The **Business Rule Type** screen allows you to search for a business rule type using various search criteria. It also allows you to define, edit and delete a business rule type. It contains the following zone:

- [Search Business Rule Type](#) on page 3448
- [Business Rule Type](#) on page 3451

Search Business Rule Type

The **Search Business Rule Type** zone allows you to search for a business rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Business Rule Type | Used to search a particular business rule type. | No |
| Priority | Used to search a business rule type based on the priority. Note: If you set the priority to a lowest number, the system crawls from the lowest number to the highest, whenever you perform a search for a business rule type. For example, a business rule type with the priority 10 will be searched before a business rule type with the priority 20. | No |
| Description | Used to search a business rule type having a particular description. | No |
| Criteria Sequence | Used to search a business rule type where the business rule criteria has a specific order of execution. Note: This field appears when you click the Advanced Search link. | No |
| Criteria Description | Used to search a business rule type where the business rule criteria has a specific description. Note: This field appears when you click the Advanced Search link. | No |
| Parameter 1 | Used to search a business rule type with a parameter code. | No |

| Field Name | Field Description | Mandatory (Yes or No) | |
|--|---|--|---|
| | <p>Note:</p> <p>This field appears when you click the Advanced Search link.</p> <p>You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> | | |
| Parameter 1 Value | Used to search a business rule type with a parameter value. | Yes (Conditional) <table border="1" data-bbox="1192 705 1471 821"> <tr> <td>Note: This field is required if Parameter 1 is specified.</td> </tr> </table> | Note: This field is required if Parameter 1 is specified. |
| Note: This field is required if Parameter 1 is specified. | | | |
| Parameter 2 | Used to search a business rule type with a parameter code. <table border="1" data-bbox="561 894 1183 1325"> <tr> <td> <p>Note:</p> <p>This field appears when you click the Advanced Search link.</p> <p>You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> </td> </tr> </table> | <p>Note:</p> <p>This field appears when you click the Advanced Search link.</p> <p>You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> | No |
| <p>Note:</p> <p>This field appears when you click the Advanced Search link.</p> <p>You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> | | | |
| Parameter 2 Value | Used to search a business rule type with a parameter value. | Yes (Conditional) <table border="1" data-bbox="1192 1398 1471 1514"> <tr> <td>Note: This field is required if Parameter 2 is specified.</td> </tr> </table> | Note: This field is required if Parameter 2 is specified. |
| Note: This field is required if Parameter 2 is specified. | | | |
| Parameter 3 | Used to search a business rule type with a parameter code. | No | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|---|
| | <p>Note:</p> <p>This field appears when you click the Advanced Search link.</p> <p>You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> | |
| Parameter 3 Value | Used to search a business rule type with a parameter value. | Yes (Conditional) |
| | | Note: This field is required if Parameter 3 is specified. |
| Parameter 4 | Used to search a business rule type with a parameter code. | No |
| | <p>Note:</p> <p>This field appears when you click the Advanced Search link.</p> <p>You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> | |
| Parameter 4 Value | Used to search a business rule type with a parameter value. | Yes (Conditional) |
| | | Note: This field is required if Parameter 4 is specified. |

Note: While searching for the business rule type, always ensure that you provide the parameter and the parameter value in a sequential order.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------|---|
| Business Rule Type | Displays the business rule type which is associated with the parameters of the usage type Business Rule Eligibility Criteria . |
| Description | Displays the description of the business rule type. |

| Column Name | Column Description |
|-------------|---|
| Priority | Displays the priority of the business rule type. |
| Parameters | Indicates the parameters which are associated with the business rule type. |
| Edit | On clicking the Edit (✎) icon, the Business Rule Type screen appears where you can edit the business rule type details. |
| Delete | On clicking the Delete (🗑) icon, you can delete the business rule type. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (⌵) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a business rule type, the **Business Rule Type** zone appears where you can view the details of the respective business rule type.

Business Rule Type

The **Business Rule Type** zone displays the details of the business rule type. It contains the following sections:

- **Main** - Displays basic information about the business rule type. It contains the following fields:

| Field Name | Field Description |
|--------------------|---|
| Business Rule Type | Displays the business rule type. |
| Priority | Displays the priority of the business rule type. |
| Description | Displays the description of the business rule type. |

- **Parameters** - The parameters section lists the parameters associated with the business rule type where the parameter usage is set to **Business Rule Eligibility Criteria**. It contains the following columns:

| Column Name | Column Description |
|-------------|--|
| Sequence | Indicates the order in which the business rule criteria should be executed in the business rule. |
| Parameter | Indicates the parameter which is associated with the business rule type. |

- **Characteristics** - The characteristics section lists the characteristics defined for the business rule type. It contains the following columns:

| Column Name | Column Description |
|---------------------|------------------------------------|
| Characteristic Type | Indicates the characteristic type. |

| Column Name | Column Description |
|----------------------|--|
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the business rule type. |
| Delete | Used to delete the business rule type. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the business rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

Note: By default, the **Business Rule Type** zone does not appear in the **Business Rule Type** screen. It appears when you click the **Broadcast** () icon corresponding to a business rule type in the **Search Business Rule Type** zone.

Searching for a Business Rule Type**Prerequisites**

To search for a business rule type, you should have:

- Parameters defined in the application where the parameter usage is set to **Business Rule Eligibility Criteria**

Procedure

To search for a business rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, click **B** and then click **Business Rule Type**.
A sub-menu appears.
- Click the **Search** option from the **Business Rule Type** sub-menu.
The **Business Rule Type** screen appears.
- Enter the search criteria in the **Search Business Rule Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of business rule types that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Defining a Business Rule Type

Prerequisites

To define a business rule type you should have:

- Parameters defined in the application (where the **Business Rule Eligibility Criteria** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Business Rule Type**).

Procedure

To define a business rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **B** and then click **Business Rule Type**.

A sub-menu appears.

3. Click the **Add** option from the **Business Rule Type** sub-menu.

The **Business Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the business rule type.
- **Parameters** - Used to associate the parameters with the business rule type.
- **Characteristics** - Used to define the characteristics for the business rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Business Rule Type | Used to specify the business rule type. | Yes |
| Priority | Used to specify the priority for the business rule type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| | <p>Note:</p> <p>If you set the priority to a lowest number, the system crawls from the lowest number to the highest, whenever you perform a search for a business rule type. For example, a business rule type with the priority 10 will be searched before a business rule type with the priority 20.</p> <p>The priority cannot be less than or equal to zero.</p> | |
| Description | Used to specify the description for the business rule type. | Yes |

Tip: Alternatively, you can access the **Business Rule Type** screen by clicking the **Add** button in the **Page Title** area of the **Business Rule Type** screen.

4. Enter the required details in the **Main** section.
5. Associate the parameters with the business rule type, if required.
6. Define the characteristics for the business rule type, if required.
7. Click **Save**.

The business rule type is defined.

Associating a Parameter with a Business Rule Type

Prerequisites

To associate a parameter with a business rule type, you should have:

- Parameters defined in the application (where the **Business Rule Eligibility Criteria** option is selected in the **Parameter Usage** section)

Procedure

To associate a parameter with a business rule type:

1. Ensure that the **Parameters** section is expanded when you are defining, editing, or copying a business rule type.

The **Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Sequence | Used to specify the sequence number for the parameter. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| | Note: The sequence cannot be less than or equal to zero. | Note: This data is required while associating the parameters with the business rule type. |
| Parameter | Used to indicate the parameter which you want to associate with the business rule type. Note: The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears. On specifying the value for a parameter, the description of the parameter appears corresponding to the Parameter field. | Yes (Conditional) Note: This data is required while associating the parameters with the business rule type. |

- Enter the required details in the **Parameters** section.
- If you want to associate more than one parameter with the business rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate a parameter from the business rule type, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameter is associated with the business rule type.

Defining a Characteristic for a Business Rule Type

Prerequisites

To define a characteristic for a business rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Business Rule Definition**)

Procedure

To define a characteristic for a business rule type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a business rule type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Characteristic Type | Used to indicate the characteristic type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| | Note: The list includes only those characteristic types where the characteristic entity is set to Business Rule Definition . | |
| Characteristic Value | Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | No |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the business rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the business rule type, click the **Delete (🗑)** icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the business rule type.

Editing a Business Rule Type

Prerequisites

To edit a business rule type you should have:

- Parameters defined in the application (where the **Business Rule Eligibility Criteria** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Business Rule Type**).

Procedure

To edit a business rule type:

- Search for the business rule type in the **Business Rule Type** screen.
- In the **Search Results** section, click the **Edit (✎)** icon in the **Edit** column corresponding to the business rule type whose *details* you want to edit.

The **Business Rule Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the business rule type.
- Parameters** - Used to associate the parameters with the business rule type.
- Characteristics** - Used to define the characteristics for the business rule type

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Business Rule Type | Displays the business rule type. | Not applicable |
| Priority | Used to specify the priority for the business rule type. <div style="border: 1px solid black; padding: 5px;"> <p>Note: If you set the priority to a lowest number, the system crawls from the lowest number to the highest, whenever you perform a search for a business rule type. For example, a business rule type with the priority 10 will be searched before a business rule type with the priority 20. The priority cannot be less than or equal to zero.</p> </div> | Yes |
| Description | Used to specify the description for the business rule type. | Yes |

3. Modify the required details in the **Main** section.
4. Associate or disassociate parameters from the business rule type, if required.
5. Define, edit, or remove characteristics of the business rule type, if required.
6. Click **Save**.

The changes made to the business rule type are saved.

Tip: Alternatively, you can edit the details of a business rule type by clicking the **Edit** button in the **Business Rule Type** zone.

Defining a Business Rule Criteria for a Business Rule Type

Procedure

To define a business rule criteria for a business rule type, you should have:

- Business rule type defined in the application.
- Parameters defined in the application where the parameter usage is set to **Business Rule Eligibility Criteria**.

Procedure

To define a business rule criteria for a business rule type:

1. Search for the business rule type in the **Business Rule Type** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the business rule type whose business rule criteria details you want to edit.

The following zones appear:

- [Business Rule Type](#) on page 3451
 - [Business Rule Criteria](#) on page 3452
3. In the **Business Rule Criteria** zone, click the **Add** link in the upper-right corner of this zone.

The **Business Rule Criteria** screen appears. It contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| Business Rule Type | Displays the business rule type for which you want to define the criteria. |
| Description | Displays the description of the business rule type. |

In addition to these columns, this screen contains additional fields:

| Field Name | Field Description | | | | |
|----------------------|--|------------|-------------------|-----------|---|
| Criteria Sequence | Used to specify the order in which the criteria is executed in the business rule. | | | | |
| Criteria Description | Used to specify the description of the criteria. | | | | |
| Criteria | In addition, this column contains some more additional fields: <table border="1" data-bbox="646 1738 1471 1858"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> </tr> </thead> <tbody> <tr> <td>Parameter</td> <td>Displays the parameter code associated with the criteria.</td> </tr> </tbody> </table> | Field Name | Field Description | Parameter | Displays the parameter code associated with the criteria. |
| Field Name | Field Description | | | | |
| Parameter | Displays the parameter code associated with the criteria. | | | | |

| Field Name | Field Description | |
|------------|-------------------|--|
| | Field Name | Field Description |
| | | Note: This is a read-only field. |
| | Parameter Value | Used to indicate the value of the parameter code. Note: This is a read-only field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears corresponding to the Parameter Value field. |

- Enter the required business rule criteria details.
- If you want to add more than one criteria to the business rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a criteria from the business rule type, click the **Delete** (🗑️) icon corresponding to the criteria sequence field.

- Click **Save**.

The business rule criteria is defined for the business rule type.

Searching for a Business Rule

Prerequisites

To search for a business rule, you should have:

- Business rule criteria defined in the application
- Business rule types associated with the business rule
- Parameters associated with the business rule types and their corresponding values defined in the application
- Business rules defined in the application

Procedure

To search for a business rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, click **B** and then click **Business Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Business Rule** sub-menu.
The **Business Rule** screen appears.
4. Enter the search criteria in the **Search Business Rule** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of business rules that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Defining a Delinquency Grace Period Business Rule

To define a delinquency grace period business rule, you should have:

- Delinquency grace period business rule category defined in the application
- Values defined in the **BUS_RULE_CAT_FLG** lookup field

- Status defined for the delinquency grace period business rule in the application

Procedure

To define a delinquency grace period business rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **B** and then click **Business Rule**.
A sub-menu appears.
3. Click the **Add** option from the **Business Rule** sub-menu.

The **Select Business Category** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|------------------------------|
| Business Rule Category | Used to indicate the business rule category using which you want to create a business rule. The valid values are: <ul style="list-style-type: none"> • Binder Payment Business Rule • Delinquency Event Attributes Business Rule • Delinquency Grace Period Business Rule • Delinquency Miscellaneous Options Business Rule • Delinquency Termination Date Rule Business Rule • Fully-Insured Pricing Business Rule • New Born Business Rule • Rate Guarantee Business Rule | Yes |

Note: Alternatively, you can access the **Business Rule Category** screen by clicking the **Add** button in the **Page Title** area of the **Business Rule** screen.

4. Select the **Delinquency Grace Period Business Rule** option from the **Business Rule Category** list.
5. Click **OK**.

The **Delinquency Grace Period Business Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|------------------------------|
| Criteria Description | Used to indicate the business criteria that an individual membership must satisfy in order to derive the grace period from the business rule. Note: The Search (🔍) icon appears corresponding to the Criteria Description field. On clicking the Search icon, the Business Rule Criteria Search window appears. | Yes |
| Effective Date | Used to specify the date from when the business rule is effective. | Yes |
| Status | Used to indicate the status of the business rule. The valid values are: | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| | <ul style="list-style-type: none"> Active Inactive | |
| Grace Period | <p>Used to specify the number of days which are used to define the grace period end date for the delinquency process.</p> <p>Note:</p> <p>For example, if a delinquency process contains bills with the latest bill due date as 01-Jan-2023, the system considers the latest bill due date as the grace period start date which happens to be 01-Jan-2023. If you have configured the grace period as 30 days, the system calculates the grace period end date as 31-Jan-2023 by using the following formula:</p> <p>Grace Period End Date = Grace Period Start Date + Grace Period</p> <p>If you do not specify the value, by default, it is set to zero(0).</p> | No |

Note: You can edit the business rule when it is not yet used in the system.

- Enter the required details in the **Delinquency Grace Period Business Rule** screen.
- If you want to define more than one delinquency grace period business rule, click the **Add (+)** icon and then repeat step 6.

Note: However, if you want to remove a delinquency grace period business rule, click the **Delete (🗑)** icon corresponding to the **Criteria Description** field.

- Click **Save**.

The delinquency grace period business rule is defined.

Editing a Delinquency Grace Period Business Rule

To edit delinquency grace period business rule, you should have:

- Status defined for the delinquency grace period business rule in the application

Procedure

To edit a delinquency grace period business rule:

1. Search for the delinquency grace period business rule in the **Business Rule** screen.
2. In the **Search Results** section, select the check box corresponding to the **Criteria Description** column and click the **Edit** button.

Note:

You can also edit more than one delinquency grace period business rule by selecting multiple check boxes and clicking the **Edit** button.

You can edit the delinquency grace period business rule when it is not yet used in the system.

The **Delinquency Grace Period Business Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Criteria Description | Indicates the business criteria that an individual membership must satisfy in order to derive the grace period from the business rule. | Not applicable |
| | Note: This is a read-only field. | |
| Effective Date | Used to specify the date from when the business rule is effective. | Yes |
| Status | Used to indicate the status of the business rule. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | No |
| Grace Period | Displays the number of days which are used to define the grace period end date for the delinquency process. | No |
| | Note: For example, if a delinquency process contains bills with the latest bill due date as 01-Jan-2023, the system considers the latest bill due date as the grace period start date which is 01-Jan-2023. If you have configured the grace period as 30 days, the system calculates the grace period end date as 31-Jan-2023 by using the following formula: $\text{Grace Period End Date} = \text{Grace Period Start Date} + \text{Grace Period}$ If you do not specify the value, by default, it is set to zero(0). | |

3. Modify the required details in the **Delinquency Grace Period Business Rule** screen.
4. Click **Save**.

The changes made to the delinquency grace period business rule are saved.

Editing a Delinquency Miscellaneous Options Business Rule

To edit a delinquency miscellaneous options business rule, you should have:

- Status defined for the delinquency miscellaneous options business rule in the application

Procedure

To edit a delinquency miscellaneous options business rule:

1. Search for the delinquency miscellaneous options business rule in the **Business Rule** screen.
2. In the **Search Results** section, select the check box corresponding to the **Criteria Description** column and click the **Edit** button.

Note:

You can also edit more than one delinquency miscellaneous options business rule by selecting multiple check boxes and clicking the **Edit** button.

You can edit the delinquency miscellaneous options business rule when it is not yet used in the system.

The **Delinquency Miscellaneous Options Business Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Criteria Description | Indicates the business criteria that an individual membership must satisfy in order to derive the required parameters from the business rule. | Not applicable |
| | Note: This is a read-only field. | |
| Effective Date | Used to specify the date from when the business rule is effective. | Yes |
| Status | Used to indicate the status of the business rule. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Trigger Date Recalculation On Hold Release | Used to indicate whether the trigger dates of delinquency events should be recalculated when the hold on the delinquency process is released. The valid values are: <ul style="list-style-type: none"> Yes No | No |
| Trigger Date Recalculation On Resume | Used to indicate whether the trigger dates of delinquency events should be recalculated when the delinquency process is resumed after cancellation. The valid values are: <ul style="list-style-type: none"> Yes No | No |
| Trigger Termination Process | Used to indicate when you want the system to send an outbound message to the enrollment system for terminating the individual memberships billed to the delinquent account. The valid values are: <ul style="list-style-type: none"> After X Days - Used when you want the system to send an outbound message for termination after X number of days from the date when the termination event is triggered. Immediate - Used when you want the system to send an outbound message for termination on the same day when the termination event is triggered. Month End - Used when you want the system to send an outbound message for termination at the | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------------|---|-----------------------|
| | end of the month when the termination event is triggered. | |
| Termination Wait Days | Used to specify the number of days after which an outbound message for termination should be sent to the enrollment system. Note: The system sets the termination wait days to zero, if you do not specify a value while defining or editing a delinquency process type. This field is required only when the Trigger Termination Process field in the business rule is set to After X Days . | No |
| Allow Automatic Reinstatement | Used to indicate whether you want to allow automatic reinstatement of the individual membership. The valid values are: <ul style="list-style-type: none"> • Yes • No Note: This field is not applicable for Individual Delinquency . | No |
| Maximum Automatic Reinstatement Count | Used to specify the maximum number of time the system allows automatic reinstatement. Note: This field is not applicable for Individual Delinquency . | No |
| Trigger Reinstatement Process | Used to indicate an option based on which the reinstatement process must be triggered. The valid values are: <ul style="list-style-type: none"> • After X Days • Immediate • Month End Note: This field is not applicable for Individual Delinquency . | No |
| Reinstatement Wait Days | Used to specify the wait period (in days) after which the reinstatement process is triggered. Note: This field is not applicable for Individual Delinquency . | No |
| Reinstatement Threshold | Used to specify the percentage value based on which the automatic reinstatement takes place. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| | Note: This field is not applicable for Individual Delinquency . | |
| Days Since Termination | Used to specify the number of days since the termination effective date for automatic reinstatement to take place. Note: This field is not applicable for Individual Delinquency . | No |
| Member Notification Days | Used to specify the number of days after which the member receives notification. Note: This field is not applicable for Individual Delinquency . | No |
| Add Days to Date of Processing of Termination Request | Used to specify the number of days that you want to add to termination request date in order to derive termination effective date. Note: This field is not applicable for Individual Delinquency . | No |
| Add Days to Grace End Date | Used to specify the number of days that you want to add to grace end date in order to derive termination effective date. | No |
| Add Days to Coverage End Date | Used to specify the number of days that you want to add to coverage end date in order to derive termination effective date. | No |
| Add Days to Paid Through Date | Used to specify the number of days that you want to add to the paid through date (of the account) in order to derive termination effective date. | No |
| Add Months to Paid Through Date | Used to specify the number of months that you want to add to the paid through month (derived from the paid through date of the account) in order to derive termination effective date. | No |

3. Modify the required details in the **Delinquency Miscellaneous Options Business Rule** screen.

Deleting a Business Rule

Procedure

To delete a business rule:

1. Search for the business rule in the **Business Rule** screen.
2. In the **Search Results** section, select the check box corresponding to the business rule which you want to delete. You can delete more than one business rule.
3. Click **Delete**.

A message appears confirming whether you want to delete the business rule.

Note: You can delete a business rule when it is not yet used in the system.

4. Click **OK**.

The business rule is deleted.

Young Adult Coverage in an Individual Membership

Oracle Revenue Management and Billing enables you to calculate premium for the young adults who are covered in an individual membership. While creating or editing an individual membership, or while adding, editing, or inactivating a member person in an individual membership through a health care inbound message or through membership repricing inbound web service, the system derives the fully-insured pricing business rule for the individual membership. The system enables you to define the following young adult related output parameters in the fully-insured pricing business rules:

- **Young Adult Applicability** – Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Yes** and **No**.
- **Young Adult Max Age Limit** – Used to indicate the maximum age limit for young adults who are eligible for premium calculation. This output parameter is mandatory when the **Young Adult Applicability** parameter is set to **Yes**.

While deriving member relationship for each member person of the individual membership from a member relationship structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Similarly, while deriving subscription tier for the individual membership from a subscription tier structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Thus, while calculating the premium for an individual membership using an age based or tier based pricing rule, the system considers the young adult for the premium calculation based on the above two parameters set in the fully-insured pricing business rule.

Chapter 42

Individual Health Insurance Billing

While calculating the premium for an individual membership using an age based pricing rule, the system derives the rate for each eligible member person. The system identifies members which are eligible for premium calculation using the fully-insured pricing and new born business rules.

On creating or editing an individual membership through a health care inbound message or membership repricing inbound web service, the system determines the fully-insured pricing and new born business rules which are applicable for the individual membership. The system enables you to define business rules of the following categories:

- Fully-Insured Pricing
- New Born

While determining the business rules which are applicable for an individual membership, the system executes the business rules of each category which are effective on the inbound processing date based on the priority of the business rule. If an individual membership meets the criteria of the business rule, the system stamps the respective business rule corresponding to the individual membership. In this way, the system derives two business rules – one fully-insured pricing business rule and another new born business rule.

While calculating the premium for an individual membership using a tier based pricing rule, the system derives the subscription tier using the fully-insured pricing and new born business rules.

Once the premium is calculated for an individual membership, the system creates a billable charge for the premium. If the account is defined for the individual membership using the characteristic types specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLNG** feature configuration, the system uses the account to bill the charge for the premium. However, if these characteristics are not defined for the individual membership, the system considers the account of the financially responsible member person to the charge for the premium.

Chapter 43

Entity Audit

Topics:

- [Audit Event Status Transition](#)
- [Prerequisites](#)
- [Entity Audit Process](#)
- [Algorithms Used in the Entity Audit Process](#)
- [Audit Event Type](#)
- [Audit Event \(Used for Searching\)](#)
- [Audit Event \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides a mechanism wherein auditors can track various actions, such as add, update, and delete for an entity. If the entity audit feature is enabled for a business object, the system creates audit events whenever you define, edit, or delete an entity (which is created using the respective business object). For example, if the entity audit feature is enabled for the **C1-Membership** business object, the system creates an audit event whenever you define, edit, or delete a membership in a policy plan or whenever you add or remove persons from a membership. For more information on how to enable the entity audit feature for a business object, see [Prerequisites](#) on page 3510.

The entity audit process is a two-step process, wherein the system creates the audit events and then processes them whenever the **Audit Event Processing (C1-AUDEV)** batch is executed. For more information about these processes, see the following sections:

- [Audit Event Creation](#) on page 3511
- [Audit Event Processing](#) on page 3512

During the entity audit process, each audit event goes through various statuses in its lifecycle. For more information about the audit event statuses, see [Audit Event Status Transition](#) on page 3510.

Audit Event Status Transition

The following figure graphically indicates how an audit event moves from one status to another in its lifecycle:

Prerequisites

To setup the entity audit feature for a business object, you need to do the following:

- Set the **Eligible for Audit Event** option type of the entity business object to **Y**.

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **C1AT**.

- Attach an algorithm created using the **C1-READEVNT** algorithm type to the **Audit** system event of the entity business object.

Note:

At present, this algorithm is designed to work with the following business objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

If you want to use the audit algorithm for the business objects which are not listed above, you need to create a custom audit algorithm.

- Define an active audit event type for the entity business object in the system.
- Define the required algorithm types where the algorithm entity is set to **Audit Event Processing**.
- Create the required algorithms and attach them to the **Audit Event Processing** system event of the audit event type.

Note: The **C1-AUDEVMPR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the audit event types which are defined for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects.

- Define the values for the **AUDIT_USAGE_FLG** lookup field
- Define the required characteristic types where the characteristic entity is set to **Audit Event Type**.

Entity Audit Process

The entity audit process consists of the following two sub-processes:

- [Audit Event Creation](#) on page 3511
- [Audit Event Processing](#) on page 3512

Audit Event Creation

If you add, edit, or delete an entity which is created using a business object for which the entity audit feature is enabled, the system checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

For more information about the audit event type, see [Audit Event Type](#) on page 3513.

The audit event is created in the **Pending** status. Note that the system creates one audit event for the entity irrespective of the number of changes made during the entity update. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. For example, if the audit event is created

while adding or updating a pricing rule, then the entity type is set to **Pricing Rule** and entity ID is set to the pricing rule ID. In addition, an effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

At a time, you can have only two audit events for the entity in the **Pending** status — one audit event which is created during the **Add** action and another audit event which is created during the **Update** action.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

Audit Event Processing

On executing the **Audit Event Processing (C1-AUDEV)** batch, the system checks whether there are any audit events in the **Pending** status. If there is an audit event in the **Pending** status, the system checks whether an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type. If an algorithm is not attached to the **Audit Event Processing** system event of the respective audit event type, the status of the audit event is set to **Complete**.

However, if an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type, the system executes the algorithm and accordingly changes the status of the audit event to **Complete**. For example, while processing the audit events of the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects, the system checks whether an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type. If the **C1-AUDEVMPR** algorithm is attached to the audit event type, the system identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates an entry for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of these entries is set to **P**. Finally, the status of the audit event is set to **Complete**.

If any error occurs, the status of the audit event is set to **Error**. The system enables you to either reprocess or cancel the audit events which are in the **Error** status. On canceling an audit event, the status of the audit event is changed to **Canceled**.

For more information about the **Audit Event Processing (C1-AUDEV)** batch and its parameters, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in the Entity Audit Process

The following table lists the algorithms which are designed to implement the entity audit process:

| Algorithm | Algorithm Type | Attached To | System Event | Algorithm Description |
|------------------|------------------|---|------------------------|---|
| C1- REAUDEVNT | C1- REAUDEVNT | Entity Business Object | Audit | Refer to C1-REAUDEVNT on page 3512. |
| C1- AUDEVMPR | C1- AUDEVMPR | Audit Event Type of the C1-PricingRuleAgeBased and C1-PricingRuleTierBased business objects | Audit Event Processing | Refer to C1-AUDEVMPR on page 3513. |

C1-REAUDEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

At present, this algorithm is designed to work with the following business objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

If you want to use the audit algorithm for the business objects which are not listed above, you need to create a custom audit algorithm.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-AUDEVMPR

You must attach this algorithm to the **Audit Event Processing** system event while creating an audit event type for the **C1-PricingRuleAgeBased** and **C1-PricingRuleTierBased** business objects.

This algorithm is invoked when the **Audit Event Processing (C1-AUDEV)** batch is executed. If this algorithm is attached to the **Audit Event Processing** system event of the respective audit event type, the system identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates an entry for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of these entries is set to **P** in the **CI_REPRC_ENTITY_DTL** table.

Audit Event Type

Oracle Revenue Management and Billing enables you to define an audit event type for an entity business object. However, at a time, only one audit event type of the entity business object can be in the **Active** status. The system

creates an audit event using the active audit event type whenever you define, edit, or delete the respective entity. The audit event type helps the system to determine:

- **Entity Business Object** – The business object for which you want to define the audit event type.
- **Audit Usage** – The usage indicates the purpose of auditing an entity which is created using the entity business object. For example, membership premium charges might change due to change in pricing and therefore you may want to audit the pricing rules for premium calculation.
- **Audit Actions** – The various options, such as **Add Action**, **Delete Action**, and **Update All** are available while defining an audit event type. The system creates an audit event while defining, editing or deleting an entity depending on whether the respective option is selected in the audit event type. For example, if you create the active audit event types for the following entity business objects where the below listed options are selected:

| Audit Event Type | Entity Business Object | Add Action | Update All | Delete Action |
|------------------|------------------------|------------|------------|---------------|
| AETY1 | C1-POLICY | Y | N | N |
| AETY2 | C1-ASOPolicy | Y | Y | Y |

Then, the system will create an audit event using the **AETY1** audit event type when you define a fully-insured group policy. But, the system will not create an audit event when you edit or delete a fully-insured group policy. However, the system will create an audit event using the **AETY2** audit event type when you define, edit, or delete a self-funded policy.

- **Audit Elements During Update** – Alternatively, you can list the elements of the entity business object which should be monitored for the auditing purpose while editing an entity in the audit event type. You can list the elements of the entity business object when the **Update All** option is not selected. The system enables you to monitor a set of the business object statuses, characteristic types, and fields and accordingly creates an audit event while editing an entity. For example, if you create the audit event types for the following entity business objects:

| Audit Event Type | Entity Business Object | Update All | Audit Elements During Update |
|------------------|-------------------------|------------|---|
| AETY3 | C1_PERSON_BO | Y | Not applicable |
| AETY4 | C1-PricingRuleTierBased | N | Pricing Start Date, Rate Option, Base Fee for a Price Component |
| AETY5 | C1-PricingRuleAgeBased | N | Rate Option, Base Fee for a Price Component |

Then, the system will create an audit event using the **AETY3** audit event type when you edit any details of a person. But, the system will create an audit event using the **AETY4** audit event type when the following fields in a tier based pricing rule are edited:

- Pricing Start Date
- Rate Option
- Base Fee for a Price Component

Similarly, the system will create an audit event using the **AETY5** audit event type when the following fields in an age based pricing rule are edited:

- Rate Option
- Base Fee for a Price Component

The **Audit Event Type** screen allows you to define, edit, copy, and delete an audit event type. It contains the following zones:

- [Audit Event Type List](#) on page 3515
- [Audit Event Type](#) on page 3516

Audit Event Type List

The **Audit Event Type List** zone lists the audit event types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Audit Event Type | Displays the audit event type. |
| Description | Displays the description of the audit event type. |
| Entity Business Object | Indicates the business object for which the audit event type is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status | Indicates the status of the audit event type. The valid values are: <ul style="list-style-type: none"> Active Inactive |
| Audit Usage | Indicates the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. |
| Edit | On clicking the Edit () icon, the Audit Event Type screen appears where you can edit the details of the audit event type. Note: You can edit an audit event type when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following: <ul style="list-style-type: none"> Change the status from Active to Inactive and vice-versa Attach algorithms (if required) to the audit event type Define, edit, or remove characteristics of the audit event type |
| Duplicate | On clicking the Duplicate () icon, the Audit Event Type screen appears where you can define a new audit event type using an existing audit event type. |
| Delete | On clicking the Delete () icon, you can delete the audit event type. Note: You can delete an audit event type when an audit event is not yet created using the audit event type. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status** and **Entity Business Object**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to an audit event type, the **Audit Event Type** zone appears with the details of the respective audit event type.

Audit Event Type

The **Audit Event Type** zone displays the details of the audit event type. It contains the following sections:

- **Main** - Displays basic information about the audit event type. It contains the following fields:

| Field Name | Field Description |
|------------------------|---|
| Audit Event Type | Displays the audit event type. |
| Description | Displays the description of the audit event type. |
| Detailed Description | Displays additional information about the audit event type. |
| Status | Indicates the status of the audit event type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Entity Business Object | Indicates the business object for which the audit event type is defined. In addition, this field has a context menu which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Audit Usage | Indicates the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> • Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. • Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. |
| Update All | Indicates whether an audit event must be created whenever any field, characteristic, or status of the entity is updated. |
| Add Action | Indicates whether an audit event must be created whenever an entity is added. |
| Delete Action | Indicate whether an audit event must be created whenever an entity is deleted. |

- **Algorithms** - Lists the algorithms associated with the audit event type. It contains the following columns:

| Column Name | Column Description |
|--------------|--|
| System Event | Indicates the system event when the algorithm must be triggered. The valid value is: <ul style="list-style-type: none"> • Audit Event Processing |
| Sequence | Indicates the order in which the algorithms with the same system event must be triggered. |
| Algorithm | Indicates the algorithm attached to the system event. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. |

- **Audit Elements for Entity Update** - Lists the elements which must be monitored for auditing while updating the entity. It contains the following columns:

| Column Name | Column Description | | | | | | |
|------------------------|---|--------------|---------------|------------------------|--|----------------|---|
| Element Type | Indicates the type of element. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field | | | | | | |
| Element Name | Displays the element which must be monitored for auditing. Note: If the element is a part of a group or list, the system displays the element name along with the element group and/or list. For example, if you select the policyPerRole element of the C1-ASOPolicy business object, the system displays the <code>policyPersons/policyPerRole</code> in the Element Name field. Here, the policyPersons is the element list. | | | | | | |
| Element Value | The following table lists the element value depending on the element type: <table border="1" data-bbox="610 1299 1463 1518"> <thead> <tr> <th>Element Type</th> <th>Element Value</th> </tr> </thead> <tbody> <tr> <td>Business Object Status</td> <td>Indicates the status of the entity business object which must be monitored for auditing.</td> </tr> <tr> <td>Characteristic</td> <td>Indicates the characteristic type which must be monitored for auditing.</td> </tr> </tbody> </table> Note: The data does not appear in this column when the element type is set to Field . | Element Type | Element Value | Business Object Status | Indicates the status of the entity business object which must be monitored for auditing. | Characteristic | Indicates the characteristic type which must be monitored for auditing. |
| Element Type | Element Value | | | | | | |
| Business Object Status | Indicates the status of the entity business object which must be monitored for auditing. | | | | | | |
| Characteristic | Indicates the characteristic type which must be monitored for auditing. | | | | | | |

- **Characteristics** - Lists the characteristics which are defined for the audit event type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the audit event type. |
| | <p>Note: You can edit an audit event type when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following:</p> <ul style="list-style-type: none"> • Change the status from Active to Inactive and vice-versa • Attach algorithms (if required) to the audit event type • Define, edit, or remove characteristics of the audit event type |
| Delete | Used to delete the audit event type. |
| | <p>Note: You can delete an audit event type when an audit event is not yet created using the audit event type.</p> |
| Duplicate | Used to create a new audit event type using an existing audit event type. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the audit event type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |

By default, the **Audit Event Type** zone does not appear in the **Audit Event Type** screen. It appears when you click the **Broadcast** () icon corresponding to an audit event type in the **Audit Event Type List** zone.

Defining an Audit Event Type

Prerequisites

To define an audit event type, you should have:

- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object (for which you want to define an audit event type) set to **Y**

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

- Values defined for the **AUDIT_USAGE_FLG** lookup field

Procedure

To define an audit event type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Audit Event Type**.
A sub-menu appears.
3. Click the **Add** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

Note: The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define the characteristics for the audit event type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|------------------------------|
| Audit Event Type | Used to specify the audit event type. | Yes |
| | Note: You cannot specify any special characters except hyphen and underscore in the audit event type. | |
| Business Object | Indicates the business object using which you are defining the audit event type. | Not applicable |
| Description | Used to specify the description for the audit event type. | Yes |
| Detailed Description | Used to specify additional information about the audit event type. | No |
| Status | Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: You can create only one audit event type in the Active status for an entity business object. | |
| Entity Business Object | Used to indicate the business object for which you want to define the audit event type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|--|
| | Note: The list includes only those business objects where the Eligible for Audit Event option type is set to Y . | |
| Audit Usage | Used to indicate the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> • Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. • Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. | Yes |
| Update All | Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated. | No |
| Add Action | Used to indicate whether you want to create an audit event whenever the entity is added. | Yes (Conditional) Note: This field is required when you want to create an audit event while adding the entity. |
| Delete Action | Used to indicate whether you want to create an audit event whenever the entity is deleted. | Yes (Conditional) Note: This field is required when you want to create an audit event while deleting the entity. |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Audit Event Type** screen.

4. Enter the required details in the **Main** section.
5. Associate the required algorithms with the audit event type.
6. Add elements (such as, field, characteristic, or status) which you want to monitor for auditing while updating the entity.

Note: You can list the elements for auditing when the **Update All** option is not selected in the **Main** section.

7. Define characteristics for the audit event type, if required.
8. Click **Save**.

The audit event type is defined.

Associating an Algorithm with an Audit Event Type

Prerequisites

To associate an algorithm with an audit event type, you should have:

- Algorithms defined in the application (which are created using an algorithm type where the algorithm entity is set to **Audit Event Processing**)

Note: The **C1-AUDEVMPR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the audit event types which are defined for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects.

Procedure

To associate an algorithm with an audit event type:

- Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying an audit event type.

The **Algorithms** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|---|
| System Event | Used to indicate the system event when you want to trigger the algorithm. The valid value is: <ul style="list-style-type: none"> Audit Event Processing - Used when you want to trigger the attached algorithm while executing the Audit Event Process Monitor (C1-AUDEV) batch. | Yes (Conditional) Note: This field is required when you are associating an algorithm with the audit event type. |
| Sequence | Used to indicate the order in which the algorithms with the same system event should be triggered. | Yes (Conditional) Note: This field is required when you are associating an algorithm with the audit event type. |
| Algorithm | Used to indicate the algorithm that you want to attach to the system event. Note: Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field. | Yes (Conditional) Note: This field is required when you are associating an algorithm with the audit event type. |

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the audit event type, click the **Add (+)** icon, and then repeat step 2.

Note: However, if you want to remove an algorithm from the audit event type, click the **Delete (🗑)** icon corresponding to the algorithm.

Adding an Element for Auditing in an Audit Event Type

Prerequisites

To add an element for auditing in an audit event type, you should have:

- Required elements defined in the entity business object schema
- Required statuses defined in the lifecycle of the entity business object
- Required characteristic types defined in the application (where the characteristic entity is set to the respective entity)

Procedure

To add an element for auditing in an audit event type:

1. Ensure that the **Audit Elements for Entity Update** section is expanded when you are defining, editing, or copying an audit event type.

The **Audit Elements for Entity Update** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
|------------------------|--|--|--------------|------------------------|----------|----------------|--|--|
| Element Type | Used to indicate the type of element. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field | Yes (Conditional) Note: This field is required when you want to create an audit event whenever the specified element is updated. | | | | | | |
| Element Name | Used to specify the element which you want to monitor while updating the entity. The following table lists the elements which you must select for the respective element type: <table border="1" data-bbox="542 1703 1182 1911"> <thead> <tr> <th>Element Type</th> <th>Element Name</th> </tr> </thead> <tbody> <tr> <td>Business Object Status</td> <td>boStatus</td> </tr> <tr> <td>Characteristic</td> <td>characteristics/characteristicsList/characteristicType</td> </tr> </tbody> </table> | Element Type | Element Name | Business Object Status | boStatus | Characteristic | characteristics/characteristicsList/characteristicType | Yes (Conditional) Note: This field is required when you want to create an audit event whenever the specified element is updated. |
| Element Type | Element Name | | | | | | | |
| Business Object Status | boStatus | | | | | | | |
| Characteristic | characteristics/characteristicsList/characteristicType | | | | | | | |

| Field Name | Field Description | | Mandatory (Yes or No) | | | | | | |

Defining a Characteristic for an Audit Event Type

Prerequisites

To define a characteristic for an audit event type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Audit Event Type**)

Procedure

To define a characteristic for an audit event type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an audit event type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| | Note: The list includes only those characteristic types where the characteristic entity is set to Audit Event Type . | Note: This field is required when you are defining a characteristic for the audit event type. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears where you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the audit event type. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the audit event type, click the **Add** (+) icon, and then repeat step 2.

Note: However, if you want to remove a characteristic from the audit event type, click the **Delete** (🗑️) icon corresponding to the characteristic.

| How to edit an audit event type | Editing an Audit Event Type on page 3525 |
| How to copy an audit event type | Copying an Audit Event Type on page 3528 |

Editing an Audit Event Type

You can edit an audit event type when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following:

- Change the status from **Active** to **Inactive** and vice-versa
- Attach algorithms (if required) to the audit event type
- Define, edit, or remove characteristics of the audit event type

Prerequisites

To edit an audit event type, you should have:

- Values defined for the **AUDIT_USAGE_FLG** lookup field

Procedure

To edit an audit event type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Audit Event Type**.

A sub-menu appears.

3. Click the **Search** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears.

4. In the **Audit Event Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the audit event type whose details you want to edit.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

Note: The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define the characteristics for the audit event type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Audit Event Type | Displays the audit event type. | Not applicable |
| Business Object | Indicates the business object which is used while defining the audit event type. | Not applicable |
| Description | Used to specify the description for the audit event type. | Yes |
| Detailed Description | Used to specify additional information about the audit event type. | No |
| Status | Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: You can create only one audit event type in the Active status for an entity business object. | |
| Entity Business Object | Indicates the business object for which the audit event type is defined. | Not applicable |
| Audit Usage | Used to indicate the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> • Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|--|
| | <ul style="list-style-type: none"> Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. | |
| Update All | Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated. | No |
| Add Action | Used to indicate whether you want to create an audit event whenever the entity is added. | Yes (Conditional) Note: This field is required when you want to create an audit event while adding the entity. |
| Delete Action | Used to indicate whether you want to create an audit event whenever the entity is deleted. | Yes (Conditional) Note: This field is required when you want to create an audit event while deleting the entity. |

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Audit Event Type** zone.

- Modify the required details in the **Main** section.
- Associate or disassociate the required algorithms from the audit event type.

Note: If an audit event is created using the audit event type, you cannot edit or remove algorithms from the audit event type. In such case, you can only associate additional algorithms with the audit event type.

- Add, edit, or remove elements from the audit event type, if required.

Note:

The **Audit Elements for Entity Update** section is enabled when the **Update All** option is not selected in the **Main** section.

You cannot add, edit, or remove elements from the **Audit Elements for Entity Update** section when an audit event is already created using the audit event type.

- Define, edit, or remove characteristics of the audit event type, if required.

Note: You cannot define, edit, or remove characteristics of the **Characteristics** section when an audit event is already created using the audit event type.

- Click **Save**.

The changes made to the audit event type are saved.

| How to define a characteristic for an audit event type | Defining a Characteristic for an Audit Event Type on page 3524 |

Copying an Audit Event Type

Instead of creating an audit event type from scratch, you can create a new audit event type using an existing audit event type. This is possible through copying an audit event type. On copying an audit event type, the details including the algorithms, audit elements, and characteristics are copied to the new audit event type. You can then edit the details, if required.

Prerequisites

To copy an audit event type, you should have:

- Audit event type (whose copy you want to create) defined in the application
- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object (for which you want to define an audit event type) set to **Y**

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

- Values defined for the **AUDIT_USAGE_FLG** lookup field

Procedure

To copy an audit event type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Audit Event Type**.
A sub-menu appears.
3. Click the **Search** option from the **Audit Event Type** sub-menu.
The **Audit Event Type** screen appears.
4. In the **Audit Event Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the audit event type whose copy you want to create.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

Note: The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define the characteristics for the audit event type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|---|
| Audit Event Type | Used to specify the audit event type. | Yes |
| | Note: You cannot specify any special characters except hyphen and underscore in the audit event type. | |
| Business Object | Indicates the business object which is used while defining the audit event type. | Not applicable |
| Description | Used to specify the description for the audit event type. | Yes |
| Detailed Description | Used to specify additional information about the audit event type. | No |
| Status | Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| | Note: You can create only one audit event type in the Active status for an entity business object. | |
| Entity Business Object | Used to indicate the business object for which you want to define the audit event type. | Yes |
| | Note: The list includes only those business objects where the Eligible for Audit Event option type is set to Y . | |
| Audit Usage | Used to indicate the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. | Yes |
| Update All | Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated. | No |
| Add Action | Used to indicate whether you want to create an audit event whenever the entity is added. | Yes (Conditional) |
| | | Note: This field is required when you want to create an audit event while adding the entity. |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|---|
| Delete Action | Used to indicate whether you want to create an audit event whenever the entity is deleted. | Yes (Conditional) |
| | | Note: This field is required when you want to create an audit event while deleting the entity. |

Tip: Alternatively, you can copy an audit event type by clicking the **Duplicate** button in the **Audit Event Type** zone.

- Enter the required details in the **Main** section.
- Associate or disassociate the required algorithms from the audit event type.
- Add, edit, or remove elements from the audit event type, if required.

Note: The **Audit Elements for Entity Update** section is enabled when the **Update All** option is not selected in the **Main** section.

- Define, edit, or remove characteristics of the audit event type, if required.
- Click **Save**.

The new audit event type is defined.

Deleting an Audit Event Type

Procedure

To delete an audit event type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Audit Event Type**.
A sub-menu appears.
- Click the **Search** option from the **Audit Event Type** sub-menu.
The **Audit Event Type** screen appears.
- In the **Audit Event Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the audit event type that you want to delete.

A message appears confirming whether you want to delete the audit event type.

Note: You can delete an audit event type when an audit event is not yet created using the audit event type.

Tip: Alternatively, you can delete an audit event type by clicking the **Delete** button in the **Audit Event Type** zone.

5. Click **OK**.

The audit event type is deleted.

Search Audit Event

The **Search Audit Event** zone allows you to search for an audit event using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for an audit event using the entity or audit event details. The valid values are: <ul style="list-style-type: none"> • Entity Details • Audit Event Details | Yes |
| | Note: By default, the Entity Details option is selected. | |
| Entity | Used to search audit events which are created for a particular entity business object. Note: This field appears when the Entity Details option is selected from the Search By list. The list includes only those entity business objects where the Eligible for Audit Event option type is set to Y . | No |
| Created From | Used to search audit events which are created from a particular date onwards. | No |
| Created To | Used to search audit events which are created till a particular date. | No |
| Entity ID | Used to search audit events which are created for a particular entity. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| | <p>Note:</p> <p>This field appears when the following conditions are met:</p> <ul style="list-style-type: none"> • The Entity Details option is selected from the Search By list. • The entity business object is selected from the Entity list. <p>You can search for an audit event by clicking the Search (🔍) icon corresponding to the field.</p> | |
| Status | <p>Used to search audit events with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Canceled • Complete • Error • Pending <p>Note:</p> <p>This field appears in the search criteria by default, when the Audit Event Details option is selected from the Search By list.</p> <p>In case you choose the Entity Details option, this field appears only when the entity business object is selected from the Entity list.</p> | No |
| From Effective Date | <p>Used to search audit events whose effective date is equal to or later than the specified date.</p> <p>Note: This field appears only when you choose the Entity Details option from the Search By list and entity business object from the Entity list.</p> | No |
| To Effective Date | <p>Used to search audit events whose effective date is equal to or earlier than the specified date.</p> <p>Note: This field appears only when you choose the Entity Details option from the Search By list and entity business object from the Entity list.</p> | No |
| Audit Event ID | <p>Used to search a particular audit event.</p> <p>Note: This field appears when the Audit Event Details option is selected from the Search By list.</p> | No |
| Audit Event Type | Used to search audit events which are created using a particular audit event type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| | Note: This field appears when the Audit Event Details option is selected from the Search By list. | |
| Audit Action | Used to search audit events which are created while adding, updating, or deleting an entity. The valid values are: <ul style="list-style-type: none"> • Add Row • Change Row • Delete Row Note: This field appears when the Audit Event Details option is selected from the Search By list. | No |

Note: You must specify at least one search criterion while searching for an audit event.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Creation Date Time | Displays the date and time when the audit event is created. |
| Audit Event Information | Displays information about the audit event. Note: It has a link. On clicking the link, the Audit Event screen appears where you can view the details of the respective audit event. |
| Entity ID | Indicates the entity for which the audit event is created. |
| Entity | Indicates the entity business object for which the audit event is created. |
| Effective Date | Displays the effective date which is stamped corresponding to the audit event. Note: The effective date is used later to derive the timeline for premium calculation. |
| Status | Indicates the status of the audit event. The valid values are: <ul style="list-style-type: none"> • Canceled • Complete • Error • Pending |
| Audit Action | Indicates the action due to which the audit event is created for the entity. The valid values are: <ul style="list-style-type: none"> • Add Row • Change Row • Delete Row |
| Pricing Requested | Indicates whether the repricing entity detail records are created for the audit event. The valid values are: |

| Column Name | Column Description |
|-------------|--|
| | <ul style="list-style-type: none"> • Yes • No |
| | <p>Note: It has a link. On clicking the link, if the repricing entity record exist, the Repricing Request screen appears where you can view the details of the repricing entity. In case the record does not exist, the system displays a warning message.</p> |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Audit Event

Prerequisites

To search for an audit event, you should have:

- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object set to **Y**

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

Procedure

To search for an audit event:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Audit Event**.
The **Audit Event** screen appears.
3. Enter the search criteria in the **Search Audit Event** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of audit events that meet the search criteria appears in the **Search Results** section.

Audit Event

The **Audit Event** zone displays the details of the audit event. It contains the following sections:

- **Main** - Displays basic information about the audit event. It contains the following fields:

| Field Name | Field Description |
|-------------------------|--|
| Audit Event Information | Displays information about the audit event. |
| Audit Event Type | Indicates the audit event type using which the audit event is created. Note: It has a link. On clicking the link, the Audit Event Type screen appears where you can view the details of the respective audit event type. |
| Status | Indicates the status of the audit event. The valid values are: <ul style="list-style-type: none"> • Canceled • Complete • Error • Pending |
| Entity ID | Indicates the entity for which the audit event is created. |
| Effective Date | Displays the effective date which is stamped corresponding to the audit event in the C1_AUDIT_EVENT table. Note: If the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date. |
| Audit Action Flag | Indicates the action due to which the audit event is created for the entity. The valid values are: <ul style="list-style-type: none"> • Add Row • Change Row • Delete Row |
| Maintenance Object | Indicates the maintenance object of the entity business object for which the audit event is created. Note: It has a link. On clicking the link, the Maintenance Object screen appears where you can view the details of the respective maintenance object. |

- **Characteristics** - Lists the characteristics defined for the audit event. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following button:

| Button Name | Button Description |
|-------------|--|
| Cancel | Used to cancel the audit event. Note: The Cancel button appears when the audit event is in the Error status. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|------------------|---|
| Business Object | Indicates the business object using which the audit event is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the audit event status is updated. |
| Create Date/Time | Displays the date and time when the audit event is created. |

Canceling an Audit Event

There might be situations when an erroneous audit event is created in the system. In such case, the system provides you with an ability to cancel such audit events. However, note that you can cancel an audit event when the audit event is in the **Error** status.

Prerequisites

To cancel an audit event, you should have:

- Cancel reasons defined in the application

Note: While cancelling an audit event, you need to specify the reason why you want to cancel the audit event. You can select the appropriate cancel reason when you have defined the reasons for the **Canceled** status of the **C1-AuditEvent** business object in the **Status Reason** screen.

Procedure

To cancel an audit event:

1. Search for the audit event in the **Audit Event** screen.
2. In the **Search Results** section, click the link in the **Audit Event Information** column corresponding to the audit event which you want to cancel.

The **Audit Event** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Cancel** button in the **Audit Event** zone.

The **Status Reason** window appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Status Reason | Used to indicate the reason why you want to cancel the audit event. | Yes |

Note: The **Cancel** button appears when the audit event is in the **Error** status.

5. Select the cancel reason from the **Status Reason** list.
6. Click **Save**.

The status of the audit event is changed to **Canceled**.

- [Invoice Request Type](#)
- [Invoice Request \(Used for Searching\)](#)
- [Invoice Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to create invoice request for the following lines of health insurance business:

- **Fully-Insured Group Business** - For more information about the invoice request for the fully-insured group business, see [Invoice Request for Group Health Insurance Billing](#) on page 3542 and [Types of Invoice Request for Fully-Insured Group Business](#) on page 3546
- **Fully-Insured Individual Business** - For more information about the invoice request for the fully-insured individual business, see and [Invoice Request for Individual Health Insurance Billing](#) on page 3544 and [Types of Invoice Request for Fully-Insured Individual Business](#) on page 3548

Invoice Request for Group Health Insurance Billing

Oracle Revenue Management and Billing enables you to generate an adhoc regular or trial bill for an account through an invoice request. The system enables you to create an invoice request manually or automatically. It enables you to create an invoice request for a person or an account. You can create an invoice request for an account where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

If you create an invoice request for a person, the system will consider all those accounts of the person where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**. You can then exclude an account from the invoice request, if required. The system also enables you to consider all accounts of the person and its child persons where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

Note: The system searches for the characteristic type which is specified in the **Invoice Request Account Eligibility Char Type** option type of the **C1-INVREQ** feature configuration. By default, this option type is set to **INVRACTE**. You can change the characteristic type, if required.

In other words, the system enables you to create the following types of invoice request:

- **Manual Regular Bill Generation Invoice Request** - It is used to generate an adhoc regular bill for an account. You can create a manual regular bill generation invoice request for a person or an account from the user interface.
- **Manual Trial Bill Generation Invoice Request** - It is used to generate an adhoc trial bill for an account. You can create a manual trial bill generation invoice request for a person or an account from the user interface.
- **Automatic Regular Bill Generation Invoice Request** - It is used to generate an adhoc regular bill for an account. You can configure the system such that an automatic regular bill generation invoice request is created for an account automatically when a fully-insured group policy is activated, terminated, reinstated, or renewed from the user interface or through a health care inbound message.

Note:

The automatic invoice request creation feature is only designed to work for the fully-insured group health insurance business and not for the financial services or self-funded health insurance business.

You cannot create an automatic regular bill generation invoice request for a person.

At present, the system is not designed to create an automatic trial bill generation invoice request.

While creating an invoice request, you need to specify an invoice request type using which you want to create the invoice request. The system enables you to create the invoice request types with the following combinations:

| Invoice Mode | Bill Generation Type | Approval Process |
|--------------|----------------------|------------------|
| Manual | Regular | On |
| Manual | Regular | Off |
| Manual | Trial | Off |
| Automatic | Regular | Off |

It is the invoice request type which helps the system to determine:

- The business object using which the invoice request should be created in the system

Note: Two invoice request business objects named **Invoice Request - Regular Bill Generation (C1-InvoiceRequest)** and **Invoice Request - Trial Bill Generation (C1-InvoiceRequestTrial)** are introduced in this release. If the **Bill Generation Type** field is set to **Regular**, you must select the **Invoice Request - Regular Bill Generation** business object from the **Invoice Request Business Object** list. However, if the **Bill Generation Type** field is set to **Trial**, you must select the **Invoice Request - Trial Bill Generation** business object from the **Invoice Request Business Object** list.

- Whether a manual or automatic invoice request should be created in the system
- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode

Note:

The system will process a manual regular bill generation invoice request for an account in the deferred mode when the number of billable charges of the account exceeds the defer processing billable charge count.

The defer processing billable charge count is not considered when a manual regular bill generation invoice request is created for a person.

You can specify the defer processing billable charge count when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- Whether the approval is required for the invoice request

Note: You can only set the **Approval Required** flag when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- The wait days which is used to calculate the processing date for an invoice request

Note:

If the invoice request is processed in the online mode, the system will process the invoice request when the processing date is earlier than or equal to the system date. However, if the invoice request is processed in the deferred mode, the system will process the invoice request when the processing date is earlier than or equal to the batch business date.

If required, you can configure the system such that the processing date does not fall on a holiday. To implement this requirement you need to specify the work calendar which helps to determine the working day.

- The date calculation algorithm which is used to calculate the processing date for an automatic regular bill generation invoice request

Note: In addition, you can configure threshold days for automatic invoice request creation. It is used to determine whether the number of days between the bill cycle date and processing date is greater than the threshold days. This parameter is used in Invoice Request Date Calculation algorithm to check whether the processing date of the invoice request is within threshold period. If so, the automatic invoice request is not created for the account. This parameter is only applicable while activating or renewing a fully-insured group policy.

While creating a manual invoice request, you need to specify the following – invoice request type, entity (i.e. person or account for which the invoice request should be created), cutoff date, accounting date, and bill date.

Note: The cutoff date, accounting date, and bill date are derived while creating an automatic invoice request for an account.

For more information about the types of invoice request, see [Types of Invoice Request for Fully-Insured Group Business](#) on page 3546.

For more information on how to setup the invoice request feature, see [Prerequisites](#) on page 3554.

Invoice Request for Individual Health Insurance Billing

Until now, the system enabled you to generate an adhoc regular or trial bill for an account through an invoice request for the fully insured group business. Now, this feature is extended to support the adhoc billing requirements of the fully insured individual business.

The system enables you to manually or automatically create an invoice request for the fully insured individual business. It enables you to create an invoice request for an account to which an individual membership is billed. Before creating an invoice request for an account of an individual membership, the system validates whether the individual membership is eligible for the invoice request creation. You can create an invoice request only for an account of those individual memberships where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**. Whenever an invoice request is created for the account of an individual membership, the system adds the appropriate log entries for the individual membership in the **Log** tab of the **Membership** screen.

Note: The system validates whether the individual membership is eligible for invoice request creation using the characteristic type which is specified in the **Invoice Request Eligibility Char Type** option type of the **C1-INVREQ** feature configuration. By default, this option type is set to **INVRACTE**. You can change the characteristic type, if required.

The system enables you to create the following types of invoice request for the fully insured individual business:

- **Manual Regular Bill Generation Invoice Request** – It is used to generate an adhoc regular bill for an account. You can create a manual regular bill generation invoice request for an account from the user interface.
- **Manual Trial Bill Generation Invoice Request** – It is used to generate an adhoc trial bill for an account. You can create a manual trial bill generation invoice request for an account from the user interface.
- **Automatic Regular Bill Generation Invoice Request** – It is used to generate an adhoc regular bill for an account. You can configure the system such that an automatic regular bill generation invoice request is automatically created for an account when an individual membership is enrolled, terminated, reinstated, or canceled through a health care inbound message.

Note:

The automatic invoice request creation feature is only designed to work for the fully insured group and individual businesses and not for the financial services or self-funded health insurance business.

At present, the system is not designed to create an automatic trial bill generation invoice request.

While creating an invoice request, you need to specify an invoice request type using which you want to create the invoice request. The system enables you to create the invoice request types with the following combinations:

| Invoice Mode | Bill Generation Type | Approval Process |
|--------------|----------------------|------------------|
| Manual | Regular | On |
| Manual | Regular | Off |
| Manual | Trial | Off |
| Automatic | Regular | Off |

It is the invoice request type which helps the system to determine:

- The business object using which the invoice request should be created in the system

Note: If the **Bill Generation Type** field is set to **Regular**, you must select the **Invoice Request - Regular Bill Generation** business object from the **Invoice Request Business Object** list. However, if the **Bill Generation Type** field is set to **Trial**, you must select the **Invoice Request - Trial Bill Generation** business object from the **Invoice Request Business Object** list.

- Whether a manual or automatic invoice request should be created in the system
- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode

Note:

The system will process a manual regular bill generation invoice request for an account in the deferred mode when the number of billable charges of the account exceeds the defer processing billable charge count.

You can specify the defer processing billable charge count only when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- Whether the approval is required for the invoice request

Note: You can set the **Approval Required** flag only when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- The wait days using which the processing date is calculated for an invoice request

Note: If the invoice request is processed in the online mode, the system will process the invoice request when the processing date is earlier than or equal to the system date. However, if the invoice request is processed in the deferred mode, the system will process the invoice request when the processing date is earlier than or equal to the batch business date.

- The date calculation algorithm which is used to calculate the cutoff date, bill date, processing date, and accounting date for an automatic regular bill generation invoice request

Note:

The **C1-INVRDTCIM** algorithm is shipped in this release for the fully insured individual business. It is used to calculate the cutoff date, bill date, processing date, and accounting date for an automatic regular bill generation invoice request. If required, you can configure the algorithm such that the processing date does not fall on a holiday. In that case, you need to specify the work calendar which helps to determine the working day. You can specify the work calendar in the **C1-INVRDTCIM** algorithm. Alternatively, if the work calendar is not specified in the **C1-INVRDTCIM** algorithm, the system will use the work calendar of the account's division to ensure that the processing date falls on a working day.

In addition, you can configure threshold days for the automatic invoice request creation. The system then determines whether the number of days between the bill cycle date and processing date is greater than the threshold days. If so, the automatic invoice request is created for the account. However, if the number of days between the bill cycle date and processing date is less than or equal to the threshold days, the automatic invoice request is created for the account such that cutoff date is calculated using the next window of the bill cycle.

While creating a manual invoice request, you need to specify the following – invoice request type, account, cutoff date, accounting date, and bill date. Note that before manually or automatically creating an invoice request for an account, you need to ensure that the following algorithms are attached to the respective system event of the corresponding customer class:

| System Event | Algorithm |
|-----------------------------------|-------------|
| Invoice Request Account Selection | C1-INVACTEL |

| System Event | Algorithm |
|-------------------------------|-------------|
| Invoice Request Status Update | C1-INVRSTUP |

For more information about the types of invoice request, see [Types of Invoice Request for Fully-Insured Individual Business](#) on page 3548.

For more information on how to setup the invoice request feature, see [Prerequisites](#) on page 3554.

Types of Invoice Request for Fully-Insured Group Business

The system allows you to create the following types of invoice requests for the fully-insured group business:

- [Manual Regular Bill Generation Invoice Request](#) on page 3546
- [Manual Trial Bill Generation Invoice Request](#) on page 3547
- [Automatic Regular Bill Generation Invoice Request](#) on page 3547

Manual Regular Bill Generation Invoice Request

Once a manual regular bill generation invoice request is created in the **Draft** status, the system checks whether it is created for a person or an account. If a manual regular bill generation invoice request is created for an account, you can submit the invoice request. On submitting the invoice request, the system checks whether the number of the billable charges of the account exceed the defer processing billable charge count. If the number of the billable charges of the account exceed the defer processing billable charge count, the status of the invoice request is changed to **Defer Processing Batch**. However, if the number of the billable charges of the account does not exceed the defer processing billable charge count, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is later than the system date, the status of the invoice request is changed to **Defer Processing**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Defer Processing** status. If there is an invoice request in the **Defer Processing** status, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is later than the system date, the status of the invoice request remains as **Defer Processing**.

Note: The system enables you to cancel an invoice request which is in the **Defer Processing Batch** or **Defer Processing** status.

However, if the processing date is earlier than or equal to the system date, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the online mode. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

However, if a manual regular bill generation invoice request is created for a person, the system checks whether the number of accounts of the person (if the **Include Person Hierarchy** option is not selected) or the number of accounts of the person and its child persons (if the **Include Person Hierarchy** option is selected) exceeds the limit defined in the **Account Limit** option type of the **C1-INVREQ** feature configuration. If the number of accounts does not exceed the account limit, the system derives the account of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

However, if the number of accounts exceeds the account limit, the status of the invoice request is changed to **Account Derivation Pending**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Account Derivation Pending** status. If there is an invoice request in the **Account Derivation Pending** status,

the system derives the accounts of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

When you execute the **BILLOPEN** batch with the **Off Cycle Switch** parameter set to **Y**, the system checks whether the account that meets the search criteria is included in any invoice request which is in the **Defer Processing Batch** status. If the account is included in the invoice request, the system checks whether the processing date of the invoice request is earlier than or equal to the batch business date. If processing date is earlier than or equal to the batch business date, the system checks whether there is any record in the **Processing** status for the account in the invoice request. If so, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the **Pending** status. When you execute the **BSGENREQ** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the bill segments for the adhoc regular bill. When you execute the **POSTPROC** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the post-processing bill segments (if any) and completes the adhoc regular bill of the account. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, or if a To Do is generated for the bill review, the status of the record in the invoice request is changed to **Error**. If all records in the invoice request are in the **Error** status, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

You can optionally configure the approval process for the manual regular bill generation invoice request. If the **Approval Required** flag is set to **Yes** in the invoice request type, the status of the manual regular bill generation invoice request is changed to **Approval In Progress** when you submit the invoice request. The approver can then approve or reject the manual regular bill generation invoice request based on the observations.

Manual Trial Bill Generation Invoice Request

The manual regular bill generation invoice request and manual trial bill generation invoice request are created and processed identically with the following exceptions:

- On submitting the manual trial bill generation invoice request for an account, the system does not check whether the number of the billable charges of the account exceed the defer processing billable charge count. Therefore, the manual trial bill generation invoice request is always processed in the deferred mode.
- You need to specify the following parameters while executing the **BILLOPEN**, **BSGENREQ**, and **POSTPROC** batches:
 - Bill Generation Type (set to **Trial**)
 - Description for Trial Billing Batch Run
 - Off Cycle Switch (set to **Y**)
- The **BSGENREQ** batch will not freeze and complete a trail bill for the account.
- At present, a To Do is not generated for a trial bill review, and therefore the system does not check whether a To Do is generated for a trial bill review.

Automatic Regular Bill Generation Invoice Request

The following table lists the algorithms that you need to attach to the corresponding business objects in the respective scenarios:

| If you want to create an automatic invoice request for an account while... | Then attach the algorithm.... | | | |
|--|-------------------------------|---------------------|--------------|------------------|
| | Business Object | Status | System Event | Algorithm |
| Activating a Fully-Insured Group Policy | C1-POLICY | In Force/ Active | Enter | C1- INVREQCRE |

| If you want to create an automatic invoice request for an account while... | Then attach the algorithm.... | | | |
|--|-------------------------------|------------|-----------------|--------------|
| | Business Object | Status | System Event | Algorithm |
| <p>Note: This happens only on the customer onboarding. If an invoice request is already processed for any account in the person's hierarchy, the system will not create an invoice request for the account.</p> | | | | |
| Terminating a Fully-Insured Group Policy | | Terminated | Enter | C1-INVREQPT |
| Reinstating a Fully-Insured Group Policy | | Reinstated | Enter | C1-INVREPRIN |
| Renewing a Fully-Insured Group Policy | | - | Audit | C1-IRPOLREW |
| <p>Creating an Account for a Parent Customer or Bill Group who is the Main Customer of the Fully-Insured Group Policy</p> <p>Note: This happens only on the customer onboarding. If an invoice request is already processed for any account in the person's hierarchy, the system will not create an invoice request for the account.</p> | C1-AccountBO | - | Post-Processing | C1-INVRACTPO |

The above algorithms contain a parameter wherein you can specify the invoice request type using which the automatic invoice request should be created in the system.

If the automatic invoice request creation feature is configured for the fully-insured group health insurance business, the system creates an automatic regular bill generation invoice request in the **Defer Processing Batch** status for an account when:

- A fully-insured group policy is activated, terminated, reinstated, or renewed
- An account is created for a parent customer or bill group who is the main customer of the fully-insured group policy

The deferred mode processing for manual regular bill generation invoice request and automatic regular bill generation invoice request is identical.

Types of Invoice Request for Fully-Insured Individual Business

The system allows you to create the following types of invoice requests for the fully-insured individual business:

- [Manual Regular Bill Generation Invoice Request](#) on page 3549

- [Manual Trial Bill Generation Invoice Request](#) on page 3549
- [Automatic Regular Bill Generation Invoice Request](#) on page 3550

Manual Regular Bill Generation Invoice Request

Once you manually create a regular bill generation invoice request for an account, the status of the invoice request is set to **Draft**. You can then submit the invoice request. You can optionally configure the approval process for the manual regular bill generation invoice request. If the **Approval Required** flag is set to **Yes** in the invoice request type, the status of the manual regular bill generation invoice request is changed to **Approval In Progress** when you submit the invoice request. The approver can then approve or reject the manual regular bill generation invoice request based on the observations.

On submitting or approving the invoice request, the system checks whether the number of the billable charges of the account exceeds the defer processing billable charge count. If the number of the billable charges of the account exceeds the defer processing billable charge count, the status of the invoice request is changed to **Defer Processing**. However, if the number of the billable charges of the account does not exceed the defer processing billable charge count, the system checks whether the processing date of the invoice request is earlier than or equal to the system date.

If the processing date is earlier than or equal to the system date, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the online mode. Finally, the status of the invoice request is changed to **Processed**. But, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

However, if the processing date is later than the system date, the status of the invoice request is changed to **Defer Processing**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Defer Processing** status. If there is an invoice request in the **Defer Processing** status, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is earlier than or equal to the system date, the status of the invoice request is changed to **Processing** and the algorithm attached to the **Processing** status is invoked. However, if the processing date is later than the system date, the status of the invoice request remains as **Defer Processing**.

| |
|---|
| <p>Note: The system enables you to cancel an invoice request which is in the Defer Processing status.</p> |
|---|

Manual Trial Bill Generation Invoice Request

The manual regular bill generation invoice request and manual trial bill generation invoice request are created and processed identically with the following exceptions:

- On submitting the manual trial bill generation invoice request for an account, the system does not check whether the number of the billable charges of the account exceed the defer processing billable charge count. The manual trial bill generation invoice request is always processed in the deferred mode.
- You need to specify the following parameters while executing the **BILLOPEN**, **BSGENREG**, and **POSTPROC** batches:
 - **Bill Generation Type** (set to **Trial**)
 - **Description for Trial Billing Batch Run**
 - **Off Cycle Switch** (set to **Y**)
- The **BSGENREG** batch will not freeze and complete a trail bill for the account.
- At present, a To Do is not generated for a trial bill review, and therefore the system does not check whether a To Do is generated for a trial bill review.

Automatic Regular Bill Generation Invoice Request

To enable the automatic invoice request creation feature for the fully insured individual business, you need to attach the following algorithms:

| If you want to create an automatic invoice request for the account while... | Then attach the algorithm.... | | | |
|---|-------------------------------|------------|--------------|--------------|
| | Business Object | Status | System Event | Algorithm |
| Activating an individual membership | C1-IndMembership | Active | Enter | C1-INVRQIMEN |
| Terminating an individual membership | | Terminated | Enter | C1-INVRQIMTM |
| Reinstating a terminated individual membership | | Active | Enter | C1-INVRQIMEN |
| Canceling an active individual membership | | Canceled | Enter | C1-INVRQIMCN |

You can create a single or different invoice request type for each individual membership event (such as, activation, termination, reinstatement, or cancelation) depending on the wait days you want to configure for the respective event. While attaching the above algorithms, you need to specify the following parameters:

| Algorithm | Parameter | Parameter Description |
|--------------|---|---|
| C1-INVRQIMEN | Invoice Request Type for Individual Membership New Enrollment | Used to indicate the invoice request type using which you want the system to automatically create an invoice request when an individual membership is activated. Note: This parameter is mandatory. |
| | Invoice Request Type for Individual Membership Reinstatement | Used to indicate the invoice request type using which you want the system to automatically create an invoice request when an individual membership is reinstated. Note: This parameter is optional. |
| | Termination Reason | Used to specify the termination reason. The system will automatically create an invoice request while reinstating an individual membership which was terminated due to the specified reason. |

| Algorithm | Parameter | Parameter Description |
|--------------|----------------------|---|
| | | <p>Note:</p> <p>This parameter is valid only when you specify the value for the Invoice Request Type for Individual Membership Reinstatement parameter.</p> <p>This parameter is optional. If you do not specify the termination reason, the system will create the invoice request on the individual membership reinstatement irrespective of the termination reason. However, if you specify the termination reason, the system will create the invoice request on the individual membership reinstatement only when the individual membership was terminated due to the specified reason.</p> <p>You can specify maximum five comma-separated values for this parameter.</p> <p>You must specify a reason which is already defined for the Terminated status of the C1-IndMembership business object in the Status Reason screen.</p> |
| C1-INVRQIMTM | Invoice Request Type | <p>Used to indicate the invoice request type using which you want the system to automatically create an invoice request when an individual membership is terminated.</p> <p>Note: This parameter is mandatory.</p> |
| | Termination Reason | <p>Used to specify the termination reason. The system will automatically create an invoice request when the individual membership is terminated due to the specified reason.</p> |

| Algorithm | Parameter | Parameter Description |
|--------------|----------------------|--|
| | | <p>Note:</p> <p>This parameter is optional. If you do not specify the termination reason, the system will create the invoice request on the individual membership termination irrespective of the termination reason. However, if you specify the termination reason, the system will create the invoice request on the individual membership termination only when the individual membership is terminated due to the specified reason.</p> <p>You can specify maximum five comma-separated values for this parameter.</p> <p>You must specify a reason which is already defined for the Terminated status of the C1-IndMembership business object in the Status Reason screen.</p> |
| C1-INVRQIMCN | Invoice Request Type | <p>Used to indicate the invoice request type using which you want the system to automatically create an invoice request when an individual membership is canceled.</p> <p>Note: This parameter is mandatory.</p> |
| | Cancellation Reason | <p>Used to specify the cancellation reason. The system will automatically create an invoice request when the individual membership is canceled due to the specified reason.</p> |

| Algorithm | Parameter | Parameter Description |
|-----------|-----------|---|
| | | <p>Note:</p> <p>This parameter is optional. If you do not specify the cancellation reason, the system will create the invoice request on the individual membership cancellation irrespective of the cancellation reason. However, if you specify the cancellation reason, the system will create the invoice request on the individual membership cancellation only when the individual membership is canceled due to the specified reason.</p> <p>You can specify maximum five comma-separated values for this parameter.</p> <p>You must specify a reason which is already defined for the Canceled status of the C1-IndMembership business object in the Status Reason screen.</p> |

The system determines the account to which the individual membership should be billed using the Account Identifier Type and Account Identifier Value characteristics which are defined on the individual membership. While fetching the characteristics, the system considers the characteristic types which are specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration. Before automatically creating an invoice request for the account of an individual membership, the system validates whether the individual membership is eligible for the invoice request creation. If the individual membership is eligible for the invoice request creation, the system checks whether any invoice request already exists for the account in the non-final status. If an invoice request exists for the account in the non-final status, a new invoice request is not created for the account. However, if an invoice request does not exist for the account in the non-final status, a new invoice request is created for the account in the **Draft** status. The system then transitions the status of the invoice request from **Draft** to **Defer Processing Batch**.

Note:

The system validates whether the individual membership is eligible for the invoice request creation only while activating an individual membership and not while terminating, reinstating, or canceling an individual membership.

The system enables you to cancel an invoice request which is in the **Defer Processing Batch** status.

When you execute the **BILLOPEN** batch with the **Off Cycle Switch** parameter set to **Y**, the system checks whether the account that meets the search criteria is included in any invoice request which is in the **Defer Processing Batch** status. If the account is included in the invoice request, the system checks whether the processing date of the invoice request is earlier than or equal to the batch business date. If the processing date is earlier than or equal to the batch business date, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the **Pending** status. When you execute the **BSGENREG** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the bill segments for the adhoc regular bill. When you execute the **POSTPROC** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the post-processing bill segments (if any) and completes the adhoc regular bill of the account. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its

bill segments, or if a To Do is generated for the bill review, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

Prerequisites

To setup the invoice request process, you need to do the following:

- Define the required invoice request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Invoice Request Type**
- Define the required characteristic types where the characteristic entity is set to **Invoice Request**
- Assign the **C1-INVRA** To Do type to a To Do role whose users must receive To Do generated while submitting an invoice request for approval
- Assign the **C1-INVRS** To Do type to a To Do role whose users must receive To Do generated while resubmitting an invoice request
- Set the batch control type of the **Invoice Request Periodic Monitor (C1-INVREQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about the **Invoice Request Periodic Monitor (C1-INVREQ)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

- Set the batch control type of the **Pending Bill Generation (BILLOPEN)**, **Bill Segment Generation (BSGENREG)**, and **Bill Completion (POSTPROC)** batches to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Set the following feature configuration in the system:

- **Invoice Request Configuration (C1-INVREQ)**

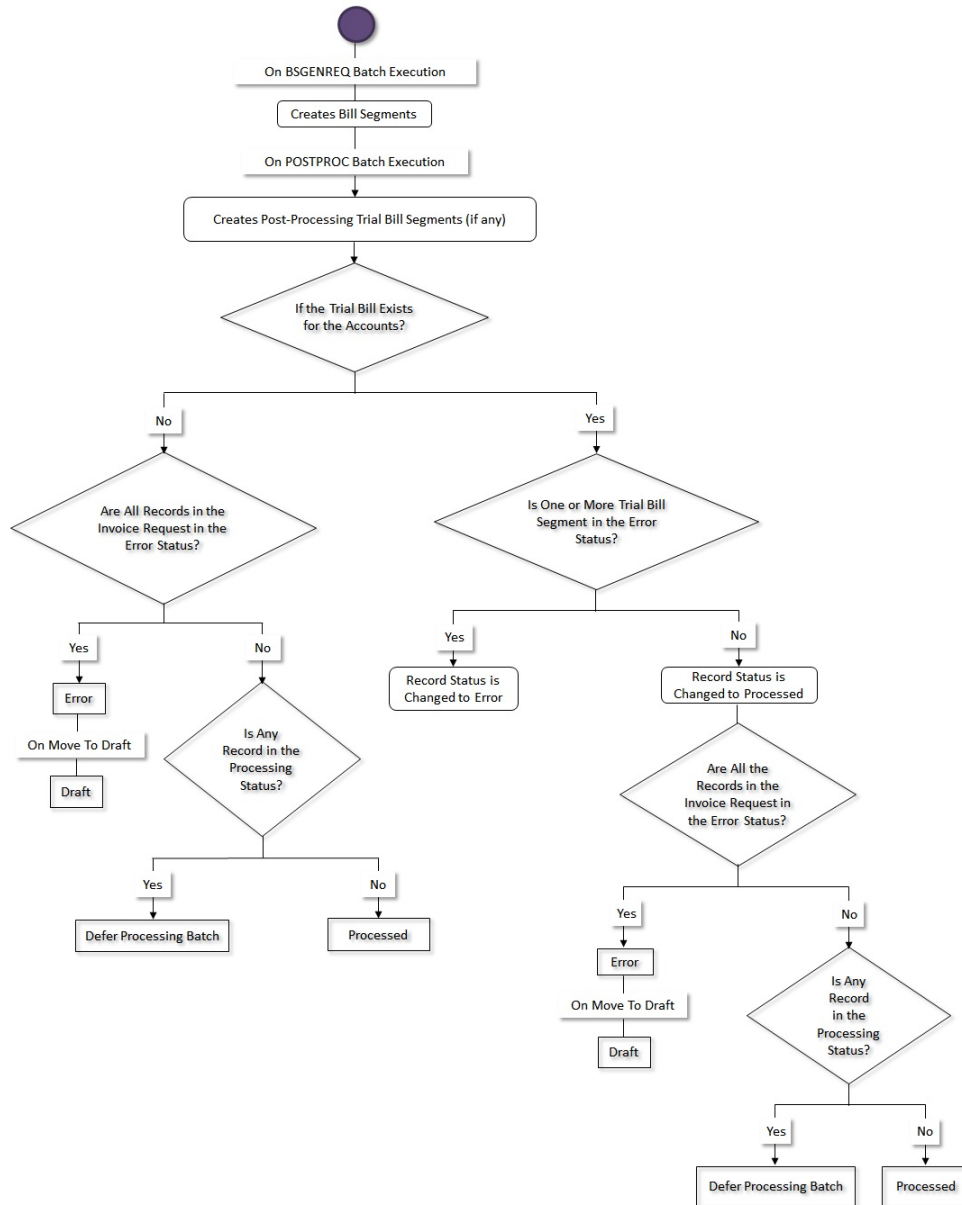

Invoice Request Manual Trial Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the manual trial bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

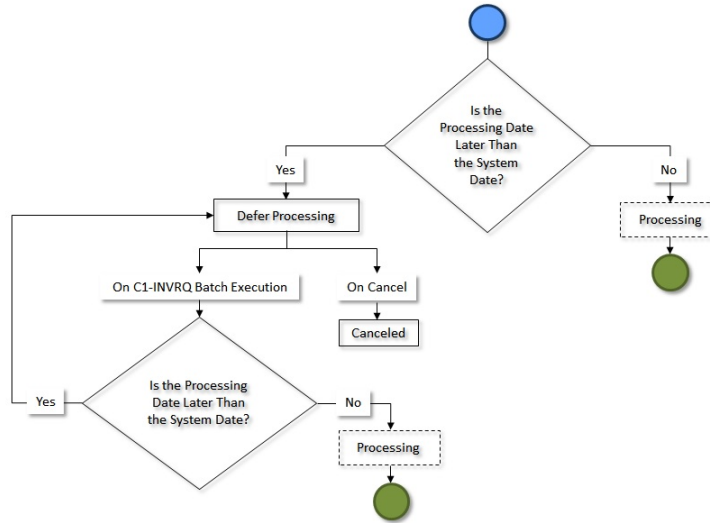

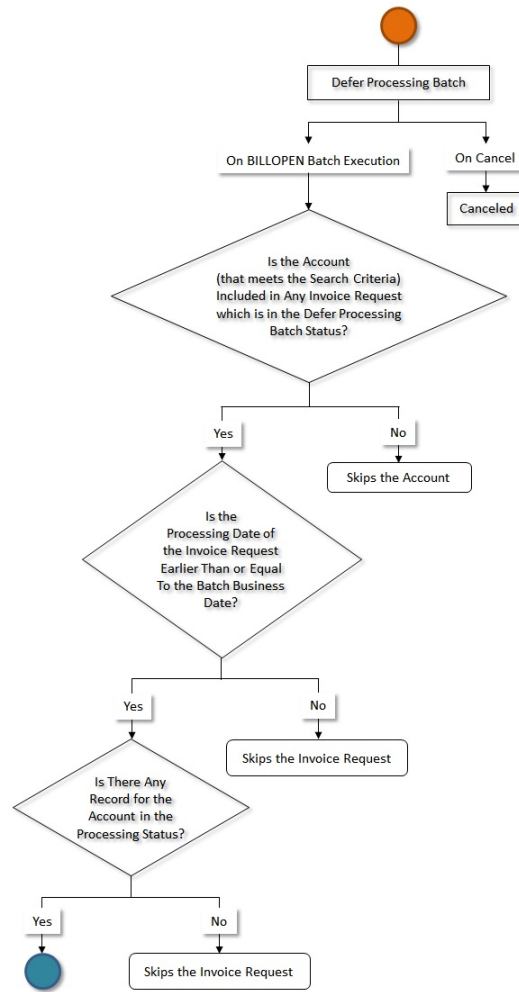

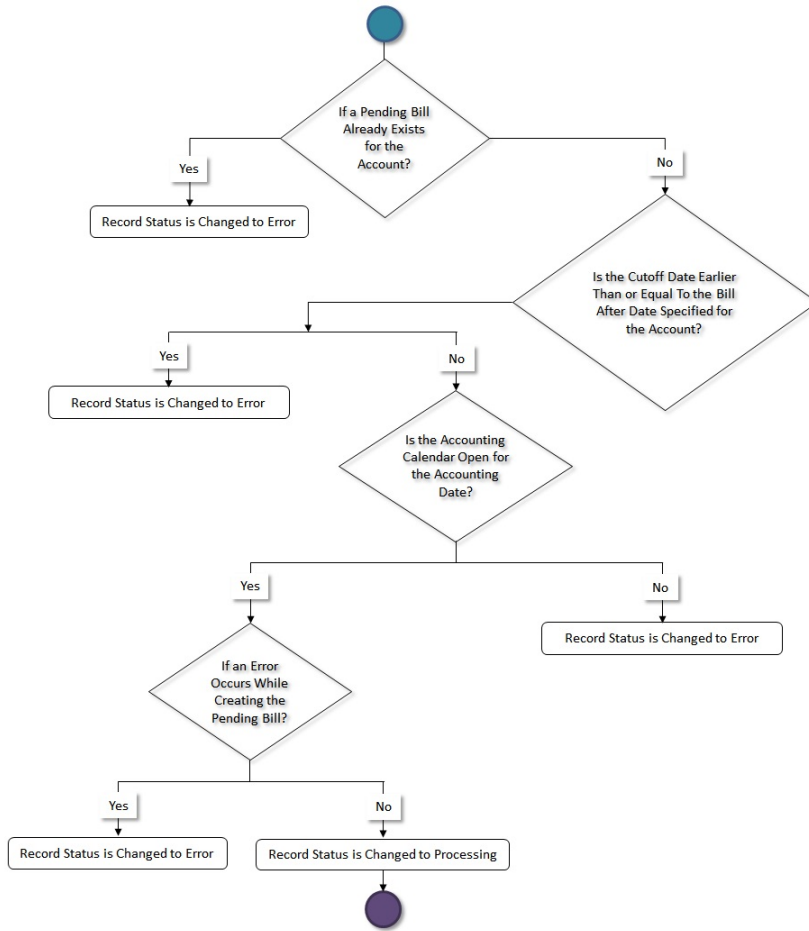

Invoice Request Manual Regular Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the manual regular bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

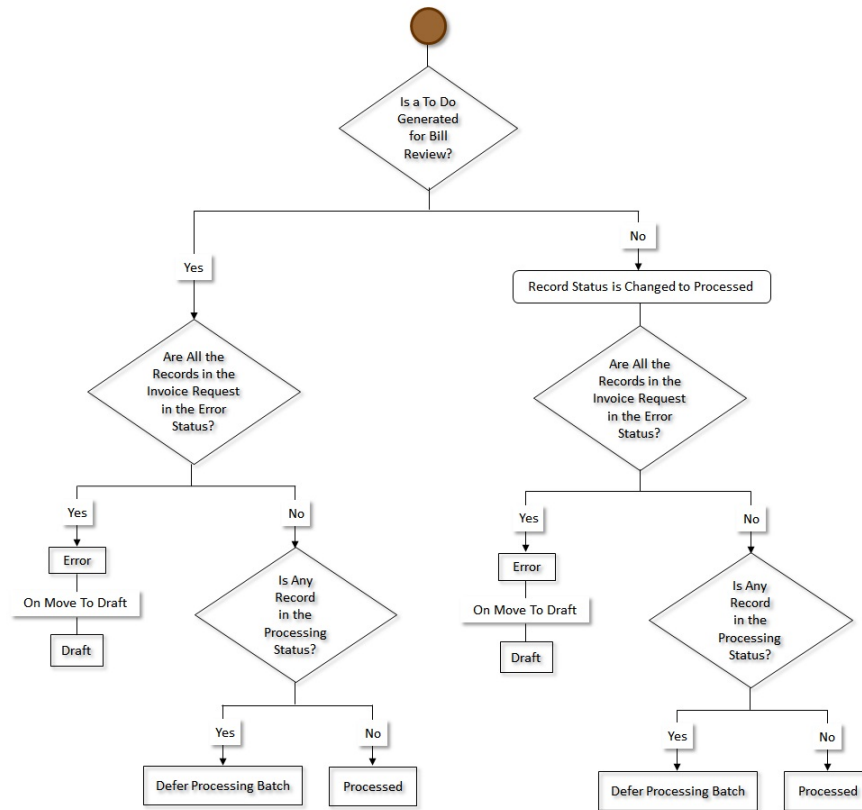

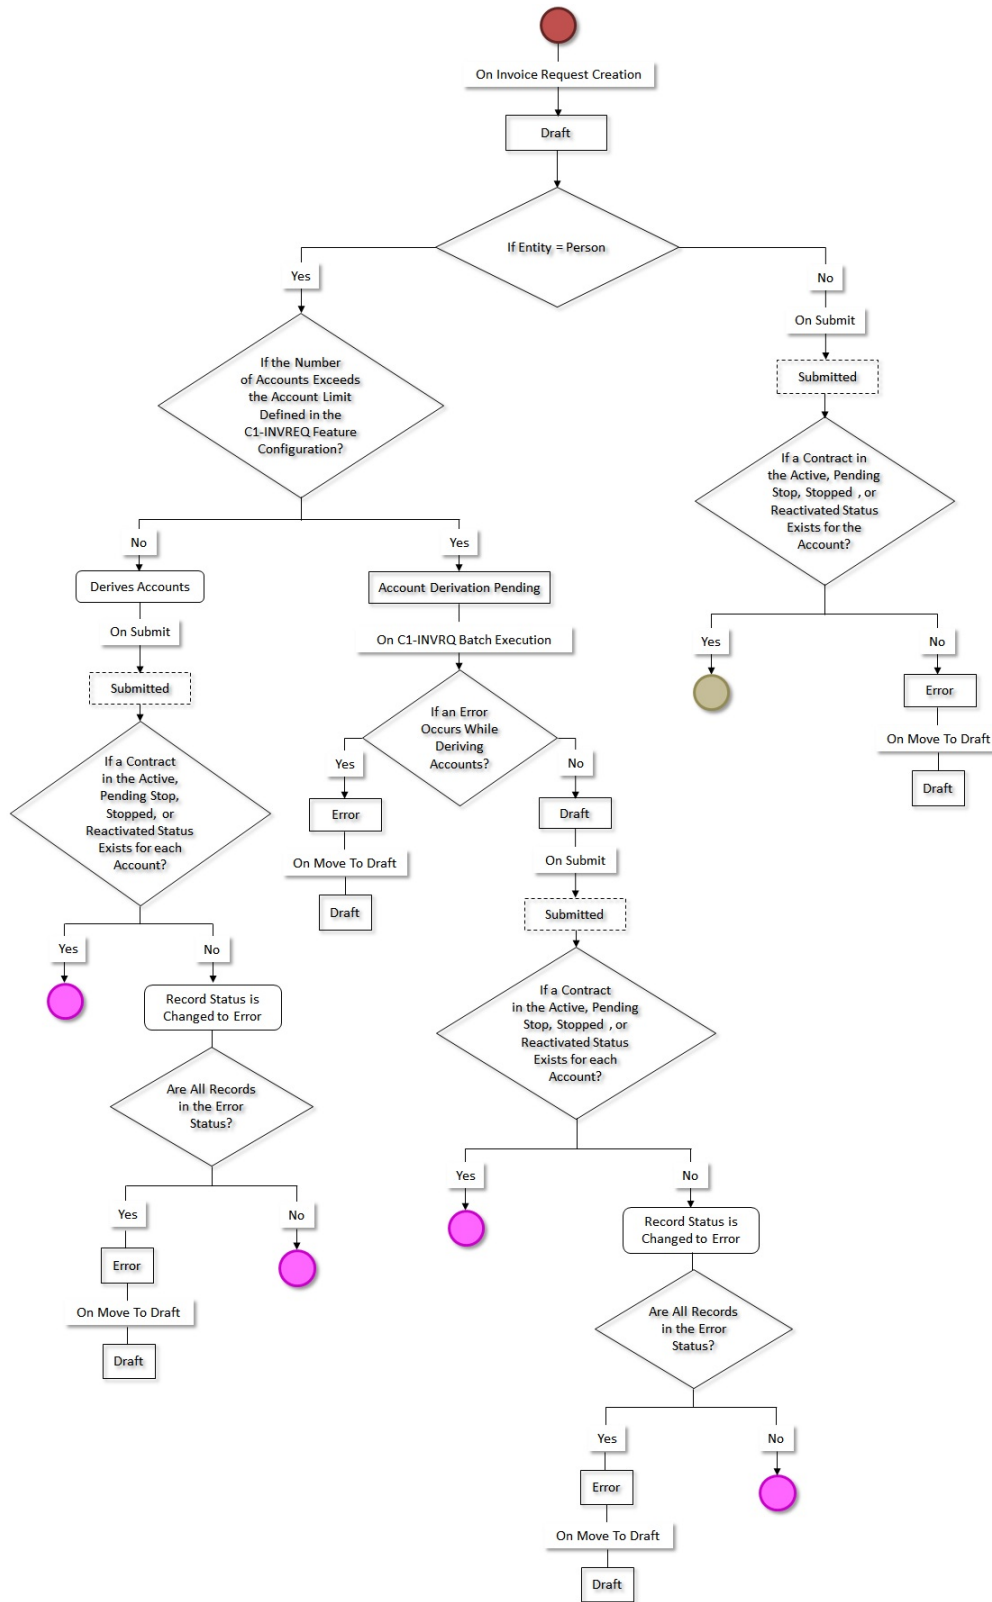

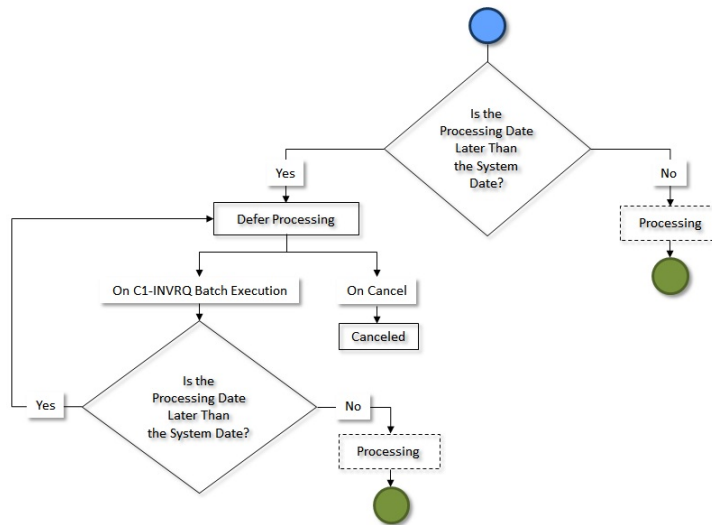

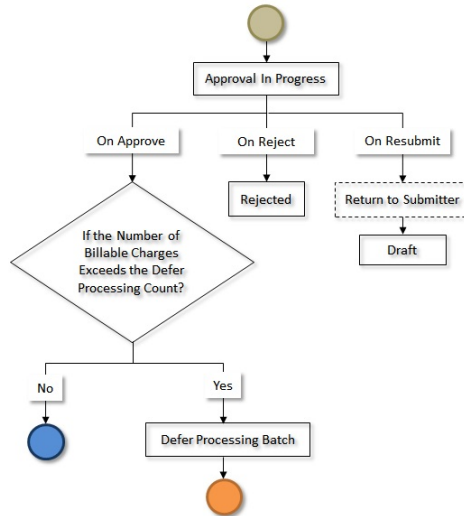

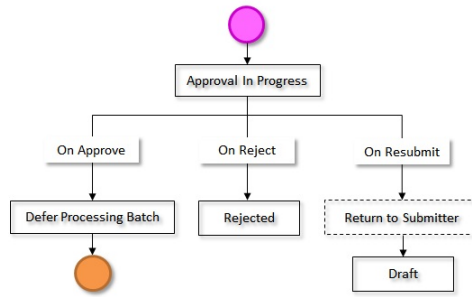

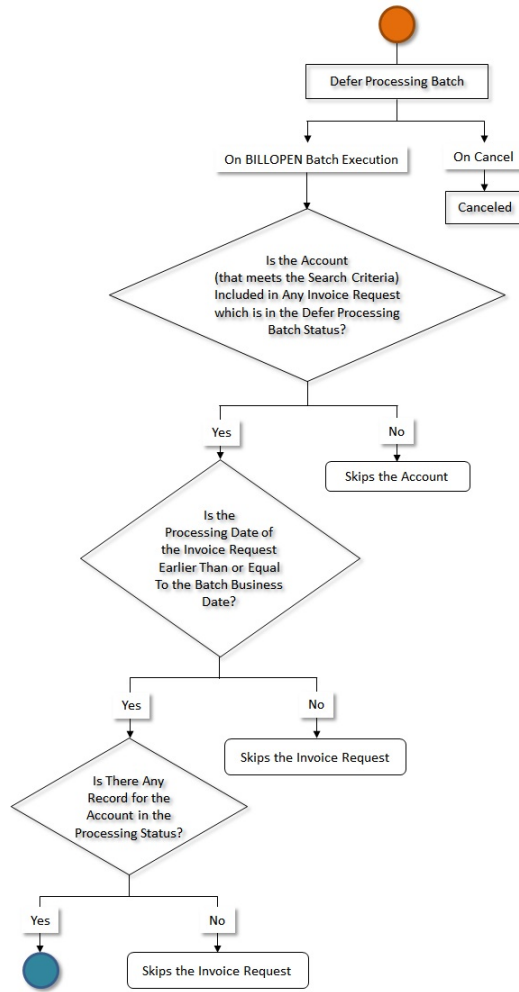

Invoice Request Manual Regular Bill Generation (With Approval) Status Transition

The following figure graphically indicates how an invoice request created through the manual regular bill generation process moves from one status to another when the approval process is configured in the invoice request type:

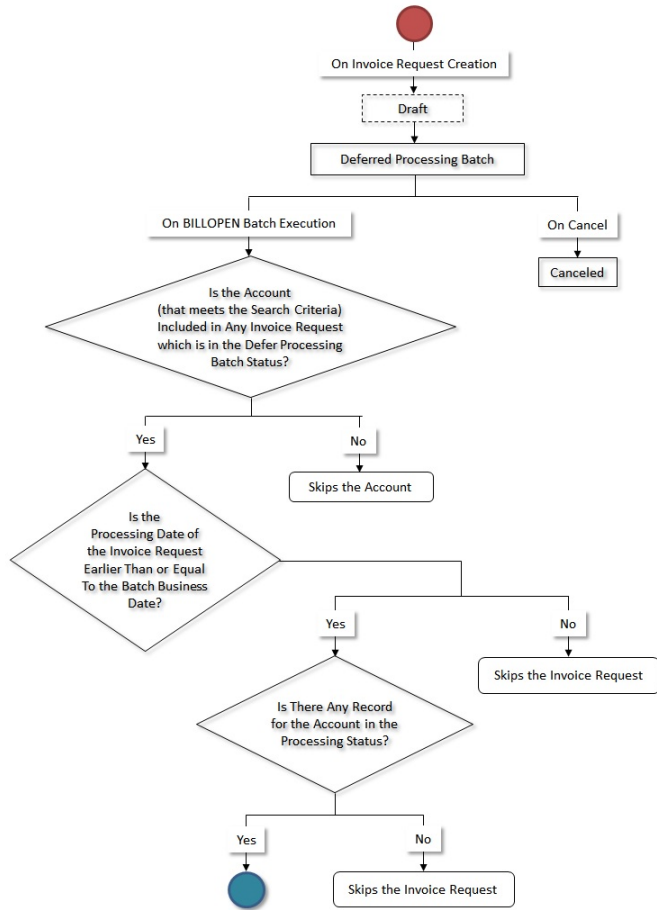

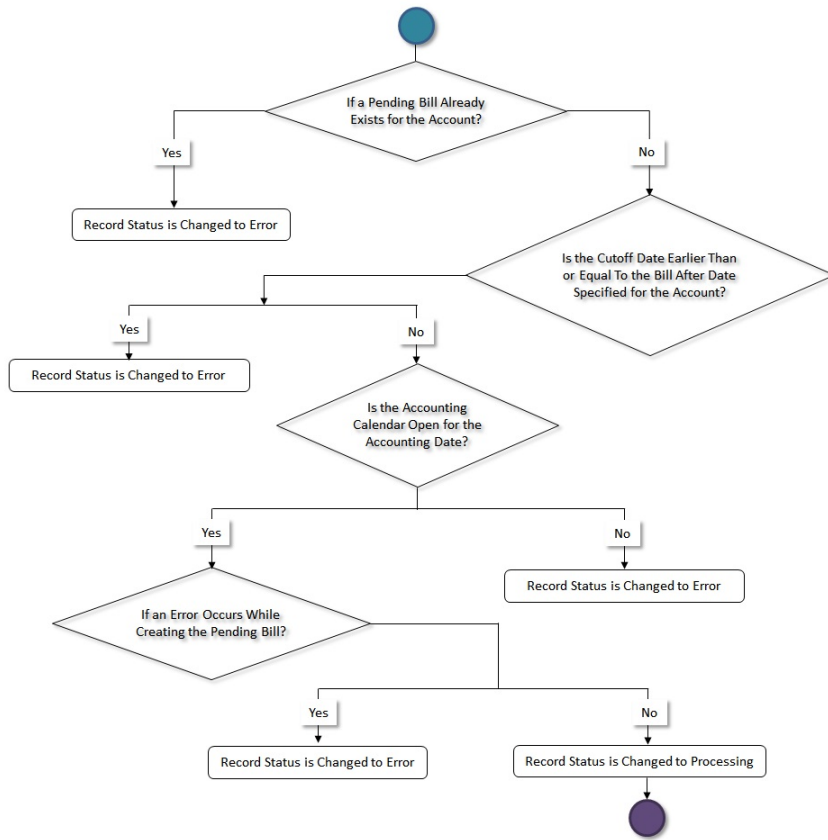

Invoice Request Automatic Regular Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request created through the automatic regular bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

Invoice Request Type

Oracle Revenue Management and Billing enables you to define an invoice request type using which you can create an invoice request. The invoice request type helps the system to determine:

- The business object using which the invoice request should be created in the system
- Whether a manual or automatic invoice request should be created in the system
- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode
- Whether the approval is required for the invoice request
- The wait days which is used to calculate the processing date for an invoice request
- The date calculation algorithm which is used to calculate the processing date for an automatic regular bill generation invoice request

Note: The automatic invoice request is only designed to work for the fully-insured group and individual health insurance businesses and not for the financial services or self-funded health insurance businesses.

The **Invoice Request Type** screen allows you to define, edit, copy, and delete an invoice request type. It contains the following zones:

- [Invoice Request Type List](#) on page 3572
- [Invoice Request Type](#) on page 3573

Invoice Request Type List

The **Invoice Request Type List** zone lists the invoice request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Invoice Request Type | Displays the invoice request type. |
| Description | Displays the description of the invoice request type. |
| Edit | On clicking the Edit (✎) icon, the Invoice Request Type screen appears where you can edit the details of the invoice request type. |

| Column Name | Column Description |
|-------------|---|
| Duplicate | On clicking the Duplicate (📄) icon, the Invoice Request Type screen appears where you can define a new invoice request type using an existing invoice request type. |
| Delete | On clicking the Delete (🗑️) icon, you can delete the invoice request type. |
| | Note: You can delete an invoice request type when an invoice request is not created using the invoice request type. |

On clicking the **Broadcast** (📡) icon corresponding to an invoice request type, the **Invoice Request Type** zone appears with the details of the respective invoice request type.

Invoice Request Type

The **Invoice Request Type** zone displays the details of the invoice request type. It contains the following sections:

- **Main** - Displays basic information about the invoice request type. It contains the following fields:

| Field Name | Field Description |
|---------------------------------|---|
| Invoice Request Type | Displays the invoice request type. |
| Description | Displays the description of the invoice request type. |
| Invoice Request Business Object | Indicates the business object using which an invoice request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Detailed Description | Displays additional information about the invoice request type. |
| Status | Indicates the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Invoice Mode | Indicates the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual |

| Field Name | Field Description |
|--|---|
| Bill Generation Type | <p>Indicates the bill generation type, using which an invoice request should be created. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Trial <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p> |
| Defer Processing Billable Charge Count | <p>Displays the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p> |
| Date Calculation Algorithm | <p>Indicates the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> <p>This field appears when the Automatic option is selected from the Invoice Mode list.</p> |
| Invoice Request Approval Required | <p>Indicates whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p> |
| Approval To Do Type | <p>Indicates that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.</p> |

| Field Name | Field Description |
|----------------------|--|
| | <p>Note:</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type.</p> <p>This field appears when the Approval Required option is selected.</p> |
| Approval To Do Role | <p>Indicates that users with the specified To Do role can only approve an invoice request which is submitted for approval.</p> <p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role.</p> <p>This field appears when the Approval Required option is selected.</p> |
| Submitter To Do Type | <p>Indicates the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an invoice request. It is only used to fetch the roles associated with the submitter To Do type while defining or editing the invoice request type.</p> <p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p> |
| Submitter To Do Role | <p>Indicates that users with the specified To Do role cannot approve an invoice request which is submitted for approval.</p> <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> |
| Freeze and Complete | <p>Indicates whether the invoice request raised through an automatic or manual invoice mode should be freeze and complete.</p> <p>Note:</p> <p>This field is not mandatory if the Invoice Mode - Manual option is selected.</p> <p>By default, this field is selected and disabled when the Invoice Mode - Automatic option is selected.</p> <p>The field should not be checked when the Bill Generation Type - Trial option is selected.</p> <p>Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.</p> <p>For the Batch mode, this field value will be passed to the batch parameter Freeze and Complete.</p> |
| Wait Days | <p>Displays the maximum wait period (in days) after which the bills in an invoice request are processed.</p> <p>Note: You cannot specify a negative value in the Wait Days field.</p> |

- **Characteristics** - Lists the characteristics defined for the invoice request type. It contains the following columns:

| Field Name | Field Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the invoice request type. |
| Delete | Used to delete the invoice request type. |
| | Note: You can delete an invoice request type when an invoice request is not created using the invoice request type. |
| Duplicate | Used to create a new invoice request type using an existing invoice request type. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the invoice request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Invoice Request Type** zone does not appear in the **Invoice Request Type** screen. It appears when you click the **Broadcast** () icon corresponding to an invoice request type in the **Invoice Request Type List** zone.

Defining an Invoice Request Type

Prerequisites

To define an invoice request type, you should have:

- Invoice request type business objects defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To define an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.

A sub-menu appears.

3. Click the **Add** option from the **Invoice Request Type** sub-menu.

The **Invoice Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request type.
- **Characteristics** - Used to define the characteristics for the invoice request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Invoice Request Type | Used to specify the invoice request type. | Yes |
| Business Object | Indicates the business object using which you are defining the invoice request type. | Not applicable |
| Description | Used to specify the description for the invoice request type. | Yes |
| Invoice Request Business Object | Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation | Yes |
| Detailed Description | Used to specify additional information about the invoice request type. | No |
| Status | Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Invoice Mode | Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.</p> </div> | Yes |
| Bill Generation Type | Used to indicate the bill generation type, using which an invoice request should be created. The valid values are: <ul style="list-style-type: none"> • Regular • Trial | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|---|
| | <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p> | |
| Defer Processing Billable Charge Count | <p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p> | No |
| Date Calculation Algorithm | <p>Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when Invoice mode is Automatic.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|--|
| Invoice Request Approval Required | Used to indicate whether approval is required while invoicing bills through an invoice request. | No |
| | Note: This field appears when the Automatic option is selected from the Invoice Mode list. | |
| Approval To Do Type | Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval. | Yes (Conditional) Note: This field is required when the Approval Required option is selected. |
| | Note: The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field. This field appears when the Approval Required option is selected. The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required. | |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval. | Yes (Conditional) Note: This field is required when the Approval Required option is selected. |
| | Note: The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the Approval Required option is selected. | |
| Submitter To Do Type | Used to indicate the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type. | Yes (Conditional) Note: This field is required when the Approval Required option is selected. |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.</p> | |
| Submitter To Do Role | Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval. | Yes (Conditional) |
| | <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p> | |
| Wait Days | Used to indicate the threshold days before which no other invoice request for any bill generation process will be initiated. | No |
| | <p>Note: By default, the value displayed for wait days is 0.</p> | |

4. Enter the required details in the **Main** section.
5. Define characteristics for the invoice request type, if required.
6. Click **Save**.

The invoice request type is defined.

Defining a Characteristic for an Invoice Request Type

Prerequisites

To define a characteristic for an invoice request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request Type**)

Procedure

To define a characteristic for an invoice request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an invoice request type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Invoice Request Type . | Note: This field is required when you are defining a characteristic for the invoice request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the invoice request type. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the invoice request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the invoice request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Invoice Request Type

Prerequisites

To edit an invoice request type, you should have:

- Invoice request type business objects defined in the application.

- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To edit an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.
The **Invoice Request Type** screen appears.
4. In the **Invoice Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the invoice request type whose details you want to edit.

The **Invoice Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the invoice request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|------------------------------|
| Invoice Request Type | Displays the invoice request type. | Not applicable |
| Business Object | Indicates the business object using which you are defining the invoice request type. | Not applicable |
| Description | Used to specify the description for the invoice request type. | Yes |
| Invoice Request Business Object | Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation | Yes |
| Detailed Description | Used to specify additional information about the invoice request type. | No |
| Status | Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Invoice Mode | Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|---|
| | <p>Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.</p> | |
| Bill Generation Type | <p>Used to indicate the bill generation type, using which an invoice request should be created. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Trial <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p> | Yes |
| Defer Processing Billable Charge Count | <p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p> | No |
| Date Calculation Algorithm | <p>Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when Invoice mode is Automatic.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|---|
| | <p>Note:</p> <p>The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p> | |
| Invoice Request Approval Required | <p>Used to indicate whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p> | No |
| Approval To Do Type | <p>Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Approval To Do Role | <p>Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | <p>At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It</p> | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |

| | <p>is only used to fetch the roles associated with the submitter To Do type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.</p> | <p>Note:</p> <p>This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | <p>Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval.</p> <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p> | <p>Yes (Conditional)</p> <p>Note:</p> <p>This field is required when the Approval Required option is selected.</p> <p>Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.</p> |
| Wait Days | <p>Used to specify the maximum wait period (in days) after which the bills in an invoice request are processed.</p> <p>Note: You cannot specify a negative value in the Wait Days field.</p> | No |

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Invoice Request Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the invoice request type, if required.
7. Click **Save**.

The changes made to the invoice request type are saved.

Deleting an Invoice Request Type

Procedure

To delete an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.
The **Invoice Request Type** screen appears.
4. In the **Invoice Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the invoice request type that you want to delete.

A message appears confirming whether you want to delete the invoice request type.

Note: You can delete an invoice request type when an invoice request is not created using the invoice request type.

Tip: Alternatively, you can delete an invoice request type by clicking the **Delete** button in the **Invoice Request Type** zone.

5. Click **OK**.
The invoice request type is deleted.

Copying an Invoice Request Type

Instead of creating an invoice request type from scratch, you can create a new invoice request type using an existing invoice request type. This is possible through copying an invoice request type. On copying an invoice request type, the details including the characteristics are copied to the new invoice request type. You can then edit the details, if required.

Prerequisites

To copy an invoice request type, you should have:

- Invoice request type (whose copy you want to create) defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To copy an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Invoice Request Type** sub-menu.

The **Invoice Request Type** screen appears.

4. In the **Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the invoice request type whose copy you want to create.

The **Invoice Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request type. It contains the following fields:
- **Characteristics** - Used to define the characteristics for the invoice request type.

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Invoice Request Type | Used to specify the invoice request type. | Yes |
| Business Object | Indicates the business object using which you are defining the invoice request type. | Not applicable |
| Description | Used to specify the description for the invoice request type. | Yes |
| Invoice Request Business Object | Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation | Yes |
| Detailed Description | Used to specify additional information about the invoice request type. | No |
| Status | Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Invoice Mode | Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic <p>Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.</p> | Yes |
| Bill Generation Type | Used to indicate the bill generation type, using which an invoice request should be created. The valid values are: <ul style="list-style-type: none"> • Regular • Trial | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|---|
| | <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p> | |
| Defer Processing Billable Charge Count | <p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p> | No |
| Date Calculation Algorithm | <p>Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when Invoice mode is Automatic.</p> |
| Invoice Request Approval Required | Used to indicate whether approval is required while invoicing bills through an invoice request. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| | <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p> | |
| Approval To Do Type | <p>Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Approval To Do Role | <p>Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | <p>Used to indicate the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Submitter To Do Role | Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval. | Yes (Conditional) Note: This field is required when the Approval Required option is selected. Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing. |
| | Note: The list includes only those To Do roles which are associated with the submitter To Do type. | |
| Wait Days | Used to indicate the threshold days before which no other invoice request for any bill generation process will be initiated. | No |
| | Note: By default, the value displayed for wait days is 0 . | |

Tip: Alternatively, you can copy an invoice request type by clicking the **Duplicate** button in the **Invoice Request Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics of the invoice request type, if required.
- Click **Save**.

The new invoice request type is defined.

| How to search for an invoice request | Searching for an Invoice Request on page 3595 |

Searching for an Invoice Request

Prerequisites

To search for an invoice request, you should have:

- Invoice request types defined in the application

Procedure

To search for an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Invoice Request**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request** sub-menu.
The **Invoice Request** screen appears.
4. Enter the search criteria in the **Search Invoice Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of invoice requests that meet the search criteria appears in the **Search Results** section.

Manually Creating an Invoice Request

Prerequisites

To create an invoice request, you should have:

- Invoice request types defined in the application
- Bills created in the application
- Account and Person entity defined in the application

Procedure

To create an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Invoice Request**.
A sub-menu appears.
3. Click the **Add** option from the **Invoice Request** sub-menu.

The **Add Invoice Request** window appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Invoice Request Type | Used to indicate the invoice request type using which you want to create the invoice request. | Yes |

Tip: Alternatively, you can access this window by clicking the **Add** button in the **Page Title** area of the **Invoice Request** screen.

4. Select the required invoice request type from the **Invoice Request Type** list.
5. Click **OK**.

The **Invoice Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request.
- **Characteristics** - Used to define the characteristics for the invoice request.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Invoice Request Type | Indicates the invoice request type using which the invoice request is created. | Not applicable |
| Entity | Used to indicate the entity using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Account • Person | Not applicable |
| | Note: By default, the Account option is selected. | |
| Account ID | Used to indicate the account for which you want to create an invoice request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| | Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears. | |
| Person ID | Used to indicate the person for whom the invoice request is generated. Note: The Search (🔍) icon appears corresponding to Person ID field. On clicking the Search icon, the Person Search window appears. | Yes |
| Cutoff Date | Used to specify the date till when the billable charges are considered for processing the invoice request. Note: By default, the current date appears in this field. | No |
| Accounting Date | Used to specify the accounting date of the bill. Note: By default, the current date appears in this field. | No |
| Bill Date | Used to specify the processing date on which the bill is completed. Note: The bill date cannot be on or earlier than the last bill date of the account. By default, the current date appears in this field. | No |
| Comments | Used to specify additional information about the invoice request. | No |

6. Enter the required details in the **Main** section.
7. Define characteristics for the invoice request, if required.
8. Click **Save**

The invoice request is created in the **Draft** status, and the status of all the records (in the invoice request) is set to **Pending**.

Invoice Request (Used for Viewing)

The **Invoice Request** screen allows you to:

- View the details of the invoice request
- Edit the details of the invoice request
- Delete the invoice request
- Submit the invoice request for processing
- Approve or reject the invoice request
- Cancel the invoice request
- View the log of the invoice request
- Add a log entry for the invoice request

It consists of the following tabs:

- [Invoice Request - Main](#) on page 3598
- [Invoice Request - Log](#) on page 3603

Invoice Request - Main

The **Main** tab displays information about the invoice request. It contains the following zones:

- [Invoice Request](#) on page 3598
- [Invoice Request Details/Account List](#) on page 3601

Invoice Request

The **Invoice Request** zone displays the details of the invoice request. It contains the following sections:

- **Main** - Displays basic information about the invoice request. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|--|
| Invoice Request Information | Displays information about the invoice request. |
| Invoice Request Type | Indicates the invoice request type using which the invoice request is created. |

| Field Name | Field Description |
|---------------------|---|
| | Note: It has a link. On clicking the link, the Invoice Request Type screen appears where you can view the details of the respective invoice request type. |
| Entity | Indicates the entity using which an invoice request is created. |
| Account Information | Indicates the account using which an invoice request is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Cutoff Date | Indicates the date till when the billable charges are considered for processing the invoice request. Note: This field is applicable only for Entity Type as Account . |
| Accounting Date | Indicates the accounting date for which the financial transaction of the bill is created. |
| Bill Date | Indicates the date when the bill is completed. Note: The bill date must not be equal to or earlier than the last bill date of the account for which the invoice request is generated. |
| Processing Date | Indicates the date when the invoice request is processed. Note: Processing Date = Invoice Request Creation Date + Wait Day + Work Days |
| Status | Indicates the status of the invoice request. The valid values are: <ul style="list-style-type: none"> • Draft • Account Derivation Pending • Submitted • Approval In Progress • Approved • Deferred Processing • Deferred Processing - Batch • Rejected • Cancelled • Error • Processing • Processed • Return to Submitter |
| Status Reason | Indicates the reason why the status of the invoice request is changed. |

| Field Name | Field Description |
|------------|--|
| | Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status. |

- **Characteristics** - Lists the characteristics defined for the invoice request. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Effective Date | Displays the date from when the characteristic is effective for the invoice request. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the invoice request. |
| | Note: The Edit button appears when the invoice request is in the Draft status. |
| Delete | Used to delete the invoice request. |
| | Note: The Delete button appears when the invoice request is in the Draft status. |
| Submit | Used to submit the invoice request. |
| | Note: The Submit button appears when the invoice request is in the Draft status. |
| Cancel | Used to cancel the invoice request. |
| | Note: The Cancel button appears when the invoice request is in the Deferred Processing Batch status. |
| Approve | Used to approve the invoice request. |
| | Note: The Approve button appears when: <ul style="list-style-type: none"> • The invoice request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the invoice request. |
| Reject | Used to reject the invoice request. |
| | Note: The Reject button appears when: <ul style="list-style-type: none"> • The invoice request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the invoice request. |
| Re Submit | Used to request for resubmitting the invoice request. |

| Button Name | Button Description |
|-------------|--|
| | <p>Note: The Re Submit button appears when:</p> <ul style="list-style-type: none"> The invoice request is in the Approval In Progress status. A user with the approval To Do role is reviewing the invoice request. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | <p>Indicates the business object using which the invoice request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Status Date/Time | Displays the date and time when the invoice request status is updated. |
| Create Date/Time | Displays the date and time when the invoice request is created. |

- **External Reference** - Lists the external references defined for the invoice request. This section contains the following columns:

Note: This section appears when the invoice request is in the **Deferred Processing Batch** or **Canceled** status.

| Column Name | Column Description |
|--------------------------------|--|
| External Reference Type | Indicates the external reference type of the invoice request. |
| External Reference Information | <p>Displays additional information about the external reference type.</p> <p>Note: It has a link. On clicking the link, the Policy screen appears with the details of the respective policy.</p> |

Invoice Request Details/Account List

The **Invoice Request Details/Account List** zone lists the bills or the accounts which are added to the invoice request. It contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Account Information | Indicates the account for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Person Information | Indicates the person for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. |
| Record Status | Indicates the status of the bills in the invoice request. The valid values are: <ul style="list-style-type: none"> • Pending • Error • Processing |
| Bill Information | Indicates the bill which is added to the invoice request. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |
| Error Message | Displays the error message indicating the error that occurred while processing the bills in the invoice request. |
| Recent Billed Date | Displays the date of the bill that has been recently processed from the invoice request. |

A check box appears corresponding to each account. On selecting the check box, and clicking the **Exclude** button, you can exclude the account from the invoice request. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to exclude all accounts listed in the respective page from the invoice request.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Filter** icon appears when the zone is **Account List**.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Excluded Accounts

The **Excluded Accounts** zone lists the accounts which are excluded from the invoice request. It appears when **Invoice Requests for Persons** option is selected from the **Search By list** in the **Search Invoice Request** zone. It contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Account Information | Indicates the account for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |

| Column Name | Column Description |
|--------------------|---|
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Person Information | Indicates the person for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. |

A check box appears corresponding to each account. On selecting the check box, and clicking the **Include** button, you can include the account to the invoice request. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all accounts listed in the respective page to the invoice request.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Filter** icon appears when the zone is **Account List**.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Invoice Request - Log

The **Log** tab contains the following zone:

- [Invoice Request Log](#) on page 3603

Invoice Request Log

The **Invoice Request Log** zone lists the complete trail of actions performed on the invoice request. It contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| Creation Date/Time | Displays the date and time when the action was performed on the invoice request. |
| Details | Displays the details of the action performed on the invoice request. |
| User | Indicates the user who has performed the action on the invoice request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is created when the action is performed on the invoice request. |
| | Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements. |
| Status Reason | Indicates the reason why the invoice request was rejected by the approver. |
| | Note: The data appears in this column when the invoice request is in the Rejected status. |

Note: You can manually add a log entry for the invoice request by clicking the **Add Log Entry** link in the upper right corner of the **Invoice Request Log** zone.

Editing an Invoice Request

Prerequisites

To edit an invoice request, you should have:

- Invoice request types defined in the application
- Bills created in the application
- Account and Person entity defined in the application

Procedure

To edit an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request whose details you want to edit.

The **Invoice Request** screen appears.

3. Click the **Edit** button in the **Invoice Request** zone.

The **Edit Invoice Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request.
- **Characteristics** - Used to define the characteristics for the invoice request.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Invoice Request Information | Displays information about the invoice request. | Not applicable |
| Invoice Request Type | Indicates the invoice request type using which the invoice request is created. | Not applicable |
| Entity | Used to indicate the entity using which you want to edit an invoice request. The valid values are: <ul style="list-style-type: none"> • Account • Person | Not applicable |
| | Note: This field is in the read-only mode. | |
| Account ID | Used to indicate the account using which you want to edit an invoice request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p> | |
| Cutoff Date | <p>Used to specify the date till when the billable charges are considered for processing the invoice request.</p> <p>Note: If the cutoff date is not mentioned, the system considers current date as the cutoff date.</p> | No |
| Accounting Date | <p>Used to specify the accounting date of the bill.</p> <p>Note: If the accounting date is not mentioned, the system considers current date as the accounting date.</p> | No |
| Bill Date | <p>Used to specify the processing date on which the bill is completed.</p> <p>Note:</p> <p>The bill date cannot be on or earlier than the last bill date of the account.</p> <p>If the bill date is not mentioned, the system considers current date as the bill date.</p> | No |
| Comments | Used to specify additional information about the invoice request. | No |

Note: The **Edit** button appears when the invoice request is in the **Draft** status.

4. Modify the details of the invoice request, if required.
5. Define, edit, or remove characteristics of the invoice request, if required.
6. Click **Save**.

The changes made to the invoice request are saved.

Defining a Characteristic for an Invoice Request

Prerequisites

To define a characteristic for an invoice request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request**)

Procedure

To define a characteristic for an invoice request:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an invoice request type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the invoice request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the invoice request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Invoice Request . | Note: This field is required when you are defining a characteristic for the invoice request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required when you are defining a characteristic for the invoice request. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the invoice request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the invoice request, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the invoice request.

Deleting an Invoice Request

Procedure

To delete an invoice request:

1. Search for the invoice request in the **Search Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request that you want to delete.

The **Invoice Request** screen appears.

3. Click the **Delete** button in the **Invoice Request** zone.

A message appears confirming whether you want to delete the invoice request.

Note: The **Delete** button appears when the invoice request is in the **Draft** status.

4. Click **OK**.

The invoice request is deleted.

Canceling an Invoice Request

Prerequisites

To cancel an invoice request, you should have:

- Reasons defined for the **Canceled** status of the **C1-InvoiceRequest** business object in the **Status Reason** screen

Procedure

To cancel an invoice request:

1. Search for the invoice request in the **Search Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request that you want to cancel.

The **Invoice Request** screen appears.

3. Click the **Cancel** button in the **Invoice Request** zone.

The **Invoice Request** window appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Status Reason | Used to indicate the reason why you want to cancel the invoice request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: The list includes only those reasons which are defined for the Canceled status of the C1-InvoiceRequest business object in the Status Reason screen. | |

Note: The **Cancel** button appears when the invoice request is in the **Deferred Processing** or **Deferred Processing - Batch** status.

- Select the reason for canceling the invoice request from the **Status Reason** list.
- Click **Save**.

The status of the invoice request (along with the bills within the invoice request) is changed to **Canceled**.

Submitting an Invoice Request

Prerequisites

To submit an invoice request, you should have:

- The status of the invoice request in the **Draft** status.
- The invoice request type as **Manual**.

Procedure

To submit an invoice request:

- Search for the invoice request in the **Search Invoice Request** screen.
- In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request that you want to submit.

The **Invoice Request** screen appears.

- Click the **Submit** button in the **Invoice Request** zone.

The system behaves in the following manner:

| If... | Then... |
|--|--|
| The Approval Required option is selected in the respective invoice request type | The status of the invoice request is changed to Approval In Progress . In this status, you can perform various actions on the invoice request, such as, Approve or Reject or Return To Submitter . If the approver clicks the Approve button, the status of the invoice request is changed to Approval In Progress . If the approver clicks the Reject button, the status of the invoice request is changed to Rejected . If the approver clicks the Return To Submitter button, a To Do is generated and the |

| If... | Then... |
|---|---|
| | invoice request is changed to Draft . The submitter updates the invoice request and redirects it back to the approver for approval purposes. |
| The Approval Required option is not selected in the respective invoice request type and the entity type is Person | The status of the invoice request is changed to Processed , or Deferred Processing or Deferred Processing - Batch . |
| The Approval Required option is not selected in the respective invoice request type, and the entity type is Account , and the billable charge count exceeds the defer processing billable charge count | The status of the invoice request is changed to Deferred Processing - Batch . |
| The Approval Required option is not selected in the respective invoice request type, and the entity type is Account , and the billable charge count does not exceed the defer processing billable charge count, and the invoice processing date does not exceed the system date | The status of the invoice request is changed to Processed else it is changed to Defer Processing . |

Note:

The **Submit** button appears when the invoice request is in the **Draft** status and invoice request type is **Manual**.

Approving an Invoice Request

You can view the number of invoice requests which are pending for approval in the **Invoice Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the invoice request based on the observations.

Note: The system will not allow you to approve, reject, or resubmit an invoice request submitted by you.

Prerequisites

To approve an invoice request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an invoice request:

1. Do either of the following:

| If you want to... | Then... |
|--|---|
| Approve an invoice request through the Invoice Request screen | <ol style="list-style-type: none"> 1. Search for the invoice request in the Invoice Request screen. |

| If you want to... | Then... |
|--|---|
| | <ol style="list-style-type: none"> In the Search Results section, click the link in the Invoice Request Information column corresponding to the invoice request which you want to review. |
| Approve an Invoice request from the To Do List screen | <ol style="list-style-type: none"> Click the Menu link in the Application toolbar. A list appears. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. Enter C1-INVRATODO in the To Do Type field. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. Select the Open option from the Filter by list to view all unassigned To Dos. Click the link in the Message column corresponding to the To Do of the invoice request that you want to review. |

The **Invoice Request** screen appears.

- Review the details in the **Invoice Request** screen.
- If the information in the invoice request is accurate, then click the **Approve** button in the **Invoice Request** zone.

The system behaves in the following manner:

| If... | Then... |
|---|--|
| The status of the invoice request is changed to Approved | A To Do entry is created using the To Do type F1-TODOCOMPL specified in the approval profile and is assigned back to the submitter to complete the invoice request. |

Note: The **Approve** button appears when:

- The invoice request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the invoice request.

Rejecting an Invoice Request

Prerequisites

To reject an invoice request, you should have:

- Reasons defined for the **Rejected** status of the **C1-InvoiceRequest** business object in the **Status Reason** screen.

Note: The system will not allow you to approve, reject, or resubmit an invoice request submitted by you.

Procedure

To reject an invoice request:

- Do either of the following:

| If you want to... | Then... |
|---|---|
| Reject an invoice request through the Invoice Request screen | <ol style="list-style-type: none"> Search for the invoice request in the Invoice Request screen. In the Search Results section, click the link in the Invoice Request Information column corresponding to the invoice request which you want to review. |
| Reject an invoice request from the To Do List screen | <ol style="list-style-type: none"> Click the Menu link in the Application toolbar. A list appears. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. Enter C1-INVRATODO in the To Do Type field. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. Select the Open option from the Filter by list to view all unassigned To Dos. Click the link in the Message column corresponding to the To Do of the invoice request that you want to review. |

The **Invoice Request** screen appears.

- Review the details in the **Invoice Request** screen.
- If the information in the invoice request is incorrect, then click the **Reject** button in the **Invoice Request** zone.

The **Reject Invoice Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the invoice request. | Yes |
| | Note: The list includes only those reasons which are defined for the Rejected status of the C1-InvoiceRequest business object in the Status Reason screen. | |
| Comments | Used to specify additional information while rejecting the invoice request. | No |

Note: The **Reject** button appears when:

- The invoice request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the invoice request.

4. Select the reason for rejecting the invoice request from the **Status Reason** list.
5. Click **Save**.

The status of the invoice request is changed to **Rejected**.

Requesting to Resubmit an Invoice Request

Procedure

To request to resubmit an invoice request:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Request for resubmitting an invoice request through the Invoice Request screen | <ol style="list-style-type: none"> 1. Search for the invoice request in the Invoice Request screen. 2. In the Search Results section, click the link in the Invoice Request Information column corresponding to the invoice request which you want to review. |
| Request for resubmitting an invoice request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-INVRATODO in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the invoice request that you want to review. |

The **Invoice Request** screen appears.

- Review the details in the **Invoice Request** screen.
- If the information in the invoice request is incomplete and you want the submitter to make the required changes and resubmit the invoice request for approval, then click the **ReSubmit** button in the **Invoice Request** zone.

The **Resubmit Invoice Request** window appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Comments | Used to specify the changes which the submitter should make in the invoice request before resubmitting it for approval. | Yes |

Note: The **Re Submit** button appears when:

- The invoice request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the invoice request.

- Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the invoice request type. In addition, the status of the invoice request is changed to **Draft**.

Viewing the Log of an Invoice Request

Procedure

To view the log of an invoice request:

- Search for the invoice request in the **Invoice Request** screen.
- In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request whose log you want to view.

The **Invoice Request** screen appears.

- Click the **Log** tab.

The **Log** tab appears.

- View the complete trail of actions performed on the invoice request in the **Invoice Request Log** zone.

Adding a Log Entry for an Invoice Request

Procedure

To add a log entry for an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request whose log you want to edit.

The **Invoice Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Invoice Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Request Information | Displays information about the invoice request. | Not applicable |
| Log Details | Used to specify additional comments for the invoice request. | Yes |

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Invoice Request Log** zone.

Chapter 45

Hold Request Creation, Modification, Release, and View Through Inbound Web Service

Topics:

- [Prerequisites](#)
- [C1-CreateHoldRequest Business Service](#)
- [C1-GetHoldRequestHistory Business Service](#)
- [C1-ReleaseHoldRequest Business Service](#)
- [C1-UpdateHoldRequest Business Service](#)

Oracle Revenue Management and Billing enables you to create, edit, and release a hold request through a web service. It also enables you to view the details of a hold request through a web service. You can send the hold request creation, modification, release, or view request from the external system through an inbound web service. The following business services are shipped with the product to support different hold request operations:

| Business Service | Description |
|--------------------------|--|
| C1-CreateHoldRequest | Used to create a hold request for a single entity (i.e. for a particular person, account, or bill). For more information, see C1-CreateHoldRequest Business Service on page 3617 |
| C1-UpdateHoldRequest | Used to edit an active hold request. For more information, see C1-UpdateHoldRequest Business Service on page 3653 |
| C1-GetHoldRequestHistory | Used to fetch the details of an active hold request with a single entity (i.e. person, account, or bill). The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature. For more information, see C1-GetHoldRequestHistory Business Service on page 3633 |
| C1-ReleaseHoldRequest | Used to release an active hold request with a single entity (i.e. person, account, or bill). For more information, see C1-ReleaseHoldRequest Business Service on page 3645 |

You can create one inbound web service which supports all four operations - hold request creation, hold request update, hold request release, and hold request view. Alternatively, you can create four different inbound web services - one for hold request creation, another for hold request update, third for hold request release, and fourth for hold request view.

You can create a SOAP or REST based inbound web service. If you want to send the request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service. However, if you want to send the request in the XML format, you can create a SOAP or REST based inbound web service.

For more information on how to setup this feature, see [Prerequisites](#) on page 3616.

Prerequisites

The following table lists the prerequisites for hold request creation, modification, release, and view through an inbound web service:

| If you want to... | Then... |
|--------------------------|--|
| C1-CreateHoldRequest | <p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-CreateHoldRequest business service. • Authorize the ORMB user to access the required application service • Define the required hold request type for the hold request where the Approval Required flag is configured as No. • Define the required hold reason and comments • Define the required values for the HOLD_ENTITY_LVL_FLG lookup field. • Define the required values for the HOLD_PROCESS_FLG lookup field. • Define the required characteristic types where the characteristic entity is set to Hold Request |
| C1-UpdateHoldRequest | <p>Used to edit an active hold request. Through this service, you can edit the following details of an active hold request:</p> <ul style="list-style-type: none"> • End date, comments, and characteristics of a hold request • End date of a single hold entity in a hold request • End date of multiple hold processes in a hold request <p>It also allows you to delete a characteristic of a hold request. While sending the request for hold request modification, you need to specify the following details:</p> <ul style="list-style-type: none"> • Hold request ID • Hold entity ID (i.e. person ID, account ID, or bill ID) <p>Once the hold request is edited through the service, the hold request ID is sent in the response. The system enables you to track the hold request modification response sent to the external system using the Inbound Web Service History feature.</p> |
| C1-GetHoldRequestHistory | <p>Used to fetch the details of an active hold request with a single entity (i.e. person, account, or bill). The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature.</p> |
| C1-ReleaseHoldRequest | <p>Used to release an active hold request with a single entity (i.e. person, account, or bill). While sending the request for hold request release, you need to specify the following details:</p> <ul style="list-style-type: none"> • Hold request ID • Hold release reason and comments <p>Once the hold request is released through the service, the hold request ID is sent in the response along with its status and end date. Note that the hold request end date is set to the system date. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature.</p> |

| How to setup the C1-HOLDSRCH feature configuration | Setting the C1-HOLDSRCH Feature Configuration on page 4071 |

C1-CreateHoldRequest Business Service

The **Create Hold Request (C1-CreateHoldRequest)** business service enables you to create a hold request for a single entity (i.e. for a particular account, bill, or person). You can call this business service from an external system through an inbound web service. If you want to send the hold request creation request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request creation request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the request for hold request creation, you need to specify the following details:

- Hold request type, hold request start date, and hold request end date or hold days (which is used to calculate hold request end date if not specified)
- Entity (i.e. ACCT, BILL, or PERS) for which you want to create the hold request
- Hold reason and comments
- Entity identifiers when the entity is an account or a person, and the entity ID when the entity is a bill.
- Hold entity and hold process end dates
- Business processes (i.e. ATPY, BILL, FNDG, OVDU, REFD) which you want to hold for the entity
- Characteristics of the hold request

Points to Note:

- You must specify an active hold request type where the approval process is not configured for activation and release.
- If you do not specify the hold request type, the system, by default, considers the hold request type specified in the **Default Hold Request Type for IWS** option type of the **C1-HOLDSRCH** feature configuration.
- This business service does not allow you to create past dated or future dated hold request. Therefore, you must always set the hold request start date to the system date.
- Even if you explicitly specify a value for the defer processing count in the hold request type, it is no longer considered by this business service while creating a hold request.
- The upstream system may provide the hold request type to override the default hold request type, mentioned in the hold request inbound web service.
- If the hold request is in **DRAFT** status, this business service continues to operate in the background until the status of the hold request is set to **ACTIVE**.

On creating a hold request, the status of the hold request is set to **ACTIVE**. Once the hold request is created through the service, the hold request ID is sent in the response along with its status. The system enables you to track the hold request creation response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request Creation Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request Creation Request in the XML Format](#) on page 3618 and [Hold Request Creation Response in the XML Format](#) on page 3619 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-CreateHoldRequest** business service through an inbound web service, you need to ensure that the hold request creation request contains the following tags:

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| C1-CreateHoldRequest | Used to indicate that you want to invoke the C1-CreateHoldRequest business service. | Yes |
| holdRequest | Used to specify the details of the hold request. | Yes |
| sourceSystem | Used to indicate the external system from which the hold creation request is sent. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request creation request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History . | No |
| externalTransactionId | Used to indicate the transaction in the external system through which the hold request creation request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled. | No |
| externalSourceId | Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled. | No |
| holdStartDate | Used to specify the date from when the hold request is effective. | Yes |
| holdEndDate | Used to specify the date till when the hold request is effective. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) | | | | | | | | |
|---|--|--|------|---|---|--|--|--|--|-----|
| | <p>Note: The hold request end date must be either derived or provided by the upstream system before creating a hold request in an Active status.</p> | <p>Note: This data is required if the holdDays is not specified.</p> | | | | | | | | |
| holdDays | <p>Used to specify the number of days an entity should be kept on hold in the hold request.</p> <p>Note: If the holdEndDate is not specified, the system calculates the holdEndDate by adding the holdDays to the holdStartDate. The system considers the holdDays as calendar days which include all the 7 days in a week.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required if holdEndDate is not specified.</p> | | | | | | | | |
| holdRequestType | <p>Used to specify an active hold request type where the approval process is not configured for activation and release.</p> <p>Note: If an active hold request type is used where the approval process is configured, the system throws an error with a failure response.</p> | No | | | | | | | | |

The valid values are:</p> <ul style="list-style-type: none"> • ACCT - Used when you want to specify the account. • BILL - Used when you want to specify the bill. • PERS - Used when you want to specify the person. <p>Note:</p> <table border="1" data-bbox="480 1188 1156 1579"> <thead> <tr> <th data-bbox="480 1188 792 1241">If...</th> <th data-bbox="792 1188 1156 1241">Then</th> </tr> </thead> <tbody> <tr> <td data-bbox="480 1241 792 1381">You are creating the hold request for an ACCT entity</td> <td data-bbox="792 1241 1156 1381">You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.</td> </tr> <tr> <td data-bbox="480 1381 792 1465">You are creating the hold request for a BILL entity</td> <td data-bbox="792 1381 1156 1465">You can only add Funding process in the hold request.</td> </tr> <tr> <td data-bbox="480 1465 792 1579">You are creating the hold request for a PERS entity</td> <td data-bbox="792 1465 1156 1579">You can add Bill Generation and Funding process in the hold request.</td> </tr> </tbody> </table> <p>You must specify a value which is already defined in the HOLD_ENTITY_LVL_FLG lookup field. It must be in the Active status.</p> | If... | Then | You are creating the hold request for an ACCT entity | You can add Auto Pay , Bill Generation , Funding , and Overdue process in the hold request. | You are creating the hold request for a BILL entity | You can only add Funding process in the hold request. | You are creating the hold request for a PERS entity | You can add Bill Generation and Funding process in the hold request. | Yes |
| If... | Then | | | | | | | | | |
| You are creating the hold request for an ACCT entity | You can add Auto Pay , Bill Generation , Funding , and Overdue process in the hold request. | | | | | | | | | |
| You are creating the hold request for a BILL entity | You can only add Funding process in the hold request. | | | | | | | | | |
| You are creating the hold request for a PERS entity | You can add Bill Generation and Funding process in the hold request. | | | | | | | | | |
| holdReason | <p>Used to specify the reason for the hold request.</p> <p>Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status.</p> | Yes | | | | | | | | |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------------|--|--|
| holdComments | Used to specify additional information about the hold request. | No |
| entityIdentifierType | Used to specify the entity type. | Yes (Conditional) |
| | Note: You cannot specify BILL as a type for the entity identifier. | Note: This data is required while defining or editing a hold request. |
| entityIdentifierValue | Used to specify the entity identifier (i.e. account or person). | Yes (Conditional) |
| | Note: You cannot specify BILL as a value for the entity identifier. | Note: This data is required while defining or editing a hold request. |
| entityId | Used to specify a list of entities for which you want to create a hold request. | Yes (Conditional) |
| | Note: You need to specify the entity ID when the hold entity is BILL . | Note: This data is required while defining or editing a hold request. |
| holdEntityEndDate | Used to specify the date till when the entity is effective for hold request. | No |
| hierarchySwitch | Used to associate the hold entity with the entity hierarchy relationship. | No |
| holdProcessData | Used to specify process information for the hold request. | Yes |
| holdProcess | Used to specify the process that you want to keep on hold in the hold request. The valid values are: <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. | Yes |
| | Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status. | |
| holdProcessEndDate | Used to specify the date till when the entity is effective for hold request. | No |
| characteristics | Used to specify a characteristic for the hold request. | Yes |
| characteristicType | Used to indicate the characteristic type. | Yes |
| | Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type. | |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| characteristicValue | Used to specify the value for the characteristic type. | Yes |
| effectiveDate | Used to specify the date from when the characteristic is effective. | Yes |

The following table lists and describes the tags which appear in the hold request creation response in the XML format:

| Tag Name | Tag Description |
|---------------|--|
| statusCd | Indicates whether the hold request creation request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure |
| holdRequestId | Displays the hold request ID. |
| holdStatus | Indicates the current status of the hold request. |
| messageText | Indicates the error that occurred while creating the hold request. |
| | Note: This tag appears when the value in the statusCd tag is set to Failure . |

Hold Request Creation Request and Response - Attribute/Value Pairs in JSON Format

Note: We recommend you to refer the [Hold Request Creation Request in the JSON Format](#) on page 3623 and [Hold Request Creation Response in the JSON Format](#) on page 3624 topics in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are structured in the JSON format.

Before calling the **C1-CreateHoldRequest** business service through an inbound web service, you need to ensure that the hold request creation request contains the following attributes:

| Attribute Name | Attribute Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| C1-CreateHoldRequest | Used to indicate that you want to invoke the C1-CreateHoldRequest business service. | Yes |
| holdRequest | Used to specify the details of the hold request. | Yes |
| sourceSystem | Used to indicate the external system from which the hold creation request is sent. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request creation request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History . | No |
| externalTransactionId | Used to indicate the transaction in the external system through which the hold request creation request is sent. | No |

| Attribute Name | Attribute Description | Mandatory (Yes or No) |
|------------------|---|--|
| | Note: The external transaction ID is used when the Inbound Web Service History feature is enabled. | |
| externalSourceId | Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled. | No |
| holdStartDate | Used to specify the date from when the hold request is effective. | Yes |
| holdEndDate | Used to specify the date till when the hold request is effective. | Yes (Conditional) Note: This data is required if the holdDays is not specified. |
| holdDays | Used to specify the number of days an entity should be kept on hold in the hold request. Note: If the holdEndDate is not specified, the system calculates the holdEndDate by adding the holdDays to the holdStartDate . The system considers the holdDays as calendar days which include all the 7 days in a week. | Yes (Conditional) Note: This data is required if holdEndDate is not specified. |
| holdRequestType | Used to specify an active hold request type where the approval process is not configured for activation and release. Note: If an active hold request type is used where the approval process is configured, the system throws an error with a failure response. | No |
| holdEntity | Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • ACCT - Used when you want to specify the account. • BILL - Used when you want to specify the bill. • PERS - Used when you want to specify the person. | Yes |

| Attribute Name | Attribute Description | Mandatory (Yes or No) | | | | | | | | |
|---|---|--|------|---|---|--|--|--|---|--|
| | <p>Note:</p> <table border="1" data-bbox="493 296 1198 688"> <thead> <tr> <th data-bbox="493 296 818 348">If...</th> <th data-bbox="818 296 1198 348">Then</th> </tr> </thead> <tbody> <tr> <td data-bbox="493 348 818 495">You are creating the hold request for an ACCT entity</td> <td data-bbox="818 348 1198 495">You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.</td> </tr> <tr> <td data-bbox="493 495 818 579">You are creating the hold request for a BILL entity</td> <td data-bbox="818 495 1198 579">You can only add Funding process in the hold request.</td> </tr> <tr> <td data-bbox="493 579 818 688">You are creating the hold request for a PERS entity</td> <td data-bbox="818 579 1198 688">You can add Bill Generation and Funding process in the hold request.</td> </tr> </tbody> </table> <p>You must specify a value which is already defined in the HOLD_ENTITY_LVL_FLG lookup field. | If... | Then | | | | | | | | | |
| You are creating the hold request for an ACCT entity | You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request. | | | | | | | | | |
| You are creating the hold request for a BILL entity | You can only add Funding process in the hold request. | | | | | | | | | |
| You are creating the hold request for a PERS entity | You can add Bill Generation and Funding process in the hold request. | | | | | | | | | |
| holdReason | <p>Used to specify the reason for the hold request.</p> <p>Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field. It must be in the Active status.</p> | Yes | | | | | | | | |
| holdComments | Used to specify additional information about the hold request. | No | | | | | | | | |
| entityIdentifierType | <p>Used to specify the entity type.</p> <p>Note: You cannot specify BILL as a type for the entity identifier.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a hold request.</p> | | | | | | | | |
| entityIdentifierValue | <p>Used to specify the entity identifier (i.e. account or person).</p> <p>Note: You cannot specify BILL as a value for the entity identifier.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a hold request.</p> | | | | | | | | |
| entityId | <p>Used to specify a list of entities for which you want to create a hold request.</p> <p>Note: You need to specify the entityId when BILL is used as a hold entity.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a hold request.</p> | | | | | | | | |
| holdEntityEndDate | Used to specify the date till when the entity is effective for hold request. | No | | | | | | | | |
| hierarchySwitch | Used to associate the hold entity with the entity hierarchy relationship. | No | | | | | | | | |

| Attribute Name | Attribute Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| holdProcessData | Used to specify process information for the hold request. | Yes |
| holdProcess | Used to specify the process that you want to keep on hold in the hold request. The valid values are: <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. <p>Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.</p> | Yes |
| holdProcessEndDate | Used to specify the date till when the entity is effective for hold request. | No |
| characteristics | Used to specify a characteristic for the hold request. | Yes |
| characteristicType | Used to indicate the characteristic type. <p>Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type.</p> | Yes |
| characteristicValue | Used to specify the value for the characteristic type. | Yes |
| effectiveDate | Used to specify the date from when the characteristic is effective. | Yes |

The following table lists and describes the tags which appear in the hold request creation response in the JSON format:

| Attribute Name | Attribute Description |
|----------------|--|
| statusCd | Indicates whether the hold request creation request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure |
| holdRequestId | Displays the hold request ID. |
| holdStatus | Indicates the current status of the hold request. |
| messageText | Indicates the error that occurred while creating the hold request. <p>Note: This tag appears when the value in the statusCd tag is set to Failure.</p> |

</characteristics>
</holdRequest>
</Cl-CreateAdjustment>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

      "holdEntityEndDate": "2022-12-30",
      "hierarchySwitch": "N",
      "holdProcessData":
        {
          "holdProcess": "OVDU"
          "holdProcessEndDate": "2021-12-30"
        }
    }
  }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a hold creation request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

C1-GetHoldRequestHistory Business Service

The **Inquire Hold Request Details (C1-GetHoldRequestHistory)** business service enables you to view the details of an active hold request for a single entity (i.e. person, account, or bill). You can call this business service from an external system through an inbound web service. If you want to send the hold request view request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request view request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request view request, you need to specify the following details:

- Either the entity identifier type and entity identifier value or the entity ID.

Note: Specify a valid entity ID in the hold request view request which is used in the system.

The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request View Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request View Request in the XML Format](#) on page 3634 and [Hold Request View Response in the XML Format](#) on page 3635 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-GetHoldRequestHistory** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

| Tag Name | Tag Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| C1-GetHoldRequestHistory | Used to indicate that you want to invoke the C1-GetHoldRequestHistory business service. | Yes |
| getHoldReqHistRequest | Used to specify the details of the hold request which you want to view. | Yes |
| sourceSystem | Used to indicate the external system from which the hold view request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History . | No |
| c1ExternalTransactionId | Used to indicate the transaction in the external system through which the hold request view request is sent. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| | Note: The external transaction ID is used when the Inbound Web Service History feature is enabled. | |
| externalSourceId | Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled. | No |
| getHoldReqStartDt | Used when you want to view hold request details which are created from a particular date onwards. | Yes |
| getHoldReqEndDt | Used when you want to view hold request details which are created till a particular date. | No |
| getHoldReqEntity | Used when you want to view the hold request details for a particular entity. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS | Yes |
| getHoldReqReason | Used when you want to view the hold request details based on a specific reason. Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status. | Yes |
| getHoldReqEntIdentType | Used to specify the entity type. Note: You cannot specify BILL as a type for the entity identifier. | Yes (Conditional) Note: This data is required while viewing a hold request. |
| getHoldReqEntIdentValue | Used to specify the entity identifier (i.e. account or person). Note: You cannot specify BILL as a value for the entity identifier. | Yes (Conditional) Note: This data is required while viewing a hold request. |
| getHoldReqEntityId | Used to specify a list of entities for which you want to create a hold request. Note: You need to specify the entityId when BILL is used as a hold entity. | Yes (Conditional) Note: This data is required while viewing a hold request. |
| getHoldReqProcess | Used when you want to view the hold request details for a specific process. The valid values are: <ul style="list-style-type: none"> • ATPY • BILL | Yes |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|----------|--|-----------------------|
| | <ul style="list-style-type: none"> • FNDG • OVDU | |

The following table lists and describes the tags which appear in the hold request view response in the XML format:

| Tag Name | Tag Description |
|---------------------|--|
| holdReqHistResponse | Displays the response returned by the business service in relation to the hold request. |
| statusCd | Indicates whether the hold request view request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure |
| messageText | Indicates the error that occurred while creating the hold request. Note: This tag appears when the value in the statusCd tag is set to Failure . |
| holdReqHistList | Displays the details of a hold request. |
| holdRequestId | Displays the hold request ID. |
| holdReqStartDt | Displays the date from when the hold request was effective. |
| holdReqEndDt | Displays the date till when the hold request was effective. |
| holdStatus | Indicates the current status of the hold request. |
| holdReqType | Indicates the type using which the hold request was created. |
| holdReqReason | Indicates the reason which was specified when the hold request was created. |
| holdReqEntity | Indicates the entity for which the hold request was created. |
| holdReqProcesses | Indicates the process which was kept on hold in the hold request. |

Hold Request View Request and Response - Attribute/Value Pairs in JSON Format

Note: We recommend you to refer the [Hold Request View Request in the JSON Format](#) on page 3637 and [Hold Request View Response in the JSON Format](#) on page 3638 topics in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are structured in the JSON format.

Before calling the **C1-GetHoldRequestHistory** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

| Tag Name | Tag Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| C1-GetHoldRequestHistory | Used to indicate that you want to invoke the C1-GetHoldRequestHistory business service. | Yes |
| getHoldReqHistRequest | Used to specify the details of the hold request which you want to view. | Yes |
| sourceSystem | Used to indicate the external system from which the hold view request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History . | No |
| c1ExternalTransactionId | Used to indicate the transaction in the external system through which the hold request view request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| externalSourceId | Used to specify the external source system ID. | No |
| | Note: The external source system ID is used when the Inbound Web Service History feature is enabled. | |
| getHoldReqStartDt | Used when you want to view hold request details which are created from a particular date onwards. | Yes |
| getHoldReqEndDt | Used when you want to view hold request details which are created till a particular date. | No |
| getHoldReqEntity | Used when you want to view the hold request details for a particular entity. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS | Yes |
| getHoldReqReason | Used when you want to view the hold request details based on a specific reason. | Yes |
| | Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status. | |
| getHoldReqEntIdentType | Used to specify the entity type. | Yes (Conditional) |
| | Note: You cannot specify BILL as a type for the entity identifier. | |
| getHoldReqEntIdentValue | Used to specify the entity identifier (i.e. account or person). | Yes (Conditional) |
| | Note: You cannot specify BILL as a value for the entity identifier. | |
| getHoldReqEntityId | Used to specify a list of entities for which you want to create a hold request. | Yes (Conditional) |
| | Note: You need to specify the entityId when BILL is used as a hold entity. | |
| getHoldReqProcess | Used when you want to view the hold request details for a specific process. The valid values are: <ul style="list-style-type: none"> • ATPY • BILL • FNDG • OVDU | Yes |

The following table lists and describes the tags which appear in the hold request view response in the XML format:

| Tag Name | Tag Description |
|---------------------|--|
| holdReqHistResponse | Displays the response returned by the business service in relation to the hold request. |
| statusCd | Indicates whether the hold request view request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure |
| messageText | Indicates the error that occurred while creating the hold request. Note: This tag appears when the value in the statusCd tag is set to Failure . |
| holdReqHistList | Displays the details of a hold request. |
| holdRequestId | Displays the hold request ID. |
| holdReqStartDt | Displays the date from when the hold request was effective. |
| holdReqEndDt | Displays the date till when the hold request was effective. |
| holdStatus | Indicates the current status of the hold request. |
| holdReqType | Indicates the type using which the hold request was created. |
| holdReqReason | Indicates the reason which was specified when the hold request was created. |
| holdReqEntity | Indicates the entity for which the hold request was created. |
| holdReqProcesses | Indicates the process which was kept on hold in the hold request. |

Sample Hold Request View Request and Response in the XML Format

Using the below example, you can view a hold request for the **ACCT** account entity where **ATPY** auto pay process is on hold.

Sample Hold Request View Request in the XML Format

```
<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_HOLD</sourceSystem>
    <externalSourceId>ESI1</externalSourceId>
    <clExternalTransactionId>ETI1</clExternalTransactionId>
    <getHoldReqStartDt>2022-01-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>ACCT</getHoldReqEntity>
    <getHoldReqReason>TORNADO_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4321</getHoldReqEntIdentValue>
    <getHoldReqEntityId>003526636627</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
</C1-GetHoldRequestHistory>
```

Sample Hold Request View Response in the XML Format

The following information is received as response when the hold request is processed successfully.

```
<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_HOLD</sourceSystem>
    <externalSourceId>ESI1</externalSourceId>
    <c1ExternalTransactionId>ETI1</c1ExternalTransactionId>
    <getHoldReqStartDt>2022-01-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>ACCT</getHoldReqEntity>
    <getHoldReqReason>TORNADO_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4321</getHoldReqEntIdentValue>
    <getHoldReqEntityId>003526636627</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
  <holdReqHistResponse>
    <statusCd>SUCCESS</statusCd>
    <messageText></messageText>
    <holdReqHistList>
      <holdReqId>006046575162</holdReqId>
      <holdReqStartDt>2022-01-01</holdReqStartDt>
      <holdReqEndDt></holdReqEndDt>
      <holdReqStatus>ACTIVE</holdReqStatus>
      <holdReqType>HOLD_WITHOUT_APPROVAL</holdReqType>
      <holdReqReason>TORNADO_IN_TX</holdReqReason>
      <holdReqEntity>003526636627</holdReqEntity>
      <holdReqProcesses>ATPY</holdReqProcesses>
    </holdReqHistList>
  </holdReqHistResponse>
</C1-GetHoldRequestHistory>
```

The following information is received from the hold request when the requested search parameters fail to return any search results.

```
<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_TEST</sourceSystem>
    <externalSourceId>ESI55</externalSourceId>
    <c1ExternalTransactionId>ETI33</c1ExternalTransactionId>
    <getHoldReqStartDt>2021-12-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>PERS</getHoldReqEntity>
    <getHoldReqReason>FLOODS_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4323</getHoldReqEntIdentValue>
    <getHoldReqEntityId>004556623427</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
  <holdReqHistResponse>
    <statusCd>FAILURE</statusCd>
    <messageText>The system could not retrieve hold request ID based on
the search parameters.
    </messageText>
    <holdReqHistList>
      <holdReqId></holdReqId>
      <holdReqStartDt></holdReqStartDt>
      <holdReqEndDt></holdReqEndDt>
      <holdReqStatus></holdReqStatus>
      <holdReqType></holdReqType>
      <holdReqReason></holdReqReason>
      <holdReqEntity></holdReqEntity>
      <holdReqProcesses></holdReqProcesses>
    </holdReqHistList>
  </holdReqHistResponse>
</C1-GetHoldRequestHistory>
```

```

    </holdReqHistList>
  </holdReqHistResponse>
</C1-GetHoldRequestHistory>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

      "messageText": "The system could not retrieve hold request ID
based on the search parameters."
      "holdReqHistList":
      {
        "holdReqId": "",
        "holdReqStartDt": "",
        "holdReqEndDt": "",
        "holdReqStatus": "",
        "holdReqType": "",
        "holdReqReason": "",
        "holdReqEntity": "",
        "holdReqProcesses": ""
      }
    }
  }
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a hold view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

C1-ReleaseHoldRequest Business Service

The **Release Hold Request (C1-ReleaseHoldRequest)** business service enables you to release an active hold request for a single entity (i.e. person, account, or bill). You can call this business service from an external system through an inbound web service. If you want to send the hold request release request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request release request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request release request, you need to specify the following details:

- Hold request ID
- Hold release reason and comments

Once the hold request is released through this business service, the hold request ID is sent in the response along with its status and end date. Note that the hold request end date is set to the system date. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request Release Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request Release Request in the XML Format](#) on page 3646 and [Hold Request Release Response in the XML Format](#) on page 3646 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ReleaseHoldRequest** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| C1-ReleaseHoldRequest | Used to indicate that you want to invoke the C1-ReleaseHoldRequest business service. | Yes |
| sourceSystem | Used to indicate the external system from which the hold release request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History . | No |
| externalTransactionId | Used to indicate the transaction in the external system through which the hold request release request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled. | No |
| externalSourceId | Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled. | No |
| holdRequestId | Used to specify the hold request ID of the hold request for which the hold request release request is sent. Note: You must specify the hold request ID which is already defined in the system. | Yes |
| holdReleaseReason | Used to specify the reason for releasing the hold request. Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field. It must be in the Active status. | Yes |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| holdComments | Used to specify additional information about the hold request. | No |

The following table lists and describes the tags which appear in the hold request view response in the XML format:

| Tag Name | Tag Description |
|----------------------|--|
| requestProcessStatus | Indicates whether the hold request view request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> Success Failure |
| holdRequestId | Displays the hold request ID. |
| holdReleaseReason | Indicates the reason which was specified when the hold request was released. |
| holdComments | Displays additional information about the hold request. |
| errormsg | Indicates the error that occurred while creating the hold request. Note: This tag appears when the value in the requestProcessStatus tag is set to Failure . |
| holdEndDate | Displays the date till when the hold request was effective. |
| holdStatus | Indicates the current status of the hold request. |

Sample Hold Request Release Request and Response in the XML Format

Using the below example, you can release a hold request with an **Active** status for the **22559977334488** hold request ID.

Sample Hold Request Release Request in the XML Format

```
<C1-ReleaseHoldRequest>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>22559977334488</holdRequestId>
  <holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
  <holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
</C1-ReleaseHoldRequest>
```

Sample Hold Request Release Response in the XML Format

The following information is received as response when the hold request is processed successfully.

```
<C1-ReleaseHoldRequest>
  <requestProcessStatus>SUCCESS</requestProcessStatus>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>22559977334488</holdRequestId>
  <holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
  <holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
  <holdEndDate>2022-31-01</holdEndDate>
  <holdRequestStatus>RELEASE</holdRequestStatus>
  <errormsg></errormsg>
</C1-ReleaseHoldRequest>
```

The following information is received from the hold request when the hold request ID passed in the release request is invalid.

```
<C1-ReleaseHoldRequest>
  <requestProcessStatus>FAILURE</requestProcessStatus>
```

```

<sourceSystem>SRC_AMER_PRIME</sourceSystem>
<externalTransactionId>ETI44</externalTransactionId>
<externalSourceId>ESI77</externalSourceId>
<holdRequestId>790420762397</holdRequestId>
<holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
<holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
<holdEndDate></holdEndDate>
<holdRequestStatus></holdRequestStatus>
<errorMsg>The hold request ID 790420762397 is invalid</errorMsg>
</Cl-ReleaseHoldRequest>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold release request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Hold Request Release Request and Response in the JSON Format

Using the below example, you can release a hold request with an **Active** status for the **44776611339988** hold request ID.

Sample Hold Request View Request in the JSON Format

```

{
  "Cl-ReleaseHoldRequest": {
    "sourceSystem": "SRC_PANAMER_PRIME"
    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "44776611339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
  }
}

```

Sample Hold Request Release Response in the JSON Format

```

{
  "Cl-ReleaseHoldRequest": {
    "requestProcessStatus": "SUCCESS"
    "sourceSystem": "SRC_PANAMER_PRIME"
    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "44776611339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
    "holdEndDate": "2022-02-28"
    "holdRequestStatus": "RELEASE"
    "errorMsg": ""
  }
}

```

The following information is received from the hold request when the hold request ID passed in the release request is invalid.

```
{
```

```

"C1-ReleaseHoldRequest" :
{
  "requestProcessStatus": "FAILURE"
  "sourceSystem": "SRC_PANAMER_PRIME"
  "externalTransactionId": "ETI01"
  "externalSourceId": "ESI05"
  "holdRequestId": "55772211339988"
  "holdReleaseReason": "FLOODS"
  "holdComments": "HEAVY FLOODS IN DOWNTOWN"
  "holdEndDate": ""
  "holdRequestStatus": ""
  "errorMsg": "The hold request ID 55772211339988 is invalid"
}
}

```

Note: We have given the above request and response samples to illustrate how the attribute value pairs should be structured while sending a hold release request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

C1-UpdateHoldRequest Business Service

The **Update Hold Request (C1-UpdateHoldRequest)** business service enables you to edit an active hold request. You can call this business service from an external system through an inbound web service. If you want to send the hold request update request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request update request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request update request, you need to specify the following details:

- Hold request ID
- Hold entity ID (i.e. person ID, account ID, or bill ID)

Through this service, you can edit the following details of an active hold request:

- End date, comments, and characteristics of a hold request
- End date of a single hold entity in a hold request
- End date of multiple hold processes in a hold request

Once the hold request is edited through the service, the hold request ID is sent in the response. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request Update Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request Update Request in the XML Format](#) on page 3654 and [Hold Request Update Response in the XML Format](#) on page 3655 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-UpdateHoldRequest** business service through an inbound web service, you need to ensure that the hold request update request contains the following tags:

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| C1-UpdateHoldRequest | Used to indicate that you want to invoke the C1-UpdateHoldRequest business service. | Yes |
| sourceSystem | Used to indicate the external system from which the hold update request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request update request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History . | No |
| externalTransactionId | Used to indicate the transaction in the external system through which the hold request update request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled. | No |
| externalSourceId | Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled. | No |
| holdRequestId | Used to specify the hold request ID of the hold request for which the hold request update request is sent. Note: You must specify the hold request ID which is already defined in the system. | Yes |
| holdComments | Used to specify additional information about the hold request. | No |
| holdEndDate | Used to specify the date till when the hold request is effective. Note: The hold request end date must be either derived or provided by the upstream system before creating a hold request in an Active status. The hold request end date cannot be earlier than the hold process end date. | No |
| entityId | Used to specify a list of entities for which you want to create a hold request. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|--------------------|--|---|
| | <p>Note: You need to specify the entity ID when the hold entity is BILL.</p> | |
| entityEndDate | <p>Used to specify the date till when the entity is effective for hold request.</p> <p>Note:</p> <p>The entity end date cannot be later than the hold end date and earlier than the hold process end date.</p> <p>The entity end date cannot be later than the system date.</p> <p>At present, you can only update the end date of a single entity specified in the hold request update request. If there are two or more entities on hold, you need to initiate a separate hold request update request for each entity in order to update its respective end date.</p> | No |
| holdProcessData | Used to specify the details of the hold process. | No |
| holdProcess | <p>Used to specify the process that you want to keep on hold in the hold request. The valid values are:</p> <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. <p>Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while updating the hold request information.</p> |
| holdProcessEndDate | <p>Used to specify the date till when the entity is effective for hold request.</p> <p>Note:</p> <p>The hold process end date cannot be later than the hold end date.</p> <p>At present, you can only update the end date of a single process specified in the hold request update request. If there are two or more processes on hold, you need to initiate a separate hold request update request for each process in order to update its respective end date.</p> | No |
| characteristics | Used to specify a characteristic for the hold request. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|---------------------|--|--|
| | | Note: This data is required while updating the hold request information. |
| action | Used to specify the action to be performed on the characteristic. The valid values are: <ul style="list-style-type: none"> • Update • Delete | Yes (Conditional) Note: This data is required while updating the hold request information. |
| characteristicType | Used to indicate the characteristic type. Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type. | Yes (Conditional) Note: This data is required while updating the hold request information. |
| characteristicValue | Used to specify the value for the characteristic type. Note: You must specify a characteristic value which is associated with the characteristic type and is present in the system. | Yes (Conditional) Note: This data is required while updating the hold request information. |
| effectiveDate | Used to specify the date from when the characteristic is effective. | Yes (Conditional) Note: This data is required while updating the hold request information. |

The following table lists and describes the tags which appear in the hold request view response in the XML format:

| Tag Name | Tag Description |
|----------------------|--|
| requestProcessStatus | Indicates whether the hold request update request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure |
| holdRequestId | Displays the hold request ID. |
| errormsg | Indicates the error that occurred while updating the hold request. Note: This tag appears when the value in the requestProcessStatus tag is set to Failure . |

Hold Request Update Request and Response - Tags in JSON Format

Note: We recommend you to refer the [Hold Request Update Request in the JSON Format](#) on page 3659 and [Hold Request Update Response in the JSON Format](#) on page 3659 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-ReleaseHoldRequest** business service through an inbound web service, you need to ensure that the hold request update request contains the following tags:

| Tag Name | Tag Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| C1-UpdateHoldRequest | Used to indicate that you want to invoke the C1-UpdateHoldRequest business service. | Yes |
| sourceSystem | Used to indicate the external system from which the hold update request is received. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| | <p>Note:</p> <p>You must specify an external system which is already defined in the system.</p> <p>The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request update request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see <i>Inbound Web Service History</i>.</p> | |
| externalTransactionId | <p>Used to indicate the transaction in the external system through which the hold request update request is sent.</p> <p>Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.</p> | No |
| externalSourceId | <p>Used to specify the external source system ID.</p> <p>Note: The external source system ID is used when the Inbound Web Service History feature is enabled.</p> | No |
| holdRequestId | <p>Used to specify the hold request ID of the hold request for which the hold request update request is sent.</p> <p>Note: You must specify the hold request ID which is already defined in the system.</p> | Yes |
| holdComments | Used to specify additional information about the hold request. | No |
| holdEndDate | <p>Used to specify the date till when the hold request is effective.</p> <p>Note:</p> <p>The hold request end date must be either derived or provided by the upstream system before creating a hold request in an Active status.</p> <p>The hold request end date cannot be earlier than the hold process end date.</p> | No |
| entityId | <p>Used to specify a list of entities for which you want to create a hold request.</p> <p>Note: You need to specify the entity ID when the hold entity is BILL.</p> | No |
| entityEndDate | Used to specify the date till when the entity is effective for hold request. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|--------------------|--|---|
| | <p>Note:</p> <p>The entity end date cannot be later than the hold end date and earlier than the hold process end date.</p> <p>The entity end date cannot be later than the system date.</p> <p>At present, you can only update the end date of a single entity specified in the hold request update request. If there are two or more entities on hold, you need to initiate a separate hold request update request for each entity in order to update its respective end date.</p> | |
| holdProcessData | Used to specify the details of the hold process. | No |
| holdProcess | <p>Used to specify the process that you want to keep on hold in the hold request. The valid values are:</p> <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. <p>Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while updating the hold request information.</p> |
| holdProcessEndDate | <p>Used to specify the date till when the entity is effective for hold request.</p> <p>Note:</p> <p>The hold process end date cannot be later than the hold end date.</p> <p>At present, you can only update the end date of a single process specified in the hold request update request. If there are two or more processes on hold, you need to initiate a separate hold request update request for each process in order to update its respective end date.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while updating the hold request information.</p> |
| characteristics | Used to specify a characteristic for the hold request. | <p>Yes (Conditional)</p> <p>Note: This data is required while updating the hold request information.</p> |
| action | <p>Used to specify the action to be performed on the characteristic. The valid values are:</p> <ul style="list-style-type: none"> • Update | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|---------------------|---|---|
| | <ul style="list-style-type: none"> Delete | Note: This data is required while updating the hold request information. |
| characteristicType | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type. | Note: This data is required while updating the hold request information. |
| characteristicValue | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: You must specify a characteristic value which is associated with the characteristic type and is present in the system. | Note: This data is required while updating the hold request information. |
| effectiveDate | Used to specify the date from when the characteristic is effective. | Yes (Conditional) |
| | | Note: This data is required while updating the hold request information. |

The following table lists and describes the tags which appear in the hold request view response in the XML format:

| Tag Name | Tag Description |
|----------------------|--|
| requestProcessStatus | Indicates whether the hold request update request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> Success Failure |
| holdRequestId | Displays the hold request ID. |
| errorMsg | Indicates the error that occurred while updating the hold request. |
| | Note: This tag appears when the value in the requestProcessStatus tag is set to Failure . |

Chapter 46

Hold Direct Debit Instruction

Topics:

- [Prerequisites](#)
- [Algorithms Used in C1-AutoPayRequest](#)
- [Auto Pay Request Status Transition without Approval](#)
- [Auto Pay Request Status Transition with Approval](#)
- [Auto Pay Request Type](#)
- [Auto Pay Request \(Used for Searching\)](#)
- [Auto Pay Request \(Used for Viewing\)](#)

In the financial services and health insurance domains, there might be scenarios wherein the customers would like to review their invoices before the charges are directly debited from their accounts. In such scenarios, there is a need to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer.

Oracle Revenue Management and Billing provides the ability to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer. A new field named **Auto Pay Review Required** is added in the **Auto Pay** tab of the **Account** screen. On completing a bill for an account, the system creates the automatic payment records in the **CI_BILL_ACH** table as per the auto pay instructions defined for the account. If the **Auto Pay Review Required** option is selected, the system sets the **EXTRACT_ELIG_SW** column corresponding to the automatic payment records in the **CI_BILL_ACH** table to **N**. However, if the **Auto Pay Review Required** option is not selected, the system sets the **EXTRACT_ELIG_SW** column corresponding to the automatic payment records in the **CI_BILL_ACH** table to **Y**. The **EXTRACT_ELIG_SW** column indicates whether the automatic payment record is eligible for the extraction. If the **EXTRACT_ELIG_SW** column is set to **N**, the **APAYCRET** batch does not consider the automatic payment record in the **CI_BILL_ACH** table for automatic payment creation.

Once the confirmation is received for one or more bills, the system enables you to create an automatic payment request for the bills. While creating an automatic payment request, you need to specify an automatic payment request type using which you want to create the automatic payment request. It is the automatic payment request type which helps the system to determine:

- The business object using which the automatic payment request should be created in the system
- Whether the approval is required for the automatic payment request

Once you specify the automatic payment request type, the system creates the automatic payment request in the **Draft** status. You can then include the bills for which invoice confirmation is received from the customers in the automatic payment request. At least one bill should be included in the automatic payment request. Before submitting an automatic payment request, you need to do the following:

- Edit the Schedule Extract Date (if required) of each bill
- Set the **Eligible for Extraction** field of each bill to **Y**

You can also delete a bill from an automatic payment request when it is in the **Draft** status. Once you edit the required details of the bills in an automatic payment request, you can submit the automatic payment request. If the approval

process is not configured in the respective automatic payment request type, the system does the following:

- Updates the **ELIG_EXTRACT_SW** and **APAY_CRE_DT** columns corresponding to the automatic payment records in the **CI_BILL_ACH** table
- Changes the status of the automatic payment request to **Processed**

If the approval process is configured in the respective automatic payment request type, the system changes the status of the automatic payment request to **Approval In Progress**. A To Do notification is created for the approver using the approval To Do type (specified in the respective automatic payment request type) and assigned to the users with the approval To Do role (specified in the respective automatic payment request type). Once the approver reviews an automatic payment request, the approver can approve, reject, or resubmit the automatic payment request based on the observations. If the approver approves the automatic payment request, the system does the following:

- Updates the **ELIG_EXTRACT_SW** and **APAY_CRE_DT** columns corresponding to the automatic payment records in the **CI_BILL_ACH** table
- Changes the status of the automatic payment request to **Processed**

If the approver rejects an automatic payment request, the status of the automatic payment request is changed to **Rejected**. However, if the approver requests the submitter to resubmit an automatic payment request, the status of the automatic payment request is changed to **Draft**. A To Do notification is created for the submitter using the submitter To Do type (specified in the respective automatic payment request type) and assigned to the users with the submitter To Do role (specified in the respective automatic payment request type). While rejecting or resubmitting an automatic payment request, the approver needs to specify the reason for rejection or resubmission.

To implement the hold direct debit feature, the following new screens are introduced in this release:

- **Auto Pay Request Type** - Enables you to create, edit, delete, and copy an automatic payment request type.
- **Auto Pay Request (Used for Searching)** - Enables you to search for an automatic payment request. It also enables you to create an automatic payment request.
- **Auto Pay Request (Used for Viewing)** - Enables you to edit, delete, submit, approve, reject, and resubmit the automatic payment request. It also enables you to add, edit, and delete bills from the automatic payment request.

In addition, the following changes are made to the system:

- **Auto Pay Review Required** - This field is added in the **Auto Pay** tab of the **Account** screen. It indicates whether you want to hold direct debit (i.e. automatic payment) for the bills of the account until the confirmation is received from the customer.
- **Eligible for Extraction** - This column is added in the **Auto Pay** tab of the **Bill** screen. It indicates whether the automatic payment record for the bill is eligible for extraction.

Prerequisites

To setup the auto pay request feature, you need to do the following:

- Auto pay request type business object defined in the application
- Auto pay request types defined in the system.
- Approval To Do types and To Do roles defined in the application
- Submitter To Do types and To Do roles defined in the application
- Characteristic types defined in the application

Algorithms Used in C1-AutoPayRequest

The following table lists the algorithm which is attached to the **C1-AutoPayRequest** business object:

| System Event | Algorithm | Algorithm Type | Description |
|--------------|--------------|----------------|--|
| Information | C1-APAYRQINF | C1-APAYRQINF | Refer to C1-APAYRQINF on page 3671 |

The following table lists the algorithms which are used in the lifecycle of the **C1-AutoPayRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|------------------------|--------------|--------------|----------------|--|
| Draft | Exit | F1-TODOCOMPL | F1-TODOCOMPL | Refer to F1-TODOCOMPL on page 1549 |
| Submitted | Enter | C1-APAYSUB | C1-APAYSUB | Refer to C1-APAYSUB on page 3672 |
| Approval In Progress | Enter | C1-APAYAPP | C1-APAYAPP | Refer to C1-APAYAPP on page 3672 |
| | Exit | F1-TODOCOMPL | F1-TODOCOMPL | Refer to F1-TODOCOMPL on page 1549 |
| Update Auto Pay Record | Enter | C1-UPDAPAY | C1-UPDAPAY | Refer to C1-UPDAPAY on page 3672 |
| Approved | Enter | C1-APAYAPRVD | C1-APAYAPRVD | Refer to C1-APAYAPRVD on page 3672 |

| Processed | - | - | - | - |
| Rejected | - | - | - | - |

C1-APAYRQINF

The **C1-APAYRQINF** algorithm generates the auto pay request information string and is plugged in at **System Event**:

Information of business object: **C1-AutoPayRequest**.

It concatenates the following fields:

- Auto Pay Request Type Description
- Auto Pay Request Status Description
- Auto Pay Request ID

F1-TODOCOMPL

This algorithm type completes the To Do entries that are linked to an object when the object exits the given status.

It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-APAYSUB

The **C1-APAYSUB** algorithm will be plugged at the **“Enter” System event** of the business object (**C1-AutoPayRequest**) life cycle status: **SUBMITTED**.

This algorithm checks the following:

1. Whether the approval is required for the auto pay request based on the configuration in auto pay request type (**IS_APPR_REQ = Y**).
 - a. If the approval is required for the auto pay request, the status of the auto pay request is changed to **Approval In Progress**.
 - b. If the approval is not required for the auto pay request, the status of the auto pay request is changed to **UPDATEAPAY**.
2. At least one auto pay record is selected in the auto pay request.
3. Updated scheduled extraction date cannot be less than system date.
4. **Auto Pay Request** cannot be created for any auto pay record if the same auto pay record is selected in another request which is in the **Approval In Progress** status.

C1-APAYAPP

The **C1-APAYAPP** algorithm creates the following:

1. A To Do using the To Do type specified in the approval profile which is attached to the **Auto Pay Request Type**. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.
2. A log entry is added when a To Do is created using the To Do type. It will create To Do Entry when **Auto Pay Request** enters in the **Approval in Progress** status from **Submit** status.

C1-UPDAPAY

The **C1-UPDAPAY** algorithm will be plugged in at **“Enter” System event** of the business object (**C1-AutoPayRequest**) life cycle status: **UPDATEAPAY**.

1. The **Extract Eligible Switch** and **Auto Pay Creation Date** are updated in the **CI_BILL_ACH** table with the latest values present in **Auto Pay Request Details** table. The auto pay request status is then changed to **PROCESSED**.
2. If the bill which is present in the **Auto Pay Request** is cancelled then the latest details of **Extract Eligible Switch** and **Auto Pay Creation Date** are not updated in the **CI_BILL_ACH** table and the auto pay request status is changed to **PROCESSED**.

C1-APAYAPRVD

The **C1-APAYAPRVD** algorithm is the **Enter** status algorithm. This algorithm is invoked when you approve an **Auto Pay Request**. It confirms whether the approval flag is true and the status of the **Auto Pay request** is **APPROVED** to transit it to the next level.

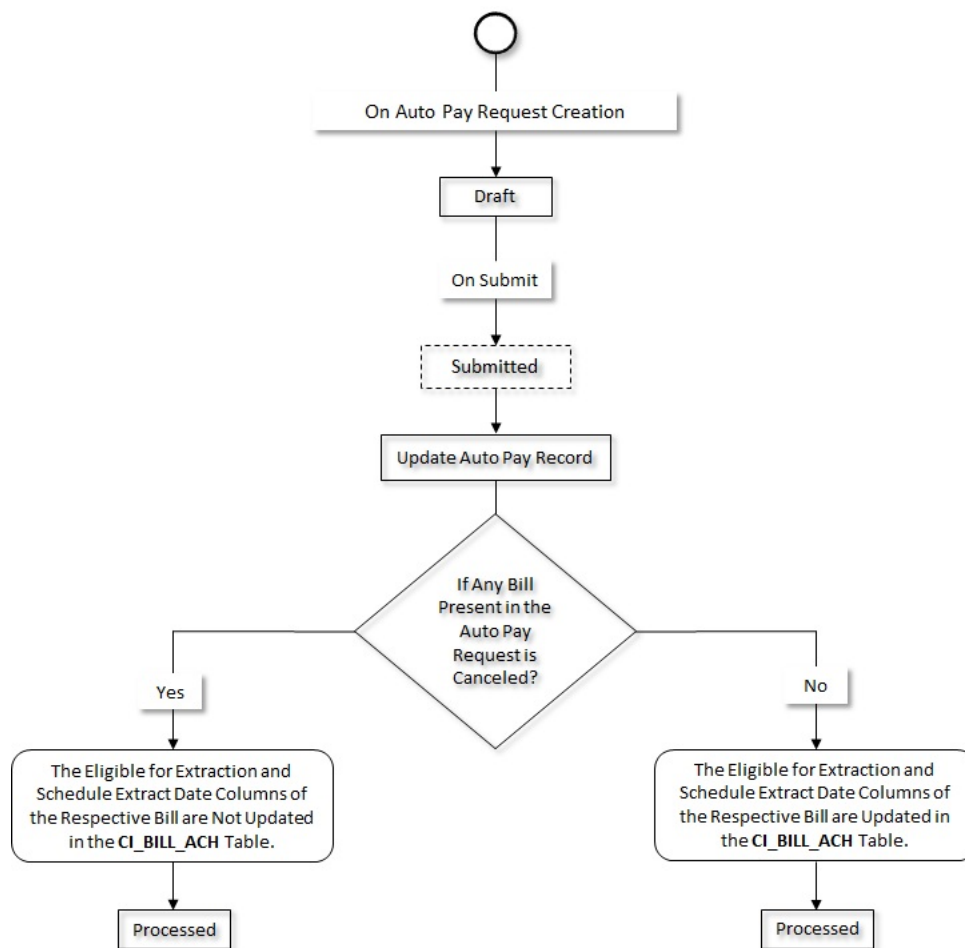

C1-APAYRESUB

The **C1-APAYRESUB** algorithm is invoked on the **Re-Submit** button. It moves the status of the **Auto Pay Request** to **Draft**.

A To Do is generated for the user as submitter whose To Do type and To Do role are fetched from the **Auto Pay Request Type**. This algorithm creates the To Do entry when the **Auto Pay Request** enters into the **Return to Submitter** status from the **Approval In Progress** status.

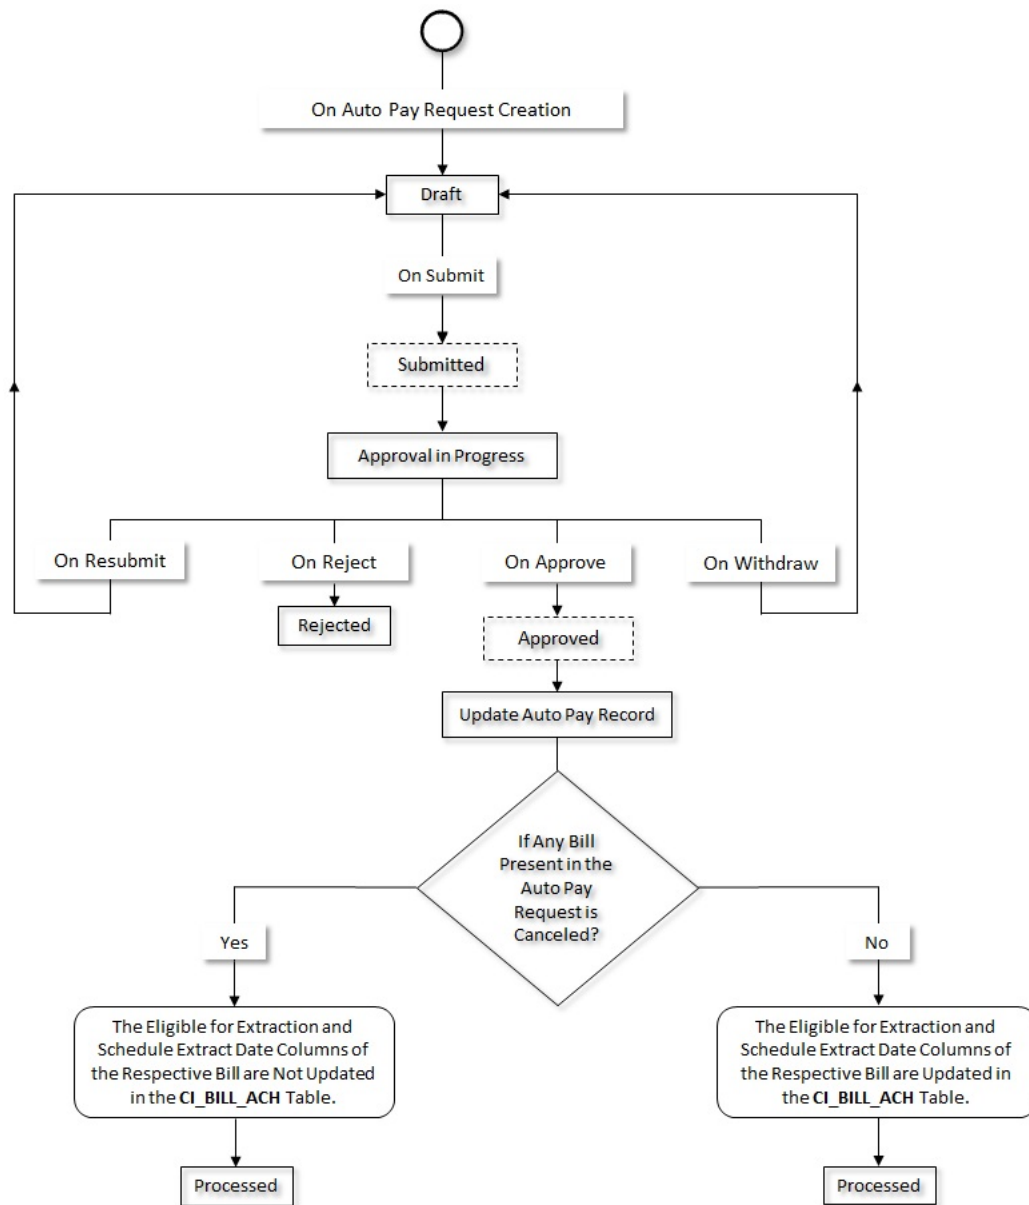

Auto Pay Request Status Transition without Approval

The following figure graphically indicates how an auto pay request moves from one status to another when the approval process is not configured in the auto pay request type:

Auto Pay Request Status Transition with Approval

The following figure graphically indicates how an auto pay request moves from one status to another when the approval process is configured in the auto pay request type:

Auto Pay Request Type

The **Auto Pay Request Type** screen allows you to define, edit, copy, and delete an auto pay request type. It also allows you to view the details of an auto pay request type. It contains the following zones:

- [Auto Pay Request Type List](#) on page 3674
- [Auto Pay Request Type](#) on page 3675

Auto Pay Request Type List

The **Auto Pay Request Type List** zone lists the auto pay request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Auto Pay Request Type | Displays the auto pay request type. |
| Description | Displays the description of the auto pay request type. |
| Edit | On clicking the Edit (✎) icon, the Auto Pay Request Type screen appears where you can edit the details of the auto pay request type. |
| Duplicate | On clicking the Duplicate (📄) icon, the Auto Pay Request Type screen appears where you can define an auto pay request type using an existing auto pay request type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the auto pay request type. Note: You can delete an auto pay request type only when an auto pay request is not yet created using the auto pay request type. |

On clicking the **Broadcast** (📡) icon corresponding to an auto pay request type, the **Auto Pay Request Type** zone appears with the details of the respective auto pay request type.

Auto Pay Request Type

The **Auto Pay Request Type** zone displays the details of the auto pay request type. It contains the following sections:

- **Main** - Displays basic information about the auto pay request type. It contains the following fields:

| Field Name | Field Description |
|-------------------------|--|
| Auto Pay Request Type | Displays the auto pay request type. |
| Description | Displays the description of the auto pay request type. |
| Related Transaction BO | Indicates the business object using which the auto pay transaction is performed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Detailed Description | Displays additional information about the auto pay request type. |
| Auto Pay Request Action | Indicates the action which is performed on the auto pay request using the auto pay request type. |

| Field Name | Field Description |
|----------------------|--|
| Status | Indicates the current status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> Active Inactive |
| Approval Required | Indicates whether approval is required for the auto pay request which is created using the auto pay request type. |
| Approval To Do Type | Indicates that the To Do entry of the specified To Do Type is created when you submit the auto pay request for an approval. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. This field appears only when the Approval Required option is selected. |
| Approval To Do Role | Indicates that the users which belong to the specified To Do role can only approve the auto pay request when it is submitted for an approval. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. This field appears only when the Approval Required option is selected. |
| Submitter To Do Type | Indicates that the To Do entry of the specified To Do task is created when an auto pay request is resubmitted by an approver. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. |
| Submitter To Do Role | Indicates that the approvers which belong to the specified To Do role can only resubmit the auto pay request. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. |

- **Characteristic** - Lists the characteristics defined for the auto pay request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - The **Record Actions** section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the auto pay request type. |
| Delete | Used to delete the auto pay request type. |

| Button Name | Button Description |
|-------------|--|
| | Note: You can delete an auto pay request type only when an auto pay request is not yet created using the auto pay request type. |
| Duplicate | Used to create a new auto pay request type using an existing auto pay request type. |

- **Record Information** - The **Record Information** section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the auto pay request type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Auto Pay Request Type** zone does not appear in the **Auto Pay Request Type** screen. It appears only when you click the **Broadcast** () icon corresponding to an auto pay request type in the **Auto Pay Request Type List** zone.

Defining an Auto Pay Request Type

Prerequisites

To define an auto pay request type, you should have:

- Auto pay request type business objects defined in the application
- Approval To Do Types and To Do roles defined in the application
- Submitter To Do Types and To Do roles defined in the application

Procedure

To define an auto pay request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.
A sub-menu appears.

- Click the **Add** option from the **Auto Pay Request Type** sub-menu.

Tip: Alternatively, you can access the **Auto Pay Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Auto Pay Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple auto pay request type business objects defined in the application. If there is only one auto pay request type business object defined in the application, the **Auto Pay Request Type** screen appears.

- Select the required auto pay request type business object from the respective field.
- Click **OK**.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the auto pay request type.
- Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Auto Pay Request Type | Used to specify the auto pay request type. | Yes |
| Business Object | Indicates the business object using which the auto pay request type is defined in the system. | Not applicable |
| Description | Used to specify the description for the auto pay request type. | Yes |
| Related Transaction BO | Used to indicate the business object using which the auto pay transaction is performed. The valid value is: <ul style="list-style-type: none"> Auto Pay Request | Yes |
| Detailed Description | Used to specify additional information about the auto pay request type. | No |
| Auto Pay Request Action | Indicates the action which is performed on the auto pay request using the auto pay request type. The valid value is: <ul style="list-style-type: none"> Update | Not applicable |
| | Note: By default, the Update option is selected and cannot be edited. | |
| Status | Used to indicate the current status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| | Note: You cannot change the status of an auto pay request type to Inactive when an auto pay request created using the auto pay request type is in the Draft or Rejected status. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Approval Required | Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type. | No |
| Approval To Do Type | Used to specify the To Do entry of the specified To Do Type that is created when you submit the auto pay request for an approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears only when the Approval Required check box is selected.</p> | <p>Note: This field is required while approving an auto pay request which is created using the auto pay request type.</p> |
| Approval To Do Role | Used to indicate the users which belong to the specified To Do role who can approve the auto pay request when it is submitted for an approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated with the specified Approval To Do Type.</p> <p>This field appears only when the Approval Required check box is selected.</p> | <p>Note: This field is required while approving an auto pay request which is created using the auto pay request type.</p> |
| Submitter To Do Type | Used to indicate the To Do entry of the specified To Do Type that is created when an auto pay request is resubmitted by an approver. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>This field appears only when the Approval Required check box is selected.</p> | <p>Note: This field is required while resubmitting an auto pay request which is created using the auto pay request type.</p> |
| Submitter To Do Role | Used to indicate the users which belong to the specified To Do role who can resubmit the auto pay request when it is submitted for an approval. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated with the specified Submitter To Do Type.</p> <p>This field appears only when the Approval Required check box is selected.</p> | <p>Note: This field is required while resubmitting an auto pay request which is created using the auto pay request type.</p> |

6. Enter the required details in the **Main** section.
7. Define a list of characteristics for the auto pay request type, if required.
8. Click **Save**.

The auto pay request type is defined.

Defining a Characteristic for an Auto Pay Request Type

Prerequisites

To define a characteristic for an auto pay request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Pay Request Type**)

Procedure

To define a characteristic for an auto pay request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an auto pay request type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | <p>Note: The list includes only those characteristic types where the characteristic entity is set to Auto Pay Request Type.</p> | <p>Note: This field is required while defining a characteristic for the auto pay request type.</p> |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | <p>Note: This field is required while defining a characteristic for the auto pay request type.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for the respective characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the auto pay request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the auto pay request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Auto Pay Request Type

Prerequisites

To edit an auto pay request type, you should have:

- Auto pay request type that you want to edit defined in the application

Procedure

To edit an auto pay request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Auto Pay Request Type** sub-menu.
The **Auto Pay Request Type** screen appears.
- In the **Auto Pay Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the auto pay request type whose details you want to edit.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the auto pay request type.

- **Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Auto Pay Request Type | Displays the auto pay request type. | Not applicable |
| Business Object | Indicates the business object using which the auto pay request type is defined in the system. | Not applicable |
| Description | Used to specify the description for the auto pay request type. | Yes |
| Related Transaction BO | Used to indicate the business object using which the auto pay transaction is performed. | Yes |
| Detailed Description | Used to specify additional information about the auto pay request type. | No |
| Auto Pay Request Action | Displays the action which is performed on the auto pay request using the auto pay request type. | Not applicable |
| Status | Used to indicate the status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Approval Required | Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type. | No |
| Approval To Do Type | Used to indicate the To Do task which is performed by the approver while approving the auto pay request. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search (🔍) icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> </div> | Yes |

Copying an Auto Pay Request Type

Instead of creating an auto pay request type from scratch, you can create a new auto pay request type using an existing auto pay request type. This is possible through copying an auto pay request type. On copying an auto pay request type, the details including the characteristics are copied to the new auto pay request type. You can then edit the details, if required.

Prerequisites

To copy an auto pay request type, you should have:

- Auto pay request type (whose copy you want to create) defined in the application
- Auto pay request business objects defined in the application

Procedure

To copy an auto pay request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Auto Pay Request Type** sub-menu.

The **Auto Pay Request Type** screen appears.

4. In the **Auto Pay Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the auto pay request type whose copy you want to create.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the auto pay request type.
- **Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Auto Pay Request Type | Used to specify the auto pay request type. | Yes |
| Business Object | Indicates the business object using which the auto pay request type is defined in the system. | Not applicable |
| Description | Used to specify the description for the auto pay request type. | Yes |
| Related Transaction BO | Used to indicate the business object using which the auto pay transaction is performed. | Yes |
| Detailed Description | Used to specify additional information about the auto pay request type. | No |
| Status | Used to indicate the status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Approval Required | Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type. | No |
| Approval To Do Type | <p>Used to indicate the To Do task which is performed by the approver while approving the auto pay request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> | Yes |
| Approval To Do Role | <p>Used to indicate the users with the specified To Do role who can approve the auto pay request.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | Yes |
| Submitter To Do Type | <p>Used to indicate the To Do task created when an auto pay request is submitted by an approver.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> | Yes |
| Submitter To Do Role | Used to indicate the users with the specified To Do role who can submit the auto pay request for approval. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | Note: The list includes only those To Do roles which are associated with the submitter To Do type. | |

Tip: Alternatively, you can copy an auto pay request type by clicking the **Duplicate** button in the **Auto Pay Request Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics of the auto pay request type, if required.
- Click **Save**.

The new auto pay request type is defined.

Deleting an Auto Pay Request Type

Procedure

To delete an auto pay request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Auto Pay Request Type** sub-menu.
The **Auto Pay Request Type** screen appears.
- In the **Auto Pay Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the auto pay request type that you want to delete.
A message appears confirming whether you want to delete the auto pay request type.

Tip: Alternatively, you can delete an auto pay request type by clicking the **Delete** button in the **Auto Pay Request Type** zone.

- Click **OK**.
The auto pay request type is deleted.

Searching for an Auto Pay Request

Prerequisites

To search for an auto pay request, you should have:

- Auto pay request types defined in the application

Procedure

To search for an auto pay request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Auto Pay Request**.
A sub-menu appears.
3. Click the **Search** option from the **Auto Pay Request** sub-menu.
The **Auto Pay Request** screen appears.
4. Enter the search criteria in the **Search Auto Pay Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of auto pay requests that meet the search criteria appears in the **Search Results** section.

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
A list of auto pay requests that meet the search criteria appears in the **Search Results** section.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose auto pay line items you want to delete.
The **Auto Pay Request** screen appears.
3. Ensure that the **Auto Pay Details** zone in the **Main** tab of **Auto Pay Request** screen is expanded.
A list of auto pay line appears in the **Auto Pay Details** zone.

4. Select the check box corresponding to the auto pay line item which you want to delete from the auto pay request.
5. Click the **Delete** button in the **Auto Pay Details** zone, to delete the auto pay line item from an auto pay request.
A message appears confirming whether you want to delete the auto pay line items from an auto pay request.
6. Click **OK**.

The auto pay line items is deleted.

Note:

At least one auto pay record is required for deleting the auto pay request.

The **Delete** button appears only when the auto pay request is in the **Draft** status.

Editing the Auto Pay Line Item Details in an Auto Pay Request

Prerequisites

To edit an auto pay line item in an auto pay request, you should have:

- Bills added in the auto pay request

Procedure

To edit an auto pay line item from an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
A list of auto pay requests that meet the search criteria appears in the **Search Results** section.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose auto pay line items you want to delete.

The **Auto Pay Request** screen appears.

3. Ensure that the **Auto Pay Details** zone in the **Main** tab of **Auto Pay Request** screen is expanded.
A list of auto pay line appears in the **Auto Pay Details** zone.
4. Select the Check box corresponding to the auto pay line item which you want to edit.
5. Click the **Edit** button in the **Auto Pay Delete** zone, to edit the auto pay line item from an auto pay request.

On clicking **Edit** button, the **Edit Auto Pay Request Details** screen appears. It contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------|------------------------------|-----------------------|
| Auto Pay ID | Displays the auto pay ID. | Not applicable |
| Account Number | Displays the account number. | Not applicable |
| Account ID | Displays the account ID. | Not applicable |
| Bill ID | Displays the bill ID. | Not applicable |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Auto Pay Amount | Displays the amount of the automatic payment. | Not applicable |
| Schedule Extract Date | Used to specify date when you want to schedule the auto pay request for the auto pay line item. | Yes |
| Eligible For Extraction | Used to indicate whether the auto pay amount is debited from the account on a specified and scheduled extract date. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |

6. Enter the required details in the **Edit Auto Pay Request Details** screen.
7. Click **Save**.

The auto pay line item is modified.

Note:

At least one auto pay record is required for deleting the auto pay request.

The **Edit** button appears only when the auto pay request is in the **Draft** status.

Viewing the Log of an Auto Pay Request

Procedure

To view the log of an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose details you want to view.
The **Auto Pay Request** screen appears.
3. Click the **Log** tab.
The **Log** tab appears.
4. View the complete trail of actions performed on the auto pay request in the **Auto Pay Request Log** zone.

Adding a Log Entry for an Auto Pay Request

Procedure

To add a log entry for an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request for which you want to add a log entry.

The **Auto Pay Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Auto Pay Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Auto Pay Request ID | Displays the auto pay request ID. | Not applicable |
| Log Details | Used to specify additional comments for the auto pay request. | Yes |

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Auto Pay Request Log** zone.

Chapter 47

Garbling Customer Information

Oracle Revenue Management and Billing enables you to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on. On receiving the data erasure request from a customer, the data controller will garble the personal information of the customer by masking the data with random characters and then cease the access to the customer records.

To garble the information of one or more persons, you need to do the following:

1. Define the **Garble Data (C1-GRBL)** characteristic for each person whose data needs to be garbled and set its value to **Y**.
2. Execute the **Garble Person Information (C1-GRBPI)** batch. For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

On executing the **Garble Person Information (C1-GRBPI)** batch, the system identifies the persons where the **Garble Data (C1-GRBL)** characteristic is set to **Y** and the **Garbling Completed (C1-GBCM)** characteristic is either not defined or set to **N**. Note that the system considers the **Garble Data (C1-GRBL)** characteristic value which is effective on the batch business date.

Once the persons are identified, the data in the following fields is masked with random characters across all records in the system:

- ACCOUNT_NBR
- ACCT_NBR
- ADDRESS1
- ADDRESS1_UPR
- ADDRESS2
- ADDRESS3
- ADDRESS4
- BIRTH_DT
- BROKER_NAME
- CITY
- COUNTRY
- COUNTY
- CUSTOMER_NAME
- EMAILID

- ENTITY_NAME
- ENTITY_NAME1
- ENTITY_NAME2
- ENTITY_NAME3
- GEO_CODE
- HOUSE_TYPE
- IN_CITY_LIMIT
- NAME1
- OVRD_MAIL_NAME1
- OVRD_MAIL_NAME2
- OVRD_MAIL_NAME3
- PER_ID_NBR
- PHONE
- POSTAL
- POSTAL_UPR
- STATE

In other words, the personal and account related information of a customer is garbled across the system. In addition, this batch allows you to garble the required characteristics and identifiers of a person and account.

Note: An account may have one or more persons linked to it. The information of an account is garbled when the data erasure request is received for the main customer of the account.

Once the personal and account related information of a customer is garbled, the access group of the person is changed to **C1GB** (which does not have any data access role). This ensures that the data of the person and his or her accounts cannot be accessed from any screens in the system. If an approval transaction contains personal and account related information of a customer, you cannot even view the approval transaction in the system.

Note: The access is forbidden for performing any transaction for the person and account only from the user interface and web services and not through the background process.

You can also garble the data of a person using the **C1-GRBPI** inbound web service. However, you can garble the data of only one person at a time using this inbound web service.

Chapter 48

Deleting Inactive Customer or Closed Account Information

Oracle Revenue Management and Billing enables you to delete all records of a person or account from the system. A new batch named **C1-GDPR** is introduced in this release. It enables you to delete all records of a person or account from the system. You can either delete the records of a particular person or account using its ID or delete the records of a set of persons or accounts at once using its characteristic. A new characteristic type named **C1-GDPRE** is shipped with the product. While executing the batch, the system first checks whether the person or account ID is specified in the batch. If so, the batch deletes the records of the respective person or account from the system. You cannot specify both the person and account ID at the same time while executing the batch.

If the person or account ID is not specified while executing the batch, the system checks whether the **Delete Characteristic Type** parameter is defined in the **C1-GDPR** batch. You can define the **C1-GDPRE** characteristic for the persons or accounts whose records you want to delete from the system. If you set the **Delete Characteristic Type** parameter in the **C1-GDPR** batch to **C1-GDPRE**, the batch considers those person or accounts for deletion where the **C1-GDPRE** characteristic is set to **Y**.

The system deletes all records of a particular account only when the following conditions are met:

- Account's closing date is earlier than or equal to system date
- All contracts of the account should either be in the **Closed** or **Canceled** status

The system deletes all records of a particular person only when the following conditions are met:

- The closing date of all its accounts is earlier than or equal to system date
- All contracts of all its accounts should either be in the **Closed** or **Canceled** status

The **C1-GDPR** batch contains the following parameters:

- **Account ID** – Used to indicate the account whose records you want to delete from the system.
- **Person ID** – Used to indicate the person whose records you want to delete from the system.
- **Delete Characteristic Type** – Used to specify the characteristic type. Here, you must specify the **C1-GDPRE** characteristic type. The system then considers those person or accounts for deletion where the **C1-GDPRE** characteristic is set to **Y**.

- **Clear CLOB Data** – Used to indicate whether you want to delete the references of the persons or accounts considered for deletion from the CLOB data. The valid values are **Y** and **N**. Note that if you set the value for this parameter to **Y**, the performance of the batch would be impacted when there is voluminous data.
- **Thread Pool Name** – Used to specify the thread pool on which you want to execute the batch.

The **C1-GDPR** batch is a multi-threaded batch. The multi-threading is based on the person or account **ID** and chunks for multi-threading are created based on numerical distribution of person or account **ID**.

Chapter 49

Automatic Refund

Until now, the system considered the records with the debit amount in the **CI_BILL_ACH** table during the **Create Automatic Payments and Refunds (APAYCRET)** batch execution. Now, the system considers the records with the debit and credit amount in the **CI_BILL_ACH** table during the **Create Automatic Payments and Refunds (APAYCRET)** batch execution. If the automatic payment amount stamped against a bill is in debit, the batch creates automatic payment and payment event for such bill. It also creates a clearing record for each automatic payment in the **CI_APAY_CLR_STG** table. The payment freeze date in the clearing records is set to NULL. The automatic payment is created when an algorithm using the **APAY-CREATE** algorithm type is created and attached to the **Automatic Payment Creation** system event in the installation options.

However, if the automatic payment amount stamped against a bill is in credit, the batch creates a refund request against the bill. The refund request is created when an algorithm using the **C1-AREF-CRET** algorithm type is created and attached to the **Automatic Adjustment Creation** system event in the installation options. This algorithm indicates the refund request type using which the refund request must be created. If the approval workflow is configured for the refund request type, the status of the refund request is set to **Pending for Approval**. However, if the approval workflow is not configured for the refund request type, the status of the refund request is set to **Processed** and the refund adjustment is created in the **Frozen** status. In addition, it creates a clearing record for each automatic refund in the **CI_ADJ_CLR_STG** table.

The refund request and refund adjustments are created when the automatic payment amount is in credit irrespective of whether the **Autopay Creation Option** field in the installation options is set to **Create At Bill Completion**, **Create On Extract Date**, or **Freeze Payment on Notification**.

Note: In the **Freeze Payment on Notification** feature, the automatic payments and refunds are created. However, at present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to develop the custom logic to activate and extract automatic refund clearing records in a flat file.

If required, you can void the refund request and cancel the refund adjustments from the user interface. If the **Autopay Creation Option** field in the installation options is set to **Freeze Payment on Notification**, you can void the refund request and cancel the refund adjustments using the **Cancel Automatic Refunds (AREFRA)** batch once the review comments are stored in the staging tables.

Chapter 50

Payment Distribution

Topics:

- [Account Level Payment Distribution](#)
- [Statement Level Payment Distribution](#)

Until now, you were able to distribute payments against a particular bill and/or contract. Now, the system enables you to distribute payments against the unpaid bills of the account or statement. For more information, refer to the following topics:

- [Account Level Payment Distribution](#) on page 3716
- [Statement Level Payment Distribution](#) on page 3717

Account Level Payment Distribution

Until now, you were able to match a payment against a particular bill of an account. Oracle Revenue Management and Billing now provides the ability to apply a payment on an account which will get matched against the unpaid bills of the account. This feature is only applicable for accounts which practice open item accounting. The system supports the account level payment distribution through the following modes:

- Inbound web service
- EDI 820 file
- Payment request
- Payment upload

While creating a match type for the account level payment distribution, you must set the entity type of the match type to **Account**. Earlier, the manual distribution algorithm of a match type was invoked only when the payment distribution was done through the payment request feature. Now, the manual distribution algorithm of a match type is invoked when the payment distribution is done using any of the above modes. The existing manual distribution algorithm spot of a match type is enhanced to support the account level payment distribution. In case of the account level payment distribution, the manual distribution algorithm spot receives the account ID as the input parameter. When this algorithm spot is invoked through the payment request feature, the account ID is passed as the match value. However, when this algorithm spot is invoked through the inbound web service, EDI 820, and payment upload feature, the account ID is not passed as the match value. Instead, the payment is distributed using the payee account ID. The manual distribution algorithm spot then returns a list of unpaid bills of the account.

A new manual distribution algorithm named **C1-MD-ACCT** is introduced in this release. It distributes the payment amount against the unpaid bills of the account in the ascending order of due date (i.e. bill with the oldest due date will have high priority). If there are multiple unpaid bills with the same due date, the system distributes the payment amount against the unpaid bills in the ascending order of the unpaid amount (i.e. bill with the lowest amount will have high priority). And, if there are two or more unpaid bills with the same due date and unpaid amount, the system will randomly distribute the payment amount against any of the unpaid bills of the account.

Once the system distributes the payment amount against the unpaid bills of the account, the system creates a payment for each unpaid bill. Here, all these payments would be created under the same payment event.

Any excess amount that is left after distributing the payments on the unpaid bills of the account should be applied on the on-account contract of the account. The system derives the on-account contract using the contract type specified in the **On-Account Contract Type** option type of the **C1-ADJ-PAY** feature configuration. If the on-account contract of the specified contract type is not available for the account, the system creates on-account contract using the contract type specified in the **On-Account Contract Type** option type of the **C1-ADJ-PAY** feature configuration. The system then parks the excess credit payment on the on-account contract of the account.

While creating the excess credit payment, the system uses the match type which is specified in the **On-Account Match Type** option type of the **C1-ADJ-PAY** feature configuration.

Once all payments including the excess credit payment is created, the system will store the payee account ID on all payments when the payment is applied at the account level. The payee account ID is stored as a characteristic using the characteristic type which is specified in the **Account Level Payment Characteristic Type** option type of the **C1-ADJ-PAY** feature configuration. The **C1-ACPAY** characteristic type is shipped with the product.

Note that you can apply payments on the account level using the single-step approach of the **PUPL** batch and not using the three-step approach of the **PUPL** batch. Also, note that multi tender distribution is not supported for the account level payment distribution.

Statement Level Payment Distribution

Until now, you were able to match a payment against a particular bill of an account. Oracle Revenue Management and Billing now provides the ability to apply a payment on a statement which will get matched against the unpaid bills on the statement. The bills on a statement may belong to the same or different accounts of the person for whom the statement is created using the statement construct. Note that the system supports the statement level payment distribution for those statements:

- Which are created using the statement constructs comprising of one or more accounts and no contracts (under construct details)
- Which are in the **Printed** status

This feature is only applicable for accounts which practice open item accounting. The system supports the statement level payment distribution through the following modes:

- Inbound web service
- EDI 820 file
- Payment request
- Payment upload

While creating a match type for the statement level payment distribution, you must set the entity type of the match type to **Statement**. Earlier, the manual distribution algorithm of a match type was invoked only when payment distribution was done through the payment request feature. Now, the manual distribution algorithm of a match type is invoked when the payment distribution is done using any of the above modes. The existing manual distribution algorithm spot of a match type is enhanced to support the statement level payment distribution. In case of the statement level payment distribution, the manual distribution algorithm spot receives the statement ID as the input parameter. When this algorithm spot is invoked through the payment request feature, the statement ID is passed as the match value. However, when this algorithm spot is invoked through the inbound web service, EDI 820, or payment upload feature, the statement ID is not passed as the match value. Instead, the statement ID is directly fetched from the dataset. The manual distribution algorithm spot then returns a list of unpaid bills on the statement.

A new manual distribution algorithm named **C1-MD-STMT** is introduced in this release. It distributes the payment amount against the unpaid bills of the statement in the ascending order of due date (i.e. bill with the oldest due date will have high priority). If there are multiple unpaid bills with the same due date, the system distributes the payment amount against the unpaid bills in either of the following two ways:

- In the ascending order of the unpaid amount (i.e. bill with the lowest amount will have high priority)
- Using the weighted distribution based on the unpaid amount of each bill

If you want to distribute the payment amount using the former method, you must set the **Weighted distribution of payments among bills of same age. (Valid Values :Y,N)** parameter of the **C1-MD-STMT** algorithm to **N**. However, if you want to distribute the payment amount using the latter method, you must set the **Weighted distribution of payments among bills of same age. (Valid Values :Y,N)** parameter of the **C1-MD-STMT** algorithm to **Y**.

Once the system distributes the payment amount against the unpaid bills of the statement, the system creates a payment for each unpaid bill. Here, all these payments would be created under the same payment event.

Any excess amount that is left after distributing the payments on the unpaid bills of the statement should be applied on the on-account contract of the account. The person linked to the statement construct using which the statement is created should have an account which will be used to park the excess amount paid on a statement. If the account is not available and the payment against a statement is in excess of the total unpaid balance of the statement, then the entire payment on the statement ID will be errored out and won't be applied on any of the bills.

The system derives the on-account contract of the account using the contract type specified in the **On-Account Contract Type** option type of the **C1-ADJ-PAY** feature configuration. If the on-account contract of the specified contract type is not available for the account, the system creates on-account contract using the contract type specified in the **On-**

Account Contract Type option type of the **C1-ADJ-PAY** feature configuration. The system then parks the excess credit payment on the on-account contract of the account. While creating the excess credit payment, the system uses the match type which is specified in the **On-Account Match Type** option type of the **C1-ADJ-PAY** feature configuration.

Once all payments including the excess credit payment is created, the system will store the statement ID on all payments when the payment is applied at the statement level. The statement ID is stored as a characteristic using the characteristic type which is specified in the **Statement Level Payment Characteristic Type** option type of the **C1-ADJ-PAY** feature configuration. The **C1-STPAY** characteristic type is shipped with the product.

Note that you can apply payments on the statement level using the single-step approach of the **PUPL** batch and not using the three-step approach of the **PUPL** batch. Also, note that multi tender distribution is not supported for the statement level payment distribution.

Note: At the moment, you can delete a statement which is used for the payment distribution from the user interface. The system neither performs any validation during the statement deletion nor cancels any payments when a statement is deleted. Therefore, you need to ensure that you do not delete any statements which are used for payment distribution in the system.

Chapter 51

Mass Payment Transfer

Topics:

- [Full Payment Transfer](#)
- [Partial Payment Transfer](#)
- [Mass Payment Transfer Process](#)
- [CSV File Format for Mass Payment Transfer](#)
- [Sample CSV File for Mass Payment Transfer](#)

Oracle Revenue Management and Billing facilitates mass payment transfer using the **File Upload Interface** feature. In the mass payment transfer, you can transfer multiple payments at once. You can transfer payments at the payment or payment event level (i.e. transfer an individual payment or all payments of a payment event at once). However, note that you can transfer only those payments which are in the **Frozen** status.

You can upload the data for either full or partial payment transfer in the CSV format through the **File Transformation and Upload (C1-FTRAN)** batch. While executing the **File Transformation and Upload (C1-FTRAN)** batch, you need to specify a file request type which indicates the XPath of the fields where the data from the CSV record should be stored while transforming the data in the XML format using the **C1-TransferPaymentService** business service. Once each CSV file record is transformed in the XML format, you can transfer payments through the **File Request Processing (C1-FREQP)** batch.

Full Payment Transfer

You can upload the data for full payment transfer from the CSV file using the **File Upload Interface** utility. Ideally, you should not specify the transfer amount during the full payment transfer. If you do not specify the transfer amount or if the transfer amount is equal to the payment amount or to the sum of all frozen payments in the payment event, the system does the full payment transfer. However, if the transfer amount is less than the payment amount or the sum of all frozen payments in the payment event, the system does the partial payment transfer. Note that the payment transfer amount should not be more than the payment amount or the sum of all frozen payments in the payment event. Also, note that you should only transfer positive payments which are in the **Frozen** status and where the payment amount is greater than zero using the **File Upload Interface** utility.

While doing full payment transfer at the payment level, the system cancels the old payment and creates one new payment using the specified match type in the **Frozen** status. For example, the P1 payment is created against the contract of the A1 account, as shown in the following table:

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|-------------------|-------------|--------|--------|
| A1 | PE1 | P1 | Suspense Contract | C1 | \$200 | Frozen |

Now, when you fully transfer the payment using the match type as Bill from the A1 to A2 account, the system will cancel the old payment and create a new payment as shown in the following table:

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|-------------------|-------------|--------|----------|
| A1 | PE1 | P1 | Suspense Contract | C1 | \$200 | Canceled |
| A2 | PE2 | P2 | Bill | Bill1 | \$200 | Frozen |

While doing full payment transfer at the payment event level, the system fetches the list of frozen payments linked to the payment event and then adds them in the **C1_PAY_DETAILS** table. In addition, the system sets the **PY_CANCEL_SW** column corresponding to the payments in the **C1_PAY_DETAILS** table to **Y**. Let us assume that the following payments are made to the A1 account through the PE1 payment event:

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|---------------------|-------------|--------|--------|
| A1 | PE1 | P1 | Suspense Contract | C1 | \$100 | Frozen |
| | | P2 | On Account Contract | C2 | \$50 | Frozen |
| | | P3 | Suspense Contract | C3 | \$100 | Frozen |
| | | P4 | Overpayment on Bill | C4 | \$100 | Frozen |
| | | P5 | On Account Contract | C5 | \$100 | Frozen |

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|---------------------|-------------|--------|----------|
| | | P6 | Suspense Contract | C1 | \$100 | Frozen |
| | | P7 | On Account Contract | C5 | \$100 | Frozen |
| | | P8 | Overpayment on Bill | C4 | \$75 | Canceled |
| | | P10 | Bill | Bill1 | \$200 | Frozen |
| | | P11 | Bill | Bill2 | \$100 | Frozen |
| | | P12 | Bill | Bill3 | \$350 | Frozen |
| | | P13 | Bill | Bill2 | \$25 | Canceled |

Now, if you want to fully transfer the payments from the A1 account to the A2 account using the match type as Bill, the system considers the following payments for transfer from the payment list:

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|---------------------|-------------|--------|--------|
| A1 | PE1 | P1 | Suspense Contract | C1 | \$100 | Frozen |
| | | P2 | On Account Contract | C2 | \$50 | Frozen |
| | | P3 | Suspense Contract | C3 | \$100 | Frozen |
| | | P4 | Overpayment on Bill | C4 | \$100 | Frozen |
| | | P5 | On Account Contract | C5 | \$100 | Frozen |
| | | P6 | Suspense Contract | C1 | \$100 | Frozen |
| | | P7 | On Account Contract | C5 | \$100 | Frozen |
| | | P10 | Bill | Bill1 | \$200 | Frozen |
| | | P11 | Bill | Bill2 | \$100 | Frozen |
| | | P12 | Bill | Bill3 | \$350 | Frozen |

Then, the system will cancel the old payments and create a new payment, as shown in the following table:

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|---------------------|-------------|--------|----------|
| A1 | PE1 | P1 | Suspense Contract | C1 | \$100 | Canceled |
| | | P2 | On Account Contract | C2 | \$50 | Canceled |
| | | P3 | Suspense Contract | C3 | \$100 | Canceled |
| | | P4 | Overpayment on Bill | C4 | \$100 | Canceled |
| | | P5 | On Account Contract | C5 | \$100 | Canceled |
| | | P6 | Suspense Contract | C1 | \$100 | Canceled |
| | | P7 | On Account Contract | C5 | \$100 | Canceled |
| | | P10 | Bill | Bill1 | \$200 | Canceled |
| | | P11 | Bill | Bill2 | \$100 | Canceled |
| | | P12 | Bill | Bill3 | \$350 | Canceled |
| | | A2 | PE2 | P1 | Bill | Bill4 |

Partial Payment Transfer

You can upload the data for partial payment transfer from the CSV file using the **File Upload Interface** utility. The transfer amount is required for partial payment transfer. Therefore, the **Transfer Amount** column should be added in the CSV file while uploading the data for partial payment transfer. You should update the existing file request type to include the **Transfer Amount** field in the **Field Transformation** section.

You can specify the transfer amount either less than or equal to the payment amount or to sum of all frozen payments in the payment event depending on whether payment transfer is done at the payment or payment event level. If you do not specify the transfer amount or if the transfer amount is equal to the payment amount or to the sum of all frozen payments in the payment event, the system does the full payment transfer. However, if the transfer amount is less than the payment amount or the sum of all frozen payments in the payment event, the system does the partial payment transfer. Note that the payment transfer amount should not be more than the payment amount or the sum of all frozen payments in the payment event. Also, note that you should only transfer positive payments which are in the **Frozen** status and where the payment amount is greater than zero using the **File Upload Interface** utility.

While doing partial payment transfer at the payment level, the system cancels the old payment and creates two new payments in the **Frozen** status - one with the transfer amount using the specified match type and another with the remaining amount (if any) using the match type of the old payment. For example, the P1 payment is created against the contract of the A1 account, as shown in the following table:

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|-------------------|-------------|--------|--------|
| A1 | PE1 | P1 | Suspense Contract | C1 | \$200 | Frozen |

Now, when you partially transfer \$150 of payment using the match type as Bill from the A1 to A2 account, the system will cancel the old payment and create the new payments as shown in the following table:

| Account | Payment Event | Payment Details | Match Type | Match Value | Amount | Status |
|---------|---------------|-----------------|-------------------|-------------|--------|----------|
| A1 | PE1 | P1 | Suspense Contract | C1 | \$200 | Canceled |
| A2 | PE2 | P2 | Bill | Bill1 | \$150 | Frozen |
| A1 | PE1 | P3 | Suspense Contract | C1 | \$50 | Frozen |

While doing partial payment transfer at the payment event level, the system fetches the list of frozen payments linked to the payment event and then identifies the payments which are eligible for transfer from the payment list in the following manner:

1. If the payments are created against the contracts, the system considers the following option types of the **C1_CMO** feature configuration to determine the payments which are eligible for transfer from the payment list:
 - Suspense Contract Type
 - On Account Contract Type
 - Excess Credit Contract Type

For more information about the **C1_CMO** feature configuration, see [Setting the C1_CMO Feature Configuration](#) on page 4039.

2. However, if the payments are created against the bills, the system considers the bill date and bill amount to determine the payments which are eligible for transfer from the payment list.

The payments which are eligible for transfer from the payment list are added in the **C1_PAY_DETAILS** table. The system stamps the transfer priority corresponding to eligible payments in the **TRANSFER_PRIORITY** column of the **C1_PAY_DETAILS** table. The system assigns transfer priority to each eligible payment in the following sequence:

1. Considers payments against the contracts which are created using the contract type specified in the **Suspense Contract Type** option type of the **C1_CMO** feature configuration. If there are multiple payments which are created on the suspense contracts, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1 and P2 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, and C1 and C2 are both suspense contracts, then the system sets the transfer priority of P1 and P2 to 1 in the payment transfer request.
2. Considers payments against the contracts which are created using the contract type specified in the **On Account Contract Type** option type of the **C1_CMO** feature configuration. For example, if you partially transfer P1 and P2 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, C1 is a suspense contract, and C2 is an on account contract, then the system sets the transfer priority of P1 to 1 and P2 to 2 in the payment transfer request. However, if you partially transfer P3 from the A1 account to the A2 account through a payment transfer request where P3 is created against C3 and C3 is an on account contract, then the system sets the transfer priority of P3 to 1 in the payment transfer request. If there are multiple payments on the on account contracts, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1, P2, and P3 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, P3 is created against C3, C1 is a suspense contract, and C2 and C3 are both on account contracts, then the system sets the transfer priority of P1 to 1 and P2 and P3 to 2 in the payment transfer request.
3. Considers payments against the contracts which are created using the contract type specified in the **Excess Credit Contract Type** option type of the **C1_CMO** feature configuration. For example, if you partially transfer P1 and

P2 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, C1 is an on account contract, and C2 is an excess credit contract, then the system sets the transfer priority of P1 to 1 and P2 to 2 in the payment transfer request. However, if you partially transfer P3 from the A1 account to the A2 account through a payment transfer request where P3 is created against C3 and C3 is an excess credit contract, then the system sets the transfer priority of P3 to 1 in the payment transfer request. If there are multiple payments on the excess credit contracts, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1, P2, and P3 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, P3 is created against C3, C1 is a suspense contract, and C2 and C3 are both excess credit contracts, then the system sets the transfer priority of P1 to 1 and P2 and P3 to 2 in the payment transfer request.

4. Considers payments created against the bills in the descending order of the bill date (i.e. bill with the latest date). If there are multiple payments which are created against the bills having the same bill date, the system considers the payments which are created against the bills in the descending order of the bill amount (i.e. bill with the highest amount). However, if there are multiple payments which are created against the bills having the same bill date and bill amount, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1, P2, P3, and P4 from the A1 account to the A2 account through a payment transfer request where P1 is created against B1 (with the bill date 01-Jan-2020 and bill amount \$100), P2 is created against B2 (with the bill date 01-Feb-2022 and bill amount \$20), P3 is created against B3 (with the bill date 01-Mar-2022 and bill amount \$30), and P4 is created against B4 (with the bill date as 01-Mar-2022 and bill amount \$40), the system sets the transfer priority of P4 to 1, P3 to 2, P2 to 3, and P1 to 4, respectively, in the payment transfer request.
5. Considers payments which are created against entities other than contracts or bills and assigns the same transfer priority to these payments.

In addition, the system sets the **PY_CANCEL_SW** column corresponding the payments in the **C1_PAY_DETAILS** table to **Y** or **N** depending on whether these eligible payments are considered for transfer or not. Let us assume that the following payments are made to the A1 account through the PE1 payment event:

| Payment Details | Match Type | Match Value | Contract Type | Bill Date | Amount | Status |
|-----------------|---------------------|-------------|---------------|-------------|--------|----------|
| P1 | Suspense Contract | C1 | CT1 | | \$100 | Frozen |
| P2 | On Account Contract | C2 | CT2 | | \$50 | Frozen |
| P3 | Suspense Contract | C3 | CT3 | | \$100 | Frozen |
| P4 | Overpayment on Bill | C4 | CT4 | | \$100 | Frozen |
| P5 | On Account Contract | C5 | CT5 | | \$100 | Frozen |
| P6 | Suspense Contract | C1 | CT1 | | \$100 | Frozen |
| P7 | On Account Contract | C5 | CT5 | | \$100 | Frozen |
| P8 | Overpayment on Bill | C4 | CT4 | | \$75 | Canceled |
| P10 | Bill | Bill1 | | 21-Mar-2021 | \$200 | Frozen |

| Payment Details | Match Type | Match Value | Contract Type | Bill Date | Amount | Status |
|-----------------|------------|-------------|---------------|-------------|--------|--------|
| P11 | Bill | Bill2 | | 21-Feb-2021 | \$100 | Frozen |
| P12 | Bill | Bill3 | | 21-Jan-2021 | \$350 | Frozen |
| P13 | Bill | Bill2 | | 22-Feb-2021 | \$25 | Frozen |

And, let us assume that the **Suspense Contract Type**, **On Account Contract Type**, and **Excess Credit Contract Type** option types of the **C1_CMO** feature configuration are set to CT1, CT5, and CT4, respectively.

Now, if you want to partially transfer \$900 of payment from the A1 account to the A2 account using the match type as Bill, the system considers the following payments for transfer from the payment list using the given transfer priority:

| Payment Details | Match Type | Match Value | Contract Type | Bill Date | Amount | Eligible for Transfer | Transfer Priority | Cancel Switch |
|-----------------|---------------------|-------------|---------------|-------------|--------|-----------------------|-------------------|---------------|
| P1 | Suspense Contract | C1 | CT1 | | \$100 | Y | 1 | Y |
| P2 | On Account Contract | C2 | CT2 | | \$50 | N | | N |
| P3 | Suspense Contract | C3 | CT3 | | \$100 | N | | N |
| P4 | Overpayment on Bill | C4 | CT4 | | \$100 | Y | 3 | Y |
| P5 | On Account Contract | C5 | CT5 | | \$100 | Y | 2 | Y |
| P6 | Suspense Contract | C1 | CT1 | | \$100 | Y | 1 | Y |
| P7 | On Account Contract | C5 | CT5 | | \$100 | Y | 2 | Y |
| P8 | Overpayment on Bill | C4 | CT4 | | \$75 | N | | N |
| P10 | Bill | Bill1 | | 21-Mar-2021 | \$200 | Y | 4 | Y |
| P11 | Bill | Bill2 | | 21-Feb-2021 | \$100 | Y | 6 | Y |
| P12 | Bill | Bill3 | | 21-Jan-2021 | \$350 | Y | 7 | Y |

| Payment Details | Match Type | Match Value | Contract Type | Bill Date | Amount | Eligible for Transfer | Transfer Priority | Cancel Switch |
|-----------------|------------|-------------|---------------|-------------|--------|-----------------------|-------------------|---------------|
| P13 | Bill | Bill2 | | 22-Feb-2021 | \$25 | Y | 5 | Y |

If the remaining transfer amount is greater than zero after considering frozen payments against the above mentioned contracts and bills of the account, the system will randomly consider other payments from the payment list which are created against entities other than the above mentioned contracts and bills of the account and assign the same transfer priority to all such payments.

While partially transferring at the payment event level, the system will cancel all payments which are transferred and then create new payments using the specified match type. Here, the status of the old payments is changed to **Canceled** and the status of the new payments is set to **Frozen**. In addition, if there is a remaining balance on any payment which is considered for transfer, the system will create a new payment for the remaining amount using the match type which is specified in the old payment. The payment for the remaining amount is created in the **Frozen** status. In the above example, the system will cancel the old payments and create the new payments, as shown in the following table:

| Payment Details | Match Type | Match Value | Contract Type | Bill Date | Amount | Status |
|-----------------|---------------------|-------------|---------------|-------------|--------|----------|
| P1 | Suspense Contract | C1 | CT1 | | \$100 | Canceled |
| P4 | Overpayment on Bill | C4 | CT4 | | \$100 | Canceled |
| P5 | On Account Contract | C5 | CT5 | | \$100 | Canceled |
| P6 | Suspense Contract | C1 | CT1 | | \$100 | Canceled |
| P7 | On Account Contract | C5 | CT5 | | \$100 | Canceled |
| P10 | Bill | Bill1 | | 21-Mar-2021 | \$200 | Canceled |
| P11 | Bill | Bill2 | | 21-Feb-2021 | \$100 | Canceled |
| P12 | Bill | Bill3 | | 21-Jan-2021 | \$350 | Canceled |
| P13 | Bill | Bill2 | | 22-Feb-2021 | \$25 | Canceled |
| P14 | Bill | Bill4 | | 21-Jan-2021 | \$900 | Frozen |
| P15 | Bill | Bill3 | | 21-Jan-2021 | \$275 | Frozen |

Mass Payment Transfer Process

The following are the different steps involved in the Mass Payment Transfer process:

1. [Defining a File Request Type for Payment Transfer](#) on page 3727
2. [Uploading a Payment Transfer File](#) on page 3728
3. [Transferring Payments](#) on page 3729

Defining a File Request Type for Payment Transfer

Procedure

To define a file request type for payment transfer:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Do the following in the **Main** section:
 - a) Enter the file request type and description in the respective fields.
 - b) Select the **Data Transformation Required** option.
The **File Format** and **File Extension** fields are enabled. In addition, the **Root XML Tag** field appears in the **Main** section.
 - c) Select the **Comma Separated Values** option from the **File Format** list.
 - d) Enter `csv` in the **File Extension** field.
 - e) Ensure that the **C1-FRTA** algorithm is attached to the **Data Transformation Algorithm** field.
5. Do the following in the **Services** section:
 - a) Enter the sequence number in the respective field.
 - b) Select the **Business Service** option from the **Service Type** list.
 - c) Enter the **C1-TransferPaymentService** business service in the **Service Name** field.
 - d) Select the **Update** option from the **Operation** list.
6. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
7. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
8. In the **Field Transformation** section, you need to specify the following details:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Sequence | Used to indicate the data field in the CSV record which you want to upload in the system. | Yes |
| Field Name | Used to indicate the field for which you want to upload the data in the system. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Map Field XPath | Used to specify the XPath of the field where you want to store the data field from the CSV record. | Yes |

While creating a file request type for mass payment transfer, you need to specify the following field mappings in the **Field Transformation** section:

| Sequence | Field Name | Map Field XPath |
|----------|------------------|---|
| 1 | PAY_EVENT_ID | C1-TransferPaymentService/paymentEventId |
| 2 | PAY_ID | C1-TransferPaymentService/paymentId |
| 3 | TRANSFER_TYPE | C1-TransferPaymentService/transferType |
| 4 | TRANSFER_REASON | C1-TransferPaymentService/transferReason |
| 5 | MATCH_TYPE | C1-TransferPaymentService/matchType |
| 6 | MATCH_TYPE_VALUE | C1-TransferPaymentService/matchTypeValue |
| 7 | SRC_SYSTEM | C1-TransferPaymentService/sourceSystem |
| 8 | EXT_TXN_ID | C1-TransferPaymentService/externalTransactionId |
| 9 | EXT_SRC_ID | C1-TransferPaymentService/externalSourceId |
| 10 | TRANSFER_AMT | C1-TransferPaymentService/transferAmount |

9. Click **Save**.

The file request type is defined for mass payment transfer.

Uploading a Payment Transfer File

You can upload the mass payment transfer file in the CSV format through the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you need to specify a file request type using which you want to upload the payment transfer data from the CSV file in the respective fields. For more information about the batch, refer to *Oracle Revenue Management and Billing File Upload Interface Batch Execution Guide*.

Once the CSV file is uploaded in the system, you can download the file or move the file to a different directory on the SFTP server using the **File Management System** screen. You can also view whether the CSV file records are successfully uploaded or not, whether an error occurred while uploading the file, and the header and footer details of the file using the **File Upload Dashboard** screen. In addition, if the CSV file records are successfully added in the system, you can view the status of the file records and their original and transformed payloads through the **File Record Details** screen. For more information about these screens, refer to *Oracle Revenue Management and Billing File Upload Interface User Guide*.

Transferring Payments

You can transfer multiple payments at once through the **File Request Processing (C1-FREQP)** batch. While executing this batch, you need to specify a file request type using which the payment transfer data is transformed in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing File Upload Interface Batch Execution Guide*.

Once the CSV file record is successfully processed, the payment is transferred from one account to another. To view the details of the payment, you can navigate to the **Payment** screen through the **File Record Details** screen. For more information about the **File Record Details** screen, refer to *Oracle Revenue Management and Billing File Upload Interface User Guide*.

CSV File Format for Mass Payment Transfer

Before uploading a payment transfer file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

| Data | Description | Mandatory (Yes or No) |
|------------------|---|--|
| Payment Event ID | Used to indicate the payment event whose frozen payments you want to transfer. | Yes (Conditional) Note: This data is required when you want to transfer all frozen payments of a particular payment event. |
| Payment ID | Used to indicate the payment that you want to transfer. Note: The system allows you to transfer a payment which is in the Frozen status. | Yes (Conditional) Note: This data is required when you want to transfer a particular payment. |
| Transfer Type | Used to indicate whether you want to transfer payments at the payment or payment event level. The valid values are: <ul style="list-style-type: none"> E — Used when you want to transfer all frozen payments of a particular payment event. P — Used when you want to transfer a particular payment. | Yes |
| Transfer Reason | Used to indicate the reason why you want to transfer the payment. Note: Here, you must specify the payment cancel reason where the Payment Transfer option is selected. | Yes |
| Match Type | Used to indicate the match type using which you want to transfer the payment. Note: You must specify the match type which is already defined in the system. | Yes |
| Match Value | Used to indicate the entity against which you want to transfer the payment. | Yes |

| Data | Description | Mandatory (Yes or No) |
|---------------------------|--|---|
| | Note: Here, the entity can be account, bill, or contract. You must specify an entity which already exists in the system. | |
| Source System | Used to indicate the external system from where the payment transfer data is received. Note: You must specify an external system which is already defined in the system. | No |
| External Transaction ID | Used to indicate the transaction in the external system through which the payment transfer data is received. | No |
| External Source System ID | Used to specify the external source system ID. | No |
| Transfer Amount | Used to specify the transfer amount. Note: Here, you must specify a positive value. The transfer amount should not be more than the payment amount or the sum of all frozen payments in the payment event. | Yes (Conditional) Note: This data is required when you want to make a partial payment transfer. |

Sample CSV File for Mass Payment Transfer

```
,436878000000,P,ROBL,HCMATCH,770018000000,,,,,120
,436229000000,P,ENTR,HCMATCH,770018000000,,,,,100
436560000000,,E,NSF,HCMATCH,770018000000,,,,,180
,436912000000,P,ACCT,HCMATCH,770018000000,,,,,200
```

Let us assume that the payment transfer file is uploaded and transformed using a file request type with the following field transformation details:

| Sequence | Field Name | Map Field XPath |
|----------|------------------|--|
| 1 | Payment Event ID | C1-TransferPaymentService/paymentEventId |
| 2 | Payment ID | C1-TransferPaymentService/paymentId |
| 3 | Transfer Type | C1-TransferPaymentService/transferType |
| 4 | Transfer Reason | C1-TransferPaymentService/transferReason |
| 5 | Match Type | C1-TransferPaymentService/matchType |

| Sequence | Field Name | Map Field XPath |
|----------|---------------------------|---|
| 6 | Match Type Value | C1-TransferPaymentService/matchTypeValue |
| 7 | Source System | C1-TransferPaymentService/sourceSystem |
| 8 | External Transaction Id | C1-TransferPaymentService/externalTransactionId |
| 9 | External Source system Id | C1-TransferPaymentService/externalSourceId |
| 10 | Transfer Amount | C1-TransferPaymentService/transferAmount |

On successfully uploading and transforming the data, the system creates a transformed payload for each CSV file record. The transformed payload stores the payment transfer data in the following tags:

| Service Payload | Tag Name | CSV File Record 1 | CSV File Record 2 | CSV File Record 3 | CSV File Record 4 |
|-----------------------------------|-----------------------|-------------------|-------------------|-------------------|-------------------|
| C1-Transfer Payment Service | paymentEventId | - | - | 436560000000 | - |
| | paymentId | 436878000000 | 436229000000 | - | 436912000000 |
| | transferType | P | P | E | P |
| | transferReason | ROBL | ENTR | NSF | ACCT |
| | matchType | HCMATCH | HCMATCH | HCMATCH | HCMATCH |
| | matchTypeValue | 770018000000 | 770018000000 | 770018000000 | 770018000000 |
| | sourceSystem | - | - | - | - |
| | externalTransactionId | - | - | - | - |
| | externalSourceId | - | - | - | - |
| | transferAmount | 120 | 100 | 180 | 200 |

Reporting

Topics:

- [Report Creation Using Apache FOP Framework](#)
- [FOP Reports](#)

Oracle Revenue Management and Billing provides best-in-class enterprise reporting feature which enables its customers to uncover new sights for taking faster and more informed business decisions. The reporting feature is a unique platform which easily integrates with the existing infrastructure and provides reusable design, data elements, and easy access to the application programming interface.

Oracle Revenue Management and Billing Reporting feature provides its customers the following benefits:

- Allows to generate and deliver customized reports to users in various departments and customers on time.
- Allows the implementers to efficiently create and update document templates.
- Supports output in the CSV, JSON, PDF, XML, and XLS formats using custom Formatting Objects Processor (FOP) templates.

Report Creation Using Apache FOP Framework

Oracle Revenue management and Billing allows you to create reports in the CSV, JSON, PDF, XML, and XLS formats using the Apache FOP (Formatting Objects Processor) framework. Apache FOP is an output arrangement which is driven by the XSL formatting object. It is a Java application that reads the XSL formatting object tree conforming to the XSL 1.1 Recommendation (05 December 2006) and then converts it into a document in the required output format. It allows you to preview the output directly on the screen.

To understand more about the framework, refer to the official Apache FOP site at <https://xmlgraphics.apache.org/fop/> or you can also refer GitHub at <https://github.com/apache/fop>.

Prerequisites

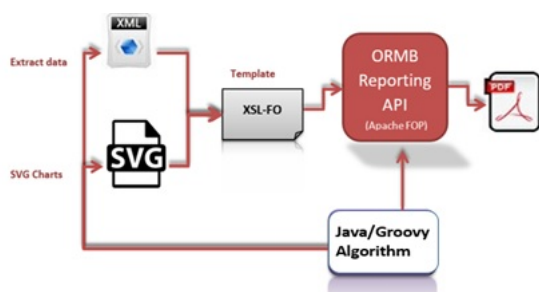

To use the Apache FOP reporting feature in ORMB, you should have:

- **C1-REPORTVW** feature configuration set in the application

PDF Generation Using Apache FOP

For generating a PDF from an XML file you need an XSLT stylesheet which converts the XML file to an XSL-FO file. The created XSL-FO file is also an XML file which contains all the formatted objects. The ORMB FOP reporting framework reads the XSL-FO file and formats it to a PDF document.

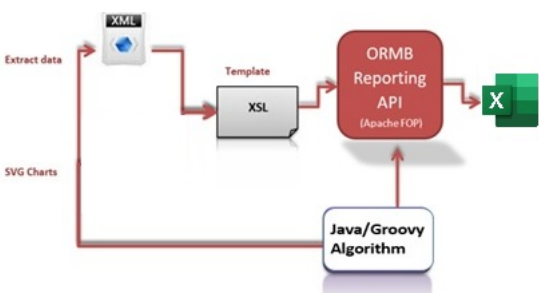

The process overview of PDF generation from an XML file is shown in the below image:

Excel (XLS) Generation Using XSL Transformation

For generating an Excel (XLS) from an XML file you need an XSLT stylesheet which converts the XML file to an XSL file. The created XSL file is also an XML file which contains all the formatted objects. The ORMB reporting framework reads the XSL file and formats it to an Excel (XLS) document.

The process overview of Excel (XLS) generation from an XML file is shown in the below image:

Sample XML Format for FOP Reporting

Using the below example, you can create an XML which contains name and a list of friends with contact numbers:

Sample XML Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<root>
<name>Ryan</name>
<friend>
  <name>David</name>
  <phNo>+1.603.555.0100</phNo>
</friend>
<friend>
  <name>John</name>
  <phNo>+1.603.555.0101</phNo>
</friend>
</root>
```

Note: This is how an XML should be generated with encoded UTF-8 format.

Sample XSL Format for FOP Reporting

Using the below example, you can create an XSL format which renders the table that contains details of friends given in the above sample XML format:

Sample XSL Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<xsl:stylesheet version="1.1"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:fo="http://www.w3.org/1999/XSL/Format"
  exclude-result-prefixes="fo">
<xsl:template match="root">
<fo:root xmlns:fo="http://www.w3.org/1999/XSL/Format">
  <fo:layout-master-set>
    <fo:simple-page-master master-name="my-page">
      <fo:region-body margin="1in"/>
    </fo:simple-page-master>
  </fo:layout-master-set>
  <fo:page-sequence master-reference="my-page">
    <fo:flow flow-name="xsl-region-body">
      <fo:block>Hello, <xsl:value-of select="name" />!</fo:block>
      <fo:block>
        <fo:table>
          <fo:table-body>
            <fo:table-row>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>No.</fo:block>
              </fo:table-cell>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>Name</fo:block>
              </fo:table-cell>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>Phone Number</fo:block>
              </fo:table-cell>
            </fo:table-row>
            <xsl:for-each select="./friend">
              <fo:table-row>
                <fo:table-cell border="solid 1px black" text-align="center">
                  <fo:block>
                    <xsl:value-of select="position()" />
                  </fo:block>
                </fo:table-cell>
                <fo:table-cell border="solid 1px black" text-align="center">
```

```

<fo:block>
  <xsl:value-of select="name" />
</fo:block>
</fo:table-cell>
<fo:table-cell border="solid 1px black" text-align="center">
  <fo:block>
    <xsl:value-of select="phNo" />
  </fo:block>
</fo:table-cell>
</fo:table-row>
</xsl:for-each>
</fo:table-body>
</fo:table>
</fo:block>
</fo:flow>
</fo:page-sequence>
</fo:root>
</xsl:template>
</xsl:stylesheet>

```

Note: For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

Create XSL Template for an FOP Report

The XSL template is required to create an FOP report in the PDF or Excel (XLS) format. The XSL template converts the XML file into XSL-FO file. This XSL-FO is further read by the ORMB FOP reporting framework and formats the XSL-FO file into a PDF/Excel (XLS) file.

Note: For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

XSL Templates shipped with ORMB

The following XSL templates for the corresponding FOP reports are shipped with ORMB:

| XSL Template | FOP Report |
|--------------|---------------------------|
| FOPAGEBPDF | AgingReport.xml |
| FOPAGEOPDF | |
| FOPAGEHCBPDF | AgingReportHC.xml |
| FOPAGEHCOPDF | |
| FOPAGEHCBXLS | AgingReportHCExcel.xml |
| FOPAGEHCOXLS | |
| RPT_LETTER | AutoPay_Letter.xml |
| FOPAPAYHBPDF | AutoPayResponseReport.xml |

| XSL Template | FOP Report |
|---------------------|---------------------------------------|
| FOPAPAYHOPDF | |
| FOPAPAYHBXLS | AutoPayResponseReportExcel.xls |
| FOPAPAYHOXLS | |
| PLSM_DETEXL | billExtract_Banking_Individual.xls |
| PLSM_SMRYEXL | |
| FOPBIPAHBPDF | BinderPaymentReport.xls |
| FOPBIPAHOPDF | |
| FOPBIPAHBXLS | BinderPaymentReportExcel.xls |
| FOPBIPAHOXLS | |
| DCMR | Deal_Compare_Exl.xls |
| DLDWLD | Deal_Extract_For_Upload.xls |
| DEEEXCEL | Deal_Internal_Exl.xls |
| DEIEXCEL | |
| DEIPDF | Deal_Internal_Version2.xls |
| DLPRTEXLR | Deal_Profitability_Exl.xls |
| DEEPDF | DealExtract_External_Type.xls |
| FOPDDROPDF | DirectDebitRejection.xls |
| EFPR_EXT_PDF | Effective_Pricing_Extract.xls |
| EFPR_EXT_EXL | Effective_Pricing_Extract_Exl.xls |
| REP_CODE2 | ExpiringCreditCard_Letter.xls |
| FOPASLHCBPDF | FOPAggregateStoplossHCReport.xls |
| FOPASLHCOPDF | |
| FOPASLHCBXLS | FOPAggregateStoplossHCReportExcel.xls |
| FOPASLHCOXLS | |
| FOPSSLHCBPDF | FOPSpecificStoplossHCReport.xls |
| FOPSSLHCOPDF | |
| FOPSSLHCBXLS | FOPSpecificStoplossHCReportExcel.xls |
| FOPSSLHCOXLS | |

| XSL Template | FOP Report |
|---------------------|--------------------------------------|
| FOPHLDBXLS | HoldEntityDetailsReport.xml |
| FOPHLDOXLS | |
| FOPPADGHBPDF | PaymentDetailGroupHCReport.xml |
| FOPPADGHOPDF | |
| FOPPADGHBXLS | PaymentDetailGroupHCReportExcel.xml |

|---------------------|--------------------------------------|
| FOPTODOOXLS | ToDoReportExcel.xsl |
| FOPTODOBXLS | |
| FOPTRDTBXLS | TransactionRejectionDetailExcel.xsl |
| FOPTRDTOXLS | |
| FOPTRSMBXLS | TransactionRejectionSummaryExcel.xsl |
| FOPTRSMOXLS | |
| FOPUSROPDF | UserAccessReport.xsl |

Create an Algorithm for an FOP Report

Before creating any new custom FOP report an algorithm is created which contains the following content:

- Query for the report
- XML formation code
- Input parameter validation
- Call to report generation algorithm

The algorithm is then associated with the FOP report while defining the FOP report in the application. When the FOP report is generated, the algorithm which is attached to the FOP report does the following:

- Extract data from the system in an XML file
- Present the extracted data in CSV, JSON, PDF, XML, or XLS format using the XSL file associated with the FOP report

The following algorithms for the corresponding FOP reports are shipped with ORMB:

| FOP Report | Report Generation Algorithm |
|-------------------|------------------------------------|
| FOPADJBXLS | C1_FOPADJUST |
| FOPADJOXLS | |
| FOPAGEBPDF | C1_FOPAGING |
| FOPAGEOPDF | |
| FOPAGEHCBPDF | C1_FOPAGEHC |
| FOPAGEHCOPDF | |
| FOPAGEHCBXLS | C1_FOPAGEHC |
| FOPAGEHCOXLS | |
| FOPAPAYHBPDF | C1_FOPAPAY |
| FOPAPAYHOPDF | |
| FOPAPAYHBXLS | C1_FOPAPAY |

| FOP Report | Report Generation Algorithm |
|-------------------|------------------------------------|
| FOPAPAYHOXLS | |
| PLSM_DETEXL | C1-PLDETXCL |
| PLSM_SMRYEXL | C1-PLSMEXCL |
| FOPBIPAHBPDF | C1_FOPBIPA |
| FOPBIPAHOPDF | |
| FOPBIPAHBXLS | C1_FOPBIPA |
| FOPBIPAHOXLS | |
| DCMR | C1-DLCMPRRPT |
| DLDWLD | C1-DLDWLD |
| DEEEXCEL | C1-DLEXTEXCL |
| DEIEXCEL | C1-DLINTEXCL |
| DEIPDF | C1-DLINTPDF |
| DLPRTEXLR | C1-DLPRTEXLR |
| DEEIPDF | C1-DLEXTPDF |
| FOPDDROPDF | C1_FOPDEBIT |
| EFPR_EXT_PDF | C1-EFFPRPDF |
| EFPR_EXT_EXL | C1-EFFPREXL |
| FOPASLHCBPDF | C1_FOPASLHC |
| FOPASLHCOPDF | |
| FOPASLHCBXLS | C1_FOPASLHC |
| FOPASLHCOXLS | |
| FOPSSLHCBPDF | C1_FOPSSLHC |
| FOPSSLHCOPDF | |
| FOPSSLHCBXLS | C1_FOPSSLHC |
| FOPSSLHCOXLS | |
| FOPHLDBXLS | C1_FOPHOLD |
| FOPHLDOXLS | |
| FOPPADGHBPDF | C1_FOPPADTGH |

| FOP Report | Report Generation Algorithm |
|-------------------|------------------------------------|
| FOPPADGHOPDF | |
| FOPPADGHBXLS | C1_FOPPADTGH |
| FOPPADGHOXLS | |
| FOPPADIHBPDF | C1_FOPPAYHDT |
| FOPPADIHOPDF | |
| FOPPADIHBXLS | C1_FOPPAYHDT |

| FOPTRSMOXLS | C1_FOFTXNREG |
| FOPUSROPDF | C1_FOPUSER |

Creating a Message for an FOP Report

Prerequisite

To create a message for an FOP report you should have:

- Error message added in the MessageRepository.java file. For example:

```
public static ServerMessage searchByIsNull()
{
    MessageRepository repo = MessageRepository.getInstance();
    MessageParameters messageParms = new MessageParameters();
    return repo.getMessage(SEARCH_BY_IS_NULL, messageParms);
}
```

- Error code added in the ReportingMessage.java file. For example:

```
public static final int SEARCH_BY_IS_NULL = 2039;
```

Procedure

To create a message for an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Message**.
A sub-menu appears
3. Click the **Add** option from the **Message** sub-menu.

The Select Business Object screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Message Business Object | Used to indicate that you want to create a message for a business object. | Yes |

4. Select **Message** from the **Message Business Object** list.
5. Click **OK**.

The **Message** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Message Category | Used to indicate the category for which you want to create a message. The valid value is: <ul style="list-style-type: none"> • Reports | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Message Number | Used to specify the error code which you have added in the ReportingMessage.java file. | Yes |
| Message Text | Used to specify the error message. | Yes |
| Detailed Description | Used to specify additional information about the message. | No |

6. Click **Save**.

The message is created.

Calling the ORMB FOP Reporting API

Procedure

To call the ORMB FOP reporting API:

1. You should use the ORMB provided business component to call the below reporting API which generates the FOP reports:
com.splwg.ccb.domain.reportsubmission.FOPReportGenerationComponent_Impl
2. Call the reporting API method in the below format:

```
public String generateReport(String xslTemplateName, String xmlContent, String outputFileName)
```

The parameters for the reporting API method is defined as below:

| Parameter Name | Parameter Description |
|-----------------|--|
| xslTemplateName | Used to pass the XSL-FO/XSL file name. It is given in the below format: <code><name of report>.xsl</code> |
| xmlContent | Used to pass the XML content generated by the algorithm. |
| outputFileName | Used to pass the PDF/Excel (XLS) file name that you want to generated. It is given in the below format: <code><name_of_report>.pdf/xls</code> |

Setting Master Configuration for Email Notification

Procedure

Email notification is configured for FOP reports which are generated in the batch mode. To set master configuration for email notification:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Master Configuration**.
The **Master Configuration** screen appears.
3. Search for **Reporting Email Sender Configuration** in the **Master Configuration List** zone.
4. Click the **Add**  icon in the **Action** column corresponding to **Reporting Email Sender Configuration**.

The **Master Configuration** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Master Configuration | Displays the master configuration | Not Applicable |
| SMTP Host Name | Used to specify the SMTP application to send and receive emails. | Yes |
| SMTP Port | Used to specify the communication endpoint to transfer email data over SMTP through a network, from one server to another. The valid value is: <ul style="list-style-type: none"> 25 | Yes |
| Username | Used to specify the username of the user. | Yes |
| Password | Used to specify the password for the user. | Yes |
| Secure Sockets Layer | Used to indicate whether you want to transfer the email data securely across a network. | No |
| Test | Used to configure the sender's and receiver's email ID. | Yes |
| From Email Address | Used to specify the user's email ID. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;">Note: This field appears only when you select the check box corresponding to the Test field.</div> | Yes |
| To Recipient Email ID | Used to specify the receiver's email ID. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;">Note: This field appears only when you select the check box corresponding to the Test field.</div> | Yes |

5. Enter the required details in the **Master Configuration** screen.
6. Click **Save**.

The master configuration for email notification is set.

Creating a Custom Algorithm for FOP Reports

Prerequisite

To create a custom algorithm for FOP reports you should have:

- The **ReportDataExtractAlgorithmSpot** algorithm spot defined in the application

Procedure

To create a custom algorithm for FOP reports:

1. Log into **Eclipse**.
2. In the navigation pane, right click on the **C1** folder.

A list appears.

- From the list, select **New** and then click **Others**.

The **Select a Wizard** window appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Wizard | Used to filter the Algorithm Implementation wizard. | No |

Note: You can also navigate to the **Algorithm Implementation** wizard in the **Oracle Utilities** section through the navigation window provided below the **Wizard** field.

- Select **Algorithm Implementation** from the navigation window.
- Click **Next**.

The **New Algorithm Implementation** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Source Folder | Displays the source from where the algorithm spot is called. The valid value is: <code>C1/Java</code> | Not Applicable |
| Package | Used to specify the directory in the source folder where you want the algorithm to appear. The valid value is: <code>com.splwg.ccb.domain.reports</code> | Yes |
| Name | Used to specify the algorithm that you want to create. | Yes |
| Soft Parameters | Used to specify parameters for the algorithm. | No |
| Algorithm Spot Interface | Used to specify the algorithm spot used to create custom data extract in the PDF or XLS format. The valid value is: <code>com.splwg.ccb.domain.reports</code> Note: You can also extract data in the XML, CSV, or JSON formats by calling the <code>CommonUtil_Impl</code> API while generating the respective report. | Yes |

- Click **Finish**.

The custom algorithm for FOP report is created.

Configuring the Custom Algorithm from the User Interface

Prerequisites

To configure the custom algorithm from the user interface you should:

- Define custom algorithm JAVA code

- Generate artifacts, do Web Build and start the WebLogic server to bring the ORMB application up and running

Procedure

To configure the custom algorithm from the user interface you should:

- Create an algorithm type and associate it with the custom algorithm java code
 - Create an algorithm and associate it with the algorithm type
1. To create an algorithm type, click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Algorithm Type**.

A sub-menu appears

3. Click the **Add** option from the **Algorithm Type** sub-menu.

The **Algorithm Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|------------------------------|
| Algorithm Type | Used to specify the algorithm type that you want to create in the system. | Yes |
| Description | Used to specify the description for the algorithm type. | Yes |
| Detailed Description | Used to specify additional information about the algorithm type | No |
| Algorithm Entity | Used to indicate the algorithm entity for which you want to create the algorithm type. The valid value is: <ul style="list-style-type: none"> • Report-Data Extract Algorithm | Yes |
| Program Type | Used to indicate the program code using which the custom algorithm is created. The valid value is: <ul style="list-style-type: none"> • JAVA | Yes |
| Program Name | Used to specify the custom algorithm java code. The valid value is: com.splwg.ccb.domain.reportsubmission.ReportDataExtractAlgor | Yes |

In addition, the **Algorithm Type** screen contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|------------------------------|
| Sequence | Used to specify the sequence in which the parameter is considered for the algorithm type. | No |
| Parameter | Used to specify the parameter using which you want to create the algorithm type. | No |
| Required | Used to indicate whether the parameter is required or not. | No |
| Owner | Indicates the user who associated the parameter with the algorithm type. | No |

4. Enter the required details in the **Algorithm Type** screen.

5. Click **Save**.

The algorithm type is saved.

6. To create an algorithm, click the **Admin** link in the **Application** toolbar.

A list appears.

7. From the **Admin** menu, select **A** and then click **Algorithm**.

A sub-menu appears

8. Click the **Add** option from the **Algorithm** sub-menu.

The **Algorithm** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| Algorithm Code | Used to specify the algorithm that you want to create in the system | Yes |
| Description | Used to specify the description for the algorithm. | Yes |
| Algorithm Type | Used to specify the algorithm type to which you want to associate the algorithm. | Yes |
| Algorithm Type Description | Displays the description of the algorithm type. | Not Applicable |
| Parameter | Displays the parameter of the algorithm. | Not Applicable |
| Effective Date | Displays the date from when the algorithm type is effective for the algorithm. | Not Applicable |

9. Enter the required details in the **Algorithm** screen.

10. Click **Save**.

The custom algorithm is configured in the user interface.

Report Creation

The **Report Creation** screen allows you to define reports for extracting data of a person and/or its accounts using the Apache FOP framework. It also enables you to view, edit, or delete an existing report. It contains the following zone:

[Report Search](#) on page 3747

Report Search

The **Report Search** zone allows you to search for an existing FOP report using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Report | Used to search for a particular FOP report. | No |
| Description | Used to search FOP reports with a particular description. | No |

Note: You must specify at least one search criterion while searching for an FOP report.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------|---|
| Report | Displays the FOP report. |
| Description | Displays the description of the FOP report. |
| Output Format | Indicates the format in which the FOP report is extracted from the system. Note: At present, you can extract an FOP report in PDF, CSV, and XML formats. |
| Report Type | Indicates the type of information which is extracted using the FOP report. The valid values are: <ul style="list-style-type: none"> • Bill • Custom • Letter |
| View | On clicking the View button you can view the details of the FOP report. |
| Edit | On clicking the Edit (✎) icon, the Report Creation screen appears where you can edit the details of the FOP report. |
| Delete | On clicking the Delete (🗑) icon, you can delete the FOP report. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an FOP Report

Procedure

To search for an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Creation**.
The **Report Creation** screen appears.
3. Enter the search criteria in the **Report Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of FOP reports that meet the search criteria appears in the **Search Results** section.

Defining an FOP Report

Prerequisites

To define an FOP report you should have:

- FOP reporting framework configured in the system
- **C1_FOPONBL** algorithm defined in the system to create FOP reports for bill templates
- Parameters defined for the **C1_FOPONBL** algorithm
- **C1_FOPONBL** algorithm attached to the **Online Bill Display** system event
- **C1_FOPLTRALG** algorithm defined in the system to create FOP reports for letter templates
- Parameters defined for the **C1_FOPLTRALG** algorithm
- **C1_FOPLTRALG** algorithm attached to the **Online Letter Image** system event
- Algorithms defined in the application for creating custom FOP reports

Procedure

To define an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Creation**.
The **Report Creation** screen appears.
3. Click the **Add** button available at the upper right corner of the **Report Creation** screen.
The **Report Creation** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Report | Used to specify the FOP report | No |
| Description | Used to specify the description for the FOP report | No |
| Output Format | Used to indicate the format in which you want to generate the FOP report. The valid values are: <ul style="list-style-type: none"> • CSV | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| | <ul style="list-style-type: none"> • DOCX • JSON • PDF • Web • XLS • XML <p>Note: At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats. You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.</p> | |
| Script | <p>Used to indicate the script using which the FOP report is extracted in the Web format.</p> <p>Note: This field is enabled only when you select the Web option from the Output Format list.</p> | No |
| Report Type | <p>Used to indicate the type of information that you want to extract using the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • Bill • Custom • Letter <p>Note: This field is disabled when you select the Web option from the Output Format list.</p> | Yes |
| Report Template | <p>Used to indicate the template using which the FOP report is uploaded in the system.</p> <p>Note: This field appears only when you select the Bill or Letter option from the Report Type list.</p> | Yes |
| XSL Template | <p>Used to indicate the XSL template file using which you want to create the FOP report.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|---|
| | <p>Note:</p> <p>The Upload button appears corresponding to the XSL Template field. On clicking the Upload button, the Upload XSL Template window appears where you can choose the required XSL template.</p> <p>This field is disabled when you select the Web option from the Output Format list.</p> | |
| Report Generation Algorithm | <p>Used to indicate the algorithm defined for creating a custom FOP report.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Report Generation Algorithm field. On clicking the Search icon, the Algorithm Code/Description window appears where you can search for the required algorithm.</p> <p>This field is enabled only when you select the Custom option from the Report Type list.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required while creating a custom FOP report.</p> |
| Reporting Mode | <p>Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are:</p> <ul style="list-style-type: none"> • Batch • Online | Yes |
| Email ID | <p>Used to specify the email ID where you want to send the notification of the FOP report generation.</p> <p>Note: This field is enabled only when you select the Batch option from the Reporting Mode list.</p> | <p>Yes (Conditional)</p> <p>Note: The field is required for generating FOP report in the batch mode.</p> |
| Subject | <p>Used to specify the text which you want to appear in the subject line of the email.</p> <p>Note: This field is enabled only when you select the Batch option from the Reporting Mode list.</p> | <p>Yes (Conditional)</p> <p>Note: The field is required for generating FOP report in the batch mode.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|---|
| Email Body Content | Used to specify the content which you want to appear in the email body, | Yes (Conditional) |
| | Note: This field is enabled only when you select the Batch option from the Reporting Mode list. | Note: The field is required for generating FOP report in the batch mode. |

In addition, the **Report Creation** screen contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Display Sequence | Used to indicate the sequence of the parameter. | No |
| Report Parameter | Used to indicate the parameter which you want to define while generating the FOP report. | No |
| | Note: The Search (🔍) icon appears corresponding to the Report Parameter field. On clicking the Search icon, the Field Details window appears where you can search for the required parameter. On specifying the parameter, the description of the parameter appears corresponding to the Report Parameter field. | |

Note: The above columns do not appear when you select the **Web** option from the **Output Format** list.

- Enter the required details in the **Report Creation** screen.
- Click **Save**.

The FOP report is defined.

Editing an FOP Report

Prerequisites

To edit an FOP report you should have:

- FOP report (whose details you want to edit) defined in the application
- Algorithms defined in the application for creating custom FOP reports

Procedure

To edit an FOP report:

- Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.

2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the FOP report whose details you want to edit.

The **Report Creation** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Report | Used to specify the FOP report | Not Applicable |
| Description | Used to specify the description for the FOP report | No |
| Output Format | <p>Used to indicate the format in which you want to generate the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • CSV • DOCX • JSON • PDF • Web • XLS • XML <p>Note: At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats. You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.</p> | Yes |
| Script | <p>Used to indicate the script using which the FOP report is extracted in the Web format.</p> <p>Note: This field is enabled only when you select the Web option from the Output Format list.</p> | No |
| Report Type | <p>Used to indicate the type of information that you want to extract using the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • Bill • Custom • Letter <p>Note: This field is disabled when you select the Web option from the Output Format list.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|--|
| Report Template | Used to indicate the template using which the FOP report is uploaded in the system. Note: This field appears only when you select the Bill or Letter option from the Report Type list. | Yes |
| XSL Template | Used to indicate the XSL template file using which you want to create the FOP report. Note: The Upload button appears corresponding to the XSL Template field. On clicking the Upload button, the Upload XSL Template window appears where you can choose the required XSL template. This field is disabled when you select the Web option from the Output Format list. | Yes |
| Report Generation Algorithm | Used to indicate the algorithm defined for creating a custom FOP report. Note: The Search  icon appears corresponding to the Report Generation Algorithm field. On clicking the Search icon, the Algorithm Code/Description window appears where you can search for the required algorithm. This field is enabled only when you select the Custom option from the Report Type list. | Yes (Conditional) Note: This field is required while creating a custom FOP report. |
| Reporting Mode | Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are: <ul style="list-style-type: none"> • Batch • Online | Yes |
| Email ID | Used to specify the email ID where you want to send the notification of the FOP report generation. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|--|
| | Note: This field is enabled only when you select the Batch option from the Reporting Mode list. | Note: The field is required for generating FOP report in the batch mode. |
| Subject | Used to specify the text which you want to appear in the subject line of the email. Note: This field is enabled only when you select the Batch option from the Reporting Mode list. | Yes (Conditional) Note: The field is required for generating FOP report in the batch mode. |
| Email Body Content | Used to specify the content which you want to appear in the email body, Note: This field is enabled only when you select the Batch option from the Reporting Mode list. | Yes (Conditional) Note: The field is required for generating FOP report in the batch mode. |

In addition, the **Report Creation** screen contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Display Sequence | Used to indicate the sequence of the parameter. | No |
| Report Parameter | Used to indicate the parameter which you want to define while generating the FOP report. Note: The Search (🔍) icon appears corresponding to the Report Parameter field. On clicking the Search icon, the Field Details window appears where you can search for the required parameter. On specifying the parameter, the description of the parameter appears corresponding to the Report Parameter field. | No |

Note: The above columns do not appear when you select the **Web** option from the **Output Format** list.

3. Modify the required details in the **Report Creation** screen.
4. Click **Save**.

The changes made to the FOP report are saved.

Deleting an FOP Report

Procedure

To delete an FOP report:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the FOP report that you want to delete.
A message appears confirming whether you want to delete the FOP report from the system.
3. Click **OK**.
4. The FOP report is deleted.

Viewing the FOP Report Details

Prerequisites

To view the FOP report details you should have:

- FOP report (whose details you want to view) defined in the system

Procedure

To view the FOP report details:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **View** button in the **View** column corresponding to the FOP report whose details you want to view.
The **Report Details** screen appears.
3. View the details of the FOP report in the **Report Details** screen.

Report Audit

The **Report Audit** screen allows you to track the records of the generated FOP reports in the system. It also allows you to do the following:

- Download the FOP reports which are generated successfully in the system
- View the error message of the FOP report which did not generate successfully

The **Report Audit** screen contains the following zone:

[Report Generation List](#) on page 3757

Report Generation List

The **Report Generation List** zone allows you to view a list of FOP reports which are generated in the system. It contains the following columns:

| Column Name | Column Description |
|-----------------------|--|
| Sequence | Displays the sequence of the generated FOP report. |
| Report ID | Displays the unique identification number which is created automatically by the system for a particular FOP report during report generation process. |
| Report | Displays the FOP report which is generated in the system. |
| Created By | Displays the user who has generated the FOP report in the system. |
| Creation Date Time | Displays the date and time when the FOP report is generated in the system. |
| Generation Successful | Indicates whether the FOP report generation is successful or not. The valid values are: <ul style="list-style-type: none"> • No • Yes |
| Message Text | Displays information about the FOP report generation. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>If the FOP report generation is successful, then, this column displays the following message:</p> <p>Report Generation Success</p> <p>However, if the FOP report generation is not successful, then, this column displays the reason why the FOP reports is not generated successfully in the system.</p> </div> |
| Download Report | On clicking the Download link, you can download the FOP report. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: The Download link does not appear for FOP reports which are not generated successfully in the system.</p> </div> |

Downloading an FOP Report

Prerequisites

To download an FOP report you should have:

- FOP reports generated successfully in the system

Procedure

To download an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Audit**.
The **Report Audit** screen appears.
3. Ensure that the **Report Generation List** zone is expanded in the **Report Audit** screen.
4. Click the **Filters** (Y) icon available at the upper right corner of the **Report Generation List** zone.
The **Report** field appears below the report list.
5. Specify the FOP report which you want to download in the **Report** field.
6. Click **Search**.
The specified FOP report is filtered in the **Report Generation List** zone.
7. Click the **Download** link in the **Download** column corresponding to the FOP report that you want to download.
The FOP report is downloaded.

Report Generation

The **Report Generation** screen allows you to extract the details of an FOP report.

Generating an FOP Report

Prerequisites

To generate an FOP report you should have:

- FOP reports created in the system

Procedure

To generate an FOP report:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Reports** and then click **Report Generation**.

The **Report Generation** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|------------------------------|
| Report | Used to indicate the FOP report that you want to generate. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Description | Displays the description of the FOP report | Not Applicable |

In addition, the **Report Generation** screen contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Display Sequence | Displays the sequence in which the parameter is defined for the FOP report. |
| Report Parameter | Displays the parameter which is defined for the FOP report. |
| Report Parameter Value | Used to specify the value of the parameter for generating the FOP report. |

3. Select the required FOP report from the **Report** list.
4. Specify the values of the parameters defined for the FOP report in the **Report Parameter Value** column.
5. Click **Generate**.

The FOP report is generated.

FOP Reports

Oracle Revenue Management and Billing enables you to extract data using the following FOP reports:

- [Adjustment Detail Report](#) on page 3760
- [Aggregate Stop-Loss Report](#) on page 3760
- [Entity Hold Detail Report](#) on page 3760
- [Invoice Aging Report](#) on page 3761
- [Payment Detail Report for Fully-Insured Individual Business](#) on page 3761
- [Payment Detail Report for Self-funded and Fully-Insured Group Business](#) on page 3761
- [Payment Summary Report for Fully-Insured Individual Business](#) on page 3762
- [Payment Summary Report for Self-funded and Fully-Insured Group Business](#) on page 3762
- [Specific Stop-Loss Report](#) on page 3763
- [To Do Report](#) on page 3763
- [User Access Report](#) on page 3764
- [Automatic Payment Response Report](#) on page 3764
- [Binder Payment Report](#) on page 3764
- [Quick Response Code Generation](#) on page 3765

For more information about these FOP reports, refer to *Oracle Revenue Management and Billing FOP Reports Guide*

Adjustment Detail Report

The **Adjustment Detail** report enables you to view the adjustments which are created for persons or accounts, or which are created against bills. While generating the adjustment detail report, you can specify the following parameters – Start Date, End Date, Division, Entity Type, and Entity ID. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2022 and entity type as Account, the system will extract all adjustments which are created for the accounts from 01-01-2022 till the current date.

You can generate the adjustment detail report from the user interface or through a batch process in the Excel format. We have shipped the following adjustment detail reports in this release:

- **FOPADJBXLS** - Used when you want to generate the adjustment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPADJOXLS** - Used when you want to generate the adjustment detail report from the user interface in the Excel format.

Aggregate Stop-Loss Report

The **Aggregate Stop-Loss** report enables you to view the aggregate stop-loss which is billed to a parent customer. At a time, it enables you to view the aggregate stop-loss information of a particular parent customer which belongs to a particular division. While generating the aggregate stop-loss report, you can specify the following parameters – Division, Parent Customer, Claim Billed Through, Policy Start Date, and Policy End Date. The division and parent customer are mandatory. If you specify the claim billed until date, you need to specify the policy start and end dates. For example, if you specify 04-01-2021 in the **Claim Billed Through** parameter, 01-01-2021 in the **Policy Start Date** parameter, and 12-31-2021 in the **Policy End Date** parameter, the system fetches the aggregate stop-loss charges which are billed to the parent customer between 01-01-2022 to 04-01-2022.

This report can be used for the self-funded business. You can generate the aggregate stop-loss report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following aggregate stop-loss reports in this release:

- **FOPASLHCBPDF** - Used when you want to generate the aggregate stop-loss report through the **C1-RPTGN** batch in the PDF format.
- **FOPASLHCBXLS** - Used when you want to generate the aggregate stop-loss report through the **C1-RPTGN** batch in the Excel format.
- **FOPASLHCOPDF** - Used when you want to generate the aggregate stop-loss report from the user interface in the PDF format.
- **FOPASLHCOXLS** - Used when you want to generate the aggregate stop-loss report from the user interface in the Excel format.

Entity Hold Detail Report

The **Entity Hold Detail** report enables you to view the entities, such as persons, accounts, or bills for which the business processes, such as bill generation, automatic payment, funding, overdue, or refund, are on hold for a given period. While generating the entity hold detail report, you can specify the following parameters – Start Date, End Date, Division, Hold Entity, Entity ID, Hold Process, and Hold Status. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2021 and hold entity as Bill, the system will extract all hold requests which are created for the bills from 01-01-2021 till the current date.

You can generate the entity hold detail report from the user interface or through a batch process in the Excel format. We have shipped the following entity hold detail reports in this release:

- **FOPHLDBXLS** - Used when you want to generate the entity hold detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPHLDOXLS** - Used when you want to generate the entity hold detail report from the user interface in the Excel format.

Invoice Aging Report

The **Invoice Aging** report enables you to view the invoices which are due for payment in different age buckets. At a time, it enables you to view the invoice aging data of all customers which belong to a particular division. While generating the invoice aging report, you can specify the following parameters – Start Date, End Date, Division, and Customer Class. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date. While generating the invoice aging report, the system does the currency conversion when the accounts' invoice currency is different from the customer's division currency.

This report can be used for the self-funded, fully-insured group, and fully-insured individual business. In case of the self-funded and fully-insured group business, the aging data is grouped at the bill group and parent customer levels. However, in case of the fully-insured individual business, the aging data is grouped at the individual customer level.

You can generate the invoice aging report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following invoice aging reports in this release:

- **FOPAGEHCBCPDF** - Used when you want to generate the invoice aging report through the **C1-RPTGN** batch in the PDF format.
- **FOPAGEHCBCXLS** - Used when you want to generate the invoice aging report through the **C1-RPTGN** batch in the Excel format.
- **FOPAGEHCBCPDF** - Used when you want to generate the invoice aging report from the user interface in the PDF format.
- **FOPAGEHCBCXLS** - Used when you want to generate the invoice aging report from the user interface in the Excel format.

Payment Detail Report for Fully-Insured Individual Business

The **Payment Detail** report for fully-insured individual business enables you to view the payment details of each account. At a time, it enables you to view the payments of all accounts which belong to a particular division. While generating the payment detail report for the fully-insured individual business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, Payment Status, Payment Amount Range, Health Plan ID, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. While filtering the data using the payment amount range, you need to specify the lower and upper range value separated by the hyphen (-) symbol. For example, if you set the start date to 01-01-2021, division to D10, and payment amount range to 150-200, the system will extract all payments which are created from 01-01-2021 till the current date, whose payment amount is between 150 and 200, and which are created for the accounts belonging to the D10 division. The payments are shown in the payment currency.

You can generate the payment detail report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment detail reports for the fully-insured individual business in this release:

- **FOPPADTHBCPDF** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the PDF format.
- **FOPPADTHBCXLS** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPPADTHBCPDF** - Used when you want to generate the payment detail report from the user interface in the PDF format.
- **FOPPADTHBCXLS** - Used when you want to generate the payment detail report from the user interface in the Excel format.

Payment Detail Report for Self-funded and Fully-Insured Group Business

The **Payment Detail** report for self-funded and fully-insured group business enables you to view the payment details of each account. At a time, it enables you to view the payments of all accounts which belong to a particular division. While

generating the payment detail report for the self-funded or fully-insured group business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, Payment Status, Payment Amount Range, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. While filtering the data using the payment amount range, you need to specify the lower and upper range value separated by the hyphen (-) symbol.

For example, if you set the start date to 01-01-2020, division to D1, and payment amount range to 50-100, the system will extract all payments which are created from 01-01-2020 till the current date, whose payment amount is between 50 and 100, and which are created for the accounts belonging to the D1 division. The payments are shown in the payment currency.

You can generate the payment detail report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment detail reports for the self-funded and fully-insured group business in this release:

- **FOPPADGHBPDF** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the PDF format.
- **FOPPADGHBXLS** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPPADGHOPDF** - Used when you want to generate the payment detail report from the user interface in the PDF format.
- **FOPPADGHOXLS** - Used when you want to generate the payment detail report from the user interface in the Excel format.

Payment Summary Report for Fully-Insured Individual Business

The **Payment Summary** report for fully-insured individual business enables you to view the total payment made for each account. At a time, it enables you to view the total payment of each account which belongs to a particular division. While generating the payment summary report for the fully-insured individual business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, Health Plan ID, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payment total is shown in the customer's division currency. While generating the payment summary report, the system does the currency conversion when the payment currency is different from the customer's division currency.

You can generate the payment summary report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment summary reports for the fully-insured individual business in this release:

- **FOPPASMHBPDF** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the PDF format.
- **FOPPASMHBXLS** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the Excel format.
- **FOPPASMHOPDF** - Used when you want to generate the payment summary report from the user interface in the PDF format.
- **FOPPASMHOXLS** - Used when you want to generate the payment summary report from the user interface in the Excel format.

Payment Summary Report for Self-funded and Fully-Insured Group Business

The **Payment Summary** report for self-funded and fully-insured group business enables you to view the total payment made for each account. At a time, it enables you to view the total payment of each account which belongs to a particular division. While generating the payment summary report for the self-funded or fully-insured group business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payment total is shown in the customer's division

currency. While generating the payment summary report, the system does the currency conversion when the payment currency is different from the customer's division currency.

You can generate the payment summary report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment summary reports for the self-funded and fully-insured group business in this release:

- **FOPPASGHBPDF** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the PDF format.
- **FOPPASGHXBLS** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the Excel format.
- **FOPPASGHOPDF** - Used when you want to generate the payment summary report from the user interface in the PDF format.
- **FOPPASGHOXLS** - Used when you want to generate the payment summary report from the user interface in the Excel format.

Specific Stop-Loss Report

The **Specific Stop-Loss** report enables you to view the specific stop-loss which is billed for each member to a bill group. At a time, it enables you to view the specific stop-loss information of a particular parent customer which belongs to a particular division. While generating the specific stop-loss report, you can specify the following parameters – Division, Parent Customer, Claim Billed Through, Policy Start Date, and Policy End Date. The division and parent customer are mandatory. If you specify the claim billed until date, you need to specify the policy start and end dates. For example, if you specify 03-01-2022 in the **Claim Billed Through** parameter, 01-01-2022 in the **Policy Start Date** parameter, and 12-31-2022 in the **Policy End Date** parameter, the system fetches the specific stop-loss charges which are billed to different bill groups of the parent customer between 01-01-2022 to 03-01-2022.

This report can be used for the self-funded business. You can generate the specific stop-loss report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following specific stop-loss reports in this release:

- **FOPSSLHCBPDF** - Used when you want to generate the specific stop-loss report through the **C1-RPTGN** batch in the PDF format.
- **FOPSSLHCBXLS** - Used when you want to generate the specific stop-loss report through the **C1-RPTGN** batch in the Excel format.
- **FOPSSLHCOPDF** - Used when you want to generate the specific stop-loss report from the user interface in the PDF format.
- **FOPSSLHCOXLS** - Used when you want to generate the specific stop-loss report from the user interface in the Excel format.

To Do Report

The **To Do** report enables you to view the notifications (i.e. To Dos) assigned to a user and its current status. While generating the To Do report, you can specify the following parameters – Start Date, End Date, To Do Type, To Do Type Description, Assigned User, Created By, Status, Operator, and To Do Age. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 06-01-2022 and To Do type as C1-ACCL, the system will extract all To Dos which are created using the C1-ACCL To Do type from 06-01-2022 till the current date. While filtering the data using the To Do age, you need to specify the operator along with the To Do age. The system supports the following operators: Greater Than (>), Less Than (<), Less Than Equal To (<=), Greater Than Equal To (>=), and Equal To (=). For example, if you specify the start date as 06-01-2022, To Do age as 50, and operator as >, the system will extract all To Dos which are open in the system since more than 50 days.

You can generate the To Do report from the user interface or through a batch process in the PDF format. We have shipped the following To Do reports in this release:

- **FOPTODOBPDF** - Used when you want to generate the To Do report through the **C1-RPTGN** batch in the PDF format.
- **FOPTODOOPDF** - Used when you want to generate the To Do report from the user interface in the PDF format.

User Access Report

The **User Access** report enables you to view the permissions granted to different users for accessing the data. While generating the user access report, you can specify the following parameters – User Group, User Group Description, To Do Role, and To Do Role Description.

You can generate the user access report from the user interface in the PDF format. We have shipped the following user access report in this release:

- **FOPUSROPDF** - Used when you want to generate the user access report from the user interface in the PDF format.

Automatic Payment Response Report

Oracle Revenue Management and Billing enables you to extract the response received for automatic payment clearing records from the auto clearing house along with the current payment status through an FOP report. While generating the automatic payment response report, you can specify the following parameters – Search By, Start Date, End Date, Division, Customer Class, Person Name, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, and Automatic Payment Response. The **Search By** filter enables you to extract the automatic payment clearing records either using the following values:

- **AUTOPAY_EXTRACTION_DATE** – If you set the **Search By** parameter to **AUTOPAY_EXTRACTION_DATE**, the system considers the automatic payment clearing records whose extract date falls within the start and end dates.
- **UPLOAD_DATE** - If you set the **Search By** parameter to **UPLOAD_DATE**, the system considers the automatic payment clearing records whose response from the auto clearing house is uploaded within the start and end dates.

The **Search By**, **Start Date**, and **Division** are mandatory. If you do not specify the end date, the system by default sets it to the system date. You can generate the automatic payment response report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following automatic payment response reports in this release:

- **FOPAPAYHBPDF** - Used when you want to generate the automatic payment response report through the **C1-RPTGN** batch in the PDF format.
- **FOPAPAYHBXLS** - Used when you want to generate the automatic payment response report through the **C1-RPTGN** batch in the Excel format.
- **FOPAPAYHOPDF** - Used when you want to generate the automatic payment response report from the user interface in the PDF format.
- **FOPAPAYHOXLS** - Used when you want to generate the automatic payment response report from the user interface in the Excel format.

Binder Payment Report

Oracle Revenue Management and Billing enables you to extract the binder payments through an FOP report. While generating the binder payment report, you can specify the following parameters – Start Date, End Date, Division, Customer Class, Person Name, Exchange Subscriber Identifier Type, Exchange Subscriber Identifier, Membership Status, and Binder Payment Status.

The **Start Date**, **End Date**, and **Division** are mandatory. You can generate the binder payment report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following binder payment reports in this release:

- **FOPBIPAHOPDF** - Used when you want to generate the binder payment report through the **C1-RPTGN** batch in the PDF format.

- **FOPBIPAHOXLS** - Used when you want to generate the binder payment report through the **C1-RPTGN** batch in the Excel format.
- **FOPBIPAHBPDF** - Used when you want to generate the binder payment report from the user interface in the PDF format.
- **FOPBIPAHBXLS** - Used when you want to generate the binder payment report from the user interface in the Excel format.

Quick Response Code Generation

A Quick Response (QR) code is a type of matrix barcode (or two-dimensional barcode). A barcode is a machine-readable optical label that can contain information about the item to which it is attached. Oracle Revenue Management and Billing provides a QR code generator using which you can generate a QR code. At the moment, the QR code is only supported for the FOP reports which are generated in the PDF format. You can define dataset for the QR string using which you want to generate the QR code. You can insert a QR code on any page in the Portable Document Format (PDF) file.

To insert a QR code in an FOP report, you need to add QR related code snippets in the respective XSL file. Only then, the system will insert the QR code when you generate the FOP report in the PDF format.

Chapter 53

Automatic Refund/Write Off

Topics:

- [Refund/Write Off Business Rules](#)
- [Automatic Refund/Write Off on Terminating a Group Policy or Individual Membership](#)
- [Rollback Automatic Refund/Write Off on Reinstating a Group Policy or Individual Membership](#)
- [Automatic Refund/Write Off Preference](#)
- [Refund/Write Off Instruction](#)

Oracle Revenue Management and Billing enables you to create an automatic refund/write off instruction for an account when a fully-insured group policy or individual membership is terminated. It also enables you to rollback an automatic refund/write off for an account when the fully-insured group policy or individual membership is reinstated. For more information, refer to the respective sections in this chapter.

Refund/Write Off Business Rules

Oracle Revenue Management and Billing enables you to define business rules for automatic refund and write off creation. A new category named **Refund/Write Off Business Rule** is introduced in this release. The refund/write off business rules are used for creating automatic refund and write off requests for accounts when the fully-insured group policy or individual membership is terminated.

While terminating a fully-insured group policy or individual membership, the system derives the refund/write off business rule for the fully-insured group policy or individual membership. While deriving the refund/write off business rule for a fully-insured group policy or individual membership, the system considers the business rules which are effective on the termination date. Once the effective business rules are identified, the system executes these business rules in the order of their priority. Once the criteria of the business rule are met, the business rule is stamped against the fully-insured group policy or individual membership. If two or more business rules have the same priority, the system sorts the business rules for execution based the business rule criteria sequence.

While defining the refund/write off business rule criteria, you can use the parameters which are defined on the following entities:

- Individual Membership
- Member Person of Individual Membership
- Health Plan
- Health Product
- Policy
- Account

You can define, edit, and delete a refund/write off business rule through the **Business Rule** screen. While defining a refund/write off business rule, you need to set its category to **Refund/Write Off Business Rule**. The refund/write off business rule enables you to define the following parameters:

- **Refund Threshold Amount** – Used to specify the threshold amount for refund. If the account balance is greater than or equal to the refund threshold amount, the system creates automatic refund for an account.
- **Defer Refund (in Days)** – Used to specify the number of days till when you want to defer the automatic refund for an account. It is used while calculating the automatic refund request creation date.
- **Write Off Threshold Amount** – Used to specify the threshold amount for write off. If the account balance is less than or equal to the write off threshold amount, the system creates automatic write off for an account.
- **Defer Write Off (in Days)** – Used to specify the number of days till when you want to defer the automatic write off for an account. It is used while calculating the automatic write off request creation date.

You can view the refund/write off business rules through the **Business Rule** screen.

Automatic Refund/Write Off on Terminating a Group Policy or Individual Membership

On terminating a fully-insured group policy or individual membership, the system derives the refund/write off business rule for the fully-insured group policy or individual membership and stamps it against the policy or membership ID in the **C1_ENT_BUS_RULE** table.

If the fully-insured group policy is defined for a parent customer, the system derives all accounts of the parent customer and its bill groups and then creates an automatic refund/write off instruction for each account of the parent customer and its bill groups. However, if the fully-insured group policy is defined for a bill group, the system derives all accounts of the bill group and then creates an automatic refund/write off instruction for each account of the bill group. While deriving the parent customer and bill group of the fully-insured group policy, the system considers the **Parent Person Type** and

Bill Group Person Type option types of the **C1-PERSTYPE** feature configuration. However, in case of individual membership, the system derives all accounts of the financially responsible person and then creates an automatic refund/write off instruction for each account of the financially responsible person.

Note:

The system does not create a new automatic refund/write off instruction for an account when an automatic refund/write off instruction already exists for the account in the **Pending**, **Valid**, **Error**, or **Pending Completion** status.

If you want to create automatic refund/write off instruction for an account on terminating a fully-insured group policy, you need to ensure that the **C1-POTR-INS** algorithm is attached to the **Terminated** status of the **C1-POLICY** business object.

If you want to create automatic refund/write off instruction for an account on terminating an individual membership, you need to ensure that the **C1-IMTR-INS** algorithm is attached to the **Terminated** status of the **C1-IndMembership** business object.

The system calculates the wait date using the wait days specified in the **C1-POTR-INS** or **C1-IMTR-INS** algorithm, respectively. In case of a fully-insured group policy, the wait days is added to the policy end date to derive the wait date. However, in case of an individual membership, the wait days is added to the membership end date to derive the wait date. The wait date is later used to calculate the automatic refund/write off request creation date. A new screen named **Refund/Write off Instruction** is introduced in this release. It enables you to view the automatic refund/write off instructions of an account which are created on terminating a fully-insured group policy or individual membership. On creating an automatic refund/write off instruction, the status of the automatic refund/write off instruction is set to **Pending**. The following two batches are introduced in this release:

- [Identify Refund/Write Off Eligibility \(C1-RFWO1\)](#) on page 3769
- [Automatic Creation of Refund/Write Off \(C1-RFWO2\)](#) on page 3770

On voiding a refund request created through an automatic refund instruction, the system cancels the transfer adjustments and refund adjustment on the netting contract of the account. And, on canceling a write off request created through an automatic write off instruction, the system cancels the transfer adjustments and write off adjustment on the netting contract of the account.

Identify Refund/Write Off Eligibility (C1-RFWO1)

The **Identify Refund/Write Off Eligibility (C1-RFWO1)** batch is used to check whether there are any automatic refund/write off instructions in the **Pending** status. If there is an automatic refund/write off instruction in the **Pending** status, the system derives the business rule stamped against the fully-insured group policy or individual membership for which the automatic refund/write off instruction is created. If the business rule is not found for the fully-insured group policy or individual membership in the **C1_ENT_BUS_RULE** table, the system changes the status of the automatic refund/write off instruction to **Invalid**. In addition, the automatic refund/write off instruction reason is set to **INBR** (Business Rule Could not be Derived). However, if the business rule is found for the fully-insured group policy or individual membership in the **C1_ENT_BUS_RULE** table, the system derives the account balance. If the account balance is zero, the system changes the status of the automatic refund/write off instruction to **Invalid**. In addition, the automatic refund/write off instruction reason is set to **INZR** (Account Balance Is Zero).

If the account balance is greater than zero but less than the refund threshold amount, the system changes the status of the automatic refund instruction to **Invalid**. In addition, the automatic refund instruction reason is set to **INTH** (Account Balance Doesn't Meet Threshold Limit). However, if the account balance is greater than zero and greater than or equal to the refund threshold amount, the system does the following:

- Changes the status of the automatic refund instruction to **Valid**.
- Derives the refund request type from the automatic refund/write off field mapping which is specified in the **C1_REFWO** feature configuration.
- Calculates the automatic refund request creation date using the wait date (calculated earlier using the wait days) and defer refund days specified in the business rule.

If the account balance is less than zero but greater than the write off threshold amount, the system changes the status of the automatic write off instruction to **Invalid**. In addition, the automatic write off instruction reason is set to **INTH** (Account Balance Doesn't Meet Threshold Limit). However, if the account balance is less than zero and less than or equal to the write off threshold amount, the system does the following:

- Changes the status of the automatic write off instruction to **Valid**.
- Derives the write off request type from the automatic refund/write off field mapping which is specified in the **C1_REFWO** feature configuration.
- Calculates the automatic write off request creation date using the wait date (calculated earlier using the wait days) and defer write off days specified in the business rule.

Note: If the system is used for both the fully-insured group and fully-insured individual line of business, you need to define two separate field mappings of the **Automatic Refund/Write-Off** preference category – one for each line of business (i.e. fully-insured group business and fully-insured individual business). Once you define the field mapping for each line of business, you need to set them against the **Field Mapping Preference for Individual Membership** and **Field Mapping Preference for Policy (Small Group)** option types, respectively, in the **C1_REFWO** feature configuration.

If the netting contract type is not specified in the refund/write off request type, the system changes the status of the automatic refund/write off instruction to **Invalid**. In addition, the automatic refund/write off instruction reason is set to **NCTM** (Netting Contract Type Missing).

Automatic Creation of Refund/Write Off (C1-RFWO2)

The **Automatic Creation of Refund/Write Off (C1-RFWO2)** batch is used to check whether there are any automatic refund/write off instructions in the **Valid**, **Pending Completion**, or **Error** status. If there is an automatic refund/write off instruction in the **Valid** or **Error** status and if the refund/write off request creation date in the automatic refund/write off instruction is earlier than or equal to the batch business date, the system verifies the account balance. Note that the automatic refund/write off instruction in the **Error** status are considered only when the **Select records in Error (Y/ N)** parameter in the batch is set to **Y**. If the current account balance does not match the account balance retrieved in the **C1-RFWO1** batch, the system cancels the automatic refund/write off instruction. The status of the automatic refund/write off instruction is changed to **Canceled** and the automatic refund/write off instruction reason is set to the reason code which is specified in the **Instruction Cancel Reason on Account Balance Change** attribute of the automatic refund/write off field mapping.

If the current account balance matches the account balance retrieved in the **C1-RFWO1** batch, the system creates the refund/write off request using the refund/write off request type (which is specified in the automatic refund/write off field mapping). While creating the refund/write off request, the adjustment level is set to **Account**. If the approval process is not configured on the refund/write off request type, the refund/write off request is created and processed immediately. On processing a refund/write off request, the system does the following:

- Creates transfer adjustments against the unmatched financial transactions of the account on the netting contract
- Creates one refund/write off adjustment against the netting contract
- Changes the status of the refund/write off request to **Processed**
- Changes the status of the automatic refund/write off instruction to **Completed**

If the approval process is configured on the refund/write off request type, the refund/write off request is created in the **Approval in Progress** status. The status of the automatic refund/write off instruction is then changed to **Pending Completion**.

Note: An approver can approve or reject the refund/write off request from the user interface. If the approver approves the refund/write off request, the system creates transfer adjustments against the unmatched financial transactions of the account on the netting contract and creates one refund/write off adjustment against the netting contract. Finally, the status of the refund/write off request is changed to **Processed**. However, if the approver rejects the refund/write off request, the system sets the automatic refund/write off instruction reason to the reason code which is specified in the **Instruction Cancel Reason on Rejecting Request** attribute of the automatic refund/write off field mapping.

In addition, if the refund process is on hold for the account, the refund request is created in the **Hold** status. The status of the automatic refund instruction is then changed to **Pending Completion**.

If an error occurs while creating a refund/write off request, the system does the following:

- Changes the status of the automatic refund/write off instruction to **Error**
- Sets the automatic refund/write off instruction reason to the reason code which is specified in the **Error Code on Processing Refund/Write Off Request** attribute of the automatic refund/write off field mapping.
- Creates a To Do using the **C1-ATRFWO** To Do type for the automatic refund/write off instruction

If there is an automatic refund/write off instruction in the **Pending Completion** status and if the refund/write off request creation date in the automatic refund/write off instruction is earlier than or equal to the batch business date, the system checks whether the status of the corresponding refund/write off request is **Processed**. If so, the system changes the status of the automatic refund/write off instruction to **Completed**.

Rollback Automatic Refund/Write Off on Reinstating a Group Policy or Individual Membership

If a terminated fully-insured group policy or individual membership is reinstated, the system checks whether an automatic refund/write off instruction exists for the policy or membership. If an automatic refund/write off instruction exists for the policy or membership, the system behaves in the following manner:

| Refund/Write Off Request Exists (Y or N) | Automatic Refund/Write Off Instruction Status | System Behavior |
|--|---|---|
| N | Pending or Valid | <p>The system does the following:</p> <ul style="list-style-type: none"> • Changes the status of the automatic refund/write off instruction to Canceled • Sets the automatic refund/write off instruction reason to the reason code which is specified in the Instruction Cancel Reason on Reinstatement attribute of the automatic refund/write off field mapping. |
| Y | Pending Completion | <p>The system does the following:</p> <ul style="list-style-type: none"> • Changes the status of the automatic refund/write off instruction to Canceled • Sets the automatic refund/write off instruction reason to the reason code which is specified in the Instruction Cancel Reason on Reinstatement attribute of the automatic refund/write off field mapping. • If the refund/write off request is in the Processed or Approval in Progress status, then <ul style="list-style-type: none"> • The appropriate log entry is added to the refund/write off request. • The status of the refund/write off request is changed to Rejected. • The automatic refund/write off instruction reason is set to the reason code which is specified in the Refund Request Reject |

| Refund/Write Off Request Exists (Y or N) | Automatic Refund/Write Off Instruction Status | System Behavior |
|--|---|---|
| | | <p>Reason on Reinstatement or Write Off Request Reject Reason on Reinstatement attribute of the automatic refund/write off field mapping, respectively.</p> <ul style="list-style-type: none"> If the refund request is in the Hold status, then <ul style="list-style-type: none"> The appropriate log entry is added to the refund request. The status of the refund request is changed to Voided. The automatic refund instruction reason is set to the reason code which is specified in the Void Status Reason for Refund Request on Reinstatement attribute of the automatic refund/write off field mapping. |
| Y | Completed | <p>The system does the following:</p> <ul style="list-style-type: none"> If the write off request is in the Processed status, then <ul style="list-style-type: none"> The appropriate log entry is added to the write off request. The status of the write off request is changed to Canceled. The status of the automatic write off instruction is changed to Canceled The automatic write off instruction reason is set to the reason code which is specified in the Instruction Cancel Reason on Reinstatement attribute of the automatic refund/write off field mapping. If the refund request is in the Processed status, then no action is taken against the refund request and automatic refund instruction. |

Automatic Refund/Write Off Preference

The Automatic Refund/Write Off Preference enables you to set the attributes which are used while generating automatic refund and/or write off requests for the accounts during fully-insured group policy and individual membership termination. You should define two separate field mappings of the **Automatic Refund/Write-Off** preference category – one for each line of business (i.e. fully-insured group business and fully-insured individual business).

You can define, edit, delete, and copy an automatic refund/write off preference through the **Field Mapping** screen.

Searching for an Automatic Refund/Write Off Preference

Prerequisites

To search for an automatic refund/write off preference, you should have:

- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup field.

Procedure

To search for an automatic refund/write off preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Automatic Refund/Write Off** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
A list of automatic refund/write off preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Automatic Refund/Write Off Preference Details

Procedure

To view the details of an automatic refund/write off preference:

1. Search for an automatic refund/write off preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the automatic refund/write off preference whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the automatic refund/write off preference in the **Field Mapping** zone.

Defining an Automatic Refund/Write Off Preference

Prerequisites

To define an automatic refund/write off preference, you should have:

- Refund/write off request business objects defined in the application.
- Status reasons defined for the **C1-RefundReq** business object.

- Values defined for the **Field Mapping Preference for Individual Membership** and **Field Mapping Preference for Policy (Small Group)** option type in the **C1_REFWO** feature configuration.
- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup field.

Procedure

To define an automatic refund/write off preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|------------------------------|
| Field Mapping Business Object | Used to indicate the business object using which you want to create an automatic refund/write off preference. The valid values are: <ul style="list-style-type: none"> • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping | Yes |

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the automatic refund/write off preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|------------------------------|
| Preference | Used to specify the automatic refund/write off preference. | Yes |
| Description | Used to specify the description for the automatic refund/write off preference. | Yes |
| Detailed Description | Used to specify additional information about the automatic refund/write off preference. | No |
| Status | Used to indicate the status of the automatic refund/write off preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |

- **Preference Category** - This section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Preference Category | <p>Used to indicate the category to which the preference belongs. The valid values are:</p> <ul style="list-style-type: none"> • Automatic Refund/Write Off • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Member Status Reason Preferences • Statement Construct | Yes |
| | <p>Note: You must select Automatic Refund/Write Off option as the preference category while creating an automatic refund/write off preference.</p> | |

- **Preference Settings** - Used to set the attributes in the automatic refund/write off preference.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|--|
| Attribute | <p>Used to indicate the attribute which you want to set in the automatic refund/write off preference. The valid values are:</p> <ul style="list-style-type: none"> • Cancel Status Reason for Write Off Request on Reinstatement - Used when the write off adjustment request is canceled on reinstating the policy or individual membership. • Error Code on Processing Refund/Write Off Request - Used when the system generates an error while creating a refund/write off request. • Instruction Cancel Reason on Account Balance Change - Used when the refund/write off instruction is canceled due to change in the account balance once the refund/write off request is created. • Instruction Cancel Reason on Reinstatement - Used when the refund/write off instruction is canceled on reinstating the policy or individual membership. • Instruction Cancel Reason on Rejecting Request - Used when the refund/write off request in the Approval In Progress status is rejected by the approver. | Yes (Conditional) |
| | | <p>Note: This field is required while defining the settings for an automatic refund/write off preference.</p> |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | |
|---|--|-------------------------------|------------------------|---|---|---|---|---|---|--|
| | <ul style="list-style-type: none"> • Refund Request Type - Used when the refund adjustment is created using the respective refund request type. • Refund Request Reject Reason on Reinstatement - Used when the system rejects the refund request in the Approval In Progress status on reinstating the policy or individual membership. | | | | | | | | | |
| | <ul style="list-style-type: none"> • Void Status Reason for Refund Request on Reinstatement - Used when the status of the refund request in the Hold status is changed to Void on reinstating the policy or individual membership. • Write Off Request Type - Used when the refund adjustment is created using the respective write off request type. • Write Off Request Reject Reason on Reinstatement - Used when the system rejects the write off request in the Approval In Progress status on reinstating the policy or individual membership. | | | | | | | | | |
| Value | <p>Used to specify the attribute value. The list varies depending on the attribute you want to set in the automatic refund/write off preference:</p> <table border="1" data-bbox="597 1031 1214 1820"> <thead> <tr> <th data-bbox="602 1037 808 1108">If the attribute is set to...</th> <th data-bbox="813 1037 1209 1108">Then, this field is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 1115 808 1360">Cancel Status Reason for Write Off Request on Reinstatement</td> <td data-bbox="813 1115 1209 1360"> Used to specify the reason for canceling the write off adjustments. <div data-bbox="818 1205 1205 1346" style="border: 1px solid black; padding: 2px;"> <p>Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-RefundReq business object.</p> </div> </td> </tr> <tr> <td data-bbox="602 1367 808 1682">Error Code on Processing Refund/Write Off Request</td> <td data-bbox="813 1367 1209 1682"> Used to indicate the error code which the system generates while creating a refund/write off request. <div data-bbox="818 1493 1205 1667" style="border: 1px solid black; padding: 2px;"> <p>Note: The list includes only those values which are defined in the REFWO_INST_RSN_CD_FLG lookup field which is shipped with this product.</p> </div> </td> </tr> <tr> <td data-bbox="602 1688 808 1814">Instruction Cancel Reason on Account Balance Change</td> <td data-bbox="813 1688 1209 1814"> Used to indicate the reason why the refund/write off instruction is canceled when the account balance is changed. </td> </tr> </tbody> </table> | If the attribute is set to... | Then, this field is... | Cancel Status Reason for Write Off Request on Reinstatement | Used to specify the reason for canceling the write off adjustments. <div data-bbox="818 1205 1205 1346" style="border: 1px solid black; padding: 2px;"> <p>Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-RefundReq business object.</p> </div> | Error Code on Processing Refund/Write Off Request | Used to indicate the error code which the system generates while creating a refund/write off request. <div data-bbox="818 1493 1205 1667" style="border: 1px solid black; padding: 2px;"> <p>Note: The list includes only those values which are defined in the REFWO_INST_RSN_CD_FLG lookup field which is shipped with this product.</p> </div> | Instruction Cancel Reason on Account Balance Change | Used to indicate the reason why the refund/write off instruction is canceled when the account balance is changed. | <p>Yes (Conditional)</p> <div data-bbox="1232 968 1464 1163" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required while defining the settings for an automatic refund/write off preference.</p> </div> |

| | <p>If the attribute is set to...</p> <p>Void Status Reason for Refund Request on Reinstatement</p> | <p>Then, this field is...</p> <p>Note: You can select the appropriate reason of rejection when you have defined the reasons for the Rejected status of the C1-RefundReq business object in the Status Reason screen.</p> <p>Used to indicate the reason why the status of refund request is changed from Hold to Voided when the individual membership or policy is reinstated.</p> <p>Note: The list includes only those values which are defined in the REFWO_INST_RSN_CD_FLG lookup field.</p> | |
| | <p>If the attribute is set to...</p> <p>Write Off Request Type</p> <p>Write Off Request Reject Reason on Reinstatement</p> | <p>Then, this field is...</p> <p>Used to indicate the write off request type using which the write off adjustment is created.</p> <p>Note: You must specify a write off request type which is already defined in the system.</p> <p>Used to indicate the reason why the write off request is rejected when the individual membership or policy is reinstated.</p> <p>Note: You can select the appropriate reason of rejection when you have defined the reasons for the Rejected status of the C1-RefundReq business object in the Status Reason screen.</p> | |
| Entity Type | <p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> • Account • Adjustment • Billable Charge • Membership | | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> • Payment • Policy | |
| | <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p> | |

Note: While defining an automatic refund/write off preference, you must set at least one attribute in the automatic refund/write off preference.

6. Select the **Automatic Refund/Write Off** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the automatic refund/write off preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the automatic refund/write off preference, click the **Delete (🗑)** icon corresponding to the attribute.

10. Click **Save**.

The automatic refund/write off preference is defined.

Editing an Automatic Refund/Write Off Preference

Prerequisites

To edit an automatic refund/write off preference, you should have:

- Values defined for the **Field Mapping Preference for Individual Membership** and **Field Mapping Preference for Policy (Small Group)** option type in the **C1_REFWO** feature configuration.
- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup field.

Procedure

To edit an automatic refund/write off preference:

1. Search for an automatic refund/write off preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit (🖋)** icon in the **Edit** column corresponding to the automatic refund/write off preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the automatic refund/write off preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Preference | Displays the automatic refund/write off preference. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Description | Used to specify the description for the automatic refund/write off preference. | Yes |
| Detailed Description | Used to specify additional information about the preference. | No |
| Status | Used to indicate the status of the automatic refund/write off preference. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Preference Category | Indicates the feature for which the preference is designed. The valid value is: <ul style="list-style-type: none"> Automatic Refund/Write Off | Not applicable |

- **Preference Settings** - Used to define the settings for the automatic refund/write off preference.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|--|
| Attribute | Used to indicate the attribute which you want to set in the automatic refund/write off preference. The valid values are: <ul style="list-style-type: none"> Cancel Status Reason for Write Off Request on Reinstatement - Used when the write off adjustment request is canceled on reinstating the policy or individual membership. Error Code on Processing Refund/Write Off Request - Used when the system generates an error while creating a refund/write off request. Instruction Cancel Reason on Account Balance Change - Used when the refund/write off instruction is canceled due to change in the account balance once the refund/write off request is created. Instruction Cancel Reason on Reinstatement - Used when the refund/write off instruction is canceled on reinstating the policy or individual membership. Instruction Cancel Reason on Rejecting Request - Used when the refund/write off request in the Approval In Progress status is rejected by the approver. Refund Request Type - Used when the refund adjustment is created using the respective refund request type. Refund Request Reject Reason on Reinstatement - Used when the system rejects the refund request in the Approval In Progress status on reinstating the policy or individual membership. | Yes (Conditional) Note: This field is required while defining the settings for an automatic refund/write off preference. |
| | <ul style="list-style-type: none"> Void Status Reason for Refund Request on Reinstatement - Used when the status of the refund | |

Copying an Automatic Refund/Write Off Preference

Instead of creating an automatic refund/write off preference from scratch, you can create a new automatic refund/write off preference using an existing automatic refund/write off preference. This is possible through copying an automatic refund/write off preference. On copying an automatic refund/write off preference, the details including the attributes are copied to the new automatic refund/write off preference. You can then edit the details, if required.

Prerequisites

To copy an automatic refund/write off preference, you should have:

- Automatic refund/write off preference (whose copy you want to create) defined in the application
- Refund/write off request business objects defined in the application.
- Status reasons defined for the **C1-RefundReq** business object.
- Values defined for the **Field Mapping Preference for Individual Membership** and **Field Mapping Preference for Policy (Small Group)** option type in the **C1_REFWO** feature configuration.
- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup field.

Procedure

To copy an automatic refund/write off preference:

1. Search for an automatic refund/write off preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the automatic refund/write off preference whose copy you want to create.
3. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the automatic refund/write off preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Preference | Used to specify the automatic refund/write off preference. | Yes |
| Description | Used to specify the description for the automatic refund/write off preference. | Yes |
| Detailed Description | Used to specify additional information about the automatic refund/write off preference. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Status | Used to indicate the status of the automatic refund/write off preference. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Preference Category | Indicates the feature for which the preference is designed. The valid values is: <ul style="list-style-type: none"> Automatic Refund/Write Off | Not applicable |

- **Preference Settings** - Used to set the attributes in the automatic refund/write off preference.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|--|
| Attribute | Used to indicate the attribute which you want to set in the automatic refund/write off preference. The valid values are: <ul style="list-style-type: none"> • Cancel Status Reason for Write Off Request on Reinstatement - Used when the write off adjustment request is canceled on reinstating the policy or individual membership. • Error Code on Processing Refund/Write Off Request - Used when the system generates an error while creating a refund/write off request. • Instruction Cancel Reason on Account Balance Change - Used when the refund/write off instruction is canceled due to change in the account balance once the refund/write off request is created. • Instruction Cancel Reason on Reinstatement - Used when the refund/write off instruction is canceled on reinstating the policy or individual membership. • Instruction Cancel Reason on Rejecting Request - Used when the refund/write off request in the Approval In Progress status is rejected by the approver. • Refund Request Type - Used when the refund adjustment is created using the respective refund request type. • Refund Request Reject Reason on Reinstatement - Used when the system rejects the refund request in the Approval In Progress status on reinstating the policy or individual membership. | Yes (Conditional) Note: This field is required while defining the settings for an automatic refund/write off preference. |
| | <ul style="list-style-type: none"> • Void Status Reason for Refund Request on Reinstatement - Used when the status of the refund request in the Hold status is changed to Void on reinstating the policy or individual membership. | |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | |
|---|---|-------------------------------|------------------------|---|--|---|--|---|--|--|--|--|
| | <ul style="list-style-type: none"> • Write Off Request Type - Used when the refund adjustment is created using the respective write off request type. • Write Off Request Reject Reason on Reinstatement - Used when the system rejects the write off request in the Approval In Progress status on reinstating the policy or individual membership. | | | | | | | | | | | |

Search Refund/Write Off Instruction

The **Search Refund/Write off Instruction** zone allows you to search for a refund/write off instruction using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a refund or write off instruction using the policy or individual membership details. The valid values are: <ul style="list-style-type: none"> • Policy Details • Individual Membership Details | Yes |
| | Note: By default, the Policy Details option is selected. | |
| Policy ID | Used to search refund or write off instructions which are created using a particular policy. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Policy window appears. This field appears when the Policy Details option is selected from the Search By list. | |
| Account ID | Used to search refund or write off instructions which are created for particular account. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Membership ID | Used to search refund or write off instructions which are created for particular membership. | No |
| | Note: This field appears when the Individual Membership Details option is selected from the Search By list. | |
| Created From | Used to search refund or write off instructions which are created from a particular date onwards. | No |
| Status | Used to search refund or write off instructions with a particular status. The valid values are: <ul style="list-style-type: none"> • Canceled • Completed • Error • Invalid • Pending | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| | <ul style="list-style-type: none"> Pending Completion Valid | |
| Created Until | Used to search refund or write off instructions which are created till a particular date. | No |
| Action | Used to indicate whether the instructions are created for refund or write off. The valid values are: <ul style="list-style-type: none"> Refund Write Off | No |

Note: You must specify at least one search criterion while searching for a refund or write off instruction.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Policy Information | <p>Displays information about the policy for which the refund or write off instruction is created.</p> <p>Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy. This column appears when you select the Policy Details option from the Search By list.</p> |
| Membership Information | <p>Displays information about the membership for which the refund or write off instruction is created.</p> <p>Note: It has a link. On clicking the link, the Membership screen appears where you can view the details of the individual membership. This column appears when you select the Individual Membership Details option from the Search By list.</p> |
| Account Information | <p>Displays the account for which the refund or write off instruction is created. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> |
| Creation Date Time | Displays the date and time when the refund or write off instruction is created. |
| Status | <p>Indicates the status of the refund or write off instruction. The valid values are:</p> <ul style="list-style-type: none"> Canceled Completed |

| Column Name | Column Description |
|--------------------------------------|--|
| | <ul style="list-style-type: none"> • Error • Invalid • Pending • Pending Completion • Valid |
| Reason | Displays the reason for which the refund or write off instruction is created in the system. |
| Action | Indicates whether the instruction is created for refund or write off. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off |
| Request Creation Date | Displays the date when the request is created. |
| Refund/Write Off Request Information | Displays information about the refund or write off request. Note: It has a link. On clicking the link, the Refund Request or Write Off Request screen appears depending on whether the request is for refund or write off. |

Searching for a Refund/Write off Instruction

Prerequisites

To search for a refund/write off instruction, you should have:

- Refund or Write Off Instruction defined in the application

Procedure

To search for a refund/write off instruction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write off Instruction**.
The **Refund/Write off Instruction** screen appears.
3. Enter the search criteria in the **Refund/Write off Instruction** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of refund or write off instructions that meets the search criteria appears in the **Search Results** section.

Chapter 54

Delinquency Management

Topics:

- [Individual Delinquency](#)

Oracle Revenue Management and Billing allows you to manage delinquency for the individual health care business. For more information, see [Individual Delinquency](#) on page 3796

Individual Delinquency

Oracle Revenue Management and Billing provides the capability to create an automatic delinquency process for each account belonging to the individual health care customers based on their respective unpaid amount of the overdue bills. The individual health care customers can easily keep a track of their delinquent accounts by using the delinquency process. The delinquency process is capable of performing the following actions:

- Provides account level delinquency where all the overdue bills of an account are added to a delinquency process for collection.
- Schedules the following types of events at prescribed intervals for the delinquent account:
 - Creating customer contacts
 - Creating To Do notifications
 - Calculating the termination date
 - Triggering the termination of individual customers
- Skips certain scheduled events or actions for the delinquent account
- Cancels the delinquency process based on specific criteria. Refer to the **Cancel Criteria** system event in the [Associating an Algorithm with a Delinquency Process Type](#) on page 3851.
- Holds the delinquency process in case of the following contingencies:
 - A disaster (pandemic or hurricanes), or a genuine request from the customer
 - If the Promise To Pay or Payment Agreement or Payment Arrangement is active for the account
 - If a Group person is declared bankrupt

Refer to the **Hold Delinquency Process Criteria** system event in the [Associating an Algorithm with a Delinquency Process Type](#) on page 3851.

- Generates an alert on delinquency dashboard

For more information on how to setup the delinquency process, see [Prerequisites](#) on page 3796

Prerequisites

To setup the individual delinquency feature, you need to do the following:

- Define the required business rules using the following business rule categories:
 - Delinquency Grace Period Business Rule
 - Delinquency Event Attributes Business Rule
 - Delinquency Termination Date Rule Business Rule
 - Delinquency Miscellaneous Options Business Rule

Note: You can define the above business rules through the **Business Rules** screen.

- Define the **Membership Terminate Request (C1-MemberTermRequest)** business object which is used to setup the outbound message type for creating the membership termination request in the XML format.

Note: The outbound message type is configured in the **Membership Termination Outbound Message Trigger (C1-MTOMT)** batch which creates an outbound message whenever the membership termination process request is initiated.

- Define an algorithm of the **C1-EVALDPAPP** algorithm type to evaluate the approval configuration on the delinquency process type when a manual intervention happens in the delinquency process.

- Define the required collection methods, such as, **Self-Control Delinquency (SDEL)** and **Parental Delinquency (DELP)** in the **COLL_METH_FLG** lookup field.

Note: You must define a collection class for an account and a person with the respective collection method through the **Collection Class** screen.

The following table describes how you can setup the system for an account or a person based on the respective collection method:

| Scenario | System Behavior |
|---|--|
| A collection class is defined for an Account entity where the collection method is set to Self-Control Delinquency . | <ul style="list-style-type: none"> The account entity has its own delinquency process. Bills belonging to the respective account are skipped when the person of the respective account is evaluated for delinquency. |
| A collection class is defined for an Account entity where the collection method is set to Parental Delinquency . | <ul style="list-style-type: none"> The account simply follows the collection class configuration defined for the main person of the account. Bills belonging to the respective account are considered only when a person or any parent within the person's hierarchy is evaluated for delinquency. |
| A collection class is defined for a Person entity where the collection method is set to Self-Control Delinquency . | <ul style="list-style-type: none"> The person entity has its own delinquency process. Bills belonging to the respective person's account or any account falling under its hierarchy are not considered when any of the parent persons within the hierarchy is evaluated for delinquency. <p>Note: When you skip a person from its parent person's delinquency process, the system always skips that particular person along with the hierarchy that resides under that person.</p> |
| A collection class is defined for a Person entity where the collection method is set to Parental Delinquency . | <ul style="list-style-type: none"> The person simply follows the collection class configuration defined for its parent person. The system also checks the following conditions: <ul style="list-style-type: none"> If a parent person is not defined: <ul style="list-style-type: none"> The person entity has its own delinquency process. Bills belonging to the respective person's account or any account falling under its hierarchy are not considered when any of the parent persons within the hierarchy is evaluated for delinquency. If a parent person is defined: <ul style="list-style-type: none"> The person and hierarchy falling under the person is considered under that parent person's delinquency management. |

- Define the following fields in the XML schema of the **Health Care Inbound Message (C1-HCInboundMessage)** business object:
 - Collection Class
 - Postpone Credit Review Until
 - Drag Days

Note: You can specify the values for the above fields while creating the health care inbound message.

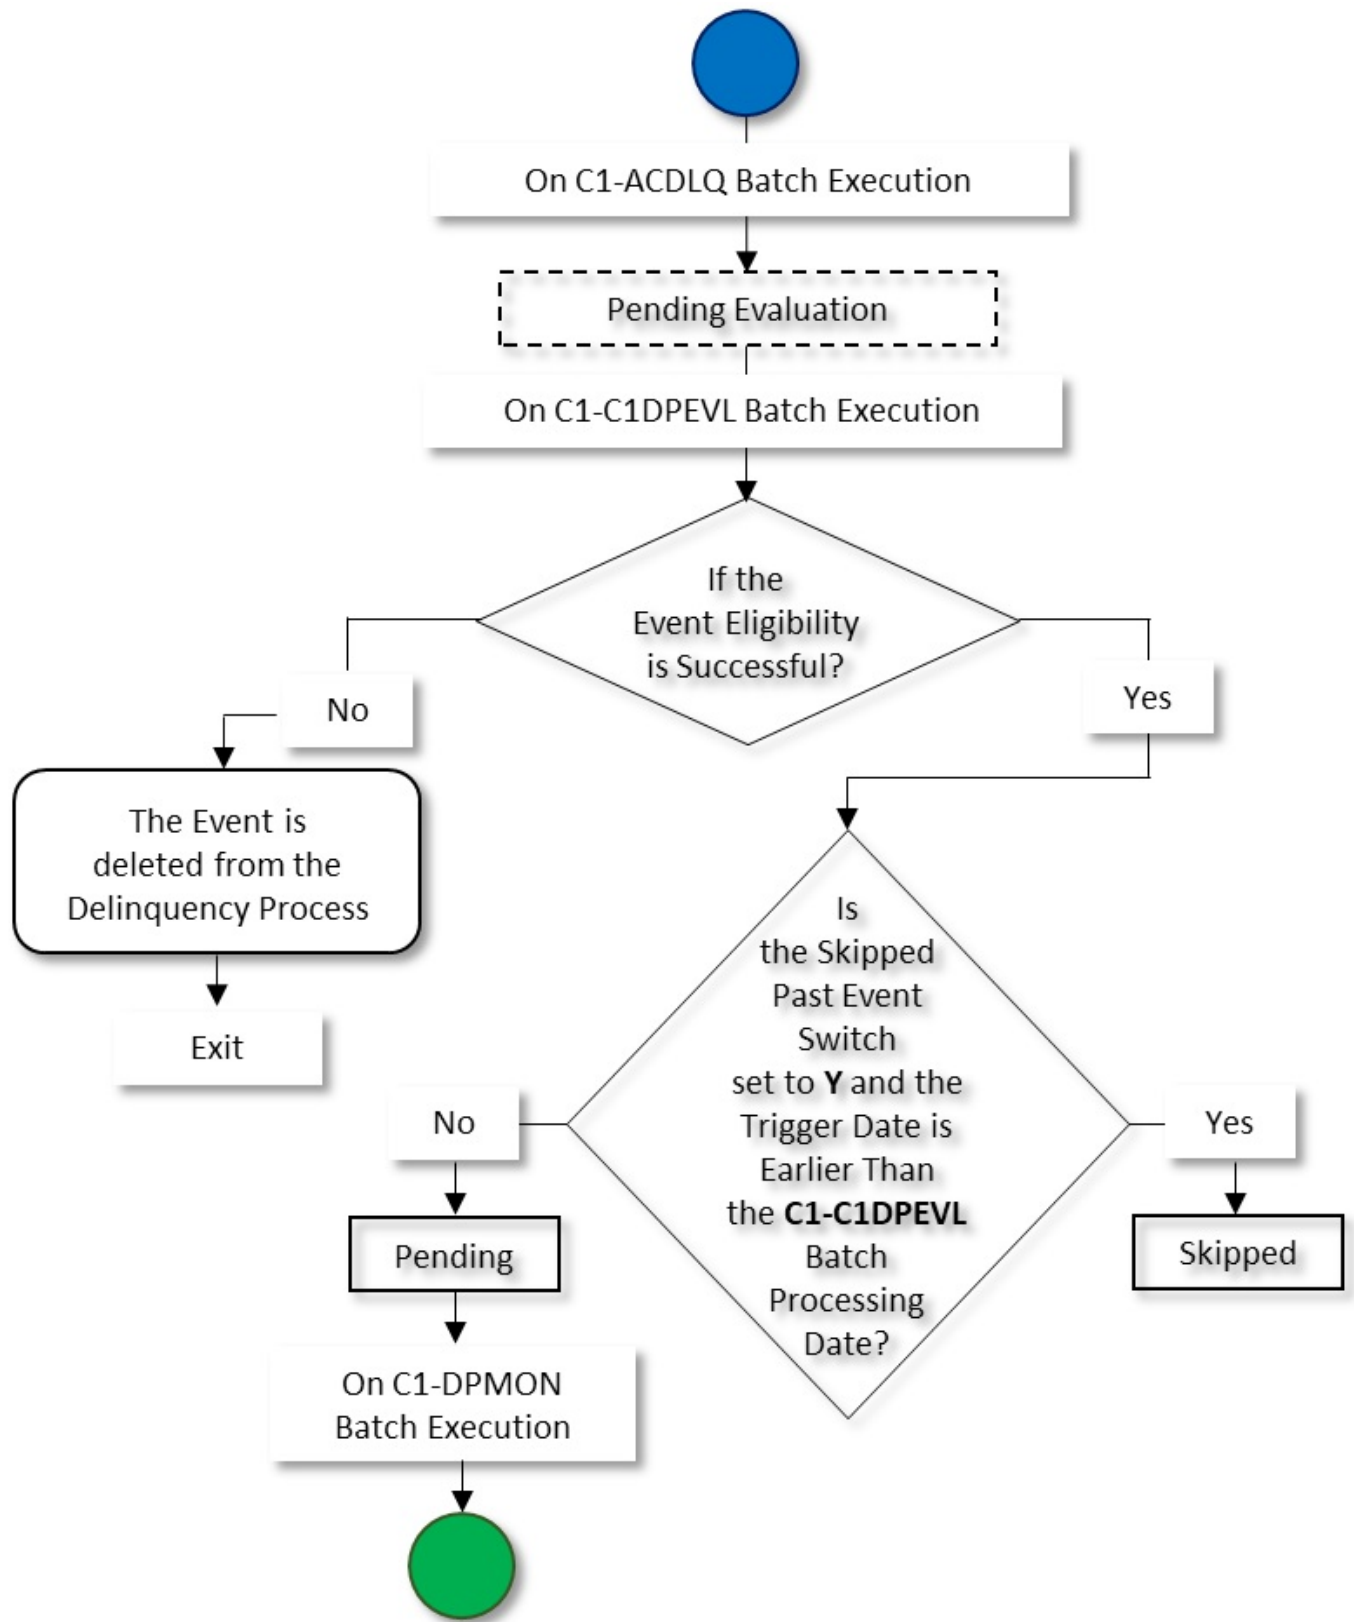

- Configure the delinquency control along with its respective algorithms in the system.
- Configure the delinquency event type along with its respective algorithms in the system.
- Configure the delinquency process type along with its respective algorithms in the system.
- Define the required field mapping preference categories in the system
 - Routing Method - Contact Method Mapping
 - Delinquency Process Type
 - Delinquency Process
- Define values for the **Delinquency Process Field Mapping**, **Policy Characteristic Type for Customer Contact**, and **Routing Method – Contact Method Mapping** option types in the **DELINPROC** feature configuration.

Delinquency Event (Automated Process) Status Transition

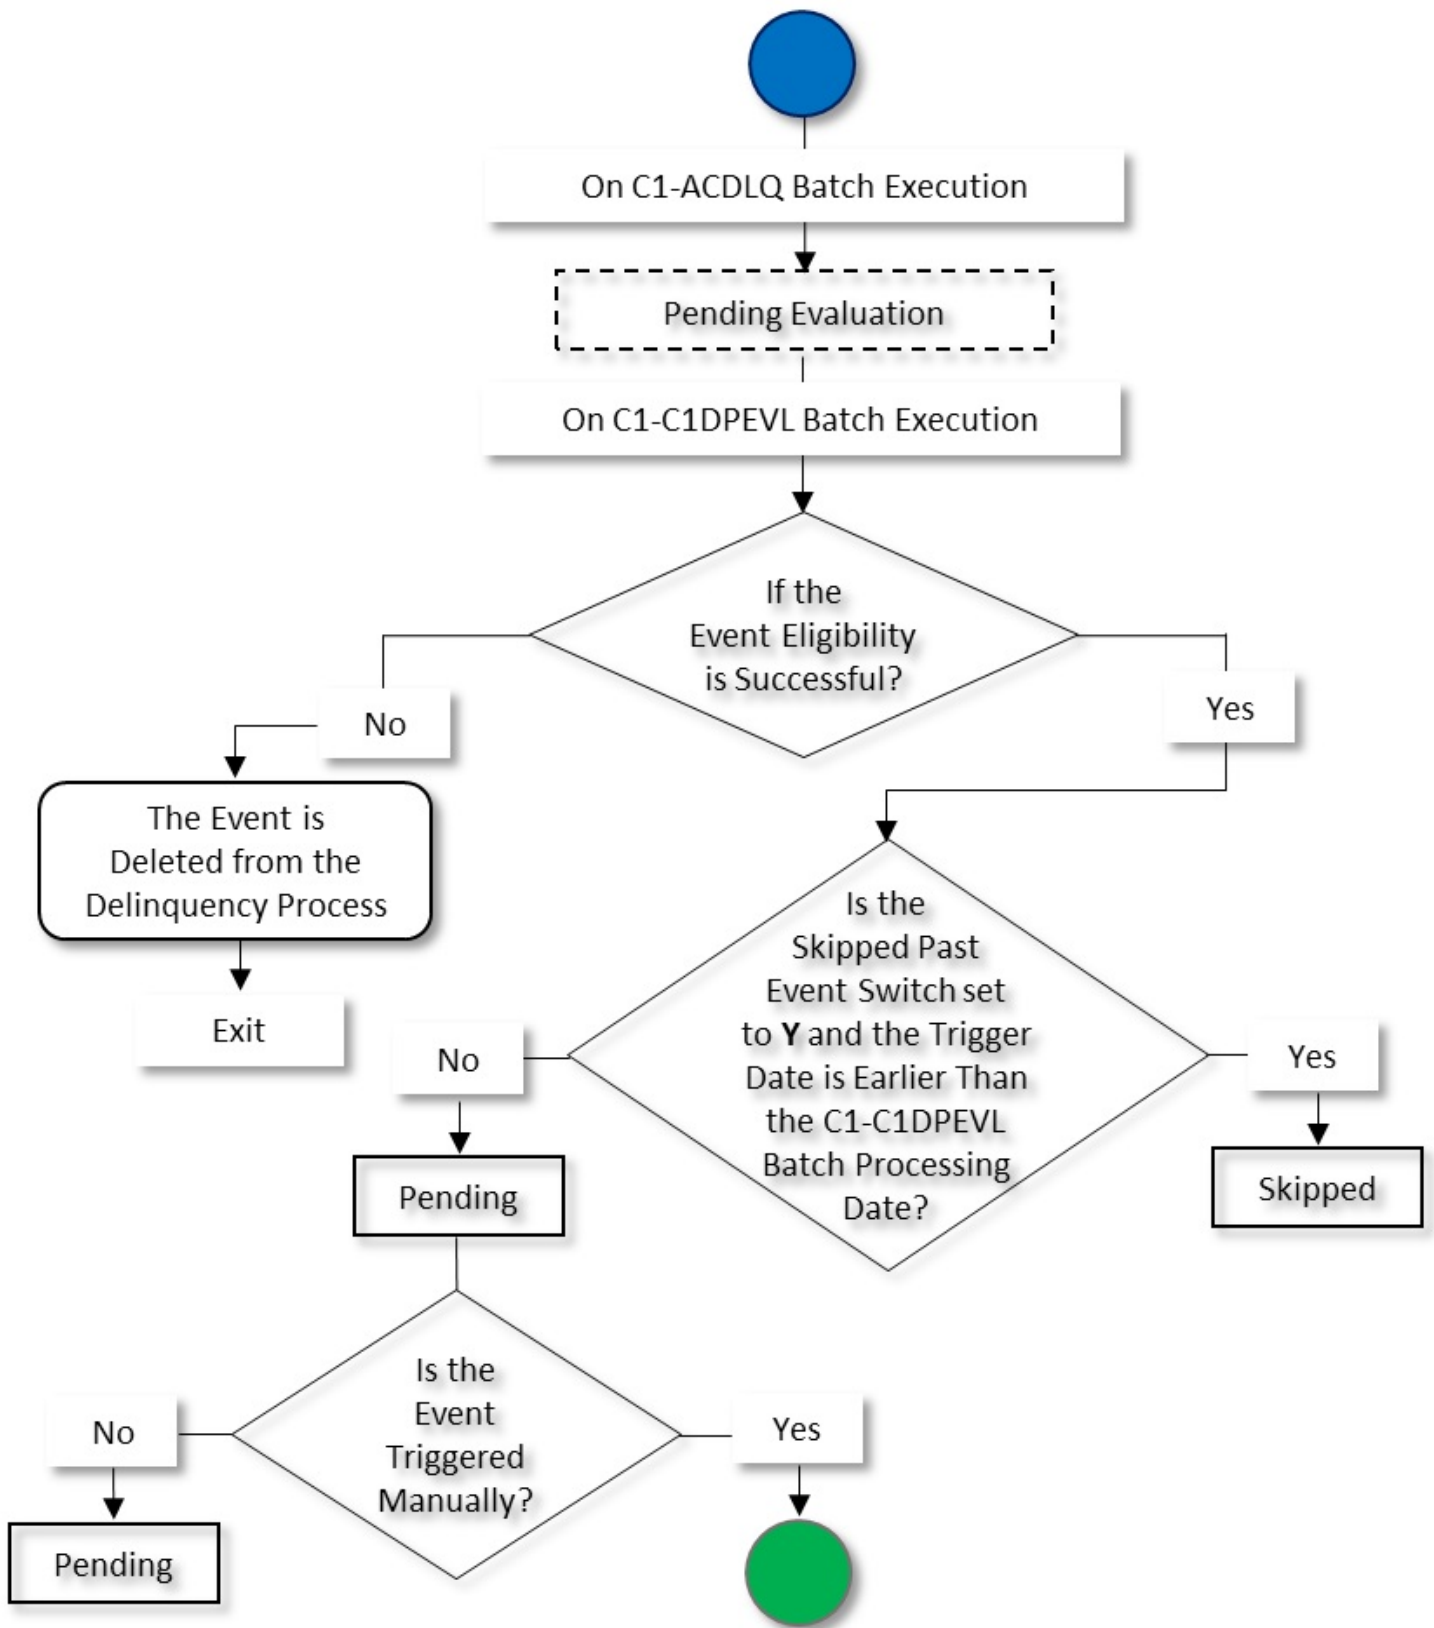

The following figure graphically indicates how a delinquency event moves from one status to another when the delinquency event trigger mode is configured as automatic:

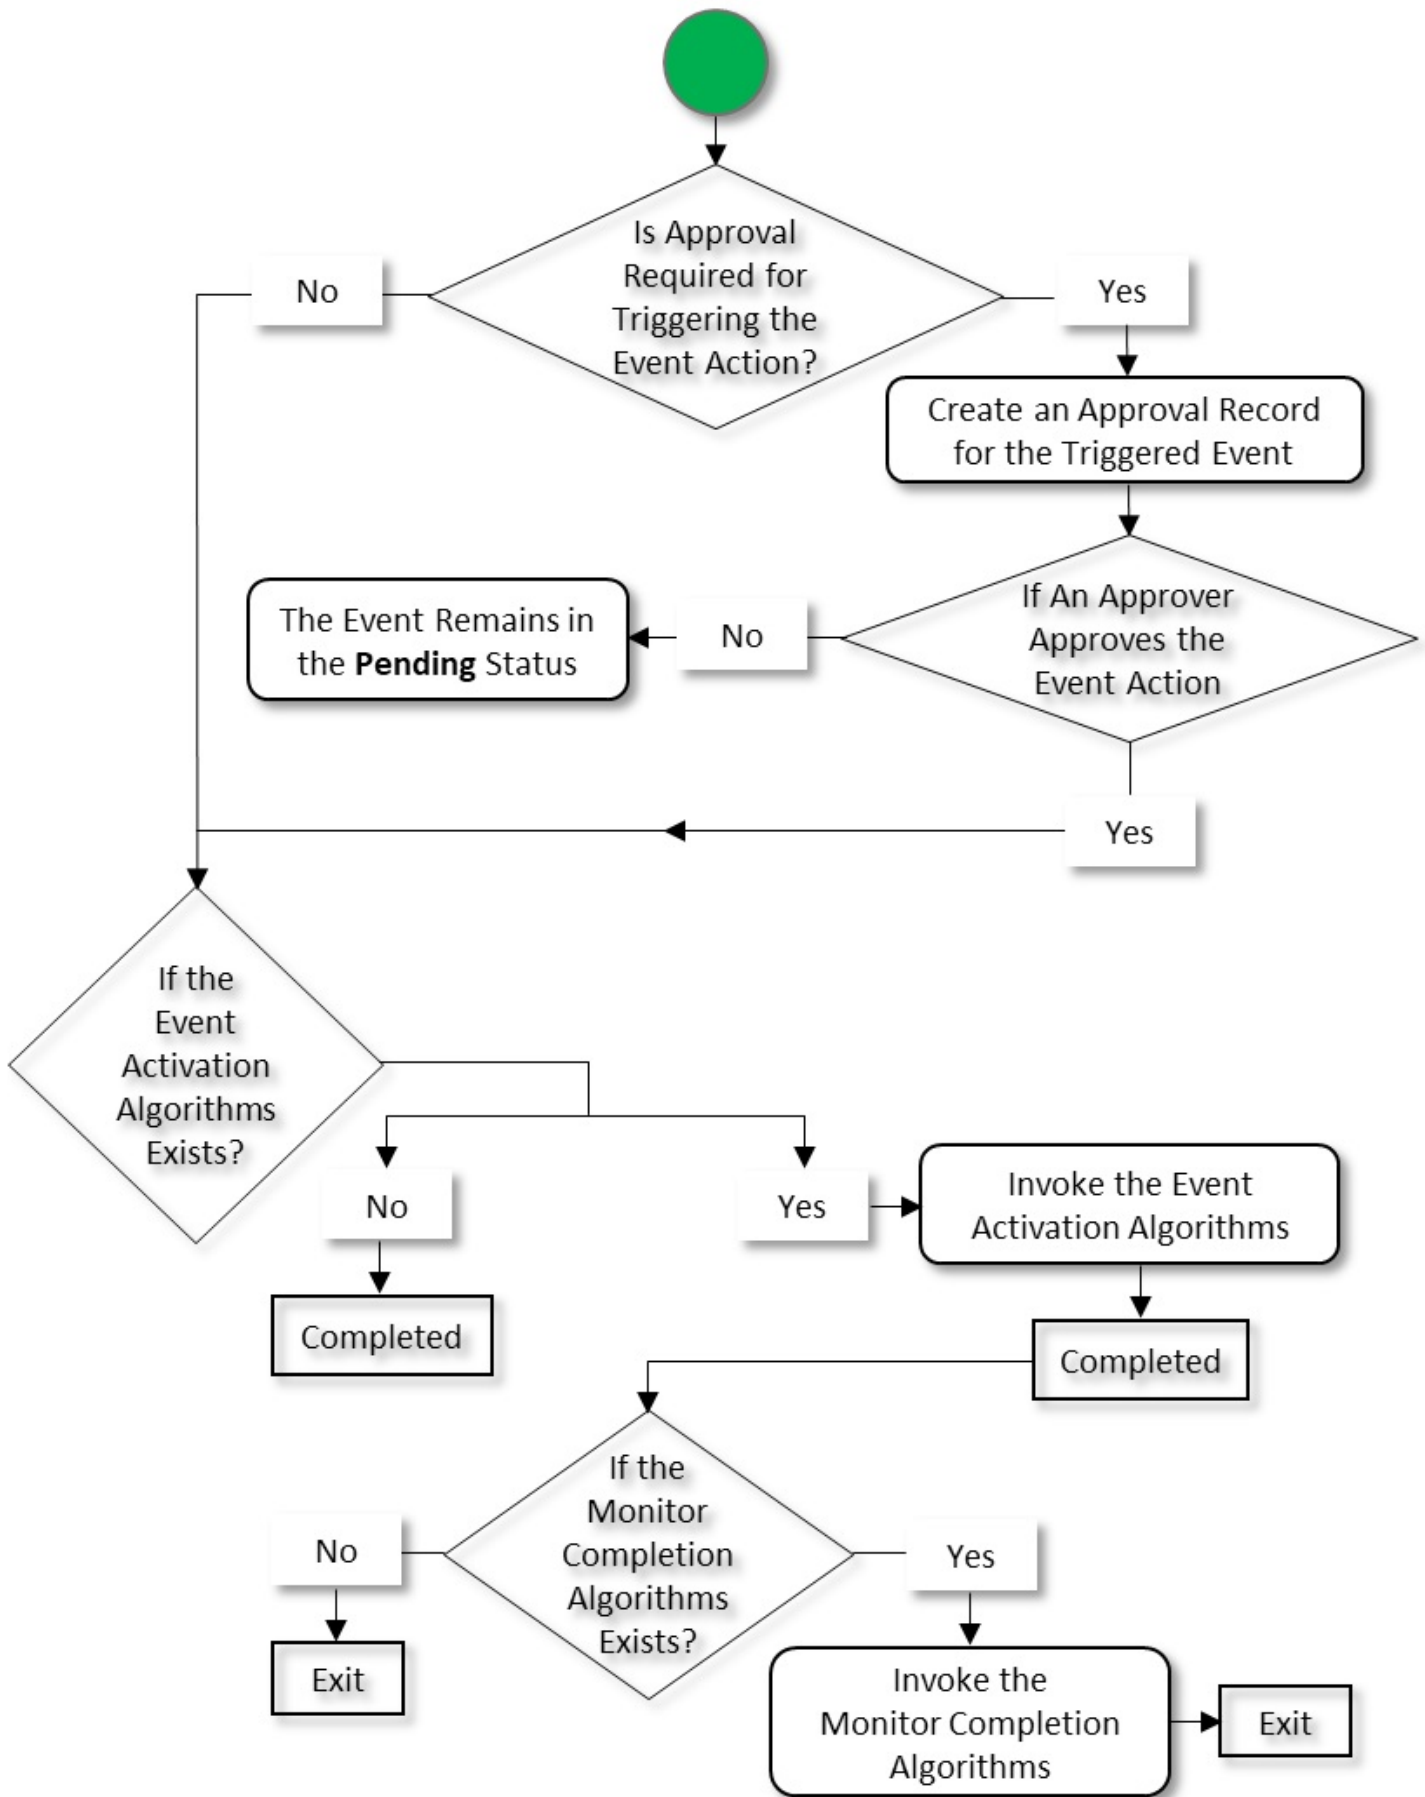

Delinquency Event (Manual Process) Status Transition

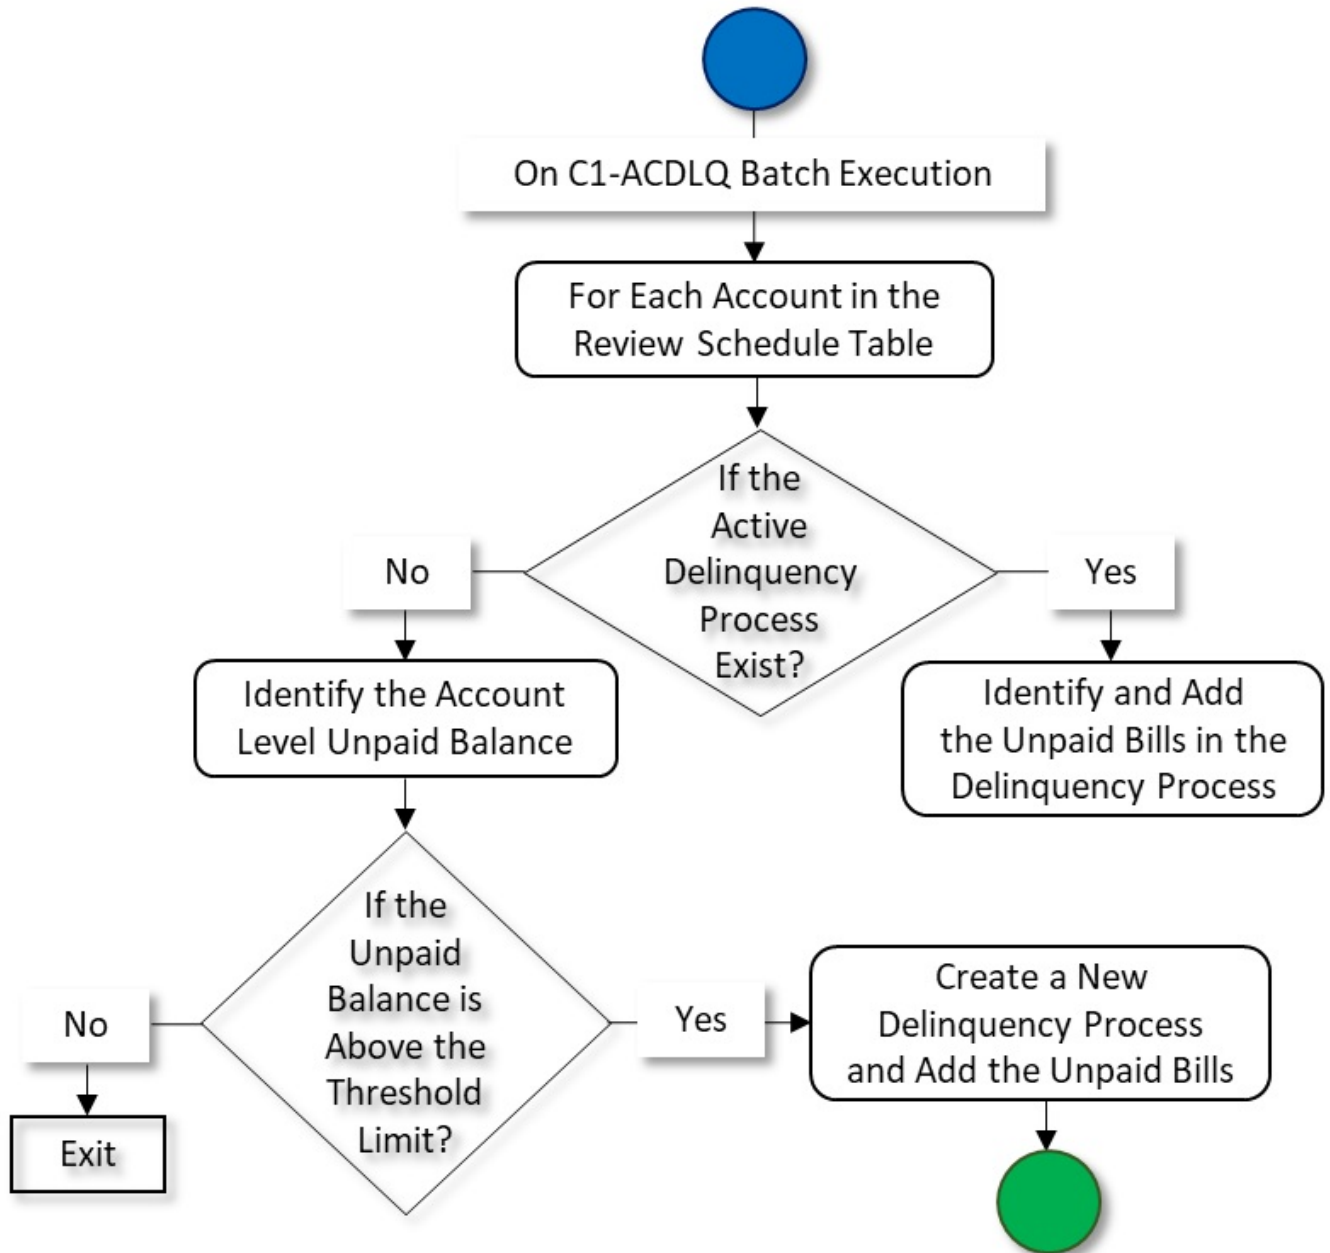

The following figure graphically indicates how a delinquency event moves from one status to another when the delinquency event trigger mode is configured as manual:

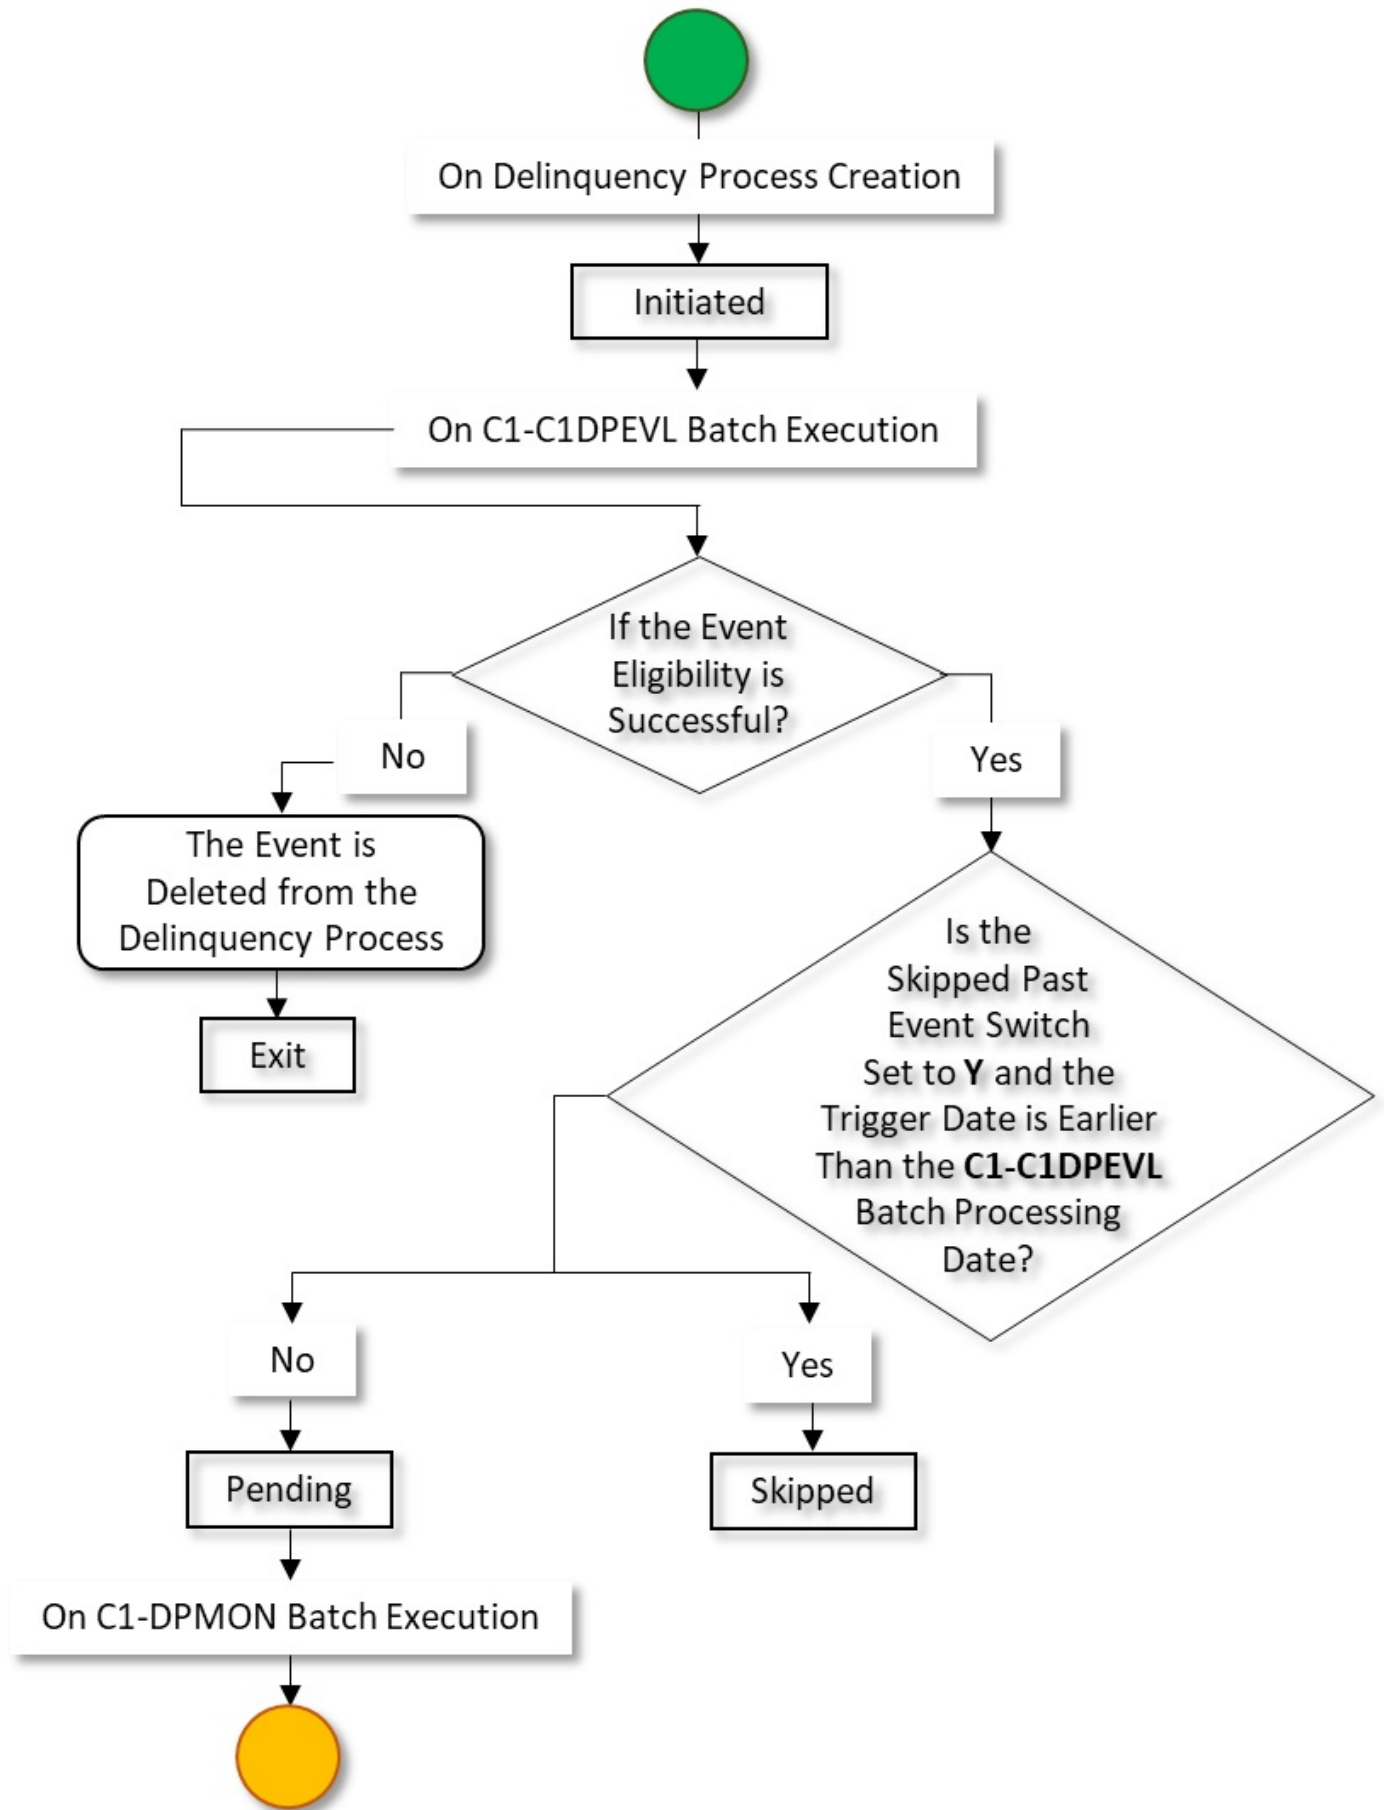

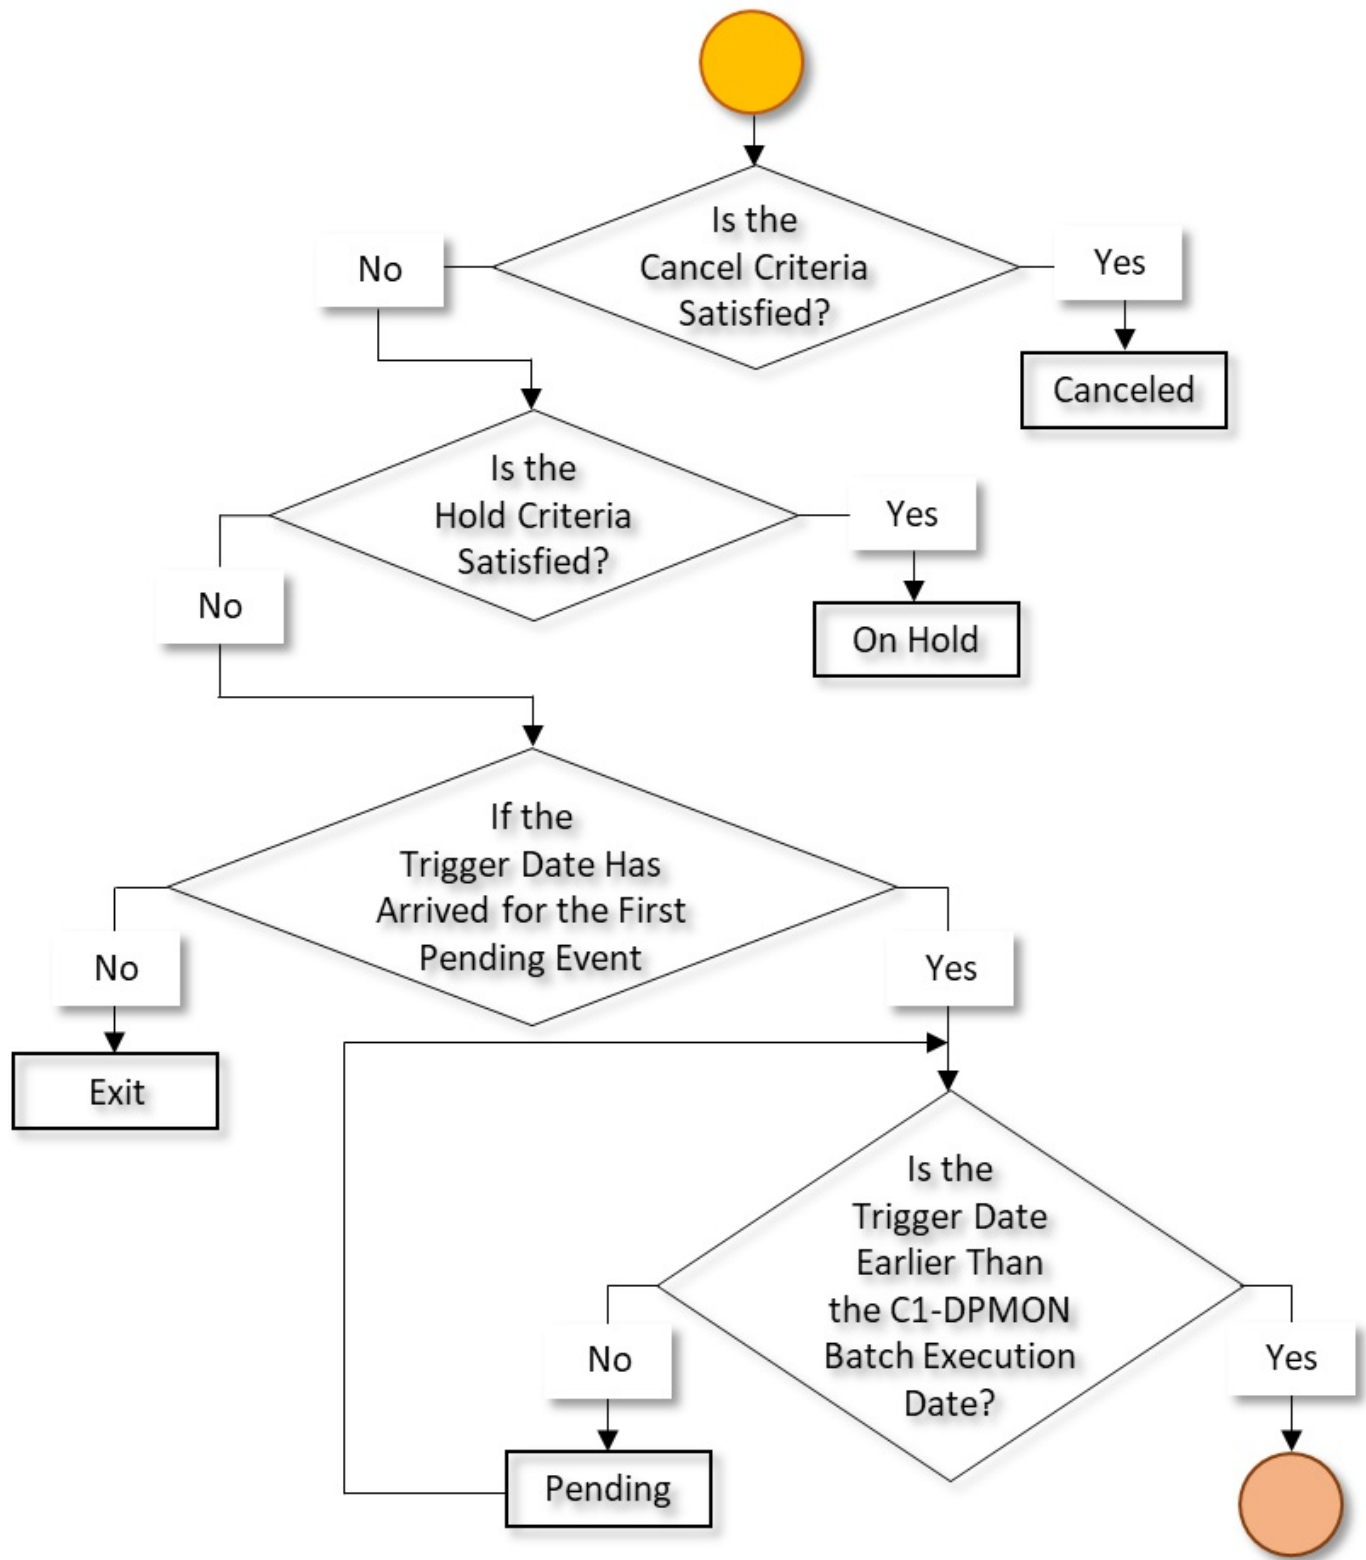

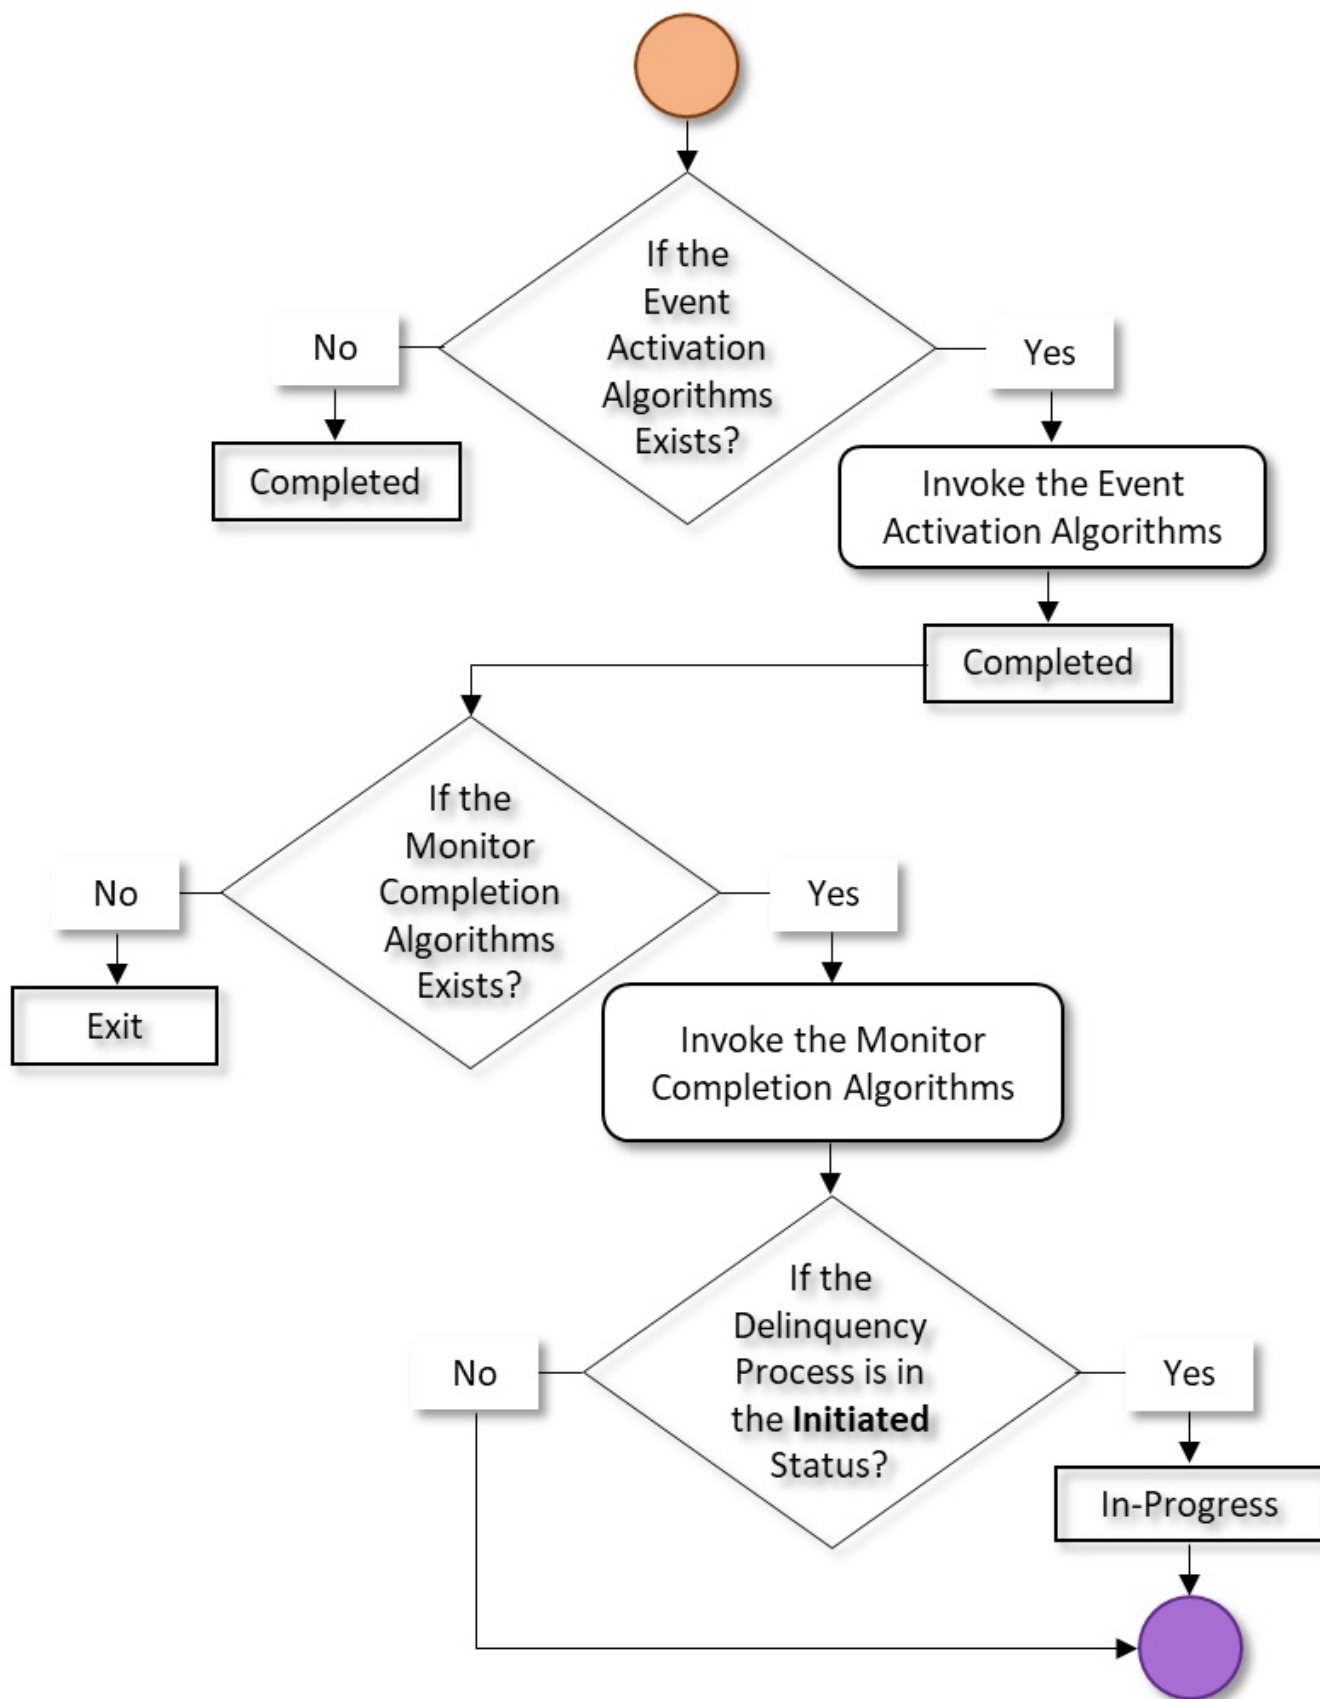

Delinquency Process Status Transition

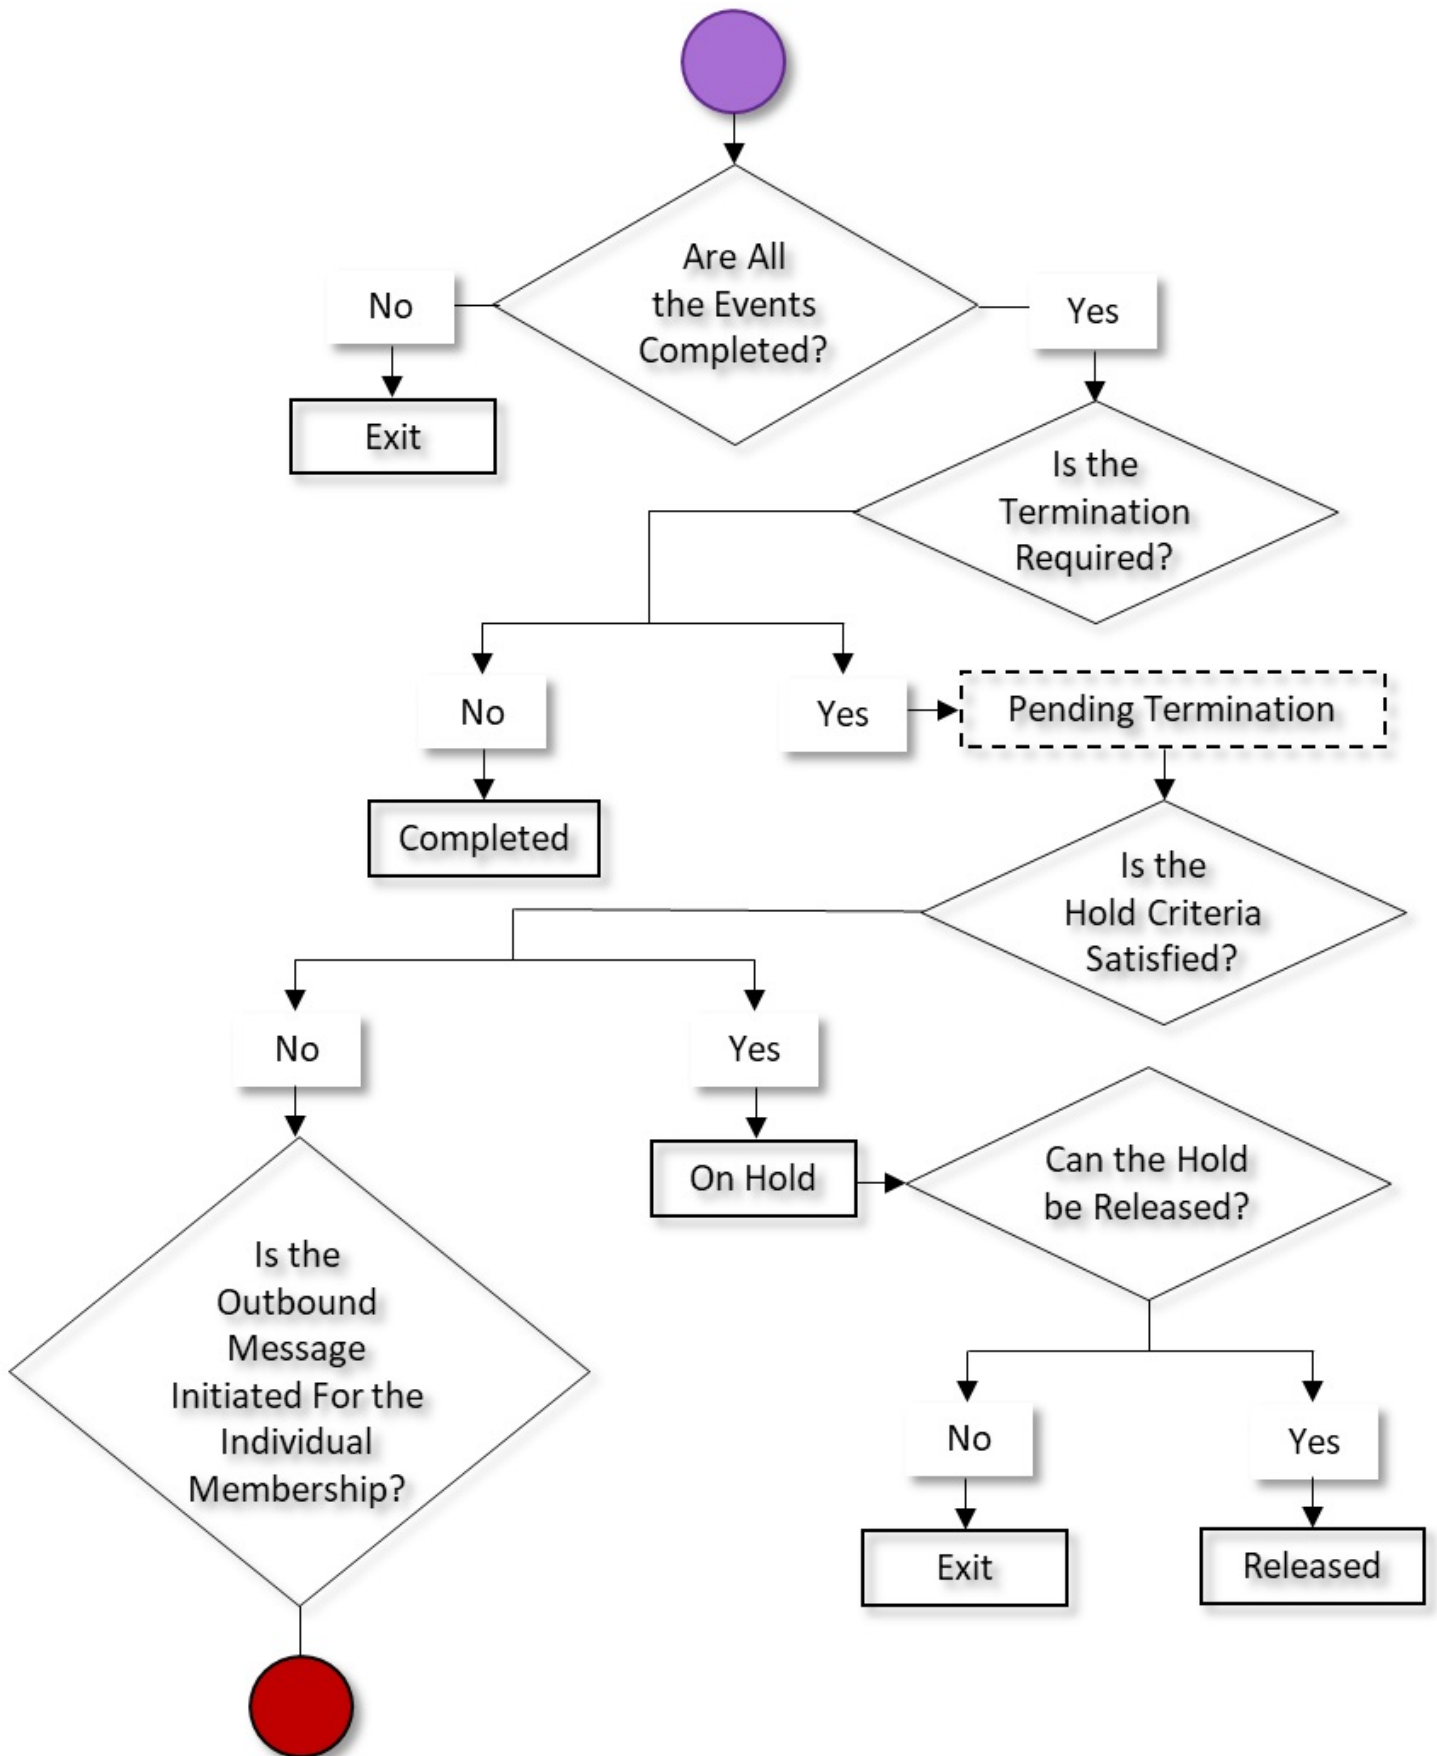

The following figure graphically indicates how a delinquency process moves from one status to another in its lifecycle:

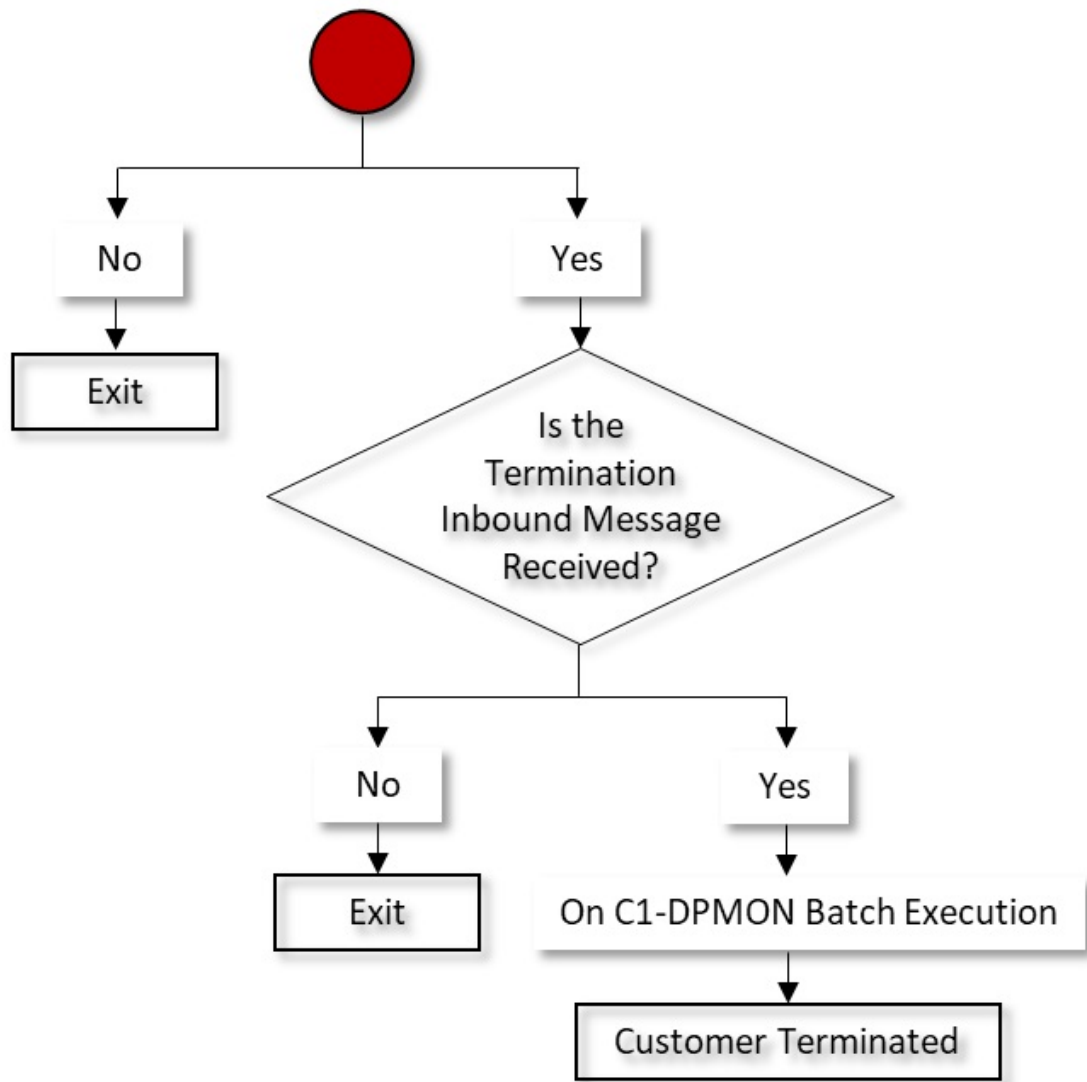

Algorithms Used in Delinquency Event Type

The following table lists the algorithms which are used in the delinquency event type:

| System Event | Algorithm | Algorithm Type | Description |
|------------------|--------------|----------------|--|
| Event Activation | C1-DLQCRTODO | C1-DLQCRTODO | Refer to C1-DLQCRTODO on page 3809 |
| Event Activation | C1-DETERMDT | C1-DETERMDT | Refer to C1-DETERMDT on page 3809 |
| Event Activation | C1-DLQSENDCC | C1-DLQSENDCC | Refer to C1-DLQSENDCC on page 3810 |

| System Event | Algorithm | Algorithm Type | Description |
|-------------------------|--------------|----------------|--|
| Monitor Completed Event | C1-RCLTRGDMD | C1-RCLTRGDMD | Refer to C1-RCLTRGDMD on page 3810 |
| Monitor Completed Event | C1-TRNTERTRG | C1-TRNTERTRG | Refer to C1-TRNTERTRG on page 3810 |

C1-DLQCRTODO

This algorithm creates a To Do entry for the main customer of the account when the delinquency is at **Account** level. You must specify a To Do Type and To Do Role as soft parameters while creating this algorithm. This algorithm creates a log entry for the delinquency process and stamps the To Do ID against the respective log entry.

Note: The **C1-DLQCRTODO** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DLQCRTODO** algorithm type to the **Event Activation** system event.

C1-DETERMDT

This algorithm calculates the termination effective date based on the termination date rule priority configuration set on the delinquency process type, and stores the termination effective date rule and termination date on the delinquency process for the subsequent processes, such as, letter extract, termination request event, etc.

The different termination date rules supported by this algorithm are:

- **X Days After Termination Request Event** - The termination effective date is the Trigger Date of the Termination Request Event + (X) No. of Days
- **X Days After Grace End Date** - The termination effective date is the Grace End Date + (X) No. of Days.

Note: The X Days After Grace End Date is generally used for medium and small groups.

- **Latest Billed Coverage End Date** - The termination effective date is the (X) No. of Days after the Maximum Coverage End Date that falls on or prior to the Grace End Date
- **Latest Due Coverage End Date** - The termination effective date is the (X) No. of Days after the end of the coverage prior to the latest due date from the invoices on the delinquency process.
- **X Days After Paid Through Date** - The termination effective date is the Paid Through Date + (X) No. of Days.

Note: The X Days After Paid Through Date is commonly used for the Fully-Insured Plain Individual Plans.

- **X Months After Paid Through Date** - The termination effective date is the End of Month (Paid Through Date + (X) No. of Months).

Note: The X Months After Paid Through Date is commonly used for Fully-Insured Plain Individual Plans.

- **Month End of Termination Request Event** - The termination effective date is the End of the Month of (Trigger Date of the Termination Request + Member Notification Days) + 1

Note: The Month End of Termination Request Event is generally used for medicare and sometimes for group where the member notice is sent.

- **Month End of Grace Period Start** - The termination effective date is the last day of the Grace Period Start Month.
- **Month End of Termination Letter Creation** - The termination effective date is the Direct Billed Medicare Termination Date as the End of Month of the Termination Letter Creation Date.

Note: The **C1-DETTERRMDT** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DETTERRMDT** algorithm type to the **Event Activation** system event.

C1-DLQSENDCC

This algorithm is created for those events that are required to issue letters. It has the following mode of operation:

- **Account Level Delinquency Process** - This algorithm creates customer contacts for all the persons associated with an account which has been configured to receive the notification. If you provide specific account relationship types as the soft parameters, the algorithm creates only the customer contact for an account person for the given relationship type(s). If you do not provide specific account relationship types, the algorithm creates customer contacts regardless of the relationship type(s).

You must specify the following parameters while creating this algorithm:

- **Customer Contact Type** - Used to specify the customer contact type used to create the customer contact.
- **Customer Contact Class** - Used to specify the customer contact class (of the contact type) used to create the customer contact.
- **Default Contact Method** - Used to specify the default (preferred) contact method when the field mapping is not available for the bill route type.
- **Account Characteristic Type** - Used to specify the characteristic to store the account ID on the customer contact. The **Account Characteristic Type** is used by subsequent letter extract algorithm to retrieve the account override address wherever it is applicable.
- **Membership Characteristic Type** - Used to specify the characteristic to store the membership ID on the customer contact.

Note:

For every customer contact, the algorithm adds a log entry for the delinquency process. The delinquency process ID is also stamped on the customer contact as a characteristic.

The **C1-DLQSENDCC** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DLQSENDCC** algorithm type to the **Event Activation** system event created for the delinquency event type.

C1-RCLTRGDMD

This algorithm retrieves the customer contact created for the event and based on the document mail date recalculates the trigger date of the pending events in the delinquency process. This is to be used on those event types which have an activation algorithm that creates a customer contact and if recalculation is needed for the trigger date of the pending events based on the difference in actual mail date and the customer contact's creation date. You need to specify the following parameter while creating this algorithm:

- **Document Composition Date Characteristic Type** - Used to specify the document composition date type characteristic type which is stamped on the customer contact.

Note: The **C1-RCLTRGDMD** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-RCLTRGDMD** algorithm type to the **Monitor Event Completed** system event created for the delinquency event type.

C1-TRNTERTRG

This algorithm evaluates the termination trigger configurations and decides if the delinquency process can be transitioned to the **Pending Termination** status. This usually happens either immediately or at the end of the month, of triggering this event or X days after triggering this event.

Note: The **C1-TRNTERTRG** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-TRNTERTRG** algorithm type to the **Monitor Event Completed** system event created for the delinquency event type.

Algorithms Used in Delinquency Process Type

The following table lists the algorithms which are used in the delinquency process type:

| System Event | Algorithm | Algorithm Type | Description |
|--|--------------|----------------|--|
| Calculate Unpaid and Original Amounts | C1-CUAOAB | C1-CUAOAB | Refer to C1-CUAOAB on page 3812 |
| Cancel Criteria | C1-CANDELPRC | C1-CANDELPRC | Refer to C1-CANDELPRC on page 3812 |
| Cancel Criteria | C1-CANDPAPTC | C1-CANDPAPTC | Refer to C1-CANDPAPTC on page 3813 |
| Membership Derivation | C1-MEMBDLQ | C1-MEMBDLQ | Refer to C1-MEMBDLQ on page 3813 |
| Hold Delinquency Process Criteria | C1-HLDDELPRC | C1-HLDDELPRC | Refer to C1-HLDDELPRC on page 3814 |
| Release Delinquency Process Criteria | C1-RELDELPRC | C1-RELDELPRC | Refer to C1-RELDELPRC on page 3814 |
| Grace Period Derivation | C1-DERGRBR | C1-DERGRBR | Refer to C1-DERGRBR on page 3814 |
| Send Member Level Notification Option Derivation | C1-DERMLNBR | C1-DERMLNBR | Refer to C1-DERMLNBR on page 3814 |
| Termination Date Rule Derivation | C1-DERTRBR | C1-DERTRBR | Refer to C1-DERTRBR on page 3815 |
| Wait Days Derivation | C1-DERWDBR | C1-DERWDBR | Refer to C1-DERWDBR on page 3815 |
| Termination and Reinstatement Configuration Derivation | C1-DERTROBR | C1-DERTROBR | Refer to C1-DERTROBR on page 3815 |
| Membership Notification | C1-DERMNDAYS | C1-DERMNDAYS | Refer to C1-DERMNDAYS on page 3815 |

| System Event | Algorithm | Algorithm Type | Description |
|--|-------------|----------------|---|
| Days Derivation | | | |
| Trigger Date Recalculation Option Derivation | C1-DERRTDBR | C1-DERRTDBR | Refer to C1-DERRTDBR on page 3815 |

C1-CUAOAB

This algorithm calculates the unpaid and original amount owed for a bill. It calls the **Determine Open-Item Bill Amounts** plug-in spot on installation options for the bill in question. This algorithm should only be plugged into delinquency process types that are collecting on bills.

This algorithm has the following input parameter:

- Delinquency Process ID - DelinquencyProcess_Id
- Delinquency Process Related Object - DelinquencyProcessRelatedObject

This algorithm has the following output parameter:

- Unpaid Amount
- Original Amount
- Indeterminate Switch

Note: The **C1-CUAOAB** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-CUAOAB** algorithm type to the **Calculate Unpaid and Original Amount** system event defined for the delinquency process type.

C1-CANDELPRC

This Cancel Criteria algorithm will return that the delinquency process for an account is OK to be cancelled if any of the below criteria is satisfied:

- The bill(s) is(are) paid and in turn the customer's or account's unpaid balance within the tolerance limit, or
- Collection class of the account or customer changes
- For Individual customer Delinquency, if voluntary termination is received for the memberships with a termination date on or before the calculated termination date
- For Individual customer Delinquency, if voluntary cancellation is received for the memberships.

It has the below parameters:

- Tolerance Percentage. Required. This holds the percentage value (unpaid amount with respect to original amount) for the payment tolerance limit.
- Tolerance Amount. Required. This holds the dollar value for the payment tolerance limit.
- Tolerance Amount and Percentage Required (Y/ N). Required. If set to Y, both Tolerance Percentage and Tolerance Amount conditions are enforced. If set to N, either one can be enforced.
- Include On Account Payments In Threshold Evaluation - Y/N. Optional. This parameter determines if On Account payments need to be considered when evaluating for unpaid thresholds.
- On Account Payments Contract Types. Optional. Provide up to 20 comma separated contract type codes. Required if Include On Account Payments In Threshold Evaluation = Y

- Use Current Revenue Period Billed For Latest Overdue Due Date In Threshold Evaluation - Y/N. Optional. This parameter determines if the total billed for the latest overdue due date is used when evaluating for unpaid thresholds.
- Which Date Determines Age ('D' - Due Date or 'B' - Bill Date). This parameter controls if a bill's age is computed using its due date or its bill date (bill date is typically the completion date). Required if Include Use Current Revenue Period Billed For Latest Overdue Due Date In Threshold Evaluation - Y/N = Y
- Only Process Bills with an Age >= This Value. Optional. A bill must be >= this many days old to be processed. It is used to distinguish aged bills from credit bills placed on the delinquency process. Required if Include Use Current Revenue Period Billed For Latest Overdue Due Date In Threshold Evaluation - Y/N = Y
- Delinquency Process Cancel Reason for Unpaid Amount Reduction. Optional. Value must be a valid Business Object Cancel Reason for Delinquency Process. This parameter holds the cancel reason for canceling the delinquency process due to the unpaid amount or percentage falling within the threshold.
- Delinquency Process Cancel Reason for Collection Class Change. Optional. Value must be a valid Business Object Cancel Reason for Delinquency Process. This parameter holds the cancel reason for canceling the delinquency process due to a change in the collection class of the person or account.
- Evaluate Customer Status when all Events are Completed. Required. (Y/N). This parameter determines whether to evaluate the customer status for termination or cancellation when all the events of the Delinquency Process are in **Completed** status.

Note:

This algorithm is invoked when you execute the **Delinquency Monitor (C1-DPMON)** batch.

The **C1-CANDELPRC** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-CANDELPRC** algorithm type to the **Cancel Criteria** system event defined for the delinquency process type.

C1-CANDPAPTC

This Cancel Criteria algorithm is to be used for Fully Insured Individual delinquency processes. It will return that the Delinquency Process for the Account of the Individual is OK to be cancelled if the individual is effectuated (that is, the PTD is non-blank on the account) and either of the below conditions are satisfied:

- If the delinquency process is for an individual with APTC benefit and the earliest unpaid coverage period, which started the delinquency, no longer has APTC benefit, or
- If the delinquency process is for an individual without APTC benefit and the earliest unpaid coverage period, which started the delinquency, now has APTC benefit.

This algorithm contains the following soft parameters:

- Delinquency Process Cancel Reason For APTC Benefit Update - This is a valid Delinquency Process cancel status reason updated on the Delinquency Process record for APTC benefit update.
- Delinquency Process Type Field Mapping - Individual - This is Field Mapping code for Delinquency process Type for Individual customer.

Note:

This algorithm determines the cancellation of a delinquency process for a customer or an account when the total number of paid bills and unpaid bill balance is within the tolerance limit, or when the customer class of an account or customer is changed. This algorithm is invoked when you execute the **Delinquency Monitor (C1-DPMON)** batch.

The **C1-CANDPAPTC** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-CANDPAPTC** algorithm type to the **Cancel Criteria** system event defined for the delinquency process type.

C1-MEMBDLQ

This algorithm derives the list of memberships related to the given account for which the delinquency process is created.

Note: The **C1-MEMBDLQ** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-MEMBDLQ** algorithm type to the **Memberships Derivation** system event defined for the delinquency process type.

C1-HLDELPRC

This hold criteria evaluation algorithm will be attached on the Delinquency Process Type. The algorithm will return a flag to indicate if the Delinquency Process for an Account is to be put on hold:

- If there is a postpone credit review date stamped on the account, or
- There is an active Promise To Pay on account level, or
- Payment Agreement available for the account

Note:

This algorithm is invoked when you execute the **Delinquency Monitor (C1-DPMON)** batch.

The **C1-HLDELPRC** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-HLDELPRC** algorithm type to the **Hold Delinquency Process Criteria** system event defined for the delinquency process type.

C1-REDELPRC

This algorithm evaluates the status of the hold on the delinquency process to determine if the Delinquency Process should be released. In hold status also this algorithm will keep on checking hold end date of delinquency process needs to be extend or not or it should be release. This algorithm should be plugged in on the **Release Delinquency Process Criteria** on the Delinquency Process Type.

This algorithm contains the following soft parameters:

- Hold Request Reason: Optional. This will hold the **Hold Request** reason code from **Status Reason** Admin screen.
- Promise To Pay Reason: Optional. This will hold the **Promise To Pay** reason code from **Status Reason** Admin screen.
- Payment Agreement Reason: Optional. This will hold the **Payment Agreement** reason code from **Status Reason** Admin screen.

Note: The **C1-REDELPRC** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-REDELPRC** algorithm type to the **Release Delinquency Process Criteria** system event defined for the delinquency process type.

C1-DERGRBR

This algorithm will invoke the delinquency process Business Rules to derive the Grace Period as the most lenient grace period for the delinquency process.

Note: The **C1-DERGRBR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DERGRBR** algorithm type to the **Grace Period Derivation** system event defined for the delinquency process type.

C1-DERMLNBR

This algorithm will invoke the delinquency process Business Rules to derive the Send Member Level Notification option for delinquency process events.

Note: The **C1-DERMLNBR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DERMLNBR** algorithm type to the **Send Member Level Notification Option Derivation** system event defined for the delinquency process type.

C1-DERTRBR

This algorithm invokes the business rules evaluation and derives the termination rule based on the business rule output and the termination rule priority configuration on the delinquency process type.

Note: The **C1-DERTRBR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DERTRBR** algorithm type to the **Termination Date Rule Derivation** system event defined for the delinquency process type.

C1-DERWDBR

This algorithm invokes the business rules evaluation and derives the wait days, wait months and day of the month configurations for the given event. When multiple business rules are derived for a delinquency process, then the values are derived as the most lenient value from the applicable business rules.

Note: The **C1-DERWDBR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DERWDBR** algorithm type to the **Wait Days Derivation** system event defined for the delinquency process type.

C1-DERTROBR

This algorithm invokes the business rules evaluation and derives the termination and reinstatement configuration based on the business rule outputs.

This algorithm contains the following input parameters:

- Delinquency Process ID - DelinquencyProcess_Id

This algorithm contains the following output parameters:

- Trigger Termination Process
- Termination Wait Days
- Allow Automatic Reinstatement
- Trigger Reinstatement Process
- Reinstatement Wait Days

Note: The **C1-DERTROBR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DERTROBR** algorithm type to the **Termination and Reinstatement Configuration Derivation** system event defined for the delinquency process type.

C1-DERMNDAYS

This algorithm will invoke the delinquency process Business Rules to derive the Member Notification Days for the delinquency process.

Note: The **C1-DERMNDAYS** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DERMNDAYS** algorithm type to the **Membership Notification Days Derivation** system event defined for the delinquency process type.

C1-DERRTDBR

This algorithm invokes the business rules evaluation and derives the recalculate trigger date options (for both Hold Release and Resume Delinquency Process) based on the business rule outputs.

This algorithm contains the following input parameters:

- Delinquency Process ID - DelinquencyProcess_Id

This algorithm contains the following output parameters:

- Recalculate Trigger Date for Hold Release - Boolean

- Recalculate Trigger Date for Resume - Boolean

Note: The **C1-DERRTDBR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-DERRTDBR** algorithm type to the **Trigger Date Recalculation Option Derivation** system event defined for the delinquency process type.

Delinquency Control

The **Delinquency Control** screen allows you to define, edit, and delete a delinquency control. It contains the following zones:

- [Delinquency Control List](#) on page 3816
- [Delinquency Control](#) on page 3816

Delinquency Control List

The **Delinquency Control List** zone lists the delinquency controls that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|--|--|
| Collection Class | Indicates the collection class associated with the delinquency control. Note: You can create only one delinquency control for every collection class in the system. You need to set the collection method as Self-Control Delinquency in the collection class while associating the collection class with the delinquency control. |
| Minimum Credit Review Frequency (Days) | Displays the minimum number of days after which the credit review process should be conducted. Note: Based on the specified frequency, the system executes the credit review process in a repetitive manner. |
| Edit Delinquency Control | On clicking the Edit () icon, the Delinquency Control screen appears where you can edit the details of the delinquency control. |
| Delete Delinquency Control | On clicking the Delete () icon, you can delete the delinquency control. Note: You can delete a delinquency control when the associated collection class is not referred in a delinquency process. |

On clicking the **Broadcast** () icon corresponding to a delinquency control, the **Delinquency Control** zone appears with the details of the respective delinquency control.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using **Status** available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Delinquency Control

The **Delinquency Control** zone displays the details of the delinquency control. It contains the following sections:

- **Main** - Displays basic information about the delinquency control. It contains the following fields:

| Field Name | Field Description |
|--|--|
| Collection Class | <p>Indicates the collection class associated with the delinquency control.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Collection Class screen appears where you can view the details of the respective collection class.</p> <p>You can create only one delinquency control for every collection class in the system.</p> <p>You need to set the collection method as Self-Control Delinquency in the collection class while associating the collection class with the delinquency control.</p> |
| Minimum Credit Review Frequency (Days) | <p>Displays the minimum number of days after which the credit review process should be conducted.</p> <p>Note: Based on the specified frequency, the system executes the credit review process in a repetitive manner.</p> |
| Status | <p>Indicates the status of the delinquency control. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the delinquency control. |
| Delete | <p>Used to delete the delinquency control.</p> <p>Note: You can delete a delinquency control when the associated collection class is not referred in a delinquency process.</p> |

- **Algorithms** - This section lists the algorithms defined for the delinquency control. It contains the following columns:

| Column Name | Column Description |
|--------------|--|
| Sequence | Indicates the order in which the algorithms with the same system event must be triggered. |
| System Event | <p>Indicates the system event when the algorithm must be triggered. The valid value is:</p> <ul style="list-style-type: none"> • Delinquency Monitor Rule - Used when you want to trigger the attached algorithm while executing the following batches: <ul style="list-style-type: none"> • Account Level Delinquency Monitor (C1-ACDLQ) batch • Person Level Delinquency Monitor (C1-PRDLQ) batch |
| Algorithm | Indicates the algorithm attached to the system event. |

| Column Name | Column Description |
|-------------|---|
| | Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the delinquency control is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Delinquency Control** zone does not appear in the **Delinquency Control** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a delinquency control in the **Delinquency Control List** zone.

Defining a Delinquency Control

Prerequisites

To define a delinquency control, you should have:

- Delinquency control business object defined in the application.
- Collection class defined where the collection method set to **Self-Control Delinquency**.

Procedure

To define a delinquency control:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Control**.
A sub-menu appears.
3. Click the **Add** option from the **Delinquency Control** sub-menu.

The **Delinquency Control** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the delinquency control.
- **Algorithms** - Used to associate an algorithm with the delinquency control.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Collection Class | Used to indicate the collection class which is associated with the delinquency control. | Yes |
| | Note: This list displays only those options where the collection method is set as Self-Control Delinquency . | |
| Business Object | Indicates the business object using which you are defining the delinquency control. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Minimum Credit Review Frequency (Days) | Used to specify the minimum number of days after which the credit review process should be conducted. | No |
| | Note: Based on the specified frequency, the system executes the credit review process in a repetitive manner. | |
| Status | Used to indicate the status of the delinquency control. The valid value is: <ul style="list-style-type: none"> Active Inactive | Yes |

- Enter the required details in the **Main** section.
- Associate the required algorithms with the delinquency control.
- Click **Save**.

The delinquency control is defined.

Associating an Algorithm with a Delinquency Control

Prerequisites

To associate an algorithm with a delinquency control, you should have:

- Algorithm and Algorithm Type defined in the application.
- System event defined in the application.

Procedure

To associate an algorithm with a delinquency control:

- Ensure that the **Algorithms** section is expanded when you are defining or editing the delinquency control.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|---|--|
| System Event | Used to indicate the system event when you want to execute the algorithm. The valid values are: <ul style="list-style-type: none"> Delinquency Monitor Rule - Used to attach an algorithm which evaluates the rules to determine the delinquency of an individual and accordingly create a delinquency process. | Yes (Conditional) |
| | | Note: This field is required while associating an algorithm with the delinquency control. |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|---|
| | <p>Note:</p> <p>The C1-DLNQMNRL algorithm type is shipped with the product. You must attach an algorithm created using the C1-DLNQMNRL algorithm type to the Delinquency Monitor Rule system event defined for the delinquency control.</p> <p>The algorithm determines whether the account's debt is overdue based on the credit rating, age, and amount thresholds (including amount and percentage of the unpaid amount with respect to the original amount).</p> <p>This algorithm has the logic to determine whether to add to an existing or create a new delinquency process, however the implementation team may have an algorithm to always create a new delinquency process whenever a bill is in overdue state.</p> | |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) |
| | | <p>Note: This field is required while associating an algorithm with the delinquency control.</p> |
| Algorithm | Used to specify the algorithm. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select the system event option, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p> | <p>Note: This field is required while associating an algorithm with the delinquency control.</p> |

- If you want to associate more than one algorithm with the delinquency control, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the delinquency control, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the delinquency control.

Editing a Delinquency Control

Prerequisites

To edit a delinquency control, you should have:

- Delinquency control business object defined in the application.
- Collection class defined where the collection method set to **Self-Control Delinquency**.

Procedure

To edit a delinquency control:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Control**.
A sub-menu appears.
3. Click the **Search** option from the **Delinquency Control** sub-menu.
The **Delinquency Control** screen appears.
4. In the **Delinquency Control List** zone, click the **Edit**  icon in the **Edit Delinquency Control** column corresponding to the delinquency control whose details you want to edit.

The **Delinquency Control** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the delinquency control.
- **Algorithms** - Used to associate an algorithm with the delinquency control.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Collection Class | Indicates the collection class for delinquency control. | Not applicable |
| Business Object | Indicates the business object using which you are defining the delinquency control. | Not applicable |
| Minimum Credit Review Frequency (Days) | Used to specify the minimum number of days after which the credit review process should be conducted. | No |
| | Note: Based on the specified frequency, the system executes the credit review process in a repetitive manner. | |
| Status | Used to indicate the status of the delinquency control. The valid value is: <ul style="list-style-type: none"> • Active • Inactive | Yes |

5. Modify the details in the **Main** section, if required.
6. Associate the required algorithms with the delinquency control.
7. Click **Save**.

The changes made to the delinquency control are saved.

Deleting a Delinquency Control

Procedure

To delete a delinquency control:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Control**.
A sub-menu appears.
3. Click the **Search** option from the **Delinquency Control** sub-menu.
The **Delinquency Control** screen appears.
4. In the **Delinquency Control** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the delinquency control that you want to delete.
A message appears confirming whether you want to delete the delinquency control.

Note: You can delete a delinquency control when the associated collection class is not referred in a delinquency process.

Tip: Alternatively, you can delete a delinquency control by clicking the **Delete** button in the **Delinquency Control List** zone.

5. Click **OK**.
The delinquency control is deleted.

Viewing the Delinquency Control Details

Procedure

To view the details of the delinquency control:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Control**.
A sub-menu appears.
3. Click the **Search** option from the **Delinquency Control** sub-menu.
The **Delinquency Control** screen appears.

- In the **Delinquency Control** zone, click the **Broadcast** () icon corresponding to the delinquency control whose details you want to view.

The **Delinquency Control** zone appears.

- View the details of the delinquency control in the **Delinquency Control** zone.

Delinquency Event Type

The Delinquency event type screen allows you to define, edit, copy, and delete a delinquency event type. It contains the following zones:

- [Delinquency Event Type List](#) on page 3823
- [Delinquency Event Type](#) on page 3823

Delinquency Event Type List

The **Delinquency Event Type List** zone lists the delinquency event types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Delinquency Event Type | Displays the delinquency event type. |
| Description | Displays the description of the delinquency event type. |
| Edit | On clicking the Edit () icon, the Delinquency Event Type screen appears where you can edit the details of the delinquency event type. |
| Duplicate | On clicking the Duplicate () icon, the Delinquency Event Type screen appears where you can define a new delinquency event type using an existing delinquency event type. |
| Delete | On clicking the Delete () icon, you can delete the delinquency event type. Note: You can delete a delinquency event type when a delinquency process is not created using the delinquency event type. |

On clicking the **Broadcast** () icon corresponding to a delinquency event type, the **Delinquency Event Type** zone appears with the details of the respective delinquency event type.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Delinquency Event Type

The **Delinquency Event Type** zone displays the details of the delinquency event type. It contains the following sections:

- Main** - Displays basic information about the delinquency event type. It contains the following fields:

| Field Name | Field Description |
|------------------------|---|
| Delinquency Event Type | Displays the delinquency event type. |
| Description | Displays the description of the delinquency event type. |
| Detailed Description | Displays additional information about the delinquency event type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the delinquency event type. |
| Delete | Used to delete the delinquency event type. |
| | Note: You can delete a delinquency event type when a delinquency process is not created using the delinquency event type. |
| Duplicate | Used to create a new delinquency event type using an existing delinquency event type. |

- **Algorithms** - This section lists the algorithms defined for the delinquency event type. It contains the following columns:

| Column Name | Column Description |
|--------------|--|
| Sequence | Indicates the order in which the algorithms with the same system event must be triggered. |
| System Event | <p>Indicates the system event when the algorithm must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • Event Activation - Used to configure the following algorithms: <ul style="list-style-type: none"> • C1-DLQCRTODO - Used to create a To Do for the main customer of the account when the delinquency event is triggered. This algorithm is invoked in the C1-DPMON batch. <div data-bbox="797 1247 1476 1388" style="border: 1px solid black; padding: 5px;"> <p>Note: The C1-DLQCRTODO algorithm type and algorithm are shipped with the product. You need to attach this algorithm to the Event Activation system event. For more information about the algorithm, refer to C1-DLQCRTODO on page 3809</p> </div> <ul style="list-style-type: none"> • C1-DETTTERMDT - Used to calculate the termination effective date for the main customer of the account when the delinquency event is triggered. This algorithm is invoked in the C1-DPMON batch. <div data-bbox="797 1556 1476 1696" style="border: 1px solid black; padding: 5px;"> <p>Note: The C1-DETTTERMDT algorithm type and algorithm are shipped with the product. You need to attach this algorithm to the Event Activation system event. For more information about the algorithm, refer to C1-DETTTERMDT on page 3809</p> </div> <ul style="list-style-type: none"> • C1-DLQSENDCC - Used to the create customer contacts for all the persons who are associated with the account that is configured to receive the notification when the delinquency event is triggered. This algorithm is invoked in the C1-DPMON batch. |

| Column Name | Column Description |
|-------------|--|
| | <p>Note: The C1-DLQSENDCC algorithm type and algorithm are shipped with the product. You need to attach this algorithm to the Event Activation system event. For more information about the algorithm, refer to C1-DLQSENDCC on page 3810</p> <ul style="list-style-type: none"> • Monitor Completed Event - Used to configure the following algorithms: <ul style="list-style-type: none"> • C1-RCLTRGDMD - Used to retrieve the customer contact created for the event and recalculates the trigger date of the pending events in the delinquency process based on the document mail date when the delinquency event is triggered. This algorithm is invoked in the C1-DPMON batch. <p>Note: The C1-RCLTRGDMD algorithm type and algorithm are shipped with the product. You need to attach this algorithm to the Monitor Completed Event system event. For more information about the algorithm, refer to C1-RCLTRGDMD on page 3810</p> <ul style="list-style-type: none"> • C1-TRNTERTRG - Used to evaluate the termination trigger date configurations and decide the subsequent status of the delinquency process when the delinquency event is triggered. This algorithm is invoked in the C1-DPMON batch. <p>Note: The C1-TRNTERTRG algorithm type and algorithm are shipped with the product. You need to attach this algorithm to the Monitor Completed Event system event. For more information about the algorithm, refer to C1-TRNTERTRG on page 3810</p> |
| Algorithm | <p>Indicates the algorithm attached to the system event.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|---|
| Business Object | <p>Indicates the business object using which the delinquency event type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |

By default, the **Delinquency Event Type** zone does not appear in the **Delinquency Event Type** screen. It appears when you click the **Broadcast** (📢) icon corresponding to a delinquency event type in the **Delinquency Event Type List** zone.

Defining a Delinquency Event Type

Prerequisites

To define a delinquency event type, you should have:

- Delinquency event type business objects defined in the application

Procedure

To define a delinquency event type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Process Type**.
A sub-menu appears.
3. Click the **Add** option from the **Delinquency Event Type** sub-menu.

The **Delinquency Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the delinquency event type.
- **Algorithms** - Used to associate an algorithm with the delinquency event type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Delinquency Event Type | Displays the delinquency event type. | Not applicable |
| Business Object | Indicates the business object using which you are defining the delinquency event type. | Not applicable |
| Description | Used to specify the description for the delinquency event type. | Yes |
| Detailed Description | Used to specify additional information about the delinquency event type. | No |

4. Enter the required details in the **Main** section.
5. Associate an algorithm with a delinquency event type, if required.
6. Click **Save**.

The delinquency event type is defined.

Associating an Algorithm with a Delinquency Event Type

Prerequisites

To associate an algorithm with a delinquency event type, you should have:

- Algorithm and algorithm type defined in the application.
- Values defined for the **DELIN_EVT_TYPE_SEVT_FLG** lookup field.

Procedure

To associate an algorithm with a delinquency event type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the delinquency event type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) | | | | | | | | | | | | | | | | | | |
|-------------------------|---|--|-----------|-------------|------------------|--------------|--|------------------|-------------|---|------------------|--------------|--|-------------------------|--------------|--|-------------------------|--------------|--|---|
| System Event | <p>Used to indicate the system event when you want to execute the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Event Activation • Monitor Completed Event <p>Note:</p> <p>The above system events are used when you want to trigger the attached algorithm while executing the Delinquency Process Monitor (C1-DPMON) batch.</p> <p>The Event Activation system event is invoked on the trigger date to perform the actions related to those events which are in the Pending status. Once all the actions are executed, the event status is changed from Pending to Completed.</p> <p>The Monitor Completed Event system event is invoked on those events which are in the Completed status, to determine whether the delinquency process can proceed to the next subsequent event.</p> <p>The following table lists the algorithms which must be attached to the above system events:</p> <table border="1"> <thead> <tr> <th>System Event</th> <th>Algorithm</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Event Activation</td> <td>C1-DLQCRTODO</td> <td>Refer to C1-DLQCRTODO on page 3809</td> </tr> <tr> <td>Event Activation</td> <td>C1-DETERMDT</td> <td>Refer to C1-DETERMDT on page 3809</td> </tr> <tr> <td>Event Activation</td> <td>C1-DLQSENDCC</td> <td>Refer to C1-DLQSENDCC on page 3810</td> </tr> <tr> <td>Monitor Completed Event</td> <td>C1-RCLTRGDMD</td> <td>Refer to C1-RCLTRGDMD on page 3810</td> </tr> <tr> <td>Monitor Completed Event</td> <td>C1-TRNTERTRG</td> <td>Refer to C1-TRNTERTRG on page 3810</td> </tr> </tbody> </table> | System Event | Algorithm | Description | Event Activation | C1-DLQCRTODO | Refer to C1-DLQCRTODO on page 3809 | Event Activation | C1-DETERMDT | Refer to C1-DETERMDT on page 3809 | Event Activation | C1-DLQSENDCC | Refer to C1-DLQSENDCC on page 3810 | Monitor Completed Event | C1-RCLTRGDMD | Refer to C1-RCLTRGDMD on page 3810 | Monitor Completed Event | C1-TRNTERTRG | Refer to C1-TRNTERTRG on page 3810 | <p>Yes (Conditional)</p> <p>Note: This field is required while associating an algorithm with the delinquency event type.</p> |

| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) | | | | | | | | | | | | | | | | | | |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|---|
| | | Note: This field is required while associating an algorithm with the delinquency event type. |
| Algorithm | Used to specify the algorithm. | Yes (Conditional) |
| | Note: If you select the system event option, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field. | Note: This field is required while associating an algorithm with the delinquency event type. |

- If you want to associate more than one algorithm with the delinquency process type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the delinquency process type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the delinquency event type.

Editing a Delinquency Event Type

Prerequisites

To edit a delinquency event type, you should have:

- Delinquency event type business objects defined in the application

Procedure

To edit a delinquency event type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **D** and then click **Delinquency Process Type**.
A sub-menu appears.
- Click the **Search** option from the **Delinquency Event Type** sub-menu.
The **Delinquency Event Type** screen appears.
- In the **Delinquency Event Type** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the delinquency event type whose details you want to edit.

The **Delinquency Event Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the delinquency event type.
- Algorithms** - Used to associate an algorithm with the delinquency event type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Delinquency Event Type | Used to specify the delinquency event type. | Yes |
| Business Object | Indicates the business object using which you are defining the delinquency event type. | Not applicable |
| Description | Used to specify the description for the delinquency event type. | Yes |
| Detailed Description | Used to specify additional information about the delinquency event type. | No |

Tip: Alternatively, you can edit a delinquency event type by clicking the **Edit** button in the **Delinquency Event Type** zone.

- Enter the required details in the **Main** section.
- Associate the required algorithms with a delinquency event type.
- Click **Save**.

The changes made to the delinquency event type are saved.

Copying a Delinquency Event Type

Instead of creating a delinquency event type from scratch, you can create a new delinquency event type using an existing delinquency event type. This is possible through copying a delinquency event type. On copying a delinquency event type, the details including the algorithms are copied to the new delinquency event type. You can then edit the details, if required.

Prerequisites

To copy a delinquency event type, you should have:

- Delinquency event type business objects defined in the application

Procedure

To copy a delinquency event type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **D** and then click **Delinquency Event Type**.
A sub-menu appears.
- Click the **Search** option from the **Delinquency Event Type** sub-menu.
The **Delinquency Event Type** screen appears.

4. In the **Delinquency Event Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the delinquency event type whose copy you want to create.

The **Delinquency Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the delinquency event type.
- **Algorithms** - Used to associate an algorithm with the delinquency event type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Delinquency Event Type | Used to specify the delinquency event type. | Yes |
| Business Object | Indicates the business object using which you are defining the delinquency event type. | Not applicable |
| Description | Used to specify the description for the delinquency event type. | Yes |
| Detailed Description | Used to specify additional information about the delinquency event type. | No |

Tip: Alternatively, you can copy a delinquency event type by clicking the **Duplicate** button in the **Delinquency Event Type** zone.

5. Enter the required details in the **Main** section.
6. Associate the required algorithm with a delinquency event type.
7. Click **Save**.

The new delinquency event type is defined.

Deleting a Delinquency Event Type

Procedure

To delete a delinquency event type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Event Type**.
A sub-menu appears.
3. Click the **Search** option from the **Delinquency Event Type** sub-menu
The **Delinquency Event Type** screen appears.

- In the **Delinquency Event Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the *delinquency* event type that you want to delete.

A message appears confirming whether you want to delete the delinquency event type.

Note: You can delete a delinquency event type when the delinquency event type is not associated with a delinquency process type.

Tip: Alternatively, you can delete a delinquency event type by clicking the **Delete** button in the **Delinquency Event Type List** zone.

- Click **OK**.

The delinquency event type is deleted.

Delinquency Process Type

Oracle Revenue Management and Billing allows you to define a delinquency process type using which you can create a delinquency process. It is the delinquency process type which helps the system to determine the following:

- The delinquency entity type which decides whether the delinquency process type is applicable for a person level or an account level delinquency.
- The collection object which defines the type of object managed by the delinquency process.
- The delinquency event trigger modes, such as **Manual**, **Automatic**, and **Manual or Automatic** are configured in the system. For more information, see [Defining a Delinquency Process Type](#) on page 3844
- The delinquency event trigger date calculation rules which are configured for the delinquency process using the delinquency process type. For more information, see [Defining a Delinquency Process Type](#) on page 3844
- The business object using which the delinquency process should be created in the system.
- The consider work days that verify the calculated trigger date in the system.
- The grace period configured for an individual membership. For more information, see [Configuring the Grace Period for a Delinquency Process Type](#) on page 3853
- Whether the trigger date recalculation is configured for the delinquency process that is kept on hold and resumed later for some reason. For more information, see [Configuring the Trigger Date Recalculation Method in a Delinquency Process Type](#) on page 3860
- The algorithms defined for the delinquency process. For more information, see [Associating an Algorithm with a Delinquency Process Type](#) on page 3851
- The delinquency process type events configured for the delinquency process. For more information, see [Configuring an Event for a Delinquency Process Type](#) on page 3847
- Whether an automatic termination is configured for the delinquency process. For more information, see [Configuring the Automatic Termination and Reinstatement Process in a Delinquency Process Type](#) on page 3855

Note: You can only configure the automatic termination (in a delinquency process type) for an individual membership.

- Whether an approval is configured for manual actions taken on the delinquency process. For more information, see [Configuring the Approval Process in a Delinquency Process Type](#) on page 3862
- Whether the termination date rule priority is configured for the delinquency process. For more information, see [Setting the Termination Date Rules in a Delinquency Process Type](#) on page 3859
- Whether a characteristic is defined for a delinquency process. For more information, see [Defining a Characteristic for a Delinquency Process Type](#) on page 3863

This screen consists of the following zones:

- [Delinquency Process Type List](#) on page 3832
- [Delinquency Process Type](#) on page 3833

Delinquency Process Type List

The **Delinquency Process Type List** zone lists the delinquency process types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|--------------------------|---|
| Delinquency Process Type | Displays the delinquency process type. |
| Description | Displays the description of the delinquency process type. |
| Delinquency Entity Type | Indicates the type of entity created for delinquency. The valid values are: <ul style="list-style-type: none"> • Account • Person |

| Column Name | Column Description |
|-------------|--|
| | Note: At present, only the Account entity is applicable for an individual delinquency. |
| Status | Indicates the status of the delinquency process type. The valid values are: <ul style="list-style-type: none"> Active Inactive |
| Edit | On clicking the Edit (✎) icon, the Delinquency Process Type screen appears where you can edit the details of the delinquency process type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the delinquency process type. <p>Note: You can delete a delinquency process type when a delinquency process is not created using the delinquency process type.</p> |

On clicking the **Broadcast** (📡) icon corresponding to a delinquency process type, the **Delinquency Process Type** zone appears with the details of the respective delinquency process type.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Delinquency Entity Type**, **Description**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Delinquency Process Type

The **Delinquency Process Type** zone displays the details of the delinquency process type. It contains the following sections:

- Main** - Displays basic information about the delinquency process type. It contains the following fields:

| Field Name | Field Description |
|-------------------------------------|--|
| Delinquency Process Type | Displays the delinquency process type. |
| Delinquency Entity Type | Displays the entity type for which the delinquency process type is created. |
| Delinquency Process Business Object | Indicates the business object using which the delinquency process should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Description | Displays additional information about the delinquency process type. |
| Status | Indicates the status of the delinquency process type. The valid values are: <ul style="list-style-type: none"> Active Inactive |
| Collection Object | Indicates the entity on which the collection should take place in the delinquency process. |

| Field Name | Field Description |
|--|--|
| | Note: At present, the system supports Bill as the collection entity. |
| Automatic Termination and Reinstatement Required | Indicates whether the automatic termination and reinstatement is required or not for the delinquency process. Note: At present, automatic reinstatement is not applicable for individual delinquency. |
| Delinquency Event Trigger Mode | Indicates the mode in which the delinquency event must be triggered. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual • Manual or Automatic |
| Trigger Date Calculation Mode | Indicates the mode in which the date calculation must be triggered. The valid values are: <ul style="list-style-type: none"> • Latest Bill Due Date with Grace Period • Usage Basis |
| Wait Period | Indicates the specific period considered for calculating the trigger dates for the events on the delinquency process. The valid values are: <ul style="list-style-type: none"> • Monthly Cyclic • Wait Days |
| Usage Basis | Indicates the option based on which the date calculation must be take place. The valid values are: <ul style="list-style-type: none"> • Delinquency Process Creation Date • Grace Start Date • Latest Bill Date • Latest Bill Due Date |
| Consider Work Days | Indicates whether you want to consider work days for the trigger dates of the events on the delinquency process. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the delinquency process type. |
| Delete | Used to delete the delinquency process type. Note: You can delete a delinquency process type. when the delinquency process type is not created using the delinquency process type. |
| Duplicate | Used to create a new delinquency process type using an existing delinquency process type. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the delinquency process type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

- **Characteristics** - This section lists the characteristics of the delinquency process type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Delinquency Process Event Types** - This section lists the event types defined for the delinquency process type. It contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Sequence | Indicates the sequence of the field attribute. |
| Delinquency Event Type | Indicates the delinquency event type. Note: It has a link. On clicking the link, the Delinquency Event Type screen appears where you can view the details of the respective delinquency event type |
| Trigger Period | Indicates the period when you want to trigger the event using the delinquency event type. The valid values are: <ul style="list-style-type: none"> • After Grace End Date • Before Grace End Date Note: The system calculates the trigger date based on the trigger period. If you select the After Grace End Date option, the system calculates the trigger date using the following formula: Trigger Date = Grace End Date + Wait Days If you select the Before Grace End Date option, the system calculates the trigger date using the following formula: Trigger Date = Grace End Date - Wait Days |
| Wait Period Source | Indicates the source from where the wait period is received. The valid values are: <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type Note: You need to configure the Derive Wait Period Details based on Business Rules (C1-DERWDBR) algorithm in the delinquency process type, if you select the Algorithm option from the Wait Period Source field. |
| Wait Days | Displays the wait period (in days) after which the delinquency event is triggered. |

| Column Name | Column Description |
|---------------------------------|---|
| | Note: Data in this column appears only if you have selected the Wait Days option from the Wait Period field. |
| Wait Months | Displays the wait period (in months) after which the delinquency event is triggered. Note: Data in this column appears only if you have selected the Monthly Cyclic option from the Wait Period field. |
| Day of Month | Indicates the particular day of the month after which the delinquency event is triggered. Note: Data in this column appears only if you have selected the Monthly Cyclic option from the Wait Period field. |
| Move Past Dated Event To Future | Indicates whether you want to move the past dated event to a future date. |
| Preview Required | Indicates whether an delinquency event requires a preview before it is actually triggered. |
| Preview Days | Displays the preview period (in days) prior to which the delinquency event is triggered for preview. Note: The system calculates the preview date based on preview days. The preview date is calculated using the following formula: $\text{Preview Date} = \text{Trigger Date} - \text{Preview Days}$ |
| Skip Past Event | Indicates whether you want to skip any event if the calculated trigger date for the event is past dated. |
| Eligibility Rule Type | Indicates the rule type eligibility for the delinquency process type. |

| Column Name | Column Description |
|---|---|
| | <p>Note:</p> <p>To define the rule type eligibility, you need to do the following:</p> <ul style="list-style-type: none"> • Define the required parameters using the following source entities: <ul style="list-style-type: none"> • Account • Health Plan • Health Product • Person <p>and set the parameter usage to Rule Eligibility Criteria.</p> <ul style="list-style-type: none"> • Define a rule type where the rule type usage is set to Delinquency Process Event Eligibility. • Define a rule using the rule type with a parameter configured using the above source entities. <p>For example, you configure a parameter (created using the Health Plan source entity) within a rule type and create a rule using the respective rule type. When the C1-DPEVL batch is executed, the system invokes the rules engine for each health plan associated with the memberships which are derived using the membership derivation algorithm. If the rules engine returns with a Success status at least for one health plan, the system includes the configured event in the delinquency process, else the event is deleted from the delinquency process.</p> <p>Once the C1-ACDLQ batch is executed, the system adds all the events irrespective of eligibility in the delinquency process, and later on the C1-DPEVL batch evaluates the eligibility for each event.</p> |
| Send Membership Level Notification Source | <p>Indicates the source from where the send membership level notification information is received. The valid values are:</p> <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type <p>Note:</p> <p>You need to configure the Derive Send Member Level Notification based on Business Rules (C1-DERMLNBR) algorithm in the delinquency process type, if you select the Algorithm option from the Send Membership Level Notification Source field.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> |
| Send Membership Level Notification | <p>Indicates whether you want to send membership level notification when customer contacts are created as part of the events in the delinquency process created using the delinquency process type. The valid values are:</p> <ul style="list-style-type: none"> • Send Membership Level Notification Required • Send Membership Level Notification Not Required |

| Column Name | Column Description |
|-------------|--|
| | <p>Note:</p> <p>You need to execute the Create Member Level Notifications (C1-MBRNT) batch to derive the list of memberships for the delinquent person or account.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> |

- **Algorithms** - This section lists the algorithms defined for the delinquency process type. It contains the following columns:

| Column Name | Column Description |
|--------------|--|
| Sequence | Indicates the order in which the algorithms with the same system event must be triggered. |
| System Event | <p>Indicates the system event when the algorithm must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • Calculate Unpaid and Original Amounts • Cancel Criteria • Hold Delinquency Process Criteria • Release Delinquency Process Criteria • Policies Derivation • Grace Period Derivation • Termination Date Rule Derivation • Trigger Date Recalculation Option Derivation • Termination and Reinstatement Configuration Derivation • Wait Days Derivation • Send Member Level Notification Option Derivation • Membership Notification Days Derivation <p>Note: For more information on each system event, refer to Associating an Algorithm with a Delinquency Process Type on page 3851</p> |
| Algorithm | <p>Indicates the algorithm attached to the system event.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> |

- **Grace Period Configuration** - This section lists the grace period configuration defined for the delinquency process type. It contains the following fields:

| Field Name | Field Description |
|---------------------|---|
| Grace Period Source | <p>Indicates the source for grace period. The valid values are:</p> <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type |

| Field Name | Field Description |
|------------------------|---|
| | <p>Note: You need to configure the Derive Grace Period based on Business Rules (C1-DERGRBR) algorithm in the delinquency process type, if you select the Algorithm option from the Grace Period Source field.</p> |
| Grace Period (Days) | <p>Displays the number of days which are used to define the grace period end date for the delinquency process.</p> <p>Note:</p> <p>For example, if a delinquency process contains bills with the latest bill due date as 01-Jan-2023, the system considers the latest bill due date as the grace period start date which is 01-Jan-2023. Now, if you have configured the grace period as 30 days, the system determines the grace period end date as 31-Jan-2023 by using the following formula:</p> <p>Grace Period End Date = Grace Period Start Date + Grace Period</p> |
| Grace Start Date Basis | <p>Indicates the option based on which the grace date calculation is performed. The valid values are:</p> <ul style="list-style-type: none"> • Delinquency Process Creation Date • Latest Bill Due Date • X Days after Latest Bill Due Date <p>Note: The grace start date basis is used as the base date for performing the grace period calculation.</p> |
| Add Days To Due Date | <p>Displays the number of days by which the due date gets extended and is further used for calculating the grace end date.</p> <p>Note:</p> <p>For example, if the grace period start date is set as 01-Jan-2023 and you have configured the add days to due date as 7 days, the system adds the add days to due date to the grace period start date. Therefore, the new grace period start date is now set as 08-Jan-2023. The system then combines the grace period start date with the grace period to calculate the grace period end date using the following formula:</p> <p>Grace Period End Date = Grace Period Start Date + Grace Period</p> |

- **Termination and Reinstatement Configuration** - This section lists the termination and reinstatement configuration defined for the delinquency process type. It contains the following fields:

| Field Name | Field Description |
|--|--|
| Termination Reinstatement Configuration Source | <p>Indicates the source for termination and reinstatement configuration. The valid values are:</p> <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type |

| Field Name | Field Description |
|--|---|
| | <p>Note: You need to configure the Derive Termination and Reinstatement configuration based on Business Rules (C1-DERTROBR) algorithm in the delinquency process type, if you select the Algorithm option from the Termination Reinstatement Configuration Source field.</p> |
| Trigger Process Termination | <p>Indicates an option based on which the termination process is triggered. The valid values are:</p> <ul style="list-style-type: none"> • After X Days • Immediate • Month End |
| Termination Wait Days | <p>Displays the wait period (in days) after which the termination process is triggered.</p> <p>Note: The system sets the termination wait days to zero, if you do not specify a value while defining or editing a delinquency process type. The data appears in this field only when you have selected the After X Days option from the Termination Wait Days field.</p> |
| Allow Reinstatement Automatic | <p>Indicates whether you want to allow automatic reinstatement of the individual membership. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: This field is not applicable for Individual Delinquency purposes.</p> |
| Maximum Reinstatement Count Automatic | <p>Displays the maximum number of time the system allows automatic reinstatement.</p> <p>Note: This field is not applicable for Individual Delinquency purposes.</p> |
| Trigger Process Reinstatement | <p>Indicates an option based on which the reinstatement process must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • After X Days • Immediate • Month End <p>Note: This field is not applicable for Individual Delinquency purposes.</p> |
| Reinstatement Wait Days | <p>Displays the wait period (in days) after which the reinstatement process is triggered.</p> <p>Note: The system sets the reinstatement wait days to zero, if you do not specify a value while defining or editing a delinquency process type. This field is not applicable for Individual Delinquency purposes.</p> |

| Field Name | Field Description |
|-------------------------------------|---|
| Reinstatement Threshold | Displays the value based on which the automatic reinstatement takes place. |
| | <p>Note:</p> <p>The percentage of the amount paid must be greater than or equal to the threshold percentage based on which automatic reinstatement takes place.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> |
| Days Since Termination | Displays the number of days since the termination effective date for automatic reinstatement to take place. |
| | <p>Note:</p> <p>If you configure the days since termination as 10 days for automatic reinstatement, the system adds days since termination to the termination effective date irrespective of whether termination effective date is elapsed or not. If the termination effective date is elapsed, the system does not perform the automatic reinstatement. In this case, you have to manually conduct the reinstatement process.</p> <p>The automatic reinstatement process is triggered only within the certain number of days once the termination has taken place.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> |
| Membership Notification Days Source | Indicates the source from where the membership notification days information is received. The valid values are: <ul style="list-style-type: none"> Algorithm Delinquency Process Type |
| | <p>Note:</p> <p>You need to configure the Derive Member Notification Days based on Business Rules (C1-DERMNDAYS) algorithm in the delinquency process type, if you select the Algorithm option from the Membership Notification Days Source field.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> |
| Member Notification Days | Displays the number of days after which the member receives notification. |
| | Note: This field is not applicable for Individual Delinquency purposes. |

Note: This section appears only when the **Automatic Termination and Reinstatement Required** checkbox is selected. At present, the automatic reinstatement process is not applicable for individual delinquency purposes, hence this section displays fields related to automatic termination such as **Termination Reinstatement Configuration Source**, **Trigger Termination Process**, and **Termination Wait Days**.

- **Termination Date Rule Priority** - This section lists the priority and termination date rule defined for the delinquency process type. It contains the following columns:

| Column Name | Column Description |
|-----------------------|--|
| Priority | <p>Displays the order in which the termination date rule is considered while defining a delinquency process type.</p> <p>Note:</p> <p>The system selects the termination date rule which has the highest priority.</p> <p>For example, let us assume that an individual customer exists in the system with different memberships, where the membership attributes are responsible to retrieve the termination date rules. If you want to terminate an individual customer who has different memberships, the system requires a termination date rule which calculates the termination effective date for the termination process.</p> <p>Now, the system goes through multiple memberships and derives different termination date rules for different memberships, making it difficult to select a particular termination date rule to calculate the termination effective date. Here, the system derives the priority sequence of each rule, and selects the termination date rule which has the highest priority.</p> |
| Termination Date Rule | Indicates the termination date rule used for calculating the termination effective date. |

Note: This section appears only when the **Automatic Termination and Reinstatement Required** option is selected.

- **Termination Reasons For Automatic Reinstatement** - This section lists the termination reasons defined for automatic reinstatement in the delinquency process type. It contains the following column:

| Column Name | Column Description |
|--------------------|---|
| Termination Reason | <p>Indicates the reason which is specified during the termination process.</p> <p>Note:</p> <p>The automatic reinstatement takes place only when a reason is specified during the termination process, and the specified reason appears in the Termination Reason list. If the specified reason does not appear in the Termination Reason list, you have to manually perform the reinstatement process.</p> <p>This field is not applicable for individual delinquency purposes.</p> |

Note: This section appears only when the **Automatic Termination and Reinstatement Required** option is selected.

- **Trigger Date Recalculation Configuration** - This section lists the termination reasons defined for automatic reinstatement in the delinquency process type. It contains the following fields:

| Field Name | Field Description |
|---|---|
| Trigger Date Recalculation On Hold Release Source | <p>Indicates the source for recalculating the trigger date once the hold request is released. The valid values are:</p> <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type |

| Field Name | Field Description |
|---|---|
| | Note: You need to configure the Derive Recalculate Trigger Date option based on Business Rules (C1-DERRTDBR) algorithm in the delinquency process type, if you select the Algorithm option from the Trigger Date Recalculation On Hold Release Source field. |
| Trigger Date Recalculation On Hold Release | Indicates whether you want to recalculate the trigger date once the hold request is released. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Trigger Date Recalculation On Resume Source | Indicates the source for recalculating the trigger date once the hold request is resumed. The valid values are: <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type <p>Note: You need to configure the Derive Recalculate Trigger Date option based on Business Rules (C1-DERRTDBR) algorithm in the delinquency process type, if you select the Algorithm option from the Trigger Date Recalculation On Resume Source field.</p> |
| Trigger Date Recalculation On Resume | Indicates whether you want to recalculate the trigger date once the hold request is resumed. The valid values are: <ul style="list-style-type: none"> • Yes • No |

Note: The system conducts trigger date recalculation in the following scenarios:

- When the delinquency process is kept on hold for certain days and is later released either on hold end date or through manual intervention, the system determines the total number of days (hold days) the delinquency process was kept on hold. The system adds the calculated days to the trigger date which was calculated earlier and calculates the trigger date once again. This recalculated trigger date is used to trigger those events which were not triggered as the delinquency process was kept on hold.
- When you make a payment against a bill for which a delinquency process is created, the system cancels the delinquency process. If the payment made against a bill gets canceled due to any reason after some days, the system checks whether there are any overdue bills for the respective account. If the overdue bills exist, the delinquency process which was canceled earlier is resumed. Once the delinquency process is resumed, the system determines the total number of days (extra days) the delinquency process was in canceled state. The system adds the extra days to the trigger date which was calculated earlier and calculates the trigger date once again. This recalculated trigger date is used to trigger those events which were not triggered as the delinquency process was canceled.

- **Approval Configuration** - This section lists the approval configuration defined for the delinquency process type. It contains the following fields:

| Field Name | Field Description |
|-------------------|---|
| Approval Required | Indicates whether an approval is required for certain manual actions performed on the delinquency process created using the delinquency process type. |

| Field Name | Field Description |
|---------------------|---|
| Approval To Do Type | Indicates the To Do entry created of the specified To Do type. |
| | Note: This field appears when the Approval Required option is selected. |
| Approval To Do Role | Indicates that users with the specified To Do Role can only perform the following actions. The valid values are: <ul style="list-style-type: none"> • Approve • Reject • Withdraw |
| | Note: The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the Approval Required option is selected. |
| Approval Action | Indicates the set of actions for which the approval process must be triggered. The valid values are: <ul style="list-style-type: none"> • Cancel • Edit Hold • Edit Trigger Date • Hold • Release Hold • Request Reinstatement • Skip Event • Trigger Event |
| | Note: This field appears when the Approval Required option is selected. |

By default, the **Delinquency Process Type** zone does not appear in the **Delinquency Process Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a delinquency process type in the **Delinquency Process Type List** zone.

Defining a Delinquency Process Type

Prerequisites

To define a delinquency process type, you should have:

- Delinquency event types defined in the application.
- Algorithms defined using the **C1-CUAOAB**, **C1-CANDELPRC**, **C1-MEMBDLQ**, **C1-HLDDELPRC**, **C1-RECALCHLD**, **C1-DERGRBR**, **C1-DERMLNBR**, **C1-DERTRBR**, **C1-DERWDBR**, **C1-DERTROBR**, **C1-DERMNDAYS**, and **C1-DERRTDBR** algorithm types.
- Delinquency process type business objects defined in the application.
- Delinquency process business objects defined in the application.
- Approval To Do Type and Approval To Do Role defined in the application.

Procedure

To define a delinquency process type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Process Type**.
A sub-menu appears.
3. Click the **Add** option from the **Delinquency Process Type** sub-menu.

The **Delinquency Process Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the delinquency process type.
- **Delinquency Process Type Events** - Used to define events for the delinquency process type.
- **Algorithms** - Used to associate an algorithm with the delinquency process type.
- **Grace Period Configuration** - Used to configure the grace period for the delinquency process type.
- **Termination and Reinstatement Configuration** - Used to configure the termination and reinstatement for the delinquency process type.
- **Termination Date Rule Priority** - Used to define the termination date rule priority for the delinquency process type.
- **Termination Reasons For Automatic Reinstatement** - Used to define the termination reason for an automatic reinstatement for the delinquency process type.
- **Trigger Date Recalculation Configuration** - Used to configure the trigger date recalculation for the delinquency process type.
- **Approval Configuration** - Used to configure an approval for the delinquency process type.
- **Characteristics** - Used to define the characteristics for the delinquency process type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Delinquency Process Type | Used to specify the delinquency process type. | Yes |
| Delinquency Entity Type | Used to specify the entity type for which the delinquency process type is created. | No |
| Delinquency Process Business Object | Indicates the business object using which you are defining the delinquency process type. | Yes |
| Description | Used to specify the description for the delinquency process type. | No |
| Detailed Description | Used to specify additional information about the delinquency process type. | No |
| Status | Used to indicate the status of the delinquency process type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | No |
| | Note: By default, the Active option is selected. | |
| Collection Object | Used to indicate the entity on which the collection should take place in the delinquency process. The valid value is: | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| | <ul style="list-style-type: none"> • Bill <p>Note: At present, the system supports Bill as the collection entity.</p> | |
| Automatic Termination and Reinstatement Required | <p>Used to indicate whether automatic termination and reinstatement is required or not for the delinquency process.</p> <p>Note: At present, automatic reinstatement is not applicable for individual delinquency.</p> | No |
| Delinquency Event Trigger Mode | <p>Used to indicate the mode in which the delinquency event must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • Automatic • Manual • Manual or Automatic <p>Note: You must specify the delinquency event trigger mode which is already defined in the system.</p> | No |
| Trigger Date Calculation Mode | <p>Used to indicate the mode in which the date calculation must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • Latest Bill Due Date with Grace Period • Usage Basis <p>Note: By default, this field is disabled. It is enabled only when you select the Automatic option from the Delinquency Event Trigger Mode list.</p> | Yes (Conditional) |
| Usage Basis | <p>Used to indicate the option based on which the date calculation must be take place. The valid values are:</p> <ul style="list-style-type: none"> • Delinquency Process Creation Date • Grace Start Date • Latest Bill Date • Latest Bill Due Date <p>Note: By default, this field is disabled. It is enabled only when you select the Usage Basis option from the Trigger Date Calculation Mode list.</p> | Yes (Conditional) |
| Consider Work Days | <p>Used to indicate whether you want to consider work days for the trigger dates of the events on the delinquency process.</p> | No |

4. Enter the required details in the **Main** section.
5. Configure an event for the delinquency process type, if required.
6. Associate an algorithm with a delinquency process type, if required.

7. Configure the grace period for the delinquency process type, if required.
8. Configuring the automatic termination and reinstatement process in a delinquency process type, if required.
9. Set the termination date rules in a delinquency process type, if required.
10. Set the termination reason for an automatic reinstated membership in a delinquency process type, if required.
11. Configure the trigger date recalculation method in a delinquency process type, if required.
12. Configure the approval process in a delinquency process type, if required.
13. Define characteristics for the delinquency process type, if required.
14. Click **Save**.

The delinquency process type is defined.

Configuring an Event for a Delinquency Process Type

Procedure

To configure an event for a delinquency process type:

1. Ensure that the **Delinquency Process Event Types** section is expanded when you are defining or editing a delinquency process type.

The **Delinquency Process Event Types** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Sequence | Used to specify the order in which the events are executed. | Yes |
| | Note: The event execution is totally based on the sequence of trigger dates. | |
| Delinquency Event Type | Used to indicate the type of event configured in the delinquency process type. | No |
| | Note: The Search (🔍) icon appears corresponding to the Delinquency Event Type field. On clicking the Search icon, the Delinquency Event Type Search window appears. | |
| Trigger Period | Used to indicate the period when you want to trigger an event using the delinquency event type. The valid values are: <ul style="list-style-type: none"> • After Grace End Date • Before Grace End Date | Yes (Conditional) |
| | Note: By default, this field is disabled. It is enabled only when you select the Latest Bill Due Date with Grace Period option from the Trigger Date Calculation Mode field. The system calculates the trigger date based on the trigger period. If you select the After Grace End Date option, the system calculates the trigger date using the following formula: Trigger Date = Grace End Date + Wait Days If you select the Before Grace End Date option, the system calculates the trigger date using the following formula: Trigger Date = Grace End Date - Wait Days | |
| Wait Period Source | Used to indicate the source from where the wait period is received. The valid values are: <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|--|
| | <p>Note:</p> <p>You need to configure the Derive Wait Period Details based on Business Rules (C1-DERWDBR) algorithm in the delinquency process type, if you select the Algorithm option from the Wait Days Source field.</p> <p>By default, the Delinquency Process Type option type is selected.</p> | |
| Wait Days | Used to specify the wait period (in days) after which the delinquency event is triggered. | Yes (Conditional) |
| | <p>Note: This field is disabled only when you select the Monthly Cyclic option from the Wait Period field.</p> | <p>Note: This field is required when you have selected the Wait Days option from the Wait Period field.</p> |
| Wait Months | Used to specify the wait period (in months) which is used to calculate the trigger date. | No |
| | <p>Note: By default, this field is disabled. It is enabled only when you select the Monthly Cyclic option from the Wait Period field.</p> | |
| Day of Month | Used to indicate the particular day of the month which is retrieved using the wait months. | Yes (Conditional) |
| | <p>Note: By default, this field is disabled. It is enabled only when you select the Monthly Cyclic option from the Wait Period field.</p> | |
| Move Past Dated Event To Future | Used to indicate whether you want to move the past dated event to a future date. | No |
| | <p>Note: By default, this field is disabled. It is enabled only when you select the Monthly Cyclic option from the Wait Period field.</p> | |
| Preview Required | Used to indicate whether an delinquency event requires a preview before it is actually triggered. | No |
| Preview Days | Used to specify the preview period (in days) prior to which the delinquency event is triggered for preview. | No |
| | <p>Note: The system calculates the preview date based on preview days. The preview date is calculated using the following formula:</p> <p>Preview Date = Trigger Date - Preview Days</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| Skip Past Event | Used to indicate whether you want to skip any event if the calculated trigger date for the event is past dated. | No |
| Eligibility Rule Type | <p>Used to indicate the rule type eligibility for the delinquency process type.</p> <p>Note:</p> <p>To define the rule type eligibility, you need to do the following:</p> <ul style="list-style-type: none"> • Define the required parameters using the following source entities: <ul style="list-style-type: none"> • Account • Health Plan • Health Product • Person <p>and set the parameter usage to Rule Eligibility Criteria.</p> <ul style="list-style-type: none"> • Define a rule type where the rule type usage is set to Delinquency Process Event Eligibility. • Define a rule using the rule type with a parameter configured using the above source entities. <p>For example, you configure a parameter (created using the Health Plan source entity) within a rule type and create a rule using the respective rule type. When the C1-DPEVL batch is executed, the system invokes the rules engine for each health plan associated with the memberships which are derived using the membership derivation algorithm. If the rules engine returns with a Success status at least for one health plan, the system includes the configured event in the delinquency process, else the event is deleted from the delinquency process.</p> <p>Once the C1-ACDLQ batch is executed, the system adds all the events irrespective of eligibility in the delinquency process, and later on the C1-DPEVL batch evaluates the eligibility for each event.</p> | No |
| Send Membership Level Notification Source | <p>Used to indicate the source from where the send membership level notification information is received. The valid values are:</p> <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type | <p>Yes (Conditional)</p> <p>Note: This field is required when you have selected an option from the Send Membership Level Notification field.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------------|--|---|
| | <p>Note:</p> <p>By default, the Delinquency Process Type option type is selected.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> | |
| Send Membership Level Notification | <p>Used to indicate whether you want to send membership level notification when customer contacts are created as part of the events in the delinquency process created using the delinquency process type. The valid values are:</p> <ul style="list-style-type: none"> Send Member Level Notification Required Send Member Level Notification Not Required <p>Note: This field is not applicable for Individual Delinquency purposes.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you have selected an option from the Send Membership Level Notification Source field.</p> |

- Enter the required details in the **Delinquency Process Event Types** section.
- If you want to add more than one event in a delinquency process type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an event from a delinquency process type, click the **Delete** (🗑️) icon corresponding to the **Audit Event Type** field.

- Click **Save**.

The event is configured in a delinquency process type.

Associating an Algorithm with a Delinquency Process Type

Prerequisites

To associate an algorithm with a delinquency process type, you should have:

- Algorithm and Algorithm Type defined in the application.
- System event defined in the application.

Procedure

To associate an algorithm with a delinquency process type:

- Ensure that the **Algorithms** section is expanded when you are defining or editing the delinquency process type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| System Event | <p>Used to indicate the system event when you want to execute the algorithm.</p> <p>The following table lists the system events on which the algorithms must be attached:</p> <p>The following table lists the algorithms that are associated with a delinquency process type:</p> | Yes (Conditional) |

| Column Name | Column Description | | | Mandatory (Yes or No) |
|-------------|--|------------------|---|---|
| | System Event | Algorithm | Description | Note: This field is required while associating an algorithm with the delinquency process type. |
| | Calculate Unpaid and Original Amounts | C1- CUAOAB | Refer to C1-CUAOAB on page 3812 | |
| | Cancel Criteria | C1- CANDELPRC | Refer to C1-CANDELPRC on page 3812 | |
| | | C1- CANDPAPTC | Refer to C1-CANDPAPTC on page 3813 | |
| | Memberships Derivation | C1- MEMBDLQ | Refer to C1-MEMBDLQ on page 3813 | |
| | Hold Delinquency Process Criteria | C1- HLDELPRC | Refer to C1-HLDELPRC on page 3814 | |
| | Release Delinquency Process Criteria | C1- RELDELPRC | Refer to C1-RELDELPRC on page 3814 | |
| | Grace Period Derivation | C1- DERGRBR | Refer to C1- DERGRBR on page 3814 | |
| | Send Member Level Notification Option Derivation | C1- DERMLNBR | Refer to C1- DERMLNBR on page 3814 | |
| | Termination Date Rule Derivation | C1- DERTRBR | Refer to C1- DERTRBR on page 3815 | |
| | Wait Days Derivation | C1- DERWDBR | Refer to C1- DERWDBR on page 3815 | |
| | Termination and Reinstatement Configuration Derivation | C1- DERTROBR | Refer to C1- DERTROBR on page 3815 | |
| | Membership Notification Days Derivation | C1- DERMNDAYS | Refer to C1- DERMNDAYS on page 3815 | |

| Column Name | Column Description | | | Mandatory (Yes or No) |
|-------------|--|------------------|--|--|
| | System Event | Algorithm | Description | |
| | Trigger Date Recalculation Option Derivation | C1-DERRTDBR | Refer to <i>C1-DERRTDBR</i> on page 3815 | |
| Sequence | Used to specify the order in which the algorithms for each system event must be triggered. | | | Yes (Conditional) Note: This field is required while associating an algorithm with the delinquency process type. |
| Algorithm | Used to specify the algorithm. Note: If you select the system event option, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field. | | | Yes (Conditional) Note: This field is required while associating an algorithm with the delinquency process type. |

- If you want to associate more than one algorithm with the delinquency process type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the delinquency process type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The algorithm is associated with a delinquency process type.

Configuring the Grace Period for a Delinquency Process Type

Procedure

To configure the grace period for a delinquency process type:

- Ensure that the **Grace Period Configuration** section is expanded when you are defining or editing a delinquency process type.

The **Grace Period Configuration** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Grace Period Source | Used to indicate the source from where the grace period is received. The valid values are: <ul style="list-style-type: none"> Algorithm Delinquency Process Type | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|---|
| | <p>Note:</p> <p>By default, the Delinquency Process Type is selected.</p> <p>You need to configure the Derive Grace Period based on Business Rules (C1-DEGRBR) algorithm in the delinquency process type, if you select the Algorithm option from the Grace Period Source field.</p> | |
| Grace Period (Days) | <p>Used to specify the number of days which are used to define the grace period end date for the delinquency process.</p> <p>Note: For example, if a delinquency process contains bills with the latest bill due date as 01-Jan-2023, the system considers the latest bill due date as the grace period start date which is 01-Jan-2023. Now, if you have configured the grace period as 30 days, the system determines the grace period end date as 31-Jan-2023 by using the following formula:</p> <p>Grace Period End Date = Grace Period Start Date + Grace Period</p> | <p>Yes (Conditional)</p> <p>Note: This field is required if you have selected the Delinquency Process Type option from the Grace Source Period list.</p> |
| Grace Start Date Basis | <p>Used to indicate the option based on which the grace date calculation is performed. The valid values are:</p> <ul style="list-style-type: none"> Delinquency Process Creation Date Latest Bill Due Date X Days after Latest Bill Due Date <p>Note:</p> <p>By default, this field is disabled. It is enabled only when you select the Grace Start Date option from the Usage Basis list.</p> <p>The grace start date basis is used as the base date for performing the grace period calculation.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required if you have selected the Grace Start Date option from the Usage Basis list.</p> |
| Add Days To Due Date | Used to specify the number of days by which the due date gets extended and is further used for calculating the grace period end date. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>This field appears only when you select the X Days after Latest Bill Due Date option from the Grace Start Date Basis list.</p> <p>If you do not specify any value, by default it is set to zero (0).</p> <p>For example, if the grace period start date is set as 01-Jan-2023 and you have configured the add days to due date as 7 days, the system adds the add days to due date to the grace period start date. Therefore, the new grace period start date is now set as 08-Jan-2023. The system then combines the grace period start date with the grace period to calculate the grace period end date using the following formula:</p> <p>Grace Period End Date = Grace Period Start Date + Grace Period</p> | |

- Enter the required details in the **Grace Period Configuration** section.
- Click **Save**.

The grace period is configured for a delinquency process type.

Configuring the Automatic Termination and Reinstatement Process in a Delinquency Process Type Procedure

To configure the automatic termination and reinstatement process in a delinquency process type:

- Ensure that the **Termination and Reinstatement Configuration** section is expanded when you are defining or editing a delinquency process type.

The **Termination and Reinstatement Configuration** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Termination Reinstatement Configuration Source | <p>Used to indicate the source from where the termination and reinstatement configuration is received. The valid values are:</p> <ul style="list-style-type: none"> Algorithm Delinquency Process Type <p>Note:</p> <p>By default, the Delinquency Process Type option type is selected.</p> <p>You need to configure the Derive Termination and Reinstatement configuration based on Business Rules (C1-DERTROBR) algorithm in the delinquency process type, if you select the Algorithm option from the Termination Reinstatement Configuration Source field.</p> | Yes |
| Trigger Termination Process | <p>Used to indicate an option based on which the termination process is triggered. The valid values are:</p> <ul style="list-style-type: none"> After X Days | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------------|--|--|
| | <ul style="list-style-type: none"> • Immediate • Month End <p>Note: This field is enabled only when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> | <p>Note: This field is required when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> |
| Termination Wait Days | <p>Used to specify the wait period (in days) after which the termination process is triggered.</p> <p>Note: You cannot specify a negative value in the Termination Wait Days field. If you do not specify the termination wait days, by default, it is set to zero (0). This field is enabled only when you select the After X Days option from the Trigger Termination Process field.</p> | No |
| Allow Automatic Reinstatement | <p>Used to indicate whether you want to allow automatic reinstatement of the individual membership. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: This field is not applicable for Individual Delinquency purposes. This field is enabled only when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> |
| Maximum Automatic Reinstatement Count | <p>Used to specify the maximum number of time the system allows automatic reinstatement.</p> <p>Note: This field is not applicable for Individual Delinquency purposes. This field is enabled when you select the Yes option from the Allow Automatic Reinstatement field.</p> | No |
| Trigger Reinstatement Process | <p>Used to indicate an option based on which the reinstatement process must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • After X Days • Immediate • Month End | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| | <p>Note:</p> <p>This field is not applicable for Individual Delinquency purposes.</p> <p>This field is enabled only when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> | <p>Note: This field is required when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> |
| Reinstatement Wait Days | <p>Used to specify the wait period (in days) after which the reinstatement process is triggered.</p> <p>Note:</p> <p>This field is not applicable for Individual Delinquency purposes.</p> <p>This field is enabled only when you select the After X Days option from the Trigger Reinstatement Process field.</p> <p>You cannot specify a negative value in the Reinstatement Wait Days field. If you do not specify the reinstatement wait days, by default, it is set to zero (0).</p> | No |
| Reinstatement Threshold | <p>Used to specify the value based on which the automatic reinstatement takes place.</p> <p>Note:</p> <p>This field is not applicable for Individual Delinquency purposes.</p> <p>You must specify a value for reinstatement threshold which exists between 1 to 100.</p> <p>This field is enabled only when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> |
| Days Since Termination | Used to specify the number of days since the termination effective date for automatic reinstatement to take place. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| | <p>Note:</p> <p>If you configure the days since termination as 10 days for automatic reinstatement, the system adds days since termination to the termination effective date irrespective of whether termination effective date is elapsed or not. If the termination effective date is elapsed, the system does not perform the automatic reinstatement. In this case, you have to manually conduct the reinstatement process. The automatic reinstatement process is triggered only within the certain number of days once the termination has taken place.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> <p>This field is enabled only when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> | |
| Membership Notification Days Source | <p>Used to indicate the source from where the membership notification days information is received. The valid values are:</p> <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type <p>Note:</p> <p>By default, the Delinquency Process Type option type is selected.</p> <p>You need to configure the Derive Member Notification Days based on Business Rules (C1-DETMNDAYS) algorithm in the delinquency process type, if you select the Algorithm option from the Membership Notification Days Source field.</p> <p>This field is not applicable for Individual Delinquency purposes.</p> | Yes |
| Member Notification Days | <p>Used to specify the number of days after which the member receives notification.</p> <p>Note:</p> <p>This field is enabled only when you select the Delinquency Process Type option from the Termination Reinstatement Configuration Source field.</p> <p>You cannot specify a negative value in the Member Notification Days field. If you do not specify the member notification days, by default, it is set to zero (0).</p> <p>This field is not applicable for Individual Delinquency purposes.</p> | No |

2. Enter the required details in the **Termination and Reinstatement Configuration** section.

3. Click **Save**.

The automatic termination and reinstatement process is configured in a delinquency process type.

Setting the Termination Date Rules in a Delinquency Process Type

Procedure

To set the termination date rules in a delinquency process type:

1. Ensure that the **Termination Date Rule Priority** section is expanded when you are defining or editing a delinquency process type.

The **Termination Date Rule Priority** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|--|
| Priority | Used to specify the order in which the termination date rule is considered while defining a delinquency process type. | Yes (Conditional) Note: This field is required if you have selected an option from the Termination Date Rule field. |
| Termination Date Rule | Used to indicate the termination date rule used for calculating the termination effective date. | Yes (Conditional) Note: This field is required if you have specified a value in the Priority field. |

2. Enter the required details in the **Termination Date Rule Priority** section.
3. If you want to set more than one termination date rule in a delinquency process type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a termination date rule from a delinquency process type, click the **Delete** (🗑️) icon corresponding to the **Priority** field.

4. Click **Save**.

The termination date rule is set in a delinquency process type.

Setting the Reasons for Termination of an Automatic Reinstated Membership in a Delinquency Process Type

Prerequisites

To set the reasons for termination of an automatic reinstated membership in a delinquency process type, you should have:

- Termination reasons for automatic reinstatement of a membership defined in the system

Procedure

To set the reasons for termination of an automatic reinstated membership in a delinquency process type:

1. Ensure that the **Termination Reasons For Automatic Reinstatement** section is expanded when you are defining or editing a delinquency process type.

The **Termination Reasons For Automatic Reinstatement** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Termination Reason | Used to indicate the reason which is specified during the termination process. Note: The automatic reinstatement takes place only when a reason is specified during the termination process, and the specified reason appears in the Termination Reason list. If the specified reason does not appear in the Termination Reason list, you have to manually perform the reinstatement process. This field is not applicable for Individual Delinquency purposes. | No |

- Enter the required details in the **Termination Date Rule Priority** section.
- If you want to set more than one termination reason for an automatically reinstated membership in a delinquency process type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a termination reason for an automatically reinstated membership from a delinquency process type, click the **Delete (🗑)** icon corresponding to the **Termination Reason** field.

- Click **Save**.

The termination reason for an automatic reinstated membership is set in a delinquency process type.

Configuring the Trigger Date Recalculation Method in a Delinquency Process Type

Procedure

To configure the trigger date recalculation method in a delinquency process type:

- Ensure that the **Trigger Date Recalculation Configuration** section is expanded when you are defining or editing a delinquency process type.

The **Trigger Date Recalculation Configuration** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Trigger Date Recalculation On Hold Release Source | Used to indicate the source for recalculating the trigger date once the hold request is released. The valid values are: <ul style="list-style-type: none"> Algorithm Delinquency Process Type Note: By default, the Delinquency Process Type option is selected. You need to configure the Derive Recalculate Trigger Date option based on Business Rules (C1-DERRTDBR) algorithm in the delinquency process type, if you select the Algorithm option from the Trigger Date Recalculation On Hold Release Source field. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| Trigger Date Recalculation On Hold Release | <p>Used to indicate whether you want to recalculate the trigger date once the hold request is released. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the No option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required if you have selected the Delinquency Process Type option from the Trigger Date Recalculation On Hold Release Source field.</p> |
| Trigger Date Recalculation On Resume Source | <p>Used to indicate the source for recalculating the trigger date once the hold request is resumed. The valid values are:</p> <ul style="list-style-type: none"> • Algorithm • Delinquency Process Type <p>Note: By default, the Delinquency Process Type option is selected. You need to configure the Derive Recalculate Trigger Date option based on Business Rules (C1-DERRTDBR) algorithm in the delinquency process type, if you select the Algorithm option from the Trigger Date Recalculation On Resume Source field.</p> | <p>Yes</p> |
| Trigger Date Recalculation On Resume | <p>Used to indicate whether you want to recalculate the trigger date once the hold request is resumed. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the No option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required if you have selected the Delinquency Process Type option from the Trigger Date Recalculation On Resume field.</p> |

Note: The system conducts trigger date recalculation in the following scenarios:

- When the delinquency process is kept on hold for certain days and is later released either on hold end date or through manual intervention, the system determines the total number of days (hold days) the delinquency process was kept on hold. The system adds the calculated days to the trigger date which was calculated earlier and calculates the trigger date once again. This recalculated trigger date is used to trigger those events which were not triggered as the delinquency process was kept on hold.
- When you make a payment against a bill for which a delinquency process is created, the system cancels the delinquency process. If the payment made against a bill gets canceled due to any reason after some days, the system checks whether there are any overdue bills for the respective account. If the overdue bills exist, the delinquency process which was canceled earlier is resumed. Once the delinquency process is resumed, the system determines the total number of days (extra days) the delinquency process was in canceled state. The system adds the extra days to the trigger date which was calculated earlier and calculates the trigger date once again. This recalculated trigger date is used to trigger those events which were not triggered as the delinquency process was canceled.

2. Enter the required details in the **Trigger Date Recalculation Configuration** section.
3. Click **Save**.

The trigger date recalculation method is configured in a delinquency process type.

Configuring the Approval Process in a Delinquency Process Type

Prerequisites

To configure an approval process in a delinquency process type, you should have:

- Required approval profiles defined in the application
- Approval To Do Type and Approval To Do Role defined in the application

Procedure

To configure an approval process in a delinquency process type:

1. Ensure that the **Approval Configuration** section is expanded when you are defining or editing a delinquency process type.

The **Approval Configuration** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|---|
| Approval Required | Used to indicate whether an approval is required for certain manual actions performed on the delinquency process created using the delinquency process type. | No |
| Approval To Do Type | Used to indicate the To Do entry created of the specified To Do type. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do Type appears next to the Approval To Do Type field.</p> <p>This field appears when the Approval Required check box is selected.</p> | <p>Note: This field is required if you have selected the Approval Required check box.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Approval To Do Role | <p>Used to indicate that users with the specified To Do Role can only perform the following actions. The valid values are:</p> <ul style="list-style-type: none"> • Approve • Reject • Withdraw <p>Note: The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the Approval Required check box is selected.</p> | No |
| Approval Action | <p>Used to indicate the set of actions for which the approval process must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • Cancel • Edit Hold • Edit Trigger Date • Hold • Release Hold • Request Reinstatement • Skip Event • Trigger Event <p>Note: This field appears when the Approval Required check box is selected.</p> | No |

2. Enter the required details in the **Approval Configuration** section.
3. If you want to add more than one approval action for an approval process in a delinquency process type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an approval action from for an approval process in a delinquency process type, click the **Delete (🗑)** icon corresponding to the **Approval Action** field.

4. Click **Save**.

The approval process is configured in a delinquency process type.

Defining a Characteristic for a Delinquency Process Type

Prerequisites

To define a characteristic for a delinquency process type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Delinquency Process**).

Procedure

To define a characteristic for a delinquency process type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a delinquency process type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Delinquency Process . | Note: This field is required when you are defining a characteristic for the delinquency process type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required when you are defining a characteristic for the delinquency process type. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the delinquency process type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the delinquency process type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Delinquency Process Type

Prerequisites

To edit a delinquency process type, you should have:

- Delinquency event types defined in the application.
- Algorithms defined using the **C1-CUAOAB**, **C1-CANDELPRC**, **C1-MEMBDLQ**, **C1-HLDDELPRC**, **C1-RECALCHLD**, **C1-DERGRBR**, **C1-DERMLNBR**, **C1-DERTRBR**, **C1-DERWDBR**, **C1-DERTROBR**, **C1-DERMNDAYS**, and **C1-DERRTDBR** algorithm types.
- Delinquency process type business objects defined in the application.
- Delinquency process business objects defined in the application.
- Approval To Do Type and Approval To Do Role defined in the application.

Procedure

To edit a delinquency process type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Process Type**.

A sub-menu appears.

- Click the **Search** option from the **Delinquency Process Type** sub-menu.

The **Delinquency Process Type** screen appears.

- In the **Delinquency Process Type** zone, click the **Edit**  icon in the **Edit** column corresponding to the delinquency process type whose details you want to edit.

The **Delinquency Process Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the delinquency process type.
- Delinquency Process Type Events** - Used to define an event for the delinquency process type.
- Algorithms** - Used to associate an algorithm with the delinquency process type.
- Grace Period Configuration** - Used to configure the grace period for the delinquency process type.
- Termination and Reinstatement Configuration** - Used to configure the termination and reinstatement for the delinquency process type.
- Termination Date Rule Priority** - Used to define the termination date rule priority for the delinquency process type.
- Termination Reasons For Automatic Reinstatement** - Used to define the termination reason for an automatic reinstatement for the delinquency process type.
- Trigger Date Recalculation Configuration** - Used to configure the trigger date recalculation for the delinquency process type.
- Approval Configuration** - Used to configure an approval for the delinquency process type.
- Characteristics** - Used to define the characteristics for the delinquency process type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Delinquency Process Type | Displays the delinquency process type. | Not applicable |
| Delinquency Entity Type | Used to specify the entity type for which the delinquency process type is created. | No |
| Delinquency Process Business Object | Indicates the business object using which you are defining the delinquency process type. | Yes |
| Description | Used to specify the description for the delinquency process type. | No |
| Detailed Description | Used to specify additional information about the delinquency process type. | No |
| Status | Used to indicate the status of the delinquency process type. The valid values are: <ul style="list-style-type: none"> Active Inactive | No |
| | Note: By default, the Active option is selected. | |
| Collection Object | Used to indicate those bills which are overdue on the basis of bill or due date. The valid value is: | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| | <ul style="list-style-type: none"> • Bill <p>Note: At present, the system supports Bill as the collection entity.</p> | |
| Automatic Termination and Reinstatement Required | <p>Used to indicate whether automatic termination and reinstatement is required or not for the delinquency process.</p> <p>Note: At present, automatic reinstatement is not applicable for individual delinquency.</p> | No |
| Delinquency Event Trigger Mode | <p>Used to indicate the mode in which the delinquency event must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • Automatic • Manual • Manual or Automatic <p>Note: You must specify the delinquency event trigger mode which is already defined in the system.</p> | No |
| Trigger Date Calculation Mode | <p>Used to indicate the mode in which the date calculation must be triggered. The valid values are:</p> <ul style="list-style-type: none"> • Latest Bill Due Date with Grace Period • Usage Basis <p>Note: By default, this field is disabled. It is enabled only when you select the Automatic option from the Delinquency Event Trigger Mode list.</p> | Yes (Conditional) |
| Usage Basis | <p>Used to indicate the option based on which the date calculation must be take place. The valid values are:</p> <ul style="list-style-type: none"> • Delinquency Process Creation Date • Grace Start Date • Latest Bill Date • Latest Bill Due Date <p>Note: By default, this field is disabled. It is enabled only when you select the Usage Basis option from the Trigger Date Calculation Mode list.</p> | Yes (Conditional) |
| Consider Work Days | Used to indicate whether you want to consider the work days for delinquency process or not. | No |

Tip: Alternatively, you can edit a delinquency process type by clicking the **Edit** button in the **Delinquency Process Type** zone.

5. Enter the required details in the **Main** section.
6. Configure an event for the delinquency process type, if required.

7. Associate the required algorithms with a delinquency process type.
8. Configure the grace period for the delinquency process type, if required.
9. Configuring the automatic termination and reinstatement process in a delinquency process type, if required.
10. Set the termination date rules in a delinquency process type, if required.
11. Set the reasons for terminating an automatic reinstated membership in a delinquency process type, if required.
12. Configure the trigger date recalculation method in a delinquency process type, if required.
13. Configure the approval process in a delinquency process type, if required.
14. Define characteristics for the delinquency process type, if required.
15. Click **Save**.

The changes made to the delinquency process type are saved.

Deleting a Delinquency Process Type

Procedure

To delete a delinquency process type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Delinquency Process Type**.
A sub-menu appears.
3. Click the **Search** option from the **Delinquency Process Type** sub-menu.
The **Delinquency Process Type** screen appears.
4. In the **Delinquency Process Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the delinquency process type that you want to delete.
A message appears confirming whether you want to delete the delinquency process type.

Note: You can delete a delinquency process type when a delinquency process is not created using the delinquency process type.

Tip: Alternatively, you can delete a delinquency process type by clicking the **Delete** button in the **Delinquency Process Type List** zone.

5. Click **OK**.
The delinquency process type is deleted.

Delinquency Process (Used for Searching)

The **Delinquency Process** screen allows you to search for a delinquency process using various search criteria. It contains the following zone:

- [Search Delinquency Process](#) on page 3869

Through this screen, you can navigate to the following screen:

- [Delinquency Process \(Used for Viewing\)](#) on page 3873

Search Delinquency Process

The **Search Delinquency Process** zone allows you to search for a delinquency process using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for a delinquency process using the process details, or person, or account, or membership details. The valid values are: <ul style="list-style-type: none"> • Process Details • Person/Account/Membership Details | Yes |
| | Note: By default, the Process Details option is selected. | |
| Delinquency Process ID | Used to search a delinquency process using the delinquency process ID. | No |
| | Note: This field appears when the Process Details option is selected from the Search By list. | |
| Delinquency Process Type | Used to search delinquency processes with a particular delinquency process type. | No |
| Delinquency Event Type | Used to search delinquency processes with a particular delinquency event type. | No |
| | Note: This field appears when the Process Details option is selected from the Search By list. | |
| Status | Used to search delinquency processes with a particular status. The valid values are: <ul style="list-style-type: none"> • Canceled • Completed • On Hold | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Initiated • Delinquency In Progress • Pending Reinstatement • Pending Termination • Customer Reinstated • Reinstatement Payment/Adjustment Canceled • Automatic Reinstatement Stopped • Request Reinstatement • Customer Terminated | |
| Event Preview Status | <p>Used to search delinquency processes with a particular event preview status. The valid values are:</p> <ul style="list-style-type: none"> • Completed • In Progress • Not Required • Pending • Pending Evaluation <p>Note: This field appears when the Process Details option is selected from the Search By list.</p> | No |
| Created From | Used to search delinquency processes which are created from a particular date onwards. | No |
| Created Until | Used to search delinquency processes which are created till a particular date. | No |
| Collection Class | <p>Used to search delinquency processes with a particular collection class.</p> <p>Note: This field appears when the Process Details option is selected from the Search By list.</p> | No |
| Person ID | Used to delinquency processes which are created for a specific person. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears, where you can view the details of the respective person.</p> <p>The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search (🔍) icon, the Person Search window appears. On specifying the person, the description of the person appears corresponding to the Person ID field.</p> <p>This field appears when the Person/Account/Membership Details option is selected from the Search By list.</p> | |
| Account ID | <p>Used to delinquency processes which are created for a specific account.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Account screen appears, where you can view the details of the respective account.</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search (🔍) icon, the Account Search window appears. On specifying the person, the description of the account appears corresponding to the Account ID field.</p> <p>This field appears when the Person/Account/Membership Details option is selected from the Search By list.</p> | No |

Note: You must specify at least one search criterion while searching for a delinquency process.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------------|---|
| Delinquency Process Information | <p>Displays information about the delinquency process.</p> <p>Note: It has a link. On clicking the link, the Delinquency Process screen appears where you can view the details of the respective delinquency process.</p> |
| Person Identifier | Indicates the person identifier associated with the delinquency process. |
| Person Name | Indicates the person associated with the delinquency process. |
| Delinquency Entity | Indicates the entity for which the delinquency process is created. |
| Create Date/Time | Displays the date and time when the delinquency process is created. |
| Status | Indicates the status of the delinquency process. The valid values are: |

| Column Name | Column Description |
|------------------------|---|
| | <ul style="list-style-type: none"> • Canceled • Completed • On Hold • Initiated • Delinquency In Progress • Pending Reinstatement • Pending Termination • Customer Reinstated • Reinstatement Payment/Adjustment Canceled • Automatic Reinstatement Stopped • Request Reinstatement • Customer Terminated |
| Cancel | On clicking the Cancel () icon, the Initiate Cancellation of Delinquency Process screen appears where you can specify the details why you want to initiate cancelation of the selected delinquency process. |
| Request Reinstatement | On clicking the Request Reinstatement () icon, the Initiate Reinstatement for Delinquency Process screen appears where you can specify the reason why you want to initiate reinstatement of the group membership. Note: This icon appears only when the delinquency process is created for a group membership. |
| Hold | On clicking the Hold () icon, the Initiate Hold for Delinquency Process screen appears where you can specify the details why you want to initiate hold for the selected delinquency process. |
| Release | On clicking the Release () icon, the Initiate Release for Delinquency Process screen appears where you can specify the details why you want to initiate release for the selected delinquency process. |
| Delinquency Process ID | Displays the delinquency process ID. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Delinquency Process ID**, **Delinquency Process Type**, **Delinquency Event Type**, **Status**, **Event Preview Status**, **Created From**, **Created Until**, and **Collection Class**) available in the **Filter** area. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Searching for a Delinquency Process**Prerequisites**

To search for a delinquency process, you should have:

- Delinquency process business object defined in the application.
- Delinquency process types defined in the application.
- Delinquency event types defined in the application.

Procedure

To search for a delinquency process:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Process**.
The **Delinquency Process** screen appears.
3. Enter the search criteria in the **Search Delinquency Process** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of delinquency processes that meet the search criteria appears in the **Search Results** section.

Delinquency Process (Used for Viewing)

The **Delinquency Process** screen allows you to:

- Edit the details of a delinquency process

- View the additional attributes of a delinquency process
- View the bills of a delinquency process
- View the events of a delinquency process
- View the approval details of a delinquency process
- View the hold details of a delinquency process
- Approve or reject the manual actions performed on a delinquency process
- Withdraw the manual actions performed on a delinquency process
- Cancel a delinquency process
- Hold a delinquency process
- Release a delinquency process
- Request reinstatement of a delinquency process for a group membership

Note: Reinstatement is not applicable for **Individual Delinquency** purposes.

- View the log of a delinquency process
- Add a log entry for a delinquency process

It consists of the following zones:

- [Delinquency Process Details](#) on page 3874
- [Additional Attributes](#) on page 3876
- [Bills](#) on page 3876
- [Events](#) on page 3876
- [Event Notifications](#) on page 3878
- [Approval Details](#) on page 3878
- [Hold Details](#) on page 3880
- [Log](#) on page 3880

Delinquency Process Details

The **Delinquency Process Details** zone displays the details of the delinquency process. It contains the following fields:

| Field Name | Field Description |
|--------------------------|---|
| Delinquency Process ID | Displays the delinquency process ID. |
| Delinquency Process Type | Indicates the delinquency process type using which the delinquency process is created. |
| Delinquency Entity | Indicates the entity for which the delinquency process is created. |
| Collection Class | Indicates the collection class of a person or an account for the delinquency process. |
| Grace Period (In Days) | Displays the number of days which are used to define the grace period end date for the delinquency process. |

| Field Name | Field Description |
|-------------------------------|--|
| | <p>Note:</p> <p>For example, if a delinquency process contains bills with the latest bill due date as 01-Jan-2023, the system considers the latest bill due date as the grace period start date which is 01-Jan-2023. Now, if you have configured the grace period as 30 days, the system determines the grace period end date as 31-Jan-2023 by using the following formula:</p> $\text{Grace Period End Date} = \text{Grace Period Start Date} + \text{Grace Period}$ |
| Grace Start Date | Indicates the date from when the grace period is effective for the delinquency process. |
| Grace End Date | Indicates the date till when the grace period is effective for the delinquency process. |
| Delinquency Due Date | Indicates the earliest bill due date from when the delinquency process is created. |
| Termination Date Rule | Indicates the termination date rule used for calculating the termination effective date. |
| Termination Trigger Date | Indicates the date on which the termination of an individual membership is triggered. |
| Termination Date | Indicates the date from when the termination is effective. |
| | Note: Termination can take place in retro as well as in advance. |
| Termination Reason | Indicates the reason for initiating the termination process. |
| Status | Indicates the status of the delinquency process. The valid values are: <ul style="list-style-type: none"> • Canceled • Completed • On Hold • Initiated • Delinquency In Progress • Pending Reinstatement • Pending Termination • Customer Reinstated • Reinstatement Payment/Adjustment Canceled • Automatic Reinstatement Stopped • Request Reinstatement • Customer Terminated |
| Comments | Displays the comments added for the delinquency process. |
| Reinstatement Trigger Date | Indicates the date on which reinstatement is triggered. |
| Automatic Reinstatement Count | Displays the maximum number of times reinstatement happens systematically. |

Additional Attributes

The **Additional Attributes** zone displays additional details of the delinquency process. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Effective Date | Displays the date from when the characteristic is effective for the delinquency process. |
| Characteristic Type | Indicates the characteristic type for the delinquency process. |
| Characteristic Value | Displays the value of the characteristic type. |
| Description | Displays the description of the characteristic type. |

You can filter the list using search criteria (such as, **Effective Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Bills

The **Bills** zone displays the bills that are added in the delinquency process. It contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Bill ID | Displays the bill ID. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |
| Bill Date | Displays the date when the bill was generated. |
| Due Date | Displays the date when the bill is due for payment. |
| Status | Indicates the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete |
| Original Amount | Displays the bill amount. |
| Outstanding Amount | Displays the unpaid amount of the bill. |
| Account Information | Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Events

The **Events** zone displays the events that are created in the delinquency process. It contains the following columns:

| Column Name | Column Description |
|--------------|---|
| Trigger Date | Displays the trigger date of the event. |

| Column Name | Column Description |
|------------------------|---|
| Delinquency Event Type | Displays the delinquency event type. |
| | Note: It has a link. On clicking the link, the Delinquency Event Type screen appears where you can view the details of the delinquency event type. |
| Event Status | <p>Indicates the event status. The valid values are:</p> <ul style="list-style-type: none"> • Completed • Pending • Pending Evaluation • Pending Contact Creation • Skipped |
| Preview Date | Displays the date from when the preview status of the event is set to In Progress . |
| | <p>Note:</p> <p>The event's preview status remains as In Progress till the event is triggered. Once the event is triggered, the event's preview status is updated to Completed.</p> <p>The system calculates the preview date based on preview days. The preview date is calculated using the following formula:</p> $\text{Preview Date} = \text{Trigger Date} - \text{Preview Days}$ |
| Event Preview Status | <p>Indicates the preview status of the event. The valid values are:</p> <ul style="list-style-type: none"> • Completed • In Progress • Not Required • Pending Evaluation • Pending |
| Status Update | Displays the date when the status of the event was last updated. |
| Trigger Event | <p>On clicking the Trigger Event () icon, the following process takes place:</p> <p>The system invokes the Monitor Completed Event algorithm of the last completed event, if there is any. If the Monitor Completed Event algorithm returns with a false value, the system displays a warning message with a confirmation dialog box. If you click Yes, the system simply triggers the current event. If there are no pending events or if the last completed event does not contain the Monitor Completed Event algorithm, the system triggers the current event.</p> <p>Now, while triggering the event, the system performs the following actions:</p> <ul style="list-style-type: none"> • The Event Activation algorithm is invoked. • The event status is updated from Pending to Completed. • The Status Update column is updated with the processing date and user ID. |
| Skip Event | <p>On clicking the Skip Event () icon, the system performs the following actions:</p> <ul style="list-style-type: none"> • The event status is updated from Pending to Skipped. |

| Column Name | Column Description |
|----------------------|---|
| | <ul style="list-style-type: none"> The Status Update column is updated with the processing date and user ID. |
| Edit Trigger Date | On clicking the Edit Trigger Date  icon, the Delinquency Process Update Event Trigger Date screen appears where you can set the new trigger date. |
| Approval In Progress | Indicates whether the event is assigned to an approver for an approval. The valid values are: <ul style="list-style-type: none"> Yes No |

Event Notifications

The **Event Notifications** zone displays the notifications that are created for an event. It contains the following columns:

| Column Name | Column Description | | | | | | |
|--|---|-------|---------|-----------------------------------|---|--|---|
| Notification Type | Indicates the type of notification sent when the event is triggered. The valid values are: <ul style="list-style-type: none"> To Do Customer Contact | | | | | | |
| Notification Information | Displays information about the notification. The system behaves in the following way: <table border="1" data-bbox="560 919 1461 1234"> <thead> <tr> <th>If...</th> <th>Then...</th> </tr> </thead> <tbody> <tr> <td>Notification Type is To Do</td> <td>On clicking the link, the To Do Entry screen appears where you can view the details of the respective To Do.</td> </tr> <tr> <td>Notification Type is Customer Contact</td> <td>On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer.</td> </tr> </tbody> </table> | If... | Then... | Notification Type is To Do | On clicking the link, the To Do Entry screen appears where you can view the details of the respective To Do. | Notification Type is Customer Contact | On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer. |
| If... | Then... | | | | | | |
| Notification Type is To Do | On clicking the link, the To Do Entry screen appears where you can view the details of the respective To Do. | | | | | | |
| Notification Type is Customer Contact | On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer. | | | | | | |

Note:

If a delinquency event type is created for terminating an individual membership, the system creates an outbound message whenever the respective event is triggered. Simultaneously, the system also creates an entry related to the outbound message in the **Log** zone.

The **Events Notifications** zone does not appear by default. It appears when you click the **Broadcast**  icon corresponding to an event in the **Events** zone.

Approval Details

The **Approval Details** zone displays the approval information for the delinquency process. It contains the following columns:

| Column Name | Column Description |
|-----------------|--|
| Created By Info | Displays the user who has created an approval entry. |
| Approval Action | Indicates the action taken by an approver on the approval entry. The valid value is: <ul style="list-style-type: none"> Cancel Edit Hold |

| Column Name | Column Description |
|------------------------|--|
| | <ul style="list-style-type: none"> Edit Trigger Date Hold Request Reinstatement Release Hold Skip Event Trigger Event |
| Delinquency Event Type | Displays the delinquency event type of the event for which an approval is requested. |
| Status | Indicates the current status of an approval request. The valid values are: <ul style="list-style-type: none"> Approval In Progress Approved Rejected Withdrawn Expired |
| Status Update | Displays the date and time when the approval request is updated. |
| Comments | On clicking the Comments  icon, the Delinquency Process Approval Information screen appears where you can specify additional comments for the delinquency process. |
| View | On clicking the View  icon, the Delinquency Process Approval Information window appears displaying the approval details. Note: You can also approve or reject the approval entry through this screen. |
| Approve | On clicking the Approve  icon, the Confirmation window appears where you approve the approval entry. Note: The Approve icon appears only for those users who have a specified To Do Role. |
| Reject | On clicking the Reject  icon, the Confirmation window appears where you reject the approval entry. Note: The Reject icon appears only for those users who have a specified To Do Role. |
| Withdraw | On clicking the Withdraw  icon, the Confirmation window appears where you can withdraw the approval entry. Note: The Withdraw icon appears only for those users who have a specified To Do Role. |
| To Do | Displays the To Do that is generated when the approver when an approval request is created. Note: It contains a link. On clicking the link, the To Do Entry screen appears where you can view the details of the respective To Do. |

Hold Details

The **Hold Details** zone lists the active delinquency process hold records that are kept on hold. It contains the following columns:

| Column Name | Column Description |
|---------------------------------|---|
| Hold Start Date | Displays the date from when the hold is effective for the delinquency process. |
| Hold End Date | Displays the date till when the hold is effective for the delinquency process. |
| Delinquency Process Hold Status | Indicates the status of the record on hold. The valid value is: <ul style="list-style-type: none"> Active Completed |
| Creation Mode | Indicates the mode in which the delinquency process hold record is created. The valid values are: <ul style="list-style-type: none"> Automatic Manual |
| Edit | On clicking the Edit  icon, the Delinquency Process Hold Information screen appears where you can edit the hold details. |

Note: This zone displays only those records that have the **Delinquency Process Hold Status** set to **Active**.

Log

The **Log** zone lists the complete trail of actions performed on the delinquency process. It contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| Creation Date Time | Displays the date and time when the action was performed on the delinquency process. |
| Details | Displays the details about the action performed on the delinquency process. |
| User | Indicates the user who has performed the action on the delinquency process. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is created when the action is performed on the delinquency process. |
| Status Reason | Indicates the reason why the offset request is rejected or unapplied (i.e. canceled). |

Note: You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Log** zone.

Editing a Delinquency Process

Prerequisites

To edit a delinquency process, you should have:

- Delinquency control defined in the application
- Delinquency event type defined in the application
- Delinquency process type and delinquency process business objects defined in the application

Procedure

To edit a delinquency event type:

1. Search for the delinquency process in the **Delinquency Process Search** screen.
2. In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process whose details you want to edit.

The **Delinquency Process** screen appears.

3. Click the **Edit** button in the upper right corner of the **Delinquency Process Information** section.

The **Delinquency Process** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the delinquency process. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Delinquency Process | Displays information about the delinquency process. | Not applicable |
| Delinquency Process Type | Indicates the delinquency process type using which the delinquency process is created. | Not applicable |
| Delinquency Entity | Indicates the entity for which the delinquency process is created. | Not applicable |
| Termination Trigger Date | Used to specify the trigger date for terminating the individual membership. Note: The Termination Trigger Date is calculated by the event activation algorithm configured on the event which terminates the individual membership. This field appears only when the termination trigger date is configured on the respective event. | No |
| Comments | Used to specify additional information about the delinquency process. | No |

- **Characteristics** - Used to define the characteristics for the delinquency process. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to indicate the date from when the delinquency process is effective. | No |
| Characteristic Type | Used to indicate the characteristic type for the delinquency process. Note: The list includes only those characteristic types where the characteristic entity is set to Delinquency Process . | Yes (Conditional) Note: This field is required when you are editing the delinquency process details. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are editing the delinquency process details. |

Note: The **Edit** button appears when the status of the delinquency process is either **Initiated**, **Delinquency In Progress**, or **On Hold**.

- Enter the required details in the **Main** section.
- Define characteristics for the delinquency process, if required.
- If you want to define more than one characteristic for the delinquency process, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the delinquency process, click the **Delete (🗑)** icon corresponding to the characteristic.

- Click **Save**.
The changes made to the delinquency process are saved.

Holding a Delinquency Process

Prerequisites

To hold a delinquency process, you should have:

- Status reasons defined in the application.

Procedure

To hold a delinquency process:

- Search for the delinquency process in the **Delinquency Process Search** screen.
- In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process that you want to hold.

The **Delinquency Process** screen appears.

- Click the **Hold** button in the upper right corner of the **Delinquency Process Information** section.

The **Initiate Hold for Delinquency Process** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Delinquency Process Information | Displays information about the delinquency process. | Not applicable |
| Hold Start Date | Used to indicate the date from when the hold is effective for the delinquency process. | Not applicable |
| | Note: The hold start date cannot be greater than the hold end date. By default, the system date appears in this field. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Hold End Date | Used to indicate the date till when the hold is effective for the delinquency process. | Yes |
| | Note: The hold end date cannot be earlier than the hold start date | |
| Status Reason | Used to indicate the reason why you want to hold the delinquency process. | Yes |
| Comments | Used to specify additional information about the hold. | No |

Tip: Alternatively, you can hold a delinquency process by clicking the **Hold**  icon in the **Hold** column corresponding to the delinquency process.

Note: The **Hold** button appears when the status of the delinquency process is either **Initiated, Delinquency In Progress**, or **Pending Termination**.

- Select the reason for hold from the **Status Reason** list.
- Enter the comments in the **Comments** field, if required.
- Click **Save**.

The status of the delinquency process is changed to **On Hold**.

Canceling a Delinquency Process

Prerequisites

To cancel a delinquency process, you should have:

- Cancellation reasons defined in the application.

Procedure

To cancel a delinquency process:

- Search for the delinquency process in the **Delinquency Process Search** screen.
- In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process that you want to cancel.

The **Delinquency Process** screen appears.

- Click the **Cancel** button in the upper right corner of the **Delinquency Process Information** section.

The **Initiate Cancel for Delinquency Process** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Delinquency Process Information | Displays information about the delinquency process. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Status Reason | Used to indicate the reason why you want to cancel the delinquency process. | Yes |
| Comments | Used to specify additional information while canceling the delinquency process. | No |

Tip: Alternatively, you can cancel a delinquency process by clicking the **Cancel** (✕) icon in the **Cancel** column corresponding to the delinquency process.

Note: The **Cancel** button appears when the status of the delinquency process is either **Initiated, Delinquency In Progress**, or **On Hold**.

4. Select the cancellation reason from the **Status Reason** list.
5. Enter the comments in the **Comments** field, if required.
6. Click **Save**.

The status of the delinquency process is changed to **Canceled**.

Adding a Log Entry for a Delinquency Process

Procedure

To add a log entry for a delinquency process:

1. Search for the delinquency process in the **Delinquency Process Search** screen.
2. In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process for which you want to add a log entry.

The **Delinquency Process** screen appears.

3. Click the **Add Log Entry** link in the upper right corner of the **Log** zone.

The **Add Delinquency Process Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Delinquency Process Information | Displays information about the delinquency process. | Not applicable |
| Log Details | Used to specify additional comments for the delinquency process. | Yes |

4. Enter the comments in the **Log Details** field.
5. Click **Save**.

The log entry is added in the **Log** zone.

Triggering an Event in a Delinquency Process

Prerequisites

To trigger an event in a delinquency process, you should have:

- Delinquency event types defined in the application.

Procedure

To trigger an event in a delinquency process:

1. Search for the delinquency process in the **Delinquency Process Search** screen.
2. In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process whose event you want to trigger.

The **Delinquency Process** screen appears.

3. Expand the **Events** zone.
4. Click the **Trigger Events**  icon in the **Trigger Events** column corresponding to the event which you want to trigger.

The system performs the following set of actions:

- The respective **Event Activation** algorithm is invoked.
- The event status is updated from **Pending** to **Completed**.
- The **Status Update** column is updated with the processing date and the user ID.

Skipping an Event in a Delinquency Process

Prerequisites

To skip an event in a delinquency process, you should have:

- Delinquency event types defined in the application.

Procedure

To skip an event in a delinquency process:

1. Search for the delinquency process in the **Delinquency Process Search** screen.
2. In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process whose event you want to skip.

The **Delinquency Process** screen appears.

- Expand the **Events** zone.
- Click the **Trigger Events** () icon in the **Trigger Events** column corresponding to the event which you want to skip.

The system performs the following set of actions:

- The event status is updated from **Pending** to **Skipped**.
- The **Status Update** column is updated with the processing date and the user ID.

Editing the Trigger Date of an Event in a Delinquency Process

Procedure

To edit the trigger date of an event in a delinquency process:

- Search for the delinquency process in the **Delinquency Process Search** screen.
- In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process whose event trigger date you want to edit.

The **Delinquency Process** screen appears.

- Expand the **Events** zone.
- Click the **Trigger Events** () icon in the **Edit Trigger Date** column corresponding to the event whose event trigger date you want to edit.

The **Delinquency Process Update Event Trigger Date** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Trigger Date | Displays the date when the event is scheduled to trigger. | Not applicable |
| New Trigger Date | Used to indicate the latest date on which the event is scheduled to trigger. | Yes |
| | Note: The new trigger date cannot be earlier than the system date. | |

- Click **Save**.

The changes made to the event trigger date in a delinquency process are saved.

Approving an Event of a Delinquency Process

Prerequisites

To approve an event of a delinquency process, you should have:

- Delinquency event defined in the application.
- To Do Type and To Do Role defined in the application.

Procedure

To approve an event of a delinquency process:

1. Search for the delinquency process in the **Delinquency Process Search** screen.
2. In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process whose event you want to approve.

The **Delinquency Process** screen appears.

3. Ensure that the **Approval Details** zone is expanded.
4. Click the **Approve**  icon in the **Approve** column corresponding to the approval entry which you want to approve.

The confirmation dialog appears confirming whether you want to approve the approval entry.

5. Click **OK**.

The status of the approval entry is changed from **Approval In Progress** to **Approved**.

Rejecting an Event of a Delinquency Process

Prerequisites

To reject an event of a delinquency process, you should have:

- Delinquency event defined in the application.
- To Do Type and To Do Role defined in the application.

Procedure

To reject an event of a delinquency process:

1. Search for the delinquency process in the **Delinquency Process Search** screen.
2. In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process whose event you want to reject.

The **Delinquency Process** screen appears.

3. Ensure that the **Approval Details** zone is expanded.
4. Click the **Reject**  icon in the **Reject** column corresponding to the approval entry which you want to reject.
The confirmation dialog appears confirming whether you want to reject the approval entry.
5. Click **OK**.

The status of the approval entry is changed from **Approval In Progress** to **Rejected**.

Withdrawing an Event of a Delinquency Process

Prerequisites

To withdraw an event of a delinquency process, you should have:

- Delinquency event defined in the application.
- To Do Type and To Do Role defined in the application.

Procedure

To withdraw an event of a delinquency process:

1. Search for the delinquency process in the **Delinquency Process Search** screen.
2. In the **Search Results** section, click the link in the **Delinquency Process Information** column corresponding to the delinquency process whose event you want to withdraw.

The **Delinquency Process** screen appears.

3. Ensure that the **Approval Details** zone is expanded.
4. Click the **Withdraw**  icon in the **Withdraw** column corresponding to the approval entry which you want to withdraw.

The confirmation dialog appears confirming whether you want to withdraw the approval entry.

5. Click **OK**.

The status of the approval entry is changed from **Approval In Progress** to **Withdrawn**.

Membership Termination Request Outbound Message

Oracle Revenue Management and Billing enables you to send the membership termination outbound message through the **C1-MemberTermRequest** business object. This business object is used to setup an outbound message type by invoking the **Individual Membership Outbound Message Trigger (C1-MTOMT)** batch whenever the membership termination process is initiated. The membership termination process is initiated when an individual subscriber is delinquent.

| For more information on... | See... |

Membership Termination Outbound Message Schema

The following code snippet illustrates how the tags are nested in the membership termination outbound message schema:

```
<schema>
  <xmlRawResponse></xmlRawResponse>
  <xmlResponse></xmlResponse>
  <outboundMessageId></outboundMessageId>
  <notificationExternalId></notificationExternalId>
  <type></type>
  <processingMethod></processingMethod>
  <status></status>
  <extract></extract>
  <batchControl></batchControl>
  <batchNumber></batchNumber>
  <creationDateTime></creationDateTime>
  <messageCategory></messageCategory>
  <messageNumber></messageNumber>
  <processSignature></processSignature>
  <version></version>
  <xmlSource>
    <healthPlanCode></healthPlanCode>
    <externalMembershipId></externalMembershipId>
    <membershipId></membershipId>
    <delinquencyProcessId></delinquencyProcessId>
    <mainSubscriberPersonId></mainSubscriberPersonId>
    <mainSubscriberPersonIdentifierType></mainSubscriberPersonIdentifierType>
    <mainSubscriberPersonIdentifier></mainSubscriberPersonIdentifier>
    <mainSubscriberName></mainSubscriberName>
    <mainSubscriberRelationshipType></mainSubscriberRelationshipType>
    <startDate></startDate>
    <endDate></endDate>
    <paidThroughDate></paidThroughDate>
    <terminateDate></terminateDate>
    <terminateReason></terminateReason>
    <terminateReasonDescription></terminateReasonDescription>
    <billedAmount></billedAmount>
    <paidAmount></paidAmount>
  </xmlSource>
  <errorDetails></errorDetails>
  <ilmDate></ilmDate>
  <isEligibleForArchiving></isEligibleForArchiving>
</schema>
```

Membership Termination Outbound Message XML Format

Note:

We recommend you to refer the membership termination outbound message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

At present, the membership termination outbound message is not delivered to the external system. The mechanism to deliver the membership termination outbound message is handled by the implementation team.

| Tag Name | Tag Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| schema | Used to specify the tags of a membership termination outbound message. | Yes |
| xmlRaw Response | Displays the unchanged information from an external source system when: <ul style="list-style-type: none"> • A response XSL file is defined on the external system. • An outbound message type is associated with the outbound message. | Not Applicable |
| | Note: At present, this tag does not contain any information. | |
| xmlResponse | Displays the information from an external source system which is invoked by the real-time message. Note: At present, this tag does not contain any information. | Not Applicable |
| outbound MessageId | Used to specify the outbound message ID. | Not Applicable |
| notification ExternalId | Used to specify the external source system ID. | Not Applicable |
| type | Used to specify the outbound message type using which you want to create the membership termination outbound message. Note: You must specify an outbound message type which is already defined in the system. | Not Applicable |
| processingMethod | Used to specify the method implemented in processing the membership termination outbound message. The valid value is: <ul style="list-style-type: none"> • Batch | Not Applicable |
| status | Indicates the status of the outbound message. | Not Applicable |
| extract | Indicates the action for processing the records in the batch. The valid values are: <ul style="list-style-type: none"> • Can be Extracted - Used when the records are created with a processing method of a batch. • Not to be Extracted - Used when the processing should be held for some reason. | Not Applicable |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|--|--|---|
| batchControl | Used to indicate the batch control for the membership termination outbound message. | Not Applicable |
| batchNumber | Used to specify the batch number. | Not Applicable |
| creation DateTime | Used to specify the date and time when the membership termination outbound message is processed. | Not Applicable |
| messageCategory | Used to specify the category to which the error message belongs. | Not Applicable |
| messageNumber | Used to specify the error code. | Not Applicable |
| processSignature | Used to specify the process signature. | Not Applicable |
| version | Used to specify the version. | Not Applicable |
| xmlSource | Used to specify the tag information for the membership termination outbound message. | Yes |
| delinquency ProcessId | Used to specify the delinquency process ID. | Yes |
| health PlanCode | Used to specify the unique identifier for the health plan. | Yes |
| external MembershipId | Used to specify the external membership ID. Note: Here, you need to specify a membership ID which is maintained in the external source system. | No |
| membershipId | Used to specify the membership ID. | Yes |
| mainSubscriber PersonId | Used to specify the person ID who is the main subscriber of the membership. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| mainSubscriber PersonIdentifier Type | Used to specify the primary person identifier of the main subscriber of the membership. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| mainSubscriber PersonIdentifier | Used to specify the value of the main subscriber person identifier type. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| main | Used to specify the name of the main subscriber. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|------------------------------------|--|---|
| SubscriberName | | Note: This data is required while defining or editing the respective information. |
| mainSubscriber RelationshipType | Used to specify the member person relationship type of the main subscriber of the membership. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| startDate | Used to indicate the date from when the membership is effective. Note: The startDate cannot be later than the endDate. | Yes |
| endDate | Used to indicate the date till when the membership is effective. Note: The endDate cannot be later than the startDate. | No |
| paidThrough Date | Used to indicate the paid through date of the account on which the membership is billed. | Yes |
| terminateDate | Used to indicate the membership termination date. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| terminateReason | Used to specify the reason for membership termination. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| terminate Reason Description | Used to specify additional information on membership termination. | No |
| billedAmount | Used to specify the sum of all original amounts of the bills involved in the delinquency process. | Yes |
| paidAmount | Used to specify the sum of all unpaid amounts of the bills involved in the delinquency process. | Yes |
| errorDetails | Displays the error information. Note: At present, this tag does not contain any information. | No |
| ilmDate | Displays the ilm date. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| | Note: At present, this tag does not contain any information. | |
| isEligibleForArchiving | Displays the ilm archiving switch. The valid values are: <ul style="list-style-type: none"> • Y • N Note: At present, this tag does not contain any information. | No |

Sample Membership Termination Outbound Message

Using the below example, you can do the following:

- Initiate an outbound message to terminate an individual membership when the main subscriber is delinquent.

| Person Name | Main Subscriber | Health Plan Code | Billed Amount | Paid Through Date | Amount Paid |
|-------------|-----------------|------------------|---------------|-------------------|-------------|
| JOE, LATHAM | Yes | APTC_BENEFIT | 5000.00 | 31-10-2023 | 0.00 |

```
<schema>
  <xmlRawResponse></xmlRawResponse>
</xmlResponse></xmlResponse>
<outboundMessageId></outboundMessageId>
<notificationExternalId></notificationExternalId>
<type></type>
<processingMethod></processingMethod>
<status></status>
<extract></extract>
<batchControl></batchControl>
<batchNumber></batchNumber>
<creationDateTime></creationDateTime>
<messageCategory></messageCategory>
<messageNumber></messageNumber>
<processSignature></processSignature>
<version></version>
<xmlSource>
  <healthPlanCode>APTC_BENEFIT</healthPlanCode>
  <externalMembershipId>JOE_LAT_1995</externalMembershipId>
  <membershipId>756692964026275</membershipId>
  <delinquencyProcessId>228385060384</delinquencyProcessId>
  <mainSubscriberPersonId>2350627566</mainSubscriberPersonId>
  <mainSubscriberPersonIdentifierType>WEB</mainSubscriberPersonIdentifierType>
  <mainSubscriberPersonIdentifier>JOE</mainSubscriberPersonIdentifier>
  <mainSubscriberName>JOE, LATHAM</mainSubscriberName>
  <mainSubscriberRelationshipType>OWNER</mainSubscriberRelationshipType>
  <startDate>2023-01-01</startDate>
  <endDate>2023-12-31</endDate>
  <paidThroughDate></paidThroughDate>
  <terminateDate>2023-10-31</terminateDate>
  <terminateReason>INDV_MEM_TERM</terminateReason>
  <terminateReasonDescription>Membership Awaiting Termination</
terminateReasonDescription>
```

```

    <billedAmount>5000.00</billedAmount>
    <paidAmount>0.00</paidAmount>
  </xmlSource>
  <errorDetails></errorDetails>
  <ilmDate></ilmDate>
  <isEligibleForArchiving></isEligibleForArchiving>
</schema>

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an membership termination outbound message to the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Membership Cancellation Request Outbound Message

Oracle Revenue Management and Billing enables you to send the membership cancellation outbound message through the **C1-MemberCancelRequest** business object. This business object is used to setup an outbound message type by invoking the **Individual Membership Outbound Message Trigger (C1-MTOMT)** batch whenever the membership cancellation process is initiated. The membership cancellation process is initiated when an individual subscriber is delinquent.

Sample Membership Cancellation Outbound Message

Using the below example, you can do the following:

- Initiate an outbound message to cancel an individual membership when the main subscriber is delinquent.

| Person Name | Main Subscriber | Health Code | Plan | Billed Amount | Paid Date | Through | Amount Paid |
|--------------------|-----------------|--------------|------|---------------|------------|---------|-------------|
| TREVOR, JOHNSON | SELF | APTC_BENEFIT | | 2500.00 | 31-09-2023 | | 0.00 |

```
<schema>
  <xmlRawResponse></xmlRawResponse>
  <xmlResponse></xmlResponse>
  <outboundMessageId></outboundMessageId>
  <notificationExternalId></notificationExternalId>
  <type></type>
  <processingMethod></processingMethod>
  <status></status>
  <extract></extract>
  <batchControl></batchControl>
  <batchNumber></batchNumber>
  <creationDateTime></creationDateTime>
  <messageCategory></messageCategory>
</schema>
```

```

<messageNumber></messageNumber>
<processSignature></processSignature>
<version></version>
<xmlSource>
  <healthPlanCode>APTC_BENEFIT</healthPlanCode>
  <externalMembershipId>TREV_JOHNSON_1990</externalMembershipId>
  <membershipId>199027061071452</membershipId>
  <delinquencyProcessId>105284384641</delinquencyProcessId>
  <mainSubscriberPersonId>0334838136</mainSubscriberPersonId>
  <mainSubscriberPersonIdentifierType>WEB</mainSubscriberPersonIdentifierType>
  <mainSubscriberPersonIdentifier>TREV_35704014_M01</
mainSubscriberPersonIdentifier>
  <mainSubscriberName>TREVOR, JOHNSON</mainSubscriberName>
  <mainSubscriberRelationshipType>OWNER</mainSubscriberRelationshipType>
  <startDate>2023-01-01</startDate>
  <endDate>2023-12-31</endDate>
  <paidThroughDate></paidThroughDate>
  <cancelReason>INDV_MEM_CNC</cancelReason>
  <cancelReasonDescription>Membership Awaiting Cancellation</
cancelReasonDescription>
  <billedAmount>2500.00</billedAmount>
  <paidAmount>0.00</paidAmount>
</xmlSource>
<errorDetails></errorDetails>
<ilmDate></ilmDate>
<isEligibleForArchiving></isEligibleForArchiving>
</schema>

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an membership cancellation outbound message to the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Delinquency Process Type Preference

The Delinquency process type preference enables you to set the attributes which are used during the creation of a delinquency process. While deriving the details for a delinquency process, the system uses the following attributes from the delinquency process type preference:

- Active Individual Delinquency
- Benefit Sub Type
- Effectuated Individual Delinquency for Ancillary
- Effectuated Individual without Benefit
- Effectuated Individual with Benefit
- Non-Effectuated Individual Delinquency
- Termed Individual Delinquency

You can define, edit, delete, and copy a delinquency process type preference through the **Field Mapping** screen.

Searching for a Delinquency Process Type Preference

Prerequisites

To search for a delinquency process type preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a delinquency process type preference:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Field Mapping**.

A sub-menu appears.

- Click the **Search** option from the **Field Mapping** sub-menu.

The **Field Mapping** screen appears.

- Select the **Delinquency Process Type** option from the **Preference Category** list.
- Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of delinquency process type preferences that meet the search criteria appears in the **Search Results** section.

Defining a Delinquency Process Type Preference

Prerequisites

To define a delinquency process type preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field
- Values defined in the **FIELD_CAT_FLG** lookup field
- Delinquency process type defined in the application

Procedure

To define a delinquency process type preference:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Field Mapping**.

A sub-menu appears.

- Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Field Mapping Business Object | Used to indicate the business object using which you want to create the billing preference. The valid values are: <ul style="list-style-type: none"> Bill Route Method - Contact Method Mapping Field Mapping Medicare Plan Benefit Package Membership Status Reason Mapping | Yes |

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the delinquency process type preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Preference | Used to specify the delinquency process type preference. | Yes |
| Description | Used to specify the description for the delinquency process type preference. | Yes |
| Detailed Description | Used to specify additional information about the delinquency process type preference. | No |
| Status | Used to indicate the status of the delinquency process type preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |

- **Preference Category** - This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Preference Category | Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> Routing Method - Contact Method Mapping Statement Construct | |

- **Preference Settings** - Used to set the attributes in the delinquency process type preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | |
|-------------------------------|--|--|------------------------|-------------------------------|--|--|
| Attribute | <p>Used to indicate the attribute which you want to set in the delinquency process type preference. The valid values are:</p> <ul style="list-style-type: none"> • Active Individual Delinquency - Used when you want to create a delinquency process for an active customer. • Benefit Sub Type - Used when you want the system to consider the benefit charges of the specified benefit sub type to derive the appropriate delinquency process type for the account. • Effectuated Individual Delinquency for Ancillary - Used when you want to create an effectuated individual delinquency process for ancillary services. • Effectuated Individual without Benefit - Used when you want to create an effectuated individual delinquency process without any benefit services. • Effectuated Individual with Benefit - Used when you want to create an effectuated individual delinquency process including the benefit services. • Non-Effectuated Individual Delinquency - Used when you want to create a non-effectuated individual delinquency process. • Termed Individual Delinquency - Used when you want to create a delinquency process for an inactive customer. | <p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the delinquency process type preference.</p> | | | | |
| Value | <p>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the delinquency process type preference:</p> <table border="1" data-bbox="613 1667 1203 1913"> <thead> <tr> <th>If the attribute is set to...</th> <th>Then, this field is...</th> </tr> </thead> <tbody> <tr> <td>Active Individual Delinquency</td> <td>Used to indicate the delinquency process type using which you want to create the delinquency process when the main</td> </tr> </tbody> </table> | If the attribute is set to... | Then, this field is... | Active Individual Delinquency | Used to indicate the delinquency process type using which you want to create the delinquency process when the main | <p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the delinquency process type preference.</p> |
| If the attribute is set to... | Then, this field is... | | | | | |
| Active Individual Delinquency | Used to indicate the delinquency process type using which you want to create the delinquency process when the main | | | | | |

| Field Name | Field Description | | Mandatory (Yes or No) |
|------------|--|--|-----------------------|
| | If the attribute is set to... | Then, this field is... | |
| | | <p>customer of the account, for which you want to create the delinquency process, is an active customer. An individual is deemed to be an active customer when at least one membership of the individual customer is in the Active status.</p> <div data-bbox="894 653 1195 831" style="border: 1px solid black; padding: 5px;"> <p>Note: Here, you must specify the delinquency process type which is already defined in the system.</p> </div> | |
| | Benefit Sub Type | Used to indicate the benefit sub type. The system considers the benefit (i.e. subsidy) charges of the specified benefit sub type to derive the appropriate delinquency process type for the account. The system considers this attribute when the Active Individual Delinquency attribute is not defined and when paid through date is present on the account. | |
| | Effectuated Individual Delinquency for Ancillary | <p>Used to indicate the delinquency process type using which you want to create the delinquency process when the following conditions are met:</p> <ul style="list-style-type: none"> • The Active Individual Delinquency attribute is not defined • Paid through date is present on the account • Earliest unpaid coverage period | |

| Field Name | Field Description | | Mandatory (Yes or No) |

| | If the attribute is set to... | Then, this field is... | |
| | | does not include subsidy charges <ul style="list-style-type: none"> Individual is enrolled to a health plan which belongs to a non-medical health product | |
| | If the attribute is set to... | Then, this field is... | |
| | Effectuated Individual without Benefit | Used to indicate the delinquency process type using which you want to create the delinquency process when the following conditions are met: <ul style="list-style-type: none"> The Active Individual Delinquency attribute is not defined Paid through date is present on the account Earliest unpaid coverage period does not include subsidy charges Individual is enrolled to a health plan which belongs to a medical health product | |
| | Effectuated Individual with Benefit | Used to indicate the delinquency process type using which you want to create the delinquency process when the following conditions are met: <ul style="list-style-type: none"> The Active Individual Delinquency | |

| Field Name | Field Description | | Mandatory (Yes or No) |
|-------------|--|---|-----------------------|
| | If the attribute is set to... | Then, this field is... | |
| | | attribute is not defined. <ul style="list-style-type: none"> • Paid through date is present on the account • Earliest unpaid coverage period includes subsidy charges | |
| | Non-Effectuated Individual Delinquency | Used to indicate the delinquency process type using which you want to create the delinquency process when the Active Individual Delinquency attribute is not defined and the paid through date is not present on the account. | |
| | Termed Individual Delinquency | Used to indicate the delinquency process type using which you want to create the delinquency process when the main customer of the account, for which you want to create the delinquency process, is an inactive customer. An individual is deemed to be an inactive customer when all memberships of the individual customer is in the Terminated status. | |
| Entity Type | Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> • Account • Adjustment • Billable Charge • Membership • Payment • Policy | | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field. | |

Note: While defining a delinquency process type preference, you must set at least one attribute in the delinquency process type preference.

6. Select the **Delinquency Process Type** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the delinquency process type preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the delinquency process type preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click **Save**.

The delinquency process type preference is defined.

Editing a Delinquency Process Type Preference

Prerequisites

To edit a delinquency process type preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field
- Values defined in the **FIELD_CAT_FLG** lookup field
- Delinquency process type defined in the application

Procedure

To edit a delinquency process type preference:

1. Search for the delinquency process type preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the delinquency process type preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the delinquency process type preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Preference | Displays the delinquency process type preference. | Not applicable |
| Description | Used to specify the description for the delinquency process type preference. | Yes |
| Detailed Description | Used to specify additional information about the delinquency process type preference. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Status | Used to indicate the status of the delinquency process type preference. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Preference Category | Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> Delinquency Process Type | Not applicable |

- **Preference Settings** - Used to set the attributes in the delinquency process type preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| Attribute | Used to indicate the attribute which you want to set in the delinquency process type preference. The valid values are: <ul style="list-style-type: none"> Active Individual Delinquency - Used when you want to create a delinquency process for an active customer. | | Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field. | | |

Tip: Alternatively, you can edit the details of a delinquency process type preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the delinquency process type preference, if required.

Note: You must set at least one attribute in a delinquency process type preference.

5. Click **Save**.

The changes made to the delinquency process type preference are saved.

Deleting a Delinquency Process Type Preference

Procedure

To delete a delinquency process type preference:

1. Search for the delinquency process type preference in the **Field Mapping** screen.

- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the delinquency process type preference that you want to delete.

A message appears confirming whether you want to delete the delinquency process type preference.

Tip: Alternatively, you can delete a delinquency process type preference by clicking the **Delete** button in the **Field Mapping** zone.

- Click **OK**.

The delinquency process type preference is deleted.

Copying a Delinquency Process Type Preference

Instead of creating a delinquency process type preference from scratch, you can create a new delinquency process type preference using an existing delinquency process type preference. This is possible through copying a delinquency process type preference. On copying a delinquency process type preference, the details including the attributes are copied to the new delinquency process type preference. You can then edit the details, if required.

Prerequisites

To copy a delinquency process type preference, you should have:

- Delinquency process type preference (whose copy you want to create) defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field
- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To copy a delinquency process type preference:

- Search for the delinquency process type preference in the **Field Mapping** screen.
- In the **Search Results** section, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the delinquency process type preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- Main** - Used to specify basic details of the delinquency process type preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Preference | Used to specify the delinquency process type preference. | Yes |
| Description | Used to specify the description for the delinquency process type preference. | Yes |
| Detailed Description | Used to specify additional information about the delinquency process type preference. | No |
| Status | Used to indicate the status of the delinquency process type preference. The valid values are: <ul style="list-style-type: none"> Active | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| | <ul style="list-style-type: none"> Inactive | |
| Preference Category | Indicates the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> Delinquency Process Type | Not applicable |

- **Preference Settings** - Used to set the attributes in the delinquency process type preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| Attribute | Used to indicate the attribute which you want to set in the delinquency process type preference. The valid values are: <ul style="list-style-type: none"> • Active Individual Delinquency - Used when you want to create a delinquency process for an active customer. • Benefit Sub Type - Used when you want the system to consider the benefit charges of the specified benefit sub type to derive the appropriate delinquency process type for the account. • Effectuated Individual Delinquency for Ancillary - Used when you want to create an effectuated individual delinquency process for ancillary services. • Effectuated Individual without Benefit - Used when you want to create an effectuated individual delinquency process without any benefit services. • Effectuated Individual with Benefit - Used when you want to create an effectuated individual delinquency process including the benefit services. • Non-Effectuated Individual Delinquency - Used when you want to create a non-effectuated individual delinquency process. • Termed Individual Delinquency - Used when you want to create a delinquency process for an inactive customer. | Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> Note: This field is required while setting an attribute in the delinquency process type preference. </div> |

| | | belongs to a non-medical health product | |
| | If the attribute is set to... | Then, this field is... | |
| | Effectuated Individual without Benefit | Used to indicate the delinquency process type using which you want to create the delinquency process when the following conditions are met: <ul style="list-style-type: none"> • The Active Individual Delinquency attribute is not defined • Paid through date is present on the account • Earliest unpaid coverage period does not include subsidy charges • Individual is enrolled to a health plan which belongs to a medical health product | |
| | Effectuated Individual with Benefit | Used to indicate the delinquency process type using which you want to create the delinquency process when the following conditions are met: <ul style="list-style-type: none"> • The Active Individual Delinquency attribute is not defined. • Paid through date is present on the account • Earliest unpaid coverage period includes subsidy charges | |
| | Non-Effectuated Individual Delinquency | Used to indicate the delinquency process type using which you want to create the delinquency process when the Active | |

| Field Name | Field Description | | Mandatory (Yes or No) |
|-------------|---|---|-----------------------|
| | If the attribute is set to... | Then, this field is... | |
| | | Individual Delinquency attribute is not defined and the paid through date is not present on the account. | |
| | Termed Individual Delinquency | Used to indicate the delinquency process type using which you want to create the delinquency process when the main customer of the account, for which you want to create the delinquency process, is an inactive customer. An individual is deemed to be an inactive customer when all memberships of the individual customer is in the Terminated status. | |
| Entity Type | Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> • Account • Adjustment • Billable Charge • Membership • Payment • Policy <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p> | | No |

Note: While defining a delinquency process type preference, you must set at least one attribute in the delinquency process type preference.

Tip: Alternatively, you can copy a delinquency process type preference by clicking the **Duplicate** button in the **Field Mapping** zone.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the delinquency process type preference, if required.
5. Click **Save**.

The new delinquency process type preference is defined.

Bill Route Method - Contact Method Mapping Preference

The Bill route method - contact method mapping preference enables you to set the bill route and contact method mapping for individual delinquency purposes. While creating a preference using the **Bill Route Method - Contact Method Mapping (C1_BillRouteCntMethMap)** business object, you can specify the following attributes:

- Bill Routing Method
- Preferred Contact Method

You can define, edit, delete, and copy a bill route method - contact method mapping preference through the **Field Mapping** screen.

Searching for a Bill Route Method - Contact Method Mapping Preference

Prerequisites

To search for a bill route method - contact method mapping preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a bill route method - contact method mapping preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Bill Route Method - Contact Method Mapping** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click Search.

A list of bill route method - contact method mapping preferences that meet the search criteria appears in the **Search Results** section.

Defining a Bill Route Method - Contact Method Mapping Preference

Prerequisites

To define a bill route method - contact method mapping preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field
- Values defined in the **FIELD_CAT_FLG** lookup field
- The **Bill Route Method - Contact Method Mapping (C1_BillRouteCntMethMap)** business object defined in the application

Procedure

To define a bill route method - contact method mapping preference:

- 1.** Click the **Admin** link in the **Application** toolbar.
A list appears.
- 2.** From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
- 3.** Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Field Mapping Business Object | Used to indicate the business object using which you want to create the billing preference. The valid values are: <ul style="list-style-type: none"> • Bill Route Method - Contact Method Mapping • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping | Yes |

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

- 4.** Select the **Bill Route Method - Contact Method Mapping** option from the **Field Mapping Business Object** list.
- 5.** Click **OK**.

The **Bill Route Method - Contact Method Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the bill route method - contact method mapping preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Preference | Used to specify the bill route method - contact method mapping preference. | Yes |
| Description | Used to specify the description for the bill route method - contact method mapping preference. | Yes |

- **Bill Route Method - Contact Method Mapping** - Used to set the bill routing and preferred contact method in the bill route method - contact method mapping preference. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Bill Routing Method | Used to indicate the bill routing method for which you want to map the preferred contact method. | Yes |
| | Note: Here, the list includes all the values which are defined in the BILL_RTG_METH_FLG lookup field. | |
| Preferred Contact Method | Used to indicate the preferred contact method for the bill routing method. | Yes |
| | Note: Here, the list includes all the values which are defined in the CONTACT_METH_FLG lookup field. | |

Note:

If a preference is defined using the **C1_BillRouteCntMethMap** business object, the system will derive the preferred contact method for the bill routing method from the preference while creating a customer contact for the delinquent account.

While defining a bill route method - contact method mapping preference, you must set at least one bill routing and preferred contact method in the bill route method contact method mapping preference.

6. Enter the required details in the **Main** section.
7. Select the required bill routing and preferred contact method from the respective fields.
8. If you want to set more than one bill routing and preferred contact method in the bill route method - contact method mapping preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove a bill routing and preferred contact method from the bill route method - contact method mapping preference, click the **Delete (🗑)** icon corresponding to the bill routing and preferred contact method.

9. Click **Save**.

The bill route method - contact method mapping preference is defined.

Editing a Bill Route Method - Contact Method Mapping Preference

Prerequisites

To edit a bill route method - contact method mapping preference, you should have:

- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup fields

Procedure

To edit a bill route method - contact method mapping preference:

1. Search for a bill route method - contact method mapping preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the a bill route method contact method mapping preference whose details you want to edit.

The **Bill Route Method - Contact Method Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the bill route method - contact method mapping preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Preference | Displays the bill route method - contact method mapping preference. | Not applicable |
| Description | Used to specify the description for the bill route method - contact method mapping preference. | Yes |

- **Bill Route Method - Contact Method Mapping** - Used to set a bill routing and preferred contact method in the bill route method - contact method mapping preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|---|
| Bill Routing Method | Indicates the bill routing method for which you want to map the preferred contact method. | Yes (Conditional) |
| | Note: Here, the list includes all the values which are defined in the BILL_RTG_METH_FLG lookup field. | Note: This field is required while setting a bill routing and preferred contact method in a bill route method - contact method mapping preference |
| Preferred Contact Method | Indicates the preferred contact method for the bill routing method. | Yes (Conditional) |
| | Note: Here, the list includes all the values which are defined in the CONTACT_METH_FLG lookup field. | Note: This field is required while setting a bill routing and preferred contact method in a bill route method - contact method mapping preference. |

Note:

If a preference is defined using the **C1_BillRouteCntMethMap** business object, the system will derive the preferred contact method for the bill routing method from the preference while creating a customer contact for the delinquent account.

Alternatively, you can edit the details of a bill route method - contact method mapping preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the bill routing and preferred contact method from the bill route method - contact method mapping preference, if required.

Note: You must set at least one bill routing and preferred contact method in a bill route method - contact method mapping preference.

5. Click **Save**.

The changes made to the bill route method - contact method mapping preference are saved.

Deleting a Bill Route Method - Contact Method Mapping Preference**Procedure**

To delete a bill route method - contact method mapping preference:

1. Search for the bill route method - contact method mapping preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the bill route method - contact method mapping preference that you want to delete.

A message appears confirming whether you want to delete the bill route method - contact method mapping preference.

Tip: Alternatively, you can delete a bill route method - contact method mapping preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The bill route method - contact method mapping preference is deleted.

Copying a Bill Route Method - Contact Method Mapping

Instead of creating a bill route method - contact method mapping preference from scratch, you can create a new bill route method - contact method mapping preference using an existing bill route method - contact method mapping preference.

This is possible through copying a bill route method - contact method mapping preference. On copying a bill route method contact method mapping preference, the details including the bill routing and preferred contact method are copied to the new bill route method - contact method mapping preference. You can then edit the details, if required.

Prerequisites

To copy a bill route method contact method mapping preference, you should have:

- The **Bill Route Method - Contact Method Mapping (C1_BillRouteCntMethMap)** business object defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field
- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To copy a bill route method - contact method mapping preference:

1. Search for the bill route method - contact method mapping preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the bill route method - contact method mapping preference whose copy you want to create.

The **Bill Route Method - Contact Method Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the bill route method - contact method mapping preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Preference | Used to specify the bill route method - contact method mapping preference. | Yes |
| Description | Used to specify the description for the bill route method - contact method mapping preference. | Yes |

- **Bill Route Method - Contact Method Mapping** - Used to set the attributes in the delinquency process type preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Bill Routing Method | Used to indicate the bill routing method for which you want to map the preferred contact method. | Yes |
| | Note: Here, the list includes all the values which are defined in the BILL_RTG_METH_FLG lookup field. | |
| Preferred Contact Method | Used to indicate the preferred contact method for the bill routing method. | Yes |
| | Note: Here, the list includes all the values which are defined in the CONTACT_METH_FLG lookup field. | |

Note:

If a preference is defined using the **C1_BillRouteCntMethMap** business object, the system will derive the preferred contact method for the bill routing method from the preference while creating a customer contact for the delinquent account.

While defining a bill route method - contact method mapping preference, you must set at least one bill routing and preferred contact method in the bill route method - contact method mapping preference.

Tip: Alternatively, you can copy a bill route method - contact method mapping preference by clicking the **Duplicate** button in the **Field Mapping** zone.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the bill routing and preferred contact method from the bill route method - contact method mapping preference, if required.
5. Click **Save**.

The new bill route method - contact method mapping preference is defined.

Chapter 55

On Demand Billing

Topics:

- [Prerequisites](#)
- [CSV File Format for Insurance Usage Data](#)
- [Usage Record Status Transition](#)
- [File Type](#)
- [On Demand Billing](#)
- [Usage Data Processing](#)

Oracle no longer supports the Off Cycle Billing feature introduced in Oracle Revenue Management and Billing Version 2.2.4.2. Instead, the On Demand Billing feature has been introduced to facilitate adhoc billing. Earlier, you were only able to carry out billing based on the bill cycle (defined for the account). In other words, you were able to generate a bill for a bill cycle using the billable charges whose start and end dates fall within the bill cycle. However, there might be situations where you have received certain billing information after the bill is generated for the bill cycle. In such scenarios, you would like to generate a separate bill for the newly created billable charges. The system now allows you to generate an adhoc bill. However, note that you cannot generate adhoc bills through the **Bill** screen.

A bill is generated using the billable charges. Now, in order to differentiate between the normal and adhoc billable charges, you need to set the **Adhoc Bill** flag for the billable charges. If the value of the **Adhoc Bill** flag is set to **Y**, the system will consider the billable charge during adhoc billing. And, if the value of the **Adhoc Bill** flag is set to **N**, the system will consider the billable charge during regular billing based on the bill cycle.

A new batch named **Adhoc Billing (C1-FABL)** is created which generates adhoc bills. Both, automatically generated and manually created billable charges (with the **Adhoc Bill** flag set to **Y**) are considered during adhoc billing.

With Oracle Revenue Management and Billing V2.4.0.0.0, the On Demand Billing feature has been enhanced to facilitate billing for multiple usage data files in one go. Till now you were only able to create billable charges and bill for only one usage data file at a time using the using the **On Demand Billing** screen. However, there might be situations where you want to upload multiple usage data files and generate billable charges for the usage records (of a single or multiple accounts) that you may want to group together based on certain criteria. For example, you may want to generate billable charges for all debit transactions of one or more accounts. In such scenarios, you can now upload multiple usage data files using a file group and create billable charges for the records uploaded through the **Usage Data Processing** screen. You can create file groups based on various criteria to upload multiple usage data files. For example, you may want to create a file group for uploading usage data files of accounts that need to be billed for the services to be charged for using the credit card facility. You can create a file group using the **On Demand Billing** screen. You can then upload one or more usage data files using the file group through the **Usage Data Processing** screen. Oracle Revenue Management and Billing provides you with a facility to upload usage data received from various product processors or banking applications for billing. You can upload a usage data file in the CSV format. The **Usage Data Processing** screen allows you to upload usage data files for both banking and insurance modules. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format,

see CSV File Format for Banking and CSV File Format for Insurance. When you upload a usage data file, mapping algorithm parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The status of each usage record is changed to Valid or Invalid depending on whether the usage record was validated successfully or not. Once a usage record is successfully validated, you can submit the valid records and create billable charges for them. Once the usage data files are uploaded and billable charges are generated through the **Usage Data Processing** screen, you can then create and freeze the bills using the **On Demand Billing** screen.

You can optionally configure the system to use the approval workflow process for a usage data file. On submitting a valid record, the approval workflow process routes the usage record to the approver for approval. The approver receives a notification to approve the valid records. The approver can either approve or reject one or more valid records. Once the approver approves a valid record, a billable charge is created for the usage record. However, if the approver rejects a valid record, a notification is sent to the submitter to resolve the usage record. The submitter can then correct the existing data or add missing data (based on the review comments), and can again submit the valid record for approval. Once the valid record is approved, a billable charge is created for the usage record.

The system generates the bills based on the Bill After Date. The Bill After Date indicates the date after which adhoc or normal bills must be generated. In case of adhoc billing, the Bill After Date is specified for a file group using which you can upload one or more usage data files.

While uploading usage data files for adhoc billing, you may or may not specify the Bill After Date for a file group. The system behaves in the following manner when:

- **Bill After Date — Specified:** Adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.
- **Bill After Date — Not Specified:** During the upload process, the Bill After Date is set to the current date. And, adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.

In case of regular billing, you may or may not specify the Bill After Date while uploading a usage data file. The system behaves in the following manner when:

- **Bill After Date — Specified:** Normal bill is generated for the account in the bill cycle in which the bill after date falls.
- **Bill After Date — Not Specified:** Normal bill is generated for the account based on the bill cycle defined for the account.

Once the adhoc or normal bills are generated for a usage data file, you can freeze and complete the bills. Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a usage data file from the **On Demand Billing** screen.

During the on demand billing process, each usage record of a file goes through various statuses until it is billed to the person. For more information about the usage record statuses, see [Usage Record Status Transition](#) on page 3929.

Prerequisites

To setup the on demand billing process, you need to do the following:

- Ensure approver's user group has access to the **F1-DFLTS** application service
- Create a To Do Type for submitter named **C1-ODBSU** using the following information:

- **Navigation Option** — C1_SUBMIT
- **Priority** — Priority 10 – Highest
- **Message Category** — 17000
- **Message Number** — 1470
- **Sort Keys** — Define the following sort keys for the To Do type:

| Sort Key | Use as Default | Sort Order |
|---------------|----------------|------------|
| Usage Data ID | Yes | Descending |

- **Drill Keys** — Define the following drill keys for the To Do type:

| Table Name | Field Name |
|-------------|-------------------|
| CI_BCHG_STG | BCHG_HSTG_ID |
| CI_BCHG_STG | FILE_NAME |
| CI_BCHG_STG | BCHG_STG_STAT_FLG |

- Create a To Do Type for approver named **C1-ODBAP** using the following information:

- **Navigation Option** — CI_NDAP
- **Priority** — Priority 10 – Highest
- **Message Category** — 17000
- **Message Number** — 1470
- **Sort Keys** — Define the following sort keys for the To Do type:

| Sort Key | Use as Default | Sort Order |
|---------------|----------------|------------|
| Usage Data ID | Yes | Descending |

- **Drill Keys** — Define the following drill keys for the To Do type:

| Table Name | Field Name |
|-------------|--------------|
| CI_BCHG_STG | BCHG_HSTG_ID |
| CI_BCHG_STG | FILE_NAME |

- Create a To Do role named **C1-ODBSU** for submitter and **C1-ODBAP** for approver
- Assign the **C1-ODBSU** To Do type to the **C1-ODBSU** To Do role
- Assign the **C1-ODBAP** To Do type to the **C1-ODBAP** To Do role
- Create a To Do role named **C1-ODFU** and assign users to this To Do role. The users who have the **C1-ODFU** To Do role will receive the To Do entries generated while executing the **Upload and Validate Usage Data File (C1-ODFU)** batch.

- Assign the **C1-ODFU** To Do type to the **C1-ODFU** To Do role
- Create a To Do role named **C1-ODBCH** and assign users to this To Do role. The users who have the **C1-ODBCH** To Do role will receive the To Do entries generated while executing the **Billable Charge Creation (C1-ODBCH)** batch.
- Assign the **C1-ODBCH** To Do type to the **C1-ODBCH** To Do role
- Create a To Do role named **C1-FABL** and assign users to this To Do role. The users who have the **C1-FABL** To Do role will receive the To Do entries generated while executing the **Adhoc Billing (C1-FABL)** batch.
- Assign the **C1-FABL** To Do type to the **C1-FABL** To Do role
- Create a To Do role named **C1-FCADH** and assign users to this To Do role. The users who have the **C1-FCADH** To Do role will receive the To Do entries generated while executing the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch.
- Assign the **C1-FCADH** To Do type to the **C1-FCADH** To Do role
- Set e-mail address for the users who are going to use the **On Demand Billing** screen (otherwise To Do entry will not be generated on executing the above batches)
- Create a mapping algorithm using the **C1-CSVPMALGO** algorithm type
- Create a validation algorithm using the **C1-VLDALGO** algorithm type
- Create an extract algorithm using the **C1-EXTALGO** algorithm type
- Create a To Do algorithm using the **C1_ODBDALGO** algorithm type and set the following parameters in the algorithm:
 - **To Do Role for Submitter** — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.
 - **To Do Type for Submitter** — Used to indicate that a To Do entry of the specified To Do type must be created when the approver rejects the records.
 - **To Do Role for Approver** — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.
 - **To Do Type for Approver** — Used to indicate that a To Do entry of the specified To Do type must be created when the submitter submits the valid records for approval.
- Define the required file types in the system
- Define values for the following lookup fields:
 - ODB_CAN_RSN_FLG
 - ODB_REJ_RSN_FLG
 - PAGE_NUMBER
- If you want to create billable charges with future date for a contract, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.
- Create an algorithm using the **C1-ODDFILEIN** algorithm type and attach it to the **Upload File Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen.

Besides this, you need to setup the following feature configurations:

- On Demand Billing (C1-ODBFC)
- Multi Parameter Based Pricing (C1_PPARAM_FLG)

Note: If you want to use the **On Demand Billing** feature in an ORMB Cloud Service Premium Edition environment, you need to set the **ODB Extendable Lookup and Bucket** option type of the **C1-CFS** feature configuration.

CSV File Format for Insurance Usage Data

Before uploading a usage data file for insurance, you need to ensure that the CSV file contains the following columns:

| Column Name | Description | Mandatory (Yes or No) |
|--|---|--|
| DATA IDENTIFIER | Used to specify the serial number of the usage record. | No |
| START DATE | Used to specify the date from when the price item was used. Note: You must specify the date in the YYYY-MM-DD format. | No |
| END DATE | Used to specify the date till when the price item was used. Note: You must specify the date in the YYYY-MM-DD format. | No |
| CONTRACT ID | Used to specify the contract ID. | Yes |
| CHARGE TYPE | Used to indicate the charge type. | No |
| DESCRIPTION | Used to specify the description for the usage record. It is shown on the billable charge. | Yes |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Used to specify the description for the line item (charge). | Yes (Conditional) Note: This data is required when the charge amount is specified. |
| AMOUNT1, AMOUNT2, AMOUNT10, | Used to specify the charge amount. | Yes (Conditional) Note: This data is required when the bill line description or currency is specified. |
| CURRENCY1, CURRENCY2, CURRENCY10, | Used to specify the currency in which the amount is charged. Note: If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system. | Yes (Conditional) Note: This data is required when the charge amount is specified. |

| Column Name | Description | Mandatory (Yes or No) |
|--|--|--|
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> • true • false | No |
| | Note: By default, the value will be set to false if the column does not contain any value. | |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> • true • false | No |
| | Note: By default, the value will be set to true if the column does not contain any value. | |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> • true • false | No |
| | Note: By default, the value will be set to true if the column does not contain any value. | |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Used to specify the distribution code which indicates the GL account associated with the charge. | Yes (Conditional) |
| | | Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description. |
| PRICE ITEM | Used to specify the price item code. | Yes |
| VARIANCE | Used to indicate the variance that must be used along with the price item for determining the price item pricing. | No |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. | Yes (Conditional) |
| | Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | Note: This data is required when the parameter value is specified. |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Used to specify the parameter value. | Yes (Conditional) |
| | Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | Note: This data is required when the parameter type is specified. |

| Column Name | Description | Mandatory (Yes or No) |
|---|---|--|
| SQI1, SQI2,, SQI10 | Used to indicate the service quantity identifier that must be used for calculating the price item charges. | Yes (Conditional) Note: This data is required when the service quantity is specified. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Used to specify the number of units of the service quantity. | Yes (Conditional) Note: This data is required when the SQL is specified. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Used to indicate the characteristic that must be defined for the billable charge. | Yes (Conditional) Note: This data is required when the characteristic value is specified. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Used to specify the value of the characteristic type. | Yes (Conditional) Note: This data is required when the characteristic type is specified. |
| RECURRING FLAG | Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. | No |
| BILL PERIOD | Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created. | Yes (Conditional) Note: This data is required when the recurring flag is equal to Bill Period. |
| FREQUENCY | Used to indicate the invoice frequency at which the recurring bill segments must be created. | Yes (Conditional) Note: This data is required when the recurring flag is equal to Frequency. |

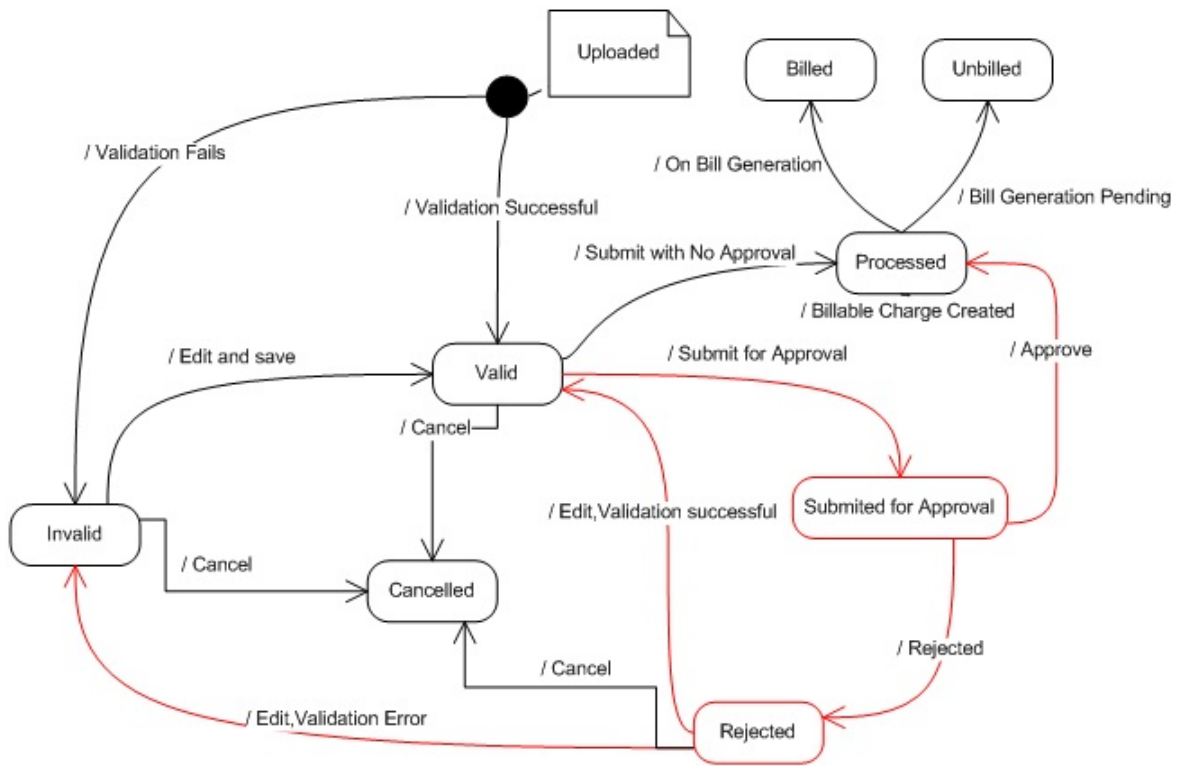

Note:

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

Usage Record Status Transition

The following figure graphically indicates how a usage record moves from one status to another during the on demand billing process:

File Type

Oracle Revenue Management and Billing allows you to define file types using which you can upload a usage or payment data file. It is the file type which helps the system to understand how to process the file. The feed type specified in the file type indicates the type of data that you can upload using the file type. You can upload the following types of data using a file type:

- Banking Usage Data
- Insurance Usage Data

Note: This file type is not applicable for financial services.

- Payment Upload Data

The following table lists the algorithms that you need to specify while defining file types for uploading usage or payment data:

| Feed Type | Algorithm | Mandatory (Yes or No) | Algorithm Type Shipped with the Product... | Algorithm Type Purpose |
|---------------------|----------------------|-----------------------|--|--|
| Payment Upload Data | Mapping algorithm | Yes | C1-CSVUPLPAY | Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database. |
| Payment Upload Data | Validation algorithm | Yes | C1-PUPLVALID | Validates a payment data file. |

| Feed Type | Algorithm | Mandatory (Yes or No) | Algorithm Type Shipped with the Product... | Algorithm Type Purpose |
|----------------------|----------------------|-----------------------|---|---|
| Banking Usage Data | Mapping algorithm | Yes | C1-CSVPMALGO | Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface . |
| Banking Usage Data | Validation algorithm | No | C1-VLDALGO | Validates a usage data file. |
| Banking Usage Data | To Do algorithm | No | C1_ODBTDALGO | Initiates the approval process for usage records before creating the billable charges. |
| Banking Usage Data | Extract algorithm | No | C1-EXTALGO | Extracts the usage records along with the error messages (if any) in the CSV format. |
| Insurance Usage Data | Mapping algorithm | Yes | C1-CSVPMALGO | Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface . |
| Insurance Usage Data | Validation algorithm | No | None | - |
| | | | Note: You need to design custom algorithm type to validate insurance usage data. | |
| Insurance Usage Data | To Do algorithm | No | C1_ODBTDALGO | Initiates the approval process for usage records before creating the billable charges. |
| Insurance Usage Data | Extract algorithm | No | C1-EXTALGO | Extracts the usage records along with the error messages (if any) in the CSV format. |

The **File Type** screen allows you to define, edit, and delete a file type. This screen consists of the following zones:

- [File Types](#) on page 3931

File Types

The **File Types** zone lists the file types that are already defined in the system. You can define, edit and delete a file type through this zone.

This zone contains the following columns:

| Column Name | Column Description |
|-------------|--|
| File Type | Displays the file type. |
| Description | Displays the description of the file type. |
| Feed Type | Indicates the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> • Banking Usage Data |

| Column Name | Column Description |
|----------------------|---|
| | <ul style="list-style-type: none"> Insurance Usage Data <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> Note: This file type is not applicable for financial services. </div> <ul style="list-style-type: none"> Payment Upload Data |
| Mapping Algorithm | Indicates the mapping algorithm which is triggered when you upload a file. |
| Validation Algorithm | Indicates the validation algorithm which is triggered once the file is uploaded in the system. |
| To Do Algorithm | Indicates whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required. |
| Extract Algorithm | Indicates the extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format. |
| Edit | <p>On clicking the Edit () icon, the File Type screen appears where you can edit the details of the file type.</p> <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> Note: You can edit the details of a file type when no files are uploaded using the file type. </div> |
| Delete | <p>On clicking the Delete () icon, you can delete the file type.</p> <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> Note: You can only delete a file type which is not yet used for uploading a file. </div> |

You can define a file type by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Defining a File Type

Prerequisites

To define a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1_ODBDALGO** algorithm type

Procedure

To define a file type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **File Type**.

The **File Type** screen appears.

- Click the **Add** link in the upper right corner of the **File Types** zone.

The **File Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| File Type | Used to specify the file type. | Yes |
| Description | Used to specify the description for the file type. | Yes |
| Feed Type | Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> Banking Usage Data <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This file type is not applicable for health insurance business.</div> <ul style="list-style-type: none"> Insurance Usage Data <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This file type is not applicable for financial services.</div> <ul style="list-style-type: none"> Payment Upload Data | Yes |
| Disable Move to Staging | Used to indicate whether you want to disable the Move to Staging functionality in the Payment Upload screen. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;">Note: This field appears when you select the Payment Upload Data option from the Feed Type list.</div> | No |
| Mapping Algorithm | Used to attach a mapping algorithm which is triggered when you upload a file. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| | <p>Note:</p> <p>The C1-CSVUPLPAY algorithm type is designed for uploading payment data and the C1-CSVPMALGO algorithm type is designed for uploading usage data. The C1-CSVUPLPAY algorithm type does the following:</p> <ol style="list-style-type: none"> 1. Validates whether the file is in the CSV format 2. Validates whether at least one payment record is available in the CSV file 3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database 4. Uploads the payments records in the pre-staging area <p>However, the C1-CSVPMALGO algorithm type does the following:</p> <ol style="list-style-type: none"> 1. Validates whether the file is in the CSV format 2. Validates whether the CSV file contains data in the required format 3. Validates whether the following data is available for each usage record: <ul style="list-style-type: none"> • Account Identifier Type • Account Identifier • Division • Price Item • Description 4. Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |
| To Do Algorithm | Used to indicate whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| | <p>Note:</p> <p>The C1_ODBTDALGO algorithm type contains the following parameters:</p> <ul style="list-style-type: none"> • To Do Role For Submitter — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver. • To Do Type For Submitter — Used to indicate that a To Do using the specified To Do type must be created when the approver rejects the records. • To Do Role For Approver — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter. • To Do Type For Approver — Used to indicate that a To Do using the specified To Do type must be created when the submitter submits the valid records for approval. <p>This field is disabled when you select the Payment Upload Data option from the Feed Type list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |
| Validation Algorithm | Used to attach a validation algorithm which is triggered once the file is uploaded in the system. | Yes (Conditional) Note: This field is required when you select the Payment Upload Data option from the Feed Type list. |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| | <p>Note:</p> <p>The C1-PUPLVALID algorithm type is designed for validating a payment data file. It has some pre-defined validations based on which the status of the payment record is set to Valid, Invalid, or Error. For more information about the pre-defined validations, see Upload Payment Records in the Pre-Staging Area on page 1418.</p> <p>However, the C1-VLDALGO algorithm type is designed for validating a banking usage data file. It checks whether account identifier specified for each usage record contains any special characters. You can define any custom validations in this algorithm, if required. You cannot use an algorithm created using the C1-VLDALGO algorithm type to validate an insurance usage data file. If you want to validate an insurance usage data file, you need to create a custom algorithm type.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |
| Extract Algorithm | <p>Used to attach an extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.</p> <p>Note: This field is disabled when you select the Payment Upload Data option from the Feed Type list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |

In addition, it contains the following two sections:

- **Map Divisions** — Used to indicate the divisions for which you want to use the file type.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Division | <p>Used to indicate the division.</p> <p>Note: You can only view those divisions to which you have access in the Division list.</p> | No |

Note: This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.

- **Custom Labels** — Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

Note:

This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.

If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one division with the file type, click the **Add** (+) icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** (🗑️) icon corresponding to the division.

5. Click **Save**.

The file type is defined.

Editing a File Type**Prerequisites**

To edit a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1_ODBDALGO** algorithm type

Note: You can edit the details of a file type when no files are uploaded using the file type.

Procedure

To edit a file type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.
The **File Type** screen appears.
3. Click the **Edit** (✎) icon in the **Edit** column corresponding to the file type whose details you want to edit.
The **File Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--------------------------------|-----------------------|
| File Type | Used to specify the file type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|

| Division | <p>Used to indicate the division.</p> <p>Note: You can only view those divisions to which you have access in the Division list.</p> | No |

Note: This section does not appear when the feed type is set to **Payment Upload Data**.

- **Custom Labels** — Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

Note:

This section does not appear when the feed type is set to **Payment Upload Data**.

If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one division with the file type, click the **Add** (+) icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** (🗑️) icon corresponding to the division.

5. Click **Save**.

The changes made to the file type are saved.

Deleting a File Type**Procedure**

To delete a file type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.
The **File Type** screen appears.
3. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the file type that you want to delete.
A message appears confirming whether you want to delete the file type.

Note: You can only delete a file type which is not yet used for uploading a file.

4. Click **OK**.

The file type is deleted.

On Demand Billing

The **On Demand Billing** screen allows you to search for a file group based on various search criteria. Through this screen, you can:

- Define a file group
- Edit a file group
- Delete a file group
- Close a file group
- Generate adhoc bills for a file group
- Freeze and complete adhoc bills of a file group
- View all bills generated for a file group
- View usage data files of a file group
- Cancel a usage data file

This screen consists of the following zones:

- [Search](#) on page 3943

Search

The **Search** zone allows you to search for file groups for which bills are processed and/or generated in the system. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| File Group | Used to specify the file group. | No |
| Description | Used to specify the description for the file group. | No |
| User ID | Used to specify the name of the user who has uploaded the usage data files in the file group. | No |
| Bill After Date | Used to specify the date after which the bills must be generated for the file group. | No |
| Status | Used to indicate the status of the file group. The valid values are: <ul style="list-style-type: none"> • Closed • Open | No |

Note: You must specify at least one search criterion while searching for a file group.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|--------------------------------------|
| File Group | Displays the name of the file group. |

| Column Name | Column Description |
|--------------------------|---|
| | Note: It has a link. On clicking the link, the File Group screen appears where you can view the details of the file group. |
| Bill After Date | Displays the date after which the bills must be generated for the file group. |
| Default Usage Start Date | Displays the date from when the price item was used. |
| Default Usage End Date | Displays the date till when the price item was used. |
| Status | Displays the status of the file group. The valid values are: <ul style="list-style-type: none"> • Open • Close |
| Close | On clicking the Close (✖) icon, you can close a file group. <p>Note: You can only close a file group in which all the records of the usage data files are either in the processed or cancelled status.</p> |
| Generate Bill | On clicking the Generate Bill (📄) icon, you can generate bills for a file group. |
| Complete Bill | On clicking the Complete Bill (✅) icon, you can freeze and complete the bills of a file group. |
| Total | Displays the total number of records that are uploaded through the file group. |
| Valid | Displays the number of records which are successfully validated in the system. |
| Invalid | Displays the number of records which could not pass through the validation process in the system. |
| Submitted | Displays the number of valid records which are submitted for approval. |
| Processed | Displays the number of valid records for which billable charges are already created. |
| Rejected | Displays the number of records which are rejected by the approver. |
| Cancelled | Displays the number of records which are cancelled in the system. |
| Unbilled | Displays the number of records for which billable charges are created, but are not yet billed to the person. |
| Billed | Displays the number of records for which billable charges are created and billed to the person. |
| Bills | Displays the number of bills generated for the file group. <p>Note: It has a link. On clicking the link, the View Bill Data screen appears where you can view all bills generated for the usage data file.</p> |
| Last Batch Status | Indicates the batch that was last executed on the file group and its current status. <p>Note: It has a link. On clicking the link, the Batch Run Tree screen appears where you can view the execution details of the batch.</p> |

Group Files

The **Group Files** zone allows you to view the usage data files uploaded using a file group. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| File Name | Used to specify the name of the usage data file. | No |
| File Type | Used to specify the type of usage data file. | No |
| File Upload From Date | Used to specify the start date of the period during which the usage data file that you want to search was uploaded in the system. | No |
| File Upload To Date | Used to specify the end date of the period during which the usage data file that you want to search was uploaded in the system. | No |

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|---|
| File Information | Displays the name of the usage data file of the file group and its related details. |
| Total | Displays the total number of records that are uploaded through the usage data file. |
| Valid | Displays the number of records which are successfully validated in the system. |
| Invalid | Displays the number of records which could not pass through the validation process in the system. |
| Submitted | Displays the number of valid records which are submitted for approval. |
| Rejected | Displays the number of records which are rejected by the approver. |
| Processed | Displays the number of valid records for which billable charges are already created. |

| Column Name | Column Description |
|-------------|--|
| Cancelled | Displays the number of records of a usage data file which are cancelled. |
| UnBilled | Displays the number of records for which billable charges are created, but are not yet billed to the person. |
| Billed | Displays the number of records for which billable charges are created and billed to the person. |
| Cancel | On clicking the Cancel () icon, you can cancel a file. |

By default, the **Group Files** zone does not appear in the **On Demand Billing** screen. It appears when you click the **Broadcast** () icon corresponding to the file group in the **Search Results** section.

Note: By default, the **Group Files** zone displays a list of usage data files that are uploaded using the file group in the **Search Results** section. However, you can filter the list of usage data files by specifying a search criteria in the **Search Criteria** section.

Searching for a File Group

Procedure

To search for a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of file groups that meet the search criteria appears in the **Search Results** section.

Defining a File Group

Prerequisites

To define a file group, you should have:

- Access to the divisions for which you want to define the file group

Procedure

To define a file group:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.

The **On Demand Billing** screen appears.

3. Click the **Add** link in the upper right corner of the **Search** zone.

The **File Group** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| File Group | Used to specify the file group. | Yes |
| Description | Used to specify the description for the file group. | Yes |
| Bill After Date | Used to specify the date after which the bill must be generated for the file group. | Yes |
| Default Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required. | Yes |
| | Note: The default usage start date cannot be later than the default usage end date. | |
| Default Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required. | Yes |
| | Note: The default usage end date cannot be earlier than the default usage start date. | |

In addition, the **File Group** screen contains the following section:

Map Divisions— The **Map Divisions** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Division | Used to indicate the division for which you want to define the file group. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|-------------------|--|
| | | Note: If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file. |

- Enter the required details.
- If you want to define the file group for more than one division, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a division from the file group, click the **Delete (🗑)** icon corresponding to the division.

- Click **Save**.

The file group is defined.

Editing a File Group

Procedure

To edit a file group:

Note: You can edit the details of a file group when no usage data files of this group have been uploaded in the system or all the records in the usage data files of a file group are cancelled.

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- Select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **File Group** column corresponding to the file group whose details you want to edit.

The **File Group** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--------------------------|-----------------------|
| File Group | Displays the file group. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Description | Used to specify the description for the file group. | Yes |
| Bill After Date | Used to specify the date after which the bill must be generated for the file group | Yes |
| Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. | Yes |
| | Note: The default usage start date cannot be later than the default usage end date. | |
| Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. | Yes |
| | Note: The default usage end date cannot be earlier than the default usage start date. | |

In addition, the **Add/Edit File Group** screen contains the following section:

- **Map Divisions**— The **Map Divisions** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| Division | Used to indicate the division for which you want to define the file group. | No |
| | | Note: If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file. |

5. Modify the required details.

Note: If you want to define the file group for more than one division, click the **Add** (+) icon and then specify the details. However, if you want to remove a division from the file group, click the **Delete** (🗑️) icon corresponding to it.

6. Click **Save**.

The changes made to the file group are saved.

Deleting a File Group

Procedure

To delete a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. Select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the link in the **File Group** column corresponding to the file group that you want to delete.
The **File Group** screen appears.
5. Click **Delete**.
The file group is deleted.

Note: The delete button appears only if the file group is not yet used. In other words, you cannot delete a file group that you have used for uploading usage data files.

Closing a File Group

Procedure

To close a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the **Close** (✖) icon in the **Close** column corresponding to the file group that you want to close.
The status of the file group is changed to **Closed**.

Note: You can only close a file group in which all the records of the usage data files are either in the processed, cancelled, or rejected status. However, you may close a file group in which all the records are not in the cancelled and/or processed status, but in that case a to do entry is sent to the approver for approval of the pending records.

Generating Adhoc Bills for a File Group

The **On Demand Billing** screen allows you to generate adhoc bills for a file group. However, you can generate bills only after you close the file group for which you want to generate adhoc bills.

Procedure

To generate adhoc bills for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Generate Bill** (📄) icon corresponding to the file group for which you want to generate the adhoc bills.

The **Generate Bill** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Cutoff Date | Used to specify the cutoff date for the bill. | Yes |
| Accounting Date | Used to specify the accounting date of the bill. | Yes |

3. Enter the required details.
4. Click **OK**.

The adhoc bills are generated for the usage data files of a file group. An adhoc bill is generated for a usage data file and account combination when the bill after date is equal to or earlier than the current date. The status of the usage records is changed to **Billed**. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, a batch job is created using the **Adhoc Billing (C1-FABL)** batch. A message appears indicating the batch job ID. This batch job creates adhoc bills for the usage data file.

Note:

You can change the online bill creation limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Adhoc Billing (C1-FABL)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If an adhoc bill with the **Pending** status already exists for a usage data file and account combination, then the existing bill is deleted and regenerated. However, you can generate the bill again for a file group only after manually deleting the bill from the **Bill** screen.

On successful completion of the **Adhoc Billing (C1-FABL)** batch, a To Do entry is created using the **C1-FABL** To Do type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-FABL** To Do type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of billable charges which were processed
- Number of billable charges for which the bill after date is a future date
- Number of adhoc bills generated for the usage data file
- Number of billable charges which could not be processed successfully

Once the batch is executed successfully, the status of the usage records in a usage data file of a file group is changed to **Billed**.

Freezing All Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for the usage data files of a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

Procedure

To freeze and complete all adhoc bills generated for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Freeze and Complete** (👍) icon corresponding to the file group whose adhoc bills you want to freeze and complete.

The **Complete Bill** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Bill Date | Used to specify the date on which the bill was completed. | Yes |
| Accounting Date | Used to specify the accounting date of the bill. | Yes |

3. Enter the required details.
4. Click **OK** in the message box.

A batch job is created using the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch. A message appears indicating the batch job ID. This batch job freezes and completes all adhoc bills of the usage data file which are in the **Pending** status. The system does not freeze and complete pending adhoc bills which have bill segments in the **Error** status. For more information on the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note:

On successful completion of the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, a To Do entry is created using the **C1-FCADH** To Do type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-FCADH** To Do type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of bills which were picked up for completion
- Number of bills which were completed
- Number of bills which could not be completed successfully

Once the batch is executed successfully, the status of the bills is changed to **Complete**.

Freezing Selected Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

Procedure

To freeze and complete selected adhoc bills of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose adhoc bills you want to freeze and complete.

The **View Bill Data** screen appears.

3. Select the check box corresponding to the pending adhoc bill that you want to freeze and complete.

Note: The check box does not appear corresponding to the completed adhoc bills and pending adhoc bills which have bill segments in the **Error** status.

4. Click **Freeze/Complete**.

The **Complete Bill** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Bill Date | Used to specify the date on which the bill was completed. | Yes |
| Accounting Date | Used to specify the accounting date of the bill. | Yes |

5. Enter the required details.
6. Click **OK** in the message box.

The status of the bills is changed to **Complete**.

Note:

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a file group are in the **Complete** status
- Multiple bills are generated for a usage data file of a file group and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen when there is at least one pending bill for a file group where none of the bill segments are in the **Error** status.

Viewing All Bills Generated for a File Group

Procedure

To view all bills generated for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose bills you want to view.

The **View Bill Data** screen appears. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| File Group | Displays the name of the file group. |
| Description | Displays the description of the file group. |
| Bill Generation Date | Used to specify the date when the bills were generated for the file group. |
| Billing Method | Indicates the type of billing used for the file group. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing |
| Bill Status | Used to indicate the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete |

In addition, this screen contains the following columns:

| Column Name | Column Description |
|-------------------|--|
| Bill ID | Displays the bill ID. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Alternate Bill ID | Displays the alternate bill ID. |
| Bill Status | Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete |
| Bill Date | Displays the date when the bill was completed. |
| Accounting Date | Displays the accounting date for which the financial transaction of the bill is created. |
| Invoice Amount | Displays the total amount billed to the person. |

| Column Name | Column Description |
|--------------------|---|
| Invoice Currency | Displays the currency in which the amount is billed to the person. |
| Invoice Account ID | Indicates the account for which the bill is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Display Bill | On clicking this link, you can view the details of the respective bill. Note: This link appears only for the bills that are in the Complete status. The facility to view the generated bills in PDF format is available only if Oracle Documaker is integrated with Oracle Revenue Management and Billing. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. Click **Search**.
4. View the bills generated for the usage data file in the **View Bill Data** screen.
5. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

6. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
7. If required, you can freeze and complete adhoc bills which are generated for the usage data file.

Note:

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a usage data file are in the **Complete** status
- Multiple bills are generated for a usage data file and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen when there is at least one pending bill for a usage data file where none of the bill segments are in the **Error** status.

Viewing Usage Data Files of a File Group

Procedure

To view usage data files of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the file group whose usage data files you want to view.

The **Group Files** zone appears.

3. View the usage data files of the file group in the **Group Files** zone.

Usage Data Processing

The **Usage Data Processing** screen allows you to search for a usage data file based on various search criteria. Through this screen, you can:

- Upload a usage data file
- Cancel a usage data file
- View all records uploaded through a usage data file
- View the valid, invalid, and cancelled records of a usage data file
- View the valid records of a usage data file which are submitted for approval
- View the valid records of a usage data file for which billable charges are already created
- View the rejected, billed and unbilled records of a usage data file
- Submit the valid records of a usage data file and create billable charges for them
- Approve or reject one or more valid records of a usage data file
- Revalidate the valid and invalid records of a usage data file
- Edit the valid, invalid and rejected records of a usage data file
- Export the usage data of a usage data file into a CSV file

This screen consists of the following zones:

- [Search](#) on page 3957

Search

The **Search** zone allows you to search for usage data files that are uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| File Name | Used to specify the name of the usage data file. | No |
| File Type | Used to indicate the type of usage data file. | No |
| File Upload From Date | Used when you want to search for usage data files that were uploaded from a particular date onwards. | No |
| To | Used when you want to search for usage data files that were uploaded till a particular date. | No |
| User ID | Used to specify the name of the user who has uploaded the usage data file. | No |
| Billing Method | Used to specify the type of billing used for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing • Regular Billing | No |
| File Group | Used to specify the file group of the usage data file. | No |

Note: You must specify at least one search criterion while searching for a usage data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|--|
| File Information | Displays the name of the usage data file and its related details. |
| Revalidate | <p>On clicking the Revalidate () icon, you can execute the validation process once again on the valid, invalid, and rejected records.</p> <p>Note: The Revalidate icon appears when the usage records are in the Valid, Invalid, and/or Rejected status. In other words, you cannot revalidate a usage data file for which billable charges are created or when the bills are generated for a usage data file.</p> |
| Cancel | <p>On clicking the Cancel () icon, you can cancel all valid, invalid, and rejected records of the usage data file.</p> <p>Note: The Cancel icon appears when the usage records are in the Valid, Invalid, and/or Rejected status. In other words, you cannot cancel a usage data file for which billable charges are created or when the bills are generated for a usage data file.</p> |
| Submit | <p>On clicking the Submit () icon, you can submit the valid records and create billable charges for them. If the valid usage records need to be approved before creating the billable charges, a To Do entry is created for the approver to approve the valid records.</p> |

| Column Name | Column Description |
|-------------|--|
| | <p>Note: The Submit icon appears when all the records of a usage data file are in the Valid status. In other words, if a usage data file contains records in the Invalid status, you cannot create billable charges for a usage data file.</p> |
| Approve | <p>On clicking the Approve (☑) icon, the approver can approve all valid records of the usage data file.</p> <p>Note: The Approve icon appears when the usage data file (with all usage records in the Valid status) is uploaded using a file type to which the To Do algorithm (for enabling approval workflow) is attached.</p> |
| Total | <p>Displays the total number of records that are uploaded through the usage data file.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all records uploaded through the usage data file.</p> |
| Valid | <p>Displays the number of records which are successfully validated in the system.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all valid records of the usage data file.</p> |
| Invalid | <p>Displays the number of records which could not pass through the validation process in the system.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all invalid records of the usage data file.</p> |
| Submitted | <p>Displays the number of valid records which are submitted for approval.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all submitted records of the usage data file.</p> |
| Rejected | <p>Displays the number of records which are rejected by the approver.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all rejected records of the usage data file.</p> |
| Processed | <p>Displays the number of valid records for which billable charges are already created.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all processed records of the usage data file.</p> |
| Billed | <p>Displays the number of records for which billable charges are created and billed to the person.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all billed records of the usage data file.</p> |
| Unbilled | <p>Displays the number of records for which billable charges are created, but are not yet billed to the person.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all unbilled records of the usage data file.</p> |

| Column Name | Column Description |
|------------------|---|
| Cancelled | Displays the number of records which are cancelled in the system. |
| | Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all cancelled records of the usage data file. |
| Batch Run Status | Indicates the batch that was last executed on the usage data file and its current status. |
| | Note: It has a link. On clicking the link, the Batch Run Tree screen appears where you can view the execution details of the batch. |

You can upload a usage data file by clicking the **Upload** link in the upper right corner of this zone.

Searching for a Usage Data File

Procedure

To search for a usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of usage data files that meet the search criteria appears in the **Search Results** section.

Uploading a Usage Data File

Prerequisites

To upload a usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format
- File group using which you want to upload the usage data files is in **Open** status

Procedure

To upload a usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Billing Method | Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| | <ul style="list-style-type: none"> Regular Billing | |
| File Group | Used to specify the file group to which you want to add the usage data file. | Yes (Conditional) |
| | Note: This field appears when you select the Adhoc Billing option from the File Group list. You can only view those file groups that are in the open status and to which you have access in the File Group list. | Note: If you select the billing method as Adhoc Billing , you have to specify the file group to which you want to add the usage data file. |
| Bill After Date | Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field. | Yes (Conditional) |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. | Note: If you select the billing method as Regular Billing , you have to specify the bill after date. |
| Default Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required. | Yes (Conditional) |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date. | Note: If you select the billing method as Regular Billing , you have to specify the default usage start date. |
| Default Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required. | Yes (Conditional) |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date. | Note: If you select the billing method as Regular Billing , you have to specify the default usage end date. |
| File Type | Used to specify the type of usage data file. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. | No |
| File Name | Used to specify the name and path of the usage data file that you want to upload. Note: You can also click the Browse button corresponding to this field to browse to the location where the usage data file is available in the system. | Yes |

4. Enter the required details.
5. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the usage data file that you want to upload is available.
7. Click **Open**.
The usage data file name and path appears in the **File Name** field.
8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

Note:

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

- Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Replacing an Existing File

Prerequisites

To replace an existing usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format
- File group using which you want to upload the usage data files is in **Open** status

Procedure

To replace an existing usage data file:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- Select **Billing Management** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
- Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|---|
| Billing Method | Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> Adhoc Billing Regular Billing | Yes |
| File Group | Used to specify the file group to which you want to add the usage data file. Note: This field appears when you select the Adhoc Billing option from the File Group list. You can only view those file groups that are in the open status and to which you have access in the File Group list. | Yes (Conditional) Note: If you select the billing method as Adhoc Billing , you have to specify the file group to which you want to add the usage data file. |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| Bill After Date | Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field. | Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the bill after date. |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. | |
| Default Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required. | Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage start date. |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date. | |
| Default Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required. | Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage end date. |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date. | |
| File Type | Used to specify the type of usage data file. | Yes |
| Replace Existing File | Used to indicate that you want to replace any existing file in the system. | Yes |
| File Name | Used to specify the name and path of the usage data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the usage data file is available in the system. | |

- Select the **Replace Existing File** check box.

Note: You can replace an existing file when the usage records of a usage data file are in any of the statuses:

- **Valid** and/or **Invalid**
- **Rejected**
- **Cancelled**

In other words, you cannot replace a file when the billable charges are already created for the usage records of a usage data file, or are pending for approval with the approver.

5. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

6. Browse to the location where the usage data file that you want to replace is available.
7. Click **Open**.

The usage data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

Note:

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Viewing All Records of a Usage Data File**Procedure**

To view all records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the usage records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|---|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Used to specify the status of the usage record. The valid values are: <ul style="list-style-type: none"> • Valid • Invalid • Submitted for Approval • Processed • Rejected • Cancelled | No |
| Division | Used to specify the division to which the usage record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the usage records. | Yes (Conditional) |
| | | Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|---|
| Account Identifier | Used to indicate the account whose usage records you want to view. | Yes (Conditional) |
| | | Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. Note: This column appears only for the valid records for which billable charges have been created. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. |

| Column Name | Column Description |
|--|--|
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |

| Column Name | Column Description |
|---|--|
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

Note: You can download details of all the records of a usage data file in a CSV file format using the **Export TO Excel** link provided in the **Search** section.

- View the records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the usage records in the **Usage Data** screen.
- If required, you can click the **Export TO Excel** link to download details of all the records of a usage data file in a CSV file format.

Viewing Valid Records of a Usage Data File

Procedure

To view valid records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Valid** column corresponding to the usage data file whose valid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the valid records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Status | Indicates that all valid records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the valid record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the valid records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose valid records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all valid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |

| Column Name | Column Description |
|--|--|
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQVALUE1, SQVALUE2,, SQVALUE10 | Displays the number of units of the service quantity. |

| Column Name | Column Description |
|--|---|
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the valid records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the valid records in the **Usage Data** screen.

Viewing Invalid Records of a Usage Data File**Procedure**

To view invalid records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Invalid** column corresponding to the usage data file whose invalid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the invalid records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Status | Indicates that all invalid records are displayed in the Usage Data screen. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| Division | Used to specify the division to which the invalid record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the invalid records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose invalid records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all invalid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |

| Column Name | Column Description |
|--|--|
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION | Displays the distribution code which indicates the GL account associated with the charge. |

| Column Name | Column Description |
|--------------------------------------|--|
| CODE 2, ..., GL DISTRIBUTION CODE 10 | |
| CHARTYPE1, CHARTYPE2, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the invalid records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the invalid records in the **Usage Data** screen.

Viewing Submitted Records of a Usage Data File

Procedure

To view submitted records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Submitted** column corresponding to the usage data file whose submitted records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the submitted records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all records submitted for approval are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the submitted record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the submitted records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose submitted records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all submitted records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |

| Column Name | Column Description |
|--|--|
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL DESCRIPTION1, LINE BILL | Displays the description of the line item (charge). |

| Column Name | Column Description |
|---|---|
| LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the submitted records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
6. If required, you can filter the submitted records in the **Usage Data** screen.

Viewing Processed Records of a Usage Data File

Procedure

To view processed records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Processed** column corresponding to the usage data file whose processed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the processed records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|------------------------------|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all processed records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the processed record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the processed records. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|--|
| | | Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose processed records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all processed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |

| Column Name | Column Description |
|--|--|
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |

Viewing Cancelled Records of a Usage Data File**Procedure**

To view cancelled records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Cancelled** column corresponding to the usage data file whose cancelled records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the cancelled records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all cancelled records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the cancelled record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the cancelled records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose cancelled records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all cancelled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. Note: This column appears only if you have cancelled a valid record for which billable charges have been created. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |

| Column Name | Column Description |
|--|--|
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Viewing Rejected Records of a Usage Data File**Procedure**

To view rejected records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Rejected** column corresponding to the usage data file whose rejected records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the rejected records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Status | Indicates that all rejected records are displayed in the Usage Data screen. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|--|
| Division | Used to specify the division to which the rejected record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the rejected records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose rejected records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all rejected records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |

| Column Name | Column Description |
|--|--|
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE 1, PARAM TYPE 2,, PARAM TYPE 15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE 1, PARAM VALUE 2,, PARAM VALUE 15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY 1, CURRENCY 2,, CURRENCY 10 | Displays the currency in which the amount is charged. |
| MEMO ONLY 1, MEMO ONLY 2,, MEMO ONLY 10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY 1, SUMMARY 2,, SUMMARY 10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL 1, SHOW ON BILL 2,, SHOW ON BILL 10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |

| Column Name | Column Description |
|--|--|
| CHARTYPE 1, CHARTYPE 2,, CHARTYPE 10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL 1, CHARVAL 2,, CHARVAL 10 | Displays the value of the characteristic type. |
| REASON | Indicates the reason why the usage record was rejected by the approver. |
| COMMENTS | Displays additional information entered while rejecting a usage record. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the rejected records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the rejected records in the **Usage Data** screen.

Viewing Billed Records of a Usage Data File**Procedure**

To view billed records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Billed** column corresponding to the usage data file whose billed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the billed records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all billed records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the billed record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the billed records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose billed records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all billed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |

| Column Name | Column Description |
|--|--|
| CONTRACT ID | Displays the contract ID. |
| | Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. |
| | Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. |
| | Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. |
| | Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. |
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. |
| | Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. |
| | Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, | Displays the description of the line item (charge). |

| Column Name | Column Description |
|---|---|
| BILL DESCRIPTION1 LINE | |
| AMOUNT1, AMOUNT2, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the billed records of the usage data file in the **Usage Data** screen.

- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the billed records in the **Usage Data** screen.

Viewing Unbilled Records of a Usage Data File

Procedure

To view unbilled records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Unbilled** column corresponding to the usage data file whose unbilled records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the unbilled records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all unbilled records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the unbilled record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the unbilled records. | Yes (Conditional) |

Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|---|
| Account Identifier | Used to indicate the account whose unbilled records you want to view. | Yes (Conditional) |
| | | Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all unbilled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |

| Column Name | Column Description |
|--|---|
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the unbilled records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. Submitting a Valid Record**Procedure**

To submit a valid record:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the **Submit** (👉) icon corresponding to the usage data file whose valid records you want to submit.

The system behaves in the following manner when:

- Billing Method — Adhoc Billing, Approval Workflow — Off, and Bill After Date — Current or Future Date:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **Y** and

the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**.

- **Billing Method — Adhoc Billing, Approval Workflow — On, and Bill After Date — Current or Future Date:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.
- **Billing Method — Regular Billing, Approval Workflow — Off, and Bill After Date — Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** and the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account in the bill cycle in which the bill after date falls.
- **Billing Method — Regular Billing, Approval Workflow — Off, and Bill After Date — Not Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** in the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account based on the bill cycle defined for the account.
- **Billing Method — Regular Billing and Approval Workflow — On:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.

Note:

You can change the transaction limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Billable Charge Creation (C1-ODBCH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If you want to create billable charges for valid usage records where start date is a future date, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.

If a batch job is created automatically, the number of valid records for which billable charges are created in each work unit depends on the value defined for the **Billable Charge Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

In case an account belongs to an invoicing group, the billable charge is created for the member account and the bill is generated for the master account.

On successful completion of the **Billable Charge Creation (C1-ODBCH)** batch, a To Do entry is created using the **C1-ODBCH To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODBCH To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records for which billable charges were created
- Number of records for which billable charges could not be created successfully

3. If a batch job is created automatically, click **OK** in the message box.

Approving a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

Note: The system will not allow you to approve or reject a usage record submitted by you.

Procedure

To approve a valid record:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Approve the usage record from the Usage Data Processing screen | <ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Approve (☑) icon corresponding to the usage data file whose records you want to review. |
| Approve the usage record from the To Do List screen | <ol style="list-style-type: none"> 1. From the Main Menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 2. Select the type of To Do entries you want to view. The To Do List screen appears. 3. Select Open from the Filter by list to view all unassigned To Dos. 4. Click the Submitted Message link corresponding to the To Do entry whose records you want to review. |

The **Usage Data** screen appears.

2. Review the usage records which you want approve or reject.
3. Do either of the following:

| If you want to... | Then... |
|-----------------------------------|--|
| Approve one or more usage records | <ol style="list-style-type: none"> 1. If the usage record is accurate, then select the check box corresponding to the usage record. 2. Click Approve. The system behaves in the following manner when: <ul style="list-style-type: none"> • Billing Method — Adhoc Billing and Bill After Date — Current or Future Date: A billable charge is created for each valid record which is approved. The Adhoc Bill flag is set to Y and |

Rejecting a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

Note: The system will not allow you to approve or reject a usage record submitted by you.

Procedure

To reject a valid record:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Reject the usage record from the Usage Data Processing screen | <ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Approve (☺) icon corresponding to the usage data file whose records you want to review. |
| Reject the usage record from the To Do List screen | <ol style="list-style-type: none"> 1. From the Main Menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 2. Select the type of To Do entries you want to view. The To Do List screen appears. 3. Select Open from the Filter by list to view all unassigned To Dos. 4. Click the Submitted Message link corresponding to the To Do entry whose records you want to review. |

The **Usage Data** screen appears.

2. Review the usage records which you want approve or reject.
3. Do either of the following:

| If you want to... | Then... |
|----------------------------------|--|
| Reject one or more usage records | <ol style="list-style-type: none"> 1. If the usage record is not appropriate, then select the check box corresponding to the usage record. 2. Click Reject. |
| Reject all usage records | <ol style="list-style-type: none"> 1. Click Reject All. |

The **Rejection Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Reason | Used to indicate the reason why you want to reject the usage record. | Yes |
| Comments | Used to specify additional information while rejecting the usage record. | Yes |

4. Select the reason for rejecting the usage record and enter the comments in the respective field.

Note: The **ODB_REJ_RSN_FLG** lookup field values appear in the **Reason** list.

5. Click **OK**.

The status of the usage record is changed to **Rejected**. A To Do entry is created for the submitter to include correct or missing data.

Canceling a Usage Data File

There might be situations when incorrect usage data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. Once the usage data file is cancelled, the status of the file and all usage records in the file is changed to **Cancelled**. However, note that you can cancel a usage data file when there are no records (in other words, zero records) in the **Processed** and **Submitted** statuses.

Procedure

To cancel a usage data file:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Cancel the usage data file from the Usage Data Processing screen | <ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Cancel (🚫) icon corresponding to the usage data file that you want to cancel. |
| Cancel the usage data file from the On Demand Billing screen | <ol style="list-style-type: none"> 1. From the Main Menu, select Billing Management and then click On Demand Billing. The On Demand Billing screen appears. 2. Search for the file group whose usage data file you want to cancel. The search results appears. 3. Click the Broadcast (📡) icon corresponding to the required file group. The Group Files zone appears. The Group Files zone lists the usage data files that are uploaded using the file group. 4. Click the Cancel (🚫) icon corresponding to the usage data file that you want to cancel. |

A message appears confirming whether you want to cancel the usage data file.

2. Click **OK**.

The **Cancel Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Reason | Used to indicate the reason why you want to cancel the usage data file. | Yes |
| Comments | Used to specify additional information while cancelling the usage data file. | Yes |

3. Select the reason for cancelling the usage data file and enter the comments in the respective field.

Note: The ODB_CAN_RSN_FLG lookup field values appear in the **Reason** list.

4. Click **OK**.

The status of the usage data file is changed to **Cancelled**.

Revalidating a Usage Data File

There might be situations when you want to execute the validation process once again on the usage data file. For example, initially when the usage data file was uploaded, accounts didn't have an active contract and therefore the status of the usage records was set to **Invalid**. Later, a contract was created and activated for each account (whose usage records are available in the usage data file). In such case, you need to execute the validation process once again on the usage data file. However, note that when you revalidate a usage data file, only the records in the **Valid** and **Invalid** status are revalidated.

Procedure

To revalidate a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Click the **Revalidate** () icon corresponding to the usage data file on which you want to execute the validation process once again.

The valid and invalid records are revalidated, and accordingly the status of records is changed. A message appears indicating that the validation process has completed successfully.

Note:

If the usage data file size exceeds the file size limit set in the **On Demand Billing (C1-ODBFC)** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job revalidates the usage data file. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If a batch job is created automatically, the number of usage records that are revalidated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

3. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Editing a Valid, Invalid, or Rejected Usage Record

If the usage record validation fails or the approver rejects the usage record due to some reason, the status of the record is changed to **Invalid** or **Rejected**, respectively. You need to then correct the existing data or add the missing data. The system allows you to edit the valid, invalid, and rejected usage records.

Procedure

To edit a valid, invalid or rejected usage record:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Depending on whether you want to edit a valid, invalid, or rejected record, click the link in the **Valid**, **Invalid**, or **Rejected** column corresponding to the usage data file whose records you want to edit.

The **Usage Data** screen appears. The columns in the **Search Results** section are editable.

Note:

In case of rejected records, all columns except the **Reason** and **Comments** columns are editable.

In case of invalid record, the field with incorrect or missing data is highlighted with the red color. This helps to easily identify the reason why the validation process failed.

3. Enter the correct or missing data in the respective field.
4. Click **Save**.

All valid, invalid, or rejected usage records are validated once again. Once the validation process has completed successfully, the status of the records is changed accordingly.

Exporting Usage Data into CSV file

Oracle Revenue Management and Billing provides you the facility to export the usage data into a CSV file. However, you can download the usage data in a CSV file only if the billable charges are not yet created. In other words, you can download the usage data only when all the records of a usage data file are in the valid and/or invalid status. Once the usage data is downloaded, you can edit the usage records and reupload the usage data file.

Note: When you download the usage data file using the **Export To Excel** option, the downloaded file is saved on your system with a unique ID. Once you make the required changes in the downloaded usage data file, you need to save the modified file with the same name as it exists in Oracle Revenue Management and Billing, and then upload the file into the system to replace the existing file.

Procedure

To export usage data into CSV file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose usage records you want to export.
The **Usage Data** screen appears.
3. Click the **Export TO Excel** link in the **Search** section to download details of all the valid and/or invalid records of a usage data file in a CSV file format.
A message appears indicating that all valid and invalid records will be exported.
4. Click **OK**.

The system prompts you to save the file.

Filtering Usage Records

Procedure

To filter records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.

- Depending on whether you want to filter total, valid, invalid, submitted, processed, rejected, cancelled, billed, or unbilled usage records, click the link in the respective column corresponding to the usage data file.

The **Usage Data** screen appears.

- Enter the search criteria based on which you want to filter the records.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

The search results are filtered based on the specified criteria.

Most Commonly Used Tasks

Topics:

- [Changing the Layout](#)

This section lists some of the common tasks that are performed while using various functionality in the application.

Changing the Layout

You can change the layout of the zone by:

- [Removing a Column from the Zone](#) on page 4010
- [Adding a Column to the Zone](#) on page 4010
- [Rearranging Columns in the Zone](#) on page 4010

Adding a Column to the Zone

Once you have removed the columns from the zone, you can add them back to the zone. To add a column to the zone:

1. Click the **Column Configuration** () icon in the upper right corner of the zone.

A panel appears at the bottom of the zone with a list of column names.

Note: The column names with the white background in the panel are currently not displayed in the zone.

2. Drag and drop the column name from the panel to the location where you want to add the column in the zone.
The white background of the column name in the panel changes to the grey background indicating that the column is currently displayed in the zone.
3. If you want to add another column name from the panel to the zone, repeat the second step. Click the **Refresh** button, data will be displayed to the columns added in the zone.

Related Topics

| How to change the layout of the zone | Changing the Layout on page 4010 |

Rearranging Columns in the Zone

You can change the order in which the columns are displayed in the zone. To change the position of a column in the zone:

1. Click the column name whose position you want to change in the zone.
2. Drag and drop the column name between the columns where you want to place the selected column.

The position of the column changes in the zone.

Related Topics

| For more information on... | See... |
|--------------------------------------|--|
| How to change the layout of the zone | Changing the Layout on page 4010 |

Removing a Column from the Zone

To remove a column from the zone:

Click the **Delete** () icon corresponding to the column name that you want to remove from the zone.

The column is removed from the zone and is currently displayed with white background in the panel.

Note: Alternatively you can remove the column from the zone by clicking the Delete (🗑️) icon corresponding to the column name in the panel.

Appendix

B

Administration

Topics:

- [UI Maps](#)
- [Feature Configurations](#)

This section lists some of the administrative tasks.

UI Maps

This section explains how to create the UI maps for viewing and modifying data of the business objects within the approval workflow group.

Creating Display UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group.

Procedure

To create a Display UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Display UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Display naming convention while automatically generating a Display UI map. Therefore, do not use this naming convention while creating a Display UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create a Display UI map for account, you must use the following schema:

```
<schema>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

8. Click the **Save** link in the **Actions/Navigation** area.
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Display Only** button.
The HTML code is generated in the **HTML Editor** zone.
10. Click the **Save** link in the **Actions/Navigation** area.
The changes are saved.

|--|--|
| How to define an approval workflow group | Defining an Approval Workflow Group on page 1112 |
| How to edit an approval workflow group | Editing an Approval Workflow Group on page 1121 |

Creating Input UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group.

Procedure

To create an Input UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Input UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Input naming convention while automatically generating an Input UI map. Therefore, do not use this naming convention while creating an Input UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create an Input UI map for account, you must use the following schema:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

The <approvalTransactionId/> tag is used in the schema to retrieve the approval transaction ID of the respective business object. The <action/> tag is used in the schema to retrieve the action performed by the submitter.

- Click the **Save** link in the **Actions/Navigation** area.

The **Display Only** and **Input Map** buttons are enabled on the dashboard.

- Click the **Input Map** button.

The HTML code is generated in the **HTML Editor** zone.

- Add the following tag in the head tag:

```
<script language="javascript" type="text/javascript" src="code/
approvalWorkflow.js"></script>
```

- Add the text highlighted in bold within the tag as shown below:

```
<td>
<input onClick="performAction('<Approval Workflow Group Code>');"
oraMdLabel="SAVE_BTN_LBL" class="oraButton" type="button">
<input onClick="oraSubmitMap('CANCEL', false);" oraMdLabel="CANCEL_LBL"
class="oraButton" type="button">
</td>
```

In the above HTML code, you must replace <Approval Workflow Group Code> with the code of the approval workflow group for which you are creating a UI map.

- Click the **Save** link in the **Actions/Navigation** area.

The changes are saved.

Feature Configurations

This section explains how to set various feature configurations which are required for implementing various features in Oracle Revenue Management and Billing.

Setting the C1_ACCTINFO Feature Configuration

Prerequisites

To set the **C1_ACCTINFO** feature configuration, you should have:

- Account Type characteristic type defined in the application (where the characteristic entity is set to Account)
- Invoice Group Account characteristic type defined in the application (where the characteristic entity is set to Account)

Procedure

To set the **C1_ACCTINFO** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_ACCTINFO** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Account Type | Used to specify the characteristic type. This characteristic type is used to define the type of account in the Account screen. | Yes |
| | Note: By default, the C1_F_ATY characteristic type is specified. If you want to use account types other than the ones defined in the C1_F_ATY characteristic type, you need to create a new predefined characteristic type and add the required account types as its characteristic values. Then, specify the newly created characteristic type as the value for this option type. | |
| Invoice Group Account | Used to specify the characteristic type. This characteristic type is used to indicate whether the account is a master or member account in the Account screen. | Yes |
| | Note: By default, the C1_F_IGA characteristic type is specified. If you want to use any other characteristic type other than C1_F_IGA , you need to create a new predefined characteristic type and add two characteristic values — Y and N. Then, specify the newly created characteristic type as the value for this option type. | |

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

| Invoicing Group | <i>Invoicing Group</i> |

Setting the C1-ASOBLLNG Feature Configuration

The **C1-ASOBLLNG** feature configuration enables the system to determine the following:

- Whether the approval transaction should be created while defining, editing, or deleting a self-funded pricing rule.
- Various parameters, characteristic types, and extendable lookup business objects which should be used for the fully-insured group, fully-insured individual, and self-funded business.
- Person relationship type using which the bill group should be related to the parent customer.
- Policy person roles using which the parent customer and bill groups should be associated with the fully-insured group and self-funded policies.
- Status to which a policy should be transitioned on terminating, reinstating, or renewing the fully-insured group policy.
- Status to which a group membership should be transitioned on inactivating the main subscriber of the group membership.
- Status to which a member person of a group membership should be transitioned on inactivating the group membership.
- Status to which an individual membership should be transitioned on canceling the main subscriber of the individual membership.
- Status to which a member person of an individual membership should be transitioned on canceling the individual membership.
- Whether the plan-specific contracts should be created on the accounts for the fully-insured group policies.

Prerequisites

To set the **C1-ASOBLLNG** feature configuration, you should have:

- Required policy person roles, account relationship types, and person relationship types defined in the application
- Approval workflow settings configured for the **C1PRCANC**, **C1PRCASL**, **C1PRCRLCLM**, **C1PRCDA**, **C1PRFLTFFEE**, **C1PRCLVLFN**, **C1PRETCLM**, **C1PRRETENR**, and **C1PRCSSL** approval workflow groups
- Required approval workflow group defined for the Minimum Premium Program (MPP) pricing rule and approval workflow settings configured for the MPP approval workflow group
- Required characteristic types defined in the application
- Values defined for the **C1-ExtLookClaimTemplate**, **C1-ExtLookPricingRuleLineItem**, and **C1-ExtLookRetTypeRateOpt** extendable lookups
- Predefined values defined for the **C1INVTYP** characteristic type
- Required SQIs defined in the application
- Pricing arrangement parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- Billable charge line type parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- Pricing group rule parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- A predefined characteristic type named **Active Employee Coverage Billing Arrangement** defined with the following characteristic values:

| Characteristic Value | Description |
|----------------------|----------------|
| DRT | Direct Billing |
| GRP | Group Billing |

You must set the characteristic entity of the **Active Employee Coverage Billing Arrangement** characteristic type to **Person**.

- A predefined characteristic type named **Benefit Billing Arrangement** defined with the following characteristic values:

| Characteristic Value | Description |
|----------------------|----------------|
| DRT | Direct Billing |
| GRP | Group Billing |

You must set the characteristic entity of the **Benefit Billing Arrangement** characteristic type to **Person, Policy, and Policy Plan**.

- A predefined characteristic type named **COBRA Billing Arrangement** defined with the following characteristic values:

| Characteristic Value | Description |
|----------------------|----------------|
| DRT | Direct Billing |
| GRP | Group Billing |
| TPA | TPA Billing |

You must set the characteristic entity of the **COBRA Billing Arrangement** characteristic type to **Person, Policy, and Policy Plan**.

- Required billing preference, binder payment preference, geographic rating area preference for fully-insured group and individual, medicare preference, member relationship and subscription tier preference, and membership status reason preference defined in the application.

Procedure

To set the **C1-ASO BLLNG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-ASO BLLNG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------------------|--|---|
| Account Identifier Type Char Type | Used to specify the characteristic type which stores the account identifier type. It is used to determine the account to which you want to bill the group or individual membership. Note: You must specify a characteristic type where the characteristic entity is set to Membership . | Yes (Conditional) Note: This data is required while billing a group or individual membership. |
| Account Identifier Value Char Type | Used to specify the characteristic type which stores the account identifier. It is used to determine the account to which you want to bill the group or individual membership. Note: You must specify a characteristic type where the characteristic entity is set to Membership . | Yes (Conditional) Note: This data is required while billing a group or individual membership. |
| Age Based Parameter | Used to specify the parameter using which you want to define the lower age limit and upper age limit pricing eligibility criteria in an age based pricing. Note: The AGEBASED parameter is shipped with the product. By default, the value is set to AGEBASED . You can change the value, if required. However, note that you must specify an adhoc parameter where source entity is set to Algorithm , source type code is set to Calculate membership person's age , and the parameter usage is set to Pricing Eligibility Criteria . | Yes (Conditional) Note: This data is required while defining an age based pricing rule. |
| Approval Workflow Group for ASL | Used to specify the approval workflow group for an aggregate stop-loss pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting an aggregate stop-loss pricing rule. Note: The CIPRCASL approval workflow group for an aggregate stop-loss pricing rule is shipped with the product. By default, the value is set to CIPRCASL . You can change the value, if required. | Yes (Conditional) Note: This data is required while enabling the approval workflow process for an aggregate stop-loss pricing rule. |

| Option Type | Description | Mandatory (Yes or No) |
|--|---|--|
| Approval Workflow Group for Ancillary | <p>Used to specify the approval workflow group for an ancillary pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting an ancillary pricing rule.</p> <p>Note: The C1PRCANC approval workflow group for an ancillary pricing rule is shipped with the product. By default, the value is set to C1PRCANC. You can change the value, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for an ancillary pricing rule.</p> |
| Approval Workflow Group for Claim | <p>Used to specify the approval workflow group for a claim pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a claim pricing rule.</p> <p>Note: The C1PRCRLCLM approval workflow group for a claim pricing rule is shipped with the product. By default, the value is set to C1PRCRLCLM. You can change the value, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for a claim pricing rule.</p> |
| Approval Workflow Group for Flat Fees | <p>Used to specify the approval workflow group for the one-time and recurring flat fees pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the one-time and recurring flat fees pricing rules.</p> <p>Note: The C1PRFLTFEE approval workflow group for the one-time and recurring flat fees pricing rules is shipped with the product. By default, the value is set to C1PRFLTFEE. You can change the value, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for the one-time and recurring flat fees pricing rules.</p> |
| Approval Workflow Group for Level Funded | <p>Used to specify the approval workflow group for the enrollment based premium and flat rate based premium level funded pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the enrollment based premium and flat rate based premium level funded pricing rules.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for the enrollment based premium and flat rate based premium level funded pricing rules.</p> |

| Option Type | Description | Mandatory (Yes or No) |
|---|---|---|
| | <p>Note:</p> <p>The C1PRCLVLFN approval workflow group for the enrollment based premium and flat rate based premium level funded pricing rules is shipped with the product.</p> <p>By default, the value is set to C1PRCLVLFN. You can change the value, if required.</p> | |
| Approval Workflow Group for MPP | Used to specify the approval workflow group for a minimum premium program pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a minimum premium program pricing rule. | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for the minimum premium program pricing rules.</p> |
| Approval Workflow Group for Retention Type Claim Based | <p>Used to specify the approval workflow group for a retention type claim based pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a retention type claim based pricing rule.</p> <p>Note:</p> <p>The C1PRETCLM approval workflow group for a retention type claim based pricing rule is shipped with the product.</p> <p>By default, the value is set to C1PRETCLM. You can change the value, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for a retention type claim based pricing rule.</p> |
| Approval Workflow Group for Retention Type Enrollment Based | <p>Used to specify the approval workflow group for a retention type enrollment based pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a retention type enrollment based pricing rule.</p> <p>Note:</p> <p>The C1PRRETENR approval workflow group for a retention type enrollment based pricing rule is shipped with the product.</p> <p>By default, the value is set to C1PRRETENR. You can change the value, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for a retention type enrollment based pricing rule.</p> |
| Approval Workflow Group for SSL | Used to specify the approval workflow group for a specific stop-loss pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a specific stop-loss pricing rule. | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|--|--|--|
| | <p>Note:</p> <p>The C1PRCSSL approval workflow group for a specific stop-loss pricing rule is shipped with the product.</p> <p>By default, the value is set to C1PRCSSL. You can change the value, if required.</p> | <p>Note: This data is required while enabling the approval workflow process for a specific stop-loss pricing rule.</p> |
| Approval Workflow Group-Discount Arrangement | <p>Used to specify the approval workflow group for the discount share and discount guarantee pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the discount share and discount guarantee pricing rules.</p> <p>Note:</p> <p>The C1PRCDA approval workflow group for the discount share and discount guarantee pricing rules is shipped with the product.</p> <p>By default, the value is set to C1PRCDA. You can change the value, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for the discount share and discount guarantee pricing rules.</p> |
| Base Fee PC Sequence Characteristic | <p>Used to specify the characteristic type where you want to store the sequence number of the eligible base fee's price component. This characteristic is then passed to the rating engine for further processing.</p> <p>Note:</p> <p>The C1BSFESE characteristic type is shipped with the product.</p> <p>By default, the value is set to C1BSFESE. You can change the value, if required. However, note that you must specify an adhoc characteristic type where the characteristic entity is set to Rate Component.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while billing fully-insured group and individual health plans.</p> |
| Benefit Arrangement Billing | <p>Used to specify the characteristic type which indicates whom to bill the premium for a Medicare group membership. This characteristic type is defined for a policy plan, policy, and/or parent customer. The system then uses this characteristic type to determine whom to bill the Medicare group membership premium.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while billing the premium for a Medicare group membership.</p> |
| Bill Cycle Rule Code | <p>Used to specify the characteristic type which stores the billing preference of the account. This characteristic type is defined for an account. The system then uses this characteristic type to derive the bill cycle and bill period for the account.</p> | <p>Yes (Conditional)</p> |

| Option Type | Description | Mandatory (Yes or No) |
|-------------------------------------|--|--|
| | <p>Note: You must specify a characteristic type where the characteristic entity is set to Account.</p> | <p>Note: This data is required when you want the bill cycle and bill period to be tightly coupled with each other.</p> |
| Bill Group Policy Person Role | <p>Used to specify the policy person role using which a bill group should be associated with a fully-insured group or self-funded policy when the policy information is given for the bill group in an inbound message.</p> <p>Note: You must specify a policy person role which is already defined in the system.</p> | Yes |
| Bill Seg Req Reference Id Char Type | <p>Used to indicate the characteristic type where you want to store the request reference ID. During the fully-insured group and individual bill segment generation, this characteristic is stamped on a bill segment calculation line which indicates the repricing request for which the bill segment calculation line is created.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Bill Segment Calc Line.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while billing fully-insured group and individual health plans.</p> |
| Billable Charge Line Type Parameter | <p>Used to specify the parameter in which you want to store the billable charge line type. This parameter can then be used while defining an ancillary pricing rule type.</p> <p>Note: You must specify an adhoc parameter where the source entity is set to Transaction and the parameter usage is set to Price Item.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining an ancillary pricing rule type.</p> |
| Billing Arrangement | <p>Used to specify the characteristic type which indicates whom to bill the premium for an active employee coverage group membership. This characteristic type is defined for a parent customer and/or bill group. The system then uses this characteristic type to determine whom to bill the active employee coverage group membership premium.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while billing the premium for an active employee coverage group membership.</p> |
| Binder Payment Field Mapping | <p>Used to specify a binder payment preference. The system considers the various attributes of the binder payment preference while creating and monitoring binder payments for an individual membership.</p> <p>Note: You must specify a binder payment preference which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while creating and monitoring binder payments for an individual membership.</p> |

| Option Type | Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Claim Template Extendable Lookup Business Object | <p>Used to specify the claim template extendable lookup business object. The system displays the values of the specified extendable lookup in the Claim Template list while defining or editing a claim pricing rule type.</p> <p>Note: The C1-ExtLookClaimTemplate extendable lookup for claim template is shipped with the product. By default, the value is set to C1-ExtLookClaimTemplate. You can change the value, if required.</p> | Yes |
| Cobra Billing Arrangement | Used to specify the characteristic type which indicates whom to bill the premium for a COBRA group membership. This characteristic type is defined for a policy plan, policy, and/or parent customer. The system then uses this characteristic type to determine whom to bill the COBRA group membership premium. | Yes (Conditional) |
| Customer Registration ID Characteristic for Inbound Log | <p>Used to specify the characteristic type where you want to store the customer registration ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the customer registration object which is created through the health care inbound message.</p> <p>Note: The C1CRLOG characteristic type is shipped with the product. By default, the value is set to C1CRLOG. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log.</p> | Yes (Conditional) |
| Default Flat Rate Option | <p>Used to specify the rate option which must be used by default when the rate option is not given and the modifier method is set to either FLAT or NULL in the pricing rule data of a health care inbound message.</p> <p>Note: You must specify a rate option where the rate schedule is set to HC_FRTSC.</p> | Yes (Conditional) |
| Default Percentage Rate Option | Used to specify the rate option which must be used by default when the rate option is not given and the modifier method is set to either EXPT or INPT in the pricing rule data of a health care inbound message. | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|--|---|--|
| | <p>Note: You must specify a rate option where the rate schedule is set to HC_PRTSC.</p> | |
| <p>Invoice Type Characteristic Type</p> | <p>Used to specify the characteristic type which indicates the type of account. This characteristic type is defined for the account. The system then uses this characteristic type to determine the account on which the claim, specific stop-loss credits, aggregate stop-loss credits, claim based fee, enrollment based fee, one-time flat fees, recurring flat fees, ancillary, discount, or level funded billable charges should be created in the system. For more information, refer to Bill Group's Account on page 79.</p> <p>Note: The C1INVTYP characteristic type is shipped with the product. By default, the value is set to C1INVTYP. You can change the value, if required. However, note that you must specify a predefined characteristic type where the characteristic entity is set to Account.</p> | <p>Yes</p> |
| <p>Line Item Extendable Lookup Business Object</p> | <p>Used to specify the line item extendable lookup business object. The system displays the values of the specified extendable lookup in the Line Item list while defining, editing, or copying a claim template.</p> <p>Note: The C1-ExtLookPricingRuleLineItem extendable lookup for line item is shipped with the product. By default, the value is set to C1-ExtLookPricingRuleLineItem. You can change the value, if required.</p> | <p>Yes</p> |
| <p>Medicare</p> | <p>Used to specify a Medicare preference. The system considers the various attributes of the Medicare preference while creating charges for Medicare Part D Low Income Subsidy (LIS) and Late Enrollment Penalty (LEP).</p> <p>Note: You must specify a Medicare preference which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while creating charges for Medicare Part D LIS and LEP.</p> |
| <p>Membership Cancel Status</p> | <p>Used to specify the status to which an individual membership should be transitioned when the status of its main subscriber is set to Canceled.</p> <p>Note: You must specify a status which is defined in the lifecycle of the C1-IndMembership business object.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while canceling an individual membership.</p> |

| Option Type | Description | Mandatory (Yes or No) |
|--|--|--|
| Membership Characteristic for Inbound Log | Used to specify the characteristic type where you want to store the membership ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the group or individual membership which is created through the health care inbound message. | Yes (Conditional) |
| | <p>Note:</p> <p>The CIMBRLOG characteristic type is shipped with the product.</p> <p>By default, the value is set to CIMBRLOG. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log.</p> | <p>Note: This data is required while creating a group or individual membership through a health care inbound message.</p> |
| Membership ID Characteristic for Billable Charge | Used to specify the characteristic type where you want to store the membership ID. During the fully-insured group and individual billable charge creation process, this characteristic is stamped on a billable charge which indicates the group or individual membership for which the billable charge is created. | Yes (Conditional) |
| | <p>Note: You must specify a foreign key characteristic type where the characteristic entity is set to Billable Charge.</p> | <p>Note: This data is required while billing a group or individual membership.</p> |
| Membership Inactive Status | Used to specify the status to which a group membership should be transitioned when its main subscriber is inactivated. | Yes (Conditional) |
| | <p>Note: You must specify a status which is defined in the lifecycle of the C1-Membership business object.</p> | <p>Note: This data is required while inactivating a group membership.</p> |
| Membership Person Cancel Status | Used to specify the status to which the member persons of an individual membership should be transitioned when the individual membership is canceled. | |
| | <p>Note: You must specify a status which is defined in the MEMBER_PER_STATUS_FLG lookup field.</p> | <p>Note: This data is required while canceling an individual membership.</p> |
| Membership Person Inactive Status | Used to specify the status to which the member persons of a group membership should be transitioned when the group membership is inactivated. | Yes (Conditional) |
| | <p>Note: You must specify a status which is defined in the MEMBER_PER_STATUS_FLG lookup field.</p> | <p>Note: This data is required while inactivating a group membership.</p> |
| Off-process Request Detail Maximum Count | Used to indicate the maximum number of amendment details you can specify in an off-process request. | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|---|---|--|
| | | Note: This data is required while creating an off-process request. |
| Override Proration Applicability Characteristic Type | <p>Used to specify the characteristic type which indicates whether the proration rule should be overridden for a member person. At present, the override proration feature is used for a new born when the gift days are offered to a new born. This characteristic type can be defined for the group membership, policy plan, policy, and state.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Membership, Policy Plan, Policy, and State. Here, the predefined values for the characteristic type can be Y and N.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to override the proration rule.</p> |
| Override Proration Effective Date Characteristic Type | <p>Used to specify the characteristic type where you want to store the date from when the premium should be calculated for the new born. This characteristic is used during the bill segment generation to determine the bill period in which the date falls. The system then accordingly prorates the premium amount for the new born.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Membership Person.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to override the proration rule.</p> |
| Override Proration Rule Characteristic Type | <p>Used to specify the characteristic type where you want to store the override SQ rule for a new born. This characteristic type can be defined for the group membership, policy plan, policy, and state. If this characteristic is not defined at any level, the system uses the SQ rule of the rate schedule attached to the active contract to prorate the premium amount of a new born child.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Membership, Policy Plan, Policy, and State.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to override the proration rule.</p> |
| Parent Customer Policy Person Role | <p>Used to specify the policy person role using which the parent customer should be associated with a fully-insured group or self-funded policy when the policy information is given for the bill group or parent customer in an inbound message.</p> <p>Note: You must specify a policy person role which is already defined in the system.</p> | Yes |
| Person ID Characteristic for Inbound Log | Used to specify the characteristic type where you want to store the person ID. This characteristic type is used while creating a log entry for a health care | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|---|--|--|
| | <p>inbound message. The log entry then indicates the person whose record is created through the health care inbound message.</p> <p>Note: The C1PERLOG characteristic type is shipped with the product.</p> <p>By default, the value is set to C1PERLOG. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log.</p> | <p>Note: This data is required while creating a person through a health care inbound message.</p> |
| Person Identifier Type Char Type | <p>Used to specify the characteristic type which stores the person identifier type. It is used to determine the person to whom you want to bill the group or individual membership.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Membership.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while billing a group or individual membership.</p> |
| Person Identifier Value Char Type | <p>Used to specify the characteristic type which stores the person identifier. It is used to determine the person to whom you want to bill the group or individual membership.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Membership.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while billing a group or individual membership.</p> |
| Person Relationship Type | <p>Used to indicate how a bill group should be related to a parent customer. The system uses the person relationship type while:</p> <ul style="list-style-type: none"> • Creating a bill group for a parent customer through an inbound message • Viewing the 360° information of a parent customer <p>Note: You must specify a person relationship type which is already defined in the system.</p> | <p>Yes</p> |
| Plan Based Contract Characteristic Type | <p>Used to specify the characteristic type which helps to determine whether the system should create plan-specific contracts for a price item. This characteristic must be defined on the person for whom you want to create plan-specific contracts on the accounts.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Person.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to enable the plan-specific contract creation feature for specific persons in the fully-insured group health plan business.</p> |

| Option Type | Description | Mandatory (Yes or No) |
|--|--|---|
| Plan Based Contract Characteristic Value | Used to specify the characteristic value which indicates that the system should create plan-specific contracts for a price item on the accounts. | Yes (Conditional) Note: This data is required when you want to enable the plan-specific contract creation feature for specific persons in the fully-insured group health plan business. |
| Plan Based Contract Creation Eligibility | Used to indicate whether the system should create plan-specific contract for a price item on the account. The valid value is Yes . | Yes (Conditional) Note: This data is required when you want to enable the plan-specific contract creation feature for the fully-insured group health plan business. |
| Plan Id Characteristic Type | Used to specify the characteristic type where you want to store the plan for which the contract is created. During the fully-insured group policy plan contract creation, this characteristic is defined on the contract. Note: You must specify a characteristic type where the characteristic entity is set to Contract . | Yes (Conditional) Note: This data is required when you want to enable the plan-specific contract creation feature for the fully-insured group health plan business. |
| Policy Reinstatement Status | Used to specify the status to which the policy must be transitioned when it is reinstated. Note: You must specify a status which is defined in the lifecycle of the C1-POLICY business object. | Yes (Conditional) Note: This data is required while reinstating a fully-insured group policy. |
| Policy Renewal Status | Used to specify the status to which the policy must be transitioned when it is renewed. Note: You must specify a status which is defined in the lifecycle of the C1-POLICY business object. | Yes (Conditional) Note: This data is required while renewing a fully-insured group policy. |
| Policy Termination Status | Used to specify the status to which the policy must be transitioned when it is terminated. Note: You must specify a status which is defined in the lifecycle of the C1-POLICY business object. | Yes (Conditional) Note: This data is required while terminating a fully-insured group policy. |

| Option Type | Description | Mandatory (Yes or No) |
|--|---|---|
| Pricing Arrangement Parameter | <p>Used to specify the parameter in which you want to store the pricing arrangement. This parameter can then be used while defining an ancillary pricing rule type.</p> <p>Note: You must specify an adhoc parameter where the source entity is set to Transaction and the parameter usage is set to Price Item.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining an ancillary pricing rule type.</p> |
| Pricing Group Rule Parameter | <p>Used to specify the parameter in which you want to store the pricing group rule. The system stamps this parameter on the price assignment which is created through a pricing rule using a pricing group. It indicates that the price assignment is created using the respective rule in the pricing group.</p> <p>Note: You must specify an adhoc parameter where the source entity is set to Transaction and the parameter usage is set to Price Item.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining a claim, specific stop-loss, aggregate stop-loss, retention type claim based, or retention type enrollment based pricing rule for a bill group using a pricing group.</p> |
| Pricing Rule ID Characteristic for Inbound Log | <p>Used to specify the characteristic type where you want to store the pricing rule ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the pricing rule which is created through the health care inbound message.</p> <p>Note:</p> <p>The C1PRLOG characteristic type is shipped with the product.</p> <p>By default, the value is set to C1PRLOG. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while creating a pricing rule through a health care inbound message.</p> |
| Pricing Rule Type Category Characteristic | <p>Used to specify the characteristic type which indicates the pricing rule type category. This characteristic type is defined for a billable charge line type. The system uses this characteristic to lists the billable charge line types which are valid while defining a pricing rule type or pricing rule of a particular category.</p> | <p>Yes</p> |

| Option Type | Description | Mandatory (Yes or No) |
|---|--|---|
| | <p>Note:</p> <p>The C1PRTCAT characteristic type is shipped with the product.</p> <p>By default, the value is set to C1PRTCAT. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Billable Charge Line Type.</p> | |
| Proration Distributed SQI | <p>Used to specify the SQI where you want to store the distributed premium amount for the non-skip billing period. The system uses this SQI while creating the SQI based billable charge for the group membership premium.</p> <p>Note: You must specify an SQI which is already defined in the system.</p> | <p>es (Conditional)</p> <p>Note: This data is required when the 9/10 Billing (Skip Months) feature is enabled for an account.</p> |
| Proration SQI | <p>Used to specify the SQI where you want to store the pre-calculated or calculated premium amount. The system uses this SQI while creating the SQI based billable charge for the group or individual membership premium.</p> <p>Note: You must specify an SQI which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while billing fully-insured group and individual health plans.</p> |
| Rate Component Base Fee Characteristic | <p>Used to specify the characteristic type which indicates whether the rate component is a base fee rate component. This characteristic type is defined for the rate component.</p> <p>Note:</p> <p>The C1RCBFMA characteristic type is shipped with the product.</p> <p>By default, the value is set to C1RCBFMA.</p> | <p>Yes</p> |
| Rate Option Extendable Lookup Business Object | <p>Used to specify the rate option extendable lookup business object. The system displays the values of the specified extendable lookup in the Rate Option list while defining, editing, or copying a pricing rule type.</p> | <p>Yes</p> |

| Option Type | Description | Mandatory (Yes or No) |
|---|---|---|
| | <p>Note:</p> <p>The C1-ExtLookRetTypeRateOpt extendable lookup for rate option is shipped with the product.</p> <p>By default, the value is set to C1-ExtLookRetTypeRateOpt. You can change the value, if required.</p> | |
| Rating Area Field Mapping for Group | <p>Used to specify a geographic rating area preference. The system considers the various attributes of the geographic rating area preference while deriving the geographic rating area for a group membership.</p> <p>Note: You must specify a geographic rating area preference which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while deriving the geographic rating area for a group membership.</p> |
| Rating Area Field Mapping for Individual | <p>Used to specify a geographic rating area preference. The system considers the various attributes of the geographic rating area preference while deriving the geographic rating area for an individual membership.</p> <p>Note: You must specify a geographic rating area preference which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while deriving the geographic rating area for an individual membership.</p> |
| Reinsurer Person Relationship Type | <p>Used to indicate the relationship type using which the reinsurer person should be associated with the parent customer.</p> <p>Note: You must specify a reinsurer person relationship type which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while associating the reinsurer person with the parent customer.</p> |
| Relation Structure Code Field Mapping | <p>Used to specify a member relationship and subscription tier preference. The system considers the various attributes of the member relationship and subscription tier preference while deriving the member relationship for a member person and the subscription tier for a group or individual membership.</p> <p>Note: You must specify a member relationship and subscription tier preference which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while deriving the member relationship for a member person and the subscription tier for a group or individual membership.</p> |
| Sponsored Switch Characteristic for Billable Charge | <p>Used to specify the characteristic type which indicates whether the billable charge is a reverse charge for a membership benefit. This characteristic type is defined while creating the reverse charge for a membership benefit.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Billable Charge.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while creating the reverse charge for a benefit.</p> |

| Option Type | Description | Mandatory (Yes or No) |
|--|---|--|
| State of Issue Characteristic Type | Used to specify the characteristic type where you store the state for which the group or individual membership, policy plan, or policy is issued. This characteristic type can be defined for the group or individual membership, policy plan, or policy. This characteristic is used while identifying a list of eligible children in a group or individual membership for premium calculation. | Yes (Conditional) Note: This data is required while identifying a list of eligible children for premium calculation. |
| | Note: You must specify a characteristic type where the characteristic entity is set to Membership, Policy Plan, and Policy . | |
| Statement Construct Char for Inbound Log | Used to specify the characteristic type where you want to store the statement construct ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the statement construct which is created through the health care inbound message. | Yes (Conditional) Note: This data is required while creating a log entry for a health care inbound message. |
| | Note: You must specify a characteristic type where the characteristic entity is set to Statement Construct for Inbound Log . | |
| Status Reason Mapping | Used to specify a membership status reason preference. The system considers the various attributes of the membership status reason preference while deriving the individual membership or member person status reason. | Yes (Conditional) Note: This data is required while maintaining an individual membership. |
| | Note: You must specify a membership status reason preference which is already defined in the system. | |
| To Do Role Characteristic Type | Used to specify the characteristic type where you want to store the To Do role. This characteristic type is defined for the parent customer. The system uses this characteristic to determine the users to whom the To Dos created using the C1-REPC1 , C1-REPC2 , and C1-FIBCR To Do types should be assigned. | Yes (Conditional) Note: This data is required while billing fully-insured group and individual health plans. |
| | <p>Note:</p> <p>A To Do is created using the C1-REPC1 To Do type when an error occurs while creating a repricing request. A To Do is created using the C1-REPC2 To Do type when an error occurs while calculating group or individual membership premium. A To Do is created using the C1-FIBCR To Do type when an error occurs while creating a billable charge for a group and individual membership.</p> <p>You must specify an adhoc characteristic type where the characteristic entity is set to Person.</p> | |

| Option Type | Description | Mandatory (Yes or No) |
|-------------------------------|--|--|
| TPA Account Relationship Type | Used to indicate how a third party administrator (TPA) person should be related to its account. The system uses this account relationship type while creating a TPA account for a TPA person through a health care inbound message. | Yes (Conditional) |
| | Note: You must specify an account relationship type which is already defined in the system. | Note: This data is required while creating a TPA account through a health care inbound message. |
| TPA Person Relationship Type | Used to indicate how a third party administrator (TPA) person should be related to its parent customer. The system uses this person relationship type while creating a TPA person for a parent customer through a health care inbound message. | Yes (Conditional) |
| | Note: You must specify a person relationship type which is already defined in the system. | Note: This data is required while creating a TPA person through a health care inbound message. |
| TPA Policy Person Role | Used to specify the policy person role using which a third party administrator (TPA) person should be associated with a fully-insured group policy when the policy information is given for the TPA person in a health care inbound message. | Yes (Conditional) |
| | Note: You must specify a policy person role which is already defined in the system. | Note: This data is required while associating a TPA person with a fully-insured group policy through a health care inbound message. |

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_AXENTITY Feature Configuration

The **C1_AXENTITY** feature configuration enables you to configure various settings related to the **Approval Workflow** feature.

Prerequisites

To set the **C1_AXENTITY** feature configuration, you should have:

- An algorithm defined using the **C1-APPTXN** algorithm type in the application
- To Do types defined in the application
- Fields defined in the application

- XSL files that you want to use for the Input and Display UI maps

Procedure

To set the **C1_AXENTITY** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_AXENTITY** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|---|--|------------------------------|
| Approval Transaction Compare New or Missing Entry Color | Used to indicate the color in which you want to highlight the new record or new additions made to the existing record. This helps in comparing the existing and new data while reviewing an approval transaction. Note: You must specify a hexadecimal value for this option type. | Yes |
| Approval Transaction Compare Value Changed Color | Used to indicate the color in which you want to highlight the modifications made to the existing data. This helps in comparing the existing and new data while reviewing an approval transaction. Note: You must specify a hexadecimal value for this option type. | Yes |
| Approval Transaction Entity Access Algorithms | Used to specify the algorithm which controls access to the maintenance objects based on the access group and division. | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| | <p>Note: By default, the value is set to C1-APPTXN. If you create new maintenance objects and want to control the access of these new maintenance objects based on the access group and division, you have to create a custom algorithm and then attach it to this option type. In such case, you will have to define this option type twice — one with the default algorithm (that is, C1-APPTXN) and another with the custom algorithm.</p> | |
| Approval Transaction Field Masking | <p>Used to specify the business object for masking the approval transaction field in the approval workflow group schema.</p> <p>Note: If you do not specify the business object, masking is disabled for the respective field.</p> | Yes |
| Approval Transaction Resolve To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when an approver at any level in the hierarchy rejects an approval transaction.</p> <p>Note: You must specify a To Do type which is already defined in the system.</p> | Yes |
| Approval Transaction screen timeout | <p>Used to indicate the time (in minutes) in which the screen timeout message should appear in the Comparison: New versus Existing screen when the system takes longer time to display an approval transaction.</p> | Yes |
| Disable Approval Transaction Fields in Input UI Maps | <p>Used to indicate the fields that you want to disable whenever the input UI maps are regenerated.</p> <p>Note: You must specify a field which is already defined in the application.</p> | Yes |
| Display Existing Panel on Left Side (Y/N) | <p>Used to indicate whether you want to view the existing or new data in the left panel while reviewing an approval transaction. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want the existing data to appear in the left panel of the Comparison: New versus Existing screen. • N - Used when you want the new data to appear in the left panel of the Comparison: New versus Existing screen. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p> | No |
| Display Information String | <p>Used to indicate whether the approval transaction information string should appear in the Comparison: New versus Existing screen when you are reviewing an approval transaction of a construct. The valid values are:</p> <ul style="list-style-type: none"> • true | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| | <ul style="list-style-type: none"> false | |
| Display UI XSL | Used to indicate the XSL file that you want to use while regenerating the Display UI maps. | Yes |

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-BILLADJSQ Feature Configuration

Prerequisites

To set the **C1-BILLADJSQ** feature configuration, you should have:

- Service quantity identifiers (SQIs) defined in the application

Procedure

To set the **C1-BILLADJSQ** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-BILLADJSQ** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------|---|---|
| Billable Charge SQI | Used to specify the service quantity identifier (SQI) which you want to use while creating a billable charge for the state assessment fee. | Yes (Conditional) |
| | Note: You must specify an SQI which is already defined in the system. | Note: This data is required when you want to create billable charges for the state assessment fee. |
| Coverage End Date SQI | Used to specify the service quantity identifier (SQI) which you want use to derive the coverage end date from the account's last billed charge. The system uses the derived coverage end date in calculating the future retro adds (debits) for the respective account. | Yes |
| | Note: You must specify an SQI which is already defined in the system. | |
| Premium Amount SQI | Used to specify the service quantity identifier (SQI) based on which you want to calculate the catch up premium for each eligible billable charge. The value derived is finally used to calculate the future retro adds (debits) for the respective account. | Yes |
| | Note: You must specify an SQI which is already defined in the system. The future retro adds (debits) appears in the Billing and Adjustment Summary zone of the Account tab on the Customer 360° Information screen. | |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_CMO Feature Configuration

The **C1_CMO** feature configuration enables the system to determine the following:

- Administrative contracts and excess credit transactions which should be listed in the **Customer 360° Information** screen

- Payments against the suspense, on account, and excess credit contracts which are eligible for partial payment transfer from the payment list

Prerequisites

To set the **C1_CMO** feature configuration, you should have:

- Required contract types defined in the application

Procedure

To set the **C1_CMO** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_CMO** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------------|---|------------------------------|
| Administrative Contract Type | Used to specify the contract type. The contracts of the specified contract type are then listed in the Administrative Contracts zone of the Account tab on the Customer 360° Information screen. Note: If you want to specify multiple contract types, you need to set the Administrative Contract Type option type multiple times with a unique sequence number. If you do not specify the value for this option type, the data does not appear in the Administrative Contracts zone. | No |
| On Account Contract Type | Used to specify the contract type. The excess credit transactions on the contracts of the specified contract type are then listed in the Billed Vs Paid zone of the Account tab on the Customer 360° Information screen. It also helps the system to determine the payments against the on account contracts (created using the specified contract type) which | No |

| Option Type | Description | Mandatory (Yes or No) |
|-------------------------------------|--|--|
| | <p>are eligible for partial payment transfer from the payment list.</p> <p>Note:</p> <p>If you want to specify multiple contract types, you need to set the On Account Contract Type option type multiple times with a unique sequence number.</p> <p>If you do not specify the value for this option type, the data does not appear in the Billed Vs Paid zone.</p> | |
| Excess Credit Contract Type | <p>Used to specify the contract type. It helps the system to determine the payments against the excess credit contracts (created using the specified contract type) which are eligible for partial payment transfer from the payment list. Ideally, these excess credit contracts of the accounts should be used to park overpayments on the bills.</p> <p>Note: If you want to specify multiple contract types, you need to set the Excess Credit Contract Type option type multiple times with a unique sequence number.</p> | No |
| Suspense Contract Type | <p>Used to specify the contract type. It helps the system to determine the payments against the suspense contracts (created using the specified contract type) which are eligible for partial payment transfer from the payment list.</p> <p>Note: If you want to specify multiple contract types, you need to set the Suspense Contract Type option type multiple times with a unique sequence number.</p> | No |
| Excluded Contract types for netting | <p>Used when you want to exclude unmatched financial transactions of a particular contract type while creating transfer adjustments for a refund/write off request at the account level.</p> <p>Note: You can exclude multiple contract types by defining the Excluded Contract types for netting option type multiple times (with unique sequence number) in the feature configuration.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required when the adjustment level in the refund/write off request is set to Account or Bill.</p> |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_DIVFUNCT Feature Configuration

Procedure

To set the **C1_DIVFUNCT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_DIVFUNCT** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|---------------------------------------|--|-----------------------|
| Enforce division-specific validations | Used to indicate whether the division-specific validations must be triggered on the Person , Account and Contract screens. The valid values are: <ul style="list-style-type: none"> • Y • N | Yes |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the DELINPROC Feature Configuration

Procedure

To set the **DELINPROC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **DELINPROC** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|---|---|---|
| Delinquency Process Field Mapping | Used to specify a delinquency process preference which is created using the Delinquency Process preference category through the Field Mapping screen. The system then avails the attributes from the preference at various stages in the lifecycle of a delinquency process. | Yes (Conditional) |
| | Note: This option type is applicable for both the fully insured group and the fully insured individual businesses. For more information about the preference, refer to the Delinquency Process Preference section. | Note: This data is required while defining a delinquency process preference. |
| Policy Characteristic Type for Customer Contact | Used to indicate the characteristic type using which you want to store the policy ID on the customer contact. Here, you must specify a characteristic type where the characteristic entity is set to Customer Contact . | Yes (Conditional) |
| | Note: This option type is referred in the C1-NOTADREC and C1-NOTADCAN algorithms attached to a customer class. It is required when the group customer wants to allocate advance deposit to settle its overdue bills through a delinquency process. It is only applicable for the fully insured group business. | Note: This data is required while defining a delinquency process preference. |
| Routing Method – Contact Method Mapping | Used to specify a routing method – contact method mapping preference which is created using the C1_BillRouteCntMethMap business object through | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|-------------|---|---|
| | the Field Mapping screen. The system then derives the preferred contact method for the bill routing method from the routing method – contact method mapping preference while creating a customer contact for a person or an account during the delinquency management. | Note: This data is required while defining a delinquency process preference. |
| | Note: This option type is applicable for both the fully insured group and the fully insured individual businesses. For more information about the preference, refer to the Routing Method – Contact Method Mapping Preference section. | |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-EHRCONFIG Feature Configuration

The **C1-EHRCONFIG** feature configuration enables the system to determine the maximum number of levels that can be included in an entity hierarchy relationship. Accordingly, the system enables you to create hierarchy entities for upto one level less than the level specified in the **Maximum Hierarchy Level** option type of the **C1-EHRCONFIG** feature configuration. For example, if you set the **Maximum Hierarchy Level** option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements.

Procedure

To set the **C1-EHRCONFIG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-EHRCONFIG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option type:

| Option Type | Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Maximum Hierarchy Level | Used to indicate the maximum number of levels that you want to include in an entity hierarchy relationship. Note: At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels. The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. By default, the value is set to 10. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in this option type. | Yes |

- Enter the value for the required option type in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXCHRATE Feature Configuration

Procedure

To set the **C1_EXCHRATE** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_EXCHRATE** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| End Date Required for Division Override | Used to indicate whether the end date is mandatory for a division-specific exchange rate. The valid values are: <ul style="list-style-type: none"> • Y • N By default, the value of this option type is set to N . | Yes |

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXP_OVRD Feature Configuration

Procedure

To set the **C1_EXP_OVRD** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_EXP_OVRD** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Expire Override Switch | Used to indicate whether you want to automatically expire an agreed pricing when the agreed pricing of a person or an account without end date is overridden. The valid values are: <ul style="list-style-type: none"> • Y • N | Yes |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FINTRANOP Feature Configuration

The **C1_FINTRANOP** feature configuration enables the system to determine various options which should be considered while creating billable charges, determining a price item pricing, generating bill segments, and while creating an actual bill using a trial bill.

Prerequisites

To set the **C1_FINTRANOP** feature configuration, you should have:

- Values defined for the **BIRC_OPT_TYP_FLG** lookup field

Procedure

To set the **C1_FINTRANOP** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_FINTRANOP** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|---|--|---|
| Account Financial History Details Switch | <p>Used to indicate whether detailed or summarized information should be displayed for an account in the Account Financial History screen. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to list all financial transactions of a bill, payment, or adjustment for an account in the Account Financial History screen. • N - Used when you want to summarize all financial transactions of a particular type on an entity (i.e. bill, payment, or adjustment) and display the total amount in the Account Financial History screen. <p>Note: If you do not specify the value for this option type, by default, it is set to Y.</p> | No |
| Allow Advance Billing of Future Dated Charges | <p>Used to indicate whether you want to use advance billing for future dated billable charges. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If the Allow Advance Billing of Future Dated Charges option type is set to Y, the system considers those billable charges where the bill after date is on or before the cut-off date, irrespective whether the date of those billable charges is past or future dated.</p> <p>The Allow Advance Billing of Future Dated Charges option type should be defined only in case of non-recurring billable charges.</p> <p>By default, the value for this option type is set to N.</p> | No |
| Allow Caching Of Rule Based Autopay List | <p>Used to indicate whether you want to cache the rule based auto pay instructions of an account when the C1-APRULEEVL algorithm is invoked. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p> | No |
| Allow non-significant zero amount FT GL entry | <p>Used to indicate whether you want to allow non-significant zero amount FT GL entries in the system. The valid values are:</p> <ul style="list-style-type: none"> • Y • N | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to allow non-significant zero amount FT GL entries in the system.</p> |

| Option Type | Description | Mandatory (Yes or No) |
|---|---|--|
| | Note: The FT GL amount is considered significant only when the statistical and total amount are non-zero. | |
| Avoid internal match event creation for zero dollar Bill | Used to indicate whether you want to consider a zero balance bill for offsetting against another bills in an offset request. The valid values are: <ul style="list-style-type: none"> • Y • N | Yes (Conditional) Note: This data is required when you want to consider a zero balance bill for offsetting against another bills in an offset request. |
| | Note: If you set this option type to Y , the system does not match the credit and debit line items internally of a zero balance bill on the bill completion. If you set this option type to N , the system matches the credit and debit line items internally of a zero balance bill on the bill completion. | |
| Avoid Pricing Crawling if Rate Schedule present at Contract | Used to indicate that the system should not determine the price item pricing using the price assignment search algorithm (which is attached on the account's division) when the effective rate schedule is present on the contract. The valid values are: <ul style="list-style-type: none"> • Y • N | No |
| Bill Segment Regeneration on Freeze | Used to indicate whether you want to regenerate the bill segments before freezing them. The valid values are: <ul style="list-style-type: none"> • Y • N | No |
| | Note: If you do not specify the value for this option type, by default, it is set to N . If the Freeze and Complete option is selected for the respective window period in the bill cycle and the Bill Segment Regeneration on Freeze option type is set to Y , then the bill segments are regenerated and the status of the bill segments is set to Frozen . However, if the Freeze and Complete option is not selected for the respective window period in the bill cycle, then the bill segments are always regenerated irrespective of whether the Bill Segment Regeneration on Freeze option type is set to Y or N . | |
| Billable Charges Date - Non Recurring | Used to indicate whether you want to consider the non-recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are: | No |

| Option Type | Description | Mandatory (Yes or No) |
|-------------------------------------|--|--|
| | <ul style="list-style-type: none"> • S - Used when you want to consider the non-recurring billable charges whose start date is earlier than or equal to the cut-off date. • E - Used when you want to consider the non-recurring billable charges whose end date is earlier than or equal to the cut-off date. <p>Note: If you do not specify the value for this option type, by default, it is set to S.</p> <p>The system always considers the recurring billable charges whose start date is earlier than the cut-off date and end date is later than the cut-off date irrespective of whether the Billable Charges Date option type is set to S or E.</p> | |
| Billable Charges Date - Recurring | <p>Used to indicate whether you want to consider the recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> • S - Used when you want to consider the recurring billable charges whose start date is earlier than or equal to the cut-off date. • E - Used when you want to consider the recurring billable charges whose end date is earlier than or equal to the cut-off date. <p>Note: If you do not specify the value for this option type, by default, it is set to S.</p> | No |
| Catch Up Flag For Recurring Charges | <p>Used to indicate whether you want to consider the recurring billable charges for catch up. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to consider the recurring billable charges for catch up during the bill generation process, where the billable charge end date is earlier than the billable charge cut-off date. • N - Used when you do not want to consider the recurring billable charges for catch up during the bill generation process, where the billable charge end date is earlier than the billable charge cut-off date. | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to catch up with the recurring billable charges before the bill generation process.</p> |
| Defer Bill Segment Freeze | <p>Used to indicate whether you want to defer the freezing process of bill segments until the bill routing and due date calculation is completed. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want the system to freeze the bill segment after the bill routing and bill due date calculation is completed. • N - Used when you do not want the system to freeze the bill segment after the bill routing and bill due date calculation is completed. | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|--|--|--|
| | <p>Note: This flag is only considered for freezing the bill once the bill's status is set to Complete.</p> | <p>Note: This data is required when you want to defer the freezing process of bill segments until the bill routing and due date calculation is completed.</p> |
| Hide Debt Class Details On Account Main Page | <p>Used to indicate whether you want to hide the debt class details in the Main tab of the Account screen. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want the system to hide the debt class details in the Main tab of the Account screen. • N - Used when you want the system to populate the debt class details in the Main tab of the Account screen. | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to hide the debt class details in the Main tab of the Account screen.</p> |
| Rate Component Step Optimization | <p>Used to indicate whether you want to determine the rate for all tiering ranges of a step tiered rate component or for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to determine the rate for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. It helps to improve the performance of the billing batches. If you set this option type to Y, always ensure that you define the price components with the tiering ranges in the ascending order. • N - Used when you want to determine the rate for all tiering ranges of a step tiered rate component. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p> | <p>No</p> |
| Refund/Write-Off Flush Counter | <p>Used to specify the value for flush counter when the refund or write-off details are defined.</p> <p>Note: You must specify a numeric value greater than zero. If the total number of refund or write-off records are equal to the flush counter, the system then performs a flush and clear at session level.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required when you are defining the refund or write-off details in the system.</p> |
| Skip Priceitem Contract Type Validation | <p>Used to indicate whether you want to skip the price item's and billable charge's contract's contract type validation. The valid values are:</p> | <p>No</p> |

| Option Type | Description | Mandatory (Yes or No) |
|---------------------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Y - Used when you want to create a billable charge for a price item on the contract which is created using a contract type to which the price item is not associated. • N - Used when you want to create a billable charge for a price item on the contract which is created using a contract type to which the price item is associated. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p> | |
| Trial Bill Characteristics Conversion | <p>Used to indicate whether you want to copy the trial bill's characteristics when an actual bill is created using a trial bill. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p> | No |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FM Feature Configuration

Procedure

To set the **C1_FM** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_FM** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| First Batch in Transaction Aggregation Cycle | Used to specify the first mandatory batch that you want to be executed in the transaction aggregation cycle. | Yes |
| | Note: At present, the system does not support any value other than C1-TXNIP for this option type. | |
| Last Batch in Transaction Aggregation Cycle | Used to specify the last mandatory batch that you want to be executed in the transaction aggregation cycle. | Yes |
| | Note: At present, the system does not support any value other than C1-TXNCU for this option type. | |
| Disaggregation - Price Assignment | <p>Used to indicate whether the disaggregation request should be automatically created for a person or account when a price item is assigned to the person or account or the existing price item pricing assigned to the person or account is modified. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: You can use this feature when an algorithm which is created using the TXNDISAGGPRA algorithm type is attached to the Post-Processing system event of the C1_PRASGN_BO business object.</p> | No |
| Allow Duplicate Summary ID | <p>Used to indicate whether the transaction legs can have duplicate summary ID while creating an aggregated billable charge using the Service Quantity Calculation (C1-TXNSQ) batch. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If you set this option type to false, the system does not create the aggregated billable charge when one or more transaction legs have the same summary ID.</p> <p>If you do not specify the value for this option type, by default, the value is set to false.</p> | No |
| Parallel Query Degree | <p>Used to specify the degree of parallelism that you want to use while creating chunks (i.e. work units) in various Transaction Feed Management (TFM) batches. The valid values are:</p> <ul style="list-style-type: none"> • 1 • 2 • 3 • 4 | No |

| Option Type | Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| | <ul style="list-style-type: none"> • 5 • 6 • 7 <p>Note: With the parallel query feature, multiple threads on the database can work together simultaneously to process a single SQL statement which is used to create chunks. This helps to improve the batch performance.</p> <p>The system calculates the number of threads on the database that can be used to execute the SQL statement by setting 2 to the power of the specified parallel query degree. For example, if you set the parallel query degree to 4, the system uses 16 (i.e. 2⁴) threads on the database to create work units.</p> <p>You must set the parallel query degree depending on the infrastructure available on the site. If you do not specify the value for this option type, by default, the parallel query degree is set to 2.</p> | |
| Price Determination Description Item Batch | Used to specify the description for the batch which is used for validating the transaction and deriving the price item in the transaction aggregation cycle. For example, Validate Transaction and Derive Price Item . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence. | Yes |
| Remove Duplicates from Accumulated Rule Output | <p>Used to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p> | No |
| Rule Accumulation Output | <p>Used to indicate whether the system should accumulate the output parameters of all rules where the criteria returns Rule Is True irrespective of whether the rule true action is set to Next Dependent, Next Rule by Priority, or Success and then create transaction legs using the accumulated output parameters. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p> | No |

| Option Type | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Show Default Values in Price Item Pricing | Used to indicate whether the default values must appear in the Ignore Transaction , Aggregate Transaction , and Aggregation Schedule fields while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Y • N | Yes |
| Use Materialized Views | Used to indicate whether the price item pricing information must be cached in the CI_PRC_AGRD , CI_PRC_PL , and CI_PRC_INH_PL tables. The valid values are: <ul style="list-style-type: none"> • true • false | Yes |
| Maximum Price Item Parameters Cache Size | Used to indicate the maximum number of price items whose parameter information can be cached in the memory. | Yes |
| Maximum Price Item Parameter Groups Cache Size | Used to indicate the maximum number of price item parameter groups whose information can be cached in the memory. | Yes |
| SQ Recalculation Required | Used to indicate whether the SQIs in an aggregated billable charge must be recalculated while executing the CI-TXNCU batch. The valid values are: <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type or if you set the value to N, the system will not recalculate the SQIs in an aggregated billable charge.</p> | No |
| Transaction Detail Account Validation | Used to indicate whether the account must be validated during the transaction validation process. The valid values are: <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you set this option type to N, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.</p> <p>If you do not specify the value for this option type, the system will validate the account during the transaction validation process.</p> | No |
| Populate Summary Table Batch Description | Used to specify the description for the batch which is used for adding a summary record in the CI_TXN_DTL_PRITM_SUMMARY table. For example, Populate CI_TXN_DTL_PRITM_SUMMARY Table . This description appears in the error message when the | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|--|---|--|
| | transaction aggregation batches are not executed in the specified sequence. | Note: This data is required when the Use C1-TXNPS During Transaction Aggregation option type is set to true . |
| Find Price Item Pricing Batch Description | Used to specify the description for the batch which is used for finding the price item pricing for transactions in the transaction aggregation cycle. For example, Price Item Pricing Verification . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence. | Yes |
| Update Transaction Status Batch Description | Used to specify the description for the batch which is used for updating the status of the transactions (for which the error has occurred) in the transaction aggregation cycle. For example, Update Status . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence. | Yes |
| Service Quantity Calculation Batch Description | Used to specify the description for the batch which is used for creating the billable charges for transactions in the transaction aggregation cycle. For example, Service Quantity Calculation . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence. | Yes |
| Transaction Completion Batch Description | Used to specify the description for the batch which is used for updating the status of the transactions in the transaction aggregation cycle. For example, Mark Completion . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence. | Yes |
| Cleanup Unwanted Data Batch Description | Used to specify the description for the batch which is used for updating or deleting billable charges created for transactions in the transaction aggregation cycle. For example, Clean Up . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence. | Yes |
| Use C1-TXNPS During Transaction Aggregation | Used to indicate whether you want to use an alternative transaction aggregation process when the aggregation ratio is low. The valid values are: <ul style="list-style-type: none"> • true • false | No |

| Option Type | Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| | <p>Note: If you set this option type to true, you need to execute the following batches in the specified order in the transaction aggregation cycle:</p> <ol style="list-style-type: none"> 1. Flush All Caches (F1-FLUSH) 2. Refresh Pricing (C1-TXNRP) 3. Header Validation (C1-TXNHV) 4. Validate Transaction and Derive Price Item (C1-TXNIP) 5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS) 6. Price Item Pricing Verification (C1-TXNVP) 7. Update Status (C1-TXNEX) 8. Service Quantity Calculation (C1-TXNSQ) 9. Mark Completion (C1-TXNCM) 10. Clean Up (C1-TXNCU) with the Request Type parameter set to EROR | |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-OFFSETREQ Feature Configuration

The **C1-OFFSETREQ** feature configuration enables the system to determine whether the completed debit or credit bills of the effective child persons of the main customer (whose bill is added as the primary bill in the offset request) should be listed when you search for a bill in the offset request.

Procedure

To set the **C1-OFFSETREQ** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-OFFSETREQ** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

| Option Type | Description | Mandatory (Yes or No) |
|--|--|--|
| Allow Offsetting Across Persons | Used to indicate whether you want to offset bills across main customer’s hierarchy. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer or against one or more bills of the accounts of its effective child persons. • N - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer. | Yes |
| Show Warning When Offsetting Across Person Hierarchy | Used to indicate whether the system should display a warning message when a bill added for offsetting is in different person hierarchy than the base bill person hierarchy. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want the system to display a warning message when a bill is added for offset • N | Yes (Conditional) |
| | Note: If you do not specify the value for this option type, by default, it is set to N . | Note: This data is required when the Allow Offsetting Across Person option type is set to Y . |

7. Enter the value for the required option type in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PAYPORTAL Feature Configuration

Procedure

To set the **C1-PAYPORTAL** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-PAYPORTAL** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|-------------------------------|---|-----------------------|
| Allow Overpayment | Used to indicate whether you want to allow overpayment against an entity while editing the payment amount. The valid values are: <ul style="list-style-type: none"> • true • false | Yes |
| FK Reference for Bill | Used to indicate the foreign key reference which generates the information string for a bill in the Edit Payment Amount screen. Note: The C1-BLACT foreign key reference for bill is shipped with the product. You can also create a custom foreign key reference, if required. | Yes |
| FK Reference for Bill Segment | Used to indicate the foreign key reference which generates the information string for a bill segment in the Edit Payment Amount screen. Note: The C1-BSEG foreign key reference for bill segment is shipped with the product. You can also create a custom foreign key reference, if required. | Yes |
| FK Reference for Contract | Used to indicate the foreign key reference which generates the information string for a contract in the Edit Payment Amount screen. | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| | Note: The C1_F_SA foreign key reference for contract is shipped with the product. You can also create a custom foreign key reference, if required. | |
| FK Reference for Settlement | Used to indicate the foreign key reference which generates the information string for a settlement ID in the Edit Payment Amount screen. Note: At present, no foreign key reference for settlement ID is shipped with the product. Only the settlement ID appears in the information string. You can create a foreign key reference for settlement ID and specify it in this field. | No |

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PER_REL Feature Configuration

You can define person to person relationship type sequence in the **C1_PER_REL** feature configuration. This sequence is used while searching for effective price item pricing at the parent customer level.

Procedure

To set the **C1_PER_REL** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_PER_REL** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------------------|--|-----------------------|
| Person to Person Relationship Type | Used to indicate the person to person relationship type. Note: If you want to define more than one relationship type in the feature configuration, you need to specify the sequence in which the relationship type should be considered while searching effective price item pricing at the parent customer level. | Yes |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PERSTYPE Feature Configuration

The **C1_PERSTYPE** feature configuration enables the system to determine whether the entities should be created directly or through a customer registration object whenever a health care inbound message is processed. If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type**, **Parent Person Type**, or **TPA Person Type** option type of the **C1_PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type**, **Parent Person Type**, or **TPA Person Type** option type, the system creates or updates the person and its other entities directly and not through a customer registration object.

Prerequisites

To set the **C1_PERSTYPE** feature configuration, you should have:

- Values defined for the **PER_OR_BUS_FLG** lookup field

Procedure

To set the **C1_PERSTYPE** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PERSTYPE** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------|---|--|
| Bill Group Person Type | Used to specify the person type which indicates that the person is a bill group. | Yes (Conditional) |
| | Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status. | Note: This data is required while creating a bill group through a health care inbound message. |
| Parent Person Type | Used to specify the person type which indicates that the person is a parent customer. | Yes (Conditional) |
| | Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status. | Note: This data is required while creating a parent customer through a health care inbound message. |
| TPA Person Type | Used to specify the person type which indicates that the person is a third party administrator. | Yes (Conditional) |
| | Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status. | Note: This data is required while creating a TPA person through a health care inbound message. |

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PPARM_FLG Feature Configuration

The **C1_PPARM_FLG** feature configuration enables the system to determine whether the multi parameter based pricing or variance parameter based pricing feature is enabled. For more information on how to define pricing for a price item or price item bundle based on multiple parameters, see [Multi Parameter Based Pricing](#). For more information on how to define pricing for a price item or price item bundle based on variance parameter, see [Variance Parameter Based Pricing](#).

Procedure

To set the **C1_PPARM_FLG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PPARM_FLG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option type:

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Multi Price Parameter | Used to indicate whether you want to enable the multi parameter or variance parameter based pricing feature. The valid values are: <ul style="list-style-type: none"> • True - Used when you want to enable the multi parameter based pricing feature. • False - Used when you want to enable the variance parameter based pricing feature. | Yes |

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the C1_PR_REC Feature Configuration

Procedure

To set the **C1_PR_REC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PR_REC** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option type:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------------------|--|-----------------------|
| Effective Pricing Record Set Limit | Used to specify the number of records that can be displayed in the Search Results section of the Effective Price Assignment zone. The value must be an integer and not in decimals. The maximum number of records that can be displayed are 5000. Note: If you enter the value as 0 or if you do not specify the value for the Effective Pricing RecordSet Limit option type, no records will be displayed in the Search Results section. | Yes |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the C1_PRASNORDR Feature Configuration

The **C1_PRASNORDR** feature configuration enables the system to determine the manner in which price assignments should be searched for a global customer. For more information on how effective price item pricing is derived, see [Price Assignment Search Mechanism](#).

Prerequisites

To set the **C1_PRASNORDR** feature configuration, you should have:

- An algorithm defined using the **C1_PRASN_PP** algorithm type in the application

Procedure

To set the **C1_PRASNORDR** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PRASNORDR** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

| Option Type | Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| Price Assignment Algorithm | Used to specify the algorithm using which the price assignment should be searched for a global customer. | Yes |
| | Note: You must specify an algorithm which is already defined in the system. | |

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

Setting the C1_PRICING Feature Configuration

The **C1_PRICING** feature configuration enables the system to determine the following:

- The contract type that should be associated with a price item or price item bundle which is available for pricing.
- The priority that should be defaulted while assigning a price list to a person or an account from the user interface or through a business service.
- Whether the logs should be maintained when the **C1-GetAllAssignedPriceLists**, **C1-AssignPriceList**, **C1-GetEffectivePricing**, **C1-GetAccountRate**, **C1_PRICEASSIGN_SERVICE**, **C1-PriceAccount**, and **C1-GetPricing** business services are invoked.

Prerequisites

To set the **C1_PRICING** feature configuration, you should have:

- Contract types defined in the application

Procedure

To set the **C1_PRICING** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PRICING** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Default Contract Type | Used to indicate the contract type that you want to associate with a price item or price item bundle which is available for pricing. | Yes |
| | Note: You must specify a contract type which is already defined in the system. You must ensure that the specified contract type is defined for all divisions in the system. | |
| Default Price List Priority | Used to indicate the default priority that should appear in the Price List Assignment screen when you assign a | No |

| Option Type | Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| | price list to a person or an account. You can then edit the priority, if required. It is also used when both the priority and priority indicator are not passed to the C1-AssignPriceList business service. Note: The value for this option type must be a positive integer. | |
| Enable Service Logging | Used to indicate whether you want to maintain logs when the C1-GetAllAssignedPriceLists , C1-AssignPriceList , C1-GetEffectivePricing , C1-GetAccountRate , C1_PRICEASSIGN_SERVICE , C1-PriceAccount , and C1-GetPricing business services are invoked. The valid values are: <ul style="list-style-type: none"> • True • False | No |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PYREQSRT Feature Configuration

Procedure

To set the **C1-PYREQSRT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1-PYREQSRT** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Bill | Used to sort columns by the selected option type. The table fields in CI_BILL table are used to set the values for the option type Bill . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> Ascending Descending | No |
| Bill Segment | Used to sort columns by the selected option type. The table fields in CI_BSEG table are used to set the values for the option type Bill Segment . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> Ascending Descending | No |
| Contract | Used to sort columns by the selected option type. The table fields in CI_SA table are used to set the values for the option type Contract . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> Ascending Descending | No |

Note: Above options types are configured for the **Sort By** field for sorting columns on the **Edit Payment Amount** screen.

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_RLENG Feature Configuration

Procedure

To set the **C1_RLENG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_RLENG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------------------|---|-----------------------|
| Logging Rules for Transaction Feed | Used to indicate whether a log should be generated when you execute the Transaction Validation and Initial Product Determination (C1-TXNIP) batch. The valid values are: <ul style="list-style-type: none"> • True • False | Yes |
| | Note: This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution. | |
| Maximum Number of Rules in Cache | Used to indicate the maximum number of rules whose entry should be created in the log file. | Yes |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the C1-TXNDMYID Feature Configuration

For manually added transactions, the system can generate header details including the header ID automatically if you set the option types in the **C1-TXNDMYID** feature configuration.

Procedure

To set the **C1-TXNDMYID** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-TXNDMYID** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Dummy File Name | Used to specify the dummy file name. | Yes |
| Dummy Header ID | Used to specify the dummy header ID. | Yes |
| Dummy Transaction Source | Used to specify the dummy transaction source. | Yes |
| Dummy Header Date | Used to specify the dummy header date. | Yes |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-HOLDSRCH Feature Configuration

The **C1-HOLDSRCH** feature configuration enables the system to create active hold requests in the **MANL** (manual) mode by accessing the hold request creation, modification, release, and view through inbound web service.

Prerequisites

To set the **C1-HOLDSRCH** feature configuration, you should have:

- Values defined for the **HLRQ_OPT_TYP_FLG** lookup field.

Procedure

To set the **C1-HOLDSRCH** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-HOLDSRCH** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|----------------|---|--|
| Account FK Ref | Used to indicate the foreign key reference for an account. | Yes (Conditional) |
| | Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG lookup field. It must be in the Active status. | Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service. |
| Bill FK Ref | Used to indicate the foreign key reference for a bill. | Yes (Conditional) |
| | Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG lookup field. It must be in the Active status. | |

| Option Type | Description | Mandatory (Yes or No) |
|--------------------------|---|---|
| | | Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service. |
| Funding Exclusion Reason | Used to indicate the exclusion reason code for a bill in the funding request when the bill is put on hold through the Funding Request screen for the entire outstanding amount. Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG and CAN_RSN_CD_FLG lookup field. It must be in the Active status. | Yes (Conditional) Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service. |
| Person FK Ref | Used to indicate the foreign key reference for a person. Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG lookup field. It must be in the Active status. | Yes (Conditional) Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service. |

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_REFWO Feature Configuration

Procedure

To set the **C1_REFWO** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_REFWO** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|--|---|---|
| Default Adjustment Level | Used to indicate the default adjustment level required to create the refund/write off adjustments. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • SEGT | Yes |
| Field Mapping Preference for Individual Membership | Used to indicate an automatic refund/write-off preference. The system considers the various attributes of the automatic refund/write-off preference while deriving the automatic refund/write-off details for an individual membership. Note: You must specify an automatic refund/write-off preference which is already defined in the system. | Yes (Conditional) Note: This data is required while deriving the automatic refund/write-off details for an individual membership. |
| Field Mapping Preference for Policy (Small Group) | Used to indicate an automatic refund/write-off preference. The system considers the various attributes of the automatic refund/write-off preference while deriving the automatic refund/write-off details for a policy. Note: You must specify an automatic refund/write-off preference which is already defined in the system. | Yes (Conditional) Note: This data is required while deriving the automatic refund/write-off details for a group. |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PAYFLUPLD Feature Configuration

Procedure

To set the **C1-PAYFLUPLD** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-PAYFLUPLD** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Field Mapping for Match Type | Used to specify a field mapping which is created using the Configuration for Match Type - Handling Overpayment preference category. | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| | <p>Note:</p> <p>The system then considers this field mapping during the step-three PUGL batch execution whenever there are multiple payment records of the payee account in the CSV file.</p> <p>By default, the value is set to MT_CNF. You can change the value, if required.</p> <p>This option type is only applicable for the health insurance domain.</p> | |
| Payment Portal Thread Count | <p>Used to specify the number of threads you want to spawn in parallel. This value is used when a batch job is automatically created for the Create Payments from Payment Staging Records (PUGL) batch.</p> <p>Note: By default, the value is set to 1. You can change the value, if required.</p> | No |
| Thread Pool Name | <p>Used to specify the thread pool on which you want to execute the batch. This value is used when a batch job is automatically created for the following batches:</p> <ul style="list-style-type: none"> • Upload Payment Records in Pre-Staging Area (C1-PYUP1) • Move Payment Records to Staging Area (C1-PYUP2) • Create Payments from Payment Staging Records (PUGL) <p>Note: By default, the value is set to DEFAULT. You can change the value, if required.</p> | No |

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-CFS Feature Configuration

The **C1-CFS** feature configuration enables you to indicate whether the application environment should use the file object storage service of Oracle Cloud Infrastructure (OCI). If the file object storage service of OCI is used, you need to specify the buckets or containers within the Object Storage namespace from where you need to read files for the On Demand Billing and Payment Upload features. Before specifying the buckets to read files from the external location for the On Demand Billing and Payment Upload features, you need to define a file storage extendable lookup value using the **File Storage Configuration (F1-FileStorage)** extendable lookup where the file adapter is set to **Oracle Cloud Object Storage**. For more information on how to define a file storage extendable lookup value, refer to the **Oracle Utilities Application Framework Administrative Processes # Configuration Tools # Miscellaneous Topics # Referencing URIs # External File Storage** in *Oracle Revenue Management and Billing Online Help*.

Procedure

To set the **C1-CFS** feature configuration:

1. Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.
2. Click the **Admin** link in the **Application** toolbar.

A list appears.

3. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

4. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

5. In the **Feature Configuration Search** zone, enter **C1-CFS** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

7. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| File Object Storage Usage | <p>Used to indicate whether the application environment should use the file object storage service of Oracle Cloud Infrastructure (OCI). The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: By default, the value is set to N. You must ensure that the value of this option type is set to N in the On Premise and Cloud Service environments. If the value of this option type is set to Y, you need to accordingly specify the directory paths while executing the DWLDBILC, C1-PUPSG, C1-APACK, and C1-RECUP batches. For more information, refer to the <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> | Yes |
| ODB Extendable Lookup and Bucket | Used to specify the following information in the <File Storage Extendable Lookup Value>/<Object Storage Bucket> format: | Yes (Conditional) |

| Option Type | Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| | <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while uploading the files through the On Demand Billing feature. • The bucket or container from where you want to upload the file using the On Demand Billing feature. <p>Note: This option type is required only when the File Object Storage Usage option type is set to Y and you want to use the On Demand Billing feature.</p> | |
| Payment Upld Extendable Lookup and Bucket | <p>Used to specify the following information in the <File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while uploading the files through the Payment Upload feature. • The bucket or container from where you want to upload the file using the Payment Upload feature. <p>Note: This option type is required only when the File Object Storage Usage option type is set to Y and you want to use the Payment Upload feature.</p> | Yes (Conditional) |

8. Set the **File Object Storage Usage** option type to N.

9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-FLUPLD Feature Configuration

You need to set the **C1-FLUPLD** feature configuration only when you want to decrypt the encrypted files on the SFTP server while uploading and transforming the files through the **C1-FTRAN** batch. The **C1-FRDALG** algorithm is used to decrypt the file using the keystore. Earlier, the following properties were derived from the `FW_spl.properties.keystore.truststore.include` file to encrypt or decrypt the files using the keystore:

- `com.oracle.ouaf.system.keystore.file`
- `com.oracle.ouaf.system.keystore.passwordFileName`
- `com.oracle.ouaf.system.keystore.type`
- `com.oracle.ouaf.system.keystore.padding`
- `com.oracle.ouaf.system.keystore.mode`
- `com.oracle.ouaf.system.keystore.alias`

- `ouaf.system.fileupload.pgp.pvt.key.filepath`

Now, the **C1-FLUPLD** feature configuration enables you to specify the required details to encrypt or decrypt the files using the keystore.

Procedure

To set the **C1-FLUPLD** feature configuration:

1. Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.
2. Click the **Admin** link in the **Application** toolbar.

A list appears.

3. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

4. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

5. In the **Feature Configuration Search** zone, enter **C1-FLUPLD** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

7. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|---------------------------|---|------------------------------|
| File Decryption Key Alias | Used to specify the alias (i.e. key defined in the keystore) using which you want to encrypt or decrypt the files. | Yes |
| | Note: By default, the value is set to ouaf.system . You can change the value as per the requirement. | |
| Key Store File Path | <p>Used to specify the directory or bucket from where you want to fetch the keystore file. If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to fetch the keystore file from the shared directory on the server. <p>For example, you can set the value to <code>@SHARED_DIR/.ouaf_keystore</code>.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the <code>file-storage://</code></p> | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| | <p><File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the keystore file on OCI. The bucket or container from where you want the system to fetch the keystore file. <p>Note: By default, the value is set to @SHARED_DIR/ks/.ouaf_keystore. You must change the value as per the requirement. The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p> | |
| Key Store Mode | <p>Used to specify the mode using which you want to encrypt or decrypt the files.</p> <p>Note: By default, the value is set to CBC (i.e. Cipher-block Chaining).</p> | Yes |
| Key Store Padding | <p>Used to specify the padding using which you want to encrypt or decrypt the files.</p> <p>Note: By default, the value is set to PKCS5Padding.</p> | Yes |
| Key Store Password File Path | <p>Used to specify the directory or bucket from where you want to fetch the keystore password file. If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> @SHARED_DIR – Used when you want to fetch the keystore password file from the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/.ouaf_storepass.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the keystore password file on OCI. The bucket or container from where you want the system to fetch the keystore password file. | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| | <p>Note:</p> <p>By default, the value is set to @SHARED_DIR/ks/.ouaf_storepass. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p> | |
| Key Store Type | <p>Used to indicate the type of keystore file.</p> <p>Note: By default, the value is set to JCEKS.</p> | Yes |
| Private Key File Path | <p>Used to specify the directory or bucket from where you want to fetch the private key file. If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to fetch the private key file from the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/.ouaf_storepass.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while fetching the private key file on OCI. • The bucket or container from where you want the system to fetch the private key file. <p>Note:</p> <p>By default, the value is set to @SHARED_DIR/ks/.ouaf_storepass. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p> | Yes |

8. Enter the values for the required option types in the **Feature Configuration** screen.

9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-REPORTVW Feature Configuration

You need to set the **C1-REPORTVW** feature configuration only when you are using the Apache FOP Reporting framework in ORMB. It enables you to define the following properties which were earlier derived from the `spl.properties` file:

- `ouaf.runtime.billView.directoryPath`
- `ouaf.runtime.reportView.directoryPath`
- `ouaf.application.reportingDir`

Procedure

To set the **C1-REPORTVW** feature configuration:

1. Login to Oracle Revenue Management and Billing Version 5.1.0.0.0.

2. Click the **Admin** link in the **Application** toolbar.

A list appears.

3. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

4. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

5. In the **Feature Configuration Search** zone, enter **C1-REPORTVW** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

7. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

| Option Type | Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Report Download HTTP URL | Used to specify the HTTP servlet using which you want to download and view the FOP reports that are generated in the online mode. You must specify the URL in the following format: <code>https://ipaddress:port/ouaf/reportView</code> | Yes |
| | Note: You must override the default value as per the requirement. | |
| Report Generation (FOP) File Path | Used to specify the directory or bucket where you want to store the FOP reports which are generated either from the user interface or through a batch process. | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| | <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to store the FOP reports in the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/output.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the FOP reports on OCI. • The bucket or container where you want the system to store the FOP reports which are generated in the different formats. <p>Note:</p> <p>By default, the value is set to @SHARED_DIR/splapp/reporting/output. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p> | |
| Report Generation XSL Template File Path | <p>Used to specify the directory or bucket from where the respective XSL file should be fetched while generating the FOP report.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> • @SHARED_DIR – Used when you want to fetch the XSL file from the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/xsl.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> • The file storage extendable lookup value from where the cloud storage compartment and | Yes |

| Option Type | Description | Mandatory (Yes or No) |
|--------------------------------------|--|-----------------------|
| | <p>connection details are retrieved while fetching the XSL file for an FOP report.</p> <ul style="list-style-type: none"> The bucket or container from where you want the system to fetch the XSL file while generating the FOP report. <p>Note: By default, the value is set to @SHARED_DIR/splapp/reporting/xsl. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p> <p>Before generating an FOP report, you need to ensure that the XSL files are copied from the @INSTALL_DIR/splapp/reporting/xsl directory to the specified shared directory.</p> | |
| Report Generation XML Data File Path | <p>Used to specify the directory or bucket where you want to extract the data from the system in the XML format for an FOP report.</p> <p>If the application environment is an On Premise or Cloud Service environment, you can specify the directory name along with the following relative path:</p> <ul style="list-style-type: none"> @SHARED_DIR – Used when you want to store the XML file in the shared directory on the server. <p>For example, you can set the value to @SHARED_DIR/extractxml.</p> <p>However, if the application environment is a Cloud Service Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:</p> <ul style="list-style-type: none"> The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the XML file on OCI. The bucket or container where you want the system to store the XML file for an FOP report. <p>Note: By default, the value is set to @SHARED_DIR/splapp/reporting/extractxml. You must change the value as per the requirement.</p> <p>The shared directory variable (i.e. SHARED_DIR) is case-sensitive.</p> | Yes |

8. Enter the values for the required option types in the **Feature Configuration** screen.
9. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.
