Write Up Adjustment Type	<p>Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Write Up Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Write Up Adjustment Type field.</p> <p>This field appears when the Refund option is selected from the Action list.</p> <p>You can create the write up adjustments (only using those adjustment types) where the A/P Request Type Code option is not set to Refund.</p>	Yes
Approval Required	Used to indicate whether approval is required while creating a refund or write off adjustment using the refund or write off request type.	No
Approval Profile	<p>Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the refund or write off amount of the debit or credit bill falls within the threshold limit.</p> <p>Note: This field appears when the Approval Required option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while adding or updating a refund or write off adjustment using the refund or write off request type.	No
	Note: This field appears when the Approval Required option is selected.	
Refund Adjustment Type	Used to indicate the adjustment type using which refund adjustment must be created. By default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request.	Yes
	Note: The Search (🔍) icon appears corresponding to the Refund Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Refund Adjustment Type field. This field appears when the Refund option is selected from the Action list. You can create refund adjustments (only using those adjustment types) where the A/P Request Type Code option is set to Refund .	
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request.	Yes
	Note: The Search (🔍) icon appears corresponding to the Refund Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Refund Adjustment Type field. This field appears when the Write Off option is selected from the Action list. You can create write off adjustments (only using those adjustment types) where the A/P Request Type Code option is not set to Refund .	
Netting Contract Type	Used to indicate the contract type used for netting transactions while processing refunds or write-offs.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Refund/Write Off Request Type** zone to create a copy of the refund or write off request type.

- 5. Enter the required details in the **Main** section.
- 6. Define, edit, or remove characteristics of the refund or write off request type, if required.
- 7. Click **Save**.
The new refund or write off request type is defined.

Refund/Write Off Request (Used for Searching)

The **Refund/Write Off Request** screen allows you to search for a refund and write off request using various search criteria. It also allows you to create a refund or write off request. It contains the following zone:

- [Search Refund/Write Off Request](#) on page 1718

Through this screen, you can navigate to the following screens:

- [Refund Request \(Used for Viewing\)](#) on page 1731
- [Write Off Request \(Used for Viewing\)](#) on page 1767

Search Refund/Write Off Request

The **Search Refund/Write Off Request** zone allows you to search for a refund and write off request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a refund or write off request using the request, payment, or bill details. The valid values are: <ul style="list-style-type: none"> • Request Details • Payment Details • Bill Details 	Yes
	Note: By default, the Request Details option is selected.	
Action	Used to indicate whether you want to search for a refund or write off request. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off 	No
	Note: This field appears when the Request Details or Bill Details option is selected from the Search By list.	
Refund/Write Off Request Type	Used to search for refund or write off requests which are created using a particular refund or write off request type.	No
	Note: This field appears when the Request Details option is selected from the Search By list. The list includes only those refund or write off requests types which are already defined in the system. The values appear in this list when the respective refund or write off type is selected from the Action list.	
Status	Used to search refund or write off requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Cancelled • Deferred Cancel • Deferred Processing • Deferred Void • Draft • Hold • Processed • Rejected • Voided 	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
	Tip: The Voided status is applicable when you want to search a refund request whereas the Cancelled status is applicable when you want to search a write off request.	

Field Name	Field Description	Mandatory (Yes or No)
User ID	Used to search for refund or write off requests which are created by a particular user.	No
	Note: This field appears when the Request Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon the User Search window appears.	
Refund/Write Off Request ID	Used to search a particular refund or write off request.	No
	Note: This field appears when you select the Request Details option from the Search By list.	
Creation From Date	Used to search for refund or write off requests which are created on or after the specified date.	No
	Note: This field appears when the Request Details option is selected from the Search By list. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field. Simultaneously, you can also specify the time or select it using the Time Picker (🕒) icon corresponding to the field. The creation from date cannot be later than the created to date.	
Account ID	Used to search for refund or write off requests which include the bills of a particular account.	No
	Note: This field appears when the Request Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon the Account Search window appears.	
Created To	Used to search for refund or write off requests which are created till a specified date.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This field appears when the Request Details option is selected from the Search By list.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field. Simultaneously, you can also specify the time or select it using the Time Picker (🕒) icon corresponding to the field.</p> <p>The created to date cannot be earlier than the creation from date.</p>	
Payment Event ID	<p>Used to search for refund requests (through which a payment event is created) for refund purposes.</p> <p>Note:</p> <p>This field appears when the Payment Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon the Payment Event Search window appears.</p>	No
Payor Account ID	<p>Used to search for refund requests which are created for a particular payor account.</p> <p>Note:</p> <p>This field appears when the Payment Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon the Account Search window appears.</p>	No
Payor Name	<p>Used to search for refund requests which are created for a particular payor.</p> <p>Note: This field appears when the Payment Details option is selected from the Search By list.</p>	No
Payment Date	<p>Used to search for refund requests which include payments made on a particular date.</p> <p>Note:</p> <p>This field appears when the Payment Details option is selected from the Search By list.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</p>	No
MICR ID	Used to search for refund requests which include payments made with a particular MICR code.	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the Payment Details option is selected from the Search By list.	
Check Number	Used to search for refund request which include payments made through a particular check number. Note: This field appears when the Payment Details option is selected from the Search By list.	No
Bill ID	Used to search for refund or write off requests which include bill segments or adjustments of a particular bill. Note: This field appears when the Bill Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon the Bill Search window appears.	No
Bill Date From	Used to search for refund or write off requests which include bill segments or adjustments which are generated on or after the specified date. Note: This field appears when the Bill Details option is selected from the Search By list. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field. The bill date from date cannot be later than the bill date to date.	No
Bill Date To	Used to search for refund or write off requests which include bill segments or adjustments which are created till a specified date. Note: This field appears when the Bill Details option is selected from the Search By list. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field. The bill date to date cannot be earlier than the bill date from date.	No

Note: You must specify at least one search criterion while searching for a refund or write off request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request.
	Note: It has a link. On clicking the link, the Refund Request or Write Off Request screen appears where you can view the details of the respective request.
Status	Indicates the status of the refund or write off request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Cancelled • Deferred Cancel • Deferred Processing • Deferred Void • Draft • Hold • Processed • Rejected • Voided
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off
	Note: This column appears when the Request Details or Bill Details option is selected from the Search By list.
Refund/Write Off Amount	Displays the total refund or write off amount.
	Note: This column appears when the Request Details or Bill Details option is selected from the Search By list.
Refund Amount	Displays the total amount available for refund.
	Note: This column appears when the Payment Details option is selected from the Search By list.
Account Information	Displays additional information about the account for which the refund or write off request is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Created By	Indicates the user who has created the refund or write off request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

Searching for a Refund or Write Off Request

Prerequisites

To search for a refund or write off request, you should have:

- Refund or Write Off request types defined in the application

Procedure

To search for a refund or write off request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**.
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request** sub-menu.
The **Refund/Write Off Request** screen appears.
4. Enter the search criteria in the **Search Refund/Write Off Request** zone depending on whether you want to search for a refund or write off request.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of refund or write off requests that meet the search criteria appears in the **Search Results** section.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	<div><div>a. Click the Main link in the Application toolbar. A list appears.</div><div>b. From the Main menu, select Accounting and Receivable and then click Account Receivable Central.</div><div>c. Search for the bill in the Account Receivable Central screen.</div><div>d. In the Search Results section, select the required bill and then click the Refund.</div></div> <div>Note: You can select only one bill at a time (with non-zero outstanding balance) while creating a refund request from the Account Receivable Central screen.</div>
Define a refund request from the Refund Request screen	<div><div>a. Click the Main link in the Application toolbar. A list appears.</div><div>b. From the Main menu, select Accounting and Receivable and then click Refund/Write Off Request.</div><div>A sub-menu appears.</div><div>c. Click the Add option from the Refund/Write Off Request sub-menu.</div></div>
Define a refund request from the Payment Event Summary screen	<div><div>a. Click the Main link in the Application toolbar. A list appears.</div><div>b. From the Main menu, select Payments and then click Payment Event Summary.</div><div>c. Search for the payment event (whose payments you want to refund) in the Payment Event Summary screen.</div><div>d. In the Search Results section, click the Broadcast (📡) icon corresponding to the payment event whose payments you want to view. The Payments zone appears.</div><div>e. Select the option corresponding to the payments that you want to refund.</div><div>f. Click the Refund button in the Payments zone.</div></div>

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	Used to indicate the type of request which you want to create. The valid values are: <ul style="list-style-type: none">• Refund	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> Write Off 	
	Note: If you are creating a refund request (for a bill or payment) via the Account Receivable Central or Payment Event Summary screen, the system, by default, sets the action to Refund and the field is non-editable. This field is editable only when the refund request is created from the Refund/Write Off Request screen.	
Refund/Write Off Request Type	Used to indicate the request type using which you want to create the refund or write off request. Note: The refund request types appear only Refund option is selected from the Action field. The write off request types appear only Write Off option is selected from the Action field.	Yes
Account	Used to indicate the account for which you want to create the refund or write off request. Note: If you are creating a refund request (for a bill or payment) via the Account Receivable Central or Payment Event Summary screen, the system, by default, sets the action to Refund and the field is non-editable. This field is editable if the refund request is created from the Refund/Write Off Request screen. You can search for an account by clicking the Search (🔍) icon corresponding to the respective field. On clicking the Search icon, the Account Search window appears. On specifying the account, the description of the account appears corresponding to the Account field.	Yes
Adjustment Level	Used to indicate the adjustment level for which you want to create the refund request. Note: If you are creating a refund request (for a bill or payment) via the Account Receivable Central or Payment Event Summary screen, the system, by default, sets the action to Refund and the field is non-editable. This field is editable if the refund request is created from the Refund/Write Off Request screen.	No

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the respective payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the respective refund request. It contains the following tabs:

- [Refund Request - Main](#) on page 1731
- [Refund Request - Bills](#) on page 1737
- [Refund Request - Payments and Adjustments](#) on page 1740
- [Refund Request - Log](#) on page 1744

Note: The refund request is created only for those bills where the outstanding amount is lesser than zero.

4. Add the payments, payment events, or credit bill line items that you want to refund, if required.
5. Edit the refund amount of the respective entity, if required.
6. Override the address if you want to send the refund amount to a different address other than the address of the account's main customer, if required.
7. Define characteristics for the refund request, if required.

Refund Request (Used for Viewing)

Once you create a refund request, the **Refund Request** screen allows you to:

- Edit and delete a refund request
- View the details of a refund request
- Submit a refund request for approval
- Approve or reject a refund request
- View the log of a refund request
- Add a log entry for a refund request
- Void a refund request

This screen consists of the following tabs:

- [Refund Request - Main](#) on page 1731
- [Refund Request - Bills](#) on page 1737

Note: The **Bills** tab appears only when the refund request is in the **Draft** status.

- [Refund Request - Payments and Adjustments](#) on page 1740

Note: The **Payments and Adjustments** tab appears only when the refund request is in the **Draft** status.

- [Refund Request - Log](#) on page 1744

Refund Request - Main

The **Main** tab displays information about the refund request. It contains the following zones:

- [Refund Request](#) on page 1732
- [Refund Details](#) on page 1734

Note: The **Refund Details** zone appears when the refund request is in **Draft** status and the total refund amount is greater than zero.

- [Bill Line Items](#) on page 1735

Refund Request

The **Refund Request** zone displays the details of the refund request. This zone contains the following sections:

- **Main** - Displays the basic information about the refund request. It contains the following fields:

Field Name	Field Description
Refund Request Information	Displays information about the refund request.
Refund Request Type	Indicates the refund request type using which the refund request is created.
	Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the respective refund request type.
Status	Indicates the status of the refund request. The valid values are: <ul style="list-style-type: none">• Approval In Progress• Cancelled• Deferred Cancel• Deferred Processing• Deferred Void• Draft• Hold• Processed• Rejected• Voided
Status Reason	Indicates the reason why the refund request is rejected or voided.
	Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or voided reason. This field appears when the refund request is in either Rejected or Voided status.
Adjustment Level	Indicates the adjustment level for which you want to create the write off request.
Account Information	Indicates the account for which the refund request is created.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Name	Indicates the person for whom the refund request is created.
Override Address	Indicates whether the account's mailing address is overridden.
Address 1	Displays the house number and apartment name.
Address 2	Displays the street name.
Address 3	Indicates the landmark, if available.
Address 4	Displays the village or town name.

Field Name	Field Description
City	Displays the city name.
State	Displays the state name.
Country	Displays the country name.
Postal	Displays the postal or zip code.
Comments	Displays additional information about the refund request.
Total Refund Amount	Displays the total refund amount.

- **Characteristics** - Lists the characteristics defined for the refund request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the refund request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund request.
	Note: The Edit button appears when the refund request is in the Draft status.
Delete	Used to delete the refund request.
	Note: The Delete button appears when the refund request is in the Draft status.
Submit	Used to submit the refund request for approval.
	Note: The Submit button appears when the refund request is in the Draft status.
Approve	Used to approve the refund request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> • The refund request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the refund request.
Reject	Used to reject the refund request.
	Note: The Reject button appears when: <ul style="list-style-type: none"> • The refund request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the refund request.
Void	Used to void the refund request.
	Note: The Void button appears when the refund request is in the Processed status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund request is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the refund request status is updated
Create Date/Time	Displays the date and time when the refund request is created.

- **Characteristics** - Lists the characteristics of the refund request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Refund Details

The **Refund Details** zone lists the payment events, payments, and credit bill line items (such as bill segments and adjustments) that you have added to the refund request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a payment, payment event, bill, bill segment, or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Refund Amount	Displays the amount that must be refunded.
	Note: By default, the amount which is eligible for refund appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created or against which the payment is matched. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: By default, the adjustment type specified in the refund request type appears in this column. You can change the adjustment type, if required, by editing the refund request.
Adjustment Information	Displays information about the refund adjustment.

Column Name	Column Description
	<p>Note:</p> <p>It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.</p> <p>Data in this column appears only when the refund request is in the Processed status.</p> <p>The information string appears when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options - Framework screen.</p>
Bill Information	<p>Displays additional information about the bill. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.</p> <p>Data in this column appears only when the refund request is in the Processed status.</p>
Payment Refunded	<p>Displays the amount that is refunded.</p> <p>Note: This column appears when the refund request in the Draft status and</p>

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

In addition, this section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Note:

A check box appears corresponding to each refund request. To update the details of a refund request, select the check box corresponding to the refund request and then click the **Edit** button. You can also select multiple refund requests at the same time.

To delete a refund request, select the check box corresponding to the refund request and click the **Delete** button. You can also select multiple refund requests at the same time.

You can filter the list using the **Entity Type** and **Entity Amount** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (☒) icon in the upper right corner of this zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment, or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. The system calculates the request amount using the following formula:
	$\text{Request Amount} = \text{Entity Amount} - \text{Refund Amount}$
	Note: In case the bill segment or adjustment has a debit balance, the eligible amount for refund would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the write off adjustment.
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. The data appears in this column only when the status of the write off request is Processed . The information string appears when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options - Framework screen.

Note: By default, the **Bill Line Items** zone does not appear in the **Refund Request** screen. It appears only when you click the **Broadcast** (☺) icon in the **Refund Details** zone corresponding to the entity type where the entity type is set to **Bill**.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

You can filter the list using the **Entity Type** and **Entity Amount** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Refund Request - Bills

The **Bills** tab allows you to search bills with credit line items such as credit bill segments and adjustments that you want to refund. It contains the following zones:

- [Search Bills](#) on page 1737
- [Bill Line Items](#) on page 1739

Search Bills

The **Search Bills** zone allows you to search for bills using various search criteria. It also lists the completed bills of the account which are either have a credit balance or one or more credit line items, such as bill segments and adjustments. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: <ul style="list-style-type: none">• Bill Details• Bill and Price Item Details	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search a particular bill.	No
	Note: The Search 🔍 icon appears corresponding to the Bill ID field. On clicking the Search icon the Bill Search window appears.	
Bill Date From	Used to search for bills which are created on or after the specified date.	No
	Note: You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field. The bill date from date cannot be later than the bill date to date.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Date To	Used to search for bills which are created till a particular date.	No
	Note: You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field. The bill date to date cannot be earlier than the bill date from date.	
Price Item	Used to search for bills which are created for a particular price item.	No
	Note: This field appears when you select Bill and Price Item Details option from the Search By list. You can search for a price item by clicking the search (🔍) icon corresponding to the Price Item field. On clicking the Search icon the Price Item Search window appears.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Amount	Displays the total amount of the bill.

Note:

If you want to refund a bill with a credit balance (including all the credit line items of the respective bill) you need to select the check box corresponding to the bill and click the **Add** button in the **Search Results** section. All the credit bill segments and adjustments of the respective bill are added in the **Refund Details** zone in the **Main** tab of the **Refund Request** screen.

However, if you select a bill (with a credit balance) which contains one or more debit line items or if you select a bill (with a debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request in the **Refund Details** zone in the **Main** tab of the **Refund Request** screen.

If a refund request is currently in progress for a credit bill segment or adjustment of a bill, then the bills of the respective account do not appear in the **Search Bills** zone. In addition, a bill with all debit line items do not appear in the **Search Bills** zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application.
	Note: It has a link. If the entity is a bill segment, the Bill Segment screen appears where you can view the details of the respective bill segment on clicking the link. However, if the entity is an adjustment, the Adjustment screen appears with the details of the respective adjustment on clicking the link.
Entity Amount	Displays the bill segment or adjustment amount.
Eligible Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Amount Refunded	Displays the amount which is already refunded to the account.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

You can select one or more credit bill segments or adjustments and click the **Add** button in this zone to add selected credit bill segments or adjustments to the refund request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** (📢) icon corresponding to the bill in the **Search Bills** zone.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	<p>a. Click the Main link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select Accounting and Receivable and then click Account Receivable Central.</p> <p>c. Search for the bill in the Account Receivable Central screen.</p> <p>d. In the Search Results section, select the required bill and then click the Refund.</p>
	<p>Note: You can select only one bill at a time (with non-zero outstanding balance) while creating a refund request from the Account Receivable Central screen.</p>
Define a refund request from the Refund Request screen	<p>a. Click the Main link in the Application toolbar.</p>

If you want to...	Then...
	<p>A list appears.</p> <p>b. From the Main menu, select Accounting and Receivable and then click Refund/Write Off Request.</p> <p>A sub-menu appears.</p> <p>c. Click the Add option from the Refund/Write Off Request sub-menu.</p>
Define a refund request from the Payment Event Summary screen	<p>a. Click the Main link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select Payments and then click Payment Event Summary.</p> <p>c. Search for the payment event (whose payments you want to refund) in the Payment Event Summary screen.</p> <p>d. In the Search Results section, click the Broadcast (📡) icon corresponding to the payment event whose payments you want to view.</p> <p>The Payments zone appears.</p> <p>e. Select the option corresponding to the payments that you want to refund.</p> <p>f. Click the Refund button in the Payments zone.</p>

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	Used to indicate the type of request which you want to create. The valid values are:	Not applicable
	<ul style="list-style-type: none"> Refund Write Off 	
	<p>Note:</p> <p>If you are creating a refund request (for a bill or payment) via the Account Receivable Central or Payment Event Summary screen, the system, by default, sets the action to Refund and the field is non-editable.</p> <p>This field is editable only when the refund request is created from the Refund/Write Off Request screen.</p>	
Refund/Write Off Request Type	Used to indicate the request type using which you want to create the refund or write off request.	Yes
	<p>Note:</p> <p>The refund request types appear only Refund option is selected from the Action field.</p> <p>The write off request types appear only Write Off option is selected from the Action field.</p>	
Account	Used to indicate the account for which you want to create the refund or write off request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>If you are creating a refund request (for a bill or payment) via the Account Receivable Central or Payment Event Summary screen, the system, by default, sets the action to Refund and the field is non-editable.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p> <p>You can search for an account by clicking the Search (Q) icon corresponding to the respective field. On clicking the Search icon, the Account Search window appears.</p> <p>On specifying the account, the description of the account appears corresponding to the Account field.</p>	
Adjustment Level	<p>Used to indicate the adjustment level for which you want to create the refund request.</p> <p>Note:</p> <p>If you are creating a refund request (for a bill or payment) via the Account Receivable Central or Payment Event Summary screen, the system, by default, sets the action to Refund and the field is non-editable.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p>	No

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the respective payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the respective refund request. It contains the following tabs:

- [Refund Request - Main](#) on page 1731
- [Refund Request - Bills](#) on page 1737
- [Refund Request - Payments and Adjustments](#) on page 1740
- [Refund Request - Log](#) on page 1744

Note: The refund request is created only for those bills where the outstanding amount is lesser than zero.

4. Add the payments, payment events, or credit bill line items that you want to refund, if required.
5. Edit the refund amount of the respective entity, if required.
6. Override the address if you want to send the refund amount to a different address other than the address of the account's main customer, if required.

7. Define characteristics for the refund request, if required.

Defining a Characteristic for a Refund Request

Prerequisites

To define a characteristic for a refund request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.
The **Refund Request** screen appears.
3. Click the **Edit** button in the **Refund Request** zone.
The **Edit Refund Request** screen appears.

Note: The **Edit** button appears only when the refund request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the refund request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the refund request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the refund request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the refund request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Adding a Payment Event to the Refund Request

Prerequisites

To add a payment event to the refund request, you should have:

- Payments made by the account for which you need to create the refund request

Procedure

To add a payment event to the refund request:

1. Click the **Payments** tab in the **Refund Request** screen.
The **Payments** tab appears.
2. Filter the payment events, if required, in the **Search Payment Event** zone.

Note: You can only refund payments, which are matched against suspense or excess credit contracts, to the payor account. Therefore, you can only view payment events which includes payments matched against suspense or excess credit contracts. If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

3. Select the check box corresponding to the payment event, whose payments you want to refund, in the **Search Results** section.

Note: You can add more than one payment event to the refund request at the same time.

- 4. Click **Add**.
A message appears indicating that the selected payment events are added to the refund request.
- 5. Click **OK**.

Note that the entity is added in the **Refund Details** zone on the **Main** tab.

Note:
You can only refund payments which are in the **Frozen** status.

If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Adding a Credit Bill to the Refund Request

You can refund the credit bills to the account.

Prerequisites

To add a credit bill to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.
The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add the credit bill to the refund request	a. In the Search Bills zone, select the bills that you want to refund. b. Click the Add button available at the upper left corner of the Search Bills zone.
	Note: Default adjustment type selected in the write off request type should be non A/P.
A bill has credit balance and one or more debit line items and you want to add the credit bill to the refund request	a. In the Search Bills zone, select the bills that you want to refund. b. Click the Add button available at the upper left corner of the Search Bills zone.
	Note: Default adjustment type selected in the write off request type should be non A/P.

4. Click **Add**.
A message appears indicating that the selected bills are added to the refund request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.
Note that all the credit bill segments or adjustments of the bills are added in the **Refund Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Rejecting a Refund Request

Prerequisites

To reject a refund request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a refund request, you need to specify the reason why you want to reject the refund request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-RefundReq** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To reject a refund request:

1. Do either of the following:

If you want to...	Then...
Reject a refund request through the Refund/Write Off Request screen	a. Search for the refund request in the Refund/Write Off Request screen. b. In the Search Results section, click the link in the Refund/Write Off Request Information column

If you want to...	Then...
	corresponding to the refund request which you want to review.
Reject a refund request from the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do Type for User Search window appears.</p> <p>c. Enter C1-REFRQ in the To Do Type field.</p> <p>d. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>e. Select the Open option from the Filter by list to view all unassigned To Dos.</p> <p>f. Click the link in the Message column corresponding to the To Do of the refund request that you want to review.</p>

The **Refund Request** screen appears.

- Review the refund request details.
- Click the **Reject** button in the **Refund Request** zone.

The **Reject Refund Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the refund request.	Yes
Comments	Used to specify additional information while rejecting the refund request.	No

Note: The **Reject** button appears when:

- The refund request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the refund request.

- Select the rejection reason from the **Status Reason** list.
 - Click **Save**.
- The status of the refund request is changed to **Rejected**.

Viewing the Log of a Refund Request

Procedure

To view the log of a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose log you want to view.

The **Refund Request** screen appears. It consists of the following tabs:

- **Main** - Displays information about the refund request. It contains the following zones:
 - **Refund Request** - Displays the details of the refund request.
 - **Refund Details** - Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Bill Line Items** - Displays the details of the bill which must be refunded.

Note:

This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Refund Details** zone.

- **Payments** - Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Bills** - Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears when the refund request is in the **Draft** status.
 - **Log** - Lists the complete trail of actions performed on the refund request.
3. Click the **Log** tab.
 4. View the log of the refund request in the **Refund Request Log** zone.

Note: You can manually add a log entry for the refund request by clicking the **Add Log Entry** link in the upper right corner of the **Refund Request Log** zone.

Adding a Log Entry for a Refund Request

Procedure

To add a log entry for a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose log you want to edit.

The **Refund Request** screen appears. It consists of the following tabs:

- **Main** - Displays information about the refund request. It contains the following zones:
 - **Refund Request** - Displays the details of the refund request.
 - **Refund Details** - Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Payments** - Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Bills** - Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears when the refund request is in the **Draft** status.
 - **Log** - Lists the complete trail of actions performed on the refund request.
- 3. Click the **Log** tab.
The **Log** tab appears.
- 4. Click the **Add Log Entry** link in the upper right corner of the **Refund Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the refund request.	Not applicable
Log Details	Used to specify additional comments for the refund request.	Yes

- 5. Enter the comments in the **Log Details** field.
- 6. Click **Save**.
The log entry is added in the **Refund Request Log** zone.

Voiding a Refund Request

There might be situations when incorrect refund request is processed in the system. In such case, the system provides you with an ability to void or cancel the refund request. However, note that you can void a refund request when the refund request is in the **Processed** status.

Prerequisites

To void a refund request, you should have:

- Void reasons defined in the application

Note: While voiding a refund request, you need to specify the reason why you want to void the refund request. You can select the appropriate void reason when you have defined the reasons for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen.

Procedure

To void a refund request:

- 1. Search for the refund request in the **Refund/Write Off Request** screen.
- 2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request that you want to void.
The **Refund Request** screen appears.

3. Click the **Void** button in the **Refund Request** zone.

The **Void Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to void the refund request.	Yes
Comments	Used to specify additional information while voiding the refund request.	No

Note: The **Void** button appears when the refund request is in the **Processed** status.

4. Select the void reason from the **Status Reason** list.

5. Click **Save**.

The status of the refund request is changed to **Voided**.

Note: The **C1-REFVOID** algorithm cancels all the frozen adjustments created for the refund request which is in the **Processed** state.

Write Off Request (Used for Viewing)

Once you create a write off request, the **Write Off Request** screen allows you to:

- Edit and delete a write off request
- View the details of a write off request
- Submit a write off request for approval
- Approve or reject a write off request
- View the log of a write off request
- Add a log entry for a write off request
- Cancel a write off request

This screen consists of the following tabs:

- **Main** - Displays information about the write off request. It contains the following zones:
 - **Write Off Request** - Displays the details of the write off request.
 - **Write Off Details** - Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bill Line Items** - Displays the details of the bill which must be written off.

Note:
This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** - Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:
 - **Search Bills** - Lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
 - **Bill Line Items** - Lists the debit and credit bill segments and adjustments of the bill.
- This tab appears when the write off request is in the **Draft** status.
- **Log** - Lists the complete trail of actions performed on the write off request.

Write Off Request - Main

The **Main** tab displays information about the write off request. It contains the following zones:

- [Write Off Request](#) on page 1768
- [Write Off Details](#) on page 1770
- [Bill Line Items](#) on page 1771

Write Off Request

The **Write Off Request** zone displays the details of the write off request. This zone contains the following sections:

- **Main** - This section provides basic information about the write off request. It contains the following fields:

Field Name	Field Description
Write Off Request Information	Displays information about the write off request.
Write Off Request Type	Indicates the write off request type using which the write off request is created.
	Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the write off request type.
Status	Indicates the status of the write off request. The valid values are: <ul style="list-style-type: none">• Draft• Approval In Progress• Rejected• Processed• Cancelled
Status Reason	Indicates the reason why the write off request is rejected or cancelled.
	Note: This field appears when the write off request is in the Rejected or Cancelled status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or cancelled reason.
Account Information	Indicates the account for which the write off request is created.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Comments	Displays additional information about the write off request.

Field Name	Field Description
Total Write Off Amount	Displays the total write off amount.
Adjustment Level	Used to indicate the adjustment level for which you want to create the write off request.
	Note: It is a read-only field.

- **Characteristics** - Lists the characteristics defined for the write off request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the write off request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the write off request.
	Note: The Edit button appears when the write off request is in the Draft status.
Delete	Used to delete the write off request.
	Note: The Delete button appears when the write off request is in the Draft status.
Submit	Used to submit the write off request for approval.
	Note: The Submit button appears when the write off request is in the Draft status.
Approve	Used to approve the write off request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> • The write off request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the write off request.
Reject	Used to reject the write off request.
	Note: The Reject button appears when: <ul style="list-style-type: none"> • The write off request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the write off request.
Cancel	Used to cancel the write off request.
	Note: The Cancel button appears when the write off request is in the Processed status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the write off request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the write off request status is updated
Create Date/Time	Displays the date and time when the write off request is created.

Write Off Details

The **Write Off Details** zone lists the debit bill line items (such as bill segments and adjustments) that you have added to the write off request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Write Off Amount	Displays the amount that must be written off.
	Note: By default, the amount which is eligible for write off appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created.
	Note: By default, the adjustment type specified in the write off request type appears in this column. You can change the adjustment type, if required, by editing the write off request.
Adjustment Information	Displays information about the write off adjustment.

Column Name	Column Description
	<p>Note:</p> <p>It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.</p> <p>The data appears in this column when the status of the write off request is Processed.</p> <p>The information string appears when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options - Framework screen.</p>
Bill Information	<p>Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.</p>

Note:

On clicking the **Broadcast** (📡) icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	<p>Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.</p> <p>Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.</p>
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.

Column Name	Column Description
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast** (📡) icon corresponding to the bill in the **Write Off Details** zone.

Write Off Request - Bills

The **Bills** tab allows you to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:

- [Search Bills](#) on page 1772
- [Bill Line Items](#) on page 1773

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details 	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search bills which are created for a particular price item.	No
	Note: This field appears when you select Bill and Price Item Details option from the Search By list. You can search for a price item by clicking the search (🔍) icon corresponding to the field.	

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to write off a bill with debit balance and all debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All debit bill segments and adjustments of the bill are added in the **Write Off Details** zone on the **Main** tab. However, if you select a bill (with debit balance) which contains one or more credit line items or if you select a bill (with credit balance) which contains one or more debit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Defining a Characteristic for a Write Off Request

Prerequisites

To define a characteristic for a write off request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a write off request:

- 1. Search for the write off request in the **Refund/Write Off Request** screen.
- 2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.
The **Write Off Request** screen appears.
- 3. Click the **Edit** button in the **Write Off Request** zone.
The **Edit Write Off Request** screen appears.

Note: The **Edit** button appears only when the write off request is in the **Draft** status.

- 4. Ensure that the **Characteristics** section is expanded when you are editing the write off request.
The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.

- 5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- 6. If you want to define more than one characteristic for the write off request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the write off request, click the **Delete** (🗑) icon corresponding to the characteristic.

Adding a Debit Bill to the Write Off Request

Prerequisites

To add a debit bill to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.
The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all debit line items and you want to add the debit bill to the write off request	a. In the Search Bills zone, select the bills that you want to write off.
	b. Click the Add button available at the upper left corner of the Search Bills zone.
	Note: Default adjustment type selected in the write off request type should be non A/P.
A bill has debit balance and one or more credit line items and you want to add the debit bill to the write off request	a. In the Search Bills zone, select the bills that you want to write off.
	b. Click the Add button available at the upper left corner of the Search Bills zone.
	Note: Default adjustment type selected in the write off request type should be non A/P.

4. Click **Add**.

A message appears indicating that the selected bills are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:
Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.
The system will not allow you to add a credit line item to the **Write Off Details** zone.

Adding a Debit Bill Line Item to the Write Off Request

You can write off the debit bill line items, such as bill segments and adjustments, of the account. While adding a debit bill line item to the write off request, you can either:

- Directly add all debit line items of a bill to the write off request by adding the bill which has all bill segments and adjustments in debit
- Individually add a debit bill segment or adjustment of a bill (with one or more debit line items) to the write off request

Prerequisites

To add a debit bill line item to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill line item to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.
The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do any of the following:

If...	Then...
A bill has all debit line items and you want to add a particular debit bill line item to the write off request	<p>a. In the Search Bills zone, click the Broadcast (📡) icon corresponding to the bill whose line items you want to view.</p> <p>The Bill Line Items zone appears.</p> <p>b. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.</p>
A bill has debit balance and one or more credit line items	<p>a. In the Search Bills zone, click the Broadcast (📡) icon corresponding to the bill whose line items you want to view.</p> <p>The Bill Line Items zone appears.</p> <p>b. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.</p>
A bill has credit balance and one or more debit line items	<p>a. In the Search Bills zone, click the Broadcast (📡) icon corresponding to the bill whose line items you want to view.</p> <p>The Bill Line Items zone appears.</p> <p>b. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.</p>

4. Click **Add**.
A message appears indicating that the selected bill segments or adjustments are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.

The system will not allow you to add a credit line item to the **Write Off Details** zone.

Editing a Write Off Request

Prerequisites

To edit a write off request, you should have:

- Adjustment types without A/P request type defined in the application

Procedure

To edit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.
The **Write Off Request** screen appears.
3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Write Off Request Information	Displays information about the write off request.	Not applicable
Adjustment Level	Used to indicate the adjustment level for which you want to create the write off request.	No
	Note: It is a read-only field.	
Account Information	Indicates the account for which the write off request is created.	Not applicable
Comments	Used to specify additional information about the write off request.	No

In addition, this screen contains the following two sections:

- **Characteristics** - Used to define the characteristics for the write off request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the write off request.

4. Modify the details of the write off request, if required.
5. Define, edit, or remove characteristics of the write off request, if required.
6. Click **Save**.

The changes made to the write off request are saved.

Editing the Write Off Details

Prerequisites

To edit the write off details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the write off details:

- 1. Search for the write off request in the **Refund/Write Off Request** screen.
- 2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose bill line item details you want to edit.
The **Write Off Request** screen appears. You can edit the bill line items of the write off request by using either of the following ways:

If...	Then...
Select the bill whose details you want to edit in the Write Off Details zone and click the Edit button available in the upper left corner of this zone.	The Edit Request Details screen appears.
In the Write Off Details zone, click the Broadcast (📡) icon corresponding to the bill whose line items details you want to edit.	The Bill Line Items zone appears.
	Note: This zone appears when the Entity Type is Bill .
	a. Select the bill line item whose details you want to edit in the Bill Line Items zone and click the Edit button available in the upper left corner of this zone. The Edit Request Details screen appears.

Note: A bill line item from the write off request can be edited when the write off request is in the **Draft** status.

The **Edit Request Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the write off request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	Indicates the adjustment type of the write off request type. You can search for an adjustment type by clicking the Search (🔍) icon corresponding to the field.	No

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are <ul style="list-style-type: none">AdjustmentsBillBill SegmentPayment EventPayment
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the amount that must be write off.

Column Name	Column Description
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created.
	Note: You can search for an account by clicking the Search (🔍) icon corresponding to the field.
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the write off request.

Note:
Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.
The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

- 3. Modify the details of the bill line items.
- 4. Click **Save**.
The changes made to the write off bill line items are saved.

Submitting a Write Off Request

Prerequisites

To submit a write off request, you should have:

- Debit bill line items added in the write off request

Procedure

To submit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to submit.
The **Write Off Request** screen appears.
3. Click the **Submit** button in the **Write Off Request** zone.

The system behaves in the following manner:

If...	Then
The Approval Required and Hierarchical Approval check boxes are selected in the write off request type using which the write off request is created	A To Do of the C1-WOREQ To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the write off request is changed to Approval In Progress .
The Approval Required check box is selected, but the Hierarchical Approval check box is not selected in the write off request type using which the write off request is created	A To Do of the C1-WOREQ To Do type is created and sent to the approver at the hierarchy level where the total write off amount falls within the threshold limit. In addition, the status of the write off request is changed to Approval In Progress .
The Approval Required check box is not selected in the write off request type using which the write off request is created	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed .

If...	Then
	Note: The write off adjustments are created in the Frozen status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to Open . However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced .
The total write off amount is less than the minimum threshold amount	<p>The write off request is automatically approved by the system and write off adjustments are created using the specified adjustment types. In addition, the status of the write off request is changed to Processed.</p> <p>Note: The write off adjustments are created in the Frozen status. Approving a Write Off Request

You can view the number of write off requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the write off request based on the observations.

Note: The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To approve a write off request:

1. Do either of the following:

If you want to...	Then...
Approve a write off request through the Refund/Write Off Request screen	a. Search for the write off request in the Refund/Write Off Request screen.

If you want to...	Then...
	b. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the write off request which you want to review.
Approve a write off request from the To Do List screen	a. Click the Menu link in the Application toolbar. A list appears. b. From the Main menu, select To Do and then click To Do List . The To Do Type for User Search window appears. c. Enter C1-WOREQ in the To Do Type field. d. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. e. Select the Open option from the Filter by list to view all unassigned To Dos. f. Click the link in the Message column corresponding to the To Do of the write off request that you want to review.

The **Write Off Request** screen appears.

- Review the write off request details.
- Click the **Approve** button in the **Write Off Request** zone.

The system behaves in the following manner:

If...	Then...
The Hierarchical Approval check box is selected in the write off request type using which the write off request is created and the total write off amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the C1-WOREQ To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the write off request remains as Approval In Progress .
The Hierarchical Approval check box is selected in the write off request type using which the write off request is created and the total write off amount is less than the threshold amount specified at the next level in the approval hierarchy	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed . Note: The write off adjustments are created in the Frozen status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to Open . However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced .
The Hierarchical Approval check box is not selected in the write off request type	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed .

If...	Then...
using which the write off request is created	Note: The write off adjustments are created in the Frozen status. Rejecting a Write Off Request

Prerequisites

To reject a write off request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a write off request, you need to specify the reason why you want to reject the write off request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-WORequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To reject a write off request:

1. Do either of the following:

If you want to...	Then...
Reject a write off request through the Refund/Write Off Request screen	<ol style="list-style-type: none"> a. Search for the write off request in the Refund/Write Off Request screen. b. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the write off request which you want to review.

If you want to...	Then...
Reject a write off request from the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do Type for User Search window appears.</p> <p>c. Enter C1-WOREQ in the To Do Type field.</p> <p>d. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>e. Select the Open option from the Filter by list to view all unassigned To Dos.</p> <p>f. Click the link in the Message column corresponding to the To Do of the write off request that you want to review.</p>

The **Write Off Request** screen appears.

- 2. Review the write off request details.
- 3. Click the **Reject** button in the **Write Off Request** zone.

The **Reject Write Off Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the write off request.	Yes
Comments	Used to specify additional information while rejecting the write off request.	No

Note: The **Reject** button appears when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

- 4. Select the rejection reason from the **Status Reason** list.
 - 5. Click **Save**.
- The status of the write off request is changed to **Rejected**.

Viewing the Log of a Write Off Request

Procedure

To view the log of a write off request:

- 1. Search for the write off request in the **Refund/Write Off Request** screen.
- 2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose log you want to view.

The **Write Off Request** screen appears. It consists of the following tabs:

- **Main** - Displays information about the write off request. It contains the following zones:
 - **Write Off Request** - Displays the details of the write off request.
 - **Write Off Details** - Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bill Line Items** - Displays the details of the bill which must be written off.

Note:
This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** - Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears when the write off request is in the **Draft** status.
 - **Log** - Lists the complete trail of actions performed on the write off request.
- 3. Click the **Log** tab
 - 4. View the log of the write off request in the **Write Off Request Log** zone.

Note: You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

Cancelling a Write Off Request

There might be situations when incorrect write off request is processed in the system. In such case, the system provides you with an ability to cancel the write off request. However, note that you can cancel a write off request when the write off request is in the **Processed** status.

Prerequisites

To cancel a write off request, you should have:

- Cancel reasons defined in the application

Note: While cancelling a write off request, you need to specify the reason why you want to cancel the write off request. You can select the appropriate cancel reason when you have defined the reasons for the **Cancelled** status of the **C1-WORequest** business object in the **Status Reason** screen.

Procedure

To cancel a write off request:

- 1. Search for the write off request in the **Refund/Write Off Request** screen.
- 2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to cancel.
The **Write Off Request** screen appears.
- 3. Click the **Cancel** button in the **Write Off Request** zone.

The **Cancel Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the write off request.	Yes
Comments	Used to specify additional information while cancelling the write off request.	No

Note: The **Cancel** button appears when the write off request is in the **Processed** status.

- 4. Select the cancel reason from the **Status Reason** list.
- 5. Click **Save**.
The status of the write off request is changed to **Cancelled**.

Note: The **C1-WOCANCEL** algorithm cancels all the frozen adjustments created for the write off request which is in the **Processed** state.

- [Hold Request \(Used for Viewing\)](#)

Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. A hold may be enforced due to various reasons, including natural calamities, disaster recovery, disputes, suspicious activity, pending investigations, uncleared checks, legal restrictions, and so on.

Oracle Revenue Management and Billing enables you to hold certain processes at the person, account, or bill level through a hold request. You need to specify a period (i.e., duration) for which the hold request is initiated. Depending on the entity level, you need to add the entities, such as persons, accounts, or bills in the hold request. You need to define a period for which you want to keep the entities on hold. The hold entity period should be within the hold request period. Similarly, depending on the entity level, you need to add the processes, such as bill generation, overdue, auto pay, funding, delinquency, or refund, respectively, that you want to keep on hold for the entity through the hold request. The system will hold the process for the entity when the entity date range falls within the respective process date range. You can create multiple hold requests for the same entity with different hold reasons.

Prerequisites

To setup the hold request feature, you need to do the following:

- Define the required hold request types in the system
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive a To Do while submitting a hold activation or release request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive a To Do while requesting to resubmit a hold activation or release request for approval
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the **Environment Type** option type of the **SYSDT** feature configuration
- Set the **C1-HOLDSRCH** feature configuration
- Attach the **CI_COPAICP** algorithm to the **Cancel Logic** system event of the respective overdue process templates
- Attach the **CI_OE-NO-DEP** algorithm to the **Cancel Logic** system event of the respective overdue event type
- Define the values for the **HOLD_PROCESS_FLG** and **HOLD_REASON_FLG** lookup fields.
- Define the status reasons for the **Discarded**, **Rejected**, and **Released** statuses of the **C1-HoldRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)**, **Hold Request Monitor (C1-HLMON)**, **Delete Pending Bills and its Bill Segments (C1-DELBI)**, and **Hold Request Entity Derivation Monitor (C1-HLDET)** batches to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Hold Request Lifecycle

While creating a hold request, you need to specify the hold request type using which you want to create the hold request. It is the hold request type which helps the system to determine the following:

- The hold request business object using which a hold request should be created through the hold request type.
- The processes which can be kept on hold for different entities through the respective hold requests.
- Whether approval process is required while activating and/or releasing the respective hold requests.
- Whether partial hold is allowed when a bill is kept on hold through the respective hold requests.

Note: You cannot create a past dated hold request, but you can surely create a future dated hold request.

Once a hold request is created, you can add more processes and entities before activating the hold request. You can then click the **Submit** button to activate the hold request. On activating a hold request, the system checks whether the number

of entities added in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the status of the hold request is changed to **Active** and the respective processes are kept on hold for the selected entities. However, if the number of entities added in the hold request exceeds the defer processing count, the system changes the status of the hold request to **Deferred Processing**. On executing the **C1-HLDRQ** batch, the status of the hold request is changed to **Active**.

You can optionally configure the approval process, if required, while activating the hold request. If the activation approval process is configured in the respective hold request type, the status of the hold request is changed to **Activation Approval In Progress**. The approver can review, and accordingly approve or reject the hold activation request based on the observations. In addition, the approver can request the submitter to resubmit the hold activation request for approval after making the necessary changes to it. On approving the hold activation request, the status of the hold request is changed to **Active** and the respective processes are kept on hold for the selected entities.

Note that all the selected processes of the entities may not be kept on hold on activating a hold request. Only when the entity date falls within the process date range and the process start date is earlier than the system date or batch business date, the system keeps the process of the respective entity on hold. You need to then execute the **C1-HLMON** batch at regular intervals. It will hold a process of an entity when the following conditions are met:

- Entity date falls within the process date range
- Process start date is earlier than the batch business date

The system enables you to manually release a hold request from the user interface. On manually releasing a hold request from the user interface, the system sets the hold request, hold entities, and hold processes end dates to the system date. In addition, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities. You can optionally configure the approval process, if required, while releasing the hold request. If the release approval process is configured in the respective hold request type, the status of the hold request is changed to **Release Approval in Progress**. The approver can review, and accordingly approve the hold release request based on the observations. In addition, the approver can request the submitter to resubmit the hold release request for approval after making the necessary changes to it. On approving the hold release request, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities.

The system also automatically releases a hold request. On executing the **C1-HLMON** batch, it checks whether any active hold request's end date is earlier than the batch business date. If so, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities. In addition, the release status reason is stamped corresponding to the hold request. The hold request, hold entity, and the hold process end dates are updated to the batch business date. Note that the entity and process end dates are updated only when their start date is not a future date.

A hold request goes through various statuses in its lifecycle. Note that lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object.

For more information on how to setup the hold request feature, see [Prerequisites](#) on page 1796.

Hold Entities

Through a hold request, you can keep various entities, such as persons, accounts, or bills on hold. To keep the persons, accounts, or bills on hold, you need to set the entity level in the hold request to **Person**, **Account**, or **Bill**, respectively. The system enables you to keep the following processes on hold for the respective entity through a hold request:

Entity	Valid Hold Processes
Person	Bill Generation, Delinquency, and Funding
	<p>Note:</p> <p>If you keep the bill generation process on hold for a person, then the system will hold the bill generation process for all its immediate accounts.</p> <p>If you keep the delinquency process on hold for a person, then the system will hold the delinquency process for the person and its immediate accounts.</p> <p>If you keep the funding process on hold for a person, then the system will hold the funding process for all its bills irrespective of the bill status. In addition, the hold will be on the complete outstanding bill amount and not on the partial bill amount.</p>
Account	Auto Pay, Bill Generation, Delinquency, Funding, Overdue, and Refund
	<p>Note:</p> <p>You cannot select both the Overdue and Delinquency processes at the same time in the hold request. The Overdue process is valid for the financial services and health insurance domains, but the Delinquency process is valid only for the health insurance domain.</p> <p>If you keep the funding process on hold for an account, then the system will hold the funding process for all its bills irrespective of the bill status. In addition, the hold will be on the complete outstanding bill amount and not on the partial bill amount.</p> <p>If the auto pay process of an account is on hold, you cannot include any debit bill of the account in any funding request.</p> <p>On activating a hold request for an account, the system creates an alert for the account on the dashboard. On clicking the dashboard alert, the Alerts tab of the Account screen appears. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.</p>
Bill	Funding
	<p>Note:</p> <p>If the entity level is set to Bill, you can hold the funding process of only completed bills through the hold request.</p> <p>If you select the Allow Partial Hold for Bill option in the respective hold request type, you can hold the funding of partial outstanding amount of the bill through the hold request.</p> <p>If you want to hold the auto pay process for a bill, you need to use the Stop Autopay feature.</p>

While creating a hold request where the entity level is set to **Person**, you can select the **Hierarchy** option corresponding to each person included in the hold request. If the **Hierarchy** option is selected, the system keeps the respective processes on hold for all the accounts in the person's hierarchy. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. However, if the **Hierarchy** option is not selected, the system keeps the respective processes on hold only for the persons' immediate accounts.

You can create multiple hold requests for the same entity with different hold reasons. If a bill is on hold through multiple hold requests with different hold reasons, then the maximum hold amount across the hold requests will be considered for the bill. Let us understand this with the help of an example.

Hold Request	Bill	Bill Outstanding Amount	Hold Amount
HR1	B1	100\$	50\$
HR2	B2	100\$	60\$
HR3	B3	-100\$	-30\$
HR4	B4	-100\$	-50\$

In this case, the hold amount for B1 would be 60\$ and the hold amount for B2 would be 50\$.

Hold Processes

Through a hold request, you can keep the following processes on hold:

- **Auto Pay** – You can hold the auto pay process of an account. The system allows you to select the **Auto Pay** option in a hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see [Hold Auto Pay](#) on page 1800.
- **Bill Generation** – You can hold the bill generation process of a person or an account. The system allows you to select the **Bill Generation** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**. For more information, see [Hold Bill Generation](#) on page 1804.
- **Delinquency** – You can hold the delinquency process of a person or an account. The system allows you to select the **Delinquency** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**. For more information, see [Hold Delinquency](#) on page 1808.

Note: The **Delinquency** process is tested and certified only for the health insurance domain and not for the financial services domain.

- **Funding** – You can hold the funding process of a person, account, or a bill. The system allows you to select the **Funding** option in the hold request when the entity level is set to **Person**, **Account**, or **Bill**. For more information, see [Hold Funding](#) on page 1813.
- **Overdue** – You can hold the overdue process of an account. The system allows you to select the **Overdue** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see [Hold Overdue Process](#) on page 1814.
- **Refund** – You can hold the refund process of an account. The system allows you to select the **Refund** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see [Hold Refund](#) on page 1818.

Hold Auto Pay

Oracle Revenue Management and Billing enables you to hold the auto pay process for an account through a hold request. If the auto pay process is kept on hold for an account, the system does not allow you to create automatic payments for the debit bills of the account.

Note: The system allows you to select the **Auto Pay** option in a hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

While adding the auto pay process in a hold request, you need to specify the date range for which you want to hold the auto pay process for the accounts. The system enables you to hold the auto pay process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the auto pay process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the auto pay process for the account (the valid values are **Y** or **N**)
- Hold auto pay start date (required if the hold auto pay is set to **Y**)
- Hold auto pay end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3681.

Auto Pay Hold Activation

On activating a hold request for an account, the system sets the defer auto pay date corresponding to the accounts whose date range falls within the auto pay process date range of the hold request. The defer auto pay date is set to the hold entity end date or auto pay process end date whichever is earlier. This means that the system will allow to create automatic payments for the accounts only after the respective defer auto pay date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the defer auto pay date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Defer Auto Pay Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Auto Pay Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Auto Pay Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	30-Jan-2025	

Scenario		Start Date	End Date	Defer Auto Pay Date
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Auto Pay Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the defer auto pay date for the Account 1 is set to 15-Jan-2025 and the defer auto pay date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the auto pay process end date. However, in the scenario 2, the defer auto pay date for the Account 1 is set to 20-Jan-2025. This is because the auto pay process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the defer auto pay date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the defer auto pay date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the defer auto pay date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the defer auto pay date of the Account 3 is updated to 25-Jan-2025

In the scenario 4, the defer auto pay date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the defer auto pay date to the auto pay process end date when the entity end date is not specified in the hold request. In the scenario 5, the defer auto pay date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the defer auto pay date to hold request end date when both the entity end date and auto pay process end date are not specified in the hold request. In the scenario 6, the defer auto pay date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the defer auto pay date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the auto pay process or hold entity is later than the hold request start date, the defer auto pay date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the auto pay process or hold entity start date). For example,

Scenario		Start Date	End Date	Defer Auto Pay Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Auto Pay Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the defer auto pay date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the defer auto pay date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the defer auto pay date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The defer auto pay date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Defer Auto Pay Date field on the Auto Pay tab of the Account screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the defer auto pay date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the defer auto pay date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

Auto Pay Hold Release

On releasing a hold request for an account, the system sets the defer auto pay date to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table. Let us understand how the defer auto pay date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Defer Auto Pay Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Auto Pay Process	01-Jan-2025	20-Jan-2025				
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Auto Pay Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Defer Auto Pay Date
	Auto Pay Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the defer auto pay date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the defer auto pay date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the defer auto pay date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The defer auto pay date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the defer auto pay date to the system date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the defer auto pay date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

Hold Bill Generation

Oracle Revenue Management and Billing enables you to hold the bill generation process of a person or an account through a hold request. If the bill generation process is kept on hold for an account, the system does not allow you to create any bills for the account from the user interface or through a batch process. If the bill generation process is kept on hold for a person, the system does not allow you to create bills for any of its accounts from the user interface or through a batch process.

Note:

The system allows you to select the **Bill Generation** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**.

While adding the bill generation process in a hold request, you need to specify the date range for which you want to hold the bill generation process for the persons or accounts. The system enables you to hold the bill generation process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the bill generation process for a person or an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the bill generation process for the person or account (the valid values are Y or N)
- Hold bill generation start date (required if the hold bill generation is set to Y)
- Hold bill generation end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3681.

Bill Generation Hold Activation

On activating a hold request for an account, the system sets the bill after date corresponding to the accounts whose date range falls within the bill generation process date range of the hold request. The bill after date is set to the hold entity end date or bill generation process end date whichever is earlier. This means that the system will allow to create bills for the accounts only after the respective bill after date.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date. In addition, if there are pending bills for an account which is kept on hold through a hold request, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table. You need to then execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Let us understand how the bill after date is derived for an account that is kept on hold through a hold request.

The following table illustrates how the bill after date is derived for an account that is kept on hold through a hold request:

Scenario		Start Date	End Date	Bill After Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	20-Jan-2025	
	Auto Pay Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Bill Generation Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Bill Generation Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025

Scenario		Start Date	End Date	Bill After Date
Scenario 6	Account 2	01-Jan-2025	-	31-Jan-2025
	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Bill Generation Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the bill after date for the Account 1 is set to 15-Jan-2025 and the bill after date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the bill generation process end date. However, in the scenario 2, the bill after date for the Account 1 is set to 20-Jan-2025. This is because the bill generation process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the bill after date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the bill after date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the bill after date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the bill after date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the bill after date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the bill after date to the bill generation process end date when the entity end date is not specified in the hold request. In the scenario 5, the bill after date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the bill after date to hold request end date when both the entity end date and bill generation process end date are not specified in the hold request. In the scenario 6, the bill after date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the bill after date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the bill generation process or hold entity is later than the hold request start date, then bill after date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the bill generation process or hold entity start date). For example,

Scenario		Start Date	End Date	Bill After Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Mar-2025	-
	Bill Generation Process	15-Mar-2025	31-Mar-2025	
	Auto Pay Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the bill after date for the Account 1 can be derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the bill after date for the Account 2 will be derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the bill after date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note:

The bill after date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

On activating a hold request for a person, the system sets the bill after date to the entity end date or process end date whichever is earlier either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. The way in which the bill after date is derived for the person's accounts is same as that of an individual account kept on hold through a hold request.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date. In addition, if there are pending bills for a person which is kept on hold through a hold request, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table. You need to then execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note: The bill after date then appears in the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the bill after date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the bill after date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed. Note that when the entity level is set to **Person**, the system always sets the bill after date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

Bill Generation Hold Release

On releasing a hold request for an account, the system clears the bill after date for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.

Let us understand how the bill after date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Bill After Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025				-
	Account 1	01-Jan-2025	15-Jan-2025				-
	Account 2	01-Jan-2025	20-Jan-2025				-
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Bill Generation Process	01-Jan-2025	20-Jan-2025				-
	Auto Pay Process	01-Jan-2025	25-Jan-2025				-
	Account 1	01-Jan-2025	22-Jan-2025				-
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025				-
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Bill Generation Process	05-Jan-2025	20-Jan-2025				25-Jan-2025

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Bill After Date
	Account 3	05-Jan-2025	20-Jan-2025				-
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	
	Bill Generation Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				-

In the scenario 1, the bill after date for the Account 1 and Account 2 is cleared when the hold request is manually released on 10-Jan-2025. In the scenario 2, the bill after date for the Account 1 is cleared when the hold request is automatically released through the **C1-HLMON** batch on 20-Jan-2025.

In the scenario 3, the bill after date for the Account 3 is not cleared when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The bill after date for the Account 3 is cleared when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it is cleared from the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

On releasing a hold request for a person, the system clears the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. The way in which the bill after date is updated for the person's accounts is same as that of an individual account whose hold is released either manually or automatically.

Note: The bill after date is cleared from the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately clears the bill after date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system clears the bill after date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. Note that when the entity level is set to **Person**, the system always clears the bill after date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

Hold Delinquency

Oracle Revenue Management and Billing enables you to hold the delinquency process for a person or an account through a hold request. If the delinquency process is kept on hold for an account, the system does not allow you to continue the delinquency process (if any) created for the account. Similarly, if the delinquency process is kept on hold for a person, the system does not allow you to continue the delinquency process (if any) created for the person and its accounts.

Note:

The system allows you to select the **Delinquency** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**.

You cannot select both the **Overdue** and **Delinquency** processes at the same time in the hold request. The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

You should not select the **Overdue** process in one hold request and the **Delinquency** process in another hold request for the same account in the same hold period.

While adding the delinquency process in a hold request, you need to specify the date range for which you want to hold the delinquency process for the persons or accounts. The system enables you to hold the delinquency process while creating a hold request from the user interface or through the upload request feature. If you want to create a hold request

to hold the delinquency process for a person or an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the delinquency process for the person or account (the valid values are **Y** or **N**)
- Hold delinquency start date (required if the hold delinquency is set to **Y**)
- Hold delinquency end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3681.

Delinquency Hold Activation

On activating a hold request for an account, the system sets the postpone credit review until date corresponding to the accounts whose date range falls within the delinquency process date range of the hold request. The postpone credit review until date is set to the hold entity end date or delinquency process end date whichever is earlier. If the postpone credit review until date stamped on the delinquent account is later than the system date, the system will then hold the delinquency process, if any, initiated for the account. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the postpone credit review until date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Delinquency Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Delinquency Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Delinquency Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 is set to 15-Jan-2025 and the postpone credit review until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the delinquency process end date. However, in the scenario 2, the postpone credit review until date for the Account 1 is set to 20-Jan-2025. This is because the delinquency process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the postpone credit review until date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the postpone credit review until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the postpone credit review until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the postpone credit review until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the postpone credit review until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the postpone credit review until date to the delinquency process end date when the entity end date is not specified in the hold request. In the scenario 5, the postpone credit review until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the postpone credit review until date to hold request end date when both the entity end date and delinquency process end date are not specified in the hold request. In the scenario 6, the postpone credit review until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the postpone credit review until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the delinquency process or hold entity is later than the hold request start date, the postpone credit review until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after delinquency process or hold entity start date). For example,

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Delinquency Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the postpone credit review until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the postpone credit review until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the postpone credit review until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

On activating a hold request for a person, the system sets postpone credit review until date to the entity end date or process end date whichever is earlier for the respective person and its immediate accounts (where the person is the main customer). If the postpone credit review until date does not exist for the person or if the postpone credit review until date already exists for the person but is earlier than the system date, then the postpone credit review until date is set to the entity end date or process end date whichever is earlier. However, if the postpone credit review until date already exists for the person but is later than the derived hold end date (i.e., entity end date or process end date whichever is earlier), then the postpone credit review until date of the person is not updated.

If the postpone credit review until date does not exist for the person's immediate account or if the postpone credit review until date already exists for the person's immediate account but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the person's immediate account but is later than the derived hold end date, then the postpone credit review until date of the account is not updated.

If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. If the postpone credit review until date does not exist for the person's child person or if the postpone credit review until date already exists for the person's child person but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the person's child person but is later than the derived hold end date, then the postpone credit review until date of the child person is not updated.

Similarly, if the postpone credit review until date does not exist for the child person's account or if the postpone credit review until date already exists for the child person's account but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the child person's account but is later than the derived hold end date, then the postpone credit review until date of the child person's account is not updated.

If the postpone credit review until date stamped on the delinquent person or account is later than the system date, the system will then hold the delinquency process, if any, initiated for the person or account. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Note:

On executing the **C1-DPMON** batch, the status of the delinquency process is then changed to **On Hold** when the algorithm (i.e., **C1-HLDELPRC**) attached to the **Hold Delinquency Process Criteria** system event in the respective delinquency process type is triggered.

The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the **Delinquency** process is added in the hold request, the system derives the entity level of the hold request. If the entity level is set to **Account**, the system checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, the system determines whether the number of entities in the hold request exceeds the defer processing count (specified in the respective hold request type). If the number of entities in the hold request is less than or equal to the defer processing count, the system sets the status of the hold request to **Active**. In addition, it immediately sets the postpone credit review until date for the respective account. However, if the number

of entities in the hold request is greater than the defer processing count, the system sets the status of the hold request to **Deferred Processing**. The system then sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

However, if a group membership is billed to the account, the system does not use the defer processing count. It sets the status of the hold request to **Active**. It then sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. Similarly, if the entity level is set to **Person**, the system does not use the defer processing count. It sets the status of the hold request to **Active**. It then sets the postpone credit review until date for the respective persons and its accounts in the deferred mode when the **C1-HLMON** batch is executed.

Note: You need to execute the **C1-DPMON** batch after executing the **C1-HLDRQ** or **C1-HLMON** batch.

Delinquency Hold Release

On releasing a hold request for an account, the system sets the postpone credit review until date to the system date for the respective account. Let us understand how the postpone credit review until date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Delinquency Process	01-Jan-2025	31-Jan-2025				-
	Account 1	01-Jan-2025	15-Jan-2025				-
	Account 2	01-Jan-2025	20-Jan-2025				-
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Delinquency Process	01-Jan-2025	20-Jan-2025				-
	Auto Pay Process	01-Jan-2025	25-Jan-2025				-
	Account 1	01-Jan-2025	22-Jan-2025				-
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Delinquency Process	01-Jan-2025	31-Jan-2025				-
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	-
	Delinquency Process	05-Jan-2025	20-Jan-2025				-
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Delinquency Process	10-Jan-2025	25-Jan-2025				-
	Account 3	10-Jan-2025	25-Jan-2025				-

In the scenario 1, the postpone credit review until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the postpone credit review until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch on 20-Jan-2025.

In the scenario 3, the postpone credit review until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The postpone credit review until

date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

On releasing a hold request for a person, the system sets the postpone credit review until date to the system date for the respective person and its immediate accounts (where the person is the main customer). If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. The way in which the postpone credit review until date is updated for the person, its immediate accounts, its child persons, and its child persons' accounts is same as that of an individual account whose hold is released either manually or automatically.

Note: The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

The system does not consider the defer processing count while releasing a hold request where the delinquency process is kept on hold for an account or a person. The system sets the postpone credit review until date in the deferred mode when the **C1-HLMON** batch is executed.

Note: You need to execute the **C1-DPMON** batch after executing the **C1-HLMON** batch.

Hold Funding

Oracle Revenue Management and Billing enables you to hold the funding process for a person, account, or a bill through a hold request. If the funding process is kept on hold for a bill, the system does not allow you to add the bill in a funding request. If the funding process is kept on hold for an account, the system does not allow you to add any bills of the account in a funding request. However, if the funding process is kept on hold for a person, the system does not allow you to add any bills of any of its accounts in a funding request.

Note: The system allows you to select the **Funding** option in the hold request when the entity level is set to **Person**, **Account**, or **Bill**.

While adding the funding process in a hold request, you need to specify the date range for which you want to hold the funding process for the persons, accounts, or bills. The system enables you to hold the funding process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the funding process for a person, account, or a bill through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the funding process for the person, account, or bill (the valid values are **Y** or **N**)
- Hold funding start date (required if the hold auto pay is set to **Y**)
- Hold funding end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3681.

Funding Hold Activation

On activating a hold request for a bill, the system does not allow you to add the bill in a funding request. On activating a hold request for an account, the system does not allow you to add any bills of the account in a funding request. However, on activating a hold request for a person, the system does not allow you to add any bills of any of its accounts in a funding request. In addition, if the **Hierarchy** option is selected, the system does not allow you to add any bills of the accounts in

the person's hierarchy in a funding request. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Funding Hold Release

On releasing a hold request for a bill, the system allows you to add the bill in a funding request. On releasing a hold request for an account, the system allows you to add any bills of the account in a funding request. However, on releasing a hold request for a person, the system allows you to add any bills of any of its accounts including its child persons' bills (if the **Hierarchy** option is selected) in a funding request.

Hold Overdue Process

Oracle Revenue Management and Billing enables you to hold the overdue process for an account through a hold request. If the overdue process is kept on hold for an account, the system does not allow you to initiate an overdue process for the account. In addition, if an active overdue process (if any) exists for the account kept on hold, the system cancels the respective overdue process of the account and changes its status to **Inactive**.

Note:

The system allows you to select the **Overdue** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

You cannot select both the **Overdue** and **Delinquency** processes at the same time in the hold request. The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

You should not select the **Overdue** process in one hold request and the **Delinquency** process in another hold request for the same account in the same hold period.

The existing active overdue process (if any) is inactivated only when the following conditions are met:

- The **CI_COPAICP** algorithm is attached to the **Cancel Logic** system event of the respective overdue process template.
- The **CI_OE-NO-DEP** algorithm is attached to the **Cancel Logic** system event of the respective overdue event type.

While adding the overdue process in a hold request, you need to specify the date range for which you want to hold the overdue process for the accounts. The system enables you to hold the overdue process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the overdue process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the overdue process for the account (the valid values are **Y** or **N**)
- Hold overdue start date (required if the hold overdue is set to **Y**)
- Hold overdue end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3681.

Overdue Hold Activation

On activating a hold request for an account, the system sets the postpone credit review until date corresponding to the accounts whose date range falls within the overdue process date range of the hold request. The postpone credit review until date is set to the hold entity end date or overdue process end date whichever is earlier. This means that the system will allow to initiate an overdue process for the account only after the respective postpone credit review until date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the postpone credit review until date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	20-Jan-2025	
	Auto Pay Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Overdue Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Overdue Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Overdue Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 is set to 15-Jan-2025 and the postpone credit review until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the overdue process end date. However, in the scenario 2, the postpone credit review until date for the Account 1 is set to 20-Jan-2025. This is because the overdue process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the postpone credit review until date of the Account 3 is updated every time a new hold request

is created for the same account. On 1st Jan, the postpone credit review until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the postpone credit review until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the postpone credit review until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the postpone credit review until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the postpone credit review until date to the overdue process end date when the entity end date is not specified in the hold request. In the scenario 5, the postpone credit review until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the postpone credit review until date to hold request end date when both the entity end date and overdue process end date are not specified in the hold request. In the scenario 6, the postpone credit review until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the postpone credit review until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the overdue process or hold entity is later than the hold request start date, the postpone credit review until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the overdue process or hold entity start date). For example,

Scenario		Start Date	End Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Overdue Process	15-Mar-2025	31-Mar-2025	
	Auto Pay Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the postpone credit review until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the postpone credit review until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the postpone credit review until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the postpone credit review until date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

Overdue Hold Release

On releasing a hold request for an account, the system sets the postpone credit review until date to the system date for the respective account. Let us understand how the postpone credit review until date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Postpone Credit Review Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Overdue Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Overdue Process	01-Jan-2025	20-Jan-2025				
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Overdue Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Overdue Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Overdue Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the postpone credit review until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the postpone credit review until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The postpone credit review until date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the postpone credit review until date to the system date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the postpone credit review until date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

Hold Refund

Oracle Revenue Management and Billing enables you to hold the refund process for an account through a hold request. If the refund process is kept on hold for an account, the system does not process the refund requests (if any) created for the account. Note that the system does not stop you from creating A/P adjustments for an account from the **Adjustment** screen when the refund process is kept on hold for the account.

Note:
The system allows you to select the **Refund** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

While adding the refund process in a hold request, you need to specify the date range for which you want to hold the refund process for the accounts. The system enables you to hold the refund process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the refund process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the refund process for the account (the valid values are **Y** or **N**)
- Hold refund start date (required if the hold refund is set to **Y**)
- Hold refund end date

You can also create, update, or release a hold request through an inbound web service. For more information, see [Hold Request Creation, Modification, Release, and View Through Inbound Web Service](#) on page 3681.

Refund Hold Activation

On activating a hold request for an account, the system sets the hold refund until date corresponding to the accounts whose date range falls within the refund process date range of the hold request. The hold refund until date is set to the hold entity end date or refund process end date whichever is earlier. This means that the system will allow to process the refund request for the accounts only after the respective hold refund until date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the hold refund until date is derived for an account that is kept on hold through a hold request.

Scenario		Start Date	End Date	Hold Refund Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025

Scenario		Start Date	End Date	Hold Refund Until Date
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Refund Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Refund Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Refund Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the hold refund until date for the Account 1 is set to 15-Jan-2025 and the hold refund until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the refund process end date. However, in the scenario 2, the hold refund until date for the Account 1 is set to 20-Jan-2025. This is because the refund process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the hold refund until date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the hold refund until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the hold refund until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the hold refund until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the hold refund until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the hold refund until date to the refund process end date when the entity end date is not specified in the hold request. In the scenario 5, the hold refund until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the hold refund until date to hold request end date when both the entity end date and refund process end date are not specified in the hold request. In the scenario 6, the hold refund until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the hold refund until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the refund process or hold entity is later than the hold request start date, the hold

refund until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after refund process or hold entity start date). For example,

Scenario		Start Date	End Date	Hold Refund Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Refund Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the hold refund until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the hold refund until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the hold refund until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the hold refund until date for the respective accounts. In addition, the system changes the status of the non-final refund request (if any) for the respective accounts to **Hold**. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the hold refund until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed. In addition, the **C1-HLDRQ** batch changes the status of the non-final refund request (if any) for the respective accounts to **Hold**.

Refund Hold Release

On releasing a hold request for an account, the system sets the hold refund until date to the system date for the respective accounts. Let us understand how the hold refund until date is updated for an account when the hold is manually or automatically released.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Hold Refund Until Date
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Refund Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Refund Process	01-Jan-2025	20-Jan-2025				

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Hold Refund Until Date
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Refund Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Refund Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Refund Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the hold refund until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the hold refund until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the hold refund until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The hold refund until date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.

If the number of accounts in the hold request is less than the defer processing count (specified in the respective hold request type), the system immediately sets the hold refund until date to the system date for the respective accounts. In addition, the system immediately changes the status of the refund request (if any) for the respective accounts from **Hold** to its previous status. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the hold refund until date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. In addition, the **C1-HLMON** batch changes the status of the refund request (if any) for the respective accounts from **Hold** to its previous status.

Hold Mass Accounts Using Selection Criteria

Oracle Revenue Management and Billing enables you to add multiple accounts in a hold request by specifying their respective account ID. Alternatively, you can also specify the selection criteria to derive the list of accounts that you want to add in a hold request. The **Use Selection Criteria** option is available when you set the entity level to **Account** while creating a hold request. On selecting the **Use Selection Criteria** option, the **Hold Entities** section is removed from

the **Hold Request** screen. Instead, a section named **Account Selection Criteria** appears in the **Hold Request** screen. This section enables you to specify the criteria for deriving accounts using the account, person, policy, or individual membership details. You can specify the criteria for deriving accounts using the policy or individual membership details only when the **Environment Type** option type of the **SYSDT** feature configuration is set to **H**.

On saving a hold request with the account selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **Y**
- Creates the hold request in the **Entity Derivation Pending** status

Note: You cannot edit the account selection criteria when the hold request is in the **Entity Derivation Pending** status.

However, while saving a hold request without the account selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **N**
- Creates the hold request in the **Draft** status

The **C1-HLDET** batch then checks whether there are any hold requests in the **Entity Derivation Pending** status. The system considers those hold requests whose start date is earlier than or equal to batch business date. If there is a hold request in the **Entity Derivation Pending** status, the batch derives the accounts based on the criteria defined for the hold request. The derived accounts are stored as the hold entities for the hold request in the **C1_HOLD_REQ_DTLS** table. The start date of all the hold entities is set to the system date and end date is set to null. Finally, the **massHoldSw** field of the hold request is set to **N** and the status of the hold request is changed from **Entity Derivation Pending** to **Draft**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Once the status of the hold request is changed to **Draft**, you can modify the required details of the hold request expect the filter criteria. You can add more accounts (if required) manually from the user interface. You can also edit or delete the accounts derived through the filter criteria from the hold request. On activating a hold request created using a selection criterion, the start date of the hold request, hold entity, or hold process is not changed when it is earlier than the system date.

How to define an account selection criteria	Defining an Account Selection Criteria for a Hold Request on page 1882

Hold Mass Persons Using Selection Criteria

Oracle Revenue Management and Billing enables you to add multiple persons in a hold request by specifying their respective person ID. Here, you can select the **Hierarchy** option corresponding to the person indicating that you want to hold the processes of the person, its immediate accounts, its child persons, and its child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy.

Alternatively, you can also specify the selection criteria to derive the list of persons that you want to add in a hold request. The **Use Selection Criteria** option is available when you set the entity to **Person** while creating a hold request. On selecting the **Use Selection Criteria** option, the **Hold Entities** section is removed from the **Hold Request** screen. Instead, a section named **Person Selection Criteria** appears in the **Hold Request** screen. This section enables you to specify the criteria for deriving persons using the person details.

On saving a hold request with the person selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **Y**
- Sets the **HIERARCHY_SW** field corresponding to each hold entity of the hold request to **N**
- Creates the hold request in the **Entity Derivation Pending** status

Note: You cannot edit the person selection criteria when the hold request is in the **Entity Derivation Pending** status.

However, while saving a hold request without the person selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **N**
- Sets the **HIERARCHY_SW** field corresponding to each hold entity of the hold request to **Y** or **N** depending on whether the Hierarchy option is selected or not corresponding to the hold entity
- Creates the hold request in the **Draft** status

The **C1-HLDET** batch then checks whether there are any hold requests in the **Entity Derivation Pending** status. The system considers those hold requests whose start date is earlier than or equal to batch business date. If there is a hold request in the **Entity Derivation Pending** status, the batch derives the persons based on the criteria defined for the hold request. The derived persons are stored as the hold entities for the hold request in the **C1_HOLD_REQ_DTLS** table. The start date of all the hold entities is set to the system date and end date is set to null. Finally, the **massHoldSw** field of the hold request is set to **N** and the status of the hold request is changed from **Entity Derivation Pending** to **Draft**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Once the status of the hold request is changed to **Draft**, you can modify the required details of the hold request expect the filter criteria. You can also set the **Hierarchy** option corresponding to the hold entity in the hold request. You can add more persons (if required) manually from the user interface. You can also edit or delete the persons derived through the filter criteria from the hold request. On activating a hold request created using a selection criterion, the start date of the hold request, hold entity, or hold process is not changed when it is earlier than the system date.

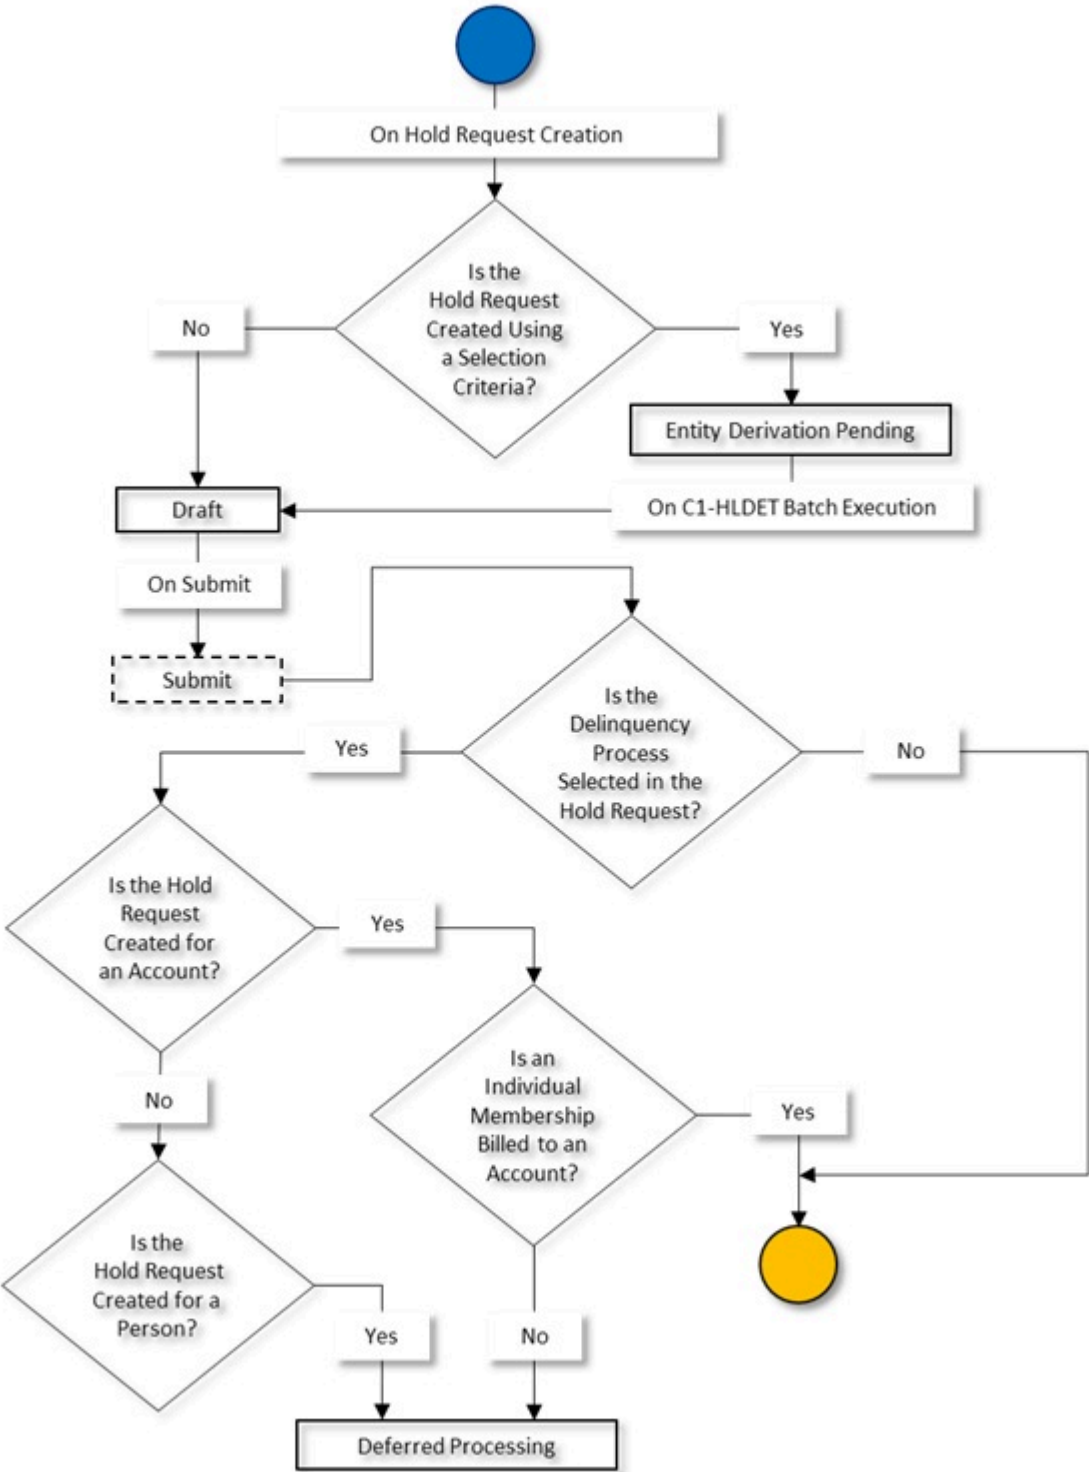

Note: If you select the **Hierarchy** option corresponding to the person, the system will hold the processes of the person, its immediate accounts, its child persons, and its child persons' accounts. The system will consider only the child persons and not the grandchild persons from the person's hierarchy. However, if you do not select the **Hierarchy** option corresponding to the person, the system will hold the processes of the person and its immediate accounts.

How to define a person selection criteria	Defining a Person Selection Criteria for a Hold Request on page 1892

Hold Request (Without Approval) Status Transition

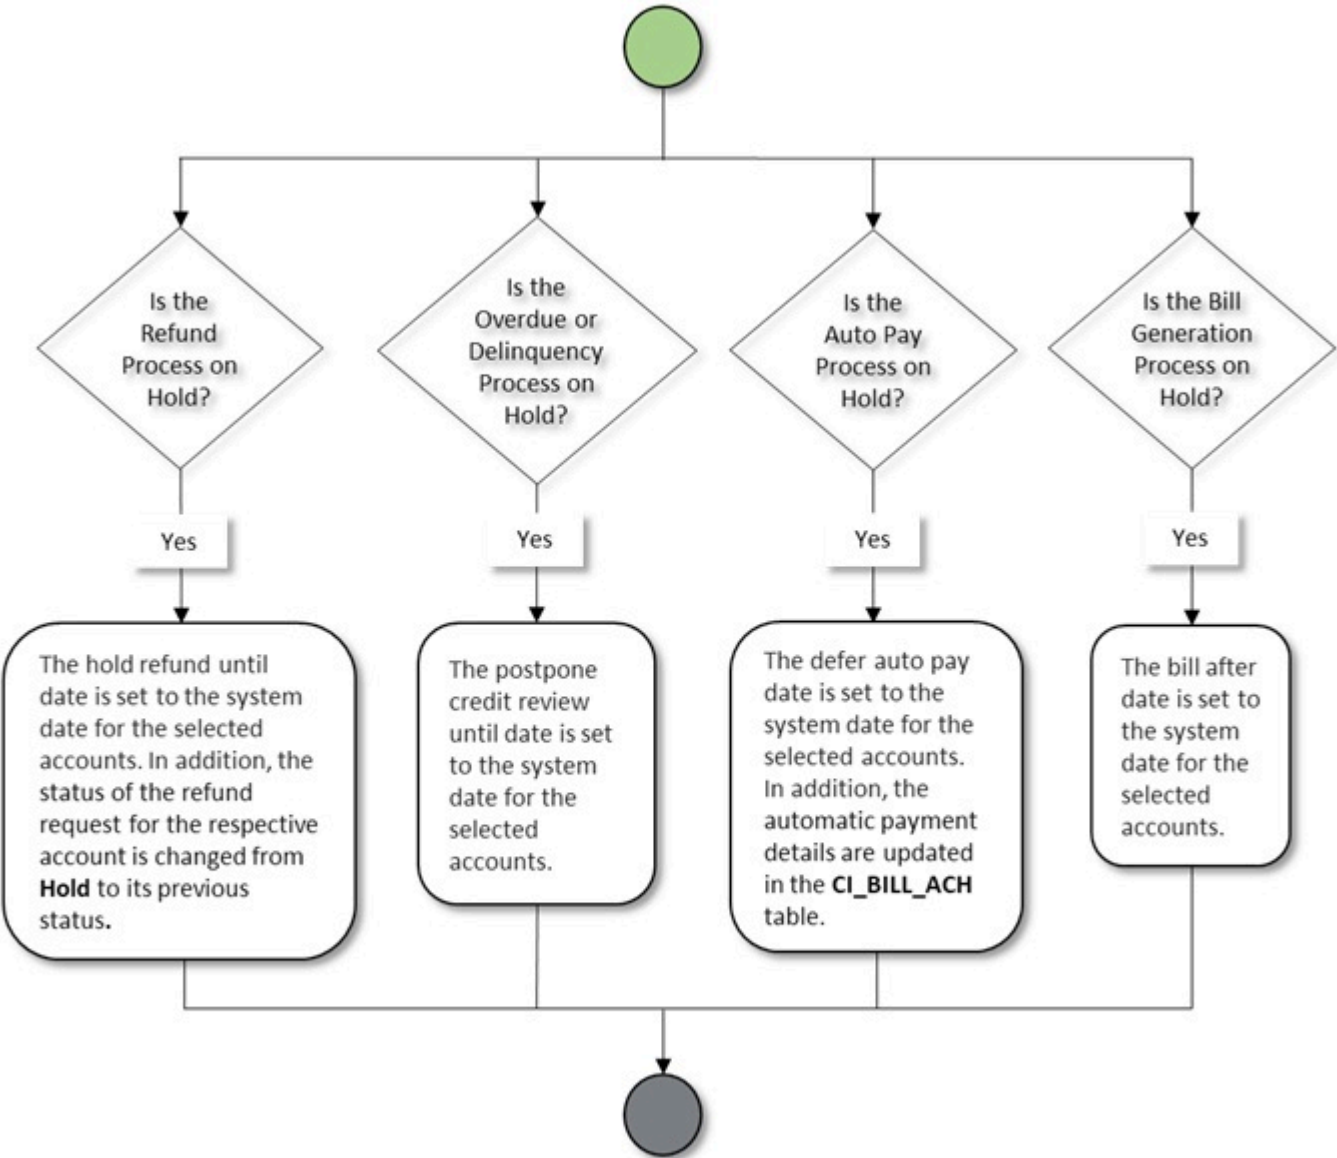

The following figure graphically indicates how a hold request moves from one status to another when the approval process is not configured in the hold request type:

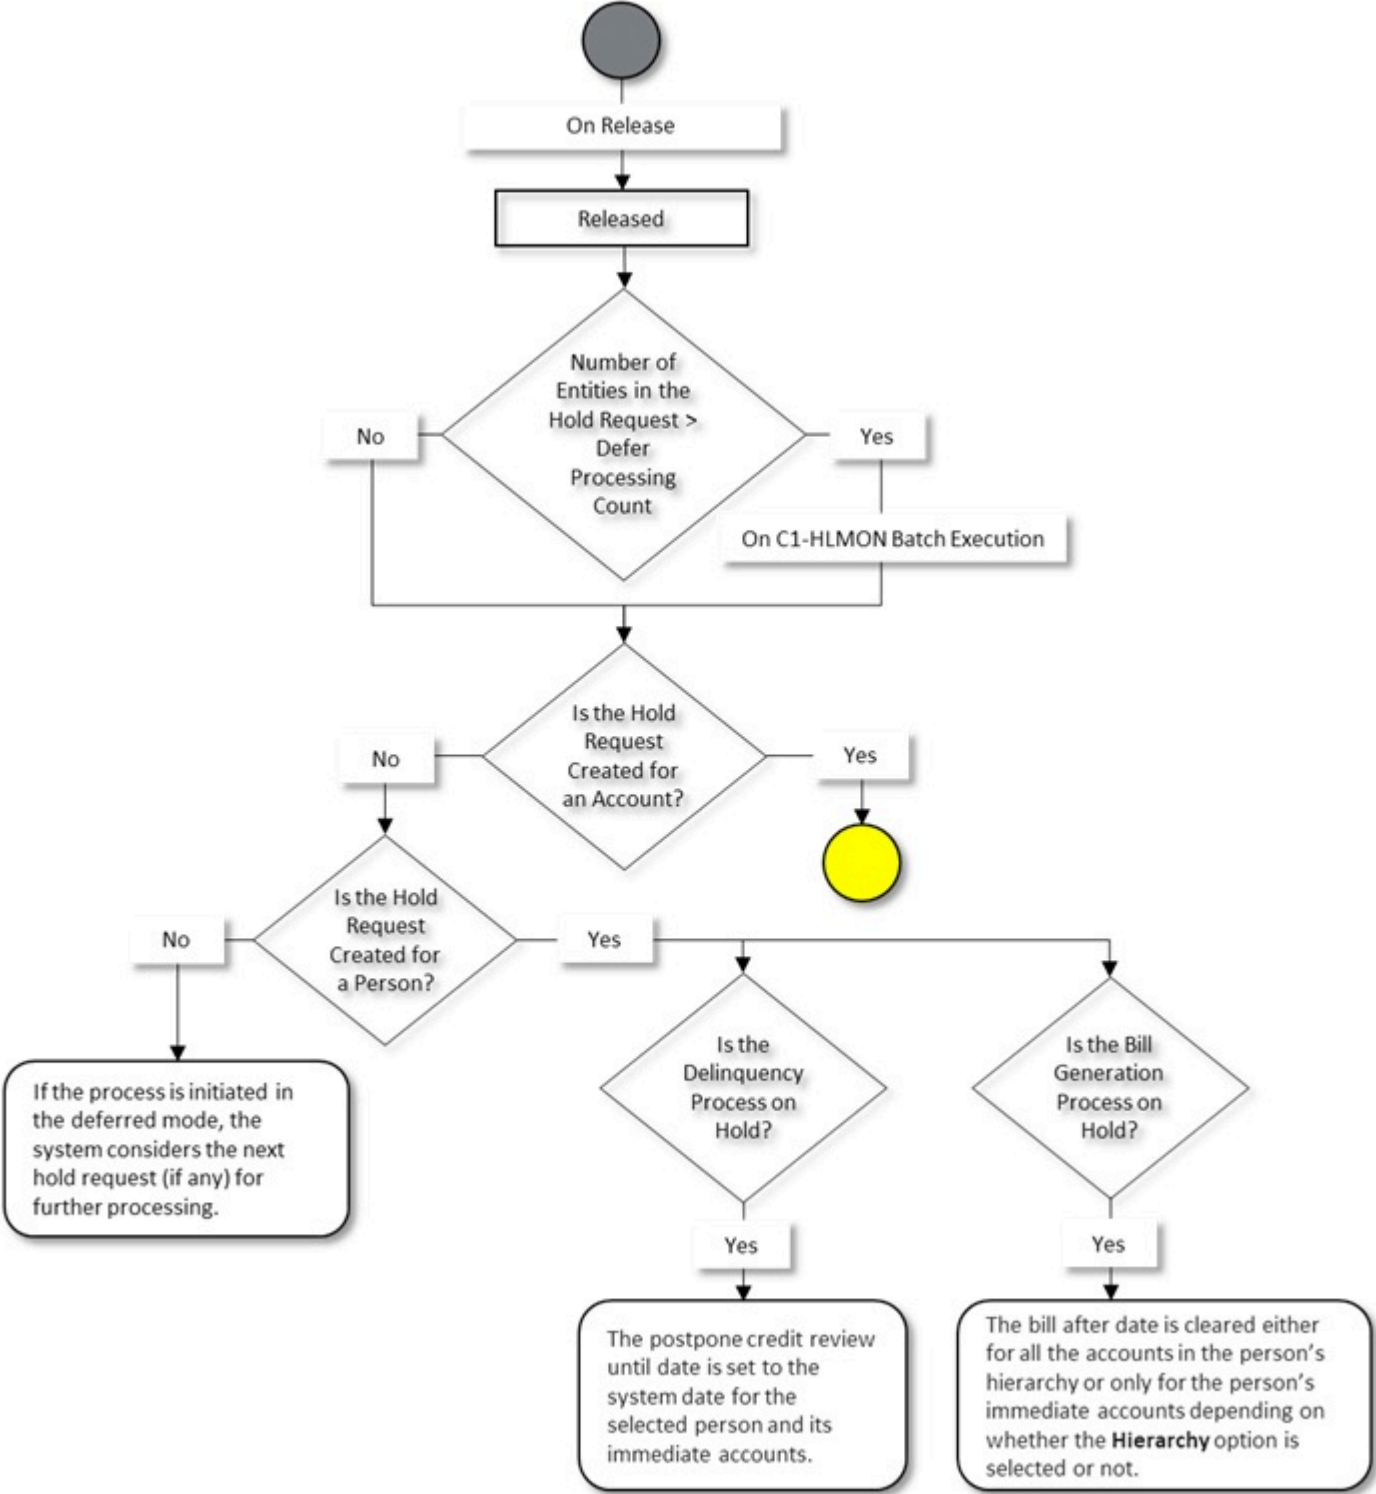

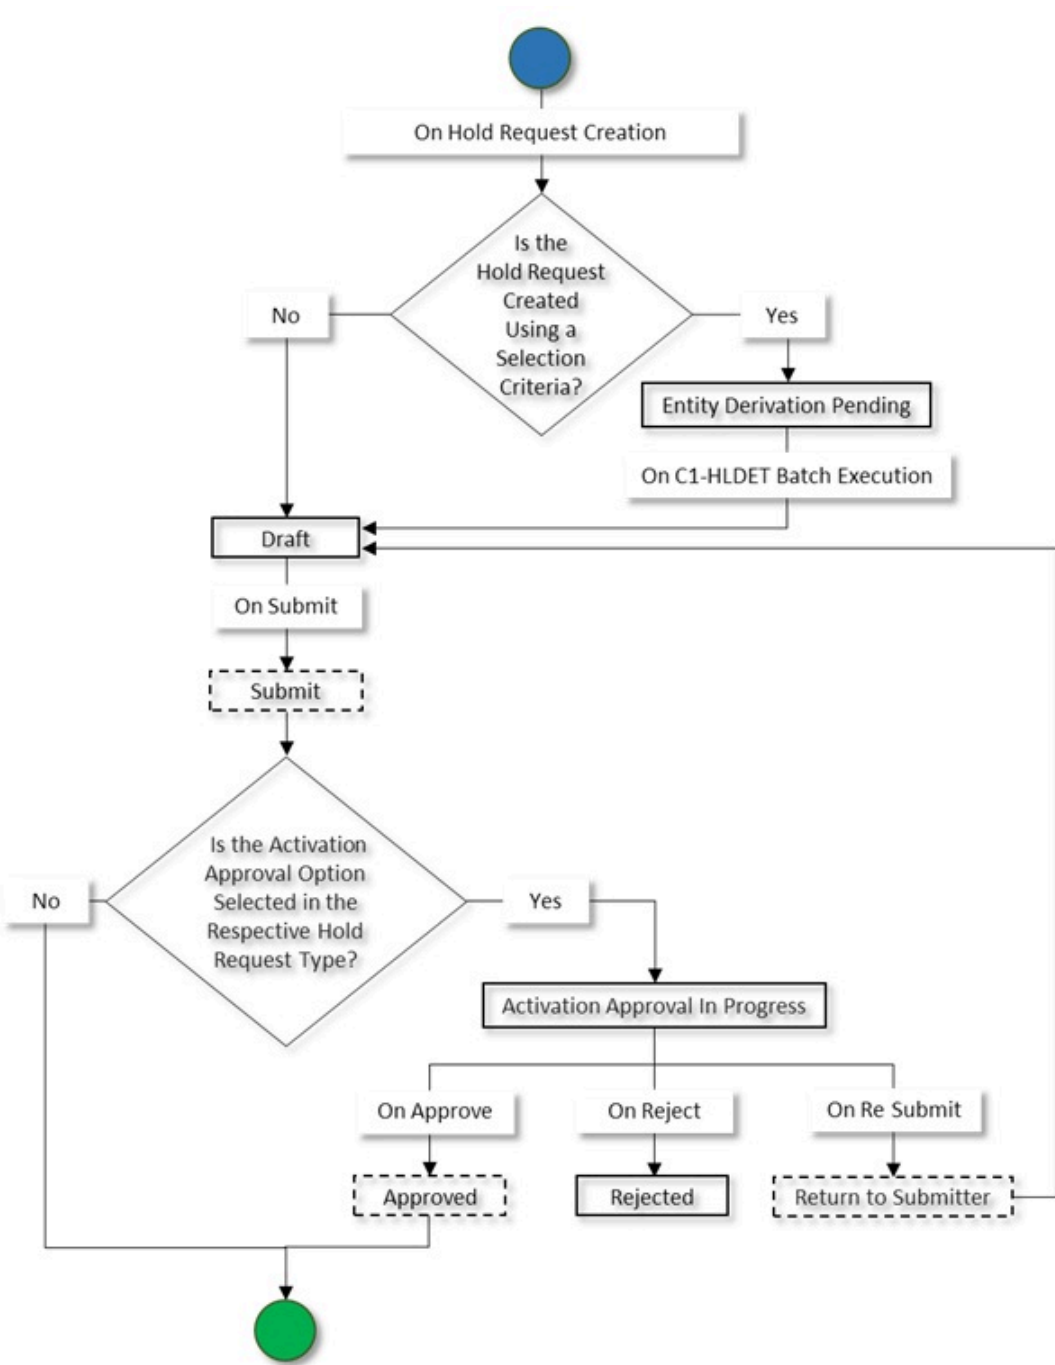

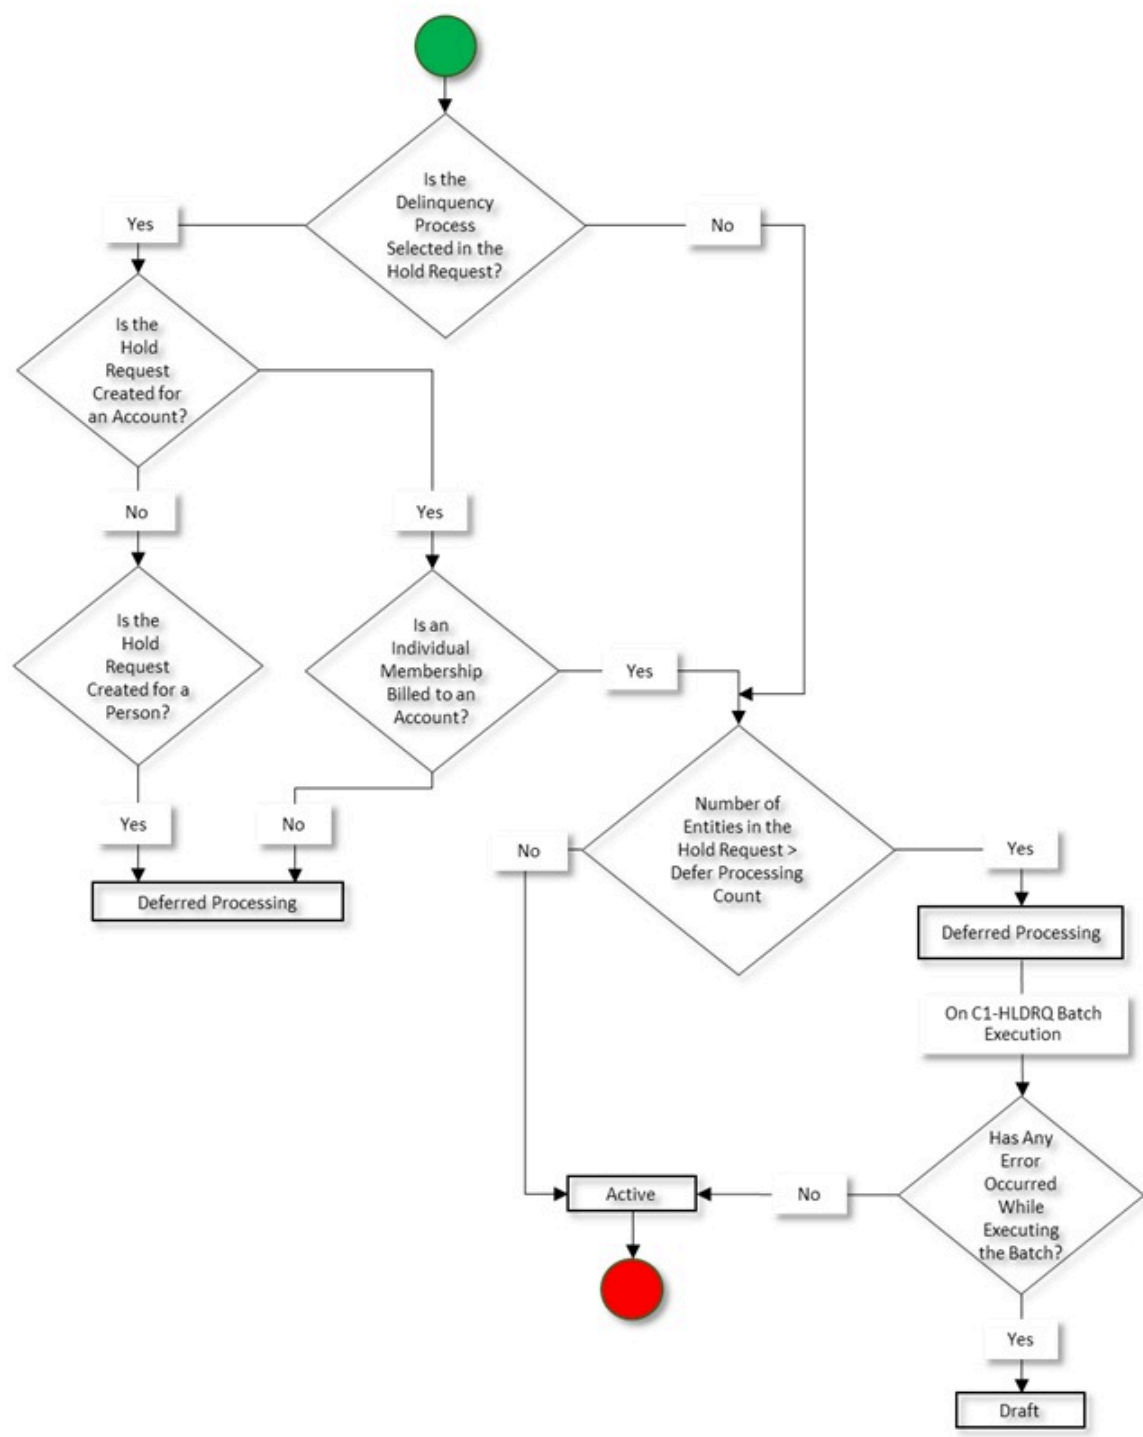

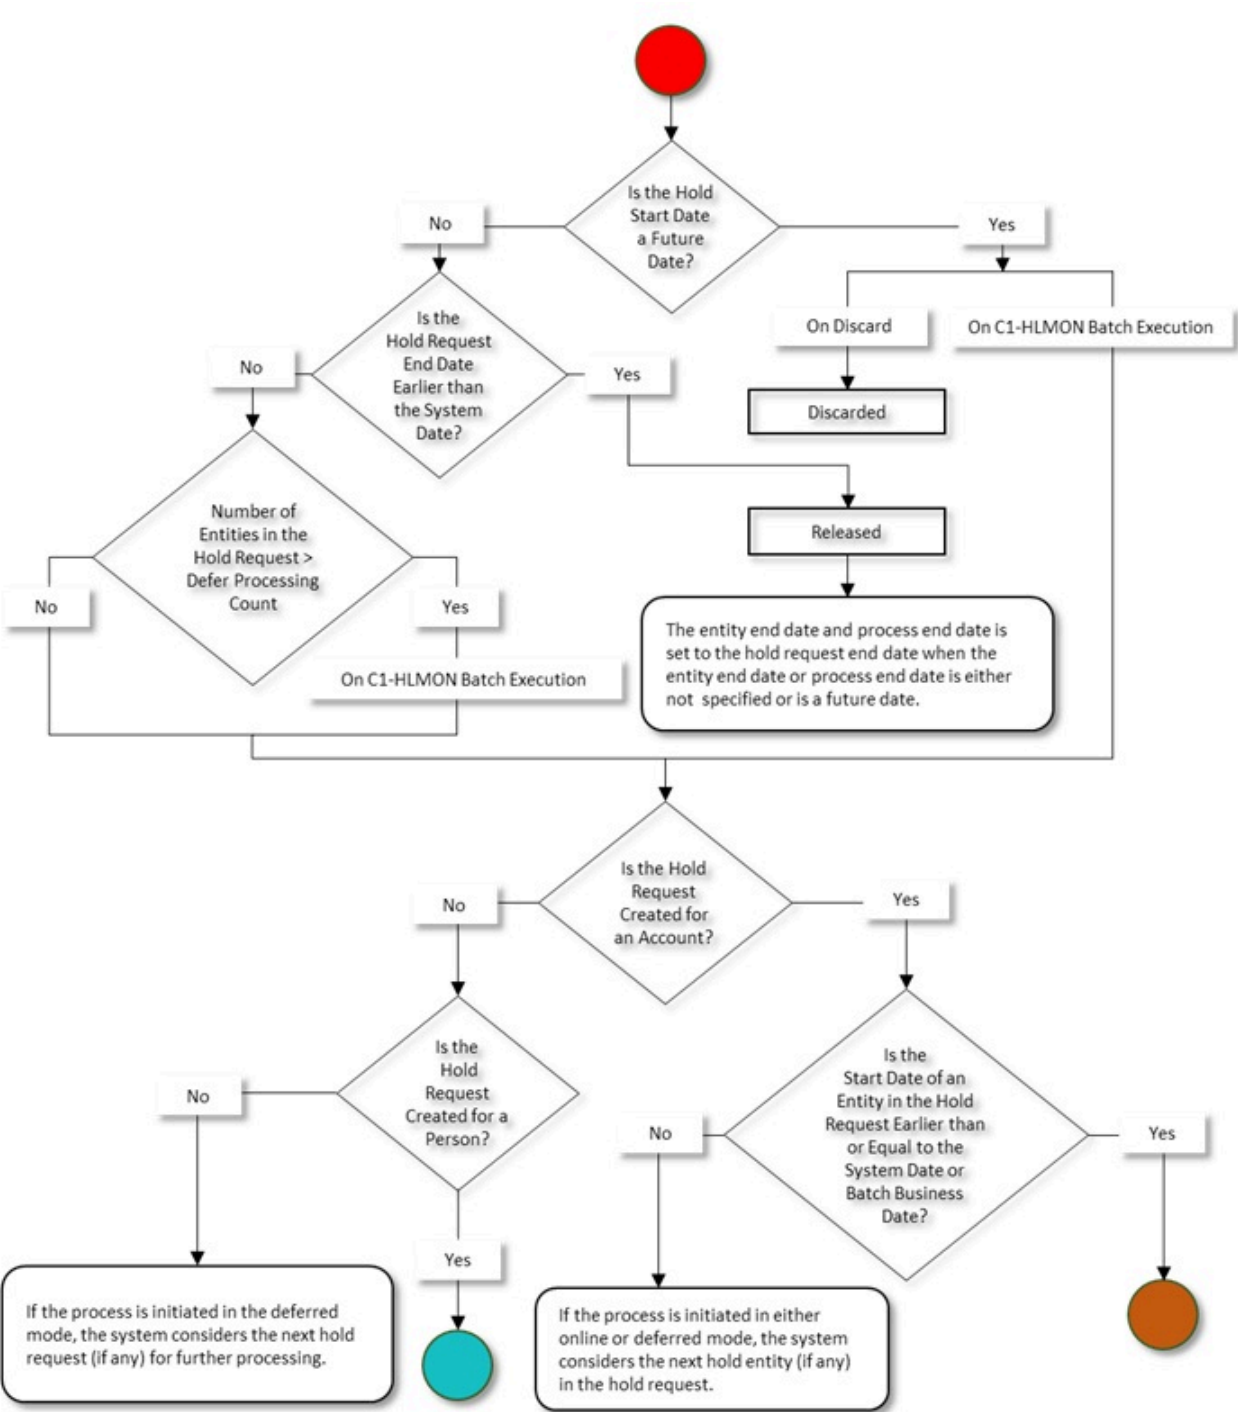

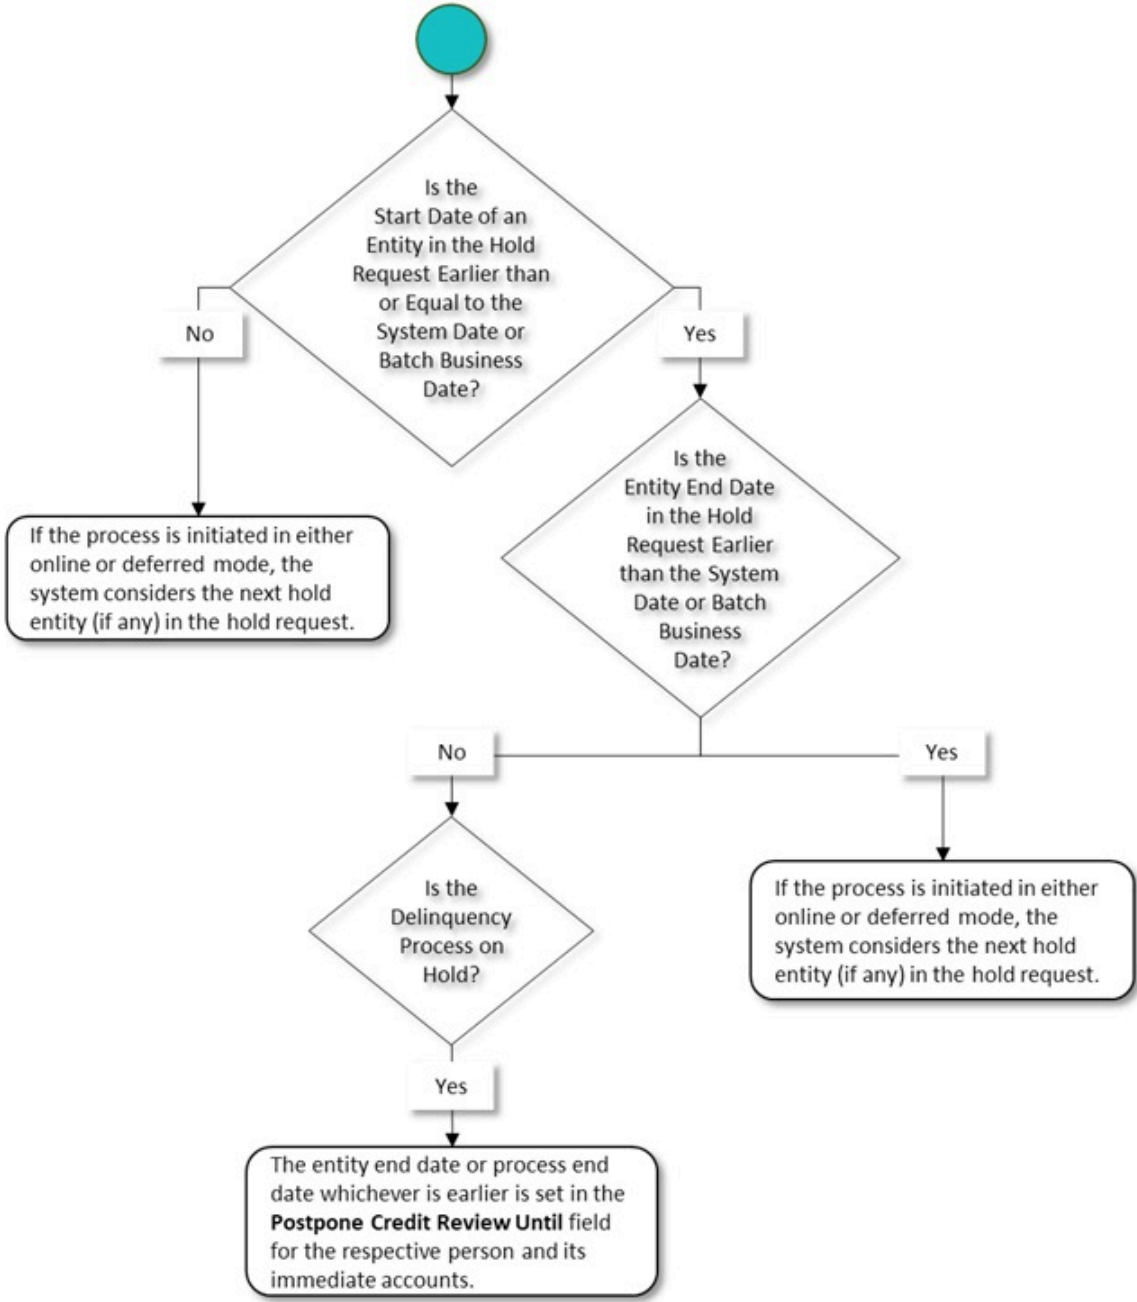

Hold Request (With Approval) Status Transition

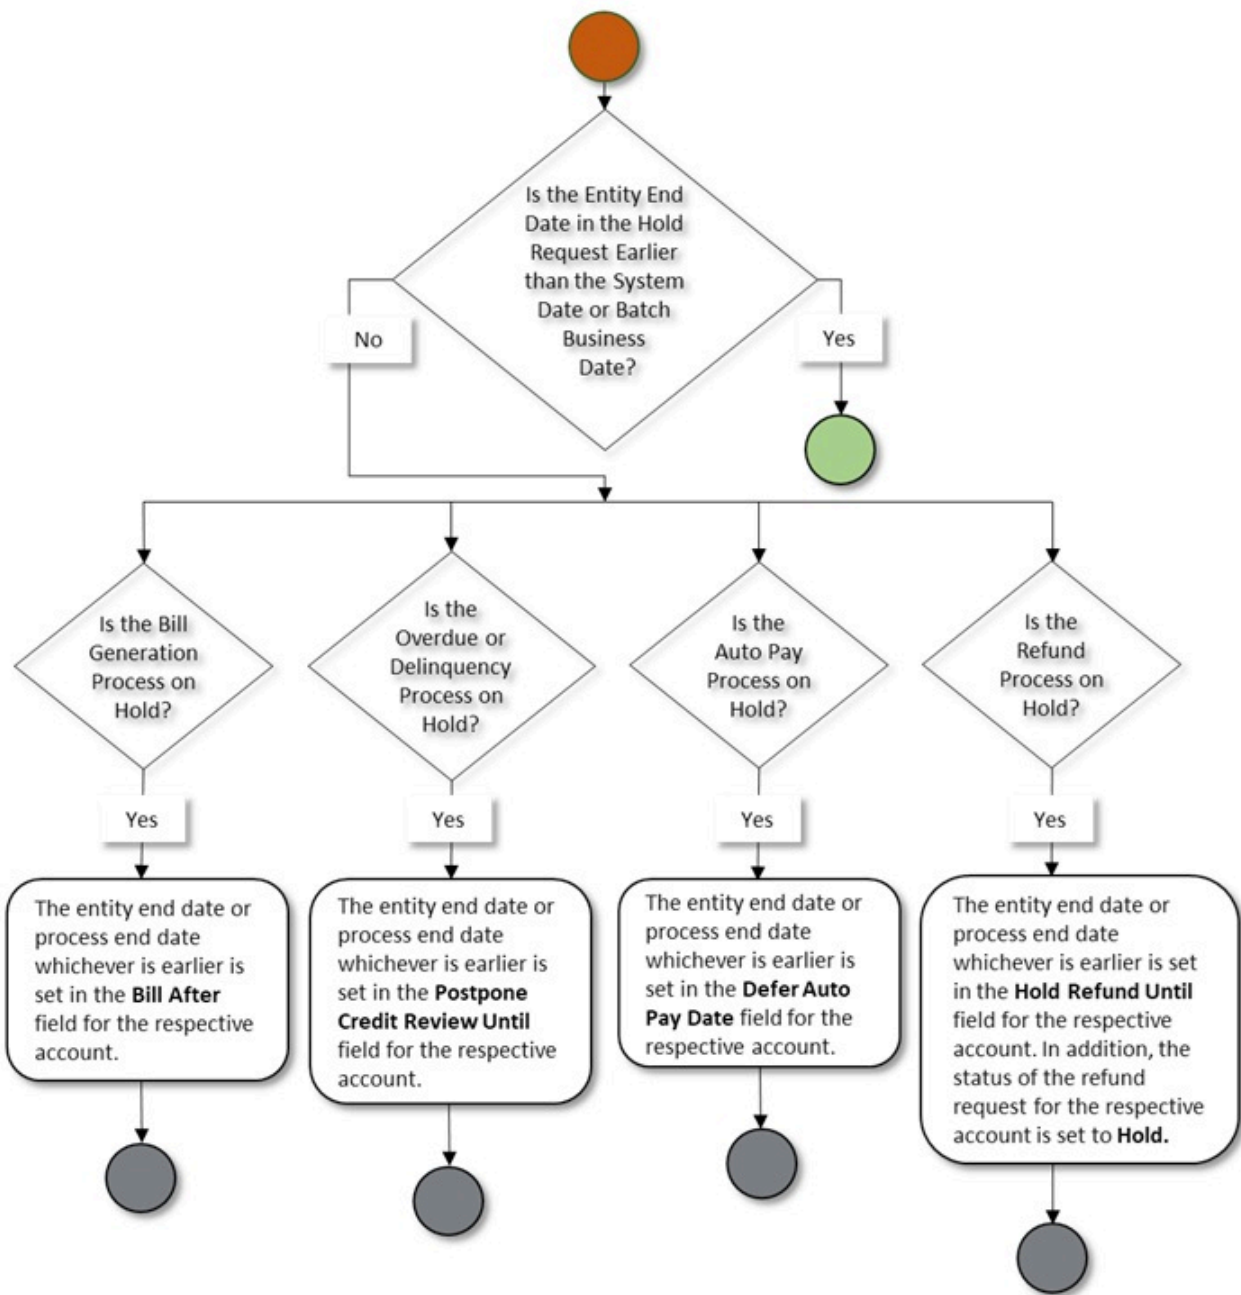

The following figure graphically indicates how a hold request moves from one status to another when the approval process is configured in the hold request type:

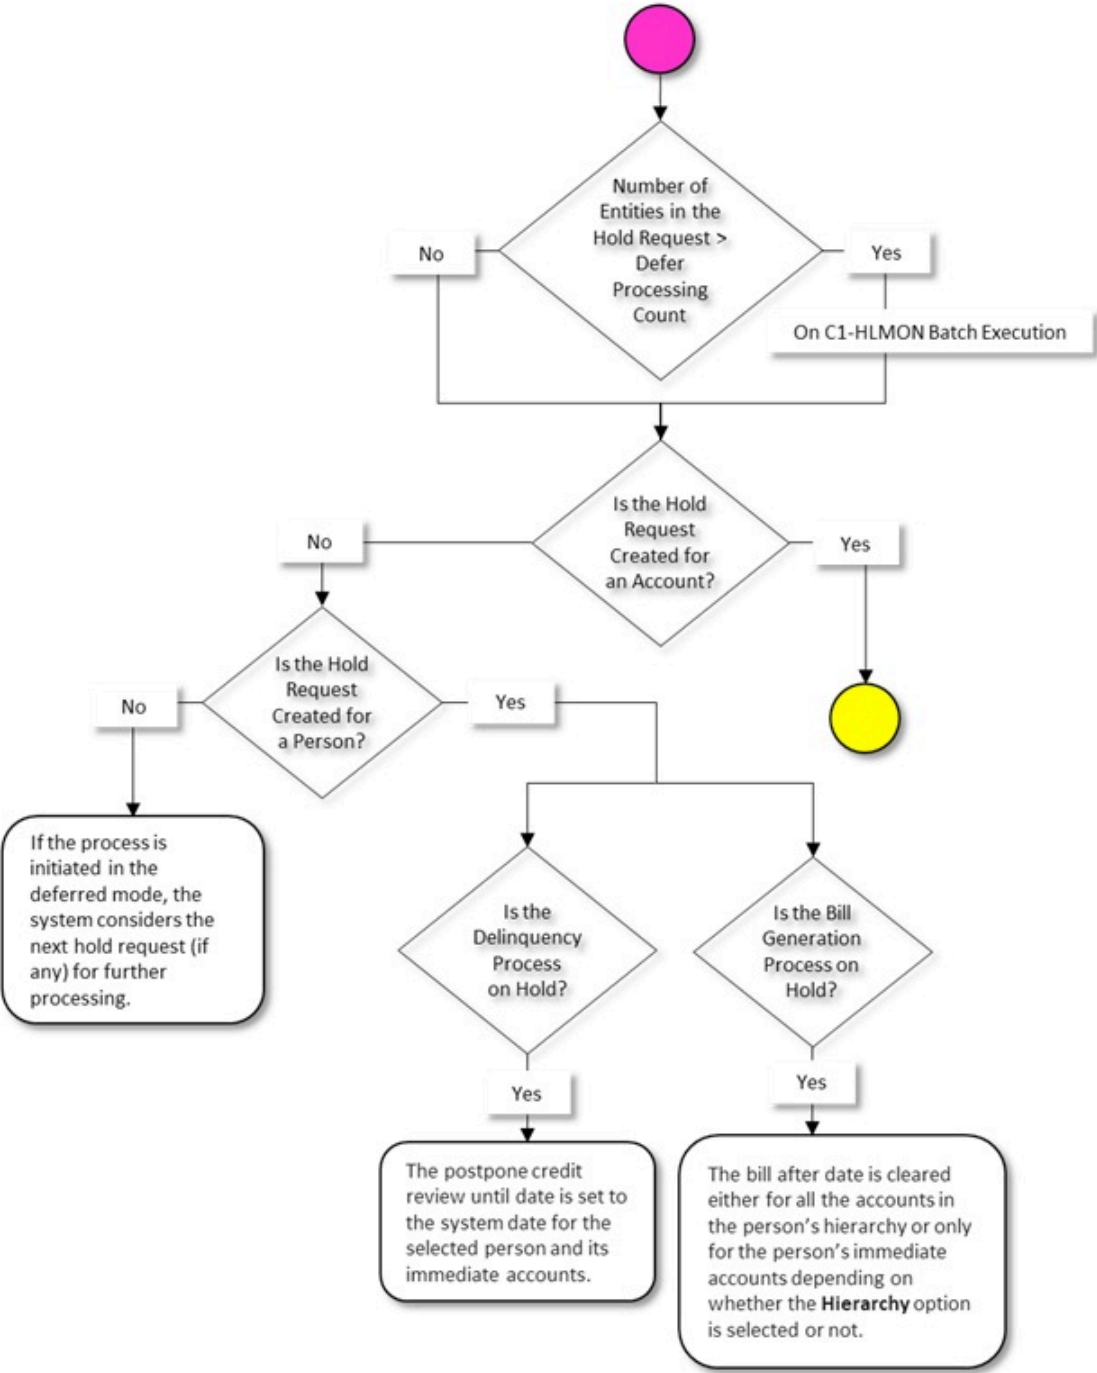

Setting the C1-HOLDSRCH Feature Configuration

The **C1-HOLDSRCH** feature configuration enables you to set certain feature-specific options which are used while creating or viewing a hold request in the system.

Prerequisites

To set the **C1-HOLDSRCH** feature configuration, you should have:

- Foreign key references defined for different entities, such as person, account, and bill
- Required hold request types defined in the application

Procedure

To set the **C1-HOLDSRCH** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-HOLDSRCH** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account FK Ref	Used to indicate the foreign key reference for account. The system then generates information string for the account using the specified foreign key reference and accordingly displays it in the Hold Request screen.	Yes
	Note: You must specify a foreign key reference which is already defined in the system. The ACCT foreign key reference for account is shipped with the product. You can also use a custom foreign key reference, if required.	
Bill FK Ref	Used to indicate the foreign key reference for bill. The system then generates information string for the bill using the specified foreign key reference and accordingly displays it in the Hold Request screen.	Yes
	Note: You must specify a foreign key reference which is already defined in the system. The C1-BILL foreign key reference for bill is shipped with the product. You can also use a custom foreign key reference, if required.	
Default Hold Request Type for IWS	Used to indicate the hold request type using which you want to create a hold request through an inbound web service. The system uses the specified hold request type when it is not received in the inbound request.	Yes
	Note: You must specify a hold request type which is already defined in the system. Here, you must specify an active hold request type where the approval process is not configured for activation and release.	
Funding Exclusion Reason	Used to indicate the reason why the bill record was excluded from the funding request. The system stamps this reason	Yes

Option Type	Description	Mandatory (Yes or No)
	corresponding to the bill record when you create a hold request for a bill via the Funding Request screen.	
Person FK Ref	Used to indicate the foreign key reference for person. The system then generates information string for the person using the specified foreign key reference and accordingly displays it in the Hold Request screen.	Yes
	Note: You must specify a foreign key reference which is already defined in the system. The PERS foreign key reference for person is shipped with the product. You can also use a custom foreign key reference, if required.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the SYSDT Feature Configuration

The **SYSDT** feature configuration enables you to set certain environment options which will be used across features in the application.

Procedure

To set the **SYSDT** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **SYSDT** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Environment Type	Used to indicate whether the environment will be used for the financial services or health insurance domain. The valid values are: <ul style="list-style-type: none"> B - Used when you want to use the environment for the financial services domain. H - Used when you want to use the environment for the health insurance domain. 	Yes
Maximum Attachment Size	Used to specify the maximum size limit for a file that can be uploaded in the system. The size is interpreted in megabytes (MB). For example, if you want to set the maximum size limit of a file to 5 MB, then specify the value as 5 in this option type.	No
	Note: You must specify a value greater than zero. If you do not specify any value for this option type, the system would not enforce any limit while uploading a file in the system.	
System Override Date	Used when you want to override the system date. The system will then use the specified date as the system date instead of retrieving the system date from the database.	No
	Note: You must specify the date in the YYYY-MM-DD format. This option type is valid only when an appropriate system property is set. It provides a way to override the system date for online operations of all the users in the region. See the online help (search for 'System Override Date') for more information about the system property and how to override the system date at the user level rather than at the system level.	

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Algorithms Used in C1-HoldRequest

The following table lists the algorithms which are attached to the **C1-HoldRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-HOLD-INF	C1-HOLD-INF	Refer to C1-HOLD-INF on page 1842.
Validation	C1-HLDVALDN	C1-HLDVALDN	Refer to C1-HLDVALDN on page 1843.

Discarded	-	-	-	-

C1-HOLD-INF

This algorithm generates the hold request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Hold Request Type Description
2. Entity Level (i.e., Person, Account, or Bill)
3. Hold Request Status Description
4. Hold Request ID

C1-HLDVALDN

This algorithm validates the following while creating or editing a hold request:

- At least one process is selected for the hold request.

Note: Entity selection is optional.

- No duplicate entity and process are selected for the hold request.
- The same entity is not kept on hold with the same hold reason in multiple hold requests.
- The hold request end date is specified.
- The process start date is not earlier than the hold request start date.
- The entity start date is not earlier than the hold request start date.
- The process end date is not later than to the hold request end date.
- The entity end date is not later than the hold request end date.
- At least one process start date is earlier than or equal to the entity start date.
- At least one process end date is later than or equal to the entity end date.
- The **Overdue**, **Auto Pay**, and **Refund** processes are not selected when the entity level is set to **Person**.
- The **Bill Generation**, **Overdue**, **Auto Pay**, **Refund**, and **Delinquency** processes are not selected when the entity level is set to **Bill**.
- Both **Overdue** and **Delinquency** processes are not selected at a time in the hold request.

Note: The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain.

- A bill with non-zero outstanding bill amount is added in the hold request.
- Each entity's start and end dates should fall within at least one process's start and end dates.
- The hold amount is less than or equal to the outstanding amount when the entity level is set to **Bill**.

In addition, this algorithm validates the following when changes are made to an active hold request:

- An existing process or entity is not deleted from the hold request.
- Any process details other than the end date is not modified in the hold request.
- The start date of the hold request, hold entity, or hold process is not modified in the hold request.
- The hold reason in the hold request is not modified.
- The end date of the hold request, hold entity, or hold process is not set to the date which is earlier than the system date.
- A new process is added with the start date later than or equal to the system date.
- A new entity is not added to an active hold request.
- A past end date of an entity or process is not changed in the hold request.

C1-HLDARCTRN

This algorithm is invoked when you create a hold request. If the hold request is created through the **Account Receivable Central** or **Delinquency Central** screen or through an inbound web service, it changes the status of the hold request to **Active**. However, if the hold request is created through the **Hold Request** screen, it changes the status of the hold request to **Draft**.

C1-CKMSHLD

This algorithm is invoked when the hold request is created in the **Draft** status. If the **massHoldSw** field is set to **Y** for the hold request, this algorithm changes the status of the hold request from **Draft** to **Entity Derivation Pending**.

Note: The system sets the **massHoldSw** field to **Y** when the **Use Selection Criteria** option is selected while creating a hold request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-MASSHOLD

This algorithm is invoked when the **C1-HLDET** batch is executed. If the **massHoldSw** field is set to **Y** for the hold request, this algorithm derives the filter criteria specified in the hold request. It then creates a dynamic SQL query to fetch the list of accounts or persons that meets the filter criteria depending on whether the entity level is set to **Account** or **Person**. The derived accounts or persons are then stored as the hold entities for the hold request in the **C1_HOLD_REQ_DTLS** table. This algorithm sets the start date of all the hold entities to the system date and end date to null. Once the hold request is updated, it then sets the **massHoldSw** field of the hold request to **N** and changes the status of the hold request from **Entity Derivation Pending** to **Draft**.

Note:

The system sets the **massHoldSw** field to **Y** when the **Use Selection Criteria** option is selected while creating a hold request.

The filters are stored in the XML format in the **BO_DATA_AREA** column of the **C1_HOLD_REQ** table. If the entity level is set to **Person**, the filter values are stored within the **<personFilter>** and **</personFilter>** tags. However, if the entity level is set to **Account**, the filter values are stored within the **<acctFilter>** and **</acctFilter>**, **<policyFilter>** and **</policyFilter>**, **<personFilter>** and **</personFilter>**, or **<indMembershipFilter>** and **</indMembershipFilter>** tags, respectively, depending on the search option used in the hold request.

Once the status of the hold request is changed to **Draft**, you can modify the required details of the hold request except the filter criteria. You can add more accounts (if required) manually from the user interface. You can also edit or delete the accounts derived through the filter criteria from the hold request.

C1-HOLDSUBMT

This algorithm is invoked when you click the **Submit** button. It checks whether the **Activation Approval** option is selected in the respective hold request type. If the **Activation Approval** option is selected in the respective hold request type, it changes the status of the hold request to **Activation Approval In Progress**. However, if the **Activation Approval**

option is not selected in the respective hold request type, it checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm changes the status of the hold request to **Active**. Note that the system does not allow you to activate a hold request when the hold request end date is earlier than the system date. However, if the number of entities added in the hold request exceeds the defer processing count, this algorithm changes the status of the hold request to **Deferred Processing**.

In addition, it displays a warning message while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date.

Note that if the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HOLDAPP

This algorithm is invoked when the status of the hold request is changed to **Activation Approval In Progress**. It creates a To Do using the activation approval To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the activation approval To Do role that is specified in the respective hold request type. In addition, it creates a log entry for the hold request when the To Do is created for the approver.

C1-HOLDAPRVD

This algorithm is invoked when you click the **Approve** button. It checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm changes the status of the hold request to **Active**. In addition, it changes the start date of the hold request, hold entities, and the hold processes to the system date. Note that the system does not allow you to activate a hold request when the hold request end date is earlier than the system date. However, if the number of entities added in the hold request exceeds the defer processing count, this algorithm changes the status of the hold request to **Deferred Processing**.

Note that if the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level

is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

C1-HLDRESUBM

This algorithm is invoked when you click the **Re Submit** button. It changes the status of the hold request to **Draft**. The submitter can then make the required changes and resubmit the hold activation request for approval.

In addition, it creates a To Do using the submitter To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the submitter To Do role that is specified in the respective hold request type. Note that the To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type. It also creates a log entry for the hold request when the To Do is created for the submitter.

Note:

While requesting a submitter to resubmit a hold activation request, the approver needs to specify the comments so that the submitter can make the required changes in the hold request.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

C1-HOLDACTV

This algorithm is invoked when the status of the hold request is changed to **Active**. It validates the following on activation:

- The entity start date is not earlier than the hold request start date.
- The entity end date is not later than the hold request end date.
- The hold amount is less than or equal to the outstanding amount when the entity level is set to **Bill**.
- A bill with non-zero outstanding bill amount is added in the hold request.
- The entity end date or process end date is not earlier than the system date.

It also does the following (in the online mode):

- If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date.
- If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to **Inactive**.

In addition, it does the following in the online or deferred (i.e., when the **C1-HLDRQ** or **C1-HLMON** batch is executed) mode depending on the defer processing count:

- If the hold request is created for the **Account** entity, the **Bill Generation** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the bill after date to the hold entity end date or bill generation process end date whichever is earlier. In addition, it creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
- If the hold request is created for the **Account** entity, the **Overdue** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the postpone credit review until date to the hold entity end date or overdue process end date whichever is earlier.
- If the hold request is created for the **Account** entity, the **Delinquency** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the postpone credit review until date to the hold entity end date or delinquency process end date whichever is earlier.
- If the hold request is created for the **Person** entity, the **Delinquency** process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date, it sets the postpone credit review until date to the hold entity end date or delinquency process end date whichever is earlier. If the **Hierarchy** option is selected

for the person, this algorithm sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. However, if the **Hierarchy** option is not selected for the person, this algorithm sets the postpone credit review until date for the person and its immediate accounts (where the person is the main customer).

Note: This happens only in the deferred mode when the **C1-HLDRQ** or **C1-HLMON** batch is executed.) For more information, see [Hold Delinquency](#) on page 1808.

- If the hold request is created for the **Person** entity, the **Bill Generation** process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date, it sets the bill after date to the hold entity end date or bill generation process end date whichever is earlier. The bill after date is set either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Note: This happens only in the deferred mode when the **C1-HLDRQ** or **C1-HLMON** batch is executed.) In addition, it creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.

- If the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the defer auto pay date to the hold entity end date or auto pay process end date whichever is earlier.
- If the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, it updates the automatic payment details of the debit bills (if any) for the respective account in the **CI_BILL_ACH** table.
- If the hold request is created for the **Account** entity, the **Refund** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the hold refund until date to the hold entity end date or refund process end date whichever is earlier. In addition, the status of the non-final refund request (if any) for the respective account is set to **Hold**.

Note:

If the hold entity end date is not specified, the system will consider the respective process end date while deriving the above dates. If both the hold entity end date and respective process end date are not specified, the system will consider the hold request end date while deriving the above dates.

This algorithm does not change the start date of the hold request, hold entity, or hold process when it is a future date.

This algorithm contains the following parameter:

- **Alert Type** – Used to indicate the alert type using which the alerts should be created in the dashboard whenever an account is kept on hold. You can then click on the hyperlink and navigate to the **Alerts** tab of the **Account** screen. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released. This parameter is optional.

Note: You need to specify the same alert type in both the **C1-HOLDACTV** and **C1-RELENTITY** algorithms.

C1-RELAPP

This algorithm is invoked when the status of the hold request is changed to **Release Approval in Progress**. It creates a To Do using the release approval To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the release approval To Do role that is specified in the respective hold request type. In addition, it creates a log entry for the hold request when the To Do is created for the approver.

C1-HRQ-TRANS

This algorithm is invoked when you click the **Approve** button. It changes the status of the hold request to **Released**.

C1-RELRESUBM

This algorithm is invoked when you click the **Re Submit** button. It changes the status of the hold request to **Active**. The submitter can then make the required changes and resubmit the hold release request for approval.

In addition, it creates a To Do using the submitter To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the submitter To Do role that is specified in the respective hold request type. Note that the To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

Note:

While requesting a submitter to resubmit a hold release request, the approver needs to specify the comments so that the submitter can make the required changes in the hold request.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

C1-RELENTITY

This algorithm is invoked when you click the **Release** button. It checks whether the **Release Approval** option is selected in the respective hold request type. If the **Release Approval** option is selected in the respective hold request type, it changes the status of the hold request to **Release Approval in Progress**. However, if the **Release Approval** option is not selected in the respective hold request type, it changes the status of the hold request to **Released**. On releasing a hold request, it checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm does the following (in the online mode):

- If the hold request is created for the **Account** entity, the **Bill Generation** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the bill after date is cleared for the respective account.
- If the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the defer auto pay until date is set to the system date for the respective account. In addition, it updates the automatic payment details of the debit bills (if any) for the respective account in the **CI_BILL_ACH** table.
- If the hold request is created for the **Account** entity, the **Overdue** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the postpone credit review until date is set to the system date for the respective account.
- If the hold request is created for the **Account** entity, the **Delinquency** process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date, the postpone credit review until date is set to the system date for the respective account. (**Note:** This happens only in the deferred mode when the **C1-HLMON** batch is executed.)
- If the hold request is created for the **Account** entity, the **Refund** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the hold refund until date is set to the system date for the respective account. In addition, the status of the refund request (if any) for the respective accounts is changed from **Hold** to its previous status.
- If the hold request is created for the **Person** entity, the **Bill Generation** process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date, the bill after date is cleared either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from

the person's hierarchy and then derives the accounts where the child person is the main customer. (**Note:** This happens only in the deferred mode when the **C1-HLMON** batch is executed.)

- If the hold request is created for the **Person** entity, the **Delinquency** process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date, the postpone credit review until date is set to the system date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. (**Note:** This happens only in the deferred mode when the **C1-HLMON** batch is executed.)

Note:

The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

This algorithm is also invoked when the approver approves the hold release request.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the above-mentioned release process would be completed when the **C1-HLMON** batch is executed.

This algorithm also updates the alert end date on the respective account to the system date irrespective of whether the number of entities added in the hold request exceeds the defer processing count or not.

This algorithm contains the following parameter:

- **Alert Type** – Used to indicate the alert type. The system then considers the alerts of the respective alert type on the account and updates its end date when the hold request is released. This parameter is optional.

Note: You need to specify the same alert type in both the **C1-HOLDACTV** and **C1-RELENTITY** algorithms.

C1-RLSHOLD

This algorithm is invoked when you click the **Release** button. If the hold entity end date and hold process end date is later than the system date, this algorithm sets the hold entity end date and hold process end date to the system date. In addition, it sets the hold request end date to the system date. Finally, it changes the status of the hold request to **Released**.

Hold Request Type

Oracle Revenue Management and Billing allows you to define a hold request type using which you can create a hold request. It is the hold request type which helps the system to determine the following:

- Business object using which the hold request should be created in the system
- Whether you can partially hold a bill through a hold request
- Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time).
- Whether approval is required while activating or releasing a hold request
- Processes that you can keep on hold for an entity through a hold request

The **Hold Request Type** screen allows you to define, edit, delete, and copy a hold request type. It contains the following zones:

- [Hold Request Type List](#) on page 1850
- [Hold Request Type](#) on page 1850

Hold Request Type List

The **Hold Request Type List** zone lists the hold request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Edit	On clicking the Edit (✎) icon, the Hold Request Type screen appears where you can edit the details of the hold request type.
Duplicate	On clicking the Duplicate (📄) icon, the Hold Request Type screen appears where you can define a new hold request type using an existing hold request type.
Delete	On clicking the Delete (🗑) icon, you can delete the hold request type.
	Note: You can delete a hold request type only when a hold request is not yet created using the hold request type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a hold request type, the **Hold Request Type** zone appears with the details of the respective hold request type.

Hold Request Type

The **Hold Request Type** zone displays the details of the hold request type. It contains the following sections:

- **Main** - Displays the basic information about the hold request type. It contains the following fields:

Field Name	Field Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Hold Request Business Object	Indicates the business object using which a hold request should be created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.

Field Name	Field Description
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Detailed Description	Displays additional information about the hold request type.
Status	<p>Indicates the status of the hold request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive
Allow Partial Hold for Bill	<p>Indicates whether partial hold is allowed for a bill.</p> <p>Note: This field is applicable when you create a hold request (using the hold request type) where the entity level is set to Bill.</p>
Defer Processing Count	<p>Displays the count which helps to determine the following:</p> <ul style="list-style-type: none"> • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the CI_BILL_ACH table in the deferred or online mode.
Activation Approval	Indicates whether approval is required while activating a hold request (created using the hold request type) for an entity.
Activation Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.</p> <p>Note:</p> <p>This field appears when the Activation Approval option is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type.</p>
Activation Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve a hold activation request which is submitted for approval.</p> <p>Note:</p> <p>This field appears when the Activation Approval option is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Release Approval	Indicates whether approval is required while releasing a hold request (created using the hold request type) of an entity.
Release Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval.

Field Name	Field Description
	<p>Note:</p> <p>This field appears when the Release Approval option is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type.</p>
Release Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve a hold release request which is submitted for approval.</p> <p>Note:</p> <p>This field appears when the Release Approval option is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Submitter To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.</p> <p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Submitter To Do Role	<p>Indicates that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval.</p> <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>

- **Hold Processes** - Lists the processes that you can keep on hold for an entity while creating a hold request. The valid values are:
 - Auto Pay
 - Bill Generation
 - Delinquency
 - Funding
 - Overdue
 - Refund
- **Record Actions** - Enables you to perform various actions on the hold request type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request type.
Delete	<p>Used to delete the hold request type.</p> <p>Note: You can delete a hold request type when a hold request is not yet created using the hold request type.</p>
Duplicate	Used to create a new hold request type using an existing hold request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request type is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics of the hold request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Hold Request Type** zone does not appear in the **Hold Request Type** screen. It appears when you click the **Broadcast** (☺) icon corresponding to the hold request type in the **Hold Request Type List** zone.

Defining a Hold Request Type

Prerequisites

To define a hold request type, you should have:

- Hold request type business objects defined in the application
- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To define a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Hold Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type Business Object	Used to indicate the business object using which you want to create the hold request type. The valid value is: <ul style="list-style-type: none"> Hold Request Type (i.e., C1-HoldRequestType) - Enables you to maintain a hold request type. 	Yes
	Note: The above business object is shipped with the product. The list includes those business objects which are created using the Hold Request Type (i.e., C1-HOLDRQTY) maintenance object.	

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple hold request type business objects defined in the application. If there is only one hold request type business object defined in the application, the **Hold Request Type** screen appears.

- Select the required hold request type business object from the respective field.
- Click **OK**.

The **Hold Request Type** screen appears. It contains the following sections:

- Main** - Used to specify the basic details for the hold request type.
- Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
- Characteristics** - Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the business object using which you are defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: <ul style="list-style-type: none"> Hold Request - Display (i.e., C1-HoldReqDisplay)- Enables you to display the details of a hold request. Hold Request - Maintenance (i.e., C1-HoldRequest) - Enables you to maintain a hold request. 	Yes
	Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the Hold Request (i.e., C1-HOLDREQ) maintenance object.	
Detailed Description	Used to specify additional information about the hold request type.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.</p>	
Status	<p>Used to indicate the status of the hold request type. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive <p>Note: You cannot change the status of a hold request type to Inactive when the corresponding hold request is in a status other than Discarded, Rejected, or Released.</p>	Yes
Allow Partial Hold for Bill	<p>Used to indicate whether partial hold is allowed for a bill.</p> <p>Note: This field is applicable when you create a hold request (using the hold request type) where the entity level is set to Bill.</p>	Yes
Defer Processing Count	<p>Used to specify the count which helps to determine the following:</p> <ul style="list-style-type: none"> Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. Whether the automatic payment details must be updated in the CI_BILL_ACH table in the deferred or online mode. <p>Note:</p> <p>You must specify a positive integer value in this field.</p> <p>By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50.</p> <p>The Deferred mode means in the background when the Hold Request Periodic Monitor (C1-HLDRQ) batch is executed. You can configure the Hold Request Periodic Monitor (C1-HLDRQ) batch such that it is executed at regular intervals. For more information about this batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	No
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No

Field Name	Field Description	Mandatory (Yes or No)
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Activation Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Activation Approval To Do Type field. This field appears when the Activation Approval option is selected. The C1-HLDAP To Do type is shipped with the product. You can use the C1-HLDAP To Do type or a custom To Do type, if required.	Note: This field is required when the Activation Approval option is selected.
Activation Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval.	Yes (Conditional)
	Note: The list includes only those To Do roles which are associated with the activation approval To Do type. This field appears when the Activation Approval option is selected.	Note: This field is required when the Activation Approval option is selected.
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Release Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Release Approval To Do Type field. This field appears when the Release Approval option is selected. The C1-HLDAP To Do type is shipped with the product. You can use the C1-HLDAP To Do type or a custom To Do type, if required.	Note: This field is required when the Release Approval option is selected.

Field Name	Field Description	Mandatory (Yes or No)
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval.	Yes (Conditional)
	Note: This field appears when the Release Approval option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	Note: This field is required when the Release Approval option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.	No
	Note: The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field. The C1-HOLSB To Do type is shipped with the product. You can use the C1-HOLSB To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval.	Yes (Conditional)
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	Note: This field is required when the submitter To Do type is specified in the respective field.

6. Enter the required details in the **Main** section.
7. Add the processes that you can keep on hold for an entity while creating the corresponding hold request.
8. Define characteristics for the hold request type, if required.
9. Click **Save**.
The hold request type is defined.

Adding a Hold Process in a Hold Request Type

Prerequisites

To add a hold process in a hold request type, you should have:

- Values defined in the **HOLD_PROCESS_FLG** lookup field

Procedure

To add a hold process in a hold request type:

1. Ensure that the **Hold Processes** section is expanded when you are defining, editing, or copying a hold request type.

The **Hold Processes** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that you want keep on hold for an entity through a hold request. The valid values are: <ul style="list-style-type: none">• Auto Pay - Used when you want to hold the automatic payment process of an entity through a hold request.• Bill Generation - Used when you want to hold the bill generation process of an entity through a hold request.• Delinquency - Used when you want to hold the delinquency process of an entity through a hold request.• Funding - Used when you want to hold the funding process of an entity through a hold request.• Overdue - Used when you want to hold the overdue process of an entity through a hold request.• Refund - Used when you want to hold the refund process of an entity through a hold request.	Yes
	Note: When you create a hold request using a hold request type, the system will derive only those hold processes that are added in the hold request type in the respective list of the Hold Request screen. The list includes only those processes which are added in the HOLD_PROCESS_FLG lookup field. You must select at least one hold process while defining a hold request type.	

2. Enter the required details in the **Hold Processes** section.
3. If you want to add more than one hold process for the hold request type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a hold process from the hold request type, click the **Delete (🗑)** icon corresponding to the hold process. Note that you cannot remove a process from the hold request type when one or more hold requests with the hold process is in a status other than **Discarded**, **Rejected**, or **Released**.

Defining a Characteristic for a Hold Request Type

Prerequisites

To define a characteristic for a hold request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request Type**)

Procedure

To define a characteristic for a hold request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hold request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request Type .	Note: This field is required when you are defining a characteristic for the hold request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the hold request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the hold request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the hold request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to copy a hold request type	Copying a Hold Request Type on page 1864

Editing a Hold Request Type

Prerequisites

To edit a hold request type, you should have:

- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To edit a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the hold request type whose details you want to edit.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request type.
- **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
- **Characteristics** - Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Displays the hold request type.	Not applicable
Business Object	Indicates the business object which is used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: <ul style="list-style-type: none">• Hold Request - Display (i.e., C1-HoldReqDisplay)- Enables you to display the details of a hold request.• Hold Request - Maintenance (i.e., C1-HoldRequest)<ul style="list-style-type: none">- Enables you to maintain a hold request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the Hold Request (i.e., C1-HOLDREQ) maintenance object.</p>	
Detailed Description	<p>Used to specify additional information about the hold request type.</p> <p>Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.</p>	No
Status	<p>Used to indicate the status of the hold request type. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive <p>Note: You cannot change the status of a hold request type to Inactive when the corresponding hold request is in a status other than Discarded, Rejected, or Released.</p>	Yes
Allow Partial Hold for Bill	<p>Used to indicate whether partial hold is allowed for a bill.</p> <p>Note: This field is applicable when you create a hold request (using the hold request type) where the entity level is set to Bill.</p>	Yes
Defer Processing Count	<p>Used to specify the count which helps to determine the following:</p> <ul style="list-style-type: none"> Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. Whether the automatic payment details must be updated in the CI_BILL_ACH table in the deferred or online mode. 	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>You must specify a positive integer value in this field.</p> <p>By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50.</p> <p>The Deferred mode means in the background when the Hold Request Periodic Monitor (C1-HLDRQ) batch is executed. You can configure the Hold Request Periodic Monitor (C1-HLDRQ) batch such that it is executed at regular intervals. For more information about this batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No
Activation Approval To Do Type	<p>Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Activation Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Activation Approval To Do Type field.</p> <p>This field appears when the Activation Approval option is selected.</p> <p>The C1-HLDAP To Do type is shipped with the product. You can use the C1-HLDAP To Do type or a custom To Do type, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Activation Approval option is selected.</p>
Activation Approval To Do Role	<p>Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the activation approval To Do type.</p> <p>This field appears when the Activation Approval option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Activation Approval option is selected.</p>
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No

Field Name	Field Description	Mandatory (Yes or No)
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Release Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Release Approval To Do Type field. This field appears when the Release Approval option is selected. The C1-HLDAP To Do type is shipped with the product. You can use the C1-HLDAP To Do type or a custom To Do type, if required.	Note: This field is required when the Release Approval option is selected.
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval.	Yes (Conditional)
	Note: This field appears when the Release Approval option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	Note: This field is required when the Release Approval option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.	No
	Note: The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field. The C1-HOLSB To Do type is shipped with the product. You can use the C1-HOLSB To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	the approver requests the submitter to resubmit a hold activation or release request for approval.	Note: This field is required when the submitter To Do type is specified in the respective field.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	

Tip: Alternatively, you can click the **Edit** button in the **Hold Request Type** zone to edit the details of the hold request type.

- 5. Modify the required details in the **Main** section.
- 6. Add or remove the hold processes from the hold request type, if required.

Note: You cannot remove a process from the hold request type when one or more hold requests with the hold process is in a status other than **Discarded**, **Rejected**, or **Released**.

- 7. Define, edit, or remove characteristics of the hold request type, if required.
- 8. Click **Save**.
The changes made to the hold request type are saved.

Copying a Hold Request Type

Instead of creating a hold request type from scratch, you can create a new hold request type using an existing hold request type. This is possible through copying a hold request type. On copying a hold request type, the details including the hold processes and characteristics are copied to the new hold request type. You can then edit the details, if required.

Prerequisites

To copy a hold request type, you should have:

- Hold request type (whose copy you want to create) defined in the application
- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To copy a hold request type:

- 1. Click the **Admin** link in the **Application** toolbar.
A list appears.
- 2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.

3. Click the **Search** option from the **Hold Request Type** sub-menu.
The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Duplicate** (🔗) icon in the **Duplicate** column corresponding to the hold request type whose copy you want to create.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request type.
- **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
- **Characteristics** - Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the business object using which you are defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: <ul style="list-style-type: none"> • Hold Request - Display (i.e., C1-HoldReqDisplay)- Enables you to display the details of a hold request. • Hold Request - Maintenance (i.e., C1-HoldRequest) <ul style="list-style-type: none"> - Enables you to maintain a hold request. 	Yes
	Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the Hold Request (i.e., C1-HOLDREQ) maintenance object.	
Detailed Description	Used to specify additional information about the hold request type.	No
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a hold request type to Inactive when the corresponding hold request is in a status other than Discarded, Rejected, or Released .	
Allow Partial Hold for Bill	Used to indicate whether partial hold is allowed for a bill.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note: This field is applicable when you create a hold request (using the hold request type) where the entity level is set to Bill.</p>	
Defer Processing Count	<p>Used to specify the count which helps to determine the following:</p> <ul style="list-style-type: none"> Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. Whether the automatic payment details must be updated in the CI_BILL_ACH table in the deferred or online mode. <p>Note:</p> <p>You must specify a positive integer value in this field.</p> <p>By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50.</p> <p>The Deferred mode means in the background when the Hold Request Periodic Monitor (C1-HLDRQ) batch is executed. You can configure the Hold Request Periodic Monitor (C1-HLDRQ) batch such that it is executed at regular intervals. For more information about this batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	No
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Activation Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Activation Approval To Do Type field.</p> <p>This field appears when the Activation Approval option is selected.</p> <p>The C1-HLDAP To Do type is shipped with the product. You can use the C1-HLDAP To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Activation Approval option is selected.</p>
Activation Approval To Do Role	<p>Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the activation approval To Do type.</p> <p>This field appears when the Activation Approval option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Activation Approval option is selected.</p>
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No
Release Approval To Do Type	<p>Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Release Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Release Approval To Do Type field.</p> <p>This field appears when the Release Approval option is selected.</p> <p>The C1-HLDAP To Do type is shipped with the product. You can use the C1-HLDAP To Do type or a custom To Do type, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Release Approval option is selected.</p>
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This field appears when the Release Approval option is selected.</p> <p>The list includes only those To Do roles which are associated with the release approval To Do type.</p>	<p>Note: This field is required when the Release Approval option is selected.</p>
Submitter To Do Type	<p>Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-HOLSB To Do type is shipped with the product. You can use the C1-HOLSB To Do type or a custom To Do type, if required.</p>	No
Submitter To Do Role	<p>Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval.</p> <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the submitter To Do type is specified in the respective field.</p>

Tip: Alternatively, you can click the **Duplicate** button in the **Hold Request Type** zone to create a copy of the hold request type.

- Enter the required details in the **Main** section.
- Add or remove the hold processes from the hold request type, if required.
- Define, edit, or remove characteristics of the hold request type, if required.
- Click **Save**.
The new hold request type is defined.

Deleting a Hold Request Type

Procedure

To delete a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *hold* request type that you want to delete.

A message appears confirming whether you want to delete the hold request type.

Note: You can delete a hold request type only when a hold request is not yet created using the hold request type.

Tip: Alternatively, you can click the **Delete** button in the **Hold Request Type** zone to delete the hold request type.

5. Click **OK**.
The hold request type is deleted.

Hold Request (Used for Searching)

The **Hold Request** screen allows you to search for a hold request using various search criteria. It also allows you to create a hold request. It contains the following zone:

- [Search Hold Request](#) on page 1870

Through this screen, you can navigate to the following screen:

- [Hold Request \(Used for Viewing\)](#) on page 1897

Search Hold Request

The **Search Hold Request** zone allows you to search for a hold request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a hold request using the hold request or bill details. The valid values are: <ul style="list-style-type: none">• Request Details• Bill Details	Yes
	Note: By default, the Request Details option is selected.	
Hold Request Type	Used to search for hold requests which are created using a particular hold request type.	No
	Note: This field appears when the Request Details option is selected from the Search By list. The list includes only those hold request types which are already defined in the system.	
Entity	Used to search for hold requests which are created at a particular entity level. The valid values are: <ul style="list-style-type: none">• Account• Bill• Person	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This field appears when the Request Details option is selected from the Search By list.</p> <p>The list includes only those values which are defined in the HOLD_ENTITY_LVL_FLG lookup field.</p>	
Hold Process	<p>Used to search for hold requests which are created to hold a particular process of an entity. The valid values are:</p> <ul style="list-style-type: none"> • Auto Pay • Bill Generation • Delinquency • Funding • Overdue • Refund <p>Note:</p> <p>This field appears when the Request Details option is selected from the Search By list.</p> <p>The list includes only those values which are added in the HOLD_PROCESS_FLG lookup field.</p>	No
User ID	<p>Used to search for hold requests which are created by a particular user.</p> <p>Note: This field appears when the Request Details option is selected from the Search By list.</p>	No
Hold Reason	<p>Used to search for hold requests which are created due a particular reason.</p> <p>Note:</p> <p>This field appears when the Request Details option is selected from the Search By list.</p> <p>The list includes only those values which are defined in the HOLD_REASON_FLG lookup field.</p>	No
Start Date	<p>Used to search for hold requests which are created from a particular date onwards.</p> <p>Note:</p> <p>This field appears when the Request Details option is selected from the Search By list.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to search for hold requests with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Active • Activation Approval In Progress • Deferred Processing • Discarded • Draft • Entity Derivation Pending • Rejected • Released • Release Approval in Progress • Release Request Approved • Return Release Request to Submitter <p>Note: This field appears when the Request Details option is selected from the Search By list.</p>	No
End Date	<p>Used to search for hold requests which are created till a particular date.</p> <p>Note: This field appears when the Request Details option is selected from the Search By list. You can either manually specify the date or select it using the Date Picker () icon corresponding to the field.</p>	No
Account ID	<p>Used to search for hold requests which are created for a particular account.</p> <p>Note: This field appears when the Request Details option is selected from the Search By list. The Search () icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p>	No
Person ID	<p>Used to search for hold requests which are created for a particular person.</p> <p>Note: This field appears when the Request Details option is selected from the Search By list. The Search () icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.</p>	No
Hold Request ID	Used to search for a particular hold request.	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the Request Details option is selected from the Search By list.	
Bill ID	Used to search for hold requests which are created for a particular bill. Note: This field appears when the Bill Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.	No
Bill Date From	Used to search for hold requests created for bills that are completed on or after the specified date. Note: This field appears when the Bill Details option is selected from the Search By list. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	Yes (Conditional) Note: This field is required when the search criteria is specified in the To field.
To	Used to search for hold requests created for bills that are completed on or before the specified date. Note: This field appears when the Bill Details option is selected from the Search By list. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	Yes (Conditional) Note: This field is required when the search criteria is specified in the Bill Date From field.

Note: You must specify at least one search criterion while searching for a hold request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the hold request is created.
Hold Request Information	Displays information about the hold request. Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none"> • Active • Activation Approval In Progress • Deferred Processing

Column Name	Column Description
	<ul style="list-style-type: none"> Discarded Draft Entity Derivation Pending Rejected Released Release Approval in Progress Release Request Approved Return Release Request to Submitter
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.
Hold Processes	Indicates the processes which are kept on hold for the entity through the hold request. If multiple processes are selected in a hold request, the system concatenates and displays the hold processes separated by the Comma (,) symbol.
Hold Reason	Indicates the reason why the hold request is created for the entity.
Created By	Indicates the user who has created the hold request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Hold Request

Prerequisites

To search for a hold request, you should have:

- Hold request types defined in the application
- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To search for a hold request:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Accounting and Receivable** and then click **Hold Request**.
A sub-menu appears.
- Click the **Search** option from the **Hold Request** sub-menu.
The **Hold Request** screen appears.
- Enter the search criteria in the **Search Hold Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of hold requests that meet the search criteria appears in the **Search Results** section.

Creating a Hold Request

Prerequisites

To create a hold request, you should have:

- Hold request types defined in the application.
- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To create a hold request:

1. Do either of the following:

If you want to...	Then...
Hold a bill through a hold request from the Account Receivable Central screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select Accounting and Receivable and then click Account Receivable Central.</p> <p>The Account Receivable Central screen appears.</p> <p>c. Search for a bill that you want to keep on hold in the Search Bill zone.</p> <p>A list of bills that meet the search criteria appears in the search results.</p> <p>d. In the Search Results section, select the check box corresponding to the required bill that you want keep on hold and then click Hold.</p>
	<p>Note:</p> <p>You can select only one bill at a time while creating a hold request from the Account Receivable Central screen.</p> <p>You can only select a bill with non-zero outstanding balance.</p>
Hold a bill through a hold request from the Funding Request screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select Accounting and Receivable and then click Funding Request.</p> <p>The Funding Request screen appears.</p>

If you want to...	Then...
	<p>c. Search for the required draft funding request in the Search Funding Request zone.</p> <p>A list of funding request that meet the search criteria appears in the search results.</p> <p>d. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request whose details you want to edit.</p> <p>The Funding Request screen appears.</p> <p>e. Click the Bills tab.</p> <p>f. Select the check box corresponding to the bills that you want to keep on hold in the Selected Bills zone.</p> <p>g. Click the Hold button.</p> <p>Note:</p> <p>Before clicking the Hold button, you must ensure that the Funding Exclusion Reason option type is set in the C1-HOLDSRCH feature configuration.</p> <p>You can select multiple bills at the same time while creating a hold request from the Funding Request screen.</p> <p>You can only select a bill with non-zero outstanding balance.</p>
<p>Hold an account through a hold request from the Delinquency Central screen</p>	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select Delinquency Management and then click Delinquency Central.</p> <p>The Delinquency Central screen appears.</p> <p>c. Search for the overdue process of an account in the Search Overdue Process zone.</p> <p>A list of overdue processes that meet the search criteria appears in the search results.</p> <p>d. In the Search Results section, select the check box corresponding to the required overdue process of an account whose processes you want to keep on hold and then click Create Hold Request.</p> <p>Note: You can select only one overdue process at a time while creating a hold request for an account from the Account Receivable Central screen.</p>
<p>Create a hold request for a person, account, or bill from the Hold Request screen</p>	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select Accounting and Receivable and then click Hold Request.</p> <p>A sub-menu appears.</p> <p>c. Click the Add option from the Hold Request sub-menu.</p>

The **Add Hold Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to indicate the hold request type using which you want to create the hold request.	Yes
	Note: The list includes only those hold request types which are already defined in the system.	

Tip: Alternatively, you can access the **Add Hold Request** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request** screen.

2. Select the required hold request type from the respective field.
3. Click **OK**.

The **Hold Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request.
- **Hold Entities** - Used to indicate the entity (such as, person, account, or bill depending on the specified entity level) that you want to keep on hold. This section appears only when the **Use Selection Criteria** option is not selected while creating a hold request for an account or a person.
- **Account Selection Criteria** - Used to specify a selection criteria to derive the list of accounts that you want to add in the hold request. This section appears only when the following conditions are met:
 - The **Account** option is selected from the **Entity** list.
 - The **Use Selection Criteria** option is selected.
- **Person Selection Criteria** - Used to specify a selection criteria to derive the list of persons that you want to add in the hold request. This section appears only when the following conditions are met:
 - The **Person** option is selected from the **Entity** list.
 - The **Use Selection Criteria** option is selected.
- **Hold Processes** - Used to indicate one or more processes of the entity that you want to keep on hold for a particular period.
- **Characteristics** - Used to define the characteristics for the hold request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Indicates the hold request type using which you want to create the hold request.	Not applicable
Start Date	Used to specify the date from when the hold request is effective.	Yes
	Note: The hold request start date cannot be later than the hold request end date. By default, this field is set to the system date. You can specify a future date, if required. However, when you specify a past date, the system will automatically reset it to the system date. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the hold request is effective.	Yes
	Note: The hold request end date cannot be earlier than the hold request start date. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	
Hold Reason	Used to indicate the reason why you want to hold the entity.	Yes
	Note: The list includes only those values which are defined in the HOLD_REASON_FLG lookup field.	
Entity	Used to indicate the type of entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • Account • Bill • Person 	Yes
	Note: The list includes only those values which are defined in the HOLD_ENTITY_LVL_FLG lookup field. If you are creating a hold request for a bill via the Account Receivable Central or Funding Request screen, the system, by default, sets the entity to Bill and the field is non-editable. If you are creating a hold request for an account via the Delinquency Central screen, the system, by default, sets the entity to Account and the field is non-editable.	
Use Selection Criteria	Used to indicate whether you want to specify a selection criteria to derive the list of accounts or persons that you want to add in the hold request.	No
	Note: This field appears when the Account or Person option is selected from the Entity list.	
Comments	Used to specify additional information about the hold request.	No
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	

4. Enter the required details in the **Main** section.

5. Add the entities (such as, persons, accounts, or bills) that you want to keep on hold through the hold request.
6. Define the account or person selection criteria to derive the list of accounts or persons, respectively, that you want to add in the hold request.

Note: This step is required only when the **Use Selection Criteria** option is selected while creating a hold request for an account or a person.

7. Add the processes of the entity that you want to keep on hold through the hold request.
8. Define characteristics for the hold request, if required.
9. Click **Save**.

The hold request is created. The creation mode of the hold request is set to **Manual**.

Note:

If you create a hold request for a bill via the **Account Receivable Central** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type. In addition, the **FROM_ARC_SW** field in the **C1_HOLD_REQ_DTLS** table is set to **Y**.

If you create a hold request for an account via the **Delinquency Central** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type. In addition, the **FROM_ARC_SW** field in the **C1_HOLD_REQ_DTLS** table is set to **Y**.

If you create a hold request for a bill via the **Funding Request** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type. In addition, the **FROM_ARC_SW** field in the **C1_HOLD_REQ_DTLS** table is set to **Y**. The status of the respective bill record in the funding request is set to **Excluded**. Also, the status reason is stamped corresponding to the excluded records. The system derives the status reason for the excluded records from the **Funding Exclusion Reason** option type of the **C1-HOLDSRCH** feature configuration.

If you create a hold request for an account, person, or bill directly from the **Hold Request** screen, the system sets the status of the hold request to **Draft**. Note that if you create a hold request for an account or a person using the account selection criteria or person selection criteria, respectively, the system sets the status of the hold request to **Entity Derivation Pending**. In addition, a log entry is created indicating that the account or person derivation will happen after the Hold Request Entity Derivation Monitor batch is executed. For more information, see [Hold Mass Accounts Using Selection Criteria](#) on page 1821 and [Hold Mass Persons Using Selection Criteria](#) on page 1822.

Adding an Entity in a Hold Request

Procedure

To add an entity in a hold request:

- 1. Ensure that the **Hold Entities** section is expanded when you are creating or editing a hold request.

The **Hold Entities** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Entity ID	Used to indicate the entity (such as, person, account, or bill depending on the specified entity level) that you want to keep on hold.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Hold Entity ID field. Depending on the entity level selected, the system behaves in the following manner on clicking the Search icon:</p> <ul style="list-style-type: none">• If the entity level is set to Account, the Account Search window appears.• If the entity level is set to Person, the Person Search window appears.• If the entity level is set to Bill, the Bill Search window appears. <p>If you are creating a hold request for a bill via the Account Receivable Central or Funding Request screen, the system, by default, displays the selected bill ID and the field is non-editable. You cannot remove this selected bill from the hold request throughout its lifecycle.</p> <p>If you are creating a hold request for an account via the Delinquency Central screen, the system, by default, displays the account ID (of the selected overdue process) and the field is non-editable. You cannot remove this account from the hold request throughout its lifecycle.</p> <p>If the entity level is set to Bill, you must specify a bill with non-zero outstanding bill amount and which is in the Complete status.</p>	
Start Date	Used to specify the date from when you want to hold the entity.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity start date cannot be later than the hold entity end date.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</p>	
End Date	<p>Used to specify the date till when you want to hold the entity.</p> <p>Note:</p> <p>The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity end date cannot be earlier than the hold entity start date.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</p>	No
Hold Amount	<p>Used to specify the outstanding bill amount that you want to keep on hold.</p> <p>Note:</p> <p>This field appears when the Bill option is selected from the Entity list.</p> <p>This field is editable only when the Allow Partial Hold for Bill option is selected in the respective hold request type.</p> <p>By default, the system displays the amount which is outstanding on the bill. If the field is editable, you can change the hold amount, if required. However, ensure that you specify a non-zero value in this field and the specified amount should not exceed the outstanding bill amount.</p>	Yes
Hierarchy	<p>Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.</p> <p>Note: This field appears when the Person option is selected from the Entity list.</p>	No

Note: The **Hold Entities** section appears only when the **Use Selection Criteria** option is not selected while creating a hold request for an account or a person.

- 2. Enter the required details in the **Hold Entities** section.
- 3. If you want to add more than one entity in the hold request, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an entity from the hold request, click the **Delete (■)** icon corresponding to the hold entity.

How to create a hold request	Creating a Hold Request on page 1875

Defining an Account Selection Criteria for a Hold Request

Prerequisites

To define an account selection criteria for a hold request, you should have:

- Divisions, bill cycles, customer classes, states, health plans, membership identifier types, and policy types defined in the application
- Values defined in the **BILL_ADDR_SRCE_FLG**, **PRODUCT_TYPE_FLG**, **PRODUCT_HC_CAT_FLG**, **PRODUCT_LOB_FLG**, and **PRODUCT_LOB_CAT_FLG** lookup fields
- Required characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Health Plan**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Product**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Person**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define an account selection criteria for a hold request:

- 1. Ensure that the **Account Selection Criteria** section is expanded when you are creating or editing a hold request.

The **Account Selection Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account using the account, individual membership, person, or policy details. The valid values are: <ul style="list-style-type: none">• Account Details• Individual Membership Details• Person Details• Policy Details	Yes
	Note: The Individual Membership Details and Policy Details options appear in the Search By list only when the Environment Type option type of the SYSDT feature configuration is set to H . For more information, see Setting the SYSDT Feature Configuration on page 1840.	

Note:
The **Account Selection Criteria** section appears only when the following conditions are met in the **Main** section:

- The **Account** option is selected from the **Entity** list.
- The **Use Selection Criteria** option is selected. Note that this option appears only when the **Account** or **Person** option is selected from the **Entity** list.

2. Select the required option depending on which you want to search for the accounts from the **Search By** list.

The following fields appear in the **Account Selection Criteria** section:

Field Name	Field Description	Mandatory (Yes or No)
Address Source	Used to search for accounts where a particular address source is used to route the account's bills and/or quotes via the postal service. The valid values are: <ul style="list-style-type: none">• Account Override• Bill• Main• Multiple Account Override• Person	No
	Note: This field appears when the Account Details option is selected from the Search By list. The list includes only those values which are defined in the BILL_ADDR_SRCE_FLG lookup field.	
Division	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the Search By list: <ul style="list-style-type: none">• Account Details - This field enables you to search for accounts which belong to a particular division.• Individual Membership Details - This field enables you to search for individual membership's member persons' accounts that belong to a particular division.• Policy Details - This field enables you to search for policy persons' accounts that belong to a particular division.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This field appears when the Account Details, Individual Membership Details, or Policy Details option is selected from the Search By list. Note that in case of the latter two options (i.e., Individual Membership Details and Policy Details), this field appears only when you click the Advanced Search link available in the right side of the Account Selection Criteria section.</p> <p>The list includes only those divisions which are already defined in the system.</p>	
State	<p>You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Account Details - This field enables you to search for accounts whose billing address belongs to a specific state. Note that this field is enabled while searching using the account details only when an option is selected from the Address Source list. • Individual Membership Details - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular state. • Person Details - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in a particular state. • Policy Details - This field enables you to search for accounts of persons that are linked to policies issued in a particular state. <p>Note: The Search (🔍) icon appears corresponding to the State field. On clicking the Search icon, the State Search window appears.</p>	No
Bill Cycle	<p>Used to search for accounts with a particular bill cycle.</p> <p>Note:</p> <p>This field appears when the Account Details option is selected from the Search By list.</p> <p>The list includes only those bill cycles which are already defined in the system.</p>	No
County	<p>You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Account Details - This field enables you to search for accounts whose billing address belongs to a specific 	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>county. Note that this field is enabled while searching using the account details only when an option is selected from the Address Source list.</p> <ul style="list-style-type: none"> • Individual Membership Details - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular county. • Person Details - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in a particular county. • Policy Details - This field enables you to search for accounts of persons that are linked to policies issued in a particular county. <p>Note: You can specify comma-separated values in this field.</p>	
Customer Class	<p>You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Account Details - This field enables you to search for accounts which belong to a particular customer class. • Individual Membership Details - This field enables you to search for individual membership's member persons' accounts that belong to a particular customer class. • Policy Details - This field enables you to search for policy persons' accounts that belong to a particular customer class. <p>Note:</p> <p>This field appears when the Account Details, Individual Membership Details, or Policy Details option is selected from the Search By list. Note that in case of the latter two options (i.e., Individual Membership Details and Policy Details), this field appears only when you click the Advanced Search link available in the right side of the Account Selection Criteria section.</p> <p>The list includes only those customer classes which are already defined in the system.</p>	No
Postal	<p>You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Account Details - This field enables you to search for accounts whose billing address belongs to a specific postal or zip code. Note that this field is enabled while searching using the account details only when an option is selected from the Address Source list. 	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Individual Membership Details - This field enables you to search for accounts that belong to the individual membership's member persons who resides in an area with a particular postal or zip code. • Person Details - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in an area with a particular postal or zip code. • Policy Details - This field enables you to search for accounts of persons that are linked to policies issued in an area with a particular postal or zip code. <p>Note: You can specify comma-separated values in this field.</p>	
Product Type	<p>Used to search for accounts of persons that are linked to individual memberships of a particular health product type. The valid values are:</p> <ul style="list-style-type: none"> • Exclusive Provider Organization • Health Maintenance Organization • Point-of-Service Plan • Preferred Provider Organization <p>Note: This field appears when the Individual Membership Details option is selected from the Search By list. The list includes only those values which are defined in the PRODUCT_TYPE_FLG lookup field.</p>	No
Product Category	<p>Used to search for accounts of persons that are linked to individual memberships of a particular health product category. The valid value is:</p> <ul style="list-style-type: none"> • Medical <p>Note: This field appears when the Individual Membership Details option is selected from the Search By list. The list includes only those values which are defined in the PRODUCT_HC_CAT_FLG lookup field.</p>	No
Health Plan	<p>Used to search for accounts of persons that are linked to individual memberships of a particular health plan.</p> <p>Note: This field appears when the Individual Membership Details option is selected from the Search By list. You must specify a health plan which is already defined in the system.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>You can use this field while searching for an account using the individual membership or policy details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Individual Membership Details - This field enables you to search for accounts of persons that are linked to individual memberships with a particular start date. • Policy Details - This field enables you to search for accounts of persons that are linked to policies with a particular start date. 	No
	<p>Note:</p> <p>This field appears when the Individual Membership Details or Policy Details option is selected from the Search By list.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</p>	
End Date	<p>You can use this field while searching for an account using the individual membership or policy details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Individual Membership Details - This field enables you to search for accounts of persons that are linked to individual memberships with a particular end date. • Policy Details - This field enables you to search for accounts of persons that are linked to policies with a particular end date. 	No
	<p>Note:</p> <p>This field appears when the Individual Membership Details or Policy Details option is selected from the Search By list.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</p>	
Membership Identifier Type	Used to search for accounts of persons that are linked to individual memberships using a particular membership identifier type.	Yes (Conditional)
	<p>Note: This field appears when the Individual Membership Details option is selected from the Search By list.</p> <p>The list includes only those membership identifier types which are already defined in the system.</p>	<p>Note: If you specify the membership identifier as a search criteria, you have to select the membership identifier type.</p>
Membership Identifier	Used to search for accounts of persons that are linked to a particular individual membership.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the Individual Membership Details option is selected from the Search By list.	Note: If you specify the membership identifier type as a search criteria, you have to enter the membership identifier.
Product LOB	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB.	No
	Note: This field appears when the Individual Membership Details option is selected from the Search By list and the Advanced Search link available in the right side of the Account Selection Criteria section is clicked. The list includes only those values which are defined in the PRODUCT_LOB_FLG lookup field.	
Product LOB Category	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB category. The valid values are: <ul style="list-style-type: none"> • Commercial • Government • State Programs 	No
	Note: This field appears when the Individual Membership Details option is selected from the Search By list and the Advanced Search link available in the right side of the Account Selection Criteria section is clicked. The list includes only those values which are defined in the PRODUCT_LOB_CAT_FLG lookup field.	
Person ID	Used to search for accounts where a particular person is the main customer.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears. This field appears when the Person Details option is selected from the Search By list. If you specify the person ID along with any other search criteria, the system gives high precedence to the person ID and ignores the other account selection criteria except Include Person Hierarchy .	Note: This field is required when the Include Person Hierarchy option is selected.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search for accounts where the main customer have a particular name.	No
	Note: This field appears when the Person Details option is selected from the Search By list.	
Include Person Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.	No
	Note: This field appears when the Person Details option is selected from the Search By list.	
Policy Type	Used to search for accounts of persons that are linked to policies created using a particular policy type.	No
	Note: This field appears when the Policy Details option is selected from the Search By list. The list includes only those policy types which are already defined in the system.	
Policy Plan Number	Used to search for accounts of persons that are linked to policies having a particular policy plan.	No
	Note: This field appears when the Policy Details option is selected from the Search By list.	
Policy Number	Used to search for accounts of persons that are linked to a particular policy.	No
	Note: This field appears when the Policy Details option is selected from the Search By list.	
Source System	Used to search for accounts of persons that are linked to policies originated from a particular external system.	No
	Note: This field appears when the Policy Details option is selected from the Search By list. The list includes only those source systems which are already defined in the system.	
Status	Used to search for accounts of persons that are linked to policies with a particular status. The valid values are: <ul style="list-style-type: none"> • Activate • In Force/Active 	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none">• Cancel• Canceled• Pending Cancellation• Pending• Pending Reinstatement• Pending Termination• Post Run out• Reinstated• Renewed• Run out• Terminated	
	Note: This field appears when the Policy Details option is selected from the Search By list.	

In addition, the following sub-sections appear in the **Account Selection Criteria** section:

- **Characteristics** - This section appears when the **Account Details**, **Person Details**, or **Policy Details** option is selected from the **Search By** list. Note that in case of the latter option (i.e., **Policy Details**), this section appears only when you click the **Advanced Search** link available in the right side of the **Account Selection Criteria** section. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts with a particular type of characteristic.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Characteristic Type field. On clicking the Search icon, the Search Characteristic Value window appears.	Note: If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts with a particular characteristic.	Yes (Conditional)
		Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Membership Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships with a particular type of characteristic.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Characteristic Type field. On clicking the Search icon, the Search Characteristic Value window appears.	Note: If you specify the characteristic value as a search criteria, you have to select the characteristic type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships with a particular characteristic.	Yes (Conditional)
		Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Health Product Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships of a health product with a particular type of characteristic.	Yes (Conditional)
		Note: If you specify the characteristic value as a search criteria, you have to select the characteristic type.
	Note: The Search (🔍) icon appears corresponding to the Characteristic Type field. On clicking the Search icon, the Search Characteristic Value window appears.	
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships of a health product with a particular characteristic.	Yes (Conditional)
		Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Health Plan Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships of a health plan with a particular type of characteristic.	Yes (Conditional)
		Note: If you specify the characteristic value as a search criteria, you have to select the characteristic type.
	Note: The Search (🔍) icon appears corresponding to the Characteristic Type field. On clicking the Search icon, the Search Characteristic Value window appears.	
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships of a health plan with a particular characteristic.	Yes (Conditional)
		Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note: You can specify multiple characteristics in the account selection criteria by clicking the **Add (+)** icon corresponding to the **Characteristic Type** field. If you specify multiple characteristics in the account selection criteria, the system uses the **AND** operator to derive the list of accounts that have all the specified characteristics. However, note that you cannot specify more than five characteristics in the account selection criteria.

3. Enter the required search criteria in the **Account Selection Criteria** section.

Note:

You must specify at least one search criterion while defining an account selection criteria for a hold request.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

How to create a hold request	Creating a Hold Request on page 1875

Defining a Person Selection Criteria for a Hold Request

Prerequisites

To define a person selection criteria for a hold request, you should have:

- States defined in the application
- Required characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To define a person selection criteria for a hold request:

1. Ensure that the **Person Selection Criteria** section is expanded when you are creating or editing a hold request.

Note:

The **Person Selection Criteria** section appears only when the following conditions are met in the **Main** section:

- The **Person** option is selected from the **Entity** list.
- The **Use Selection Criteria** option is selected. Note that this option appears only when the **Account** or **Person** option is selected from the **Entity** list.

The **Person Selection Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for a particular person.	No
	Note: The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.	
Person Name	Used to search for persons with a particular name.	No

Field Name	Field Description	Mandatory (Yes or No)
State	Used to search for persons who reside in a particular state.	No
	Note: The Search (🔍) icon appears corresponding to the State field. On clicking the Search icon, the State Search window appears.	
County	Used to search for persons who reside in a particular county.	No
	Note: You can specify comma-separated values in this field.	
Postal	Used to search for persons who reside in an area with a particular postal or zip code.	No
	Note: You can specify comma-separated values in this field.	

In addition, the following sub-section appears in the **Person Selection Criteria** section:

- **Characteristics** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for persons with a particular type of characteristic.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Characteristic Type field. On clicking the Search icon, the Search Person Characteristic Value window appears.	Note: If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for persons with a particular characteristic.	Yes (Conditional)
		Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note: You can specify multiple characteristics in the person selection criteria by clicking the **Add** (+) icon corresponding to the **Characteristic Type** field. If you specify multiple characteristics in the person selection criteria, the system uses the **AND** operator to derive the list of persons that have all the specified characteristics. However, note that you cannot specify more than five characteristics in the person selection criteria.

2. Enter the required search criteria in the **Person Selection Criteria** section.

<p>Note:</p> <p>You must specify at least one search criterion while defining a person selection criteria for a hold request.</p> <p>ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.</p>

Adding a Process in a Hold Request

Prerequisites

To add a process in a hold request, you should have:

- Required applicable processes added in the respective hold request type

Procedure

To add a process in a hold request:

1. Ensure that the **Hold Processes** section is expanded when you are creating or editing a hold request.

The **Hold Processes** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that you want to keep on hold. The system then holds the selected process of those entities whose start and end dates fall with the process’s start and end dates.	Yes
	<p>Note:</p> <p>The list includes only those processes which are selected in the respective hold request type.</p> <p>Depending on the entity level selected, the system enables you to select the following processes:</p> <ul style="list-style-type: none">• If the entity level is set to Account, you can select the Auto Pay, Bill Generation, Delinquency, Funding, Overdue, and/or Refund option (if available) from the Hold Process list. However, note that you cannot select both the Overdue and Delinquency processes at a time in the hold request.• If the entity level is set to Person, you can select the Bill Generation, Delinquency, and/or Funding option (if available) from the Hold Process list.• If the entity level is set to Bill, you can only select the Funding option from the Hold Process list. <p>The Overdue process is valid for the financial services and health insurance domains but the Delinquency process is valid only for the health insurance domain.</p>	
Start Date	Used to specify the date from when the process of an entity is kept on hold.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	Note: The hold process start date must be between the hold request start and end dates. The hold process start date cannot be later than the hold process end date. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	
End Date	Used to specify the date till when the process of an entity is kept on hold. Note: The hold process end date must be between the hold request start and end dates. The hold process end date cannot be earlier than the hold process start date. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	No

2. Enter the required details in the **Hold Processes** section.

Note: You must specify at least one process while creating a hold request.

3. If you want to add more than one process in the hold request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a process from the hold request, click the **Delete** (🗑️) icon corresponding to the hold process.

Defining a Characteristic for a Hold Request

Prerequisites

To define a characteristic for a hold request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request**)

Procedure

To define a characteristic for a hold request:

1. Ensure that the **Characteristics** section is expanded when you are creating or editing a hold request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
	Note: You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	Note: This field is required when you are defining a characteristic for the hold request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request .	Note: This field is required when you are defining a characteristic for the hold request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the hold request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the hold request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the hold request, click the **Delete** (🗑) icon corresponding to the characteristic.

Hold Request (Used for Viewing)

Once you create a hold request, the **Hold Request** screen allows you to:

- View the details of the hold request
- Add entities in the hold request
- Add processes in the hold request
- Edit the details of the hold request
- Edit the entity details of the hold request
- Edit the end dates of all the entities at once in the hold request (mass edit)
- Delete an entity from the hold request
- Delete the hold request
- Discard the hold request (i.e., future dated hold request)
- Submit the hold activation request for approval
- Approve or reject the hold activation request
- Request to resubmit the hold activation request for approval
- Release the hold request
- Approve the hold release request
- Request to resubmit the hold release request for approval
- View the log of the hold request
- Add a log entry for the hold request

This screen consists of the following tabs:

- [Hold Request - Main](#) on page 1897
- [Hold Request - Log](#) on page 1916

Hold Request - Main

The **Main** tab displays information about the hold request. It contains the following zones:

- [Hold Request](#) on page 1898
- [Hold Entities](#) on page 1901
- [Search Account](#) on page 1903

Note:

This zone appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Account**
- The status of the hold request is set to **Draft**.

- [Search Bill](#) on page 1912

Note:

This zone appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Bill**
- The status of the hold request is set to **Draft**.

- [Search Person](#) on page 1914

Note:

This zone appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Person**
- The status of the hold request is set to **Draft**.

Hold Request

The **Hold Request** zone displays the details of the hold request. It contains the following sections:

- **Main** - Displays the basic information about the hold request. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Hold Request Type	Indicates the hold request type using which the hold request is created. Note: It has a link. On clicking the link, the Hold Request Type screen appears where you can view the details of the respective hold request type.
Status	Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none">• Active• Activation Approval In Progress• Deferred Processing• Discarded• Draft• Entity Derivation Pending• Rejected• Released• Release Approval in Progress• Release Request Approved• Return Release Request to Submitter
Status Reason	Indicates the reason why the hold request is rejected or released.

Field Name	Field Description
	Note: This field appears when the hold request is in Rejected or Released status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status reason.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.
Hold Reason	Indicates the reason why the entity is kept on hold.
Entity	Indicates the type of entity for which the hold request is created. The valid values are: <ul style="list-style-type: none"> • Account • Bill • Person
Comments	Displays additional information about the hold request. Note: This field appears when the comments are provided while adding or editing a hold request.

- **Hold Processes** - Lists the processes which are kept on hold for an entity through the hold request. It contains the following columns:

Column Name	Column Description
Hold Process	Indicates the process which is kept on hold. The valid values are: <ul style="list-style-type: none"> • Auto Pay • Bill Generation • Delinquency • Funding • Overdue • Refund
Start Date	Displays the date from when the process of an entity is kept on hold.
End Date	Displays the date till when the process of an entity is kept on hold.

- **Characteristics** - Lists the characteristics of the hold request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the hold request. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request.

Button Name	Button Description
	Note: The Edit button appears when the hold request is in the Draft or Active status.
Delete	Used to delete the hold request.
	Note: The Delete button appears when the hold request is in the Draft status.
Submit	Used to submit the hold request.
	Note: The Submit button appears when the hold request is in the Draft status.
Re Submit	Used to re-submit the hold activation or release request.
	Note: The Re Submit button appears when the following conditions are met: <ul style="list-style-type: none"> The hold request is in the Activation Approval In Progress or Release Approval in Progress status. A user with the approval To Do role is reviewing the hold request.
Approve	Used to approve the hold activation or release request.
	Note: The Approve button appears when the following conditions are met: <ul style="list-style-type: none"> The hold request is in the Activation Approval In Progress or Release Approval in Progress status. A user with the approval To Do role is reviewing the hold request.
Reject	Used to reject the hold activation request.
	Note: The Reject button appears when the following conditions are met: <ul style="list-style-type: none"> The hold request is in the Activation Approval In Progress status. A user with the approval To Do role is reviewing the hold request.
Release	Used to release the hold request.
	Note: The Release button appears when the hold request is in the Active status.
Discard	Used to discard the future dated hold request.
	Note: The Discard button appears when the following conditions are met: <ul style="list-style-type: none"> The hold request is future dated (i.e. when the hold request start date is later than the system date). The hold request is in the Active status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request is created. In addition, a context menu (☑) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the hold request status is updated.
Create Date/Time	Displays the date and time when the hold request is created.

Hold Entities

The **Hold Entities** zone lists the entities which are added in the hold request. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu (☑) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. This column appears when the entity level in the hold request is set to Person .
Account Information	Displays information about the account. In addition, this column has a context menu (☑) icon which helps in navigating to other screens in the application.

Column Name	Column Description
	<p>Note:</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> <p>This column appears when the entity level in the hold request is set to Account.</p>
Bill Information	<p>Displays information about the bill. In addition, this column has a context menu (☺) icon which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p> <p>This column appears when the entity level in the hold request is set to Bill.</p>
Entity ID	Indicates the entity which is kept on hold through the hold request.
Start Date	Displays the date from when the entity is on hold.
End Date	<p>Displays the date till when the entity is on hold.</p> <p>Note: Once the hold request is either manually or automatically released, the system updates the hold entity end date to the system date.</p>
Hold Amount	<p>Displays the bill amount which is kept on hold through the hold request.</p> <p>Note: This column appears when the entity level in the hold request is set to Bill.</p>
Bill After Date	<p>Displays the date after which bills can be generated for the account.</p> <p>Note:</p> <p>This column appears when the entity level in the hold request is set to Account.</p> <p>Once the hold request is either manually or automatically released, the bill after date is cleared (i.e., set to NULL) for the respective account.</p>
Postpone Credit Review Until	<p>Displays the date after which overdue debt can be monitored for the entity either through the Overdue or Delinquency Management process.</p> <p>Note: This column appears when the entity level in the hold request is set to Account or Person.</p>
Defer Auto Pay Date	<p>Displays the date till when you want to hold the automatic payment process for the account.</p> <p>Note: This column appears when the entity level in the hold request is set to Account.</p>
Hierarchy	<p>Indicates whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold through the hold request. The valid values are:</p> <ul style="list-style-type: none"> Y

Column Name	Column Description
	<ul style="list-style-type: none"> N
	Note: This column appears when the entity level in the hold request is set to Person . The system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
Hold Refund Until	Displays the date after which the refund request can be processed for the account.
	Note: This column appears when the entity level in the hold request is set to Account . The system does not stop you from creating A/P adjustments for an account from the Adjustment screen when the refund process is kept on hold for the account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold entity.
Delete	Used to delete the hold entity from the hold request.

Note:

The **Edit** and **Delete** buttons appear only when the hold request is in the **Draft** or **Active** status.

A check box appears corresponding to each hold entity. To update the details of a hold entity, select the check box corresponding to the hold entity and then click the **Edit** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page. For more information, see [Editing the Entity Details of a Hold Request](#) on page 1921.

You can also mass update the end date of the hold entities in a hold request at once by clicking the **Edit All** link available in the upper right corner of this zone. The link appears only when the hold request is in the **Draft** or **Active** status. For more information, see [Updating the End Date of All the Hold Entities \(Mass Edit\)](#) on page 1923.

To delete a hold entity, select the check box corresponding to the hold entity and click the **Delete** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page. For more information, see [Deleting an Entity from a Hold Request](#) on page 1925.

You can filter the list using the **Entity ID** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Search Account

The **Search Account** zone allows you to search for accounts using various search criteria. It also allows you to add the accounts in the hold request. It appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Account**
- The status of the hold request is set to **Draft**.

It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account using the account, policy, or individual membership details. The valid values are: <ul style="list-style-type: none"> • Account Details • Policy Details • Individual Membership Details 	Yes
	Note: By default, the Account Details option is selected. The Individual Membership Details and Policy Details options appear in the Search By list only when the Environment Type option type of the SYSDT feature configuration is set to H . For more information, see Setting the SYSDT Feature Configuration on page 1840.	
Account ID	Used to search for a particular account.	No
	Note: This field appears when the Account Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears. On selecting the account, the respective information string appears corresponding to the Account ID field. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.	
Division	You can use this field while searching for an account using the account or individual membership details. The context of this field changes depending on the respective option selected from the Search By list: <ul style="list-style-type: none"> • Account Details - This field enables you to search for accounts which belong to a particular division. • Individual Membership Details - This field enables you to search for individual membership's member persons' accounts that belong to a particular division. 	No
	Note: This field appears when the Account Details or Individual Membership Details option is selected from the Search By list. The list includes only those divisions which are already defined in the system.	

Field Name	Field Description	Mandatory (Yes or No)
Address Source	Used to search for accounts where a particular address source is used to route the account's bills and/or quotes via the postal service. The valid values are: <ul style="list-style-type: none"> Account Override Bill Main Multiple Account Override Person 	Yes (Conditional)
	Note: This field is required when the search criteria is specified in the State , County , or Postal field.	
	Note: This field appears when the Account Details option is selected from the Search By list. The list includes only those values which are defined in the BILL_ADDR_SRCE_FLG lookup field.	
Bill Cycle	Used to search for accounts with a particular bill cycle.	No
	Note: This field appears when the Account Details option is selected from the Search By list. The list includes only those bill cycles which are already defined in the system.	
State	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the Search By list: <ul style="list-style-type: none"> Account Details - This field enables you to search for accounts whose billing address belongs to a particular state. Policy Details - This field enables you to search for accounts of persons that are linked to policies issued in a particular state. Individual Membership Details - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular state. 	No
	Note: The Search (🔍) icon appears corresponding to the State field. On clicking the Search icon, the State Search window appears.	
Customer Class	You can use this field while searching for an account using the account or individual membership details. The context of this field changes depending on the respective option selected from the Search By list: <ul style="list-style-type: none"> Account Details - This field enables you to search for accounts which belong to a particular customer class. 	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> Individual Membership Details - This field enables you to search for individual membership's member persons' accounts that belong to a particular customer class. <p>Note:</p> <p>This field appears when the Account Details or Individual Membership Details option is selected from the Search By list.</p> <p>The list includes only those customer classes which are already defined in the system.</p>	
County	<p>You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> Account Details - This field enables you to search for accounts whose billing address belongs to a particular county. Policy Details - This field enables you to search for accounts of persons that are linked to policies issued in a particular county. Individual Membership Details - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular county. <p>Note: You can specify comma-separated values in this field.</p>	No
Postal	<p>You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> Account Details - This field enables you to search for accounts whose billing address belongs to a specific postal or zip code. Policy Details - This field enables you to search for accounts of persons that are linked to policies issued in an area with a particular postal or zip code. Individual Membership Details - This field enables you to search for accounts that belong to the individual membership's member persons who resides in an area with a particular postal or zip code. <p>Note: You can specify comma-separated values in this field.</p>	No
Price Item	Used to search for accounts for which charges of a particular price item are created.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This field appears when the Policy Details option is selected from the Search By list.</p> <p>The Search (Q) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p>	
Policy Plan Number	<p>Used to search for accounts of persons that are linked to policies having a particular policy plan.</p> <p>Note: This field appears when the Policy Details option is selected from the Search By list.</p>	No
Policy Type	<p>Used to search for accounts of persons that are linked to policies created using a particular policy type.</p> <p>Note:</p> <p>This field appears when the Policy Details option is selected from the Search By list.</p> <p>The list includes only those policy types which are already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required if you are searching for accounts using the state, county, postal, start date, or end date as a search criteria.</p>
Source System	<p>Used to search for accounts of persons that are linked to policies originated from a particular external system.</p> <p>Note:</p> <p>This field appears when the Policy Details option is selected from the Search By list.</p> <p>The list includes only those source systems which are already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required if you are searching for accounts using the state, county, postal, start date, or end date as a search criteria.</p>
Policy Number	<p>Used to search for accounts of persons that are linked to a particular policy.</p> <p>Note: This field appears when the Policy Details option is selected from the Search By list.</p>	No
Start Date	<p>You can use this field while searching for an account using the policy or individual membership details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Policy Details - This field enables you to search for accounts of persons that are linked to policies with a particular start date. • Individual Membership Details - This field enables you to search for accounts of persons that are linked to individual memberships with a particular start date. 	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This field appears when the Individual Membership Details option is selected from the Search By list.</p> <p>The list includes only those values which are defined in the PRODUCT_HC_CAT_FLG lookup field.</p>	
Product LOB	<p>Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB.</p> <p>Note:</p> <p>This field appears when the Individual Membership Details option is selected from the Search By list.</p> <p>The list includes only those values which are defined in the PRODUCT_LOB_FLG lookup field.</p>	No
Product LOB Category	<p>Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB category. The valid values are:</p> <ul style="list-style-type: none"> • Commercial • Government • State Programs <p>Note:</p> <p>This field appears when the Individual Membership Details option is selected from the Search By list.</p> <p>The list includes only those values which are defined in the PRODUCT_LOB_CAT_FLG lookup field.</p>	No
Characteristic Type	<p>You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the Search By list:</p> <ul style="list-style-type: none"> • Account Details - This field enables you to search for accounts with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to Account. • Individual Membership Details - This field enables you to search for member persons' accounts of the individual memberships with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to Membership. • Policy Details - This field enables you to search for policy persons' accounts of the policies with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to Policy. 	<p>Yes (Conditional)</p> <p>Note: If you specify the characteristic value as a search criteria, you have to select the characteristic type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the Search By list:	Yes (Conditional)
	<ul style="list-style-type: none"> • Account Details - This field enables you to search for accounts with a particular characteristic. • Individual Membership Details - This field enables you to search for member persons' accounts of the individual memberships with a particular characteristic. • Policy Details - This field enables you to search for policy persons' accounts of the policies with a particular characteristic. 	Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.
	Note: This field appears when you select an option from the Characteristic Type list.	

Note: You must specify at least one search criterion while searching for an account.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays additional information about the account. In addition, this column has a context menu (☺) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Country	Displays the country in which the account's main customer resides.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code of the address.
Customer Class	Indicates the customer class to which the account belongs.
Division	Indicates the division to which the account belongs.
Account ID	Displays the account ID.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add an account to the hold request.

A check box appears corresponding to each account. On selecting the check box, you can add the account to the hold request. You can also select multiple accounts at the same time. In addition, you can select the check box

corresponding to the column header. This allows you to add all the accounts listed in the respective page to the hold request.

Note: The **Export** option is available in the **Explorer Zone** menu. On clicking the **Export** option, you can extract the search results in the CSV format. Two additional columns named **Account Identifier Type** and **Account Identifier** appear in the CSV file apart from the columns listed above in the **Search Results** section.

Search Bill

The **Search Bill** zone allows you to search for bills using various search criteria. It also allows you to add the bills in the hold request. It appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Bill**
- The status of the hold request is set to **Draft**.

It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the bill details. The valid value is: <ul style="list-style-type: none">• Bill Details	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search for a particular bill.	No
	Note: The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears. On selecting the bill, the respective information string appears corresponding to the Bill ID field. It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.	
Alternate Bill ID	Used to search for a bill using its alternate bill ID.	No
Address Source	Used to search for bills which are routed using a particular address source. The valid values are: <ul style="list-style-type: none">• Account Override• Bill• Main• Multiple Account Override• Person	Yes (Conditional)
		Note: This field is required if you are searching for bills using the state, country, or postal as a search criteria.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the BILL_ADDR_SRCE_FLG lookup field.	
Bill Date From	Used to search for bills which are completed on or after the specified date.	Yes (Conditional)
	Note: By default, the current date appears in this field. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	Note: This field is required if you have specified the value in the To field.
State	Used to search for bills where billing address belongs to a particular state.	No
	Note: The Search (🔍) icon appears corresponding to the State field. On clicking the Search icon, the State Search window appears.	
To	Used to search for bills which are completed on or before the specified date.	Yes (Conditional)
	Note: By default, the current date appears in this field. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	Note: This field is required if you have specified the value in the Bill Date From field.
County	Used to search for bills where billing address belongs to a particular county.	No
Show All Bills	Used to indicate whether you want to search for all the bills or only the non-zero bills.	No
	Note: By default, this option is not selected and as a result, only the non-zero bills that meet the search criteria appears in the search results. However, if you select the Show All Bills option, the system lists all the bills including zero amount bills that meet the search criteria in the Search Results section.	
Postal	Used to search for bills where billing address belongs to a particular postal or zip code.	No

Note:

You must specify at least one search criterion while searching for a bill.

The number of days between Bill From Date and Bill To Date should not exceed 60 days.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu (☺) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Account Information	Indicates the account for which the bill is created. In addition, this column has a context menu (☺) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Country	Displays the country to which the bill is routed via the postal service.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code of the address.
Entity ID	Displays the bill ID.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the hold request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the hold request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the respective page to the hold request.

Note: The **Export** option is available in the **Explorer Zone** menu. On clicking the **Export** option, you can extract the search results in the CSV format. One additional column named **Account ID** appears in the CSV file apart from the columns listed above in the **Search Results** section.

Search Person

The **Search Person** zone allows you to search for persons using various search criteria. It also allows you to add the persons in the hold request. It appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Person**
- The status of the hold request is set to **Draft**.

It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person using the person details. The valid value is: <ul style="list-style-type: none"> Person Details 	Yes
	Note: By default, the Person Details option is selected.	
Person ID	Used to search for a particular person.	No
	Note: The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears. On selecting the person, the respective information string appears corresponding to the Person ID field. It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.	
County	Used to search for persons who reside in a particular county.	No
State	Used to search for persons who reside in a particular state.	No
Postal	Used to search for persons who reside in an area with a particular postal or zip code.	No

Note: You must specify at least one search criterion while searching for a person.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays additional information about the person. In addition, this column has a context menu (☺) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Person Identifier Type	Indicates the primary person identifier type.
Person Identifier	Displays the value of the primary person identifier type.
Country	Indicates the country where the person resides.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code of the address.
Entity ID	Displays the person ID.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a person to the hold request.

A check box appears corresponding to each person. On selecting the check box, you can add the person to the hold request. You can also select multiple persons at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the persons listed in the respective page to the hold request.

Note: The **Export** option is available in the **Explorer Zone** menu. On clicking the **Export** option, you can extract the search results in the CSV format. One additional column named **Person Name** appears in the CSV file apart from the columns listed above in the **Search Results** section.

Hold Request - Log

The **Log** tab contains the following zone:

- [Hold Request Log](#) on page 1916

Hold Request Log

The **Hold Request Log** zone lists the complete trail of actions performed on the hold request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the hold request.
Details	Displays the details about the action performed on the hold request.
User	Indicates the user who has performed the action on the hold request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the hold request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the hold request is rejected or released.

Note: You can manually add a log entry for the hold request by clicking the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

Adding a Person in a Hold Request

Prerequisites

To add a person in a hold request, you should have:

- States defined in the application

Procedure

To add a person in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another person.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.
The **Hold Request** screen appears.
3. Expand the **Search Person** zone.
4. Enter the search criteria in the **Search Person** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of persons that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the person that you want to add in the hold request.

Note: You can also select multiple persons at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the persons listed in the respective page to the hold request.

7. Click the **Add** button in the **Search Person** zone.
A message appears indicating that the selected person is successfully added in the hold request. Note that the person is added in the **Hold Entities** zone.

Note: You cannot add a person in a hold request when it is created through the **Upload Request** feature.

Adding an Account in a Hold Request

Prerequisites

To add an account in a hold request, you should have:

- Divisions, bill cycles, customer classes, states, health plans, membership identifier types, and policy types defined in the application

- Values defined in the **BILL_ADDR_SRCE_FLG**, **PRODUCT_TYPE_FLG**, **PRODUCT_HC_CAT_FLG**, **PRODUCT_LOB_FLG**, and **PRODUCT_LOB_CAT_FLG** lookup fields
- Required characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To add an account in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another account.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request whose details you want to edit.
The **Hold Request** screen appears.
3. Expand the **Search Account** zone.
4. Enter the search criteria in the **Search Account** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the account that you want to add in the hold request.

Note: You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the accounts listed in the respective page to the hold request.

7. Click the **Add** button in the **Search Account** zone.
A message appears indicating that the selected account is successfully added in the hold request. Note that the account is added in the **Hold Entities** zone.

Note: You cannot add an account in a hold request when it is created through the **Upload Request** feature.

Editing a Hold Request

Prerequisites

To edit a hold request, you should have:

- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To edit a hold request:

- 1. Search for the hold request in the **Hold Request** screen.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request whose details you want to edit.
The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Hold Request** zone.

The **Hold Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request.
- **Hold Processes** - Used to indicate one or more processes of the entity that you want to keep on hold for a particular period.
- **Characteristics** - Used to define the characteristics for the hold request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Hold Request Type	Indicates the hold request type using which the hold request is created.	Not applicable
Start Date	Displays the date from when the hold request is effective.	Not applicable
End Date	<p>Used to specify the date till when the hold request is effective.</p> <p>Note:</p> <p>The hold request end date cannot be earlier than the hold request start date.</p> <p>You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</p> <p>You must specify a date which is equal to or later than the system date.</p>	Yes
Hold Reason	<p>Used to indicate the reason why you want to hold the entity.</p> <p>Note:</p> <p>The list includes only those values which are defined in the HOLD_REASON_FLG lookup field.</p> <p>You cannot change the hold reason when the hold request is in the Active status.</p>	Yes
Entity	<p>Indicates the type of entity for which the hold request is created. The valid values are:</p> <ul style="list-style-type: none"> • Account • Bill • Person 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify additional information about the hold request.	No
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

- 5. Modify the required details in the **Main** section.
- 6. Add or remove the hold processes from the hold request, if required.

Note:

You cannot delete a process or modify the details of a process except the end date when the hold request is in the **Active** status. Note that you cannot specify a date which is earlier than the system date.

A new process is added with the start date later than or equal to the system date.

You cannot change the past end date of an entity or process in the hold request.

You cannot add or remove a hold process from the hold request when it is created through the **Upload Request** feature.

- 7. Define, edit, or remove characteristics of the hold request, if required.
- 8. Click **Save**.
The changes made to the hold request are saved.

Editing the Entity Details of a Hold Request

Procedure

To edit the entity details of a hold request:

- 1. Search for the hold request in the **Hold Request** screen.
- 2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request whose details you want to edit.
The **Hold Request** screen appears.
- 3. Select the check box corresponding to the hold entity that you want to edit in the **Hold Entities** zone.

Note: You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page.

4. Click **Edit**.

The **Edit Hold Request Entities** screen appears. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

In addition, this screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Entity ID	Displays the entity ID.	Not applicable
Entity Information	Displays the information about the entity.	Not applicable
Start Date	<div>Used to specify the date from when you want to hold the entity.</div> <div>Note: This field is editable only when the hold request is in the Draft status. The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</div>	Yes
End Date	<div>Used to specify the date till when you want to hold the entity.</div> <div>Note: The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.</div>	No
Hold Amount	Used to specify the outstanding bill amount that you want to keep on hold.	Yes

Column Name	Column Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This column appears when the Bill option is selected from the Entity list.</p> <p>This field is editable only when the Allow Partial Hold for Bill option is selected in the respective hold request type.</p> <p>You must specify a non-zero value in this field and the specified amount should not exceed the outstanding bill amount.</p>	
Hierarchy	<p>Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.</p> <p>Note:</p> <p>This column appears when the Person option is selected from the Entity list.</p> <p>This column is editable only when the hold request is in the Draft status.</p>	No

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

5. Modify the details of the hold entities, if required.
6. Click **Save**.
The changes made to the hold request are saved.

Note: After updating the end date of a hold entity, you need to execute the **Hold Request Monitor (C1-HLMON)** batch. On executing the batch, the system will accordingly update the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.

Related Topics

For more information on...	See...
How to search for a hold request	Searching for a Hold Request on page 1874
Hold Request screen	Hold Request (Used for Viewing) on page 1897
Hold Entities zone	Hold Entities on page 1901

Updating the End Date of All the Hold Entities (Mass Edit)

Procedure

To update the end date of all the hold entities at once in a hold request:

1. Search for the hold request in the **Hold Request** screen.

- 2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request whose details you want to edit.
The **Hold Request** screen appears.
- 3. Click the **Edit All** link available in the upper right corner of the **Hold Entities** zone.

The **Hold Request Information** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Displays the date from when the hold request is effective.	Not applicable
End Date	Displays the date till when the hold request is effective.	Not applicable
Hold Entity End Date	Used to specify the date till when you want to hold all the entities in the hold request. Note: The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the Date Picker  icon corresponding to the field.	Yes

Note: The **Edit All** link appears when the hold request is in the **Draft** or **Active** status.

- 4. Enter the required date in the **Hold Entity End Date** field.
- 5. Click **Save**.

The end date of the hold entities, hold processes, and the hold request is set to the specified date. For example, a hold request exists with the following hold processes and hold entities:

	Original Start Date	Original End Date
Hold Request	01-01-2021	12-31-2021
Hold Process: Billing	01-01-2021	12-31-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021
Account 1	01-01-2021	12-31-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	10-30-2021

Now, if you want to mass update the hold entity end date to 09-30-2021 on 04-01-2021, the system updates the hold entity, hold process, and hold request end dates as shown in the following table:

	Original Start Date	Original End Date
Hold Request	01-01-2021	09-30-2021
Hold Process: Billing	01-01-2021	09-30-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021

	Original Start Date	Original End Date
Account 1	01-01-2021	09-30-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	09-30-2021

While updating the end date of a hold entity, the system checks whether the existing hold entity end date is earlier than the new hold entity end date. If the existing hold entity end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold entities. However, if the existing hold entity end date is later than the new hold entity end date, the system considers and updates the end date of such hold entities. Similarly, the system checks whether the existing hold process end date is earlier than the new hold entity end date. If the existing hold process end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold processes. However, if the existing hold process end date is later than the new hold entity end date, the system considers and updates the end date of such hold processes. Finally, the hold request end date is also set to the new hold entity end date.

A log is also created for the hold request indicating that mass update is done for the end date of the entities.

Note:

If the start date of any hold entity is later than the new hold entity end date, the system throws an appropriate error message and does not update the end date of the respective hold entity.

After updating the end date of a hold entity, you need to execute the **Hold Request Monitor (C1-HLMON)** batch. On executing the batch, the system will accordingly update the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.

Deleting an Entity from a Hold Request

Procedure

To delete an entity from a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.
The **Hold Request** screen appears.
3. Select the check box corresponding to the hold entity that you want to delete in the **Hold Entities** zone.

Note: You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page.

4. Click **Delete**.

A message appears confirming whether you want to delete the hold entity.

Note: The **Delete** button appears when the hold request is in the **Draft** or **Active** status. However, the system enables you to delete an entity from the hold request only when it is in the **Draft** status. Also, the entity (i.e., bill or account) added from the **Account Receivable Central**, **Funding Request**, or **Delinquency Central** screen, respectively, cannot be deleted from the hold request even when it is in the **Draft** status.

5. Click **OK**.
The hold entities are deleted from the hold request.

Note: You cannot remove an entity from a hold request when it is created through the **Upload Request** feature.

Deleting a Hold Request

Procedure

To delete a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request that you want to delete.
The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Hold Request** zone.
A message appears confirming whether you want to delete the hold request.

Note: The **Delete** button appears when the hold request is in the **Draft** status.

5. Click **OK**.
The hold request is deleted.

Discarding a Hold Request

Prerequisites

To discard a hold request, you should have:

- Reasons defined for the **Discarded** status of the **C1-HoldRequest** business object in the **Status Reason** screen

Procedure

To discard a hold request:

1. Search for a future dated active hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request that you want to discard.
The **Hold Request** screen appears.
3. Click the **Discard** button in the **Hold Request** zone.

The **Discard Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discard Reason	Used to indicate the reason why you want to discard the hold request.	Yes
	Note: The list includes only those reasons which are defined for the Discarded status of the C1-HoldRequest business object through the Status Reason screen.	
Comments	Used to specify additional information while discarding the hold request.	No

Note:
The **Discard** button appears when the following conditions are met:

- The hold request is future dated (i.e. when the hold request start date is later than the system date).
- The hold request is in the **Active** status.

4. Select the reason for discarding the hold request from the **Discard Reason** list.
5. Enter the comments (if any) while discarding the hold request in the respective field.
6. Click **Save**.
The status of the hold request is changed to **Discarded**. Note that the hold request end date, hold entity end date, and the hold process end date are not changed to the date when the hold request is discarded.

Submitting a Hold Activation Request

Prerequisites

To submit a hold activation request, you should have:

- At least one entity (such as, person, account, or bill depending on the specified entity level) added to the hold request

Procedure

To submit a hold activation request:

1. Search for the hold request in the **Hold Request** screen.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request that you want to submit.
The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Hold Request** zone.

The system behaves in the following manner:

If...	Then...
The Activation Approval option is selected in the respective hold request type	The status of the hold request is changed to Activation Approval In Progress . A To Do is created using the To Do type (i.e., C1-HLDAP) specified in the Activation Approval To Do Type field of the respective hold request type and then assigned to the users with the role specified in the Activation Approval To Do Role field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the approver.
The Activation Approval option is not selected in the respective hold request type and the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count (defined in the respective hold request type)	<p>The status of the hold request is changed to Deferred Processing.</p> <p>Note:</p> <p>You need to execute the Hold Request Periodic Monitor (C1-HLDRQ) batch. It considers the hold requests which are in the Deferred Processing status and then changes its status to Active.</p> <p>Once the hold request is activated, you need to execute the following batches:</p> <ul style="list-style-type: none"> • C1-DELBI - If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the C1-DELBI batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>. • C1-HLMON - On executing the C1-HLMON batch, the system will set the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.
	<p>The status of the hold request is changed to Active. In addition, the system does the following (in the online mode):</p> <ul style="list-style-type: none"> • If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date. • If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to Inactive. • An alert is created in the dashboard whenever an account is kept on hold through a hold request. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.

If...	Then...
	<p>Note:</p> <p>A warning message appears while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date.</p> <p>The system does not allow you to activate a hold request when the hold request end date is earlier than the system date.</p> <p>If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the C1-DELBI batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>

<p>Note:</p> <p>If the Delinquency process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to Account, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either Deferred Processing or Active. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to Deferred Processing. Similarly, if the entity level is set to Person, it does not use the defer processing count. It directly changes the status of the hold request to Deferred Processing.</p> <p>The Submit button appears when the hold request is in the Draft status.</p>
--

On activating a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If...	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the bill after date for the respective account. In addition, the system creates an entry for the hold request in the CI_BILL_DEL_REQUEST table.
	Note: The bill after date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Bill On or After Date field on the Main tab of the Account screen.
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.
The hold request is created for an account, the delinquency process is on hold, and the entity start date in	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.

If...	Then...
the hold request is earlier than or equal to the system date	<p>Note: The postpone credit review until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.</p>
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	<p>The entity end date or process end date whichever is earlier is set as the defer auto pay date for the respective account.</p> <p>Note: The defer auto pay date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Defer Auto Pay Date field on the Auto Pay tab of the Account screen.</p>
The hold request is created for an account, the refund process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	<p>The entity end date or process end date whichever is earlier is set as the hold refund until date for the respective account. In addition, the status of the non-final refund request (if any) for the respective account is set to Hold.</p> <p>Note: The hold refund until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen.</p>
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the system date	The automatic payment details of the debit bills (if any) for the respective account are updated in the CI_BILL_ACH table.
The hold request is created for a person, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	<p>The entity end date or process end date whichever is earlier is set as the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the Hierarchy option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. In addition, the system creates an entry for the hold request in the CI_BILL_DEL_REQUEST table.</p> <p>Note:</p> <p>In this scenario, the bill after date is always set in the deferred mode when the C1-HLMON batch is executed.</p> <p>The bill after date then appears in the Bill On or After Date field on the Main tab of the Account screen.</p>
The hold request is created for a person, the delinquency process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective person and its immediate accounts (where the person is the main customer). If the Hierarchy option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

If...	Then...
	<p>Note:</p> <p>In this scenario, the postpone credit review until date is always set in the deferred mode when the C1-HLMON batch is executed.</p> <p>The postpone credit review until date then appears corresponding to the person in the Hold Entities zone of the Hold Request screen. In addition, the postpone credit review until date of the account appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.</p>

Note:

If the hold entity end date is not specified, the system will consider the respective process end date while deriving the above dates. If both the hold entity end date and respective process end date are not specified, the system will consider the hold request end date while deriving the above dates.

The system does not change the start date of the hold request, hold entity, or hold process when it is a future date.

However, if the number of entities added in the hold request exceeds the defer processing count, the system behavior mentioned in the above table would be completed when the **C1-HLMON** batch is executed.

Approving a Hold Activation Request

You can view the number of hold requests for which activation is pending for approval from the **Hold Request** screen. The approver can review, and accordingly approve or reject the hold activation request based on the observations. In addition, the approver can request the submitter to resubmit the hold activation request for approval after making the necessary changes in it.

Note: The system will not allow you to approve, reject, or request to resubmit a hold activation request submitted by you.

To approve a hold activation request, you should have:

- Activation approval To Do role assigned in the system

Procedure

To approve a hold activation request:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	<p>a. Search for the hold request with the Approval In Progress status in the Hold Request screen.</p> <p>A list of hold requests with the respective status appears in the search results.</p>

If you want to...	Then...
	<p>b. In the Search Results section, click the link in the Hold Request Information column corresponding to the hold request which you want to review.</p>
Review a hold activation request through the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do List screen appears.</p> <p>c. Click the Search (Q) icon corresponding to the To Do Type field.</p> <p>The To Do Type for User Search window appears.</p> <p>d. Enter C1-HLDAP in the To Do Type field.</p> <p>e. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>f. Select the Open option from the Filter by list to view all unassigned To Dos.</p> <p>g. Click the link in the Message column corresponding to the To Do of the hold request that you want to review.</p>

The **Hold Request** screen appears.

- Review the details in the **Hold Request** screen.
- If the information in the hold request is accurate, click the **Approve** button in the **Hold Request** zone.

The system behaves in the following manner:

If...	Then...
The number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count (defined in the respective hold request type)	<p>The status of the hold request is changed to Deferred Processing.</p> <p>Note:</p> <p>You need to execute the Hold Request Periodic Monitor (C1-HLDRQ) batch. It considers the hold requests which are in the Deferred Processing status and then changes its status to Active.</p> <p>Once the hold request is activated, you need to execute the following batches:</p> <ul style="list-style-type: none"> C1-DELBI - If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the C1-DELBI batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>. C1-HLMON - On executing the C1-HLMON batch, the system will set the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.
The number of entities added (either manually or via filter criteria) in the hold request does not exceed the defer processing count (defined in the respective hold request type)	<p>The status of the hold request is changed to Active. In addition, the system does the following (in the online mode):</p> <ul style="list-style-type: none"> If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date. If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to Inactive.

If...	Then...
	<ul style="list-style-type: none"> An alert is created in the dashboard whenever an account is kept on hold through a hold request. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.
	<p>Note:</p> <p>A warning message appears while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date.</p> <p>The system does not allow you to activate a hold request when the hold request end date is earlier than the system date.</p> <p>If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the C1-DELBI batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>

<p>Note:</p> <p>If the Delinquency process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to Account, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either Deferred Processing or Active. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to Deferred Processing. Similarly, if the entity level is set to Person, it does not use the defer processing count. It directly changes the status of the hold request to Deferred Processing.</p> <p>The Approve button appears when the hold request is in the Activation Approval In Progress status and when a user with the activation approval To Do role is reviewing the hold request.</p>

On approving a hold activation request, the system does the following in the online or deferred (i.e., when the **C1-HLMON** batch is executed) mode depending on the defer processing count:

If...	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	<p>The entity end date or process end date whichever is earlier is set as the bill after date for the respective account. In addition, the system creates an entry for the hold request in the CI_BILL_DEL_REQUEST table.</p> <p>Note: The bill after date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Bill On or After Date field on the Main tab of the Account screen.</p>
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	<p>The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.</p> <p>Note: The postpone credit review until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.</p>
The hold request is created for an account, the delinquency process is	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.

If...	Then...
on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	<p>Note: The postpone credit review until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.</p>
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	<p>The entity end date or process end date whichever is earlier is set as the defer auto pay date for the respective account.</p> <p>Note: The defer auto pay date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Defer Auto Pay Date field on the Auto Pay tab of the Account screen.</p>
The hold request is created for an account, the refund process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	<p>The entity end date or process end date whichever is earlier is set as the hold refund until date for the respective account. In addition, the status of the non-final refund request (if any) for the respective account is set to Hold.</p> <p>Note: The hold refund until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen.</p>
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the batch business date	The automatic payment details of the debit bills (if any) for the respective account are updated in the CI_BILL_ACH table.
The hold request is created for a person, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	<p>The entity end date or process end date whichever is earlier is set as the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the Hierarchy option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. In addition, the system creates an entry for the hold request in the CI_BILL_DEL_REQUEST table.</p> <p>Note:</p> <p>In this scenario, the bill after date is always set in the deferred mode when the C1-HLMON batch is executed.</p> <p>The bill after date then appears in the Bill On or After Date field on the Main tab of the Account screen.</p>

Rejecting a Hold Activation Request

Prerequisites

To reject a hold activation request, you should have:

- Activation approval To Do role assigned in the system
- Reasons defined for the **Rejected** status of the **C1-HoldRequest** business object in the **Status Reason** screen.

<p>Note: The system will not allow you to approve, reject, or request to resubmit a hold activation request submitted by you.</p>
--

Procedure

To reject a hold activation request:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	<p>a. Search for the hold request with the Activation Approval In Progress status in the Hold Request screen.</p> <p>A list of hold requests with the respective status appears in the search results.</p> <p>b. In the Search Results section, click the link in the Hold Request Information column corresponding to the hold request which you want to review.</p>

If you want to...	Then...
Review a hold activation request through the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do List screen appears.</p> <p>c. Click the Search (Q) icon corresponding to the To Do Type field.</p> <p>The To Do Type for User Search window appears.</p> <p>d. Enter C1-HLDAP in the To Do Type field.</p> <p>e. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>f. Select the Open option from the Filter by list to view all unassigned To Dos.</p> <p>g. Click the link in the Message column corresponding to the To Do of the hold request that you want to review.</p>

The **Hold Request** screen appears.

- Review the details in the **Hold Request** screen.
- If the information in the hold request is incorrect, click the **Reject** button in the **Hold Request** zone.

The **Reject Hold Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the hold activation request.	Yes
	Note: The list includes only those reasons which are defined for the Rejected status of the C1-HoldRequest business object through the Status Reason screen.	
Comments	Used to specify additional information while rejecting the hold activation request.	No
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	

Note: The **Reject** button appears when the following conditions are met:

- The hold request is in the **Activation Approval In Progress** status.
- A user with the activation approval To Do role is reviewing the hold request.

- Select the reason for rejecting the hold activation request from the **Status Reason** list.
 - Enter the comments (if any) while rejecting the hold activation request in the respective field.
 - Click **Save**.
- The status of the hold request is changed to **Rejected**.

Requesting to Resubmit a Hold Activation Request for Approval

While reviewing a hold activation request, the approver can also request the submitter to resubmit the hold activation request for approval after making the necessary changes to it.

Prerequisites

To request to resubmit a hold activation request for approval, you should have:

- Activation approval To Do role assigned in the system
- Submitter To Do type and submitter To Do role defined in the respective hold request type

Procedure

To request to resubmit a hold activation request for approval:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	<ol style="list-style-type: none"> a. Search for the hold request with the Activation Approval In Progress status in the Hold Request screen. A list of hold requests with the respective status appears in the search results. b. In the Search Results section, click the link in the Hold Request Information column corresponding to the hold request which you want to review.
Review a hold activation request through the To Do List screen	<ol style="list-style-type: none"> a. Click the Menu link in the Application toolbar. A list appears. b. From the Main menu, select To Do and then click To Do List. The To Do List screen appears. c. Click the Search (Q) icon corresponding to the To Do Type field. The To Do Type for User Search window appears. d. Enter C1-HLDAP in the To Do Type field. e. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. f. Select the Open option from the Filter by list to view all unassigned To Dos. g. Click the link in the Message column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is incomplete and you want the submitter to make the required changes and resubmit the hold activation request for approval, click the **Re Submit** button in the **Hold Request** zone.

The **Resubmit Hold Request** window appears. It contains following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes that the submitter should make in the hold request before resubmitting the activation request for approval.	Yes
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↘) icon at the bottom right corner of the text box.	

Note: The **Re Submit** button appears when the following conditions are met:

- The hold request is in the **Activation Approval In Progress** status.
- A user with the activation approval To Do role is reviewing the hold request.

4. Enter the comments in the respective field.

5. Click **Save**.

The status of the hold request is changed to **Draft**. A To Do is created using the To Do type (i.e., **C1-HOLSB**) specified in the **Submitter To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Submitter To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the submitter.

Note:

The To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

Releasing a Hold Request

Prerequisites

To release a hold request, you should have:

- Reasons defined for the **Released** status of the **C1-HoldRequest** business object in the **Status Reason** screen

Procedure

To release a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request that you want to release.
The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.

- Click the **Release** button in the **Hold Request** zone.

The **Release Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Release Reason	Used to indicate the reason why you want to release the hold request.	Yes
	Note: The list includes only those reasons which are defined for the Released status of the C1-HoldRequest business object through the Status Reason screen.	
Comments	Used to specify additional information while releasing the hold request.	No
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	

Note: The **Release** button appears when the hold request is in the **Active** status.

- Select the reason for releasing the hold request from the **Release Reason** list.
- Enter the comments (if any) while releasing the hold request in the respective field.
- Click **Save**.

The system behaves in the following manner:

If...	Then...
The Release Approval option is selected in the respective hold request type	The status of the hold request is changed to Release Approval in Progress . A To Do is created using the To Do type (i.e., C1-HLDAP) specified in the Release Approval To Do Type field of the respective hold request type and then assigned to the users with the role specified in the Release Approval To Do Role field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the approver.
The Release Approval option is not selected in the respective hold request type	The status of the hold request is changed to Released . If the hold entity end date and hold process end date is earlier than the system date, the system sets the hold entity end date and hold process end date to the system date. It also sets the hold request end date to the system date. In addition, the alert end date on the respective account is set to the system date.

On releasing a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If...	Then...
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The defer auto pay until date is set to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the CI_BILL_ACH table.
	Note: The defer auto pay date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Defer Auto Pay Date field on the Auto Pay tab of the Account screen.

If...	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The bill after date is cleared for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.
	Note: The bill after date is cleared corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it is cleared from the Bill On or After Date field on the Main tab of the Account screen.
The hold request is created for an account, the overdue process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.
The hold request is created for an account, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.
The hold request is created for an account, the refund process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The hold refund until date is set to the system date for the respective account. In addition, the status of the refund request (if any) for the respective accounts is changed from Hold to its previous status.
	Note: The hold refund until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen.
The hold request is created for a person, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The bill after date is cleared either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the Hierarchy option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
	Note: In this scenario, the bill after date is always cleared in the deferred mode when the C1-HLMON batch is executed. The bill after date is cleared from the Bill On or After Date field on the Main tab of the Account screen.
The hold request is created for a person, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The postpone credit review until date is set to the system date for the respective person and its immediate accounts (where the person is the main customer). If the Hierarchy option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

If...	Then...
	<p>Note:</p> <p>In this scenario, the postpone credit review until date is always set in the deferred mode when the C1-HLMON batch is executed.</p> <p>The postpone credit review until date then appears corresponding to the person in the Hold Entities zone of the Hold Request screen. In addition, the postpone credit review until date of the account appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.</p>

Note: The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the release process (i.e. system behavior mentioned in the above table) would be completed when the **C1-HLMON** batch is executed.

Approving a Hold Release Request

You can view the number of hold requests for which release is pending for approval from the **Hold Request** screen. The approver can review, and accordingly approve the hold release request based on the observations. In addition, the approver can request the submitter to resubmit the hold release request for approval after making the necessary changes in it.

Note: The system will not allow you to approve or request to resubmit a hold release request submitted by you.

To approve a hold release request, you should have:

- Release approval To Do role assigned in the system

Procedure

To approve a hold release request:

1. Do either of the following:

If you want to...	Then...
Review a hold release request through the Hold Request screen	<p>a. Search for the hold request with the Release Approval in Progress status in the Hold Request screen.</p> <p>A list of hold requests with the respective status appears in the search results.</p> <p>b. In the Search Results section, click the link in the Hold Request Information column corresponding to the hold request which you want to review.</p>

If you want to...	Then...
Review a hold release request through the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do List screen appears.</p> <p>c. Click the Search (Q) icon corresponding to the To Do Type field.</p> <p>The To Do Type for User Search window appears.</p> <p>d. Enter C1-HLDAP in the To Do Type field.</p> <p>e. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>f. Select the Open option from the Filter by list to view all unassigned To Dos.</p> <p>g. Click the link in the Message column corresponding to the To Do of the hold request that you want to review.</p>

The **Hold Request** screen appears.

- Review the details in the **Hold Request** screen.
- If the information in the hold request is accurate, click the **Approve** button in the **Hold Request** zone.

The status of the hold request is changed to **Released**. If the hold entity end date and hold process end date is earlier than the system date, the system sets the hold entity end date and hold process end date to the system date. It also sets the hold request end date to the system date. In addition, the alert end date on the respective account is set to the system date.

Note: The **Approve** button appears when the hold request is in the **Release Approval in Progress** status and when a user with the release approval To Do role is reviewing the hold request.

On releasing a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If...	Then...
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	<p>The defer auto pay until date is set to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the CI_BILL_ACH table.</p> <p>Note: The defer auto pay date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Defer Auto Pay Date field on the Auto Pay tab of the Account screen.</p>
The hold request is created for an account, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	<p>The bill after date is cleared for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.</p> <p>Note: The bill after date is cleared corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it is cleared from the Bill On or After Date field on the Main tab of the Account screen.</p>
The hold request is created for an account, the overdue process is on hold, and the entity end date in the	The postpone credit review until date is set to the system date for the respective account.

If...	Then...
hold request is earlier than or equal to the system date	<p>Note: The postpone credit review until date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Postpone Credit Review Until field on the C & C tab of the Account screen.</p>

Requesting to Resubmit a Hold Release Request for Approval

While reviewing a hold release request, the approver can also request the submitter to resubmit the hold release request for approval after making the necessary changes to it.

Prerequisites

To request to resubmit a hold release request for approval, you should have:

- Release approval To Do role assigned in the system
- Submitter To Do type and submitter To Do role defined in the respective hold request type

Procedure

To request to resubmit a hold release request for approval:

1. Do either of the following:

If you want to...	Then...
Review a hold release request through the Hold Request screen	<p>a. Search for the hold request with the Release Approval In Progress status in the Hold Request screen.</p> <p>A list of hold requests with the respective status appears in the search results.</p> <p>b. In the Search Results section, click the link in the Hold Request Information column corresponding to the hold request which you want to review.</p>
Review a hold release request through the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do List screen appears.</p> <p>c. Click the Search (🔍) icon corresponding to the To Do Type field.</p> <p>The To Do Type for User Search window appears.</p> <p>d. Enter C1-HLDAP in the To Do Type field.</p> <p>e. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>f. Select the Open option from the Filter by list to view all unassigned To Dos.</p>

If you want to...	Then...
	g. Click the link in the Message column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

- 2. Review the details in the **Hold Request** screen.
- 3. If the information in the hold request is incomplete and you want the submitter to make the required changes and resubmit the hold release request for approval, click the **Re Submit** button in the **Hold Request** zone.

The **Resubmit Hold Request** window appears. It contains following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes that the submitter should make in the hold request before resubmitting the release request for approval.	Yes
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	

Note: The **Re Submit** button appears when the following conditions are met:

- The hold request is in the **Release Approval In Progress** status.
- A user with the release To Do role is reviewing the hold request.

- 4. Enter the comments in the respective field.
- 5. Click **Save**.

The status of the hold request is changed to **Active**. A To Do is created using the To Do type (i.e., **C1-HOLSB**) specified in the **Submitter To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Submitter To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the submitter.

Note:

The To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

Adding a Log Entry for a Hold Request

Procedure

To add a log entry for a hold request:

- 1. Search for the hold request in the **Hold Request** screen.
- 2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request for which you want to add a log entry.
The **Hold Request** screen appears.
- 3. Click the **Log** tab.
The **Log** tab appears.
- 4. Click the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

The **Add Hold Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Log Details	Used to specify additional comments for the hold request.	Yes
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	

- 5. Enter the comments in the **Log Details** field.
- 6. Click **Save**.
The log entry is added in the **Hold Request Log** zone.

Delinquency Central

Topics:

- [Prerequisites](#)
- [Delinquency Central \(Used for Viewing\)](#)
- [Overdue Process Information for Account: {Account ID}](#)

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see [Prerequisites](#) on page 1950.

Related Topics

For more information on...	See...
Delinquency Central screen	Delinquency Central (Used for Viewing) on page 1950
Overdue Process Information for Account: {Account ID}	Overdue Process Information for Account: {Account ID} on page 1957

Prerequisites

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

Delinquency Central (Used for Viewing)

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person's account
- Create a payment agreement request for an account

This screen consists of the following zones:

- [Search Overdue Process](#) on page 1950
- [Overdue Events](#) on page 1955

Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: <ul style="list-style-type: none">• Person• Account• Bill• Overdue Process	No
	Note: By default, the Person option is selected.	
Person ID	Used to search for overdue processes which belong to a particular person.	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the Person option from the Search By list.	
Person Identifier Type	Used to search for overdue processes with a particular person identifier type.	Yes (Conditional)
	Note: This field appears when you select the Person option from the Search By list.	Note: If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search for overdue processes with a specific value of the person identifier type.	Yes
	Note: This field appears when you select the Person option from the Search By list.	
Account ID	Used to search for overdue processes created for a particular account.	No
	Note: This field appears when you select the Account option from the Search By list.	
Account Identifier Type	Used to search for overdue processes with a particular account identifier type.	Yes (Conditional)
	Note: This field appears when you select the Account option from the Search By list.	Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search for overdue processes with a particular account identifier.	Yes
	Note: This field appears when you select the Account option from the Search By list.	
Bill ID	Used to search for overdue processes with a particular bill.	No
	Note: This field appears when you select the Bill option from the Search By list.	
Alternate Bill ID	Used to search for overdue processes using an alternate bill ID.	No
	Note: This field appears when you select the Bill option from the Search By list.	
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and its value.	No
	Note: This field appears when you select the Bill option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Overdue Process Template	Used to search for overdue processes with a particular overdue process template.	No
	Note: This field appears when you select the Overdue Process option from the Search By list.	
Start Date	Used to search for overdue processes with a particular start date.	Yes
	Note: This field appears when you select the Overdue Process option from the Search By list.	
End Date	Used to search overdue process with a particular end date.	Yes
	Note: This field appears when you select the Overdue Process option from the Search By list.	
Status	Used to search for overdue processes with a particular status. The valid values are: <ul style="list-style-type: none"> Active Inactive 	No
	Note: This field appears when you select the Overdue Process option from the Search By list.	
On Hold	Used to search for overdue processes that are on hold.	No
	Note: This field appears when you select the Overdue Process option from the Search By list.	
Overdue Amount From	Used to search for overdue processes with a particular lower limit of the overdue amount.	No
	Note: This field appears when you select the Overdue Process option from the Search By list.	
To	Used to search for overdue processes with a particular higher limit of the overdue amount.	No
	Note: This field appears when you select the Overdue Process option from the Search By list.	
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and value.	No
	Note: This field appears when you select the Overdue Process option from the Search By list.	

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

Column Name	Column Description
Main Customer	Displays the name of the main customer to whom the account belongs.
	Note: This field appears when you select the Account option from the Search By list.
Person Name	Displays the name of the person to whom the account belongs.
	Note: This field appears when you select the Person option from the Search By list.
Person Identifier Type	Displays the person identifier type.
	Note: This field appears when you select the Person or Account option from the Search By list.
Person Identifier	Displays the value of the person identifier type.
	Note: This field appears when you select the Person or Account option from the Search By list.
Account Identifier Type	Displays the account identifier type.
	Note: This field appears when you select the Account option from the Search By list.
Account Identifier	Displays the value of the account identifier type.
	Note: This field appears when you select the Account option from the Search By list.
Overdue	Displays whether the person account(s)/bill(s) are overdue. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field appears when you select the Person or Account option from the Search By list.
Number of Active Overdue processes	Displays the number of overdue processes linked to the person's account that are in active status.
	Note: This field appears when you select the Person or Account option from the Search By list.
Number of Hold(s) on Account(s)	Displays the number of hold requests on the particular account.
Number of Overdue Bills	Displays the total number of bills that are overdue.
	Note: This field appears when you select the Person or Account option from the Search By list.
Total Overdue Amount	Displays the total overdue amount for an account.
Last Payment Date	Displays date of the last payment made by the person.

Column Name	Column Description
	Note: This field appears when you select the Person or Account option from the Search By list.
Last Payment Amount	Displays the amount last paid by the person.
	Note: This field appears when you select the Person or Account option from the Search By list.
Number Of Payment Arrangements	Displays the number of payment arrangements for the person's account.
	Note: This field appears when you select the Person or Account option from the Search By list.
Total Number of Overdue Process on Hold	Displays the total number of overdue process that are on hold.
	Note: This field appears when you select the Person or Account option from the Search By list.
Number of Promise To Pay	Displays the number of promise to pay belonging to the person.
	Note: This field appears when you select the Person or Account option from the Search By list.
Number of Broken Promise To Pay	Displays the total number of promise to pay that are broken.
	Note: This field appears when you select the Person or Account option from the Search By list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Overdue Process	Display additional information about the overdue process.
	Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the overdue process.
Overdue Process Template	Displays the template that was used to create overdue process's events.
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the account.
Person Information	Display additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears with the details of the person.
Overdue Amount	Displays the overdue amount under that overdue process.

Column Name	Column Description
On Hold	Displays whether the overdue process is on hold.
Overdue Process Details	On clicking the View (🔍) icon, the Overdue Process Details screen appears where you can view details of the overdue process.

On clicking the **Broadcast** (📡) icon corresponding to the overdue process, the **Overdue Events** zone appears with the details of the respective overdue process.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

- Click the **Menu** link in the **Application** toolbar

- 2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
The **Delinquency Central** screen appears.
- 3. Enter the search criteria in the **Search Overdue Process** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 4. Click **Search**.
A list of overdue processes that meet the search criteria appear in the **Search Results** section.

Viewing Events of an Overdue Process

Procedure

To view events of an overdue process:

- 1. Search for the overdue process in the **Delinquency Central** screen.
- 2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the overdue process whose event details you want to view.
The **Overdue Events** zone appears.
- 3. View the overdue event details of the overdue process in the **Overdue Events** zone.

Viewing the Overdue Process Details

Procedure

To view the details of an overdue process:

- 1. Search for the overdue process in the **Delinquency Central** screen.
- 2. In the **Search Results** section, click the link in the **Overdue Process Information** column corresponding to the overdue process whose details you want to view.

The **Overdue Process** screen appears. It consists of the following tabs:

- **Main** - Displays the basic details of the overdue process.
- **Events** - Displays the events details of the overdue process.
- **Log** - Displays a complete trail of actions performed on the overdue process.
- **Characteristics** - Displays the characteristics of the overdue process.

3. View the event details of the overdue process in the **Overdue Process** screen.

Overdue Process Information for Account: {Account ID}

The **Overdue Process Information for Account: {Account ID}** screen allows you to view detail information of the account which is linked to the overdue process.

This screen consists of the following zones:

- [Person Information](#) on page 1957
- [Account Information](#) on page 1958
- [Customer Contact Details](#) on page 1958
- [Promise To Pay](#) on page 1958
- [Hold Details](#) on page 1959
- [Overdue Bills](#) on page 1959
- [Payment Arrangement](#) on page 1959
- [Search Bill](#) on page 1960
- [Searching for a Bill](#) on page 1961
- [Adding the Customer Contact Details](#) on page 1961
- [Creating a Hold Request for an Overdue Process](#) on page 1962
- [Creating a Payment Arrangement for an Overdue Process](#) on page 1963
- [Defining a Promise To Pay for an Overdue Process](#) on page 1963

Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Person Name	Displays the name of the person whose account is linked to the overdue process.
Phone Number	Displays the phone number of the person.
Address	Displays the address of the person.

Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Last Payment Date	Displays the date of the last payment made from the account that is linked with the overdue process.
Last Payment Amount	Displays the amount last paid from the account.

Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Contact Date/Time	Displays the date and time when the customer was contacted.
Customer Contact Information	Displays additional information about the customer contact.
	Note: It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer contact.
Preferred Contact Method	Displays the preferred method of contacting the customer.
Comments	Displays the comments that are placed against each customer.

Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Promise To Pay Information	Displays additional information of promise to pay.
	Note: It has a link. On clicking the link, the Promise To Pay screen appears where you can view the details of promise to pay.
Scheduled Amount	Displays the amount to be paid on the Scheduled Date .
Scheduled Date	Displays the date when the payment is expected as per promise to pay.
Status	Displays the status of promise to pay.
Created By	Displays the user ID who has created the promise to pay.

Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request.
Status	Displays the status of the hold request.
Entity	Displays the hold request entity.
Entity Information	Displays the information about the entity on hold.
	Note: It has a link. On clicking the link, the Account , Bill or Person screen appears, where you can view details of the respective account, bill or person.
Start Date	Displays the date when the hold request is created.
End Date	Displays the end date of the hold request.

Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Overdue Amount	Displays the amount that is overdue in the bill.
Days Past Due	Displays the number of days past after the bill date.

Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Contract Information	Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application.

Column Name	Column Description
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Payoff Balance	Displays the total amount that is paid against the payment arrangement contract.
Arrange Amount	Displays the amount that is paid in installments as per the payment arrangement contract.
Number of Installments	Displays the number of installments used to calculate the Arrange Amount .

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the name of the person for whom the bill is generated.	No
Person ID	Used to specify the person ID.	No
Bills of Persons in Hierarchy	Used to indicate whether you want to search for a bills generated against a person's hierarchy.	No
Bill Cycle	Used to indicate bills where a particular bill cycle is defined.	No
Bill Currency	Used to indicate the bill currency.	No
Billing Method	Used to indicate the billing method. The valid values are: <ul style="list-style-type: none">• Ad-Hoc Billing• Regular Billing	No
Bill ID	Used to specify the bill ID.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Account ID	Used to indicate the account against which the bill is generated.	No
On or After Bill Date	Used to specify the date when the bill was completed.	No
Account Identifier Type	Used to search for bills where the account against which it is generated, a particular account identifier type is defined.	No
Account Identifier	Used to search for a bill generated against an account with a particular account identifier.	No

Note: You must specify at least one search criterion while searching for the bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Name	Displays the name of the person against whom the bill is generated.
Bill ID	Displays the bill ID.
Bill Status	Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Current Charges	Displays the bill amount.
Bill Information	Displays additional information about the bill.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
The **Delinquency Central** screen appears.
3. Select the **Bill** option from the **Search By** list.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of bills that meet the search criteria appear in the **Search Results** section.

Adding the Customer Contact Details

Procedure

To add customer contact details:

1. Search for an overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the overdue process linked to the account for which you want to add the customer contact.
3. Click **Contact Customer**.

The **Customer Contact** screen appears.

4. Enter the required details.

The fields **Person ID**, **Contact Date/Time** and **User ID** are auto-populated.

5. Click **Save**.

The customer is contacted based on the value set for **Preferred Contact Method** field on the **Customer Contact** screen.

Creating a Hold Request for an Overdue Process

Procedure

To create a hold request for an overdue process:

1. Search for an overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a hold request for an overdue process.
3. Click **Create Hold Request** button.

The **Add Hold Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory
Hold Request Type	Used to indicate the hold request type that is used for creating a hold request.	Yes

4. Select the required hold request type from the **Hold Request Type** field.

5. Click **OK**.

The **Hold Request** screen appears.

6. Enter the required details for an overdue process.

7. Click **Save**.

A hold request is defined for an overdue process where the status of the hold request is set as **Draft**.

Note:

The **Hold Request** screen appears where you can view the details of the hold request.

Creating a Payment Arrangement for an Overdue Process

Procedure

To create a payment arrangement for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a payment arrangement for an overdue process.
3. Click the **Create Payment Arrangement** button.
The **Payment Arrangement** screen appears. It contains the following tabs:
 - **Main**
 - **History**
4. Enter the required details in the **Payment Arrangement** screen.
5. Click the **Save** button in the **Page Title** area of the **Payment Arrangement** screen.
A payment arrangement is created with the respective payment arrangement contract.

Note: The **Payment Arrangement** screen appears with the details of the payment arrangement.

Defining a Promise To Pay for an Overdue Process

Procedure

To create a promise to pay for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to define a promise to pay for an overdue process.
3. Click the **Create Promise To Pay** button.
A message appears confirming that the promise to pay will be created for the account for which the overdue process is initiated.
4. Click **OK**.
The **Promise To Pay** screen appears.
5. Enter the required details in the **Promise To Pay** screen.
6. Click the **Save** button in the **Page Title** area of the **Promise To Pay** screen.
A promise to pay is created with the scheduled payment details.

Upload Request

Topics:

- [Prerequisites](#)
- [Upload Request \(Without Approval\) Status Transition](#)
- [Upload Request \(With Approval\) Status Transition](#)
- [Defer Upload Request Validation](#)
- [Mass Account Billing Cycle Update](#)
- [Mass Contract Rider Update](#)
- [Mass Billable Charge Creation \(Financial Services\)](#)
- [Mass Hold Request Creation](#)
- [Mass Refund Request Creation](#)
- [Mass Write Off Request Creation](#)
- [Mass Policy Reinstatement](#)
- [Mass Bill Group Level Sorting](#)
- [Mass Bill Group Level Derivation and Pricing Parameter Creation](#)
- [Upload Request Type](#)
- [Upload Request \(Used for Searching\)](#)
- [Upload Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides a generic upload feature which enables you to upload various types of data. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

While uploading data for the above supported entities, you need to specify the upload request type using which you want to upload the file. It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can upload a data file in the CSV format. You cannot upload data for more than one entity type through the same CSV file. For example, you cannot upload data for billable charges and hold requests using a single CSV file. An upload request of the specified upload request type is created when the file is successfully uploaded in the system. You can track a file through an upload request.

Once an upload request is created, the status of the upload request is set to **Draft**. The status of each record uploaded through an upload request is set to **Pending**. However, if the mandatory data is not available or data required for deriving mandatory data is incorrect in the record, the status of record is set to **Invalid**. You can then edit, delete, or validate the upload request. During the validation process, the system and custom validations (if any) are executed. The status of each record is changed to **Valid** or **Invalid** depending on whether the record was validated successfully or not.

Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUplReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUplReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request(C1-BillLevelUploadRequest)

Note: Mapping details are already defined in the above upload request types.

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see [Upload Request \(Without Approval\) Status Transition](#) and [Upload Request \(With Approval\) Status Transition](#).

Note: The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see [Prerequisites](#) on page 1967.

Prerequisites

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
 - Policy Status after Processing Reinstatement Upload Request
 - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
 - **Navigation Option** - c1upldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:
- | Table Name | Field Name |
|---------------|-------------------|
| C1_UPLOAD_REQ | Upload Request ID |
- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
 - Create a To Do type named **C1-BGDVP** using the following information:
 - **Navigation Option** - c1upldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when approval workflow is off:

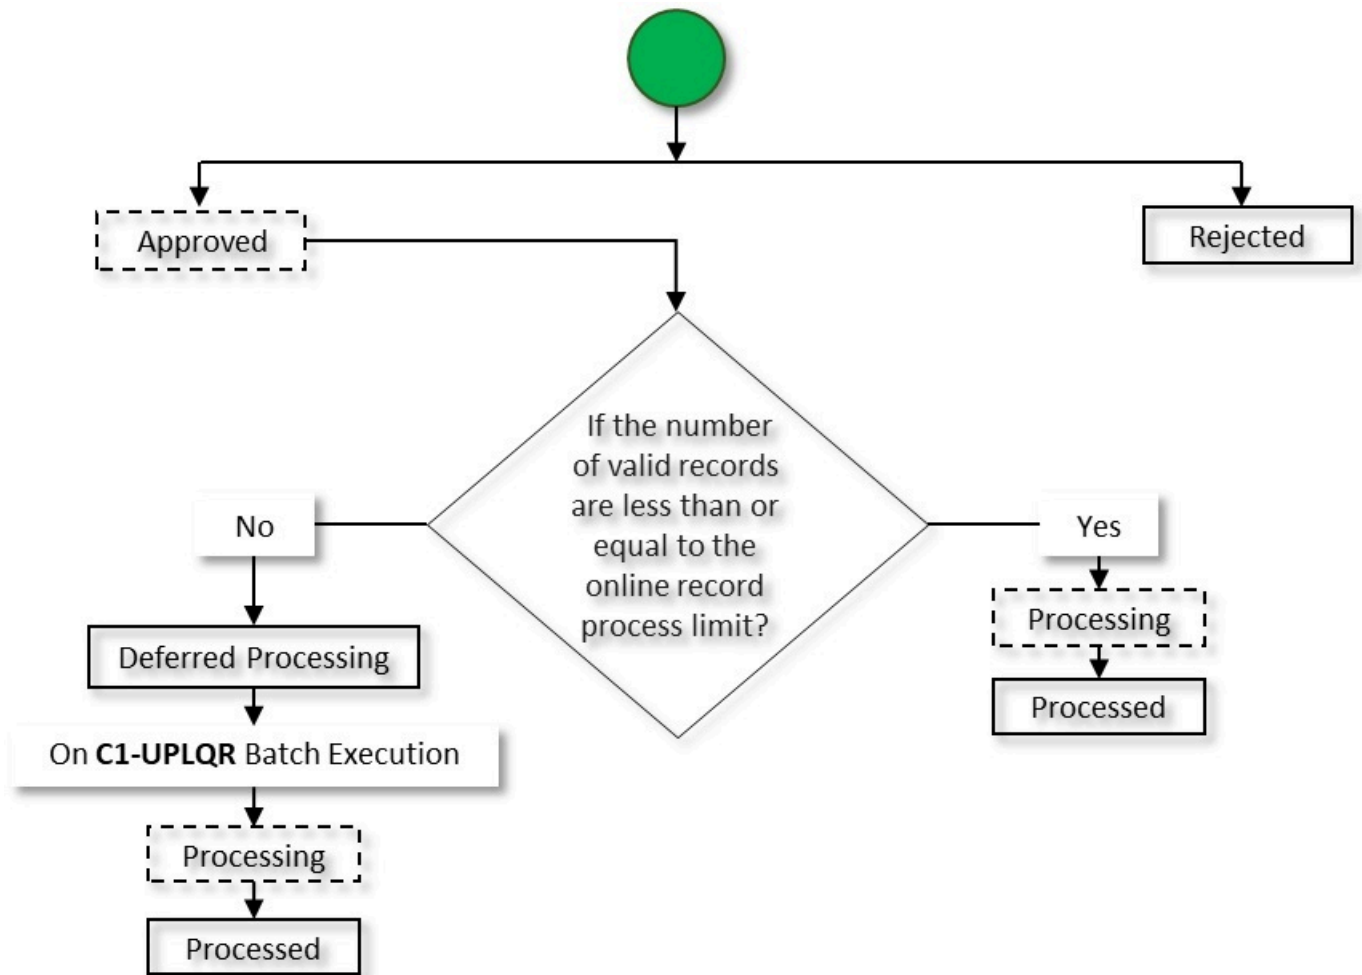

Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when approval workflow is on:

Defer Upload Request Validation

Until now, the system enabled you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

The system faced performance issues while validating a CSV file uploaded through the Upload Request feature when the CSV file had voluminous records. Therefore, now the system has introduced defer processing mechanism while validating a CSV file. The defer processing mechanism for the validation process is introduced for the following business objects:

- C1-BillableChargeUploadRequest
- C1-HoldUploadRequest
- C1-RefundUploadRequest
- C1-WriteOffUploadRequest
- C1-BillLevelUploadRequest

Two new statuses named **Validating** and **Deferred Validation** are added in the lifecycle of the above business objects. Now, when you click the **Validate** button, the system changes the status of the upload request to **Validating**. The system then invokes the **C1-DEFERVALD** algorithm which is attached to the **Validating** status. It checks whether the total number of records in the upload request exceeds the online record validate limit defined in the **C1-DEFERVALD** algorithm. If the total number of records in the upload request does not exceed the online record validate limit, all records in the upload request are validated immediately and its record status is changed to **Valid** or **Invalid** depending on whether it is successfully validated or not. Finally, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the status of the upload request is changed to **Deferred Validation**. On executing the **C1-UPLRQ** batch, the system checks whether there are any upload requests in the **Deferred Validation** status. If there is an upload request in the **Deferred Validation** status, all records in the upload request are validated in the deferred mode and its record status is changed to **Valid** or **Invalid** depending on whether it is successfully validated or not. Finally, the status of the upload request is changed to **Validated**.

Mass Account Billing Cycle Update

Until now, the system enabled you to update the bill cycle for an account from the user interface. Now, the system provides the ability to update the bill cycle for multiple accounts at once through the **Upload Request** feature.

Prerequisites

To setup the mass account billing cycle creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-BCUUR To Do** type to a To Do role whose users must receive a To Do while submitting a mass account billing cycle creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for account billing cycle (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillCycleUpdateUplReq** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BCU-DERIV	C1-BCU-DERIV	Refer to C1-BCU-DERIV on page 1974.

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-BCU-VALID	C1-BCU-VALID	Refer to C1-BCU-VALID on page 1974.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT on page 1975.

	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
Processed	-	-	-	-

C1-BCU-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**. It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BCU-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BCU-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record, the system reads the account ID and bill cycle, and updates the bill cycle information of the account using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Account Billing Cycle Update CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass account billing cycle through an upload request:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the account ID is not specified.
Account Identifier	Used to specify the identifier of the account whose bill cycle you want to update.	Yes (Conditional)
		Note: This data is required when the account ID is not specified.
Account ID	Used to indicate the account whose bill cycle you want to update.	No
	Note: If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination.	
Bill Cycle	Used to specify the bill cycle.	Yes
	Note: You must specify a valid bill cycle which is associated with the division to which the account belongs.	

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the account billing cycle creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account identifier type, then the sequence of the **Account Identifier Type** column header should be set to 1 during data mapping.

Sample Account Billing Cycle Update CSV File

Mass Contract Rider Update

Until now, the system enabled you to update the contract rider details for a contract from the user interface. Now, the system provides the ability to update the contract rider details for multiple contracts at once through the **Upload Request** feature.

Prerequisites

To setup the mass contract rider creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-CRUUR To Do** type to a To Do role whose users must receive a To Do while submitting a mass contract rider creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for contract rider (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-ContractRiderUpdateUplReq** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	Refer to C1-CR-DERIV on page 1978.
Validated	Enter	C1-CR-VALID	C1-CR-VALID	Refer to C1-CR-VALID on page 1978.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT on page 1975.
	Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer to C1-DEFERUPLD on page 1975.

	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
Processed	-	-	-	-

C1-CR-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**. It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-CR-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the **Contract Rider Applicability** flag on the bill factor is set to **Y**, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the **Contract Rider Applicability** flag on the bill factor is set to **N**, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-CR-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record, the system reads the account ID and contract ID, and updates the contract rider information of the contract using the entity business object defined in the upload request type. If the contract ID is not specified in the record, then the system derives the active contract of the specified contract type on the account, and then updates the contract rider information of the contract. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Contract Rider Update CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass contract rider through an upload request:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the account ID and contract ID are not specified.
Account Identifier	Used to specify the identifier of the account whose contract you want to update.	Yes (Conditional)
		Note: This data is required when the account ID and contract ID are not specified.
Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional)
		Note: This data is required when the account identifier type, account identifier, and contract ID are not specified.
Contract Type	Used to indicate the type of the contract whose details you want to update.	Yes (Conditional)
	Note: You must specify a contract type which already exists in the system.	Note: This data is required when the contract ID is not specified.
Contract ID	Used to indicate the contract whose contract rider information you want to update.	No
	Note: If you do not specify the contract ID, the system derives the active contract using the account ID and contract type combination.	
Start Date	Used to specify the date from when the bill factor is effective for the contract.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the bill factor is effective for the contract.	No
	Note: The end date cannot be earlier than the start date.	
Bill Factor	Used to specify the bill factor.	Yes
	Note: You must specify a valid bill factor where the Contract Rider Applicability flag is set to Y.	

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the contract rider creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account identifier type, then the sequence of the **Account Identifier Type** column header should be set to 1 during data mapping.

Mass Billable Charge Creation (Financial Services)

Until now, the system enabled you to create a billable charge from the user interface. Now, the system provides the ability to create multiple billable charges for different accounts at once through the **Upload Request** feature.

Prerequisites

To setup the mass billable charge creation feature for the financial services, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass billable charge creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for billable charge (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillableChargeUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillableChargeUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillableChargeUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	Refer to C1-CRTUPLDTL on page 1982.
	Enter	C1-BC-DERIV	C1-BC-DERIV	Refer to C1-BC-DERIV on page 1982.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD on page 1982.

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BC-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating billable charges and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not

derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BC-VALID

This algorithm validates the data upload in an upload request for creating billable charges before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Billable Charge Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass billable charges for financial services through an upload request:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional)
		Note: This data is required when the Account Identifier Type and Account Identifier is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when you want to create the billable charge against a specific contract on the account. If this data is not specified then billable charge is created against a contract with highest priority.
Start Date	Used to specify the start date of billable charge. Note: You need to specify the start date in YYYY-MM-DD format.	Yes
End Date	Used to specify the end date of billable charge. Note: You need to specify the start date in YYYY-MM-DD format.	Yes
Charge Type	Used to specify the charge type for which you want to create a billable charge.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Recurring Flag	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set policy invoice frequency. The valid values are: <ul style="list-style-type: none"> BP FR 	Yes (Conditional) Note: This data is required when Frequency or Bill Period is specified.
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required when Recurring Flag is set to FR .
Bill Period	Used to specify the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required when Recurring Flag is set to BP .
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No
Description on Bill1, Description on Bill2,, Description on Bill5	Used to specify description for the billable charge lines.	Yes (Conditional) Note: This data is required when the charge amount is specified.

Column Name	Description	Mandatory (Yes or No)
Currency1, Currency2, Currency5	Used to specify the currency in which the amount is charged.	Yes (Conditional)
	Note: If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Note: This data is required when the charge amount is specified.
Amount1, Amount2, Amount5	Used to specify the charge amount.	Yes (Conditional)
		Note: This data is required when the description on bill or currency is specified.
Show On Bill1, Show on Bill2, Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are:	No
	<ul style="list-style-type: none"> true false 	
	Note: By default, the value will be set to True if the column does not contain any value.	
Summary1, Summary2, Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are:	No
	<ul style="list-style-type: none"> true false 	
	Note: By default, the value will be set to True if the column does not contain any value.	
Memo Only1, Memo Only2, Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are:	No
	<ul style="list-style-type: none"> true false 	
	Note: By default, the value will be set to False if the column does not contain any value.	
GL Distribution Code1, GL Distribution Code2, GL distribution Code5	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional)
		Note: This data is required when False is specified in the Memo Only column corresponding to the bill line description.
Price Item	Used to specify the price item code.	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when Variance Parameter or Price Item Parameter and Price Item Parameter Value is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) Note: This data is required when Price Item is specified and Price Item Parameter and Price Item Parameter Value are not specified.
Price Item Parameter1, Price Item Parameter2,, Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
Price Item Parameter Value1, Price Item Parameter Value2,, Price Item Parameter Value15	Used to specify the parameter value. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
SQI1, SQI2,, SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) Note: This data is required when the service quantity is specified.
SQI Value1, SQI Value2,, SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) Note: This data is required when the SQI is specified.
Effective Date1, Effective Date2,, Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Value1, Char Value2,, Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when Effective Date or Char Type is specified.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the billable charge creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account Id, then the sequence of the **Account Id** column header should be set to 1 during data mapping.

Sample Billable Charge Creation CSV File

```

Mass Hold Request Creation

Until now, the system enabled you to create a hold request from the user interface and through an inbound web service. Now, the system provides the ability to create multiple hold requests at once through the **Upload Request** feature.

Prerequisites

- To setup the mass hold request creation feature, you need to do the following:
- Define the required upload request types in the system.
 - Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass hold request creation upload request for approval.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request**.
 - Define the required foreign key reference for hold request (if not available) in the system.
 - Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-HoldUploadRequest** business object in the **Status Reason** screen.
 - Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language

- Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLD-DERIV	C1-HLD-DERIV	Refer to C1-HLD-DERIV on page 1989.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD on page 1982.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
Validated	Enter	C1-HLD-VALID	C1-HLD-VALID	Refer to C1-HLD-VALID on page 1990.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT on page 1975.

	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
Processed	-	-	-	-

C1-HLD-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**. If the hold entity is **ACCT** and the entity ID is not specified in the

record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is **PERS** and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLD-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is **valid**. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the **person ID** using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**. It also checks whether there are two or more records with the same entity ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-HLD-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the hold request type, start date, end date, hold reason, hold entity, hold entity start date, hold entity end date, comments, hold process details, and hold characteristic details, it creates one hold request using the entity business object defined in the upload request type. However, if there are multiple entity IDs with the same combination, all are added in the same hold request. The hold request is created in the **Draft** status and then transitioned to **Submit**. From the **Submit** status, the status of the hold request is either changed to **Approval In Progress** or **Active** depending on whether the **Approval Required** flag is set to **Yes**. If the number of bills of the entities which are kept on hold through the hold request does not exceed the defer processing count (defined in the hold request type), the status of the hold request is changed to **Active**. However, if the number of bills of the entities which are kept on hold through the hold request exceeds the defer processing count, the status of the hold request is changed to **Deferred Processing**. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Hold Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass hold requests through an upload request:

Column Name	Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type using which you want to create the hold request.	Yes
	Note: You must specify a hold request type which is already defined in the system. It should be in the Active status.	
Start Date	Used to specify the date from when the hold request is effective.	Yes
	Note: The hold request start date cannot be later than the hold request end date.	
End Date	Used to specify the date till when the hold request is effective.	Yes
	Note: The hold request end date cannot be earlier than the hold request start date.	
Hold Reason	Used to indicate the reason why you want to hold the entity.	Yes
	Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field. It should be in the Active status.	
Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none">• ACCT• BILL• PERS	Yes
	Note: You must specify a value which is already defined in the HOLD_ENTITY_LVL_FLG lookup field. It should be in the Active status.	
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
	Note: You must specify an account identifier type which is already defined in the system.	Note: This data is required when the hold entity is set to ACCT and the hold entity ID is not specified in the record.
Account Identifier	Used to specify the account identifier. The system will derive the account using the given account identifier type	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
	and account identifier combination and then create a hold request for the respective account.	Note: This data is required when the hold entity is set to ACCT and the hold entity ID is not specified in the record.
Person Identifier Type	Used to specify the person identifier type.	Yes (Conditional)
	Note: You must specify a person identifier type which is already defined in the system.	Note: This data is required when the hold entity is set to PERS and the hold entity ID is not specified in the record.
Person Identifier	Used to specify the person identifier. The system will derive the person using the given person identifier type and person identifier combination and then create a hold request for the respective person.	Yes (Conditional)
		Note: This data is required when the hold entity is set to PERS and the hold entity ID is not specified in the record.
Hold Entity ID	Used to indicate the entity (such as, person, account, or bill) that you want to keep on hold.	Yes (Conditional)
	Note: If the hold entity is set to ACCT , you must specify the account ID in this column. If the hold entity is set to PERS , you must specify the person ID in this column. And, if the hold entity is set to BILL , you must specify the bill ID in this column. If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	Note: This data is required when the hold entity is set to BILL .
Comments	Used to specify additional information about the hold request.	No
Hold Entity Start Date	Used to specify the date from when you want to hold the entity.	Yes
	Note: The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date.	
Hold Entity End Date	Used to specify the date till when you want to hold the entity.	No

Column Name	Description	Mandatory (Yes or No)
	Note: The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	
Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N Note: You can hold the funding process when the hold entity is set to ACCT , PERS , or BILL .	No
Hold Funding Start Date	Used to specify the date from when you want to hold the funding process for the entity. Note: The hold funding start date must be between the hold request start and end dates. The hold funding start date cannot be later than the hold funding end date.	Yes (Conditional) Note: This data is required when the hold funding is set to Y in the record.
Hold Funding End Date	Used to specify the date till when you want to hold the funding process for the entity. Note: The hold funding end date must be between the hold request start and end dates. The hold funding end date cannot be earlier than the hold funding start date.	No
Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N Note: You can hold the overdue process when the hold entity is set to ACCT . Note that you cannot set both hold overdue and hold delinquency to Y for an account in the same duration. The Overdue process is valid for the financial services and health insurance domains but the Delinquency process is valid only for the health insurance domain.	No

Column Name	Description	Mandatory (Yes or No)
Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process for the entity.	Yes (Conditional)
	Note: The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	Note: This data is required when the hold overdue is set to Y in the record.
Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process for the entity.	No
	Note: The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	
Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are:	No
	<ul style="list-style-type: none"> • Y • N 	
	Note: You can hold the bill generation process when the hold entity is set to ACCT or PERS .	
Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process for the entity.	Yes (Conditional)
	Note: The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	Note: This data is required when the hold bill generation is set to Y in the record.
Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process for the entity.	No
	Note: The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	
Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are:	No
	<ul style="list-style-type: none"> • Y 	

Column Name	Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> N 	
	Note: You can hold the automatic payment process when the hold entity is set to ACCT .	
Hold Auto Pay Start Date	Used to specify the date from when you want to hold the automatic payment process for the entity.	Yes (Conditional)
	Note: The hold auto pay start date must be between the hold request start and end dates. The hold auto pay start date cannot be later than the hold auto pay end date.	Note: This data is required when the hold auto pay is set to Y in the record.
Hold Auto Pay End Date	Used to specify the date till when you want to hold the automatic payment process for the entity.	No
	Note: The hold auto pay end date must be between the hold request start and end dates. The hold auto pay end date cannot be earlier than the hold auto pay start date.	
Hold Refund	Used to indicate whether you want to hold the refund process for the entity. The valid values are: <ul style="list-style-type: none"> Y N 	No
	Note: You can hold the refund process when the hold entity is set to ACCT .	
Hold Refund Start Date	Used to specify the date from when you want to hold the refund process for the entity.	Yes (Conditional)
	Note: The hold refund start date must be between the hold request start and end dates. The hold refund start date cannot be later than the hold refund end date.	Note: This data is required when the hold refund is set to Y in the record.
Hold Refund End Date	Used to specify the date till when you want to hold the refund process for the entity.	No

Column Name	Description	Mandatory (Yes or No)
	Note: The hold refund end date must be between the hold request start and end dates. The hold refund end date cannot be earlier than the hold refund start date.	
Hold Delinquency	Used to indicate whether you want to hold the delinquency process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N Note: You can hold the delinquency process when the hold entity is set to PERS or ACCT . Note that you cannot set both hold overdue and hold delinquency to Y for an account in the same duration. The Overdue process is valid for the financial services and health insurance domains but the Delinquency process is valid only for the health insurance domain.	No
Hold Delinquency Start Date	Used to specify the date from when you want to hold the delinquency process for the entity.	Yes (Conditional)
	Note: The hold delinquency start date must be between the hold request start and end dates. The hold delinquency start date cannot be later than the hold delinquency end date.	Note: This data is required when the hold delinquency is set to Y in the record.
Hold Delinquency End Date	Used to specify the date till when you want to hold the delinquency process for the entity.	No
	Note: The hold delinquency end date must be between the hold request start and end dates. The hold delinquency end date cannot be earlier than the hold delinquency start date.	
Effective Date1, Effective Date2,, Effective Date5	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
		Note: This data is required when the characteristic type is specified in the record.
Char Type1, Char Type2,, Char Type5	Used to specify the characteristic type.	No

Column Name	Description	Mandatory (Yes or No)
	Note: You must specify a characteristic type where the characteristic entity is set to Hold Request .	
Char Val1, Char Val2,, Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required when the characteristic type is specified in the record.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the hold request creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain hold request type, then the sequence of the **Hold Request Type** column header should be set to 1 during data mapping.

Mass Refund Request Creation

Until now, the system enabled you to create a refund request from the user interface. Now, the system provides the ability to create multiple refund requests at once through the **Upload Request** feature.

Prerequisites

To setup the mass refund request creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass refund request creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for refund request (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-RefundUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-RF-DERIV	C1-RF-DERIV	Refer to C1-RF-DERIV on page 2000.

C1-RF-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-RF-VALID

This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-RF-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating the refund requests. If successfully processed, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Refund Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass refund requests through an upload request:

Column Name	Description	Mandatory (Yes or No)
Refund Request Type	Used to specify the refund request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the refund request.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the refund request.	Yes (Conditional)
		Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type. The valid values are: <ul style="list-style-type: none"> ADID - Used when you want to create refund request against an adjustment. BLID - Used when you want to create refund request against the bill. BSID - Used when you want to create refund request against bill segment. PEID - Used when you want to create refund request against payment event. PYID - Used when you want to create refund request against payment. 	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the refund adjustments are created.	No
Refund Amount	Used to specify the amount that you want to refund.	Yes
Comments	Used to specify the comments which are added on the refund request.	No
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional)
		Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the refund request.	Yes (Conditional)
		Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional)

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when Effective Date or Char Type is specified.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the refund request creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain refund request type, then the sequence of the **Refund Request Type** column header should be set to 1 during data mapping.

Sample Refund Request Creation CSV File

```
REFUND_REQ_WITH_APP,,,9646391134,Bill,964633710789,,679,
Excess Amount,,,,,,,,,REFUND_REQ_WITHOUT_APP,ACCTNM,
Demo_Individual_Al,,Bill Segment,578184142944,
,500,Excess Amount,,,,,,,,,
```

Mass Write Off Request Creation

Until now, the system enabled you to create a write-off request from the user interface. Now, the system provides the ability to create multiple write-off requests at once through the **Upload Request** feature.

Prerequisites

- To setup the mass write off request creation feature, you need to do the following:
- Define the required upload request types in the system.
 - Assign the **C1-WOUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass write off request creation upload request for approval.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request**.
 - Define the required foreign key reference for write off request (if not available) in the system.
 - Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-WriteOffUploadRequest** business object in the **Status Reason** screen.
 - Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-WriteOffUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-WriteOffUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-WO-DERIV	C1-WO-DERIV	Refer to C1-WO-DERIV on page 2004.

C1-WO-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating write off requests and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-WO-VALID

Information will be available shortly.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-WO-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating the write off requests. If successfully processed, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Write Off Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass write off requests through an upload request:

Column Name	Description	Mandatory (Yes or No)
Write Off Request Type	Used to specify the write off request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the write off request.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the write off request.	Yes (Conditional)
		Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type. The valid values are: <ul style="list-style-type: none">ADID - Used when you want to create write off request against an adjustment.BLID - Used when you want to create write off request against the bill.BSID - Used when you want to create write off request against bill segment.PEID - Used when you want to create write off request against payment event.PYID - Used when you want to create write off request against payment.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the write off adjustments are created.	No
Write Off Amount	Used to specify the amount that you want to write off.	Yes
Comments	Used to specify the comments which are added on the write off request.	No

Column Name	Description	Mandatory (Yes or No)
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional)
		Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the write off request.	Yes (Conditional)
		Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional)
		Note: This data is required when Effective Date or Char Type is specified.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the write off request creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain write off request type, then the sequence of the **Write Off Request Type** column header should be set to 1 during data mapping.

Sample Write Off Request Creation CSV File

```
TR_WO_WA,,,5122509743,Bill,512251049867,WRITEOFA,-600,write -
off,,,,,,,,,,,,,
TR_WO_WA,,,1778883101,Bill,177887558997,WRITEOFA,-540,write -
off,,,,,,,,,,,,,
```

Mass Policy Reinstatement

Until now, the system enabled you to reinstate a fully-insured group policy from the user interface. Now, the system provides the ability to reinstate multiple fully-insured group policies at once through the **Upload Request** feature.

Prerequisites

- To setup the mass policy reinstatement creation feature, you need to do the following:
- Define the required upload request types in the system.
 - Assign the **C1-RPUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass policy reinstatement creation upload request for approval.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request**.
 - Define the required foreign key reference for policy reinstatement (if not available) in the system.
 - Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-ReinstatementUploadRequest** business object in the **Status Reason** screen.
 - Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:

- Time Interval
- Timer Active
- User ID
- Batch Language
- Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-ReinstatementUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-ReinstatementUploadRequest** business object:

Status		System Event	Algorithm	Algorithm Type	Description
Draft		Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	Refer to C1-CRTUPLDTL on page 1982.
		Enter	C1-REN-DERIV	C1-REN-DERIV	Refer to C1-REN-DERIV on page 2009.
Validated		Enter	C1-REN-VALID	C1-REN-VALID	Refer to C1-REN-VALID on page 2009.
Canceled		-	-	-	-
Submitted		Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT on page 1975.
		Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer to C1-DEFERUPLD on page 1975.
		Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
Approval Progress	In	Enter	C1-UPLAPPENT	C1-UPLAPPENT	Refer to C1-UPLAPPENT on page 1975.
		Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	Refer to C1-UPLAPPEXT on page 1975.
		Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1428.
Approved		Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer to C1-DEFERUPLD on page 1975.
		Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
Rejected		-	-	-	-

Processed		-	-	-	-

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-REN-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the policy ID using the source system and policy number combination whenever the policy ID is not specified in the record. Once the policy ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the policy ID using the source system and policy number combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-REN-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the policy ID and reinstatement reason specified in the record is valid. If the policy ID and reinstatement reason are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the policy ID is invalid, it derives the policy ID using the source system and policy number combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the policy ID using the source system and policy number combination, or if the reinstatement reason is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more policies with the same policy ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**. It contains the following parameters:

- **Policy Status after Processing Reinstatement Upload Request** - Used to specify the status to which you want to transition the policy when the reinstatement upload request is processed.
- **Policy Reinstatement Status for Reason Verification** - Used to validate the reinstatement reason. The reason should be a valid reason for the specified status.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Policy Reinstatement CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass policy reinstatements through an upload request:

Column Name	Description	Mandatory (Yes or No)
Policy ID	Used to indicate the policy which you want to reinstate.	No
	Note: If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.

Column Name	Description	Mandatory (Yes or No)
Policy Number	Used to indicate the policy number.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.
Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy.	Yes
	Note: You must specify a reason which is defined for the status specified in the Policy Reinstatement Status for Reason Verification parameter of the C1-REN-VALID algorithm.	

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the policy reinstatement creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain policy Id, then the sequence of the **Policy Id** column header should be set to 1 during data mapping.

Sample Policy Reinstatement CSV File

```
DGSSY1,Demo_Group_BG1_Policy,ZZ-PAYMENT-RECEIVED
```

Mass Bill Group Level Sorting

Until now, the system enabled you to define sort ID for a bill group from the user interface. Now, the system provides the ability to define sort ID for multiple bill groups at once through the **Upload Request** feature.

Prerequisites

To setup the mass bill group level sorting creation feature, you need to do the following:

- Define the required upload request types in the system.
- Create a To Do type named **C1-BGSRT** using the following information:
 - **Navigation Option** - clupldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive a To Do while submitting a mass bill group level sorting upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.

- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for bill group level sorting (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillGrpSortUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillGrpSortUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillGrpSortUploadRequest** business object:

Status		System Event	Algorithm	Algorithm Type	Description
Draft		Enter	C1-BLSRTUPLD	C1-BLSRTUPLD	Refer to C1-BLSRTUPLD on page 2013.
		Enter	C1-BLSRTDERV	C1-BLSRTDERV	Refer to C1-BLSRTDERV on page 2013.
Validated		Enter	C1-BLSRTVALD	C1-BLSRTVALD	Refer to C1-BLSRTVALD on page 2013.
Canceled		-	-	-	-

C1-BLSRTUPLD

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLSRTDERV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group sort record.
- The end date is not earlier than the start date and the start date is not later than the end date.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group sort record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BLSRTPROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, it creates one bill group sort record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Bill Group Level Sorting CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass bill group level sorting through an upload request:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group sorting upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration.	Note: This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
2	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
			Note: This data is required when the bill group (i.e. person) ID is not specified.
3	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)
			Note: This data is required when the bill group (i.e. person) ID is not specified.
4	Sort ID	Used to specify the sort ID.	Yes
5	Description	Used to specify the description for the sort ID.	Yes
6	Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes
		Note: The start date cannot be later than the end date.	
7	End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
		Note: The end date cannot be earlier than the start date.	

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the bill group level sorting creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain billing group Id, then the sequence of the **Billing Group Id** column header should be set to 1 during data mapping.

Sample Bill Group Level Sorting CSV File

```
1887432126,Social Security -

```

Mass Bill Group Level Derivation and Pricing Parameter Creation

Until now, the system enabled you to define derivation and pricing parameters for a bill group from the user interface. Now, the system provides the ability to define derivation and pricing parameters for multiple bill groups at once through the **Upload Request** feature.

Prerequisites

To setup the mass bill group level derivation pricing parameter creation feature, you need to do the following:

- Define the required upload request types in the system.
- Create a To Do type named **C1-BGDVP** using the following information:
 - **Navigation Option** - c1upldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:
- | Table Name | Field Name |
|---------------|-------------------|
| C1_UPLOAD_REQ | Upload Request ID |
- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive a To Do while submitting a mass bill group level derivation and pricing parameters upload request for approval.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
 - Define the required characteristic types where the characteristic entity is set to **Upload Request**.
 - Define the required foreign key reference for bill group level derivation pricing parameter (if not available) in the system.
 - Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillLevelUploadRequest** business object in the **Status Reason** screen.
 - Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillLevelUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillLevelUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BLVUPLDTL	C1-BLVUPLDTL	Refer to C1-BLVUPLDTL on page 2017.

C1-BLVUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLVLDERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group derivation and pricing parameters record.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group derivation and pricing parameters record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- The number of characters specified in each field does not exceed the maximum field length.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.
- The source system exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the effective bill group sort record.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It contains the following parameter:

- **Source System Extendable Lookup** - Used to specify the source system extendable lookup business object. The bill group derivation and pricing parameters records should contain the source system which is already defined in this extendable lookup.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BLVVLVPRO

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, it creates one bill group derivation and pricing parameters record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Bill Group Level Derivation and Pricing Parameter CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating a mass bill group level derivation and pricing parameters through an upload request:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the claim and enrollment transactions are received.	Yes
		Note: You must specify a source system which already exists in the extendable lookup which is specified in the Source System Extendable Lookup parameter of the C1-BLVLVALID algorithm.	
2	Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group.	Yes
		Note: You must not specify the ampersand (&) character in the parameter 1.	
3	Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 2.	
4	Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 3.	
5	Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 4.	
6	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
		Note: The effective date must be within the date range of the sort ID defined for the bill group.	
7	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)

Sr. No.	Value	Description	Mandatory (Yes or No)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group derivation and pricing parameters upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration.	Note: This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
8	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional) Note: This data is required when the bill group (i.e. person) ID is not specified.
9	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional) Note: This data is required when the bill group (i.e. person) ID is not specified.
10	Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the mass bill group level derivation and pricing parameters creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain source system, then the sequence of the **Source System** column header should be set to 1 during data mapping.

Sample Bill Group Level Derivation and Pricing Parameter CSV File

```
Prime,MPP11,MPP12,"MPP13",2024-07-01,1887432126,Social security -
number,"342-23-5469",1111
```

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

This section lists the match types that are shipped with the product:

- Contract
- Contract Type

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to Contract (CONT) .
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to Contract Type (CNTY) . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 1370
- [Upload Request Type](#) on page 1371

Upload Request Type List

The **Upload Request Type List** zone lists the upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the Edit (🔗) icon, the Upload Request Type screen appears where you can edit the details of the upload request type.

Column Name	Column Description
Duplicate	On clicking the Duplicate (📄) icon, the Upload Request Type screen appears where you can define a new upload request type using an existing upload request type.
Delete	On clicking the Delete (🗑) icon, you can delete the upload request type. Note: You can delete an upload request type only when an upload request is not yet created using the upload request type.
Mapping	On clicking the Mapping (🔗) icon, the Upload Request Mapping screen appears where you can do the following: <ul style="list-style-type: none"> Map the data of the CSV file to the schema of the respective upload request business object. The system will then store the data in the respective tags of the upload request business object schema. Configure the search filters for the respective upload request type. The system will then display the search filters (in the specified sequence) in the Data Records zone of the Upload Request screen while viewing the details of the respective upload requests. Note: This column is applicable only for an upload request type which is created using the C1-UplRequestType business object and not for an upload request type which is created using the C1-AdjRequestType business object.
Status	Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"> ACTIVE INACTIVE

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. It contains the following sections:

- Main** - Displays the basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object using which an upload request should be created.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"> Active Inactive
File Size (KB)	Indicates the maximum file size (in kilobytes) allowed while uploading files using the upload request type. If you upload a file that exceeds the maximum file size, the system will not allow you to upload the file.
	Note: This field appears when the upload request type is created using the Adjustment Upload Request Type (C1-AdjRequestType) business object.
Defer Algorithm	Indicates the algorithm that is triggered when you create adjustments for an adjustment upload request or when you approve the adjustment data file uploaded through an adjustment upload request.
	Note: The C1-UPLDEFEVL algorithm is shipped with the product. You need to attach this algorithm to the Defer Algorithm field. This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode (i.e., when the C1-UPLRQ batch is executed). This field appears when the upload request type is created using the Adjustment Upload Request Type (C1-AdjRequestType) business object. It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Entity Business Object	Indicates the Business Object of the entity when you create the upload request type.
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon the Business Object Search window appears.
Approval Required	Indicates whether approval is required while uploading a file using the upload request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when a upload request is submitted for approval.

Field Name	Field Description
	<p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve a upload request which is submitted for approval.</p> <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>On selecting the To Do Type, the To Do Roles configured on the To Do Type is populated.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
FK Reference Code	<p>Indicates the foreign key reference which specifies the created upload request type.</p> <p>Note:</p> <p>This field appears when you create upload request type using Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Foreign Key Reference screen appears where you can view the details of the respective To Do role.</p> <p>U</p>

- Adjustment Match Type**

In addition, this section has the following columns:

Note: The **Match Type** column is displayed for **Adjustment Upload Request** Business Object.

Column Name	Column Description
Match Type	<p>Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are:</p> <ul style="list-style-type: none"> Contract Contract Type <p>Note: The Match Type column is displayed for Adjustment Upload Request business object (C1-AdjRequestType).</p>
Algorithm	<p>Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm. The Algorithm column is displayed for Adjustment Upload Request Business Object (C1-AdjRequestType).</p>

- Characteristics** - Lists the characteristics of the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the upload request type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an upload request type.
Delete	Used to delete the upload request type. Note: You can delete an upload request type when a upload request is not yet created using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which an upload request type is created. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

If you want to create...	Then, you should have...
An adjustment upload request type	<ul style="list-style-type: none"> • Upload request type business objects defined in the application • Upload request business objects defined in the application • Defer algorithm created using the C1-UPLDEFEV algorithm type in the system • Required To Do role assigned to the C1-ADJUP To Do type in the application • Algorithm created using the C1-MTCIALG or C1-MTCTALG algorithm type depending on the match type using which you want to create the adjustments
An account bill cycle upload request type	<ul style="list-style-type: none"> • Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the C1-BCUUR To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference (for example, C1-ACCT) defined in the application
A bill group derivation and pricing parameters upload request type	<ul style="list-style-type: none"> • Upload request type business objects defined in the application • Upload request business objects defined in the application • An approval To Do type named C1-BGDVP created with the following specifications: sort key - Upload Request ID, drill key table - C1_UPLOAD_REQ, and drill key field - UPLOAD_REQ_ID • Required To Do role assigned to the C1-BGDVP To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference (for example, C1-ACCT) defined in the application
A bill group sorting upload request type	<ul style="list-style-type: none"> • Upload request type business objects defined in the application • Upload request business objects defined in the application • An approval To Do type named C1-BGSRT created with the following specifications: sort key - Upload Request ID, drill key table - C1_UPLOAD_REQ, and drill key field - UPLOAD_REQ_ID • Required To Do role assigned to the C1-BGSRT To Do type in the application • Required entity business object (for example, C1-BillingGroupSortId) defined in the application • Required foreign key reference defined in the application
A billable charge creation upload request type (for the financial services business)	<ul style="list-style-type: none"> • Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the C1-BCUR To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference (for example, C1-BCHIN) defined in the application
A billable charge creation upload request type (for the fully insured group and individual lines of business)	<ul style="list-style-type: none"> • Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the C1-BCUR To Do type in the application

If you want to create...	Then, you should have...
	<ul style="list-style-type: none"> Required entity business object (for example, C1-BILLCHARGE) defined in the application Required foreign key reference (for example, C1-BCHIN) defined in the application
A contract rider upload request type	<ul style="list-style-type: none"> Upload request type business objects defined in the application Upload request business objects defined in the application Required To Do role assigned to the C1-CRUUR To Do type in the application Required entity business object (for example, C1_SA) defined in the application Required foreign key reference (for example, C1-SATY) defined in the application
A hold request creation upload request type	<ul style="list-style-type: none"> Upload request type business objects defined in the application Upload request business objects defined in the application Required To Do role assigned to the C1-HLDUR To Do type in the application Required entity business object (for example, C1-HoldRequest) defined in the application Required foreign key reference (for example, C1-HLDRE) defined in the application
A refund request creation upload request type	<ul style="list-style-type: none"> Upload request type business objects defined in the application Upload request business objects defined in the application Required To Do role assigned to the C1-REFUR To Do type in the application Required entity business object (for example, C1-RefundReq) defined in the application Required foreign key reference (for example, C1-REFWO) defined in the application
A policy reinstatement upload request type	<ul style="list-style-type: none"> Upload request type business objects defined in the application Upload request business objects defined in the application Required To Do role assigned to the C1-RPUR To Do type in the application Required entity business object (for example, C1-POLICY) defined in the application Required foreign key reference (for example, C1-POLCY) defined in the application
A payment tender cancellation upload request type	<ul style="list-style-type: none"> Upload request type business objects defined in the application Upload request business objects defined in the application Required To Do role assigned to the C1-TNDCL To Do type in the application Required foreign key reference (for example, C1-PEVT) defined in the application
A write off request creation upload request type	<ul style="list-style-type: none"> Upload request type business objects defined in the application Upload request business objects defined in the application Required To Do role assigned to the C1-WOUR To Do type in the application Required entity business object (for example, C1-WORequest) defined in the application Required foreign key reference (for example, C1-REFWO) defined in the application

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	<p>Used to indicate the business object using which you want to create the upload request type. The valid values are:</p> <ul style="list-style-type: none"> • Adjustment Upload Request Type (i.e., C1-AdjRequestType) - Enables you to maintain an adjustment upload request type. • Upload Request Type (i.e., C1-UplRequestType) - Enables you to maintain an upload request type. <p>Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the Upload Request Type (i.e., C1-UPLREQTYP) maintenance object.</p>	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the upload request type.
- **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload request.

Note: This section appears when you are creating an upload request type using the **C1-AdjRequestType** business object.

- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the business object using which you are defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object using which you want to create the respective upload request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>If you are creating an upload request type using the C1-AdjRequestType business object, the valid value is:</p> <ul style="list-style-type: none"> • Adjustment Upload Request (i.e., C1-ADJUPLD) - Enables you to maintain an adjustment upload request. <p>However, if you are creating an upload request type using the C1-UplRequestType business object, the valid values are:</p> <ul style="list-style-type: none"> • Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq) - Enables you to maintain an account bill cycle upload request. • Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest) - Enables you to maintain a bill group derivation and pricing parameters upload request. • Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest) - Enables you to maintain a bill group sorting upload request. • Billable Charge Upload (i.e., C1-BillableChargeUploadRequest) - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the financial services domain. • Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI) - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business. • Contract Rider Upload i.e., C1-ContractRiderUpdateUplReq) - Enables you to maintain a contract rider upload request. • Hold Request Upload (i.e., C1-HoldUploadRequest) - Enables you to maintain a hold request creation upload request. • Refund Request Upload (i.e., C1-RefundUploadRequest) - Enables you to maintain a refund request creation upload request. • Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest) - Enables you to maintain a policy reinstatement upload request. • Tender Cancellation Upload Request (i.e., C1-TndrCnclUploadRequest) - Enables you to maintain a payment tender cancellation upload request. • Write Off Request Upload (i.e., C1-WriteOffUploadRequest) - Enables you to 	

Field Name	Field Description	Mandatory (Yes or No)
	maintain a write off request creation upload request.	
	Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the Upload Request (Adjustment Upload) (i.e., C1-UPLREQ) or Upload Request (i.e., C1-UPLOADREQ) maintenance object depending on the business object used to create the upload request type.	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
	Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.	
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot change the status of an upload request type to Inactive when the corresponding upload request is in a status other than Canceled , Rejected , or Processed .	
File Size (KB)	Used to indicate the maximum file size limit (in kilobytes) while uploading files through the respective upload request.	Yes
	Note: You must specify a positive integer value in this field. This field appears when you are creating an upload request type using the C1-AdjRequestType business object. By default, the maximum file size limit is to 700 KB in all the business objects which are created using the Upload Request (i.e., C1-UPLOADREQ) maintenance object. Therefore, you don't need to explicitly set the maximum file size limit while defining an upload request type using the C1-UplRequestType business object.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the Create Adjustment or Approve button.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Defer Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>You need to attach an algorithm created using the C1-UPLDEFEV algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode.</p> <p>The Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is executed. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when you are creating an upload request type using the C1-AdjRequestType business object.</p>	
Entity Business Object	Used to indicate the business object using which you want to create the entities through the respective upload request.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Entity Business Object field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when you are creating an upload request type using the C1-UplRequestType business object.</p> <p>The Upload Request feature enables you to upload business object based entities and non business object based entities in the system. If you want to create business object based entities through the respective upload request, you need to specify the entity business object in the upload request type. However, if you want to create non business object based entities (i.e., entities created via any business service) through the respective upload request, you do not need to specify the entity business object in the upload request type.</p>	
Approval Required	Used to indicate whether approval is required while creating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
FK Reference Code	<p>Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request.</p> <p>Note:</p> <p>If the foreign key reference is specified in an upload request type, the system displays the entity information for the respective upload requests in the Data Records zone of the Upload Request screen once the entity is created (i.e., once the upload request is processed). However, if the foreign key reference is not specified in an upload request type, the system does not display the entity information for the respective upload requests.</p> <p>The Search (🔍) icon appears corresponding to the FK Reference Code field. On clicking the Search icon, the Foreign Key Search window appears.</p> <p>This field appears when you are creating an upload request type using the C1-UplRequestType business object.</p>	No

6. Enter the required details in the **Main** section.
 7. Associate a match type with the adjustment upload request type.
 8. Define characteristics for the upload request type, if required.
 9. Click **Save**.
- The upload request type is defined.

Upload Request Type screen	Upload Request Type on page 1369
How to associate a match type with an adjustment upload request type	Associating a Match Type with an Adjustment Upload Request Type on page 2034
How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1381

Associating a Match Type with an Adjustment Upload Request Type

Prerequisites

To associate a match type with an adjustment upload request type, you should have:

- Required algorithm defined for the selected match type

Note: The following algorithms are shipped with the product for the respective match type:			
Match Type	Algorithm Type	Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm derives the contract for each adjustment record where the match type is set to CONT .
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm derives the contract using the contract type and account details for each adjustment record where the match type is set to CNTY . If there are multiple active contracts of the specified contract type on the account, the contract with the latest start date is considered.

Procedure

To associate a match type with an adjustment upload request type:

1. Ensure that the **Adjustment Match Type** section is expanded when you are defining, editing, or copying an adjustment upload request type.

The **Adjustment Match Type** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type for which you want to associate the algorithm. The valid values are: <ul style="list-style-type: none">• Contract• Contract Type	Yes (Conditional)
		Note: This field is required when you are creating an upload request type using the C1-AdjRequestType business object.
Algorithm	Used to attach an algorithm that will be triggered to derive the contract. The system will then create an adjustment against the respective contract.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search icon, the Algorithm Search window appears. You must specify an algorithm which is already defined in the system.	Note: This field is required when you are creating an upload request type using the C1-AdjRequestType business object.

Note: This section appears when an upload request type is created using the **C1-AdjRequestType** business object.

2. Enter the required details in the **Adjustment Match Type** section.
3. If you want to define more than one match type for the adjustment upload request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a match type from the adjustment upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

Defining a Characteristic for an Upload Request Type

Prerequisites

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request Type**)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request Type .	Note: This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

If you want to edit...	Then, you should have...
	<ul style="list-style-type: none"> Required foreign key reference (for example, C1-REFWO) defined in the application

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the upload request type.
- **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload request.

Note: This section appears when you are editing an upload request type which is created using the **C1-AdjRequestType** business object.

- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the business object which is used while defining the upload request type.	Not applicable
Upload Request Business Object	<p>Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the C1-AdjRequestType business object, the valid value is:</p> <ul style="list-style-type: none"> • Adjustment Upload Request (i.e., C1-ADJUPLD) - Enables you to maintain an adjustment upload request. <p>However, if you are creating an upload request type using the C1-UplRequestType business object, the valid values are:</p> <ul style="list-style-type: none"> • Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq) - Enables you to maintain an account bill cycle upload request. • Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest) - Enables you to maintain a bill group derivation and pricing parameters upload request. • Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest) - Enables you to maintain a bill group sorting upload request. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Billable Charge Upload (i.e., C1-BillableChargeUploadRequest) - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the financial services domain. • Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI) - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business. • Contract Rider Upload i.e., C1-ContractRiderUpdateUplReq) - Enables you to maintain a contract rider upload request. • Hold Request Upload (i.e., C1-HoldUploadRequest) - Enables you to maintain a hold request creation upload request. • Refund Request Upload (i.e., C1-RefundUploadRequest) - Enables you to maintain a refund request creation upload request. • Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest) - Enables you to maintain a policy reinstatement upload request. • Tender Cancellation Upload Request (i.e., C1-TndrCnclUploadRequest) - Enables you to maintain a payment tender cancellation upload request. • Write Off Request Upload (i.e., C1-WriteOffUploadRequest) - Enables you to maintain a write off request creation upload request. <p>Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the Upload Request (i.e., C1-UPLOADREQ) maintenance object.</p>	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	<p>Used to specify additional information about the upload request type.</p> <p>Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.</p>	No
Status	<p>Used to indicate the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note: You cannot change the status of an upload request type to Inactive when the corresponding upload request is in a status other than Canceled, Rejected, Completed, or Processed.</p>	
File Size (KB)	<p>Used to indicate the maximum file size limit (in kilobytes) while uploading files through the respective upload request.</p> <p>Note: You must specify a positive integer value in this field. This field appears when you are editing an upload request type which is created using the C1-AdjRequestType business object.</p>	Yes
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you click the Create Adjustment or Approve button.</p> <p>Note: The Search (🔍) icon appears corresponding to the Defer Algorithm field. On clicking the Search icon, the Algorithm Search window appears. You need to attach an algorithm created using the C1-UPLDEFEVL algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode. The Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is executed. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>. This field appears when you are editing an upload request type which is created using the C1-AdjRequestType business object.</p>	Yes
Entity Business Object	Used to indicate the business object using which you want to create the entities through the respective upload request.	No

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The Search (Q) icon appears corresponding to the Entity Business Object field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when you are editing an upload request type which is created using the C1-UplRequestType business object.</p>	
Approval Required	Used to indicate whether approval is required while creating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (Q) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request.	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: The Search (🔍) icon appears corresponding to the FK Reference Code field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when you are editing an upload request type which is created using the C1-UplRequestType business object.	

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

- 5. Modify the required details in the **Main** section.
- 6. Define, edit, or remove a match type from the adjustment upload request type, if required.
- 7. Define, edit, or remove characteristics of the upload request type, if required.
- 8. Click **Save**.
The changes made to the upload request type are saved.

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1381

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Note: While copying an upload request type, the system does not copy the mapping details from the original upload request type to the new upload request type. You need to manually define the mapping details for the new upload request type.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEV** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type

- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Duplicate**() icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request type.
- **Adjustment Match Type** - Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type.

Note: This field appears when **Adjustment Upload Request Type (C1-AdjRequestType)** business object is selected.

- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object using which you are defining an upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request. When you create upload request type using upload request business object, the valid values are: <ul style="list-style-type: none">• Bill Cycle Update Upload (i.e C1-BillCycleUpdateUplReq)• Bill Group Derivation & Pricing Parameter (i.e C1-BillLevelUploadRequest)• Bill Group Sorting Upload Request (i.e C1-BillGrpSortUploadRequest)• Billable Charge Upload (i.e C1-BillableChargeUploadRequest)• Billable Charge Upload for Fully Insured (i.e C1-BillableChargeUploadFI)• Contract Rider Upload (i.e C1-ContractRiderUpdateUplReq)	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> Hold Request Upload (i.e C1-HoldUploadRequest) Refund Request Upload (i.e C1-RefundUploadRequest) Reinstatement Upload Request (i.e C1-ReinstatementUploadRequest) Tender Cancellation Upload Request (i.e C1-TndrCnclUploadRequest) Write Off Request Upload (i.e C1-WriteOffUploadRequest) <p>Note:</p> <p>The above mentioned business objects are shipped with the product. It enables you to maintain an upload request type.</p> <p>The list includes those business objects which are created using an Upload Request (i.e., C1-UPLOADREQ) maintenance object.</p>	
Description	Used to specify the description for an upload request type.	Yes
Detailed Description	<p>Used to specify additional information about an upload request type.</p> <p>Note: You can resize the text box depending on your requirement by clicking the Resize Handle (↗) icon at the bottom right corner of the text box.</p>	No
Status	<p>Used to indicate the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive <p>Note: You cannot change the status of an upload request type to Inactive when the corresponding upload request is in a status other than Cancelled, Approved, Rejected, or Completed.</p>	Yes
File Size (KB)	<p>Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.</p> <p>Note: This field appears when Adjustment Upload Request Type business object (C1-AdjRequestType) is selected.</p>	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when Adjustment Upload Request Type business object (C1-AdjRequestType) is selected.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	
Entity Business Object	<p>Used to indicate the business object that you want to use to create the upload request type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when Upload Request Type business object (C1-UplRequestType) is selected.</p>	No
Approval Required	Used to indicate whether approval is required while uploading a file using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)																										
	Note: The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field. This field appears when the Approval Required option is selected. The following table lists the To Do type using which the To Do must be generated for the different upload requests:	Note: This field is required when the Approval Required check box is selected.

Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)																										
	Note: The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.																										
FK Reference Code	Used to indicate the FK Reference code to display the entity information.	No																										

Field Name	Field Description	Mandatory (Yes or No)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when Upload Request Type business object (C1-UplRequestType) is selected.	

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

5. Enter the required details in the **Main** section.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑) icon corresponding to the match type.

6. Define a match type for an adjustment upload request type.
7. Define, edit, or remove characteristics of the upload request type, if required.
8. Click **Save**.
- The new upload request type is defined.

Mapping Data and Configuring Filters for an Upload Request Type

The **Upload Request Mapping** screen enables you to do the following:

- **Map the Data of the CSV File** - To read the data from a Comma-Separated Values (CSV) file, you need to map its columns with the schema of the upload request business object. The system will then store the data in the respective tags of the upload request business object schema. While mapping the columns with the schema, you need to specify the column headers that would appear in the CSV file. The system will then create the XML tags by converting the column header into camelCase after removing the spaces from the column header. For example, if the header in the CSV file is Account Id, then the corresponding XML tag formed by the system is accountId. The system will then store the data from the column in the respective tag of the upload request business object schema.

- **Configure the Search Filters** - The system enables you to configure maximum 10 search filters for an upload request type. It then displays the search filters (in the specified sequence) in the **Data Records** zone of the **Upload Request** screen while viewing the details of the respective upload requests. Once an upload request is created using an upload request type, you cannot change the search filters of the upload request type. In addition, while copying an upload request type, the system does not automatically copy the search filters from the upload request type. You will then have to manually configure the search filters for the new upload request type.

Note: This screen is applicable only for an upload request type which is created using the **C1-UplRequestType** business object and not for an upload request type which is created using the **C1-AdjRequestType** business object.

Procedure

To map the data and configure search filters for an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping**() icon in the **Mapping** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Mapping** screen appears. It contains the following field:

Field Name	Field Description
Upload Request Type	Displays the description of the upload request type.

In addition, it contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the column header of a CSV file that you would upload using the upload request type.	Yes
Searchable	Used to indicate whether you want to create a field for the column header and provide the ability to filter the data records using it. The system will then accordingly display the fields and columns in the Data Records zone of the Upload Request screen.	Yes (Conditional)
	Note: You can select this option for maximum 10 column headers in an upload request type.	Note: This field is required when you are configuring a search filter for the upload request type.
Sequence	Used to indicate the order in which you want to display the corresponding fields and columns in the Data Records zone of the Upload Request screen.	Yes
	Note: You must specify a positive integer value in this field.	

4. Enter the required details in **Upload Request Mapping** screen.

Note:

If you want to add more than one mapped to the upload request type, click the **Add (+)** icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete (🗑)** icon corresponding to the column header.

You cannot change the mapping details once an upload request is created using the upload request type.

While copying an upload request type, the system does not copy the mapping details from the original upload request type to the new upload request type. You need to manually define the mapping details for the new upload request type.

5. Click **Save**.
The columns are mapped to the CSV files for upload request type.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Upload Request Type** sub-menu.
The **Upload Request Type** screen appears.
- In the **Upload Request Type List** zone, click the **Delete (🗑)** icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

Note: You can delete an upload request type only when an upload request is not yet created using the upload request type.

Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

5. Click **OK**.
The upload request type is deleted.

Upload Request (Used for Searching)

The **Upload Request** screen allows you to search for a upload request using various search criteria. It also allows you to upload, validate and process the transaction data. It contains the following zone:

- [Search Upload Request](#) on page 2051

Through this screen, you can navigate to the following screen:

- [Upload Request \(Used for Viewing\)](#) on page 2058

Search Upload Request

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using the request details. The valid value is: <ul style="list-style-type: none">• Request Details	Yes

Field Name	Field Description	Mandatory (Yes or No)
Upload Date From	Used to search for upload requests which are created from a particular date onwards.	No
	Note: You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	
Status	Used to search for upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated • Validating 	No
To	Used to search for upload requests which are created till a particular date.	No
	Note: You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	
User ID	Used to search for upload requests which are created by a particular user.	No
Upload Request Type	Used to search for upload requests which are created using a particular upload request type.	No
	Note: The list includes only those upload request types which are already defined in the system	
File Name	Used to search for a particular file name.	No
Upload Request ID	Used to search for a particular upload request.	No

Note: You must specify at least one search criterion while searching for an upload request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Upload Request Information	Displays information about the upload request.
	Note: It has a link. On clicking the link, the Upload Request screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the upload request. The valid values are:

Column Name	Column Description
	<ul style="list-style-type: none"> • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated • Validating
Upload Request Type	Displays the upload request type using which the upload request is created.
Entity Business Object	Displays the business object code of the entity. In addition, a context menu (☺) icon appears, corresponding to this field, which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.
Created By	Indicates the user who has created the upload request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Upload Request

Prerequisites

To search for an upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.

The **Upload Request** screen appears.

4. Enter the search criteria in the **Search Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of upload requests that meet the search criteria appears in the **Search Results** section.

Creating an Upload Request

Prerequisites

To create an upload request, you should have:

- Upload request types defined in the application

Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request.	Yes
	Note: The list includes only those upload request types which are already defined in the system. It should be in the Active status.	

Tip: Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

Note:

The **Select Upload Request Type** screen appears when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the **{XXX} Upload Request** screen appears.

Here, {XXX} changes depending on the upload request type that you have selected.

4. Select the required upload request type from the respective field.
5. Click **OK**.

The **{XXX} Upload Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request.
- **Characteristics** - Used to define the characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>This field appears when you are creating an upload request using an upload request type where the upload request business object is set to C1-BillGrpSortUploadRequest or C1-BillLevelUploadRequest.</p> <p>The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to Parent Customer.</p> <p>The Search (Q) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	
File Name	<p>Used to specify the name and path of the file that you want to upload.</p> <p>Note: You can also click the Choose File button corresponding to this field to browse to the location where the file is available in the system.</p>	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

6. Enter the required details in the **Main** section.
7. Click the **Choose File** button corresponding to the **File Name** field.
8. Browse to the location where the file that you want to upload is available in the system.
9. Click **Open**.
The file name appears in the **File Name** field.
10. Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
11. Define characteristics for the upload request, if required.
12. Click **Save**.
A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID) is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

Defining a Characteristic for an Upload Request

Prerequisites

To define a characteristic for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

Procedure

To define a characteristic for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
	Note: You can either manually specify the date or select it using the Date Picker (📅) icon corresponding to the field.	Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request .	Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the upload request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request
- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request
- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- **Main** - This tab contains the following two zones:
 - **Upload Request** - Displays the details of the upload request.
 - **Data Records** - Lists the data records of the upload request.
- **Log** - This tab lists the complete trail of actions performed on the upload request.

Upload Request - Main

The **Main** tab contains the following zones:

- [Upload Request](#) on page 2058
- [Data Records](#) on page 2060

Upload Request

The **Upload Request** zone displays the details of the upload request. It contains the following sections:

- **Main** - Displays the basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.
Upload Request Type	Indicates the upload request type using which the upload request is created.
	Note: It has a link. On clicking the link, the Upload Request Type screen appears where you can view the details of the respective upload request type.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none">• Approval In Progress• Approved• Cancelled• Deferred Processing• Deferred Validation• Draft• Processed• Rejected

Field Name	Field Description
	<ul style="list-style-type: none"> Submitted Validated Validating
File Name	Displays name of the uploaded file.

- **Statistics** - This section lists the statistics of records in the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Pending Records	Displays the count of data records pending after successful derivation.
Valid Records	Displays the count of valid data records.
Invalid Records	Displays the count of data records after unsuccessful derivation.
Error Records	Displays the count of data records in error status.
Processed Records	Displays the count of data records after processing.

- **Record Actions** - Enables you to perform various actions on the upload request. It contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request.
	Note: The Edit button appears when the upload request is in the Draft or Validated status.
Delete	Used to delete the upload request.
	Note: The Delete button appears when the upload request is in the Draft status.
Validate	Used to validate the upload request.
	Note: The Validate button appears when the upload request is in the Draft status.
Cancel	Used to cancel the upload request.
	Note: The Cancel button appears when the upload request is in the Validated status.
Submit	Used to submit the upload request.
	Note: The Submit button appears when: <ul style="list-style-type: none"> The upload request is in the Validated status. The Approval Required check box is selected in the upload request type using which the upload request is created.
Approve	Used to approve the upload request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> The upload request is in the Approval In Progress status. A user with the approval To Do role is reviewing the upload request.

Column Name	Column Description
Reject	Used to reject the upload request.
	Note: The Reject button appears when: <ul style="list-style-type: none">The upload request is in the Approval In Progress status.A user with the approval To Do role is reviewing the upload request.

- Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu (☺) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the upload request status is updated.
Create Date/Time	Displays the date and time when the upload request is created.

- Characteristics** - Lists the characteristics of the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Data Records

The **Data Records** zone lists the data records of the upload request. It contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2,,Search Criteria 10	Used to search for data from the CSV file with respect to the field.	No

Field Name	Field Description	Mandatory (Yes or No)
Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.		
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: <ul style="list-style-type: none"> Error Invalid Pending Processed Valid 	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the View (🔍) icon, the Data Record Details window appears where you can view the details of the data records.
Search Result 1, Search Result 2,, Search Result 10	Displays data from the CSV file.
Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	
Record Status	Indicates the status of the data record. The valid values are: <ul style="list-style-type: none"> Error Invalid Pending Processed Valid
Message(s)	Displays message for the data record respective to it's status.
Entity ID	Displays entity ID of the upload request.
	Note: The entity ID is displayed only for data records with Processed status.
Entity Information	Displays entity information for the FK Reference Code selected in Upload Request Type screen.

Column Name	Column Description
	Note: The entity information is displayed only for data records with Processed status. It has a link. On clicking the link, the respective entity screen appears depending upon the upload request type selected where you can view the details of the respective entity.

Note: By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

Upload Request - Log

The **Log** tab contains the following zone:

- [Upload Request Log](#) on page 2062

Upload Request Log

The **Upload Request Log** zone lists the complete trail of actions performed on the upload request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the upload request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the upload request is rejected or processed.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Editing an Upload Request

Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to edit.
The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Upload Request** zone.

The entity **Upload Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request.
- **Characteristics** - Used to define the characteristics for the upload request.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to specify additional information about the upload request.	No

Note: The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the upload request, if required.
7. Click **Save**.
The changes made to the upload request are saved.

Deleting an Upload Request

Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to delete.
The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Upload Request** zone.
A message appears confirming whether you want to delete the upload request.

Note: The **Delete** button appears when the upload request is in the **Draft** status.

5. Click **OK**.
The upload request is deleted.

Validating an Upload Request

Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to validate.
The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Validate** button in the **Upload Request** zone.
The status of the upload request is changed to **Validated**.

Note:

The **Validate** button appears when the upload request is in the **Draft** status.

Length of value (in bytes) too long for Field Entity ID. Maximum length: 14 Found 20.

No pending records are present to be validated.

Start Date is missing.

Cancelling an Upload Request

Prerequisites

To cancel an upload request, you should have:

- Reasons defined for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Note: While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Procedure

To cancel an upload request:

- Search for the upload request in the **Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.
The **Upload Request** screen appears.
- Ensure that the **Main** tab is selected.
- Click the **Cancel** button in the **Upload Request** zone.

The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request.	Yes
	Note: The list includes only those reasons which are defined for the Canceled status of the C1-UplRequestType business object through the Status Reason screen.	
Comments	Used to specify additional information while cancelling the upload request.	No

Note: The **Cancel** button appears when the following conditions are met:

- The upload request is in the **Validated** status.
- A user with the approval To Do role is reviewing the hold request.

Note: The **Cancel** button appears when the upload request is in the **Validated** status.

- Select the reason for cancelling the upload request from the **Cancel Reason** list.
- Enter the comments (if any) while cancelling the upload request in the respective field.
- Click **Save**.
The status of the upload request is changed to **Canceled**.

Approving an Upload Request

You can view the number of upload requests which is pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

Note: The system will not allow you to approve or reject an upload request submitted by you.

To approve a upload request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve an upload request through the Upload Request screen	a. Search for the upload request with the Approval In Progress status in the Upload Request screen.

If you want to...	Then...
	<p>A list of upload requests with the respective status appears in the search results.</p> <p>b. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.</p>
Approve an upload request from the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do List screen appears.</p> <p>c. Click the Search (Q) icon corresponding to the To Do Type field.</p> <p>The To Do Type for User Search window appears.</p> <p>d. Enter the required To Do type in the To Do Type field.</p> <p>e. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>f. Select the Open option from the Filter by list to view all unassigned To Dos.</p> <p>g. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.</p>

The **Upload Request** screen appears.

- 2. Review the details in the **Upload Request** screen.
- 3. If the information in the upload request is accurate, click the **Approve** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...														
The number of valid records in the upload request does not exceed the online record process limit defined in the C1-DEFERUPLD algorithm	<p>The following table lists the behavior for the different upload requests:</p> <table><tr><th>Upload Request</th><th>Behavior</th></tr><tr><td>Bill Cycle Update</td><td>The bill cycle information is updated for the accounts.</td></tr><tr><td>Billable Charge</td><td>The billable charges are created.</td></tr><tr><td>Contract Rider Update</td><td>The contract rider information is updated for the contracts.</td></tr><tr><td>Hold Request</td><td>The hold requests are created.</td></tr><tr><td>Refund Request</td><td>The refund requests are created.</td></tr><tr><td>Write Off Request</td><td>The write off requests are created.</td></tr></table>	Upload Request	Behavior	Bill Cycle Update	The bill cycle information is updated for the accounts. Rejecting an Upload Request

Prerequisites

To reject an upload request, you should have:

- Approval To Do role assigned in the system.
- Reasons defined for the **Rejected** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Note: The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To reject an upload request:

1. Do either of the following:

If you want to...	Then...
Reject an upload request through the Upload Request screen	<p>a. Search for the upload request with the Approval In Progress status in the Upload Request screen.</p> <p>A list of upload requests with the respective status appears in the search results.</p> <p>b. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.</p>

If you want to...	Then...
Reject an upload request from the To Do List screen	<div>a. Click the Menu link in the Application toolbar. A list appears.</div> <div>b. From the Main menu, select To Do and then click To Do List. The To Do List screen appears.</div> <div>c. Click the Search (🔍) icon corresponding to the To Do Type field. The To Do Type for User Search window appears.</div> <div>d. Enter the required To Do type in the To Do Type field.</div> <div>e. Click the Search button corresponding to the To Do Type field. The To Do List screen appears.</div> <div>f. Select the Open option from the Filter by list to view all unassigned To Dos.</div> <div>g. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.</div>

The **Upload Request** screen appears.

2. Review the details in the **Upload Request** screen.
3. If the information in the upload request is incorrect, click the **Reject** button in the **Upload Request** zone.

The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes
	Note: The list includes only those reasons which are defined for the Rejected status of the C1-UplRequestType business object through the Status Reason screen.	
Comments	Used to specify additional information while rejecting the upload request.	No

Note: The **Reject** button appears when the following conditions are met:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

4. Select the reason for rejecting the upload request from the **Status Reason** list.
5. Enter the comments (if any) while rejecting the upload request in the respective field.
6. Click **Save**.
The status of the upload request is changed to **Rejected**.

Viewing the Data Record Details

Procedure

To view the details of a data record:

1. Search for the data record in the **Data Records** zone in the **Upload Request** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the data record whose details you want to view.

The **Data Record Details** window appears. It contains the following columns:

Column Name	Column Description
Sr. No.	Displays the sequential number of data.
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

3. Ensure that the **Main** tab is selected.
4. View the details of the data record in the **Data Record Details** window.

Viewing the Log of an Upload Request

Procedure

To view the log of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to view.

The **Upload Request** screen appears.

3. Click the **Log** tab.
The **Log** tab appears.
4. View the complete trail of actions performed on the upload request in the **Upload Request Log** zone.

Adding a Log Entry for an Upload Request

Procedure

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request for which you want to add a log entry.

The **Upload Request** screen appears.

3. Click the **Log** tab.
The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments for the upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
The log entry is added in the **Upload Request Log** zone.

General Ledger (GL) Accounting Template

Topics:

- [GL Accounting Template \(Without Approval\) Status Transition](#)
- [GL Accounting Template \(With Approval\) Status Transition](#)
- [Algorithms Used in C1- GLAT](#)
- [Prerequisites](#)
- [GL Accounting Template \(Used for Searching\)](#)
- [GL Accounting Template \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, ..., and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, ..., Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do for the approver to review the GL Accounting template. Once the approver approves

a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	BS	AD	PS
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	Process	Sub Process 1	Sub Process 2	Sub Process 3
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	Use GL Accounting Template (Y or N)	Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)	Algorithm Behaviour
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for the bill segment calculation line using the distribution code on the respective rate component • FT GL for the pass through line using the distribution code on the respective pass through line • Balancing FT GL using the distribution code on contract type
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for bill segment calculation line using the lines in the GL Accounting template. • FT GL for the pass through line using the distribution code on the respective pass through line.

If the bill segment is...	Then, the system...
	<ul style="list-style-type: none">Balancing FT GL using the line in the GL Accounting template.
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

GL Accounting Template (Without Approval) Status Transition

The following figure graphically indicates how a GL accounting template moves from one status to another when the Approval Required (Y or N) parameter in the C1-GLATSUB algorithm is set to N.

GL Accounting Template (With Approval) Status Transition

The following figure graphically indicates how a GL accounting template moves from one status to another when the Approval Required (Y or N) parameter in the C1-GLATSUB algorithm is set to Y.

Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none">GLAT DescriptionGLAT Status DescriptionGLAT ID

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It

Status	System Event	Algorithm	Algorithm Type	Description
				does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- [GL Accounting Template \(Used for Viewing\)](#) on page 2089

This screen consists of the following zones:

- [Search GL Accounting Template](#) on page 2084
- [GL Accounting Template Lines](#) on page 2085

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none">DraftApproval In ProgressDeactivation Approval In ProgressActiveInactiveRejected	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

Note: You must specify at least one search criterion while searching for a template.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template.
	Note: It has a link. On clicking the link, the GL Accounting Template screen appears where you can view the details of the respective template.
Description	Displays the description of process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.

Column Name	Column Description
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

Note: By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to the template in the **Search Results** section.

Searching for a GL Accounting Template

Procedure

To search for a GL Accounting template:

- 1. Click the **Admin** link in the **Application** toolbar.
A list appears.
- 2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
- 3. Enter the search criteria in the **Search GL Accounting Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- 4. Click **Search**.
A list of templates that meet the search criteria appears in the **Search Results** section.

Creating a GL Accounting Template

Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

Procedure

To create a GL Accounting template:

- 1. Click the **Admin** link in the **Application** toolbar.
A list appears.
- 2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
- 3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** -Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

4. Enter the required details

Note:

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.

Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.

6. Click **Save**.

The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

Viewing the GL Accounting Template Details

Procedure

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** - Displays information about the template. It contains the following zone:
 - **GL Accounting Template** - Displays the details of the template.
 - **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

3. View the details of the template in the **GL Accounting Template** zone.

GL Accounting Template (Used for Viewing)

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** - Displays information about the template. It contains the following zone:
 - **GL Accounting Template** - Displays the details of the template.
- **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

GL Accounting Template - Main

The **Main** tab on the **GL Accounting Template** contains the following zone:

[GL Accounting Template](#) on page 2089

GL Accounting Template

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- **Main** - This section provides basic information about the GL Accounting template. It contains the following fields:

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** - Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	Note: The Edit button appears when the template is in the Draft or Rejected status.
Delete	Used to delete the template.
	Note: The Delete button appears when the template is in the Draft or Rejected status.
Submit	Used to activate the template.
	Note: The Submit button appears when the template is in the Draft or Rejected status.
Approve	Used to approve the template.
	Note: the Approve button appears when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Reject	Used to reject the template.

Button Name	Button Description
	Note: the Reject button appears when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Deactivate	Used to deactivate the active template.
	Note: The Deactivate button appears when the template is in the Active status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

[GL Accounting Template Log](#) on page 2091

GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

Editing a GL Accounting Template

Procedure

To edit a GL Accounting Template:

- 1. Search for the template in the **GL Accounting Template** screen.
- 2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to edit.
The **GL Accounting Template** screen for editing appears.
- 3. Click the **Edit** button in the **GL Accounting Template** zone.

Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** - Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

Note:

If you want to specify more than one template lines, click the **Add (+)** icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete (🗑)** icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search (🔍)** icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.
The changes made to the GL Accounting template are saved.

Deleting a GL Accounting Template

Procedure

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to delete.
The **GL Accounting Template** screen appears.
3. Click the **Delete** button in the **GL Accounting Template** zone.
A message appears confirming whether you want to delete the template.

Note: The **Delete** button appears when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.
The GL Accounting template is deleted.

Note:
You can delete a template when its status is **Draft**.

Submitting a GL Accounting Template

Prerequisites

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

Procedure

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to submit.
The **GL Accounting Template** screen appears.
3. Click the **Submit** button in the **GL Accounting Template** zone.
The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the C1-GLATSUB algorithm.	A To Do of the C1-GLAT To Do type is created and sent to the approver and the status of the template is changed to Approval In Progress .
Approval Required Flag is set to No in the C1-GLATSUB algorithm.	The template is created using the specified process and the status of the template is changed to Active .

Note:
The **Submit** button appears when the template is in the **Draft** or **Rejected** status.

Approving a GL Accounting Template

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

Note: The system will not allow you to approve or reject a template submitted by you.

Procedure

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the GL Accounting template screen	<ol style="list-style-type: none"> a. Search for the template in the GL Accounting template screen. b. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.
Approve a GL Accounting Template from the To Do List screen	<ol style="list-style-type: none"> a. Click the Menu link in the Application toolbar. A list appears. b. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. c. Enter C1-GLAT in the To Do Type field. d. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. e. Select the Open option from the Filter by list to view all unassigned To Dos. f. Click the link in the Message column corresponding to the To Do of the GL Accounting template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to Active as specified in the GL Accounting template.

Note: The **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

Rejecting a GL Accounting Template

Prerequisites

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

Procedure

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the GL Accounting Template screen	<p>a. Search for the template in the GL Accounting Template screen.</p> <p>b. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.</p>
Reject a GL Accounting template from the To Do List screen	<p>a. Click the Menu link in the Application toolbar.</p> <p>A list appears.</p> <p>b. From the Main menu, select To Do and then click To Do List.</p> <p>The To Do Type for User Search window appears.</p> <p>c. Enter C1-GLAT in the To Do Type field.</p> <p>d. Click the Search button corresponding to the To Do Type field.</p> <p>The To Do List screen appears.</p> <p>e. Select the Open option from the Filter by list to view all unassigned To Dos.</p>

If you want to	Then
	f. Click the link in the Message column corresponding to the To Do of the template that you want to review.

The **GL Accounting Template** screen appears.

- Review the template details.
- Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes
Comments	Used to specify additional information while rejecting the template.	No

Note: The **Reject** button appears when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the template is changed to **Rejected**.

Deactivating a GL Accounting Template

Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

Note:

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

Procedure

To deactivate a GL Accounting template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to deactivate.
The **GL Accounting Template** screen appears.
3. Click the **Deactivate** button in the **GL Accounting Template** zone.

Note: The **Deactivate** button appears when the template is in the **Active** status.

The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments for the deactivation of template.	No

4. Click **OK**.
The GL Accounting template status is changed to **Deactivation Approval In Progress**.

Viewing the Log of a GL Accounting Template

Procedure

To view the log of a GL Accounting template:

1. Search for the template in the **GL Accounting template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** - Displays information about the template. It contains the following zone:
 - **GL Accounting Template** - Displays the details of the template.
- **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.

The **GL Accounting Template Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.

Column Name	Column Description
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Indicates the reason why the template was rejected or voided.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

Adding a Log Entry for a GL Accounting Template

Procedure

To add a log entry for a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to edit.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** - Displays information about the template. It contains the following zone:
 - **GL Accounting Template** - Displays the details of the template.
- **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.
The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
GL Accounting Template Information	Displays information about the template.	Not applicable
Log Details	Used to specify additional comments for the template.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
The log entry is added in the **GL Accounting Template Log** zone.

Payment Agreement Request

Topics:

- [Payment Agreement Request \(Without Approval\) Status Transition](#)
- [Payment Agreement Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-PaymentAgreementRequest](#)
- [Payment Agreement Request Type](#)
- [Payment Agreement Request \(Used for Searching\)](#)
- [Payment Agreement Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount - 100\$, Unpaid Amount - 75\$)
- B2 (Bill Amount - 250\$, Unpaid Amount - 125\$)
- B3 (Bill Amount - 150\$, Unpaid Amount - 150\$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exist in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exist in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see [Payment Agreement Request \(Without Approval\) Status Transition](#) on page 2104 and [Payment Agreement Request \(With Approval\) Status Transition](#) on page 2104. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

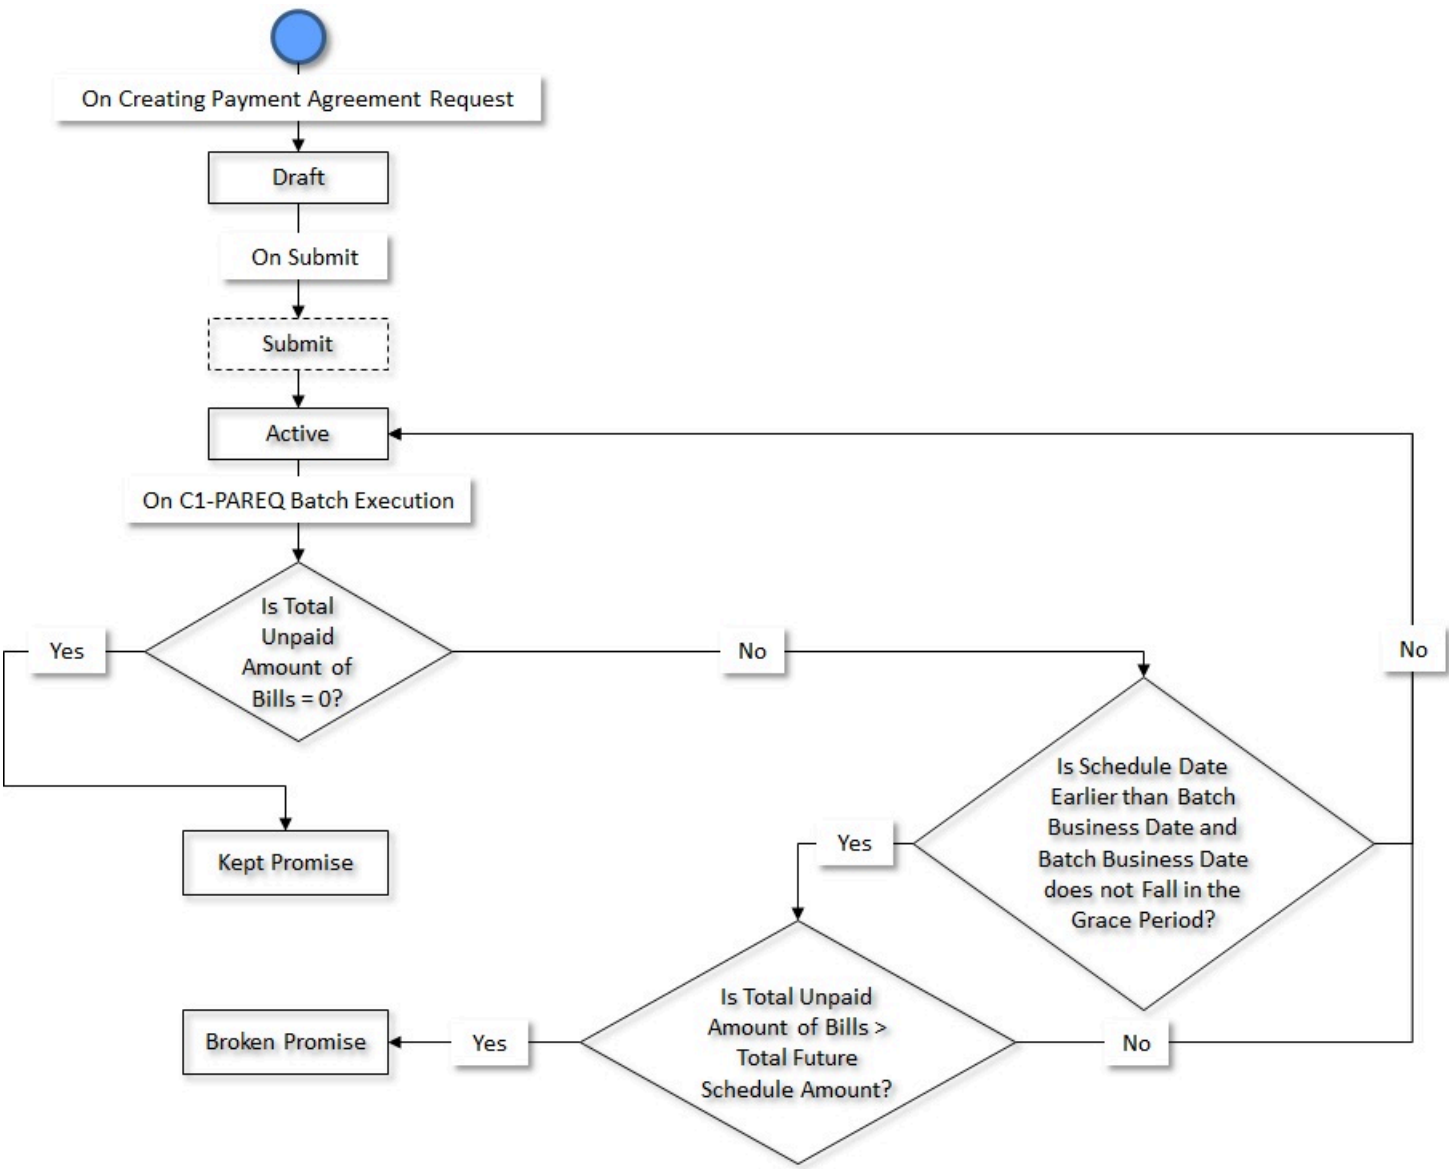

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

Note: The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see [Prerequisites](#) on page 2105.

Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**

- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to C1-PA-INFO on page 2106
Pre-Processing	C1-PA-PRE	C1-PA-PRE	Refer to C1-PA-PRE on page 2107
Validation	C1-PA-VAL	C1-PA-VAL	Refer to C1-PA-PRE on page 2107

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	Refer to C1-PA-SUBMIT on page 2107
Approval Progress	In Enter	C1-PA-APPENT	C1-PA-APPENT	Refer to C1-PA-APPENT on page 2107
Approval Progress	In Exit	C1-PA-APPEXT	C1-PA-APPEXT	Refer to C1-PA-APPEXT on page 2107
Return to Submitter	Enter	C1-PA-RESUB	C1-PA-RESUB	Refer to C1-PA-RESUB on page 2107
Active	Monitor	C1-PA-MONTR	C1-PA-MONTR	Refer to C1-MONTR on page 2107
Active	Enter	C1-PA-ACTENT	C1-PA-ACTENT	Refer to C1-ACTENT on page 2107

C1-PA-INFO

This algorithm generates the payment agreement request information string which appears throughout the application. This algorithm concatenates the following fields:

- Payment Agreement Request Type Description
- Payment Agreement Request Status Description
- Payment Agreement Request ID

C1-PA-PRE

This Algorithm is used to avoid the concurrency issue for payment agreement.

C1-PA-SUBMIT

This Algorithm is used to validate payment agreement request.

C1-PA-APPENT

This algorithm creates **To Do** based on the **Approval To Do Type** configured in Payment Agreement Request Type.

C1-PA-APPEXT

This algorithm checks whether an approver is associated with the approval **To Do Role** specified in the **Payment Agreement Request Type**. It does not allow the submitter to approve or reject the payment agreement request.

C1-PA-RESUB

This algorithm is invoked on **Re-Submit** button. It moves the status of Payment Agreement Request into **Draft**. A 'To Do' will be generated for the user as submitter whose **To Do Type** and **To Do Role** are fetched from Payment Agreement Request Type.

C1-MONTR

This algorithm is invoked from the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch. It changes the status of the payment request from **Active** to **KP** (Kept Promise) or **BP** (Broken Promise) based on payment received.

C1-ACTENT

This algorithm will validate Payment Agreement Request before activation.

Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- [Payment Agreement Request Type List](#) on page 2108
- [Payment Agreement Request Type](#) on page 2108

Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the Edit (✎) icon, the Payment Agreement Request Type screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the Duplicate (📄) icon, the Payment Agreement Request Type screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the Delete (🗑) icon, you can delete the payment agreement request type.
	Note: You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

Payment Agreement Request Type

The **Payment Agreement Request Type** zone displays the details of the payment agreement request type. This zone contains the following sections:

- **Main** - This section provides basic information about the payment agreement request type. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.

Field Name	Field Description
Payment Agreement Request Business Object	Indicates the business object that will be used to create the payment agreement request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the payment agreement request type.
Status	Indicates the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Status Change Notification Type	Indicates the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> Alert To Do Both
Approval Required	Indicates whether approval is required while creating payment agreement request using the payment agreement request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when you submit the payment agreement request for approval.
	Note: This field appears when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.
Approval To Do Role	Indicates that users with the specified To Do role can only approve or reject the payment agreement request submitted for approval.
	Note: This field appears when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do type for the submitter when the payment agreement request type is resubmitted by the approver.

Field Name	Field Description
	<p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>
Submitter To Do Role	<p>Indicates the To Do role of the submitter when the payment agreement request type is resubmitted by the approver.</p> <p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p>

- **Characteristics** - This section lists the characteristics of the payment agreement request type. It contains the following columns:

Column Name	Column Description	Mandatory (Yes Or No)
Characteristic Type	Indicates the characteristic type.	No
Characteristic Value	Displays the value of the characteristic type.	No

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment agreement request type.
Delete	<p>Used to delete the payment agreement request type.</p> <p>Note: You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.</p>
Duplicate	Used to create a new payment agreement request type using an existing payment agreement request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	<p>Indicates the business object using which the payment agreement request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

By default, the **Payment Agreement Request Type** zone does not appear in the **Payment Agreement Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a payment agreement request type in the **Payment Agreement Request Type List** zone.

Defining a Payment Agreement Request Type

Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment agreement request type.
- **Characteristics** - Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none">• Active• Inactive	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none">• Alert• To Do• Both	No
Approval Required	Used to indicate whether approval is required for creating payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
		The list will include only those To Do roles which are associated with the To Do type specified in the Approval To Do Type field.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
		The list will include only those To Do roles which are associated with the To Do type specified in the Submitter To Do Type field.

6. Enter the required details.
7. Define characteristics for the payment agreement request type, if required.
8. Click **Save**.
The payment agreement request type is defined.

How to define a characteristic for a payment agreement request type	Defining a Characteristic for a Payment Agreement Request Type on page 2113

Defining a Characteristic for a Payment Agreement Request Type

Prerequisites

To define a characteristic for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

Procedure

To define a characteristic for a payment agreement request type:

- 1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	Note: This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment agreement request type.

- 2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- 3. If you want to define more than one characteristic for the payment agreement request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Payment Agreement Request Type

Prerequisites

To edit a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Procedure

To edit a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the payment agreement request type whose details you want to edit.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment agreement request type.
- **Characteristics** - Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Displays the payment agreement request type.	Not applicable
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Upload Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both 	No
Approval Required	Used to indicate whether approval is required for editing payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when the Approval Required check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval. Note: This field appears when the Approval Required check box is selected.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver. Note: This field appears when the Approval Required check box is selected. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver. Note: This field appears when the Approval Required check box is selected.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.

Tip: Alternatively, you can click the **Edit** button in the **Payment Agreement Request Type** zone to edit the details of the payment agreement request type.

5. Modify the required details.

Note: You can search for a **Approval To Do Type** and **Submitter To Do Type** by clicking the **Search** (🔍) icon corresponding to the respective field.

6. Define, edit, or remove characteristics of the payment agreement request type, if required.

7. Click **Save**.

The changes made to the payment agreement request type are saved.

Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** (🔗) icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment agreement request type.
- **Characteristics** - Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active 	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> Inactive 	
Status Change Notification Type	<p>Used to indicate the notification type on the status change of payment agreement request type. The valid values are:</p> <ul style="list-style-type: none"> Alert To Do Both 	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	<p>Note: This field appears when the Approval Required check box is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	<p>Note: This field is required when the Approval Required check box is selected.</p>

Bill Details

The **Bill Details** zone lists unpaid debt bill details. You will not find any records in this zone if the payment agreement request list does not have any unpaid bills assigned to it. This zone contains the following columns:

Column Name	Column Description
Bill Information	Indicates the bill against which the payment agreement request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.

Column Name	Column Description
Original Bill Amount	Displays the bill amount when the bill was generated.
Current Bill Balance	Displays the outstanding amount.
Due Date	Displays the due date of the bill.

By default, the **Bill Details** zone does not appear in the **Payment Agreement Request** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment agreement request in the **Search Payment Agreement Request** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4186.

Searching for a Payment Agreement Request

Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Payment Agreement Request**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.
The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

To add an overdue bill in a payment agreement request:

Note: A bill with outstanding amount greater than zero which is not part of an overdue process will be allowed to be added in a payment agreement request. While a bill with negative outstanding amount will not be allowed to be added in a payment agreement request.

1. Search for the payment agreement request in the **Payment Agreement Request** screen which is in **Draft** or **Active** status.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.
The **Payment Agreement Request** screen appears.
3. Click the **Bills** tab.
The **Bills** tab appears.
4. Enter the search criteria in the **Search Bills** zone.
In the **Search Results** section, list of bills meeting the search criteria are displayed.
5. Select the check box corresponding to the bill which you want to add to the payment agreement request from the **Search Results** section.
You can add more than one bill to the payment agreement request at the same time.

6. Click **Add**.
A message appears indicating that selected bills have been successfully added to the payment agreement request.
7. Click **OK**.
Note that the bill is added in the **Bill Details** zone in the **Main** tab.

Viewing the Log of a Payment Agreement Request

Procedure

To view the log of a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to view.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** - This tab contains the following three zones:
 - **Payment Agreement Request** - Displays the details of the payment agreement request.
 - **Bill Details** - Lists the bill details of the payment agreement request.
 - **Payment Schedule** - Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** - This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** - This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Payment Agreement Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Indicates the reason why the payment agreement request was rejected.

Column Name	Column Description
Old Payment Schedule	Displays the details of old payment schedule.

Note: You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

Adding a Log Entry for a Payment Agreement Request

Procedure

To add a log entry for a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to edit.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** - This tab contains the following three zones:
 - **Payment Agreement Request** - Displays the details of the payment agreement request.
 - **Bill Details** - Lists the bill details of the payment agreement request.
 - **Payment Schedule** - Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** - This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** - This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.
The **Log** tab appears.
 4. Click the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

The **Add Payment Agreement Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Log Details	Used to specify additional comments for the payment agreement request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
The log entry is added in the **Payment Agreement Request Log** zone.

Chapter 31

Inbound Message

Topics:

- [Health Care Inbound Message](#)
- [Health Product and Plan Inbound Message](#)
- [Inbound Message Type](#)
- [Inbound Message \(Used for Searching\)](#)
- [Inbound Message \(Used for Viewing\)](#)
- [Statement Construct Preference](#)

Oracle Revenue Management and Billing enables you to create the following inbound messages through the respective inbound web services:

Inbound Message	Inbound Web Service
Health Care Inbound Message on page 2148	C1-HCInboundMessage on page 2555

Once an inbound message is created, you can submit the inbound message for validation and processing from the user interface or through a batch process. The following table lists the batches which validate and process the respective inbound message at regular intervals:

Inbound Message	Batch Control Name
Health Care Inbound Message	Health Care Inbound Message Periodic Monitor (C1-HCINB)

For more information about the batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

Health Care Inbound Message

On calling the **C1-HCInboundMessage** web service, you can create a health care inbound message using a health care inbound message type. You can create a health care inbound message type using the **Health Care Inbound Message Type (C1-HCInboundMsgType)** business object. The health care inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. You must specify the **Health Care Inbound Message (C1-HCInboundMessage)** business object in the health care inbound message type.
- **Customer Registration Type** - The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. The customer registration type helps the system to determine:
 - **Customer Registration Business Object** - The business object using which the customer registration object should be created in the system. You must specify the **Customer Registration - Health Care (C1-CustomerRegistrationHC)** business object in the customer registration type.
 - **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Person BO (C1_PERSON_BO)** business object in the customer registration type.
 - **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Account BO (C1-AccountBO)** business object in the customer registration type.
 - **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the customer registration type.
 - **Membership Business Object** - The business object using which the membership should be created in the system. You must specify the **Membership (C1-Membership)** business object in the customer registration type.
 - **Address Business Object** - The business object using which the effective dated address should be created in the system. You must specify the **Address (C1-Address)** business object in the customer registration type.

While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

The following table lists the various activities that you can perform for the respective combination through the **C1-HCInboundMessage** web service:

Person Type	Policy Category	Enables you to:
Parent Customer	Self-Funded	<ul style="list-style-type: none">• Create or edit a parent customer• Create or edit a bill group of the parent customer• Create the derivation and pricing parameters for the bill group• Create or edit the accounts of a bill group• Create or edit the policies of a bill group
	Fully-Insured Group	<ul style="list-style-type: none">• Create or edit a parent customer• Create or edit a bill group of the parent customer• Create the derivation and pricing parameters for the bill group• Create or edit the accounts of the parent customer and bill group• Create or edit the policies of the parent customer and bill group

Person Type	Policy Category	Enables you to:
		<ul style="list-style-type: none"> Create or edit the plans of the policies Associate one or more pricing rule types with a policy plan Create or edit the pricing rules of the policy plans Terminate, reinstate, or renew policies of the parent customer and bill group
Bill Group	Self-Funded	<ul style="list-style-type: none"> Create or edit a bill group Create the derivation and pricing parameters for the bill group Create or edit the accounts of the bill group Create or edit the policies of the bill group
	Fully-Insured Group	<ul style="list-style-type: none"> Create or edit a bill group Create the derivation and pricing parameters for the bill group Create or edit the accounts of the bill group Create or edit the policies of the bill group Create or edit the plans of the policies Associate one or more pricing rule types with a policy plan Create or edit the pricing rules of the policy plans Terminate, reinstate, or renew policies of the bill group
Any Other Person Type	-	<ul style="list-style-type: none"> Create or edit a person Credit or edit the accounts of the person Create or edit the memberships of the policy plans Add or remove members from a membership Create or edit the one-time or recurring pass-through billable charges for a membership Create or edit the benefits charges for a membership

The following table describes how the system behaves when the respective entity information is given in a health care inbound message:

Entity	System Behavior
Person	<p>The system uses the C1-PERSTYPE feature configuration to decide whether the person type specified in the health care inbound message represents Parent Customer or Bill Group. If the person type specified in the health care inbound message matches the person type specified in the Bill Group Person Type or Parent Person Type option type of the C1-PERSTYPE feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the Bill Group Person Type or Parent Person Type option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p>

Entity	System Behavior
	<p>If the related person information is given for a bill group and the person type of the related person is Parent Customer, then the bill group is related to the parent customer using the person relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p> <p>Note: The system supports the Add and Update operations for all entities except the derivation and pricing parameters for the bill group. Through the health care inbound message, each time, the system creates a new derivation and pricing parameters record for the bill group and does not update the existing derivation and pricing parameters record of the bill group.</p>
Account	<p>While creating an account, the system defines the Invoice Type characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLLNG feature configuration.</p>
Policy	<p>If the fully-insured group policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> • Associates the bill group with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLLNG feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLLNG feature configuration <p>However, if the fully-insured group policy information is given for a parent customer, the system does the following:</p> <ul style="list-style-type: none"> • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLLNG feature configuration <p>If the self-funded policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> • Associates the bill group with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLLNG feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLLNG feature configuration <p>On renewing a fully-insured group policy, the system removes the end date from the policy and stamps the renewal date against the policy.</p> <p>Note: You can renew a policy where the policy category is set to Self-Funded from the user interface and not through a health care inbound message. However, you can renew a policy where the policy category is set to Fully-Insured Group through a health care inbound message and not from the user interface.</p>

Entity	System Behavior
	<p>On terminating a fully-insured group policy, the system updates the end date of the following entities with the termination date:</p> <ul style="list-style-type: none"> • Policy • Policy Person • Policy Plan • Membership • Membership Person • Pricing Rule <p>However, before updating the end dates, the system stores the original end date in the ORG_END_DT column of the respective table for all the above entities. The status of the policy is changed to the status which is specified in the Policy Termination Status option type of the C1-ASOBLLNG feature configuration.</p> <p>On reinstating a fully-insured group policy, the system updates the end date of the above entities with the original end date. In addition, the status of the policy is changed to the status which is specified in the Policy Reinstatement Status option type of the C1-ASOBLLNG feature configuration.</p> <p>Note: The Policy entity is applicable only for Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.</p>
Policy Plan	<p>While creating a policy plan, the system requires either the price item or at least one pricing rule type. The system allows you to associate only those pricing rule types where the category is set to Age Based, Tier Based, or Pass-Through Billable Charge.</p> <p>Note: The Policy Plan entity is applicable only for Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.</p>
Pricing Rule Type	<p>The system does not allow you to create or update a pricing rule type through a health care inbound message.</p> <p>Note: The Pricing Rule Type entity is applicable for Self-Funded Group Health Insurance, Fully-Insured Group Health Insurance and Individual Health Insurance businesses.</p>
Pricing Rule	<p>The system allows you to define and edit the age-based and tier-based pricing rules of the policy plan. Note that the system supports the Replace operation and not the Update operation when you are editing these pricing rules through a health care inbound message.</p>

Entity	System Behavior
	<p>Note:</p> <p>You can define and edit the age-based and tier-based pricing rules through a health care inbound message and not from the user interface.</p> <p>You can create the following pricing rules from the user interface and not through a health care inbound message:</p> <ul style="list-style-type: none"> • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • One-Time Flat Fees • Recurring Flat Fees • Ancillary • Discount Arrangement • Level Funded
	<p>Note: The Pricing Rule entity is applicable for Self-Funded Group Health Insurance, Fully-Insured Group Health Insurance, and Individual Health Insurance businesses.</p>
	<p>Pass-Through Billable Charge</p> <p>If the price item, account identifier type, and account identifier are given in the billable charge information, the system directly creates an SQI based billable charge when you process the health care inbound message. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to Pass-Through Billable Charge. If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). If so, the system creates an SQI based billable charge using the respective pass-through billable charge pricing rule type.</p> <p>Note: The Pass-Through Billable Charge entity is applicable only for Fully-Insured Group Health Insurance and Individual Health Insurance business.</p>

The following table recommends the sequence in which the respective entities should be created for the different line of business through a separate healthcare inbound message.

Line of Business	Sequence	Entity
Fully-Insured Group Health Insurance	1	Parent Customer (along with policy details)
	2	Bill Groups (along with policy details)
	3	Pricing Rules
	4	Member Persons (along with policy details)
Individual Health Insurance	1	Member Person (along with health product, health plan, and pricing rule details)
Self-Funded Group Health Insurance	1	Parent Customer (along with policy details)
	2	Bill Groups (along with policy details)

Line of Business	Sequence	Entity
	3	Pricing Rules
	4	Member Persons (along with policy details)

The following table lists the details which you need to provide either in full or partial while editing the entity information through a health care inbound message.

Entity	Information	Tag Name	In case of edit, you need to provide details in...
Person	Person Name	<personName>	All the tags within the <personName> tag
	Identifiers	<identifiers>	All the tags within the <identifiers> tag
	Address	<address>	The following tags within the <address> tag: <ul style="list-style-type: none"> • <addressEffDate> • <addressType>
	Phones	<phones>	All the tags within the <phones> tag
	Related Persons	<relatedPersons>	All the tags within the <relatedPersons> tag
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: <ul style="list-style-type: none"> • <characteristicType> • <effectiveDate>
	Bill Level Parameters	<billLevelParameters>	The following tag within the <billLevelParameters> tag: <ul style="list-style-type: none"> • <sequence>
Account	Identifiers	<identifiers>	All the tags within the <identifiers> tag
	Account Person	<accountPerson>	All the tags within the <accountPerson> tag
	Account Autopay	<autoPayDetails>	All the tags within the <autoPayDetails> tag
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: <ul style="list-style-type: none"> • <characteristicType> • <effectiveDate>
Policy	Policy Person	<policyPersons>	All the tags within the <policyPersons> tag
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: <ul style="list-style-type: none"> • <characteristicType> • <effectiveDate>
	Plan	<pricingRuleTypeList>	All the tags with the <pricingRuleTypeList> tag.

Entity	Information	Tag Name	In case of edit, you need to provide details in...
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: <ul style="list-style-type: none"> • <characteristicType> • <effectiveDate>
	Pricing Rule	<pricingRuleData>	All the tags within the <pricingRuleData> tag.
Membership	Membership Person	<memberData>	The following tags within the <memberData> tag:: <ul style="list-style-type: none"> • <sequence> • <membershipIdentifierType> • <policyNumber> • <sourceSystem> • <planNumber> • <healthPlanCode>
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: <ul style="list-style-type: none"> • <characteristicType> • <effectiveDate>
	Membership Person Characteristics	<membershipPersonCharacteristic>	The following tags within the <membershipPersonCharacteristic> tag: <ul style="list-style-type: none"> • <characteristicType> • <effectiveDate>

The following table lists the details which you need to provide while carrying out a specific action for an entity through a health care inbound message.

Entity	Action	You need to provide the details in the following tags...
Fully-Insured Group Policy	Policy Renewal	<pre> <policyData> <policyType></policyType> <policyNumber></policyNumber> <sourceSystem></sourceSystem> <renewalDate></renewalDate> <endDate></endDate> </policyData> </pre>
	Policy Reinstatement	<pre> <policyData> <policyNumber></policyNumber> <sourceSystem></sourceSystem> <reinstateInformation> <reinstatementDate></reinstatementDate> </reinstateInformation> <reinstatementReason></reinstatementReason> </policyData> </pre>

Entity	Action	You need to provide the details in the following tags...
Individual Membership		</policyData>
	Policy Termination	<pre> <policyData> <policyNumber></policyNumber> <sourceSystem></sourceSystem> <terminationInformation> <terminateDate></terminateDate> <terminationReason></ terminationReason> </terminationInformation> </policyData> </pre>
	Manual Renewal (only renews the membership)	<pre> <memberData> <sequence></sequence> <startDate></startDate> <endDate></endDate> <autoRenew></autoRenew> <membershipRenewalDate></ membershipRenewalDate> <membershipPersonStatus></ membershipPersonStatus> <membershipPersonstatusReason></ membershipPersonstatusReason> </memberData> </pre>
	Manual Renewal (of a dependent person)	<pre> <memberData> <sequence></sequence> <endDate></endDate> <membershipPersonStatus></ membershipPersonStatus> <membershipPersonstatusReason></ membershipPersonstatusReason> </memberData> </pre>
	Termination	<pre> <memberData> <sequence></sequence> <endDate></endDate> <membershipPersonStatus></ membershipPersonStatus> <membershipPersonstatusReason></ membershipPersonstatusReason> </memberData> </pre>

On calling the **C1-HCInboundMessage** web service, a health care inbound message is created in the **Pending** status. When the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch is executed, the system checks whether there are any health care inbound messages in the **Pending** status. If there is a health care inbound message in the **Pending** status, the system validates the inbound message. If the health care inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the health care inbound messages for validation and processing from the user interface. On submitting a health care inbound message, the system validates the health care inbound message. If a health care inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

If the person type is **Parent Customer**, the customer registration object is created in the **Complete** status. However, if the person type is **Bill Group**, the customer registration object is created in the **Bill Group Approved** status. The policies are created in the **In Force/Active** status and the pricing rules are created in the **Active** status. Finally, the status of the health care inbound message is changed to **Processed**.

Note: The above status transition is mentioned for a customer registration object based on the assumption that the data sent through the health care inbound message will be pre-approved and does not require any approval in the system.

If any error occurs while validating or processing a health care inbound message, the status of the health care inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected health care inbound message. The system can reprocess a health care inbound message when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the health care inbound message from **Rejected** to **Pending**. The **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch will then reconsider and reprocess the health care inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected health care inbound messages. However, it will attempt to retry when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a health care inbound message depends on the value defined in the **Maximum Retry** parameter.

At present, if a customer registration object is created through a health care inbound message, you cannot edit the customer registration object from the user interface. You can only edit such customer registration objects through a health care inbound message.

For more information on...	See...
How to setup the C1-ASOBLLNG feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4193
How to setup the C1-PERSTYPE feature configuration	Setting the C1_PERSTYPE Feature Configuration on page 4238

Prerequisites

To use the health care inbound message feature, you need to do the following:

- Define the required customer registration types in the system.

Note: The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

- Define the required health care inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-HCINVAL**, **C1-HCINPROC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** and **C1-ExtLookRefTypeRateOpt** extendable lookups.
- Define the values for the **HOUSE_TYPE**, **PER_OR_BUS_FLG**, **NAME_TYPE_FLG**, **ADDRESS_TYPE_FLG**, **BILL_ADDR_SRCE_FLG**, **BILL_FORMAT_FLG**, and **RUNOUT_ADM_OPT_FLG** lookup fields.

- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
 - Person Relationship Type
 - Bill Group Policy Person Role
 - Parent Customer Policy Person Role
 - Invoice Type Characteristic Type
 - Policy Termination Status
 - Policy Reinstatement Status
 - Default Rate Option - Flat
 - Default Rate Option - Percentage
 - Age Based Parameter
 - Membership Inactive Status
 - Member Person Inactive Status
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
 - Bill Group Person Type
 - Parent Person Type
- Define the required person identifier types, account identifier types, person relationship types, characteristic types, phone types, customer classes, bill cycles, collection classes, divisions, bill route types, charge types, currencies, bill periods, invoice frequencies, distribution codes, auto pay route types, auto pay sources, account relationship types, policy types, policy person roles and contract relationship types in the application.
- Define the values for the **C1_INVOICE_DAY_BILL_PERIOD_FLG** lookup field.

Note: Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

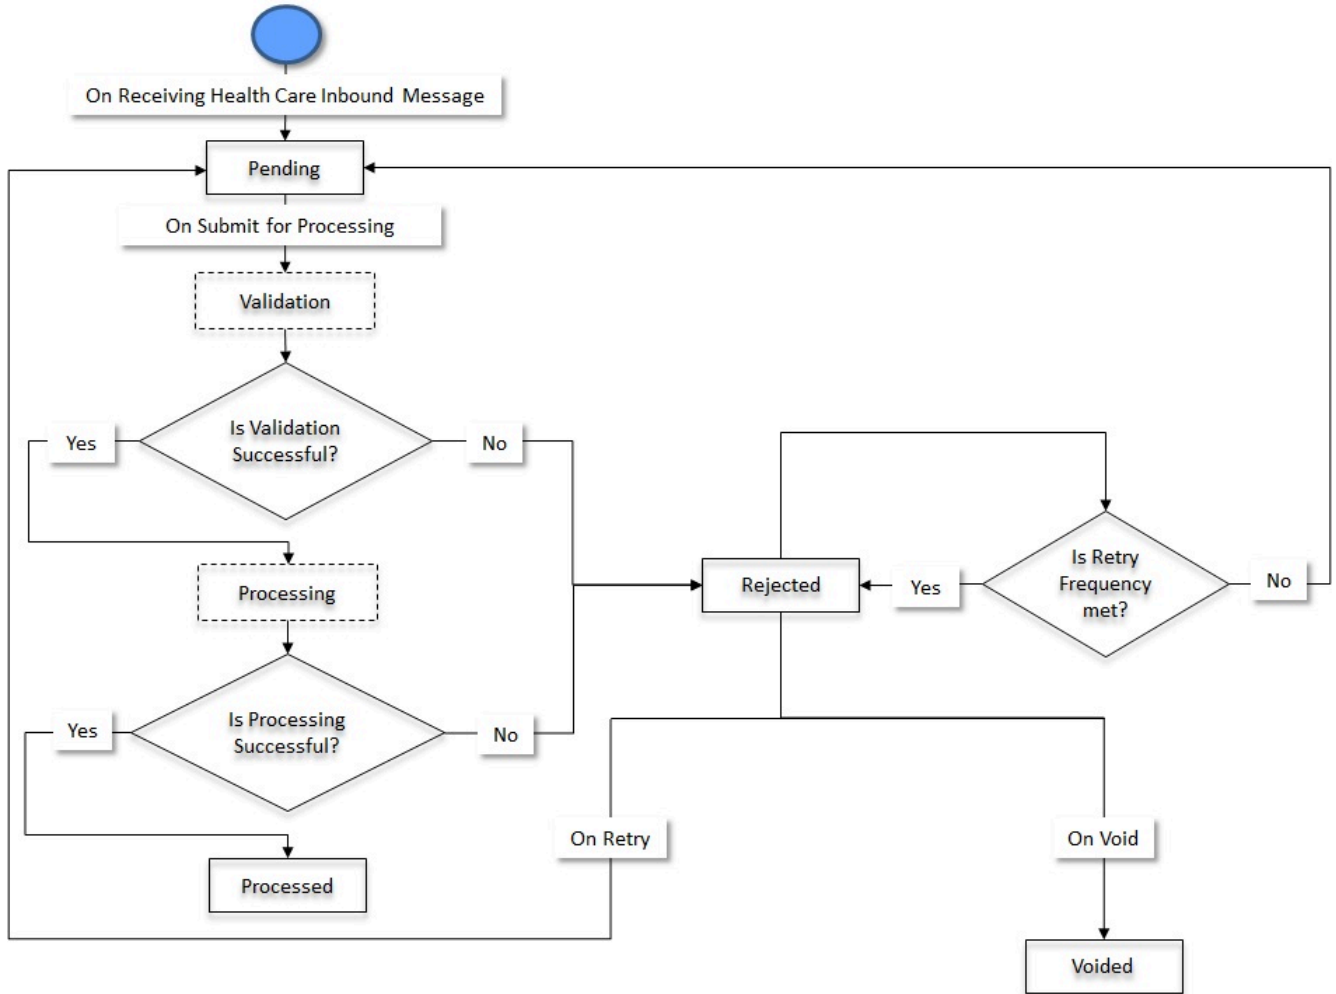

- Define the required predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination.
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement.
- Define the bill cancel reasons which you want to use when the premium bill segment is canceled during the policy or membership termination.
- Define the required exchange rates in the system.
- Define the required access groups in the system.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

Health Care Inbound Message Status Transition through User Interface

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the user interface:

Health Care Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch:

Algorithms Used in C1-HCInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-HCInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 2160.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
	Enter	C1-HCINVAL	C1-HCINVAL	Refer to C1-HCINVAL on page 2160.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
	Enter	C1-HCINPROC	C1-HCINPROC	Refer to C1-HCINPROC on page 2161.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 2161.
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 2161.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HCINVAL

Health Care Inbound Message - Validation

This algorithm is invoked when you execute the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the health care inbound message which is in the **Pending** status. It checks the following:

- Whether the details of the parent customer are given in the bill group information.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HCINPROC

This algorithm is invoked once a health care inbound message is successfully validated. It processes the health care inbound message and creates or updates the parent customers, bill groups (including derivation and pricing parameters for the bill group), accounts, self-funded or fully-insured group policies, policy plans, memberships, member persons, pass-through billable charges, and pricing rules. In addition, it allows you to terminate, reinstate, and renew a fully-insured group policy.

If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. The memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.

If the processing fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** - Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** - This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Care Inbound Message XML Format

Note: We recommend you to refer the Health Care Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the health care inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health care inbound message.	Yes
bo	Used to indicate the business object using which the health care inbound message should be created in the system. The valid value is: <ul style="list-style-type: none">• C1-HCInboundMessage	Yes
messageType	<div>You can use this tag within the following tags:<ul style="list-style-type: none">• schema - Here, the messageType tag indicates the health care inbound message type using which the health care inbound message should be created in the system.<div>Note: The system refers the value from within the headerData tag.</div><ul style="list-style-type: none">• headerData - Here, the messageType tag is used to specify the health care inbound message type using which the health care inbound message should be created in the system.<div>Note: You must specify a valid health care inbound message type which is in the Active status.</div></div>	Yes
sourceSystem	<div>You can use this tag within the following tags:<ul style="list-style-type: none">• schema - Here, the sourceSystem tag indicates the external system from where the health care inbound message is received.<div>Note: The system refers the value from within the headerData tag.</div><ul style="list-style-type: none">• headerData - Here, the sourceSystem tag is used to indicate the external system from where the health care inbound message is received.</div>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> billLevelParameters - Here, the sourceSystem tag is used to indicate the source system using which you want to define the derivation and pricing parameters for the bill group. memberData - Here, the sourceSystem tag is used to indicate the source system using which you want to derive the policy where the policy plan is defined. policyData - Here, the sourceSystem tag is used to indicate the source system from where the policy is originated. <p>Note:</p> <p>You must specify a source system which is already defined in the C1-SourceSystemLookup extendable lookup. It must be in the Active status.</p> <p>This tag is applicable only for the Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.</p>	
externalTransactionId	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> schema - Here, the externalTransactionId tag indicates the transaction in the external source system which resulted in the health care inbound message. <p>Note: The system refers the value from within the headerData tag.</p> <ul style="list-style-type: none"> headerData - Here, the externalTransactionId tag is used to indicate the transaction in the external source system which resulted in the health care inbound message. 	No
externalBatchId	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> schema - Here, the externalBatchId tag indicates the external batch job or batch run number through which the health care inbound message is created. <p>Note: The system refers the value from within the headerData tag.</p> <ul style="list-style-type: none"> headerData - Here, the externalBatchId tag is used to indicate the external batch job or batch run number through which the health care inbound message is created. 	Yes
externalSourceId	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> schema - Here, the externalSourceId tag displays the external source system ID. <p>Note: The system refers the value from within the headerData tag.</p> <ul style="list-style-type: none"> headerData - Here, the externalSourceId tag is used to specify the external source system ID. 	Yes
characteristics	You can use this tag within the following tags:	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • schema - Here, the characteristics tag is used to specify a list of characteristics for the health care inbound message. • personData - Here, the characteristics tag is used to specify a list of characteristics for the person. • relatedPersons - Here, the characteristics tag is used to specify a list of characteristics for the person to person relationship. • memberData - Here, the characteristics tag is used to specify a list of characteristics for the membership. • billableChargeData - Here, the characteristics tag is used to specify a list of characteristics for the billable charge. • accountData - Here, the characteristics tag is used to specify a list of characteristics for the account. • policyData - Here, the characteristics tag is used to specify a list of characteristics for the policy. • planData - Here, the characteristics tag is used to specify a list of characteristics for the policy plan. • pricingRuleData - Here, the characteristics tag is used to specify a list of characteristics for the pricing rule. • benefitData - Here, the characteristics tag is used to specify a list of characteristics for the membership benefit. 	
inboundMessageCharacteristic	Used to specify a characteristic for the health care inbound message.	No
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional)
		Note: This data is required while defining or editing an adhoc characteristic of the health care inbound message.
characteristicType	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> • inboundMessageCharacteristic - The characteristicType tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to Inbound Message. • characteristicsList - The characteristicType tag is used to specify the characteristic type. If you are defining a characteristic for a: <ul style="list-style-type: none"> • Person - You must specify a characteristic type where the characteristic entity is set to Person. • Related Person - You must specify a characteristic type where the characteristic entity is set to Person to Person. • Membership - You must specify a characteristic type where the characteristic entity is set to Membership. • Membership Person - You must specify a characteristic type where the characteristic entity is set to Membership Person. 	Yes (Conditional) Note: This data is required while defining or editing a characteristic of the respective entity.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Membership Benefit - You must specify a characteristic type where the characteristic entity is set to Benefit. • Billable Charge - You must specify a characteristic type where the characteristic entity is set to Billable Charge. • Account - You must specify a characteristic type where the characteristic entity is set to Account. • Policy - You must specify a characteristic type where the characteristic entity is set to Policy. • Policy Plan - You must specify a characteristic type where the characteristic entity is set to Policy Plan. • Pricing Rule - You must specify a characteristic type where the characteristic entity is set to Pricing Rule. • Pricing Rule - You must specify a characteristic type where the characteristic entity is set to Pricing Rule. 	
effectiveDate	You can use this tag within the following tags:	Yes (Conditional)
	<ul style="list-style-type: none"> • inboundMessageCharacteristic - Here, the effectiveDate tag is used to specify the date from when the characteristic is effective for the health care inbound message. • characteristicsList - Here, the effectiveDate tag is used to specify the date from when the characteristic is effective for the respective entity (i.e. person, person to person relationship, membership, member person, billable charge, account, policy, policy plan, pricing rule, or membership benefit). • billLevelParameters - Here, the effectiveDate tag is used to specify the date from when the derivation and pricing parameters are effective for the bill group. • policyPlanProrationRuleList - Here, the effectiveDate tag is used to specify the proration rules defined for the policy plan. 	Note: This data is required while defining or editing a characteristic of the respective entity or while defining the derivation and pricing parameters for the bill group.
	Note: You must specify the date in the YYYY-MM-DD format.	
characteristicValue	You can use this tag within the following tags:	Yes (Conditional)
	<ul style="list-style-type: none"> • inboundMessageCharacteristic - Here, the characteristicValue tag is used to specify the value for the predefined characteristic type. • characteristicsList - Here, the characteristicsList tag is used to specify the value for the characteristic type. 	Note: This data is required while defining or editing a characteristic of the respective entity.
customerStructureMessage	Used to specify the details of the customer including the header information for the health care inbound message.	Yes
characteristicValueForeignKey	Used to specify the first value for the foreign key characteristic type.	Yes (Conditional)
		Note: This data is required while defining or editing a foreign key characteristic of the health care inbound message.

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicValueFK2	Used to specify the second value for the foreign key characteristic type.	No
characteristicValueFK3	Used to specify the third value for the foreign key characteristic type.	No
characteristicValueFK4	Used to specify the fourth value for the foreign key characteristic type.	No
characteristicValueFK5	Used to specify the fifth value for the foreign key characteristic type.	No
headerData	Used to specify the header information for the health care inbound message.	Yes
personData	Used to specify the details of the parent customer, bill group, or member person.	Yes (Conditional)
		Note: This data is required while defining or editing a person.
accessGroup	You can use this tag within the following tags:	No
	<ul style="list-style-type: none"> personData - Here, the accessGroup tag is used to indicate the user group that can access the person data. accountData - Here, the accessGroup tag is used to indicate the user group that can access the account data. customerStructureData - Here, the accessGroup tag is used to indicate the user group that can access the customer data. 	
	Note: If you do not specify a value, by default it is set to system default.	
sequence	You can use this tag within the following tags:	Yes (Conditional)
		Note: This data is required while defining or editing the respective information.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • benefitDataList - Here, the sequence tag is used to indicate the order in which the benefit charge should be created for the membership. • accountData - Here, the sequence tag is used to indicate the order in which the account should be created in the system. • memberData - Here, the sequence tag is used to indicate the order in which the membership benefit should be created in the system. 	
personType	Used to indicate the type of person. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • B - Indicates that the person is a business owner. • BG - Indicates that the person is a bill group. • G - Indicates that the person is a group owner. • K - Indicates that the person is a broker. • P - Indicates that the person is an individual. • PG - Indicates that the person is a parent customer. 	Note: This data is required while defining or editing a person.
	Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status.	
personName	Used to specify a list of names for the person.	Yes (Conditional)
		Note: This data is required while defining a person.
entityName	Used to specify the name of the person.	Yes (Conditional)
		Note: This data is required while defining a person.
nameType	Used to indicate the type of name. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • AL - Indicates that the type of name is Alias. • ALT - Indicates that the type of name is Alternate Representation. • DBA - Indicates that the type of name is Doing Business As. • FORM - Indicates that the type of name is Former. • LGAL - Indicates that the type of name is Legal. • PRIM - Indicates that the type of name is Primary. 	Note: This data is required while defining a person.
	Note: You must specify a value which is already defined in the NAME_TYPE_FLG lookup field. It must be in the Active status.	
identifiers	You can use this tag within the following tags: <ul style="list-style-type: none"> • personData - Here, the identifiers tag is used to specify the identification details for the person. • accountData - Here, the identifiers tag is used to specify the identification details for the account. 	Yes (Conditional)
		Note: This data is required while defining or editing the respective information.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify one primary identifier for a person and account.	
idType	You can use this tag within the following tags:	Yes (Conditional)
	<ul style="list-style-type: none"> • identifiers - Here, the idType tag is used to specify the person or account identifier type. • relatedPersons - Here, the idType tag is used to specify the person identifier type. • mainSubscriber - Here, the idType tag is used to specify the person identifier type. • accountPerson - Here, the idType tag is used to specify the person identifier type. • policyPersons - Here, the idType tag is used to specify the person identifier type. 	Note: This data is required in the following scenarios: <ul style="list-style-type: none"> • While defining or editing the identification details of a person and account. • While defining or editing a person to person relationship. • While defining or editing the membership information of a person. • While linking an account to another person. • While associating a person with a policy.
	Note: You must specify a person or account identifier type which is already defined in the system.	
idValue	You can use this tag within the following tags:	Yes (Conditional)
	<ul style="list-style-type: none"> • identifiers - Here, the idValue tag is used to specify the person or account identifier. • relatedPersons - Here, the idValue tag is used to indicate the person with whom you want to establish the person to person relationship. • mainSubscriber - Here, the idValue tag is used to indicate the person who is the main subscriber of the membership. • accountPerson - Here, the idValue tag is used to indicate the person to whom you want to link the account. • policyPersons - Here, the idValue tag is used to indicate the person to whom you want to associate the policy. 	Note: This data is required while defining or editing the respective information.
isPrimary	Used to indicate whether the person or account identifier is a primary identifier. The valid values are: <ul style="list-style-type: none"> • Y • N 	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to N . You must specify a value which is already defined in the F1_YESNO_FLG lookup field. It must be in the Active status.	
division	You can use this tag within the following tags: <ul style="list-style-type: none"> • personData - Here, the division tag is used to indicate the division to which the person belongs. • accountData - Here, the division tag is used to indicate the division to which the account belongs. • statementConstructDetails - Here, the division tag is used indicate the division to which the statement construct belongs. Note: You must specify a division which is already defined in the system.	No
birthDate	Used to specify the date when the person was born. Note: You must specify the date in the YYYY-MM-DD format.	No
sinceDate	Used to specify the date when the person's record is created in the system. This is purely informational. Note: You must specify the date in the YYYY-MM-DD format.	No
address	You can use this tag within the following tags: <ul style="list-style-type: none"> • personData - Here, the address tag is used to specify the address of the person. • accountData - Here, the address tag is used to specify the address of the account. 	Yes (Conditional) Note: This data is required while defining or editing the address of the respective entity.
addressEffDate	Used to specify the date from when the address is effective. Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the health care inbound message.	Yes (Conditional) Note: This data is required while editing the address of a person or account.
addressType	Used to indicate the type of address. The valid values are: <ul style="list-style-type: none"> • MAIN - Indicates that the address is the person's mailing address. You can use this address type while specifying the address for the person and account. • SEAS - Indicates that the address is the person's seasonal address. You can use this address type while specifying the address for the person. 	Yes (Conditional) Note: This data is required while editing the address of a person or account.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> OVRD - Indicates that the address is the account's override address. You can use this address type while specifying the address for the account. 	
	Note: If you do not specify the address type, by default, it is set to MAIN . You must specify an address type which is already defined in the ADDRESS_TYPE_FLG lookup field. It must be in the Active status.	
mailingName	Used to specify the name using which the person should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements.	No
address1	You can use this tag within the following tags: <ul style="list-style-type: none"> address - Here, the address1 tag is used to specify the first line of the address. It may contain details, such as the house number. personAddressOverride - Here, the address1 tag is used to specify the first line of the address. It may contain details, such as the house number. 	Yes (Conditional)
		Note: This data is required while defining and editing the address of a person and account.
address2	You can use this tag within the following tags: <ul style="list-style-type: none"> address - Here, the address2 tag is used to specify the second line of the address. It may contain details, such as the apartment name. personAddressOverride - Here, the address2 tag is used to second line of the address. It may contain details, such as the apartment name. 	No
address3	You can use this tag within the following tags: <ul style="list-style-type: none"> address - Here, the address3 tag is used to specify the third line of the address. It may contain details, such as the street name. personAddressOverride - Here, the address3 tag is used to specify the third line of the address. It may contain details, such as the street name. 	No
address4	You can use this tag within the following tags: <ul style="list-style-type: none"> address - Here, the address4 tag is used to specify the fourth line of the address. It may contain the landmark details. personAddressOverride - Here, the address4 tag is used to specify the fourth line of the address. It may contain the landmark details. 	No
city	You can use this tag within the following tags: <ul style="list-style-type: none"> address - Here, the city tag is used to specify the city name. personAddressOverride - Here, the city tag is used to specify the city name. 	No

Tag Name	Tag Description	Mandatory (Yes or No)
state	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the state tag is used to indicate the state where the city is located. personAddressOverride - Here, the state tag is used to indicate the state where the city is located. 	No
zip	Used to specify the zip code of the address.	No
addressStatus	<p>Used to indicate the status of the address. The valid values are:</p> <ul style="list-style-type: none"> C1AC C1IN <p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the addressStatus tag is used to indicate the status of the address. personAddressOverride - Here, the addressStatus tag is used to indicate the status of the address. <p>Note:</p> <ul style="list-style-type: none"> You must specify a value which is already defined in the ADDR_STATUS_FLG lookup field. It must be in the Active status. While creating an address for an entity, the status of the address should always be set to C1AC (i.e. Active). The addressStatus tag is not mandatory. Therefore, if you do not specify the value for the addressStatus tag while creating an address, the system, by default, sets it to C1AC (i.e. Active). For more information on how to update the address status, see Maintaining Address Status through Inbound Web Service 	No
country	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the country tag is used to indicate the country where the person or account is located. personAddressOverride - Here, the country tag is used to indicate the country where the person is located. 	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the address of a person or account.</p>
houseType	<p>Used to indicate the type of the house. The valid values are:</p> <ul style="list-style-type: none"> AB - Indicates that the type of house is a House Boat Reference. WW - Indicates that the type of house is a House Trailer Reference. <p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the houseType tag is used to indicate the type of the house. personAddressOverride - Here, the houseType tag is used to indicate the type of the house. 	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a house type which is already defined in the HOUSE_TYPE lookup field. It must be in the Active status.	
streetNumber1	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the streetNumber1 tag is used to specify the numeric information, if any, related to the address. personAddressOverride - Here, the streetNumber1 tag is used to specify the numeric information, if any, related to the address. 	No
streetNumber2	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the streetNumber2 tag is used to specify the numeric information, if any, related to the address. personAddressOverride - Here, the streetNumber2 tag is used to specify the numeric information, if any, related to the address. 	No
inCityLimit	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the inCityLimit tag is used to indicate whether the address is within the city limit. The valid values are: <ul style="list-style-type: none"> Y N personAddressOverride - Here, the inCityLimit tag is used to indicate whether the address is within the city limit. The valid values are: <ul style="list-style-type: none"> Y N 	No
taxVendorGeographicalCode	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the taxVendorGeographicalCode tag is used to specify the geographic code of the address. personAddressOverride - Here, the taxVendorGeographicalCode tag is used to specify the geographic code of the address. 	No
county	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> address - Here, the county tag is used to specify the county name. personAddressOverride - Here, the county tag is used to specify the county name. 	No
email	Used to specify the e-mail ID of the person.	No
overrideMailingName1	Used to specify the name using which you want to override the person's mailing name.	No
overrideMailingName2	Used to specify the name using which you want to override the person's override mailing name 1.	No

Tag Name	Tag Description	Mandatory (Yes or No)
overrideMailingName3	Used to specify the name using which you want to override the person's override mailing name 2.	No
phones	Used to specify the phone details of the person.	Yes (Conditional)
		Note: This data is required while defining or editing the phone details of a person.
phoneType	Used to indicate the type of phone.	Yes (Conditional)
	Note: You must specify a phone type which is already defined in the system.	Note: This data is required while defining or editing the phone details of a person.
phoneValue	Used to specify the phone number of the person.	Yes (Conditional)
		Note: This data is required while defining or editing the phone details of a person.
extension	Used to specify the extension value of the phone number.	Yes (Conditional)
		Note: This field is required when you are adding the phone details of a person.
relatedPersons	Used to list other persons with whom you want to establish the person's relationship.	Yes (Conditional)
		Note: This data is required while defining or editing a person to person relationship.
personRelationshipType	Used to indicate how the other person is related to the person.	Yes (Conditional)
	Note: You must specify a person relationship type which is already defined in the system. If you have specified a parent customer as the related person for a bill group, the system, by default, uses the person relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration. It does not considers the value specified in this tag.	Note: This data is required while creating relationship between a bill group and person whose the person type is not Parent Customer .
startDate	You can use this tag within the following tags:	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • relatedPersons - Here, the startDate tag is used to specify the date from when the other person is related to the person. • memberData - Here, the startDate tag is used to specify the date from when the membership is effective. • billableChargeData - Here, the startDate tag is used to specify the start date of the billable charge. • autoPayDetails - Here, the startDate tag is used to specify the date from when the auto pay instruction is effective. • policyData - Here, the startDate tag is used to specify the date from when the policy is effective. • policyPersons - Here, the startDate tag is used to specify the date from when the person is associated with the policy. • planData - Here, the startDate tag is used to specify the date from when the policy plan is effective. • pricingRuleData - Here, the startDate tag is used to specify the date from when the pricing rule is effective. • benefitDataList - Here, the startDate tag is used to specify the date from when the benefit is availed for the membership. 	<p>Note: This data is required in the following scenarios:</p> <ul style="list-style-type: none"> • While defining the respective information. • While editing the membership information of a person. • While editing an auto pay instruction of an account. • While editing a pricing rule.
	<p>Note:</p> <p>The start date of the membership benefit cannot be earlier than the membership start date or later than the membership end date.</p> <p>The membership benefit start date cannot be later than the membership benefit end date.</p>	
	<ul style="list-style-type: none"> • statementConstructDetails - Here, the startDate tag is used to specify the date from when the statement construct is effective. 	
	<p>Note: You must specify the date in the YYYY-MM-DD format.</p>	
endDate	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> • relatedPersons - Here, the endDate tag is used to specify the date till when the other person is related to the person. • memberData - Here, the endDate tag is used to specify the date till when the membership is effective. • billableChargeData - Here, the endDate tag is used to specify the end date of the billable charge. • autoPayDetails - Here, the endDate tag is used to specify the date till when the auto pay instruction is effective. • policyData - Here, the endDate tag is used to specify the date till when the policy is effective. • policyPersons - Here, the endDate tag is used to specify the date till when the person is associated with the policy. • planData - Here, the endDate tag is used to specify the date till when the policy plan is effective. • pricingRuleData - Here, the endDate tag is used to specify the date till when the pricing rule is effective. • benefitDataList - Here, the endDate tag is used to specify the date till when the benefit is availed for the membership. 	<p>Yes (Conditional)</p> <p>Note: This data is required while editing the membership information of a person.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The end date of the membership benefit cannot be earlier than the membership start date or later than the membership end date.</p> <p>The membership benefit end date cannot be earlier than the membership benefit start date.</p> <ul style="list-style-type: none"> • statementConstructDetails - Here, the endDate tag is used to specify the date till when the statement construct is effective. <p>Note: You must specify the date in the YYYY-MM-DD format.</p>	
financialRelationshipSw	<p>Used to indicate whether the other person is financially responsible for the person. The valid values are:</p> <ul style="list-style-type: none"> • True • False <p>Note: If you do not specify the value, by default, it is set to False.</p>	No
parentOrChild	<p>Used to indicate whether the other person is parent or child. The valid values are:</p> <ul style="list-style-type: none"> • C • P <p>Note: You must specify a value which is already defined in the PARENT_OR_CHILD_FLG lookup field. It must be in the Active status.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a person to person relationship.</p>

No
externalMedicareBeneficiary	<p>Used to indicate the beneficiary (i.e. member person) who has received the Medicare membership benefits.</p> <p>Note: This tag is applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.</p>	No
mainSubscriber	<p>Used to indicate whether the person is the main subscriber of the membership. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: This tag and all the tags within this parent tag are only applicable for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.</p>	Yes
policyNumber	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> • memberData - Here, the policyNumber tag is used to specify the policy number. 	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> policyData - Here, the policyNumber tag is used to specify the policy number. 	Note: This data is required while defining or editing the respective information.
	Note: This tag is applicable only for the Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.	
planNumber	You can use this tag within the following tags:	Yes (Conditional)
	<ul style="list-style-type: none"> memberData - Here, the planNumber tag is used to indicate the fully-insured group policy plan for which the membership is created. planData - Here, the planNumber tag is used to specify the plan number. 	Note: This data is required while defining or editing the respective information.
	Note: This tag is applicable only for the Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.	
healthPlanCode	Used to indicate the health plan for which the main subscriber has enrolled.	Yes
	Note: This tag is applicable only for the Individual Health Insurance business.	
membershipRateGuarantee	Used to specify information about the rate guarantee.	No
	Note: This tag and all the tags within this parent tag are applicable only for the Individual Health Insurance business.	
membershipRateGuaranteeDetail	Used to specify rate guarantee details for each individual membership.	No
rateGuaranteeStartDate	Used to specify the date from when the rate guarantee is available for the individual membership.	Yes (Conditional)
		Note: This data is required while defining or editing the respective information.
rateGuaranteeEndDate	Used to specify the date till when the rate guarantee is available for the individual membership.	Yes (Conditional)
		Note: This data is required while defining or editing the respective information.
rateGuaranteeStatus	Used to indicate the status of the rate guarantee period. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> ACTV INAC 	Note: This data is required while defining or editing the respective information.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the RATE_GRNT_STATUS_FLG lookup field. It must be in the Active status.	
membershipPersonCharacteristics	Used to specify a list of characteristics for the member person.	No
benefitData	Used to specify information about the membership benefit.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.	Note: This data is required while defining or editing a membership benefit.
benefitDataList	Used to specify the details of a membership benefit.	Yes (Conditional)
		Note: This data is required while defining or editing a membership benefit.
benefitStatus	Used to indicate the status of the membership benefit. The valid values are: <ul style="list-style-type: none"> ACTIVE DISCARD Note: While defining a membership benefit, by default, the status is set to Active . On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to Inactive and the status of the new benefit record is set to Active . You can discard an active or inactive membership benefit whenever required.	Yes (Conditional)
		Note: This data is required while defining or editing a benefit.
benefitSourceFlag	Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: <ul style="list-style-type: none"> CMS ST Note: You must specify a value which is already defined in the BENEFIT_SRC_FLG lookup field. It must be in the Active status.	No
benefitSubTypeFlag	Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You can only specify a benefit sub type which is already defined in the system.	
planBenefitPackageId	Used to indicate the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit.	Yes (Conditional)
	Note: You can only specify a Medicare plan benefit package which is already defined in the system.	Note: This data is required while creating the Medicare Part A, Part B, or Part D membership benefit.
benefitAmount	Used to specify the pass-through amount for the availed membership benefit.	Yes (Conditional)
		Note: This data is required while creating the Medicare Part D LIS, Medicare Part D LEP, APTC, or other membership benefits.
billableChargeData	Used to specify the details for a billable charge. Ideally, this piece of information should be specified in the main subscriber details and not in the member person details.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.	Note: This data is required while defining or editing a billable charge of a membership.
accountIdType	Used to specify the account identifier type.	Yes (Conditional)
	Note: You must specify an account identifier type which is already defined in the system.	Note: This data is required when the accountIdValue tag contains the account identifier.
accountIdValue	Used to indicate the account for which you want to create the billable charge.	Yes (Conditional)
		Note: This data is required when the accountIdType tag contains the account identifier type.
chargeType	Used to indicate the type of billable charge that you want to create.	No
	Note: You must specify a charge type which is already defined in the system.	
priceItemCode	You can use this tag within the following tags:	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> billableChargeData - Here, the priceItemCode tag is used to indicate the price item for which you want to create the billable charge. planData - Here, the priceItemCode tag is used to indicate the price item which you want to associate with the policy plan. 	Note: This data is required while defining or editing a billable charge of a membership.
description	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> billableChargeData - Here, the description tag is used to specify the description for the billable charge. policyData - Here, the description tag is used to specify the description for the policy. 	Yes (Conditional) Note: This data is required while defining the respective information.
recurringMethod	<p>Used to indicate whether recurring bill segments must be created for the billable charge at the specified intervals. The valid values are:</p> <ul style="list-style-type: none"> BP - Used when you want to create recurring bill segments at the intervals defined in the bill period. FR - Used when you want to create recurring bill segments at the set invoice frequency. <p>Note: You must specify a value which is already defined in the RECURRING_FLG lookup field. It must be in the Active status.</p>	No
billPeriod	<p>Used to indicate the bill period using which you want to determine the intervals at which the recurring bill segments must be created.</p> <p>Note: You must specify a bill period which is already defined in the system.</p>	Yes (Conditional) Note: This data is required when the recurringMethod tag contains BP .
frequency	<p>Used to indicate the invoice frequency at which the recurring bill segments must be created.</p> <p>Note: You must specify an invoice frequency which is already defined in the system.</p>	Yes (Conditional) Note: This data is required when the recurringMethod tag contains FR .
billAfterDt	<p>Used to specify the date after which the bill must be generated for the billable charge.</p> <p>Note: You must specify the date in the YYYY-MM-DD format.</p>	No
billableChargeLines	Used to specify the details for a pass through line in the billable charge.	Yes
descriptionOnBill	Used to specify the information about the pass through line that should appear on the bill.	Yes
currencyCode	Used to indicate the currency in which you want to charge the amount.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	
chargeAmount	Used to specify the charge amount.	Yes
showOnBillSw	Used to indicate whether the charge should appear on the person's printed bill. The valid values are: <ul style="list-style-type: none"> • True • False Note: If you do not specify the value, by default, it is set to True .	No
appearInSummarySw	Used to indicate whether the charge should be included in the summary line. The valid values are: <ul style="list-style-type: none"> • true • false Note: If you do not specify the value, by default, it is set to false .	No
distributionCode	Used to specify the distribution code which indicates the GL account associated with the charge. Note: You must specify a distribution code which is already defined in the system.	No
accountData	Used to specify the account details of a person.	Yes (Conditional) Note: This data is required while defining or editing an account.
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account. Note: The value is stored in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLLNG feature configuration. You must specify a value which is already defined in the predefined characteristic type.	Yes (Conditional) Note: This data is required while defining or editing an account.
customerClass	Used to indicate the customer class to which the account belongs. Note: You must specify a customer class which is already defined in the system.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining an account.
billCycle	Used to indicate the bill cycle for the account. Note: You must specify a bill cycle which is already defined in the system.	No
billLeadDays	Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0). Note: If you do not specify the value, by default, it is set to zero(0).	No
currency	Used to indicate the currency in which you want to bill the account. Note: You must specify a currency which is already defined in the system.	Yes (Conditional) Note: This data is required while defining an account.
dragDays	You can use this tag within the following tags: <ul style="list-style-type: none"> personData - Here, the dragDays tag is used to specify additional grace days (if any) offered at the person level. These drag days are considered while calculating the grace end date when the trigger date calculation mode (in the respective delinquency process type) is set to Latest Bill Due Date with Grace Period. Note: For example, if the latest bill due date is 05-Jan-2024, grace period is set to 5 days (in the respective delinquency process type), and drag days is to 10 days (for the respective person), then the grace end date for the person is set to 20-Jan-2024. accountData - Here, the dragDays tag is used to specify additional grace days (if any) offered at the account level. These drag days are considered while calculating the grace end date when the trigger date calculation mode (in the respective delinquency process type) is set to Latest Bill Due Date with Grace Period. Note: For example, if the latest bill due date is 05-Jan-2024, grace period is set to 5 days (in the respective delinquency process type), and drag days is to 10 days (for the respective account), then the grace end date for the account is set to 20-Jan-2024. 	Yes (Conditional) Note: This data is required while defining an account.
setUpDate	Used to specify the date when the account was first created. This is purely informational.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>If you do not specify the value, by default, it is set to the current date.</p>	
acctUsageFlg	<p>Used to indicate the category to which the account belongs. The valid values are:</p> <ul style="list-style-type: none"> • INVC - Indicates that the account will be used to bill charges of the usage accounts. • SETL - Indicates that the account will be used only for settlement purposes. • USAG - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually. <p>Note:</p> <p>If you do not specify the value, by default, it is set to USAG.</p> <p>You must specify a value which is already defined in the ACCT_USAGE_FLG lookup field. It must be in the Active status.</p>	No
comments	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> • accountData - Here, the comments tag is used to specify additional information about the account. • autoPayDetails - Here, the comments tag is used to specify additional information about the auto pay instruction. 	No
deferAutoPayDt	Used to specify the date till when you want to hold the automatic payment process for the account.	No
collectionClass	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> • personData - Here, the collectionClass tag is used to control how the person's debt is compared against collection criteria (i.e. tolerance limit) to determine whether a collection process (such as delinquency process) should be initiated for the person. A new collection method named Self-Control Delinquency is available while defining a collection class. It is used to create a distinct or separate delinquency process for the persons who belong to the collection class. If you want to evaluate the debt of the person's accounts, its child persons, and the child persons' accounts while monitoring the person's delinquency, you must set the collection method of their respective collection class to Parental Delinquency. If you set the collection method of the collection class for any of the person's account, any of its child person, or child persons' accounts to Self-Control Delinquency, the system does not consider the debt of the respective entity while monitoring the delinquency of the parent person. 	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>Note:</p> <p>If you do not want to initiate delinquency process for a child person or an account, ensure that the person or account belongs to a collection class where the collection method is set to Not Eligible for Collection.</p> <p>If the collection class is not defined for a person, the system skips the person while monitoring the delinquency.</p> <ul style="list-style-type: none"> • accountData - Here, the collectionClass tag is used to control how the account's debt is compared against collection criteria (i.e. tolerance limit) to determine whether a collection process (such as delinquency process) should be initiated for the account. A new collection method named Self-Control Delinquency is available while defining a collection class. It is used to create a distinct or separate delinquency process for the accounts which belong to the collection class. <p>Note:</p> <p>If you do not want to initiate delinquency process for an account, ensure that the account belongs to a collection class where the collection method is set to Not Eligible for Collection.</p> <p>If the collection class is not specified for an account, the system, by default, sets it to the one specified in the respective customer class when you create the account through a health care inbound message.</p> <p>Note:</p> <p>You must specify a collection class which is already defined in the system.</p> <p>This tag is applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.</p>	
postponeCreditReviewUntil	<p>Used when you want to review the account's debt after a particular date. The system will consider the account for monitoring the delinquency only after the specified date. You can specify the postpone credit review until date for an account from the user interface or through a health care inbound message.</p> <p>Note: This tag is applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the respective information.</p>
lastCreditReviewDate	<p>Used to indicate the date when the account's debt was last reviewed. The system stamps the last credit review date against an account when a delinquency process is initiated for the account through the C1-ACDLQ batch.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the respective information.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: This tag is applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.	
billRouteType	You can use this tag within the following tags:	Yes (Conditional)
	<ul style="list-style-type: none"> accountData - Here, the billRouteType tag is used to indicate how the account's bill must be sent to the main customer. accountPersonRouting - Here, the billRouteType tag is used to indicate how the account's bill must be sent to the linked person. 	Note: This data is required while defining or editing the respective information.
	Note: You must specify a bill route type which is already defined in the system.	
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> ACCT ACOV BILL MAIN PER TEST <p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> accountData - Here, the billRouteType tag is used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. accountPersonRouting - Here, the billRouteType tag is used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. 	Note: This data is required while defining the respective information.
	Note: You must specify a value which is already defined in the BILL_ADDR_SRCE_FLG lookup field. It must be in the Active status.	
skipAutoMaintenanceSw	Used to specify whether auto maintenance should be skipped for an account.	Yes (Conditional)
	Note: This tag is applicable only for the Individual Health Insurance business.	Note: This data is required while defining the respective information.
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date.	Yes (Conditional)
	Note: The priority cannot be less than or equal to zero.	Note: This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional)
		Note: This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are:	No
	<ul style="list-style-type: none"> • C1DD - Indicates that you want to directly debit the main customer's bank account. • C1PA - Indicates that you want to send a payment advice to the main customer. 	
	Note: You must specify a value which is already defined in the APAY_METHOD_FLG lookup field. It must be in the Active status.	
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	Note: You must specify an auto pay route type which is already defined in the system.	Note: This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	Note: You must specify an auto pay source which is already defined in the system.	Note: This data is required while defining or editing an auto pay instruction of an account.
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire.	Yes (Conditional)
	Note: You must specify the month in the MM format.	Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.
expiryYear	Used to specify the year when the tender type of the auto pay source will expire.	Yes (Conditional)
	Note: You must specify the year in the YYYY format.	Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.
name	Used to specify the name of the person as it appears in the financial institution's system.	No
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.	No
	Note: The maximum withdrawal amount cannot be less than zero.	
accountPerson	Used to specify information about the person (other than main customer) to whom you want to link the account.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)														
	Note: The system, by default, adds the person (for whom the account information is given in the health care inbound message) as the main customer of the account. While linking the person as main customer of the account, the system sets the following attributes:	Note: This data is required while linking a person to an account.														
	<table><tr><th>Attribute Name</th><th>Attribute Value</th></tr><tr><td>Financially Responsible</td><td>Y</td></tr><tr><td>Account Relationship Type</td><td>Main Customer</td></tr><tr><td>Receive Copy of Bill</td><td>Y</td></tr><tr><td>Bill Format</td><td>Detailed</td></tr><tr><td>Receives Notification</td><td>Y</td></tr><tr><td>Number of Bill Copies</td><td>1</td></tr></table>	Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y	Number of Bill Copies	1	
	Attribute Name	Attribute Value														
	Financially Responsible	Y														
	Account Relationship Type	Main Customer														
	Receive Copy of Bill	Y														
	Bill Format	Detailed														
	Receives Notification	Y														
	Number of Bill Copies	1														
accountRelationshipType	Used to indicate how the person is related to the account.	Yes (Conditional)														
	Note: You must specify an account relationship type which is already defined in the system.	Note: This data is required while linking a person to an account.														
isFinanciallyResponsible	Used to indicate whether the person is financially responsible for the account. The valid values are: <ul style="list-style-type: none">TrueFalse Note: If you do not specify the value, by default, it is set to False .	No														
personAddressOverride	Used to specify the account override address for the linked person.	No														
postal	Used to specify the postal code of the address.	No														
accountPersonRouting	Used to specify the bill routing information for the linked person.	Yes (Conditional)														
		Note: This data is required while defining or editing the bill routing information of a linked person.														
shouldReceiveCopyOfBill	Used to indicate whether the linked person should receive a copy of the account's bill. The valid values are: <ul style="list-style-type: none">YN Note: If you do not specify the value, by default, it is set to N .	No														

Tag Name	Tag Description	Mandatory (Yes or No)
billFormat	Used to indicate whether the linked person should receive the detailed or summary bill. The valid values are: <ul style="list-style-type: none"> • D • S 	No
	Note: You must specify a value which is already defined in the BILL_FORMAT_FLG lookup field. It must be in the Active status. If you do not specify the value, by default, it is set to D when the linked person should receive a copy of the account's bill. This information is ignored when the shouldReceiveCopyOfBill tag contains N .	
numberOfBillCopies	Used to indicate the number of copies of the bill which the linked person must receive.	No
	Note: If you do not specify the value, by default, it is set to 1 when the linked person should receive a copy of the account's bill. This information is ignored when the shouldReceiveCopyOfBill tag contains N .	
receivesNotification	Used to indicate whether the linked person should receive letters (i.e. notifications) initiated by collection, write-off, and overdue events. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value, by default, it is set to N . This information is ignored when the shouldReceiveCopyOfBill tag contains N .	
policyData	Used to specify the details of the policy.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are only applicable for the Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.	Note: This data is required while defining or editing a policy.
policyType	Used to indicate the policy type using which you are defining the policy.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>Note: You must specify a policy type which is already defined in the system. If you want to create a fully-insured group policy, you must specify a policy type where the policy category is set to Fully-Insured Group. However, if you want to create a self-funded policy, you must specify a policy type where the policy category is set to Self-Funded.</p>	<p>Note: This data is required while defining or editing a policy.</p>
advancedLevelFundingEligibility	<p>Used to indicate whether the self-funded policy provides advanced level funding eligibility. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>You must specify a value which is already defined in the F1_YESNO_FLG lookup field. It must be in the Active status.</p> <p>At present, if you are defining a self-funded policy the advanced level funded eligibility is set to No.</p> <p>This tag and all the tags within this parent tag are only applicable for the Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a policy.</p>
runOutEndDate	<p>Used to specify the date when the runout period of the self-funded policy ends.</p> <p>Note:</p> <p>The runout end date cannot be earlier than or equal to the policy end date.</p> <p>This data is required when you are defining a policy using a policy type where the policy category is set to Self-Funded.</p> <p>This tag is applicable only for the Self-Funded Group Health Insurance business.</p>	No
runOutAdminOption	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • ENGO • ENLA • NROA • PERC 	No

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>Note:</p> <p>You must specify a value which is already defined in the RUNOUT_ADM_OPT_FLG lookup field. It must be in the Active status.</p> <p>At present, this data is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> <p>This data is required when you are defining a policy using a policy type where the policy category is set to Self-Funded.</p> <p>This tag is applicable only for the Self-Funded Group Health Insurance business.</p>	
renewalDate	Used to specify the date when you want to renew the fully-insured group policy.	Yes (Conditional)
	<p>Note:</p> <p>You can renew a self-funded policy only from the user interface.</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>This tag is applicable only for the Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.</p>	<p>Note: This data is required while renewing a fully-insured group policy.</p>
advanceDepositApplSW	Used to indicate whether the advance deposit is applicable for the policy. The valid values are:	No
	<ul style="list-style-type: none"> Y N 	
	<p>Note:</p> <p>This tag is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to POLI. However, this tag is not mandatory. If you do not specify the value, the system, by default, sets it to N.</p> <p>This tag is applicable only for the fully-insured group business. In other words, this tag is applicable only when you create a policy using a policy type where the policy category is set to Fully-Insured Group.</p> <p>For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 3984.</p>	
advanceDepositAmount	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> personData - Here, the advanceDepositAmount tag is used to specify the advance deposit amount that will be parked at the 	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>parent customer level. It is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to PG.</p> <ul style="list-style-type: none"> policyData - Here, the advanceDepositAmount tag is used to specify the advance deposit amount that will be parked at the policy level. It is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to POLI and the advance deposit applicability for the policy is set to Y. Note that the advanceDepositAmount tag is applicable only when you create a policy using a policy type where the policy category is set to Fully-Insured Group. 	<p>Note: This data is required when you want to allocate advance deposit for delinquent customers.</p>
	<p>Note:</p> <p>You must specify a positive value in this field.</p> <p>This tag is applicable only for the fully-insured group business.</p> <p>For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 3984.</p>	
advanceDepositGraceDays	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> personData - Here, the advanceDepositGraceDays tag is used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer. While calculating the grace period, the system derives the earliest start date among all the policies where the parent customer is the policy holder and considers it as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e. grace start date + grace days). For example, if a parent customer is the policy holder of two policies - P1 (01-Jan-2022 to 31-Dec-2022) and P2 (01-Jun-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date (as it is the earliest start date) and sets the grace end date to 07-Jan-2022. The advance deposit grace days is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to PG. policyData - Here, the advanceDepositGraceDays tag is used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e. grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022. The advance deposit grace days is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to POLI and the advance deposit applicability for the policy is set to Y. Note that the 	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to allocate advance deposit for delinquent customers.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>advanceDepositGraceDays tag is applicable only when you create a policy using a policy type where the policy category is set to Fully-Insured Group.</p> <p>Note: You must specify an integer value in this field. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 3984.</p>	
advanceDepositLevel	<p>Used to indicate whether you want to park the advance deposit received from the group customer at the parent customer or policy level. The valid values are:</p> <ul style="list-style-type: none"> PG - Used when you want to park the advance deposit at the parent customer level. POLI - Used when you want to park the advance deposit at the policy level. <p>Note: The advance deposit level is only applicable for the person whose person type is set to Parent Customer. If you do not specify the advance deposit level, then the parent customer is not eligible for the advance deposit either at the parent customer or policy level. You must specify a value which is already defined in the ADV_DEP_LVL_FLG lookup field. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 3984.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to allocate advance deposit for delinquent customers.</p>
advanceDepositAccountIdentifierType	<p>Used to specify the account identifier type. It is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to POLI and the advance deposit applicability for the policy is set to Y. Note that the advanceDepositAccountIdentifierType tag is applicable only when you create a policy using a policy type where the policy category is set to Fully-Insured Group.</p> <p>Note: You must specify an account identifier type which is already defined in the system. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 3984.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to allocate advance deposit for delinquent customers.</p>
advanceDepositAccountIdentifierValue	<p>Used to specify the account identifier. It is required when the advance deposit level of the respective policy holder</p>	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	(i.e., parent customer) is set to POLI and the advance deposit applicability for the policy is set to Y . Note that the advanceDepositAccountIdentifierValue tag is applicable only when you create a policy using a policy type where the policy category is set to Fully-Insured Group .	Note: This data is required when you want to allocate advance deposit for delinquent customers.
	Note: You must specify an account with the account relationship type that is specified in the Advance Deposit Account Relationship Type attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the Delinquency Process Field Mapping option type of the DELINPROC feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4218. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 3984.	
policyPersons	Used to indicate the person that you want to associate with the policy.	Yes
policyPerRole	Used to indicate the role of the person in the policy.	Yes (Conditional)
	Note: You must specify a policy person role which is already defined in the system.	Note: This data is required while associating a person with the policy.
terminationInformation	Used to specify the termination details of the fully-insured group policy.	No
	Note: At present, you cannot terminate a self-funded policy either from the user interface or through a health care inbound message. This tag and all the tags within this parent tag are applicable only for Fully-Insured Group Health Insurance business.	
terminateDate	Used to specify the date when you want to terminate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the date in the YYYY-MM-DD format. The termination date cannot be earlier than the policy start date. On terminating a policy, the status of the policy is changed to the status which is specified in the Policy Termination Status option type of the C1-ASOBLLNG feature configuration.	Note: This data is required while terminating a fully-insured group policy.

Tag Name	Tag Description	Mandatory (Yes or No)
terminationReason	Used to indicate the reason why you want to terminate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the status reason which is already defined for the status specified in the Policy Termination Status option type of the C1-ASOBLLNG feature configuration.	Note: This data is required while terminating a fully-insured group policy.
reinstateInformation	Used to specify the reinstatement details of the fully-insured group policy.	No
	Note: At present, you cannot reinstate a self-funded policy either from the user interface or through a health care inbound message. This tag and all the tags within this parent tag are applicable only for Fully-Insured Group Health Insurance business.	
reinstatementDate	Used to specify the date when you want to reinstate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the date in the YYYY-MM-DD format. The reinstatement date cannot be earlier than the policy start date. On reinstating a policy, the status of the policy is changed to the status which is specified in the Policy Reinstatement Status option type of the C1-ASOBLLNG feature configuration.	Note: This data is required while reinstating a fully-insured group policy.
reinstateReason	Used to indicate the reason why you want to reinstate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the status reason which is already defined for the status specified in the Policy Reinstatement Status option type of the C1-ASOBLLNG feature configuration.	Note: This data is required while reinstating a fully-insured group policy.
planData	Used to specify the details of the policy plan.	Yes (Conditional)
	Note: At present, you can only define a policy plan in a fully-insured group policy. Therefore, the system will ignore this information when given for a self-funded policy. This tag and all the tags within this parent tag are applicable only for the Self-Funded Group Health Insurance and Fully-Insured Group Health Insurance businesses.	Note: This data is required while defining or editing a policy plan.
planName	Used to specify the description of the policy plan.	No
pricingRuleTypeList	Used to associate a pricing rule type with the policy plan.	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while associating a pricing rule type with the policy plan.
pricingRuleType	Used to specify the pricing rule type.	Yes (Conditional)
	Note: At present, you can only associate those pricing rule types where the category is set to Age Based , Tier Based , or Pass-Through Billable Charge . Therefore, the system will ignore the pricing rule types where the category is set to Claim , Specific Stop-Loss , Aggregate Stop-Loss , Retention Type Claim Based , Retention Type Enrollment Based , Flat Fees , Ancillary , Discount Arrangement , or Level Funded .	Note: This data is required when a price item is not associated with the policy plan.
primaryPlanSw	Used to indicate whether the plan is a primary plan in the policy. The valid values are: <ul style="list-style-type: none"> Y N Note: If you do not specify the value, by default, it is set to N.	No
benefitTypeFlag	Used to indicate the type of benefit availed for the membership. The valid values are: <ul style="list-style-type: none"> COMM MA Note: You must specify a value which is already defined in the BENEFIT_TYPE_FLG lookup field. It must be in the Active status.	Yes
policyPlanProrationRuleList	Used to specify the proration rules defined for the policy plan.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are applicable only for Fully-Insured Group Health Insurance business.	Note: This data is required while defining or editing the proration rules for the policy plan.
prorationEventType	Used to indicate the event when you want to prorate the membership premium. The valid values are: <ul style="list-style-type: none"> ENRL - Used when you want to prorate the membership premium on enrolling a member person. TERM - Used when you want to prorate the membership premium on terminating a member person. NWBR - Used when you want to prorate the membership premium on enrolling a new born. SMET - Used when you want to prorate the membership premium on enrolling and terminating a member person in the same month. 	Yes (Conditional)
		Note: This data is required while defining or editing the proration rules for the policy plan.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the PRORATION_EVT_TYPE_FLG lookup field. It must be in the Active status.	
prorationType	<p>Used to indicate how you want to prorate the membership premium. The valid values are:</p> <ul style="list-style-type: none"> • DALY - Used when you want to prorate the membership premium from the day the proration event has occurred. • MDMT - Used when you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: <div style="background-color: #f0f0f0; padding: 5px; margin: 10px 0;"> $\text{Bill Period Start Date} + \text{Specified 'Number of Days'}$ </div> <p>For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person.</p> • FLMT - Used when the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person. • WAVR - Used when the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership. • COVD - Used when you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. <p>Note: You can use this proration type when the proration event is set to Same Month Enrollment and Termination.</p> <ul style="list-style-type: none"> • ENRL - Used when you want to prorate the premium for a member person using the proration type of the enrollment event. <p>Note: You can use this proration type when the proration event is set to Same Month Enrollment and Termination.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the proration rules for the policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> TERM - Used when you want to prorate the premium for a member person using the proration type of the termination event. 	
	Note: You can use this proration type only when the proration event is set to Same Month Enrollment and Termination .	
	Note: You must specify a value which is already defined in the PRORATION_TYPE_FLG lookup field. It must be in the Active status.	
numberOfDays	Used to specify the number of days to determine the cutoff date.	Yes (Conditional)
		Note: This data is required when the proration type is set to Mid-Month or Coverage Days .
pricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are applicable only for the Fully-Insured Group Health Insurance business.	Note: This data is required while defining or editing a pricing rule.
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	Used to specify the entity type. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> HLPN - Used when you want to specify the health plan. PER - Used when you want to specify the person. PIDT - Used when you want to specify the person identifier type. PIDV - Used when you want to specify the person identifier value. PLAN - Used when you want to specify the plan. PLCY - Used when you want to specify the policy. SSYS - Used when you want to specify the source system. STAT - Used when you want to specify the state. 	Note: This data is required while defining or editing a pricing rule.
	Note: You must specify a value which is already defined in the PRC_RULE_ENTITY_TYPE lookup field. It must be in the Active status.	
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining or editing a pricing rule.
status	Used to indicate the status of the pricing rule. The valid values are: <ul style="list-style-type: none"> ACTV INAC Note: If you do not specify the value, by default, it is set to Active .	No
pricingRuleType	Used to indicate the pricing rule type using which you want to define the pricing rule. Note: You must specify a pricing rule type where the category is set to Age Based or Tier Based .	Yes (Conditional) Note: This data is required while defining or editing a pricing rule.
priceItemCd	Used to indicate the price item for which you want to define the pricing rule. Note: You must specify a price item which is already associated with the respective pricing rule type.	Yes (Conditional) Note: This data is required while defining or editing a pricing rule.
rateOption	Used to indicate the rate option using which you want to create price assignment for the pricing rule. Note: <p>You must specify a rate option which is already defined in the C1-ExtLookRetTypeRateOpt extendable lookup. It must be in the Active status.</p> <p>If the rate option is not given for an age-based pricing rule, by default, it is set to:</p> <ul style="list-style-type: none"> The value specified in the Default Rate Option - Flat option type of the C1-ASOBLLNG feature configuration when the modifier method is set to FLAT The value specified in the Default Rate Option - Percentage option type of the C1-ASOBLLNG feature configuration when the modifier method is set to EXPT or INPT <p>However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the Default Rate Option - Flat option type of the C1-ASOBLLNG feature configuration when the modifier method is set to FLAT or NULL.</p>	No
pricingType	Used to indicate the type of pricing defined for the pricing rule. The valid values are: <ul style="list-style-type: none"> FLAT PCNT 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the PRC_TYPE_FLG lookup field. It must be in the Active status.	
modifierApplicability	Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are: <ul style="list-style-type: none"> Y N Note: If you do not specify the value, by default, it is set to N.	No
modifierMethod	Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are: <ul style="list-style-type: none"> EXPT - Indicates that the system should consider the modifier rate as exclusive percentage. FLAT - Indicates that the system should consider the modifier rate as a flat amount. INPT - Indicates that the system should consider the modifier rate as inclusive percentage. Note: You must specify a value which is already defined in the HC_MODIFIER_METHOD lookup field. It must be in the Active status.	Yes (Conditional) Note: This data is required when the modifierApplicability tag contains Y.
baseRate	Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes. Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.	Yes (Conditional) Note: This data is required while defining a pricing rule.
baseFee	Used to specify the base fees for the eligible members.	Yes (Conditional) Note: This data is required while defining a pricing rule.
lowerAgeLimit	Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component. Note: The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) Note: This data is required while defining an age-based pricing rule.

Tag Name	Tag Description	Mandatory (Yes or No)
upperAgeLimit	Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component.	Yes (Conditional)
	Note: The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration. This data is ignored when given in a tier-based pricing rule information.	Note: This data is required while defining an age-based pricing rule.
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional)
		Note: This data is required while defining a tier-based pricing rule.
parameterCode	You can use this tag within the following tags: <ul style="list-style-type: none"> pricingParameter - Here, the parameterCode tag is used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria. modifierInformation - Here, the parameterCode tag is used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria. 	Yes (Conditional)
	Note: You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to Pricing Eligibility Criteria . The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information. You cannot specify any special character except underscore (_) in the parameter name.	Note: This data is required while specifying the respective information.
parameterValue	You can use this tag within the following tags: <ul style="list-style-type: none"> pricingParameter - Here, the parameterValue tag is used to specify the value for the parameter (i.e. employee attribute). modifierInformation - Here, the parameterValue tag is used to specify the value for the parameter (i.e. modifier). 	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Note: This data is required while specifying the respective information.

Tag Name	Tag Description	Mandatory (Yes or No)
modifierInformation	Used to specify the modifier based on which you want to increase or decrease the base fees.	Yes (Conditional)
	Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.	Note: This data is required while specifying the modifier information.
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional)
		Note: This data is required while specifying the modifier information.
statementConstructsData	Used to specify the details of the statement construct.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.	Note: This data is required while defining or editing a statement construct.
personStatementConstructs	Used to specify the details of a person for whom the statement construct is created.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
personIdentifier	Used to specify the person with the statement construct.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
personIdentifierType	Used to specify the person identifier type associated with the statement construct.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
statementConstructIdentifier	Used to specify the statement construct identifier defined for the statement construct.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
statementAddressSource	Used to indicate the source whose address should be used for sending the statements to the person. The valid value is: • PER	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the STM_ADDR_SRC_FLG lookup field. It must be in the Active status.	Note: This data is required while defining or editing a statement construct.
statementCycle	Used to indicate the statement construct cycle for a person.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
statementRouteType	Used to indicate how to route the statements to the person.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
effectiveStatus	Used to indicate the status of the statement construct. The valid values are: <ul style="list-style-type: none"> A - Indicates the status of the statement construct is in active state. I - Indicates the status of the statement construct is in inactive state. 	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
	Note: You must specify a value which is already defined in the EFF_STATUS lookup field. It must be in the Active status.	
addressId	Used to specify the address to which the statement should be sent.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
numberOfCopies	Used to specify the number of copies of the statement construct you want the person to receive.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
statementFormat	Used to indicate the format of the statement construct. The valid values are: <ul style="list-style-type: none"> D - Indicates that the statement construct is in detail format. S Indicates that the statement construct is in summary format. 	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
	Note: You must specify a value which is already defined in the STM_FORMAT_FLG lookup field. It must be in the Active status.	

Tag Name	Tag Description	Mandatory (Yes or No)
description	Used to specify the description of the statement construct.	Yes (Conditional)
		Note: This data is required while defining or editing a statement construct.
statementConstructDetail	Used to specify the statement construct details.	Yes (Conditional)
		Note: This data is required while specifying the statement construct information.
serviceAgreement	Used to specify the statement construct contract.	Yes
accountNumber	Used to specify the value for the account identifier type of the payee.	Yes (Conditional)
	Note: You must specify the account number which is already defined in the system.	Note: This data is required while specifying the statement construct information.
accountNumberTypeCd	Used to specify the account identifier type of the payee.	Yes (Conditional)
		Note: This data is required while specifying the statement construct information.
statementPrintDescription	Used to specify the description of the construct detail associated with the contract.	Yes (Conditional)
		Note: This data is required while specifying the statement construct information.
printOrder	Used to specify the financial transactions associated with the account / contract to appear on the printed statement.	Yes (Conditional)
		Note: This data is required while specifying the statement construct information.
repriceAfterDate	Used to specify whether you want to hold the repricing for the membership until the specified date.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: This tag is applicable only for the Individual Health Insurance business.	
paidThroughDate	Used to specify the term end date of the last fully or partially paid term. For more information about the paid through date, refer to Policy on page 228. Note: This tag is applicable only for the Fully-Insured Group Health Insurance and Individual Health Insurance businesses.	No
status	Used to specify status of the policy. The valid values are: <ul style="list-style-type: none"> • Pending • Activate • In Force/Active • Pending Termination • Terminated • Pending Reinstatement • Reinstated • Renewed • Cancel Note: You must specify the status code which is already defined in the lifecycle of the C1-POLICY business object.	
statusReason	Used to specify the reason why the status of the policy is changed. Note: You must specify a reason which is already defined for the Cancel status of the C1-POLICY business object.	
memoOnlySponsorCharge	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> • Y • N 	
isCMSAccountSw	Used to specify the CMS account that has offered the membership benefit. The valid values are	

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the health care inbound message.
statusReason	Indicates the reason why the status of the health care inbound message is changed.
person	At present, this tag is not supported in a health care inbound message.
statusDateTime	Displays the date and time when the status of the health care inbound message is changed in the system.

Tag Name	Tag Description						
creationDateTime	Displays the date and time when the health care inbound message is created in the system.						
searchCharacteristicValue	At present, this tag is not supported in a health care inbound message.						
version	<p>This tag appears within the following parent tags:</p> <table> <tr> <th>Parent Tag</th><th>Then the purpose of the version tag is...</th></tr> <tr> <td>schema</td><td>Displays the version of the health care inbound message.</td></tr> <tr> <td>inboundMessageCharacteristic</td><td>Displays the version of the characteristic defined for the health care inbound message.</td></tr> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the health care inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the health care inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.						
toDoRetry	<p>Displays the information about the retry option used for the health care inbound message.</p> <p>Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the health care inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the health care inbound message from Rejected to Pending .						
numberOfRetries	Indicates the number of times the retry option is used for the health care inbound message.						
currentErrorState	<p>Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is:</p> <ul style="list-style-type: none"> REJECTED 						
isRetried	<p>Indicates whether the retry option is used to change the status of the health care inbound message. The valid values are:</p> <ul style="list-style-type: none"> true false

Sample Health Care Inbound Message for Fully-Insured Group Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group health insurance business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans

The following table provides sample data for a fully-insured group customer that you can process through a health care inbound message:

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
				APE Medicare Gold RE MALE	AGE_BASED
				APE Medicare Bronze RE FEMALE	AGE_BASED
				APE Medicare Silver RE FEMALE	AGE_BASED
				APE Medicare Gold RE FEMALE	AGE_BASED

In addition, the following table provides sample derivation and pricing parameters for multiple bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Self-Funded Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a self-funded health insurance business
- Create the accounts for the bill groups
- Create the policies for the bill groups where the policy category is set to **Self-Funded**

The following table provides sample data for a self-funded customer that you can process through a health care inbound message:

Person Name	Person Type	Policy	Account
US Energy Corp	Parent Customer	-	-
US Energy ACTIVE	Bill Group	Active Employee Health Insurance Policy	Standard
			Retention
US Energy COBRA	Bill Group	Active COBRA Employee Health Insurance Policy	Standard
		Retiree COBRA Employee Health Insurance Policy	Retention
US Energy RETIREE	Bill Group	Retiree Employee Health Insurance Policy	Standard
			Retention

In addition, the following table provides sample derivation and pricing parameters for multiple bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
US Energy ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	-	-
	SMALLPRIME	ACTIVE	LOS ANGELES	-	-
US Energy COBRA	SMALLPRIME	COBRA	DALLAS	-	-
	SMALLPRIME	COBRA	SAN JOSE	-	-
US Energy RETIREE	SMALLPRIME	RETIRED	CHARLOTTE	-	-
	SMALLPRIME	RETIRED	DETROIT	-	-

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Pricing Rules

Using the below example, you can create the following:

- Tier-based pricing rule for the **DD_BASIC** policy plan -
The following table provides sample data for a tier-based pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Parameter	Parameter Value
DD_BASIC	TIER_BASED	20	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	MALE
		40	EMPBAND	IC2
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
		60	EMPBAND	IC3
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
		80	EMPBAND	IC4
			SUBSCRIPTIONTIER	E
			GENDER	MALE

- Age-based pricing rule for the **PPO_MED_BRONZE_RETIRED** policy plan -
The following table provides sample data for an age-based pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
PPO_MED_BRONZE_	AGE_BASED	200	0	19	GENDER	FEMALE	TOBUSE	Y	20
		200	0	19	GENDER	MALE	TOBUSE	Y	20

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
RETIRED		300	20	39	GENDER	FEMALE	TOBUSE	Y	30
		300	20	39	GENDER	MALE	TOBUSE	Y	30
		450	40	59	GENDER	FEMALE	TOBUSE	Y	40
		450	40	59	GENDER	MALE	TOBUSE	Y	40
		550	60	130	GENDER	FEMALE	TOBUSE	Y	50
		550	60	130	GENDER	MALE	TOBUSE	Y	50

- Additional fee pricing rule for the **COBRA_DENTAL** policy plan -
The following table provides sample data for an additional fee pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Modifier	Modifier Value	Modifier Rate
COBRA_DENTAL	CAPITATION_FEES	100	IC_BAND	IC1	10
		200	M1_BAND	M1	20
		300	M2_BAND	M2	30
		400	M3_BAND	M3	40

- Rate Guarantee pricing rule for the **RATE_LOCK_MED** policy plan -
The following table provides sample data for a rate guarantee pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Start Date	End Date	Rate Guarantee
RATE_LOCK_MED	AGE_BASED	200	20	39	01-01-2021	31-03-2021	Y
	TIER_BASED	400	40	59	01-02-2021	31-07-2021	Y
	TIER_BASED	600	60	79	01-02-2021	31-10-2021	Y
	AGE_BASED	800	80	99	01-01-2021	30-11-2021	Y

- Discount charge pricing rule for the **DISC_CHG_MED** policy plan -
The following table provides sample data for a discount charge pricing rule of the policy plan:

Bill Group	Policy Plan	Pricing Rule Type	Base Fee	Modifier	Modifier Value	Modifier Rate
United Antarctica Group	DISC_	DISCOUNT_	50	VP_BAND	VP1	10
	CHG_	CHARGE	70	M_BAND	M1	20
	MED		90	IC_BAND	IC1	30

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Group Membership (Without Benefit)

Using the below example, you can do the following:

- Create the persons who are neither parent customer nor bill group
- Create a membership where the person is the main subscriber
- Add persons in a membership

Person Name	Person Type	Policy	Policy Plan	Main Subscriber	Member Relationship Type
G, ALLEN	Person	AP234389	HMO_MED_ SILVER_RETIRED	Yes	SELF
G, JOHN	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SPOUSE
G, HARRY	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, NELSON	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, PARKER	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, RUSSEL	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, LINDA	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	DAUGHTER

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Individual Membership (With Benefit)

Using the below example, you can do the following:

- Create individual membership where the person is the main subscriber and contains dependent persons.
- Enroll the main subscriber to a health plan
- Provide information regarding benefit type, binder payment, rate guarantee, exchange details, etc.

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Binder Payment	Benefit Type	Exchange ID
GEOFF, JOHNSON	SELF	Yes	HMCSP01	Yes	MA	ABHF_121_FL
GWYNETH, JOHNSON	SPOUSE	No	HMCSP01	Yes	MA	ABHF_121_FL

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Group Membership (With Benefit)

Using the below example, you can do the following:

- Create group membership where the person is the main subscriber and contains dependent persons.

Person Name	Member Relationship Type	Main Subscriber	Policy	Policy Plan	Benefit Type
TREVOR, WALSH	SELF	Yes	AP234389	HMO_MED_ SILVER_RETIRED	MA
LETECIA, WALSH	SPOUSE	No	AP234389	HMO_MED_ SILVER_RETIRED	MA
MIKE, WALSH	SON	No	AP234389	HMO_MED_ SILVER_RETIRED	MA

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Advance Deposit at Parent Customer Level

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans
- Maintain the advance deposit details at the parent customer level

The following table provides sample data for a fully-insured group customer that you can process through a health care inbound message:

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
				APE Medicare Gold RE MALE	AGE_BASED
				APE Medicare Bronze RE FEMALE	AGE_BASED
				APE Medicare Silver RE FEMALE	AGE_BASED
				APE Medicare Gold RE FEMALE	AGE_BASED

In addition, the following table provides sample derivation and pricing parameters for multiple bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	HMO

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Advance Deposit at Policy Level

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans
- Maintain the advance deposit details at the policy level

The following table provides sample data for a fully-insured group customer that you can process through a health care inbound message:

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
CMR					
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
CMR					
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
				APE Medicare Gold RE MALE	AGE_BASED
				APE Medicare Bronze RE FEMALE	AGE_BASED
				APE Medicare Silver RE FEMALE	AGE_BASED
				APE Medicare Gold RE FEMALE	AGE_BASED

In addition, the following table provides sample derivation and pricing parameters for multiple bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	HMO

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Renewal

Using the below example, you can do the following:

- Renew a fully-insured group policy

The following table provides sample data through which you can renew a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Policy Renewal Date	Policy End Date
WALSH_TYPES	Corp Customer	PL_MED_HEALTH_00	WALSH_TC_MED_PL	2024-01-01	2024-12-31

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Reinstatement

Using the below example, you can do the following:

- Reinstatement a fully-insured group policy

The following table provides sample data through which you can reinstate a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Reinstatement Date	Policy End Date
GREG_INDUS	Group Customer	POL_DT_HLT_50	PL_DT_101	2024-05-15	2024-12-31

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Termination

Using the below example, you can do the following:

- Terminate a fully-insured group policy

The following table provides sample data through which you can terminate a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Termination Date	Policy End Date
HOP_TECH	Group Customer	PL_DENT_700	PN_DENT_505	2024-02-01	2024-12-31

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Renewal

Using the below example, you can do the following:

- Renew a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Membership Renewal Date
GEOFF, TURNER	SELF	Yes	HPMINAG01	2024-01-01

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Renewal of a Dependent Person

Using the below example, you can do the following:

- Renew a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Membership Renewal Date
BRADLEY NICHOLSON	SELF	Yes	HP_SNR_GOLD	2024-01-05
RAMONA NICHOLSON	SPOUSE	No	HP_SNR_GOLD	2024-01-05

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Termination

Using the below example, you can do the following:

- Terminate a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Membership Termination Date
GLENN, MARSH	SELF	Yes	HPMINAG01	2024-03-31

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Health Product and Plan Inbound Message

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, you can define a health product and plan inbound message using a health product and plan inbound message type. The **C1-HCProdHlthPlnInboundMessage** is a **SOAP** service which helps to create a health product, health plan, and pricing

rule for a health plan through an inbound message, whereas the **C1-HCProdHlthPlnInboundMes** is a **RESTful** service which helps to create and edit a health product, health plan, and pricing rule for a health plan through an inbound message.

You can define a health product and plan inbound message type using the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object through the **Inbound Message Type** screen. The health product and plan inbound message type business object encapsulates the following information:

- A business object using which you want to create the health product when the health product and plan inbound message is processed.
- A business object using which you want to create the health plan when the health product and plan inbound message is processed.

The health product and plan inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health product and plan inbound message should be created in the system. You must specify the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the health product and plan inbound message type. The health product and plan inbound message business object enables you to create and edit the following entities for a fully-insured individual customer through an inbound web service:
 - Health Product
 - Health Plan
 - Health Plan Pricing Rules

Note: You can create or update the above entities either through a single or separate health product and plan inbound messages.

- **Health Care Product Business Object** - The business object using which health product should be created in the system. You must specify the **Health Care Product (C1-HealthcareProduct)** business object in the health product and plan inbound message type.
- **Health Plan Business Object** - The business object using which health plan should be created in the system. You must specify the **Health Plan (C1-HealthPlan)** business object in the health product and plan inbound message type.

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, a batch named **C1-HCPHP** checks whether there are any health product and plan inbound messages in the **Pending** status. If there is a health product and plan inbound message in the **Pending** status, the batch changes the status of the health product and plan inbound message to the default next status (i.e. **Validation**). Then, the algorithm attached to the **Validation** status is triggered. If the validation is successful, the system changes the status of the health product and plan inbound message to **Processing**. Then, the algorithm attached to the **Processing** status is triggered. If the processing is successful, the system creates or updates the entities, such as health product, health plan, pricing rules for the health plan, and then changes the status of the health product and plan inbound message to **Processed**.

How to setup the C1-ASOBLLNG feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4193

Prerequisites

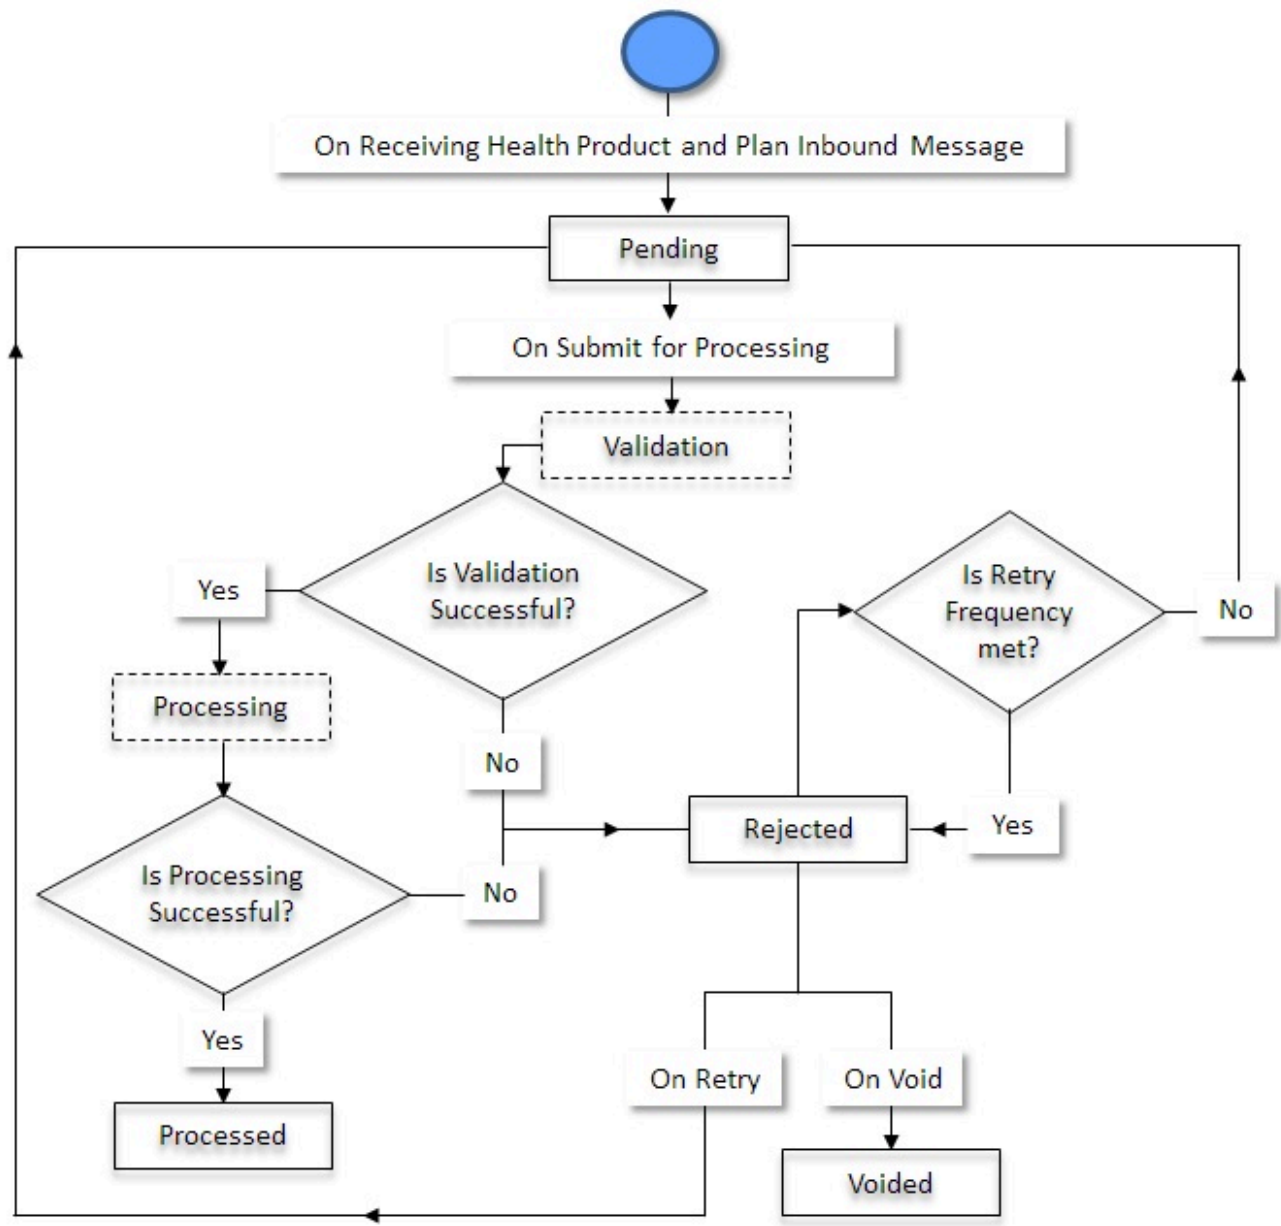

To use the health product and plan inbound message feature, you need to do the following:

- Define the required health product and plan inbound message types in the system.
- Assign the **Product (C1_PRODUCT)** maintenance object to the **Health Product (C1-HealthcareProduct)** business object, while defining the health product and plan inbound message type.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the required characteristic types where the characteristic entity is set to **Health Plan**.

- Define the required characteristic types where the characteristic entity is set to **Product**.
- Define the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the system.
- Define the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object in the system.
- Define the **Healthcare Product (C1-HealthcareProduct)** business object in the system.
- Define the **Health Plan (C1-HealthPlan)** business object in the system.
- Define the required pricing rule type business object in the system.
- Define the required values for the health plan in the **PRC_RULE_ENTITY_TYPE** lookup field.

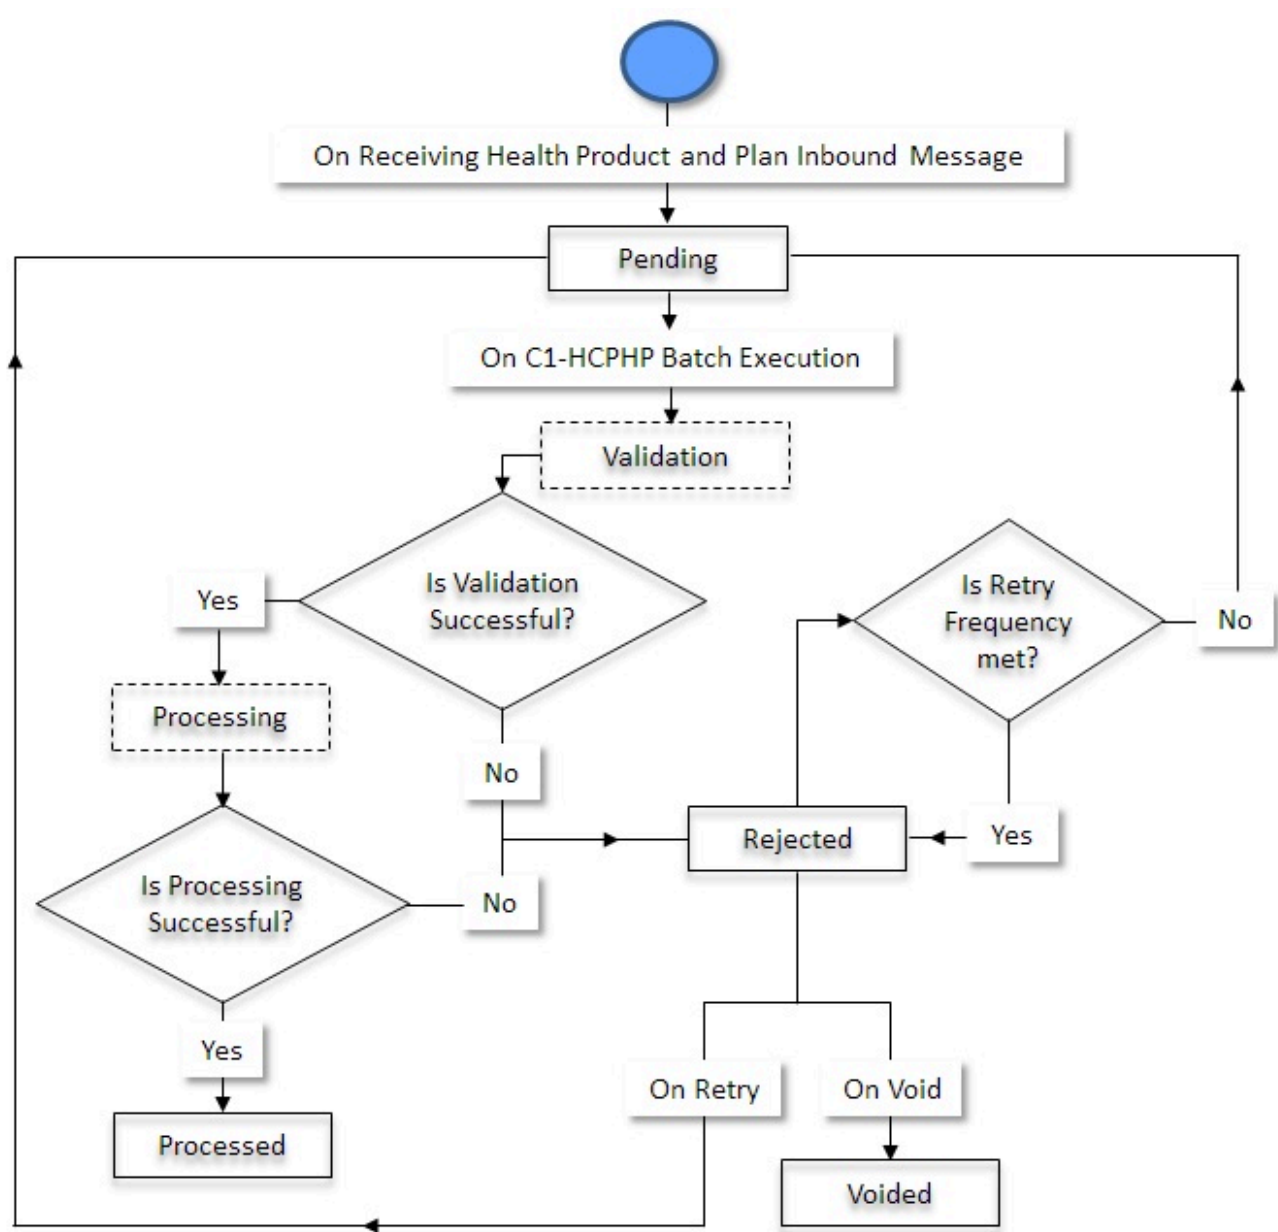

Health Product and Plan Inbound Message Status Transition through User Interface

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the user interface:

Health Product and Plan Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the **Health Product and Plan Inbound Message Periodic Monitor (C1-HCPHP)** batch:

Algorithms Used in C1-HCProdHlthPlnInbound

The following table lists the algorithms which are used in the lifecycle of the **C1-HCProdHlthPlnInbound** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 2160.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
	Enter	C1-HLTPRDVAL	C1-HLTPRDVAL	Refer to C1-HLTPRDVAL on page 2509.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206.
	Enter	C1-HCPRPROC	C1-HCPRPROC	Refer to C1-HCPRPROC on page 2510.

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 2161.
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 2161.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLTPRDVAL

This algorithm is invoked when you execute the **Health Product Health Plan (C1-HCPHP)** periodic monitor batch or click the **Submit for Processing** button in the **Inbound Message** screen. This algorithm validates the Health Product and Plan Inbound Message, which is in the Pending status, to check the following conditions:

- Whether the specified **Inbound Message Type** and **Inbound Message Business Object** are valid.
- Whether the specified source system is valid and does exists in the **Source System Extendable Lookup (C1-SourceSystemLookup)**.
- Whether the mandatory data (such as health product code, description, product type, bundled product, start date, status) is specified in the health product.
- Whether the mandatory data (such as health plan code, description, health product, start date, status) is specified in the health plan.
- Whether the mandatory data (such as health plan code, charge, start date, pricing rule) is specified in the health plan pricing rules.
- Whether the specified data for the lookup columns matches with those mentioned in the system.
- Whether all of the switch columns either contain **Y** or **N** as values.
- Whether the specified end date for health product, health plan, and health pricing rule is greater than the start date.

- Whether the product is mapped to the division which exists in the system, and the product - division mapping is a one time process.
- Whether the product code is mapped with the health plan exists in the system.
- Whether the characteristic type mapped with the respective entity exists in the system.
- Whether the specified pricing rule type for creating the pricing rule exists in the system in the **Active** status, and the pricing rule type - health plan mapping is a one time process.
- Whether the specified price item and price item parameters for pricing rule eligibility are valid, and the price item parameters exist in the **CI_PRICE_PARM** table.
- Whether the price item parameters that have parameter usage specified as **Pricing Rule Eligibility Criteria** are available while defining the pricing rule eligibility for the pricing rule.
- Whether the entity type is specified as **Health Plan** and entity value as **Health Plan Code** while creating a pricing rule for a health plan.

Note:

This algorithm does not consider the following validations or checks:

- No validation is performed between the date range of the product and health plan.
- No check is performed whether the product is in the **Active** status while creating a health plan.
- No check is performed whether the health plan is in the **Active** status while creating the health plan pricing rules.
- No check is performed on the set of the pricing rule eligibility, which is defined on multiple pricing rules, for a price item.
- No validation is performed if duplicate parameters are defined for a pricing rule.

C1-HCPRPROC

This algorithm is invoked when the health product and plan inbound message is successfully validated. This algorithm creates or updates the health product, health plan, and health plan pricing rule information for individual memberships.

This algorithm fetches the business object from the health product and plan inbound message type to create or update the records for health product, health plan, and health plan pricing rule. The algorithm performs the following operations:

- Creates or updates the health product based on the health product code.
- Creates or updates the health plan based on the health plan code.
- Creates or updates the health plan pricing rules based on the price item, health plan, start date, and eligibility criteria.

Note:

The pricing rule eligibility is optional while creating or updating the pricing rules for the health plan.

The health product and plan inbound message log maintains complete trail of actions performed on health product, health plan, and health plan pricing rules.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** - Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** - This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Product and Plan Inbound Message XML Format

Note: We recommend you to refer the Health Product and Plan Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCProdHlthPlnInboundMessage** inbound web service, you need to ensure that the health product and plan inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health product and plan inbound message.	Yes
messageType	Used to indicate the health product and plan inbound message type using which the health product and plan inbound message should be created in the system.	Yes
	Note: You must specify a valid health product and plan inbound message type which is created using the C1-HCProdHlthPlnInboundTyp business object and which is in the Active status. The system then derives the business objects using which the health product and plan inbound message, health products, and health plans should be created from the health product and plan inbound message type.	
sourceSystem	Used to indicate the external system from where the health product and plan inbound message is received.	Yes
	Note: You must specify a source system which is already defined in the C1-SourceSystemLookup extendable lookup. It must be in the Active status.	

Tag Name	Tag Description	Mandatory (Yes or No)
externalTransactionId	Used to indicate the transaction in the external source system which resulted in the health product and plan inbound message.	No
externalBatchId	Used to indicate the external batch job or batch run number through which the health product and plan inbound message is created.	Yes
externalSourceId	Used to specify the external source system ID.	Yes
characteristics	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> schema - Here, the characteristics tag is used to specify a list of characteristics for the health product and plan inbound message. healthPlanPricingRuleData - Here, the characteristics tag is used to specify a list of characteristics for the pricing rule of a health plan. 	No
inboundMessageCharacteristic	Used to specify a characteristic for the health product and plan inbound message.	No
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional) Note: This data is required while defining or editing an adhoc characteristic of the health product and plan inbound message.
characteristicType	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> inboundMessageCharacteristic - Here, the characteristicType tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to Inbound Message. productCharacteristics - Here, the characteristicType tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to Product. healthPlanCharacteristics - Here, the characteristicType tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to Health Plan. characteristicsList - Here, the characteristicType tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to Pricing Rule. 	Yes (Conditional) Note: This data is required while defining or editing a characteristic of the respective entity.
effectiveDate	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> inboundMessageCharacteristic - Here, the effectiveDate tag is used to specify the date from when the characteristic is effective for the health product and plan inbound message. 	Yes (Conditional) Note: This data is required while defining or editing a characteristic of the respective entity.

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> productCharacteristics - Here, the effectiveDate tag is used to specify the date from when the characteristic is effective for the health product. healthPlanCharacteristics - Here, the effectiveDate tag is used to specify the date from when the characteristic is effective for the health plan. characteristicsList - Here, the effectiveDate tag is used to specify the date from when the characteristic is effective for the pricing rule of a health plan. 	
	Note: You must specify the date in the YYYY-MM-DD format.	
characteristicValue	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> inboundMessageCharacteristic <ul style="list-style-type: none"> - Here, the characteristicValue tag is used to specify the value for the predefined characteristic type. productCharacteristics - Here, the characteristicValue tag is used to specify the value for the characteristic type. healthPlanCharacteristics - Here, the characteristicValue tag is used to specify the value for the characteristic type. characteristicsList - Here, the characteristicValue tag is used to specify the value for the characteristic type. 	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a characteristic of the respective entity.</p>
characteristicValueForeignKey	Used to specify the first value for the foreign key characteristic type.	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a foreign key characteristic of the health product and plan inbound message.</p>
characteristicValueFK2	Used to specify the second value for the foreign key characteristic type.	No
characteristicValueFK3	Used to specify the third value for the foreign key characteristic type.	No
characteristicValueFK4	Used to specify the fourth value for the foreign key characteristic type.	No
characteristicValueFK5	Used to specify the fifth value for the foreign key characteristic type.	No
productHealthPlanMessage	Used to specify the details of a health product, health plan, or pricing rule for a health plan.	Yes
HealthProductData	Used to specify the details of a health product.	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a health product.</p>
healthProductCode	Used to indicate the type of product. The valid values are:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> EPO - Indicates that the product type is exclusive provider organization. HMO - Indicates that the product type is health maintenance organization. POS - Indicates that the product type is point of service plan. PPO - Indicates that the product type is preferred provider organization. <p>Note: You must specify a value which is already defined in the PRODUCT_TYPE_FLG lookup field. It must be in the Active status.</p> <p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> HealthProductData - Here, the healthProductCode tag is used to specify the unique identifier for the health product. healthPlanData - Here, the healthProductCode tag is used to indicate the health product for which you want to define the health plan. 	
description	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> HealthProductData - Here, the description tag is used to specify the description for the health product. healthPlanData - Here, the description tag is used to specify the description for the health plan. 	Yes
productType	<p>Used to indicate how the health product can be classified based on the provider network.</p> <p>Note: You must specify a value which is already defined in the PRODUCT_TYPE_FLG lookup field. It must be in the Active status.</p>	Yes
productSubType	<p>Used to indicate the type of medical accounts that are linked to the health product. The valid values are:</p> <ul style="list-style-type: none"> FSA - Indicates that the product sub type is flexible spending account. HRA - Indicates that the product sub type is health reimbursement account. HSA - Indicates that the product sub type is point of service plan. MC - Indicates that the product sub type is medicare cost. MR - Indicates that the product sub type is medicare risk. <p>Note: You must specify a value which is already defined in the PRODUCT_SUB_TYPE_FLG lookup field. It must be in the Active status.</p>	No
productHCCategory	<p>Used to indicate the health care category to which the health product belongs. The valid value is:</p> <ul style="list-style-type: none"> MED - Indicates the health care category of product is medical. 	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the PRODUCT_HC_CAT_FLG lookup field. It must be in the Active status.	
productAdministration	Used to specify the name of the agency which administers the health product.	No
productLOB	Used to indicate the line of business to which the health product belongs. The valid value is: <ul style="list-style-type: none"> • SHOP - Indicates the line of business to which the health product belongs is shopping mall. Note: You must specify a value which is already defined in the PRODUCT_LOB_FLG lookup field. It must be in the Active status.	No
productLOBCategory	Used to indicate the line of business category to which the health product belongs. The valid value is: <ul style="list-style-type: none"> • COMM - Indicates the line of business category to which the health product belongs is commercial. • GOVT - Indicates the line of business category to which the health product belongs is government. • STPG - Indicates the line of business category to which the health product belongs is state programs. Note: You must specify a value which is already defined in the PRODUCT_LOB_CAT_FLG lookup field. It must be in the Active status.	No
bundledProduct	Used to indicate whether the health product is a bundled product. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes
bundledProducts	Used to specify the health products which are included in the bundled product.	Yes (Conditional) Note: This data is required when the health product is a bundled product (i.e. when the bundledProduct tag contains Y).
startDate	You can use this tag within the following tags: <ul style="list-style-type: none"> • HealthProductData - Here, the startDate tag is used to specify the date from when the health product is effective. Note: The health product start date cannot be later than the health product end date. <ul style="list-style-type: none"> • healthPlanData - Here, the startDate tag is used to specify the date from when the health plan is effective. 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The health plan start date cannot be later than the health plan end date.</p> <p>The health plan start date cannot be earlier than the health product start date and later than the health product end date.</p> <ul style="list-style-type: none"> • healthPlanPricingRuleData - Here, the startDate tag is used to specify the date from when the pricing rule of a health plan is effective. <p>Note:</p> <p>The pricing rule start date cannot be later than the pricing rule end date.</p> <p>The pricing rule start date cannot be earlier than the health plan start date and later than the health plan end date.</p> <p>Note: You must specify the date in the YYYY-MM-DD format.</p>	
endDate	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> • HealthProductData - Here, the endDate tag is used to specify the date till when the health product is effective. <p>Note: The health product end date cannot be earlier than the health product start date.</p> <ul style="list-style-type: none"> • healthPlanData - Here, the endDate tag is used to specify the date till when the health plan is effective. <p>Note:</p> <p>The health plan end date cannot be earlier than the health plan start date.</p> <p>The health plan end date cannot be earlier than the health product start date and later than the health product end date.</p> <ul style="list-style-type: none"> • healthPlanPricingRuleData - Here, the endDate tag is used to specify the date till when the pricing rule of a health plan is effective. <p>Note:</p> <p>The pricing rule end date cannot be earlier than the pricing rule start date.</p> <p>The pricing rule end date cannot be earlier than the health plan start date and later than the health plan end date.</p> <p>Note: You must specify the date in the YYYY-MM-DD format.</p>	No
status	You can use this tag within the following tags:	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> HealthProductData - Here, the status tag is used to indicate the status of the health product. The valid values are: <ul style="list-style-type: none"> ACTIVE INACTIVE healthPlanData - Here, the status tag is used to indicate the status of the health plan. The valid values are: <ul style="list-style-type: none"> ACTIVE INACTIVE healthPlanPricingRuleData - Here, the status tag is used to indicate the status of the pricing rule. The valid values are: <ul style="list-style-type: none"> PENDING ACTIVE INACTIVE 	
productCharacteristics	Used to specify a list of characteristics for the health product.	No
healthProductDivision	Used to specify a list of divisions where the health product is available.	Yes (Conditional)
		Note: This data is required while associating a health product with a division.
division	Used to indicate the division where the health product is available.	Yes
	Note: If you associate the health product with a division, the system only allows the persons belonging to the division to enroll for different health plans of the health product. However, if you do not associate the health product to any division, the system allows the persons belonging to different divisions to enroll for different health plans of the health product.	
healthPlanData	Used to specify the details of the health plan.	Yes (Conditional)
		Note: This data is required while defining or editing a health plan.
healthPlanCode	Used to specify the unique identifier for the health plan.	Yes
charitablePlan	Used to indicate whether the health plan provides subsidized health insurance coverage. The valid values are: <ul style="list-style-type: none"> Y N 	No
	Note: If you do not specify the value, by default, it is set to N.	
standardPlan	Used to indicate whether the health plan provides standard health insurance coverage. The valid values are: <ul style="list-style-type: none"> Y N 	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to N.	
acaQhp	<p>Used to indicate whether the health plan provides Affordable Care Act (ACA) qualified health insurance coverage. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value, by default, it is set to N.</p>	No
grandFatherPlan	<p>Used to indicate whether the health plan is a grandfathered health plan. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value, by default, it is set to N.</p>	No
ancillaryBenefits	<p>Used to indicate whether the health plan provides ancillary benefits. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>Ancillary benefits are a secondary type of health insurance coverage that covers miscellaneous medical expenses that are incurred during a stay at the hospital. For example, it can cover expenses such as ambulance transportation, blood, drugs, and medical supplies like bandages.</p> <p>If you do not specify the value, by default, it is set to N.</p>	No
riderBenefits	<p>Used to indicate whether the health plan provides rider benefits. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>A rider is an additional benefit that can be included to the basic health insurance plan. By adding riders, the insurance coverage can be expanded as per the requirement and at a lower cost.</p> <p>If you do not specify the value, by default, it is set to N.</p>	No
addOnPlan	<p>Used to indicate whether the health plan is an add-on health plan. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to N. An add-on health plan may provide ancillary or rider benefits. It is also known as a supplemental health plan. As these add-on plans provide additional benefits over the base plan, they are not considered as the standalone plan.	
hiosId	Used to specify the Health Insurance Oversight System ID.	Yes (Conditional) Note: This data is required while associating the hiosId for a health plan.
healthPlanCharacteristics	Used to specify a list of characteristics for the health plan.	Yes (Conditional) Note: This data is required while defining or editing the characteristics of a health plan.
healthPlanPricingRuleTypes	Used to associate the pricing rule types with the health plan.	Yes (Conditional) Note: This data is required while associating a pricing rule type with the health plan.
pricingRuleType	You can use this tag within the following tags: <ul style="list-style-type: none"> healthPlanPricingRuleTypes - Here, the pricingRuleType tag is used to specify the pricing rule type. healthPlanPricingRuleData - Here, the pricingRuleType tag is used to indicate the pricing rule type using which you want to define the pricing rule. Note: At present, you can only specify those pricing rule types where the category is set to Age Based, Tier Based, Discount Charge, Additional Fee, and Benefit .	Yes (Conditional) Note: This data is required while associating a pricing rule type with the health plan and while defining or editing a pricing rule for a health plan.
healthPlanPricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional) Note: This data is required while defining or editing a pricing rule defined for the health plan.
sequence	You can use this tag within the following tags:	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> healthPlanPricingRuleData - Here, the sequence tag is used to indicate the order in which the pricing rules should be created in the system. baseRate - Here, the sequence tag is used to indicate the order in which the price component should be created using the given base rate information. pricingParameter - Here, the sequence tag is used to indicate the order in which the pricing eligibility criteria should be created using the parameter information. modifierInformation - Here, the sequence tag is used to indicate the order in which the pricing eligibility criteria should be created using the modifier information. pricingRuleEligibility - Here, the sequence tag is used to indicate the order in which the pricing rule eligibility should be created for the health plan. 	<p>Note: This data is required while defining or editing the respective information.</p>
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	<p>Used to specify the entity type. The valid values are:</p> <ul style="list-style-type: none"> HLPN - Used when you want to specify the health plan. PER - Used when you want to specify the person. PIDT - Used when you want to specify the person identifier type. PIDV - Used when you want to specify the person identifier value. PLAN - Used when you want to specify the plan. PLCY - Used when you want to specify the policy. SSYS - Used when you want to specify the source system. STAT - Used when you want to specify the state. <p>Note: You must specify a value which is already defined in the PRC_RULE_ENTITY_TYPE lookup field. It must be in the Active status.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a pricing rule defined for the health plan.</p>
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a pricing rule defined for the health plan.</p>
priceItemCd	<p>Used to indicate the price item for which you want to define the pricing rule.</p> <p>Note: You must specify a price item which is already associated with the respective pricing rule type.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a pricing rule defined for the health plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
rateOption	Used to indicate the rate option using which you want to create price assignment for the pricing rule of a health plan.	No
	<p>Note:</p> <p>You must specify a rate option which is already defined in the C1-ExtLookRetTypeRateOpt extendable lookup. It must be in the Active status.</p> <p>If the rate option is not given for an age-based pricing rule, by default, it is set to:</p> <ul style="list-style-type: none"> The value specified in the Default Rate Option - Flat option type of the C1-ASOBLLNG feature configuration when the modifier method is set to FLAT The value specified in the Default Rate Option - Percentage option type of the C1-ASOBLLNG feature configuration when the modifier method is set to EXPT or INPT <p>However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the Default Rate Option - Flat option type of the C1-ASOBLLNG feature configuration when the modifier method is set to FLAT or NULL.</p>	
pricingType	Used to indicate the type of pricing defined for the pricing rule. The valid values are:	Yes
	<ul style="list-style-type: none"> FLAT PCNT <p>Note: You must specify a value which is already defined in the PRC_TYPE_FLG lookup field. It must be in the Active status.</p>	
modifierApplicability	Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are:	No
	<ul style="list-style-type: none"> Y N <p>Note:</p> <p>You must specify a value which is already defined in the HC_MODIFIER_APPLICABILITY lookup field. It must be in the Active status.</p> <p>If you do not specify the value, by default, it is set to N.</p>	
modifierMethod	Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> EXPT - Indicates that the system should consider the modifier rate as exclusive percentage. FLAT - Indicates that the system should consider the modifier rate as a flat amount. 	<p>Note: This data is required when the modifierApplicability tag contains Y.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> INPT - Indicates that the system should consider the modifier rate as inclusive percentage. 	
	Note: You must specify a value which is already defined in the HC_MODIFIER_METHOD lookup field. It must be in the Active status.	
baseRate	Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes.	Yes (Conditional)
	Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.	Note: This data is required while defining a pricing rule for the health plan.
baseFee	Used to specify the base fees for the health plan.	Yes (Conditional)
		Note: This data is required while defining a pricing rule for the health plan.
lowerAgeLimit	Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component.	Yes (Conditional)
	Note: The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration. This data is ignored when given in a tier-based pricing rule information.	Note: This data is required while defining or editing an age-based pricing rule for the health plan.
upperAgeLimit	Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component.	Yes (Conditional)
	Note: The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration. This data is ignored when given in a tier-based pricing rule information.	Note: This data is required while defining an age-based pricing rule for the health plan.
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional)
		Note: This data is required while defining a tier-based pricing rule for the health plan.

Tag Name	Tag Description	Mandatory (Yes or No)
parameterCode	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> pricingParameter - Here, the parameterCode tag is used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria. modifierInformation - Here, the parameterCode tag is used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria. <p>Note:</p> <p>You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to Pricing Eligibility Criteria. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information.</p> <p>You cannot specify any special character except underscore (_) in the parameter name.</p>	Yes (Conditional)
		Note: This data is required while specifying the respective information.
parameterValue	<p>You can use this tag within the following tags:</p> <ul style="list-style-type: none"> pricingParameter - Here, the parameterCode tag is used to specify the value for the parameter (i.e. employee attribute). modifierInformation - Here, the parameterCode tag is used to specify the value for the parameter (i.e. modifier). <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p>	Yes (Conditional)
		Note: This data is required while specifying the respective information.
modifierInformation	<p>Used to specify the modifier based on which you want to increase or decrease the base fees.</p> <p>Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.</p>	Yes (Conditional)
		Note: This data is required while specifying the modifier information.
rate	<p>Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.</p>	Yes (Conditional)
		Note: This data is required while specifying the modifier information.
characteristicsList	<p>Used to specify a characteristic for the health plan.</p>	Yes (Conditional)
		Note: This data is required while defining or editing a characteristic of the respective entity.

Tag Name	Tag Description	Mandatory (Yes or No)
pricingRuleEligibility	Used to specify a set of attributes based on which the pricing rule eligibility is decided.	Yes (Conditional)
		Note: This data is required while defining or editing an age or tier-based pricing rule for the health plan.
priceParmCode	Used to specify the pricing attribute using which you want to define the pricing eligibility criteria.	Yes (Conditional)
		Note: This data is required while specifying the respective information.
priceParmVal	Used to specify the value for the parameter (i.e. pricing attribute).	Yes (Conditional)
		Note: This data is required while specifying the respective information.

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
bo	Indicates the business object using which the health product and plan inbound message is created in the system.
boStatus	Displays the status of the health product and plan inbound message.
statusReason	Indicates the reason why the status of the health product and plan inbound message is changed.
statusDateTime	Displays the date and time when the status of the health product and plan inbound message is changed in the system.
creationDateTime	Displays the date and time when the health product and plan inbound message is created in the system.
version	<p>This tag appears within the following parent tags:</p> <ul style="list-style-type: none"> schema - Here, the version tag displays the version of the health product and plan inbound message. inboundMessageCharacteristic - Here, the version tag displays the version of the characteristic defined for the health product and plan inbound message.
searchCharacteristicValue	At present, this tag is not supported in a health product and plan inbound message.
toDoRetry	Displays the information about the retry option used for the health product and plan inbound message.

Tag Name	Tag Description
	Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the health product and plan inbound message is validated and processed either through the user interface or batch process.
retryDateTime	Displays the date and time when the retry option is used to change the status of the health product and plan inbound message from Rejected to Pending .
numberOfRetries	Indicates the number of times the retry option is used for the health product and plan inbound message.
currentErrorState	Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> REJECTED
isRetried	Indicates whether the retry option is used to change the status of the health product and plan inbound message. The valid values are: <ul style="list-style-type: none"> true false

</schema>
```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Product and Plan Inbound Message for Health Plan Setup

Using the below example, you can do the following:

- Create the health plan for the product in the ORMB system through the health product and health plan inbound message.

The following table provides sample data for a health product and health plan that you can process through the health product and plan inbound message:

Health Code	Product	Health Code	Plan	HiOS ID	Description	Start Date	Status
HPMP444		HMCSP01		HIOSHLPNMS001	Health Plan Medicare Surplus	2021-02-01	ACTIVE
HPMP444		HMCDP01		HIOSHLPNMD005	Health Plan Medicare Dental	2021-03-01	ACTIVE

```

Sample Health Product and Plan Inbound Message for Health Plan Pricing Rules Setup

Using the below example, you can do the following:

- Create the age-based pricing rule for the **RET_DENT** health plan -
The following table provides sample data for an age-based pricing rule of the health plan:

Health Plan	Pricing Rule Type	Base Rate			Pricing Parameter		Modifier Information		
		Base Fee	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
RET_DENT	AGE_BASED	100	1	20	TOBAC	Y	SMOKER	N	10
		300	1	40	TOBAC	Y	SMOKER	N	20
		500	1	60	TOBAC	Y	SMOKER	N	30

- Create the discount charge pricing rule for the **RET_DENT** health plan -
The following table provides sample data for a discount charge pricing rule of the health plan:

Health Plan	Pricing Rule Type	Base Fee	Modifier	Modifier Value	Modifier Rate
RET_DENT	DISCOUNT_CHARGE	50	VP_BAND	VP1	10
		70	M_BAND	M1	20
		90	IC_BAND	IC1	30

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Health Care Inbound Message Type (C1-HCInboundMsgType)	<ul style="list-style-type: none">• Inbound Message Business Object - The business object using which the health care inbound message should be created in the system.• Customer Registration Type - The customer registration type using which the customer registration object should be created through a health care inbound message.
Health Product Health Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)	<ul style="list-style-type: none">• Inbound Message Business Object - The business object using which the health product and plan inbound message should be created in the system.• Health Product Business Object - The business object using which the health product should be created in the system.• Health Plan Business Object - The business object using which the health plan should be created in the system.
Individual Inbound Message Type (C1-IndHCInboundMsgType)	<ul style="list-style-type: none">• Inbound Message Business Object - The business object using which the health care inbound message should be created in the system.• Person Business Object - The business object using which the individual customer should be created in the system.• Account Business Object - The business object using which the individual customer's account should be created in the system.• Individual Membership Business Object - The business object using which the individual membership should be created in the system.• Benefits Business Object - The business object using which the individual membership benefits should be created in the system.• Address Business Object - The business object using which the address should be created in the system.• Statement Construct Business Object - The business object using which the statement construct should be created in the system.

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- [Inbound Message Type List](#) on page 2535
- [Inbound Message Type](#) on page 2536

Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.

Column Name	Column Description
Edit	On clicking the Edit (✎) icon, the Inbound Message Type screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the Duplicate (📄) icon, the Inbound Message Type screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the Delete (🗑) icon, you can delete the inbound message type.
	Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** (📡) icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** - This section displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.
Customer Registration Type	Indicates the customer registration type using which the customer registration object is created through a health care inbound message.
	Note: It has a link. On clicking the link, the Customer Registration Type screen appears where you can view the details of the respective customer registration type. This field appears when you are viewing the details of an inbound message type which is created using the C1-HCInboundMsgType business object.
Inbound Message Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Field Name	Field Description
Healthcare Product Business Object	Indicates the business object using which the health product is created through a health product and plan inbound message. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the C1-HCProdHlthPlnInboundTyp business object.
Health Plan Business Object	Indicates the business object using which the health plan is created through a health product and plan inbound message. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the C1-HCProdHlthPlnInboundTyp business object.
Description	Displays the description of the inbound message type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Detailed Description	Displays additional information about the inbound message type.

- **Additional Data** - This section lists the additional information about the inbound message type. This section appears when you are viewing the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. It contains the following fields:

Field Name	Field Description
Person Business Object	Indicates the business object using which the individual customer is created through a health care inbound message.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Account Business Object	Indicates the business object using which the individual customer's account is created through a health care inbound message.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Individual Membership Business Object	Indicates the business object using which the individual membership is created through a health care inbound message.

Field Name	Field Description
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Benefits Business Object	Indicates the business object using which the individual membership benefit is created through a health care inbound message. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Address Business Object	Indicates the business object using which the address is created through a health care inbound message. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Statement Construct Business Object	Indicates the business object using which the statement construct is created through a health care inbound message. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** - This section lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type. Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

Viewing the Inbound Message Type Details

Procedure

To view the details of an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Broadcast** (📡) icon corresponding to the inbound *message* type whose details you want to view.
The **Inbound Message Type** zone appears.
5. View the details of the inbound message type in the **Inbound Message Type** zone.

Defining an Inbound Message Type

Prerequisites

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none">• Health care inbound message type business object defined in the application• Health care inbound message business object defined in the application• Customer registration types defined in the application

If you want to define a..	Then, you should have...
Health Product and Plan Inbound Message Type	<ul style="list-style-type: none"> Health product and plan inbound message type business object defined in the application Health product and plan inbound message business object defined in the application Health product business object defined in the application Health plan business object defined in the application
Individual Inbound Message Type	<ul style="list-style-type: none"> Health care inbound message type business object defined in the application Health care inbound message business object defined in the application Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)								
Inbound Message Type Business Object	Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type:	Yes								
	<table><tr><th>Inbound Message Type</th><th>Business Object</th></tr><tr><td>Health Care Inbound Message Type</td><td>C1-HCInboundMsgType</td></tr><tr><td>Health Product and Plan Inbound Message Type</td><td>C1-HCProdHlthPlnInbound</td></tr><tr><td>Individual Inbound Message Type</td><td>C1-IndHCInboundMsgType</td></tr></table>		Inbound Message Type	Business Object	Health Care Inbound Message Type	C1-HCInboundMsgType	Health Product and Plan Inbound Message Type	C1-HCProdHlthPlnInbound	Individual Inbound Message Type	C1-IndHCInboundMsgType
	Inbound Message Type		Business Object							
	Health Care Inbound Message Type		C1-HCInboundMsgType							
	Health Product and Plan Inbound Message Type		C1-HCProdHlthPlnInbound							
Individual Inbound Message Type	C1-IndHCInboundMsgType									

4. Select the required business object to create the respective inbound message type.
5. Click **OK**.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.	Yes
	Note: This field appears when you are defining an inbound message type using the C1-HCInboundMsgType business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required , Final Approval Required , and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.	
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product through a health product and plan inbound message.	Yes
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HCProdHlthPlnInbound business object.	
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan through a health product and plan inbound message.	Yes
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HCProdHlthPlnInbound business object.	
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- **Additional Data** - Used to specify additional details about the inbound message type. This section appears when you are specifying the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Business Object	Used to indicate the business object using which you want to create an individual customer through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Account Business Object	Used to indicate the business object using which you want to create an individual customer's account through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Individual Membership Business Object	Used to indicate the business object using which you want to create an individual membership through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Benefits Business Object	Used to indicate the business object using which you want to create an individual membership benefit through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Address Business Object	Used to indicate the business object using which you want to create an address through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Statement Construct Business Object	Used to indicate the business object using which you want to create an statement construct through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Inbound Message Type** screen.

- **Characteristics** - Used to define the characteristics for the inbound message type.

6. Enter the required details in the **Main** section.

- 7. Enter the required details in the **Additional Data** section.
- 8. Define characteristics for the inbound message type, if required.
- 9. Click **Save**.
The inbound message type is defined.

How to define a characteristic for an inbound message type	Defining a Characteristic for an Inbound Message Type on page 2543

Defining a Characteristic for an Inbound Message Type

Prerequisites

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

Procedure

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound *message* type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Inbound Message Type .	Note: This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the inbound message type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Inbound Message Type

Prerequisites

The following table lists the prerequisites for editing various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none">• Health care inbound message type business object defined in the application• Health care inbound message business object defined in the application• Customer registration types defined in the application
Health Product and Plan Inbound Message Type	<ul style="list-style-type: none">• Health product and plan inbound message type business object defined in the application• Health product and plan inbound message business object defined in the application• Health product business object defined in the application• Health plan business object defined in the application
Individual Inbound Message Type	<ul style="list-style-type: none">• Health care inbound message type business object defined in the application• Health care inbound message business object defined in the application• Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the Inbound message type whose details you want to edit.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.	Yes
	Note: This field appears when you are defining an inbound message type using the C1-HCInboundMsgType business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required , Final Approval Required , and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.	
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product through a health product and plan inbound message.	Yes
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HCProdHlthPlnInbound business object.	
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan through a health product and plan inbound message.	Yes
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HCProdHlthPlnInbound business object.	
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the inbound message type.	No

- **Additional Data** - Used to specify additional details about the inbound message type. This section appears when you are specifying the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Business Object	Used to indicate the business object using which you want to create an individual customer through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Account Business Object	Used to indicate the business object using which you want to create an individual customer's account through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Individual Membership Business Object	Used to indicate the business object using which you want to create an individual membership through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Benefits Business Object	Used to indicate the business object using which you want to create an individual membership benefit through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Address Business Object	Used to indicate the business object using which you want to create an address through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Statement Construct Business Object	Used to indicate the business object using which you want to create an statement construct through a health care inbound message.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	

- **Characteristics** - Used to define the characteristics for the inbound message type.

Tip: Alternatively, you can edit the details of an inbound message type by clicking the **Edit** button in the **Inbound Message Type** zone.

5. Modify the required details in the **Main** and **Additional Data** section, if required.
6. Define, edit, or remove characteristics of the inbound message type, if required.
7. Click **Save**.

The changes made to the inbound message type are saved.

Copying an Inbound Message Type

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

Prerequisites

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Customer registration types defined in the application
Health Product and Plan Inbound Message Type	<ul style="list-style-type: none"> • Health product and plan inbound message type business object defined in the application • Health product and plan inbound message business object defined in the application • Health product business object defined in the application • Health plan business object defined in the application
Individual Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application

If you want to define a..	Then, you should have...
	<ul style="list-style-type: none"> Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Duplicate** (🔗) icon in the **Duplicate** column corresponding to the inbound message type whose copy you want to create.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.	Yes
	Note: This field appears when you are defining an inbound message type using the C1-HCInboundMsgType business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required , Final Approval Required , and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.	
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product through a health product and plan inbound message.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HCProdHlthPlnInbound business object.	
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan through a health product and plan inbound message.	Yes
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HCProdHlthPlnInbound business object.	
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- **Additional Data** - Used to specify additional details about the inbound message type. This section appears when you are specifying the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Business Object	Used to indicate the business object using which you want to create an individual customer through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Account Business Object	Used to indicate the business object using which you want to create an individual customer's account through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Individual Membership Business Object	Used to indicate the business object using which you want to create an individual membership through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	

Field Name	Field Description	Mandatory (Yes or No)
Benefits Business Object	Used to indicate the business object using which you want to create an individual membership benefit through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Address Business Object	Used to indicate the business object using which you want to create an address through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	
Statement Construct Business Object	Used to indicate the business object using which you want to create an statement construct through a health care inbound message.	Yes
	Note: This field appears when you are defining a health care inbound message type using the C1-IndHCInboundMsgType business object.	

- **Characteristics** - Used to define the characteristics for the inbound message type.

Tip: Alternatively, you can copy an inbound message type by clicking the **Duplicate** button in the **Inbound Message Type** zone.

5. Enter the required details in the **Main** and **Additional Data** section.
6. Define, edit, or remove characteristics of the inbound message type, if required.
7. Click **Save**.
The new inbound message type is defined.

Deleting an Inbound Message Type

Procedure

To delete an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.

- 2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
- 3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
- 4. In the **Inbound Message Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the Inbound message type that you want to delete.
A message appears confirming whether you want to delete the inbound message type.

Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.

Tip: Alternatively, you can delete an inbound message type by clicking the **Delete** button in the **Inbound Message Type** zone.

- 5. Click **OK**.
The inbound message type is deleted.

Inbound Message (Used for Searching)

The **Inbound Message** screen allows you to search for an inbound message using various search criteria. It contains the following zone:

- [Search Inbound Message](#) on page 2551

Through this screen, you can navigate to the following screen:

- [Inbound Message \(Used for Viewing\)](#) on page 2557

Search Inbound Message

The **Search Inbound Message** zone allows you to search for an inbound message using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an inbound message using the inbound message or person details. The valid values are: <ul style="list-style-type: none">• Message Details• Person Details	Yes
	Note: By default, the Message Details option is selected.	
Inbound Message ID	Used to search a particular inbound message.	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the Message Details option is selected from the Search By list.	
Person ID	<p>Used to search inbound messages through which a particular parent customer or bill group and their related entities are created in the system.</p> <p>Note: The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.</p> <p>This field appears when the Person Details option is selected from the Search By list.</p> <p>This field is only applicable for the fully-insured group and self-funded businesses.</p> <p>This field can only be used to search inbound messages through which a person of the following person types is created in the system:</p> <ul style="list-style-type: none"> • Parent Customer • Bill Group 	Yes
Status	<p>Used to search inbound messages with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No
Source System	<p>Used to search inbound messages which are received from a particular external system.</p> <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No
Created From	<p>Used to search inbound messages which are created from a particular date onwards.</p> <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No
External Source ID	<p>Used to search inbound messages which are received from a particular external source system.</p> <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Created To	Used to search inbound messages which are created till a particular date.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
External Transaction ID	Used to search the inbound message which was a result of a particular transaction in the external source system.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
User ID	Used to search inbound messages which are created by a particular user.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
External Batch ID	Used to search inbound messages which are created through a particular batch job.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	

Note: You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the inbound message is created in the system.
Inbound Message Information	Displays information about the inbound message.
	Note: It has a link. On clicking the link, the Inbound Message screen appears where you can view the details of the respective inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.

Column Name	Column Description
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. This column appears when the Person Details option is selected from the Search By list.
Created By	Indicates the user who has created the inbound message.
	Note: This column appears when the Message Details option is selected from the Search By list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Inbound Message

Prerequisites

To search for an inbound message, you should have:

- Inbound message types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

Procedure

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.
The **Inbound Message** screen appears.
3. Enter the search criteria in the **Search Inbound Message** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of inbound messages that meet the search criteria appears in the **Search Results** section.

Creating an Inbound Message

The following table lists the different types of inbound messages that you can create through the respective inbound web service:

Inbound Message	Inbound Web Service
Health Care Inbound Message on page 2148	C1-HCInboundMessage on page 2555
Health Product and Plan Inbound Message on page 2504	C1-HCProdHlthPlnInboundMessage on page 2556
	C1-HCProdHlthPlnInboundMes on page 2556

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

C1-HCInboundMessage

The **C1-HCInboundMessage** inbound web service is a SOAP based Web service which can be used for the self-funded, fully-insured group, and fully-insured individual businesses. It enables you to create or update a parent customer, bill group, individual customer and their account, self-funded or fully-insured group policy, policy plan, group or individual membership, group or individual membership benefits, and statement constructs. It allows you to define and edit pricing rules for the fully-insured group business. It allows you to create or update a pass-through billable charge for a fully-insured group policy. It allows you to terminate, reinstate, or renew a fully-insured group policy. It also allows you to terminate an individual membership.

On calling the **C1-HCInboundMessage** inbound web service, a health care inbound message is created in the **Pending** status. A health care inbound message goes through various statuses in its lifecycle. You can search for a health care inbound message through the **Inbound Message** screen.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 2156.

C1-HCProdHlthPlnInboundMessage

The **C1-HCProdHlthPlnInboundMessage** inbound web service is a SOAP based Web service which can be used for the fully-insured individual business. It enables you to create or update a health product, health plan and a pricing rule for a health plan.

On calling the **C1-HCProdHlthPlnInboundMessage** inbound web service, a health product and plan inbound message is created in the **Pending** status. A health product and plan inbound message goes through various statuses in its lifecycle. You can search for a health product and plan inbound message through the **Inbound Message** screen.

Before calling the **C1-HCProdHlthPlnInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 2505.

Viewing the Inbound Message Details

Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.
The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the inbound message in the **Inbound Message** zone.

Related Topics

Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing
- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- [Inbound Message - Main](#) on page 2557
- [Inbound Message - Message](#) on page 2559
- [Inbound Message - Log](#) on page 2560

Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- [Inbound Message](#) on page 2558

Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** - Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none">• Pending• Processed• Rejected• Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
	Note: It has a link. On clicking the link, the Inbound Message Type screen appears where you can view the details of the respective inbound message type.
Source System	Indicates the external source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.
Person	Indicates the person specified in the inbound message.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. This field appears when the Person Details option is selected from the Search By list in the Search Inbound Message zone.

- **Characteristics** - Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics of the inbound message.
	Note: The Edit button appears when the inbound message is in the Pending or Rejected status.
Delete	Used to delete the inbound message.

Button Name	Button Description
	Note: The Delete button appears when the inbound message is in the Pending status.
Submit for Processing	Used to submit the inbound message for validation and processing. Note: The Submit for Processing button appears only when the inbound message is in the Pending status.
Retry	Used when you want to change the status of the inbound message from Rejected to Pending so that the inbound message can be considered once again for validation and processing. Note: The Retry button appears when the inbound message is in the Rejected status.
Void	Used to cancel the inbound message. Note: The Void button appears when the inbound message is in the Rejected status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

Inbound Message - Message

The **Message** tab displays the content of the inbound message in the XML format. It contains the following zone:

- [Inbound Message Content](#) on page 2559

Inbound Message Content

The **Inbound Message Content** zone displays the content of the inbound message in the XML format. By default, each tag in the inbound message is expanded. You can collapse the tag whenever required.

For more information about the tags, refer to the respective XML format section:

Inbound Message	XML Format
Health Care Inbound Message	Health Care Inbound Message XML Format on page 2162

Inbound Message	XML Format
Health Product and Plan Inbound Message	Health Product and Plan Inbound Message XML Format on page 2511

Once the inbound message is validated and processed either from the user interface or through a batch process, the following tags appear at the bottom of the inbound message in the **Inbound Message Content** zone:

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the inbound message.
retryDateTime	Displays the date and time when the retry option is used to change the status of the inbound message from Rejected to Pending .
numberOfRetries	Indicates the number of times the retry option is used for the inbound message.
currentErrorState	Indicates the status to which the inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none">REJECTED
isRetried	Indicates whether the retry option is used to change the status of the inbound message. The valid values are: <ul style="list-style-type: none">truefalse

Editing an Inbound Message

Procedure

To edit an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to edit.
The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Inbound Message** zone.

The **Inbound Message** screen appears. It contains the following sections:

- **Main** - Displays the basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** - Used to define, edit, or remove characteristics of the inbound message.

Note: The **Edit** button appears when the inbound message is in the **Pending** or **Rejected** status.

5. Define, edit, or remove characteristics of the inbound message, if required.
6. Click **Save**.
The changes made to the inbound message are saved.

How to define a characteristic for an inbound message	Defining a Characteristic for an Inbound Message on page 2562

Defining a Characteristic for an Inbound Message

Prerequisites

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

Procedure

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Inbound Message .	Note: This field is required when you are defining a characteristic for the inbound message.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the inbound message.

2. Enter the required details in the **Characteristics** section.

3. If you want to define more than one characteristic for the inbound message, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the inbound message, click the **Delete (■)** icon corresponding to the characteristic.

4. Click **Save**.
The characteristics are defined for the inbound message.

Deleting an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message when the inbound message is in the **Pending** status.

Procedure

To delete an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to delete.
The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Inbound Message** zone.
A message appears confirming whether you want to delete the inbound message.

Note: The **Delete** button appears when the inbound message is in the **Pending** status.

5. Click **OK**.
The inbound message is deleted.

Processing an Inbound Message

Prerequisites

The following table lists the prerequisites which you should setup before processing the respective inbound message:

Inbound Message	Refer to...
Health Care Inbound Message	Prerequisites on page 2156

Inbound Message	Refer to...
Health Product and Plan Inbound Message	Prerequisites on page 2505

Procedure

To process an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to submit for validation and processing.
The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Processing** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Health Care Inbound Message	<p>Creates or updates a person, account and fully-insured group or self-funded policy. It creates or updates a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, if requested, it terminates, reinstates, or renews a fully-insured group policy. Finally, the status of the inbound message is changed to Processed.</p> <p>The system uses the C1-PERSTYPE feature configuration to decide whether the person type specified in the health care inbound message represents Parent Customer or Bill Group. If the person type specified in the health care inbound message matches the person type specified in the Bill Group Person Type or Parent Person Type option type of the C1-PERSTYPE feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the Bill Group Person Type or Parent Person Type option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p>
Health Product and Plan Inbound Message	Creates or updates a health product, health plan, and pricing rules for individual memberships. In addition, it also maintains a log of the entities that are either added or updated through the health product and plan inbound message. Note that the system allows to upload the health product, health plan, and pricing rules together in a single inbound message or by creating

If the inbound message is a...	Then...
	three separate inbound messages. Finally, the status of the inbound message is changed to Processed . The system uses the C1-HLTPRDVAL algorithm to validate the uploaded data through the health product and plan inbound message. Once the data is successfully validated, entities like health product, health plan, and pricing rules are created in the system.

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

Note: The **Submit for Processing** button appears when the inbound message is in the **Pending** status.

Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

Procedure

To use the retry option for an inbound message:

- 1. Search for the inbound message in the **Inbound Message** screen.
- 2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to use the retry option.
The **Inbound Message** screen appears.
- 3. Ensure that the **Main** tab is selected.
- 4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
- 5. Click the **Retry** button in the **Inbound Message** zone.
The status of the inbound message is changed to **Pending**.

Note: The **Retry** button appears when the inbound message is in the **Rejected** status.

Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message when the inbound message is in the **Rejected** status.

Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to void.
The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.
The status of the inbound message is changed to **Voided**.

Note: The **Void** button appears when the inbound message is in the **Rejected** status.

Viewing the Content of an Inbound Message

Procedure

To view the content of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.
The **Inbound Message** screen appears.
3. Click the **Message** tab.
The **Message** tab appears.
4. View the content of the inbound message in the XML format in the **Inbound Message Content** zone.

Adding a Log Entry for an Inbound Message

Procedure

To add a log entry for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to add a log entry.
The **Inbound Message** screen appears.
3. Click the **Log** tab.
The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

The **Add Inbound Message Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Information	Displays information about the inbound message.	Not applicable
Log Details	Used to specify additional comments for the inbound message.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Inbound Message Log** zone.

Statement Construct Preference

Oracle Revenue Management and Billing enables you to create and edit the statement construct of a person through a health care inbound message. However, note that you can create and edit the statement construct of only those persons through a health care inbound message whose record is created via a customer registration object. While creating or editing a statement construct, the system uses the statement construct business object of the customer registration type which is specified in the respective inbound message type.

If the data is not available in the following tags of a health care inbound message while creating a statement construct for a person, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
statementAddressSource	Default Statement Address Source
effectiveStatus	Default Statement Status
statementCycle	Default Statement Cycle
statementFormat	Default Statement Format
statementRouteType	Default Statement Route Type
numberOfCopies	Default Statement Number of Copies

In addition, if the data is not available in the following tag of a health care inbound message while adding an account or contract in a statement construct, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
printOrder	Default Statement Print Order

The system considers the statement construct preference which is specified in the **Field Mapping** parameter of the **C1-HCINPROC** algorithm. You can define, edit, delete, and copy a statement construct preference through the **Field Mapping** screen.

C1-HCINPROC algorithm	C1-HCINPROC on page 2161

Searching for a Statement Construct Preference

Procedure

To search for a statement construct preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Statement Construct** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
A list of statement construct preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Statement Construct Preference Details

Procedure

To view the details of a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the statement construct preference whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the statement construct preference in the **Field Mapping** zone.

Defining a Statement Construct Preference

Prerequisites

To define a statement construct preference, you should have:

- Field mapping business objects defined in the application.
- Statement cycles and statement route types defined in the application
- Values defined in the **STM_ADDR_SRC_FLG** and **STM_FORMAT_FLG** lookup fields.

Procedure

To define a statement construct preference:

- 1. Click the **Admin** link in the **Application** toolbar.
A list appears.
- 2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
- 3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	<p>Used to indicate the business object using which you want to create the statement construct preference. The valid values are:</p> <ul style="list-style-type: none">• Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap) - Enables you to maintain a routing method - contact method mapping preference.• Field Mapping (i.e., C1-FieldMapping) - Enables you to maintain the following:<ul style="list-style-type: none">• Automatic Refund/Write-Off Preference• Billing Preference• Binder Payment Preference• Configuration for Match Type - Handling Overpayment Preference• Delinquency Process Preference• Delinquency Process Type Preference• Geographic Rating Area Preference• Individual Membership Preference• Medicare Preference• Member Reconciliation Preference• Member Relationship and Subscription Tier Preference• Membership Repricing Reasons Preference• Statement Construct Preference• Medicare Plan Benefit Package (i.e., C1-BenefitPackage) - Enables you to maintain a medicare plan benefit package.• Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping) - Enables you to maintain an individual membership status reason preference. <p>Note: The above business objects are shipped with the product. The list includes those business objects which are created using the Field Mapping (i.e., C1-FIELDMAP) maintenance object.</p>	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

- 4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.

5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none">• Active• Inactive	Yes

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	<div>Used to indicate the category to which the preference belongs. The valid values are:<ul style="list-style-type: none">• Automatic Refund/Write-Off• Billing• Binder Payment• Configuration for Match Type - Handling Overpayment• Delinquency Process• Delinquency Process Type• Geographic Rating Area• Individual Membership• Medicare• Medicare Plan Benefit• Member Reconciliation• Member Relationship and Subscription Tier• Membership Repricing Reasons• Membership Status Reason• Routing Method - Contact Method Mapping• Statement Construct</div> <div>Note: The list includes only those values which are defined in the FIELD_CAT_FLG lookup field. You must select the Statement Construct option from the list while creating a statement construct preference.</div>	Yes

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the statement construct preference.	Yes
	Note: The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value.	Yes
	Note: The attribute value list appears only when the attribute is selected from the respective list. The attribute value list varies depending on the attribute that you want to set in the statement construct preference.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> • Account • Adjustment • Billable Charge • Membership • Payment • Policy 	No
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the MAP_ENTITY_FLG lookup field.	

Note: While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

6. Select the **Statement Construct** option from the **Preference Category** list.
The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Set the required attributes in the statement construct preference.
9. If you want to set more than one attribute in the statement construct preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the statement construct preference, click the **Delete (■)** icon corresponding to the attribute.

10. Click **Save**.
The statement construct preference is defined.

Editing a Statement Construct Preference

Prerequisites

To edit a statement construct preference, you should have:

- Statement cycles and statement route types defined in the application
- Values defined in the **STM_ADDR_SRC_FLG** and **STM_FORMAT_FLG** lookup fields.

Procedure

To edit a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the statement construct preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the statement construct preference.	Not applicable
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none">• Active• Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none">• Statement Construct	Not applicable

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the statement construct preference.	Yes
	Note: The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value.	Yes
	Note: The attribute value list appears only when the attribute is selected from the respective list. The attribute value list varies depending on the attribute that you want to set in the statement construct preference.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are:	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none">AccountAdjustmentBillable ChargeMembershipPaymentPolicy	
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the MAP_ENTITY_FLG lookup field.	

Tip: Alternatively, you can click the **Edit** button in the **Field Mapping** zone to edit the details of the statement construct preference.

- 3. Modify the required details in the **Main** section.
- 4. Define, edit, or remove the attribute from the statement construct preference, if required.

Note: You must set at least one attribute in a statement construct preference.

- 5. Click **Save**.
The changes made to the statement construct preference are saved.

Related Topics

How to search for a statement construct preference	Searching for a Statement Construct Preference on page 2569

Copying a Statement Construct Preference

Instead of creating a statement construct preference from scratch, you can create a new statement construct preference using an existing statement construct preference. This is possible through copying a statement construct preference. On copying a statement construct preference, the details including the attributes are copied to the new statement construct preference. You can then edit the details, if required.

Prerequisites

To copy a statement construct preference, you should have:

- Statement construct preference (whose copy you want to create) defined in the application
- Statement cycles and statement route types defined in the application
- Values defined in the STM_ADDR_SRC_FLG and STM_FORMAT_FLG lookup fields.

Procedure

To copy a statement construct preference:

- 1. Search for the statement construct preference in the **Field Mapping** screen.
- 2. In the **Search Results** section, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the statement construct preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> Statement Construct 	Not applicable

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the statement construct preference.	Yes
	Note: The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value.	Yes
	Note: The attribute value list appears only when the attribute is selected from the respective list. The attribute value list varies depending on the attribute that you want to set in the statement construct preference.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> Account Adjustment Billable Charge Membership Payment Policy 	No
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the MAP_ENTITY_FLG lookup field.	

Note: While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

Tip: Alternatively, you can click the **Duplicate** button in the **Field Mapping** zone to create a copy of the statement construct preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the statement construct preference, if required.
5. Click **Save**.

The new statement construct preference is defined.

Deleting a Statement Construct Preference

Procedure

To delete a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the statement construct preference that you want to delete.
A message appears confirming whether you want to delete the statement construct preference.

Tip: Alternatively, you can click the **Delete** button in the **Field Mapping** zone to delete the statement construct preference.

3. Click **OK**.
The statement construct preference is deleted.

Upload Lockbox Payment and Remittance Advices

Topics:

- [Prerequisites](#)
- [EDI 820 Flat File Description](#)
- [Sample EDI 820 Flat File](#)
- [Upload EDI 820 Files in ORMB](#)

Oracle Revenue Management and Billing enables you to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. Under this feature, the payments made by customers are directed to a special post office box instead of going to the company directly. The bank goes to this post office box, retrieves the payments, processes them and deposits the funds directly into the company's bank account.

An EDI 820 payment order or remittance advice is an electronic document that can be used to initiate payments and send remittance information. EDI 820 sends information to vendor furnishing details of payment for his supplies. A remittance advice is a note sent from a customer to their supplier, informing the supplier that they have paid their invoice. The advice may contain elements such as a text note, the invoice number and the invoice amount, among others. Remittance advice is not required, but they are seen as a courtesy since they make it easier for the supplier to match invoices with payments.

To enable this feature, lockbox payment files are required to be uploaded on ORMB and these files have to be allocated to the appropriate accounts. To support multiple lines of business, the lockbox upload needs to:

- Consider the primary identifier when looking for a source customer number match. For customers having multiple source system identifiers, the lockbox process only matches against the one identified as primary customer.
- Incorporate the payment allocation logic in the system on the basis of which the lockbox uploads the payments for the identified customer.

To support remittances which can split a tender across multiple customers:

- Allow source customer number or tax id to be provided as remittance (RMR) values. In case of multiple source customer number or tax id, remittance values are provided for a single tender, the account associated with the first remittance value is set as the payor account. If there is at least one remittance value where a single customer account cannot be determined, the entire tender is placed into general suspense.
- A new payment upload batch **C1-PUPSG** is developed to read lockbox payment files from the bank and load the payment details into the ORMB payment upload staging tables for processing.
- Once the text file is uploaded, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Sample EDI 820 Flat File	Sample EDI 820 Flat File on page 2581
Upload EDI 820 Files in ORMB	Upload EDI 820 Files in ORMB on page 2581

Prerequisites

To setup the upload lockbox payment process, you need to do the following:

- Define the values in the parameters of the **C1-CCPYTSADS** and **C1-MATSATYP** algorithms.
- Lockbox tender types defined in the **C1_LBX_TENDER_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1_LBX_820_RECORD_TYPE** , **C1_LBX_REF_IDQ_LKP**, and **C1_LBX_RMR_ID_TYPE** lookup fields respectively.

EDI 820 Flat File Description

Following is the description of the key field segments in the EDI 820 flat file format:

Field Name	Description												
External Source ID	Uniquely identifies the lockbox.												
External Transmission ID	Uniquely identifies the transmission. To ensure this transmission, the date component (such as, 20150813) should match the deposit date and there should only be one file per deposit date.												
External Batch ID	Uniquely identifies the batch of payments in a transmission. To ensure these payments, if there are multiple ST records in a file, the transaction set control number (such as, 0101, 0202, ..) should be unique.												
Payment Transaction	<p>The following table describes the fields that are included in the payment transaction:</p> <table border="1"> <thead> <tr> <th>Field</th><th>Description</th></tr> </thead> <tbody> <tr> <td>Attributes</td><td> <p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> • Payment Amount • Payment Method • Payment Date • Payor Name </td></tr> <tr> <td>Reference Records</td><td> <p>Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction:</p> <table border="1"> <thead> <tr> <th>External Reference ID Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr> <tr> <td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr> </tbody> </table> </td></tr> </tbody> </table>	Field	Description	Attributes	<p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> • Payment Amount • Payment Method • Payment Date • Payor Name 	Reference Records	<p>Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction:</p> <table border="1"> <thead> <tr> <th>External Reference ID Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr> <tr> <td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr> </tbody> </table>	External Reference ID Value	Description	ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).	CHK	Use the transaction reference number. (Reference Identifier Code TN).
Field	Description												
Attributes	<p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> • Payment Amount • Payment Method • Payment Date • Payor Name 												
Reference Records	<p>Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction:</p> <table border="1"> <thead> <tr> <th>External Reference ID Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr> <tr> <td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr> </tbody> </table>	External Reference ID Value	Description	ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).	CHK	Use the transaction reference number. (Reference Identifier Code TN).						
External Reference ID Value	Description												
ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).												
CHK	Use the transaction reference number. (Reference Identifier Code TN).												

Field Name	Description		
	Field	Description	
		External Reference ID Value	Description
		FWT	Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).
		CAS	Use the transaction reference number. (Reference Identifier Code TN).
		OBP	Use the online payment trace number. (Reference Identifier Code 8G).
	Source Customer Number	Uniquely identifies the customer. This is retrieved from the internal customer number reference record. (Reference Identifier Code is IT).	
	MICR	Uniquely identifies the MICR. (Reference Identifier Code is MICR)	
	Check Number	Uniquely identifies the check number. (Reference Identifier Code is CK)	
Taxpayer Identification Number	Uniquely Identifies the taxpayer. (Reference Identifier Code is EI)		
Remittance Advice	he following table describes the fields that are involved in the remittance advice:		
	Field	Description	
	Attributes	Following are the attributes: <ul style="list-style-type: none">• Invoice Number• Payment Amount	
	Reference Records	Uniquely identifies the remittance advice. The following table indicates the external reference ID based on the payment methods used in the remittance advice:	
		External Reference ID Value	Description
		Billing Account ID	Uniquely identifies the account. (Reference Identifier Code is 12).
		Bill Group ID	Uniquely identifies the billing group. (Reference Identifier Code is U1).

Upload EDI 820 Files in ORMB

A new batch named **Lockbox Payment Upload - Small Group (C1-PUPSG)** is introduced in this release. This batch is used to read the EDI 820 lockbox file received from the bank containing payment details for accounts and uploads the payment details into the ORMB payment upload staging tables. The batch uses the reference ID available in the payment and remittance record (in the specified order) to identify the account in the system:

- Source System Customer Number
- Invoice ID (if the source system customer number is not available)
- MICR (if the source system customer number and invoice ID are not available)

If all three reference IDs are available in the payment and remittance record, the system uses the source system customer number to identify the customer in ORMB. If the customer is found in ORMB, the system then checks whether the identified customer has an account. If the identified customer has one account, the system checks the following:

- If the **Check Binder Payment** parameter in the **Pay Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether the payment is the first payment for the account and the tender used for the payment is not automatic payment. If so, the payment is applied to the **Binder Payment** contract.

- If the **Check Promise To Pay** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active promise to pay for the account. If so, the payment is applied to the **On Account** contract.
- If the **Check Payment Agreement** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active payment agreement request for the account. If so, the payment is applied to the **On Account** contract.

However, if the **Check Binder Payment**, **Check Promise To Pay**, and **Check Payment Agreement** parameters are set to **N**, the payment is applied to the account's open bills in the order of the due date (i.e. oldest bill first). If the payment amount is greater than the account's billed balance plus overpayment threshold amount (defined in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm), the entire amount is applied on the On Account contract. However, if the payment amount is greater than the account's billed balance, but less than account's billed balance plus overpayment threshold amount, the overpayment amount is applied on the On Account contract.

Let us understand this with the help of an example:

Payment Amount	Bill 1 (Due Date 01-Feb-2017)	Bill 2 (Due Date 01-April-2016)	Overpayment Threshold Amount	System Behavior
100	50	50	50	One payment (50\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
150	50	100	120	One payment (100\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
175	60	75	50	One payment (75\$) is created for Bill 2 (oldest due date); One payment (60\$) is created for Bill 1; The remaining amount (40\$) is applied on the On Account contract.
200	50	50	50	The entire amount (200\$) is applied on the On Account contract. This is because the payment amount is greater than the account's billed balance plus overpayment threshold amount.

If the identified customer has multiple accounts, then the payment is applied to the On Account contract. If there are no accounts for the identified customer, or account could not be found in ORMB, or the customer could not be found in ORMB, the payment is applied to the suspense contract defined on the tender source associated with the external source (lockbox) ID.

If the source system customer number is not available, but the invoice ID and MICR are available in the payment and remittance record, then batch uses the invoice ID to find the account for which the invoice is created. Once the account is identified, the system behaves in the similar manner (listed above) when the identified customer has one account.

If the source system customer number and invoice ID are not available, but the MICR is available in the payment and remittance record, then system finds the payment where the same MICR is stamped as a characteristic and then finds the account for which the respective payment is created. In this way, the system derives the account for which the payment must be applied. However, the MICR is used to derive the account only when the **Search Customer Using MICR (Y/N)** parameter in the batch is set to **Y**. Once the account is derived, the system behaves in the similar manner (listed above) when the identified customer has one account.

Following scenarios must be considered before uploading the **EDI 820** file in the system.

Scenario	System Behavior
If the RMR tag contains the bill Id and the NM1 tag contains the binder payment identification value	The system initiates the payment for the bill Id and defines the binder payment identifier value in the Characteristics tab of the Payment screen.
If the RMR tag contains the bill Id but the NM1 tag does not contain the binder payment identification value	The system initiates the payment for the bill Id and does not process further.
If the RMR tag contains some other information besides the bill Id and the NM1 tag contains the binder payment identification value	<p>The system performs the following actions:</p> <ol style="list-style-type: none"> 1. Identifies the appropriate membership using the binder payment identification value provided in the NM1 tag. The binder payment identification value must contain the binder payment applicability flag set to Y. 2. Once the membership is identified and is in the Pending Effectuation status, the system identifies the account of the membership, using the information provided in the RMR tag, and applies the payment against the binder contract. 3. If the membership is in the Active status, the system applies the payment against the account's contract.
If the RMR tag contains some other information besides the bill Id and the NM1 tag does not contain the binder payment identification value	The system identifies the account of the membership using the information provided in the RMR tag and applies the payment against the account's contract.

You can upload payment and remittance advice in the TXT format. You need to ensure that the text file is in the required format; otherwise the file will not be uploaded.

Once the text file is uploaded through the **Lockbox Payment Upload - Small Group (C1-PUPSG)** batch, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Deferred Revenue Recognition

Topics:

- [Prerequisites](#)
- [Deferred Revenue Recognition Status Transition](#)
- [Algorithms Used in Deferred Revenue Recognition](#)
- [Deferred Revenue Recognition Template \(Used for Searching\)](#)
- [Deferred Revenue Recognition Template \(Used for Viewing\)](#)
- [Deferred Revenue Recognition \(Used for Searching\)](#)
- [Deferred Revenue Recognition \(Used for Viewing\)](#)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is \$1200. When this new business is booked, the revenue of \$1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, \$200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information about the deferred revenue recognition statuses, see [Deferred Revenue Recognition Status Transition](#) on page 2587.

Note: The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see [Prerequisites](#) on page 2587.

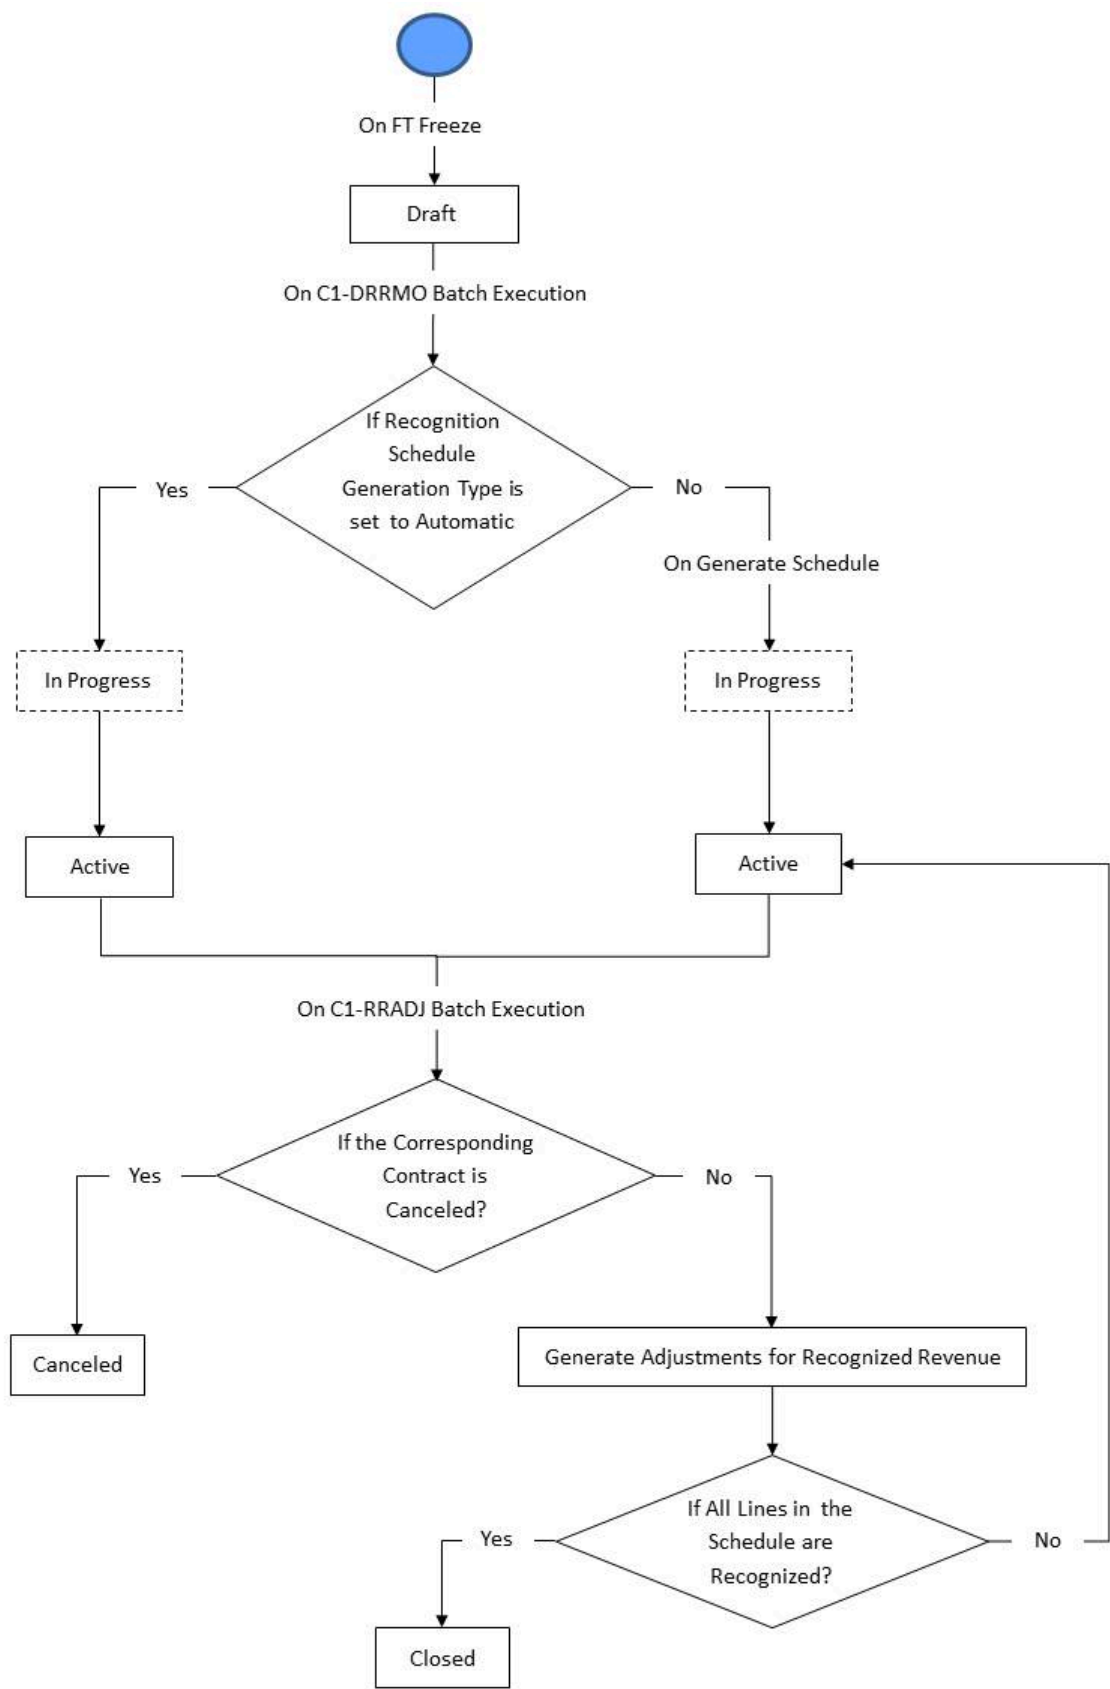

Prerequisites

To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
 - Use Calendar or Business Days (C or B)
 - Override Default Recognition Date (Y or N)
 - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
 - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Deferred Revenue Recognition Status Transition

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	<p>This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter:</p> <ul style="list-style-type: none">• Use Contract Expiration Date (Y or N) - Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.
		C1-REVRECITM	C1-REVRECITM	<p>This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon</p>

Status	System Event	Algorithm	Algorithm Type	Description
				<p>(which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters:</p> <ul style="list-style-type: none"> • Use Calendar or Business Days (C or B) - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory. • Override Default Recognition Date (Y or N) - Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory. • Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun) - Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day. • Override Default Monthly Recognition Date (1-31) - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, ..., 31. This parameter is required when you want to override the default monthly recognition date.
		C1-REVRECADJ	C1-REVRECADJ	<p>This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVITMREC	C1-REVITMREC	<p>If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter:</p> <ul style="list-style-type: none"> • Create Adjustments (Y or N) - Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.
		C1-DRRTM-INF	C1-DRRTM-INF	<p>This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	<p>This algorithm validates the deferred revenue recognition template. It checks the following:</p> <ul style="list-style-type: none"> • Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule. • Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events. • Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination. • Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field. • Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.>> Whether the low proration limit is between 0 to 31 and is less than the high proration limit. <p>In addition, it does not allow you to:</p>

Status	System Event	Algorithm	Algorithm Type	Description
				<ul style="list-style-type: none"> Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition. Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status. Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status. <p>You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.</p>
		C1-DRRSC-INF	C1-DRRSC-INF	<p>This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Deferred Revenue Recognition Status 3. Distribution Code 4. Deferred Revenue Recognition ID
		C1-REVMON	C1-REVMON	<p>This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.</p>
		C1-REVRECINP	C1-REVRECINP	<p>This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none">• Next Status• Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.</p>

Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition Template \(Used for Viewing\)](#) on page 2600

This screen consists of the following zone:

- [Search Deferred Revenue Recognition Template](#) on page 2593

Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none">• Daily• Monthly• Weekly	No
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are:	No

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> Active Inactive 	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	<p>Displays the deferred revenue recognition.</p> <p>Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the respective deferred revenue recognition template.</p>
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

Related Topics

How to view the details of a deferred revenue recognition template	Viewing the Deferred Revenue Recognition Template Details on page 2600
How to search for a deferred revenue recognition template	Searching for a Deferred Revenue Recognition Template on page 2594

Searching for a Deferred Revenue Recognition Template

Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

Defining a Deferred Revenue Recognition Template

Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the deferred revenue recognition template.
- **Parameters** - Used to specify the various parameters for the deferred revenue recognition template.
- **Algorithms** - Used to associate algorithms with the deferred revenue recognition template.
- **Divisions** - Used to associate a deferred revenue recognition template with a division.
- **Characteristics** - Used to define the characteristics for the deferred revenue recognition template.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none">• Active• Inactive	Yes

The **Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition.	Yes
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Distribution Code Search window appears.	
Contract Type	Used to indicate a particular type of contract.	Yes
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> Automatic Manual 	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> Daily Monthly Weekly 	Yes
Allow Proration	Used to allow proration.	Yes
	Note: The Allow Proration field appears when you select Recognition Schedule as Monthly .	
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.	Yes (Conditional)
	Note: This field appears when you check the tick-box for Allow Proration .	
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	(in which it is enrolled) is less than the specified limit, then the amount is prorated.	Note: This field is required when the recognition schedule is selected as monthly and when the Allow Proration check box is selected.
	Note: This field appears when you check the tick-box for Allow Proration .	

4. Enter the required details.
5. Associate algorithms with the deferred revenue recognition template, if required.
6. View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
7. Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
8. Click **Save**.
The deferred revenue recognition template is created.

Related Topics

Deferred Revenue Recognition Template screen	Deferred Revenue Recognition Template (Used for Searching) on page 2593
How to associate algorithms with the deferred revenue recognition template	Associating Algorithms with a Deferred Revenue Recognition Template on page 2597

Associating Algorithms with a Deferred Revenue Recognition Template

Procedure

To associate algorithms with a deferred revenue recognition template:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes
Sequence	Used to specify the sequence number.	Yes
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes

Field Name	Field Description	Mandatory (Yes or No)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the Algorithm field.</p>	

- Enter the required details in the **Algorithms** section.
- If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add** (+) icon, and then repeat 2.

Note: However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete** (🗑️) icon corresponding to the algorithm.

Related Topics

How to define a deferred revenue recognition template	Defining a Deferred Revenue Recognition Template on page 2595
How to edit a deferred revenue recognition template	Editing a Deferred Revenue Recognition Template on page 2603

Associating Deferred Revenue Recognition Template With A Division

Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

Procedure

To associate deferred revenue recognition template with a division:

- Ensure that the **Divisions** section is expanded when you are creating or editing a deferred revenue recognition template.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template.	No
	Note: You can only view those divisions to which you have access in the Division list.	

- Select the required division from the list.
- If you want to associate the deferred revenue recognition template with more than one division, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑) icon corresponding to the division.

4. Click **Save**.
The deferred revenue recognition template is associated with the divisions.

Defining a Characteristic for a Deferred Revenue Recognition Template

Prerequisites

To define a characteristic for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

Procedure

To define a characteristic for a deferred revenue recognition template:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Valued field.	Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete** (🗑) icon corresponding to the characteristic.

Viewing the Deferred Revenue Recognition Template Details

Procedure

To view the details of a deferred revenue recognition template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
The **Deferred Revenue Recognition Template** screen appears.
3. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
4. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to view.

The **Deferred Revenue Recognition Template** screen appears.

5. View the details of the deferred revenue recognition template in the **Deferred Revenue Recognition Template** zone.

Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- [Deferred Revenue Recognition Template](#) on page 2601

Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- Main** - Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none">ActiveInactive

- Parameters** - Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code.
	Note: It has a link. On clicking the link, the Distribution Code screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the Deferred Revenue Recognition Template which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: <ul style="list-style-type: none">ManualAutomatic
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: <ul style="list-style-type: none">DailyMonthlyWeekly
Allow Proration	Used to allow proration.
	Note: The Allow Proration field appears when you select Recognition Schedule as Monthly .
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end

Field Name	Field Description
	of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.
	Note: This field appears when you check the tick-box for Allow Proration .
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.
	Note: This field appears when you check the tick-box for Allow Proration .

- **Divisions** - Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** - Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No
Algorithm	Displays an algorithm that needs to be attached to the selected system event.	No
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.	

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template.
	Note: The Edit button appears when the deferred revenue recognition template is in the Active status.
Delete	Used to delete the deferred revenue recognition template.

-
- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing a Deferred Revenue Recognition Template

Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to edit.
The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.
The **Deferred Revenue Recognition Template** screen appears.

Note: The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.

4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics of the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.
The changes made to the deferred revenue recognition template are saved.

Deleting a Deferred Revenue Recognition Template

Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.

- 2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template that you want to delete.
The **Deferred Revenue Recognition Template** screen appears.
- 3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.
A message appears confirming whether you want to delete the deferred revenue recognition template.
- 4. Click **OK**.
The deferred revenue recognition template is deleted.

Deferred Revenue Recognition (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition \(Used for Viewing\)](#) on page 2610

This screen consists of the following zone:

- [Search Deferred Revenue Recognition](#) on page 2605

Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: <ul style="list-style-type: none">• Account Details• Person Details• Deferred Revenue Recognition Details• Financial Transaction Details• Policy Details	Yes
	Note: By default, the Account Details option is selected.	
Person ID	Used to search deferred revenue recognition which are assigned to a particular person.	No
	Note: This field appears when you select the Person Details option from the Search By list.	
Account ID	Used to search the account ID.	No
	Note: This field appears only when you select the Account Details option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional)
		Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
		Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the Account Details option from the Search By list.	Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier.	Yes (Conditional)
	Note: This field appears when you select the Account Details option from the Search By list.	
Contract ID	Used to specify the contract ID linked to the account.	No
	Note: This field appears when you select the Account Details option from the Search By list.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	Note: This field appears when you select the Person Details option from the Search By list.	
Status	Used to search deferred revenue recognition with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft 	No
	Note: This field appears when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition.	No
	Note: This field appears when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid.	No
	Note: This field appears when you select the Person Details or Account Details option from the Search By list.	
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	
Description	Used to specify the description of the deferred revenue recognition. Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none">• Daily• Monthly• Weekly Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	No
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction. Note: This field appears only when you select the Financial Transaction Details option from the Search By list.	
Policy Type	Used to indicate the type of policy. Note: This field appears when you select the Policy Details option from the Search By list.	Yes
Policy Number	Used to indicate the policy number. Note: This field appears when you select the Policy Details option from the Search By list.	No
Plan Number	Used to indicate the plan number of the policy. Note: This field appears when you select the Policy Details option from the Search By list.	No
Source System	Used to indicate the name of the external system from where the policy originated. Note: This field appears when you select the Policy Details option from the Search By list.	No
Start Date	Used to indicate the date from when the policy is effective.	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the Policy Details option from the Search By list.	
End Date	Used to indicate the date till when the policy is effective. Note: This field appears when you select the Policy Details option from the Search By list.	No

Note: You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective financial transaction.

Searching for a Deferred Revenue Recognition

Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application

- Recognition Schedules defined in the application
- Source Systems defined in the application

Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable**.
A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.
The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

Viewing the Deferred Revenue Recognition Details

Procedure

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2610
- [Deferred Revenue Recognition - Log](#) on page 2613

3. Ensure that the **Main** tab is selected.
4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2610
- [Deferred Revenue Recognition - Log](#) on page 2613

Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- [Deferred Revenue Recognition](#) on page 2610
- [Associated Deferred Revenue Recognitions](#) on page 2612
- [Recognition Schedule](#) on page 2612
- [Revenue Recognition Items](#) on page 2613

Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** - Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction Information screen appears where you can view the details of the financial transaction.
Total Revenue Deferred	Displays the total revenue deferred.

Field Name	Field Description
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	Note: The Edit button appears when the deferred revenue recognition is in the Active status.
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	Note: The Generate Schedule button appears only when the deferred revenue recognition is in the Draft status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> Active Closed Canceled

Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

Note: This zone appears when the deferred revenue recognition is in the **Active** status.

Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. "
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the deferred revenue recognition.

Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- [Deferred Revenue Recognition Log](#) on page 2613

Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

Editing a Deferred Revenue Recognition

Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.
The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.
The **Deferred Revenue Recognition** screen appears.

Note: The **Edit** button appears when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics of the deferred revenue recognition, if required.
7. Click **Save**.
The changes made to the deferred revenue recognition are saved.

Creating the Deferred Revenue Recognition Schedule

Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.

- 2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate. The **Deferred Revenue Recognition** screen appears.
- 3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

Note: The **Generate Schedule** button appears when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

Defining a Characteristic for a Deferred Revenue Recognition

Prerequisites

To define a characteristic for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

Procedure

To define a characteristic for a deferred revenue recognition:

- 1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Deferred Revenue Recognition .	Note: This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the deferred revenue recognition.

2. Enter the required details in the **Characteristics** section.

Note: If you select a characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

3. If you want to define more than one characteristic for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the characteristic.

Related Topics

Adding Related Deferred Revenue Recognitions

Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

Procedure

To add related deferred revenue recognitions:

1. Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Deferred Revenue Recognition Search window appears.	
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transactions Search window appears.	

2. Enter the required details in the **Related Deferred Revenue Recognitions** section.
3. If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the related deferred revenue recognition.

Related Topics

Editing the Deferred Revenue Recognition Schedule Details

Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

Procedure

To edit the details of the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

The **Deferred Revenue Recognition** screen appears.
3. Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.
The **Edit Recognition Schedule** screen appears.

Note: A recognition schedule from the deferred revenue recognition can be edited when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

4. Modify the details of the recognition schedule.
5. If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add (+)** icon and then repeat step 4.

Note: However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete** (■) icon corresponding to the recognition schedule.

6. Click **Save**.

The changes made to the recognition schedule are saved.

Viewing the Log of a Deferred Revenue Recognition

Procedure

To view the log of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2610
- [Deferred Revenue Recognition - Log](#) on page 2613

3. Click the **Log** tab.
The **Log** tab appears.
4. View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

Adding a Log Entry for a Deferred Revenue Recognition

Procedure

To add a log entry for a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to edit.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:.

- [Deferred Revenue Recognition - Main](#) on page 2610
- [Deferred Revenue Recognition - Log](#) on page 2613

3. Click the **Log** tab.
The **Log** tab appears.
4. Click on the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.
The **Add Deferred Revenue Recognition Schedule Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes Or No)
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.	Not applicable
Log Details	Used to specify additional comments for the deferred revenue recognition.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
The log entry is added in the **Deferred Revenue Recognition Log** zone.

Oracle Revenue Management and Billing enables you to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. The system enables you to upload a pay instruction file in the following formats:

- **CSV File Format** - You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch.
- **EDI 820 File Format** - You can upload pay instruction files in the EDI 820 file format from the specified location on the server using the **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.

Note: The **BPR** tag in the EDI 820 file must be set to **I** to indicate that the file contains pay instructions for reconciliation.

While uploading pay instruction files, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Once a file is successfully validated, the reconciliation is created for the file in the **Draft** status. The reconciliation is immediately transitioned to the **Send Notification** status and the algorithms attached to the Send Notification status are executed. Once the To Do is created, the status of the reconciliation is changed to **Pending**. A pay instruction is created for each record in the file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

You need to then specify the payment ID against which you want to reconcile the billed items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the accounts for which you have received the pay instruction. The status of the reconciliation is changed to **Pending Reconciliation**.

On reconciling the pay instructions, the system finds the bill segment against which the pay instruction must be reconciled using the account identifier, policy number, plan number, member identifier, and coverage period combination.

- [Discrepancy Report \(Used for Viewing\)](#)
- [Member Reconciliation Preference](#)

Once the bill segment is identified, the transfer adjustment is created against the bill segment and offset adjustment is created against the respective reconciliation contract. If all pay instructions in the file are successfully reconciled, the status of the reconciliation is changed to **Completed**. However, if one or more pay instruction in the file could not be successfully reconciled, the status of the reconciliation is changed to **Open**. If a file contains a pay instruction for previous coverage period, then system checks whether there is any open pay instruction for that coverage period in the system and accordingly tries to reconcile the pay instruction. However, if an open pay instruction for that coverage period does not exist in the system, the system tries to reconcile the pay instruction against the billed item.

You may manually reconcile the pay instructions which are in the **Pending Reconciliation** status. Alternatively, you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** batch at regular interval to reconcile the pay instructions.

During reconciliation, a pay instruction also goes through various statuses in its lifecycle. You may configure the following two batches to execute at the regular intervals:

- **Pay Instruction Periodic Monitor (for Pending Status) (C1-PIPMO)** - It monitors whether there are any pay instructions in the **Pending** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.
- **Pay Instruction Periodic Monitor (for Open Status) (C1-PIMDF)** - It monitors whether there are any pay instructions in the **Open** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.

If you cancel the payment tender, the payment and reconciliation associated with the payment are automatically canceled. The status of the reconciliation is changed to **Pending Cancellation**. And, the status of all pay instructions in the reconciliation is changed to **Canceled**. If required, you can manually cancel a reconciliation. However, you can cancel a reconciliation when it is in the **Open** or **Completed** status. On canceling a reconciliation, the status of the reconciliation is changed to **Pending Cancellation** and the status of all pay instructions in the reconciliation is changed to **Canceled**.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. It monitors whether there are reconciliations in the **Pending Cancellation** status. If there is a reconciliation in the **Pending Cancellation** status, the status of the reconciliation is changed to **Canceled**.

The system enables you to create a copy of reconciliation when it is in the **Canceled** status. If the number of pay instructions in the reconciliation does not exceed the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a copy of the reconciliation and pay instructions is created in the real time (i.e. immediately). The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

However, if the number of pay instructions in the reconciliation exceeds the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a batch job is automatically created using the **Duplicate Reconciliation (C1-RECUD)** batch. A message appears indicating the batch job ID. This batch job creates a copy of the reconciliation and pay instructions. The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

If the policy number, plan number, and member identifier are specified in a pay instruction, then the pay instruction is reconciled at the main subscriber level. If the policy number and plan number are specified in a pay instruction, then the pay instruction is reconciled at the plan level. However, if the policy number is only specified in a pay instruction, then the pay instruction is reconciled at the policy level.

On reconciling, some pay instructions are fully reconciled against the bill segments, some pay instructions are partially reconciled against the bill segments, and some pay instructions are not reconciled against any bill segments. The system enables you to capture such discrepancies for the reporting purposes. If required, you can generate the discrepancy report at the file or account level. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All billed items which were partially reconciled against pay instructions due to rate variance
- All billed items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. Once you review and finalize the discrepancy report, its status is changed to **Completed**. At a time, you can only have one discrepancy report for the file or account in the **Pending** status. Until, you finalize a discrepancy report, you cannot create another discrepancy report for the file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation is in the **Open** status.

The reconciliation process goes through various statuses in its entire lifecycle. For more information about the reconciliation statuses, see...

- [Reconciliation Status Transition](#) on page 2628
- [Pay Instruction Status Transition](#) on page 2629
- [Discrepancy Report Status Transition](#) on page 2631

Pre-requisites

To setup the Member to Member Reconciliation feature, you need to do the following:

- **Configure the following Characteristics:**
 - Define an account eligible for reconciliation process from an **On-Account Contract** of a Universal Generic account.
 - Populate the Policy ID, or Plan ID, or Membership ID linked with the billable charges.
- Define the bills having the status as **Completed** for reconciliation.
- Define the **Contract Types** for reconciliation.
- Ensure that payment on **Suspense Contract** is available to match against the bills.
- Configure the **Customer Class** algorithm for a payer account.

Reconciliation of Individual Health Insurance Subsidy Payments

Several states have established health insurance exchanges to offer health and dental insurance coverage options to their respective residents. Individuals within these states can compare and purchase coverage from a selection of health and dental plans, which are referred to as Qualified Health Plan (QHP).

Individuals who enroll for these QHPs may be eligible for Federal Tax Credits and Cost-Sharing Reductions (CSRs), which are subsidies based on the subscriber's income, to help pay for their health insurance and lower their out-of-pocket costs. The Centers for Medicare & Medicaid Services (CMS) makes monthly payments to insurers for the individuals who receive these credits.

CMS has established and instituted the State-Based Exchange (SBE) or Federally Facilitated Marketplace (FFM) reconciliation process to ensure that insurers enrollment information aligns with Marketplace enrollment information. The dispute process provides a mechanism for insurers to correct an FFM enrollment record or related payment information that the monthly reconciliation process cannot resolve.

Oracle Revenue Management and Billing (ORMB) may receive either the exact or different payment amount from the exchange for the sponsored charges due to various reasons. ORMB now enables you to reconcile the payments from the exchange against the bill line items for the fully insured individual business, thereby ensuring that the discrepancy is identified and resolved on time to quickly recover the money from CMS via the dispute process.

The reconciliation process in ORMB is enhanced to support both the fully insured group business and fully insured individual business. For the fully insured group business, the system stamped the policy ID and plan ID in the **C1_FT_EXT** table while freezing a financial transaction on the bill completion. These details were later used to reconcile the pay instructions against the bill line items. In this release, the **C1-STMPFTINF** algorithm type (which is attached on the **FT Freeze** system event of a customer class) is enhanced to support the fully insured individual business. It stamps the health plan code and price item in the **C1_FT_EXT** table while freezing a financial transaction on the bill completion for the fully insured individual business. These details are later used to reconcile the pay instructions received from the exchange against the bill line items of the exchange account.

A new field named **Reconciliation Category** is available while defining a reconciliation type. It helps to differentiate between the fully insured group and fully insured individual reconciliation objects. If you want to upload and process a pay instruction file for a fully insured group business using a reconciliation type, you must set the reconciliation category of the reconciliation type to **Group**. However, if you want to upload and process a pay instruction file for a fully insured individual business using a reconciliation type, you must set the reconciliation category of the reconciliation type to **Individual**.

A new algorithm type named **C1-PAYINSEXC** is introduced in this release. You need to attach an algorithm created using the **C1-PAYINSEXC** algorithm type to the **Upload Pay Instructions** system event of a reconciliation type where the reconciliation category is set to **Individual**. This algorithm parses a pay instruction file which is received from the

exchange. It reads each record in the pay instruction file and creates one or more pay instructions in a reconciliation object depending on the number of exchange payment types received in the record. For example, if a record contains information about two exchange payment types (i.e. EP1 and EP2), the system will create two pay instructions for the record - one for EP1 and another for EP2. The exchange payment types (i.e. health insurance coverage) maintained in the CMS system might be different from the price items maintained in ORMB. Therefore, ORMB enables you to map an exchange payment type with a price item using the **C1-PayTypePrcItemMap** extendable lookup. Note that no values are shipped for this extendable lookup from the product. You need to create a value for the **C1-PayTypePrcItemMap** extendable lookup wherein each payment type received from the exchange is mapped to a price item. You can map a price item to one or more payment types based on the requirements.

While creating an algorithm using the **C1-PAYINSEXC** algorithm type, you need to specify the following parameters:

- **Pay Instruction Business Object** - Used to indicate the business object using which you want to create a pay instruction.
- **Date Format** - Used to indicate the format in which you want to store the coverage period start and end dates.
- **Payment Type - Price Item mapping** - Used to indicate the **C1-PayTypePrcItemMap** extendable lookup value using which you want the system to derive the price item for each payment type received from the exchange.

The system enables you to upload a pay instruction file received from the exchange in the CSV file format. You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch. While receiving a pay instruction file from the exchange, you need to ensure that each record in the pay instruction file contains the following information:

- Payor (i.e. exchange person) or its account from where the payment is received
- Subscriber (i.e. individual membership) for whom the payment is received
- Health plan and its coverage period for which the payment is received
- At least one exchange payment type (i.e. health insurance coverage) and its subsidy amount which is sponsored by the exchange

Note:

The system assumes that the exchange person will have only one account. Therefore, if an exchange person has multiple accounts, the system will not allow you to upload and process a pay instruction file received from the respective exchange. Hence, if the exchange person has a single account in the system, you can either provide the payor or its account details in the record. However, if the exchange person has multiple accounts in the system, you must provide the payor's account details in the record.

You can create an exchange person and its account in the system through the health care inbound message. While creating an account for an exchange person, ensure that you set the **Eligible for Member Reconciliation (C1-RCELG)** characteristic of the account to **Y**.

You can specify either the health plan code or Health Insurance Oversight System (HIOS) ID in the record. If you are planning to use the Health Insurance Oversight System (HIOS) ID for a health plan, you need to attach an algorithm created using the **C1-STMPHLPN** algorithm type to the **Enter** system event (with the lowest sequence number) of the **Pending** status in the **C1-MemberReconciliation** business object. This algorithm will then derive the code of the health plan, to which the individual is enrolled for the coverage period, using the HIOS ID. Note that, while creating a pay instruction, the system will derive the health plan code when the HIOS ID is present in the record irrespective of whether the health plan code is present in the record or not. However, if the HIOS ID is not present in the record, the system will use the health plan code that is present in the record.

If a subscriber has enrolled for multiple insurance coverages of a health plan for the same coverage period and if the subscriber is eligible for subsidy for one or more insurance coverages, you will receive the subsidy amount for the respective insurance coverages from the CMS system. The subsidy information is received in the form of exchange payment type and amount. At a time, you can specify maximum 10 exchange payment types and their amounts in each record of a pay instruction file.

The **C1-RECUP** batch is enhanced to support the fully insured individual business. On executing the **C1-RECUP** batch, the system reads the pay instruction file from the specified location and validates it. Once a file is successfully validated, the reconciliation object is created for the file in the **Draft** status. The reconciliation object is immediately transitioned

to the **Send Notification** status and the algorithms attached to the **Send Notification** status are executed. Once the To Do is created, the status of the reconciliation object is changed to **Pending**. One or more pay instructions are created for a record of a pay instruction file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not. While creating a pay instruction, the system derives the health plan code (if not available), individual membership and the exchange account. For more information about the **C1-RECUP** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

You need to then specify the payment ID against which you want to reconcile the bill line items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the exchange accounts for which you have received the pay instruction. The status of the reconciliation object is changed to **Pending Reconciliation**. On reconciling the pay instructions, the system finds the open and unmatched bill line item of the exchange account against which the pay instruction must be reconciled using the health plan, subscriber, price item, and coverage period combination. The system creates a reconciliation adjustment for a pay instruction which is successfully reconciled. While reconciling the pay instructions, the system sets the pay instruction matching level characteristic type of the reconciliation object to **MEMBER**.

You can manually reconcile the pay instructions of a reconciliation object, or you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** or **Pay Instruction Processing Batch (C1-RCPM)** batch at regular intervals to reconcile the pay instructions.

Note: While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level.

For more information about the above batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

If you attach an algorithm created using the **C1-VALMRPYCN** algorithm type to the **Payment Cancellation** system event of the required customer class, the system automatically cancels the payment and reconciliation object associated with the payment when you cancel its corresponding payment tender. The status of the reconciliation object is changed to **Pending Cancellation** and the status of all pay instructions in the reconciliation object is changed to **Canceled**.

If required, you can also manually cancel a reconciliation object. However, you can cancel a reconciliation object only when it is in the **Open** or **Completed** status. On canceling a reconciliation object, the status of the reconciliation object is changed to **Pending Cancellation**. Before canceling a pay instruction, the reconciliation adjustment (if any) corresponding to the pay instruction is also canceled.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. This batch monitors whether there are any reconciliation objects in the **Pending Cancellation** status. If there is a reconciliation object in the **Pending Cancellation** status, the status of the reconciliation object and the status of all pay instructions in the reconciliation object is changed to **Canceled**. For more information about the **C1-RCNMD** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

If all pay instructions in a reconciliation object are successfully reconciled, the system changes the status of the reconciliation object to **Completed**. However, if one or more pay instruction in a reconciliation object is not successfully reconciled, the system changes the status of the reconciliation object to **Open**. If you want the system to automatically reconcile the open pay instructions of the account when you bill the account each time, you need to attach an algorithm created using the **C1-RCLOPNRCN** algorithm type to the **Post Bill Completion** system event of the required customer class. The system will then trigger the reconciliation process to reconcile the open pay instruction against the open and unmatched bill line item of the exchange account and will accordingly update the status of the pay instruction and reconciliation object.

If you attach an algorithm created using the **C1-VLPYINACN** algorithm type to the **Adjustment Cancellation** system event of the adjustment type (using which the reconciliation adjustments are created), the system ensures that no one can cancel a reconciliation adjustment until it is linked to a non-canceled pay instruction.

Reconciliation Discrepancy Report of Individual Health Insurance Subsidy Payments

Until now, you were able to generate the reconciliation discrepancy report at the file or account level for the fully insured group business. Now, in addition, you can generate the reconciliation discrepancy report at the file or account level for the individual health insurance subsidy payments. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All bill line items which were partially reconciled against pay instructions due to rate variance
- All bill line items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. The system will create the discrepancy report in either **Pending** or **Deferred Processing** status. Once you review the discrepancy line items and finalize the discrepancy report, its status is changed to **Completed**.

At a time, you can only have one discrepancy report for a file or an account in the **Pending** or **Deferred Processing** status. Until you finalize a discrepancy report, you cannot create another discrepancy report for the respective file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation object is in the **Open** status.

When you generate a discrepancy report for a pay instruction file which is received from the exchange or when you generate a discrepancy report for an exchange account, the system displays the following additional information for each discrepancy line item along with other details:

- Payor Identifier Type
- Payor Identifier
- Health Plan
- HIOS ID
- Payment Type

Note: Policy number and plan number are displayed instead of the above information when you generate discrepancy report for the fully insured group business.

Deferred Processing Mode for Discrepancy Report Creation

Until now, the reconciliation discrepancy report at the file or account level was only created in the online mode (i.e. immediately). Now, the system provides you with the ability to configure deferred processing mechanism for the reconciliation discrepancy report creation. A new status named **Deferred Processing** is introduced in the lifecycle of the **C1-DiscrepancyReport** business object. On generating a discrepancy report at the file or account level, the discrepancy report is created in the **Draft** status. A new algorithm named **C1-DISCDEF** is attached to the **Enter** system event of the **Draft** status. This algorithm checks whether the number of pay instructions in the non-final status exceeds the deferred count specified in the algorithm. If the number of pay instructions in the non-final status does not exceed the deferred count, the status of the discrepancy report is changed to **Pending**. The system then adds the discrepancy line items in the discrepancy report by comparing each non-final pay instruction against the open and unmatched bill line item of the exchange account.

However, if the number of pay instructions in the non-final status exceeds the deferred count, the status of the discrepancy report is changed to **Deferred Processing**. A new batch named **C1-DRMT** is introduced in this release. This batch

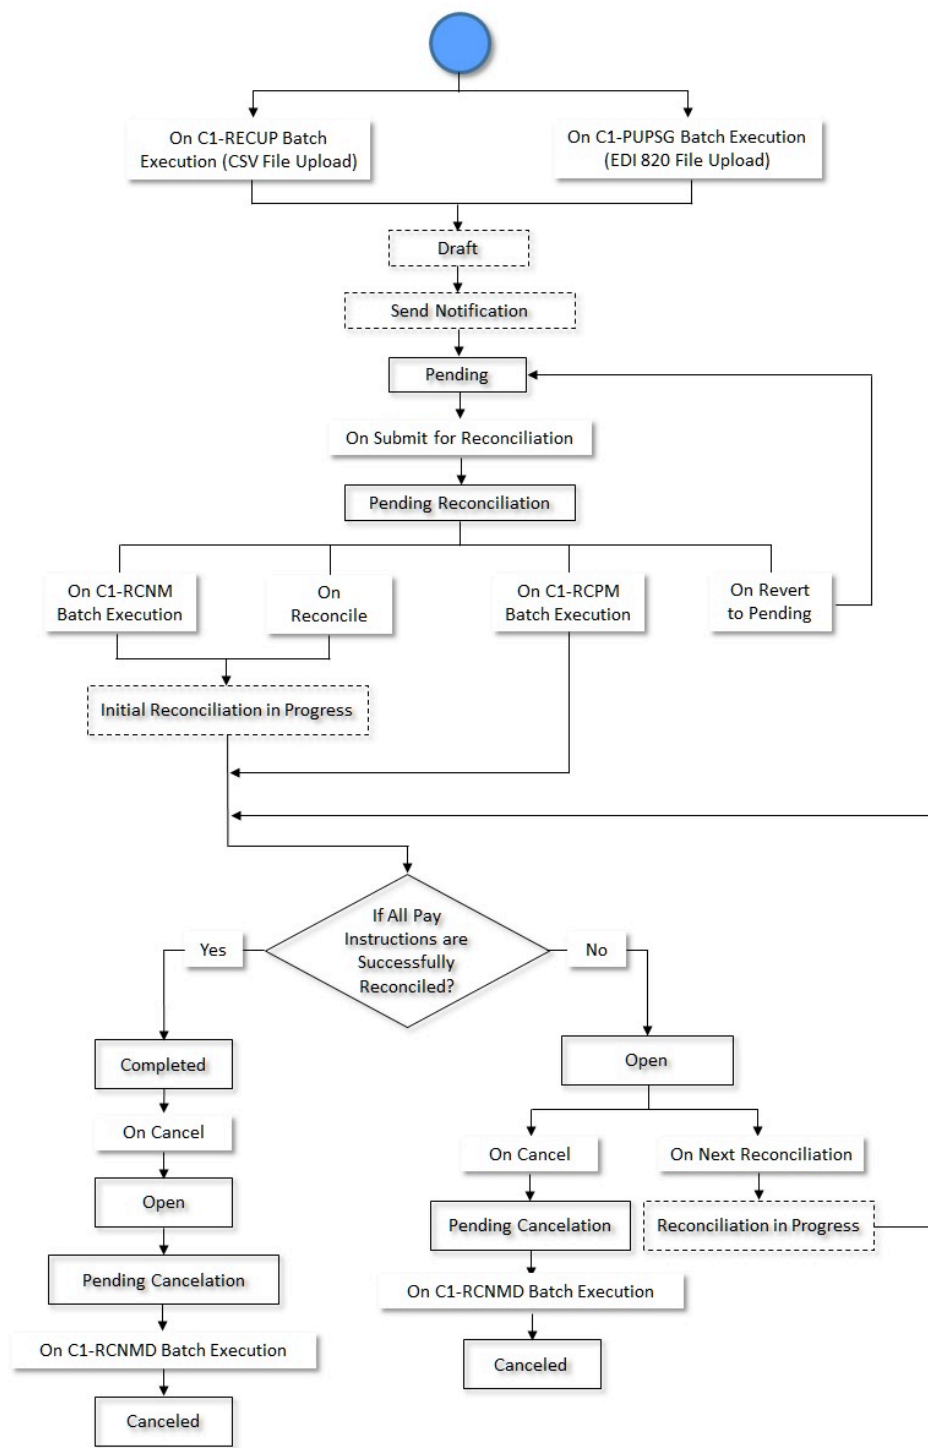

is used to monitor or check whether there are any discrepancy reports in the **Deferred Processing** status. If there is a discrepancy report in the **Deferred Processing** status, the batch changes the status of the discrepancy report to **Pending**. Then, the system adds the discrepancy line items in the discrepancy report by comparing each non-final pay instruction against the open and unmatched bill line item of the exchange account.

This batch is a multi-threaded batch. The multi-threading is based on discrepancy request ID and chunks for multi-threading are created based on numerical distribution of discrepancy request ID. This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
Maintenance Object	Yes	Used to indicate that you want to monitor discrepancy reports which are created using the business objects of a particular maintenance object.
		Note: By default, the parameter value is set to C1-DISCR-RPT .
Restrict by Batch Code	No	Used when you want to monitor discrepancy reports whose current status is linked to the Discrepancy Report Monitor (C1-DRMT) batch. The valid value is true .
Restrict by Discrepancy Report Type	No	Used when you want to monitor the discrepancy reports which are created using a particular discrepancy report type.
Restrict by Business Object	No	Used when you want to monitor discrepancy reports which are created using a particular business object.
Restrict by Status Code	No	Used when you want to monitor discrepancy reports which are in a particular status.
		Note: This parameter is useful when this batch is invoked from more than one status in the lifecycle of the business object.
Override maximum errors	No	Used to override the maximum number of errors after which the batch must be terminated.
Threadpool	No	Used to specify the thread pool on which you want to execute the batch.

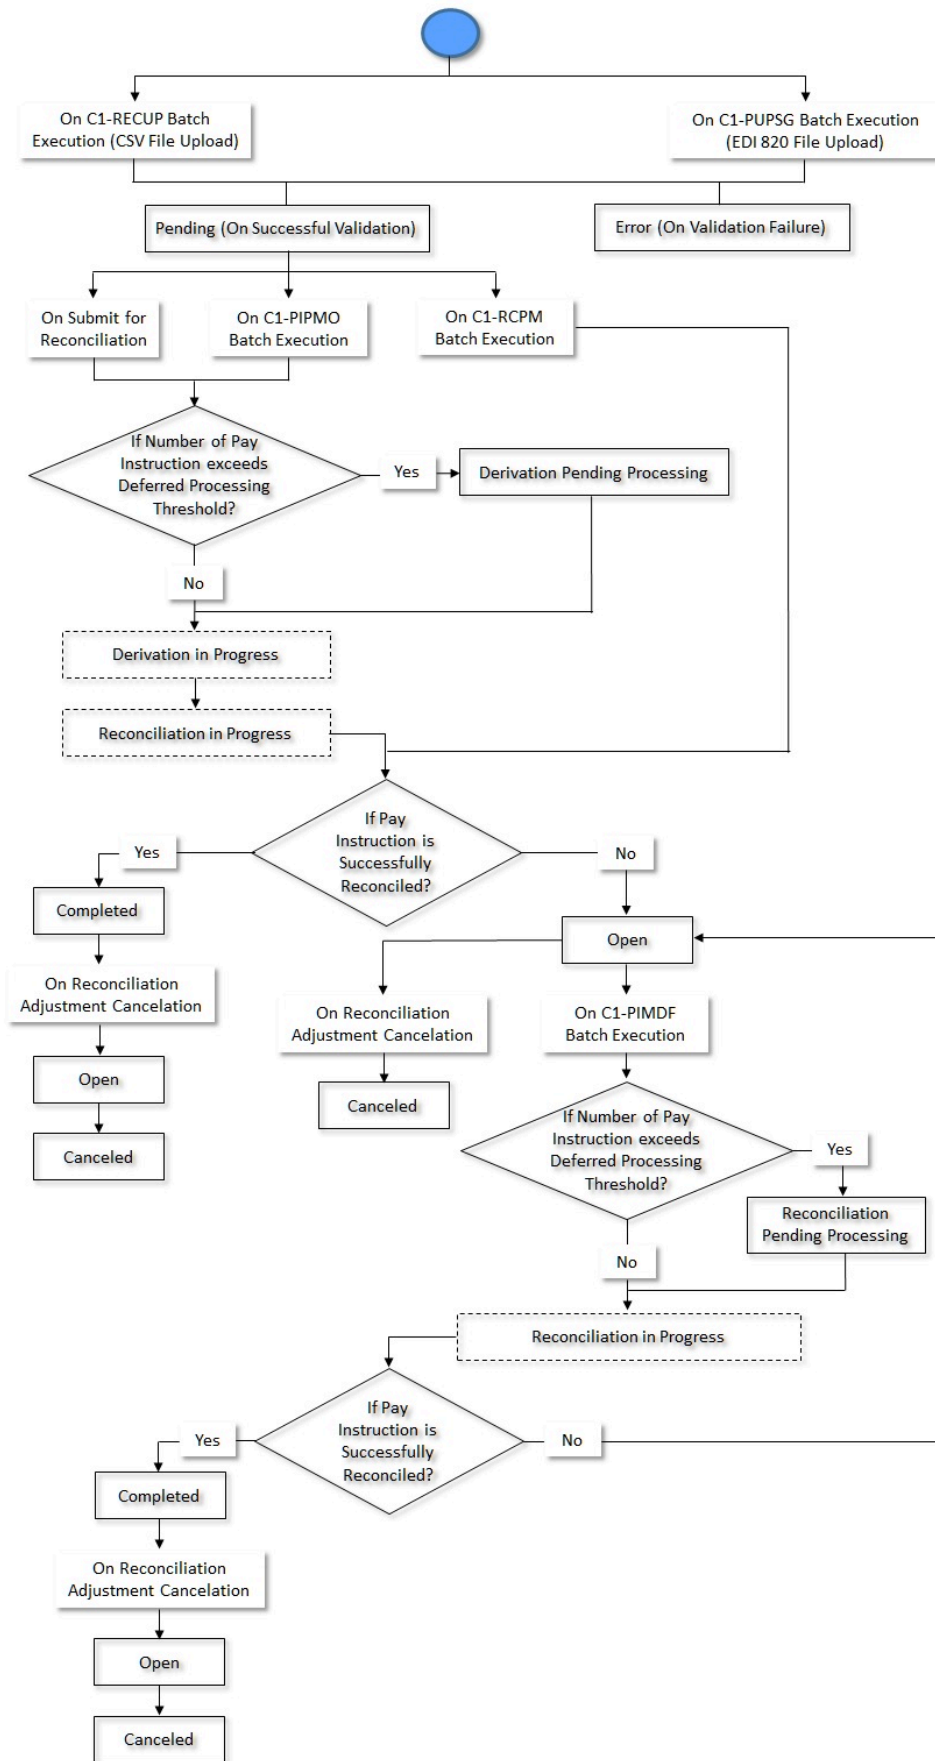

Reconciliation Status Transition

The following figure graphically indicates how a reconciliation goes through various statuses in its lifecycle:

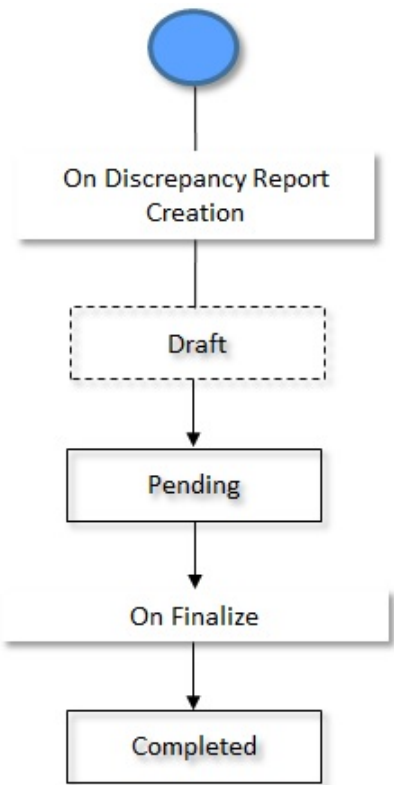

Pay Instruction Status Transition

EDI 820 File Format For Reconciliation

Before uploading an EDI 820 file, you need to ensure that the EDI 820 file contains the following columns:

Tag	Attribute	Description	Mandatory (Yes or No)
Algo Param	Account Identifier Type	Used to specify the account identifier type. The valid values are: <ul style="list-style-type: none">Account NameBase Global Account IDBill Group IdentifierDemo Bank Account NumberExternal Account IdentifierFlexcube Account IDInternational Bank Account Number	Yes (Conditional)
			Note: This data is required when Account Identifier is provided.
N1[3]	Account Identifier value	Used to specify the value of the account identifier type.	Yes (Conditional)
			Note: This data is required when Account Identifier Type is provided.

Tag	Attribute	Description	Mandatory (Yes or No)
Batch Param	Member Identifier type	Used to specify the member identifier type.	Yes
RMR[2]	Policy Number	Used to specify the policy number of the member.	Yes
Algo Param	Plan Number	Used to specify the plan number of the member.	No
ENT[4]	Member Identifier Value	Used to specify the value of the member identifier type.	Yes
RMR[4]	Amount	Used to specify the amount that has to be paid to the member.	Yes
			Note: The data value of this column must be 0, if no amount is provided.
DTM[6]	Coverage Start Date	Used to specify the date of the policy from where the coverage starts.	Yes
		Note: The Coverage Start Date cannot be later than the coverage end date.	
DTM[6]	Coverage End Date	Used to specify the date of the policy till when the coverage ends.	Yes
		Note: The coverage end date cannot be earlier than the coverage start date.	
NM1[4][5]	Member Name	Used to specify the name of the member.	Yes
REF[2]	Plan Number	Used to specify the plan number of the member.	Yes (Conditional)
			Note: This data is required when Algo Param tag does not have a value.
Batch Param	Reconciliation Type	Used to specify the type of reconciliation.	Yes
Batch Param	Reconciliation Cancel Status	Used to specify the Reconciliation Cancellation status.	Yes

Here the tags ISA and IEA resemble Bank Details, whereas LBTEST01 indicates Tender Source information.

Tags like GS and GE, ST and SE are known as Start and End Tags. All of the other tags are embedded inside these Start and End tags.

For more information about the EDI 820 file format, see topic [EDI 820 File Format For Reconciliation](#) on page 2631

Algorithms Used in C1-MemberReconType

The following table lists the algorithms which are attached to the **C1-MemberReconType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-REOCNPEP	C1-REOCNPEP	Refer to C1-REOCNPEP on page 2633

C1-REOCNPEP

This algorithm validates a reconciliation type.

It checks the following:

- A duplicate algorithm is not added.
- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a reconciliation type when the corresponding reconciliation is in a status other than **Completed** or **Canceled**.

Algorithms Used in C1-MemberReconciliation

The following table lists the algorithms which are attached to the **C1-MemberReconciliation** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-RECONINFO	C1-RECONINFO	Refer to C1-RECONINFO on page 2635
Validation	C1-MRECONVAL	C1-MRECONVAL	Refer to C1-MRECONVAL on page 2635

The following table lists the algorithms which are used in the lifecycle of the **C1-MemberReconciliation** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Send Notification	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206
	Enter	C1-RCNCRETD	F1-TDCREATE	Refer to F1-TDCREATE on page 2635
Pending	Enter	C1-VALPAYINS	C1-VALPAYINS	Refer to C1-VALPAYINS on page 2636
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1428
Pending Reconciliation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 206

Status	System Event	Algorithm	Algorithm Type	Description
Void	-	-	-	-

C1-RECONINFO

This algorithm generates the reconciliation information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Reconciliation Type Description
- Reconciliation Status
- Reconciliation ID

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** - Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-TDCREATE

This algorithm is invoked when the status of the reconciliation is changed to **Send Notification**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the reconciliation is created for a pay instruction file.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is created for a pay instruction file.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

C1-VALPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Pending**. Once a pay instruction is created, this algorithm validates the following:

- The coverage end date is not earlier than the coverage start date.
- Either the account identifier type and account identifier or the account ID is available in the pay instruction record.
- The member identifier type is available when the member identifier is specified and vice versa.
- A person with the given member identifier type and member identifier combination exists in the system.
- An account with the specified account ID exists in the system.
- The account ID is derived using the account identifier type and account identifier combination when the account ID is not available in the pay instruction record.
- The account is eligible for reconciliation.

If the above mentioned validations are successful, the status of the pay instruction is set to **Pending**. However, if any of the above validation fails, the status of the pay instruction is set to **Error**.

This algorithm contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** - Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. This type of characteristic is defined on the account. You must specify a characteristic type where the characteristic entity is set to Account.
- **Maintenance Object for Generating Pay Instruction Logs** - Used to specify the maintenance object using which you want to generate logs for the pay instruction.
- **Pay Instruction Error Status** - Used to specify the status code to which you want to transition the pay instruction when the validation fails.
- **Pay Instruction Pending Status** - Used to specify the status code to which you want to transition the pay instruction when the validation is successful.

All these parameters are mandatory.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** - Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

C1-MONPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Initial Reconciliation in Progress** or **Reconciliation in Progress**. It monitors or checks whether there are any pay instructions in the following statuses:

- Reconciliation Pending Processing
- Derivation Pending Processing
- Completed

If all pay instructions in the reconciliation are in the **Completed** status, then the status of the reconciliation is changed to **Completed**. However, if there are any pay instructions in the **Reconciliation Pending Processing** or **Derivation Pending Processing** status, then the status of reconciliation is changed to **Open**.

This algorithm contains the following parameters:

- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which the pending pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
