Deleting a Discrepancy Report

Procedure

To delete a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report that you want to delete.

The **Discrepancy Report** screen appears.

3. Click the **Delete** button in the **Discrepancy Report** zone.

A message appears confirming whether you want to delete the discrepancy report.

Note: The **Delete** button appears when the discrepancy report is in the **Pending** or **Draft** status.

4. Click **OK**.

The discrepancy report is deleted.

Finalizing a Discrepancy Report

Prerequisites

To finalize a discrepancy report, you should have:

- Discrepancy Report status as Pending or Draft.

Procedure

To finalize a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report that you want to finalize.

The **Discrepancy Report** screen appears.

3. Click the **Finalize** button in the **Discrepancy Report** zone.

The status of the discrepancy report is changed to **Completed**.

Note: The **Finalize** button appears when the discrepancy report is in the **Pending** status.

Adding a Log Entry for a Discrepancy Report

Procedure

To add a log entry for a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report whose log you want to edit.

The **Discrepancy Report** screen is displayed. It consists of following tabs.

- [Discrepancy Report - Main](#) on page 2624
- [Discrepancy Report - Log](#) on page 2627

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Discrepancy Report Log** zone.

The **Add Discrepancy Report Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Discrepancy Report Information | Displays information about the discrepancy report. | Not applicable |
| Log Details | Used to specify additional comments for the discrepancy report. | Yes |

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Discrepancy Report Log** zone.

Member Reconciliation Preference

Oracle Revenue Management and Billing enables you to reconcile all pay instructions of a file at the member level through a batch named **C1-RCPM**. While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

A member reconciliation preference consists of the following attributes:

- Payment Event Characteristic Type
- Pay Instruction Completed Status
- Reconciliation Matching Level Characteristic Type
- Pay Instruction Open Status
- Reconciliation Open Status

For more information about these attributes, see [Defining a Member Reconciliation Preference](#) on page 2632. You can define, edit, delete, and copy a member reconciliation preference through the **Field Mapping** screen.

Searching for a Member Reconciliation Preference

Prerequisites

To search for a member reconciliation preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Member Reconciliation** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of member reconciliation preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Member Reconciliation Preference Details

Procedure

To view the details of a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the member reconciliation preference whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the member reconciliation preference in the **Field Mapping** zone.

Defining a Member Reconciliation Preference

Prerequisites

To define a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To define a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Field Mapping Business Object | Used to indicate the business object using which you want to create the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping | Yes |

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Preference | Used to specify the member reconciliation preference. | Yes |
| Description | Used to specify the description for the member reconciliation preference. | Yes |
| Detailed Description | Used to specify additional information about the member reconciliation preference. | No |
| Status | Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |

- **Preference Category** - This section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Preference Category | Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct | Yes |

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| Attribute | Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Payment Event Characteristic Type - Used when a pay instruction is reconciled at the member level through the C1-RCPM batch. • Pay Instruction Completed Status - Used when a pay instruction is fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Matching Level Characteristic Type - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • Pay Instruction Open Status - Used when a pay instruction is not fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Open Status - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the C1-RCPM batch. | Yes (Conditional) Note: This field is required while setting an attribute in the member reconciliation preference. |
| Value | Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member reconciliation preference: | Yes (Conditional) |

| Field Name | Field Description | | Mandatory (Yes or No) |
|------------|--|---|--|
| | <p>If the attribute is set to...</p> <p>Payment Event Characteristic Type</p> | <p>Then, this field is...</p> <p>Used to specify the characteristic type where you can store the payment event ID. | | <p>Reconciliation Open Status</p> | <p>Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to Open.</p> <div data-bbox="863 1444 1127 1682" style="border: 1px solid black; padding: 5px;"> <p>Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-MemberReconciliation business object.</p> </div> | |
| Entity Type | <p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> • Account • Billable Charge | | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field. | |

Note: While defining a member reconciliation preference, you must set at least one attribute in the member reconciliation preference.

6. Select the **Member Reconciliation** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the member reconciliation preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the member reconciliation preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click **Save**.

The member reconciliation preference is defined.

Editing a Member Reconciliation Preference

Prerequisites

To edit a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To edit a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the member reconciliation preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Preference | Displays the member reconciliation preference. | Not applicable |
| Description | Used to specify the description for the member reconciliation preference. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Detailed Description | Used to specify additional information about the member reconciliation preference. | No |
| Status | Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Preference Category | Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> Member Reconciliation | Not applicable |

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | |
|-----------------------------------|--|--|-------------------------------|------------------------|
| Attribute | Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Payment Event Characteristic Type - Used when a pay instruction is reconciled at the member level through the C1-RCPM batch. • Pay Instruction Completed Status - Used when a pay instruction is fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Matching Level Characteristic Type - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • Pay Instruction Open Status - Used when a pay instruction is not fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Open Status - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the C1-RCPM batch. | Yes (Conditional) | | |

| Entity Type | Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> Account Billable Charge | No |
| | Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field. | |

Tip: Alternatively, you can edit the details of a member reconciliation preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member reconciliation preference, if required.

Note: You must set at least one attribute in a member reconciliation preference.

5. Click **Save**.

The changes made to the member reconciliation preference are saved.

Copying a Member Reconciliation Preference

Instead of creating a member reconciliation preference from scratch, you can create a new member reconciliation preference using an existing member reconciliation preference. This is possible through copying a member reconciliation preference. On copying a member reconciliation preference, the details including the attributes are copied to the new member reconciliation preference. You can then edit the details, if required.

Prerequisites

To copy a member reconciliation preference, you should have:

- Member reconciliation preference (whose copy you want to create) defined in the application
- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To copy a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.

2. In the **Search Results** section, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the member reconciliation preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Preference | Used to specify the member reconciliation preference. | Yes |
| Description | Used to specify the description for the member reconciliation preference. | Yes |
| Detailed Description | Used to specify additional information about the member reconciliation preference. | No |
| Status | Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Preference Category | Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Member Reconciliation | Not applicable |

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| Attribute | Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Payment Event Characteristic Type - Used when a pay instruction is reconciled at the member level through the C1-RCPM batch. • Pay Instruction Completed Status - Used when a pay instruction is fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Matching Level Characteristic Type - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • Pay Instruction Open Status - Used when a pay instruction is not fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Open Status - Used when one or more pay instructions of a file are | Yes (Conditional) |
| | | Note: This field is required while setting an attribute in the member reconciliation preference. |

| Field Name | Field Description | Mandatory (Yes or No) | | | | |
|-----------------------------------|--|----------------------------------|--|-----------------------------------|---|---|
| | not yet fully reconciled at the member level through the C1-RCPM batch. | | | | | |

- [Ancillary Pricing](#)
- [Discount Pricing](#)

Oracle Revenue Management and Billing introduces a new pricing model for the self-funded health insurance business. In this pricing model, you can define pricing rules using a pricing rule type. You can define the following pricing rule types in ORMB:

- Claim
- Aggregate Stop-Loss
- Specific Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment

- [Level Funding Pricing](#)
- [Minimum Premium Program](#)
- [Self-Funded Pricing Rule Versioning](#)

Prerequisites

To setup the self-funded pricing feature, you need to do the following:

- Define values for claim template extendable lookup
- Define values for rate option extendable lookup
- Define values for line item extendable lookup
- Setup the **C1-ASOBLNG** feature configuration
- Define price items for the pricing rules
- Define parameters for the pricing rules
- Associate parameters to the price items for the pricing rules

Approval Workflow for the Self-Funded Pricing Rules

Oracle Revenue Management and Billing enables you to configure the approval workflow process for the claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, flat fees, ancillary, discount, or level funded pricing rules. The following approval workflow groups are shipped with the product:

| Approval Workflow Group | Description |
|-------------------------|--|
| C1PRCRLCLM | Claim Pricing Rule |
| C1PRCSSL | Specific Stop-Loss Pricing Rule |
| C1PRCASL | Aggregate Stop-Loss Pricing Rule |
| C1PRETCLM | Retention Type Claim Based Pricing Rule |
| C1PRRETENR | Retention Type Enrollment Based Pricing Rule |
| C1PRFLTTEE | Flat Fees Pricing Rule |
| C1PRCANC | Ancillary Pricing Rule |
| C1PRCDA | Discount Arrangement Pricing Rule |
| C1PRCLVLFN | Level Funded Pricing Rule |

To enable the approval workflow process for the pricing rules, you need to do the following:

1. Create the required approval workflow chains, approval workflow criterion types, approval workflow group chain linkages, and approval workflow reasons.

Note: The **Field Level Approval** feature is not supported for the self-funded pricing rules. Therefore, you should not define field approval rule criteria while creating the approval workflow group chain linkage for the above listed approval workflow groups.

2. Define the approval workflow settings for the respective approval workflow group and set the **Active** field to **Yes**.
3. Ensure that the following value is set in the respective option type of the **C1-ASOBLNG** feature configuration:

| Option Type | Value |
|---|------------|
| Approval Workflow Group for Claim | C1PRCRLCLM |
| Approval Workflow Group for SSL | C1PRCSSL |
| Approval Workflow Group for ASL | C1PRCASL |
| Approval Workflow Group for Retention Type Claim Based | C1PRETCLM |
| Approval Workflow Group for Retention Type Enrollment Based | C1PRRETENR |
| Approval Workflow Group for Flat Fees | C1PRFLTFEE |
| Approval Workflow Group for Ancillary | C1PRCANC |
| Approval Workflow Group for Discount Arrangement | C1PRCDA |
| Approval Workflow Group for Level Funded | C1PRCLVLFN |

Once the approval workflow process is enabled for the pricing rules of a particular category (for example, Claim), the system creates an approval transaction whenever you define, edit, or delete a pricing rule of the respective category (i.e. whenever you define, edit, or delete a claim pricing rule). You can view the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules in the **Pricing Rule Approval Transactions** zone of the **Customer 360° Information** screen. On clicking the link in the **Approval Transaction ID** column corresponding to an approval transaction, the **Comparison: New versus Existing** screen appears. It allows the approver to review the pricing rule and accordingly approve, reject, or cancel the approval transaction.

Tip: Alternatively, you can review the approval transaction and take appropriate action from the **Approval Transaction** screen.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Line Item Extendable Lookup

Different charges, such as consumer-driven amount, traditional health insurance amount, network access fees, and so on are received as part of the claim transaction. These charges which contribute to the total claim amount are

defined as the line items in the system. Each line item must be defined in the system using the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. A line item encapsulates the following information:

- Service Quantity Identifier (SQI) which indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the charge.
- Billable charge line type using which you want to create the calculation line for the charge.
- Whether the system should write off the charge when it is not eligible for billing.
- Billable charge line type using which you want to create the write off calculation line for the charge.
- Whether the charge should be considered while calculating the percentage based retention type claim based fee.
- The pricing rule type categories to which the charge is associated.

For example, the following table illustrates few line items which are applicable to different pricing rule type categories:

| Charge | Line Item | Write Off, If Not Eligible for Billing | Pricing Rule Type Category |
|-------------------------------------|-----------|--|----------------------------|
| Consumer-Driven Amount | CDH | Yes | Claim |
| | | | Specific Stop-Loss |
| | | | Aggregate Stop-Loss |
| | | | Ancillary |
| Traditional Health Insurance Amount | THC | Yes | Claim |
| | | | Specific Stop-Loss |
| | | | Aggregate Stop-Loss |
| Preventive Care Charges | PCC | No | Ancillary |

The CDH and THC line items can be included in a claim template. They can also be considered while calculating specific and aggregate stop-loss. The CDH and PCC line items can be considered while defining pricing arrangements in an ancillary pricing rule type. In addition, any charge received for the CDH and THC line items in a claim transaction will be written off when these line items are not eligible for billing.

The **C1-ExtLookPricingRuleLineItem** extendable lookup is redesigned to:

- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the fees separately for each applicable claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum amount for a line item

Once you derive the pricing information from a claim pricing rule in a specific stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for specific stop-loss. If so, it is considered for calculating specific stop-loss.

Once you derive the pricing information from a claim pricing rule in an aggregate stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for aggregate stop-loss. If so, it is considered for calculating aggregate stop-loss.

Once you derive the pricing information from a claim pricing rule in a level-funded pricing rule, you need to specify whether the additional fee (if any) should be settled through level funding. If so, it is considered while accumulating level funded charges.

Until now, when the **Include In Settlement** column was selected corresponding to a line item in a level funded pricing rule, the system settled the charge as well as its markup or markdown through level funding. However, now, the system provides two different options – one which helps to determine whether the charge should be settled through level funding and another which helps to determine whether the corresponding markup or markdown should be settled through level funding.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2652

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Business Object | Used to search a particular extendable lookup business object. | No |
| Description | Used to search extendable lookups with a particular description. | No |

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Business Object | Displays the extendable lookup business object. |
| Description | Displays the description of the extendable lookup business object. |
| | Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup. |

Searching for the Line Item Extendable Lookup

Procedure

To search for the **Line Item** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.

3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookPricingRuleLineItem** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Line Item** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Line Item Extendable Lookup

Procedure

To view the values of the **Line Item** extendable lookup:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.
3. View the values of the **Line Item** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Line Item)

The **Extendable Lookup** screen allows you to view the values of the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. It also allows you to define, edit, copy, and delete a line item. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2653
- [Extendable Lookup Value](#) on page 2654

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Line Item** extendable lookup. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Value | Displays the line item. |
| Description | Displays the description of the line item. |
| Owner | Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> • Base • Customer Modification • Framework |
| Edit | On clicking the Edit (✎) icon, the Line Item screen appears where you can edit the details of the line item. |
| Duplicate | On clicking the Duplicate (📄) icon, the Line Item screen appears where you can define a new line item using an existing line item. |
| Delete | On clicking the Delete (🗑) icon, you can delete the line item. <p>Note: You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.</p> |
| Detailed Description | Displays additional information about the line item. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a line item, the **Extendable Lookup Value** zone appears with the details of the respective line item.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the line item. It contains the following sections:

- **Main** – Displays basic information about the line item. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| Line Item | Indicates the charge for which the line item is created. |
| Description | Displays the description of the line item. |
| Override Description | Displays the overridden description of the line item. |

| Field Name | Field Description |
|--|---|
| Detailed Description | Displays additional information about the line item. |
| Status | Indicates the status of the line item. The valid values are: <ul style="list-style-type: none"> Active Inactive |
| Service Quantity Identifier | Indicates the service quantity identifier associated with the line item. |
| Billable Charge Line Type | Indicates the billable charge line type using which the calculation line is created for the charge (i.e. line item). |
| Write Off Billable Charge Line Type | Indicates the billable charge line type using which the write off calculation line is created for the charge (i.e. line item). |
| Write Off, if Not Eligible for Billing | Indicates whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> Yes No |
| Retention Claim Based Percentage Calculation | Indicates whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> Yes No |

- **Line Item Usage** – Indicates the pricing rule type categories to which the line item is associated. It contains the following column in a grid:

| Column Name | Column Description |
|----------------------------|--|
| Pricing Rule Type Category | Indicates the pricing rule type category which is associated with the charge (i.e. line item). The valid values are: <ul style="list-style-type: none"> Aggregate Stop-Loss Ancillary Claim Retention Type Claim Based Specific Stop-Loss |

- **Markup or Markdown Billing Information** – Indicates the markup or markdown billing information defined for the line items. It contains the following columns in a grid:

| Column Name | Column Description |
|---------------------------|--|
| Rate Type | Indicates the minimum and maximum markup or markdown billing information defined using the rate type. |
| Billable Charge Line Type | Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge. |

- **Line Item Billing Information** – Indicates the rate type and billable charge line type to which the line item is associated. It contains the following columns in a grid:

| Column Name | Column Description |
|---------------------------|--|
| Rate Type | Indicates the rate type defined for the line item. |
| Billable Charge Line Type | Indicates the billable charge line type billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum amount for a line item. |

- **Claim Handling Fees Billing Information** – Indicates the claim handling fees billing information. It contains the following columns in a grid:

| Column Name | Column Description | | | | | | |
|---------------------------|---|-------------|--------------------|-----------|--|---------------------------|--|
| Fee Type | Indicates the type of charge applicable on the line items. | | | | | | |
| Fee | Indicates the fee defined for the line items. | | | | | | |
| Rate | Indicates the rate and billable charge line type defined for the line items. <table border="1" data-bbox="565 678 1463 926"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Indicates the rate type defined for a line item.</td> </tr> <tr> <td>Billable Charge Line Type</td> <td>Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.</td> </tr> </tbody> </table> | Column Name | Column Description | Rate Type | Indicates the rate type defined for a line item. | Billable Charge Line Type | Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge. |
| Column Name | Column Description | | | | | | |
| Rate Type | Indicates the rate type defined for a line item. | | | | | | |
| Billable Charge Line Type | Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge. | | | | | | |

- **Record Actions** – This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the line item. |
| Delete | Used to delete the line item. Note: You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing. |
| Duplicate | Used to create a new line item using an existing line item. |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the extendable lookup business object using which the line item is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Owner | Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification |

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Line Item

Prerequisites

To define a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To define a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup or markdown billing information for the line items.
- **Line Item Billing Information** – Used to define line item billing information for the line items.
- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line items.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|------------------------------|
| Line Item | Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created. | Yes |
| Description | Used to specify the description for the line item. | Yes |
| Override Description | Used when you want to override the description of the line item. | No |
| Detailed Description | Used to specify additional information about the line item. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Status | <p>Used to indicate the status of the line item. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive <p>Note: By default, the value is set to Active.</p> | No |
| Service Quantity Identifier | Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item. | Yes |
| Billable Charge Line Type | <p>Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item).</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type Search field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | No |
| Write Off Billable Charge Line Type | <p>Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Write Off Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Write Off Billable Charge Line Type field.</p> | Yes (Conditional) |
| Write Off, if Not Eligible for Billing | <p>Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are:</p> <ul style="list-style-type: none"> Yes No <p>Note: By default, the value is set to No.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Retention Claim Based Percentage Calculation | Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| | Note: By default, the value is set to No . | |

4. Enter the required details in the **Main** section.
5. Associate the line item with one or more pricing rule type categories.
6. Define the markup or markdown billing information for the line items.
7. Define line item billing information for the line items.
8. Define the claim handling fees billing information for the line items.
9. Click **Save**.

The line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Associating a Line Item with a Pricing Rule Type Category

Procedure

To associate a line item with a pricing rule type category:

1. Ensure that the **Line Item Usage** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Usage** section contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| Pricing Rule Type Category | Used to indicate the pricing rule type category which you want to associate with the charge (i.e. line item). The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | | | |
|----------------------------|---|----------------------------|--------------|-------|---|--------------------|---|---------------------|--|----------------------------|--|-----------|--|--|
| | <ul style="list-style-type: none"> Ancillary Claim Retention Type Claim Based Specific Stop-Loss <p>The following table describes the significance of each category that can be associated with the line item:</p> <table border="1"> <thead> <tr> <th>Pricing Rule Type Category</th> <th>Significance</th> </tr> </thead> <tbody> <tr> <td>Claim</td> <td>Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.</td> </tr> <tr> <td>Specific Stop-Loss</td> <td>Whether the line item can be considered while calculating specific stop-loss.</td> </tr> <tr> <td>Aggregate Stop-Loss</td> <td>Whether the line item can be considered while calculating aggregate stop-loss.</td> </tr> <tr> <td>Retention Type Claim Based</td> <td>Whether the line item can be used while calculating the percentage based retention type claim based fee.</td> </tr> <tr> <td>Ancillary</td> <td>Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.</td> </tr> </tbody> </table> <p>Note: At present, the line items are not used in the pricing rule types where the pricing rule type category is set to Retention Type Enrollment Based and Flat Fees.</p> | Pricing Rule Type Category | Significance | Claim | Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group. | Specific Stop-Loss | Whether the line item can be considered while calculating specific stop-loss. | Aggregate Stop-Loss | Whether the line item can be considered while calculating aggregate stop-loss. | Retention Type Claim Based | Whether the line item can be used while calculating the percentage based retention type claim based fee. | Ancillary | Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type. | <p>Note: This field is required when you are associating the line item with a pricing rule type category.</p> |
| Pricing Rule Type Category | Significance | | | | | | | | | | | | | |
| Claim | Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group. | | | | | | | | | | | | | |
| Specific Stop-Loss | Whether the line item can be considered while calculating specific stop-loss. | | | | | | | | | | | | | |
| Aggregate Stop-Loss | Whether the line item can be considered while calculating aggregate stop-loss. | | | | | | | | | | | | | |
| Retention Type Claim Based | Whether the line item can be used while calculating the percentage based retention type claim based fee. | | | | | | | | | | | | | |
| Ancillary | Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type. | | | | | | | | | | | | | |

- Enter the required details in the **Line Item Usage** section.
- If you want to associate the line item with more than one pricing rule type category, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove a pricing rule type category from the line item, click the **Delete (🗑)** icon corresponding to the pricing rule type category.

- Click **Save**.

The line item is associated with the pricing rule type category.

Defining the Markup or Markdown Billing Information for the Line Items

Procedure

To define the markup or markdown billing information for the line items:

1. Ensure that the **Markup or Markdown Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Markup or Markdown Billing Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|---|
| Rate Type | Used to indicate the rate type. | Yes (Conditional) Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field. |
| Billable Charge Line Type | Used to specify the billable charge line type. Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | Yes (Conditional) Note: This field is required when you select an option from the Rate Type field. |

2. Enter the required details in the **Markup or Markdown Billing Information** section.
3. If you want to add more than one markup or markdown billing information for the line item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a markup or markdown billing information from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

4. Click **Save**.

The markup or markdown billing information is defined for the line items.

Defining Line Item Billing Information for the Line Items

Procedure

To define the line item billing information for the line items:

1. Ensure that the **Line Item Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Billing Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|--|
| Rate Type | Used to indicate the rate type. | Yes (Conditional) |
| | | Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field. |
| Billable Charge Line Type | Used to specify the billable charge line type. | Yes (Conditional) |
| | Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | Note: This field is required when you select an option from the Rate Type field. |

2. Enter the required details in the **Line Item Billing Information** section.
3. If you want to add more than one line item billing information for the line item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a line item billing information from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

4. Click **Save**.

The line item billing information is defined for the line items.

Defining the Claim Handling Fees Billing Information for the Line Items

Procedure

To define the claim handling fees billing information for the line items:

1. Ensure that the **Claim Handling Fees Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Claim Handling Fees Billing Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|---------------------------|--|---|-------------------|-----------------------|-----------|---------------------------------|---|---------------------------|---|---|--|
| Fee Type | Used to indicate the type of charge applicable on the line items. | Yes (Conditional) Note: This field is required when fee is selected from the Fee field. | | | | | | | | | |
| Fee | Used to indicate the fee defined for the line items. | Yes (Conditional) Note: This field is required when fee type is selected from the Fee Type field. | | | | | | | | | |
| Rate | Used to indicate the rate and billable charge line type for the line items. | Yes | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Used to indicate the rate type.</td> <td>Yes (Conditional) Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field.</td> </tr> <tr> <td>Billable Charge Line Type</td> <td>Used to specify the billable charge line type. Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</td> <td>Yes (Conditional) Note: This field is required when you select an option from the Rate Type field.</td> </tr> </tbody> </table> | Field Name | Field Description | Mandatory (Yes or No) | Rate Type | Used to indicate the rate type. | Yes (Conditional) Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field. | Billable Charge Line Type | Used to specify the billable charge line type. Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | Yes (Conditional) Note: This field is required when you select an option from the Rate Type field. | |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Rate Type | Used to indicate the rate type. | Yes (Conditional) Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field. | | | | | | | | | |
| Billable Charge Line Type | Used to specify the billable charge line type. Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | Yes (Conditional) Note: This field is required when you select an option from the Rate Type field. | | | | | | | | | |

2. Enter the required details in the **Claim Handling Fees Billing Information** section.

- If you want to add more than one claim handling fee billing information for the line item, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim handling fee billing information from the line item, click the **Delete (🗑)** icon corresponding to the line item.

- If you want to add more than one rate for the line item, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a rate from the line item, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The claim handling fees billing information is defined for the line items.

Editing a Line Item

Prerequisites

To edit a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To edit a line item:

- Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Edit (📎)** icon in the **Edit** column corresponding to the line item whose details you want to edit.

The **Line Item** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the line item.
- Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- Markup or Markdown Billing Information** – Used to define the markup and markdown billing information for the line item.
- Line Item Billing Information** – Used to define the line item billing information for the line item.
- Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line item.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|---|
| Line Item | Indicates the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created. | Not applicable |
| Description | Used to specify the description for the line item. | Yes |
| Override Description | Used when you want to override the description of the line item. | No |
| Detailed Description | Used to specify additional information about the line item. | No |
| Status | Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Service Quantity Identifier | Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item. | Yes |
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type Search field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | Yes |
| Write Off Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Write Off Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Write Off Billable Charge Line Type field.</p> | Yes (Conditional) <p>Note: This field is required when the Write Off, if Not Eligible for Billing field is set to Yes.</p> |
| Write Off, if Not Eligible for Billing | Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> Yes No | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Retention Claim Based Percentage Calculation | Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |

Tip: Alternatively, you can edit the details of a line item by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.

The changes made to the line item are saved.

Copying a Line Item

Instead of creating a line item from scratch, you can create a new line item using an existing line item. This is possible through copying a line item. On copying a line item, the details including the pricing rule type categories to which the line item is associated are copied to the new line item. You can then edit the details, if required.

Prerequisites

To copy a line item, you should have:

- Line item (whose copy you want to create) defined in the application
- Service quantity identifiers and billable charge line types defined in the application

Procedure

To copy a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the line item whose copy you want to create.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup or markdown billing information for the line item.
- **Line Item Billing Information** – Used to define the line item billing information for the line item.
- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line item.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) | |
|----------------------|--|--|-----|
| Line Item | Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created. | Yes | |
| Description | Used to specify the description for the line item. | Yes | |
| Override Description | Used when you want to override the description of the line item. | No | |
| Detailed Description | Used to specify additional information about the line item. | No | |
| Status | Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes | |
| Service Identifier | Quantity | Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item. | Yes |
| Billable Charge Type | Line | Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|--|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type Search field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | |
| Write Off Billable Charge Line Type | <p>Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Write Off Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Write Off Billable Charge Line Type field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Write Off, if Not Eligible for Billing field is set to Yes.</p> |
| Write Off, if Not Eligible for Billing | <p>Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No | No |
| Retention Claim Based Percentage Calculation | <p>Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No | No |

Tip: Alternatively, you can copy a line item by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.

The new line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Deleting a Line Item**Procedure**

To delete a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the line item that you want to delete.

A message appears confirming whether you want to delete the line item.

Note: You can delete a line item when it is not yet used in the claim template or while defining the Administrative Services Only (ASO) pricing.

Tip: Alternatively, you can delete a line item by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The line item is deleted from the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Viewing the Line Item Details

Procedure

To view the details of a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Broadcast** () icon corresponding to the line item whose details you want to view.

The **Extendable Lookup Value** zone appears.

4. View the details of the line item in the **Extendable Lookup Value** zone.

Claim Template Extendable Lookup

The ASO service provider may bill different charges for a claim transaction to different employers. The system enables you to create different claim templates for different employers. A claim template contains a set of charges (i.e. line items) which can be billed to a parent customer or bill group. You can define multiple claim templates in the system. Each claim template must be defined in the system using the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. A claim template encapsulates the following information:

- Whether the claim template can be used while defining a claim pricing rule for a policy which is in the **In Force/Active, Post Runout**, or **Runout** status.
- Line items which can be billed to a parent customer or bill group.
- Whether you want to calculate the markup or markdown on the line items which are included in the claim template.
- Whether you want to specify a flat markup or markdown amount for the line items or the markup or markdown percentage for the line items which are eligible for percentage based markup or markdown
- Whether a line item is eligible for billing or not.
- Whether you want to define rule based billing eligibility for a line item.
- Whether you want to define billing eligibility for a line item while defining a claim pricing rule.
- Rule type which indicates the rules that should be executed to determine whether the line item is eligible for billing.
- Whether the line item is eligible for percentage based markup or markdown when the markup or markdown type is set to **Percentage**.

Once a claim template is defined in the extendable lookup, you can associate the claim template with a claim pricing rule type. You can associate multiple claim templates with a claim pricing rule type. Then, while defining a claim pricing rule for a parent customer, you can use any one of the claim template associated with the respective claim pricing rule type. The system then inherits the line items and the default markup and markdown values in the claim pricing rule from the claim template.

However, while defining a claim pricing rule for a policy of a bill group, you can only use the claim templates which are defined for the respective policy status and associated with the respective claim pricing rule type.

For example, the following table illustrates few claim templates with different line items:

| Claim Template | Policy Status | Line Item | Billing Eligibility | Pricing Strategy | Markup or Markdown Type | Markup or Markdown Amount | Markdown or Markdown Percentage |
|----------------|---------------------|-----------|---------------------|------------------|-------------------------|---------------------------|---------------------------------|
| CT1 | In Force/ Active | CDH | Yes | Markup | Flat Amount | \$2 | - |
| | | THC | Yes | | | | |
| | | PCC | No | | | | |
| CT2 | Runout | CDH | Yes | Markdown | Percentage | - | 2.00 |
| | | THC | Yes | | | | |
| CT3 | Post Runout | PCC | Yes | None | - | - | - |
| | | NAF | No | | | | |

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2671

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Business Object | Used to search a particular extendable lookup business object. | No |
| Description | Used to search extendable lookups with a particular description. | No |

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------|--|
| Business Object | Displays the extendable lookup business object. |
| Description | Displays the description of the extendable lookup business object. |

| Column Name | Column Description |
|-------------|---|
| | Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup. |

Searching for the Claim Template Extendable Lookup

Procedure

To search for the **Claim Template** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookClaimTemplate** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Claim Template** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Claim Template Extendable Lookup

Procedure

To view the values of the **Claim Template** extendable lookup:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.
3. View the values of the **Claim Template** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Claim Template)

The **Extendable Lookup** screen allows you to view the values of the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. It also allows you to define, edit, copy, and delete a claim template. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2673
- [Extendable Lookup Value](#) on page 2674

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Claim Template** extendable lookup. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Value | Displays the claim template. |
| Description | Displays the description of the claim template. |
| Owner | Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification |
| Edit | On clicking the Edit () icon, the Claim Template screen appears where you can edit the details of the claim template. |
| Duplicate | On clicking the Duplicate () icon, the Claim Template screen appears where you can define a new claim template using an existing claim template. |
| Delete | On clicking the Delete () icon, you can delete the claim template. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: You can delete a claim template when it is not yet used in a claim pricing rule type.</p> </div> |
| Detailed Description | Displays additional information about the claim template. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a claim template, the **Extendable Lookup Value** zone appears with the details of the respective claim template.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the claim template. It contains the following sections:

- **Main** – Displays basic information about the claim template. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| Claim Template | Displays the claim template. |
| Description | Displays the description of the claim template. |
| Override Description | Displays the overridden description of the claim template. |
| Detailed Description | Displays additional information about the claim template. |
| Status | Indicates the status of the claim template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |

- **Claim Template Usage** – Indicates when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

| Field Name | Field Description |
|-------------------|--|
| Policy Status | Indicates whether the claim template should be used while defining a claim pricing rule for a policy which is in the In Force/Active , Post Runout , or Runout status. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout |

- **Claim Handling Fees** – Indicates the claim handling fees which are applicable to one ore more line items in the claim template. It contains the following columns:

| Column Name | Column Description |
|---------------------------------|---|
| Show Line Items in Pricing Rule | Indicates that claim line item appears when you are defining or editing a claim pricing rule. |
| Fee Type | Indicates the type of charge applicable on the line items. |
| Fee | Indicates the fee defined for the line items. |

| Column Name | Column Description | | | | | | | | |
|--------------------|--|---|--------------------|----------|---|-----------|--|------|--|
| Fee Significance | Indicates the purpose of the imposing the claim handling fees on the line items. | | | | | | | | |
| Fee Applicability | Indicates the fee applicability on which the claim handling fees are defined. | | | | | | | | |
| Rating Information | Indicates the rate type and value that you want to use while defining the rating information for the line items. | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items.</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items.</td> </tr> <tr> <td>Rate</td> <td>Displays the rate that you want to use while defining or editing the claim handling fees for the line items.</td> </tr> </tbody> </table> | Column Name | Column Description | Editable | Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items. | Rate Type | Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items. | Rate | Displays the rate that you want to use while defining or editing the claim handling fees for the line items. |
| | Column Name | Column Description | | | | | | | |
| | Editable | Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items. | | | | | | | |
| Rate Type | Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items. | | | | | | | | |
| Rate | Displays the rate that you want to use while defining or editing the claim handling fees for the line items. | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |

- **Default Markup or Markdown Values** – Indicates the default markup or markdown values defined for the line items in the claim template. It contains the following fields:

| Field Name | Field Description |
|-------------------------------|---|
| Pricing Strategy | Indicates whether you want to markup or markdown the line items. The valid values are: <ul style="list-style-type: none"> • Markup • Markdown • None |
| Markup or Markdown Type | Indicates whether you want a flat or percentage based markup or markdown on the line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage |
| | Note: This field appears when the Markup or Markdown option is selected from the Pricing Strategy list. |
| Markup or Markdown Amount | Displays the default flat markup or markdown amount for the line items. |
| | Note: This field appears when the Flat Amount option is selected from the Markup or Markdown Type list. |
| Markup or Markdown Percentage | Displays the default percentage of markup or markdown for all line items. |
| | Note: This field appears when the Percentage option is selected from the Markup or Markdown Type list. |
| Editable | Indicates that rate type and rate value fields are editable while defining or editing the markup or markdown values for the line items. |
| Rate Type | Displays minimum and maximum markup or markdown defined using the rate type. |

| Field Name | Field Description |
|------------|---|
| Rate | Displays the rate for minimum and maximum markup or markdown defined using the rate type. |

- **Line Items** – Lists the line items which are added in the claim template. It contains the following columns:

| Column Name | Column Description | | | | | | | | |
|---|---|-------------|--------------------|----------|--|-----------|--|------|--|
| Sequence | Indicates the order in which the calculation line should be generated for the line item. | | | | | | | | |
| Line Item | Indicate the line item which is added in the claim template. | | | | | | | | |
| Billing Eligibility | Indicates whether the line item is eligible for billing. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible • Rule Based • Used Defined (Default No) • User Defined (Default Yes) | | | | | | | | |
| Rule Type | Indicates that rules of the specified rule type should be executed to determine whether the line item is eligible for billing. Note: The data appears in this column when the Rule Based option is selected from the Billing Eligibility list. | | | | | | | | |
| Markup or Markdown Percentage Eligibility | Indicates whether the line item is eligible for percentage based markup or markdown when the Markup or Markdown Type field is set to Percentage . The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible | | | | | | | | |
| Post-Processing Required | Indicates that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction. | | | | | | | | |
| Rating Information | Displays the rate type and rate value that you want to use while defining the rate for the line items. <table border="1" data-bbox="613 1415 1461 1885"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the rate for the line items.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items. Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup. </td> </tr> </tbody> </table> | Column Name | Column Description | Editable | Indicates that the rate type and rate value fields are editable while defining a claim pricing rule. | Rate Type | Indicates the rate type that you want to use while defining the rate for the line items. | Rate | Used to specify the rate that you want to use while defining the rate for the line items. Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup. |
| Column Name | Column Description | | | | | | | | |
| Editable | Indicates that the rate type and rate value fields are editable while defining a claim pricing rule. | | | | | | | | |
| Rate Type | Indicates the rate type that you want to use while defining the rate for the line items. | | | | | | | | |
| Rate | Used to specify the rate that you want to use while defining the rate for the line items. Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup. | | | | | | | | |

- **Record Actions** – This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the claim template. |
| Delete | Used to delete the claim template. |
| | Note: You can delete a claim template when it is not yet used in a claim pricing rule type. |
| Duplicate | Used to create a new claim template using an existing claim template. |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the extendable lookup business object using which the claim template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Owner | Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification |

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the claim template in the **Extendable Lookup Value List** zone.

Defining a Claim Template

Procedure

To define a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Claim Template | Used to specify the claim template. | Yes |
| Description | Used to specify the description for the claim template. | Yes |
| Override Description | Used when you want to override the description of the claim template. | No |
| Detailed Description | Used to specify additional information about the claim template. | No |
| Status | Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: By default, the value is set to Active . | |

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Policy Status | Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the In Force/Active , Post Runout , or Runout status. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Yes |

- **Claim Handling Fees** – Used to define the claim handling fees for the claim lines items which are added in the claim template.
 - **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
 - **Line Items** – Used to add the claim line items in the claim template.
4. Enter the required details in the **Main** section.
 5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** dropdown list depending on whether you want to use the claim template while defining a claim pricing rule for a
 6. Define the claim handling fees for the line items in the claim template, if required.
 7. Define the default markup or markdown values for the line items in the claim template, if required.
 8. Add the required the line items in the claim template.
 9. Click **Save**.

The claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Defining the Claim Handling Fees for Line Items in the Claim Template**Procedure**

To define the claim handling fees for the line items in the claim template:

1. Ensure that the **Claim Handling Fees** section is expanded when you are defining, editing, or copying a claim template.

The **Claim Handling Fees** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
|---------------------------------|---|-----------------------|-------------------|-----------------------|---|--|----|-----|
| Show Line Items in Pricing Rule | Used to indicate whether the claim line item is visible while defining or editing the pricing rules. | Not applicable | | | | | | |
| Fee Type | Used to indicate the charge type defined on the line items. | Yes | | | | | | |
| Fee | Used to indicate the type of rate defined on the line items. | Yes | | | | | | |
| Fee Significance | Used to indicate the purpose of the imposing the fees on the line items. | Yes | | | | | | |
| Fee Applicability | Displays one or more applicable claim line item on which the claim handling fees are imposed. <table border="1" data-bbox="537 1360 1252 1528"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> </tr> </thead> <tbody> <tr> <td>Line Items</td> <td>Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.</td> </tr> </tbody> </table> | Field Name | Field Description | Line Items | Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule. | Yes | | |
| Field Name | Field Description | | | | | | | |
| Line Items | Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule. | | | | | | | |
| Rating Information | Used to indicate one or more rate options which are valid for a line item. <table border="1" data-bbox="537 1644 1252 1864"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.</td> <td>No</td> </tr> </tbody> </table> | Field Name | Field Description | Mandatory (Yes or No) | Editable | Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule. | No | Yes |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
| Editable | Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule. | No | | | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|------------|-------------------|--|------------------------------|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | Rate Type | Indicates the rate type that you want to use while defining the rate for the line items. | Yes | |
| | Rate | Used to specify the rate that you want to use while defining the rate for the line items. Note: This field is editable when the Editable checkbox is selected in the Rating Information column of the Claim Handling Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup. | Yes | |

- Enter the required details in the **Claim Handling Fees** section.
- If you want to add more than one claim handling fee in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim handling fee from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- If you want to add more than one fee applicability in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a fee applicability from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- If you want to add more than one rating information in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a rating information from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The claim handling fees are defined for the line items in the claim template.

Defining the Default Markup or Markdown Values for Line Items in a Claim Template

Procedure

To define the markup or markdown values for line items in a claim pricing rule:

1. Ensure that the **Default Markup or Markdown Values** section is expanded when you are defining, editing, or copying a claim template.

The **Default Markup or Markdown Values** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|---|
| Pricing Strategy | Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None | No |
| Markup or Markdown Type | Used to indicate the markup or markdown type for the claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage | No |
| Markup or Markdown Amount | Used to specify the markup or markdown amount. | No |
| Markup or Markdown Percentage | Used to specify the markup or markdown percentage. | No |
| Editable | Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule. | Not applicable |
| Rate Type | Indicates the minimum and maximum markup or markdown defined using the rate type. | Yes (Conditional) Note: This field is required when you define the rate from the respective field. |
| Rate | Used to specify the value for minimum and maximum markup or markdown using the rate type. | Yes (Conditional) Note: This field is required when you select the rate type from the respective field. |

2. Enter the required details in the **Markup or Markdown Values** section.
3. If you want to add more than one default markup or markdown value in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a default markup or markdown value from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

4. Click **Save**.

The markup or markdown values for line items are defined for the claim template.

Adding a Line Item in a Claim Template

Prerequisites

To add a line item in a claim template, you should have:

- The line item defined in the **C1-ExtLookPricingRuleLineItem** extendable lookup.
- Rule types defined in the application (where the rule type usage is set to **ASO Billing Line Item Eligibility**) when you want to define rule based billing eligibility for a line item.

Procedure

To add a line item in a claim template:

1. Ensure that the **Line Items** section is expanded when you are defining, editing, or copying a claim template.

The **Line Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Sequence | Used to indicate the order in which the calculation line should be generated for the line item. | Yes (Conditional) Note: This field is required while adding a line item in the claim template. |
| Line Item | Used to indicate the line item that you want to include in the claim template. Note: The list includes only those line items which are associated to the Claim pricing rule type category. | Yes (Conditional) Note: This field is required while adding a line item in the claim template. |
| Billing Eligibility | Used to indicate whether the line item is eligible for billing. If line item is not eligible for billing, the system does not create the calculation line for the line item. The valid values are: <ul style="list-style-type: none"> • Eligible - Used when the line item is eligible for billing. • Not Eligible - Used when the line item is not eligible for billing. • Rule Based - Used when you want to determine whether the line item is eligible for billing using certain business rules while executing the Update Status (C1-TXNEX) batch. | Yes (Conditional) Note: This field is required while adding a line item in the claim template. |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|---|---|--|-------------------|-----------------------|----------|---|----------------|-----------|---|-------------------|---|
| | <ul style="list-style-type: none"> • Used Defined (Default No) - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the User Defined Billing Option option is not selected for the line item in the claim pricing rule. • User Defined (Default Yes) - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the User Defined Billing Option option is selected for the line item in the claim pricing rule. | | | | | | | | | | |
| Rule Type | <p>Used to indicate that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.</p> <p>Note: The list includes only those rule types where the rule type usage is set to ASO Billing Line Item Eligibility. The values appear in this list when you select the Rule Based option from the Billing Eligibility list.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the Rule Based option from the Billing Eligibility list.</p> | | | | | | | | | |
| Markup or Markdown Percentage Eligibility | <p>Used to indicate whether the line item is eligible for percentage based markup or markdown when the Markup or Markdown Type field is set to Percentage. The valid values are:</p> <ul style="list-style-type: none"> • Eligible • Not Eligible | <p>Yes (Conditional)</p> <p>Note: This field is required while adding a line item in the claim template.</p> | | | | | | | | | |
| Post-Processing Required | <p>Used to indicate that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required while adding a line item in the claim template.</p> | | | | | | | | | |
| Rating Information | <p>Displays the rate type and rate value that you want to use while defining the rate for the line items.</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule.</td> <td>Not applicable</td> </tr> <tr> <td>Rate Type</td> <td>Used to indicate the rate type that you want to use while defining the rate for the line items.</td> <td>Yes (Conditional)</td> </tr> </tbody> </table> | Field Name | Field Description | Mandatory (Yes or No) | Editable | Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule. | Not applicable | Rate Type | Used to indicate the rate type that you want to use while defining the rate for the line items. | Yes (Conditional) | <p>Yes (Conditional)</p> <p>Note: This field is required while adding a line item in the claim template.</p> |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Editable | Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule. | Not applicable | | | | | | | | | |
| Rate Type | Used to indicate the rate type that you want to use while defining the rate for the line items. | Yes (Conditional) | | | | | | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|------------|-------------------|---|---|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | | | Note: This field is required when you define the rate from the respective field. | |
| | Rate | Used to specify the rate that you want to use while defining the rate for the line items. | Yes (Conditional) Note: This field is required when you select the rate type from the respective field. | |

- Enter the required details in the **Line Items** section.
- If you want to add more than one line item in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a line item from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The line item is added in the claim template.

Editing a Claim Template

Procedure

To edit a claim template:

- Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit**  icon in the **Edit** column corresponding to the claim template whose details you want to edit.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Claim Template | Displays the claim template. | Not applicable |
| Description | Used to specify the description for the claim template. | Yes |
| Override Description | Used when you want to override the description of the claim template. | No |
| Detailed Description | Used to specify additional information about the claim template. | No |
| Status | Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Policy Status | Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the In Force/Active , Post Runout , or Runout status. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Yes |

- **Claim Handling Fees** – Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
- **Line Items** – Used to indicate the line items in the claim template.

Tip: Alternatively, you can edit the details of a claim template by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Modify the policy status in the **Claim Template Usage** section, if required.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove line items from the claim template, if required.
9. Click **Save**.

The changes made to the claim template are saved.

| How to add the line items in a claim template | Adding a Line Item in a Claim Template on page 2682 |

Copying a Claim Template

Instead of creating a claim template from scratch, you can create a new claim template using an existing claim template. This is possible through copying a claim template. On copying a claim template, the details including the line items and default markup or markdown values are copied to the new claim template. You can then edit the details, if required.

Prerequisites

To copy a claim template, you should have:

- Claim template (whose copy you want to create) defined in the application

Procedure

To copy a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the claim template whose copy you want to create.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Claim Template | Used to specify the claim template. | Yes |
| Description | Used to specify the description for the claim template. | Yes |
| Override Description | Used when you want to override the description of the claim template. | No |
| Detailed Description | Used to specify additional information about the claim template. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Status | Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Policy Status | Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the In Force/Active , Post Runout , or Runout status. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout | Yes |

- **Claim Handling Fees** – Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the line items which are added in the claim template.
- **Line Items** – Used to add the claim line items in the claim template.

Tip: Alternatively, you can copy a claim template by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove the line items from the claim template, if required.
9. Click **Save**.

The new claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Deleting a Claim Template

Procedure

To delete a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim template that you want to delete.
A message appears confirming whether you want to delete the claim template.

Note: You can delete a claim template when it is not yet used in a claim pricing rule type.

Tip: Alternatively, you can delete a claim template by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The claim template is deleted from the **C1-ExtLookClaimTemplate** extendable lookup.

Viewing the Claim Template Details

Procedure

To view the details of a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Broadcast** () icon corresponding to the claim template whose details you want to view.
The **Extendable Lookup Value** zone appears.
4. View the details of the claim template in the **Extendable Lookup Value** zone.

Rate Option Extendable Lookup

The basic pricing details (such as rate schedule, pricing currency) and the transaction aggregation details may vary from one bill group or parent customer to another and from one price item to another. The basic pricing and transaction aggregation details are defined in the rate option. Each rate option must be defined in the system using the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. A rate option encapsulates the following information:

- The rate schedule that you want to use while defining the price item pricing.
- Currency in which you want to define the price item pricing.
- Whether zero pricing should be displayed in the bill.
- Whether the transactions mapped to the price item should be ignored for billing.
- Whether the transactions mapped to the price item should be aggregated for billing.
- The aggregation schedule using which the transactions should be aggregated for billing.
- How and when you want to rate the transaction legs which are mapped to the price item.
- Whether you want the price item pricing to be applied to all customers or only to the new customers.

Once the rate options are defined in the extendable lookup, you can associate one or more rate options with a price item while adding the price item in a claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, or ancillary pricing rule type. You can then use the rate option while defining pricing rule for the respective price item using the respective pricing rule type. The rate option specified in a pricing rule is used while creating the price item pricing or price assignment for the pricing rule.

For example, the following table illustrates how the rate options can be used for different price items in a pricing rule type:

| Claim Pricing Rule Type | Price Item | Rate Option | Claim Pricing Rule | Price Item Pricing |
|-------------------------|------------|-------------|--|--|
| CPRT1 | P1 | R1 | CPR1 (Price Item: P1, Rate Option: R1) | PA1 is created for P1 using the details specified in R1. |
| | | R2 | - | - |
| | | R3 | CPR2 (Price Item: P1, Rate Option: R3) | PA2 is created for P1 using the details specified in R3. |

| Claim Pricing Rule Type | Price Item | Rate Option | Claim Pricing Rule | Price Item Pricing |
|-------------------------|------------|-------------|--|--|
| | P2 | R1 | - | - |
| | | R4 | CPR3 (Price Item: P2, Rate Option: R4) | PA3 is created for P2 using the details specified in R4. |
| CPRT2 | P1 | R1 | CPR4 (Price Item: P1, Rate Option: R1) | PA4 is created for P1 using the details specified in R1. |

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2690

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Business Object | Used to search a particular extendable lookup business object. | No |
| Description | Used to search extendable lookups with a particular description. | No |

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Business Object | Displays the extendable lookup business object. |
| Description | Displays the description of the extendable lookup business object. |
| | Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup. |

Searching for the Rate Option Extendable Lookup

Procedure

To search for the **Rate Option** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRetTypeRateOpt** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The **Rate Option** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Rate Option Extendable Lookup

Procedure

To view the values of the **Rate Option** extendable lookup:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.
3. View the values of the **Rate Option** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Rate Option)

The **Extendable Lookup** screen allows you to view the values of the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. It also allows you to define, edit, copy, and delete a rate option. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2692
- [Extendable Lookup Value](#) on page 2692

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Option** extendable lookup. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Value | Displays the rate option. |
| Description | Displays the description of the rate option. |
| Owner | Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification |
| Edit | On clicking the Edit (✎) icon, the Rate Option screen appears where you can edit the details of the rate option. |
| Duplicate | On clicking the Duplicate (📄) icon, the Rate Option screen appears where you can define a new rate option using an existing rate option. |
| Delete | On clicking the Delete (🗑) icon, you can delete the rate option. |
| | Note: You can delete a rate option when it is not yet used in a pricing rule type. |
| Detailed Description | Displays additional information about the rate option. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate option, the **Extendable Lookup Value** zone appears with the details of the respective rate option.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate option. It contains the following sections:

- **Main** – Displays basic information about the rate option. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Rate Option | Displays the rate option. |
| Description | Displays the description of the rate option. |
| Override Description | Displays the overridden description of the rate option. |
| Detailed Description | Displays additional information about the rate option. |
| Status | Indicates the status of the rate option. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Rate Schedule | Indicates the rate schedule that will be used while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view the details of the respective rate schedule. |
| Pricing Currency | Indicates the currency in which the price item pricing will be defined. |
| Print Zero | Indicates whether zero pricing will be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Ignore Transaction | Indicates whether the transactions mapped to the price item will be ignored for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Aggregate Transaction | Indicates whether the transactions mapped to the price item will be aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Aggregation Schedule | Indicates the aggregation schedule using which the transactions will be aggregated for billing. |
| Transaction Rating Criteria | Indicates how and when the transaction legs which are mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines • Rate Transactions |
| Apply To | Indicates whether the price item pricing will be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> • All Customers |

| Field Name | Field Description |
|------------|---|
| | <ul style="list-style-type: none"> New Customers |

- Record Actions** – This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the rate option. |
| Delete | Used to delete the rate option. Note: You can delete a rate option when it is not yet used in a pricing rule type. |
| Duplicate | Used to create a new rate option using an existing rate option. |

- Record Information** – This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the extendable lookup business object using which the rate option is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Owner | Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> Framework Base Customer Modification |

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the rate option in the **Extendable Lookup Value List** zone.

Defining a Rate Option

Prerequisites

To define a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To define a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Rate Option | Used to specify the rate option. | Yes |
| Description | Used to specify the description for the rate option. | Yes |
| Override Description | Used when you want to override the description of the rate option. | No |
| Detailed Description | Used to specify additional information about the rate option. | No |
| Status | Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: By default, the value is set to Active . | |
| Rate Schedule | Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. | Yes |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears. | |
| Pricing Currency | Used to indicate the currency in which you want to define the price item pricing. | Yes |
| Print Zero | Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| | Note: By default, the value is set to Yes . | |
| Ignore Transaction | Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|---|
| | Note: By default, the value is set to No . | |
| Aggregate Transaction | <p>Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the value is set to No. This field is disabled when the Ignore Transaction field is set to Yes.</p> | Yes |
| Aggregation Schedule | <p>Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.</p> <p>Note: This field is disabled when the Ignore Transaction field is set to Yes.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Aggregate Transaction field is set to Yes.</p> |
| Transaction Rating Criteria | <p>Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate SQs <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> • Rate Transactions <p>Note: This value appears in the list only when the Ignore Transaction field is set to either Yes or No and the Aggregate Transaction field is set to No.</p> <p>Note: By default, the value is set to Do Not Rate Transactions.</p> | Yes |
| Apply To | Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> All Customers New Customers | |
| | Note: By default, the value is set to All Customers . | |

- Enter the required details in the **Main** section.
- Click **Save**.

The rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Editing a Rate Option

Prerequisites

To edit a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To edit a rate option:

- Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Edit**  icon in the **Edit** column corresponding to the rate option whose details you want to edit.

The **Rate Option** screen appears. It contains the following section:

- Main** – Used to specify basic details about the rate option. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Rate Option | Displays the rate option. | Not applicable |
| Description | Used to specify the description for the rate option. | Yes |
| Override Description | Used when you want to override the description of the rate option. | No |
| Detailed Description | Used to specify additional information about the rate option. | No |
| Status | Used to indicate the status of the rate option. The valid values are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|---|
| | <ul style="list-style-type: none"> Active Inactive | |
| Owner | <p>Indicates who has created the rate option. The valid values are:</p> <ul style="list-style-type: none"> Framework Base Customer Modification | Not applicable |
| Rate Schedule | <p>Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.</p> | Yes |
| Pricing Currency | Used to indicate the currency in which you want to define the price item pricing. | Yes |
| Print Zero | <p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> Yes No | Yes |

Copying a Rate Option

Instead of creating a rate option from scratch, you can create a new rate option using an existing rate option. This is possible through copying a rate option. On copying a rate option, the pricing and transaction aggregation details are copied to the new rate option. You can then edit the details, if required.

Prerequisites

To copy a rate option, you should have:

- Rate option (whose copy you want to create) defined in the application
- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To copy a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the rate option whose copy you want to create.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Rate Option | Used to specify the rate option. | Yes |
| Description | Used to specify the description for the rate option. | Yes |
| Override Description | Used when you want to override the description of the rate option. | No |
| Detailed Description | Used to specify additional information about the rate option. | No |
| Status | Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Rate Schedule | Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.</p> </div> | Yes |
| Pricing Currency | Used to indicate the currency in which you want to define the price item pricing. | Yes |
| Print Zero | Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|---|
| Ignore Transaction | Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Aggregate Transaction | Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: This field is disabled when the Ignore Transaction field is set to Yes.</p> | Yes |
| Aggregation Schedule | Used to indicate the aggregation schedule using which the transactions should be aggregated for billing. <p>Note: This field is disabled when the Ignore Transaction field is set to Yes.</p> | Yes (Conditional) Note: This field is required when the Aggregate Transaction field is set to Yes . |
| Transaction Rating Criteria | Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate SQs <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> • Rate Transactions <p>Note: This value appears in the list only when the Ignore Transaction field is set to either Yes or No and the Aggregate Transaction field is set to No.</p> | Yes |
| Apply To | Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> • All Customers | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <ul style="list-style-type: none"> New Customers | |

Tip: Alternatively, you can copy a rate option by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

- Enter the required details in the **Main** section.
- Click **Save**.

The new rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Deleting a Rate Option

Procedure

To delete a rate option:

- Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rate option that you want to delete.

A message appears confirming whether you want to delete the rate option.

Note: You can delete a rate option when it is not yet used in a pricing rule type.

Tip: Alternatively, you can delete a rate option by clicking the **Delete** button in the **Extendable Lookup Value** zone.

- Click **OK**.

The rate option is deleted from the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Viewing the Rate Option Details

Procedure

To view the details of a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Broadcast** () icon corresponding to the rate option whose details you want to view.

The **Extendable Lookup Value** zone appears.

4. View the details of the rate option in the **Extendable Lookup Value** zone.

Rate Type Extendable Lookup

A new extendable lookup for rate type named **C1-ExtLookRateType** is introduced in the system. A rate type extendable lookup enables you to specify the following:

- Whether the system should calculate fees on sum of all applicable claim charges or separately for each applicable claim charge.
- The billable charge line type using which the calculation line should be created when the fee is calculated on sum of all applicable claim charges
- Whether the system should calculate percentage based markup or markdown on sum of all eligible claim charges or separately for each eligible claim charge
- The billable charge line type using which the calculation line should be created when the minimum and maximum markup or markdown is calculated on sum of all eligible claim charges
- Whether the rate type can be used while adding fees, default markup or markdown, or claim line items

Following rate types are used in the system:

- Maximum Fee
- Minimum Fee
- Retained Percentage
- Minimum Markup or Markdown

- Maximum Markup or Markdown
- Minimum Amount
- Maximum Amount

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2704

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Business Object | Used to search a particular extendable lookup business object. | No |
| Description | Used to search extendable lookups with a particular description. | No |

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Business Object | Displays the extendable lookup business object. |
| Description | Displays the description of the extendable lookup business object. |
| | Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup. |

Searching for the Rate Type Extendable Lookup

Procedure

To search for the **Rate Type** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRateType** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Rate Type** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Rate Type Extendable Lookup

Procedure

To view the values of the **Rate Type** extendable lookup:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. View the values of the **Rate Type** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Rate Type)

The **Extendable Lookup** screen allows you to view the values of the **Rate Type (C1-ExtLookRateType)** extendable lookup. It also allows you to define, edit, copy, and delete a rate type. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2692
- [Extendable Lookup Value](#) on page 2692

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Type** extendable lookup. It contains the following columns:

| Column Name | Column Description |
|-------------|-------------------------|
| Value | Displays the rate type. |

| Column Name | Column Description |
|----------------------|--|
| Description | Displays the description of the rate type. |
| Owner | Indicates the user who has created the rate type. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification |
| Edit | On clicking the Edit (✎) icon, the Rate Type screen appears where you can edit the details of the rate type. |
| Duplicate | On clicking the Duplicate (📄) icon, the Rate Type screen appears where you can define a rate type item using an existing rate type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the rate type. |
| | Note: You can delete a rate type when it is not yet used in a pricing rule type. |
| Detailed Description | Displays additional information about the rate type. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate type, the **Extendable Lookup Value** zone appears with the details of the respective rate type.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate type. It contains the following sections:

- **Main** – Displays basic information about the rate type. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| Rate Type | Displays the rate type. |
| Description | Displays the description for the rate type. |
| Override Description | Displays the overridden description of the rate type. |
| Detailed Description | Displays the additional information about the rate type. |

| Field Name | Field Description |
|---------------------------|---|
| Status | Indicates the status of the rate type. The valid values are: <ul style="list-style-type: none"> Active Inactive |
| Line-Specific Calculation | Indicates whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> Yes No |
| Billable Charge Line Type | Indicates the billable charge line type using which the calculation line is created for the charge. |

Rate Type Usage – Lists the various charges to which the rate type is associated. It contains the following column in a grid:

| Column Name | Column Description |
|---------------|---|
| Applicable To | Indicates the claim handling fees that are associated with the rate type. |

- **Record Actions** – This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the rate type. |
| Delete | Used to delete the rate type. Note: You can delete a rate type when it is not yet used in a pricing rule type. |
| Duplicate | Used to create a new rate type using an existing line item. |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the extendable lookup business object using which the rate type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Owner | Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> Framework Base Customer Modification |

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** () icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Rate Type

Prerequisites

To define a rate type, you should have:

- Billable charge line type and rate types defined in the application.

Procedure

To define a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Rate Type | Used to specify the rate type. | Yes |
| Description | Used to specify the description for the rate type. | Yes |
| Override Description | Used when you want to override the description of the rate type. | No |
| Detailed Description | Used to specify additional information about the rate type. | No |
| Status | Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | No |
| | Note: By default, the value is set to Active . | |
| Line-Specific Calculation | Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). Note: The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | No |

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Applicable To | Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: <ul style="list-style-type: none"> • Claim Handling Fees • Claim Line Items • Markup or Markdown | Yes |

4. Enter the required details in the **Main** section.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑️) icon corresponding to the **Applicable To** field.

7. Click **Save**.

The rate type is added in the **C1-ExtLookRateType** extendable lookup.

Editing a Rate Type

Prerequisites

To edit a rate type, you should have:

- Billable charge line type and rate type usage defined in the application.

Procedure

To edit a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit**  icon in the **Edit** column corresponding to the rate type whose details you want to edit.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|------------------------------|
| Rate Type | Displays the rate type. | Not applicable |
| Description | Used to specify the description for the rate type. | Yes |
| Override Description | Used when you want to override the description of the rate type. | No |
| Detailed Description | Used to specify additional information about the rate type. | No |
| Status | Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | No |
| Line-Specific Calculation | Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | |

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Applicable To | <p>Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are:</p> <ul style="list-style-type: none"> • Claim Handling Fees • Claim Line Items • Markup or Markdown | Yes |

Tip: Alternatively, you can edit the details of a rate type by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section, if required.
5. Add, edit, or remove usage (for the rate type) from the **Usage** section, if required.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑️) icon corresponding to the **Applicable To** field.

7. Click **Save**.

The changes made to the rate type are saved.

Copying a Rate Type

Instead of creating a rate type from scratch, you can create a new rate type using an existing rate type. This is possible through copying a rate type. On copying a rate type, the line specific calculation, billable charge type, and usage detailed are copied to the new rate type. You can then edit the details, if required.

Prerequisites

To copy a rate type, you should have:

- Rate type (whose copy you want to create) defined in the application.
- Billable charge line type and rate type usage defined in the application.

Procedure

To copy a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the rate type whose copy you want to create.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Rate Type | Used to specify the rate type. | Yes |
| Description | Used to specify the description for the rate type. | Yes |
| Override Description | Used when you want to override the description of the rate type. | No |
| Detailed Description | Used to specify additional information about the rate type. | No |
| Status | Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | No |
| Line-Specific Calculation | Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | |

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Applicable To | Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. | Yes |

Tip: Alternatively, you can copy a rate type by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section, if required.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑️) icon corresponding to the **Applicable To** field.

7. Click **Save**.

The new rate type is added in the **C1-ExtLookRateType** extendable lookup.

Deleting a Rate Type

Procedure

To delete a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.

- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.
- In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rate type that you want to delete.
A message appears confirming whether you want to delete the rate type.

Note: You can delete a rate type when it is not yet used in a pricing rule type.

Tip: Alternatively, you can delete a rate type by clicking the **Delete** button in the **Extendable Lookup Value** zone.

- Click **OK**.

The rate type is deleted from the **C1-ExtLookRateType** extendable lookup.

Viewing the Rate Type Details

Procedure

To view the details of a rate type:

- Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.
- In the **Extendable Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the rate option whose details you want to view.
The **Extendable Lookup Value** zone appears.
- View the details of the rate type in the **Extendable Lookup Value** zone.

Pricing Group

Oracle Revenue Management and Billing enables you to create pricing groups for a bill group. It consists of one or more rules. Each rule has a unique priority. A rule contains one or more criteria. Each criterion can contain the following:

- **Source System** - Indicates the external system from where the claim or enrollment transaction is received.
- **Parameter 1, Parameter 2, Parameter 3, and Parameter 4** - Indicates employee attributes based on which you want to define the pricing.

Note that the source system and parameter 1 are mandatory when you are defining a criterion in a rule. In the **Parameter 1** field, you can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone.

You can specify multiple parameter 2, parameter 3, and parameter 4 combinations in the criterion. You can also specify multiple source system, parameter 1, parameter 2, parameter 3, and parameter 4 combinations (i.e. multiple criteria) in a rule. Once a pricing group is defined for a bill group, you can then use the pricing group while defining a pricing rule for the bill group. This enables you to define various rates for employees with different set of attributes. For example, in a claim pricing rule, you can maintain different markup and markdown values for employees who belong to the Western, Eastern, and Central location of United States.

You can define, edit, copy, and delete a pricing group through the **Bill Group Pricing Groups** zone in the **Pricing** tab of the **Customer 360° Information** screen.

Viewing the Pricing Groups of a Bill Group

Procedure

To view the pricing groups of a bill group:

1. Search for the bill group whose is associated with the self-funded policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

4. In the **Bill Group Self-Funded Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing groups you want to view.

The **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. View the pricing groups which are defined for the bill group and are currently active in the **Bill Group Pricing Groups** zone.

Defining a Pricing Group for a Bill Group

Prerequisites

To define a pricing group for a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define a pricing group for a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group for whom you want to define a pricing group.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. Click the **Add** link in the upper right corner of the **Bill Group Pricing Groups** zone.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Indicates the bill group for whom you want to define the pricing group. | Not applicable |
| Status | Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Description | Used to specify the description for the pricing group. | Yes |

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Priority | Used to indicate the order in which the rule should be executed while determining the pricing for the price item. | Yes |
| | Note: You cannot define multiple rules in the pricing group with the same priority. | |
| Rule | Used to specify the rule in the pricing group. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Description | Used to specify the description for the pricing group rule. | Yes |
| Criteria | On clicking the Add  icon, you can define criteria for the pricing group rule. | Not applicable |

6. Enter the required details in the **Main** section.
7. Define the required rules in the **Pricing Group Rules** section.
8. Click the **Add**  icon in the **Criteria** field corresponding to the pricing group rule for which you want to define the criteria.

The following fields appear in another grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Source System | Used to indicate the external system from where the claim or enrollment transaction is received. | Yes |
| Parameter 1 | Used to specify the employee attribute based on which you want to define the pricing. Note: You can only specify the employee attribute which is defined for the bill group and source system combination in the Bill Group Derivation and Pricing Parameters zone. You must not specify the ampersand (&) character in this field. The Search  icon appears corresponding to this field. On clicking the Search icon, the Parameter 1 List for Bill Group window appears. | Yes |
| Parameter 2 | Used to specify the employee attribute based on which you want to define the pricing. Note: You must not specify the ampersand (&) character in this field. | No |
| Parameter 3 | Used to specify the employee attribute based on which you want to define the pricing. Note: You must not specify the ampersand (&) character in this field. | No |
| Parameter 4 | Used to specify the employee attribute based on which you want to define the pricing. Note: You must not specify the ampersand (&) character in this field. | No |

9. Enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add (+)** icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete (🗑)** icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The pricing group is defined for the bill group.

Editing a Pricing Group of a Bill Group

Prerequisites

To edit a pricing group of a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To edit a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to edit.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

- In the **Bill Group Pricing Groups** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing group whose details you want to edit.

The **Pricing Group** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the pricing group. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Indicates the bill group for whom you want to define the pricing group. | Not applicable |
| Status | Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Description | Used to specify the description for the pricing group. | Yes |

- Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Priority | Used to indicate the order in which the rule should be executed while determining the pricing for the price item. Note: You cannot define multiple rules in the pricing group with the same priority. | Yes |
| Rule | Used to specify the rule in the pricing group. | Yes |
| Description | Used to specify the description for the pricing group rule. | Yes |
| Criteria | On clicking the Add () icon, you can define criteria for the pricing group rule. | Not applicable |

Note: You cannot define, edit, or remove a rule when the pricing group is already used while defining a pricing rule for the bill group.

- Modify the required details in the **Main** section.
- Edit the required rules in the **Pricing Group Rules** section.
- Click the **Add** () icon in the **Criteria** field corresponding to the pricing group rule for which you want to edit the criteria.

The following fields appear in another grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Source System | Used to indicate the external system from where the claim or enrollment transaction is received. | Yes |
| Parameter 1 | <p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p>Note:</p> <p>You can only specify the employee attribute which is defined for the bill group and source system combination in the Bill Group Derivation and Pricing Parameters zone.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter 1 List for Bill Group window appears.</p> | Yes |
| Parameter 2 | <p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p>Note: You must not specify the ampersand (&) character in this field.</p> | No |
| Parameter 3 | <p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p>Note: You must not specify the ampersand (&) character in this field.</p> | No |
| Parameter 4 | <p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p>Note: You must not specify the ampersand (&) character in this field.</p> | No |

Note: You cannot define, edit, or remove the source system, parameter 1, parameter 2, parameter 3, and parameter 4 from a rule when the pricing group is already used while defining a pricing rule for the bill group.

9. If required, enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑️) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑️) icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete** (🗑️) icon corresponding to the pricing group rule.

14. Click **Save**.

The changes made to the pricing group are saved.

Deleting a Pricing Group of a Bill Group

Procedure

To delete a pricing group of a bill group:

- Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.
The **Person** tab in the **Customer 360° Information** screen appears.
- Click the **Pricing** tab.
The **Pricing** tab appears.
- In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose pricing group you want to delete.
The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
- In the **Bill Group Pricing Groups** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the pricing group that you want to delete.

A message appears confirming whether you want to delete the pricing group.

Note: You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.

6. Click **OK**.

The pricing group is deleted.

Copying a Pricing Group of a Bill Group

Instead of creating a pricing group from scratch, you can create a new pricing group using an existing pricing group. This is possible through copying a pricing group. On copying a pricing group, the details including the rules are copied to the new pricing group. You can then edit the details, if required.

Prerequisites

To copy a pricing group of a bill group, you should have:

- Pricing group (whose copy you want to create) defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To copy a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to copy.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the pricing group whose copy you want to create.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Indicates the bill group for whom you want to define the pricing group. | Not applicable |
| Status | Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Description | Used to specify the description for the pricing group. | Yes |

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Priority | Used to indicate the order in which the rule should be executed while determining the pricing for the price item. Note: You cannot define multiple rules in the pricing group with the same priority. | Yes |
| Rule | Used to specify the rule in the pricing group. | Yes |
| Description | Used to specify the description for the pricing group rule. | Yes |
| Criteria | On clicking the Add  icon, you can define criteria for the pricing group rule. | Not applicable |

6. Enter the required details in the **Main** section.
7. Define, edit, or remove the required rules from the **Pricing Group Rules** section.
8. Click the **Add**  icon in the **Criteria** field corresponding to the pricing group rule for which you want to define or edit the criteria.

The following fields appear in another grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Source System | Used to indicate the external system from where the claim or enrollment transaction is received. | Yes |
| Parameter 1 | Used to specify the employee attribute based on which you want to define the pricing. Note: You can only specify the employee attribute which is defined for the bill group and source system combination in the Bill Group Derivation and Pricing Parameters zone. You must not specify the ampersand (&) character in this field. The Search  icon appears corresponding to this field. On clicking the Search icon, the Parameter 1 List for Bill Group window appears. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Parameter 2 | Used to specify the employee attribute based on which you want to define the pricing. | No |
| | Note: You must not specify the ampersand (&) character in this field. | |
| Parameter 3 | Used to specify the employee attribute based on which you want to define the pricing. | No |
| | Note: You must not specify the ampersand (&) character in this field. | |
| Parameter 4 | Used to specify the employee attribute based on which you want to define the pricing. | No |
| | Note: You must not specify the ampersand (&) character in this field. | |

9. Enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add (+)** icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete (🗑)** icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The new pricing group is defined for the bill group.

Pricing Rule Type

Oracle Revenue Management and Billing enables you to define a pricing rule type using which you can create a pricing rule. Through this screen you can define the following pricing rule types:

- **Claim**
- **Specific Stop-Loss (SSL)**
- **Aggregate Stop-Loss (ASL)**
- **Retention Type Claim Based**
- **Retention Type Enrollment Based**
- **Flat Fee**
- **Ancillary**
- **Discount Arrangement**
- **Level Funded**
- **Minimum Premium Pricing**
- **Age Based**
- **Tier Based**
- **Pass-Through Billable Charge**
- **Additional Fee**
- **Benefit**
- **Discount Charge**

This screen consists of the following zones:

- [Pricing Rule Type List](#) on page 2725
- [Pricing Rule Type](#) on page 2729

Pricing Rule Type List

The **Pricing Rule Type List** zone lists the pricing rule types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|----------------------------|--|
| Pricing Rule Type | Displays the pricing rule type. |
| Description | Displays the description of the pricing rule type. |
| Pricing Rule Type Category | Indicates the category to which the pricing rule type belongs. The valid values are: |

| Column Name | Column Description |
|-------------|--|
| | <ul style="list-style-type: none"> • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees • Ancillary • Discount Arrangement • Discount Charge • Level Funded • Age Based • Tier Based • Pass-Through Billable Charge • Benefit • Additional Fee • Minimum Pricing Rule Type |
| Edit | <p>On clicking the Edit () icon, the Claim Pricing Rule Type, Specific Stop-Loss (SSL) Pricing Rule Type, Aggregate Stop-Loss (ASL) Pricing Rule Type, Retention Type Claim Based Pricing Rule Type, Retention Type Enrollment Based Pricing Rule Type, Flat Fees Pricing Rule Type, Ancillary Pricing Rule Type, Discount Arrangement Pricing Rule Type, Discount Charge Pricing Rule Type, Level Funded Pricing Rule Type, Age Based Pricing Rule Type, Tier Based Pricing Rule Type, Pass-Through Billable Charge Pricing Rule Type, Benefit Pricing Rule Type, Additional Fee Pricing Rule Type, or Minimum Pricing Rule Type screen appears, based on the pricing rule type category, where you can edit the details of the respective pricing rule type.</p> |
| Delete | <p>On clicking the Delete () icon, you can delete the pricing rule type.</p> <p>Note: You can delete a pricing rule type when it is not yet used in the system.</p> |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a pricing rule type, the **Pricing Rule Type** zone appears with the details of the respective pricing rule type.

You can filter the list using the **Pricing Rule Type Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Pricing Rule Type

The **Pricing Rule Type** zone displays the details of the pricing rule type for claim, aggregate stop-loss, specific stop-loss, retention type enrollment based, retention type claim based, one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee. This zone contains the following sections:

- **Main** – This section provides basic information about the pricing rule type. It contains the following fields:

| Field Name | Field Description |
|------------------------------|---|
| Pricing Rule Type | Displays the pricing rule type. |
| Description | Displays the description for the pricing rule type. |
| Detailed Description | Displays additional information about the pricing rule type category. |
| Pricing Rule Business Object | Indicates the pricing rule business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule |

| Field Name | Field Description |
|----------------------------|--|
| | <ul style="list-style-type: none"> • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule • Ancillary Pricing Rule • Discount Arrangement Pricing Rule • Level Funded (LF) Pricing Rule • Minimum Premium Program Pricing Rule <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Business Object | <p>Indicates the pricing rule type business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> • Claim Pricing Rule Type • Aggregate Stop-Loss (ASL) Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Flat Fee Pricing Rule Type • Ancillary Pricing Rule Type • Discount Arrangement Pricing Rule Type • Level Funded (LF) Pricing Rule Type • Minimum Premium Program Pricing Rule Type <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Status | <p>Indicates the status of the pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive |
| Primary | Displays whether the pricing rule type is primary or not. |
| Pricing Rule Type Category | <p>Indicates the pricing rule type category for the pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees • Ancillary |

| Field Name | Field Description |
|------------|---|
| | <ul style="list-style-type: none"> Discount Arrangement Level Funded Minimum Premium Program |

- **Related Pricing Rule Types** – This section lists the pricing rule types which are related to the parent pricing rule type. It contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Sequence | Displays the order in which pricing rule type is executed. |
| Pricing Rule Type | Displays the related pricing rule type for the parent rule type. Note: It has a link. On clicking the link, the Pricing Rule Type screen appears where you can view the details of the respective pricing rule type. |
| Eligibility Rule Type | Indicates the rule type eligibility for the related pricing rule type. Note: It has a link. On clicking the link, the Rule Type screen appears where you can view the eligibility details of the respective pricing rule type. |

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Transaction Field Mapping** – This section displays the transaction related data mapped to the pricing rule type. It contains the following fields:

| Field Name | Field Description |
|--------------------------------------|---|
| Source System | Displays the external system from where the transaction data is mapped. |
| Parameter 1 ... Parameter 4 | Displays the parameters mapped for the transactions. |
| Incurred Date | Displays the date incurred for transaction. |
| Paid Date | Displays the transaction paid date. |
| Source of Funds | Displays the source of funds used to make the payment. |
| Composite | Displays the composite transaction data. |
| Claim Disposition | Displays the disposition of the claims transaction. |
| Provider's Tax Identification Number | Displays the tax identification number of the provider. |
| Member ID | Displays the member ID. |
| Main Subscriber ID | Displays the customer ID. |
| Run-in Identifier | Displays the run-in identifier. |
| Runout Identifier | Displays the runout identifier. |
| Coverage Start Date | Displays the transaction coverage start date. |
| Coverage End Date | Displays the transaction coverage end date. |
| Retroactivity Indicator | Displays information of the retroactivity indicator. |

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Algorithms** – This section displays the algorithms used for the pricing rule type. It contains the following columns:

| Column Name | Column Description |
|--------------|--|
| System Event | <p>Indicates the system event on which the algorithm must be executed. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation • Account and Price Item Derivation Post-Processing • Accumulation Billable Charge Post-Processing • Accumulation Billable Charge Pre-Processing • Accumulation Post-Processing • Accumulation Pre-Processing • Bill After Date Determination • Bill Group Derivation • Billable Charge Creation Post-Processing • Billable Charge Creation Pre-Processing • Final Settlement Derivation • New Born Waiver Calculation • Premium Calculation • Pricing Rule Derivation • Pricing Rule Post-Processing • Pricing Rule Pre-Processing • Pricing Rule Proration Amount Calculation • Skip Month Premium Calculation • Transaction Validation |
| Sequence | Displays the order in which the algorithms for each system event must be executed. |
| Algorithm | <p>Displays the algorithm.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm.</p> |

- **Additional Data** – This section displays the additional information about the pricing rule type. It contains the following fields:

| Field Name | Field Description |
|----------------------------|--|
| Eligible for Level Funding | <p>Indicates whether the pricing rule type is eligible for level funding or not. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No |

| Field Name | Field Description |
|--------------------------------------|--|
| Eligible for Specific Stop-Loss | Indicates whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| | Note: This field appears when the option selected for the Pricing Rule Type Category is Claim , Retention Type Claim Based , or Retention Type Enrollment Based . |
| Eligible for Minimum Premium Program | Indicates whether the pricing rule type is eligible for minimum premium program or not. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| | Note: This field appears when the option selected for the Pricing Rule Type Category is |
| Run-in Identifier Value | Displays the value for run-in identifier. |
| Runout Identifier Value | Displays the value for runout identifier. |

Note: This section does not appear when the pricing rule type category is flat fees.

- **Price Items** – This section displays the price items assigned to the pricing rule type. It contains the following columns:

| Column Name | Column Description | | | | | | |
|--|--|--|--------------------|-------------|--|--------------|---|
| Price Item | Displays the price item information. | | | | | | |
| | Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item. | | | | | | |
| Rate Option | On clicking the Add  icon, the following column appears: | | | | | | |
| | <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Indicates the rate option for the price item.</td> </tr> </tbody> </table> | Column Name | Column Description | Rate Option | Indicates the rate option for the price item. | | |
| | Column Name | Column Description | | | | | |
| Rate Option | Indicates the rate option for the price item. | | | | | | |
| Note: This column does not appear when the pricing rule type category is flat fees. | | | | | | | |
| Bill To Account | On clicking the Add  icon, the following columns appear: | | | | | | |
| | <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Displays the order in which the invoice type was considered while defining a price item.</td> </tr> <tr> <td>Invoice Type</td> <td>Displays the invoice type for the price item.</td> </tr> </tbody> </table> | Column Name | Column Description | Priority | Displays the order in which the invoice type was considered while defining a price item. | Invoice Type | Displays the invoice type for the price item. |
| | Column Name | Column Description | | | | | |
| | Priority | Displays the order in which the invoice type was considered while defining a price item. | | | | | |
| Invoice Type | Displays the invoice type for the price item. | | | | | | |
| | | | | | | | |
| | | | | | | | |
| Eligibility Rule Type | Indicates the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing. | | | | | | |

| Column Name | Column Description |
|-------------|---|
| | Note: It has a link. On clicking the link, the Rule Type screen appears where you can view the eligibility details of the respective pricing rule type. |

- **Price Item Parameters** – This section displays the price item parameters in the pricing rule type. It contains the following columns:

| Column Name | Column Description |
|---------------------------------|--|
| Price Item Parameter | Displays the parameter associated with the price item. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the respective parameter. |
| Transaction Field | Displays the additional transaction data. Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective transaction field. This column does not appear when the pricing rule type category is flat fees. |
| Eligible for Specific Stop-Loss | Displays the parameter eligible for Specific Stop-Loss when the eligibility checkbox was checked. Note: This field appears only when the option selected for the Pricing Rule Type Category is Claim, Retention Type Claim Based, or Retention Type Enrollment Based . |
| Eligible for Level Funding | Displays the parameter eligible for level funding when the eligibility checkbox was checked. |

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value for the characteristic type. |

- **Event Management** – This section displays the audit event details. It contains the following columns:

| Column Name | Column Description |
|------------------|--|
| Audit Event Type | Displays the audit event type which you can use while adding elements for audit in a fully-insured benefit pricing rule type. |
| Element Type | Indicates the type of audit element for a fully-insured benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field |
| Element Name | Displays the element name for a fully-insured benefit pricing rule type. |

| Column Name | Column Description |
|---------------|---|
| Element Value | Displays the value for an element name. |

- **Claim Templates** – This section list the pricing rule type for claim template. It contains the following field:

| Field Name | Field Description |
|----------------|-------------------------------|
| Claim Template | Indicates the claim template. |

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Claim-Specific Additional Data** – This section displays the claim specific additional data. It contains the following fields:

| Field Name | Field Description |
|---|---|
| Rule Based Billing Eligibility Field | Displays whether the rule based field is eligible for billing or not. Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field. |
| Rule Based Markup or Markdown Eligibility Field | Displays whether the rule based markup or markdown field is eligible for billing or not. Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field. |
| Markup or Markdown Billable Charge Line Type | Displays the markup or markdown billable charge line type. |

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **ASL-Specific Additional Data** – This section displays the Aggregated Stop-Loss specific additional data. It contains the following fields:

| Field Name | Field Description |
|--|--|
| ASL Billable Charge Line Type | Displays the Aggregated Stop-Loss billable charge line type. |
| Domestic Provider Claim Billable Charge Line Type | Displays the claim billable charge line type for domestic provider. |
| Rule Based Domestic Provider Claim Eligibility Field | Displays the rule based domestic provider for claim eligibility field. |
| ASL Limit Price Item | Displays the Aggregated Stop-Loss limit price item. |
| Rule Based Billing Eligibility Field | Displays whether the rule based field is eligible for billing or not. Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field. |
| Rule Based Markup or Markdown Eligibility Field | Displays whether the rule based markup or markdown field is eligible for billing or not. |

| Field Name | Field Description |
|--|---|
| | Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field. |
| Markup or Markdown Billable Charge Line Type | Displays the markup or markdown billable charge line type. |

Note: This section appears when the **Business Object** is **Aggregate Stop-Loss (ASL) Pricing Rule Type**.

- **Enrollment-Specific Additional Data** – This section displays the enrollment specific additional data. It contains the following fields:

| Field Name | Field Description |
|-------------------------------|---|
| Retroactivity Indicator Value | Displays the value for the retroactivity indicator. |

Note: This section appears when the **Business Object** is **Retention Type Enrollment Based Pricing Rule Type**.

- **Claim Disposition Details** – This section displays the details of claim disposition. It contains the following columns:

| Column Name | Column Description |
|-------------------|---|
| Claim Disposition | Indicates the claim disposition. |
| Disposition Mode | Indicates the claim disposition mode. The valid values are: <ul style="list-style-type: none"> • Align Signage • Zero Out |

Note: This section appears when the **Business Object** is **Retention Type Claim Based Pricing Rule Type**.

- **SSL-Specific Additional Data** – This section displays the Specific Stop-Loss additional data. It contains the following fields:

| Field Name | Field Description |
|--|---|
| SSL Billable Charge Line Type | Displays the Specific Stop-Loss billable charge line type. |
| Domestic Provider Claim Billable Charge Line Type | Displays the claim billable charge line type for domestic provider. |
| Rule Based Domestic Provider Claim Eligibility Field | Displays the rule based domestic provider for claim eligibility field. |
| Rule Based Billing Eligibility Field | Displays whether the rule based field is eligible for billing or not. <p>Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.</p> |
| Rule Based Markup or Markdown Eligibility Field | Displays whether the rule based markup or markdown field is eligible for billing or not. <p>Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.</p> |

| Field Name | Field Description |
|--|--|
| Markup or Markdown Billable Charge Line Type | Displays the markup or markdown billable charge line type. |

Note: This section appears when the **Business Object** is **Specific Stop-Loss (SSL) Pricing Rule Type**.

- **Billable Charge Line Types** – This section list the billable charge line type. It contains the following column:

| Column Name | Column Description |
|---------------------------|--|
| Billable Charge Line Type | Indicates the billable charge line type. |

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

- **Flat Fees - Specific Additional Data** – This section displays the recurring flat fee that is specific and considered as additional data. It contains the following fields:

| Field Name | Field Description |
|----------------------------|---|
| Bill Segment Cancel Reason | Indicates the reason for cancelling the bill segment. |
| Recurring Fee | Displays whether the recurring flat fee is required or not. |
| Recurring Method | Indicates the recurring method if recurring fee is required. The valid values are: <ul style="list-style-type: none"> • Bill Period • Frequency |
| | Note: This field appears when the checkbox for Recurring Fee field is selected. |

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

This section contains the following sub-section:

- **Bill Periods** – This section displays the bill period for the recurring flat fee. It contains the following column:

| Column Name | Column Description |
|-------------|----------------------------|
| Bill Period | Indicates the bill period. |

Note: This section appears when the **Recurring Method** is **Bill Period**.

- **Additional Fee Indicator** – This section displays the additional fees which are applicable to one or more line items in the claim pricing rule. It contains the following fields:

| Column Name | Column Description |
|--------------------------------|--|
| Fee | Indicates the charge type category for the claim pricing rule. |
| Claim Additional Fee Indicator | Indicates the charge type sub category for the claim pricing rule. |

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Minimum Premium Program - Specific Additional Data** –

| Column Name | Column Description |
|-------------|--------------------|
| | |

- **Record Actions** – This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the pricing rule type. |
| Delete | Used to delete the pricing rule type. |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the extendable lookup value for pricing rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object. |

By default, the **Pricing Rule Type** zone does not appear in the **Pricing Rule Type** screen. It appears when you click the **Broadcast** () icon corresponding to the pricing rule type in the **Pricing Rule Type List** zone.

Claim Pricing

The ASO service provider processes the claims as part of the ASO agreement and pays the claim amount to either hospital or main subscriber. The employer, in turn, reimburses the claim amount to the ASO service provider at the end of the bill period (i.e. typically, every month). Apart from charging the claim amount to the employer, the ASO service provider charges various additional fees, such as fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor, and so on.

Oracle Revenue Management and Billing allows the ASO service provider to bill the employers for the claim amount and various additional fees. You can use any custom mechanism or the file upload utility in ORMB to upload the claim transactions. The pricing for the claim transactions can be defined using the claim pricing rules. You can define a claim pricing rule at the parent customer and bill group levels. The claim pricing rule at the bill group level takes precedence over the claim pricing rule at the parent customer level. You can define claim pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a claim pricing rule using a claim pricing rule type.

It is the claim pricing rule type which helps the system to determine:

- Business object using which the claim pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types, such as specific stop-loss, aggregate stop-loss, and retention type claim based pricing rule types, will inherit the attributes.

Note: You must select the **Primary** option while defining a claim pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Claim Pricing Rule Type** screen.

- Pricing rule types which are related to claim pricing rule type.
- Transaction fields from where the data for claim, specific stop-loss, aggregate stop-loss, retention type claim based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define claim pricing rules using the claim pricing rule type.

- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while accumulating specific stop-loss and aggregate stop-loss and while aggregating transactions.
- Claim templates which can be used while defining claim pricing rules using the claim pricing rule type.
- Additional information, such as:
 - Whether the price items included in the claim pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
 - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
 - Billable charge line type using which you want to create markup or markdown calculation lines.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

Once a claim pricing rule type is defined, you can create claim pricing rules using the claim pricing rule type. While defining a claim pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option and claim template which you want to use while defining the claim pricing.
- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Note: You can override the default markup and markdown values which are retrieved from the claim template.

In addition, while defining a claim pricing rule for a bill group, you need to specify the status of the policy for which you want to define the claim pricing rule. You can also specify a pricing group while defining a claim pricing rule for a bill group. If you specify a pricing group while defining a claim pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Once a claim pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Claim Pricing Rule Type

Prerequisites

To define a claim pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeClaim** defined for pricing rule type.

- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To define a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the pricing rule type. Note: You can create a claim pricing rule type using the Claim Pricing Rule Type business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Claim Pricing Rule Type** business object.
5. Click **OK**.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for claim template.
- **Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Pricing Rule Type | Used to specify the pricing rule type. | Yes |
| Description | Used to specify the description for the pricing rule type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> Claim Pricing Rule Aggregate Stop-Loss (ASL) Pricing Rule Specific Stop-Loss (SSL) Pricing Rule Retention Type Claim Based Pricing Rule Retention Type Enrollment Based Pricing Rule | Yes |
| Business Object | Indicate the pricing rule type business object for claim. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based | Yes |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note: **Related Pricing Rule Types** section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note: **Transaction Field Mapping** section appears when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add claim templates in the claim pricing rule type, if required.
- Add the claim-specific data in the pricing rule type, if required.

16. Define claim handling fees indicator in the claim pricing rule type, if required.

17. Click **Save**.

The claim pricing rule type is defined.

Adding Related Pricing Rule Types in a Primary Pricing Rule Type

Prerequisites

To add related pricing rule types in a primary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.

Procedure

To add related pricing rule types in a primary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a primary pricing rule type.

Note:

This section appears when you have chosen the **Primary** from the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------------|--|--|
| Sequence | Used to specify the order in which the related pricing rule type should be invoked. | Yes (Conditional) Note: This field is required when you are defining a pricing rule type for the related pricing rule type. |
| Pricing Rule Type | Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. Note: On clicking the Search (🔍) icon that appears corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field. | Yes (Conditional) Note: This field is required when the corresponding Sequence and Eligibility Rule Type field is specified for the related pricing rule type. |
| Eligibility Rule Type | Used to indicate the rule type eligibility for the related pricing rule type. Note: The Eligibility Rule Type list includes only those rule-types where the rule type eligibility is Related Pricing Rule Type Eligibility . | No |

- Enter the required details in the **Related Pricing Rule Types** section.
- If you want to define more than one related pricing rule type for the primary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the primary pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

- Click **Save**.

The related pricing rule types are added for the primary pricing rule type.

Defining Transaction Field Mapping in a Primary Pricing Rule Type

Prerequisites

To define the transaction field mapping for a primary pricing rule type, you should have:

- Transaction fields defined in the application

Procedure

To define the transaction field mapping for a primary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining a primary pricing rule type.

Note:

This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

| Field Name | Field Description |
|---------------|--|
| Source System | Used to specify the external system from where the transaction data is mapped. |

| Field Name | Field Description |
|-----------------------------|--|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Source System field, the Transaction Field Search window appears.</p> <p>On specifying the source system, the description of the source system appears corresponding to the Source System field.</p> |
| Parameter 1.....Parameter 4 | <p>Used to specify the parameters mapped for the transaction.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Parameter 1, Parameter 2, Parameter 3, Parameter 4 field, the Transaction Field Search window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the Parameter 1, Parameter 2, Parameter 3, Parameter 4 field respectively.</p> |
| Incurred Date | <p>Used to specify the date incurred for transaction.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Incurred Date field, the Transaction Field Search window appears.</p> <p>On specifying the incurred date, the description of the incurred date appears corresponding to the Incurred Date field.</p> |
| Paid Date | <p>Used to specify the transaction paid date.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Paid Date field, the Transaction Field Search window appears.</p> <p>On specifying the paid date, the description of the paid date appears corresponding to the Paid Date field.</p> |
| Source of Funds | <p>Used to specify the source of funds used to make the payment.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Source of Funds field, the Transaction Field Search window appears.</p> <p>On specifying the source of funds, the description of the source of funds appears corresponding to the Source of Funds field.</p> |
| Composite | Used to specify the composite transaction data. |

| Field Name | Field Description |
|--------------------------------------|---|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Composite field, the Transaction Field Search window appears.</p> <p>On specifying the composite, the description of the composite appears corresponding to the Composite field.</p> |
| Claim Disposition | <p>Used to specify the disposition of the claims transaction.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Claim Disposition field, the Transaction Field Search window appears.</p> <p>On specifying the claim disposition, the description of the claim disposition appears corresponding to the Claim Disposition field.</p> |
| Provider's Tax Identification Number | <p>Used to specify the tax identification number of the provider.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Provider's Tax Identification Number field, the Transaction Field Search window appears.</p> <p>On specifying the provider's tax identification number, the description of the provider's tax identification number appears corresponding to the Provider's Tax Identification Number field.</p> |
| Member ID | <p>Used to specify the member ID.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Member ID field, the Transaction Field Search window appears.</p> <p>On specifying the member ID, the description of the member ID appears corresponding to the Member ID field.</p> |
| Main Subscriber ID | <p>Used to specify the customer ID.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Main Subscriber ID field, the Transaction Field Search window appears.</p> <p>On specifying the main subscriber ID, the description of the main subscriber ID appears corresponding to the Main Subscriber ID field.</p> |
| Run-in Identifier | Used to specify the run-in identifier. |

| Field Name | Field Description |
|-------------------------|--|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Run-in Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the run-in identifier, the description of the run-in identifier appears corresponding to the Run-in Identifier field.</p> |
| Runout Identifier | <p>Used to specify the runout identifier.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Runout Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the runout identifier, the description of the runout identifier appears corresponding to the Runout Identifier field.</p> |
| Third Party Identifier | <p>Used to specify the third party identifier to determine that the claim transaction is received from an external source system while defining a claim pricing rule type.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Third Party Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the third party identifier, the description of the third party identifier appears corresponding to the Third Party Identifier field.</p> |
| Coverage Start Date | <p>Used to specify the transaction coverage start date.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Coverage Start Date field, the Transaction Field Search window appears.</p> <p>On specifying the coverage start date, the description of the coverage start date appears corresponding to the Coverage Start Date field.</p> |
| Coverage End Date | <p>Used to specify the transaction coverage end date.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Coverage End Date field, the Transaction Field Search window appears.</p> <p>On specifying the coverage end date, the description of the coverage end date appears corresponding to the Coverage End Date field.</p> |
| Retroactivity Indicator | Used to specify information of the retroactivity indicator. |

| Field Name | Field Description |
|-------------------------|--|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Retroactivity Indicator field, the Transaction Field Search window appears.</p> <p>On specifying the retroactivity indicator, the description of the retroactivity indicator appears corresponding to the Retroactivity Indicator field.</p> |
| Network Indicator | <p>Used to map to a transaction field which indicates whether the service provider is in network or out of network.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Network Indicator field, the Transaction Field Search window appears.</p> <p>On specifying the network indicator, the description of the network indicator appears corresponding to the Network Indicator field.</p> |
| Covered Charged Amount | <p>Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Covered Charged Amount field, the Transaction Field Search window appears.</p> <p>On specifying the covered charged amount, the description of the covered charged amount appears corresponding to the Covered Charged Amount field.</p> |
| Discount Savings Amount | <p>Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Discount Savings Amount field, the Transaction Field Search window appears.</p> <p>On specifying the discount savings amount, the description of the discount savings amount appears corresponding to the Discount Savings Amount field.</p> |
| Accumulation Identifier | <p>Only Used to map to a transaction field which indicates that the claim transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the claim transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the claim transaction.</p> |

| Field Name | Field Description |
|--------------------------------|--|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Accumulation Only Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the accumulation only identifier, the description of the accumulation only identifier appears corresponding to the Accumulation Only Identifier field.</p> |
| Billing Eligibility Identifier | <p>Used to specify whether the transaction is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Billing Eligibility Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the billing eligibility identifier, the description of the billing eligibility identifier appears corresponding to the Billing Eligibility Identifier field.</p> |
| Transaction Upload Date | <p>Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Transaction Upload Date field, the Transaction Field Search window appears.</p> <p>On specifying the transaction upload date, the description of the transaction upload date appears corresponding to the Transaction Upload Date field.</p> |
| Claim Handling Fees Indicator | <p>Used to specify the claim handling fees which are applicable to one or more line items in the claim pricing rule.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Claim Handling Fees Indicator field, the Transaction Field Search window appears.</p> <p>On specifying the claim handling fees indicator, the description of the claim handling fees indicator appears corresponding to the Claim Handling Fees Indicator field.</p> |

- Enter the required details in the **Transaction Field Mapping** section.
- Click **Save**.

The transaction field mapping is defined for the primary pricing rule type.

Associating Algorithms with a Pricing Rule Type

Prerequisites

To associate algorithms with a pricing rule type, you should have:

- Algorithm and Algorithm Type defined in the application.
- System event defined in the application.

Procedure

To associate algorithms with a pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining a pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|---|--|
| System Event | Used to indicate the system event on which the algorithm is executed. The valid values are: <ul style="list-style-type: none"> Account and Price Item Derivation Accumulation Billable Charge Post-Processing Accumulation Billable Charge Pre-Processing Accumulation Post-Processing Accumulation Pre-Processing Bill After Date Determination Bill Group Derivation Final Settlement Derivation Billable Charge Creation Pre-Processing Billable Charge Creation Post-Processing Pricing Rule Post-Processing Pricing Rule Pre-Processing Premium Calculation Transaction Validation | Yes Note: This field is required when you are defining an algorithm for the pricing rule type. |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) Note: This field is required when you are defining an algorithm for the pricing rule type. |
| Algorithm | Used to specify the algorithm. Note: If you select the system event option, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field. | Yes (Conditional) Note: This field is required when you are defining an algorithm for the pricing rule type. |

- Enter the required details in the **Algorithms** section.
- If you want to associate more than one algorithm for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.
The algorithms are associated with the pricing rule type.

Defining Additional Data for a Pricing Rule Type**Procedure**

To define additional data for a pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining a pricing rule type.

| |
|--|
| Note: This section does not appear when the Pricing Rule Type Category is Flat Fees . |
|--|

The **Additional Data** section contains the following fields:

| Field Name | Field Description |
|--|---|
| Eligible for Level Funding | Used to indicate whether the pricing rule type is eligible for level funding or not. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Eligible for Specific Stop-Loss | Used to whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: This field appears when the option selected for the Pricing Rule Type Category is Claim, Retention Type Claim Based, or Retention Type Enrollment Based.</p> |
| Run-in Identifier Value | Used to specify the identifier value to determine that the ancillary transaction is received during the run-in period of the policy. |
| Third Party Identifier Value | Used to specify the identifier value to determine that the ancillary transaction is received from an external source system. |
| Accumulation Only Identifier Value | Used to specify the identifier value to determine that the ancillary transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types. |
| Eligible for Write-Off in Post Runout | Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Post Runout Write-Off Adjustment Type | Used to specify the adjustment type using which the post runout write-off adjustments must be created. |
| Rule Based Price Item Eligibility Field | Used to specify the price item eligibility field that satisfies the pricing rule. |
| Rule Based Related Pricing Rule Type Eligibility Field | Used to specify the pricing rule type eligibility field that satisfies the pricing rule. |
| Rule Based Eligibility Value | Used to specify the eligibility value that satisfies the pricing rule. |

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.

The additional data is defined for the pricing rule type.

Adding Price Items in a Pricing Rule Type

Prerequisites

To add price items in a pricing rule type, you should have:

- Price items defined in the application
- Rate Options defined in the application
- Invoice Type defined in the application

Procedure

To add price items in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a pricing rule type.

The **Price Items** section contains the following columns in a grid:

| Column Name | Column Description |
|-------------|---|
| Price Item | Used to specify the price item information. |

| Column Name | Column Description | | | | | | | |
|-----------------|--|--|-------------|--------------------|-----------------------|-------------|---|--|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Items field.</p> | | | | | | | |
| Rate Option | <p>On clicking the Add (+) icon, the following column appears in a grid:</p> <table border="1" data-bbox="553 531 1463 1402"> <thead> <tr> <th data-bbox="553 531 691 615">Column Name</th> <th data-bbox="691 531 1193 615">Column Description</th> <th data-bbox="1193 531 1463 615">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="553 615 691 1402">Rate Option</td> <td data-bbox="691 615 1193 1402"> <p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop Loss • Ancillary • Claims • Discount Share • Enrollment Based Retention Per Member Per Month • Enrollment Based Retention Per Subscriber Per Month • Flat Dollar Per Claim - Aggregate Daily • Percentage of Claim - Aggregate Daily • Retention Claim Percentage Based Service Agreement • Retention - Aggregate Monthly • Specific Stop Loss • TFM Claim Weekly </td> <td data-bbox="1193 615 1463 1402"> <p>Yes (Conditional)</p> <div data-bbox="1198 674 1458 816" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required when the Price Item field is present.</p> </div> </td> </tr> </tbody> </table> <p>Note: The Rate Option column does not appear when the Pricing Rule Type Category is Flat Fees.</p> | | Column Name | Column Description | Mandatory (Yes or No) | Rate Option | <p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop Loss • Ancillary • Claims • Discount Share • Enrollment Based Retention Per Member Per Month • Enrollment Based Retention Per Subscriber Per Month • Flat Dollar Per Claim - Aggregate Daily • Percentage of Claim - Aggregate Daily • Retention Claim Percentage Based Service Agreement • Retention - Aggregate Monthly • Specific Stop Loss • TFM Claim Weekly | <p>Yes (Conditional)</p> <div data-bbox="1198 674 1458 816" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required when the Price Item field is present.</p> </div> |
| Column Name | Column Description | Mandatory (Yes or No) | | | | | | |
| Rate Option | <p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop Loss • Ancillary • Claims • Discount Share • Enrollment Based Retention Per Member Per Month • Enrollment Based Retention Per Subscriber Per Month • Flat Dollar Per Claim - Aggregate Daily • Percentage of Claim - Aggregate Daily • Retention Claim Percentage Based Service Agreement • Retention - Aggregate Monthly • Specific Stop Loss • TFM Claim Weekly | <p>Yes (Conditional)</p> <div data-bbox="1198 674 1458 816" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required when the Price Item field is present.</p> </div> | | | | | | |
| Bill To Account | <p>On clicking the Add (+) icon, the following columns appear in a grid:</p> <table border="1" data-bbox="553 1602 1463 1900"> <thead> <tr> <th data-bbox="553 1602 740 1686">Column Name</th> <th data-bbox="740 1602 1235 1686">Column Description</th> <th data-bbox="1235 1602 1463 1686">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="553 1686 740 1900">Priority</td> <td data-bbox="740 1686 1235 1900">Used to specify the order in which the invoice type is considered for a price item.</td> <td data-bbox="1235 1686 1463 1900"> <p>Yes (Conditional)</p> <div data-bbox="1240 1745 1458 1887" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required when you are defining the invoice type.</p> </div> </td> </tr> </tbody> </table> | | Column Name | Column Description | Mandatory (Yes or No) | Priority | Used to specify the order in which the invoice type is considered for a price item. | <p>Yes (Conditional)</p> <div data-bbox="1240 1745 1458 1887" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required when you are defining the invoice type.</p> </div> |
| Column Name | Column Description | Mandatory (Yes or No) | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | <p>Yes (Conditional)</p> <div data-bbox="1240 1745 1458 1887" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required when you are defining the invoice type.</p> </div> | | | | | | |

| Column Name | Column Description | | |
|-------------|--------------------|---|------------------------------|
| | Column Name | Column Description | Mandatory (Yes or No) |
| | Invoice Type | Used to specify the invoice type for the price item. Note: On clicking the Search (🔍) icon that appears corresponding to the Invoice Type field, the Invoice Type Search window appears. | No |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one rate option to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a rate option from the price item for the pricing rule type, click the **Delete** (🗑️) icon corresponding to the rate option.

- If you want to define more than one invoice types to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a invoice type from the price item for the pricing rule type, click the **Delete** (🗑️) icon corresponding to the invoice type.

- Click **Save**.

The price items are added for the pricing rule type.

Adding a Price Item Parameter in a Pricing Rule Type

Prerequisites

To add a price item parameter in a pricing rule type, you should have:

- Parameters defined in the application
- Transaction field defined in the application
- Price item parameter associated with the price item

Procedure

To add a price item parameter in a pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a pricing rule type.

The **Price Item Parameters** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Price Item Parameter | Used to specify the parameter which you can use while defining the pricing for the price item. | Yes (Conditional) |
| | <p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required when you are defining the pricing rule type.</p> |

| Column Name | Column Description | Mandatory (Yes or No) |
|---------------------------------|--|--|
| Transaction Field | Used to specify the transaction field from where the data should be retrieved. | Yes (Conditional) Note: This field is required once the price item parameter is specified. |
| | Note: On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field . | |
| Eligible for Specific Stop-Loss | Used to indicate whether the price item parameter can be used in the accumulation criteria. | No |
| Eligible for Level Funding | Used to specify whether the price item parameter can be used in level funding or not. | No |

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

A price item parameter is added for the pricing rule type.

Defining a Characteristic for a Pricing Rule Type

Prerequisites

To define the characteristics for a pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining a pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for the pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the pricing rule type. |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the pricing rule type.

Adding Claim Templates in a Claim Pricing Rule Type

Prerequisites

To add claim templates in a claim pricing rule type, you should have:

- Claim templates defined in the application

Procedure

To add claim templates in a claim pricing rule type:

1. Ensure that the **Claim Templates** section is expanded when you are defining or editing a pricing rule type.

The **Claim Templates** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------|--------------------------------------|---|
| Claim Template | Used to indicate the claim template. | Yes (Conditional) |
| | | Note: This field is required when you are defining a claim template for the pricing rule type. |

2. Enter the required details in the **Claim Templates** section.
3. If you want to define more than one claim template for the pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim template from the pricing rule type, click the **Delete (🗑)** icon corresponding to the claim template.

4. Click **Save**.

The claim templates are defined for the pricing rule type.

Adding the Claim-Specific Data in a Pricing Rule Type

Procedure

To add the Claim-Specific additional data in a pricing rule type:

1. Ensure that the **Claim-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Claim-Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Rule Based Billing Eligibility Field | Used to specify whether the rule based field is eligible for billing or not. Note: On clicking the Search (🔍) icon that appears corresponding to the Rule Based Billing Eligibility Field field, the Field Search window appears. On specifying the field, the description of the field appears corresponding to the Rule Based Billing Eligibility Field field. | No |
| Rule Based Markup or Markdown Eligibility Field | Used to specify whether the rule based markup or markdown field is eligible for billing or not. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p> | |
| Markup or Markdown Billable Charge Line Type | <p>Used to specify the markup or markdown billable charge line type.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge lien type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p> | No |

2. Enter the required details in the **Claim-Specific Additional Data** section.
3. Click **Save**.

The Claim-Specific Additional data is added in the pricing rule type.

Adding Claim Handling Fees Indicator in a Claim Pricing Rule Type

Procedure

To add claim handling fees indicator in a claim pricing rule type:

1. Ensure that the **Claim Handling Fees Indicator** section is expanded when you are defining or editing a claim pricing rule type.

The **Claim Handling Fees Indicator** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Fee | Used to indicate the charge type category for the claim pricing rule type. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|---|
| | | Note: This field is required while adding claim handling fees indicator in a claim pricing rule. |
| Fee Indicator | Used to specify the charge type sub category for the claim pricing rule type. | No |

- Enter the required details in the **Claim Handling Fees Indicator** section.
- If you want to define more than one claim handling fees indicator for the claim pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim handling fees indicator from the claim pricing rule type, click the **Delete (🗑)** icon corresponding to the fee.

- Click **Save**.

The claim handling fees indicator is defined for the claim pricing rule type.

Editing a Claim Pricing Rule Type

Prerequisites

To edit the claim pricing rule type, you should have:

- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To edit a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for claim template.
- **Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the pricing rule type. | Not applicable |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| | <ul style="list-style-type: none"> Retention Type Enrollment Based Pricing Rule | |
| Business Object | Displays the pricing rule type business object for claim. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based | Yes |

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for claim.

- Modify the details in the **Main** section, if required.
- Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
- Modify the transaction field mapping in the primary pricing rule type, if required.
- Add, edit, or remove algorithms with the pricing rule type, if required.
- Modify the additional data for the pricing rule type, if required.
- Add, edit, or remove pricing items in the pricing rule type, if required.
- Add, edit, or remove price item parameters in the pricing rule type, if required.
- Add, edit, or remove characteristics for the pricing rule type, if required.
- Add, edit, or remove claim templates in the claim pricing rule type, if required.
- Modify the claim-specific data in the pricing rule type, if required.
- Click **Save**.

The changes made to the claim pricing rule type are saved.

Deleting a Claim Pricing Rule Type

Procedure

To delete a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim pricing rule type that you want to delete.
A message appears confirming whether you want to delete the claim pricing rule type.

Note: You can delete a claim pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a claim pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The claim pricing rule type is deleted.

Defining a Claim Pricing Rule for a Parent Customer

Prerequisites

To define a claim pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.

- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To define a claim pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|------------------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. Note: You can create a claim pricing rule using the Pricing Rule Type for claim. | Yes |

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees for the line items in the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for the line items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description |
|-----------------------------|--|
| Parent Customer Information | Displays the parent customer information. |
| Pricing Rule Type | Indicates the pricing rule type. |
| Status | Indicates the status of the parent customer for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |

| Field Name | Field Description |
|------------|---|
| | <ul style="list-style-type: none"> Pending |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Price Item | Used to indicate the price item. | Yes |
| Pricing Start Date | Used to specify the pricing rule start date. | Yes |
| | Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy Start Date . | |
| Pricing End Date | Used to specify the pricing rule end date. | Yes |
| | Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy End Date . | |
| Rate Option | Used to indicate the rate option to define the claim pricing rule for the price item. | Yes |
| Claim Template | Used to indicate the claim template to define the claim pricing rule for a parent customer. | Yes |
| | Note: This field is enabled for selection when an option from Price Item field is selected. | |

- Enter the required details in the **Main** section.
- Define the claim handling fees for the line items in a claim pricing rule, if required.

Note: The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.

- Define the markup or markdown values for the line items in a claim pricing rule, if required.

Note: The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.

- Define line items in a claim pricing rule, if required.

Note: The **Line Items** section appears when an option from **Claim Template** field is selected.

- Define characteristics for a claim pricing rule, if required.
- Click **Save**.

The claim pricing rule for a parent customer is defined.

Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule

Procedure

To define the markup or markdown values for line items for each rule in a claim pricing rule:

- Ensure that sections for each rule are expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.
- Expand the **Markup or Markdown Values** and **Line Items** sections relevant to each rule.

The **Markup or Markdown Values** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|--|
| Pricing Strategy | Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None | No |
| Markup or Markdown Type | Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage | No |
| Markup or Markdown Amount | Used to specify the markup or markdown amount. | Yes (Conditional) |
| | Note: This field is disabled when you select the Flat Amount option from the Markup or Markdown Type field. | Note: This field is required when you selecting Percentage option from the Markup or Markdown Type field. |

The **Line Items** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Sequence | Displays the sequence number for the line items. | Not applicable |
| Line Item | Displays the billing line items. | Not applicable |
| Billing Eligibility | Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible • User Defined (Default Yes) • User Defined (Default No) | Not applicable |
| User Defined Billing Option | Used to specify whether the billing option is user defined, eligible or not eligible. | Yes |
| | Note: The checkbox for this field is by default checked and disabled for values Eligible , Rule Based , or Not Eligible in the Billing Eligibility field. The checkbox for this field is enabled for values User Defined (Default Yes) or User Defined (Default No) in the Billing Eligibility . | |
| Markup or Markdown Percentage Eligibility | Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| | <ul style="list-style-type: none"> Eligible Not Eligible | |
| Markup or Markdown Percentage | Used to specify the percentage for markup or markdown value. Note: This field is enabled when the Markup or Markdown Percentage Eligibility is Eligible and when the Markup or Markdown Type is Percentage . | Yes |

- Enter the required details in the **Markup or Markdown Values** section.
- Enter the required details in the **Line Items** section.
- Click **Save**.

The markup or markdown values for line items for each rule are defined in the claim pricing rule.

Defining a Characteristic for a Claim Pricing Rule

Prerequisites

To define a characteristic for a claim pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a claim pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Effective Date | Used to specify the date from when the characteristic is effective for the claim pricing rule. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| | | Note: This field is required when you are defining a characteristic for the claim pricing rule. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule . | Note: This field is required when you are defining a characteristic for the claim pricing rule. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the claim pricing rule. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the claim pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the claim pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the claim pricing rule.

Editing a Claim Pricing Rule of a Parent Customer

Prerequisites

To edit a claim pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.

- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To edit a claim pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for claim whose claim pricing rule details you want to edit.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees for the lines items in the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for the lines items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

| Column Name | Column Description |
|-----------------------------|---|
| Parent Customer Information | Displays the parent customer information |
| Pricing Rule Type | Indicates the pricing rule type. |
| Status | Indicates the status of the parent customer for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Pending |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|---|
| Price Item | Used to indicate the price item for which you want to edit the pricing. | Yes |
| Pricing Start Date | Used to specify the start date from when the pricing will be effective for the price item. | Yes (Conditional) |
| | Note: The pricing start date cannot be later than the pricing end date. | Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|---|
| Pricing End Date | Used to specify the end date till when the pricing will be effective for the price item. | No |
| | Note: The pricing end date cannot be earlier than the pricing start date. | |
| Rate Option | Used to indicate the rate option that you want to use while editing the pricing for the price item. | Yes |
| Claim Template | Used to indicate the claim template of the claim pricing rule for a parent customer. | Yes (Conditional) |
| | | Note: This field is required when you are reapplying for a claim template. |

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Modify the details in the **Main** section, if required.
6. Modify the claim handling fees specified for the line items in a claim pricing rule, if required.
7. Modify the markup or markdown values for the line items in a claim pricing rule, if required.
8. Modify the line items in a claim pricing rule, if required.
9. Add, edit, or remove characteristics for a claim pricing rule, if required.
10. Click **Save**.

The changes made to a claim pricing rule for a parent customer are saved.

Defining a Claim Pricing Rule for a Bill Group

Prerequisites

To define a claim pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To define a claim pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Indicates the name of the parent customer. | Not applicable |
| Person Type | Indicates the type of the parent customer. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type using which you want to create a claim pricing rule for the bill group. Note: You can create a claim pricing rule using the Pricing Rule Type for claim. | Yes |
| Pricing Group | Used to indicate the pricing group for the bill group. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| | Note: Select the pricing group option when the claim pricing rule has to be defined for a bill group using the pricing group. | |
| Policy Status | Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout Note: Claim pricing rule cannot be created for Runout or Post Runout policy statuses, where the policy run out end date is missing. | Yes |

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees on the lines items for the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for the line items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description |
|------------------------|--|
| Bill Group Information | Displays the bill group information. |
| Policy Start Date | Displays the date from when the policy is effective. |
| Policy End Date | Displays the date till when the policy is effective. |
| Policy Status | Indicates the policy status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout |
| Pricing Rule Type | Indicates the pricing rule type. |
| Status | Indicates the bill group status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Pending |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|--|
| Price Item | Used to indicate the price item for which you want to edit the pricing. | Yes |
| Pricing Start Date | Used to specify the start date from when the pricing will be effective for the price item. | Yes (Conditional) Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. |
| | Note: The pricing start date cannot be later than the pricing end date. | |
| Pricing End Date | Used to specify the end date till when the pricing will be effective for the price item. | No |
| | Note: The pricing end date cannot be earlier than the pricing start date. | |
| Rate Option | Used to indicate the rate option that you want to use while editing the pricing for the price item. | Yes |
| Claim Template | Used to indicate the claim template of the claim pricing rule for a bill group. | Yes (Conditional) |
| | | Note: This field is required when you are reapplying for a claim template. |

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Enter the required details in the **Main** section.
6. Define the claim handling fees for the line items in a claim pricing rule, if required.

Note: The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.

7. Define the markup or markdown values for the line items in a claim pricing rule, if required.

Note: The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.

8. Define line items in a claim pricing rule, if required.

Note: The **Line Items** section appears when an option from **Claim Template** field is selected.

9. Define characteristics for a claim pricing rule, if required.

10. Click **Save**.

The claim pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the created price list is assigned to the claim pricing rule.

Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a claim pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Claim template defined in the application.

Procedure

To define a claim pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| | Note: You can create a claim pricing rule using the Pricing Rule Type for claim. | |
| Pricing Group | Used to indicate the pricing group. | Yes |
| Policy Status | Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout | Yes |
| | Note: Claim pricing rule cannot be created for Runout or Post Runout policy status where the policy run out End Date is missing. | |

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for line items for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout | Not applicable |
| Pricing Group | Displays the pricing group. | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Price Item | Used to indicate the price item. | Yes |
| Pricing Start Date | Used to specify the pricing rule start date. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| | Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy Start Date . | |
| Pricing End Date | Used to specify the pricing rule end date. Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy End Date . | Yes |
| Rate Option | Used to indicate the rate option to define the claim pricing rule for the price item. | Yes |
| Claim Template | Used to indicate the claim template to define the claim pricing rule for a bill group. Note: This field is enabled for selection when an option from Price Item field is selected. | Yes |

5. Enter the required details in the **Main** section.
6. Define markup or markdown values for line items for each rule in a claim pricing rule, if required.

Note: The **Markup or Markdown Values** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

7. Define line items for each rule in a claim pricing rule, if required.

Note: The **Line Items** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

8. Define characteristics for a claim pricing rule, if required.
9. Click **Save**.

The claim pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the claim pricing rule.

Editing a Claim Pricing Rule of a Bill Group

Prerequisites

To edit a claim pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To edit a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab.
The **Pricing Information** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Group Information** column, whose pricing details you want to edit.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for the bill group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees on the lines items in the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values on the lines items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

| Column Name | Column Description |
|------------------------|--|
| Bill Group Information | Displays the bill group name. |
| Policy Start Date | Displays the date from when the policy is effective. |

| Column Name | Column Description |
|-------------------|--|
| Policy End Date | Displays the date till when the policy is effective. |
| Policy Status | Indicates the policy status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout |
| Pricing Rule Type | Indicates the pricing rule type. |
| Status | Indicates the bill group status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Pending |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|--|
| Price Item | Used to indicate the price item for which you want to edit the pricing. | Yes |
| Pricing Start Date | Used to specify the start date from when the pricing will be effective for the price item. | Yes (Conditional) Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. |
| | Note: The pricing start date cannot be later than the pricing end date. | |
| Pricing End Date | Used to specify the end date till when the pricing will be effective for the price item. | No |
| | Note: The pricing end date cannot be earlier than the pricing start date. | |
| Rate Option | Used to indicate the rate option that you want to use while editing the pricing for the price item. | Yes |
| Claim Template | Used to indicate the claim template of the claim pricing rule for a bill group. | Yes |

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

6. Modify the details in the **Main** section, if required.
7. Modify the claim handling fees specified on the line items in a claim pricing rule, if required.
8. Modify the markup or markdown values on the line items in a claim pricing rule, if required.
9. Modify the line items in a claim pricing rule, if required.
10. Add, edit, or remove the characteristics for a claim pricing rule, if required.
11. Click **Save**.

The changes made to a claim pricing rule for a bill group are saved.

Viewing a Claim Pricing Rule of a Bill Group**Procedure**

To view a claim pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose claim pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the claim pricing rule type whose claim pricing rule bill group you want to view.
The **Pricing Rule** screen appears. It contains the following zone:
 - **Claim** – Displays the pricing rule claim details for a bill group. It contains the following sections:
 - **Main** – Displays the basic details of the claim pricing rule.
 - **Claim Handling Fees** – Displays the claim handling fees specified for the lines items in the claim pricing rule.
 - **Markup or Markdown Values** – Displays the markup or markdown values for the lines items in the claim pricing rule.
 - **Line Items** – Displays the associated line items eligible for billing.
 - **Characteristics** – Displays the characteristics defined for the claim pricing rule.
6. View the basic details of claim pricing rule in the **Main** section.
7. View the claim handling fees specified for the line items in the **Claim Handling Fees** section.
8. View the markup or markdown values for the line items in the **Markup or Markdown Values** section.
9. View the associated line items eligible for billing in the **Line Items** section.

10. View the characteristics of the claim pricing rule in the **Characteristics** section.

Deleting a Claim Pricing Rule of a Bill Group

Procedure

To delete a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the pricing rule type that you want to delete.
A message appears confirming whether you want to delete the claim pricing rule.
4. Click **OK**.

The claim pricing rule of a bill group is deleted.

Specific Stop-Loss (SSL) Pricing

Stop-Loss coverage provides liability limits on claims for individuals and for the employer group as a whole. Specific Stop-Loss (SSL) is the form of excess risk coverage that provides protection for the employer against a high claim on any one individual. This is protection against abnormal severity of a single member claim rather than abnormal frequency of claims in total. Specific stop-loss is also known as individual stop-loss. The specific stop-loss is calculated on the claim transactions received for an individual.

You can define a specific stop-loss pricing rule at the parent customer and bill group levels. The specific stop-loss pricing rule at the bill group level takes precedence over the specific stop-loss pricing rule at the parent customer level. You can define specific stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a specific stop-loss pricing rule using a specific stop-loss pricing rule type.

It is the specific stop-loss pricing rule type which helps the system to determine:

- Business object using which the specific stop-loss pricing rule should be created in the system.

Note: The specific stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the specific stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define specific stop-loss pricing rules using the specific stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in a specific stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating specific stop-loss.

- Additional information, such as:
 - Identifier which helps to determine whether the specific stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
 - SSL billable charge line type using which you want to create specific stop-loss billable charges.
 - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
 - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.

Once a specific stop-loss pricing rule type is defined, you can create specific stop-loss pricing rules using the specific stop-loss pricing rule type. While defining a specific stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss pricing rule must be used for only pricing or for pricing and billing.
- Whether the specific stop-loss must be accumulated at the member or main subscriber level.

- Settlement frequency which helps to determine the bill after date. The valid values are:
 - Immediately – If you select this option from the list, the bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next bill cycle.
 - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
 - Never - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
 - Yearly – If you select this option from the list, the bill after date in the specific stop-loss billable charge is set to the pricing end date.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the specific stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for specific stop-loss at the member or main subscriber level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the Aggregate Specific Stop-Loss (ASSL) should be calculated during the C1-BCSSL batch run for each bill group
- The ASSL limit indicating that the aggregate specific stop-loss amount beyond this limit will be paid by the insurance company to the ASSL credit account.
- Whether any member, main subscriber, or provider is excluded during the specific stop-loss calculation Different SSL limit (i.e. lasered amount) for a member, main subscriber, or provider who are expected to have higher claim amount.

However, while defining a specific stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the specific stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the accumulation parameters and exclusion and lasering information.

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

You can also specify a pricing group while defining a specific stop-loss pricing rule for a bill group. If you specify a pricing group while defining a stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss.

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

Once a specific stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To define a specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeSSL** defined for pricing rule type.
- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss defined in the application

Procedure

To define a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the pricing rule type. | Yes |
| | Note: You can create a specific stop-loss pricing rule type using the Specific Stop-Loss (SSL) Pricing Rule Type business object. | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.
5. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss related additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the pricing rule type. | Yes |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |
| Business Object | Indicate the pricing rule type business object for specific stop-loss. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based | |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the SSL-Specific data in the pricing rule type, if required.
- Click **Save**.

The specific stop-loss pricing rule type is defined.

Adding the SSL-Specific Data in a Pricing Rule Type

Procedure

To add the SSL-Specific additional data in a pricing rule type:

1. Ensure that the **SSL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **SSL-Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| SSL Billable Charge Line Type | <p>Used to specify the Specific Stop-Loss billable charge line type.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the SSL Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the SSL Billable Charge Line Type field.</p> | No |
| Domestic Provider Claim Billable Charge Line Type | <p>Used to specify the claim billable charge line type for domestic provider.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Domestic Provider Claim Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Domestic Provider Claim Billable Charge Line Type field.</p> | No |
| Markup or Markdown Billable Charge Line Type | Used to specify the markup or markdown billable charge line type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p> | |
| Rule Based Billing Eligibility Field | <p>Used to specify whether the rule based field is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Billing Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Billing Eligibility Field field.</p> | No |
| Rule Based Markup or Markdown Eligibility Field | <p>Used to specify whether the rule based markup or markdown field is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p> | No |
| Rule Based Domestic Provider Claim Eligibility Field | <p>Used to specify the rule based domestic provider for claim eligibility field.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field.</p> | No |

2. Enter the required details in the **SSL-Specific Additional Data** section.
3. Click **Save**.

The SSL-Specific Additional data is added in the pricing rule type.

Editing a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To edit the specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss (SSL) defined in the application

Procedure

To edit the specific stop-loss (SSL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss (SSL) whose details you want to edit.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the pricing rule type. | Not applicable |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |
| Business Object | Displays the pricing rule type business object for specific stop-loss. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based | Yes |

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.

13. Modify the SSL-Specific data in the pricing rule type, if required.

14. Click **Save**.

The changes made to the specific stop-loss pricing rule type are saved.

Deleting a Specific Stop-Loss (SSL) Pricing Rule Type

Procedure

To delete a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the specific stop-loss pricing rule type that you want to delete.

A message appears confirming whether you want to delete the specific stop-loss pricing rule type.

Note: You can delete a specific stop-loss pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a specific stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The specific stop-loss pricing rule type is deleted.

Defining a Specific Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

To define a specific stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.

- Rate option defined in the application.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

Procedure

To define a specific stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. | Yes |
| | Note: You can create a specific stop-loss pricing rule using the Pricing Rule Type for specific stop-loss. | |

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
- **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Parent Customer Information | Displays the parent customer information | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Price Item | Used to indicate the price item which you want to define for pricing. | Yes |
| Pricing Start Date | Used to specify the pricing rule start date. Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy Start Date . | Yes |
| Pricing End Date | Used to specify the pricing rule end date. Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy End Date . | Yes |
| Rate Option | Used to indicate the rate option which you want to use for defining the specific stop-loss pricing rule for the price item. | Yes |
| Pricing Rule Usage | Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing Note: This field is enabled when an option from Price Item field is selected. | Yes |
| SSL Accumulation Level | Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> • Member • Main Subscriber | |
| Settlement Frequency | Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCSSL batch is | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| | <p>stamped on the specific stop-loss billable charge.</p> <ul style="list-style-type: none"> • Never – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCSSL batch is stamped on the specific stop-loss billable charge. • Yearly – The bill after date in the specific stop-loss billable charge is set to the pricing end date. <p>Note: This field is disabled when you select Pricing and Billing option from the Pricing Rule Usage field.</p> | |
| Underwriter Review | <p>Used to indicate whether the underwriter settlement review flag is on or off. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No | Yes |
| Claim Template | <p>Used to indicate the claim template to define the claim pricing rule for a parent customer.</p> <p>Note: This field is enabled for selection when an option from Price Item field is selected.</p> | Yes |

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in a specific stop-loss pricing rule, if required.

Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

7. Define run-in parameters in a specific stop-loss pricing rule, if required.

Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

8. Define lasering and exclusion information in a specific stop-loss pricing rule, if required.

Note: The **Lasering and Exclusion** section appears when an option from the **Price Item** field is selected.

9. Define characteristics for a specific stop-loss pricing rule, if required.
10. Click **Save**.

The specific stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Accumulation Group ID | Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss. | Not applicable |
| Incurred Start Date | Used to specify the incurred start date based on which you want to accumulate the specific stop-loss. Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. | Yes |
| Incurred End Date | Used to specify the incurred end date based on which you want to accumulate the specific stop-loss. Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. | Yes |
| SSL Payout Limit | Used to specify the maximum limit defined for specific stop-loss at the member or main subscriber level. | Yes |
| Paid Start Date | Used to specify the paid start date based on which you want to accumulate the specific stop-loss. Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. | Yes |
| Paid End Date | Used to specify the paid end date based on which you want to accumulate the specific stop-loss. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| | Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. | |
| Settlement Days | Used to indicate the settlement days which helps to calculate the settlement date. Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days. | Yes |
| Compute Aggregate SSL (ASSL) | Used to indicate whether the aggregate specific stop-loss (ASSL) should be calculated or not during the C1-BCSSL batch run for each bill group. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| ASSL Credit Count | Used to indicate that the aggregate specific stop-loss amount beyond the ASSL limit will be paid by the insurance company to the ASSL credit account. Note: This field is enabled when you select Yes option from the Compute Aggregate SSL (ASSL) field. | Yes |
| ASSL Limit | Note: This field is enabled when you select Yes option from the Compute Aggregate SSL (ASSL) field. | Yes |

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.

The accumulation parameters are defined in the specific stop-loss pricing rule.

Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define run-in parameters in a specific stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Run-In | Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing | No |
| Incurred Start Date | Used to specify the incurred start date based on the run-in period of the policy in the specific stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |
| Incurred End Date | Used to specify the incurred end date based on the run-in period of the policy in the specific stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |
| Paid Start Date | Used to specify the paid start date based on the run-in period of the policy in the specific stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |
| Paid End Date | Used to specify the paid end date based on the run-in period of the policy in the specific stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |

2. Enter the required details in the **Run-In Parameters** section.
3. Click **Save**.

The run-in parameters are defined in the specific stop-loss pricing rule.

Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule

Prerequisites

To define lasering and exclusion information in a specific stop-loss pricing rule, you should have:

- Lasering or exclusion level defined in the application.
- Exception type defined in the application.

Procedure

To define lasering and exclusion information in a specific stop-loss pricing rule:

1. Ensure that the **Lasering and Exclusion** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Lasering and Exclusion** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------------------|---|--|
| Accumulation Group ID | Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss. | Not applicable |
| Level Identifier | Used to specify the lasering or exclusion level identifier. | Yes |
| Lasering or Exclusion Level | Used to indicate the lasering or exclusion in a specific stop-loss. The valid values are: <ul style="list-style-type: none"> • Main Subscriber • Member • Provider | Yes |
| Exception Type | Used to indicate the exception type. The valid values are: <ul style="list-style-type: none"> • Lasering • Exclusion | Yes |
| | Note: This field displays Exclusion option and is disabled on selection of Provider option from the Lasering or Exclusion Level column. | |
| Comments | Used to specify the comments. | No |
| Lasered Amount | Used to specify the lasered amount. | Yes (Conditional) |
| | Note: This field is disabled when Exclusion option is selected from the Exception Type column. | Note: This column is mandatory when Lasering option is selected from the Exception Type column. |

2. Enter the required details in the **Lasering and Exclusion** section.
3. If you want to define more than one lasering and exclusion information in a specific stop-loss pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a lasering and exclusion information from the specific stop-loss pricing rule, click the **Delete (🗑)** icon corresponding to the level identifier.

4. Click **Save**.

The lasering and exclusion information is defined in a specific stop-loss pricing rule.

Defining a Characteristic for a Specific Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for a specific stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a specific stop-loss pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the specific stop-loss pricing rule. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the specific stop-loss pricing rule. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule . Note: This field is required when you are defining a characteristic for the specific stop-loss pricing rule. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the specific stop-loss pricing rule. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the specific stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the specific stop-loss pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

To edit a specific stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

Procedure

To edit a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to edit.
The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:
 - **Customer Information** – Displays the customer information.
 - **Main** – Used to specify basic details about the specific stop-loss pricing rule.
 - **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
 - **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
 - **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
 - **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Parent Customer Information | Displays the parent customer information | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Price Item | Indicates the price item defined for pricing. | Not applicable |
| Pricing Start Date | Used to specify the pricing rule start date. | Yes |
| Pricing End Date | Used to specify the pricing rule end date. | Yes |
| Rate Option | Indicates the rate option used for defining the specific stop-loss pricing rule for the price item. | Not applicable |
| Pricing Rule Usage | Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing | Yes |
| SSL Accumulation Level | Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> • Member • Main Subscriber | |
| Settlement Frequency | Indicates the settlement frequency to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCSSL batch is stamped on the specific stop-loss billable charge. • Never – • Yearly – The bill after date in the specific stop-loss billable charge is set to the pricing end date. <p>Note: This field is disabled when you select Pricing and Billing option from the Pricing Rule Usage field.</p> | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Underwriter Review | Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in a specific stop-loss pricing rule, if required.
6. Modify the run-in parameters in a specific stop-loss pricing rule, if required.
7. Add, edit, or remove the lasering and exclusion information for the specific stop-loss pricing rule, if required.
8. Add, edit, or remove characteristics for the specific stop-loss pricing rule, if required.
9. Click **Save**.

The changes made to a specific stop-loss pricing rule for a parent customer are saved.

Viewing a Specific Stop-Loss Pricing Rule of a Parent Customer

Procedure

To view a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule you want to view. The **Pricing Rule** screen appears. It contains the following zone:

- **Specific Stop-Loss** – Displays the pricing rule specific stop-loss details for a parent customer. It contains the following sections:
 - **Main** – Displays the basic details of the specific stop-loss pricing rule.
 - **Accumulation Parameters** – Displays the accumulation parameters based on which accumulated specific stop-loss for the transactions are processed in the run-in or active period of the policy.
 - **Run-In Parameters** – Displays the run-in parameters in the run-in period of the policy.
 - **Lasering and Exclusion** – Displays the lasering and exclusion information that inherits the accumulation parameters
 - **Characteristics** – Displays the characteristics defined for the specific stop-loss pricing rule.
5. View the basic details of specific stop-loss pricing rule in the **Main** zone.
 6. View the accumulated parameters in the **Accumulation Parameters** zone.
 7. View the run-in parameters in the **Run-In Parameters** zone.
 8. View the lasering and exclusion information in the **Lasering and Exclusion** zone.
 9. View the characteristics of the specific stop-loss pricing rule in the **Characteristics** zone.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group

Prerequisites

To define a specific stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration.

Procedure

To define a specific stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. Note: You can create a specific stop-loss pricing rule using the Pricing Rule Type for specific stop-loss. | Yes |
| Pricing Group | Used to indicate the pricing group. | No |
| Policy Status | Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout Note: Specific stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out end date is missing. | Yes |

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Price Item | Used to indicate the price item. | Yes |
| | Note: Once an option is selected for this field, the field appears disabled. | |
| Parent Customer's SSL Pricing Rules | Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. | Yes |
| | Note: This field is enabled for selection when an option from Price Item field is selected. | |
| Pricing Start Date | Displays the pricing rule start date. | Not applicable |
| | Note: This field displays the Policy Start Date . | |
| Pricing End Date | Displays the pricing rule end date. | Not applicable |
| | Note: This field displays the Policy End Date . | |
| Rate Option | Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| | Note: Rate options in this field appears for selection, when you select an option from the Price Item field. | |
| Reinsurer Account | Used to indicate the account of the reinsurer person (associated with the parent customer of the bill group) which you want to use for defining the specific stop-loss pricing rule for the price item. | No |

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in a specific stop-loss pricing rule, if required.

Note:

The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Accumulation Criteria** for each rule in a specific stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

Note:

The **Pricing Information** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in a specific stop-loss pricing rule.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

The specific stop-loss pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule

Procedure

To define accumulation criteria in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
|-----------------------|---|-----------------------|--------------------|-----------------------|----------------------|--|----|----|
| Accumulation Group ID | Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for a specific stop-loss. | Not applicable | | | | | | |
| Run-In Maximum Limit | Used to specify the maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy. Note: This field is enabled when the start date and end date selected from the Parent Customer's SSL Pricing Rules field of Main section is greater than today's date. | Yes | | | | | | |
| SSL Limit | Used to specify whether the SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company. | Yes | | | | | | |
| Price Item | Used to specify the price item information. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears. | No | | | | | | |
| Price Item Parameters | This field contains the following columns: <table border="1" data-bbox="527 1390 1036 1669"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Used to specify multiple parameters based on which you want to determine the price item utilization.</td> <td>No</td> </tr> </tbody> </table> | Column Name | Column Description | Mandatory (Yes or No) | Price Item Parameter | Used to specify multiple parameters based on which you want to determine the price item utilization. | No | No |
| Column Name | Column Description | Mandatory (Yes or No) | | | | | | |
| Price Item Parameter | Used to specify multiple parameters based on which you want to determine the price item utilization. | No | | | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|------------|--------------------|---|------------------------------|-----------------------|
| | Column Name | Column Description | Mandatory (Yes or No) | |
| | | Note: On clicking the Search  icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears. | | |
| | Parameter Value | Used to specify the value of the parameter. Note: On selecting the Price Item Parameter , the Search  icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears. | No | |

- Enter the required details in the **Accumulation Criteria** section.
- If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The accumulation criteria is defined in the specific stop-loss pricing rule.

- You can define accumulation rules for each rule in a specific stop-loss pricing rule.

Note: You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule

Procedure

To define the stop-loss eligibility for claim line items:

1. Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
 - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating specific stop-loss.
 - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
 - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Effective Claim Pricing Rule | Used to indicate the claim pricing rule effective for pricing. | No |

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

Note: The **Reapply Claim Template** button appears when you are editing a specific stop-loss.

The **Domestic Provider Claims** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Exclude SSL (Percentage) | Used to specify the domestic provider claim billable charge line excluding the specific stop-loss in percentage to create domestic provider claim calculation lines. | No |

The **Markup or Markdown Values** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Pricing Strategy | Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Markup or Markdown Type | Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> Flat Amount Percentage | Not applicable |
| Markup or Markdown Amount | Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount . | Not applicable |

The **Line Items** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Sequence | Displays the sequence number for the line items. | Not applicable |
| Line Item | Displays the billing line items. | Not applicable |
| Eligible for Specific Stop-Loss | Used to specify whether the line item is eligible or not eligible for specific stop-loss. | No |
| Markup or Markdown Percentage Eligibility | Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> Eligible Not Eligible | Not applicable |
| Markup or Markdown Percentage | Displays the percentage for markup or markdown value. | Not applicable |

- Select the required details in the **Claim Pricing Rule** section, if required.
- Enter the required details in the **Domestic Provider Claims** section, if required.
- Select the required details in the **Line Items** section, if required.
- Click **Save**.

The claim line items are defined in the specific stop-loss pricing rule.

- You can define eligibility claim line items for each rule in a specific stop-loss pricing rule.

Note: You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a specific stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define a specific stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. Note: You can create a specific stop-loss pricing rule using the Pricing Rule Type for specific stop-loss. | Yes |
| Pricing Group | Used to indicate the pricing group. | Yes |
| Policy Status | Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout Note: Specific stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out End Date is missing. | Yes |

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Not applicable |
| Pricing Group | Displays the pricing group. | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Price Item | Used to indicate the price item. | Yes |
| | Note: Once an option is selected for this field, the field appears disabled. | |
| Parent Customer's SSL Pricing Rules | Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. | Yes |
| | Note: This field is enabled for selection when an option from Price Item field is selected. | |
| Pricing Start Date | Displays the pricing rule start date. | Yes |
| Pricing End Date | Displays the pricing rule end date. | Yes |
| Rate Option | Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. | Yes |
| | Note: Rate options in this field appears for selection, when you select an option from the Price Item field. | |

5. Enter the required details in the **Main** section.
6. Define accumulation criteria for each rule in a specific stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

7. Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

The specific stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit a specific stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration.

Procedure

To edit a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the specific stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Price Item | Indicates the price item. | Not applicable |
| Parent Customer's SSL Pricing Rules | Indicates the pricing date range derived from the parent customer's specific stop-loss pricing rule. | Not applicable |
| Pricing Start Date | Displays the pricing rule start date. | Not applicable |
| Pricing End Date | Displays the pricing rule end date. | Not applicable |
| Rate Option | Indicates the rate option of the specific stop-loss pricing rule for the price item. | Not applicable |
| Reinsurer Account | Used to indicate the account of the reinsurer person (associated with the parent customer of the bill group) which you want to use for defining the specific stop-loss pricing rule for the price item. <div style="border: 1px solid black; padding: 5px;"> <p>Note: You cannot update the reinsurer account when the reinsurer billable charges are already created for the accumulation group. Ideally, you should first cancel the reinsurer charges and then update the reinsurer account in the specific stop-loss pricing rule.</p> </div> | No |

4. Modify the accumulation criteria in a specific stop-loss pricing rule, if required.

Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for a specific stop-loss, if required.

5. Modify the stop-loss eligibility for claim line items, if required.

Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

6. Add, edit, or remove characteristics for a specific stop-loss pricing rule, if required.
7. Click **Save**.

The changes made to a specific stop-loss pricing rule for a bill group are saved.

Viewing a Specific Stop-Loss Pricing Rule of a Bill Group

Procedure

To view a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose specific stop-loss pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Specific Stop-Loss** – Displays the pricing rule specific stop-loss details for a bill group. It contains the following sections:
 - **Main** – Displays the basic details of the specific stop-loss pricing rule.
 - **Accumulation Criteria** – Displays the accumulation criteria in a specific stop-loss pricing rule.

- **Pricing Information** – Displays the stop-loss eligibility for claim line items.
 - **Characteristics** – Displays the characteristics defined for the specific stop-loss pricing rule.
6. View the basic details of specific stop-loss pricing rule in the **Main** section.
 7. View the accumulation criteria in the **Markup or Markdown Values** section.
 8. View the stop-loss eligibility for claim line items in the **Line Items** section.
 9. View the characteristics of the specific stop-loss pricing rule in the **Characteristics** section.

Deleting a Specific Stop-Loss Pricing Rule of a Bill Group

Procedure

To delete a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule you want to delete.
A message appears confirming whether you want to delete the specific stop-loss pricing rule.
4. Click **OK**.
The specific stop-loss pricing rule is deleted.

Aggregate Stop-Loss (ASL) Pricing

ASL provides a ceiling on the eligible expenses that an employer would pay, in total for all members or subscribers, during a contract period. The amount that exceeds this limit will be paid by the insurance company.

You can define an aggregate stop-loss pricing rule at the parent customer and bill group levels. The aggregate stop-loss pricing rule at the bill group level takes precedence over the aggregate stop-loss pricing rule at the parent customer level. You can define aggregate stop-loss pricing rules for parent customers and bill groups from the **Customer 360°**

Information screen. You can define an aggregate stop-loss pricing rule using an aggregate stop-loss pricing rule type. It is the aggregate stop-loss pricing rule type which helps the system to determine:

- Business object using which the aggregate stop-loss pricing rule should be created in the system.

Note: The aggregate stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the aggregate stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in an aggregate stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating aggregate stop-loss.

- Additional information, such as:
 - Identifier which helps to determine whether the aggregate stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
 - ASL billable charge line type using which you want to create aggregate stop-loss billable charges.
 - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
 - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.
 - ASL limit price item whose effective retention type enrollment based pricing should be used to calculate the enrollment based limit when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field is set to Enrollment Based Limit, Enrollment Based or Minimum ASL Limit (Whichever is Greater), or Percentage of Enrollment Based Limit in the aggregate stop-loss pricing rule which is defined for a parent customer.

Once an aggregate stop-loss pricing rule type is defined, you can create aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type. While defining an aggregate stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the settlement frequency, settlement days, accumulation parameters (such as incurred start date, incurred end date, paid start date, and paid end date).

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss and aggregate stop-loss pricing rules for a parent customer should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
 - Immediately – If you select this option from the list, the bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next bill cycle.
 - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
 - Monthly - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
 - Yearly – If you select this option from the list, the bill after date in the aggregate stop-loss billable charge is set to the pricing end date.
- Account in which the aggregate stop-loss amount should be credited.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the aggregate stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for aggregate stop-loss at the parent customer level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the ASL limit should be set to either of the following during the policy period:
 - Policy Based Limit
 - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
 - Enrollment Based Limit
 - Percentage of Enrollment Based Limit
- Whether the ASL limit should be set to either of the following during the settlement period:
 - Policy Based Limit
 - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
 - Enrollment Based Limit

However, while defining an aggregate stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the aggregate stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's ASL pricing rule from which you want to inherit the pricing date range.

Note: The pricing date range is derived from the parent customer's aggregate stop-loss pricing rule because the aggregate stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.

- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

You can also specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group. If you specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

Once an aggregate stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To define an aggregate stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeASL** defined for pricing rule type.
- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss defined in the application

Procedure

To define an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the pricing rule type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: You can create an aggregate stop-loss pricing rule type using the Aggregate Stop-Loss (ASL) Pricing Rule Type business object. | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.
- Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **ASL-Specific Additional Data** – Used to specify the aggregate stop-loss related additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the pricing rule type. | Yes |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |
| Business Object | Indicate the pricing rule type business object for aggregate stop-loss. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| | <ul style="list-style-type: none"> Active Inactive | |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based | Yes |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the ASL-Specific additional data in the pricing rule type, if required.
- Click **Save**.

The aggregate stop-loss pricing rule type is defined.

Adding the ASL-Specific Data in a Pricing Rule Type

Procedure

To add the ASL-Specific additional data in a pricing rule type:

1. Ensure that the **ASL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **ASL-Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| ASL Billable Charge Line Type | Used to specify the Aggregate Stop-Loss billable charge line type. Note: On clicking the Search (🔍) icon that appears corresponding to the ASL Billable Charge Line Type field, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the ASL Billable Charge Line Type field. | No |
| Domestic Provider Claim Billable Charge Line Type | Used to specify the claim billable charge line type for domestic provider. Note: On clicking the Search (🔍) icon that appears corresponding to the Domestic Provider Claim Billable Charge Line Type field, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Domestic Provider Claim Billable Charge Line Type field. | No |
| Markup or Markdown Billable Charge Line Type | Used to specify the markup or markdown billable charge line type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p> | |
| Rule Based Billing Eligibility Field | <p>Used to specify whether the rule based field is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Billing Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Billing Eligibility Field field.</p> | No |
| Rule Based Markup or Markdown Eligibility Field | <p>Used to specify whether the rule based markup or markdown field is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p> | No |
| Rule Based Domestic Provider Claim Eligibility Field | <p>Used to specify the rule based domestic provider for claim eligibility field.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| ASL Limit Price Item | Used to specify the Aggregated Stop-Loss limit price item. | No |

- Enter the required details in the **ASL-Specific Additional Data** section.
- Click **Save**.

The ASL-Specific Additional data is added in the pricing rule type.

Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To edit the aggregate stop-loss (ASL) pricing rule type, you should have:

- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss (ASL) defined in the application

Procedure

To edit the aggregate stop-loss (ASL) pricing rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss (ASL) whose details you want to edit.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- Algorithms** – Used to define the algorithms used for the pricing rule type.
- Additional Data** – Used to specify the additional information about the pricing rule type.
- Price Items** – Used to define the price items assigned to the pricing rule type.
- Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- Characteristics** – Used to define the characteristics for the pricing rule type.

- **ASL-Specific Additional Data** – Used to specify the aggregate stop-loss additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the pricing rule type. | Not applicable |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |
| Business Object | Displays the pricing rule type business object for aggregate stop-loss. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based | Yes |

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.

11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the ASL-Specific data in the pricing rule type, if required.
14. Click **Save**.

The changes made to the aggregate stop-loss pricing rule type are saved.

Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type

Procedure

To delete an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type that you want to delete.
A message appears confirming whether you want to delete the aggregate stop-loss pricing rule type.

Note: You can delete an aggregate stop-loss pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an aggregate stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The aggregate stop-loss pricing rule type is deleted.

Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details

Procedure

To view the details of an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** () icon corresponding to the aggregate stop-loss pricing rule type whose details you want to view.
The **Pricing Rule Type** zone appears.
5. View the details of the aggregate stop-loss pricing rule type in the **Pricing Rule Type** zone.

Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

To define an aggregate stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.

- Price item defined in the application.
- Rate option defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration.

Procedure

To define an aggregate stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing Information** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. Note: You can create an aggregate stop-loss pricing rule using the Pricing Rule Type for aggregate stop-loss. | Yes |

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregation stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Parent Customer Information | Displays the parent customer information. | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Price Item | Used to indicate the price item which you want to define for pricing. | Yes |
| Parent Customer's SSL or ASL Pricing Rules | Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules. Note: This field is enabled when you select an option from the Price Item field. | Yes |
| Pricing Start Date | Displays the pricing rule start date. Note: By default it displays the Policy Start Date . | Not applicable |
| Pricing End Date | Displays the pricing rule end date. Note: This field displays date when you select the date range from Parent Customer's SSL or ASL Pricing Rules . | Not applicable |
| Rate Option | Used to indicate the rate option which you want to use for defining the aggregate stop-loss pricing rule for the price item. Note: Options appears in this field when you select an option from the Price Item field. | Yes |
| Settlement Frequency | Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Monthly – The bill after date specified in the Manual Settlement Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Yearly – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date. Note: This field is enabled when you select an option from the Price Item field. | Yes |
| Underwriter Review | Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| | <ul style="list-style-type: none"> • Yes • No | |
| | Note: This field is enabled when you select an option from the Price Item field. | |
| Reinsurer Account | Used to indicate the account of the reinsurer person (associated with the parent customer) which you want to use for defining the aggregate stop-loss pricing rule for the price item. | No |

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

7. Define run-in parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.

The aggregate stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregation stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Accumulation Group ID | Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for an aggregation stop-loss. | Not applicable |
| ASL Credit Account | Used to indicate the account in which the aggregate stop-loss amount should be credited. Note: This field becomes read when you select a date range from the Parent Customer's SSL or ASL Pricing Rules . | Not applicable |
| Incurred Start Date | Displays the incurred start date based on which you want to accumulate the aggregate stop-loss. Note: The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules . Incurred Start Date is equal to the pricing rule start date. | Not applicable |
| Incurred End Date | Displays the incurred end date based on which you want to accumulate the aggregate stop-loss. Note: The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules . Incurred End Date is equal to the pricing rule end date. | Not applicable |
| ASL Payout Limit | Used to specify the maximum limit defined for aggregated stop-loss at the member or main subscriber level. | Yes |
| Paid Start Date | Used to specify the paid start date based on which you want to accumulate the aggregate stop-loss. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|--|-----------------------|
| | <p>Note:</p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules.</p> <p>Paid Start Date is equal to the pricing rule start date.</p> | |
| Paid End Date | <p>Used to specify the paid end date based on which you want to accumulate the aggregate stop-loss.</p> <p>Note:</p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules.</p> <p>Paid End Date is equal to the pricing rule end date.</p> | Yes |
| Settlement Days | <p>Used to indicate the settlement days which helps to calculate the settlement date.</p> <p>Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.</p> | Yes |
| ASL Limit (During Policy Period) | <p>Used to indicate the aggregate stop-loss limit set during the policy period. The valid values are:</p> <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater) | Yes |
| ASL Limit (During Settlement Period) | <p>Used to indicate the aggregate stop-loss limit set during the settlement period. The valid values are:</p> <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater) | Yes |
| Minimum ASL Limit | Used to specify the minimum ASL limit. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|--|---|
| | Note: This field is enabled when you select the Enrollment Based or Minimum ASL Limit (Whichever is Greater) option from the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field. | Note: This field is required when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) is Enrollment Based or Minimum ASL Limit (Whichever is Greater) . |
| Percentage of Enrollment Based Limit | Used to specify the percentage of enrollment based limit. Note: This field is enabled when you select the Percentage of Enrollment Based Limit option from ASL Limit (During Policy Period) field. | Yes (Conditional) Note: This field is required when the ASL Limit (During Policy Period) is Percentage of Enrollment Based Limit . |
| Policy Based Limit | Used to specify the policy based limit. Note: This field is enabled when you select the Policy Based Limit option from the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field. | Yes (Conditional) Note: This field is required when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) is Policy Based Limit . |

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.

The accumulation parameters are defined in the aggregated stop-loss pricing rule.

Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule

Prerequisites

To define run-in parameters in an aggregate stop-loss pricing rule, you should have:

- Settlement days defined in the application.
- ASL limit during the policy period defined in the application.
- ASL limit during the settlement period defined in the application.

Procedure

To define run-in parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregate stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Run-In | Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing | No |
| Accumulation Group ID | Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for an aggregate stop-loss. | Not applicable |
| Incurred Start Date | Used to specify the incurred start date based on the run-in period of the policy in the aggregate stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |
| Incurred End Date | Used to specify the incurred end date based on the run-in period of the policy in the aggregate stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |
| Paid Start Date | Used to specify the paid start date based on the run-in period of the policy in the aggregate stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |
| Paid End Date | Used to specify the paid end date based on the run-in period of the policy in the aggregate stop-loss. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |
| Run-In Maximum Limit | Used to specify the maximum limit of the run-in parameters. | Yes |
| | Note: This field is enabled when you select the checkbox for the Run-In field. | |

2. Enter the required details in the **Run-In Parameters** section.
3. Click **Save**.

The run-in parameters are defined in the aggregate stop-loss pricing rule.

Defining a Characteristic for an Aggregate Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for an aggregate stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for an aggregate stop-loss pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the aggregate stop-loss pricing rule. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule . | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the aggregate stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the aggregate stop-loss pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the aggregate stop-loss pricing rule.

Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

To edit an aggregate stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration.

Procedure

To edit an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to view.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Parent Customer Information | Displays the parent customer information | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Price Item | Indicates the price item defined for pricing. | Not applicable |
| Parent Customer's SSL or ASL Pricing Rules | Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules. | Not applicable |
| Pricing Start Date | Displays the pricing rule start date. | Not applicable |
| Pricing End Date | Displays the pricing rule end date. | Not applicable |
| Rate Option | Indicates the rate option used for defining the aggregate stop-loss pricing rule for the price item. | Not applicable |
| Settlement Frequency | Indicates the settlement frequency to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Monthly – The bill after date specified in the Manual Settlement Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Yearly – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date. | Yes |
| Underwriter Review | Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Reinsurer Account | Used to indicate the account of the reinsurer person (associated with the parent customer) which you want to use for defining the aggregate stop-loss pricing rule for the price item. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: You cannot update the reinsurer account when the reinsurer billable charges are already created for the accumulation group. Ideally, you should first cancel the reinsurer charges and then update the reinsurer account in the aggregate stop-loss pricing rule. | |

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in an aggregate stop-loss pricing rule, if required.
6. Modify the run-in parameters in an aggregate stop-loss pricing rule, if required.
7. Add, edit, or remove characteristics for the aggregate stop-loss pricing rule, if required.
8. Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a parent customer are saved.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group

Prerequisites

To define an aggregate stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|------------------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. Note: You can create an aggregate stop-loss pricing rule using the Pricing Rule Type for aggregate stop-loss. | Yes |
| Pricing Group | Used to indicate the pricing group. | No |
| Policy Status | Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout Note: Aggregate stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out end date is missing. | Yes |

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Price Item | Used to indicate the price item. | Yes |
| | Note: Once an option is selected for this field, the field appears disabled. | |
| Parent Customer's SSL or ASL Pricing Rules | Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule. | Yes |
| | Note: This field is enabled for selection when an option from Price Item field is selected. | |
| Pricing Start Date | Displays the pricing rule start date. | Not applicable |
| | Note: This field displays the Policy Start Date . | |
| Pricing End Date | Displays the pricing rule end date. | Not applicable |
| | Note: This field displays the Policy End Date . | |
| Rate Option | Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item. | Yes |
| | Note: Rate options in this field appears for selection, when you select an option from the Price Item field. | |

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in an aggregate stop-loss pricing rule, if required.

Note:

The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

You can also define the **Accumulation Criteria** for each rule in an aggregate stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

Note:

The **Pricing Information** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in an aggregate stop-loss pricing rule.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.

The aggregate stop-loss pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule**Procedure**

To define accumulation criteria in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Accumulation Group ID | Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for an aggregate stop-loss. | Not applicable |
| Price Item | Used to specify the price item information. | No |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|-----------------------|---|-----------------------|--------------------|-----------------------|----------------------|--|----|-----------------|--|----|----|
| | Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears. | | | | | | | | | | |
| Price Item Parameters | <p>This field contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td> <p>Used to specify multiple parameters based on which you want to determine the price item utilization.</p> <p>Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.</p> </td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td> <p>Used to specify the value of the parameter.</p> <p>Note: On selecting the Price Item Parameter, the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.</p> </td> <td>No</td> </tr> </tbody> </table> | Column Name | Column Description | Mandatory (Yes or No) | Price Item Parameter | <p>Used to specify multiple parameters based on which you want to determine the price item utilization.</p> <p>Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.</p> | No | Parameter Value | <p>Used to specify the value of the parameter.</p> <p>Note: On selecting the Price Item Parameter, the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.</p> | No | No |
| Column Name | Column Description | Mandatory (Yes or No) | | | | | | | | | |
| Price Item Parameter | <p>Used to specify multiple parameters based on which you want to determine the price item utilization.</p> <p>Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.</p> | No | | | | | | | | | |
| Parameter Value | <p>Used to specify the value of the parameter.</p> <p>Note: On selecting the Price Item Parameter, the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.</p> | No | | | | | | | | | |

2. Enter the required details in the **Accumulation Criteria** section.
3. If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The accumulation criteria is defined in the aggregate stop-loss pricing rule.

- You can define accumulation rules for each rule in an aggregate stop-loss pricing rule.

Note: You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule

Procedure

To define claim pricing rules in an aggregate stop-loss pricing rule:

- Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
 - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating aggregate stop-loss.
 - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
 - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Effective Claim Pricing Rule | Used to indicate the claim pricing rule effective for pricing. | No |

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

Note: The **Reapply Claim Template** button appears when you are editing an aggregate stop-loss.

The **Domestic Provider Claims** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Exclude ASL (Percentage) | Used to specify the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage to create domestic provider claim calculation lines. | No |

The **Markup or Markdown Values** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Pricing Strategy | Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None | Not applicable |
| Markup or Markdown Type | Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage | Not applicable |
| Markup or Markdown Amount | Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount . | Not applicable |

The **Line Items** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Sequence | Displays the sequence number for the line items. | Not applicable |
| Line Item | Displays the billing line items. | Not applicable |
| Eligible for Specific Stop-Loss | Used to specify whether the line item is eligible or not eligible for aggregate stop-loss. | No |
| Markup or Markdown Percentage Eligibility | Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible | Not applicable |
| Markup or Markdown Percentage | Displays the percentage for markup or markdown value. | Not applicable |

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.

5. Click **Save**.

The claim line items are defined in the aggregate stop-loss pricing rule.

6. You can define eligibility claim line items for each rule in an aggregate stop-loss pricing rule.

Note: You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group**Prerequisites**

To define an aggregate stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| | Note: You can create an aggregate stop-loss pricing rule using the Pricing Rule Type for aggregate stop-loss. | |
| Pricing Group | Used to indicate the pricing group. | Yes |
| Policy Status | Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout Note: Aggregate stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out End Date is missing. | Yes |

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Not applicable |
| Pricing Group | Displays the pricing group. | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|----------------------------------|-----------------------|
| Price Item | Used to indicate the price item. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| | Note: Once an option is selected for this field, the field appears disabled. | |
| Parent Customer's SSL or ASL Pricing Rules | Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule. Note: This field is enabled for selection when an option from Price Item field is selected. | Yes |
| Pricing Start Date | Displays the pricing rule start date. | Yes |
| Pricing End Date | Displays the pricing rule end date. | Yes |
| Rate Option | Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item. Note: Rate options in this field appears for selection, when you select an option from the Price Item field. | Yes |

- Enter the required details in the **Main** section.
- Define accumulation criteria for each rule in an aggregate stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The aggregate stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit an aggregate stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.

Procedure

To edit an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the

View () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to view.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---------------------------|-----------------------|
| Price Item | Indicates the price item. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Parent Customer's SSL or ASL Pricing Rules | Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule. | Not applicable |
| Pricing Start Date | Displays the pricing rule start date. | Not applicable |
| Pricing End Date | Displays the pricing rule end date. | Not applicable |
| Rate Option | Indicates the rate option of the aggregate stop-loss pricing rule for the price item. | Not applicable |

- Modify the accumulation criteria in an aggregate stop-loss pricing rule, if required.

Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for an aggregate stop-loss, if required.

- Modify the stop-loss eligibility for claim line items, if required.

Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

- Add, edit, or remove characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a bill group are saved.

Retention Type Claim Based Pricing

The ASO service provider provides claim administrative services and pays the claim amount on behalf of the employer. Different charges, such as administration fees, network fees, managed care fees, are typically charged as retention type claim based fees. The system enables you to charge a flat or percentage based retention type claim based fee. The rate schedule defined in the respective rate option indicates whether the retention type claim based fee is a flat fee or percentage based fee. The system considers the claim line items for calculating the percentage based retention type claim based fee when the **Retention Claim Based Percentage Calculation** field is set to **Yes**.

You can define a retention type claim based pricing rule at the parent customer and bill group levels. The retention type claim based pricing rule at the bill group level takes precedence over the retention type claim based pricing rule at the parent customer level. You can define retention type claim based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type claim based pricing rule using a retention type claim based pricing rule type. It is the retention type claim based pricing rule type which helps the system to determine:

- Business object using which the retention type claim based pricing rule should be created in the system.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type claim based pricing rules using the retention type claim based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type claim based pricing rules.
- Additional information, such as:
 - Whether the price items included in the retention type claim based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
 - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
 - Indicates how the claim must be disposed. If the **Claim Disposition** field in the transaction is set to **Yes**, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

Note: If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

Once a retention type claim based pricing rule type is defined, you can create retention type claim based pricing rules using the retention type claim based pricing rule type. While defining a retention type claim based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type claim based pricing.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

In addition, while defining a retention type claim based pricing rule for a bill group, you need to specify the status of the policy for which you want to define the retention type claim based pricing rule. You can also specify a pricing group while defining a retention type claim based pricing rule for a bill group. If you specify a pricing group while defining a retention type claim based pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat or percentage based fee for different set of price item parameters combination. For example, you can define one flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper and another flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper.

Once a retention type claim based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Claim Based Pricing Rule Type

Prerequisites

To define a retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Business Object **C1-PricingRule** defined for pricing rule.
- Pricing rule type category for the retention type claim defined in the application.

Procedure

To define a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the retention type claim based pricing rule type | Yes |
| | Note: You can create a retention type claim based pricing rule type using the Claim Pricing Rule Type business object. | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Retention Type Claim Based Pricing Rule Type** business object.
- Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the retention type claim based pricing rule type.
- Algorithms** – Used to associate the algorithms with the retention type claim based pricing rule type.
- Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- Price Items** – Used to add the price items for which you can define the retention type claim based pricing rules using the retention type claim based pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- Claim Disposition Details** – Used to define the disposition details of the claims transaction.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the retention type claim based pricing rule type. | Yes |
| Description | Used to specify the description for the retention type claim based pricing rule type. | Yes |
| Detailed Description | Used to specify the additional information about the retention type claim based pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the retention type claim based pricing rule business object. The valid value is: <ul style="list-style-type: none"> Retention Type Claim Based Pricing Rule | Yes |
| Business Object | Indicate the retention type claim based pricing rule type business object using which you are defining the retention type claim based pricing rule type. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| Status | Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to indicate whether the pricing rule type is a primary pricing rule type. | Not applicable |
| | Note: You must not select the Primary option while defining the retention type claim based pricing rule type. | |
| Pricing Rule Type Category | Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Retention Type Claim Based | Yes |

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are defining a retention type claim based pricing rule type.
- Associate the following algorithms with the retention type claim based pricing rule type:

| System Event | Algorithm | Algorithm Type | Description |
|------------------------------|--------------|----------------|---|
| Pricing Rule Post Processing | C1-PRCRETPOS | C1-PRCRETPOS | Retention Claim Based - Post Processing |
| Transaction Validation | C1-RETCLMVAL | C1-RETCLMVAL | Retention Claim Based - Validation |

- Define additional data for the retention type claim based pricing rule type.
- Add the required price items for retention type claim based pricing rule type.
- Add price item parameters for the retention type claim based pricing rule type.
- Define characteristics for the retention type claim based pricing rule type.
- Add the claim disposition details for retention type claim based pricing rule type.
- Click **Save**.

The retention type claim based pricing rule type is defined.

Adding Claim Based Disposition Details in a Pricing Rule Type

Prerequisites

To add claim based disposition details in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Claim Disposition and Disposition Mode defined in the application.

Procedure

To add claim based disposition details in a pricing rule type:

1. Ensure that the **Claim Disposition Details** section is expanded when you are defining or editing for a primary pricing rule type.

The **Claim Disposition Details** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Claim Disposition | Used to specify the type of claim disposition. | No |
| Disposition Mode | Used to specify the mode of claim disposition. | No |

2. Enter the required details in the **Claim Disposition Details** section.

Note:

If the **Claim Disposition** field in the transaction is set to **Yes**, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

3. If you want to define more than one claim disposition entry for the primary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim disposition entry for the primary pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

Editing a Retention Type Claim Based Pricing Rule Type

Prerequisites

To edit the retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRefTypeClaim** defined for the retention type claim based pricing rule type.
- Business Object **C1-PrcRuleTypRetClaimBase** defined for the retention type claim based pricing rule type.
- Pricing rule type category for the retention type claim based pricing rule type defined in the application

Procedure

To edit a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type claim based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the retention type claim based pricing rule type.

- **Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type claim based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type claim based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for retention type claim based template.
- **Claim-Specific Additional Data** – Used to specify the retention type claim based specific additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the pricing rule type. | Not applicable |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |
| Business Object | Displays the retention type claim based pricing rule type business object for retention type claim. | Not applicable |
| Status | Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | |
| Primary | Used to select the checkbox if the retention type claim based pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss • Claim • Discounted Agreement • Retention Type Claim Based • Retention Type Enrollment Based | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> Specific Stop-Loss | |

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type claim.

- Modify the details in the **Main** section, if required.
- Add, edit, or remove the related pricing rule types in the retention type claim based pricing rule type, if required.
- Modify the transaction field mapping in the retention type claim based pricing rule type, if required.
- Add, edit, or remove algorithms with the retention type claim based pricing rule type, if required.
- Modify the additional data for the retention type claim based pricing rule type, if required.
- Add, edit, or remove pricing items in the retention type claim based pricing rule type, if required.
- Add, edit, or remove price item parameters in the retention type claim based pricing rule type, if required.
- Add, edit, or remove characteristics for the retention type claim based pricing rule type, if required.
- Add, edit, or remove claim templates in the retention type claim based pricing rule type, if required.
- Modify the claim-specific data in the retention type claim based pricing rule type, if required.
- Click **Save**.

The changes made to the Retention Type Claim Based Pricing Rule Type are saved.

Deleting a Retention Type Claim Based Pricing Rule Type

Procedure

To delete a retention type claim based pricing rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the retention type claim based pricing rule type that you want to delete.

A message appears confirming whether you want to delete the retention type claim based pricing rule type.

Note: You can delete a retention type claim based pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a retention type claim based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The retention type claim based pricing rule type is deleted.

Defining a Retention Type Claim Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type claim based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|---|
| Person Name | Indicates the parent customer for whom you want to create a discount arrangement pricing rule type. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type. The valid values is: <ul style="list-style-type: none"> Retention Type Claim Based Pricing Rule | Yes |
| | | Note: If the pricing rule type is not selected then the application displays an error message. |

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays information about the parent customer for whom you are defining the retention type claim based pricing rule. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Parent Customer Information | Indicates the parent customer for whom you are defining the retention type claim based pricing rule. |
| Pricing Rule Type | Indicates the pricing rule type using which you are defining the retention type claim based pricing rule. |

- **Main** - This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Price Item | Used to indicate the price item for which you want to define the retention type claim based pricing. The valid value is: <ul style="list-style-type: none"> Admin Fee | Yes |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|----------------------|--|--|-----------------------|-----------------------|----------------------|--|----|-----------------|---|----|----------------|
| Pricing Start Date | Used to specify the start date from when the retention type claim based pricing will be effective for the price item. | Yes (Conditional) | | | | | | | | | |
| | Note: The pricing start date cannot be later than the pricing end date. | Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. | | | | | | | | | |
| Pricing End Date | Used to specify the end date till when the retention type claim based pricing will be effective for the price item. | No | | | | | | | | | |
| | Note: The pricing end date cannot be earlier than the pricing start date. | | | | | | | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining the pricing for the price item. The valid value is: <ul style="list-style-type: none"> Flat Dollar Per Claim - Agg Daily <p>On selecting an option from the Rate Option field, following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Used to specify multiple price item parameters based on which you want to determine the price item utilization. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Price Item Parameter Search screen appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item Parameter field.</p> </td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td>Used to specify multiple price item parameter values based on which you want to determine the price item utilization.</td> <td>No</td> </tr> </tbody> </table> | Field Name | Field Description | Mandatory (Yes or No) | Price Item Parameter | Used to specify multiple price item parameters based on which you want to determine the price item utilization. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Predefined Parameter Value Search screen appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Parameter Value Search field.</p> | | |
| | | <p>Note:</p> <p>If you want to define more than one price item parameter to the price item in a retention type claim based pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item parameter from the price item in a retention type claim based pricing rule type, click the Delete (🗑️) icon corresponding to the Price Item Parameter field.</p> | | |
| Fee | Used to specify the fee for the price item parameter. | | | |

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer.

7. Add the required details in the main and characteristics section.
8. Click **Save**.

The retention type claim based pricing rule for a parent customer is defined.

Note:

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type claim based pricing rule for a parent customer is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Claim Based Pricing Rule

Prerequisites

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Effective Date | Used to specify from when the pricing rule will be effective. | Yes |
| Characteristic Type | Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer. | Yes (Conditional) Note: This field is required when you are defining a characteristic for retention type claim based pricing rule. |
| Characteristic Value | Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) Note: This field is required when you are defining a characteristic for retention type claim based pricing rule. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the retention type claim based pricing rule.

Editing a Retention Type Claim Based Pricing Rule of a Parent Customer

Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type claim based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab. It consists of the following zones:

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the retention type claim based pricing rule, whose details you want to edit.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays information about the parent customer for whom the retention type claim based pricing rule is defined. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Parent Customer Information | Indicates the parent customer for whom the discount arrangement pricing rule is defined. |
| Pricing Rule Type | Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a parent customer. |

- **Main** - This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Price Item | Indicates the price item for which you want to define the pricing. | Not applicable |

Defining a Retention Type Claim Based Pricing Rule for a Bill Group

Prerequisites

To define a retention type claim based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOSStatusReason** defined for the policy status.
- Business Object **C1-PricingRuleRefTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, **C1-RETCLMVAL**, **C1-PRRTPREP**, **C1-PRCRLTY** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

- Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|--|
| Person Name | Indicates the name of the parent customer. | Not applicable |
| Person Type | Indicates the type of the parent customer. | Not applicable |
| | Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer . | |
| Pricing Rule Type | Used to indicate the pricing rule type using which you want to create a retention type claim based pricing rule. | Yes |
| | Note: Select the Retention Type Claim Based Pricing Rule Type option, as the pricing rule type. | |
| Pricing Group | Used to indicate the pricing group for the bill group. | No |
| | Note: Select the pricing group option when the retention type claim based pricing rule has to be defined for a bill group using the pricing group. | |
| Policy Status | Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout | Yes (Conditional) |
| | | Note: Policy Status is required once the Pricing Rule Type is selected. |

- Select the appropriate fields in the **Main** section.

- Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Price Item | Used to indicate the price item for which you want to define the pricing. The valid value are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| | <ul style="list-style-type: none"> Admin Fee | |
| Pricing Start Date | Used to specify the start date from when the pricing will be effective for the price item. | Yes (Conditional) |
| | | Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. |
| Pricing End Date | Used to specify the end date till when the pricing will be effective for the price item. | No |
| Rate Option | Used to specify the rate option for the price item. The valid value are: <ul style="list-style-type: none"> Flat Dollar Per Claim - Agg Daily | Yes |
| Price Item Parameter | Used to specify multiple price item parameters based on which you want to determine the price item utilization. | No |
| | Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears. | |
| Parameter Value | Used to specify multiple price item parameter values based on which you want to determine the price item utilization. | No |
| | Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Parameter Value Search screen appears. | |
| Fee | Used to specify the fee for the price item parameter. | No |

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type claim based pricing rule for a bill group is defined.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
The **Bill Group ASO Policy Pricing Rules** zone appears.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Retention Type Claim Based** – Displays Retention Type Claim Based Pricing Rule of a Bill Group. It contains the following sections:
 - **Main** – Displays the basic details of the retention type claim based pricing rule of a bill group.
 - **Price Item Parameters** – Displays the price item parameters defined for the retention type claim based pricing rule of a bill group.
 - **Characteristics** – Displays the characteristics defined for the retention type claim based pricing rule of a bill group.
6. View the basic details of a retention type claim based pricing rule of a bill group in the **Main** section.
 7. View the price item parameters of a retention type claim based pricing rule of a bill group in the **Price Item Parameters** section.
 8. View the characteristics of a retention type claim based pricing rule of a bill group in the **Characteristics** section.

Retention Type Enrollment Based Pricing

Some of the charges, such as stop-loss premium, administrative fees, etc. are typically calculated based on the number of enrollments. In addition, the ASL limit can also be based on the number of enrollments for the month. These charges can be calculated using the retention type enrollment based pricing rules.

You can define a retention type enrollment based pricing rule at the parent customer and bill group levels. The retention type enrollment based pricing rule at the bill group level takes precedence over the retention type enrollment based pricing rule at the parent customer level. You can define retention type enrollment based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type enrollment based pricing rule using a retention type enrollment based pricing rule type. It is the retention type enrollment based pricing rule type which helps the system to determine:

- Business object using which the retention type enrollment based pricing rule should be created in the system.
- Whether it is the primary pricing rule type.

Note: You must select the **Primary** option while defining a retention type enrollment based pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Retention Type Enrollment Based Pricing Rule Type** screen. At present, the system does not allow you to define any pricing rule type which inherits the attributes from the retention type enrollment based pricing rule type.

- Transaction fields from where the data for retention type enrollment based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the retention type enrollment based pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type enrollment based pricing rules using the retention type enrollment based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type enrollment based pricing rules.
- Additional information, such as:

- Whether the price items included in the retention type enrollment based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
- Retroactivity indicator which helps to determine whether the enrollment transaction is retro or non-retro transaction.

Once a retention type enrollment based pricing rule type is defined, you can create retention type enrollment based pricing rules using the retention type enrollment based pricing rule type. While defining a retention type enrollment based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type enrollment based pricing.
- Whether you want to exempt the retrospective transactions while calculating retention type enrollment based fees.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Flat fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat fee for different set of price item parameters combination. For example, you can define one flat fee for the enrollment transactions where health coverage class is set to Medical and health coverage tier is set to Family and another flat fee for the enrollment transactions where health coverage class is set to Dental and health coverage tier is set to Employee.

Once a retention type enrollment based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To define a retention type retention based pricing rule type, you should have:

- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Business Object **C1-PricingRuleRetTypeEnroll** defined for pricing rule.
- Pricing rule type category for the retention type enrollment defined in the application.

Procedure

To define a retention type retention based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.

3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the retention type enrollment based pricing rule type. | Yes |
| | Note: You can create a retention type enrollment based pricing rule type using the Claim Pricing Rule Type business object. | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.
5. Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the enrollment based parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the enrollment based pricing rule type.
- **Algorithms** – Used to define the algorithms used for the enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the enrollment based pricing rule type.
- **Enrollment-Specific Additional Data** – Used to specify the enrollment specific additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Pricing Rule Type | Used to specify the pricing rule type. | Yes |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| Business Object | Indicate the retention type enrollment based pricing rule type business object for the claim. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Aggregate Stop-Loss Claim Discount Arrangement Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss | Yes |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

- Associate algorithms with the enrollment based pricing rule type, if required.
- Define additional data for the enrollment based pricing rule type, if required.
- Add pricing items in the enrollment based pricing rule type, if required.
- Add price item parameters in the enrollment based pricing rule type, if required.
- Define characteristics for the enrollment based pricing rule type, if required.
- Add the enrollment-specific data, if required.
- Click **Save**.

The retention type enrollment based pricing rule type is defined.

Adding the Enrollment Specific Data in a Pricing Rule Type

Prerequisites

To add enrollment specific data in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Bill Group Derivation Algorithm defined in the application.

Procedure

To add enrollment specific data in a pricing rule type in a pricing rule type:

1. Ensure that the **Enrollment-Specific Additional Data** section is expanded when you are adding enrollment specific data for a primary pricing rule type.

The **Enrollment-Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Retroactivity Indicator Value | Used to specify that retroactivity indicator value should not be a part of enrollment based pricing rule type. | No |
| | Note: Set the retroactivity indicator value to R if the field should be excluded from enrollment based pricing rule types. | |

2. Enter the required details in the **Enrollment-Specific Additional Data** section.
3. Click **Save**.

The enrollment-specific data has been added in the pricing rule type.

Editing a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To edit the retention type enrollment based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeEnroll** defined for the retention type enrollment based pricing rule type.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for the retention type enrollment based pricing rule type.
- Pricing rule type category for retention type enrollment based pricing rule type defined in the application

Procedure

To edit a retention type enrollment based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the retention type enrollment based pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type.
- **Algorithms** – Used to define the algorithms used for the retention type enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the retention type enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type enrollment based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for the retention type enrollment based pricing rule type.
- **Claim-Specific Additional Data** – Used to specify the retention type enrollment based specific additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the pricing rule type. | Not applicable |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Related Transaction Business Object | Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |
| Business Object | Displays the retention type enrollment based pricing rule type business object for retention type claim. | Not applicable |
| Status | Used to indicate the status of the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | |
| Primary | Used to select the checkbox if the retention type enrollment based pricing rule type is primary. | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss • Claim • Discounted Agreement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss | Yes |

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type enrollment.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type enrollment based pricing rule type, if required.
7. Modify the transaction field mapping in the retention type enrollment based pricing rule type, if required.

8. Add, edit, or remove algorithms with the retention type enrollment based pricing rule type, if required.
9. Modify the additional data for the retention type enrollment based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type enrollment based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type enrollment based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type enrollment based pricing rule type, if required.
13. Modify the enrollment-specific data in the retention type enrollment based pricing rule type, if required.
14. Click **Save**.

The changes made to the Retention Type Enrollment Based Pricing Rule Type are saved.

Deleting a Retention Type Enrollment Based Pricing Rule Type

Procedure

To delete a retention type enrollment based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the retention type enrollment based pricing rule type that you want to delete.

A message appears confirming whether you want to delete the retention type enrollment based pricing rule type.

Note: You can delete a retention type enrollment based pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a retention type enrollment based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The retention type enrollment based pricing rule type is deleted.

Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type enrollment based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type enrollment based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|---|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> Retention Type Enrollment Based Pricing Rule | Yes |
| | | Note: If the pricing rule type is not selected then the application displays an error message. |

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays information about the parent customer for whom you are defining the retention type enrollment based pricing rule. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|--|
| Parent Customer Information | Indicates the parent customer for whom you are defining the retention type enrollment based pricing rule. |
| Pricing Rule Type | Indicates the pricing rule type using which you are defining the retention type enrollment based pricing rule. |

- **Main** - This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|---|
| Price Item | Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> Administrative Services Fees Administrative Services Fees (No Mandatory Parameters) AS_RET_ENRB Consultant Oversight Fees | Yes |
| Pricing Start Date | Used to specify the start date from when the pricing will be effective for the price item. | Yes (Conditional) |
| | Note: The pricing start date cannot be later than the pricing end date. | Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. |
| Pricing End Date | Used to specify the end date till when the retention type enrollment based pricing will be effective for the price item. | No |
| | Note: The pricing end date cannot be earlier than the pricing start date. | |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | | | |
|----------------------|--|-----------------------|-------------------|-----------------------|----------------------|---|----|--|--|--|-----------------|---|----|-----|
| Rate Option | <p>Used to specify the rate option for the price item. | Fee | Used to specify the fee for the price item parameter. | | | No |

- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule for a parent customer.

7. Add the required details in the main and characteristics section.

8. Click **Save**.

The retention type enrollment based pricing rule for a parent customer is defined.

Note:

If the approval workflow group setting is set as **Active** for the parent customer, for whom the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type enrollment based pricing rule for a parent customer is defined, once the approval transaction is approved.

| How to define a characteristic for a retention type enrollment based pricing rule. | Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule on page 2904 |

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type enrollment based pricing rule.

The **Characteristics** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Effective Date | Used to specify from when the pricing rule will be effective. | Yes |
| Characteristic Type | Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> • Eligible for Billing | Yes (Conditional) Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule. |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule. |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule.

| How to define a retention type enrollment based pricing rule for a parent customer | Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer on page 2900 |

Editing a Retention Type Enrollment Based Pricing Rule of a Parent Customer

Prerequisites

To edit a retention type enrollment based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type enrollment based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the retention type enrollment based pricing rule, whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays the basic information about the customer. It contains the following fields:

| Column Name | Column Description |
|-----------------------------|---|
| Parent Customer Information | Displays the parent name. |
| Pricing Rule Type | Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a parent customer. |

- **Main** - This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|---|
| Price Item | Indicates the price item for which you want to define the pricing. | Not applicable |
| Pricing Start Date | Used to specify the start date from when the pricing will be effective for the price item. | Yes (Conditional) |
| | | Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Pricing End Date | Used to specify the end date till when the pricing will be effective for the price item. | No |
| Rate Option | Indicates the rate option for the price item. | Not applicable |
| Exempt Retro Transactions | Used to indicate that retro transactions should not be considered for calculation purposes. | No |
| Price Item Parameter | Used to specify multiple price item parameters based on which you want to determine the price item utilization. | No |
| | Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears. | |
| Parameter Value | Used to specify multiple price item parameter values based on which you want to determine the price item utilization. | No |
| | Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Parameter Value Search screen appears. | |
| Fee | Indicates the fee for the price item parameter. | Not applicable |

- **Characteristics** - Used to define the characteristics for the Retention Type Enrollment based pricing rule for parent customer. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Effective Date | Used to specify the effective date from when the characteristic is effective for the retention type enrollment based pricing rule of a parent customer. | No |
| Characteristic Type | Used to indicate the characteristic type for the retention type enrollment based pricing rule of a parent customer. The valid values are: <ul style="list-style-type: none"> • Eligible for Billing | No |
| Characteristic Value | Used to specify the characteristic value for the retention type enrollment based pricing rule of a parent customer. | No |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | |

5. Click **Save**.

Note:

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type enrollment based pricing rule for a parent customer is defined, once the approval transaction is approved.

6. Click OK

The retention type enrollment based pricing rule of a parent customer is edited.

Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group

Prerequisites

To define a retention type enrollment based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type enrollment based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|--|
| Person Name | Indicates the name of the parent customer. | Not applicable |
| Person Type | Indicates the type of the parent customer. Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer . | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type using which you want to create a retention type enrollment based pricing rule. Note: Select the Retention Type Enrollment Based Pricing Rule option, as the pricing rule type. | Yes Note: If the pricing rule type is not selected then the application displays an error message. |
| Pricing Group | Used to indicate the pricing group for the bill group. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|---|
| | Note: Select the pricing group option when the retention type enrollment based pricing rule has to be defined for a bill group using the pricing group. | |
| Policy Status | Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Yes (Conditional) Note: Policy Status is required once the Pricing Rule Type is selected. |

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|--|
| Price Item | Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> • Administrative Services Fees • Administrative Services Fees (No Mandatory Parameters) • AS_RET_ENRB • Consultant Oversight Fees | Yes |
| Pricing Start Date | Used to specify the start date from when the pricing will be effective for the price item. | Yes (Conditional) Note: Pricing Start Date should be entered if Pricing End Date has been mentioned. |
| Pricing End Date | Used to specify the end date till when the pricing will be effective for the price item. Note: If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset. | No |
| Rate Option | Used to specify the rate option for the price item. The valid values are: <ul style="list-style-type: none"> • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims • Percentage of Claim - Agg Daily | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| | <ul style="list-style-type: none"> Flat Dollar Per Claim - Agg Daily | |
| Exempt Retro Transactions | Used to indicate that retro transactions should not be considered for calculation purposes. | No |
| Pricing Group Rule Code | Displays the name of the pricing group rule code. Note: If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description. | No |
| Price Item Parameter | Used to specify multiple price item parameters based on which you want to determine the price item utilization. Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears. | No |
| Parameter Value | Used to specify multiple price item parameter values based on which you want to determine the price item utilization. Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Parameter Value Search screen appears. | No |
| Fee | Used to specify the fee for the price item parameter. | No |

- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type enrollment based pricing rule for a bill group is defined.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

Flat Fee Pricing

The Administrative Services Only (ASO) provider would like to charge one-time or recurring flat fee to the self-funded employer. Oracle Revenue Management and Billing enables you to process and bill such one-time and recurring charges to the bill group. The system enables you to define one-time or recurring flat fee for a price item. You can define recurring flat fee based on bill period or frequency. The one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee can be defined using the respective flat fee pricing rules. You can only define one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rules for a bill group.

You can define the flat fee pricing rules for bill groups from the **Customer 360° Information** screen. You can define a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule using the respective flat fee pricing rule type. It is the flat fee pricing rule type which helps the system to determine:

- Business object using which the flat fee pricing rule should be created in the system.

Note: You must not select the **Primary** option while defining a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule type.

- Price items for which you can define the flat fee pricing rules.
- Rate options that you can use while defining the pricing for the price item.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional flat fee specific data, such as:
 - Bill segment cancel reason which you want to use when the one-time or recurring flat fee bill segment is canceled due to change in the flat fee amount.
 - Whether the pricing rule type is defined for one-time flat fee or recurring flat fee.
 - Recurring method which indicates that the system should create recurring flat fee charge based on bill period or frequency. This information is required when you are defining a recurring flat fee pricing rule type.
 - Bill period that you can use while defining a bill period based recurring flat fee pricing rule. This information is required when you are defining a bill period based recurring flat fee pricing rule type.

Once a one-time flat fee pricing rule type is defined, you can define one-time flat fee pricing rules using the one-time flat fee pricing rule type. While defining a one-time flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the one-time flat fee pricing rule is applicable. Note that you cannot define a one-time flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the one-time flat fee billable charge.
- Date which you want to specify as the start and end dates in the one-time flat fee billable charge.
- Billable charge line type using which you want to create the one-time flat fee billable charge.
- Bill after date which you want to stamp on the one-time flat fee billable charge.
- Flat fee amount for which you want to create the one-time flat fee billable charge.
- Override account when you want to create the one-time flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the one-time flat fee pricing rule type.

Once a bill period based recurring flat fee pricing rule type is defined, you can define bill period based recurring flat fee pricing rules using the bill period based recurring flat fee pricing rule type. While defining a bill period based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the bill period based recurring flat fee pricing rule is applicable. Note that you cannot define a bill period based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the bill period based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the bill period based recurring flat fee billable charge.
- Billable charge line type using which you want to create the bill period based recurring flat fee billable charge.
- Bill period using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the bill period based recurring flat fee billable charge.
- Override account when you want to create the bill period based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the bill period based recurring flat fee pricing rule type.

Once a frequency based recurring flat fee pricing rule type is defined, you can define frequency based recurring flat fee pricing rules using the frequency based recurring flat fee pricing rule type. While defining a frequency based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the frequency based recurring flat fee pricing rule is applicable. Note that you cannot define a frequency based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the frequency based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the frequency based recurring flat fee billable charge.
- Billable charge line type using which you want to create the frequency based recurring flat fee billable charge.
- Frequency using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the frequency based recurring flat fee billable charge.
- Override account when you want to create the frequency based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the frequency based recurring flat fee pricing rule type.

Once a one-time flat fee, bill period based recurring flat fee, or frequency based recurring flat fee pricing rule is defined for a bill group, the system creates the one-time or recurring flat fee billable charge, respectively. The system does not create any price assignment, price list, or price list assignment in case of flat fee pricing.

Defining a One-Time Flat Fee Pricing Rule Type

Prerequisites

To define a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To define a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the pricing rule type. Note: You can create a one-time flat fee pricing rule type using the Flat Fee Pricing Rule Type business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.

5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Pricing Rule Type | Used to specify the pricing rule type. | Yes |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule | Yes |
| Business Object | Indicates the pricing rule type business object for flat fees. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees.</p> </div> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based Flat Fees | Yes |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note:
Related Pricing Rule Types section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note:
Transaction Field Mapping section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Define billable charge line types in the flat fees pricing rule type, if required.
- Add the flat fees - specific additional data in the pricing rule type, if required.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

- Click **Save**.

The one-time flat fee pricing rule type is defined.

Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type

Procedure

To add the one-time flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Flat Fees - Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|---|
| Bill Segment Cancel Reason | Used to indicate the bill segment cancel reason. | No |
| Recurring Fee | Used to specify whether the recurring flat fee or one-time flat fee is required. Note: This field cannot be edited. | No |
| Recurring Method | Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. The valid values are: <ul style="list-style-type: none"> • Bill Period • Frequency Note: This field appears when you select the checkbox for Recurring Fee field. This field cannot be edited. | Yes (Conditional) Note: This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency. |

2. Enter the required details in the **Flat Fees - Specific Additional Data** section.
3. Click **Save**.

The Flat Fees - Specific Additional data is added in the pricing rule type.

Editing a One-Time Flat Fee Pricing Rule Type

Prerequisites

To edit a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the Pricing rule type whose details you want to edit.

The **Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---------------------------------|-----------------------|
| Pricing Rule Type | Displays the pricing rule type. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule | Yes |
| Business Object | Indicates the pricing rule type business object for flat fees. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees . | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees | Yes |

Tip: Alternatively, you can edit the details of a one-time flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

Note:

Related Pricing Rule Types section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

Note:

Transaction Field Mapping section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics of the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

15. Click **Save**.

The changes made to the one-time flat fees pricing rule type are saved.

Deleting a One-Time Flat Fee Pricing Rule Type

Procedure

To delete a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the one-time flat fee pricing rule type that you want to delete.
A message appears confirming whether you want to delete the one-time flat fee pricing rule type.

Note: You can delete a one-time flat fee pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a one-time flat fee pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The one-time flat fee pricing rule type is deleted.

Defining a One-Time Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a one-time flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a one-time flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Displays the person name. | Not applicable |
| Person Type | Displays the person type. | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type to create the pricing rule. Note: You can create a one-time flat fee pricing rule using the Pricing Rule Type for flat fees. | Yes |
| Policy Status | Used to indicate the policy status for pricing rule. The valid values are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <ul style="list-style-type: none"> In Force/Active Runout | |

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the one-time flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Price Item | Used to indicate the price item. | Yes |
| Charge Date | Used to specify the flat fee charge date. | Yes |
| | Note: By default this field displays the policy start date or policy runout start date. | |
| Billable Charge Line Type | Used to specify the billable charge line type. | No |
| | Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | |
| Bill After Date | Used to specify the bills after the specific date. | No |
| Fee | Used to specify the amount of flat fee. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| | Note: This field appears when you select the billable charge line type in the Billable Charge Line Type field. | |
| Bill To Account Override | Used to specify the account to which the bill is override. Note: On clicking the Search (🔍) icon, the Account Search window appears. On specifying the account, the description of the account appears corresponding to the Bill To Account Override field. | Yes |

5. Enter the required details in the **Main** section.
6. Define characteristics for a one-time flat fee pricing rule, if required.
7. Click **Save**.

The one-time flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the one-time flat fee pricing rule.

Defining a Characteristic for a One-Time Flat Fee Pricing Rule

Prerequisites

To define a characteristic for a one-time flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a one-time flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Effective Date | Used to specify the date from when the characteristic is effective for the one-time flat fee pricing rule. | Yes (Conditional) |

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|--|
| | | Note: This field is required when you are defining a characteristic for the one-time flat fee pricing rule. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule . | Note: This field is required when you are defining a characteristic for the one-time flat fee pricing rule. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the one-time flat fee pricing rule. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the one-time flat fee pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the one-time flat fee pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the one-time flat fee pricing rule.

Editing a One-Time Flat Fee Pricing Rule of a Bill Group

Prerequisites

To edit a one-time flat fee pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.

Procedure

To edit a one-time flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for one-time flat fee whose one-time flat fee pricing rule details you want to view. The **Flat Fee Pricing Rule** screen appears. It contains the following sections:
 - **Customer Information** – Displays the customer information for bill group.
 - **Main** – Displays the basic details of the one-time flat fee pricing rule.
 - **Characteristics** – Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Bill Group Information | Displays the bill group information. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Runout | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Price Item | Indicates the price item. | Not applicable |
| Charge Date | Used to specify the flat fee charge date. | Yes |
| Billable Charge Line Type | Displays the billable charge line type. | Not applicable |
| Bill After Date | Displays the bills after the specific date. | Not applicable |
| Fee | Used to specify the amount of flat fee. Note: This field appears when you have added the billable charge line type in the Billable Charge Line Type field. | Yes |
| Bill To Account Override | Displays the account to which the bill is override. | Not applicable |
| Billable Charge Information | Displays the billable charge information. | Not applicable |

4. Modify the basic details of the one-time flat fee pricing rule, if required.

5. Add, edit, or remove characteristics for a one-time flat fee pricing rule, if required.
6. Click **Save**.

Note: If **Fee** or **Charge Date** is modified then it checks whether bill segment is created, and if it is created then,

- If it is in frozen or pending cancelled status then,
 - Bill segment and billable charge is cancelled and new billable charge is created.
- If it is in any other status other than cancelled then,
 - Bill segment is deleted and existing billable charge billable charge is updated.

Charge Date is set to billable charge start date and end date.

When characteristics are updated, billable charge is updated with those characteristics.

The changes made to a one-time flat fee pricing rule for a bill group are saved.

Defining a Bill Period Based Recurring Flat Fee Pricing Rule Type

Prerequisites

To define a bill period based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To define a bill period based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the pricing rule type. | Yes |
| | Note: You can create a bill period based recurring flat fee pricing rule type using the Flat Fee Pricing Rule Type business object. | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.
 - **Bill Periods** – Used to specify the bill periods for specifying intervals for creating recurring bill segments.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the pricing rule type. | Yes |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Pricing Rule Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> Claim Pricing Rule Aggregate Stop-Loss (ASL) Pricing Rule Specific Stop-Loss (SSL) Pricing Rule Retention Type Claim Based Pricing Rule Retention Type Enrollment Based Pricing Rule Flat Fee Pricing Rule | Yes |
| Business Object | Indicates the pricing rule type business object for flat fees. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees . | No |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based Flat Fees | Yes |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note:

Related Pricing Rule Types section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note:

Transaction Field Mapping section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Define billable charge line types in the flat fees pricing rule type, if required.
15. Add the flat fees - specific additional data in the pricing rule type, if required.

Note:

This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

Add the bill periods in the pricing rule type, if required.

16. Click **Save**.

The bill period based recurring flat fee pricing rule type is defined.

Defining a Frequency Based Recurring Flat Fee Pricing Rule Type**Prerequisites**

To define a frequency based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To define a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the pricing rule type. | Yes |
| | Note: You can create a frequency based recurring flat fee pricing rule type using the Flat Fee Pricing Rule Type business object. | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the pricing rule type. | Yes |
| Description | Used to specify the description for the pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> Flat Fee Pricing Rule | |
| Business Object | Indicates the pricing rule type business object for flat fees. | Not applicable |
| Status | Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| | Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees . | |
| Pricing Rule Type Category | Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based Flat Fees | Yes |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note:
Related Pricing Rule Types section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note:
Transaction Field Mapping section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.

14. Define billable charge line types in the flat fees pricing rule type, if required.

15. Add the flat fees - specific additional data in the pricing rule type, if required.

Note:

This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

16. Click **Save**.

The frequency based recurring flat fee pricing rule type is defined.

Viewing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group

Procedure

To view a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose frequency based recurring flat fee pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the frequency based recurring flat fee pricing rule type whose frequency based flat fee pricing rule bill group

The **Pricing Rule** screen appears. It contains the following zone:

- **Flat Fee** – Displays the pricing rule frequency based recurring flat fee details for a bill group. It contains the following sections:
 - **Main** – Displays the basic details of the frequency based recurring flat fee pricing rule.
 - **Characteristics** – Displays the characteristics defined for the frequency based recurring flat fee pricing rule.
6. View the basic details of frequency based recurring flat fee pricing rule in the **Main** section.
 7. View the characteristics of the frequency based recurring flat fee pricing rule in the **Characteristics** section.

Deleting a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group

Procedure

To delete a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the frequency based recurring flat fee pricing rule type whose frequency based recurring flat fee pricing rule type you want to delete.

A message appears confirming whether you want to delete the frequency based recurring flat fee pricing rule.

- Click **OK**.

The frequency based recurring flat fee pricing rule is deleted.

Ancillary Pricing

The Administrative Services Only (ASO) provider may process some adhoc charges with respect to preventive care, vaccination, diagnostic, and so on. These adhoc charges may also occur due to some corrections in the claim transactions which are already billed to the customer. Oracle Revenue Management and Billing enables you to process and bill these ancillary transactions to the self-funded employer.

The system enables you to create an ancillary charge in either of the following ways:

- Create a pass through charge without markup or markdown (i.e. flat charge).
- Create a pass through charge with a flat or percentage based markup or markdown.
- Create a rate based charge using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge.

You can use any custom mechanism or the file upload utility in ORMB to upload the ancillary transactions. The pricing for the ancillary transactions can be defined using the ancillary pricing rules. You can define an ancillary pricing rule at the parent customer and bill group levels. The ancillary pricing rule at the bill group level takes precedence over the ancillary pricing rule at the parent customer level. You can define the ancillary pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an ancillary pricing rule using an ancillary pricing rule type. It is the ancillary pricing rule type which helps the system to determine:

- Business object using which the ancillary pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types will inherit the transaction field mapping details.

Note: You must select the **Primary** option while defining an ancillary pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Ancillary Pricing Rule Type** screen.

- Rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.
- Transaction fields from where the data from the ancillary transaction should be stored in the respective fields (for example, the data from the **UDF_CHAR_1** transaction field must be stored in the **Parameter 1** field which will be used for deriving the bill group and pricing).
- Algorithm which should be triggered for validating an ancillary transaction.

Note: An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for an ancillary transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for an ancillary transaction.

Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective ancillary pricing rule is derived.

Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:
 - Whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
 - Whether the price items included in the ancillary pricing rule type are eligible for level funding.
 - Whether the ancillary charges should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the ancillary pricing rule type.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs.
 - Value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.
- Price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
- Rate options that you can use while defining the pricing for the ancillary price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Price item parameters based on which you want to define the price item pricing. Two price item parameters are mandatory in the ancillary pricing rule type – one which stores the billable charge line type from the ancillary transaction and another which stores the pricing arrangement from the ancillary transaction. The following pricing arrangements are supported in the ancillary pricing rule:
 - Pass Through Charge Without Markup and Markdown
 - Pass Through Charge With Markup and Markdown

- Rate Based Charge Without Markup and Markdown
- Rate Based Charge With Markup and Markdown

Note: The price item parameters (for example, BCHGLINETYPE and PRICINGARRANGEMENT) which you include in the ancillary pricing rule type must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLNG** feature configuration, respectively.

- Additional ancillary-specific information, such as:
 - Identifiers which help to determine whether the ancillary transaction is eligible for billing for not.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
 - Billable charge line type using which you want to create billable charges for markup and markdown.
 - Rule type which indicates the rules which should be executed to determine whether the markup or markdown calculation line is eligible for billing.
 - How the system should interpret the value stored in the pricing arrangement price item parameter (i.e. whether the value means the ancillary charge should be a pass through charge without markup or markdown, pass through charge with markup or markdown, or rate based charge with or without markup or markdown). Accordingly, the system will search for the pricing in the effective ancillary pricing rule where:
 - Billable charge line type matches the one specified in the ancillary transaction
 - Line defined for the billable charge line type has the pricing arrangement as mentioned in the ancillary transaction
 - Line item which indicates the SQI using which the ancillary charge should be created. You need to specify the line item for each pricing arrangement which is defined in the ancillary pricing rule type.

Once an ancillary pricing rule type is defined, you can create ancillary pricing rules using the ancillary pricing rule type. While defining an ancillary pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the ancillary pricing.
- Whether you want to define the pricing for a pass through charge without markup or markdown. If you select the **Pass Through without Markup or Markdown** option, you cannot define the pricing for a pass through charge with markup or markdown and the pricing for rate based charge with or without markup or markdown in the ancillary pricing rule. However, if the **Pass Through without Markup or Markdown** option is not selected, you can define pricing for different billable charge line types which can be with markup or markdown or which can be rate based with or without markup or markdown. In addition, if the **Pass Through without Markup or Markdown** option is not selected, by default, the system will define the pricing for a pass through charge without markup or markdown. Depending on the billable charge line type and pricing arrangement information in the ancillary transaction, the system will accordingly fetch the appropriate pricing for billing the ancillary charge. For example, if the ancillary transaction contains BCLT1 as the billable charge line type and PASSMK as the pricing arrangement and the effective ancillary pricing rule contains the following pricing:

| Ancillary Pricing | Billable Charge Line Type | Pricing Arrangement | Rate | Pricing Strategy | Markup Amount | Markdown Amount |
|-------------------|---------------------------|--------------------------------------|------|------------------|---------------|-----------------|
| AP1 | BCLT0 | Pass Through with Markup or Markdown | - | Markup | \$10 | - |
| AP2 | BCLT1 | Pass Through with Markup or Markdown | - | Markdown | - | \$5 |

| Ancillary Pricing | Billable Charge Line Type | Pricing Arrangement | Rate | Pricing Strategy | Markup Amount | Markdown Amount |
|-------------------|---------------------------|---|------|------------------|---------------|-----------------|
| AP3 | BCLT2 | Rate Based without Markup or Markdown | \$5 | - | - | - |
| AP4 | BCLT3 | Rate Based with Markup or Markdown | \$5 | Markup | \$10 | - |
| AP5 | BCLT4 | Rate Based with Markup or Markdown | \$5 | Markdown | - | \$5 |
| AP6 | - | Pass Through without Markup or Markdown | - | - | - | - |

In this case, the system will use the AP2 pricing defined in the ancillary pricing rule. The system will markdown the SQI with the specified amount (i.e. \$5).

- Whether the billable charge line type is eligible for billing or not. Accordingly, the system will create billable charge for the ancillary transaction.

In addition, while defining an ancillary pricing rule for a bill group, you need to indicate the policy status for which the ancillary pricing rule is applicable. You can also specify a pricing group while defining an ancillary pricing rule for a bill group. Once an ancillary pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the bill group.

Defining an Ancillary Pricing Rule Type

Prerequisites

To define an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To define an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create an ancillary pricing rule type. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule Type • Ancillary Pricing Rule Type • Claim Pricing Rule Type • Discount Arrangement Pricing Rule Type • Flat Fee Pricing Rule Type | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> Level Funded (LF) Pricing Rule Type Retention Type Claim Based Pricing Rule Type Retention Type Enrollment Based Pricing Rule Type Specific Stop-Loss (SSL) Pricing Rule Type | |
| | <p>Note: You must select the Ancillary Pricing Rule Type option from the Pricing Rule Type Business Object list while defining an ancillary pricing rule type.</p> | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
- Click **OK**.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify the basic details about the ancillary pricing rule type.
- Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:
 - Specific Stop Loss
 - Aggregate Stop Loss
 - Level Funding

Note: You can use any of the above specified pricing rule types as the related pricing rule type in an ancillary pricing rule type.

- Transaction Field Mapping** – Used to map the transaction fields in a ancillary transaction to the appropriate fields in the ancillary pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for an ancillary pricing rule type.

- Algorithms** – Used to associate the algorithms with an ancillary pricing rule type.
- Additional Data** – Used to specify additional information about the ancillary pricing rule type.
- Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define the ancillary-specific additional data in an ancillary pricing rule type.

Note: Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the following pricing arrangements that are used while defining an ancillary pricing rule type.
 - **Pass Through (Markup or Markdown Optional)**
 - **Pass Through Without Markup or Markdown**
 - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the ancillary pricing rule type. | Yes |
| Description | Used to specify the description for the ancillary pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the ancillary pricing rule type. | No |
| Pricing Rule Business Object | <p>Used to indicate the business object using which you want to create the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Ancillary Pricing Rule option from the Pricing Rule Business Object list while defining an ancillary pricing rule type.</p> | Yes |
| Business Object | Indicates the business object using which you are defining the ancillary pricing rule type. | Not applicable |
| Status | <p>Used to indicate the status of the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> Inactive | |
| Primary | Used to indicate whether the ancillary pricing rule type is a primary pricing rule type. | No |
| Pricing Rule Type Category | <p>Used to indicate the category to which the ancillary pricing rule type belongs. The valid value are:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss Ancillary Claim Discount Arrangement Flat Fees Level Funded Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss | Yes |
| | <p>Note: You must select the Ancillary option from the Pricing Rule Type Category list while defining an ancillary pricing rule type.</p> | |

- Enter the required details in the **Main** section.
- Select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list.
- Select the **Primary** option in the **Main** section.

The **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear.

- Select the **Ancillary** option from the **Pricing Rule Type Category** list.
- Add the related pricing rule types in the ancillary pricing rule type, if required.
- Map the transaction fields of an ancillary transaction to the appropriate fields in the ancillary pricing rule type.
- Associate the following algorithms with the ancillary pricing rule type:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------------------------|--------------|----------------|-----------------------------------|
| Bill Group Derivation | C1_TXNBGDRV | C1_TXNBGDRV | Derive Bill Group |
| Account and Price Item Derivation | C1_ACCPRIDRV | C1_ACCPRIDRV | Account and Price Item Derivation |
| Bill After Date Determination | C1_BAFTDRV | C1_BAFTDRV | Bill After Date Determination |

- Define additional data for an ancillary pricing rule type, if required.
- Add the required price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
- Add the price item parameters based on which you want to define the ancillary pricing, if required.
- Define the characteristics for an ancillary pricing rule type, if required.
- Define the required ancillary-specific additional data in the ancillary pricing rule type.

18. Define the pricing arrangements for an ancillary pricing rule type, if required.

19. Click **Save**.

The ancillary pricing rule type is defined.

Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type

The **Administrative Services Only (ASO)** feature is designed in such a way that all non-primary pricing rule types should inherit the transaction field mapping details from a primary pricing rule type. These non-primary pricing rule types are added in a primary pricing rule type as the related pricing rule types.

Prerequisites

To add related pricing rule types in an ancillary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.
- Rule types defined in the application (where the rule type usage is set to **Related Pricing Rule Type Eligibility**)

Procedure

To add related pricing rule type in an ancillary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an ancillary pricing rule type.

| |
|---|
| Note: The Related Pricing Rule Types section appears when the Primary option is selected in the Main section. |
|---|

The **Related Pricing Rule Types** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------------|--|---|
| Sequence | Used to specify the order in which the related pricing rule type should be invoked. | Yes (Conditional) Note: This field is required when you are adding a related pricing rule type in the ancillary pricing rule type. |
| Pricing Rule Type | Used to indicate the non-primary pricing rule type which should inherit the transaction field mapping details from the claim pricing rule type. You can add a non-primary pricing rule type of the following categories in the claim pricing rule type: <ul style="list-style-type: none"> 1. Retention Type Claim Based 2. Discount Arrangement 3. Specific Stop-Loss 4. Aggregate Stop-Loss 5. Level Funding <p>Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.</p> <p>The Search (🔍) icon appears corresponding to the Pricing Rule Type field.. On clicking the Search (🔍) icon corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.</p> | Yes (Conditional) Note: This field is required when the corresponding Sequence field is specified for the related pricing rule type. |
| Eligibility Rule Type | Used to specify the rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. <p>Note: The list includes only those rule types where the rule type usage is set to Related Pricing Rule Type Eligibility.</p> | No |

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

4. Click **Save**.

The related pricing rule type is added in the ancillary pricing rule type.

Related Topics

| For more information on... | See... |

Mapping the Transaction Field in an Ancillary Pricing Rule Type

Prerequisites

To map the transaction field mapping for an ancillary pricing rule type, you should have:

- Transaction fields defined in the application

Procedure

To map the transaction field mapping for an ancillary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining an ancillary pricing rule type.

Note:

This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|---|
| Source System | Used to map to a transaction field which indicates the external system from where the ancillary transaction is received. The information stored in this field is then used for deriving the bill group, parent customer, and policy for the ancillary transaction. | Yes |
| Parameter 1 | Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group. | Yes |
| Parameter 2 | Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group. | Yes (Conditional) Note: This field is required when you want to derive the bill group using multiple employee attributes. |
| Parameter 3 | Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group. | Yes (Conditional) Note: This field is required when you want to derive the bill group using multiple employee attributes. |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|---|---|
| Parameter 4 | Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group. | Yes (Conditional) |
| | | Note: This field is required when you want to derive the bill group using multiple employee attributes. |
| Incurred Date | Used to map to a transaction field which contains the date when the health insurance service was availed by the employee. | Yes (Conditional) |
| | | Note: This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the claim transaction. |
| Paid Date | Used to map to a transaction field which contains the date when the claim amount was paid to the employee. | Yes (Conditional) |
| | | Note: This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the ancillary transaction. |
| Source of Funds | Used to map to a transaction field which indicates the source of funding. At present, this field is not used in the system. | No |
| Composite | Used to map to a transaction field which indicates whether the employee is covered under the composite insurance. | No |
| Claim Disposition | Used to map to a transaction field which helps to determine how the claim based fees should be charged for the positive and negative claim transactions. | Yes (Conditional) |
| | | Note: This field is required while calculating the retention type claim based fees for the claim transaction. |
| Provider's Tax Identification Number | Used to map to a transaction field which states the health insurance provider's identification number. The information stored in this field is then used to determine whether the health insurance provider is excluded from the specific stop-loss coverage. | Yes (Conditional) |
| | | Note: This field is required while calculating specific stop-loss for the ancillary transaction. |
| Member ID | Used to map to a transaction field which states the member's identification number. The information stored in this field is then used to determine whether the member is excluded from the specific stop-loss coverage. | Yes (Conditional) |
| | | Note: This field is required while calculating specific stop-loss for the ancillary transaction. |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| Main Subscriber ID | Used to map to a transaction field which states the main subscriber's identification number. The information stored in this field is then used to determine whether the main subscriber is excluded from the specific stop-loss coverage. | Yes (Conditional) |
| | | Note: This field is required while calculating specific stop-loss for the ancillary transaction. |
| Run-in Identifier | Used to map to a transaction field which indicates whether the ancillary transaction is a run-in ancillary transaction. | Yes (Conditional) |
| | | Note: This field is required while defining a ancillary pricing rule type. |
| Runout Identifier | Used to map to a transaction field which indicates whether the ancillary transaction is a runout ancillary transaction. At present, this field is not used in the system. | No |
| Third Party Identifier | Used to specify the third party identifier to determine that the ancillary transaction is received from an external source system while defining an ancillary pricing rule type. | No |
| Coverage Start Date | Used to map to a transaction field which indicates the coverage start date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a non-retroactive enrollment transaction. | Yes (Conditional) |
| | | Note: This field is required while defining a retention type enrollment based pricing rule type. |
| Coverage End Date | Used to map to a transaction field which indicates the coverage end date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a retroactive enrollment transaction. | Yes (Conditional) |
| | | Note: This field is required while defining a retention type enrollment based pricing rule type. |
| Retroactivity Indicator | Used to map to a transaction field which indicates whether the enrollment transaction is a retroactive enrollment transaction. | Yes (Conditional) |
| | | Note: This field is required while defining a retention type enrollment based pricing rule type. |
| Network Indicator | Used to map to a transaction field which indicates whether the service provider is in network or out of network. | Yes (Conditional) |
| | | Note: This field is required while defining a discount arrangement pricing rule. |
| Covered Charge Amount | Used to map to a transaction field which indicates the amount which is covered for the employee in the policy. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|--|
| | | Note: This field is required while calculating the discount using a discount guarantee pricing rule. |
| Discount Savings Amount | Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider. | Yes (Conditional) Note: This field is required while calculating the discount using a discount guarantee or discount share pricing rule. |
| Accumulation Only Identifier | Used to map to a transaction field which indicates that the ancillary transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the ancillary transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the ancillary transaction. | No |
| Billing Eligibility Identifier | Used to map to a transaction field which indicates whether the ancillary transaction is eligible for billing. | Yes (Conditional) Note: This field is required while defining an ancillary pricing rule type. |
| Transaction Upload Date | Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date. | Yes (Conditional) Note: This field is required while calculating the discount using a discount guarantee or discount share pricing rule. |

Note:

The **Search** (🔍) icon appears corresponding to each field. On clicking the **Search** icon, the **Transaction Field Search** window appears.

On specifying the transaction field, the description of the transaction field appears corresponding to the respective field.

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.

The transaction fields are mapped to the appropriate fields in the claim pricing rule type.

Associating an Algorithm with an Ancillary Pricing Rule Type

Prerequisites

To associate algorithms with an ancillary pricing rule type, you should have:

- Algorithms defined using the **C1_TXNBGDRV**, **C1_ACCPRIDRV**, and **C1_BAFTDRV** algorithm types.

Procedure

To associate an algorithm with an ancillary pricing rule type:

- Ensure that the **Algorithms** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|--|---|
| System Event | <p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> Account and Price Item Derivation - Used to derive the account and price item for the ancillary transaction. Accumulation Billable Charge Post Proc - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. Accumulation Billable Charge Pre Proc - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. Accumulation Post Processing - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. Accumulation Pre Processing - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. Bill After Date Determination - Used to determine the bill after date for the ancillary transaction. Bill Group Derivation - Used to derive the bill group, parent customer, and policy for the ancillary transaction. | <p>Yes</p> <p>Note: This field is required when you are associating an algorithm with the ancillary pricing rule type.</p> |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|---|
| | <ul style="list-style-type: none"> • Pricing Rule Post Processing - Used to introduce a custom logic once the effective ancillary pricing rule is derived for the ancillary transaction. • Transaction Validation - Used to introduce a custom validation for the ancillary transaction. <p>Note: You must specify Account and Price Item Derivation and Bill Group Derivation algorithms when you are associating the algorithms with an ancillary pricing rule type.</p> | |
| Sequence | Used to specify the order in which the algorithms with the same system event should be executed. | Yes (Conditional) |
| | | Note: This field is required when you are associating an algorithm with the ancillary pricing rule type. |
| Algorithm | Used to indicate the algorithm that you want to execute on the system event. | Yes (Conditional) |
| | <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p> | Note: This field is required when you are associating an algorithm with the ancillary pricing rule type. |

2. Enter the required details in the **Algorithms** section:

| System Event | Algorithm | Mandatory (Yes or No) | For more information, see... |
|--|---|-----------------------|---|
| Account and Price Item Derivation | C1_ACCPRIDRV | Yes | Account and Price Item Derivation (for the Claim Pricing Rule Type Category) on page 3124 |
| Accumulation Billable Charge Post Proc | - | No | - |
| | Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | | |
| Accumulation Billable Charge Pre Proc | - | No | - |

| System Event | Algorithm | Mandatory (Yes or No) | For more information, see... |
|-------------------------------|---|-----------------------|--|
| | Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | | |
| Accumulation Post Processing | - Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Accumulation Pre Processing | - Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Bill After Date Determination | C1_BAFTDRV | Yes | Bill After Date Determination on page 3171 |
| Bill Group Derivation | C1_TXNBGDRV | Yes | Bill Group Derivation on page 3121 |
| Pricing Rule Post Processing | - Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Transaction Validation | - Note: An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required. | No | - |

3. If you want to associate more than one algorithm with an ancillary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an algorithm from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with an ancillary pricing rule type.

Defining Additional Data in an Ancillary Pricing Rule Type

Procedure

To define additional data in an ancillary pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining or editing an ancillary pricing rule type.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

The **Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------------|--|-----------------------|
| Eligible for Specific Stop-Loss | Used to indicate whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: This field appears when the Pricing Rule Type Category is either Ancillary, Claim, Retention Type Claim Based, or Retention Type Enrollment Based. If you do not specify the value for this field, by default, it is set to No</p> | No |
| Eligible for Level Funding | Used to indicate whether the price items included in the ancillary pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Run-in Identifier Value | Used to specify the identifier value to determine whether the ancillary transaction is received during the run-in period of the policy. | No |
| Third Party Identifier Value | Used to specify the identifier value to determine whether the ancillary transaction is received from an external source system. | No |
| Accumulation Only Identifier Value | Used to specify the value when received in an ancillary transaction indicates that the ancillary transaction should only be considered for calculating specific stop-loss and aggregate | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|---|
| | stop-loss. In such case, a transaction leg is not derived for the ancillary transaction. | |
| Eligible for Write-Off in Post Runout | <p>Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>For more information, refer to the Write-Off Charges during Post Runout section.</p> <p>Note: By default, the value is set to No.</p> | No |
| Post Runout Write-Off Adjustment Type | <p>Used to specify the adjustment type using which the post runout write-off adjustments must be created.</p> <p>Note: This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Post Runout Write-Off Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Eligible for Write-Off in Post Runout field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Eligible for Write-Off in Post Runout field is set to Yes.</p> |
| Rule Based Price Item Eligibility Field | <p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing. For more information, refer to the Price Item Eligibility on page 3114.</p> <p>Note: This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Price Item Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the Rule Based Price Item Eligibility Field.</p> | No |
| Rule Based Related Pricing Rule Type Eligibility Field | <p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs. For more information, refer to Related Pricing Rule Type Eligibility on page 3112.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|--|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Related Pricing Rule Type Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Related Pricing Rule Type Eligibility Field field.</p> | |
| Rule Based Eligibility Value | Used to specify the value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing. | Yes (Conditional) |
| | | <p>Note: This field is required when a value is specified in the Rule Based Price Item Eligibility Field or Rule Based Related Pricing Rule Type Eligibility Field field.</p> |

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.

The additional data is defined in the ancillary pricing rule type.

Adding a Price Item in an Ancillary Pricing Rule Type

Prerequisites

To add a price item in an ancillary pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an ancillary pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|--|---|---|-------------------|-----------------------|-----------------------|-------------|--|-----|--------------|--|-----|
| Price Item | Used to indicate the price item that you want to include in an ancillary pricing rule type. | Yes (Conditional) Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type. | | | | | | | | | |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search (🔍) icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Items field.</p> | | | | | | | | | | |
| Rate Option | Used to indicate one or more rate options which are valid for a price item. | Not applicable | | | | | | | | | |
| | On clicking the Add (+) icon, the following field appears in a grid: | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | | | | | | |
| <p>Note:</p> <p>If you want to define more than one rate option to the price item in an ancillary pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from an ancillary pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</p> | | | | | | | | | | | |
| Bill To Account | Used to indicate a order in which the account should be considered while deriving a transaction leg. | Not applicable | | | | | | | | | |
| | On clicking the Add (+) icon, the following fields appear in a grid: | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes |
| | Field Name | | Field Description | Mandatory (Yes or No) | | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | | | | | | |
| Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | | | | | | | | | |
| | | | | | | | | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|-----------------------|--|--|------------------------------|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | | Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears. | | |
| | Note: If you want to define more than one invoice type to the price item in an ancillary pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in an ancillary pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field. | | | |
| Eligibility Rule Type | Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing. | | | No |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item.

- Click **Save**.

The price items are added for an ancillary pricing rule type.

Adding a Price Item Parameter in an Ancillary Pricing Rule Type

Prerequisites

To add a price item parameter in an ancillary pricing rule type, you should have:

- Parameters defined in the application where parameter usage is set to **Price Item**.
- Parameters associated with the price item.
- Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** defined in the application.
- Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** set as option types in the **C1-ASOBLLNG** feature configuration.

- Transaction fields defined in the application.

Procedure

To add a price item parameter in an ancillary pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|---|
| Price Item Parameter | Used to specify the parameter which you can use while defining an ancillary pricing for the price item. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required while adding a price item parameter in an ancillary pricing rule type.</p> |
| Transaction Field | Used to map to a transaction field which contains the parameter value. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Transaction Field field. On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears.</p> <p>On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field.</p> | <p>Note: This field is required while adding a price item parameter in an ancillary pricing rule type.</p> |
| Eligible for Specific Stop-Loss | Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level. | No |
| Eligible for Level Funding | Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level. | No |

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added in the ancillary pricing rule type.

Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type**Procedure**

To add the ancillary-specific additional data in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Additional Data** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Ancillary-Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|--|
| Billing Eligibility Identifier Value | Used to specify the billing eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing. | Yes (Conditional) Note: This field is required when you are adding the ancillary-specific additional data. |
| Billing Non-Eligibility Identifier Value | Used to specify the billing non-eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing. | Yes (Conditional) Note: This field is required when you are adding the ancillary-specific additional data. |
| Rule Based Markup or Markdown Eligibility Field | Used to specify the transaction field that you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing. Note: On clicking the Search (🔍) icon corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears. On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field. | Yes (Conditional) Note: This field is required when the Markup or Markdown Eligibility Rule Type field is specified. |
| Markup or Markdown Billable Charge Line Type | Used to specify the billable charge line type using which you want to create the billable charges for markup and markdown. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| | <p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p> | |
| Markup or Markdown Eligibility Rule Type | <p>Used to specify the markup or markdown eligibility rule type for the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Rule 1 <p>Note: The Markup or Markdown Eligibility Rule Type list includes only those rule-types where the rule type eligibility is ASO Billing Mark Up / Down Eligibility.</p> | No |

2. Enter the required details in the **Ancillary-Specific Additional Data** section.
3. Define pricing arrangements for ancillary-specific data in the **Ancillary-Specific Additional Data** section.
4. Click **Save**.

The ancillary-specific additional data is added in the ancillary pricing rule type.

Defining Pricing Arrangements in an Ancillary Pricing Rule Type

Prerequisites

To define pricing arrangements in an ancillary pricing rule type, you should have:

- Line Items where category is set to **Ancillary**, as defined in the application.

Procedure

To add pricing arrangements in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Data** and **Pricing Arrangements** section is expanded when you are defining or editing a pricing rule type.

The **Pricing Arrangements** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------------------------------|---|---|
| Pricing Arrangement Identifier | Used to indicate the pricing arrangement identifier that you can define through an ancillary pricing rule type. The valid values are: <ul style="list-style-type: none"> Pass Through (Markup or Markdown Optional) Pass Through without Markup or Markdown Rate Based (Markup or Markdown Optional) | Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type. |
| Pricing Arrangement Identifier Value | Used to specify the value for the pricing arrangement identifier. The valid values are: <ul style="list-style-type: none"> Pass Through (Markup or Markdown Optional) Pass Through without Markup or Markdown Rate Based (Markup or Markdown Optional) | Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type. |
| Line Item | Used to indicate the line item which using the billable charge is created for a pricing arrangement. | Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type. |

- Enter the required details in the **Pricing Arrangements** section.
- If you want to define more than one pricing arrangement in an ancillary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a pricing arrangement from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the pricing arrangement identifier.

- Click **Save**.

The pricing arrangements are defined for the ancillary pricing rule type.

Defining a Characteristic for a Ancillary Pricing Rule Type

Prerequisites

To define a characteristic for an ancillary pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an ancillary pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining an ancillary pricing rule type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for an ancillary pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for an ancillary pricing rule type. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for an ancillary pricing rule type.

| How to edit an ancillary pricing rule type | Editing an Ancillary Pricing Rule Type on page 2991 |

Editing an Ancillary Pricing Rule Type

Prerequisites

To edit an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To edit an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to an ancillary pricing rule type whose details you want to edit.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:

1. Retention Type Claim Based
2. Discount Arrangement
3. Specific Stop-Loss
4. Aggregate Stop-Loss
5. Level Funding

Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.

- **Transaction Field Mapping** – Used to map the transaction fields in a claim transaction to the appropriate fields in the claim pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for the ancillary pricing rule type.

- **Algorithms** – Used to associate the algorithms with the ancillary pricing rule type.
- **Additional Data** – Used to specify the additional information about the ancillary pricing rule type.
- **Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define ancillary-specific additional data.

Note: Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the pricing arrangements for the ancillary pricing rule type.
 - **Pass Through (Markup or Markdown Optional)**
 - **Pass Through Without Markup or Markdown**
 - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the ancillary pricing rule type. | Not applicable |
| Description | Used to specify the description for an ancillary pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the ancillary pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create an ancillary pricing rule. The valid value is: <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Ancillary Pricing Rule option from the Pricing Rule Business Object list while defining an ancillary pricing rule type.</p> | Yes |
| Business Object | Indicates the ancillary pricing rule type business object using which you are defining the ancillary pricing rule type. | Not applicable |
| Status | Used to indicate the status of the ancillary pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to indicate whether the ancillary pricing rule type is a primary pricing rule type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| | Note: This field is disabled when you select the Flat Fees option from the Pricing Rule Type Category list. | |
| Pricing Rule Type Category | <p>Indicates the category to which the ancillary pricing rule type belongs. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss <p>Note: You must select the Ancillary option from the Pricing Rule Type Category list while defining an ancillary pricing rule type.</p> | No |

Tip: Alternatively, you can edit the details of an ancillary pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for ancillary.

5. Modify the required details in the **Main** section, if required.
6. Ensure that the **Ancillary Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
7. Ensure that the **Primary** option is selected in the **Main** section.
8. Add, edit, or remove the related pricing rule types in the ancillary pricing rule type, if required.

Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected from the **Main** section.

9. Modify the transaction field mapping in the ancillary pricing rule type, if required.

Note: The **Transaction Field Mapping** section appears when the **Primary** option is selected from the **Main** section.

10. Add, edit, or remove algorithms from the ancillary pricing rule type, if required.

| System Event | Algorithm | Algorithm Type | Description |
|-----------------------------------|--------------|----------------|---|
| Account and Price Item Derivation | C1_ACCPRIDIS | C1_ACCPRIDIS | Account and Priceitem Derivation For Discount Arrangement |

11. Edit generic additional data for the ancillary pricing rule type, if required.
12. Add, edit, or remove price items in an ancillary pricing rule type, if required.
13. Add, edit, or remove price item parameters in an ancillary pricing rule type, if required.
14. Add, edit, or remove characteristics in an ancillary pricing rule type, if required.

15. Modify the ancillary-specific data in an ancillary pricing rule type, if required.
16. Modify the pricing arrangements in an ancillary pricing rule type, if required.
17. Click **Save**.

The changes made to the ancillary pricing rule type are saved.

Defining an Ancillary Pricing Rule for a Parent Customer

Prerequisites

To define an ancillary pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Person Name | Indicates the parent customer for whom you want to create an ancillary pricing rule type. | Not applicable |
| Person Type | Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> • Parent Customer | Not applicable |
| | Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer . | |
| Pricing Rule Type | Used to indicate the pricing rule type using which you want to create an ancillary pricing rule. | Yes |

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the parent customer. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Parent Customer Information | Indicates the parent customer for whom you are defining an ancillary pricing rule. |
| Pricing Rule Type | Indicates the pricing rule type using which you are defining an ancillary pricing rule. |

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Price Item | Used to indicate the price item for which you want to define an ancillary pricing rule. | Yes |
| Pricing Start Date | Used to specify the date from when the ancillary pricing rule is effective. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|--|
| | Note: The pricing start date cannot be later than the pricing end date. | |
| Pricing End Date | Used to specify the date till when the ancillary pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date. | No |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes |
| Pass Through without Markup or Markdown | Used when markup or markdown should not be calculated for the ancillary charge. Note: This field is enabled when the Rate Option field is selected. | Yes (Conditional) Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule. |

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|--|
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the ancillary pricing rule. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | Yes (Conditional) Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type. |
| Billable | Used to indicate whether the ancillary charge is eligible for billing or not. | Yes (Conditional) Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option. |
| Rate Based | Used to indicate whether the ancillary charge is calculated using a particular rate. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|---|
| | | Note: This field is required while creating a pricing arrangement with the Rate Based option. |
| Rate | Used to indicate the rate for calculating the ancillary charge. Note: This field is enabled when the Rate Based option is selected. | Yes (Conditional) Note: This field is required when Rate Based option is selected. |
| Pricing Strategy | Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Markup • Markdown • None | No |
| Markup or Markdown Type | Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage Note: This field is enabled when the Pricing Strategy field is selected. | Yes (Conditional) Note: This field is required when the Pricing Strategy field is selected. |
| Amount / Percentage | Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule. | Yes (Conditional) Note: This field is required when the Markup or Markdown Type field is selected. |

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.

The ancillary pricing rule is defined for a parent customer.

Editing an Ancillary Pricing Rule of a Parent Customer

Prerequisites

To edit an ancillary pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

Procedure

To edit a ancillary pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.

The **Pricing** screen appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Parent Customer Pricing Rules** zone, corresponding to the ancillary pricing rule whose details you want to edit.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.

| Field Name | Field Description |
|-----------------------------|---|
| Parent Customer Information | Displays the parent customer for whom the ancillary pricing rule is created. |
| Pricing Rule Type | Indicates the pricing rule type for whom the ancillary pricing rule is created. |

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|---|
| Price Item | Displays the price item that is used to create ancillary pricing rule. | Not applicable |
| Pricing Start Date | Displays the date from when the ancillary pricing rule is effective. | Not applicable |
| Pricing End Date | Used to specify the date till when the ancillary pricing rule is effective. | Not applicable |
| Rate Option | Displays the rate option that you want to use while defining the price item. | Not applicable |
| Pass Through without Markup or Markdown | Indicates that markup or markdown should not be calculated for the ancillary charge. | Yes (Conditional) |
| | Note: This field is enabled when the Rate Option field is selected. | Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule. |

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|---|
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the ancillary pricing rule. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | <p>Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type.</p> |
| Billable | Used to indicate whether the ancillary charge is eligible for billing or not. | Yes (Conditional) |
| | | <p>Note: This field is required while creating a pricing arrangement with or without the Rate Based option.</p> |
| Rate Based | Used to indicate whether the ancillary charge is calculated using a particular rate. | Yes (Conditional) |
| | | <p>Note: This field is required while creating a pricing arrangement with the Rate Based option.</p> |
| Rate | Used to indicate the rate for calculating the ancillary charge. | Yes (Conditional) |
| | | <p>Note: This field is required when Rate Based option is selected.</p> |
| Pricing Strategy | <p>Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Markup • Markdown • None | No |
| Markup or Markdown Type | <p>Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Flat Amount • Percentage | Yes (Conditional) |
| | | <p>Note: This field is required when the Pricing Strategy field is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|--|
| | Note: This field is enabled when the Pricing Strategy field is selected. | |
| Amount / Percentage | Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule. | Yes (Conditional) |
| | | Note: This field is required when the Markup or Markdown Type field is selected. |

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

5. Modify the details in the **Main** section.
6. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
7. Click **Save**.

The changes made to an ancillary pricing rule for a parent customer are saved.

Editing an Ancillary Pricing Rule of a Bill Group

Prerequisites

To edit an ancillary pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

Procedure

To edit an ancillary pricing rule of a bill group:

- Search for a bill group in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View (🔗)** icon corresponding to the bill group whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
- Click the **Pricing** tab.
The **Pricing** tab appears.
- Click the **Broadcast (📡)** icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
The **Bill Group ASO Policy Pricing Rules** zone appears.
- Click the **Edit (✎)** icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Group Information** column, whose pricing details you want to edit.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.

| Field Name | Field Description |
|------------------------|---|
| Bill Group Information | Displays the bill group for whom the ancillary pricing rule is define. |
| Policy Start Date | Displays the date from when the policy is effective. |
| Policy End Date | Displays the date till when the policy is effective. |
| Policy Status | Indicates the policy status for the pricing rule. |
| Pricing Rule Type | Indicates the pricing rule type using which you want to define an ancillary pricing rule. |
| Status | Indicates the status of the bill group. |

- **Main** – Used to specify basic details about the ancillary pricing rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|---|
| Price Item | Indicates the price item that is used to create ancillary pricing rule. | Yes |
| Pricing Start Date | Displays the date from when the ancillary pricing rule is effective. | Yes |
| Pricing End Date | Used to specify the date till when the ancillary pricing rule is effective. | No |
| | Note: This field by default displays the Policy End Date . | |
| Rate Option | Indicates the rate option that you want to use while defining the price item. | Yes |
| Pass Through without Markup or Markdown | Used to indicate that markup and markdown prices must not be considered when the ancillary transaction is processed. | Yes (Conditional) |
| | Note: This field is enabled when the Rate Option field is selected. | |
| | | Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule. |

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|--|
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the ancillary pricing rule. | Yes (Conditional) |
| | | Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type. |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | |
| Billable | Used to indicate whether the ancillary charge is eligible for billing or not. | <p>Yes (Conditional)</p> <p>Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option.</p> |
| Rate Based | Used to indicate whether the ancillary charge is calculated using a particular rate. | <p>Yes (Conditional)</p> <p>Note: This field is required while creating a pricing arrangement with the Rate Based option.</p> |
| Rate | <p>Used to indicate the rate for calculating the ancillary charge.</p> <p>Note: This field is enabled when the Rate Based option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when Rate Based option is selected.</p> |
| Pricing Strategy | <p>Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Markup • Markdown • None | No |
| Markup or Markdown Type | <p>Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Flat Amount • Percentage <p>Note: This field is enabled when the Pricing Strategy field is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Pricing Strategy field is selected.</p> |
| Amount/Percentage | Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|-------------------|--|
| | | Note: This field is required when the Markup or Markdown Type field is selected. |

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

6. Modify the details in the **Main** section.
7. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
8. Click **Save**.

The changes made to an ancillary pricing rule for a bill group are saved.

Deleting an Ancillary Pricing Rule of a Bill Group

Procedure

To delete an ancillary pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to delete.
The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the **Pricing Group Information** column, whose bill group information you want to delete.

A message appears confirming whether you want to delete the ancillary pricing rule of a bill group.

Note: You can delete an ancillary pricing rule when it is not yet used in the system.

6. Click **OK**.

The ancillary pricing rule of a bill group is deleted.

Discount Pricing

The Administrative Services Only (ASO) provider may offer some discounts to its network hospitals and providers. A portion of these discounts is then charged to the self-funded employer. Oracle Revenue Management and Billing enables you to calculate and bill the discount share or discount guarantee amount to the self-funded employer. The system enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 3014
- [Discount Guarantee](#) on page 3015

The pricing for the share or guarantee discount can be defined using the respective discount pricing rules. You can define a share or guarantee discount pricing rule only at the parent customer level. You can define the share or guarantee discount pricing rules for parent customers from the **Customer 360° Information** screen. You can define a share or guarantee discount pricing rule using a discount arrangement pricing rule type.

Once a discount arrangement pricing rule type is defined, you can create discount pricing rules using the discount arrangement pricing rule type. Once a discount pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the parent customer.

The following new batches are introduced in this release:

- **C1-ACDA** – Once the transaction legs and calculation lines are created for discount, this batch is used to accumulate the discount. It also calculates the required minimum or maximum limit on the contract. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCDA** – Once the discount is accumulated, this batch is used to create the credit (if any) and discount billable charges. It is also used to calculate the bill after date. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.

Types of Discount Arrangement

The Oracle Revenue Management and Billing enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 3014
- [Discount Guarantee](#) on page 3015

Discount Share

In the discount share method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Billable Discount Amount = Discount Savings Amount * Discount Percentage

Note that the discount share percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Discount Guarantee

In the discount guarantee method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Targeted Guaranteed Amount = Covered Charge Amount * Discount Guarantee Percentage

Billable Discount Amount = Discount Savings Amount - Targeted Guaranteed Amount

Note that the discount guarantee percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Defining a Discount Arrangement Pricing Rule Type

Prerequisites

To define a discount arrangement pricing rule type, you should have:

- Discount Arrangement pricing rule type business object defined in the application
- Discount Arrangement pricing rule business object defined in the application

Procedure

To define a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create a discount arrangement pricing rule type. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule Type • Ancillary Pricing Rule Type • Claim Pricing Rule Type • Discount Arrangement Pricing Rule Type • Flat Fee Pricing Rule Type • Level Funded (LF) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | Note: You must select the Discount Arrangement Pricing Rule Type option from the Pricing Rule Type Business Object list while defining a discount arrangement pricing rule type. | |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Discount Arrangement Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
- Click **OK**.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- **Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the discount arrangement pricing rule type.
- **DA – Specific Additional Data** – Used to specify discount arrangement-specific additional data in the discount arrangement pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the discount arrangement pricing rule type. | Yes |
| Description | Used to specify the description for the discount arrangement pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the discount arrangement pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value are: <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Discount Arrangement Pricing Rule option from the Pricing Rule Business Object list while defining a discount arrangement pricing rule type.</p> | |
| Business Object | Indicates the business object using which you are defining the discount arrangement pricing rule type. | Not applicable |
| Status | Used to indicate the status of the discount arrangement pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type. <p>Note: You must not select the Primary option while defining a discount arrangement pricing rule type.</p> | Not applicable |
| Pricing Rule Type Category | Used to indicate the category to which the discount arrangement pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss <p>Note: You must select the Discount Arrangement option from the Pricing Rule Type Category list while defining a discount arrangement pricing rule type.</p> | Yes |

6. Enter the required details in the **Main** section.
7. Select the **Discount Arrangement Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Ensure that **Primary** option is not selected when you are defining a discount arrangement pricing rule type.
9. Select the **Discount Arrangement** option from the **Pricing Rule Type Category** list.
10. Associate the following algorithms with the discount arrangement pricing rule type:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------------------------|--------------|----------------|---|
| Account and Price Item Derivation | C1_ACCPRIDIS | C1_ACCPRIDIS | Account and Priceitem Derivation For Discount Arrangement |

11. Define additional data for a discount arrangement pricing rule type, if required.
12. Add the required price items in the discount arrangement pricing rule type.
13. Add the price item parameters in the discount arrangement pricing rule type, if required.
14. Define characteristics for a discount arrangement pricing rule type, if required.
15. Add discount arrangement-specific additional data in the discount arrangement pricing rule type.
16. Click **Save**.

The discount arrangement pricing rule type is defined.

Associating Algorithms with a Discount Arrangement Pricing Rule Type

Prerequisites

To associate algorithms with a discount arrangement pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIDIS** algorithm type.

Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Algorithms** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| System Event | Used to indicate the system event when you want to execute the algorithm. The valid values are: | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|--|
| | <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for the discount arrangement transaction. • Accumulation Billable Charge Post Proc - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Billable Charge Pre Proc - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Post Processing - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Accumulation Pre Processing - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Pricing Rule Post Processing - Used to introduce a custom logic once the effective discount arrangement pricing rule is derived for the discount arrangement transaction. • Transaction Validation - Used to introduce a custom validation for the discount arrangement transaction. | <p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p> |
| Sequence | Used to specify the order in which the algorithms with the same system event must be executed. | <p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p> |
| Algorithm | <p>Used to specify the algorithm that you want to execute on the system event.</p> <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p> |

2. Enter the following details in the **Algorithms** section:

| System Event | Algorithm | Mandatory (Yes or No) | For more information, see... |
|--|---|-----------------------|---------------------------------------|
| Account and Price Item Derivation | C1_ACCPRIDIS | Yes | Information will be available soon... |
| Accumulation Billable Charge Post Proc | - Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Accumulation Billable Charge Pre Proc | - Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Accumulation Post Processing | - Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Accumulation Pre Processing | - Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Pricing Rule Post Processing | - Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required. | No | - |
| Transaction Validation | - Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required. | No | - |

- If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add (+)** icon and then specify the details. However, if you want to remove an algorithm from the discount arrangement pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.
- Click **Save**.

The algorithms are associated with the discount arrangement pricing rule type.

Defining Additional Data in a Discount Arrangement Pricing Rule Type

Procedure

To define additional data in a discount arrangement pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------------|---|-----------------------|
| Eligible for Specific Stop-Loss | Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Eligible for Level Funding | Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: If you do not specify the value for this field, by default, it is set to No.</p> | No |
| Run-in Identifier Value | Used to specify the identifier value to determine whether the discount arrangement transaction is received during the run-in period of the policy. | No |
| Third Party Identifier Value | Used to specify the identifier value to determine whether the discount arrangement transaction is received from an external source system. <p>Note: At present, this field is not used in the system.</p> | Not applicable |
| Accumulation Only Identifier Value | Used to specify the identifier value to determine whether the discount arrangement transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types. | No |
| Eligible for Write-Off in Post Runout | Used to indicate whether the discount charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| | <ul style="list-style-type: none"> • Yes • No <p>For more information, refer to the Write-Off Charges during Post Runout section.</p> <p>Note: By default, the value is set to No.</p> | |
| Post Runout Write-Off Adjustment Type | <p>Used to specify the adjustment type using which you want to create post runout write-off adjustment.</p> <p>Note: This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Post Runout Write-Off Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Post Runout Write-Off Adjustment Type field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Eligible for Write-Off in Post Runout field is set to Yes.</p> |
| Rule Based Price Item Eligibility Field | <p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.</p> <p>Note: For more information, refer to the Price Item Eligibility on page 3114 section.</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Price Item Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the Rule Based Price Item Eligibility Field.</p> | No |
| Rule Based Eligibility Value | <p>Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when a value is specified in the Rule Based Price Item Eligibility Field field.</p> |

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.

The additional data is defined in the discount arrangement pricing rule type.

Related Topics

| For more information on... | See... |

Adding a Price Item in a Discount Arrangement Pricing Rule Type**Prerequisites**

To add a price item in a discount arrangement pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | |
|-------------|---|---|------------|-------------------|-----------------------|-------------|
| Price Item | Used to indicate the price item that you want to include in the discount arrangement pricing rule type. | Yes (Conditional) Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type. | | | | |
| | Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying the price item, the description of the price item appears corresponding to the Price Item field. | | | | | |
| Rate Option | Used to indicate one or more rate options which are valid for a price item. | Not applicable | | | | |
| | On clicking the Add (➕) icon, the following field appears in a grid: | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Rate Option |
| Field Name | Field Description | Mandatory (Yes or No) | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|-----------------------|---|-----------------------|-------------------|-----------------------|----------|---|-----|--------------|--|-----|----------------|
| | <p>Note:</p> <p>If you want to define more than one rate option to the price item in the discount arrangement pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from a discount arrangement pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</p> | | | | | | | | | | |
| Bill To Account | <p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note:</p> <p>If you want to define more than one invoice type to the price item in a discount arrangement pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a invoice type from the price item in a discount arrangement pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.</p> | Field Name | Field Description | Mandatory (Yes or No) | Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | Not applicable |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | | | | | | |
| Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | | | | | | | | | |
| Eligibility Rule Type | Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing. | No | | | | | | | | | |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a discount arrangement pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item from a discount arrangement pricing rule type, click the **Delete (🗑)** icon corresponding to the **Price Item** field.

4. Click **Save**.

The price items are added for a discount arrangement pricing rule type.

Adding a Price Item Parameter in a Discount Arrangement Pricing Rule Type

Prerequisites

To add a price item parameter in a discount arrangement pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in a discount arrangement pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Price Item Parameter | Used to specify the parameter which you can use while defining a discount arrangement pricing for the price item. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required while adding a price item parameter in a discount arrangement pricing rule type.</p> |
| Transaction Field | Used to map to a transaction field which contains the parameter value. | Yes (Conditional) |
| | | <p>Note: This field is required while adding a price item parameter in a discount arrangement pricing rule type.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Transaction Field field. On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears.</p> <p>On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field.</p> | |
| Eligible for Specific Stop-Loss | Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level. | No |
| Eligible for Level Funding | Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level. | No |

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added in the discount arrangement pricing rule type.

Defining a Characteristic for a Discount Arrangement Pricing Rule Type

Prerequisites

To define a characteristic for a discount arrangement pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a discount arrangement pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for a discount arrangement pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required when you are defining a characteristic for a discount arrangement pricing rule type. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for a discount arrangement pricing rule type.

Defining the Discount Specific Data in a Discount Arrangement Pricing Rule Type

Procedure

To add the discount-specific data in a discount arrangement pricing rule type:

- Ensure that the **DA - Specific Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **DA - Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------------|--|--|
| Guaranteed Discount | Used to indicate whether the discount arrangement pricing rule type is defined for discount guarantee or discount share. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to create a discount guarantee pricing rule type. • No - Used when you want to create a discount share pricing rule type. | Yes |
| Discount Billable Charge Line Type | Used to indicate a billable charge line type using which you want to create the charge line for discount. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Discount Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Discount Billable Charge Line Type field.</p> | Yes |
| Credit Billable Charge Line Type | Used to indicate a billable charge line type using which you want to create the charge line for any credit to the customer. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Credit Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Credit Billable Charge Line Type field.</p> | Yes |
| Minimum Limit Pricing Rule Type | Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the minimum limit for the discount. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Minimum Limit Pricing Rule Type field. On clicking the Search icon, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Minimum Limit Pricing Rule Type field.</p> | Yes (Conditional) <p>Note: This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.</p> |
| Minimum Limit Price Item | Used to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Minimum Limit Price Item field. On clicking the Search icon, the Price Item Details window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Minimum Limit Price Item field.</p> | <p>Note: This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.</p> |
| Maximum Limit Pricing Rule Type | <p>Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the maximum limit for the discount.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Maximum Limit Pricing Rule Type field. On clicking the Search icon, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Maximum Limit Pricing Rule Type field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.</p> |
| Maximum Limit Price Item | <p>Used to indicate the price item whose pricing you want to use while calculating the maximum limit for the discount.</p> <p>Used to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Maximum Limit Price Item field. On clicking the Search icon, the Price Item Details window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Maximum Limit Price Item field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.</p> |

2. Enter the required details in the **DA - Specific Additional Data** section.
3. Click **Save**.

The discount-specific data is added in the discount arrangement pricing rule type.

Editing a Discount Arrangement Pricing Rule Type

Prerequisites

To edit a discount arrangement pricing rule type, you should have:

- Discount arrangement pricing rule type business object defined in the application.
- Discount arrangement pricing rule business object defined in the application.

Procedure

To edit a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- **Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the discount arrangement pricing rule type.
- **DA-Specific Additional Data** – Used to specify discount arrangement-specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the discount arrangement pricing rule type. | Not applicable |
| Description | Used to specify the description for the discount arrangement pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the discount arrangement pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value is: <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> Claim Pricing Rule Discount Arrangement Pricing Rule Flat Fee Pricing Rule Level Funded (LF) Pricing Rule Retention Type Claim Based Pricing Rule Retention Type Enrollment Based Pricing Rule Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Discount Arrangement Pricing Rule option from the Pricing Rule Business Object list while defining a discount arrangement pricing rule type.</p> | |
| Business Object | Indicates the business object used while defining the discount arrangement pricing rule type. | Not applicable |
| Status | Used to indicate the status of the discount arrangement pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type. <p>Note: You must not select the Primary option while defining the discount arrangement pricing rule type.</p> | Not applicable |
| Pricing Rule Type Category | Indicates the category to which the discount arrangement pricing rule type belongs. The valid values are: <ul style="list-style-type: none"> Aggregate Stop-Loss Ancillary Claim Discount Arrangement Flat Fees Level Funded Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss <p>Note: You must select the Discount Arrangement option from the Pricing Rule Type Category list while defining a discount arrangement pricing rule type.</p> | No |

Tip: Alternatively, you can edit the details of a discount arrangement pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Ensure that the **Discount Arrangement Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
7. Ensure that **Primary** option is not selected when you are editing a discount arrangement pricing rule type.
8. Associate the following algorithms with the discount arrangement pricing rule type:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------------------------|--------------|----------------|---|
| Account and Price Item Derivation | C1_ACCPRIDIS | C1_ACCPRIDIS | Account and Priceitem Derivation For Discount Arrangement |

9. Modify the additional data for a discount arrangement pricing rule type, if required.
10. Add, edit, or remove price items in the discount arrangement pricing rule type, if required.
11. Add, edit, or remove price item parameters in the discount arrangement pricing rule type, if required.
12. Add, edit, or remove characteristics in the discount arrangement pricing rule type, if required.
13. Modify the discount arrangement-specific data in the discount arrangement pricing rule type, if required.
14. Click **Save**.

The changes made to the discount arrangement pricing rule type are saved.

Deleting a Discount Arrangement Pricing Rule Type

Procedure

To delete a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the discount arrangement pricing rule type that you want to delete.

A message appears confirming whether you want to delete the discount arrangement pricing rule type.

Note: You can delete a discount arrangement pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a discount arrangement pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

- Click **OK**.

The discount arrangement pricing rule type is deleted.

Defining a Discount Arrangement Pricing Rule for a Parent Customer

Prerequisites

To define a discount arrangement pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Discount Arrangement**.
- Price items associated with the discount arrangement pricing rule type.

Procedure

To define a discount arrangement pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Indicates the parent customer for whom you want to create a discount arrangement pricing rule type. | Not applicable |
| Person Type | Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> • Parent Customer | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type using which you want to create a discount arrangement pricing rule. | Yes |

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays information about the parent customer for whom you are defining the discount arrangement pricing rule. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Parent Customer Information | Indicates the parent customer for whom you are defining the discount arrangement pricing rule. |
| Pricing Rule Type | Indicates the pricing rule type using which you are defining the discount arrangement pricing rule. |

- **Main** – Used to specify basic details about the discount arrangement pricing rule.
- **Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- **Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.

- **Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- **Characteristics** – Used to define the characteristics for the discount arrangement pricing rule.

Note: The **Discount Details**, **Discount Limits**, and **Exclusion** sections appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Price Item | Used to indicate the price item for which you want to define the discount arrangement pricing rule. | Yes |
| Pricing Start Date | Used to specify the date from when the discount arrangement pricing rule is effective. | Yes |
| | Note: The pricing start date cannot be later than the pricing end date. | |
| Pricing End Date | Used to specify the date till when the discount arrangement pricing rule is effective. | No |
| | Note: The pricing end date cannot be earlier than the pricing start date. | |
| Rate Option | Used to indicate the rate option that you want to use while defining the pricing for the price item. | Yes |
| Settlement Frequency | Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCDA batch is stamped on the credit billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. | Yes |
| | Note: The bill after date is stamped on the credit billable charges and not on the discount billable charges. | |

7. Enter the required details in the **Main** section.
8. Add the required discount details in the discount arrangement pricing rule.
9. Define the minimum and maximum discount limits on the contract in the discount arrangement pricing rule, if required.
10. Add the exclusion details of a network or a provider in the discount arrangement pricing rule, if required.
11. Define characteristics for the discount arrangement pricing rule, if required.
12. Click **Save**.

The discount arrangement pricing rule is defined for the parent customer.

Adding the Discount Details in a Discount Arrangement Pricing Rule

Prerequisites

To add the discount details in a discount arrangement pricing rule, you should have:

- Parameters defined in the application
- Parameters associated with the price item.

Procedure

To add the discount details in a discount arrangement pricing rule:

1. Ensure that the **Discount Details** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Details** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Price Item Parameter | <p>Used to indicate the parameter using which you want to define an eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the Price Item Parameter field.</p> <p>You can only select those price item parameters which are effective during the date range specified in the discount arrangement pricing rule.</p> <p>If a parameter associated with the price item is mandatory, then by default, the parameter appears in the Price Item Parameter field.</p> | No |
| Parameter Value | Used to specify the value for the price item parameter. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|--|
| | <p>Note:</p> <p>If you select a predefined parameter, the Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search window appears.</p> <p>On specifying the parameter value, the description of the parameter value appears corresponding to the Parameter Value field.</p> | <p>Note: This field is required when the parameter associated with the price item is mandatory.</p> |
| Discount Percentage | Used to specify the discount share or discount guarantee percentage. | Yes |
| Maximum Discount Per Claim | Used to specify the maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer. | No |

Note: The **Discount Details** section appears when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Details** section.
- If you want to define a discount percentage for another price item parameter and parameter value combination, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a discount percentage for a price item parameter and parameter value combination from the discount arrangement pricing rule, click the **Delete** (🗑️) icon corresponding to the combination.

- Click **Save**.

The discount details are added in the discount arrangement pricing rule.

Defining the Discount Limits in a Discount Arrangement Pricing Rule

Prerequisites

To define the discount limits in a discount arrangement pricing rule, you should have:

- An account, to which you want to credit the discount, defined in the application
- Minimum limit pricing rule type and minimum limit price item defined in the respective discount arrangement pricing rule type when you want to define minimum discount limit on the contract
- Maximum limit pricing rule type and maximum limit price item defined in the respective discount arrangement pricing rule type when you want to define maximum discount limit on the contract

Procedure

To define the discount limits in a discount arrangement pricing rule:

1. Ensure that the **Discount Limits** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Limits** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| No Limit | Used to indicate whether you want to define minimum or maximum discount limit on the contract. | No |
| Discount Credit Account | Used to indicate the account to which you want to credit the discount when the minimum or maximum discount limit is defined on the contract. | Yes (Conditional) Note: This field is required when the No Limit option is not selected. |
| | Note: This field is enabled when the No Limit option is not selected. | |
| Settlement Days | Used to specify the number of days which helps to calculate the final settlement date (which is pricing end date + the settlement days). The valid values: <ul style="list-style-type: none"> • 30 Days • 60 Days • 90 Days • 120 Days • 150 Days • 180 Days | Yes |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|--|
| Type of Discount Limit | Displays the type of discount limit. The valid values are: <ul style="list-style-type: none"> • Minimum • Maximum | Not applicable |
| Select | On clicking the check box corresponding to the type of discount limit, you can define minimum or maximum discount limit on the contract. Note: This field is enabled when the No Limit option is not selected. | Yes |
| Limit Type | Used to indicate whether you want to define a flat limit or an enrollment based limit. The valid values are: <ul style="list-style-type: none"> • Enrollment Based • Flat | Yes (Conditional) Note: This field is required when you are defining a minimum or maximum discount limit in the discount arrangement pricing rule. |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|--|
| | <p>Note:</p> <p>This field is enabled when the No Limit option is not selected.</p> <p>If you select the check box corresponding to the Minimum discount limit, the Limit Type field corresponding to the Minimum discount limit is enabled.</p> | |
| Amount Limit | Used to specify the flat minimum or maximum discount amount. | Yes (Conditional) |
| | <p>Note:</p> <p>This field is enabled when:</p> <ul style="list-style-type: none"> The No Limit option is not selected. The minimum or maximum limit type is set to Flat. | <p>Note: This field is required when the minimum or maximum limit type is set to Flat.</p> |

Note: The **Discount Limits** section appears when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Limits** section.
- Click **Save**.

The discount limits are defined in the discount arrangement pricing rule.

Excluding a Network or Provider in a Discount Arrangement Pricing Rule

Procedure

To exclude a network or provider in a discount arrangement pricing rule:

- Ensure that the **Exclusion** section appears when you are defining or editing a discount arrangement pricing rule.

The **Exclusion** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Exclusion Level | <p>Used to indicate whether you want to exclude the discount offered to certain network hospitals and providers during the discount share or discount guarantee calculation. The valid values are:</p> <ul style="list-style-type: none"> Network | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|---|
| | <ul style="list-style-type: none"> Provider <p>Note: The system creates the transaction legs and calculation lines for such excluded network hospitals and providers, but does not accumulate the discount.</p> | Note: This field is required while excluding a network or provider in the discount arrangement pricing rule. |
| Level Identifier | Used to specify the network or provider ID. | Yes (Conditional) |
| | | Note: This field is required while excluding a network or provider in the discount arrangement pricing rule. |

- Enter the required details in the **Exclusion** section.
- If you want to exclude more than one network or provider in the discount arrangement pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a network or provider from the exclusion list, click the **Delete** (🗑️) icon corresponding to the network or provider.

- Click **Save**.

The network or provider is excluded in the discount arrangement pricing rule.

Defining a Characteristic for a Discount Arrangement Pricing Rule

Prerequisites

To define a characteristic for a discount arrangement pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a discount arrangement pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule.

The **Characteristics** section contains the following fields in the grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the discount arrangement pricing rule. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule . | Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the discount arrangement pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the discount arrangement pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the discount arrangement pricing rule.

Editing a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To edit a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discount arrangement pricing rule, whose details you want to edit.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays information about the parent customer for whom the discount arrangement pricing rule is defined. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|--|
| Parent Customer Information | Indicates the parent customer for whom the discount arrangement pricing rule is defined. |
| Pricing Rule Type | Indicates the discount arrangement pricing rule type using which the discount arrangement pricing rule is defined. |

- **Main** – Used to specify basic details in the discount arrangement pricing rule.
- **Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- **Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.
- **Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- **Characteristics** – Used to define the characteristics for the discount arrangement pricing rule.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Price Item | Used to indicate the price item for which you want to define the discount arrangement pricing rule. | Yes |
| Pricing Start Date | Used to specify the date from when the discount arrangement pricing rule is effective. Note: The pricing start date cannot be later than the pricing end date. | Yes |
| Pricing End Date | Used to specify the date till when the discount arrangement pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date. | No |
| Rate Option | Used to indicate the rate option that you want to use while defining the pricing for the price item. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Settlement Frequency | <p>Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCDA batch is stamped on the credit billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. | Yes |
| | Note: The bill after date is stamped on the credit billable charges and not on the discount billable charges. | |

5. Modify the required details in the **Main** section.
6. Modify the required discount details in the discount arrangement pricing rule.
7. Modify the minimum or maximum discount limit on the contract in the discount arrangement pricing rule, if required.
8. Modify the exclusion list in the discount arrangement pricing rule, if required.
9. Define, edit, or remove characteristics of the discount arrangement pricing rule, if required.
10. Click **Save**.

The changes made to the discount arrangement pricing rule are saved.

Deleting a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To delete a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the discount arrangement pricing rule that you want to delete.

A message appears confirming whether you want to delete the discount arrangement pricing rule.

Note: You can delete a discount arrangement pricing rule when it is not yet used in the system.

- Click **OK**.

The discount arrangement pricing rule of a parent customer is deleted.

Viewing the Discount Arrangement Pricing Rule Details of a Parent Customer

Procedure

To view the discount arrangement pricing rule details of a parent customer:

- Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.

- In the **Search Results** section, click the

View () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Discount Arrangement** – Displays the discount arrangement pricing rule of a parent customer. It contains the following sections:
 - **Main** – Displays basic details of the discount arrangement pricing rule.
 - **Discount Details** – Displays the eligibility criteria for a discount percentage and maximum discount amount that is allowed per claim.
 - **Discount Limits** – Displays the minimum and maximum discount limit defined on the contract.
 - **Exclusions** – Displays the entity (network or provider) which is excluded in the discount arrangement pricing rule.
 - **Characteristics** – Displays the characteristics defined for the discount arrangement pricing rule.

- View the basic details of the discount arrangement pricing rule in the **Main** section.

6. View the discount details of the discount arrangement pricing rule in the **Discount Details** section.
7. View the discount limits set on the discount arrangement pricing rule in the **Discount Limits** section.
8. View the excluded entity defined for the discount arrangement pricing rule in the **Exclusions** section.
9. View the characteristics of the discount arrangement pricing rule in the **Characteristics** section.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Level Funding Pricing

Level funding is a type of self-funding. It offers all benefits of traditional self-funding. However, it provides one additional benefit which helps to stabilize monthly costs of the self-funded employer to pay off the claim, ancillary, claim based fee, enrollment based fee, and discount charges.

Oracle Revenue Management and Billing enables you to process and bill the funds charges to the self-funded employer in either of the following ways:

- Pay the fixed flat amount in every bill period
- Pay the amount based on the enrollment based limit in every bill period

The system enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding, you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some surplus or deficit in funds at the time of settlement which is ideally at the end of year. In such case, the system enables you to configure whether a flat amount or percentage of surplus should be retained by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer.

The pricing for the level funding can be defined using the level funding pricing rules. You can define a level funding pricing rule at the parent customer and bill group levels. The level funding pricing rule at the bill group level takes precedence over the level funding pricing rule at the parent customer level. You can define the level funding pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a level funding

pricing rule using a level funding pricing rule type. It is the level funding pricing rule type which helps the system to determine:

- Business object using which the level funding pricing rule should be created in the system.

Note: You must not select the **Primary** option while defining a level funding pricing rule type.

- Algorithm which should be triggered for deriving the account and price item while creating the funds transaction legs.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective level funding pricing rule is derived.

Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:
 - Whether the funds charge should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the level funding pricing rule type.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
 - Value which the output parameter in the rule should return when the price item in the level funding pricing rule type should be considered for processing.
- Price items for which you can define level funding pricing rules using the level funding pricing rule type.
- Rate options that you can use while defining the pricing for the level funded price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional level funding specific information, such as:
 - Whether the level funding premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule.
 - Bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the level funded premium.
 - Price item whose pricing you want to use for calculating the level-funded premium.
 - LF billable charge line type using which you want to create billable charges for level funded premium.
 - GL only contract type which indicates the contract against which the claim, ancillary, claim based fees, enrollment based fees, and discount charges that are settled against the funds must be debited. The distribution code on the GL only contract type will indicate the GL account against which charges settled against the funds must be debited.
 - Liability distribution code will indicate the GL account against which charges settled against the funds must be credited.
 - Number of days before which you want to create a To Do for reminding the self-funded employer to renew the level funded agreement.
 - Surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.

- Deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.
- Domestic provider billable charge line type using which you want to create billable charges for the claim, claim based fees, enrollment based fees, ancillary, and discount charges which are settled against the funds for a domestic provider.
- Markup or markdown billable charge line type using which you want to create billable charges for markup or markdown which are settled against the funds.
- Rule type which indicates the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
- Rule type which indicates the rules that should be executed to determine whether the level funded premium is for a domestic provider.
- Transaction field which you want to use in the rules as the output parameter to determine whether the level funded premium is for a domestic provider.

Once a level funding pricing rule type is defined, you can create level funding pricing rules using the level funding pricing rule type. While defining a level funding pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Specific stop-loss pricing rule of the parent customer whose accumulation parameters you want to inherit for the level funding. On selecting a specific stop-loss pricing rule, the level funding pricing date range is set automatically. The level funding pricing date range is same as the specific stop-loss pricing rule.
- Rate option which you want to use while defining the level funding pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
 - **Immediately** – If you select this option from the list, the bill after date is not calculated. The funds billable charge is billed immediately in the next bill cycle.
 - **Manually (At Required Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
 - **Never** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
 - **Yearly** – If you select this option from the list, the bill after date is set to the pricing end date in the funds billable charge.
 - **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the funds billable charge.

Note: The accumulation parameters, such as incurred start date, incurred end date, paid start date, paid end date, and settlement days are automatically inherited from the parent customer's specific stop-loss pricing rule. You cannot change any accumulation parameter except the settlement days.

- Settlement days which helps to calculate the settlement date (which is pricing end date, incurred end date, or paid end date whichever is later + the settlement days)
- Whether the customer would like to renew or cancel the level funded agreement.
- Whether a flat amount or percentage of surplus should be retained by the ASO provider at the time of settlement.
- Whether a flat amount or percentage of deficit should be offered as discount to the self-funded employer at the time of settlement.

However, while defining a level funding pricing rule for a bill group, you need to specify the following:

- The policy status in which the level funding pricing rule is applicable.
- Price item for which you want to define the pricing.
- Parent customer's level funding pricing rule from which you want to inherit the accumulation parameters.

Note:

The pricing date range is derived from the parent customer's level funding pricing rule because the level funding pricing rules for parent customer and bill group should have the same date range.

The settlement fund price item is derived from the level funding pricing rule type using which the level funding pricing rule is created.

- Rate option which you want to use while defining the level funding pricing.
- Price items whose charges should be accumulated against the level funded price items so that it can be settled against the funds.
- Whether the line items and markup or markdown in a particular claim pricing rule should be accumulated.

OR

Whether the line items which are associated with the **Level Funded** pricing rule type category should be accumulated.

- Whether the charges created using the billable charge line types in a particular ancillary pricing rule should be accumulated.

OR

Whether the charges created using the billable charge line types where the **Pricing Rule Type Category** characteristic is set to **Ancillary** should be accumulated.

- Whether the discount calculated using a particular discount arrangement pricing rule should be accumulated.
- Whether the charges calculated using the retention type claim based or retention type enrollment based pricing for a price item should be accumulated.

You can also specify a pricing group while defining a level funding pricing rule for a bill group. Once a level funding pricing rule is defined for a bill group, the system creates a price assignment in a price list and assigns the price list to the bill group.

The following new batches are introduced in this release:

- **C1-ACLF** – This batch is used to accumulate the charges which are to be settled against the funds. During the accumulation post-processing, the level funded billable charges (which are created through the TFM process) are posted against the GL accounts which are derived using the GL only contract type and liability distribution code information in the level funding pricing rule type. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCLF** – Once the level funded billable charges are accumulated, this batch is used to create the accumulated level funded billable charges. It is also used to calculate the bill after date. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Terminal Liability Reserve (Run Out) Level Funding Pricing

Oracle Revenue Management and Billing provides a mechanism to maintain terminal liability reserve for a self-funded policy through level funding. Now, the system supports the following types of level funding:

- Regular Enrollment Based Level Funding Without Terminal Liability Reserve (TLR)
- Flat Rate Based Level Funding Without TLR
- Regular Enrollment Based Level Funding With TLR
- Flat Rate Based Level Funding With TLR

The **C1-PricingRuleTypeLF** and **C1-PricingRuleLevelFunded** business objects are extended to support the TLR feature. Therefore, you can now define pricing rule types for the above listed types of level funding. While creating a level funding pricing rule type with TLR feature, you need to specify the following:

- **Terminal Liability Reserve (Run Out) Funding Required** - Used to indicate whether you want to define a level funding pricing rule type with TLR.
- **Claim Fund Off-Process Request Type** - Used to indicate the off-process request type using which the off-process request should be created in the **C1-BCLF** batch. Through this off-process request, the system creates billable charge when the customer decides to roll forward the claim fund.
- **Run Out Fund Off-Process Request Type** - Used to indicate the off-process request type using which the off-process request should be created in the **C1-BCLF** batch. Through this off-process request, the system creates billable charge when the customer decides to roll forward the run out fund.
- **Run Out Fund Pricing Rule Type** - Used to specify a bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the run out fund.
- **Run Out Fund Price Item** - Used to specify the price item which you want to use for calculating the run out fund.
- **Run Out Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create calculation line while settling charges, stop-loss, or discount through run out fund in the runout period.
- **Run Out Surplus Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create the calculation line when the surplus run out funds are left with the ASO provider at the time of settlement.
- **Run Out Deficit Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create the calculation line when the run out funds are in deficit at the time of settlement.

Now, the system enables you to specify the settlement rules while creating a level funding pricing rule type with or without TLR feature. While defining settlement rules, you need to specify the following:

- The policy status for which the settlement rules are applicable
- The fund type (i.e. claim or run out fund) for which you want to define the settlement rules
- The customer action (i.e. cancel or renew the self-funded policy) based on which you want to either close or roll forward the surplus or deficit claim or run out fund

The system provides an option to indicate whether the settlement rules specified for a claim or run out fund are editable. Accordingly, you can change the settlement rules when you create a pricing rule using the pricing rule type for a parent customer.

Now, the system enables you to create a different level funded pricing rule for each policy status at the parent customer level.

Defining a Level Funded Pricing Rule Type

Prerequisites

To define a level funded pricing rule type, you should have:

- Level Funded Pricing Rule Type business object defined in the application.
- Level Funded Pricing Rule business object defined in the application.

Procedure

To define a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create a level funded pricing rule type. Note: You can create a discount arrangement pricing rule type using the Level Funded Pricing Rule Type (C1-PricingRuleTypeDA) business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Level Funded (LF) Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
- Click **OK**.

The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify the basic details about the level funded pricing rule type.
- Algorithms** – Used to associate the algorithms with a level funded pricing rule type.
- Additional Data** – Used to specify the additional information about the level funded pricing rule type.
- Price Items** – Used to add the price items for which you can define the level funded pricing rules using the level funded pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for a level funded pricing rule type.
- DA – Specific Additional Data** – Used to define the level funded - specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the level funded pricing rule type. | Yes |
| Description | Used to specify the description for the level funded pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the level funded pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is: <ul style="list-style-type: none"> Level Funded (LF) Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining the level funded pricing rule type. | Not applicable |
| Status | Used to indicate the status of the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> Active | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> Inactive | |
| Primary | Used to indicate whether the pricing rule type is a primary pricing rule type. Note: You must not select the Primary option while defining a level funded pricing rule type. | Not applicable |
| Pricing Rule Type Category | Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Level Funded | Yes |

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are defining a level funded pricing rule type.
- Associate the following algorithms with the discount arrangement pricing rule type:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------------------------|-------------|----------------|---|
| Account and Price Item Derivation | C1_ACCPRISL | C1_ACCPRIDIS | Account and Priceitem Derivation For Level Funded |
| Accumulation Post Processing | C1-LFACPOST | C1-LFACPOST | Level Funded Accumulation Post Processing |

- Define additional data for a level funded pricing rule type, if required.
- Add the required price items in the level funded pricing rule type.
- Add the price item parameters in the level funded pricing rule type, if required.
- Define characteristics for a level funded pricing rule type, if required.
- Add level funded-specific additional data in the level funded pricing rule type.
- Click **Save**.

The level funded pricing rule type is defined.

Associating an Algorithm with a Level Funded Pricing Rule Type

Prerequisites

To associate algorithms with a level funding pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIDIS** algorithm type.

Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the discount arrangement pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|--|---|
| System Event | Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> • Account and Price Item Derivation • Accumulation Billable Charge Post Proc • Accumulation Billable Charge Pre Proc • Accumulation Post Processing • Accumulation Pre Processing • Pricing Rule Post Processing • Transaction Validation | Yes Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type. |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type. |
| Algorithm | Used to specify the algorithm. Note: Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field. | Yes (Conditional) Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type. |

2. Enter the following details in the **Algorithms** section:

| System Event | Sequence | Algorithm |
|-----------------------------------|----------|--------------|
| Account and Price Item Derivation | 10 | C1_ACCPRIDIS |

- If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the discount arrangement pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the discount arrangement pricing rule type.

Defining Additional Data in a Level Funded Pricing Rule Type

Procedure

To define additional data in a level funded pricing rule type:

- Ensure that the **Additional Data** section is expanded when you are defining or editing a level funded pricing rule type.

The **Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Eligible for Specific Stop-Loss | Used to indicate whether price items included in the level funded pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Eligible for Level Funding | Used to indicate whether price items included in the level funded pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Run-in Identifier Value | Used to specify the identifier value to determine whether the level funded transaction is received during the run-in period of the policy. | No |
| Third Party Identifier Value | Used to specify the identifier value to determine whether the level funded transaction is received from an external source system. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|--|
| Accumulation Only Identifier Value | Used to specify the identifier value to determine whether the level funded transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types. | No |
| Eligible for Write-Off in Post Runout | Used to indicate whether the level funded charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: For more information, refer to the Write-Off Charges during Post Runout section.</p> | No |
| Post Runout Write-Off Adjustment Type | Used to specify the adjustment type using which you want to create post runout write-off adjustment. <p>Note: This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Post Runout Write-Off Adjustment Type field. Adding a Price Item in a Level Funded Pricing Rule Type

Prerequisites

To add a price item in a level funded pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a level funded pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a level funded pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| Price Item | Used to indicate the price item that you want to include in the level funded pricing rule type. | Yes (Conditional) Note: This field is required when you are adding a rate option and bill to account in the level funded pricing rule type. |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|-----------------|--|-----------------------|-------------------|-----------------------|-------------|--|-----|----------------|--|-----|----------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p> | | | | | | | | | | |
| Rate Option | <p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the Add (+) icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note:</p> <p>If you want to define more than one rate option to the price item in the level funded pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from a level funded pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</p> | Field Name | Field Description | Mandatory (Yes or No) | Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | Not applicable | | | |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | | | | | | |
| Bill To Account | <p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section.</td> <td>Yes</td> </tr> </tbody> </table> | Field Name | Field Description | Mandatory (Yes or No) | Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | Not applicable |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | | | | | | |
| Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | | | | | | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|-----------------------|--|--|------------------------------|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | | Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears. | | |
| | Note: If you want to define more than one invoice type to the price item in a level funded pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in a level funded pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field. | | | |
| Eligibility Rule Type | Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing. | | | No |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a level funded pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a level funded pricing rule type.

Adding a Price Item Parameter in a Level Funded Pricing Rule Type

Prerequisites

To add a price item parameter in a level funded pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in a level funded pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a level funded pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|--|
| Price Item Parameter | Used to specify the parameter which you can use while defining a level funded pricing for the price item. Note: The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field. | Yes (Conditional) Note: This field is required when you are adding a price item parameter in a level funded pricing rule type. |
| Transaction Field | Used to specify the transaction field from where the data should be retrieved. Note: The Search (🔍) icon appears corresponding to the Transaction Field field. On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field . | Yes (Conditional) Note: This field is required when you are adding a price item parameter in a level funded pricing rule type. |
| Eligible for Specific Stop-Loss | Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rule. | No |
| Eligible for Level Funding | Used to specify whether the price item parameter can be used in level funding. | No |

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a level funded pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a level funded pricing rule type.

Defining a Characteristic for a Level Funded Pricing Rule Type

Prerequisites

To define a characteristic for a level funded pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a level funded pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for a level funded pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for a level funded pricing rule type. |

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a level funded pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a level funded pricing rule type.

Defining the Level Funded Specific Additional Data in a Level Funded Pricing Rule Type

Prerequisites

To define level funded specific additional data in a level funded pricing rule type, you should have:

- A rule type defined for **Markup or Markdown Eligibility Rule Type** and **Domestic Provider Eligibility Rule Type** field.

Procedure

To add the level-funded data in a level funded pricing rule type:

1. Ensure that the **Level Funded - Specific Additional Data** section is expanded when you are defining or editing a level funded pricing rule type.

The **Level Funded - Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Funding Arrangement | Used to indicate whether the level-funded premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule. The valid values are: <ul style="list-style-type: none"> • Enrollment Based Premium • Flat Rate Based Premium | Yes |
| Settlement Fund Pricing Rule Type | Used to indicate the bill period based recurring flat fee pricing rule type or the retention type enrollment based pricing rule type which you want to use for calculating the level-funded premium. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Settlement Fund Pricing Rule Type field. On clicking the Search (🔍) icon corresponding to the Settlement Fund Pricing Rule Type field, the Contract Type Search window appears.</p> <p>On specifying the contract type, the description of the contact type appears corresponding to the Settlement Fund Pricing Rule Type field.</p> | Yes |
| Settlement Price Item | Used to indicate the price item that you want to use for calculating the level-funded premium. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Settlement Fund Price Item field. On clicking the Search (🔍) icon corresponding to the Settlement Fund Price Item field, the Price Item Details window appears.</p> <p>On specifying the price item details, the description of the price item details appears corresponding to the Settlement Fund Price Item field.</p> | |
| LF Billable Charge Line Type | <p>Used to indicate the level funded billable charge line type using which you want to create the billable charges for level-funded settlement purposes.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the LF Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the LF Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type Search field.</p> | Yes |
| GL Only Contract Type | <p>Used to indicate the contract against which the level-funded billable charges for claim, ancillary, claim based fees, enrollment based fees, discount, specific stop-loss, and aggregate stop-loss must be debited.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the GL Only Contract Type field. On clicking the Search (🔍) icon corresponding to the GL Only Contract Type field, the Contract Type Search window appears.</p> | Yes |
| Liability Distribution Code | Used to indicate the GL account against which the level-funded billable charges (that are settled against the level-funded premium billable charge) must be credited. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Liability Distribution Code field. On clicking the Search (🔍) icon corresponding to the Liability Distribution Code field, the Distribution Code Search window appears.</p> <p>On specifying the distribution code, the description of the distribution code appears corresponding to the Liability Distribution Code field.</p> | |
| Renewal Decision Lead Time | Used to specify the number of days before which you want to create a To Do for reminding the self-funded employer to renew the level-funded agreement. | Yes |
| Surplus Billable Charge Line Type | <p>Used to indicate the surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Surplus Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Surplus Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Surplus Billable Charge Line Type field.</p> | Yes |
| Deficit Billable Charge Line Type | <p>Used to indicate the deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Deficit Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Deficit Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Deficit Billable Charge Line Type field.</p> | Yes |
| Domestic Provider Billable Charge Line Type | Used to indicate the domestic provider billable charge line type using which you want to create level-funded settlement billable charge for a domestic provider. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Domestic Provider Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Domestic Provider Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Domestic Provider Billable Charge Line Type field.</p> | |
| Markup or Markdown Billable Charge Line Type | <p>Used to indicate the markup or markdown billable charge line type using which you want to create the billable charges for markup or markdown which are settled against the level-funded premium.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Markup or Markdown Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p> | No |
| Markup or Markdown Eligibility Rule Type | Used to indicate the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing. | No |
| Rule Based Markup or Markdown Eligibility Field | <p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Markup or Markdown Eligibility Field field. On clicking the Search (🔍) icon corresponding to the Rule Based Markup or Markdown Eligibility Field Type field, the Field Search window appears.</p> <p>On specifying the eligibility field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are specifying a markup or markdown eligibility rule type in a level funded pricing rule type.</p> |
| Domestic Provider Eligibility Rule Type | Used to indicate the rules that should be executed to determine whether the level-funded premium is for a domestic provider. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|---|
| Rule Based Domestic Provider Claim Eligibility Field | Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the level-funded premium is for a domestic provider. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field. On clicking the Search (🔍) icon corresponding to the Rule Based Domestic Provider Claim Eligibility Field field, the Field Search window appears.</p> <p>On specifying the eligibility field, the description of the field appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field.</p> | <p>Note: This field is required when you are specifying a domestic provider eligibility rule type in a level funded pricing rule type.</p> |

2. Enter the required details in the **Level Funded - Specific Additional Data** section.

3. Click **Save**.

The level funded-specific data is added in the level funded pricing rule type.

Editing a Level Funded Pricing Rule Type

Prerequisites

To edit a level funded pricing rule type, you should have:

- Level funded pricing rule type business object defined in the application.
- Level funded pricing rule business object defined in the application.

Procedure

To edit a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with a discount arrangement pricing rule type.
- **Additional Data** – Used to specify the additional information about the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a discount arrangement pricing rule type.
- **Level Funded - Specific Additional Data** – Used to define the discount arrangement - specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the level funded pricing rule type. | Not applicable |
| Description | Used to specify the description for the level funded pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the level funded pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is: <ul style="list-style-type: none"> • Level Funded (LF) Pricing Rule | Yes |
| Business Object | Indicates the business object used while defining the level funded pricing rule type. | Not applicable |
| Status | Used to indicate the status of the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to indicate whether the pricing rule type is primary. <p>Note: You must not select the Primary option while defining the level funded pricing rule type.</p> | Not applicable |
| Pricing Rule Type Category | Indicates the pricing rule type category for the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> • Level Funded | No |

Tip: Alternatively, you can edit the details of a level funded pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the details in the **Main** section.
6. Associate the following algorithms with the level funded pricing rule type:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------------------------|-------------|----------------|---|
| Account and Price Item Derivation | C1_ACCPRIS | C1_ACCPRID | Account and Priceitem Derivation For Level Funded |
| Accumulation Post Processing | C1-LFACPOST | C1-LFACPOST | Level Funded Accumulation Post Processing |

7. Modify the additional data for a level funded pricing rule type, if required.
8. Add, edit, or remove the required price items in the level funded pricing rule type.
9. Add, edit, or remove the price item parameters in the level funded pricing rule type, if required.
10. Add, edit, or remove characteristics for a level funded pricing rule type, if required.
11. Modify the level funded-specific additional data in the level funded pricing rule type, if required.
12. Click **Save**.

The changes made to the level funded pricing rule type are saved.

Deleting a Level Funded Pricing Rule Type

Procedure

To delete a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the level funded pricing rule type that you want to delete.

A message appears confirming whether you want to delete the level funded pricing rule type.

Note: You can delete a level funded pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a level funded pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The level funded pricing rule type is deleted.

Defining a Level Funded Pricing Rule for a Parent Customer

Prerequisites

To define a level funded pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Level Funded**.
- Price items associated with the level funded pricing rule type.

- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level funding.

Procedure

To define a level funded pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|------------------------------|
| Person Name | Indicates the parent customer for whom you want to create a level funded pricing rule type. | Not applicable |
| Person Type | Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> • Parent Customer | Not applicable |
| Pricing Rule Type | Used to indicate the pricing rule type using which you want to create a level funded pricing rule. | Yes |

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the parent customer for whom you are defining the level funded pricing rule. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Parent Customer Information | Indicates the parent customer for whom you are defining the level funded pricing rule. |
| Pricing Rule Type | Indicates the pricing rule type using which you are defining the level funded pricing rule. |

- **Main** – Used to specify basic details in the level funding pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters in a level funded pricing rule.
- **Final Settlement Rules** – Used to define the final settlement rules when the customer decides to renew or cancel the level-funded agreement.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

Note:

The **Accumulation Parameters** and **Final Settlement Rules** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Price Item | Used to indicate the price item for which you want to define the level funded pricing rule. | Yes |
| Parent Customer's Pricing Rule | Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer. Note: On selecting the specific stop-loss pricing rule of the parent customer, the level funded Pricing Start Date and Pricing End Date field is set automatically. | Yes |
| Pricing Start Date | Used to specify the date from when the level funded pricing rule is effective. Note: The pricing start date cannot be later than the pricing end date. | Yes |
| Pricing End Date | Used to specify the date till when the level funded pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date. | No |
| Rate Option | Used to indicate the rate option that you want to use while defining the pricing for the price item. | Yes |
| Settlement Frequency | Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately - If you select this option from the list, the bill after date is not calculated. The level-funded settlement billable charge is billed immediately in the next bill cycle. • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCLF batch is stamped on the level-funded settlement billable charge. • Monthly - If you select this option from the list, the bill after date is set to the last day of the month. • On Settlement - If you select this option from the list, the bill after date is set to the settlement date in the level-funded settlement billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date in the level-funded settlement billable charge. | Yes |
| Underwriter Review | Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: By default the value of this option type is set to Yes . | |

7. Enter the required details in the **Main** section.
8. Define the accumulation parameters in the level funded pricing rule.
9. Define the final settlement rules in the level funded pricing rule.
10. Define characteristics for the level funded pricing rule, if required.
11. Click **Save**.

The level funded pricing rule is defined for the parent customer.

Editing a Level Funded Pricing Rule of a Parent Customer

Procedure

To edit a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the level funded pricing rule, whose details you want to edit.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays information about the parent customer for whom the discount arrangement pricing rule is defined. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|--|
| Parent Customer Information | Indicates the parent customer for whom the level funded pricing rule is defined. |

| Field Name | Field Description |
|-------------------|--|
| Pricing Rule Type | Indicates the level funded pricing rule type using which the level funded pricing rule is defined. |

- **Main** – Used to specify basic details in the level funded pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters in a level funded pricing rule.
- **Final Settlement Rules** – Used to define the final settlement rules when the customer decides to renew or cancel the level funded agreement.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

Note: The **Accumulation Parameters** and **Final Settlement Rules** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Price Item | Used to indicate the price item for which you want to define the level funded pricing rule. | Yes |
| Parent Customer's Pricing Rule | Used to indicate the date range of each specific stop-loss pricing rule which is defined for the parent customer. Note: On selecting the specific stop-loss pricing rule of the parent customer, the level funded Pricing Start Date and Pricing End Date field is set automatically. | Yes |
| Pricing Start Date | Used to specify the date from when the level funded pricing rule is effective. Note: The pricing start date cannot be later than the pricing end date. | Yes |
| Pricing End Date | Used to specify the date till when the level funded pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date. | No |
| Rate Option | Used to indicate the rate option that you want to use while defining the pricing for the price item. | Yes |
| Settlement Frequency | Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately - If you select this option from the list, the bill after date is not calculated. The level-funded settlement billable charge is billed immediately in the next bill cycle. • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCLF batch is stamped on the level-funded settlement billable charge. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| | <ul style="list-style-type: none"> • Monthly - If you select this option from the list, the bill after date is set to the last day of the month. • On Settlement - If you select this option from the list, the bill after date is set to the settlement date in the level-funded settlement billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date in the level-funded settlement billable charge. | |
| Underwriter Review | Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| | Note: By default the value of this option type is set to Yes . | |

5. Modify the required details in the **Main** section.
6. Modify the required accumulation parameters in the level funded pricing rule.
7. Modify the final settlement rules in the level funded pricing rule.
8. Define, edit, or remove characteristics of the level funded pricing rule, if required.
9. Click **Save**.

The changes made to the level funded pricing rule are saved.

Deleting a Level Funded Pricing Rule of a Parent Customer

Procedure

To delete a level funded pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the level funded pricing rule that you want to delete.

A message appears confirming whether you want to delete the level funded pricing rule.

Note: You can delete a level funded pricing rule when it is not yet used in the system.

- Click **OK**.

The level funded pricing rule of a parent customer is deleted.

Viewing the Details of a Level Funded Pricing Rule Defined for a Policy of a Parent Customer

Procedure

To view the level funded pricing rule details of a parent customer:

- Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Level Funding** – Displays the level funded pricing rule of a parent customer. It contains the following sections:
 - **Main** – Displays basic details of the level funded pricing rule.
 - **Accumulation Parameters** – Displays the accumulation parameters defined for a parent customer in the level funded pricing rule.
 - **Final Settlement Rules** – Displays the final settlement rules defined for the level funded pricing rule.
 - **Characteristics** – Displays the characteristics defined for the level funded pricing rule.

- View the basic details of the level funded pricing rule in the **Main** section.
- View the accumulation parameters defined for a parent customer in the **Accumulation Parameters** section.
- View the final settlement rules defined for the level funded pricing rule in the **Final Settlement Rules** section.
- View the characteristics of the level funded pricing rule in the **Characteristics** section.

Defining Accumulation Parameters in a Level Funded Pricing Rule

Procedure

To define accumulation parameters in a level funding pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining a level funded pricing rule.

The **Accumulation Parameters** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Accumulation Group ID | Displays a blank field. An accumulation group ID is generated when accumulation parameter values are defined for a level funded pricing rule. Note: It is a read-only field. | Not applicable |
| Settlement Account ID | Used to indicate the account ID to whom the settlement amount is credited. | Yes |
| Incurred Start Date | Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. Note: It is a read-only field. | Not applicable |
| Incurred End Date | Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. Note: It is a read-only field. | Not applicable |
| Paid Start Date | Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. Note: It is a read-only field. | Not applicable |
| Paid End Date | Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. Note: It is a read-only field. | Not applicable |
| Settlement Days | Used to indicate the number of days as the settlement days which help in calculating the settlement date. The valid values are: | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <ul style="list-style-type: none"> • 30 Days • 60 Days • 90 Days • 120 Days • 150 Days • 180 Days | |
| | <p>Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later plus the settlement days.</p> | |

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.

The accumulation parameters are defined in the level funded pricing rule.

Defining the Final Settlement Rules in a Level Funded Pricing Rule

Procedure

To define the final settlement rules in a level funded pricing rule:

1. Ensure that the **Final Settlement Rules** section is expanded when you are defining or editing a level funded pricing rule type.

The **Final Settlement Rules** section contains the following sub-sections:

- **Customer Renews** - Used to define the final settlement rules when the customer renews the contract.
- **Customer Cancels** - Used to define the final settlement rules when the customer cancels the contract.
- **Renewal Decision** - Used to indicate the status for the upcoming level funded contract.

The **Customer Renews** sub-section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Final Settlement Mode | Displays the final settlement mode when the customer renews the level funded agreement. The valid values are: <ul style="list-style-type: none"> • Final Settlement Surplus • Final Settlement Deficit | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|--------------------------|---|-----------------------|-------------------|-----------------------|-----------------------|--------------------------|---|-------------------|--------------------------|---|-------------------|
| Final Settlement Option | Used to indicate the final settlement option when the customer renews the level funded agreement. | Not applicable | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to indicate the final settlement option in case of surplus.</td> <td>Yes</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to indicate the final settlement option in case of deficit.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Final Settlement Surplus | Used to indicate the final settlement option in case of surplus. | Yes | Final Settlement Deficit | Used to indicate the final settlement option in case of deficit. | Yes |
| | Field Name | | Field Description | Mandatory (Yes or No) | | | | | | | |
| Final Settlement Surplus | Used to indicate the final settlement option in case of surplus. | Yes | | | | | | | | | |
| Final Settlement Deficit | Used to indicate the final settlement option in case of deficit. | Yes | | | | | | | | | |
| | | | | | | | | | | | |
| Flat/Percentage | Used to indicate the final settlement payment type when the customer renews the level funded agreement. | Not applicable | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to indicate the payment type in case of surplus. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage </td> <td>Yes</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to indicate the payment type in case of deficit. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage </td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Final Settlement Surplus | Used to indicate the payment type in case of surplus. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage | Yes | Final Settlement Deficit | Used to indicate the payment type in case of deficit. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage | Yes |
| | Field Name | | Field Description | Mandatory (Yes or No) | | | | | | | |
| Final Settlement Surplus | Used to indicate the payment type in case of surplus. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage | Yes | | | | | | | | | |
| Final Settlement Deficit | Used to indicate the payment type in case of deficit. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage | Yes | | | | | | | | | |
| | | | | | | | | | | | |
| Percentage Retained | Used to specify the percentage retained by the ASO provider when the customer renews the level funded agreement. | Not applicable | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to specify the percentage of surplus that should be retained by the ASO provider. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This field appears when the Flat/Percentage field is Percentage. </div> </td> <td>Yes (Conditional)</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to specify the percentage of deficit that should be offered as a discount by the ASO provider.</td> <td>Yes (Conditional)</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Final Settlement Surplus | Used to specify the percentage of surplus that should be retained by the ASO provider. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This field appears when the Flat/Percentage field is Percentage. </div> | Yes (Conditional) | Final Settlement Deficit | Used to specify the percentage of deficit that should be offered as a discount by the ASO provider. | Yes (Conditional) |
| | Field Name | | Field Description | Mandatory (Yes or No) | | | | | | | |
| Final Settlement Surplus | Used to specify the percentage of surplus that should be retained by the ASO provider. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This field appears when the Flat/Percentage field is Percentage. </div> | Yes (Conditional) | | | | | | | | | |
| Final Settlement Deficit | Used to specify the percentage of deficit that should be offered as a discount by the ASO provider. | Yes (Conditional) | | | | | | | | | |
| | | | | | | | | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|-----------------------|---|---|------------------------------|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | | Note: This field appears when the Flat/Percentage field is Percentage . | | |
| Flat Effective Payout | Used to specify the actual amount which should be retained by the ASO provider or offered as a discount, when the customer renews the level funded agreement. | | | Not applicable |
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | Final Settlement Surplus | Used to specify the actual amount of surplus that should be retained by the ASO provider. Note: This field appears when the Flat/Percentage field is Flat Dollar . | Yes (Conditional) | |
| | Final Settlement Deficit | Used to specify the actual amount of deficit that should be offered as a discount by the ASO provider. Note: This field appears when the Flat/Percentage field is Flat Dollar . | Yes (Conditional) | |

The **Customer Cancels** sub-section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) | |
|-------------------------|---|--|------------------------------|
| Final Settlement Mode | Displays final settlement mode when the customer cancels the level funded agreement. The valid values are: <ul style="list-style-type: none"> Final Settlement Surplus Final Settlement Deficit | Not applicable | |
| Final Settlement Option | Used to indicate the final settlement option when the customer cancels the level funded agreement. | Not applicable | |
| | Field Name | Field Description | Mandatory (Yes or No) |
| | Final Settlement Surplus | Used to indicate the final settlement option in case of surplus. | Yes |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|-----------------------|--|--|------------------------------|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | Final Settlement Deficit | Used to indicate the final settlement option in case of deficit. | Yes | |
| Flat/Percentage | Used to indicate the final settlement payment type when the customer cancels the level funded agreement. | | | Not applicable |
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | Final Settlement Surplus | Used to indicate the payment type in case of surplus. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage | Yes | |
| | Final Settlement Deficit | Used to indicate the payment type in case of deficit. The valid values are: <ul style="list-style-type: none"> Flat Dollar Percentage | Yes | |
| Percentage Retained | Used to specify the percentage retained by the ASO provider when the customer cancels the level funded agreement. | | | Not applicable |
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | Final Settlement Surplus | Used to specify the percentage of surplus that should be retained by the ASO provider. <p>Note: This field appears when the Flat/Percentage field is Percentage.</p> | Yes | |
| | Final Settlement Deficit | Used to specify the percentage of deficit that should be offered as a discount by the ASO provider. <p>Note: This field appears when the Flat/Percentage field is Percentage.</p> | Yes | |
| Flat Effective Payout | Used to specify the actual amount which should be retained by the ASO provider or offered as a discount, when the customer cancels the level funded agreement. | | | Not applicable |

| Field Name | Field Description | | | Mandatory (Yes or No) |

Defining a Characteristic for a Level Funded Pricing Rule

Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a level funded pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a level funded pricing rule.

The **Characteristics** section contains the following fields in the grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Effective Date | Used to specify the date from when the characteristic is effective for a level funded pricing rule. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for a level funded pricing rule. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule . | Note: This field is required when you are defining a characteristic for a level funded pricing rule. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for a level funded pricing rule. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the level funded pricing rule.

Defining a Level Funded Pricing Rule for a Bill Group

Prerequisites

To define a level funded pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Level Funded**.
- Price items associated with the level funded pricing rule type.
- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level funding.
- Policy status defined in the application.

Procedure

To define a level funded pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Person Name | Indicates the name of the parent customer. | Not applicable |
| Person Type | Indicates the type of the parent customer. | Not applicable |
| | Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer . | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|---|
| Pricing Rule Type | Used to indicate the pricing rule type using which you want to create a level funded pricing rule. | Yes |
| | Note: Select the Level Funded Pricing Rule Type option, as the pricing rule. | Note: If the pricing rule type is not selected then the application displays an error message. |
| Pricing Group | Used to indicate the pricing group which is used while defining the pricing. | No |
| Policy Status | Used to indicate the policy status for the pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout | Yes (Conditional) |
| | | Note: Policy Status is required once the Pricing Rule Type is selected. |

6. Click **OK**.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the bill group. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Bill Group Information | Displays the bill group information. |
| Policy Start Date | Displays the date from when the policy is effective. |
| Policy End Date | Displays the date till when the policy is effective. |
| Policy Status | Indicates the policy status for the pricing rule. |
| Pricing Rule Type | Indicates the pricing rule type for whom the level funded pricing rule is created. |

- **Main** – Used to specify basic details in the level funding pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a level funded pricing rule.
- **Pricing Information for rule type category : Claim** – Used to define the line items in a particular claim pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Ancillary** – Used to define the line items in a particular ancillary pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Discount** – Used to define the discount arrangement pricing rule which is effective for level funding calculations.
- **Pricing Information for rule type category : Retention** – Used to define the retention pricing rule which is effective for level funding calculations.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

Note:

The **Accumulation Criteria, Pricing Information for rule type category: Claim, Pricing Information for rule type category: Ancillary, Pricing Information for rule type category: Discount, and Pricing Information for rule type category: Retention** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Price Item | Used to indicate the price item for which you want to define the level funded pricing rule. | Yes |
| Parent Customer's Pricing Rule | Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer. Note: On selecting the specific stop-loss pricing rule of the parent customer, the level funded Pricing Start Date and Pricing End Date field is set automatically. | Yes |
| Pricing Start Date | Used to specify the date from when the level funded pricing rule is effective. Note: The pricing start date cannot be later than the pricing end date. | Not applicable |
| Pricing End Date | Used to specify the date till when the level funded pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date. | Not applicable |
| Rate Option | Used to indicate the rate option that you want to use while defining the pricing for the price item. | Yes |
| Settlement Fund Price Item | Used to indicate the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type. | Not applicable |

7. Enter the required details in the **Main** section.
8. Define the accumulation criteria in the level funded pricing rule for a bill group.
9. Define the pricing information for the claim rule type category for a bill group.
10. Define the pricing information for the ancillary rule type category for a bill group, if required.
11. Define the pricing information for the discount rule type category for a bill group, if required.
12. Define the pricing information for the retention rule type category for a bill group, if required.
13. Define characteristics for the level funded pricing rule for a bill group, if required, if required.
14. Click **Save**.

The level funded pricing rule is defined for a bill group.

Editing a Level Funded Pricing Rule of a Bill Group

Prerequisites

To edit a level funded pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleLevelFunded** defined for the level funded pricing rule.

Procedure

To edit a a level funded pricing rule of a bill group:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears. It consists of the following zones:

- **Parent Customer Pricing Rule Summary**
- **Bill Group ASO Policy Information**
- **Bill Group ASO Policy Pricing Rules**
- **Bill Group Pricing Groups**
- **Pricing Rule Approval Transactions**

4. Click the Broadcast (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for the bill group.
- **Main** – Used to specify basic details about the level funded pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a level funded pricing rule.

- **Pricing Information for rule type category : Claim** – Used to define the line items in a particular claim pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Ancillary** – Used to define the line items in a particular ancillary pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Discount** – Used to define the discount arrangement pricing rule which is effective for level funding calculations.
- **Pricing Information for rule type category : Retention** – Used to define the retention pricing rule which is effective for level funding calculations.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

The **Customer Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Bill Group Information | Displays the bill group information of the level funded pricing rule. | Not applicable |
| Policy Start Date | Displays the policy start date. | Not applicable |
| Policy End Date | Displays the policy end date. | Not applicable |
| Policy Status | Indicates the policy status for the level funded pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout | Not applicable |
| Pricing Rule Type | Indicates the pricing rule type for the level funded pricing rule. | Not applicable |

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Price Item | Indicates the price item. | Not applicable |
| Parent Customer's Pricing Rule | Indicates the pricing rule of the parent customer. | Not applicable |
| Pricing Start Date | Indicates the pricing rule start date. | Not applicable |
| Pricing End Date | Indicates the pricing rule end date. | Not applicable |
| Rate Option | Indicates the rate option to edit the level funded pricing rule for the price item. | Not applicable |
| Settlement Fund Item | Indicates the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type. | Not applicable |

6. Modify the details in the **Main** section.
7. Modify the accumulation criteria in a level funded pricing rule for a bill group.
8. Modify the pricing information for the claim rule type category for a bill group.
9. Modify the pricing information for the ancillary rule type category for a bill group, if required.
10. Modify the pricing information for the discount rule type category for a bill group, if required.

11. Modify the pricing information for the retention rule type category for a bill group, if required.
12. Add, edit, or remove characteristics for the characteristics for a level funded pricing rule, if required.
13. Click **Save**.

The changes made to a level funded pricing rule for a bill group are saved.

Defining Claim Pricing Information in a Level Funded Pricing Rule

Procedure

To define the claim pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Claim** zone is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Claim** zone contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Pricing Rule Type | Used to indicate the claim pricing rule type effective for level funded pricing. | Yes |
| Derive Using | Used to indicate the method through which the claim pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> • LF Line Items • Pricing Rules | Yes |

If **LF Line Items** option is selected from the **Derive Using** field, the following sub-sections appear:

- **Domestic Provider Claims** – Used to specify the domestic provider claims while calculating the level funding line items.
- **Markup or Markdown Values** – Used to define the markup or markdown values for level funding line items.
- **Line Items** – Used to associate the line items which are eligible for billing.

The **Domestic Provider Claims** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Exclude LF (Percentage) | Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines. | No |

The **Markup or Markdown Values** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Pricing Strategy | Used to indicate the pricing strategy for the claim line items. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|--|
| Markup or Markdown Type | Used to indicate the markup or markdown value type for the claim line items. The valid values are: <ul style="list-style-type: none"> Flat Amount Percentage | Not applicable |
| Markup or Markdown Amount | Used to specify the markup or markdown amount for the claim line items. Note: This field displays amount when Markup or Markdown Type field is set as Flat Amount . | Not applicable |
| Markup or Markdown Included Settlement? | Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are: <ul style="list-style-type: none"> Yes No Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field. | Yes (Conditional) Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field. |

The **Line Items** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Line Item | Used to indicate the line item which is eligible for level funded pricing. Note: The Search (🔍) icon appears corresponding to the Line Item field. On clicking the Search (🔍) icon corresponding to the Line Item field, the Pricing Rule Line Item Search window appears. On specifying the pricing rule line item, the description of the pricing rule line item appears corresponding to the Line Item field. | No |

If **Pricing Rule Type** option is selected from the **Derive Using** field, following sub-sections appear:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
 - **Domestic Provider Claims** – Used to specify the domestic provider claims while calculating the level funded pricing.
 - **Markup or Markdown Values** – Used to define the markup or markdown values for the billable charge line items.
 - **Line Items** – Used to associate the line items which are eligible for billing.

The **Claim Pricing Rule** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Effective Claim Pricing Rule | Used to indicate the claim pricing rule effective for level funded pricing. | No |

Note: If you are editing a bill group's level funded pricing rule for the **Claim** rule type category (where the bill group's pricing has ended), a **Reapply** button appears corresponding to the **Effective Claim Pricing Rule** field. You can select an effective claim pricing rule and click the **Reapply** button to set a new pricing for the claim rule type that is eligible for level funding.

The **Domestic Provider Claims** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Exclude (Percentage) LF | Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines. | No |

The **Markup or Markdown Values** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|--|
| Pricing Strategy | Used to indicate the pricing strategy for the claim line items. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None | Not applicable |
| Markup or Markdown Type | Used to indicate the markup or markdown value type for the claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage | Not applicable |
| Markup or Markdown Amount | Used to specify the markup or markdown amount for the claim line items. <p>Note: This field displays amount when Markup or Markdown Type field is set as Flat Amount.</p> | Not applicable |
| Markup / Markdown Included in Settlement? | Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field.</p> | Yes (Conditional) <p>Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field.</p> |

The **Line Items** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Sequence | Displays the sequence number for the line items. | Not applicable |
| Line Item | Displays the billing line items. | Not applicable |
| Include in Settlement | Used to indicate whether the line item should be included in the level funded claim pricing settlement. | No |
| Markup or Markdown Included in Settlement | Used to indicate whether markup or markdown should be included in the level funded claim settlement. | No |
| Markup or Markdown Percentage Eligibility | Used to indicate whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible | Not applicable |
| Markup or Markdown Percentage | Used to indicate the percentage for markup or markdown value. | Not applicable |

- Enter the required details in the appropriate sections, based on the option that is selected from the **Derive Using** field.
- If you want to add information for more than one claim pricing rule type to the level funded pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove information of more than one claim pricing rule type from the level funded pricing rule, click the **Delete (🗑)** icon corresponding to the pricing rule type field.

- Click **Save**.

The claim line items are defined in the level funded pricing rule.

Defining Ancillary Pricing Information in a Level Funded Pricing Rule

Procedure

To define the ancillary pricing information in the level funded pricing rule:

- Ensure that the **Pricing Information for rule type category : Ancillary** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Ancillary** zone contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Pricing Rule Type | Used to indicate the ancillary pricing rule type effective for level funded pricing. | Yes |
| Derive Using | Used to indicate the method through which the ancillary pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> Ancillary Billable Charge Line Type Pricing Rules | Yes |

If **Ancillary Billable Charge Line Type** option is selected from the **Derive Using** field, the following sub-sections appear:

- Billable Charge Line Types** – Used to associate the billable charge line items which are eligible for billing.

The **Billable Charge Line Types** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|---|
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> | Yes |
| Rate Based | Used to indicate that the billable charge line type is rate based. | No |
| Rate | Used to specify the rate for the billable charge line type. <p>Note: This field is enabled when the Rate Based option is selected.</p> | Yes (Conditional) <p>Note: This field is required when the Rate Based option is selected.</p> |
| Markup / Markdown Included Settlement? in | Used to indicate that markup or markdown amount must be included in the level funding settlement. | No |
| Pricing Strategy | Used to indicate the pricing strategy for the billable charge line items. The valid values are: <ul style="list-style-type: none"> Markdown Markup None | Yes |
| Markup or Markdown Type | Used to indicate the markup or markdown type for the billable line items. The valid values are: | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|--|
| | <ul style="list-style-type: none"> Flat Amount Percentage | Note: This field is required when the Rate Based option is selected either as Markup or Markdown . |
| | Note: This field is enabled when the Pricing Strategy option is selected either as Markup or Markdown . | |
| Amount/Percentage | Used to specify the amount or percentage for markup or markdown value. | Yes (Conditional) |
| | Note: This field appears when the Markup or Markdown Type option is selected. | Note: This field is required when the Markup or Markdown Type option is selected. |

If **Pricing Rule Type** option is selected from the **Derive Using** field, the following zone appears:

- **Ancillary Pricing Rule** - Used to indicate the ancillary pricing rule. It contains the following sub-section:
 - The **Billable Charge Line Types** - Used to define the billable charge line types for an ancillary pricing rule, eligible for level funding.

The **Ancillary Pricing Rule** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| Effective Ancillary Pricing Rule | Used to indicate the ancillary pricing rule effective for level funded pricing. | No |

Note: If you are editing a bill group's level funded pricing rule for the **Ancillary** rule type category (where the bill group's pricing has ended), a **Reapply** button appears corresponding to the **Effective Ancillary Pricing Rule** field. You can select an effective ancillary pricing rule and click the **Reapply** button to set a new pricing for the ancillary rule type that is eligible for level funding.

The **Billable Charge Line Types** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Sequence | Displays the sequence number for the line items. | Not applicable |
| Billable Charge Line Type | Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). | Not applicable |
| | Note: The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field. | |
| Include in Settlement | Used to indicate whether the billable charge line item should be included in the level funded ancillary pricing settlement. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Rate Based | Indicates that the billable charge line type is rate based. | Not applicable |
| Rate | Displays the rate for the billable charge line type. | Not applicable |
| Markup / Markdown Included in Settlement? | Used to indicate that markup or markdown amount must be included in the level funding settlement. | Not applicable |
| Pricing Strategy | Displays the pricing strategy for the billable charge line items. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None | Not applicable |
| Markup or Markdown Type | Indicates the markup or markdown type for the billable charge line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage <p>Note: This field is enabled when the Pricing Strategy option is selected either as Markup or Markdown.</p> | Not applicable |
| Amount/ Percentage | Displays the amount or percentage which is specified as the markup or markdown value. | Not applicable |

- Enter the required details in the appropriate sections, based on the option selected from the **Derive Using** field.
- If you want to add information for more than one ancillary pricing rule type to the level funded pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove information of more than one ancillary pricing rule type from the level funded pricing rule, click the **Delete (🗑)** icon corresponding to the pricing rule type field.

- Click **Save**.

The ancillary line items are defined in the level funded pricing rule.

Defining Discount Arrangement Pricing Information in a Level Funded Pricing Rule

Procedure

To define the discount arrangement pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Discount** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Discount** zone contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Pricing Rule Type | Used to indicate the discount arrangement pricing rule type which is effective for level funding. | Yes |
| Derive Using | Used to indicate the method through which the discount arrangement pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> • Pricing Rules | Yes |

On selecting the **Pricing Rule Type** option from the **Derive Using** field, the following sub-section appears:

- **Discount Pricing Rule** - Used to indicate the discount arrangement pricing rule. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Discount Pricing Rule | Used to indicate the discount arrangement pricing rule which is effective for level funding. | Yes |

2. Select the appropriate discount arrangement pricing rule from the **Discount Pricing Rule** section.

Note:

On selecting the discount arrangement pricing rule, the system does not generate any line items for the discount arrangement pricing information. This discount arrangement pricing rule is used at the time of level funding calculations in the TFM module.

3. If you want to add information for more than one discount pricing rule type to the level funded pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove information of more than one discount pricing rule type from the level funded pricing rule, click the **Delete (🗑)** icon corresponding to the pricing rule type field.

4. Click **Save**.

The discount arrangement pricing information is defined in the level funded pricing rule.

Defining Retention Type Claim Based and/or Retention Type Enrollment Based Pricing Rule Information in a Level Funded Pricing Rule

Procedure

To define the retention type claim based and/or retention type enrollment based pricing rule information in a level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Retention** zone is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Retention** zone contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Retention Rule Type | Used to indicate the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule. | Yes |
| Price Item | Used to indicate the price item for the level funded pricing rule. Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search (🔍) icon corresponding to the Price Item field, the Get Retention Type Pricing Rules window appears. On specifying the retention type pricing rule, the description of the retention type pricing rule appears corresponding to the Price Item field. | Yes |

2. Select the appropriate **Retention Rule Type** and **Price Item** from the **Pricing Information for rule type category : Retention** zone.

Note:

Once the retention type claim based and/or retention type enrollment based pricing rule type is selected along with the price item, the system does not generate line items for the retention type claim/enrollment based pricing rule. This retention type claim/enrollment based pricing rule is used at the time of level funding calculations in the TFM module.

3. If you want to add more than one retention type claim based and/or retention type enrollment based pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove more than one retention type claim based and/or retention type enrollment based pricing rule type from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the pricing rule type field.

4. Click **Save**.

The retention type claim based and/or retention type enrollment based pricing rules eligible for level funding are defined in the level funded pricing rule.

Defining a Characteristic for a Level Funded Pricing Rule

Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a level funded pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a level funded pricing rule.

The **Characteristics** section contains the following fields in the grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for a level funded pricing rule. | Yes (Conditional) Note: This field is required when you are defining a characteristic for a level funded pricing rule. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule . | Yes (Conditional) Note: This field is required when you are defining a characteristic for a level funded pricing rule. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) Note: This field is required when you are defining a characteristic for a level funded pricing rule. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the level funded pricing rule.

Minimum Premium Program

To keep up with the changing healthcare dynamics and reduce the rising cost of employer sponsored health plans, the Administrative Services Only (ASO) service providers are constantly thriving to develop innovative pricing models. The ASO service providers are at the forefront designing alternative funding arrangements by amalgamating fully-insured and self-funded plans to trade-off some of the disadvantages of traditional models. The alternative funding arrangements make the self-funded plans more viable to small and medium size employers who traditionally go for the fully-insured plans.

A minimum premium program (MPP) is a self-funded plan that is partly self-insured where an employer is responsible to pay for claims up to a certain level and the remaining is covered by the ASO service provider. A premium is charged to the employer by the ASO service provider for undertaking the risk, processing the claims and for providing all other administrative services.

The following terminologies are used with respect to the minimum premium program:

- **Minimum Premium** - A premium which is paid for the minimum premium program by the employer to the ASO service provider.
- **Capping Limit (i.e. MPP Limit)** - The claim amount within the MPP limit is paid by the employer; whereas the amount exceeding the MPP limit is paid by the ASO service provider.
- **Minimum Attachment Point (MAP)** - This is a guaranteed claim liability by an employer to safeguard the insurer from the financial risk if the enrollment is drastically declines.
- **Effective MPP Limit** - The MPP limit and MAP value whichever is greater is considered as the effective MPP limit.

Oracle Revenue Management and Billing provides the ability to setup the minimum premium program pricing model. You can define a minimum premium program pricing rule at the parent customer and bill group levels. You can define minimum premium program pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a minimum premium program pricing rule using a minimum premium program pricing rule type.

Note: You cannot create a minimum premium program pricing rule type and a minimum premium program pricing rule through an inbound message.

A minimum premium program pricing rule type is not a primary pricing rule type. You must include a minimum premium program pricing rule type as a related pricing rule type in the claim or ancillary pricing rule types which are used for calculating the claim amount or ancillary charges, respectively.

While creating a minimum premium program pricing rule type, you need to do the following:

- Set the pricing rule type business object to **Minimum Premium Program Pricing Rule Type**
- Set the pricing rule type category to **Minimum Premium Program**
- Set the pricing rule business object to **Minimum Premium Program Pricing Rule**
- Specify algorithms for the following system events:

| System Event | Algorithm |
|-----------------------------------|--------------|
| Accumulation Pre-Processing | C1-MPPACPREP |
| Account and Price Item Derivation | C1_ACCPRISL |
| Bill After Date Determination | C1_BAFTDRV |
| Bill Group Derivation | C1_TXNBGDRV |
| Final Settlement Derivation | C1-FSBCDV |

- Specify the price items (i.e. services related to minimum premium program) for which you want to define pricing using a minimum premium program pricing rule
- Specify the rate options that you can use while defining pricing for a price item
- Specify different types of accounts to which the price item should be billed based on the priority

Note: Ideally, the price item parameters should not be specified in a minimum premium program pricing rule type. The price item parameters which are specified in the claim or ancillary pricing rule type are used for minimum premium program accumulation.

- Specify additional information, such as:
 - Pricing rule type and price item to derive the pricing rule using which the enrollment based MPP limit is calculated

Note: At present, we are not supporting flat MPP limit for the minimum premium program pricing model.

- Off process request type using which the deficit should be roll forwarded during the policy renewal
- MPP, surplus, and deficit billable charge line types using which you want to create the respective charges
- Number of days before which you want to create a To Do for reminding the self-funded employer to renew the minimum premium program
- Specify the details for the minimum attachment point arrangement:
 - Pricing rule type and price item using which the minimum attachment point pricing rule should be created
 - Specify default values for the following:
 - **Minimum Attachment Point Arrangement Type** – Used to specify the method using which minimum attachment point should be calculated. The system supports the following methods:
 - **Enrollment Percentage of First Month** - Here, the minimum attachment point is calculated using the enrollment based percentage of the first month's MPP limit. For example, If the enrollment based percentage of the first month's MPP limit is set to 75, the system sets the minimum attachment point to $(75 * \text{First Month's MPP Limit}) / 100$.
 - **Enrollment Percentage of Previous Month** - Here, the minimum attachment point is calculated using the enrollment based percentage of the previous month's MPP limit. For example, If the enrollment based percentage of the previous month's MPP limit is set to 90, the system sets the minimum attachment point to $(90 * \text{Previous Month's MPP Limit}) / 100$.
 - **Flat Amount** - Here, the minimum attachment point is set to a flat amount.

- **Default Arrangement Value** - Used to specify default percentage or flat amount for minimum attachment point. You can change the value (if required) while defining a minimum premium program pricing rule using the respective pricing rule type.
- Specify settlement rules, such:
 - How to settle any deficit or surplus when the customer decides to cancel or renew the policy
 - Whether the system should close out or roll forward the deficit or surplus on policy renewal
 - Whether the system should close out the deficit or surplus on policy cancellation

Once a minimum premium program pricing rule type is defined, you can create minimum premium program pricing rules using the minimum premium program pricing rule type. While defining a minimum premium program pricing rule for a parent customer, you need to specify the following:

- Minimum premium program accumulation price item for which you want to define the pricing
- Specific stop-loss pricing rule of the parent customer whose accumulation parameters you want to inherit for the minimum premium program. On selecting a specific stop-loss pricing rule, the minimum premium program pricing date range is set automatically. The minimum premium program pricing date range is same as the specific stop-loss pricing rule.
- Rate option that you want to use while defining the minimum premium program pricing
- Settlement frequency which helps to determine the bill after date. The valid values are:
 - **Immediately** - If you select this option from the list, the bill after date is not calculated. The minimum premium program settlement billable charge is billed immediately in the next bill cycle.
 - **Manually (At Required Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCMPP** batch is stamped on the minimum premium program settlement billable charge.
 - **Monthly** - If you select this option from the list, the bill after date is set as per the bill cycle.
 - **Yearly** - If you select this option from the list, the bill after date is set to the pricing end date in the minimum premium program settlement billable charge.
 - **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the minimum premium program settlement billable charge.

Note: The accumulation parameters, such as incurred start date, incurred end date, paid start date, paid end date, and settlement days are automatically inherited from the parent customer's specific stop-loss pricing rule. You cannot change any accumulation parameter except the settlement days.

- Settlement days which helps to calculate the settlement date (which is pricing end date, incurred end date, or paid end date whichever is later + the settlement days)
- Settlement account for which the minimum premium program settlement billable charge should be created
- Minimum premium attachment point and its value using which the effective MPP limit is calculated
- Whether the customer would like to renew or cancel the minimum premium program

However, while defining a minimum premium program pricing rule for a bill group, you need to specify the following:

- The policy status in which the minimum premium program pricing rule is applicable.
- Minimum premium program accumulation price item for which you want to define the pricing
- Parent customer's minimum premium program pricing rule from which you want to inherit the accumulation parameters.

Note: The pricing date range is derived from the parent customer's minimum premium program pricing rule because the minimum premium program pricing rules of parent customer and bill group should have the same date range.

- Rate option that you want to use while defining the minimum premium program pricing
- Accumulation criteria that indicates the price items whose charges can be accumulated against the minimum premium program accumulation price item so that it can be settled against the minimum premium program premium.
- Whether the line items and markup or markdown in a particular claim pricing rule should be accumulated for minimum premium program.

OR

Whether the line items which are associated with the **Minimum Premium Program** pricing rule type category should be accumulated for minimum premium program.

- Whether the charges created using the billable charge line types in a particular ancillary pricing rule should be accumulated for minimum premium program.

OR

Whether the charges created using the billable charge line types where the **Pricing Rule Type Category** characteristic is set to **Ancillary** should be accumulated for minimum premium program.

- Whether the charges calculated using the retention type claim based or retention type enrollment based pricing for a price item should be accumulated for minimum premium program.

Once a minimum premium program pricing rule is defined for a bill group, the system creates a price assignment in a price list and assigns the price list to the bill group.

You must create an algorithm using the **C1-ASOEXPOS** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the division to which the bill group's account belongs. Otherwise, erroneous results might occur. For more information about the algorithm, refer to the application.

The following new batches are introduced in this release:

- **C1-ACMPP** - This batch is used to accumulate the minimum premium program billable charges which are to be settled against the minimum premium program premium. It creates an accumulation record for an active accumulation group of an account whose bill cycle window is open. It calculates the following:
 - Minimum Attachment Point
 - MPP Limit (Enrollment X MPP Limit Rate)
 - Effective MPP Limit
 - Cumulative MPP Limit
 - Claims
 - Specific Stop Loss (Credit)/Debit Adjustments
 - Net Claims
 - Cumulative Net Claims
 - Max Claim Liability (Monthly Billed Claim)
 - Cumulative Billed Claims
 - Minimum Premium Adjustment Amount
 - Cumulative Surplus/Deficit
 - Roll Forward Charge

This batch also invokes algorithms which are attached to the **Accumulation Pre-Processing** and **Accumulation Post-Processing** system events in the respective pricing rule type and accordingly updates the accumulation record.

- **C1-BCMPP** - This batch is used to create a billable charge for a minimum premium program accumulation records. The charge contains the minimum premium adjustment amount which is calculated by the **C1-ACMPP** batch. This batch also creates the roll forward billable charge on the successive pricing rule, if applicable, based on the settlement configuration. It calculates and stamps the bill after date on the minimum premium program settlement billable charge.

This batch also invokes algorithms which are attached to the **Accumulation Billable Charge Pre-Processing** and **Accumulation Billable Charge Post-Processing** system events in the respective pricing rule type and accordingly updates the minimum premium program settlement billable charge.

- **C1-CMMPP** - This batch is used to do the following:
 - Update the MPP billable charge ID on the respective transaction legs in the **CI_TXN_DTL_PRITM** table
 - Mark the transaction as **COMP** if it is in **IGNR** status in the **CI_TXN_DETAIL** table
 - Update the transaction aggregation criteria of the corresponding records in the **CI_TXN_CALC** table to **RITA**

You can opt to configure approval workflow for a minimum premium program pricing rule. The **C1PRRLMPPN** approval workflow group is shipped for the minimum premium program pricing rules. You need to create an appropriate approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, and approval workflow settings for the **C1PRRLMPPN** approval workflow group. Once the approval workflow configuration is done, ensure that **C1PRRLMPPN** is specified in the **Approval Workflow Group for MPP** option type of the **C1-ASOBLNG** feature configuration.

Self-Funded Pricing Rule Versioning

Until now, the system enabled you to edit a self-funded pricing rule when it is not referred for any transaction in the system. If you wanted to edit a referred pricing rule, you had to manually cancel bill segments of the accounts and create the disaggregation and/or reseeding requests for the accounts. Once the transactions are disaggregated, the system allowed you to edit the self-funded pricing rule.

Now, the system enables you to edit a self-funded pricing rule even when it is referred for a transaction in the system. On editing a referred self-funded pricing rule, the system will do the following:

- Automatically cancel the bill segments of the accounts and create the disaggregation and/or reseeding requests for the accounts
- Increment the version of the referred self-funded pricing rule in the system

Now, the system maintains version numbers for a self-funded pricing rule. On creating a self-funded pricing rule, the version number of the self-funded pricing rule is set to 1. Also, when a self-funded policy is renewed, the version number of each self-funded pricing rule is set to 1.

If a self-funded pricing rule is referred for a transaction, the system creates a new version of the self-funded pricing rule when you edit it. The system does versioning of a self-funded pricing rule when a set of pre-defined fields are edited. For more information about the fields for which versioning is configured, refer to *Oracle Revenue Management and Billing Insurance User Guide*. The system will automatically cancel the bill segments and create the disaggregation and/or reseeding requests for the accounts when you implement the **Entity Audit** feature for the self-funded pricing rules. The entity audit framework is configured for the following business objects in this release:

- C1-PricingRuleAncillary
- C1-PricingRuleClaim
- C1-PricingRuleRetEnroll

- C1-PricingRuleRetTypeClaim
- C1-PricingRuleASL
- C1-PricingRuleSSL
- C1-PricingRuleLevelFunded
- C1-PricingRuleDiscArrangement

The **Eligible for Audit Event** option type in all the above listed business objects is set to **Y** and the **C1-PRVERSION** algorithm is attached to the **Audit** system event of the above listed business objects.

To implement the **Entity Audit** feature, you need to create an active audit event type for the above listed business objects where the audit usage is set to **Disaggregation/Reseeding**. Here, you need to specify a list of fields from the respective business object which you want to audit or monitor. The following audit event types are shipped for the respective pricing rule business object:

| Business Object | Audit Event Type |
|-------------------------------|------------------------|
| C1-PricingRuleAncillary | ANCIL_DISAGG_AUD |
| C1-PricingRuleClaim | CLAIM_DISAGG_AUD |
| C1-PricingRuleRetEnroll | ENROL_RETEN_DISAGG_AUD |
| C1-PricingRuleRetTypeClaim | CLAIM_RETEN_DISAGG_AUD |
| C1-PricingRuleASL | ASL_DISAGG_AUD |
| C1-PricingRuleSSL | SSL_DISAGG_AUD |
| C1-PricingRuleLevelFunded | LF_DISAGG_AUD |
| C1-PricingRuleDiscArrangement | DISC_DISAGG_AUD |

You can use the above audit event types or create a custom audit event type for the required business object. On editing a referred self-funded pricing rule, the system does the following:

| If... | Then... |
|--|--|
| <p>The approval workflow process is configured for the respective pricing rule and you edit a field which is:</p> <ul style="list-style-type: none"> • Listed in the active audit event type of the respective business object • Configured for versioning | <p>The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Disaggregation Initiated. In addition, the system creates an audit event using the active audit event type for the new version of the self-funded pricing rule. The status of the audit event is set to Pending.</p> |
| <p>The approval workflow process is not configured for the respective pricing rule and you edit a field which is:</p> <ul style="list-style-type: none"> • Listed in the active audit event type of the respective business object • Configured for versioning | <p>The system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Disaggregation Initiated. In addition, the system creates an audit event using the active audit event type for the new version of the self-funded pricing rule. The status of the audit event is set to Pending.</p> |
| <p>The approval workflow process is configured for the respective pricing rule and you edit a field which is:</p> | <p>The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Active and</p> |

| If... | Then... |
|--|---|
| <ul style="list-style-type: none"> Not listed in the active audit event type of the respective business object Configured for versioning | the status of the old version of the self-funded pricing rule is changed to Inactive . |
| <p>The approval workflow process is not configured for the respective pricing rule and you edit a field which is:</p> <ul style="list-style-type: none"> Not listed in the active audit event type of the respective business object Configured for versioning | The system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Active and the status of the old version of the self-funded pricing rule is changed to Inactive . |
| The approval workflow process is configured for the respective pricing rule and you edit the end date of a self-funded pricing rule which is referred for a transaction after the pricing rule end date | The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the changes are reflected in the existing version of the self-funded pricing rule. Note that the system does not create a new version of the self-funded pricing rule. The system creates an audit event using the active audit event type for the existing version of the self-funded pricing rule. The status of the audit event is set to Pending . |
| The approval workflow process is not configured for the respective pricing rule and you edit the end date of a self-funded pricing rule which is referred for a transaction after the pricing rule end date | The system does not create a new version of the self-funded pricing rule. The changes are reflected in the existing version of the self-funded pricing rule. The system creates an audit event using the active audit event type for the existing version of the self-funded pricing rule. The status of the audit event is set to Pending . |

Note that the new version of the self-funded pricing rule will have the same pricing rule ID. However, on editing a self-funded pricing rule which is not referred for a transaction, the system edits the existing version of the self-funded pricing rule and does not create a new version of the self-funded pricing rule with incremental version number.

A new batch named **C1-DISTA** is introduced in this release. The **C1-DISTA** batch checks whether there are any audit events for the self-funded pricing rules in the **Pending** status. If an audit event for a self-funded pricing rule is in the **Pending** status, the system checks whether the self-funded pricing rule is created using a primary pricing rule type. If so, the system derives the person for whom the self-funded pricing rule is created. If the person type of the derived person is **Parent Customer**, the system fetches all accounts of the parent customer and its bill groups. However, if the person type of the derived person is **Bill Group**, the system fetches all accounts of the bill group. Once the accounts are derived, the system cancels the bill segments of the accounts and creates a disaggregation request for these accounts. The system then confirms whether you want to create reseeding requests for the related pricing rule types (if any). If you click the **OK** button, the system creates the reseeding requests. While creating a reseeding request for a related pricing rule type, the system derives all accounts from the accumulation group and then creates a reseeding request for each such account. Finally, the batch changes the status of the audit event to **Complete**.

Once the disaggregation and reseeding requests are created for the accounts, you need to disaggregate the transactions using the disaggregation batches. On executing the **C1-DRSUA** batch, the system changes the status of the disaggregation or reseeding request to **Complete** and then executes the **C1-UPDAUDEV** algorithm attached to the **Post-Processing** system event of the batch control. This algorithm changes the status of the new version of the self-funded pricing rule (for which disaggregation is completed) to **Active** and changes the status of the old version of the self-funded pricing rule to **Inactive**.

Note that you cannot edit a self-funded pricing rule in the **Active** status when an audit event for the self-funded pricing rule is in the **Pending** status. You cannot edit or delete a self-funded pricing rule which is in the **Disaggregation Initiated** status. Also, you cannot edit the related self-funded pricing rule in the **Active** status when the new version of the primary self-funded pricing rule is in the **Disaggregation Initiated** status.

Chapter 36

Stop-Loss

Topics:

- [Accumulation Data](#)

Oracle Revenue Management and Billing enables you to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the transaction calculation lines for specific stop-loss and aggregate stop-loss are created using the transaction aggregation process, you need to execute the following batches in the specified sequence:

1. Stamp Accumulate After Date (C1-STAAD)
2. Accumulate Specific Stop-Loss (C1-ACSSL)
3. Create Billable Charge for Specific Stop Loss (C1-BCSSL)
4. Accumulate Aggregate Stop-Loss (C1-ACASL)
5. Create Billable Charge for Aggregate Stop Loss (C1-BCASL)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Accumulation Data

The **Accumulation Data** screen enables you to view the aggregate stop-loss, discount, level funded, minimum premium program, and specific stop-loss accumulation details. It contains the following zones:

- **Search Parent Accumulation Group** - Enables you to search for a parent accumulation group whose accumulation details you want to view. You can search a parent accumulation group which is created for either of the following accumulation category:
 - **Aggregate Stop-Loss**
 - **Discount Arrangement**
 - **Level Funded**
 - **Minimum Premium Program**
 - **Specific Stop-Loss**
- **Aggregate Stop-Loss Accumulation Amount** - Enables you to view how the aggregate stop-loss is calculated in each accumulation run. In addition, you can view the aggregate stop-loss billable charge which is created in each accumulation run.
- **Discount Arrangement Accumulation Amount** - Enables you to view how the discount is calculated in each accumulation run. In addition, you can view the discount billable charge which is created in each accumulation run.
- **Level Funded Accumulation Amount** - Enables you to view how the charges eligible for level funding are calculated in each accumulation run. In addition, you can view the level funded billable charge which is created in each accumulation run.
- **Minimum Premium Program Amount** - Enables you to view how the charges eligible for minimum premium program are calculated in each accumulation run. In addition, you can view the minimum premium program billable charge which is created in each accumulation run.
- **Specific Stop-Loss Accumulation Amount** - Enables you to view how the specific stop-loss is calculated in each accumulation run. In addition, you can view the specific stop-loss billable charge which is created in each accumulation run.
- **Off-Process Adjustment/Billable Charges** - Enables you to view the adjustments or billable charges created through an off-process request which are used in the accumulation run.
- **Transaction Information** - Enables you to view the claim transactions for which the specific stop-loss, aggregate stop-loss, discount, or charges eligible for level funding are accumulated.
- **Transaction Leg Calculation Lines** - Enables you to view calculation lines of all legs of the transaction which are rated before billing.
- **Transaction Leg Calculation Line Characteristics** - Enables you to view the characteristics of a calculation line.

You can navigate to the **Accumulation Data** screen from the **Transaction and Audit Event Management** menu.

- [Account and Price Item Derivation \(for the Retention Type Claim Based Pricing Rule Type Category\)](#)
- [Account and Price Item Derivation \(for the Retention Type Enrollment Based Pricing Rule Type Category\)](#)
- [Account and Price Item Derivation \(for the Ancillary Pricing Rule Type Category\)](#)
- [Bill After Date Determination](#)
- [Advance Billing for Claim Fund Charge](#)
- [SSL Accumulation across Bill Groups](#)

Administrative Services Only (ASO) is an arrangement in which an organization funds its own employee benefit plan such as a health plan but hires an outside firm to perform specific administrative services. For example, an organization may hire an insurance company to evaluate and process claims under its employee health plan, while maintaining the responsibility to pay the claims itself.

Self-Funded plan specifics vary depending on the agreement a company establishes with insurance companies and third-party administrators (TPA). In the self-funded plan, the insurance company may provide little to no degree of insurance protection. ASO services are gaining popularity because many employers, particularly larger ones, explore that the self-funded plan provides the potential financial advantages at an acceptable cost.

Oracle Revenue Management and Billing (ORMB) provides a complete solution in terms of pricing, billing, and revenue management to support the self-funded plans. It also provides risk coverage for offering self-funded plans through the stop-loss services, such as specific stop-loss and aggregate stop-loss. The specific stop-loss solution in ORMB helps the employer in mitigating high-cost claims for individual members. And, the aggregate stop-loss helps the employer in mitigating risk against high-volume claims.

The **Transaction Feed Management (TFM)** module is enhanced to support the self-funded billing. You can upload the claim, enrollment, and ancillary transactions in the system using the **File Upload Interface** feature. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Once the claim, enrollment, and ancillary transaction data files are uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Price Item
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values

- Clean-up Unwanted Data

The system provides the flexibility to rate the claim, enrollment, and ancillary transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to a price item can be rated at a frequency which is different from the account's billing frequency. For example, daily, weekly, etc.

A new pricing model is introduced for the self-funded health insurance business which enables you to create pricing rules for:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Claim Based Fees
- Enrollment Based Fees
- One-time and Recurring Flat Fees
- Ancillary Charges

Once you create the required pricing structure, you can bill for the claim, enrollment, and ancillary transactions. Once the billable charges for claims, claim based fees, enrollment based fees, and ancillary are created through the transaction aggregation process, you can accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the required billable charges are created, you can bill them using the charge-based billing batches.

Pre-requisites

To setup the Self-Funded Billing feature, you need to do the following:

- Define the parent customers and bill groups in the system.
- Define the required pricing rule types for different pricing rule type categories, such as **Claim**, **Specific Stop-Loss**, **Aggregate Stop-Loss**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, **Flat Fees**, and **Ancillary**.
- Map the transaction fields appropriately in the primary pricing rule types.
- Attach an algorithm created using the **C1_TXNBGDRV** algorithm type to the **Bill Group Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim** or **Retention Type Enrollment Based**.
- Attach an algorithm created using the **C1_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **C1_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.
- Attach an algorithm created using the **C1_BAFTDRV** algorithm type to the **Bill After Date Determination** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **SA_DERV_POPC** algorithm type to the **TFM - Contract Derivation** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1-VRPR_POPC** algorithm type to the **TFM - Verify Pricing Post-Processing** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1_BCHG_POPC** algorithm type to the **TFM - Billable Charge Post-Processing** algorithm spot of the required divisions.
- Map each transaction record type to either the required rule type or primary pricing rule type.
- Define the pricing groups for the required bill groups.
- Define the required pricing rules for the parent customer and bill groups.
- Define the rate schedules with the following calculation algorithms for different price items:

| Price item related to.... | Calculation Algorithm |
|---------------------------------|-----------------------|
| Claim | C1-CLAIMCALC |
| Specific Stop-Loss | C1-SSLRTCALC |
| Aggregate Stop-Loss | C1-ASLRTCALC |
| Retention Type Enrollment Based | None |
| Flat Fees | None |
| Ancillary | C1-ANCICALC |

- Attach an algorithm created using the **C1-RETFLAT** algorithm type to the **TFM – Rate Pre-Processing** algorithm spot of the required divisions.
- Define the TFM information in the rating option for different price items in the following manner:

The following table lists the TFM information which must be defined in the rating option for the respective type of price items:

| Price item related to.... | Rate Option | | | |
|---------------------------------|-----------------------|----------------------|--------------------|-----------------|
| | Aggregate Transaction | Aggregation Schedule | Ignore Transaction | Rating Criteria |
| Claim | Yes | As Required | No | RITA |
| Specific Stop-Loss | No | - | Yes | RITX |
| Aggregate Stop-Loss | No | - | Yes | RITX |
| Retention Type Claim Based | Yes | As Required | No | RITA |
| Retention Type Enrollment Based | Yes | As Required | No | RITA |
| Ancillary | Yes | As Required | No | RITA |

- Define the derivation and pricing parameters for each bill group.
- Set the following option types in the **C1-ASOBLNG** feature configuration:
 - Person Relationship Type
 - Bill Group Policy Person Role
 - Invoice Type Characteristic Type
 - Pricing Group Rule Parameter
 - Billable Charge Line Type Parameter
 - Pricing Arrangement Parameter

Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group. These parameters are used to derive the bill group against which the billable charges created for the claim, enrollment, and ancillary transactions should be billed in the system. The derived bill group is also used for billing the claim based fees, one-time or recurring fees, specific stop-loss credits, and aggregate stop-loss credits. You can define multiple derivation and pricing parameters for a bill group, but the derivation and pricing parameter combination must be unique for a particular duration.

For example, if you want bill group 1 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Western location of the city
- Who belong to Grade A

- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 1:

| Bill Group Name | Sort ID | Source System | Parameter 1 | Parameter 2 | Parameter 3 | Parameter 4 |
|-----------------|---------|---------------|-------------|-------------|-------------|-------------|
| Bill Group 1 | 111 | X | Western | Grade A | - | - |

Example 1: Derivation and Pricing Parameters for Bill Group 1

Similarly, if you want bill group 2 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Eastern location of Mumbai
- Who are the person of Indian origin
- Who belong to Grade A
- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 2:

| Bill Group Name | Sort ID | Source System | Parameter 1 | Parameter 2 | Parameter 3 | Parameter 4 |
|-----------------|---------|---------------|-------------|-------------|-------------|-------------|
| Bill Group 2 | 123 | X | Eastern | Grade A | Mumbai | India |

Example 2: Derivation and Pricing Parameters for Bill Group 2

In the example 1 and 2, the bill group is derived based on the specified employee attributes when the source system, parameter 1, parameter 2, parameter 3, and parameter 4 are mapped to the appropriate transaction fields in the primary pricing rule type using which the pricing rules are defined for the bill group. For example,

| Pricing Rule Type | Source System | Parameter 1 | Parameter 2 | Parameter 3 | Parameter 4 |
|-------------------|-----------------|-------------|-------------|-------------|-------------|
| PR1 | External System | Location | Designation | City | Country |

Example 3: Transaction Field Mapping in Primary Pricing Rule Type

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4.

For example, the following table illustrates how you can define a rule criteria in a pricing group:

| Pricing Group | Rule | Source System | Parameter 1 | Parameter 2 | Parameter 3 | Parameter 4 |
|---------------|------|---------------|-------------|-------------|-------------|-------------|
| PG1 | R1 | X | Eastern | Grade A | Mumbai | India |
| | R2 | X | Western | Grade A | - | - |

Example 4: Rules Defined in a Pricing Group

If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees.

For example, the following table illustrates how you can use a pricing group to derive a pricing strategy in a pricing rule:

| Pricing Rule | Pricing Group | Rule | Rule Criteria | Pricing Strategy | Markup or Markdown Type | Markup or Markdown Amount |
|--------------|---------------|------|--|------------------|-------------------------|---------------------------|
| PRRR1 | PG1 | R1 | Source System = X, Parameter 1 = Eastern, Parameter 2 = Grade A, Parameter 3 = Mumbai, Parameter 4 = India | Markup | Flat Amount | \$20 |

| Pricing Rule | Pricing Group | Rule | Rule Criteria | Pricing Strategy | Markup or Markdown Type | Markup or Markdown Amount |
|--------------|---------------|------|---|------------------|-------------------------|---------------------------|
| | | R2 | Source System = X, Parameter 1 = Western, Parameter 2 = Grade A | Markdown | Flat Amount | \$10 |

Example 5: Defining a Pricing Rule Using a Pricing Group

In the example 5, the system will use the markup strategy on the claim line items for the employees who satisfy the criteria specified in R1. On the other hand, the system will use the markdown strategy on the claim line items for the employees who satisfy the criteria specified in R2.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group. The source system and parameter 1 are mandatory while defining the derivation and pricing parameters for a bill group.

You can define and edit the derivation and pricing parameters for the bill group and sort ID combination from the **Customer 360° Information** screen. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for the bill group and sort ID combinations from the **Customer 360° Information** or **Upload Request** screen. Note that you can upload the derivation and pricing parameters for the bill group and sort ID only using the CSV file format.

Related Pricing Rule Type Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a related pricing rule type in a primary pricing rule type. If the eligibility rule type is defined of a related pricing rule type, the system checks whether the related pricing rule type is eligible for deriving the transaction legs when it is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution. The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the primary pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

Note: At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met in a rule, the system calls the respective related pricing rule type for deriving the transaction legs. If none of the rules created using the rule type are satisfied, the system does not call the respective related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_15 is set Employee
- UDF_DATE_1 is set to 11-05-2018
- Transaction Record Type is set to TR1

The following table illustrates how the eligibility rules can be defined for a related pricing rule type:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Eligibility Rule Type | Rule | Rule's Effective Start Date | Rule's Effective End Date | Priority | Rule Criteria | Output Parameter | Output Parameter Value |
|-------------------------|---------------------------|---------------------------|-----------------------|------|-----------------------------|---------------------------|----------|----------------------|------------------|------------------------|
| TR1 | CLAIM | CLAIM BASED FEES | RT1 | R1 | 01-01-2018 | 31-03-2018 | 1 | UDF_CHAR_1 = Western | UDF_CHAR_15 | Director |
| | | | | R2 | 01-01-2018 | 31-03-2018 | 2 | UDF_CHAR_1 = Western | UDF_CHAR_15 | Employee |
| | | | | R3 | 01-04-2018 | 30-06-2018 | 3 | UDF_CHAR_1 = Western | UDF_CHAR_15 | Employee |
| | | | | R4 | 01-07-2018 | 31-12-2018 | 4 | UDF_CHAR_1 = Western | UDF_CHAR_15 | Director |
| | | SPECIFIC STOP-LOSS | RT2 | R5 | 01-01-2018 | 31-03-2018 | 1 | UDF_CHAR_1 = Western | UDF_CHAR_15 | Director |
| | | | | R6 | 01-01-2018 | 31-03-2018 | 2 | UDF_CHAR_1 = Eastern | UDF_CHAR_15 | Employee |
| | | | | R7 | 01-04-2018 | 31-12-2018 | 3 | UDF_CHAR_1 = Western | UDF_CHAR_15 | Employee |
| | | AGGREGATE STOP-LOSS | RT3 | R8 | 01-04-2018 | 31-12-2018 | 1 | UDF_CHAR_1 = Eastern | UDF_CHAR_15 | Employee |
| | | | | R9 | 01-04-2018 | 31-12-2018 | 2 | UDF_CHAR_1 = Western | UDF_CHAR_15 | Director |

Note: Here, the paid date is mapped to the UDF_DATE_1 field in the CLAIM pricing rule type. In addition, the Rule Based Related Pricing Rule Type Eligibility Field field is set to UDF_CHAR_15 and the Rule Based Eligibility Value field is set to Employee in the CLAIM pricing rule type.

Example 1: Related Pricing Rule Type Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for the CLAIM BASED FEES pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the Rule Based Eligibility Value field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the Rule Based Related Pricing Rule Type Eligibility Field and Rule Based Eligibility Value fields, respectively. Therefore, the system considers the CLAIM BASED FEES pricing rule type for deriving the transaction legs.

The rules which are created using the RT2 rule type are invoked for the SPECIFIC STOP-LOSS pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the Rule Based Eligibility Value field. Therefore,

the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers the SPECIFIC STOP-LOSS pricing rule type for deriving the transaction legs.

Similarly, the rules which are created using the RT3 rule type are invoked for the AGGREGATE STOP-LOSS pricing rule type in the specified priority. The claim transaction does not meet the eligibility criteria defined in the R8 rule. Therefore, the system executes the rule with the next priority (i.e. R9). The claim transaction meets the eligibility criteria defined in the R9 rule. But, the output parameter's value specified in the R9 rule does not match the value specified in the **Rule Based Eligibility Value** field. As none of the rules created using the rule type met the criteria, the system does not consider the AGGREGATE STOP-LOSS pricing rule type for deriving the transaction legs.

Price Item Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a price item in a pricing rule type. If the eligibility rule type is defined of a price item, the system checks whether the price item is eligible for billing when the pricing rule type is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution. The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

Note: At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met, the system searches for an effective pricing rule for the respective price item. If none of the rules created using the rule type are satisfied, the system does not map the transaction to the price item. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_20 is set to Employee
- UDF_DATE_1 is set to 05-03-2018
- Transaction Record Type is set to TR1

The following table illustrates how the eligibility rules can be defined for a price item in a pricing rule type:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Eligibility Rule Type | Rule | Rule's Effective Start Date | Rule's Effective End Date | Priority | Rule Criteria | Output Parameter | Output Parameter Value |
|-------------------------|---------------------------|------------|-----------------------|------|-----------------------------|---------------------------|----------|----------------------|------------------|------------------------|
| TR1 | CLAIM | P1 | RT1 | R1 | 01-01-2018 | 31-03-2018 | 1 | UDF_CHAR_1 = Western | UDF_CHAR_20 | Director |
| | | | | R2 | 01-01-2018 | 31-03-2018 | 2 | UDF_CHAR_1 = Western | UDF_CHAR_20 | Employee |
| | | | | R3 | 01-04-2018 | 30-06-2018 | 3 | UDF_CHAR_1 = Western | UDF_CHAR_20 | Employee |
| | | | | R4 | 01-07-2018 | 31-12-2018 | 4 | UDF_CHAR_1 = Western | UDF_CHAR_20 | Director |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Eligibility Rule Type | Rule | Rule's Effective Start Date | Rule's Effective End Date | Priority | Rule Criteria | Output Parameter | Output Parameter Value |
|-------------------------|---------------------------|------------|-----------------------|------|-----------------------------|---------------------------|----------|----------------------|------------------|------------------------|
| | | P2 | RT2 | R5 | 01-01-2018 | 31-03-2018 | 1 | UDF_CHAR_1 = Western | UDF_CHAR_20 | Director |
| | | | | R6 | 01-01-2018 | 31-03-2018 | 2 | UDF_CHAR_1 = Eastern | UDF_CHAR_20 | Employee |
| | | | | R7 | 01-04-2018 | 31-12-2018 | 3 | UDF_CHAR_1 = Western | UDF_CHAR_20 | Employee |

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type. In addition, the **Rule Based Related Pricing Rule Type Eligibility Field** field is set to **UDF_CHAR_20** and the **Rule Based Eligibility Value** field is set to **Employee** in the CLAIM pricing rule type.

Example 1: Price Item Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for P1 in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers P1 for billing and maps the claim transaction to P1 if an effective pricing rule, account, and active contract are available for P1.

Similarly, the rules which are created using the RT2 rule type are invoked for P2 in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers P2 for billing and maps the claim transaction to P2 if an effective pricing rule, account, and active contract are available for P2.

Self-Funded Billing Process

The **Self-Funded Billing** process consists of the following sub-processes:

- [Transaction Aggregation](#) on page 3115
- [Stop Loss Calculation](#) on page 3120
- [Bill Generation](#) on page 3120

Transaction Aggregation

Once the claim, enrollment, and ancillary transactions are uploaded, you can create billable charges for the following using the **Transaction Aggregation** process in the **Transaction Feed Management (TFM)** module:

- Claim
- Claim Based Fees
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- Ancillary

The transaction calculation lines for specific stop-loss and aggregate stop-loss are created during the **Transaction Aggregation** process. Earlier, the **Transaction Aggregation** process was designed to meet the requirements of the **Payments** and **Financial Services** industries. Now, in addition, it is tuned slightly to meet the requirements of the self-funded health insurance business. The changes are made in the following batches which are executed in the **Transaction Aggregation** process:

- **Validate Transaction and Derive Price Item (C1-TXNIP)** - During this batch execution, the system validates the transaction. If the transaction validation fails due to any reason, the status of the transaction is changed to **Error**. If the transaction validation is successful, the system checks whether a primary pricing rule type is specified in the respective transaction record type. If a primary pricing rule type is not specified in the transaction record type, the system maps the transaction to one or more price item, price item parameters, and account combinations using the rules which are invoked through the rule type. However, if a primary pricing rule type is specified in the transaction record type, the system calls the primary pricing rule type and invokes the algorithms which are attached to the following system events of the primary pricing rule type in the specified sequence:
 1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
 2. **Bill Group Derivation** - For more information, refer to the [Bill Group Derivation](#) on page 3121 section.
 3. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a primary pricing rule types with different category:

| Pricing Rule Type Category | Algorithm | For more information on how the system derives the transaction legs, refer to... |
|---------------------------------|--------------|---|
| Claim | C1_ACCPRIDRV | Account and Price Item Derivation (for the Claim Pricing Rule Type Category) on page 3124 |
| Retention Type Enrollment Based | C1_ACCPRIDRV | Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category) on page 3152 |
| Ancillary | C1_ACCPRIDRV | Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category) on page 3163 |

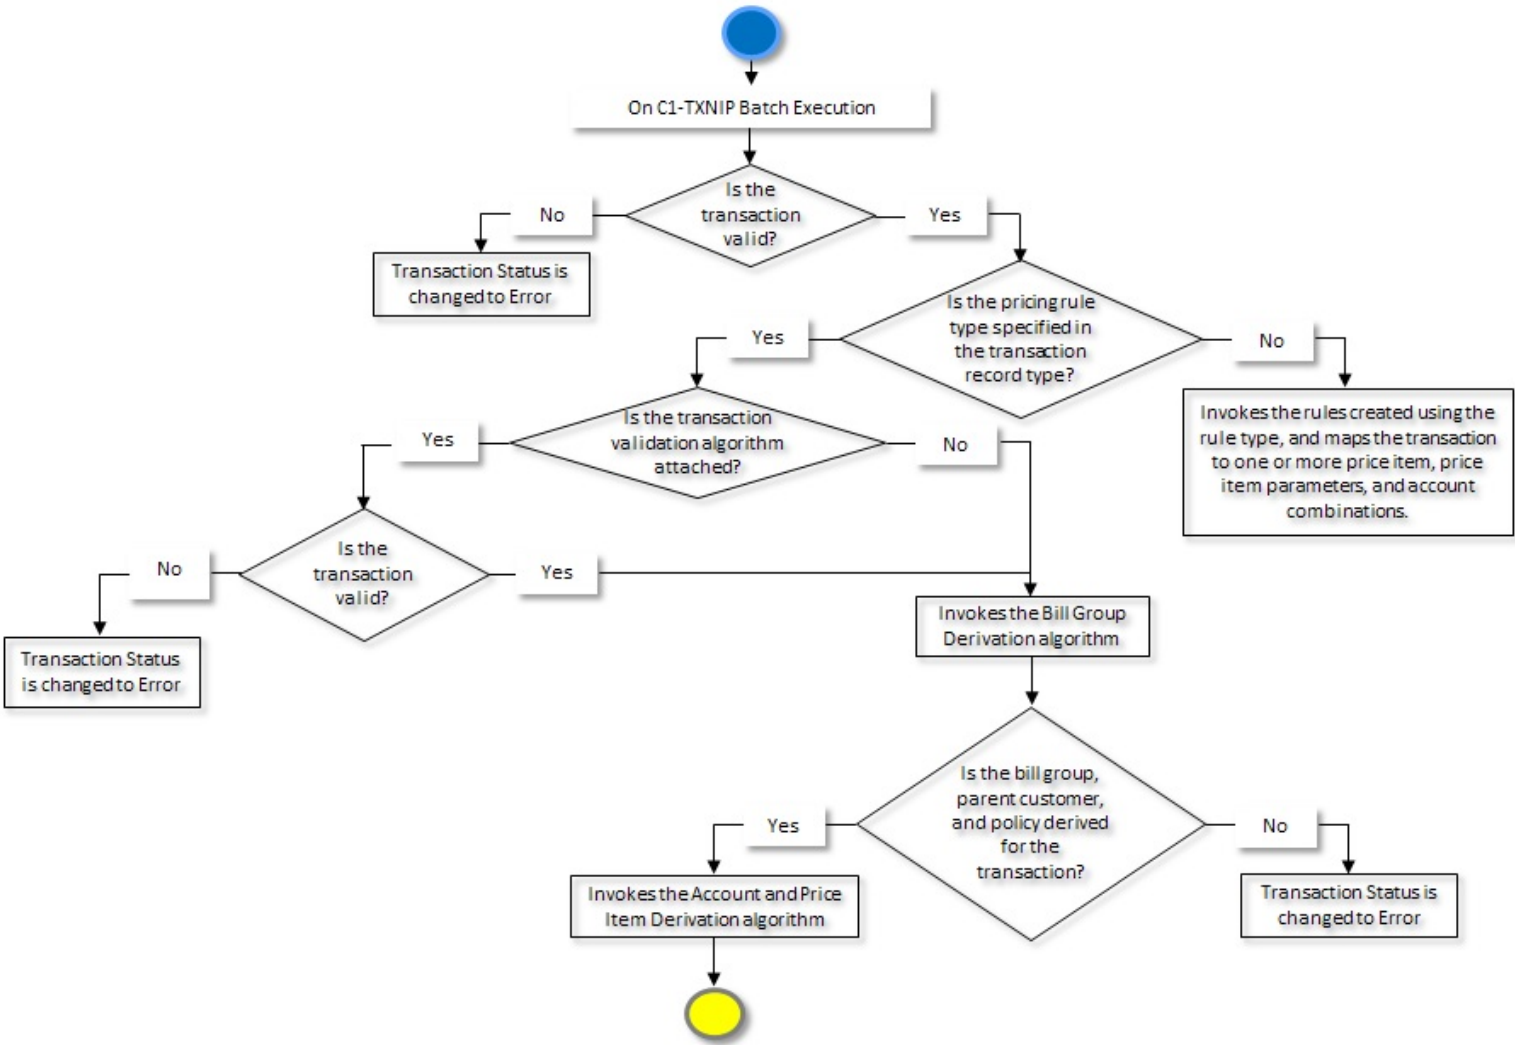

This batch then calls the eligible related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. The system invokes the algorithms which are attached to the following system events of the related pricing rule type in the specified sequence:

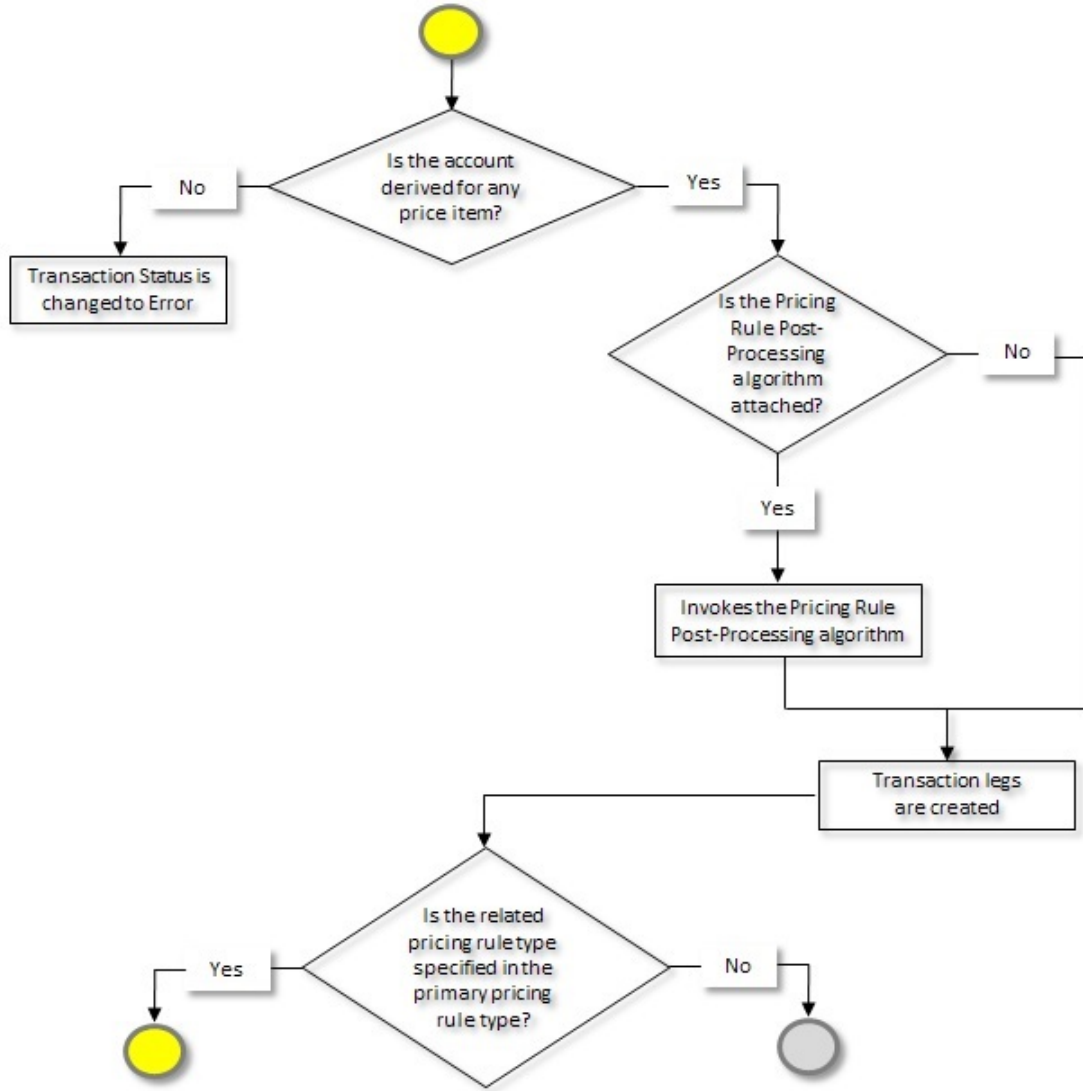

1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
2. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a related pricing rule type with different category:

| Pricing Rule Type Category | Algorithm | For more information on how the system derives the transaction legs, refer to... |
|----------------------------|-------------|--|
| Specific Stop-Loss | C1_ACCPRISL | Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories) on page 3129 |

| Pricing Rule Type Category | Algorithm | For more information on how the system derives the transaction legs, refer to... |
|----------------------------|--------------|---|
| Aggregate Stop-Loss | C1_ACCPRISL | <i>Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</i> on page 3129 |
| Retention Type Claim Based | C1_ACCPRIDRV | <i>Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)</i> on page 3141 |

The following figure graphically explains the execution process of the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch:

- **Price Item Pricing Verification (C1-TXNVP)** - During this batch execution, the system derives an effective pricing for each transaction leg on the processing date. For more information, refer to the [Price Item Pricing Verification](#) on page 1242 section. In addition, the system invokes the algorithms attached to the following algorithm spots of the derived account's division in the specified sequence for the self-funded health insurance business:

1. **TFM - Contract Derivation** - You can attach an algorithm created using the `SA_DERV_POPC` algorithm type to this algorithm spot. If the account has multiple active contracts of the contract type which is associated with the price item, this algorithm derives the contract which is associated with the policy and

maps it to the transaction leg. The manner in which the system derives the active contract for the account differs in the following scenarios:

| If the effective pricing rule stamped against the transaction leg is defined at ... | Then... |
|---|---|
| The bill group level | The system first fetches the policy derived for the transaction and then derives the active contract which is associated with the policy. |
| The parent customer level | The system first fetches the bill group to which the account belongs and then the policy where the bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. Once the policy is derived, the system derives the active contract which is associated with the policy. |

2. **TFM - Verify Pricing Post-Processing** - You can attach an algorithm created using the **C1-VRPR_POPC** algorithm type to this algorithm spot. This algorithm removes the price assignment ID and price item parameter group ID from the summary ID column of each transaction leg.
- **Service Quantity Calculation (C1-TXNSQ)** - During this batch execution, the system aggregates the transaction legs, creates a billable charge, and updates the SQI values in the billable charge. For more information, refer to the [Aggregation](#) on page 1246 section. In addition, the system invokes the algorithm attached to the following algorithm spot of the derived account's division for the self-funded health insurance business:
 - **TFM - Billable Charge Post Processing** - You can attach an algorithm created using the **C1_BCHG_POPC** algorithm type to this algorithm spot. This algorithm invokes the algorithm which is attached to the **Bill After Date Determination** system event of the respective pricing rule type. For more information, refer to the [Bill After Date Determination](#) on page 3171 section.

Stop Loss Calculation

Oracle Revenue Management and Billing enables you to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the transaction calculation lines for specific stop-loss and aggregate stop-loss are created using the transaction aggregation process, you need to execute the following batches in the specified sequence:

1. Stamp Accumulate After Date Batch (C1-STAAD)
2. Accumulate Specific Stop Loss (C1-ACSSL)
3. Create Specific Stop-Loss Billable Charge (C1-BCSSL)
4. Accumulate Aggregate Stop Loss (C1-ACASL)
5. Create Aggregate Stop-Loss Billable Charge (C1-BCASL)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Bill Generation

Once the billable charges are created for claim, claim based fees, specific stop-loss credits, aggregate stop-loss credits, enrollment based fees, and ancillary, you need to execute the following charge-based billing batches in the specified sequence to generate bills for the self-funded employer:

1. Pending Bill Generation (C1-PNDBL)
2. Bill Segment Generation (C1-BLGEN)

3. Bill Completion (C1-BLPPR)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Bill Group Derivation

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch derives the bill group, parent customer, and policy for the claim, enrollment, and ancillary transactions. This is possible only when an algorithm created using the **C1_TXNBGDRV** algorithm type is attached to the **Bill Group Derivation** system event of the primary pricing rule type. The derived bill group is used for billing the following (if any):

- Claim Charges
- Claim Based Fees
- Specific Stop-Loss (SSL) Credits
- Aggregate Stop-Loss (ASL) Credits
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- One-time or Recurring Fees
- Ancillary Charges

To derive a bill group, the system first determines the derivation date. The paid date is considered as the derivation date while processing the claim transactions. The coverage end date is considered as the derivation date while processing the retroactive enrollment transactions. And, the coverage start date is considered as the derivation date while processing the non-retroactive enrollment transactions. If the system cannot determine the derivation date, the status of the transaction is changed to **Error**.

Depending on the transaction fields which are mapped to source system, parameter 1, parameter 2, parameter 3, and parameter 4 in the primary pricing rule type, the system derives the data from the transaction. For example, if the source system is mapped to the **External System** field, parameter 1 is mapped to the **Location** field, parameter 2 is mapped to the **Designation** field, parameter 3 is mapped to the **Employee Group** field, and parameter 4 is mapped to the **Nationality** field, the system derives these details from the transaction. Based on the data available in the transaction, the system derives a bill group using the derivation and pricing parameters which are defined for the bill group. Note that the system considers the derivation and pricing parameters which are effective on the derivation date. For example, if the following derivation and pricing parameters are defined for the Bill Group 1 and Bill Group 2:

| Bill Group Name | Sort ID | Effective Date | Source System | Parameter 1 | Parameter 2 | Parameter 3 | Parameter 4 |
|-----------------|---------|----------------|---------------|-------------|----------------|-------------|-------------|
| Bill Group 1 | 123 | 01-01-2018 | X | Eastern | Senior Manager | BG1 | Indian |
| Bill Group 1 | 132 | 01-04-2018 | X | Western | Senior Manager | - | - |
| Bill Group 1 | 156 | 01-07-2018 | Y | Eastern | Senior Manager | BG1 | Indian |
| Bill Group 1 | 163 | 01-10-2018 | Y | Western | Senior Manager | - | - |
| Bill Group 2 | 172 | 01-01-2018 | Y | Eastern | - | - | - |
| Bill Group 2 | 181 | 01-04-2018 | Y | Western | - | - | - |
| Bill Group 2 | 122 | 01-07-2018 | X | Eastern | - | - | - |
| Bill Group 2 | 112 | 01-10-2018 | X | Western | - | - | - |

Now, if the system receives a claim transaction with the following details:

- External System is set to X
- Location is set to Western
- Designation is set to Senior Manager
- Paid Date is set to 12-05-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 132 (sort ID) combination are effective on the paid date, and therefore the system derives Bill Group 1 for billing the claim transaction. Let us take another example where the system receives a retroactive enrollment transaction with the following details:

- External System is set to X
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 123 (sort ID) combination are effective on the coverage end date, and therefore the system derives Bill Group 1 for billing the retroactive enrollment transaction.

In the above two examples, the system could find the exact match for the bill group in the system. However, if the exact match is not available, the system finds the bill group using the best fit match. For example, if the system receives a claim transaction with the following details:

- External System is set to Y
- Location is set to Western
- Designation is set to Senior Manager
- Employee Group is set to BG2
- Nationality is set to Indian
- Paid Date is set to 01-06-2018

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Western, Designation = Senior Manager, Employee Group = BG2, and Nationality = Indian) on the paid date. Therefore, it searches for the best fit match.

While searching for the best fit match, the system first rules out the optional parameter 4 (i.e. Nationality = Indian) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, Designation = Senior Manager, and Employee Group = BG2, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 3 (i.e. Employee Group = BG2) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, and Designation = Senior Manager, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 2 (i.e. Designation = Senior Manager) and then checks whether the effective derivation and pricing parameters, where Source System = Y and Location = Western, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the status of the transaction is changed to **Error**.

In this example, the derivation and pricing parameters, where Source System = Y and Location = Western, defined for the Bill Group 2 and 181 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the claim transaction. Let us take another example where the system receives a non-retroactive enrollment transaction with the following details:

- External System is set to Y
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Eastern, Designation = Senior Manager, Employee Group = BG1, and Nationality = Indian) on the coverage start date. Therefore, it searches for the best fit match. The derivation and pricing parameters, where Source System = Y and Location = Eastern, defined for the Bill Group 2 and 172 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the non-retroactive enrollment transaction.

Once the bill group is derived, the system derives the parent customer of the bill group. Once the parent customer is derived, the system derives the policy for the transaction in the following manner:

| If the transaction is a... | Then... |
|--|---|
| Claim Transaction | <p>The system checks whether the paid date of the claim transaction falls within the policy start date and runout end date of any policy where:</p> <ul style="list-style-type: none"> • The bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. • The status of the policy is set to either of the following: <ul style="list-style-type: none"> • In Force/Active • Runout • Post Runout |
| Retroactive Enrollment Transaction | <p>The system checks whether the coverage end date falls within the policy start date and policy end date of any policy where:</p> <ul style="list-style-type: none"> • The bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. • The status of the policy is set to In Force/Active. |
| Non-retroactive Enrollment Transaction | <p>The system checks whether the coverage start date falls within the policy start date and policy end date of any policy where:</p> <ul style="list-style-type: none"> • The bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. • The status of the policy is set to In Force/Active. |

If the system cannot derive the policy for the transaction, the status of the transaction is changed to **Error**.

Account and Price Item Derivation (for the Claim Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

Note: If you have specified the price item parameters (for which the parameter usage is set to **Pricing**) in the pricing rule types where the pricing rule type category is set to **Claim**, the system does not use these price item parameters while searching for an effective pricing rule for the respective price items. However, you can use these price item parameters while defining the accumulation criteria in the related pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.

This algorithm fetches the effective pricing rule for each price item specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date while fetching the effective pricing rules for the claim transactions. This algorithm first searches for the effective pricing rule for a price item which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF_DATE_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

The following table illustrates how the pricing rules are defined for the claim transactions at different assignment levels:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Pricing Rule | Pricing Start Date | Pricing End Date | Assignment Level |
|-------------------------|---------------------------|------------|--------------|--------------------|------------------|------------------|
| TR1 | CLAIM | P1 | C1P1 | 01-01-2018 | 31-12-2018 | Parent Customer |
| | | | C2P1 | 01-01-2018 | 31-12-2018 | Bill Group |
| | | | C3P1 | 01-01-2019 | 30-06-2019 | Bill Group |
| | | P2 | C1P2 | 01-06-2017 | 31-12-2017 | Bill Group |
| | | | C2P2 | 01-01-2018 | 31-12-2018 | Parent Customer |
| | | | C3P2 | 01-01-2019 | 30-06-2019 | Bill Group |

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the paid date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type.

For example, the following table illustrates the accounts to which the charges of P1 and P2 should be billed based on the given priority:

| Price Item | Priority | Invoice Type | Account |
|------------|----------|--------------|---------|
| P1 | 10 | Standard | A1 |
| | 20 | Retention | A2 |
| P2 | 10 | Retention | A2 |
| | 20 | Standard | A1 |

Example 2: Priority Based Account Derivation

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the claim transaction is mapped to the following price item and account combinations:

| Price Item | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|------------|------------------------|---------|-----------------|-----------------|
| P1 | PR1 | A1 | C1 | TL1 |
| P2 | PR2 | A2 | C2 | TL2 |
| P3 | PR3 | A3 | C3 | TL3 |

Example 3: Transaction Leg Derivation

In the example 3, the system creates three transaction legs — TL1, TL2, and TL3 for the transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Claim**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg — TL1, TL2, and TL3.

Note: A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.

- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_DATE_1 is set to 04-06-2018
- Transaction Record Type is set to TR1

For example, the following table illustrates an effective pricing rule which is defined using a claim pricing rule type and where a pricing group is used:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Rule 1 | Rule 2 |
|-------------------------|---------------------------|------------|--------------|--------------------|------------------|---------------|---|---|
| TR1 | CLAIM | PP1 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent | Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent |

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 04-06-2018) of the claim transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Location = Western, Nationality = Indian, Employee Department = HR, and Employee Status = Permanent)

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In the example 4, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_DATE_1 is set to 04-06-2018
- Transaction Record Type is set to TR2

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Rule 1 | Rule 2 |
|-------------------------|---------------------------|------------|--------------|--------------------|------------------|---------------|---|---|
| TR2 | CLM | PP1 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Source System = X and Parameter 1 = Western | Source System = X and Parameter 1 = Eastern |
| | | PP2 | PR2 | 01-01-2018 | 31-12-2018 | PG2 | Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent | Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent |

Note: Here, the source system is mapped to the UDF_CHAR_1 field, the parameter 1 is mapped to the UDF_CHAR_2 field, the parameter 2 is mapped to the UDF_CHAR_3 field, the parameter 3 is mapped to the UDF_CHAR_4 field, the parameter 4 is mapped to the UDF_CHAR_5 field, and the paid date is mapped to the UDF_DATE_1 field in the CLM pricing rule type.

Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match, and therefore fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

Note: We recommend that you should only include the optional aggregation price item parameters in the pricing rule types where the pricing rule type category is set to **Claim**. Otherwise, erroneous results might occur.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

| Price Item | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|------------|------------------------|---------|-----------------|-----------------|
| PP1 | - | - | - | - |
| PP2 | PR2 | - | - | - |
| PP3 | PR3 | A3 | C3 | TL1 |
| PP4 | - | - | - | - |
| PP5 | PR5 | A2 | C1 | TL2 |
| PP6 | PR6 | A1 | - | - |

Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs — TL1 and TL2 for the claim transaction.

If the eligibility rule type is defined of a price item, the system maps the claim transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

| Price Item | Eligibility Criteria Met | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|------------|--------------------------|------------------------|---------|-----------------|-----------------|
| PE1 | Yes | PR1 | A1 | C1 | TL1 |
| PE2 | - | PR2 | - | - | - |
| PE3 | No | - | - | - | - |
| PE4 | Yes | - | - | - | - |
| PE5 | Yes | PR3 | A2 | - | - |
| PE6 | Yes | PR4 | - | - | - |

Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the claim transaction. For more information, refer to the [Price Item Eligibility](#) on page 3114 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

The following table illustrates how related pricing rule types can be sequenced in a claim pricing rule type:

| Primary Pricing Rule Type | Sequence | Related Pricing Rule Type |
|---------------------------|----------|---------------------------|
| CLAIM | 10 | SPECIFIC STOP-LOSS |
| | 20 | AGGREGATE STOP-LOSS |

Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the SPECIFIC STOP-LOSS pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

The following table illustrates a claim pricing rule type where eligibility criteria is considered while deriving transaction legs for the related pricing rule types:

| Primary Pricing Rule Type | Sequence | Related Pricing Rule Type | Eligibility Criteria Met |
|---------------------------|----------|---------------------------|--------------------------|
| CLAIM | 10 | SPECIFIC STOP-LOSS | Yes |
| | 20 | AGGREGATE STOP-LOSS | No |

Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible when you attach an algorithm created using the **C1_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

Note: Ideally, the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss** should not have price item parameters for which the parameter usage is set to **Pricing**. This is because the system will not use these price item parameters while searching for an effective pricing rule for the respective price items.

This algorithm fetches an effective pricing rule for each price item specified in the related pricing rule type. It searches for an effective pricing rule for a price item at the bill group level. It derives an effective pricing rule for each price item using the incurred and paid dates specified in the claim transaction. It fetches an effective pricing rule where the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).

- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For run-in claim transactions, this algorithm fetches an effective pricing rule where the following conditions are met:

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer’s pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to BG1
- UDF_DATE_1 is set to 18-02-2018
- UDF_DATE_2 is set to 28-02-2018
- Transaction Record Type is set to TR1

For example, the following table illustrates the pricing structure defined for various related pricing rules:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Incurred Date Range in Associated Parent Customer’s Pricing Rule | Paid Date Range in Associated Parent Customer’s Pricing Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|--|---|---|
| | | | | | (i.e. in Parent Accumulation Group) | | |
| TR1 | CLAIM | SPECIFIC STOP-LOSS | S1 | C1S1 | 01-01-2017 - 31-12-2017 | 01-01-2017 - 28-02-2018 | Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1 |
| | | | | C2S1 | 01-01-2018 - 31-12-2018 | 01-01-2018 - 28-02-2019 | Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1 |
| | | | | | | Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1 | |
| | | | S2 | C1S2 | 01-01-2017 - 31-12-2017 | 01-01-2017 - 28-02-2018 | Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1 |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Incurred Date Range in Associated Parent Customer's Pricing Rule | Paid Date Range in Associated Parent Customer's Pricing Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|--|--|--|
| | | | | | (i.e. in Parent Accumulation Group) | | |
| | | | | C2S2 | 01-01-2018 - 31-12-2018 | 01-01-2018 - 28-02-2019 | Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1 |

Note:

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF_CHAR_1 and Employee Group = UDF_CHAR_2.

Here, the incurred date is mapped to the **UDF_DATE_1** field and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 3: SSL and ASL Effective Pricing Rule Derivation for Claim Transaction

In the example 3, the system fetches the C2S1 and C2S2 pricing rules for S1 and S2, respectively, because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C2S1 and C2S2 pricing rules:
 - Price Item: CLM, Price Item Parameters: Location = Western and Employee Group = BG1

Let us take another example where the system receives a run-in claim transaction with the following details:

- UDF_CHAR_1 is set to Eastern
- UDF_CHAR_3 is set to Active
- UDF_DATE_3 is set to 18-06-2017
- UDF_DATE_4 is set to 01-07-2017
- Transaction Record Type is set to TR2

For example, the following table illustrates the pricing structure defined for various related pricing rules:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Run-in Incurred Date Range in Associated Parent Customer's Pricing Rule | Run-in Paid Date Range in Associated Parent Customer's Pricing Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|---|---|---|
| | | | | | (i.e. in Run-in Accumulation Group) | | |
| TR2 | CLAIM | AGGREGATE STOP-LOSS | AS1 | C1AS1 | 01-01-2017 - 31-12-2017 | 01-01-2017 - 28-02-2018 | Price Item: CLAIM, Price Item Parameters: |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Run-in Incurred Date Range in Associated Parent Customer's Pricing Rule | Run-in Paid Date Range in Associated Parent Customer's Pricing Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|---|---|--|
| | | | | | (i.e. in Run-in Accumulation Group) | | |
| | | | | | | | Location = Eastern, Employee Status = Active |
| | | | | C2AS1 | 01-01-2018 - 31-12-2018 | 01-01-2018 - 28-02-2019 | Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active |
| | | | | | | | Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active |
| | | | AS2 | C1AS2 | 01-01-2017 - 31-12-2017 | 01-01-2017 - 28-02-2018 | Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active |
| | | | | C2AS2 | 01-01-2018 - 31-12-2018 | 01-01-2018 - 28-02-2019 | Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active |

Note:

Price Items in Primary Pricing Rule Type: CLAIM and CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_3. Here, the run-in incurred date is mapped to the UDF_DATE_3 field and the run-in paid date is mapped to the UDF_DATE_4 field in the CLAIM pricing rule type.

Example 4: SSL and ASL Effective Pricing Rule Derivation for Run-in Claim Transaction

In the example 4, the system fetches the C1AS1 and C1AS2 pricing rules for AS1 and AS2, respectively, because of the following reasons:

- Run-in incurred date mentioned in the claim transaction falls within the run-in incurred date range (i.e. 01-01-2017 - 31-12-2017) defined in the run-in accumulation group.

- Run-in paid date mentioned in the claim transaction falls within the run-in paid date range (i.e. 01-01-2017 - 28-02-2018) defined in the run-in accumulation group.
- An effective pricing rule exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C1AS1 and C1AS2 pricing rules:
 - Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
 - Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active

The system then checks whether the ASSL Credit Account (in case of specific stop-loss pricing rule) and ASL Credit Account (in case of aggregate stop-loss pricing rule) is specified in the associated parent customer's pricing rule. If so, the system considers the respective account for billing. Otherwise, the system derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type.

For example, the following table illustrates the accounts to which the charges of S1 and S2 should be billed based on the given priority:

| Related Pricing Rule Type | Price Item | Priority | Invoice Type | Account |
|---------------------------|------------|----------|--------------|---------|
| SPECIFIC STOP-LOSS | S1 | 10 | Standard | A1 |
| | | 20 | Retention | A2 |
| | S2 | 10 | Retention | A2 |
| | | 20 | Standard | A1 |

Example 5: Priority Based Account Derivation

In the example 5, while mapping the claim transaction to S1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to S2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination.

For example, the following table illustrates how the related transaction legs are created for each price item, price item parameters, and account combination:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|-------------------------|---------------------------|---------------------------|---|------------------------|---------|-----------------|-----------------|
| TR1 | CLAIM | SPECIFIC STOP-LOSS | S3 | PRS3 | A1 | C3 | TL3 |
| | | | S4 | PRS4 | A2 | C4 | TL4 |

Example 6: Transaction Leg Derivation

In the example 6, the system creates two transaction legs — TL3 and TL4 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** and **Aggregate Stop-Loss**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg — TL3 and TL4.

Note: A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).
- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Similarly, the system will fetch the pricing rule for a run-in claim transaction when the following conditions are met:

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer's pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the run-in claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 31-12-2018

- UDF_DATE_2 is set to 28-02-2019
- Transaction Record Type is set to TR1

For example, the following table illustrates an effective related pricing rule which is defined using a specific stop-loss pricing rule type and where a pricing group is used:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Incurred Date Range in Associated Parent Customer's Pricing Rule | Paid Date Range in Associated Parent Customer's Pricing Rule | Pricing Group | Pricing Group Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|--|--|---------------|--|---|
| | | | | | (i.e. in Parent Accumulation Group) | | | | |
| TR1 | CLAIM | SPECIFIC STOP-LOSS | S1 | PR1 | 01-01-2018 - 31-12-2018 | 01-01-2018 - 28-02-2019 | PG1 | Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1 |
| | | | | | | | | Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG2 |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter | Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1 |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Incurred Date Range in Associated Parent Customer's Pricing Rule | Paid Date Range in Associated Parent Customer's Pricing Rule | Pricing Group | Pricing Group Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|--|--|---------------|--|---|
| | | | | | (i.e. in Parent Accumulation Group) | | | | |
| | | | | | | | | 3 = HR, and Parameter 4 = Permanent) | |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG2 |

Note:

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF_CHAR_6 and Employee Group = UDF_CHAR_7.

Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the incurred date is mapped to the **UDF_DATE_1** field, and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 7: Effective Pricing Rule is Defined Using a Pricing Group

In the example 7, the system considers the PR1 pricing rule for S1 because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:
 - Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLNG** feature configuration. In the example 7, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 7, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 06-06-2018
- UDF_DATE_2 is set to 27-06-2018
- Transaction Record Type is set to TR2

For example, the following table illustrates the effective related pricing rules which are available during the best fit match:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Incurred Date Range in Associated Parent Customer's Pricing Rule | Paid Date Range in Associated Parent Customer's Pricing Rule | Pricing Group | Pricing Group Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|--|--|---------------|---|---|
| | | | | | (i.e. in Parent Accumulation Group) | | | | |
| TR2 | CLAIM | SPECIFIC STOP-LOSS | S1 | PR1 | 01-01-2018 - 31-12-2018 | 01-01-2018 - 28-02-2019 | PG1 | Rule 1 (where Source System = X and Parameter 1 = Western) | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1 |
| | | | | | | | | Rule 1 (where Source System = X and Parameter 1 = Western) | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2 |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Incurred Date Range in Associated Parent Customer's Pricing Rule | Paid Date Range in Associated Parent Customer's Pricing Rule | Pricing Group | Pricing Group Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|--|--|---------------|--|--|
| | | | | | (i.e. in Parent Accumulation Group) | | | | |
| | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1 |
| | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2 |
| | | | S2 | PR2 | 01-01-2018 - 31-12-2018 | 01-01-2018 - 28-02-2019 | PG2 | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2 |
| | | | | | | | | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1 |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Incurred Date Range in Associated Parent Customer's Pricing Rule | Paid Date Range in Associated Parent Customer's Pricing Rule | Pricing Group | Pricing Group Rule | Accumulation Criteria |
|-------------------------|---------------------------|---------------------------|---|--------------|--|--|---------------|--|--|
| | | | | | (i.e. in Parent Accumulation Group) | | | | |
| | | | | | | | | 3 = HR, and Parameter 4 = Permanent) | |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2 |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1 |

Note:

Price Item in Primary Pricing Rule Type: CLAIM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF_CHAR_6 and Employee Group = UDF_CHAR_7.

Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the incurred date is mapped to the **UDF_DATE_1** field, and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 8: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 8, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for S1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 8, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for S1. In addition, a transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:

- Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1

Therefore, the system fetches PR1 as the effective pricing rule for S1. In addition, the system fetches PR2 as the effective pricing rule for S2. The system creates two price item parameter groups — One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

| Related Pricing Rule Type | Price Item | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|---------------------------|------------|------------------------|---------|-----------------|-----------------|
| AGGREGATE STOP-LOSS | AS11 | - | - | - | - |
| | AS12 | PR12 | A1 | C1 | TL11 |
| | AS13 | PR13 | - | - | - |
| | AS14 | PR14 | A2 | - | - |
| | AS15 | PR15 | - | - | - |
| | AS16 | - | - | - | - |
| | AS17 | PR17 | A2 | C2 | TL12 |

Example 9: No. of Transaction Legs Derived

In the example 9, the system could not find the effective pricing rule for AS11 and AS16, the required account for AS13 and AS15, and the active contract for AS14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing.

For example, the following table illustrates the related pricing rule types where eligibility criteria is considered while deriving transaction legs for the price items:

| Sequence | Related Pricing Rule Type | Rule Type Eligibility Criteria Met | Price Item | Price Item Eligibility Criteria Met | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|----------|---------------------------|------------------------------------|------------|-------------------------------------|------------------------|---------|-----------------|-----------------|
| 10 | SPECIFIC STOP-LOSS | Yes | SS1 | Yes | PR1 | A1 | C1 | TL1 |
| | | | SS2 | - | PR2 | A2 | C2 | TL2 |
| | | | SS3 | No | - | - | - | - |
| 20 | AGGREGATE STOP-LOSS | No | AS4 | - | - | - | - | - |
| | | | AS5 | - | - | - | - | - |
| | | | AS6 | - | - | - | - | - |

Example 10: Price Item Eligibility for Transaction Leg Derivation

In the example 10, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for SS1 was satisfied, but the eligibility criteria for SS3 was not satisfied. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the [Related Pricing Rule Type Eligibility](#) on page 3112 and [Price Item Eligibility](#) on page 3114 sections, respectively.

Once a transaction leg is created, the effective pricing rule's start date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

The following table illustrates how related pricing rule types can be sequenced in a claim pricing rule type:

| Primary Pricing Rule Type | Sequence | Related Pricing Rule Type |
|---------------------------|----------|----------------------------|
| CLAIM | 10 | RETENTION TYPE CLAIM BASED |
| | 20 | SPECIFIC STOP-LOSS |
| | 30 | AGGREGATE STOP-LOSS |

Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the RETENTION TYPE CLAIM BASED pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

The following table illustrates a claim pricing rule type where eligibility criteria is considered while deriving transaction legs for the related pricing rule types:

| Primary Pricing Rule Type | Sequence | Related Pricing Rule Type | Eligibility Criteria Met |
|---------------------------|----------|----------------------------|--------------------------|
| CLAIM | 10 | RETENTION TYPE CLAIM BASED | Yes |
| | 20 | CLAIM BASED FEES | - |
| | 30 | CLAIM FEE CHARGES | No |

Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible when you attach an algorithm created using the **C1_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the related pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF_DATE_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

The following table illustrates how the related pricing rules are defined for the claim transactions at different assignment levels:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Assignment Level |
|-------------------------|---------------------------|----------------------------|---|--------------|--------------------|------------------|------------------|
| TR1 | CLAIM | RETENTION TYPE CLAIM BASED | P3 | C1P3 | 01-01-2018 | 31-12-2018 | Parent Customer |
| | | | | C2P3 | 01-01-2018 | 31-12-2018 | Bill Group |
| | | | P4 | C1P4 | 01-01-2018 | 31-12-2018 | Parent Customer |
| | | | | C2P4 | 01-01-2019 | 30-06-2019 | Bill Group |

Note: Here, the paid date is mapped to the UDF_DATE_1 field in the CLAIM pricing rule type.

Example 3: Effective Pricing Rule Derivation

In the example 3, the system fetches C2P3 and C1P4 pricing rules for P3 and P4 respectively, which are effective on the paid date. Note that the effective pricing rule for P3 is derived at the bill group level, whereas the effective pricing rule for P4 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for the exact match for the price item parameters at both the levels. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_DATE_1 is set to 20-03-2018
- Transaction Record Type is set to TR4

The following table illustrates an example where the system fetches the effective related pricing rules for a claim transaction at different assignment levels using the exact match option:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Price Item Parameters in Pricing Rule | Fees | Assignment Level | |
|-------------------------|---------------------------|---------------------------|---|--|--------------|--------------------|------------------|--|------|------------------|------------|
| TR4 | CLAIM | CLAIM BASED CHARGES | P1 | Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2 | C1P1 | 01-01-2018 | 31-12-2018 | Location = Western and Employee Status = Active | \$10 | Parent Customer | |
| | | | | | | | | Location = Eastern and Employee Status = Active | \$12 | | |
| | | | | | | | | Location = Eastern and Employee Status = Retired | \$11 | | |
| | | | | | | | | Location = Western and Employee Status = Retired | \$9 | | |
| | | | | | C2P1 | 01-01-2018 | 31-12-2018 | Location = Western and Employee Status = Active | \$8 | | Bill Group |
| | | | | | | | | Location = Eastern and Employee Status = Active | \$9 | | |
| | | | | | | | | Location = Eastern and Employee Status = Retired | \$10 | | |
| | | | | | | | | Location = Western and Employee Status = Retired | \$9 | | |

Note: Here, the paid date is mapped to the UDF_DATE_1 field in the CLAIM pricing rule type.

Example 4: Exact Match for Price Item Parameters

In the example 4, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The paid date (i.e. 20-03-2018) of the claim transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

If the system cannot find the exact match for the price item parameters at both the levels, it searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_CHAR_4 is set to Indian
- UDF_DATE_1 is set to 07-06-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates the effective related pricing rules which are available during the best fit match:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Price Item Parameters in Pricing Rule | Fees | Assignment Level |
|-------------------------|---------------------------|----------------------------|---|---|--------------|--------------------|------------------|--|------|------------------|
| TR5 | CLAIM | RETENTION CLAIM BASED FEES | P3 | Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4 | C1P3 | 01-01-2018 | 31-12-2018 | Location = Western and Employee Status = Active | \$10 | Bill Group |
| | | | | | | | | Location = Eastern and Employee Status = Active | \$12 | |
| | | | | | | | | Location = Eastern and Employee Status = Retired | \$11 | |
| | | | | | | | | Location = Western and Employee Status = Retired | \$9 | |

Note: Here, the paid date is mapped to the UDF_DATE_1 field in the CLAIM pricing rule type.

Example 5: Best Fit Match for Price Item Parameters

Note: The **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

In the example 5, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the

optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While fetching the effective pricing rule, the system considers only those price item parameters specified in the related pricing rule type for which the parameter usage is set to **Pricing**.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type.

For example, the following table illustrates the accounts to which the charges of P3 and P4 should be billed based on the given priority:

| Related Pricing Rule Type | Price Item | Priority | Invoice Type | Account |
|----------------------------|------------|----------|--------------|---------|
| RETENTION TYPE CLAIM BASED | P3 | 10 | Standard | A1 |
| | P4 | 10 | Retention | A2 |
| | | 20 | Standard | A1 |

Example 6: Priority Based Account Derivation

In the example 6, while mapping the claim transaction to P3, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P4, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_DATE_1 is set to 03-01-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates how the related transaction legs are created for each price item, price item parameters, and account combination:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Effective Pricing Rule | Best Fit Match for Price Item Parameters in Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|-------------------------|---------------------------|---------------------------|---|---|------------------------|--|---------|-----------------|-----------------|
| TR5 | CLAIM | CLAIM BASED FEES | P1 | Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4 | PR1 | Location = Western and Employee Status = Active | A1 | C1 | TL1 |
| | | | P2 | | PR2 | Location = Western and Employee Status = Active | A2 | C2 | TL2 |
| | | | P3 | | PR3 | Location = Western and Employee Status = Active | A3 | C3 | TL3 |

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 7: Transaction Leg Derivation

In the example 7, the system maps the claim transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

Note: The nationality information of an employee is not received in the **UDF_CHAR_4** field, and therefore the claim transaction is not mapped to the **Nationality** price item parameter.

In the example 7, the system creates three transaction legs — TL1, TL2, and TL3 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 7, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the related pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.
- The employee attributes specified in the claim transaction match the price item parameters defined within the satisfied rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 s set to BG1
- UDF_DATE_1 03-01-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates an effective related pricing rule which is defined using a retention type claim based pricing rule type and where a pricing group is used:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters | Fees |
|-------------------------|---------------------------|---------------------------|---|---|--------------|--------------------|------------------|---------------|--|---|------|
| TR6 | CLAIM | CLAIM BASED FEES | PP1 | Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager and Employee Group = BG1 | \$10 |
| | | | | | | | | | Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager and Employee Group = BG2 | \$12 |
| | | | | | | | | | Rule 2 (where | Designation = Senior | \$8 |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters | Fees |
|-------------------------|---------------------------|---------------------------|---|--|--------------|--------------------|------------------|---------------|--|---|------|
| | | | | | | | | | Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Manager and Employee Group = BG1 | |
| | | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager and Employee Group = BG2 | \$9 |

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 8: Effective Pricing Rule is Defined Using a Pricing Group

In the example 8, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 03-01-2018) of the claim transaction falls within the PR1 pricing rule’s date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The employee attributes specified in the claim transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 8, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the

system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates the effective related pricing rules which are available during the best fit match:

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters in Pricing Rule | Fees |
|-------------------------|---------------------------|---------------------------|---|---|--------------|--------------------|------------------|---------------|--|--|------|
| TR6 | CLAIM | CLAIM BASED FEES | PP1 | Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Rule 1 (where Source System = X and Parameter 1 = Western) | Designation = Senior Manager; Employee Group = BG1 | \$20 |
| | | | | | | | | | Rule 1 (where Source System = X and Parameter 1 = Western) | Designation = Senior Manager; Employee Group = BG2 | \$21 |
| | | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Designation = Senior Manager; Employee Group = BG1 | \$18 |
| | | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Designation = Senior Manager; Employee Group = BG2 | \$19 |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters in Pricing Rule | Fees |
|-------------------------|---------------------------|---------------------------|---|--|--------------|--------------------|------------------|---------------|--|--|------|
| | | | PP2 | | PR2 | 01-01-2018 | 31-12-2018 | PG2 | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager; Employee Group = BG2 | \$5 |
| | | | | | | | | | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager; Employee Group = BG1 | \$5 |
| | | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager; Employee Group = BG2 | \$6 |
| | | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter | Designation = Senior Manager; Employee Group = BG1 | \$9 |

| Transaction Record Type | Primary Pricing Rule Type | Related Pricing Rule Type | Price Item in Related Pricing Rule Type | Price Item Parameters in Related Pricing Rule Type | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters in Pricing Rule | Fees |
|-------------------------|---------------------------|---------------------------|---|--|--------------|--------------------|------------------|---------------|--|---------------------------------------|------|
| | | | | | | | | | 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | | |

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 9: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 9, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 9, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the claim transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within the Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

| Related Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|----------------------------|------------|--|------------------------|---------|-----------------|-----------------|
| RETENTION TYPE CLAIM BASED | PP11 | Designation = UDF_CHAR_6, Employee Status = UDF_CHAR_7 | - | - | - | - |
| | PP12 | | PR12 | A1 | C1 | TL11 |
| | PP13 | | PR13 | - | - | - |
| | PP14 | | PR14 | A2 | - | - |
| | PP15 | | PR15 | - | - | - |

| Related Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|---------------------------|------------|-----------------------|------------------------|---------|-----------------|-----------------|
| | PP16 | | - | - | - | - |
| | PP17 | | PR17 | A2 | C2 | TL12 |

Example 10: No. of Transaction Legs Derived

In the example 10, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing.

For example, the following table illustrates a claim pricing rule type where eligibility criteria is considered while deriving transaction legs for the related pricing rule types:

| Sequence | Related Pricing Rule Type | Rule Type Eligibility Criteria Met | Price Item | Price Item Eligibility Criteria Met | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|----------|----------------------------|------------------------------------|------------|-------------------------------------|------------------------|---------|-----------------|-----------------|
| 10 | RETENTION TYPE CLAIM BASED | Yes | PE1 | Yes | PR1 | A1 | C1 | TL1 |
| | | | PE2 | - | PR2 | A2 | - | - |
| | | | PE3 | No | - | - | - | - |
| 20 | CLAIM BASED FEES | - | PE4 | - | PR3 | A1 | C2 | TL2 |
| | | | PE5 | Yes | PR4 | - | - | - |
| | | | PE6 | No | - | - | - | - |
| 30 | CLAIM FEE CHARGES | No | PE7 | - | - | - | - | - |
| | | | PE8 | - | - | - | - | - |
| | | | PE9 | - | - | - | - | - |

Example 11: Price Item Eligibility for Transaction Leg Derivation

In the example 11, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for PE1 and PE5 was satisfied, but the eligibility criteria for PE3 and PE6 was not satisfied. Further, the system could not find the required account for PE5 and the active contract for PE2 on A2. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the [Related Pricing Rule Type Eligibility](#) on page 3112 and [Price Item Eligibility](#) on page 3114 sections, respectively.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps the retroactive and non-retroactive enrollment transactions to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible only when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the coverage end date and coverage start date as the derivation date while fetching the effective pricing rules for the retroactive and non-retroactive enrollment transactions, respectively. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF_DATE_1 is set to 01-02-2018
- UDF_DATE_2 is set to 28-02-2018
- Transaction Record Type is set to TR3

The following table illustrates how the pricing rules are defined for the enrollment transactions at different assignment levels:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Pricing Rule | Pricing Start Date | Pricing End Date | Assignment Level |
|-------------------------|---------------------------------|------------|--------------|--------------------|------------------|------------------|
| TR3 | RETENTION TYPE ENROLLMENT BASED | P1 | C1P1 | 01-01-2018 | 31-12-2018 | Parent Customer |
| | | | C2P1 | 01-01-2018 | 31-12-2018 | Bill Group |
| | | | C3P1 | 01-01-2019 | 30-06-2019 | Bill Group |
| | | P2 | C1P2 | 01-06-2017 | 31-12-2017 | Bill Group |
| | | | C2P2 | 01-01-2018 | 31-12-2018 | Parent Customer |
| | | | C3P2 | 01-01-2019 | 30-06-2019 | Bill Group |

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the RETENTION TYPE ENROLLMENT BASED pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the coverage start date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for exact match for the price item parameters at both the levels. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR4

The following table illustrates the effective pricing rules which are available at different assignment levels for an enrollment transaction during the exact match:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Price Item Parameters in Pricing Rule | Fees | Assignment Level | |
|-------------------------|---------------------------|------------|--|--------------|--------------------|------------------|--|------|------------------|------------|
| TR4 | ENROLLMENT BASED FEES | P1 | Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2 | C1P1 | 01-01-2018 | 31-12-2018 | Location = Western and Employee Status = Active | \$10 | Parent Customer | |
| | | | | | | | Location = Eastern and Employee Status = Active | \$12 | | |
| | | | | | | | Location = Eastern and Employee Status = Retired | \$11 | | |
| | | | | | | | Location = Western and Employee Status = Retired | \$9 | | |
| | | | | C2P1 | 01-01-2018 | 31-12-2018 | Location = Western and Employee Status = Active | \$8 | | Bill Group |
| | | | | | | | Location = Eastern and Employee Status = Active | \$9 | | |
| | | | | | | | Location = Eastern and Employee Status = Retired | \$10 | | |
| | | | | | | | Location = Western and Employee Status = Retired | \$9 | | |

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 2: Exact Match for Price Item Parameters

In the example 2, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

If the system cannot find the exact match for the price item parameters at both the levels, the system searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active

- UDF_CHAR_3 is set to HR
- UDF_CHAR_4 is set to Indian
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Price Item Parameters in Pricing Rule | Fees | Assignment Level |
|-------------------------|---------------------------|------------|--|--------------|--------------------|------------------|--|------|------------------|
| TR5 | ENROLLMENT BASED CHARGES | P3 | Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4 | C1P3 | 01-01-2018 | 31-12-2018 | Location = Western and Employee Status = Active | \$10 | Bill Group |
| | | | | | | | Location = Eastern and Employee Status = Active | \$12 | |
| | | | | | | | Location = Eastern and Employee Status = Retired | \$11 | |
| | | | | | | | Location = Western and Employee Status = Retired | \$9 | |

Note:

Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED CHARGES pricing rule type.

Here, the **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

Example 3: Best Fit Match for Price Item Parameters

In the example 3, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 3, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While fetching the effective pricing rule, the system considers only those price item parameters specified in the primary pricing rule type for which the parameter usage is set to **Pricing**. For retroactive enrollment transactions, the system considers only those effective pricing rules where the **Exempt Retro Transactions** option is not selected.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type.

For example, the following table illustrates the accounts to which the charges of P1 and P2 should be billed based on the given priority:

| Price Item | Priority | Invoice Type | Account |
|------------|----------|--------------|---------|
| P1 | 10 | Standard | A1 |
| | 20 | Retention | A2 |
| P2 | 10 | Retention | A2 |
| | 20 | Standard | A1 |

Example 4: Priority Based Account Derivation

In the example 4, while mapping the enrollment transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the enrollment transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Best Fit Match for Price Item Parameters in Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|-------------------------|---------------------------|------------|--|------------------------|--|---------|-----------------|-----------------|
| TR5 | ENROLLMENT BASED FEES | P1 | Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department | PR1 | Location = Western and Employee Status = Active | A1 | C1 | TL1 |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Best Fit Match for Price Item Parameters in Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|-------------------------|---------------------------|------------|--|------------------------|--|---------|-----------------|-----------------|
| | | P2 | = UDF_CHAR_3, and Nationality = UDF_CHAR_4 | PR2 | Location = Western and Employee Status = Active | A2 | C2 | TL2 |
| | | P3 | | PR3 | Location = Western and Employee Status = Active | A3 | C3 | TL3 |

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 5: Transaction Leg Derivation

In the example 5, the system maps the non-retroactive enrollment transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

Note: The nationality information of an employee is not received in the **UDF_CHAR_4** field, and therefore the non-retroactive enrollment transaction is not mapped to the **Nationality** price item parameter.

In the example 5, the system creates three transaction legs — TL1, TL2, and TL3 for the non-retroactive enrollment transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 5, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the pricing rule type for which the parameter usage is set to **Pricing**.

The following table describes how the system fetches a pricing rule when a pricing group is used while defining the pricing rule for a bill group:

| If the transaction is a... | Then the system fetches the pricing rule when the following conditions are met... |
|--|---|
| Retroactive enrollment transaction | <ul style="list-style-type: none"> The coverage end date of the retroactive enrollment transaction falls within the pricing rule's date range. The exact or best fit match is available for the price item parameters in the effective pricing rule. The retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule. |
| Non-retroactive enrollment transaction | <ul style="list-style-type: none"> The coverage start date of the non-retroactive enrollment transaction falls within the pricing rule's date range. The exact or best fit match is available for the price item parameters in the effective pricing rule. The non-retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule. |

Let us understand this with the help of an example. A retroactive enrollment transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates an effective pricing rule which is defined using a retention type enrollment based pricing rule type and where a pricing group is used:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters | Fees |
|-------------------------|---------------------------|------------|---|--------------|--------------------|------------------|---------------|--|---|------|
| TR6 | ENROLLMENT BASED FEES | PP1 | Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager and Employee Group = BG1 | \$10 |
| | | | | | | | | Rule 1 (where Source System | = Senior Manager and | \$12 |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters | Fees |
|-------------------------|---------------------------|------------|-----------------------|--------------|--------------------|------------------|---------------|--|---|------|
| | | | | | | | | = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Employee Group = BG2 | |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager and Employee Group = BG1 | \$8 |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager and Employee Group = BG2 | \$9 |

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the coverage start date is mapped to the **UDF_DATE_1** field, and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 6: Effective Pricing Rule is Defined Using a Pricing Group

In the example 6, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the retroactive enrollment transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)
- The employee attributes specified in the retroactive enrollment transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 6, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A non-retroactive enrollment transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 01-05-2018
- UDF_DATE_2 is set to 31-05-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters in Pricing Rule | Fees |
|-------------------------|---------------------------|------------|---|--------------|--------------------|------------------|---------------|--|--|------|
| TR6 | ENROLLMENT BASED FEES | PP1 | Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Rule 1 (where Source System = X and Parameter 1 = Western) | Designation = Senior Manager; Employee Group = BG1 | \$20 |
| | | | | | | | | Rule 1 (where Source System = X and Parameter 1 = Western) | Designation = Senior Manager; Employee Group = BG2 | \$21 |
| | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Designation = Senior Manager; Employee Group = BG1 | \$18 |
| | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Designation = Senior Manager; Employee Group = BG1 | \$19 |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters in Pricing Rule | Fees |
|-------------------------|---------------------------|------------|-----------------------|--------------|--------------------|------------------|---------------|--|--|------|
| | | | | | | | | = X and Parameter 1 = Eastern) | Group = BG2 | |
| | | PP2 | | PR2 | 01-01-2018 | 31-12-2018 | PG2 | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager; Employee Group = BG2 | \$5 |
| | | | | | | | | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager; Employee Group = BG1 | \$5 |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Designation = Senior Manager; Employee Group = BG2 | \$6 |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and | Designation = Senior Manager; Employee Group = BG1 | \$9 |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Price Item Parameters in Pricing Rule | Fees |
|-------------------------|---------------------------|------------|-----------------------|--------------|--------------------|------------------|---------------|--------------------------|---------------------------------------|------|
| | | | | | | | | Parameter 4 = Permanent) | | |

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the coverage start date is mapped to the **UDF_DATE_1** field, and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 7: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 7, the system could not find exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 7, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the non-retroactive enrollment transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

| Primary Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|---------------------------|------------|--|------------------------|---------|-----------------|-----------------|
| ENROLLMENT BASED FEES | PP1 | Designation = UDF_CHAR_6, Employee Status = UDF_CHAR_7 | - | - | - | - |
| | PP2 | | PR2 | - | - | - |
| | PP3 | | PR3 | A3 | C3 | TL1 |
| | PP4 | | - | - | - | - |
| | PP5 | | PR5 | A2 | C1 | TL2 |
| | PP6 | | PR6 | A1 | - | - |

Example 8: No. of Transaction Legs Derived

In the example 8, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs — TL1 and TL2 for the enrollment transaction.

If the eligibility rule type is defined of a price item, the system maps the enrollment transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

| Price Item | Eligibility Criteria Met | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|------------|--------------------------|------------------------|---------|-----------------|-----------------|
| PE1 | Yes | PR1 | A1 | C1 | TL1 |
| PE2 | - | PR2 | - | - | - |
| PE3 | No | - | - | - | - |
| PE4 | Yes | - | - | - | - |
| PE5 | Yes | PR3 | A2 | - | - |
| PE6 | Yes | PR4 | - | - | - |

Example 9: Price Item Eligibility for Transaction Leg Derivation

In the example 9, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the enrollment transaction. For more information, refer to the [Price Item Eligibility](#) on page 3114 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps an ancillary transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives an ancillary transaction with the following details:

- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

The following table illustrates how the pricing rules are defined for the ancillary transactions at different assignment levels:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Arrangement | Assignment Level |
|-------------------------|---------------------------|------------|---|--------------|--------------------|------------------|-----------------------------|------------------|
| TR1 | ANCILLARY | PI | BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7 | C1P1 | 01-01-2018 | 31-12-2018 | Pass Through without Markup | Parent Customer |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Arrangement | Assignment Level |
|-------------------------|---------------------------|------------|-----------------------|--------------|--------------------|------------------|---|------------------|
| | | | | | | | or Markdown | |
| | | | | C2P1 | 01-01-2018 | 31-12-2018 | Pass Through without Markup or Markdown | Bill Group |
| | | | | C3P1 | 01-01-2018 | 31-12-2018 | Pass Through without Markup or Markdown | Bill Group |
| | | P2 | | C1P2 | 01-06-2017 | 31-12-2017 | Pass Through without Markup or Markdown | Bill Group |
| | | | | C2P2 | 01-01-2018 | 31-12-2018 | Pass Through without Markup or Markdown | Parent Customer |
| | | | | C3P2 | 01-01-2019 | 30-06-2019 | Pass Through without Markup or Markdown | Bill Group |

Note:

Here, the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type. This means that the system will consider only effective pricing rules where the pricing arrangement is set to **Pass Through without Markup or Markdown** when the ancillary transaction is received where **UDF_CHAR_7** is set to **PASS**.

Here, the paid date is mapped to the **UDF_DATE_1** field in the ANCILLARY pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, because of the following reasons:

- The paid date (i.e. 15-03-2018) of the ancillary transaction falls within the C2P1 and C2P2 pricing rules' date range (i.e. 01-01-2018 to 31-12-2018).
- The pricing arrangement is set to **Pass Through without Markup or Markdown** in the C2P1 and C2P2 pricing rules.

Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

Note: The price item parameters (i.e. BCHGLINETYPE and PRICINGARRANGEMENT) must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLNG** feature configuration, respectively. Otherwise, erroneous results might occur.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type.

For example, the following table illustrates the accounts to which the charges of P1 and P2 should be billed based on the given priority:

| Price Item | Priority | Invoice Type | Account |
|------------|----------|--------------|---------|
| P1 | 10 | Standard | A1 |
| | 20 | Retention | A2 |
| P2 | 10 | Retention | A2 |
| | 20 | Standard | A1 |

Example 2: Priority Based Account Derivation

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (CIINVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (CIINVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (CIINVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (CIINVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **CIINVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives an ancillary transaction with the following details:

- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

For example, the following table illustrates how the ancillary transaction legs are created for each price item, price item parameters, and account combination:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Pricing Arrangement | Account | Active Contract | Transaction Leg |
|-------------------------|---------------------------|------------|---|------------------------|---|---------|-----------------|-----------------|
| TR1 | ANCILLARY | P1 | BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7 | PR1 | Pass Through without Markup or Markdown | A1 | C1 | TL1 |
| | | P2 | | PR2 | Pass Through without | A2 | C2 | TL2 |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Pricing Arrangement | Account | Active Contract | Transaction Leg |
|-------------------------|---------------------------|------------|-----------------------|------------------------|---|---------|-----------------|-----------------|
| | | | | | Markup or Markdown | | | |
| | | P3 | | PR3 | Pass Through without Markup or Markdown | A3 | C3 | TL3 |

Note: Here, the paid date is mapped to the **UDF_DATE_1** field and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

Example 3: Transaction Leg Derivation

In the example 3, the system maps the ancillary transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A1
- Price Item: P2; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A2
- Price Item: P3; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A3

In the example 3, the system creates three transaction legs — TL1, TL2, and TL3 for the ancillary transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 3, the system creates one price item parameter group which contains the following price item parameters:

- BCHGLINETYPE = BC1
- PRICINGARRANGEMENT = PASS

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the primary pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for an ancillary transaction when the following conditions are met:

- The paid date of the ancillary transaction falls within the pricing rule's date range.
- The employee attributes specified in the ancillary transaction match the criteria defined in any one of the pricing group rule.
- The pricing arrangement specified in the ancillary transaction matches the pricing arrangement specified in the pricing rule.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR

- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 26-01-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates an effective pricing rule which is defined using an ancillary pricing rule type and where a pricing group is used:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Pricing Arrangement |
|-------------------------|---------------------------|------------|---|--------------|--------------------|------------------|---------------|--|---|
| TR6 | ANCILLARY | P1 | BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Pass Through without Markup or Markdown |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Pass Through without Markup or Markdown |

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the paid date is mapped to the **UDF_DATE_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the **ANCILLARY** pricing rule type.

Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for P1 because of the following reasons:

- The paid date (i.e. 26-01-2018) of the ancillary transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the ancillary transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 1.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Pricing Arrangement |
|-------------------------|---------------------------|------------|---|--------------|--------------------|------------------|---------------|--|---|
| TR6 | ANCILLARY | PP1 | BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7 | PR1 | 01-01-2018 | 31-12-2018 | PG1 | Rule 1 (where Source System = X and Parameter 1= Western) | Pass Through without Markup or Markdown |
| | | | | | | | | Rule 1 (where Source System = X and Parameter 1 = Western) | Pass Through without Markup or Markdown |
| | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Pass Through without Markup or Markdown |
| | | | | | | | | Rule 2 (where Source System = X and Parameter 1 = Eastern) | Pass Through without Markup or Markdown |

| Transaction Record Type | Primary Pricing Rule Type | Price Item | Price Item Parameters | Pricing Rule | Pricing Start Date | Pricing End Date | Pricing Group | Pricing Group Rule | Pricing Arrangement |
|-------------------------|---------------------------|------------|-----------------------|--------------|--------------------|------------------|---------------|--|---|
| | | PP2 | | PR2 | 01-01-2018 | 31-12-2018 | PG2 | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Pass Through without Markup or Markdown |
| | | | | | | | | Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Pass Through without Markup or Markdown |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Pass Through without Markup or Markdown |
| | | | | | | | | Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) | Pass Through without Markup or Markdown |

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the paid date is mapped to the **UDF_DATE_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 1 and another contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

| Primary Pricing Rule Type | Price Item | Price Item Parameters | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|---------------------------|------------|---|------------------------|---------|-----------------|-----------------|
| ANCILLARY | PP11 | BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7 | - | - | - | - |
| | PP12 | | PR12 | A1 | C1 | TL11 |
| | PP13 | | PR13 | - | - | - |
| | PP14 | | PR14 | A2 | - | - |
| | PP15 | | PR15 | - | - | - |
| | PP16 | | - | - | - | - |
| | PP17 | | PR17 | A2 | C2 | TL12 |

Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined of a price item, the system maps the ancillary transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

| Price Item | Eligibility Criteria Met | Effective Pricing Rule | Account | Active Contract | Transaction Leg |
|------------|--------------------------|------------------------|---------|-----------------|-----------------|
| PE1 | Yes | PR1 | A1 | C1 | TL1 |
| PE2 | - | PR2 | - | - | - |
| PE3 | No | - | - | - | - |
| PE4 | Yes | - | - | - | - |
| PE5 | Yes | PR3 | A2 | - | - |
| PE6 | Yes | PR4 | - | - | - |

Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the ancillary transaction. For more information, refer to the [Price Item Eligibility](#) on page 3114 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Bill After Date Determination

Once the billable charges are created for claim, claim based fees, enrollment based fees, and ancillary, the system enables you to automatically stamp the bill after date in these billable charges. The system can automatically stamp the bill after date in these billable charges when an algorithm created using the **C1_BAFTDRV** algorithm type is attached to the **Bill After Date Determination** system event of the respective pricing rule type. This algorithm sets the bill after date to the end date of the aggregation schedule period in which the transaction date falls. Note that the system considers the aggregation schedule specified in the rate option which is defined for the respective price item. Let us understand this with the help of an example. If the claim transaction with the transaction date set to 25-06-2018 is mapped to the following price item and account combinations:

The following table illustrates the schedule periods defined in an aggregation schedule which is specified in the rate option of a price item:

| Pricing Rule Type | Price Item | Rate Option | Aggregate Transaction | Aggregation Schedule | Schedule Period | Account | Billable Charge |
|-------------------|------------|-------------|-----------------------|----------------------|-------------------------------|---------|-----------------|
| CLAIM | P1 | R01 | Yes | Monthly | 01-01-2018 — 31-01-2018 | A1 | BC1 |
| | | | | | 01-02-2018 — 28-02-2018 | | |
| | | | | | 01-03-2018 — 31-03-2018 | | |
| | | | | | 01-04-2018 — 30-04-2018 | | |
| | | | | | 01-05-2018 — 31-05-2018 | | |
| | | | | | | | |

| Pricing Rule Type | Price Item | Rate Option | Aggregate Transaction | Aggregation Schedule | Schedule Period | Account | Billable Charge |
|-------------------|------------|-------------|-----------------------|----------------------|-------------------------------|---------|-----------------|
| | | | | | 01-06-2018 — 30-06-2018 | | |
| | | | | | 01-07-2018 — 31-07-2018 | | |
| | | | | | 01-08-2018 — 31-08-2018 | | |
| | P2 | R01 | | | 01-09-2018 — 30-09-2018 | A2 | BC2 |
| | | | | | 01-10-2018 — 31-10-2018 | | |
| | | | | | 01-11-2018 — 30-11-2018 | | |
| | | | | | 01-12-2018 — 31-12-2018 | | |
| | P3 | R02 | Yes | Yearly | 01-01-2018 — 31-12-2018 | A3 | BC3 |

Example 1: Bill After Date Determination Using the Aggregation Schedule

In the example 1, the system stamps 30-06-2018 as the bill after date in the BC1 and BC2 billable charges. This is because the transaction date (i.e. 25-06-2018) falls in the 01-06-2018 — 30-06-2018 period of the R01 aggregation schedule.

However, the system stamps 31-12-2018 as the bill after date in the BC3 billable charge. This is because the transaction date (i.e. 25-06-2018) falls in the 01-01-2018 — 31-12-2018 period of the R02 aggregation schedule.

Note: The bill after date for the specific stop-loss and aggregate stop-loss billable charges is calculated using the settlement frequency in the **Create Specific Stop-Loss Billable Charge (C1-BCSSL)** and **Create Aggregate Stop-Loss Billable Charge (C1-BCASL)** batches, respectively.

Advance Billing for Claim Fund Charge

Until now, the system enabled you to configure the pricing for level funding and generate the claim fund charges for a self-funded employer using either of the following approach:

- Flat level funding
- Enrollment based level funding

Now, the system enables you to bill the claim fund charges to a self-funded employer in advance. In case of enrollment based level funding, the system can receive the enrollment transactions for the month of January in the month of December. Once the January enrollment transactions are received in December, the system can create claim fund charges based on the January enrollment in the month of December and accordingly bill the self-funded employer. However, the claim fund charges which are billed in the month of December will be adjusted against the claim, ancillary, or other charges which are eligible for level funding only in the month of January.

To enable this feature, you need to do the following:

- **Set the Advance Level Funding Eligibility Option** – A new field named **Advance Level Funding Eligibility** is available while defining a self-funded policy. You can set the value of the **Advance Level Funding Eligibility** field to either **Yes** or **No**. You can define the **Advance Level Funding Eligibility** field only through a health care inbound message and not from the user interface. When you create a self-funded policy from the user interface, the **Advance Level Funding Eligibility** field is non-editable. By default, the value is set to **No**. You can then change the value through a health care inbound message.
- **Set the Advance Billing Option** – A new field named **Advance Billing** is available while defining a retention type enrollment based pricing rule. You can set the value of the **Advance Billing** field to either **Yes** or **No**.
- **Create a Prospective Bill Period** – You need to create a prospective bill period wherein the bill date falls in a month prior to the month of bill segment end date. For example, if the bill segment end date is 01-31-2021, then you can set the bill date to 12-31-2020. You must use the prospective bill period in the recurring flat fee pricing rule using which you want to create the flat claim fund charge which should be billed in advance.

If the **Advance Level Funding Eligibility** field is set to **Y** through a health care inbound message, the system activates the self-funded policy even if the policy start date is later than the inbound processing date. Accordingly, a log is maintained for the self-funded policy.

On renewing a self-funded policy, the system provides the ability to copy the advance level funding eligibility value of the base policy to the renewed policy. A new field named **Copy Advance Level Funding Eligibility** is available while renewing a self-funded policy. If you select the **Copy Advance Level Funding Eligibility** option, the value is copied from the base policy to the renewed policy. If the **Advance Level Funding Eligibility** field is set to **Y** in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date.

To implement this business requirement, the following changes are made in the system:

- While accumulating the charges which are eligible for level funding, the system behaves in the following manner:
 - In case of advance flat level funding, the system considers only those claim fund bill segments where the end date is earlier than or equal to the accumulation run date and then adjusts the accumulation amount against those claim fund charges which were billed in the previous bill period.
 - In case of advance enrollment based level funding, the system considers the enrollment transactions based on their coverage end date. Only those enrollment transactions where coverage end date is earlier than or equal to the accumulation run date are accumulated and then adjusted against the claim fund charges which were billed earlier.
- If the **Advance Level Funding Eligibility** field is set to **Y** for a self-funded policy and the inbound processing date is earlier than the policy start date, the system sets the contract start date to the first day of the month in which the inbound message is processed. Otherwise, the contract start date is set to policy start date.
- The system determines the bill after date depending on the value set for the **Advance Billing** field in the retention type enrollment based pricing rule. If the **Advance Billing** field is set to **Yes**, then the bill after date is set to accounting date – 1. Here, the accounting date is fetched from the schedule of the account's bill cycle where the transaction date falls. However, if the **Advance Billing** field is set to **No**, then the bill after date is set to accounting date – 1. Here, the accounting date is fetched from the schedule of the account's bill cycle where the transaction's coverage end date falls.

SSL Accumulation across Bill Groups

Specific Stop-Loss (SSL) protects the self-funded employers against the excess claims from a single individual who is a member in the self-funded policy. Oracle Revenue Management and Billing enables the customers to configure the SSL pricing rules wherein the SSL Limit and SSL Payout Limit are defined. For the excess claims from a member, arising on top of the SSL Limit defined for the bill group, the insurer will provide the SSL credits (capped with the SSL Payout Limit) to the self-funded employer.

There can be scenarios in which a member moves from one bill group to another. For example, an employee changes the department or work location. ORMB provides the ability to continue the accumulation of the transaction amount across the bill groups, if both bill groups have the same SSL limit and their accounts have same bill cycle. If the SSL Limits

of the bill groups are different or if the bill groups' accounts have different bill cycles, the accumulation is calculated individually for each bill group based on the respective SSL Limit.

To enable the SSL Accumulation across Bill Groups feature, you need to set the **SSL Member Movement Configuration** option type in the **C1-ASOBLNG** feature configuration to either of the following:

- INDIVIDUAL
- PROPORTIONATE
- CURRENTBG

If you do not set the value for the **SSL Member Movement Configuration** option type in the **C1-ASOBLNG** feature configuration, by default, it is set to **INDIVIDUAL**.

While accumulating the SSL charges for a member, the system checks whether the member is associated with more than one bill group. If so, the system derives the value from the **SSL Member Movement Configuration** option type of the **C1-ASOBLNG** feature configuration to determine the manner in which the SSL credits should be given to the bill groups. If the value of the **SSL Member Movement Configuration** option type is set to **PROPORTIONATE**, the system does weighted distribution of the total SSL credits across the associated bill groups based on the cumulative aggregation amount of each bill group. If the value of the **SSL Member Movement Configuration** option type is set to **CURRENTBG**, the system gives the remaining SSL credits to the present bill group irrespective of the bill group for which the transaction is received. If the value of the **SSL Member Movement Configuration** option type is set to **INDIVIDUAL**, the system accumulates the charges which are eligible for SSL and calculates the SSL credits individually for each bill group based on the respective SSL Limit.

Note: In case of a member who has opted for lasering, the system considers the lasered amount instead of the SSL limit during SSL credit calculation.

Chapter 38

Fully-Insured Pricing

Topics:

- [Age Based Pricing](#)
- [Tier Based Pricing](#)
- [Pass-Through Billable Charge](#)
- [Additional Fee Pricing for COBRA Membership](#)
- [Membership Benefit Pricing](#)
- [Medicare Part A, Part B, and Part D Pricing](#)
- [Discount Charge Pricing for Retiree Membership](#)
- [Pricing Rule Inactivation](#)

A new pricing model is introduced for the fully-insured group and individual businesses. In this pricing model, you can define pricing rules using the pricing rule types. At present, you can define the following pricing rule types for the fully-insured group and individual businesses:

- [Age Based](#)
- [Tier Based](#)

Note: You cannot define pricing rules using the pass-through billable charge pricing rule types. However, you can directly create SQI based billable charges using a pass-through billable charge pricing rule type. For more information, refer to [Pass-Through](#)

- [Additional Fee](#)
- [Membership Benefit](#)
- [Discount Charge](#)

Age Based Pricing

In the Fully-Insured Pricing, the base rate for premium and fees depend upon the age, member attributes (such as employee type, employee status, etc.) and modifiers (such as tobacco usage, gender, alcohol usage, etc.). Oracle Revenue Management and Billing enables you to offer an age based pricing to a fully-insured group and individual customers. In the Age Based pricing, the premium is calculated for each eligible member based on age, member attributes and modifiers, and then aggregated to derive the total premium for the membership. An age based pricing can be defined using the age based pricing rule. You can define an age based pricing rule for a price item on the policy plan. If the age based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the age based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define an age based pricing rule using an age based pricing rule type. It is the age based pricing rule type which helps the system to determine:

- **C1-PricingRuleAgeBased** Business object using which the age based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for a membership.

Note: You must create an algorithm using the **C1-BILLPDRV** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for creating the bill period timeline (based on the derived bill period) for a membership.

Note: You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for calculating the age based premium for a membership.

Note: You must create an algorithm using the **C1_AGEPREM** algorithm type and attach it to the **Premium Calculation** system event.

- Algorithm which should be triggered for identifying eligible member persons for premium calculation.

Note: You must create an algorithm using the **C1_AGEBDELG** algorithm type and attach it to the **Pricing Rule Pre-Processing** system event.

- Algorithm which should be triggered for calculating the premium for each eligible member person.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Billable Charge Creation Post Processing** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

Note: You must create an algorithm using the **C1-AGEPRFC** algorithm type and attach it to the **Pricing Rule Proration Amount Calculation** system event.

- Algorithm which should be triggered to configure skip months for an account.

Note: You must create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)** system event.

- Price items for which you can define age based pricing rules using the age based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership and C1-PERSON business objects using which the audit event should be created whenever a membership or member person is added, updated, or removed from the policy plan.
- Elements of the C1-Membership and C1-PERSON business objects for which audit event should be created.

Note: You must ensure that either the **Update All** option is selected or the elements listed in the age based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

- Members, such as main subscriber, spouse, or children in a membership are eligible for premium calculation.
- Following are the additional dependents attributes which can affect the premium calculation if they are considered as part of pricing rules. These additional attributes are defined as characteristics for the policy plan. You must specify the following characteristic types in the age based pricing rule type:
 - **Maximum Number of Dependents** – This characteristic type stores the maximum number of children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Maximum Age Limit for Maximum Dependent Count** – This characteristic type stores the maximum age limit for children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Maximum Number of Dependents Order Priority** – This characteristic type indicates whether the youngest or eldest children should be considered during premium calculation. Each plan may set a limit to consider the number of dependents, either the eldest or youngest one for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Age Calculation Date Basis** – This characteristic type indicates whether the member person's age should be calculated using the member person's enrollment date or policy's start or renewal date. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Newborn Gift Days** – This characteristic type stores the number of days you want to offer as gift days from the new born child's enrollment date. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Newborn Gift Days Applicability** – This characteristic type indicates whether the gift days should be offered in case of a new born. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Young Adult Max Age Limit** – This characteristic type stores the maximum age limit for young adults which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Young Adult Inclusion Applicability** – This characteristic type indicates whether the young adults should be considered during the premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.

Once an age based pricing rule type is defined, you can define age based pricing rules using the age based pricing rule type. Note that, at present, you can define age based pricing rules only through a health care inbound message and not from the user interface. However, you can view the age based pricing rules defined for a policy plan from the **Customer 360° Information** screen. While creating an age based pricing rule through a health care inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the age based pricing rule
- Start and end dates of the age based pricing rule
- Age based pricing rule type using which you want to create the age based pricing rule
- Price Item for which you want to define age based pricing
- Rate option using which the price assignment should be created for the age based pricing rule

Note: If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option – Flat** or **Default Rate Option – Percentage** option type of the **C1-ASOBLLNG** feature configuration depending on whether the modifier method is set to **FLAT**, **EXPT** or **INPT**.

- Whether you want to increase or decrease the premium of an eligible member by a flat amount or in percentage based on some modifier attributes (such as tobacco usage, alcohol usage, and so on).
- Age limit and employee attributes for which the base fee is applicable

Note:

The system defines the lower age limit and upper age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration.

The employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

- Modifiers based on which you want to charge additional or offer discount to an eligible member

Note: The modifiers can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the age based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

Defining an Age Based Pricing Rule Type

Prerequisites

To define an age based pricing rule type, you should have:

- Age based pricing rule type business object defined in the application.
- Age based pricing rule business object defined in the application.
- Pricing rule type category for the age based defined in the application.

Procedure

To define an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create an age based pricing rule type. Note: You can create an age based pricing rule type using the Age Based Pricing Rule Type business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Age Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an age based pricing rule type.
- **Related Pricing Rule Type** – Used to define the pricing rule types which are related to the age based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- **Algorithms** – Used to associate the algorithms with an age based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for an age based pricing rule type.
- **Event Management** – Used to configure the audit in an age based pricing rule type.
- **Age Based Specific Additional Data** – Used to define the age based specific additional data in an age based pricing rule type.
- **Attribute Characteristic Mapping** – Used to map a characteristic attribute in an age based pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Pricing Rule Type | Used to specify an age based pricing rule type. | Yes |
| Description | Used to specify the description for an age based pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about an age based pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: <ul style="list-style-type: none"> • Age Based Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining an age based pricing rule type. | Not applicable |
| Status | Used to indicate the status of an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Skip Non-Members | Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during age based premium calculation. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| Pricing Rule Type Category | Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Age Based | Yes |

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the age based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Associate the required algorithms with the age based pricing rule type.
- Add the required price items in an age based pricing rule type.
- Add the price item parameters in an age based pricing rule type, if required.
- Define characteristics for an age based pricing rule type, if required.
- Configure the audit in an age based pricing rule type.
- Define an age based specific additional data in an age based pricing rule type.
- Map a characteristic attribute in an age based pricing rule type
- Click **Save**.

The age based pricing rule type is defined.

Adding the Related Pricing Rule Types in an Age Based Pricing Rule Type

Prerequisites

To add related pricing rule types in an age based pricing rule type, you should have:

- Additional fee pricing rule type defined in the application.
- Eligibility rule type defined in the application.

Procedure

To add related pricing rule types in an age based pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an age based pricing rule type.

Note: This section appears when the **Primary** option is selected in the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------------|--|--|
| Sequence | Used to specify the order in which the related pricing rule type should be invoked. | Yes (Conditional) Note: This field is required when you are defining a pricing rule type for the related pricing rule type. |
| Pricing Rule Type | Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. Note: On clicking the Search (🔍) icon that appears corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field. | Yes (Conditional) Note: This field is required when the corresponding Sequence and Eligibility Rule Type field is specified for the related pricing rule type. |
| Eligibility Rule Type | Used to indicate the rule type eligibility for the related pricing rule type. Note: The Eligibility Rule Type list includes only those rule-types where the rule type eligibility is Related Pricing Rule Type Eligibility . | No |

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

4. Click **Save**.

The related pricing rule types are added for the age based pricing rule type.

Associating an Algorithm with an Age Based Pricing Rule Type

Prerequisites

To associate algorithm with an age based pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_AGEPREM** algorithm type.
- An algorithm defined using the **C1_AGEBDELG** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.
- An algorithm defined using the **C1-AGEPRFC** algorithm type.
- An algorithm defined using the **C1-SKPMNTHPC** algorithm type.

Procedure

To associate algorithms with an age based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the age based pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|---|---|
| System Event | Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Account and Price Item Derivation Post-Processing - Used to derive the bill period for the account. • Account and Price Item Derivation Post-Processing - Used to create the bill period timeline for the account. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. | Yes <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: This field is required when you are associating an algorithm with the age based pricing rule type.</p> </div> |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|--|
| | <ul style="list-style-type: none"> • Premium Calculation - Used to calculate the premium for each eligible member person. • Pricing Rule Pre-Processing - Used to identify the eligible member persons for premium calculation. • Billable Charge Creation Post Processing - Used to create new billable charges for both pre-calculated and post-calculated charges. • Pricing Rule Proration Amount Calculation - Used to calculate proration factor and amount for age based pricing rule based on the policy plan configurations. • Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature) - Used to distribute the total premium in the non-skip months of the coverage period. | |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) |
| | | Note: This field is required when you are associating an algorithm with the age based pricing rule type. |
| Algorithm | Used to specify the algorithm. | Yes (Conditional) |
| | <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p> | <p>Note: This field is required when you are associating an algorithm with the age based pricing rule type.</p> |

2. Enter the following details in the **Algorithms** section:

| System Event | Algorithm | Algorithm Type | Description |
|---|--------------|----------------|--|
| Account and Price Item Derivation | C1_ACCPRIMEM | C1_ACCPRIMEM | Account and Price Item Derivation for Membership |
| Account and Price Item Derivation Post-Processing | C1-BILLPDRV | C1-BILLPDRV | Bill Period Derivation |
| Account and Price Item Derivation Post-Processing | C1-BILLRPCR | C1-BILLRPCR | Bill Period Time Line Creation |
| Bill Group Derivation | C1_MEMBGDRV | C1_MEMBGDRV | Bill Group Derivation for Membership |
| Premium Calculation | C1_AGEPREM | C1_AGEPREM | Age Based Premium Calculation |

| System Event | Algorithm | Algorithm Type | Description |
|---|--------------|----------------|---|
| Pricing Rule Pre-Processing | C1_AGEBDELG | C1_AGEBDELG | Get Eligible Member Details from Membership |
| Billable Charge Creation Post Processing | C1-FICRETBC | C1-FICRETBC | Fully Insured Pass through Billable Charge Creation |
| Pricing Rule Proration Amount Calculation | C1-AGEPRFC | C1-AGEPRFC | Calculate Proration Factor for Age Based Pricing Rule |
| Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature) | C1-SKPMNTHPC | C1-SKPMNTHPC | Skip Month Premium Calculation |

3. If you want to associate more than one algorithm with the age based pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the age based pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the age based pricing rule type.

Adding a Price Item in an Age Based Pricing Rule Type

Prerequisites

To add a price item in an age based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an age based pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an age based pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | |
|-----------------|---|---|------------|-------------------|-----------------------|-------------|--|-----|--------------|
| Price Item | Used to indicate the price item that you want to include in the age based pricing rule type. | Yes (Conditional) Note: This field is required when you are adding a rate option and bill to account in an age based pricing rule type. | | | | | | | |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p> | | | | | | | | |
| Rate Option | Used to indicate one or more rate options which are valid for a price item. | Not applicable | | | | | | | |
| | <p>On clicking the Add (+) icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note:</p> <p>If you want to define more than one rate option to the price item in an age based pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from an age based pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</p> | | Field Name | Field Description | Mandatory (Yes or No) | Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | | | | |
| Bill To Account | Used to indicate a order in which the account should be considered while deriving a transaction leg. | Not applicable | | | | | | | |
| | <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | Invoice Type |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | | | | |
| Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | | | | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|-----------------------|--|--|------------------------------|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | | Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears. | | |
| | Note: If you want to define more than one invoice type to the price item in an age based pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in an age based pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field. | | | |
| Eligibility Rule Type | Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing. | | | No |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for an age based pricing rule type.

Adding a Price Item Parameter in an Age Based Pricing Rule Type

Prerequisites

To add a price item parameter in an age based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in an age based pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an age based pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Price Item Parameter | Used to specify the parameter which you can use while defining an age based pricing for the price item. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required when you are adding a price item parameter in an age based pricing rule type.</p> |

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for an age based pricing rule type.

Defining a Characteristic for an Age Based Pricing Rule Type

Prerequisites

To define a characteristic for an age based pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an age based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an age based pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for an age based pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for an age based pricing rule type. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for an age based pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for an age based pricing rule type.

Adding Elements for Audit in an Age Based Pricing Rule Type

Prerequisites

To add elements for audit in an age based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

Procedure

To add elements for audit in an age based pricing rule type:

- Ensure that the **Event Management** section is expanded when you are defining or editing an age based pricing rule type.

The **Event Management** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Audit Event Type | Used to specify the audit event type which you can use while adding elements for audit in an age based pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field. | Yes |
| Element Type | Used to indicate the type of audit element for an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field | Not applicable |
| Element Name | Used to specify the element name for an age based pricing rule type. Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears. | Yes |
| Element Value | Used to specify the value for an element name. | Not applicable |

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one element for audit in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The elements for audit are added for an age based pricing rule type.

Defining an Age Based Specific Additional Data in an Age Based Pricing Rule Type

Procedure

To define an age based specific additional data in an age based pricing rule type:

1. Ensure that the **Age Based Specific Additional Data** section is expanded when you are defining or editing an age based pricing rule type.

The **Age Based Specific Additional Data** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Relation | Used to indicate the relation of the member in an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Children • Main Subscriber • Spouse | No |
| Relationship Type | Used to indicate the type of relationship for an age based pricing rule type. | No |

2. Enter the required details in the **Age Based Specific Additional Data** section.
3. If you want to add more than one age based specific data in an age based pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an age based specific data from an age based pricing rule type, click the **Delete (🗑)** icon corresponding to the **Relation** field.

4. Click **Save**.

The age based specific additional data is defined for the age based pricing rule type.

Mapping Characteristic Attributes in an Age Based Pricing Rule Type

Prerequisites

To map the characteristic attributes in an age based pricing rule type:

- Characteristic type defined in the application

Procedure

To map the characteristic attributes in an age based pricing rule type:

1. Ensure that the **Attribute Characteristic Mapping** section is expanded when you are defining an age based pricing rule type.

The **Attribute Characteristic Mapping** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Maximum Number of Dependents | Used to indicate the maximum number of children which are eligible for premium calculation. | No |
| Maximum Age Limit for Maximum Dependent Count | Used to indicate the maximum age limit for children which are eligible for premium calculation. | No |
| Maximum Number of Dependents Order Priority | Used to indicate whether you want to consider the youngest or eldest children during premium calculation. The valid values are: <ul style="list-style-type: none"> • YOUNGEST • ELDEST | No |
| Age Calculation Based On | Used to indicate whether the member person's age should be calculated using the member person's enrollment date or policy's renewal date. | No |
| Age Recalculation Based On | Used to indicate whether the member person's age should be re-calculated when you add a membership to a policy plan or a member person to a membership. | No |
| Newborn Gift Days | Used to indicate the number of days you want to offer as gift days from the new born child's enrollment date. As a result, no premium will be calculated for this period. | No |
| Newborn Gift Days Applicability | Used to indicate whether you want to offer gift days in case of a new born. The valid values are: <ul style="list-style-type: none"> • Y • N | No |
| Young Adult Maximum Age Limit | Used to indicate the maximum age limit for young adults who are eligible for premium calculation. | No |
| Young Adult Inclusion Applicability | Used to indicate whether you want to consider the young adults during the premium calculation. | No |

Note:

The **Search** (🔍) icon appears corresponding to each field. On clicking the **Search** icon, the **Characteristic Type Search** window appears.

On specifying the characteristic type, the description of the characteristic type appears corresponding to the respective field.

2. Enter the required details in the **Attributes Characteristic Mapping** section.
3. Click **Save**.

The characteristic types are mapped to the appropriate fields in the age based pricing rule type.

Editing an Age Based Pricing Rule Type

Prerequisites

To edit an age based pricing rule type, you should have:

- Age based pricing rule type business object defined in the application.
- Age based pricing rule business object defined in the application.

Procedure

To edit an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the age based pricing rule type whose details you want to edit.

The **Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an age based pricing rule type.
- **Related Pricing Rule Type** – Used to specify the pricing rule types which are related to the age based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- **Algorithms** – Used to associate the algorithms with an age based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for an age based pricing rule type.
- **Event Management** – Used to configure the audit in an age based pricing rule type.
- **Age Based-Specific Additional Data** – Used to define an age based specific additional data in an age based pricing rule type.
- **Attributes Characteristic Mapping** – Used to map a characteristic attribute in an age based pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Pricing Rule Type | Displays the age based pricing rule type. | Not applicable |
| Description | Used to specify the description for an age based pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about an age based pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: <ul style="list-style-type: none"> Age Based Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining an age based pricing rule type. | Not applicable |
| Status | Used to indicate the status of an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. <p>Note: The checkbox appears selected, if you have already selected the Primary option while defining an age based pricing rule type.</p> | No |
| Skip Non-Members | Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during the age based premium calculation. <p>Note: The checkbox appears selected, if you have already selected the Non-Covered Subscriber Eligible option while defining an age based pricing rule type.</p> | No |
| Pricing Rule Type Category | Indicates the pricing rule type category for an age based pricing rule type. The valid values is: <ul style="list-style-type: none"> Age Based <p>Note: It is a read-only field.</p> | No |

Tip: Alternatively, you can edit the details of an age based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Add, edit, or remove the related pricing rule types in the age based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Associate the required algorithms in an age based pricing rule type.

8. Add, edit, or remove the required price items in an age based pricing rule type.
9. Add, edit, or remove the price item parameters in an age based pricing rule type, if required.
10. Add, edit, or remove characteristics for an age based pricing rule type, if required.
11. Add, edit, or remove the configuration details of the audit in an age based pricing rule type.
12. Add, edit, or remove the age based specific additional data in an age based pricing rule type.
13. Add, edit, or remove a characteristic attribute in an age based pricing rule type
14. Click **Save**.

The changes made to the age based pricing rule type are saved.

Deleting an Age Based Pricing Rule Type

Procedure

To delete an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the age based pricing rule type that you want to delete.

A message appears confirming whether you want to delete the age based pricing rule type.

Note: You can delete an age based pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an age based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The age based pricing rule type is deleted.

Viewing the Age Based Pricing Rule Type Details

Procedure

To view the details of an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** () icon corresponding to the age based pricing rule type whose details you want to view.
The **Pricing Rule Type** zone appears.
5. View the details of the age based pricing rule type in the **Pricing Rule Type** zone.

Tier Based Pricing

The standard tier based pricing structure contains different tiers, such as Employee Only (E), Employee + Spouse (ES), Family (F), Employee + Children (EC). A main subscriber can subscribe his/her dependents to a policy plan and may fall in one of the tier. The fee for a price item can vary based on the membership tier level and employee attributes (such as employee type, employee status, etc.). Oracle Revenue Management and Billing enables you to offer a tier based

pricing to a fully-insured group customer. In the Tier Based pricing, the premium for the membership is derived based on tier level and employee attributes.

A tier based pricing can be defined using the tier based pricing rule. You can define a tier based pricing rule for a price item on the policy plan. If the tier based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the tier based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define a tier based pricing rule using a tier based pricing rule type. It is the tier based pricing rule type which helps the system to determine:

- Business object using which the tier based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for a membership.

Note: You must create an algorithm using the **C1-BILLPDRV** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for creating the bill period timeline (based on the derived bill period) for a membership.

Note: You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the subscription tier for membership, based on the bill period configured on the account..

Note: You must create an algorithm using the **C1-DERSUBTR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for calculating the premium for membership.

Note: You must create an algorithm using the **C1_TIERPREM** algorithm type and attach it to the **Pricing Rule Premium Calculation** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Algorithm which should be triggered for calculating the proration factor and amount for fully insured tier based pricing rule based on the policy plan configurations.

Note: You must create an algorithm using the **C1-TIERPRFC** algorithm type and attach it to the **Pricing Rule Proration Amount Calculation** system event.

- Algorithm which should be triggered for distributing the total premium in the non-skip months of the coverage period.

Note: You must create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)** system event.

- Price items for which you can define tier based pricing rules using the tier based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership business object using which the audit event should be created whenever a membership is added, updated, or removed from the policy plan.
- Elements of the C1-Membership business object for which audit event should be created.

Note: You must ensure that either the **Update All** option is selected or the elements listed in the tier based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

Once a tier based pricing rule type is defined, you can define tier based pricing rules using the tier based pricing rule type. Note that, at present, you can define tier based pricing rules only through a health care inbound message and not from the user interface. However, you can view the tier based pricing rules defined for a policy plan from the **Customer 360° Information** screen. While creating a tier based pricing rule through a health care inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the tier based pricing rule
- Start and end dates of the tier based pricing rule
- Tier based pricing rule type using which you want to create the tier based pricing rule
- Price Item for which you want to define tier based pricing
- Rate option using which the price assignment should be created for the tier based pricing rule

Note: If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option – Flat** option type of the **C1-ASOBLNG** feature configuration when the modifier method is set to **FLAT** or **NULL**.

- Tier level and employee attributes for which the fee is applicable

Note: The tier level and employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the tier based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

Defining a Tier Based Pricing Rule Type

Prerequisites

To define a tier based pricing rule type, you should have:

- Tier based pricing rule type business object defined in the application.
- Tier based pricing rule business object defined in the application.
- Pricing rule type category for the tier based defined in the application.

Procedure

To define a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create a tier based pricing rule type. Note: You can create a tier based pricing rule type using the Tier Based Pricing Rule Type (C1-PricingRuleTierBased) business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Tier Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a tier based pricing rule type.
- **Related Pricing Rule Type** – Used to define the pricing rule types which are related to the tier based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- **Algorithms** – Used to associate the algorithms with a tier based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the tier pricing rules using the tier based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a tier based pricing rule type.
- **Event Management** – Used to configure the audit in a tier based pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the tier based pricing rule type. | Yes |
| Description | Used to specify the description for the tier based pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the tier based pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the tier based pricing rule type. The valid value is: <ul style="list-style-type: none"> • Tier Based Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining the tier based pricing rule type. | Not applicable |
| Status | Used to indicate the status of a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. | No |
| Skip Non-Members | Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during tier based premium calculation. | No |
| Pricing Rule Type Category | Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Tier Based | Yes |

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the tier based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

8. Associate the required algorithms with the tier based pricing rule type:
9. Add the required price items in the tier based pricing rule type.
10. Add the price item parameters in the tier based pricing rule type, if required.
11. Define characteristics for the tier based pricing rule type, if required.
12. Configure the audit in the tier based pricing rule type.
13. Click **Save**.

The tier based pricing rule type is defined.

Adding the Related Pricing Rule Types in a Tier Based Pricing Rule Type

Prerequisites

To add related pricing rule types in a tier based pricing rule type, you should have:

- Additional fee pricing rule type defined in the application.
- Eligibility rule type defined in the application.

Procedure

To add related pricing rule types in a tier based pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a tier based pricing rule type.

Note: This section appears when the **Primary** option is selected in the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------------|---|------------------------------|
| Sequence | Used to specify the order in which the related pricing rule type should be invoked. | Yes (Conditional) |

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------------|--|--|
| | | Note: This field is required when you are defining a pricing rule type for the related pricing rule type. |
| Pricing Rule Type | Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. Note: On clicking the Search (🔍) icon that appears corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field. | Yes (Conditional) Note: This field is required when the corresponding Sequence and Eligibility Rule Type field is specified for the related pricing rule type. |
| Eligibility Rule Type | Used to indicate the rule type eligibility for the related pricing rule type. Note: The Eligibility Rule Type list includes only those rule-types where the rule type eligibility is Related Pricing Rule Type Eligibility . | No |

- Enter the required details in the **Related Pricing Rule Types** section.
- If you want to define more than one related pricing rule type for the tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

- Click **Save**.

The related pricing rule types are added for the tier based pricing rule type.

Associating an Algorithm with a Tier Based Pricing Rule Type

Prerequisites

To associate an algorithm with a tier based pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1-DERSUBTR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.
- An algorithm defined using the **C1-TIERPRFC** algorithm type.
- An algorithm defined using the **C1-SKPMNTHPC** algorithm type.

Procedure

To associate an algorithm with a tier based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the tier based pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|---|--|
| System Event | <p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Account and Price Item Derivation Post-Processing - Used to derive the bill period for the account. • Account and Price Item Derivation Post-Processing - Used to create the bill period timeline for the account. • Account and Price Item Derivation Post-Processing - Used to derive subscription tier for membership, based on the bill period configured on the account. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Premium Calculation - Used to calculate the premium for each eligible member person. • Billable Charge Creation Post Processing - Used to create new billable charges for both pre-calculated and post-calculated charges. • Pricing Rule Proration Amount Calculation - Used to calculate proration factor and amount for tier based pricing rule based on the policy plan configurations. | <p>Yes</p> <p>Note: This field is required when you are associating an algorithm with the tier based pricing rule type.</p> |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|---|
| | <ul style="list-style-type: none"> Skip Month Premium Calculation - Used to distribute the total premium in the non-skip months of the coverage period. | |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) |
| | | Note: This field is required when you are associating an algorithm with the tier based pricing rule type. |
| Algorithm | Used to specify the algorithm. | Yes (Conditional) |
| | <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p> | <p>Note: This field is required when you are associating an algorithm with the tier based pricing rule type.</p> |

2. Enter the following details in the **Algorithms** section:

| System Event | Algorithm | Algorithm Type | Description |
|---|--------------|----------------|--|
| Account and Price Item Derivation | C1_ACCPRIMEM | C1_ACCPRIMEM | Account and PriceItem Derivation for Membership |
| Account and Price Item Derivation Post-Processing | C1-BILLPDRV | C1-BILLPDRV | Bill Period Derivation |
| Account and Price Item Derivation Post-Processing | C1-BILLRPCR | C1-BILLRPCR | Bill Period Time Line Creation |
| Account and Price Item Derivation Post-Processing | C1-DERSUBTR | C1-DERSUBTR | Derive Subscription Tier for Membership |
| Bill Group Derivation | C1_MEMBGDRV | C1_MEMBGDRV | Bill Group Derivation for Membership |
| Premium Calculation | C1_TIERPREM | C1_TIERPREM | Tier Based Premium Calculation |
| Billable Charge Creation Post Processing | C1-FICRETBC | C1-FICRETBC | Fully Insured Charge Creation for Memberships |
| Pricing Rule Proration Amount Calculation | C1-TIERPRFC | C1-TIERPRFC | Calculate Proration Factor for Tier Based Pricing Rule |
| Skip Month Premium Calculation | C1-SKPMNTHPC | C1-SKPMNTHPC | Skip Month Premium Calculation |

3. If you want to associate more than one algorithm with the tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the tier based pricing rule type.

Adding a Price Item in a Tier Based Pricing Rule Type

Prerequisites

To add a price item in a tier based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a tier based pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a tier based pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|---|
| Price Item | Used to indicate the price item that you want to include in a tier based pricing rule type. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p> | <p>Note: This field is required when you are adding a rate option and bill to account in a tier based pricing rule type.</p> |
| Rate Option | Used to indicate one or more rate options which are valid for a price item. On clicking the Add (➕) icon, the following field appears in a grid: | Not applicable |

| Field Name | Field Description | | | Mandatory (Yes or No) | | | | | | | | | |
|-----------------------|--|--|------------------------------|-----------------------|-------------------|-----------------------|----------|---|-----|--------------|--|-----|----------------|
| | Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | |
| | Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | | | | | | | |
| | <p>Note:</p> <p>If you want to define more than one rate option to the price item in a fully-insured tier based pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from a fully-insured tier based pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</p> | | | | | | | | | | | | |
| Bill To Account | <p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> | | | Field Name | Field Description | Mandatory (Yes or No) | Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | Not applicable |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | | | | | | | | |
| Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. | Yes | | | | | | | | | | | |
| | <p>Note:</p> <p>If you want to define more than one invoice type to the price item in a tier based pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a invoice type from the price item in a tier based pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.</p> | | | | | | | | | | | | |
| Eligibility Rule Type | Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing. | | | No | | | | | | | | | |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a tier based pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item from a tier based pricing rule type, click the **Delete (🗑)** icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a tier based pricing rule type.

Adding a Price Item Parameter in a Tier Based Pricing Rule Type

Prerequisites

To add a price item parameter in a tier based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a tier based pricing rule type:

- Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a tier based pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Price Item Parameter | Used to specify the parameter which you can use while defining a tier based pricing for the price item. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required when you are adding a price item parameter in a tier based pricing rule type.</p> |

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a tier based pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a tier based pricing rule type, click the **Delete** () icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a tier based pricing rule type.

Defining a Characteristic for a Tier Based Pricing Rule Type

Prerequisites

To define a characteristic for a tier based pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a tier based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a tier based pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for a tier based pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for a tier based pricing rule type. |

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for a tier based pricing rule type, click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a tier based pricing rule type.

Adding Elements for Audit in a Tier Based Pricing Rule Type

Prerequisites

To add elements for audit in a tier based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

Procedure

To add elements for audit in a tier based pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing a tier based pricing rule type.

The **Event Management** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Audit Event Type | Used to specify the audit event type which you can use while adding elements for audit in tier based pricing rule type. | Yes |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears.</p> <p>On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field.</p> | |
| Element Type | Used to indicate the type of audit element for a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Element Name | Used to specify the element name for a tier based pricing rule type. | Yes |
| | Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears. | |
| Element Value | Used to specify the value for an element name. | Not applicable |

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one element for audit in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from a tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The elements for audit are added for a tier based pricing rule type.

Editing a Tier Based Pricing Rule Type

Prerequisites

To edit a tier based pricing rule type, you should have:

- Tier Based pricing rule type business object defined in the application.
- Tier Based pricing rule business object defined in the application.

Procedure

To edit a tier based pricing rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a tier based pricing rule type.
- **Related Pricing Rule Type** – Used to specify the pricing rule types which are related to the tier based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- **Algorithms** – Used to associate the algorithms with a tier based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the tier based pricing rules using the tier based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a tier based pricing rule type.
- **Event Management** – Used to configure the audit in a tier based pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the tier based pricing rule type. | Not applicable |
| Description | Used to specify the description for a tier based pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about a tier based pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create a tier based pricing rule type. The valid value is: <ul style="list-style-type: none"> • Tier Based Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining a tier based pricing rule type. | Not applicable |
| Status | Used to indicate the status of a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. <p>Note: The checkbox appears selected, if you have already selected the Primary option while defining a tier based pricing rule type.</p> | No |
| Skip Non-Members | Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during tier based premium calculation. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| | Note: The checkbox appears selected, if you have already selected the Non-Covered Subscriber Eligible option while defining a tier based pricing rule type. | |
| Pricing Rule Type Category | Indicates the pricing rule type category for a tier based pricing rule type. The valid values is: <ul style="list-style-type: none"> Tier Based | No |

Tip: Alternatively, you can edit the details of a tier based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Add, edit, or remove the related pricing rule types in the tier based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Associate the required algorithms in a tier based pricing rule type.
- Add, edit, or remove the required price items in a tier based pricing rule type.
- Add, edit, or remove the price item parameters in a tier based pricing rule type, if required.
- Add, edit, or remove characteristics for a tier based pricing rule type, if required.
- Add, edit, or remove the configuration details of the audit in a tier based pricing rule type.
- Click **Save**.

The changes made to the tier based pricing rule type are saved.

Deleting a Tier Based Pricing Rule Type

Procedure

To delete a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the tier based pricing rule type that you want to delete.
A message appears confirming whether you want to delete the tier based pricing rule type.

Note: You can delete a tier based pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a tier based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The tier based pricing rule type is deleted.

Viewing the Tier Based Pricing Rule Type Details

Procedure

To view the details of a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** (📡) icon corresponding to the tier based pricing rule type whose details you want to view.
The **Pricing Rule Type** zone appears.
5. View the details of the tier based pricing rule type in the **Pricing Rule Type** zone.

Pass-Through Billable Charge

At times, the system might receive pre-calculated premium for the membership through a health care inbound message. If the price item, account identifier type, and account identifier are given in the billable charge information of a health care inbound message, the system directly creates an SQI based billable charge when you process the health care inbound message. The pre-calculated premium amount is stored as a pass through line in the SQI based billable charge. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**. If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). It is the pass-through billable charge pricing rule type which helps the system to determine:

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

Note:

You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.

If the bill period or frequency is given in the billable charge information of the health care inbound message, the system does not derive the bill period for the account.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type.

Note: You can add multiple price items in a pass-through billable charge pricing rule type. But, you cannot add the same price item in multiple pass-through billable charge pricing rule types.

- Type of account to which the respective price item should be billed based on the specified priority.

Defining a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To define a pass-through billable charge pricing rule type, you should have:

- Pass-through billable charge pricing rule type business object defined in the application.
- Pass-through billable charge pricing rule business object defined in the application.

Procedure

To define a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create a pass-through billable charge pricing rule type. Note: You can create a pass-through billable charge pricing rule type using the Pass-Through Billable Charge Pricing Rule Type (C1-FIPassthroughBcRuleType) business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Pass-Through Billable Charge Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Pass-Through Billable Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pass-through billable charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with the pass-through billable charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pass-through billable charge pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the pass-through billable charge pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the pass-through billable charge pricing rule type. | Yes |
| Description | Used to specify the description for the pass-through billable charge pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the pass-through billable charge pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> • Pass-Through Billable Charge Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining the pass-through billable charge pricing rule type. | Not applicable |
| Status | Used to indicate the status of the pass-through billable charge pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Pricing Rule Type Category | Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Pass-Through Billable Charge | Yes |

6. Enter the required details in the **Main** section.
7. Associate the required algorithms with the pass-through billable charge pricing rule type.
8. Add the required price items in the pass-through billable charge pricing rule type.
9. Add the price item parameters in the pass-through billable charge pricing rule type, if required.
10. Define characteristics for the pass-through billable charge pricing rule type, if required.
11. Click **Save**.

The pass-through billable charge pricing rule type is defined.

Associating an Algorithm with a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To associate an algorithm with a pass-through billable charge pricing rule type, you should have:

- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

Procedure

To associate an algorithm with a pass-through billable charge pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the pass-through billable charge pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|---|---|
| System Event | Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Pricing Rule BC Creation Pre Processing - Used to derive the bill period for the account. • Pricing Rule Billable Charge Creation - Used to derive the price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type. | Yes Note: This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type. |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|--|
| | | Note: This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type. |
| Algorithm | Used to specify the algorithm. | Yes (Conditional) |
| | Note: Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field. | Note: This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type. |

2. Enter the following details in the **Algorithms** section:

| System Event | Algorithm | Algorithm Type | Description |
|---|--------------|----------------|--|
| Bill Group Derivation | C1_MEMBGDRV | C1_MEMBGDRV | Bill Group Derivation for Membership |
| Account and Price Item Derivation | C1_ACCPRIMEM | C1_ACCPRIMEM | Account and PriceItem Derivation for Membership |
| Pricing Rule BC Creation Pre Processing | C1-FIBCBP | C1-FIBCBP | Fetch Bill Period of Billable Charge of Membership |
| Pricing Rule Billable Charge Creation | C1-FICRETBC | C1-FICRETBC | Fully-Insured Charge creation for Memberships |

3. If you want to associate more than one algorithm with a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from a pass-through billable charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with a pass-through billable charge pricing rule type.

Adding a Price Item in a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To add a price item in a pass-through billable charge pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a pass-through billable charge pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | |
|-------------|---|---|------------|-------------------|-----------------------|-------------|
| Price Item | Used to indicate the price item that you want to include in a pass-through billable charge pricing rule type. | Yes (Conditional) | | | | |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p> | <p>Note: This field is required when you are adding a rate option and bill to account in a pass-through billable charge pricing rule type.</p> | | | | |
| Rate Option | Used to indicate one or more rate options which are valid for a price item. | Not applicable | | | | |
| | On clicking the Add (➕) icon, the following field appears in a grid: | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Rate Option |
| Field Name | Field Description | Mandatory (Yes or No) | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|-----------------------|--|-----------------------|-------------------|-----------------------|----------|---|-----|--------------|---|-----|----------------|
| | <p>Note:</p> <p>If you want to define more than one rate option to the price item in a pass-through billable charge pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</p> | | | | | | | | | | |
| Bill To Account | <p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 79 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note:</p> <p>If you want to define more than one invoice type to the price item in a pass-through billable charge pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a invoice type from the price item in a pass-through billable charge pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.</p> | Field Name | Field Description | Mandatory (Yes or No) | Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 79 section. | Yes | Not applicable |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | | | | | | |
| Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 79 section. | Yes | | | | | | | | | |
| Eligibility Rule Type | Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing. | No | | | | | | | | | |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a pass-through billable charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the **Delete (🗑)** icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a pass-through billable charge pricing rule type.

Adding a Price Item Parameter in a Pass-Through Billable Charge Pricing Rule Type**Prerequisites**

To add a price item parameter in a pass-through billable charge pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a pass-through billable charge pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Price Item Parameter | Used to specify the parameter which you can use while defining a pass-through billable charge pricing for the price item. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required when you are adding a price item parameter in a pass-through billable charge pricing rule type.</p> |

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a pass-through billable charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a pass-through billable charge pricing rule type.

Defining a Characteristic for a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To define a characteristic for a pass-through billable charge pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a pass-through billable charge pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a pass-through billable charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a pass-through billable charge pricing rule type.

Editing a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To edit a pass-through billable charge pricing rule type, you should have:

- Pass-Through Billable Charge pricing rule type business object defined in the application.
- Pass-Through Billable Charge pricing rule business object defined in the application.

Procedure

To edit a pass-through Billable Charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Pass-Through Billable Charge Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a pass-through billable charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with a pass-through billable charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pass-through billable charge pricing rules using the pass-through billable charge pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a pass-through billable charge pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the pass-through billable charge pricing rule type. | Not applicable |
| Description | Used to specify the description for a pass-through billable charge pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about a pass-through billable charge pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create a pass-through billable charge pricing rule type. The valid value is: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> Pass-Through Billable Charge | |
| Business Object | Indicates the business object using which you are defining a pass-through billable charge pricing rule type. | Not applicable |
| Status | Used to indicate the status of a pass-through billable charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Pricing Rule Type Category | Indicates the pricing rule type category for a pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Pass-Through Billable Charge | No |
| | Note: It is a read-only field, and cannot be edited. | |

Tip: Alternatively, you can edit the details of a pass-through billable charge pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the following algorithms with the pass-through billable charge pricing rule type:

| System Event | Algorithm | Algorithm Type | Description |
|---|--------------|----------------|--|
| Bill Group Derivation | C1_MEMBGDRV | C1_MEMBGDRV | Bill Group Derivation for Membership |
| Account and Price Item Derivation | C1_ACCPRIMEM | C1_ACCPRIMEM | Account and PriceItem Derivation for Membership |
| Pricing Rule BC Creation Pre Processing | C1-FIBCBP | C1-FIBCBP | Fetch Bill Period of Billable Charge of Membership |
| Pricing Rule Billable Charge Creation | C1-FICRETBC | C1-FICRETBC | Fully-Insured Charge creation for Memberships |

- Add, edit, or remove the required price items in a pass-through billable charge pricing rule type.
- Add, edit, or remove the price item parameters in a pass-through billable charge pricing rule type, if required.
- Add, edit, or remove characteristics for a pass-through billable charge pricing rule type, if required.
- Click **Save**.

The changes made to the a pass-through billable charge pricing rule type are saved.

Deleting a Pass-Through Billable Charge Pricing Rule Type

Procedure

To delete a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the pass-through billable charge pricing rule type that you want to delete.

A message appears confirming whether you want to delete the pass-through billable charge pricing rule type.

Note: You can delete a pass-through billable charge pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a pass-through billable charge pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The pass-through billable charge pricing rule type is deleted.

Viewing the Pass-Through Billable Charge Pricing Rule Type Details

Procedure

To view the details of a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Broadcast** () icon corresponding to the pass-through billable charge pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

5. View the details of the pass-through billable charge pricing rule type in the **Pricing Rule Type** zone.

Additional Fee Pricing for COBRA Membership

In the Fully-Insured Pricing, the base premium for COBRA memberships is calculated either using the **Age Based Pricing Rule Type** or **Tier Based Pricing Rule Type**. In addition to the premium, COBRA membership is also charged with additional fee which can be either defined as flat charges or premium percentage. You can configure the COBRA additional fee by creating an additional fee pricing rule using an additional fee pricing rule type. You must include an additional fee pricing rule type as a related pricing rule type (in the age based or tier based pricing rule type) of the premium pricing rule type defined for the plan with a conditional rule that additional charges are only applicable for those memberships where the membership type is defined as COBRA.

The COBRA additional fee rates are generally not customer specific but remain common across different states or regions. The system provides you with an ability to define the additional fees at a higher level and if required override them at a lower level. You can define the COBRA additional fee at plan, policy, parent customer, and state level. The system checks whether the COBRA additional fee pricing rule definition is defined at the policy plan level. If an effective dated pricing rule does not exist at the policy plan level, the system further checks the additional fee pricing rule definition at policy, parent customer, and state level.

You can define an additional fee pricing rule using an additional fee pricing rule type. It is the additional fee pricing rule type which helps the system to determine:

- **C1-PrcRuleTypeCapitationFee** Business object using which the additional charges pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the subscription tier.

Note: You must create an algorithm using the **C1-DERSUBTR** algorithm type and attach it to the **Derive Subscription Tier for Membership** system event.

- Algorithm which should be triggered for calculating the COBRA additional fees for each eligible member person.

Note: You must create an algorithm using the **C1_TIERPREM** algorithm type and attach it to the **Pricing rule Type Premium Calculation** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

Note: You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Bill Period Time Line Creation** system event.

- Algorithm which should be triggered for prorating the calculated COBRA additional fees as per the proration factor.

Note: You must create an algorithm using the **C1-TIERPRFC** algorithm type and attach it to the **Calculate Proration Factor for Tier Based Pricing Rule** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can define pricing rules for COBRA additional fee using the additional charges pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the **C1-Membership** and **C1-PERSON** business objects using which the audit event should be created whenever a membership or member person is added, updated, or removed from the policy plan.
- Elements of the **C1-Membership** and **C1-PERSON** business objects for which audit event should be created.

Note: You must ensure that either the **Update All** option is selected or the elements listed in the age based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

- Members, such as main subscriber, spouse, or children in a membership which are eligible for premium calculation. The system will only consider the member with the specified relationship type during premium calculation.

Once an additional fee pricing rule type is defined, you can then define the additional fee pricing rule using the additional fee pricing rule type.

Note: At present, you can define the additional fee pricing rule type only through the healthcare inbound message and not from the user interface. However, you can view the additional fee pricing rule defined for a policy plan or policy, parent customer or state from the **Customer 360° Information** screen.

While creating COBRA Admin Fees Pricing rule through a healthcare inbound message, you need to specify the following information:

- Entity type and Entity ID (i.e. Policy Plan and Policy Plan ID, or Policy and Policy ID, or Parent Customer and Parent Customer ID, or State and State Level) for which you want to define the COBRA additional fee pricing rule.

- Pricing Type – Flat or Percentage
- Start and end dates of the COBRA additional fee pricing rule.
- Additional fee pricing rule type using which you want to create the age based pricing rule
- Price Item for which you want to define the COBRA additional fee pricing rule.
- Rate option using which the price assignment should be created for the COBRA additional fees.

Note: In case you want flat based COBRA additional fees, use the **HC_FRTSC** rate schedule. In case of percentage based pricing, use the **HC_CAPRS** rate schedule.

Defining an Additional Fee Pricing Rule Type

Prerequisites

To define an additional fee pricing rule type, you should have:

- Additional fee pricing rule type business object defined in the application.

Procedure

To define an additional fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the additional fee pricing rule type. Note: You can create an additional fee pricing rule type using the Additional Charge Pricing Rule Type (C1-PrcRuleTypeCapitationFee) business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Additional Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Additional Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the additional fee pricing rule type.
- **Algorithms** - Used to associate the algorithms with the additional fee pricing rule type.
- **Price Items** - Used to add the price items for which you can define the pricing rules using the additional fee pricing rule type.
- **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.

- **Characteristics** - Used to define the characteristics for an additional fee pricing rule type.
- **Event Management** - Used to define the audit event type details for an additional fee pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Pricing Rule Type | Used to specify the additional fee pricing rule type. | Yes |
| Description | Used to specify the description for the additional fee pricing rule type. | Yes |
| Detailed Description | Used to specify the additional information about the additional fee pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the additional fee pricing rule type. The valid value is: <ul style="list-style-type: none"> • Additional Fee Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining the additional fee pricing rule type. | Not applicable |
| Status | Used to indicate the status of the additional fee pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to indicate whether the pricing rule type is a primary pricing rule type. Note: You must not select the Primary option while defining the additional fee pricing rule type. | Not applicable |
| Skip Non-Members | Used to indicate whether the non-member membership persons should be used for the age based calculations. Note: This field is not applicable for additional fee pricing rule type. | Not applicable |
| Pricing Rule Type Category | Used to indicate the category to which the additional fee pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Additional Fee | Yes |
| Pricing Rule Type Sub Category | Used to indicate the pricing rule type sub category for the additional fee pricing rule type. The valid value are: <ul style="list-style-type: none"> • Per Member • Per Subscriber Note: You must select the Per Subscriber option while defining the additional fee pricing rule type. | Not applicable |

6. Enter the required details in the **Main** section.

7. Associate the required algorithms with the additional fee pricing rule type:
8. Add the required price items for the additional fee pricing rule type.
9. Add price item parameters for the additional fee pricing rule type, if required.
10. Define characteristics for the additional fee pricing rule type, if required.
11. Configure the audit in the additional fee pricing rule type.
12. Click **Save**.

The additional fee pricing rule type is defined.

Associating an Algorithm with an Additional Fee Pricing Rule Type

Prerequisites

To associate an algorithm with an additional fee pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1-DERSUBTR** algorithm type.
- An algorithm defined using the **C1_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1-TIERPRFC** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

Procedure

To associate an algorithm with an additional fee pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the additional fee pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|--|--|
| System Event | <p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Create Subscription Tier - Used to derive the subscription tier for a membership • Tier Based Premium Calculation - Used to calculate the COBRA administrative fees for each eligible member person. • Fetch Bill Period of Billable Charge of Membership - Used to derive the bill period for an account. • Bill Period Time Line Creation - Used to create the SQI based billable charges for each membership and price item combination. • Calculate Proration Factor for Tier Based Pricing Rule - Used to prorate the calculated COBRA administrative fees as per the proration factor. • Fully Insured Charge Creation for Memberships - Used to create the SQI based billable charges for each membership and price item combination. | <p>Yes</p> <p>Note: This field is required when you are associating an algorithm with the additional fee pricing rule type.</p> |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | <p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the additional fee pricing rule type.</p> |
| Algorithm | <p>Used to specify the algorithm.</p> <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the additional fee pricing rule type.</p> |

2. Enter the following details in the **Algorithms** section:

| System Event | Algorithm | Algorithm Type | Description |
|--|--------------|----------------|--|
| Account and Price Item Derivation | C1_ACCPRIMEM | C1_ACCPRIMEM | Account and PriceItem Derivation for Membership |
| Bill Group Derivation | C1_MEMBGDRV | C1_MEMBGDRV | Bill Group Derivation for Membership |
| Derive Subscription Tier for Membership | C1-DERSUBTR | C1-DERSUBTR | Create Subscription Tier |
| Pricing Rule Type Premium Calculation | C1_TIERPREM | C1_TIERPREM | Tier Based Premium Calculation |
| Pricing Rule BC Creation Pre Processing | C1-FIBCBP | C1-FIBCBP | Fetch Bill Period of Billable Charge of Membership |
| Account and Price Item Derivation Post-Processing | C1-BILLRPCR | C1-BILLRPCR | Bill Period Time Line Creation |
| Calculate Proration Factor for Tier Based Pricing Rule | C1-TIERPRFC | C1-TIERPRFC | Calculate Proration Factor for Tier Based Pricing Rule |
| Pricing Rule Billable Charge Creation | C1-FICRETBC | C1-FICRETBC | Pass Through Billable Charge Creation |

- If you want to associate more than one algorithm with the additional fee pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the additional fee pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the additional fee pricing rule type.

Adding a Price Item in an Additional Fee Pricing Rule Type

Prerequisites

To add a price item in an additional fee pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an additional fee pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an additional fee pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | |
|---|---|--|------------|-------------------|-----------------------|-------------|
| Price Item | Used to indicate the price item that you want to include in the additional fee pricing rule type. | Yes (Conditional) | | | | |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p> | <p>Note: This field is required when you are adding a rate option and bill to account in an additional fee pricing rule type.</p> | | | | |
| Rate Option | Used to indicate one or more rate options which are valid for a price item. | Not applicable | | | | |
| | On clicking the Add (➕) icon, the following field appears in a grid: | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Rate Option |
| Field Name | Field Description | Mandatory (Yes or No) | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | |
| <p>Note:</p> <p>If you want to define more than one rate option to the price item in an additional fee pricing rule type, click the Add (➕) icon.</p> <p>However, if you want to remove a price item from an additional fee pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p> | | | | | | |
| Bill To Account | Used to indicate a order in which the account should be considered while deriving a transaction leg. | Not applicable | | | | |
| | On clicking the Add (➕) icon, the following fields appear in a grid: | | | | | |
| | <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> </tbody> </table> | | Field Name | Field Description | Mandatory (Yes or No) | Priority |
| Field Name | Field Description | Mandatory (Yes or No) | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | |

| Field Name | Field Description | | | Mandatory (Yes or No) |
|-----------------------|--|--|------------------------------|-----------------------|
| | Field Name | Field Description | Mandatory (Yes or No) | |
| | Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 79 section. Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears. | Yes | |
| | Note: If you want to define more than one invoice type to the price item in an additional fee pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in an additional fee pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field. | | | |
| Eligibility Rule Type | | Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing. | | No |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in an additional fee pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an additional fee pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for an additional fee pricing rule type.

Adding a Price Item Parameter in an Additional Fee Pricing Rule Type

Prerequisites

To add a price item parameter in an additional fee pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in an additional fee pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an additional fee pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Price Item Parameter | Used to specify the parameter which you can use while defining an additional fee pricing for the price item. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required when you are adding a price item parameter in an additional fee pricing rule type.</p> |

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in an additional fee pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an additional fee pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for an additional fee pricing rule type.

Defining a Characteristic for an Additional Fee Pricing Rule Type

Prerequisites

To define a characteristic for an additional fee pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an additional fee pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an additional fee pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for an additional fee pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for an additional fee pricing rule type. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an additional fee pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an additional fee pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for an additional fee pricing rule type.

Adding Elements for Audit in an Additional Fee Pricing Rule Type

Prerequisites

To add elements for audit in an additional fee pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.

- Audit event type defined in the application.

Procedure

To add elements for audit in an additional fee pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing an additional fee pricing rule type.

The **Event Management** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|------------------------------|
| Audit Event Type | Used to specify the audit event type which you can use while adding elements for audit in an additional fee pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field. | Yes |
| Element Type | Used to indicate the type of audit element for an additional fee pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field | Not applicable |
| Element Name | Used to specify the element name for an additional fee pricing rule type. Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears. | Yes |
| Element Value | Used to specify the value for an element name. | Not applicable |

2. Enter the required details in the **Event Management** section.
3. If you want to add more than one element for audit in an additional fee pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from an additional fee pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Audit Event Type** field.

4. Click **Save**.

The elements for audit are added for an additional fee pricing rule type.

Editing an Additional Fee Pricing Rule Type**Prerequisites**

To edit an additional fee pricing rule type, you should have:

- Additional fee pricing rule type business object defined in the application.
- Additional fee pricing rule business object defined in the application.

Procedure

To edit an additional fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an additional fee pricing rule type.
- **Algorithms** – Used to associate the algorithms with an additional fee pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pricing rules using the additional fee pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for an additional fee based pricing rule type.
- **Event Management** – Used to configure the audit in an additional fee based pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Pricing Rule Type | Displays the additional fee pricing rule type. | Not applicable |
| Description | Used to specify the description for the additional fee pricing rule type. | Yes |
| Detailed Description | Used to specify the additional information about the additional fee pricing rule type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the additional fee pricing rule type. The valid value is: <ul style="list-style-type: none"> Additional Fee Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining the additional fee pricing rule type. | Not applicable |
| Status | Used to indicate the status of additional fee pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to select the checkbox if the pricing rule type is primary. <p>Note: The checkbox appears selected, if you have already selected the Primary option while defining an additional fee pricing rule type.</p> | No |
| Pricing Rule Type Category | Indicates the pricing rule type category for an additional fee pricing rule type. The valid values is: <ul style="list-style-type: none"> Additional Fee | No |

Tip: Alternatively, you can edit the details of an additional fee pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the required algorithms in an additional fee pricing rule type.
- Add, edit, or remove the required price items in an additional fee pricing rule type.
- Add, edit, or remove the price item parameters in an additional fee pricing rule type, if required.
- Add, edit, or remove characteristics for an additional fee pricing rule type, if required.
- Add, edit, or remove the configuration details of the audit in an additional fee pricing rule type.
- Click **Save**.

The changes made to the an additional fee pricing rule type are saved.

Deleting an Additional Fee Pricing Rule Type

Procedure

To delete an additional fee based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the additional fee pricing rule type that you want to delete.
A message appears confirming whether you want to delete the additional fee pricing rule type.

Note: You can delete an additional fee pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an additional fee pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The additional fee pricing rule type is deleted.

Viewing the Additional Fee Pricing Rule Type Details

Procedure

To view the details of an additional fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the

Broadcast () icon corresponding to the additional fee pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

- View the details of the an additional fee pricing rule type in the **Pricing Rule Type** zone.

Membership Benefit Pricing

Oracle Revenue Management and Billing offers a benefit pricing rule type using which you can determine the following:

- Price items that should be used to create charges for different membership benefits, such as Medicare Part D LIS, Medicare Part D LEP, APTC benefit, etc.
- Eligibility rule type for the respective price item.
- Active audit event type of the **C1-Benefits** business object using which the system should create an audit event whenever the listed elements (such as benefit end date, benefit amount) are updated or when the status of the membership benefit is set to **ACTIVE** (during creation), **INACTIVE** (during modification), or **DISCARD** (when it is discontinued).

Note: The fields and statuses of a membership benefit which you specify in the **Event Management** section of a benefit pricing rule type should also exists as audit elements for update in the selected audit event type.

The **Benefit Pricing Rule Type (C1-PrcRuleTypeBenefit)** business object is shipped with the product. You need to create a benefit pricing rule type using the **Benefit Pricing Rule Type** business object. You can create the benefit charges for Medicare Part D LIS, Medicare Part D LEP, APTC benefit using the benefit pricing rule type. In this way, you can create a benefit charge for the low income subsidy (LIS) and late enrollment penalty (LEP) along with the Medicare Part D premium charge (which is calculated using the age-based or tier based pricing rule).

While creating a benefit charge for the membership, the system considers the benefit pricing rule type which is associated with the health plan or policy plan. The associated benefit pricing rule type should be added as a related pricing rule type in the age-based or tier-based pricing rule type which is associated with the health plan or policy plan. Therefore, while creating a benefit pricing rule type, you need to ensure that the **Primary** option is not selected and the pricing rule type category is set to **Benefit**. You need to then add the benefit pricing rule type as a related pricing rule type in the required age-based or tier-based pricing rule type.

While specifying an eligibility rule type for a price item, you need to ensure that the rule type usage of the rule type is set to **Price Item Eligibility**. Before creating rules for the eligibility rule type, you need to create a parameter where the source entity is set to **Benefit**, source type is set to **Field**, source type code is set to **Benefit Sub Type**, and the **Rule Eligibility Criteria** option is selected. While creating rules for the eligibility rule type, you need to ensure that the benefit sub type parameter is set to the required benefit sub type. While creating a benefit charge for the membership, the system executes the effective rules of the eligibility rule type in the order of priority. If the rule criteria is met by the group or individual membership (i.e. benefit sub type of the group or individual membership benefit matches with the rule criteria), the system considers the respective price item to create the charge for the membership benefit.

While creating a benefit pricing rule type, you must attach the following algorithms to the respective system events:

| System Event | Sequence | Algorithm |
|---|----------|--------------|
| Account and Price Item Derivation | 1 | C1_ACCPRIMEM |
| Account and Price Item Derivation Post-Processing | 1 | C1-BILLPDRV |
| Account and Price Item Derivation Post-Processing | 2 | C1-BILLRPCR |
| Bill Group Derivation | 1 | C1_MEMBGDRV |
| Billable Charge Creation Post-Processing | 1 | C1-FICRETBC |
| Premium Calculation | 1 | C1_MEDIPREM |
| Billable Charge Creation Post-Processing | 2 | C1-PRLBCVLD |

Note:

The system requires the **C1-PRLBCVLD** algorithm only when the **Validate External Price** option is selected in the benefit sub type of a membership benefit for which the benefit charge is created.

If you attach the **C1-PRLBCVLD** algorithm in a benefit pricing rule type, you need to ensure that it is also attached in the primary pricing rule type (i.e. age-based or tier-based) through the membership premium is calculated.

Defining a Benefit Pricing Rule Type

Procedure

To define a benefit pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create the benefit pricing rule type. Note: You can create a benefit pricing rule type using the Benefit Pricing Rule Type (C1-PrcRuleTypeBenefit) business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Benefit Pricing Rule Type** business object.
5. Click **OK**.

The **Benefit Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the benefit pricing rule type.

- **Algorithms** – Used to associate the algorithms with the benefit pricing rule type.
- **Price Items** – Used to add the price items using which you want to create charges for different membership benefits.
- **Price Item Parameters** – This section is not applicable for the benefit pricing rule type.
- **Characteristics** – Used to define the characteristics for the benefit pricing rule type.
- **Event Management** – Used to list the elements from the **Benefit (C1-Benefits)** business object which you want to monitor for auditing while updating a membership benefit.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the benefit pricing rule type. | Yes |
| Description | Used to specify the description for the benefit pricing rule type. | Yes |
| Detailed Description | Used to specify the additional information about the benefit pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the benefit pricing rule. The valid value is: <ul style="list-style-type: none"> • Benefit Pricing Rule | Yes |
| | Note: You can create a benefit pricing rule type using the age based or tier based pricing rule business object. | |
| Business Object | Indicates the business object using which you are defining the benefit pricing rule type. | Not applicable |
| Status | Used to indicate the status of the benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Primary | Used to indicate whether the pricing rule type is a primary pricing rule type. | Not applicable |
| | Note: You must not select the Primary option while defining the benefit pricing rule type. | |
| Pricing Rule Type Category | Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Benefit | Yes |

6. Enter the required details in the **Main** section.
7. Ensure that **Primary** option is not selected when you are defining a benefit pricing rule type.
8. Associate the required algorithms with the benefit pricing rule type.
9. Add the required price items for the benefit pricing rule type.
10. Add price item parameters for the benefit pricing rule type.
11. Define characteristics for the benefit pricing rule type.

12. Configure the audit in the benefit pricing rule type.

13. Click **Save**.

The benefit pricing rule type is defined.

Associating Algorithms with a Benefit Pricing Rule Type

Prerequisites

To associate algorithms with a benefit pricing rule type, you should have:

- Required algorithms should be defined in the application

Procedure

To associate algorithms with a benefit pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining the benefit pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|--|--|
| System Event | Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> • Account and Price Item Derivation • Account and Price Item Derivation Post-Processing • Bill Group Derivation • Billable Charge Creation Pre-Processing • Billable Charge Creation Post-Processing • New Born Waiver Calculation • Premium Calculation • Pricing Rule Derivation | Yes Note: This field is required when you want to associate an algorithm with the benefit pricing rule type. |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|---|
| | <ul style="list-style-type: none"> Pricing Rule Pre-Processing Pricing Rule Post-Processing Pricing Rule Proration Amount Calculation Skip Month Premium Calculation <p>Note: The remaining system events are not applicable for the fully-insured group and individual businesses.</p> <p>The New Born Waiver Calculation, Pricing Rule Derivation, Pricing Rule Pre-Processing, Pricing Rule Post-Processing, Pricing Rule Proration Amount Calculation, Skip Month Premium Calculation system events are not applicable for the Benefit pricing rule type category.</p> | |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) |
| | | Note: This field is required when you want to associate an algorithm with the benefit pricing rule type. |
| Algorithm | Used to specify the algorithm. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select the system event option, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p> | Note: This field is required when you want to associate an algorithm with the benefit pricing rule type. |

2. Enter the required details in the **Algorithms** section:

| System Event | Sequence | Algorithm Type |
|---|----------|----------------|
| Account and Price Item Derivation | 1 | C1_ACCPRIMEM |
| Account and Price Item Derivation Post-Processing | 1 | C1-BILLPDRV |
| Account and Price Item Derivation Post-Processing | 2 | C1-BILLRPCR |
| Bill Group Derivation | 1 | C1_MEMBGDRV |
| Billable Charge Creation Post-Processing | 1 | C1-FICRETBC |
| Premium Calculation | 1 | C1_MEDIPREM |

| System Event | Sequence | Algorithm Type |
|--|----------|----------------|
| Billable Charge Creation Post Processing | 2 | C1-PRLBVLD |

- If you want to associate more than one algorithm for the benefit pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the benefit pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the benefit pricing rule type.

Adding a Price Item in a Benefit Pricing Rule Type

Prerequisites

To add a price item in a benefit pricing rule type, you should have:

- Price item defined in the application
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a benefit pricing rule type:

- Ensure that the **Price Items** section is expanded when you are defining or editing a benefit based pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Price Item | Used to indicate the price item that you want to include in a benefit pricing rule type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|-----------------|---|-----------------------|-------------------|-----------------------|----------|--|-----|--------------|---|-----|----------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p> | | | | | | | | | | |
| Bill To Account | <p>Used to indicate the priority in which the account should be considered while creating a benefit charge using the price item.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1" data-bbox="537 705 1230 1621"> <thead> <tr> <th data-bbox="537 705 683 789">Field Name</th> <th data-bbox="683 705 1065 789">Field Description</th> <th data-bbox="1065 705 1230 789">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="537 789 683 936">Priority</td> <td data-bbox="683 789 1065 936">Used to indicate the order in which the system should consider the account with the respective invoice type.</td> <td data-bbox="1065 789 1230 936">Yes</td> </tr> <tr> <td data-bbox="537 936 683 1621">Invoice Type</td> <td data-bbox="683 936 1065 1621"> <p>Used to indicate the invoice account type. Defining a Characteristic for a Benefit Pricing Rule Type

Prerequisites

To define a characteristic for a benefit pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a benefit pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a benefit pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| | Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type . | Note: This field is required when you are defining a characteristic for a benefit pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for a benefit pricing rule type. |

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for a benefit pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a benefit pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for a benefit pricing rule type.

Adding Elements for Audit in a Benefit Pricing Rule Type

Prerequisites

To add elements for audit in a benefit pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit event type defined in the application.

Procedure

To add elements for audit in a benefit pricing rule type:

- Ensure that the **Event Management** section is expanded when you are defining or editing a benefit pricing rule type.

The **Event Management** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | |
|------------------------|---|-----------------------|--------------|------------------------|----------|----------------|--|-------|---|-----|
| Audit Event Type | <p>Used to indicate an active audit event type using which you want to create an audit event when the specified element of a membership benefit is updated.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears.</p> <p>On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field.</p> <p>You must specify an active audit event type which is created for the C1-Benefits business object.</p> | Yes | | | | | | | | |
| Element Type | <p>Used to indicate the type of element. The valid values are:</p> <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field | Not applicable | | | | | | | | |
| Element Name | <p>Used to specify the element that you want to monitor while updating a membership benefit. | Element Value | <p>Used to specify the element value depending on the element type. The following table lists the element value that you must specify depending on the element type:</p> | Not applicable | | | | | | | | |

| Field Name | Field Description | | Mandatory (Yes or No) |
|------------|------------------------|---|-----------------------|
| | Element Type | Element Value | |
| | Business Object Status | Used to indicate the status of the membership benefit business object which you want to monitor for auditing. The system then creates an audit event whenever the membership benefit is transitioned to the specified status. | |
| | Characteristic | Used to indicate the characteristic type which you want to monitor for auditing Note: Here, you must specify a characteristic type where the characteristic entity is set to Benefits . The system then creates an audit event whenever the specified characteristic is defined, edited, or removed from the membership benefit. | |
| | Field | Used to indicate the field which you want to monitor for auditing. Note: Here, you must specify a field from the C1-Benefits business object schema. | |

- Enter the required details in the **Event Management** section.
- If you want to add more than one element for audit in a benefit pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an element for audit in a benefit pricing rule type, click the **Delete** (🗑️) icon corresponding to the audit event type.

- Click **Save**.
The elements for audit are added for a benefit pricing rule type

Editing a Benefit Pricing Rule Type

Prerequisites

To edit a benefit pricing rule type, you should have:

- Benefit pricing rule type business object defined in the application.

Procedure

To define a benefit pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Benefit Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the benefit pricing rule type.
- **Algorithms** – Used to associate the algorithms with the benefit pricing rule type.
- **Price Items** – Used to add the price items for which you can define the benefit pricing rules using the benefit pricing rule type.
- **Price Item Parameters** – This section is not applicable for the benefit pricing rule type.
- **Characteristics** – Used to define the characteristics for the benefit pricing rule type.
- **Event Management** – Used to define the audit event type details for the benefit pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Pricing Rule Type | Displays the benefit pricing rule type. | Not applicable |
| Description | Used to specify the description for the benefit pricing rule type. | Yes |
| Detailed Description | Used to specify the additional information about the benefit pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> • Age Based Pricing Rule • Tier Based Pricing Rule <p>Note: You can create a benefit pricing rule type using the age based or tier based pricing rule business object.</p> | Yes |
| Business Object | Indicates the business object using which you are defining the benefit charge pricing rule type. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| Status | Used to indicate the status of the benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to indicate whether the pricing rule type is a primary pricing rule type. | Not applicable |
| | Note: You must not select the Primary option while defining the benefit pricing rule type. | |
| Pricing Rule Type Category | Indicates the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Benefit | Not applicable |

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are editing a benefit pricing rule type.
- Associate the required algorithms with the benefit pricing rule type:
- Add, edit, or remove the required price items for the benefit pricing rule type.
- Add, edit, or remove the price item parameters for the benefit pricing rule type.
- Add, edit, or remove the characteristics for the benefit pricing rule type.
- Add, edit, or remove the event management details for the benefit pricing rule type.
- Click **Save**.

The changes made to the benefit pricing rule type are saved.

Deleting a Benefit Pricing Rule Type

Procedure

To delete a benefit pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the benefit pricing rule type that you want to delete.
A message appears confirming whether you want to delete the benefit pricing rule type.

Note: You can delete a benefit pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a benefit pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The benefit pricing rule type is deleted.

Viewing the Benefit Pricing Rule Type Details

Procedure

To view the details of a benefit pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** (📡) icon corresponding to the benefit pricing rule type whose details you want to view.
The **Pricing Rule Type** zone appears.
5. View the details of the benefit pricing rule type in the **Pricing Rule Type** zone.

Medicare Part A, Part B, and Part D Pricing

The system enables you to calculate premium for the Medicare Part A, Part B, and Part D membership benefits using the age-based or tier-based pricing rule. You can use the Medicare plan benefit package and membership benefit as the pricing parameters in the age-based or tier-based pricing rule. The system enables you to restrict the billing of a membership benefit using a parameter where the source entity is set to **Algorithm** and source type code is set to **Get benefit coverage for the given date (C1-PPRAMCOV)** in the age-based or tier-based pricing rule. In the **C1-PPRAMCOV** algorithm, you can specify the following:

- **Benefit Sub Type** — Used to indicate that the pricing for the Medicare Part A, Part B, and Part D membership benefits should be determined based on the specified value. Here, you can specify the parameter values as **A**, **B**, and/or **D** separated by a comma. For example, if the parameter is set to A, B, the system will derive the base fee where the parameter is set to AB even though the membership has availed Medicare Part D benefit. This is because you have configured the system such that Medicare Part D membership benefit should not be considered for billing.

Discount Charge Pricing for Retiree Membership

Oracle Revenue Management and Billing enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership through a discount charge pricing rule. A new pricing rule type category named **Discount Charge** and the new business objects named **Discount Charge Pricing Rule Type (C1-PrcRuleTypeDisChg)** and **Discount Charge Pricing Rule (C1-PricingRuleDiscount)** are introduced in this release. This enables you to create the discount charge pricing rules where you can define different base and modifier fees based on the following pricing parameters:

- Membership attributes
- Member person attributes

For the fully-insured group and individual businesses, you can create or edit a flat or percentage based discount charge pricing rule through a health care inbound message. You can define a discount charge pricing rule at the policy plan, policy, or parent customer level. The following table describes the information that you need to provide in a health care inbound message while defining or editing a discount charge pricing rule on a policy plan, policy, or parent customer:

| Entity Type | Entity Identifiers |
|-----------------|--|
| Policy Plan | Policy, Plan, and Source System |
| Policy | Policy and Source System |
| Parent Customer | Person Identifier Type and Person Identifier Value |

For the fully-insured individual business, you can create or edit a flat or percentage based discount charge pricing rule through a health product and plan inbound message. You can define a discount charge pricing rule at the health plan level. The following table describes the information that you need to provide in a health product and plan inbound message while defining or editing a discount charge pricing rule on a health plan:

| Entity Type | Entity Identifiers |
|-------------|--------------------|
| Health Plan | Health Plan |

You can view a discount charge pricing rule defined for the fully-insured group business through the **Customer 360° View** screen. However, at present, you cannot view a discount charge pricing rule defined for the fully-insured individual business from the user interface.

You can create a discount charge pricing rule using a discount charge pricing rule type. You can create a discount charge pricing rule type from the user interface and not through an inbound message. While creating a discount charge pricing rule type, you must select the **Discount Charge Pricing Rule Type** business object and set the pricing rule type category to **Discount Charge**. The discount is always charged per subscriber and not per member, and therefore you must set the pricing rule type sub category to **Per Subscriber**. Here, you must specify the algorithms for the following system events:

| System Event | Algorithm |
|---|--------------|
| Account and Price Item Derivation | C1_ACCPRIMEM |
| Account and Price Item Derivation Post-Processing | C1-BILLPDRV |
| Account and Price Item Derivation Post-Processing | C1-BILLRPCR |
| Billable Charge Creation Post-Processing | C1-FICRETBC |
| Bill Group Derivation | C1_MEMBGDRV |
| Premium Calculation | C1_TIERPREM |

In addition, you must specify the price items for which you can create discount charge pricing rules using the discount charge pricing rule type. A discount charge pricing rule type is not a primary pricing rule type. You must include a discount charge pricing rule type as a related pricing rule type in the age-based or tier based pricing rule types which are used for calculating the retiree membership premium. This is because the discount is offered on the retiree membership premium.

If the pricing type in the discount charge pricing rule is set to **Flat**, the system offers a flat discount on the retiree membership. But, if pricing type in the discount charge pricing rule is set to **Percent**, the system calculates and offers the percentage based discount on the retiree membership premium.

Prerequisites

To setup the discount charge pricing for retiree membership, you need to do the following:

- Define the **Discount Charge Pricing Rule Type (C1-PrcRuleTypeDisChg)** business object in the system.
- Define the **Discount Charge Pricing Rule (C1-PricingRuleDiscount)** business object in the system.
- Define the **Discount Charge** pricing rule type category in the system.
- Define the required algorithms in the system.
- Define the required price items and price item parameters in the system.
- Define the required rate options in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup.
- Define the required rule types (where the rule type usage is set to **Price Item Eligibility**).
- Define the required policy, policy plan, and persons in the system.
- Define the **Healthcare Product (C1-HealthcareProduct)** business object in the system.
- Define the **Health Plan (C1-HealthPlan)** business object in the system.
- Define the **Audit Event Type (C1-AuditEventType)** business object in the system.
- Define the required audit event type in the system.
- Define the required characteristic types (where the characteristic entity is set to **Pricing Rule Type**) in the system.

Defining a Discount Charge Pricing Rule Type

Prerequisites

To define a discount charge pricing rule type, you should have:

- Discount charge pricing rule type business object defined in the application.
- Discount charge pricing rule business object defined in the application.
- Pricing rule type category for the discount charge defined in the application.

Procedure

To define a discount charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|-----------------------|
| Pricing Rule Type Business Object | Used to indicate the business object using which you want to create a discount charge pricing rule type. Note: You can create a discount charge pricing rule type using the Discount Charge Pricing Rule Type business object. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Discount Charge Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Discount Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with a discount charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount charge pricing rules using the discount charge pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a discount charge pricing rule type.
- **Event Management** – Used to configure the audit in a discount charge pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Pricing Rule Type | Used to specify the discount charge pricing rule type. | Yes |
| Description | Used to specify the description for the discount charge pricing rule type. | Yes |
| Detailed Description | Used to specify additional information about the discount charge pricing rule type. | No |
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the discount charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Discount Charge Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining the discount charge pricing rule type. | Not applicable |
| Status | Used to indicate the status of the discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to indicate whether the discount charge pricing rule type is a primary pricing rule type. | No |
| | Note: You must not select the Primary option while defining the discount charge pricing rule type. | |
| Pricing Rule Type Category | Used to indicate the category to which the discount charge pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Discount Charge | Yes |
| Pricing Rule Type Sub Category | Used to indicate the pricing rule type sub category for the discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Per Member Per Subscriber | No |
| | Note: You must select the Per Subscriber option while defining the discount charge pricing rule type. | |

6. Enter the required details in the **Main** section.
7. Associate the required algorithms with the discount charge pricing rule type.
8. Add the required price items in the discount charge pricing rule type.
9. Add the price item parameters in the discount charge pricing rule type, if required.
10. Define characteristics for the discount charge pricing rule type, if required.
11. Configure the audit in the discount charge pricing rule type.
12. Click **Save**.

The the discount charge pricing rule type is defined.

Associating an Algorithm with a Discount Charge Pricing Rule Type**Prerequisites**

To associate an algorithm with a discount charge pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

Procedure

To associate an algorithm with a discount charge pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the discount charge pricing rule type.

The **Algorithms** section contains the following columns in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------|---|---|
| System Event | Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Account and Price Item Derivation Post-Processing - Used to derive the bill period for the account. • Account and Price Item Derivation Post-Processing - Used to create the bill period timeline for the account. • Account and Price Item Derivation Post-Processing - Used to derive subscription tier for membership, based on the bill period configured on the account. | Yes |
| | | Note: This field is required when you are associating an algorithm with the discount charge pricing rule type. |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|--|
| | <ul style="list-style-type: none"> • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Premium Calculation - Used to calculate the premium for each eligible member person. • Pricing Rule Billable Charge Creation - Used to derive the price items for which you can create the SQI based billable charges using the discount charge pricing rule type. | |
| Sequence | Used to specify the order in which the algorithms for each system event must be executed. | Yes (Conditional) Note: This field is required when you are associating an algorithm with the discount charge pricing rule type. |
| Algorithm | Used to specify the algorithm. Note: Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field. | Yes (Conditional) Note: This field is required when you are associating an algorithm with the discount charge pricing rule type. |

2. Enter the following details in the **Algorithms** section:

| System Event | Algorithm | Algorithm Type | Description |
|---|--------------|----------------|---|
| Account and Price Item Derivation | C1_ACCPRIMEM | C1_ACCPRIMEM | Account and PriceItem Derivation for Membership |
| Account and Price Item Derivation Post-Processing | C1-BILLPDRV | C1-BILLPDRV | Bill Period Derivation |
| Account and Price Item Derivation Post-Processing | C1-BILLRPCR | C1-BILLRPCR | Bill Period Time Line Creation |
| Account and Price Item Derivation Post-Processing | C1-DERSUBTR | C1-DERSUBTR | Derive Subscription Tier for Membership |
| Bill Group Derivation | C1_MEMBGDRV | C1_MEMBGDRV | Bill Group Derivation for Membership |
| Premium Calculation | C1_TIERPREM | C1_TIERPREM | Tier Based Premium Calculation |
| Pricing Rule Billable Charge Creation | C1-FICRETBC | C1-FICRETBC | Fully-Insured Charge creation for Memberships |

- If you want to associate more than one algorithm with the discount charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the discount charge pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the discount charge pricing rule type.

Adding a Price Item in a Discount Charge Pricing Rule Type

Prerequisites

To add a price item in a discount charge pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a discount charge pricing rule type:

- Ensure that the **Price Items** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Price Items** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|--|
| Price Item | Used to indicate the price item that you want to include in the discount charge pricing rule type. | Yes (Conditional) Note: This field is required when you are adding a rate option and bill to account in a discount charge pricing rule type. |
| | Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying the price item, the description of the price item appears corresponding to the Price Item field. | |
| Rate Option | Used to indicate one or more rate options which are valid for a price item. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
|-----------------|---|-----------------------|-------------------|-----------------------|-------------|--|-----|--------------|---|-----|----------------|
| | <p>On clicking the Add (+) icon, the following field appears in a grid:</p> <table border="1" data-bbox="516 300 1219 531"> <thead> <tr> <th data-bbox="516 300 656 415">Field Name</th> <th data-bbox="656 300 1078 415">Field Description</th> <th data-bbox="1078 300 1219 415">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="516 415 656 531">Rate Option</td> <td data-bbox="656 415 1078 531">Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td data-bbox="1078 415 1219 531">Yes</td> </tr> </tbody> </table> <p>Note: If you want to define more than one rate option to the price item in a discount charge pricing rule type, click the Add (+) icon. However, if you want to remove a price item from a discount charge pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p> | Field Name | Field Description | Mandatory (Yes or No) | Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Rate Option | Used to indicate the rate option that you want to use while defining pricing for the price item. | Yes | | | | | | | | | |
| Bill To Account | <p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1" data-bbox="516 997 1219 1585"> <thead> <tr> <th data-bbox="516 997 656 1113">Field Name</th> <th data-bbox="656 997 1078 1113">Field Description</th> <th data-bbox="1078 997 1219 1113">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="516 1113 656 1228">Priority</td> <td data-bbox="656 1113 1078 1228">Used to specify the order in which the invoice type is considered for a price item.</td> <td data-bbox="1078 1113 1219 1228">Yes</td> </tr> <tr> <td data-bbox="516 1228 656 1585">Invoice Type</td> <td data-bbox="656 1228 1078 1585"> Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 79 section. <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> | Yes | Not applicable |
| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | |
| Priority | Used to specify the order in which the invoice type is considered for a price item. | Yes | | | | | | | | | |
| Invoice Type | Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 79 section. <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> | Yes | | | | | | | | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Eligibility Rule Type | Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing. | No |
| Sponsored | Used to indicate that the system should consider the sponsor billing arrangement while creating and billing the charge for the price item. Note: If the Sponsored option is not selected, the system considers retiree billing arrangement while creating and billing the charge for the price item. | No |

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a discount charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item from a discount charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a discount charge pricing rule type.

Adding a Price Item Parameter in a Discount Charge Pricing Rule Type

Prerequisites

To add a price item parameter in a discount charge pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a discount charge pricing rule type:

- Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Price Item Parameter | Used to specify the parameter which you can use while defining a discount charge pricing for the price item. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p> | <p>Note: This field is required when you are adding a price item parameter in a discount charge pricing rule type.</p> |

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a discount charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a discount charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added for a discount charge pricing rule type.

Defining a Characteristic for a Discount Charge Pricing Rule Type

Prerequisites

To define a characteristic for a discount charge pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a discount charge pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Characteristics** section contains the following columns in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | <p>Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| | | Note: This field is required when you are defining a characteristic for a discount charge pricing rule type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | <p>Note: This field is required when you are defining a characteristic for a discount charge pricing rule type.</p> |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for a discount charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a discount charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for a discount charge pricing rule type.

Adding Elements for Audit in a Discount Charge Pricing Rule Type

Prerequisites

To add elements for audit in a discount charge pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit event type defined in the application.

Procedure

To add elements for audit in a discount charge pricing rule type:

- Ensure that the **Event Management** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Event Management** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Audit Event Type | Used to specify the audit event type which you can use while adding elements for audit in a discount charge pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field. | Yes |
| Element Type | Used to indicate the type of audit element for a discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field | Not applicable |
| Element Name | Used to specify the element name for a discount charge pricing rule type. Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears. | Yes |
| Element Value | Used to specify the value for an element name. Note: If you select either Business Object Status or Characteristic option from the Element Type list, the Search (🔍) icon appears corresponding to the Element Value field. On clicking the Search (🔍) icon corresponding to the Element Value field, the Audit Event Type Element Value Search window appears. | Yes |

2. Enter the required details in the **Event Management** section.
3. If you want to add more than one element for audit in a discount charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from a discount charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Audit Event Type** field.

4. Click **Save**.

The elements for audit are added for a discount charge pricing rule type.

Editing a Discount Charge Pricing Rule Type**Prerequisites**

To edit a discount charge pricing rule type, you should have:

- Discount charge pricing rule type business object defined in the application.
- Discount charge pricing rule business object defined in the application.

Procedure

To edit a discount charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Discount Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a discount charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with a discount charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pricing rules using the discount charge pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a discount charge based pricing rule type.
- **Event Management** – Used to configure the audit in a discount charge based pricing rule type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Pricing Rule Type | Displays the discount charge pricing rule type. | Not applicable |
| Description | Used to specify the description for the discount charge pricing rule type. | Yes |
| Detailed Description | Used to specify the additional information about the discount charge pricing rule type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Pricing Rule Business Object | Used to indicate the business object using which you want to create the discount charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Discount Charge Pricing Rule | Yes |
| Business Object | Indicates the business object using which you are defining the discount charge pricing rule type. | Not applicable |
| Status | Used to indicate the status of discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Primary | Used to select whether the discount charge pricing rule type is a primary pricing rule type. Note: You must not select the Primary option while editing the discount charge pricing rule type. | No |
| Pricing Rule Type Category | Indicates the pricing rule type category for a discount charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Discount Charge | No |
| Pricing Rule Type Sub Category | Used to indicate the pricing rule type sub category for the discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Per Member Per Subscriber Note: You must select the Per Subscriber option while defining the discount charge pricing rule type. | No |

Tip: Alternatively, you can edit the details of a discount charge pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the required algorithms in a discount charge pricing rule type.
- Add, edit, or remove the required price items in a discount charge pricing rule type.
- Add, edit, or remove the price item parameters in a discount charge pricing rule type, if required.
- Add, edit, or remove characteristics for a discount charge pricing rule type, if required.
- Add, edit, or remove the configuration details of the audit in a discount charge pricing rule type.
- Click **Save**.

The changes made to the discount charge pricing rule type are saved.

Deleting a Discount Charge Pricing Rule Type

Procedure

To delete a discount charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the discount charge pricing rule type that you want to delete.
A message appears confirming whether you want to delete the discount charge pricing rule type.

Note: You can delete a discount charge pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a discount charge pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The discount charge pricing rule type is deleted.

Viewing the Discount Charge Pricing Rule Type Details

Procedure

To view the details of a discount charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** (🔊) icon corresponding to the discount charge pricing rule type whose details you want to view.
The **Pricing Rule Type** zone appears.
5. View the details of the a discount charge pricing rule type in the **Pricing Rule Type** zone.

Viewing the Discount Charge Pricing Rule Details

Procedure

To view the details of a discount charge pricing rule:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| View the discount charge pricing rule for a Fully-Insured Individual Membership | <ol style="list-style-type: none"> 1. Search for the fully-insured individual membership in the Customer 360° View screen. 2. In the Search Results section, click the View (🔗) icon corresponding to the fully-insured individual whose pricing rule details you want to view. The Policy tab appears in the Customer 360° Information screen. |
| View the discount charge pricing rule for a Fully-Insured Group Membership | <ol style="list-style-type: none"> 1. Search for the fully-insured group and individual memberships in the Customer 360° View screen. 2. In the Search Results section, click the View (🔗) icon corresponding to the fully-insured group membership whose pricing rule details you want to view. The Policy tab appears in the Customer 360° Information screen. |

2. Click the **Pricing Information** tab.
The **Pricing Information** tab appears.
3. In the **Fully-Insured Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the fully-insured pricing rule type whose details you want to view.

The **Pricing Rule (Discount Charge)** screen appears. It contains the following zone:

- **Discount Charge Pricing Rule** – Displays the discount charge pricing rule details for an individual membership. It contains the following sections:
 - **Pricing Information** – Displays the basic details about the discount charge pricing rule.
 - **Pricing Parameters** – Displays the pricing parameters defined for the discount charge pricing rule.
 - **Characteristics** – Displays the characteristics defined for the discount charge pricing rule.
- 4. View the basic details of the discount charge pricing rule in the **Pricing Information** section.
- 5. View the pricing parameters defined for the discount charge pricing rule in the **Pricing Parameters** section.
- 6. View the characteristics of the discount charge pricing rule in the **Characteristics** section.

Pricing Rule Inactivation

Earlier, you were not able to inactivate a pricing rule which is referred by a group or individual membership for the charge calculation. Now, the system enables you to change the status of the age based, tier based, additional fee, and discount charge pricing rules from **Active** to **Inactive** even when it is referred by a membership for the charge calculation. On inactivating a pricing rule, the system creates an audit event in the system.

A new batch named **Process Inactivated Fully-Insured Pricing Rule (C1-CBIPR)** is introduced in this release. You must execute the **Process Inactivated Fully-Insured Pricing Rule (C1-CBIPR)** batch in between the following batches - **Audit Event Process Monitor (C1-AUDEV)** and **Identify Entities for Repricing (C1-REPC1)**. The **Process Inactivated Fully-Insured Pricing Rule (C1-CBIPR)** batch considers the repricing entity details records from the **CI_REPRC_ENTITY_DTL** table which are in the **Discard** status due to pricing rule inactivation. It then cancels the billable charges and bill segments (if any) which are created using the pricing rule which you have inactivated. In addition, it changes the status of the records in the **CI_PRCE_CALC** table to **I** where the inactivated pricing rule is referred.

If you inactivate a primary pricing rule, the system will cancel the billable charges and bill segments (if any) which are created using the related pricing rules. If you inactivate a rate guarantee pricing rule, the system will cancel the billable charges and bill segments (if any) which are created using the rate guarantee pricing rule.

Audit Framework for Fully-Insured Billing

Oracle Revenue Management and Billing calculates the membership premium when you add a membership to a policy plan. It also enables you to recalculate the membership premium in the following scenarios:

- A member person is added or removed from the membership.
- The fields, characteristics, or statuses which are monitored for the auditing purposes are updated at the membership, member person, or pricing rule level.
- A pricing rule is added or updated for the policy plan.
- The derivation and pricing parameters are defined or updated for a bill group.

The membership premium calculation and recalculation (i.e. repricing) is implemented using the **Entity Audit** feature. The entity audit framework is already configured for the following business objects:

- C1-Membership
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased
- C1-BillLevel

To configure the entity audit framework for the above listed business objects, the following changes are made to these business objects:

- The **Eligible for Audit Event** option type is set to **Y** in
- An algorithm created using the **C1-READEVNT** algorithm type is already attached to the **Audit** system event of the **C1-PricingRuleTierBased**, **C1-PricingRuleAgeBased**, and **C1-BillLevel** business objects.
- An algorithm created using the **C1-FIAUDEV** algorithm type is already attached to the **Audit** system event of the **C1-Membership** and **C1_PERSON_BO** business objects.

But, the entity audit framework will work when you define an active audit event type for the above listed business objects. For more information on how to create an audit event type, see [Defining an Audit Event Type](#) on page 3518. While creating an audit event type for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects, you need to attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the **Audit Event Processing** system event of the respective audit event type. And, while creating an audit event type for the **C1-BillLevel** business object, you need to attach an algorithm created using the **C1-AUDBILLVL** algorithm type to the **Audit Event Processing** system event of the audit event type.

In addition, you need to list the following in the pricing rule types where the category is set to **Age Based** and **Tier Based**:

- Audit event types of the **C1-Membership** and **C1_PERSON_BO** business objects using which the audit event should be created whenever a membership and member person is added, updated, or removed from the policy plan, respectively.
- Elements of the **C1-Membership** and **C1_PERSON_BO** business objects for which auditing is required.

Note:

At present, you cannot use an audit event type of the **C1-Membership** and **C1_PERSON_BO** business objects in the **Age Based** and **Tier Based** pricing rule types when the **Update All** option is selected in the audit event type. Therefore, we recommend you to select an audit event type of the **C1-Membership** and **C1_PERSON_BO** business objects where the **Update All** option is not selected.

The system creates an audit event whenever the membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age based or tier based pricing rule types.

You can also configure the entity audit feature for any custom membership or person business objects.

The way in which the audit events are created and processed for a pricing rule, membership, and member person is different. While creating an audit event, the system checks whether an audit event for the entity with the same effective date already exists in the **Pending** status. If so, the system does not create a new audit event for the entity. Instead, the system adds a log in the existing audit event.

Age Based and Tier Based Pricing Rules Audit Process

If you add or edit an age based or tier based pricing rule, the system checks whether an active audit event type exists for the **C1-PricingRuleAgeBased** or **C1-PricingRuleTierBased** business object, respectively. If an active audit event type exists for the business object, the system creates an audit event for the pricing rule using the audit event type. The audit event is created in the **Pending** status. Note that the system creates one audit event for the pricing rule irrespective of the number of changes made to the pricing rule. In addition, an effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the effective date is set to the pricing rule's start date.

On executing the **Audit Event Process Monitor (C1-AUDEV)** batch, the system considers the audit events in the **Pending** or **Error** status. By default, it considers the audit events in the **Pending** status. The system checks whether the **C1-AUDEVMPR** algorithm is attached to the respective audit event type. If the **C1-AUDEVMPR** algorithm is attached to the audit event type, it identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates a repricing entity detail record for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

Let us understand this with the help of an example.

The following table illustrates the audit events that are created while adding the PR1 and PR2 pricing rules:

| | | |
|---------------------|-----|-----|
| Audit Event | AE1 | AE2 |
| Pricing Rule | PR1 | PR2 |

| | | |
|--|-----------------------|-------------|
| Pricing Rule Type Using which the Pricing Rule is Created | PRT1 | PRT3 |
| Pricing Rule Start Date | 01-01-2019 | 01-01-2019 |
| Policy Plan for which the Pricing Rule is Defined | PP1 | PP2 |
| Pricing Rule Types Associated with the Policy Plan | PRT1, PRT2, PRT3 | PRT3 |
| Memberships which Belong to the Policy Plan | M1, M2, M3, and M4 | M11 and M12 |

For the AE1 audit event, the system creates four repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M1, PRT1, 01-01-2019
- M2, PRT1, 01-01-2019
- M3, PRT1, 01-01-2019
- M4, PRT1, 01-01-2019

And, for the AE2 audit event, the system creates two repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M11, PRT3, 01-01-2019
- M12, PRT3, 01-01-2019

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Membership Audit Process

If you add or edit a membership, the system checks whether an active audit event type exists for the **C1-Membership** business object. If an active audit event type exists for the business object, the system creates the audit event using the audit event type. The system creates the audit event whenever a membership is added to a policy plan and dependent member person is added to a membership. It also creates the audit event whenever the membership and member person details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age based or tier based pricing rule types is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. membership or member person whichever is updated) date range.

The audit event is created in the **Pending** status. An effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the system creates distinct audit events in the following scenarios:

| Scenario | System Behavior |
|--|--|
| A membership is added to a policy plan | One audit event is created for the membership. Here, the effective date in the audit event is set to the membership's start date. For example, two memberships named M1 (with the start date as 01-01-2020) and M2 (with the start date as 01-15-2020) are added to a policy plan named PP1. In such case, the system will create two audit events — one for M1 with the effective date as 01-01-2020 and another for M2 with the effective date as 01-15-2020. |
| A dependent member person is added to a membership | One audit event is created for the membership. Here, the effective date in the audit event is set to the dependent member person's start date. |

| Scenario | System Behavior | | | | | | | | | | | | | | | |
|--|--|----------------|----------------|--------|------------------------------|-----------|-----|----------------------------|-----------|------|---------------------------|-----------|-----|-------------------------------------|-----------|------|
| | <p>For example, one dependent member person named MP1 (with the start date as 06-05-2020) is added to the M1 membership and another dependent member person named MP2 (with the start date as 06-10-2020) is added to the M2 membership. In such case, the system will create two audit events — one for M1 with the effective date as 06-05-2020 and another for M2 with the effective date as 06-10-2020.</p> | | | | | | | | | | | | | | | |
| <p>A dependent member person is removed from a membership</p> | <p>One audit event is created for the membership. Here, the effective date in the audit event is set to the dependent member person's start date.</p> <p>For example, one dependent member person named MP4 (with the start date as 9-15-2020) is removed from the M1 membership. In such case, the system will create one audit event for M1 with the effective date as 9-15-2020.</p> | | | | | | | | | | | | | | | |
| <p>A membership is added to a policy plan along with a dependent member person</p> | <p>Multiple audit events are created for the membership – one where the effective date is set to membership's start date, another where the effective date is set to dependent member person's start date, and third where the effective date is set to dependent member person's end date +1 Day. Note that the second audit event is created when the dependent member person's start date is later than membership's start date. And, the third audit event is created when the dependent member person's end date is earlier than membership's end date.</p> <p>For example, one membership named M1 (with the start date as 01-01-2020 and end date as 12-31-2020) is added with two member persons — MP1 who is a main subscriber and MP2 (with the start date as 03-01-2020 and end date as 10-31-2020) who is a dependent member person. In such case, the system will create three audit events for M1 — one with the effective date as 01-01-2020, another with the effective date as 03-01-2020, and third with the effective date as 11-01-2020 (i.e. 10-31-2020 + 1 Day).</p> | | | | | | | | | | | | | | | |
| <p>Membership characteristics are added or updated in the system</p> | <p>Multiple audit events are created for the membership – one for each set of membership characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the membership's characteristic is effective.</p> <p>For example, the following characteristics are added or updated for the M1 membership:</p> <table border="1" data-bbox="732 1430 1463 1829"> <thead> <tr> <th data-bbox="740 1440 976 1480">Characteristic</th> <th data-bbox="976 1440 1219 1480">Effective Date</th> <th data-bbox="1219 1440 1463 1480">Action</th> </tr> </thead> <tbody> <tr> <td data-bbox="740 1480 976 1562">Maximum Number of Dependents</td> <td data-bbox="976 1480 1219 1562">9-15-2020</td> <td data-bbox="1219 1480 1463 1562">Add</td> </tr> <tr> <td data-bbox="740 1562 976 1644">Age Calculation Date Basis</td> <td data-bbox="976 1562 1219 1644">9-20-2020</td> <td data-bbox="1219 1562 1463 1644">Edit</td> </tr> <tr> <td data-bbox="740 1644 976 1726">Young Adult Max Age Limit</td> <td data-bbox="976 1644 1219 1726">9-15-2020</td> <td data-bbox="1219 1644 1463 1726">Add</td> </tr> <tr> <td data-bbox="740 1726 976 1829">Young Adult Inclusion Applicability</td> <td data-bbox="976 1726 1219 1829">9-20-2020</td> <td data-bbox="1219 1726 1463 1829">Edit</td> </tr> </tbody> </table> | Characteristic | Effective Date | Action | Maximum Number of Dependents | 9-15-2020 | Add | Age Calculation Date Basis | 9-20-2020 | Edit | Young Adult Max Age Limit | 9-15-2020 | Add | Young Adult Inclusion Applicability | 9-20-2020 | Edit |

| <p>A set of membership fields except membership start and end dates is updated in the system</p> | <p>One audit event is created for the membership. Here, the effective date in the audit event is set to the membership’s start date.</p> <p>For example, the external membership ID of the M1 membership (with the start date as 9-15-2020) is changed. In such case, the system will create one audit event for M1 with the effective date as 9-15-2020.</p> | | | | | | | | | | | | | | | | | | | | |
| <p>The membership start date is updated in the system</p> | <p>One audit event is created for the membership. Here, the effective date in the audit event is set to the membership’s new start date.</p> <p>For example, the start date of the M1 membership is changed from 9-15-2020 to 9-20-2020. In such case, the system will create one audit event for M1 with the effective date as 9-20-2020.</p> | | | | | | | | | | | | | | | | | | | | |
| <p>The membership end date is updated in the system</p> | <p>One audit event is created for the membership. Here, the effective date in the audit event is set to membership’s new end date.</p> <p>For example, the end date of the M1 membership is changed from 12-31-2020 to 11-30-2020. In such case, the system will create one audit event for M1 with the effective date as 11-30-2020.</p> | | | | | | | | | | | | | | | | | | | | |

| Scenario | System Behavior |
|---|--|
| A set of member person's fields except member person start and end dates is updated in the system | <p>One audit event is created for the membership. Here, the effective date in the audit event is set to the member person's start date.</p> <p>For example, the relationship type and status of the MP1 member person (with the start date as 01-01-2020) in the M1 membership is changed. In such case, the system will create one audit event for M1 with the effective date as 01-01-2020.</p> |
| The dependent member person's start date is updated in the system | <p>Three audit events are created for the membership – one where the effective date is set to the dependent member person's previous start date, another where the effective date is set to the dependent member person's new start date, and third where the effective date is set to dependent member person's end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the third audit event for the membership. In such scenario, it simply creates first two audit events.</p> <p>For example, the Mike's effective date range is changed from 04-01-2019 – 09-30-2019 to 01-15-2019 – 09-30-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create three audit events for M1 – one with effective date as 04-01-2019, another with effective date as 01-15-2019, and third with effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to Person. Let us assume that in the above example a characteristic for Mike was effective from 02-01-2019. In such case, the system creates three audit events for the M1 membership (with the effective dates as mentioned above) and one audit event for the person (i.e. Mike) where the effective date is set to 02-01-2019.</p> |
| The dependent member person's end date is updated in the system | <p>Two audit events are created for the membership – one where the effective date is set to dependent member person's previous end date + 1 Day and another where the effective date is set to dependent member person's new end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the second audit event for the membership. In such scenario, it simply creates the first audit event.</p> <p>For example, the Garry's effective date range is changed from 04-01-2019 – 09-30-2019 to 04-01-2019 – 12-31-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create one audit event for M1 with the effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day). It will not create another audit event for M1 because the derived effective date (i.e. 12-31-2019 + 1 Day = 01-01-2020) is later than membership end date (i.e. 12-31-2019).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those</p> |

| Scenario | System Behavior |
|---|--|
| | effective characteristics where the characteristic entity is set to Person . Let us assume that in the above example a characteristic for Garry was effective from 11-01-2019. In such case, the system creates one audit event for M1 membership (with the effective date as mentioned above) and another audit event for the person (i.e. Garry) where the effective date is set to 11-01-2019. |
| The dependent member person's start and end dates are updated in the system | <p>Four audit events are created for the membership – one where the effective date is set to the dependent member person's previous start date, another where the effective date is set to the dependent member person's new start date, third where the effective date is set to dependent member person's previous end date + 1 Day, and fourth where the effective date is set to dependent member person's new end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the fourth audit event for the membership. In such scenario, it simply creates the first three audit events.</p> <p>For example, the Juliet's effective date range is changed from 04-01-2019 – 09-30-2019 to 01-01-2019 – 11-30-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create four audit events for M1 – one with effective date as 04-01-2019, another with effective date as 01-01-2019, third with effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day), and fourth with effective date as 12-01-2019 (i.e. 11-30-2019 + 1 Day).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to Person. Let us assume that in the above example two characteristics of Juliet were effective from 03-01-2019 and 10-01-2019, respectively. In such case, the system creates four audit events for M1 membership (with the effective dates as mentioned above), fifth audit event for the person (i.e. Juliet) where the effective date is set to 03-01-2019, and sixth audit event for the person (i.e. Juliet) where the effective date is set to 10-01-2019.</p> |

For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. A repricing entity detail record is created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

Let us understand this with the help of an example.

The following table illustrates the audit events that are created while adding the M1 and M2 memberships:

| Audit Event | AE11 | AE12 |
|---|------------|------------|
| Membership | M1 | M2 |
| Membership Start Date | 01-03-2019 | 01-02-2019 |
| Policy Plan to which Membership Belongs | PP11 | PP12 |

| | | |
|---|--|---|
| Pricing Rules Defined on the Policy Plan | PR1 (Using PRT1), PR2 (Using PRT2), PR3 (Using PRT3) | PR11 (Using PRT1), PR13 (Using PRT2) |
| Pricing Rule Types Associated with the Policy Plan | PRT1, PRT2, PRT3 | PRT1, PRT2 |

For the AE11 audit event, the system creates three repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M1, PRT1, 01-03-2019
- M1, PRT2, 01-03-2019
- M1, PRT3, 01-03-2019

And, for the AE12 audit event, the system creates two repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M2, PRT1, 01-02-2019
- M2, PRT2, 01-02-2019

Note: If the audit event's effective date is earlier than the member person's start date, the system sets the effective date in the repricing entity detail record to the member person's start date. Therefore, in such scenarios, the effective date of the audit event and repricing entity detail records will be different.

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Person Audit Process

If you add or edit a person, the system checks whether an active audit event type exists for the **C1_PERSON_BO** business object. If an active audit event type exists for the business object, the system creates an audit event for the person using the audit event type. The audit event is created in the **Pending** status. An effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the system creates distinct audit events in the following scenarios:

| Scenario | System Behavior | | | | | | | | | | | | | | | | |
|--|---|------------------------|--------------------------|------------------------|-------------------|-----|------------|------------------------|-------------|-----|------------|------------------------|-------------|-----|------------|------------------------|-------------|
| Person fields are updated in the system. | <p>One audit event is created for the person. Here, the effective date in the audit event is set to the member person's start date.</p> <p>For example, the following person identifier type is defined for MP1, MP2, and MP3 who are members of the M1 membership:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Member Person</th> <th>Member Person Start Date</th> <th>Person Identifier Type</th> <th>Person Identifier</th> </tr> </thead> <tbody> <tr> <td>MP1</td> <td>03-10-2020</td> <td>Social Security Number</td> <td>987-65-4320</td> </tr> <tr> <td>MP2</td> <td>03-15-2020</td> <td>Social Security Number</td> <td>987-65-4321</td> </tr> <tr> <td>MP3</td> <td>03-25-2020</td> <td>Social Security Number</td> <td>987-65-4322</td> </tr> </tbody> </table> | Member Person | Member Person Start Date | Person Identifier Type | Person Identifier | MP1 | 03-10-2020 | Social Security Number | 987-65-4320 | MP2 | 03-15-2020 | Social Security Number | 987-65-4321 | MP3 | 03-25-2020 | Social Security Number | 987-65-4322 |
| Member Person | Member Person Start Date | Person Identifier Type | Person Identifier | | | | | | | | | | | | | | |
| MP1 | 03-10-2020 | Social Security Number | 987-65-4320 | | | | | | | | | | | | | | |
| MP2 | 03-15-2020 | Social Security Number | 987-65-4321 | | | | | | | | | | | | | | |
| MP3 | 03-25-2020 | Social Security Number | 987-65-4322 | | | | | | | | | | | | | | |

| Scenario | System Behavior | | | | | | | | | | | | | | | | | | | | |
|--|---|----------------|----------------|----------------|--------|-----|----------------|------------|-----|-----|-------------|------------|------|-----|----------------|------------|-----|-----|-------------|------------|------|
| | In such case, the system will create three audit events — one for MP1 with the effective date as 03-10-2020, another for MP2 with the effective date as 03-15-2020, and third for MP3 with the effective date as 03-25-2020. | | | | | | | | | | | | | | | | | | | | |
| Person characteristics are added or updated in the system. | <p>Multiple audit events are created for the person – one for each set of person characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the person’s characteristic is effective.</p> <p>For example, the following characteristics are added or updated for the persons who are members of the M1 membership:</p> <table border="1"> <thead> <tr> <th>Member Person</th> <th>Characteristic</th> <th>Effective Date</th> <th>Action</th> </tr> </thead> <tbody> <tr> <td>MP1</td> <td>Marital Status</td> <td>09-15-2020</td> <td>Add</td> </tr> <tr> <td>MP1</td> <td>Garble Data</td> <td>09-20-2020</td> <td>Edit</td> </tr> <tr> <td>MP2</td> <td>Marital Status</td> <td>09-15-2020</td> <td>Add</td> </tr> <tr> <td>MP2</td> <td>Garble Data</td> <td>09-20-2020</td> <td>Edit</td> </tr> </tbody> </table> <p>In such case, the system will create four audit events — one for MP1 with the effective date as 09-15-2020, another for MP1 with the effective date as 09-20-2020, third for MP2 with the effective date as 09-15-2020, and fourth for MP2 with the effective date as 09-20-2020.</p> | Member Person | Characteristic | Effective Date | Action | MP1 | Marital Status | 09-15-2020 | Add | MP1 | Garble Data | 09-20-2020 | Edit | MP2 | Marital Status | 09-15-2020 | Add | MP2 | Garble Data | 09-20-2020 | Edit |
| Member Person | Characteristic | Effective Date | Action | | | | | | | | | | | | | | | | | | |
| MP1 | Marital Status | 09-15-2020 | Add | | | | | | | | | | | | | | | | | | |
| MP1 | Garble Data | 09-20-2020 | Edit | | | | | | | | | | | | | | | | | | |
| MP2 | Marital Status | 09-15-2020 | Add | | | | | | | | | | | | | | | | | | |
| MP2 | Garble Data | 09-20-2020 | Edit | | | | | | | | | | | | | | | | | | |

For each audit event, the system identifies the memberships in which the person is added as a member person. It identifies the policy plan to which each membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. A repricing entity detail record is created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

Let us understand this with the help of an example.

The following table illustrates the audit event that is created while updating the MP1 person:

| Audit Event | AE1 | | |
|--|------------------------------------|------------------------------------|------------------------------------|
| Membership to which MP1 belongs | M1 | M2 | M3 |
| Member Person’s Start Date | 01-01-2019 | 01-01-2019 | 01-07-2019 |
| Policy Plan to which Membership Belongs | PP1 | PP2 | PP3 |
| Pricing Rules Defined on the Policy Plan | PR1 (Using PRT1), PR2 (Using PRT2) | PR3 (Using PRT3), PR4 (Using PRT3) | PR5 (Using PRT5), PR6 (Using PRT6) |
| Pricing Rule Types Associated with the Policy Plan | PRT1, PRT2 | PRT3, PRT4 | PRT5, PRT6 |

For the AE1 audit event, the system creates five repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M1, PRT1, 01-01-2019
- M1, PRT2, 01-01-2019
- M2, PRT3, 01-01-2019

- M3, PRT5, 01-07-2019
- M3, PRT6, 01-07-2019

Note: If the audit event's effective date is earlier than the member person's start date, the system sets the effective date in the repricing entity detail record to the member person's start date. Therefore, in such scenarios, the effective date of the audit event and repricing entity detail records will be different.

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Membership Benefit Audit Process

Oracle Revenue Management and Billing enables you to calculate the charges for the availed Medicare Part D LIS, Medicare Part D LEP, or APTC benefit for the group or individual membership. The benefit charges are calculated and recalculated (whenever the benefit end date, amount, or status changes) using the **Entity Audit** framework. The entity audit framework is already configured for the **C1-Benefits** business object by:

- Setting the **Eligible for Audit Event** option type to **Y**
- Attaching the **C1-FIAUDEV** algorithm to the **Audit** system event

You need to create an active audit event type for the **Benefits** business object. While creating an active audit event type for the **Benefits** business object, you need to ensure the following:

- Set the status of the audit event type to **Active**
- Set the entity business object of the audit event type to **Benefit**
- Set the audit usage of the audit event type to **Premium Calculation**
- Ensure that the **Update All** option is not selected and the **Add Action** and **Delete Action** options are selected
- Add the fields (such as, benefitAmount and endDate) of the **C1-Benefits** business object for which you want to enable the audit process
- Add the statuses (such as, **ACTIVE**, **INACTIVE**, and **DISCARD**) of the **C1-Benefits** business object for which you want to enable the audit process

While creating or editing a membership benefit from the user interface, through a health care inbound message, or through the membership repricing inbound web service, the system derives the policy or health plan of the group or individual membership for which the benefit is created or updated. It then checks whether a benefit pricing rule type is associated with the policy or health plan. If so, the system refers the benefit pricing rule type associated with the policy or health plan. If the listed elements (such as benefit end date, benefit amount) are updated or when the status of the membership benefit is set to **ACTIVE** (during creation), **INACTIVE** (during modification), or **DISCARD** (when it is discontinued), the system creates an audit event for the membership benefit using the audit event type given in the benefit pricing rule type. Note that the system considers only the active audit event type given in the benefit pricing rule type.

The audit event is created in the **Pending** status. Note that the system creates one audit event for a membership benefit irrespective of the number of changes made to the membership benefit. In addition, an effective date is stamped corresponding to the audit event which later helps in deriving the timeline. Note that the effective date is set to the membership benefit's start date.

The system then creates a repricing entity detail record for each group or individual membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

For example, an audit event is created while adding the following group and individual membership benefits:

| | | |
|--------------------|--------|--------|
| Audit Event | AE1 | AE2 |
| Membership | GRPMEM | INDMEM |

| | | |
|---|---|--|
| Membership Start Date | 01-Jan-2024 | 01-Jan-2024 |
| Membership Benefit | Medicare Part D LIS | APTC |
| Policy Plan to which Membership Belongs | PP1 | - |
| Health Plan to which Membership Belongs | - | HP1 |
| Pricing Rules Defined on the Policy Plan | AGE_BASED_1, ADDITIONAL_FEE_1 | - |
| Pricing Rules Defined on the Health Plan | - | AGE_BASED_1, ADDITIONAL_FEE_1 |
| Pricing Rule Types Associated with the Policy Plan | AGE-BASED_01, ADDITIONAL_FEE_01, BENEFIT_01 | - |
| Pricing Rule Types Associated with the Health Plan | - | AGE-BASED_01, ADDITIONAL_FEE_01, BENEFIT_01 |

For the AE1 audit event, the system creates three repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- GRPMEM, AGE-BASED_01, 01-Jan-2024
- GRPMEM, ADDITIONAL_FEE_01, 01-Jan-2024
- GRPMEM, BENEFIT_01, 01-Jan-2024

Similarly, for the AE2 audit event, the system creates three repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- INDMEM, AGE-BASED_01, 01-Jan-2024
- INDMEM, ADDITIONAL_FEE_01, 01-Jan-2024
- INDMEM, BENEFIT_01, 01-Jan-2024

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Bill Group Derivation and Pricing Parameters Audit Process

If you add or edit the derivation and pricing parameters for a bill group, the system checks whether an active audit event type exists for the **C1-BillLevel** business object. If an active audit event type exists for the business object, the system creates an audit event for the bill level ID (i.e. bill group and sort ID combination) using the audit event type. The audit event is created in the **Pending** status. Note that the system creates one audit event for a bill group and sort ID combination irrespective of the number of changes made to the bill group and sort ID combination. In addition, an effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the effective date is set to the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.

For example, a parent customer named PC1 has two bill groups — BG1 and BG2 and the derivation and pricing parameters are edited for the following combinations:

| Bill Group | Sort ID | Effective Date | Action |
|-------------------|----------------|-----------------------|---------------|
| BG1 | 10 | 01-01-2019 | Edit |
| BG1 | 20 | 07-01-2019 | Add |

| Bill Group | Sort ID | Effective Date | Action |
|------------|---------|----------------|--------|
| BG2 | 10 | 01-01-2019 | Edit |
| BG2 | 20 | 05-01-2019 | Add |

In such case, the system will create four audit events — one for BG1 and 10 combination with the effective date as 01-01-2019, another for BG1 and 20 combination with the effective date as 07-01-2019, third for BG2 and 10 combination with the effective date as 01-01-2019, and fourth for BG2 and 20 combination with the effective date as 05-01-2019.

On executing the **Audit Event Process Monitor (C1-AUDEV)** batch, the system considers the audit events in the **Pending** or **Error** status. By default, it considers the audit events in the **Pending** status. The system checks whether the **C1-AUDBILLVL** algorithm is attached to the respective audit event type. If the **C1-AUDBILLVL** algorithm is attached to the audit event type, it identifies the parent customer of the bill group for whom the derivation and pricing parameters are defined or edited. It then considers all policies of the parent customer and its bill groups and extracts a list of memberships defined on the respective policy plans. It also identifies the active pricing rules on these policy plans and the pricing rule types using which these active pricing rules are created in the system. The system then checks whether the characteristic types specified in the bill group derivation algorithm on each pricing rule type are defined on any extracted list of membership. If so, the system then checks whether the characteristic values match the derivation and pricing parameters of the bill group. If one or more characteristic values do not match the derivation and pricing parameters of the bill group, the system creates a repricing entity detail record for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

Let us understand this with the help of an example.

The following table illustrates the changes made to the derivation and pricing parameters of various bill groups which belong to the PC1 parent customer:

| Bill Group | Sort ID | Effective Date | Derivation and Pricing Parameter | From | To |
|------------|---------|----------------|----------------------------------|---------|---------|
| BG1 | 10 | 01-01-2019 | Parameter 1 | Western | Western |
| | | | Parameter 2 | Active | Active |
| | | | Parameter 3 | Grade A | IC01 |
| | | | Parameter 4 | - | - |
| | | | Source System | X | X |
| BG1 | 20 | 01-01-2019 | Parameter 1 | Western | Western |
| | | | Parameter 2 | Active | Active |
| | | | Parameter 3 | Grade B | IC02 |
| | | | Parameter 4 | - | - |
| | | | Source System | X | X |
| BG2 | 10 | 01-01-2019 | Parameter 1 | Western | Western |
| | | | Parameter 2 | Active | Active |

| Bill Group | Sort ID | Effective Date | Derivation and Pricing Parameter | From | To |
|------------|---------|----------------|----------------------------------|---------|---------|
| | | | Parameter 3 | IC01 | Grade A |
| | | | Parameter 4 | - | - |
| | | | Source System | X | X |
| BG2 | 20 | 01-01-2019 | Parameter 1 | Western | Western |
| | | | Parameter 2 | Active | Active |
| | | | Parameter 3 | IC02 | Grade B |
| | | | Parameter 4 | - | - |
| | | | Source System | X | X |

In such case, the system creates four audit events — AE1 for BG1 and 10 combination with the effective date as 01-01-2019, AE2 for BG1 and 20 combination with the effective date as 01-01-2019, AE3 for BG2 and 10 combination with the effective date as 01-01-2019, and AE4 for BG2 and 20 combination with the effective date as 01-01-2019.

Now, let us assume that...

- PC1 has two policies — P1 (where no bill group is associated) and P2 (where BG1 is associated)
- BG1 has one policy named P2 (where PC1 is the policy holder)
- P1 has one plan named PP1 and P2 has one plan named PP2
- PP1 has two memberships — M1 and M2,
- PP2 has three memberships — M3, M4, and M5
- PRT1 and PRT2 are associated with PP1
- PRT3 is associated with PP2
- PP1 has two active pricing rules — PR1 (which is created using PRT1) and PR2 (which is created using PRT2)
- PP2 has one active pricing rule — PR3 (which is created using PRT3)

The following table illustrates the characteristics which are defined for the M1, M2, M3, M4, and M5 memberships:

| Membership | Effective Date | Characteristic Type | Characteristic Value |
|------------|----------------|---------------------|----------------------|
| M1 | 03-01-2019 | Location | Western |
| | | Employee Status | Active |
| | | Job Code | Grade A |
| | | Source System | X |
| M2 | 05-10-2019 | Location | Western |
| | | Employee Status | Active |
| | | Job Code | IC01 |

| Membership | Effective Date | Characteristic Type | Characteristic Value |
|------------|----------------|---------------------|----------------------|
| | | Source System | X |
| M3 | 05-20-2019 | Location | Western |
| | | Employee Status | Active |
| | | Job Code | Grade B |
| | | Source System | X |
| M4 | 07-20-2019 | Location | Western |
| | | Employee Status | Active |
| | | Job Code | IC02 |
| | | Source System | X |
| M5 | 08-01-2019 | Location | Western |
| | | Employee Status | Active |
| | | Job Code | Grade A |
| | | Source System | X |

In such case, the system will create the repricing entity detail records for each audit event in the **CI_REPRC_ENTITY_DTL** table.

The following table illustrates the repricing entity detail records that will be created for the respective audit event:

| Audit Event | The system will create the repricing entity detail records with the following combinations... |
|-------------|--|
| AE1 | <ul style="list-style-type: none"> • M2, PRT1, 01-01-2019 • M2, PRT2, 01-01-2019 |
| AE2 | <ul style="list-style-type: none"> • M4, PRT3, 01-01-2019 |
| AE3 | <ul style="list-style-type: none"> • M1, PRT1, 01-01-2019 • M1, PRT2, 01-01-2019 • M5, PRT3, 01-01-2019 |
| AE4 | <ul style="list-style-type: none"> • M3, PRT3, 01-01-201 |

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Premium Proration Rules

Until now, the system used the service quantity rule named **PR** attached to the **HCPREMP** rate schedule to calculate the proration factor for the membership premium. Now, Oracle Revenue Management and Billing enables you to prorate the membership premium using the proration rules defined on the fully-insured group policy plan. A proration rule

indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. In a proration rule, you need to specify the following:

- **Effective Date** – Used to specify the date from when the proration rule is effective. However, the system considers the latest proration rule and not the effective proration rule while prorating the membership premium.
- **Proration Event Type** – Used to indicate the event when the membership premium should be prorated. The valid values are:
 - **Enrollment** – Used to indicate that you want to prorate the membership premium on enrollment based on the specified proration type.
 - **Termination** – Used to indicate that you want to prorate the membership premium on termination based on the specified proration type.
 - **New Born** – Used to indicate that you want to prorate the membership premium on new born enrollment based on the specified proration type.
 - **Same Month Enrollment and Termination** – Used to indicate that you want to prorate the membership premium when the member person enrolls and terminates in the same month based on the specified proration type.
- **Proration Type** – Used to indicate how you want to prorate the membership premium. The valid values are:
 - **Daily** – Used to indicate that you want to prorate the membership premium from the day the proration event has occurred.
 - **Mid-Month** – Used to indicate that you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: Bill Period Start Date – Specified Number of Days. For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person.
 - **Full Month** – Used to indicate that the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person.
 - **Waiver** – Used to indicate that the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership.
 - **Coverage Days** – Used to indicate that you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**.
 - **Enrollment** – Used to indicate that you want to prorate the premium for a member person using the proration type of the enrollment event. You can use this proration type only when the proration event is set to **Same Month Enrollment and Termination**.
 - **Termination** – Used to indicate that you want to prorate the premium for a member person using the proration type of the termination event. You can use this proration type only when the proration event is set to **Same Month Enrollment and Termination**.
- **Number of Days** – Used to specify the number of days to determine the cutoff date when the proration type is set to Mid-Month or Coverage Days.

The following table indicates the proration types which are applicable for a particular proration event:

| Proration Event | Proration Type |
|---------------------------------------|--|
| Enrollment | Daily, Mid-Month, Full Month, Waiver |
| Termination | Daily, Mid-Month, Full Month, Waiver |
| New Born | Daily, Mid-Month, Full Month, Waiver |
| Same Month Enrollment and Termination | Coverage Days, Enrollment, Termination, Waiver |

Note that if the proration rule is not defined for the **New Born** event, the system uses the proration rule of the **Enrollment** event. The system enables you to define and edit the proration rules for a policy plan from the user interface or through a health care inbound message.

Once the membership premium is calculated either using an age based or tier based pricing rule, the system checks whether the proration rules are defined for the respective policy plan. If so, the system sets the base amount of the corresponding record in the **CI_PRCE_CALC_LN** table to the calculated premium amount. However, if the proration rules are not defined for the respective policy plan, the system sets the base amount of the corresponding record in the **CI_PRCE_CALC_LN** table to the calculated premium amount and proration factor is set to 1.

The system then executes the **C1-AGEPRFC** or **C1-TIERPRFC** algorithm attached to the **Pricing Rule Proration Amount Calculation** system event in the respective age based or tier based pricing rule type. The system invokes these algorithms in the **C1-REPC2** batch. These algorithms derive the proration event for a bill period timeline and accordingly updates the proration factor of the bill period timeline to 1 or 0 for all proration types except Daily. The proration factor is set to 1 when the premium for eligible member person (in case of age based pricing) and the premium for the membership (in case of tier based pricing) should be charged for the bill period timeline. And, proration factor is set to 0 when the premium for eligible member person (in case of age based pricing) and the premium for the membership (in case of tier based pricing) should not be charged for the bill period timeline. In case of the Daily proration type, the proration factor is calculated using the following formula: Number of Days Covered in the Coverage Period/Coverage Period

In case of tier based pricing, the system uses the subscription tier characteristic of the membership to determine the proration event.

Age Monitoring

Age is one of the most critical factor in determining health insurance premium. Therefore, Oracle Revenue Management and Billing enables you to monitor age for premium calculation.

In the age based pricing, the premium is calculated for each eligible member person based on age, employee attributes and modifiers, and then aggregated to derive the total premium for the membership. Until now, the age of a member person was calculated using the member enrollment date, plan start date, or policy renewal or start date. Now, in addition, a new predefined value named **MEMNRAGE (Member Enrollment Nearest Age)** is added to the **Age Calculation Date Basis (C1-AGCAL)** characteristic type. If you set the **C1-AGCAL** characteristic type to **MEMNRAGE**, the system considers the number of days specified in the **C1-PPRAMAGE** algorithm to calculate the nearest age of a member person. The system then derives the rate using the nearest age of the member person and accordingly calculates the premium for the member person. For example, a member person with the date of birth as 02-15-1980 has enrolled to the HMO Med Bronze plan from 01-01-2020 to 12-31-2020. And, the **C1-AGCAL** characteristic type is set to **MEMNRAGE** on the HMO Med Bronze plan where the following age based pricing is defined:

| Age Group | Rate Value |
|-----------|------------|
| 0-15 | \$100.00 |
| 16-18 | \$120.00 |
| 19-20 | \$140.00 |

| Age Group | Rate Value |
|-----------|------------|
| 21-40 | \$160.00 |
| 41-60 | \$180.00 |
| 61-65 | \$200.00 |
| 66-99 | \$250.00 |

Let us assume that the **No. of Days** parameter in the **C1-PPRAMAGE** algorithm is set to **90**. The system will calculate the nearest age of the member person through a cutoff date which is calculated using the following formula: Member Enrollment Date + No. of Days. In this case, the cutoff date is 03-30-2020 (01-01-2020 + 90). If the birthday of the member person falls within the cutoff date, the system charges the premium based on the nearest age. However, if the birthday of the member person does not fall within the cutoff date, the system charges the premium based on the actual age. In this case, the birthday falls within the cutoff date, and therefore the premium will be charged using the rate defined for the 41-60 age group (i.e. \$180) and not using the rate defined for the 21-40 age group (i.e. \$160).

Oracle Revenue Management and Billing enables you to recalculate the age of a member person in a membership in the following scenarios:

- When the policy is renewed
- When the age changes
- From the next month when the age changes

A new characteristic type named **Age Recalculation Date Basis (C1-AGREC)** is introduced in this release. We support the following predefined list of values:

- AGECHNG (Age Changes)
- CHGAGNTMNT (Next Month)
- RENEWAL (Policy Renewal)

If you want to recalculate the membership premium for a plan based on the recalculated age of a member person, you need to do the following:

- Define the **Age Recalculation Date Basis (C1-AGREC)** characteristic for the policy plan or for the policy to which the plan belongs
- Set the **Age Re-Calculation Date Basis** attribute to **Age Recalculation Date Basis (C1-AGREC)** in the age based pricing rule type which is associated with the policy plan

The system does the following when you add a membership to a policy plan or a member person to a membership:

| If the Age Recalculation Date Basis characteristic type is set to... | Then, |
|--|--|
| AGECHNG | The system creates an audit event for a member person when the birthday falls within the enrollment date range. Here, the effective date of the audit event is set to the birth date of the member person. |
| CHGAGNTMNT | The system creates an audit event for a member person when the birthday falls within the enrollment date range. Here, the effective date of the audit event is set to the billing date of the next month. For example, if the bill date in a bill period starts 1 st of every month and the date of birth of a member person is 05-10-2020, the effective date of the audit event is set to 01-11-2020. |
| RENEWAL | The system creates an audit event for a member person when the birthday falls within the new enrollment date range (i.e. from original policy end date+1 to new |

| | |
|---|--|
| If the Age Recalculation Date Basis characteristic type is set to... | Then, |
| | policy end date). Here, the effective date of the audit event is set to the birth date of the member person. |

Apart from the membership premium recalculation, the **Age Recalculation Date Basis (C1-AGREC)** characteristic is used to evaluate the member relationship characteristic of each member person and subscription tier characteristic of the membership when the **Young Adult Applicability** characteristic is set to **Y** and the child or dependent enrolling to the membership becomes young adult in the enrollment period.

The **C1-FIAUDEV** algorithm is enhanced to support the age recalculation feature. It creates audit events in the **C1_AUDIT_EVENT** table and repricing entity detail records in the **CI_REPRC_ENTITY_DTL** table when the age of a member person changes within the enrollment period.

State of Issue

The State of Issue feature enables you to search for the following characteristics on a state:

- Maximum Number of Dependents
- Maximum Age Limit for Maximum Dependent Count
- Maximum Number of Dependents Order Priority
- Age Calculation Date Basis
- Newborn Gift Days
- Newborn Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Inclusion Applicability

It helps in identifying a list of eligible children in a membership. To enable the State of Issue feature, you need to do the following:

1. Define a predefined characteristic type named **State of Issue** where the characteristic entity is set to **Membership**, **Policy Plan** and **Policy**.
2. Define the required states as the predefined values for the **State of Issue** characteristic type.
3. Set the **State of Issue** characteristic type in the **State of Issue Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration.

If the State of Issue feature is enabled, the system checks whether the **State of Issue** characteristic is defined for the membership when any of the above required characteristic is not defined at the membership person and membership levels. If the **State of Issue** characteristic is defined for the membership, the system checks whether the above required characteristic is defined on the state where the membership is issued. For example, if the **State of Issue** characteristic on the M1 membership is set to **California**, then the system will search for any of the above required characteristic on the **California** state. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

If the required characteristic is not defined at the membership person, membership, state where the membership is issued and policy plan levels, the system checks whether the **State of Issue** characteristic is defined for the policy plan. If the **State of Issue** characteristic is defined for the policy plan, the system checks whether the above required characteristic is defined on the state where the policy plan is issued. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

However, if the required characteristic is not defined at the membership person, membership, state where membership is issued, policy plan, state where the policy plan is issued, and policy levels, the system checks whether the **State of Issue** characteristic is defined for the policy. If the **State of Issue** characteristic is defined for the policy, the system checks

whether the above required characteristic is defined on the state where the policy is issued. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

Membership Premium Calculation

The membership premium is calculated differently using the following pricing:

- **Age-Based Pricing** – The system first identifies a list of members which are eligible for premium calculation in a membership. It derives the main subscriber and member persons (i.e. Spouse and Children) which are related to the main subscriber using the relationship type specified in the **Age Based** pricing rule type. To identify a list of eligible children for premium calculation, the system uses the following characteristics:
 - **Maximum Number of Dependents** – Used to indicate the maximum number of children which are eligible for premium calculation.
 - **Maximum Age Limit for Maximum Dependent Count** – Used to indicate the maximum age limit for children which are eligible for premium calculation.
 - **Maximum Number of Dependents Order Priority** – Used to indicate whether you want to consider the youngest or eldest children during premium calculation. The valid values are - **YOUNGEST** and **ELDEST**.
 - **Age Calculation Date Basis** – Used to indicate whether the member person’s age should be calculated using the member person’s enrollment date or policy’s start or renewal date.
 - **Newborn Gift Days** – Used to indicate the number of days you want to offer as gift days from the new born child’s birth date. As a result, no premium will be calculated for this period.
 - **Newborn Gift Days Applicability** – Used to indicate whether you want to offer gift days in case of a new born. The valid values are - **Y** and **N**.
 - **Young Adult Max Age Limit** – Used to indicate the maximum age limit for young adults which are eligible for premium calculation.
 - **Young Adult Inclusion Applicability** – Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Y** and **N**.

Note: Only the **Age Calculation Date Basis (C1-AGCAL)** characteristic type is shipped with the product. You need to create the remaining characteristic types in the system and set their characteristic entity to the following - **Membership Person, Membership, Policy Plan, Policy, and/or State**.

The system searches for these characteristics on the following entities in the specified sequence:

1. Membership Person

2. Membership
3. State where the Membership is issued
4. Policy Plan
5. State where the Policy Plan is Issued
6. Policy
7. State where the Policy is Issued

For example, if the **Maximum Number of Dependents** characteristic is defined for all entities, the system considers the characteristic which is defined at the Member Person level because it is the lowest level. However, if the **Newborn Gift Days Applicability** characteristic is defined at the Policy Plan and Policy levels, the system considers the characteristic which is defined at the Policy Plan level because it is the lowest level. In other words, the system crawls from the lowest to the highest level while searching for the above characteristics. You can also define the above characteristics on the state where the membership, policy plan and/or policy are issued. For more information, refer to the State of Issue section.

Once the eligible members for premium are identified, the system derives the base fee and applicable modifier fee which are defined in the pricing rules. The system then calculates the timeline for each membership and price item combination. The timeline is basically calculated to understand the period for which the premium is applicable. For example, if a policy plan named **P1** has the following membership:

| | |
|--|------------|
| Membership | M1 |
| Member Persons | P1 and P2 |
| Membership Start Date | 01-01-2019 |
| Membership End Date | 31-12-2019 |
| P0 Main Subscriber's Start Date | 01-01-2019 |
| P0 Main Subscriber's End Date | 31-12-2019 |
| P1 Member's Start Date | 01-01-2019 |
| P1 Member's End Date | 30-06-2019 |
| P2 Member's Start Date | 01-10-2019 |
| P2 Member's End Date | 31-12-2019 |

The **P1** policy plan is associated with an Age Based pricing rule type which contains the **Premium Fee** price item. The Age Based pricing rule for the **Premium Fee** price item is effective from 01-01-2019 to 31-12-2019.

In this case, the system will create the following timelines when you add **P2** member person in the **M1** membership:

| Membership | Price Item | Timeline Start Date (Effective Date) | Timeline End Date |
|-------------------|-------------------|---|--|
| M1 | Premium Fee | 01-01-2019 | 30-06-2019 (i.e. P1 Member's End Date) |
| M1 | Premium Fee | 01-07-2019 | 30-09-2019 |
| M1 | Premium Fee | 01-10-2019 (i.e. P2 Member's Start Date) | 31-12-2019 |

It creates timelines using the membership's start and end dates, member person's start and end dates, and effective date. For each timeline, the system calculates the premium for all eligible member persons in the membership. Let us assume that the effective pricing rule is configured in the following manner:

| Age Band | Fee |
|----------|-------|
| 0-21 | \$50 |
| 21-65 | \$100 |
| >65 | \$150 |

P0 belongs to the 21-65 age band and P1 and P2 belongs to the 0-21 age band. Therefore, the premium is calculated using the following base fee:

| Membership | Price Item | Timeline Start Date (Effective Date) | Timeline End Date | Base Fee |
|------------|-------------|--|--|-----------------------|
| M1 | Premium Fee | 01-01-2019 | 30-06-2019 (i.e. P1 Member's End Date) | P0: \$100 P1: \$50 |
| M1 | Premium Fee | 01-07-2019 | 30-09-2019 | P0: \$100 |
| M1 | Premium Fee | 01-10-2019 (i.e. P2 Member's Start Date) | 31-12-2019 | P0: \$100 P2: \$50 |

Now, let us assume the following characteristics are defined on the **P1** policy plan which offers gift days to a new born child:

| Effective Date | Characteristic Type | Characteristic Value |
|----------------|---------------------------------|----------------------|
| 01-01-2019 | Newborn Gift Days Applicability | Y |
| 01-01-2019 | Newborn Gift Days | 30 |

Now, if the main subscriber adds his child named **C1** who is born on 05-03-2019, the system will create the following timelines:

| Membership | Price Item | Timeline Start Date (Effective Date) | Timeline End Date |
|------------|-------------|--|--|
| M1 | Premium Fee | 01-01-2019 | 03-04-2019 (i.e. 05-03-2019 +30 Days) |
| M1 | Premium Fee | 04-04-2019 (New Born Considered for Premium Calculation) | 30-06-2019 (i.e. P1 Member's End Date) |
| M1 | Premium Fee | 01-07-2019 | 30-09-2019 |
| M1 | Premium Fee | 01-10-2019 (i.e. P2 Member's Start Date) | 31-12-2019 |

It creates timelines using the membership's start and end dates, member person's start and end dates, and effective date. For each timeline, the system calculates the premium for all eligible member persons in the membership. In this case, the premium is calculated using the following base fee:

| Membership | Price Item | Timeline Start Date (Effective Date) | Timeline End Date | Base Fee |
|------------|-------------|--|--|-----------------------------------|
| M1 | Premium Fee | 01-01-2019 | 03-04-2019 (i.e. 05-03-2019 +30 Days) | P0: \$100 P1: \$50 |
| M1 | Premium Fee | 04-04-2019 (New Born Considered for Premium Calculation) | 30-06-2019 (i.e. P1 Member's End Date) | P0: \$100 P1: \$50 C1: \$50 |
| M1 | Premium Fee | 01-07-2019 | 30-09-2019 | P0: \$100 C1: \$50 |
| M1 | Premium Fee | 01-10-2019 (i.e. P2 Member's Start Date) | 31-12-2019 | P0: \$100 P2: \$50 C1: \$50 |

- Tier Based Pricing** – The system first derives the base fee which is defined in the pricing rules. It then calculates the timeline for each membership and price item combination. The timeline is basically calculated to understand the period for which the premium is applicable. For example, if a policy plan named **P2** has the following membership:

| | |
|------------------------------|------------------------|
| Membership | M1 |
| Member Persons | P1 and P2 |
| Membership Start Date | 01-01-2019 |
| Membership End Date | 31-12-2019 |
| Membership Tier | ES (Employee + Spouse) |

The **P2** policy plan is associated with a Tier Based pricing rule type which contains the **Premium Fee** price item. The Tier Based pricing rule for the **Premium Fee** price item is effective from 01-01-2019 to 31-12-2019.

The system will create the following timeline when the **M1** membership is added to the **P2** policy plan:

| Membership | Price Item | Timeline Start Date (Effective date) | Timeline End Date |
|------------|-------------|--------------------------------------|-------------------|
| M1 | Premium Fee | 01-01-2019 | 31-12-2019 |

It creates timelines using the membership's start and end dates and effective date. For each timeline, the system calculates premium for the membership. Let us assume that the effective pricing rule is configured in the following manner:

| Tier Level | Fee |
|-------------------------|-------|
| E (Employee Only) | \$100 |
| ES (Employee + Spouse) | \$200 |
| F (Family) | \$350 |
| EC (Employee+ Children) | \$150 |

The **M1** membership belongs to the **ES (Employee + Spouse)** tier. Therefore, the premium is calculated using the following base fee:

| Membership | Price Item | Timeline Start Date (Effective Date) | Timeline End Date | Base Fee |
|------------|-------------|--------------------------------------|-------------------|----------|
| M1 | Premium Fee | 01-01-2019 | 31-12-2019 | \$200 |

Now, let us assume the following characteristics are defined on the **P2** policy plan which offers gift days to a new born child:

| Effective date | Characteristic Type | Characteristic value |
|----------------|---------------------------------|----------------------|
| 01-01-2019 | Newborn Gift Days Applicability | Y |
| 01-01-2019 | Newborn Gift Days | 30 |

Now, if the main subscriber adds his child named **C1** who is born on 05-03-2019, the system will create the following timelines:

| Membership | Price Item | Timeline Start Date (Effective date) | Timeline End Date |
|------------|-------------|--|---------------------------------------|
| M1 | Premium Fee | 01-01-2019 | 03-04-2019 (i.e. 05-03-2019 +30 Days) |
| M1 | Premium Fee | 04-04-2019 (New Born Considered for Premium Calculation) | 31-12-2019 |

In this case, the premium is calculated using the following base fee considering the membership tier has changed from **ES (Employee + Spouse)** to **F (Family)**:

| Membership | Price Item | Timeline Start Date (Effective Date) | Timeline End Date | Base Fee |
|------------|-------------|--|---------------------------------------|----------|
| M1 | Premium Fee | 01-01-2019 | 03-04-2019 (i.e. 05-03-2019 +30 Days) | 200 |
| M1 | Premium Fee | 04-04-2019 (New Born Considered for Premium Calculation) | 31-12-2019 | 350 |

The tasks performed through **Membership Repricing (C1-MEMBREPRICE)** inbound web service are described below:

- **Adding a Membership** - Whenever you are creating a membership for a policy or health plan, you need to specify the plan for which you want to create the membership, a person who is the main subscriber of the membership, and the way in which the main subscriber is related to the membership. Once the membership is created, you can add more members (i.e. persons) to the membership.
- **Editing a Membership** - Once the membership is created for a policy or health plan, you can edit the membership information such as start date, end date, and characteristics.
- **Viewing the Membership Details** - On the **Membership** page, you can view the membership details, member persons which are added to a membership, and the additional plans of the main subscriber.

- **Adding a Member Person to a Membership** - While adding a person to a membership, you need to specify whether the person is the main subscriber of the membership, whether the person is financially responsible for the membership, and how the person is related to the main subscriber. At a time, only one person can be the main subscriber of the membership.
- **Removing a Member Person from a Membership** - You cannot remove a member person, who is the main subscriber, from the membership. You can inactivate a member person whenever required. If you inactivate a member person who is the main subscriber of the membership, the system automatically inactivates the membership and all other member persons which are included in the membership.
- **Simulating Membership Premium Calculation**
 - You can simulate add and update operations carried-out for a membership, and can also calculate the premium derived from the simulation process. Any set of changes conducted as a part of the simulation process would not impact the actual membership and premium calculation process.

Bill Group Derivation for Membership

While deriving a bill group for a membership, the system first checks whether the characteristics specified in the following option types of the **C1-ASOBLLNG** feature configuration are defined for the membership:

- **Account Identifier Type Char Type** – Used to specify the characteristic type which stores the identifier type of the account to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Account Identifier Value Char Type** - Used to specify the characteristic type which stores the corresponding identifier of the account to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.

If the above two characteristics are defined for the membership, the system derives the account and then the person (i.e. bill group or parent customer) to which the account belongs. However, if the above two characteristics are not defined for the membership, the system then checks whether the characteristics specified in the following option types of the **C1-ASOBLLNG** feature configuration are defined for the membership:

- **Person Identifier Type Char Type** – Used to specify the characteristic type which stores the identifier type of the person to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Person Identifier Value Char Type** - Used to specify the characteristic type which stores the corresponding identifier of the person to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.

If the above two characteristics are defined for the membership, the system derives the person (i.e. bill group or parent customer) to which the membership should be billed. However, if the above two characteristics are not defined for the membership, the system checks whether the characteristics specified in the following parameters of the **C1_MEMBGDRV** algorithm are defined for the membership:

- **Characteristic Type for Bill level 1** – Used to specify the characteristic type which stores the bill group derivation and pricing parameter 1 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Characteristic Type for Bill level 2** - Used to specify the characteristic type which stores the bill group derivation and pricing parameter 2 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Characteristic Type for Bill level 3** - Used to specify the characteristic type which stores the bill group derivation and pricing parameter 3 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.

- **Characteristic Type for Bill level 4** - Used to specify the characteristic type which stores the bill group derivation and pricing parameter 4 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Characteristic Type for Source system** - Used to specify the characteristic type which stores the external system from where the fully-insured policy is received for billing. Here, you must specify a characteristic type where the characteristic entity is set to **Membership, Policy Plan, or Policy**. The system searches for the characteristic on the following entity in the specified order:
 1. Membership
 2. Policy Plan
 3. Policy

If the characteristic is defined at first level (i.e. membership), the system will not search for the characteristic at the subsequent levels. However, if the characteristic is not defined at first level, the system will search for the characteristic at the second level (i.e. policy plan). If the characteristic is defined at second level, the system will not search for the characteristic at the subsequent level. However, if the characteristic is not defined at second level, the system will search for the characteristic at the third level (i.e. policy).

To derive the source system from the membership, policy plan, or policy, the system first derives the policy plan to which membership belongs and then the policy to which the policy plan belongs. The above characteristics indicate the Source System, Parameter 1, Parameter 2, Parameter 3, and Parameter 4. The system derives a bill group using the derivation and pricing parameters (i.e. Source System, Parameter 1, Parameter 2, Parameter 3, and Parameter 4) which are defined for the bill group. Note that the system considers the derivation and pricing parameters which are effective on the effective date (which is available corresponding to the record in the **CI_REPRC_ENTITY_DTL** table). It first searches for the bill group using the exact match. Let us understand this with the help of an example.

The following table illustrates the derivation and pricing parameters defined for various bill groups which belong to the PC1 parent customer:

| Bill Group | Derivation and Pricing Parameters | | | | |
|------------|-----------------------------------|-------------|-------------|-------------|-------------|
| | Source System | Parameter 1 | Parameter 2 | Parameter 3 | Parameter 4 |
| BG1 | X | Western | Grade A | Active | - |
| BG2 | X | Western | Grade A | Retiree | - |
| BG3 | Y | Western | - | - | - |

And, the following characteristics are defined for the M1 membership which belongs to the PP1 policy plan:

| Entity | Characteristic Type | Characteristic Value |
|--------|---------------------|----------------------|
| M1 | Location | Western |
| M1 | Grade | Grade A |
| PP1 | External System | X |

Now, if the **Location**, **Grade**, and **External System** characteristic types are specified in **Characteristic Type for Bill level 1**, **Characteristic Type for Bill level 2**, and **Characteristic Type for Source system** parameters of the **C1_MEMBGDRV** algorithm, the system searches for a bill group where the following derivation and

If the exact match is not available, the system finds the bill group using the best fit match.

Once the policy and policy plan is derived, the system

Based on the characteristic values on the membership for bill level 1 to bill level 4 and characteristic value of source system, the bill group and parent customer corresponding to the membership is derived. 2. Deriving policy : Policy is derived from the plan to which the membership is linked.

To derive the bill group for a membership to which its premium and other pass-through charges should be billed, you need to attach an algorithm created using the **C1_MEMBGDRV** algorithm type to the **Bill Group Derivation** system event in a pricing rule type where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.

Note that while searching for a bill group, the source system and Parameter 1 (i.e. Bill Level 1) are mandatory.

This algorithm contains the following parameters:

- **Characteristic Type for Bill Level 1** – Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 1 for the membership.
- **Characteristic Type for Bill Level 2** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 2 for the membership.
- **Characteristic Type for Bill Level 3** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 3 for the membership.
- **Characteristic Type for Bill Level 4** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 4 for the membership.

Once the bill group is derived, the system derives the parent customer of the bill group. If the system could not derive the policy, bill group, or parent customer, the status of the record is changed to **Error (E)** in the **CI_REPRC_ENTITY_DTL** table.

Account and Price Item Derivation for Membership

A new algorithm type named **C1_ACCPRIMEM** is added in this release. You need to attach an algorithm created using the **C1_ACCPRIMEM** algorithm type to the **Account and Price Item Derivation** system event in a pricing rule type where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.

This algorithm fetches the effective pricing rule for each price item specified in the pricing rule type on the effective date. It first searches for effective pricing rules on the policy plan to which the membership belongs. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level. The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. If the system could not derive the

effective pricing rule for any price item or if the account or active contract for the account could not be derived, the status of the record is changed to **Error (E)** in the CI_REPRC_ENTITY_DTL table.

Bill Cycle and Bill Period Derivation

Oracle Revenue Management and Billing uses the bill cycle of an account to generate the bills for the account and the bill period of an account to create the billable charges for the account. If the bill cycle and bill period used for an account are not in sync, the system will not give the desired output. Therefore, we have introduced a new feature wherein the bill cycle and bill period can be tightly coupled with each other.

You can define a billing preference wherein you pair the bill cycle and bill period. The system enables you to define, edit, delete, and copy a billing preference through the **Field Mapping** screen. The system derives the bill cycle and bill period for an account using the billing preference. You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. Note that you must specify a characteristic type where the characteristic entity is set to **Account** in the **Bill Cycle Rule Code** option type. You can define this characteristic for an account from the user interface or through a health care inbound message.

Whenever you create or edit an account through a health care inbound message, the system checks whether the characteristic type specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration is available for the account in the inbound message. If so, the system checks whether the value specified for the billing preference characteristic type is already defined in the system. If so, the system derives the bill cycle from the billing preference when the account is created. In such case, the system ignores the bill cycle available in the inbound message. In addition, when the billing preference characteristic is updated for an account, the system derives the new bill cycle from the respective billing preference in the system.

If the characteristic type specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration is not available for the account in the inbound message, the system stores the bill cycle received in the inbound message for the account.

Until now, the system derived the bill period for an account using the **Invoice Day (C1OFFRST)** characteristic of the account. Now, you can derive the bill period for an account using the billing preference characteristic of the account. To derive the bill period from the billing preference, you need to attach the **Bill Period Derivation (C1-BILLPDRV)** algorithm to the **Account and Price Item Derivation Post-Processing** system event in the age based, tier based, additional fee, and benefit pricing rule types. The system invokes the **Bill Period Derivation (C1-BILLPDRV)** algorithm in the **C1-REPC1** batch. This algorithm derives the bill period from the billing preference of the account and accordingly updates the **RECURRING_FLG** and **RECURRING_VAL** columns of the corresponding records in the **CI_REPRC_REQ_DTL** table.

Bill Period Timeline

Prerequisites

To create a bill period timeline, you should have:

- Bill period created in the system before the membership enrollment.
- Bill period existing for the membership coverage period that includes membership coverage period plus one additional entry.

Now, you need to attach the **C1-BILLRPCR** algorithm to the **Account and Price Item Derivation Post-Processing** system event in the age based and tier based pricing rule types. It enables you to create an additional entry in the **CI_REPRC_REQ_DTL** table for the remaining months in the membership coverage period based on the bill period. For example, a record exists with the effective date as 01-01-2020 in the **CI_REPRC_REQ_DTL** table with a bill period where the bill dates start from 1st of every month and with a membership coverage period from 01-01-2020 to 12-31-2020. On executing the **C1-BILLRPCR** algorithm, the system will create the additional entries with the following effective dates in the **CI_REPRC_REQ_DTL** table:

| Bill Period | Effective Date |
|--------------------------|----------------|
| 02-01-2020 to 02-29-2020 | 02-01-2020 |
| 03-01-2020 to 03-31-2020 | 03-01-2020 |
| 04-01-2020 to 04-30-2020 | 04-01-2020 |
| 05-01-2020 to 05-31-2020 | 05-01-2020 |
| 06-01-2020 to 06-30-2020 | 06-01-2020 |
| 07-01-2020 to 07-31-2020 | 07-01-2020 |
| 08-01-2020 to 08-31-2020 | 08-01-2020 |
| 09-01-2020 to 09-30-2020 | 09-01-2020 |
| 10-01-2020 to 10-31-2020 | 10-01-2020 |
| 11-01-2020 to 11-30-2020 | 11-01-2020 |
| 12-01-2020 to 12-31-2020 | 12-01-2020 |

9/10 Billing (Skip Months)

In the health insurance domain, for a yearly coverage, the membership premium is calculated and billed every month. The fully-insured large groups such as school districts have two-three months of holiday every year. Usually, they prefer to distribute the off months' premium in the remaining months of the coverage period. Oracle Revenue Management and Billing enables you to handle this requirement through the **9/10 Billing (Skip Months)** feature. Note that, in this feature, only the recurring charges for membership premium and administration fees will be considered for distribution in the non-skip months of the coverage period.

You can set the skip months in a billing preference through the **Field Mapping** screen. You can specify one or more skip months in a billing preference which may be continuous or non-continuous. However, you cannot skip all 12 months in a billing preference. The system derives the skip months for an account using the billing preference. You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **CI-ASOBLLNG** feature configuration. Note that you must specify a characteristic type where the characteristic entity is set to **Account** in the **Bill Cycle Rule Code** option type. You can define this characteristic for an account from the user interface or through a health care inbound message. You can view a list of accounts for which skip months are defined in the billing preference using the **Skip Months** field in the **360° Search** zone.

A new column named **DIS_AMT** is added to the **CI_PRCE_CALC** and **CI_PRCE_CALC_LN** tables. While calculating the membership premium using the age based or tier based pricing rule, the system checks whether the skip months are defined for the account. If the skip months are not defined for the account, the system stores the calculated premium in the **DIS_AMT** column.

A new algorithm type named **C1-SKPMNTHPC** is introduced in this release. To setup the **9/10 billing** feature, you need to create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation** system event of the required age based and tier based pricing rule types. The system invokes this algorithm in the **C1-REPC3** batch. This algorithm distributes the total premium in the non-skip months of the coverage period. In case of an age based pricing, the system calculates the distributed amount for each eligible member in the membership. And, in case of a tier based pricing, the system calculates the distributed amount for the membership. When a billable charge is created for a non-skip month through the **C1-FIBCR** batch, the distributed amount is stored through an **SQI** on the billable charge.

Repricing

Oracle Revenue Management and Billing extends the Repricing feature for the insurance domain. To enable this feature for fully-insured line of business, you need to setup the audit framework for membership and age based and tier based pricing rules. For more information, refer to the Audit Framework for Membership and Fully-Insured Pricing Rules section.

To recalculate the membership premium, you need to execute the following batches in the specified order:

1. **Identify Entities for Repricing (C1-REPC1)** - Until now, this batch identified a set of accounts which were impacted due to change in a price list and then created a repricing request for such accounts. In this release, new parameters named **Repricing Mode** and **Membership ID** are added in this batch. If the **Repricing Mode** parameter is set to **ACCT**, this batch identifies a set of accounts which were impacted due to change in a price list and then creates a repricing request for such account. However, if the **Repricing Mode** parameter is set to **MEMB**, this batch considers the records in the **Pending (P)** and **Error (E)** status from the **CI_REPRC_ENTITY_DTL** table. For each record, the system invokes the algorithms attached to the following system events of the pricing rule type in the specified order:
 - a. **Bill Group Derivation** – Used to derives the policy, bill group, and parent customer of the bill group.
 - b. **Account and Price Item Derivation** – Used to derive the pricing rules for the price items (which are present in the pricing rule type) on the policy plan (to which the membership belongs).

Once the pricing rules are derived, the system creates a repricing request for the membership, pricing rule, and effective date combination. Finally, the status of the corresponding record is set to **Complete (C)** in the **CI_REPRC_ENTITY_DTL** table. If any error occurs while creating a repricing request, the status of the corresponding record is set to **Error (E)** in the **CI_REPRC_ENTITY_DTL** table.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

2. **Process Repricing Request (C1-REPC2)** - Until now, this batch calculated and persisted the rate for the account, price item, and effective date combination in the **CI_PRCE_CALC** table. In this release, new parameters named **Repricing Mode** and **Membership ID** are added in this batch. If the **Repricing Mode** parameter is set to **ACCT**, this batch calculates and persist the rate for the account, price item, and effective date combination in the **CI_PRCE_CALC** table. However, if the **Repricing Mode** parameter is set to **MEMB**, this batch considers the records in the **Pending (P)** and **Error (E)** status from the **CI_REPRC_REQ_DTL** table. If the pricing rule in the record is **Age Based**, the system invokes the algorithms attached to the following system events of the pricing rule type in the specified order:
 - a. **Pricing Rule Pre Processing** – Used to identify the eligible member persons for premium calculation.
 - b. **Pricing Rule Premium Calculation** – Used to calculate the premium for the membership.

Once these algorithms are executed, the premium is calculated for each eligible member person and stored in the **CI_PRCE_CALC_LN** table and the total premium for the membership is stored in the **CI_PRCE_CALC** table. Finally, the status of the corresponding record is set to **Complete (C)** in the **CI_REPRC_REQ_DTL** table.

However, if the pricing rule in the record is **Tier Based**, the system invokes the algorithm attached to the following system event of the pricing rule type:

- **Pricing Rule Premium Calculation** – Used to calculate the premium for the membership.

Once the algorithm is executed, the premium is calculated for the membership and stored in the **CI_PRCE_CALC** table. Finally, the status of the corresponding record is set to **Complete (C)** in the **CI_REPRC_REQ_DTL** table.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Fully-Insured Billable Charge Creation

Oracle Revenue Management and Billing enables you to create billable charges for pre-calculated premium amount (which is received through a health care inbound message) and calculated premium amount (which is derived using a pricing rule defined at the policy plan level). Before creating an SQI based billable charge, the system derives the bill period for the account using the **Invoice Day (C1OFFRST)** characteristic defined on the account.

While creating a billable charge for the pre-calculated premium amount through a health care inbound message, the system creates an SQI based billable charge for the membership and price item combination. Note that if the bill period or frequency is given in the billable charge information in the health care inbound message, the system does not derive the bill period for the account.

However, for creating a billable charge for the calculated premium amount, you need to execute the **Fully-Insured Group Billable Charge Creation (C1-FIBCR)** batch. It creates an SQI based billable charge for calculated premium amount. It considers the timelines in the **Pending (P)** and **Error (E)** status from the **CI_PRCE_CALC** table. Note that it considers only those timelines where the entity type is set to **Membership**. For each timeline, membership and price item combination, the system does the following:

1. Derives the bill period for the account using the **Invoice Day (C1OFFRST)** characteristic defined on the account.
2. Creates an SQI based billable charge. Here, the start and end dates on the billable charge are set to the timeline start and end dates.

If the premium amount of the two consecutive timelines of a membership and price item combination is same, this algorithm does not create a new billable charge. Instead, it extends the end date of the previous timeline's billable charge. If the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge exists for the membership and price item combination with the same start date and amount, then the system behaves in the following manner:

| If... | Then... |
|---|--|
| Bill segments for the 01-01-2019 to 31-12-2019 period are not yet generated in the system | The end date in the existing billable charge is updated to 31-10-2019. |

| If... | Then... |
|--|---|
| Bill segments for the 01-01-2019 to 31-12-2019 period are in the Freezable status | The bill segments for the 01-11-2019 to 31-12-2019 period are deleted and the end date in the existing billable charge is updated to 31-10-2019. |
| Bill segments for the 01-01-2019 to 31-12-2019 period are in the Frozen or Pending Cancel status | The bill segments for the 01-11-2019 to 31-12-2019 period are canceled and the end date in the existing billable charge is updated to 31-10-2019. |

However, if the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge exists for the membership and price item combination with the same start date, but different amount, then the system behaves in the following manner:

| If... | Then... |
|--|--|
| Bill segments for the 01-01-2019 to 31-12-2019 period are not yet generated in the system | The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period. |
| Bill segments for the 01-01-2019 to 31-12-2019 period are in the Freezable status | The bill segments for the 01-01-2019 to 31-12-2019 period are deleted. The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period. |
| Bill segments for the 01-01-2019 to 31-12-2019 period are in the Frozen or Pending Cancel status | The bill segments for the 01-01-2019 to 31-12-2019 period are canceled. The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period. |

And, if the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge does not exist for the membership and price item combination with the same start date, then a billable charge is created for the 01-01-2019 to 31-10-2019 period. Note that if there are billable charges for the membership and price item combination whose date range is within the timeline, such billable charges are canceled and their corresponding bill segments (if any) are either deleted or canceled in the system.

The pre-calculated or calculated premium amount is stored as a pass through line in the SQI based billable charge. Note that these pass through lines are memo only and no general ledger entries will be created for these pass through lines. This algorithm fetches SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. The SQI value is set to the total amount of the pass through lines in the billable charge. The system prorates the amount when the SQ rule specified in the rate schedule attached to the active contract contains the SQI which is specified in the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration.

Once the billable charge is created, the membership ID is stamped as characteristic on the billable charge. This indicates that the billable charge is created for the respective membership. This algorithm fetches the characteristic type, which must be defined on the billable charge, from the **Characteristic Type For Membership Id** option type of the **C1-ASOBLLNG** feature configuration.

Finally, the status of the corresponding timeline is set to **Complete (C)** in the **CI_PRCE_CALC** table. If any error occurs while creating a billable charge, the status of the corresponding timeline is set to **Error (E)** in the **CI_PRCE_CALC** table. In addition, if an error occurs, a To Do is created using the **C1-FIBCR** To Do type and assigned to all users with a To Do role which is specified as characteristic on the parent customer. The system considers the characteristic on the parent customer which is specified in the **To Do Role Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Note that the system does not create a To Do for each error record. Instead, the system creates distinct To Do for each membership and pricing rule combination.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

New Born Credit Waiver

Oracle Revenue Management and Billing enables you to waive off premium for a new born while calculating the health insurance premium for the group and individual memberships. However, the new born premium waiver benefit for the group and individual memberships was not recorded and maintained in ORMB for the General Ledger (GL) posting.

Now, the system calculates the premium for the new born credit waiver period and stores the amount in the billable charge when a new born member exists in the group and individual memberships and the new born applicability for the membership is set to **Yes**. The system stamps two SQIs in the billable charge - one SQI stores the new born premium (i.e. debit amount) and another SQI stores the new born premium waiver benefit (i.e. credit amount). This mechanism ensures that the system records the new born premium in the system, but at the same time does not charge the new born premium for the membership. It helps to maintain GL entries for the new born premium which is waived off during premium calculation. To enable this feature, you need to set the **New Born Waiver Credit Calculation** option type of the **C1-ASOBLNG** feature configuration to **Y**.

To implement this business requirement, the following changes are made in the system:

- While deriving the eligible members for a membership, while deriving the member relationship for a member person, and while deriving the subscription tier for a membership, the system checks whether the **New Born Waiver Credit Calculation** option type is set to **Y** or **N**. If the **New Born Waiver Credit Calculation** option type is set to **Y**, the system derives the list of eligible members for the membership, member relationship for a member person, or subscription tier for the membership considering with and without new born gift days.

If you are using an age based pricing rule wherein the member relationship derivation algorithm is attached, the system will set the following characteristics for each member person in the membership:

- **Member Relationship** – Stores the member relationship for the member person considering new born gift days
- **Member Role Without New Born Gift Days** – Stores the member relationship for the member person without considering new born gift days

However, if you are using a tier based pricing rule, the system will set the following characteristics for the membership:

- **Subscription Tier** – Stores the subscription tier for the membership considering new born gift days
- **Subscription Tier without Gift Days** - Stores the subscription tier for the membership without considering new born gift days
- While calculating premium for a membership, the system checks whether there is a new born member person in the membership and whether the **New Born Gift Days Applicability** option is set to **Yes** for the membership. If so, the system checks whether the **New Born Waiver Credit Calculation** option type in the **C1-ASOBLNG** feature configuration is set to **Y**. If so, the system calculates the new born gift period start and end dates.

While deriving the timeline during premium calculation, the system checks whether the timeline is within the new born gift days period. If so, the system calculates the premium for the new born and creates a record in the **CI_PRCE_CALC_LN** table where the **NEW_BORN_CMT_FLG** column is set to **Without Gift Days**. In addition, the system creates a reverse entry record in the **CI_PRCE_CALC_LN** table where the **NEW_BORN_CMT_FLG** column is set to **Reversal**. If the amount calculated with and without gift days do not match, the system stamps two SQIs in the billable charge - one SQI stores the new born premium (i.e. debit amount) and another SQI stores the new born premium waiver benefit (i.e. credit amount). The system considers the SQIs specified in the **New Born Waiver SQI** and **New Born Waiver Credit SQI** option types of the **C1-ASOBLNG** feature configuration, respectively.

- During premium proration, the system stores the distributed amount for the new born member person in an SQI which is specified in the **New Born Distributed SQI** option type of the **C1-ASOBLNG** feature configuration.

Membership Benefit Billing

Once the repricing entity detail records are created for the membership benefits which are added or updated, you need to execute the following batches in the given sequence:

- Identify Entities for Repricing (C1-REPC1)
- Process Repricing Request (C1-REPC2)
- Fully Insured Billable Charge Creation (C1-FIBCR)

Before executing the above batches, you need to set the **Medicare** preference in the Medicare option type of the **C1-ASOBLNG** feature configuration. This preference is used to derive the membership benefit pricing while creating charges for Medicare Part D LIS and Medicare Part D LEP. You can define a **Medicare** preference using the Medicare preference category through the **Field Mapping** screen. While defining a Medicare preference, you must set the following attributes in a Medicare preference:

- **Late Enrollment Penalty** – Used to indicate the benefit sub type for Medicare Part D LEP.
- **Low Income Subsidy** – Used to indicate the benefit sub type for Medicare Part D LIS.
- **Medicare Prescription Drug Coverage** – Used to indicate the benefit sub type for Medicare Part D.

For more information about the Medicare preference, refer to [Medicare Preference](#) on page 196

If the reverse charge is to be created for a membership benefit on the benefit sponsor account, the system does the following during the respective batch execution:

- **C1-REPC1** – This batch checks whether the benefit sponsor account or sponsor account derivation algorithm is specified in the benefit sub type. If the sponsor account derivation algorithm is specified in the benefit sub type, the **C1-REPC1** batch invokes the sponsor account derivation algorithm which derives the benefit sponsor account for the individual membership. It then creates two repricing requests – one for benefit price item and another for benefit sponsored price item.
- **C1-REPC2** – This batch derives the amount for the benefit repricing request and benefit sponsored repricing request from the **CI_BENEFITS** table.
- **C1-FIBCR** – This batch creates the billable charges for benefit price item as well as benefit sponsored price item. A characteristic is stamped on the benefit charge which is created using the benefit sponsored price item on the benefit sponsor account. This characteristic indicates that the benefit charge is a reverse charge on the benefit sponsor account. While defining the characteristic, the system fetches the characteristic type which is specified in the **Sponsored Switch Characteristic for Billable Charge** option type of the **C1-ASOBLNG** feature configuration.

If the **Validate External Price** option is selected in the benefit sub type of a membership benefit, the system invokes the **C1-PRLBCVLD** algorithm which is attached to the **Billable Charge Creation Post-Processing** system event of the respective benefit pricing rule type. It is used to calculate the benefit charge using the validate price item and then compare it against the externally priced benefit charge. If there is a mismatch in the benefit start date, benefit end date, and benefit amount, the system creates a To Do using the given To Do type and then adds the To Do in the respective

membership log. However, if the benefit start date and end dates match, but the benefit amount does not match, the system uses the threshold amount to determine whether the To Do should be created for the membership. If the calculated benefit amount is within the minimum amount (i.e. received benefit amount – threshold amount) and maximum amount (i.e. received benefit amount + threshold amount) range, the system will not create a To Do for the membership when there is mismatch in the calculated benefit amount (priced in ORMB) and received pre-calculated benefit amount (i.e. priced externally). However, if the calculated benefit amount is not within the minimum amount (i.e. received benefit amount – threshold amount) and maximum amount (i.e. received benefit amount + threshold amount) range, the system creates a To Do using the given To Do type and then adds the To Do in the respective membership log.

The **C1-PRLBCVLD** algorithm contains the following parameters:

- **To Do Type** - Used to indicate the To Do type using which you want to create a To Do. The **C1-PRBCV** To Do type is shipped with the product. This parameter is mandatory.
- **To Do Role** - Used to indicate that users with the specified To Do role must receive the To Do notification. This parameter is optional. If you do not specify this parameter, the system considers the default To Do role associated with the To Do type.
- **Threshold Amount** – Used to specify the threshold amount which is used to calculate the minimum and maximum amount range for benefit amount comparison. This parameter is mandatory.

You can view the benefit price item billable charges generated for a membership benefit from the **Billable Charges** zone of the **Contracts and Charges** tab in the **Membership** screen. Similarly, you can view the benefit sponsored price item billable charges (i.e. reverse charges which are created for a membership benefit on the benefit sponsor account) from the **Sponsor Billable Charges** zone of the **Contracts and Charges** tab in the **Membership** screen. In the **Sponsor Billable Charges** zone, the system displays the billable charges where the characteristic type specified in the **Sponsored Switch Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration is defined. Therefore, if you want to create a reverse charge for a membership benefit on the benefit sponsor account, it is mandatory to set the **Sponsored Switch Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration.

Repricing Request

The **Repricing Request** screen enables you to search for a repricing entity detail record using various search criteria. It contains the following zones:

- [Search Repricing Entity Detail Record](#) on page 3308
- [Repricing Requests](#) on page 3311
- [Timeline and Billable Charge Details](#) on page 3312
- [Pricing Calculation Details](#) on page 3312

There are two ways in which you can navigate to this screen:

- One from the **Audit Event** screen - In this case, the system automatically uses the audit event ID for searching and then lists the repricing entity detail records which are created for the respective audit event in the **Search Repricing Entity Detail Record** zone.
- Another from the **Pricing Management** menu - In this case, the system enables you to search for repricing entity detail records of a particular audit event or for all audit events of a particular membership.

Note: At present, the **Repricing Request** screen is only designed to meet the business requirements of the Fully-Insured Group Health Insurance domain.

Search Repricing Entity Detail Record

The **Search Repricing Entity Detail Record** zone enables you to search for repricing entity detail records which are:

- Created for a particular audit event
- Created for all audit events of a particular membership

It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|--|
| Search By | Used to indicate whether you want to search for a repricing entity detail record using the membership details. The valid value is: <ul style="list-style-type: none"> • Membership | Yes |
| | Note: By default, the Membership option is selected. | |
| Created From | Used to search repricing entity detail records which are created for a membership from a particular date. | No |
| From Effective Date | Used to search repricing entity detail records which are effective from a particular date onwards. | No |
| Created To | Used to search repricing entity detail records for a membership which are created till a particular date. | No |
| To Effective Date | Used to search repricing entity detail records which are effective till a particular date. | No |
| Audit Event ID | Used to search repricing entity detail records of a particular audit event. | Yes (Conditional) |
| | | Note: This field is required when you want to search for a repricing entity detail records using the audit event details. |
| Status | Used to search repricing entity detail records with a particular status. The valid values are: <ul style="list-style-type: none"> • Completed • Error • Invalid • Pending | No |
| Membership ID | Used to search repricing entity detail records of a particular membership. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Membership Search window appears. | |
| Pricing Rule Type | Used to search repricing entity detail records which are created using a particular type of pricing rule. | No |

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, a list of repricing request detail records appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Membership Information | Displays information about the membership. |
| | Note: It has a link. On clicking the link, the Membership screen appears where you can view the details of the respective membership. |
| Creation Date Time | Displays the date and time when the repricing entity detail record is created in the system. |
| Effective Date | Displays the date from when the repricing entity detail record is effective for the membership. |
| Pricing Rule Type | Displays the pricing rule type using which the pricing is defined for the entity. |
| | Note: It has a link. On clicking the link, the Pricing Rule Type screen appears where you can view the details of the respective pricing rule type. |
| Status | Displays the status of the repricing entity detail record. The valid values are: <ul style="list-style-type: none"> • Completed • Error • Invalid • Pending |
| Error Message | Displays the error message if any error occurs when the audit event is created for the membership. |
| | Note: The status of the corresponding membership is set to Error . |
| Pre processing Request ID | Displays the pre processing request Id. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone. You can also hide the **Filter** area by clicking the **Hide Filters** button in the lower left corner of this zone.

On clicking the **Broadcast** () icon corresponding to the **Membership Information** field, the **Repricing Requests** zone appears where you can view a list of repricing requests created for a specific repricing entity detail record.

Repricing Requests

The **Repricing Requests** zone allows you to view the repricing requests which are created for a particular repricing entity detail record. It contains the following columns:

| Column Name | Column Description |
|--------------------------|--|
| Pricing Rule Information | Displays information about the pricing rule using which the repricing request is created for the price item. |
| | Note: It has a link. On clicking the link, the Pricing Rule screen appears where you can view the details of the respective pricing rule. |
| Price Item Information | Displays information about the price item for which the repricing request is created in the system. |
| | Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item. |
| Account Information | Displays the concatenated string consisting of account information which are separated by a comma (,). |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Status | Displays the status of the repricing request. The valid values are: <ul style="list-style-type: none"> • Completed • Error • Invalid • Pending |
| Creation Date Time | Displays the date and time when the repricing request was created in the system. |
| Effective Date | Displays the date from when the repricing is effective for the price item. |
| Error Message | Displays the error message if any error occurs when the repricing entity detail record is created for the membership. |
| Request Reference Id | Displays the repricing request reference Id. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Repricing Requests** zone does not appear in the **Repricing Request** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to a repricing entity detail record in the **Search Repricing Entity Detail Record** zone.

You can filter the list using various search criteria (such as, **Created From**, **From Effective Date**, **Created To**, **To Effective Date**, **Account ID**, **Status**, and **Pricing Rule**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (🔊) icon corresponding to a particular repricing request, the **Timeline and Billable Charge Details** zone appears where you can view a list of timeline and billable charge details created for a specific repricing request.

Timeline and Billable Charge Details

The **Timeline and Billable Charge Details** zone enables you to view the timelines and billable charges generated for a repricing request. It contains the following columns:

| Column Name | Column Description |
|-----------------------------|--|
| Start Date | Displays the start date of the timeline. |
| End Date | Displays the end date of the timeline. |
| Amount | Displays the premium amount calculated for the timeline. |
| Billable Charge Information | Displays information about the billable charge for the timeline. |
| | Note: It has a link. On clicking the link, the Billable Charge ID screen appears where you can view the details of the respective billable charge. |
| Status | Displays the status of the timeline and billable charge details. |
| Error Message | Displays the error message if any error occurs when the repricing request is created for the price item in the system. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Timeline and Billable Charge Details** zone does not appear in the **Repricing Request** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a repricing request in the **Repricing Requests** zone.

You can filter the list using various search criteria (such as, **Start Date**, **Billable Charge ID**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a timeline, the **Pricing Calculation Details** zone appears where you can view a list of pricing details of the entity.

Pricing Calculation Details

The **Pricing Calculation Details** zone enables you to view how the premium is calculated for the membership (in case of tier-based pricing) and how the premium is calculated for each eligible member in the membership (in case of age-based pricing). It contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| Entity Information | If the age based pricing is used during the membership premium calculation, this column indicates the eligible member for whom the premium amount is calculated. However, if |

| Column Name | Column Description |
|---------------------|--|
| | the tier based pricing is used during the membership premium calculation, this column indicates the main subscriber of the membership. |
| Description on Bill | Displays the description of the rate component for which the price component is created in the age based or tier based pricing. |
| Pricing Parameter | Indicates the pricing eligibility criteria which is satisfied while deriving the base fee. |
| Amount | Displays the base fee or applicable modifier fee. |
| Total Amount | If the age based pricing is used during the membership premium calculation, this column displays the sum total of the base fee and modifier fee (if any) for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the base fee applicable for the membership. |

By default, the **Pricing Calculation Details** zone does not appear in the **Repricing Request** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to a **Billable Charge Information** field in the **Timeline and Billable Charge Details** zone.

Searching for a Repricing Entity Detail Record

Prerequisites

To search for a repricing entity detail record, you should have:

- Repricing entity detail records created in the system.

Procedure

To search for a repricing entity detail record:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Repricing Request**.
The **Repricing Request** screen appears.
3. Enter the search criteria in the **Search Repricing Entity Detail Record** zone.
4. Click **Search**.

A list of repricing entity detail records that meets the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Membership Premium Calculation Through Inbound Web Service

Oracle Revenue Management and Billing enables you to calculate membership premium through an inbound web service. The following business service is shipped with the product to support the premium calculation operations:

| Business Service | Description |
|------------------------|--|
| C1-MembershipRepricing | Used to create, update, simulate, and trigger membership repricing. For more information, see C1-MembershipRepricing Business Service on page 3317 |

If you want to send the request in the XML format, you can create a SOAP based inbound web service. For more information on how to setup the **Membership Premium Calculation Through Inbound Web Service** feature, see [Prerequisites](#) on page 3315.

Prerequisites

The following table lists the prerequisites for membership premium calculation through an inbound web service:

| If you want to... | Then... |
|---|--|
| Create adjustments through an inbound web service | <p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-CreateAdjustment business service. • Authorize the ORMB user to access the required application service. |

| If you want to... | Then... |
|---|--|
| | <ul style="list-style-type: none"> • Define the required account identifier types, divisions, contract types, and currencies in the system. • Define the required calculated or non-calculated adjustment types in the system. • Define the required characteristic types where the characteristic entity is set to Adjustment. • Associate the required characteristic types with the required adjustment types. • Include the adjustment type in the adjustment type profile which is associated with the respective contract type. • Define the required exchange rates in the system. • Define a currency conversion algorithm for adjustments using the C1_CURALGAD or C1_EXCRTAD algorithm type. • Attach a currency conversion algorithm to the Currency Conversion For Adjustments algorithm spot of the required divisions. |
| Cancel adjustments through an inbound web service | <p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-CancelAdjustment business service. • Authorize the ORMB user to access the required application service. • Define the required adjustment cancel reasons in the system. |
| View adjustments through an inbound web service | <p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-GetAdjustmentHistory business service. • Authorize the ORMB user to access the required application service. • Define the required account identifier types, divisions, contract types, and adjustment types in the system. • Set the Set Fetch Record Limit option type of the C1-RECLMT feature configuration. |
| Enable the Inbound Web Service History feature | <p>You need to do the following:</p> <ul style="list-style-type: none"> • Define an outbound message type with the following specifications: <ul style="list-style-type: none"> • Outbound Message Business Object - Web Service History (C1-WebServiceHistory) • Priority - Priority 10 -- Highest • Define an external system and associate the above outbound message type with the external system using the following specifications: <ul style="list-style-type: none"> • Processing Method - Batch • Batch Control - F1-FLUSH |

|-------------------|--|
| | <ul style="list-style-type: none"> • Create an algorithm using the C1-IWSHIST algorithm type and attach it to the Web Service History system event in the installation options. <div data-bbox="738 317 1468 426" style="border: 1px solid black; padding: 5px;"> <p>Note: You need to specify the above outbound message type, using which the outbound message should be created, in the Outbound Message Type parameter of the C1-IWSHIST algorithm.</p> </div> |

C1-MembershipRepricing Business Service

Oracle Revenue Management and Billing enables you to do the following through the **C1-MembershipRepricing** business service:

- Define and edit the following types of membership:
 - Active Employee Coverage Membership
 - Employer Sponsored Group Medicare Membership (800 Series Plans)
 - COBRA Membership
- Add a member person to the membership
- Edit the existing member person details of the membership
- Create a person whom you want to add to the membership
- Edit the details of a person who is added to the membership
- Define and edit a benefit of a member person in a medicare membership

Note: While editing a benefit of a member person, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

- Recalculate the membership premium (i.e. trigger repricing) in the following scenarios:
 - A membership is added or edited in the policy or health plan.
 - A member person is added to the membership.
 - The fields, characteristics, or statuses which are monitored for the auditing purposes are updated at the membership or member person level.
- Recalculate the membership premium in the simulation mode and not in real time

Note: You can use the simulation mode as the What-If Analysis tool. In the simulation mode, you can evaluate the membership premium when a new membership will be added or the existing membership will be updated. However, in the simulation mode, the system neither adds or edits the membership in the system nor creates the billable charge for the membership premium. It only recalculates the membership premium and sends the premium calculation details in the response. Note that membership premium recalculation happens only in the above three listed scenarios.

- View the information of the memberships whose start and end dates fall within the specified date range. The information includes:
 - Details of the membership
 - Details of each member person in the membership
 - Benefit details of a member person in a medicare membership
 - Details of the billable charges created for the membership premium for different price items

- Pricing rule and price assignment used during the membership premium billable charge creation
- Account for which the membership premium billable charge is created
- How premium is calculated for each timeline of the billable charge

Note:

If the age based pricing is used during the membership premium calculation, the premium is calculated for each eligible member of the membership. Here, the premium amount is the sum of the base fee and modifier fee (if any) for the eligible member.

However, if the tier based pricing is used during the membership premium calculation, the premium is calculated at the membership level. Here, the premium amount is the base fee applicable for the membership.

You can also filter the list of membership premium billable charges by specifying price items whose billable charges you want to view.

- View the last billed amount and current balance of the account on which the membership premium is billed.

You can define or edit only one membership at a time through the **C1-MembershipRepricing** business service. You can only create or edit a member person and not a bill group or parent customer through the **C1-MembershipRepricing** business service.

We have shipped a SOAP based inbound web service named **C1-MembRepricing** with the product. You can send the membership repricing request from the external system in the XML format through the **C1-MembRepricing** inbound web service. If you want to send the request in the XML and/or JSON format, you need to create a REST based inbound web service.

C1-MembRepricing Business Service Schema

The following code snippet illustrates how the tags are nested in the membership repricing inbound web service schema:

Membership Premium Calculation Request and Response - Tags in XML Format

Note: We recommend you to refer the **C1-MembRepricing** inbound web service schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-MembRepricing** inbound web service, you need to ensure that the membership repricing service contains the following tags:

| Tag Name | Tag Description | Mandatory (Yes or No) | | | | | | |
|--|---|-----------------------|------|--|---|--|---|-----|
| schema | Used to specify the tags of a membership repricing inbound web service. | Yes | | | | | | |
| simulationSw | Used to specify whether the simulation switch should be set as enabled or disabled in the membership repricing web service. <table border="1" data-bbox="511 1165 1201 1816"> <thead> <tr> <th>If</th> <th>Then</th> </tr> </thead> <tbody> <tr> <td>The simulation switch is set as Y</td> <td> <ul style="list-style-type: none"> Any changes made to the entities like membership, member-person, and billable-charges are not saved in the ORMB application. The billable charge event is not triggered in the ORMB application, and hence the Billable Charge tag is not displayed in the response received from the membership repricing inbound web service. </td> </tr> <tr> <td>The simulation switch is set as N</td> <td> <ul style="list-style-type: none"> The billable charge event is triggered in the ORMB application, and the Billable Charge tag is displayed in the response received from the membership repricing inbound web service. </td> </tr> </tbody> </table> | If | Then | The simulation switch is set as Y | <ul style="list-style-type: none"> Any changes made to the entities like membership, member-person, and billable-charges are not saved in the ORMB application. The billable charge event is not triggered in the ORMB application, and hence the Billable Charge tag is not displayed in the response received from the membership repricing inbound web service. | The simulation switch is set as N | <ul style="list-style-type: none"> The billable charge event is triggered in the ORMB application, and the Billable Charge tag is displayed in the response received from the membership repricing inbound web service. | Yes |
| If | Then | | | | | | | |
| The simulation switch is set as Y | <ul style="list-style-type: none"> Any changes made to the entities like membership, member-person, and billable-charges are not saved in the ORMB application. The billable charge event is not triggered in the ORMB application, and hence the Billable Charge tag is not displayed in the response received from the membership repricing inbound web service. | | | | | | | |
| The simulation switch is set as N | <ul style="list-style-type: none"> The billable charge event is triggered in the ORMB application, and the Billable Charge tag is displayed in the response received from the membership repricing inbound web service. | | | | | | | |
| | Note: If you do not specify the value for the simulation switch, by default, it is set to N . | | | | | | | |

| Tag Name | Tag Description | Mandatory (Yes or No) | | | | | | | | |
|-------------------------------|--|--|--|------------|---|-----------------|--|------------|--|--|
| action | <p>Used to indicate the execution mode of the membership repricing inbound web service when you want to receive the existing premium calculations in response.</p> <p>Note:</p> <p>If you specify the value for the action flag as READ the system retrieves the membership, pricing, and billable charge details for the membership.</p> <p>The membership information is not updated even if the simulation switch is set to N and the action flag is set as READ.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required when you want to receive the existing premium calculations in the response from the membership repricing inbound web service.</p> | | | | | | | | |

| accountIdentifiers | Used to indicate whether the account identifier is a primary identifier. The valid values are: <ul style="list-style-type: none"> • Y • N | | | | | | | | | |
| division | You can use this tag within the following tags: | No | | | | | | | | |

| Tag Name | Tag Description | | Mandatory (Yes or No) |
|----------------|--|---|---|
| | If this tag is used within... | Then the purpose of the sequence tag is... | |
| | personData | Used to indicate the division to which the person belongs. | |
| | accountBalanceData | Used to indicate the division to which the account belongs. | |
| birthDate | Used to specify the date when the person was born. | | No |
| | Note: You must specify the date in the YYYY-MM-DD format. | | |
| sinceDate | Used to specify the date when the person's record is created in the system. This is purely informational. | | No |
| | Note: You must specify the date in the YYYY-MM-DD format. | | |
| address | Used to specify the address of the person. | | Yes (Conditional) |
| | | | Note: This data is required while defining or editing the address of the person. |
| addressEffDate | Used to specify the date from when the address is effective. | | Yes (Conditional) |
| | Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the health care inbound message. | | Note: This data is required while editing the address of a person. |
| addressType | Used to indicate the type of address. The valid values are: | | Yes (Conditional) |
| | <ul style="list-style-type: none"> • MAIN - Indicates that the address is the person's mailing address. You can use this address type while specifying the address for the person and account. • SEAS - Indicates that the address is the person's seasonal address. You can use this address type while specifying the address for the person. • OVRD - Indicates that the address is the account's override address. You can use this address type while specifying the address for the account. | | Note: This data is required while editing the address of a person or account. |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-------------------------------|--|---|
| | <p>Note:</p> <p>If you do not specify the address type, by default, it is set to MAIN.</p> <p>You must specify an address type which is already defined in the ADDRESS_TYPE_FLG lookup field. It must be in the Active status.</p> | |
| mailingName | Used to specify the name using which the person should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements. | No |
| address1 | Used to specify the first line of the address. It may contain details, such as the house number. | Yes (Conditional) |
| | | <p>Note: This data is required while defining and editing the address of a person.</p> |
| address2 | Used to specify the second line of the address. It may contain details, such as the apartment name. | No |
| address3 | Used to specify the third line of the address. It may contain details, such as the street name. | No |
| address4 | Used to specify the fourth line of the address. It may contain the landmark details. | No |
| city | Used to specify the city name. | No |
| state | Used to indicate the state where the city is located. | No |
| zip | Used to specify the zip code of the address. | No |
| country | Used to indicate the country where the person or account is located. | No |
| houseType | Used to indicate the type of the house. | No |
| streetNumber1 | Used to specify the numeric information, if any, related to the address. | No |
| streetNumber2 | Used to specify the numeric information, if any, related to the address. | No |
| inCityLimit | Used to indicate whether the address is within the city limit. The valid values are: <ul style="list-style-type: none"> • Y • N | No |
| taxVendor GeographicalCode | Used to specify the geographic code of the address. | No |
| county | Used to specify the county name. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|----------------------|---|--|
| email | Used to specify the e-mail ID of the person. | No |
| overrideMailingName1 | Used to specify the name using which you want to override the person's mailing name. | No |
| overrideMailingName2 | Used to specify the name using which you want to override the person's override mailing name 1. | No |
| overrideMailingName3 | Used to specify the name using which you want to override the person's override mailing name 2. | No |
| phones | Used to specify the phone details of the person. | Yes (Conditional) Note: This data is required while defining or editing the phone details of a person. |
| phoneType | Used to indicate the type of phone. Note: You must specify a phone type which is already defined in the system. | Yes (Conditional) Note: This data is required while defining or editing the phone details of a person. |
| phoneValue | Used to specify the phone number of the person. | Yes (Conditional) Note: This data is required while defining or editing the phone details of a person. |
| extension | Used to specify the extension value of the phone number. | Yes (Conditional) Note: This data is required while defining or editing the phone details of a person. |
| relatedPersons | Used to list other persons with whom you want to establish the person's relationship. | Yes (Conditional) Note: This data is required while defining or editing a person to person relationship. |
| personRelationship | Used to indicate how the other person is related to the person. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) | | | | | | | | |
|---------------------------------------|--|--|--|---------------------------------------|--|------------------------------|--|----------------------------------|--|---|
| Type | <p>Note:</p> <p>You must specify a person relationship type which is already defined in the system.</p> <p>If you have specified a parent customer as the related person for a bill group, the system, by default, uses the person relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration. It does not consider the value specified in this tag.</p> | <p>Note: This data is required while creating relationship between a bill group and person whose the person type is not Parent Customer.</p> | | | | | | | | |
| financial RelationshipSw | <p>Used to indicate whether the other person is financially responsible for the person. The valid values are:</p> <ul style="list-style-type: none"> • True • False <p>Note: If you do not specify the value, by default, it is set to False.</p> | No | | | | | | | | |
| parentOrChild | <p>Used to indicate whether the other person is parent or child. The valid values are:</p> <ul style="list-style-type: none"> • P • C | <p>Yes (Conditional)</p> <p>Note: This data is required while creating a person to person relationship.</p> | | | | | | | | |

| If this tag is used within... | Then the purpose of the sequence tag is... | | | | | | | | | |
| relatedPersons CharacteristicsList | Used to specify the characteristic details for the related person. | | | | | | | | | |
| person CharacteristicList | Used to specify the characteristic details for the person. | | | | | | | | | |
| membership CharacteristicList | Used to specify the characteristic for the membership. | | | | | | | | | |

| Tag Name | Tag Description | | Mandatory (Yes or No) |
|------------------------------|--|---|---|
| | If this tag is used within... | Then the purpose of the sequence tag is... | |
| | | Note: The characteristic tag (along with its elements) can be used more than once within the schema when the Type attribute of the characteristic is set to List . | |
| | member CharacteristicList | Used to specify the characteristic details for the member person. | |
| | benefit CharacteristicsList | Used to specify the characteristic details for the benefit. | |
| characteristicType | You can use this tag within the following tags: | | Yes (Conditional) |
| | If this tag is used within... | Then the purpose of the sequence tag is... | Note: This data is required while defining or editing a characteristic of the respective entity. |
| | characteristic | Used to specify the characteristic type. | |
| | characteristicList | Used to specify the characteristic type. | |
| characteristicValue | You can use this tag within the following tags: | | Yes (Conditional) |
| | If this tag is used within... | Then the purpose of the sequence tag is... | Note: This data is required while defining or editing a characteristic of the respective entity. |
| | characteristic | Used to specify the value for the predefined characteristic type. | |
| | characteristicList | Used to specify the value for the predefined characteristic type. | |
| effectiveDate | You can use this tag within the following tags: | | No |
| | If this tag is used within... | Then the purpose of the sequence tag is... | |
| | characteristic | Used to specify the date from when the characteristic is effective. | |
| | characteristicList | Used to specify the date from when the characteristic details are effective for the account. | |
| person CharacteristicList | Used to specify the characteristic details for the related person. | | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-------------------------------|---|---|
| | | Note: This data is required while defining or editing a characteristic of the respective entity. |
| accountData | Used to specify the account details of a person. | Yes (Conditional) Note: This data is required while defining or editing an account. |
| accountType | Used to indicate the type of account. This information is stored as a characteristic for the account. Note: The value is stored in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLNG feature configuration. You must specify a value which is already defined in the predefined characteristic type. | Yes (Conditional) Note: This data is required while defining or editing an account. |
| customerClass | Used to indicate the customer class to which the account belongs. | Yes (Conditional) Note: This data is required while defining or editing an account. |
| postpone CreditReviewUntil | Used when you want to review the person's debt after a particular date. The system will consider the person for monitoring the delinquency only after the specified date. You can specify the postpone credit review until date for a person through a health care inbound message. | Yes (Conditional) Note: This data is required while defining or editing a person. |
| lastCreditReviewDate | Used to indicate the date when the person's debt was last reviewed. The system stamps the last credit review date against a person when a delinquency process is initiated for the person through the C1-PRDLQ batch. | Yes (Conditional) Note: This data is required while defining or editing a person. |
| dragDays | Used to specify additional grace days (if any) offered at the person level. These drag days are considered while calculating the grace end date when the trigger date calculation mode (in the respective delinquency process type) is set to Latest Bill Due Date with Grace Period . | Yes (Conditional) Note: This data is required while defining or editing a person. |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------------------|--|---|
| advanceDepositAmount | Used to specify the advance deposit amount. It is required when the advance deposit level is set to PG. | Yes (Conditional) Note: This data is required while defining or editing a person. |
| advanceDeposit GraceDays | Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer. While calculating the grace period, the system derives the earliest start date among all the policies where the parent customer is the policy holder and considers it as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e. grace start date + grace days). Note: For example, if a parent customer is the policy holder of two policies – P1 (01-Jan-2022 to 31-Dec-2022) and P2 (01-Jun-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date (as it is the earliest start date) and sets the grace end date to 07-Jan-2022. The advance deposit grace days is required when the advance deposit level is set to PG . | Yes (Conditional) Note: This data is required while defining or editing a person. |
| advanceDepositLevel | Used to indicate whether you want to park the advance deposit received from the group customer at the parent customer or policy level. The valid values are: <ul style="list-style-type: none">• PG - Used when you want to park the advance deposit at the parent customer level.• POLI - Used when you want to park the advance deposit at the policy level. Note: The advance deposit level is only applicable for the person whose person type is set to Parent Customer . If you do not specify the advance deposit level, then the parent customer is not eligible for the advance deposit either at the parent customer or policy level. | Yes (Conditional) Note: This data is required while defining or editing a person. |
| addressStatus | Used to indicate whether you want to maintain both the active and inactive address. | No |
| repriceAfterDate | Used to indicate whether you want to hold the repricing for the membership until the specified date. | No |
| billCycle | Used to indicate the bill cycle for the account. Note: You must specify a bill cycle which is already defined in the system. | No |
| billLeadDays | Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0). | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------|---|---|
| currency | Used to indicate the currency in which you want to bill the account. | Yes (Conditional) |
| | Note: You must specify a currency which is already defined in the system. | Note: This data is required while defining an account. |
| setUpDate | Used to specify the date when the account was first created. This is purely informational. | No |
| | Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the value, by default, it is set to the current date. | |
| acctUsageFlg | Used to indicate the category to which the account belongs. The valid values are: <ul style="list-style-type: none"> • INVC - Indicates that the account will be used to bill charges of the usage accounts. • SETL - Indicates that the account will be used only for settlement purposes. • USAG - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually. | No |
| comments | Used to specify additional information about the account. | No |
| deferAutoPayDt | Used to specify the date till when you want to hold the automatic payment process for the account. | No |
| collectionClass | Used to control how the person's debt is compared against collection criteria (i.e. tolerance limit) to determine whether a collection process (such as delinquency process) should be initiated for the person. A new collection method named Self-Control Delinquency is available while defining a collection class. It is used to create a distinct or separate delinquency process for the persons who belong to the collection class. If you want to evaluate the debt of the person's accounts, its child persons, and the child persons' accounts while monitoring the person's delinquency, you must set the collection method of their respective collection class to Parental Delinquency . If you set the collection method of the collection class for any of the person's account, any of its child person, or child persons' accounts to Self-Control Delinquency , the system does not consider the debt of the respective entity while monitoring the delinquency of the parent person. | No |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|---------------------|---|--|
| | <p>Note:</p> <p>If you do not want to initiate delinquency process for a child person or an account, ensure that the person or account belongs to a collection class where the collection method is set to Not Eligible for Collection.</p> <p>If the collection class is not defined for a person, the system skips the person while monitoring the delinquency.</p> | |
| billRouteType | Used to indicate how the account's bill must be sent to the main customer. | Yes (Conditional) |
| | | Note: This data is required while defining the respective information. |
| billAddressSource | Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV | Yes (Conditional) |
| | | Note: This data is required while defining the respective information. |
| accountIdentifiers | Used to specify the account identifiers for the account. | Yes |
| characteristics | Used to specify the characteristics for the account. | No |
| characteristicsList | Used to specify the characteristics information for the account. | No |
| membership | Used to specify information about the membership. | Yes |
| sourceSystem | Used to specify the external system from where the membership information is received for repricing. | Yes |
| | Note: You must specify a source system which is already defined in the C1-SourceSystemLookup extendable lookup. It must be in the Active status. | |
| policyNumber | Used to specify the policy number. | Yes (Conditional) |
| | | Note: This data is required while defining or editing the respective information. |
| planNumber | Used to specify the plan number. | Yes |
| healthPlanCode | Used to specify the health plan code. | Yes |
| boStatusCd | Used to indicate the status of the membership. | No |
| membershipType | You can use this tag within the following tags: | Yes |

| Tag Name | Tag Description | | Mandatory (Yes or No) | | | | | | |
|---------------------------------|--|-------------------------------|--|------------|---|----------------|--|--|--|

| autoRenew | Used to indicate whether the individual membership should be automatically renewed. | No | | | | | | | |
| associatedMember IdentifierType | Used to specify the identifier type of the member who is associated with another individual membership. | No | | | | | | | |
| associated MemberIdentifier | Used to specify the identification of the member who is associated with another individual membership. | Yes (Conditional) | | | | | | | |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| | | Note: This data is required while defining or editing the individual membership. |
| exchangeFlag | Used to indicate whether the individual membership is purchased from the exchange. The valid values are: <ul style="list-style-type: none"> • ON • OFF | Yes |
| exchangeId | Used to specify the identification number of the exchange from where the individual membership is purchased. | Yes (Conditional) Note: This data is required when the exchangeFlag is set to ON . |
| binderLiability Amount | Used to specify the binder liability amount. Note: This data is required when the Consider Binder Liability Amount attribute is set to Y in the binder payment preference. | Yes (Conditional) Note: This data is required while defining or editing the individual membership. |
| binderPay Applicability | Used to indicate that the system should monitor whether the binder payment is received before activating the individual membership. The valid values are: <ul style="list-style-type: none"> • Y • N | No |
| binderPay GraceDays | Used to calculate the grace date for the individual membership. | Yes (Conditional) Note: This data is required when the binderPayApplicability is set to Y . |
| binderPay Threshold | Used to specify the threshold percentage using which the threshold amount should be calculated. | Yes (Conditional) Note: This data is required when the binderPayApplicability is set to Y . |
| holdBilling | Used to indicate whether you want to hold the bill generation process for the individual membership until the binder payment is received. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|------------------------------|---|---|
| | | Note: This data is required when you have selected the binderPayApplicability to Y. |
| membership RenewalDate | Used to indicate the date when the individual membership should be renewed. Note: You must specify the renewal date when you are manually renewing the individual membership. | Yes (Conditional) Note: This data is required while defining or editing the individual membership. |
| contractPeriod | Used to indicate the period (in months) for which the individual membership should be automatically renewed. | Yes (Conditional) Note: This data is required while defining or editing the individual membership. |
| membership IdentifierList | Used to specify the identification details for the membership. | Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership. |
| membershipIdentifier | Used to specify the identification for the membership. | Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership. |
| membershipIdentifier Type | Used to specify the membership identifier type. | Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership. |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-------------------------------|--|---|
| membershipIdentifier Value | Used to specify the value for the predefined membership identifier type. | Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership. |
| membershipCharacteristic List | Used to specify the characteristic details for the membership. | Yes (Conditional) Note: This data is required only while defining the membership details of a person. |
| membershipRate Guarantee | Used to specify the rate guarantee information for each individual membership. Note: The rate guarantee information can be specified only while defining or editing the individual membership. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| membershipRate GuaranteeList | Used to specify the rate guarantee details for the individual membership. Note: The rate guarantee details can be specified only while defining or editing the individual membership. | Yes (Conditional) Note: This data is required while defining or editing the respective information. |
| rateGuaranteeStartDate | Used to specify the date from when the rate guarantee is available for the individual membership. Note: You can specify the rate guarantee start date only while defining or editing the individual membership. The rate guarantee start date cannot be later than rate guarantee end date. The rate guarantee start date cannot be earlier than the membership start date or later than membership end date. | Yes |
| rateGuaranteeEndDate | Used to specify the date till when the rate guarantee is available for the individual membership. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|----------------------|--|---|
| | <p>Note:</p> <p>You can specify the rate guarantee start date only while defining or editing the individual membership.</p> <p>The rate guarantee end date cannot be earlier than rate guarantee start date.</p> <p>The rate guarantee start end cannot be earlier than the membership start date or later than membership end date.</p> | <p>Note: This data is required if you have specified the rateGuaranteeStartDate while defining or editing the individual membership.</p> |
| rateGuarantee Status | <p>Used to indicate the status of the rate guarantee period. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive | Yes |
| memberData List | Used to specify basic information about the membership. | <p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the membership details of a person.</p> |
| memberData | <p>Used to specify the details of the main subscriber or dependent person.</p> <p>Note:</p> <p>The member data information must be provided along with the enrollment dates whenever a new membership is created.</p> <p>The memberData tag (along with its elements) can only be used once within the schema, when the Type attribute of the memberData is set to Group.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining the membership details of a person.</p> |
| memberIdType | Used to specify the external membership ID. | Yes |
| memberIdValue | Used to specify the value for the external membership ID. | Yes |
| enrollment StartDate | <p>Used to specify the date from when you want to add the member person to the membership.</p> <p>Note:</p> <p>The enrollment start date cannot be later than the enrollment end date.</p> <p>The enrollment start date cannot be earlier than the membership start date or later than the membership end date.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining the membership details of a person.</p> |
| enrollment EndDate | Used to specify the date till when you want to add the member person to the membership. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|--------------------------------|---|---|
| | <p>Note:</p> <p>The enrollment end date cannot be earlier than the enrollment start date.</p> <p>The enrollment end date cannot be earlier than the membership start date or later than the membership end date.</p> | <p>Note: This data is required while defining the membership details of a person.</p> |
| memberRelationship | Used to indicate how the main subscriber is related to the membership. | Yes (Conditional) |
| | | <p>Note: This data is required while defining or editing the membership details of a person.</p> |
| membershipPerson Status | <p>Used to indicate the status of the person in the membership. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive | Yes |
| memberId | <p>Used to specify the external membership ID.</p> <p>Note: Here, you need to specify a membership ID which is maintained in the external source system.</p> | No |

| externalMedicare BeneficiaryId | Used to specify the Medicare beneficiary identifier of the person who has availed the Medicare benefit. | No |
| benefitData | Used to specify information about the membership benefit. | Yes (Conditional) |
| | | <p>Note: This data is required while defining or editing a membership benefit.</p> |
| benefitDataList | Used to specify the details of a membership benefit. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|-----------------------|--|--|
| | | <p>Note: This data is required while defining or editing a membership benefit.</p> |
| benefitStatus | <p>Used to indicate the status of the membership benefit. The valid values are:</p> <ul style="list-style-type: none"> • ACTIVE • DISCARD <p>Note: While defining a membership benefit, by default, the status is set to Active. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to Inactive and the status of the new benefit record is set to Active. You can discard an active or inactive membership benefit whenever required.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a benefit.</p> |
| benefitSourceFlag | <p>Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are:</p> <ul style="list-style-type: none"> • CMS • ST <p>Note: You can only specify a value which is defined in the BENEFIT_SRC_FLG lookup field.</p> | No |
| benefitSubTypeFlag | <p>Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.</p> <p>Note: You can only specify a benefit sub type which is already defined in the system.</p> | No |
| planBenefit PackageId | <p>Used to indicate the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit.</p> <p>Note: You can only specify a Medicare plan benefit package which is already defined in the system.</p> | <p>Yes (Conditional)</p> <p>Note: This data is required while creating the Medicare Part A, Part B, or Part D membership benefit.</p> |
| benefitAmount | Used to specify the pass-through amount for the availed membership benefit. | Yes (Conditional) |

| Tag Name | Tag Description | Mandatory (Yes or No) |
|----------|-----------------|---|
| | | Note: This data is required while creating the Medicare Part D LIS, Medicare Part D LEP, APTC, or other membership benefits. |

The following table provides information about the response tags in the membership repricing inbound web service:

| Tag | Tag Description | | | | | | | | |
|--|--|--|------|---|---|---|---|-----------------------------------|---|
| responseDetails | Displays the information whether the membership repricing inbound web service was successfully processed or not. | | | | | | | | |
| membershipId | Indicates the membershipID for which the repricing should take place. | | | | | | | | |
| responseStatus | Indicates the status of the response received from the membership repricing inbound web service. <table border="1" data-bbox="560 846 1469 1270"> <thead> <tr> <th>If</th> <th>Then</th> </tr> </thead> <tbody> <tr> <td>An error occurs while processing the membership repricing inbound web service</td> <td>The responseStatus tag contains ERROR as a response message received from the membership repricing inbound web service, and the error message is displayed in the message tag.</td> </tr> <tr> <td>The membership repricing inbound web service is correctly processed</td> <td>The responseStatus tag contains SUCCESS as a response message received from the membership repricing inbound web service.</td> </tr> <tr> <td>A transaction results in an error</td> <td>The changes requested as a part of the transaction are not processed and a rollback is performed.</td> </tr> </tbody> </table> | If | Then | An error occurs while processing the membership repricing inbound web service | The responseStatus tag contains ERROR as a response message received from the membership repricing inbound web service, and the error message is displayed in the message tag. | The membership repricing inbound web service is correctly processed | The responseStatus tag contains SUCCESS as a response message received from the membership repricing inbound web service. | A transaction results in an error | The changes requested as a part of the transaction are not processed and a rollback is performed. |
| If | Then | | | | | | | | |
| An error occurs while processing the membership repricing inbound web service | The responseStatus tag contains ERROR as a response message received from the membership repricing inbound web service, and the error message is displayed in the message tag. | | | | | | | | |
| The membership repricing inbound web service is correctly processed | The responseStatus tag contains SUCCESS as a response message received from the membership repricing inbound web service. | | | | | | | | |
| A transaction results in an error | The changes requested as a part of the transaction are not processed and a rollback is performed. | | | | | | | | |
| message | Indicates the reason why the membership repricing inbound web service failed. | | | | | | | | |
| responseType | Indicates the type of response received from the inbound web service. The valid values are: <ul style="list-style-type: none"> • DT - Indicates that the response contains detailed information. • SMRY - Indicates that the response contains summary information. | | | | | | | | |
| paidThroughDate | Indicates the term end date of the last fully or partially paid term. For more information about the paid through date, refer to Policy on page 330. | | | | | | | | |
| premiumCalculation Details | Displays the premium calculation details for the membership. <table border="1" data-bbox="552 1669 1469 1848"> <tr> <td>Note: The premiumCalculationDetails tag (along with its elements) can be used only once within the schema when the Type attribute of the premiumCalculationDetails is set to Group.</td> </tr> </table> | Note: The premiumCalculationDetails tag (along with its elements) can be used only once within the schema when the Type attribute of the premiumCalculationDetails is set to Group . | | | | | | | |
| Note: The premiumCalculationDetails tag (along with its elements) can be used only once within the schema when the Type attribute of the premiumCalculationDetails is set to Group . | | | | | | | | | |
| premiumCalculation | Displays the total premium of all the members for the timeline. | | | | | | | | |

| Tag | Tag Description | | | | | | |
|-------------------------------|--|-------------------------------|--|--------------------|---|------------------|---|
| | <p>Note: The premiumCalculation tag (along with its elements) can be used more than once within the schema when the Type attribute of the premiumCalculation is set to List.</p> | | | | | | |
| priceItemCd | Indicates the price item for which the billable charge is created. | | | | | | |
| startDt | <p>Displays the start date of the timeline.</p> <p>Note: The startDt cannot be later than the endDt. The startDt cannot be earlier than the membership start date or later than the membership end date.</p> | | | | | | |
| endDt | <p>Displays the end date of the timeline.</p> <p>Note: The endDt cannot be earlier than the startDt. The endDt cannot be earlier than the membership start date or later than the membership end date.</p> | | | | | | |
| calcAmt | <p>You can use this tag within the following tags:</p> <table border="1" data-bbox="560 989 1461 1234"> <thead> <tr> <th data-bbox="560 989 844 1066">If this tag is used within...</th> <th data-bbox="844 989 1461 1066">Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="560 1066 844 1150">premiumCalculation</td> <td data-bbox="844 1066 1461 1150">Displays the premium amount calculated for the timeline.</td> </tr> <tr> <td data-bbox="560 1150 844 1234">premiumCalcLines</td> <td data-bbox="844 1150 1461 1234">Displays the premium amount calculated for each eligible member in the membership.</td> </tr> </tbody> </table> | If this tag is used within... | Then the purpose of the sequence tag is... | premiumCalculation | Displays the premium amount calculated for the timeline. | premiumCalcLines | Displays the premium amount calculated for each eligible member in the membership. |
| If this tag is used within... | Then the purpose of the sequence tag is... | | | | | | |
| premiumCalculation | Displays the premium amount calculated for the timeline. | | | | | | |
| premiumCalcLines | Displays the premium amount calculated for each eligible member in the membership. | | | | | | |
| distAmt | <p>You can use this tag within the following tags:</p> <table border="1" data-bbox="560 1323 1461 1568"> <thead> <tr> <th data-bbox="560 1323 844 1400">If this tag is used within...</th> <th data-bbox="844 1323 1461 1400">Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="560 1400 844 1484">premiumCalculation</td> <td data-bbox="844 1400 1461 1484">Displays the discount amount calculated for the timeline.</td> </tr> <tr> <td data-bbox="560 1484 844 1568">premiumCalcLines</td> <td data-bbox="844 1484 1461 1568">Displays the discount amount calculated for each eligible member in the membership.</td> </tr> </tbody> </table> | If this tag is used within... | Then the purpose of the sequence tag is... | premiumCalculation | Displays the discount amount calculated for the timeline. | premiumCalcLines | Displays the discount amount calculated for each eligible member in the membership. |
| If this tag is used within... | Then the purpose of the sequence tag is... | | | | | | |
| premiumCalculation | Displays the discount amount calculated for the timeline. | | | | | | |
| premiumCalcLines | Displays the discount amount calculated for each eligible member in the membership. | | | | | | |
| currencyCd | <p>You can use this tag within the following tags:</p> <table border="1" data-bbox="560 1656 1461 1892"> <thead> <tr> <th data-bbox="560 1656 844 1734">If this tag is used within...</th> <th data-bbox="844 1656 1461 1734">Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="560 1734 844 1818">premiumCalculation</td> <td data-bbox="844 1734 1461 1818">Indicates the currency in which the premium is calculated for the timeline.</td> </tr> <tr> <td data-bbox="560 1818 844 1892">premiumCalcLines</td> <td data-bbox="844 1818 1461 1892">Indicates the currency in which the premium is calculated for each eligible member in the membership.</td> </tr> </tbody> </table> | If this tag is used within... | Then the purpose of the sequence tag is... | premiumCalculation | Indicates the currency in which the premium is calculated for the timeline. | premiumCalcLines | Indicates the currency in which the premium is calculated for each eligible member in the membership. |
| If this tag is used within... | Then the purpose of the sequence tag is... | | | | | | |
| premiumCalculation | Indicates the currency in which the premium is calculated for the timeline. | | | | | | |
| premiumCalcLines | Indicates the currency in which the premium is calculated for each eligible member in the membership. | | | | | | |

| Tag | Tag Description | | | | | | |
|-------------------------------|---|-------------------------------|--|------------|---|--------------------|--|
| | Note: Here, the system chooses those currencies in which the bills added to the membership are created. | | | | | | |
| acctIdType | Indicates the account identifier type. | | | | | | |
| acctIdVal | Indicates the value of the account identifier type. | | | | | | |
| accountId | Indicates the account to which the membership is billed. | | | | | | |
| billableChgId | Indicates the billable charge ID. | | | | | | |
| pricingRuleId | Indicates the pricing rule using which the premium amount is calculated. | | | | | | |
| priceAsgnId | Indicates the price item pricing which is assigned to a membership. | | | | | | |
| premiumCalc LineDetails | Displays the premium calculated line details for each eligible member in the membership. | | | | | | |
| premiumCalcLines | Displays the premium calculated line information for each eligible member in the membership. | | | | | | |
| proFactor | Indicates the proration factor used to calculate the billable charges for the membership contract. | | | | | | |
| month | Displays the month of the premium calculation. | | | | | | |
| totalCalcAmt | Displays the total calculated amount for premium calculation. | | | | | | |
| entityTypeFlg | Indicates the type of entity created for premium calculation. | | | | | | |
| entityId | Indicates the entity ID. | | | | | | |
| referenceIdType | Indicates the reference type used for premium calculation. | | | | | | |
| referenceIdValue | Indicates the value of the reference identifier type. | | | | | | |
| pricingParameters | Indicates the pricing eligibility criteria which is satisfied while deriving the premium for the membership. | | | | | | |
| description | Displays the description of the rate component for which the price component is created in the age based or tier based pricing. | | | | | | |
| accountBalance | Displays the amount balance in the account. | | | | | | |
| accountBalanceData | Displays the account balance data information. | | | | | | |
| accountIdentifierType | Indicates the account identifier type for the account. | | | | | | |
| accountNumber | Indicates the bank account through which automatic payment is made. | | | | | | |
| accountId | Indicates the account which made the payment. | | | | | | |
| division | <p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>personData</td> <td>Displays the division to which the person belongs</td> </tr> <tr> <td>accountBalanceData</td> <td>Displays the division to which the account belongs</td> </tr> </tbody> </table> | If this tag is used within... | Then the purpose of the sequence tag is... | personData | Displays the division to which the person belongs | accountBalanceData | Displays the division to which the account belongs |
| If this tag is used within... | Then the purpose of the sequence tag is... | | | | | | |
| personData | Displays the division to which the person belongs | | | | | | |
| accountBalanceData | Displays the division to which the account belongs | | | | | | |

| Tag | Tag Description |
|-----------------------------|---|
| sourceSystem | Indicates the external system from where the membership information is received for repricing. |
| c1External TransactionId | Indicates the transaction in the external source system which resulted in the customer inbound message. |
| externalSourceId | Displays the external source system ID. |
| accountInfoDtls | Displays the account information details of an account. |
| currentBalance | Displays the total amount of funds in the account. |
| lastBillAmount | Indicates the last bill amount generated for the membership. |
| statusCd | Indicates whether the membership repricing incoming message is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Fail |
| messageText | Indicates the reason for an error occurrence. |

Sample Maintaining Advance Deposit at Parent Customer Level in XML Format

Using the below example, you can do the following:

- Maintain the advance deposit at parent customer level

The following table provides sample data where advance deposit is maintained at the parent customer level:

| Advance Deposit Level | Person Type | Person Name | Policy Number | Plan Number | Advance Amount | Bill 1 Amount | Bill 2 Amount |
|-----------------------|--------------------|------------------|-------------------|----------------------------|----------------|---------------|---------------|
| PG | PARENT CUSTOMER | PETER_ INGRAM | REPRC_ IN_POL1 | REPRC_ IN_POL1_ PLN1 | 2000 | 1500 | 500 |

Note: We have given the above sample to illustrate how the tags should be nested while sending an advance deposit creation request from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Chapter 40

Off-Process Request

Topics:

- [Off-Process Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-OffProcessRequest](#)
- [Off-Process Request Type](#)
- [Off-Process Request \(Used for Searching\)](#)
- [Off-Process Request \(Used for Viewing\)](#)

There might be situations in the Administrative Services Only (ASO) business wherein the insurance company or health insurance customer (i.e. Employer) would like to change agreed limits or funds within the policy period. For example, a need may arise to change the ASL limit, minimum or maximum discount limit, or settlement or runout funds. This will impact the stop-loss, discount arrangement, and level funding calculation, respectively. In addition, there might be situations wherein the aggregated amount might require a change due to corrections in the claim transactions or due to migration of customers for whom the stop-loss is pre-accumulated and billed in the legacy system.

Oracle Revenue Management and Billing provides a mechanism through which the agreed limits, funds, or calculated amounts can be amended within the policy period.

The following table lists a set of fields used during the respective accumulation that can be amended through an off-process request:

| Accumulation Category | Field Value |
|---------------------------|------------------------|
| Specific Stop-Loss (SSL) | Aggregated Amount |
| Aggregate Stop-Loss (ASL) | Aggregated Amount |
| | ASL Limit |
| | SSL Cumulative Credits |
| Level Funded | Aggregated Amount |
| | Settlement Fund |
| | SSL Cumulative Credits |
| | ASL Cumulative Credits |
| | Runout Fund |
| Discount Arrangement | Aggregated Amount |
| | Minimum Discount Limit |
| | Maximum Discount Limit |

The system enables you to amend the above mentioned accumulation field values through an off-process request. As its name suggests, an off-process

request is an adhoc request to create an adjustment or billable charge through which the system can amend the above mentioned accumulation field values.

While creating an off-process request, you need to specify an off-process request type using which you want to create the off-process request. It is the off-process request type which helps the system to determine:

- The business object using which the off-process request should be created in the system
- Whether the system should create an adjustment or billable charge to amend the above mentioned accumulation field values
- Whether the approval is required for the off-process request
- The accumulation categories whose field values can be amended through the respective off-process requests
- The accumulation fields whose values can be amended through the respective off-process requests
- The default adjustment type using which the adjustment should be created when the amendment mode is set to **Adjustment**
- The default billable charge line type using which the billable charge should be created when the amendment mode is set to **Billable Charge**
- The type of contract against which the adjustment or billable charge should be created for the account

Once you specify the off-process request type, you need to specify the following:

- The parent customer (i.e. person whose person type is set to **Parent Customer**) for which you want to create an off-process request
- The accumulation category whose field value you want to amend through the off-process request
- The accumulation field whose value you want to amend through the off-process request

Note: Here, you can select only those accumulation categories and fields for which the contract type and adjustment type or billable charge line type information is available in the respective off-process request type.

- The accumulation group for which the changes should be reflected in the system

Note: If the accumulation category is set to **Specific Stop-Loss**, you can only select the accumulation group defined at the bill group level. However, if the accumulation category is set to **Aggregate Stop-Loss**, **Discount Arrangement**, or **Level Funded**, you can only select the accumulation group defined at the parent customer level.

- The account for which the adjustment or billable charge should be created in the system
- The amount which you want amend through the off-process request
- The adjustment type using which the adjustment should be created when the amendment mode is set to **Adjustment** in the respective off-process request type

- The billable charge line type using which the billable charge should be created when the amendment mode is set to **Billable Charge** in the respective off-process request type
- The member or main subscriber for whom the field value should be amended in the system

Note: You need to specify the member or main subscriber when the accumulation category is set to **Specific Stop-Loss**.

- The date (i.e. effective date) when the field value should be amended in the system

Note: If the amendment mode is set to **Adjustment**, the above date is stamped as the accounting date. However, if the amendment mode is set to **Billable Charge**, the above date is stamped as the billable charge start and end dates.

- The coverage period for which the amendment is applicable

Note: The coverage period is stored for the informational purposes only and is not considered during accumulation.

Once an off-process request is created in the **Draft** status, you can edit, delete, or submit the off-process request. On submitting an off-process request, the system creates the adjustments or billable charges to amend the accumulation field values. Finally, the status of the off-process request is changed to **Processed**.

Note: The off-process request through which the adjustment is created is stored in the **Comments** field. And, the off-process request through which the billable charge is created is stored in the **GRP_REF_VAL** column.

You can optionally configure the approval process for the off-process request. If the **Approval Required** flag is set to **Yes** in the off-process request type, the status of the off-process request is changed to **Approval In Progress** when you submit the off-process request. Once the approver approves the off-process request, the status of the off-process request is changed to **Approved**. The system then creates the adjustments or billable charges to amend the accumulation field values. Finally, the status of the off-process request is changed to **Processed**. However, if the approver rejects an off-process request, the status of the off-process request is changed to **Rejected**.

These adjustments or billable charges are then considered in the accumulation run when the adjustment date or billable charge start and end dates fall within the accumulation cycle. Depending on the accumulation category, the adjustment or billable charge is considered when the **C1-ACSSL**, **C1-ACASL**, **C1-ACDA**, or **C1-ACLF** batch is executed.

For more information on how to setup the off-process request feature, see [Prerequisites](#) on page 3396.

Prerequisites

Information will be available soon...

Off-Process Request (Without Approval) Status Transition

The following figure graphically indicates how an off-process request moves from one status to another when the approval process is not configured in the off-process request type:

Algorithms Used in C1-OffProcessRequest

Information will be available soon...

Off-Process Request Type

Oracle Revenue Management and Billing allows you to define an off-process request type using which you can create an off-process request. It is the off-process request type which helps the system to determine the following:

- The business object using which the off-process request should be created in the system.
- Whether the system should create the adjustment or billable charge to amend the accumulation field values.
- Whether approval is required for an off-process request.
- The accumulation categories and their respective amendment fields whose field values can be amended through the off-process requests.

- The default adjustment type or the billable charge line type using which the adjustment should be created in the system.
- The type of contract against which the adjustment or billable charge should be created for the account.

The **Off-Process Request Type** screen allows you to define, edit, delete, and copy an off-process request type. It contains the following zones:

- [Off-Process Request Type List](#) on page 3398
- [Off-Process Request Type](#) on page 3398

Off-Process Request Type List

The **Off-Process Request Type List** zone lists the off-process request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|--------------------------|---|
| Off-Process Request Type | Displays the off-process request type. |
| Description | Displays the description of the off-process request type. |
| Edit | On clicking the Edit (✎) icon, the Off-Process Request Type screen appears where you can edit the details of the off-process request type. |
| Duplicate | On clicking the Duplicate (📄) icon, the Off-Process Request Type screen appears where you can define a new off-process request type using an existing off-process request type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the off-process request type. |
| | Note: You can delete an off-process request type when you have not created an off-process request using the off-process request type. |

On clicking the **Broadcast** (📡) icon corresponding to an off-process request type, the **Off-Process Request Type** zone appears with the details of the respective off-process request type.

Off-Process Request Type

The **Off-Process Request Type** zone displays the details of the off-process request type. It contains of the following sections:

- **Main** - Displays the basic information about the off-process request type. It contains the following fields:

| Column Name | Column Description |
|--------------------------|--|
| Off-Process Request Type | Displays the off-process request type. |

| Column Name | Column Description |
|-------------------------------------|--|
| Business Object | Indicates the business object using which the off-process request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Description | Displays the description of the off-process request type. |
| Detailed Description | Displays additional information about the off-process request type. |
| Off-Process Request Business Object | Indicates the business object using which an off-process request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status | Indicates the status of the off-process request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Amendment Mode | Indicates whether adjustments or billable charges should be created using the off-process request type. |
| Approval Required | Indicates whether approval is required while creating the adjustments or billable charges using the off-process request type. |
| Approval Profile | Indicates the approval profile which must be used to define approval hierarchy for the off-process request type. |
| | Note: The Approval Profile field appears when the Approval Required check box is selected. It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile. |
| Approval To Do Type | Indicates that the To Do entry of the specified To Do type must be created when an off-process request is submit for approval. |
| | Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. This field appears when the Approval Required option is selected. |
| Approval To Do Role | Indicates that users with the specified To Do role can only approve an off-process request which is submitted for approval. |

| Column Name | Column Description |
|-------------|---|
| | <p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> <p>This field appears when the Approval Required option is selected.</p> |

- **Accumulation Amendment Details** - Lists the types of accumulation defined for the off-process type. It contains the following columns:

| Column Name | Column Description |
|---|--|
| Accumulation Category | Indicates the category for which the adjustment or billable charge is created. |
| Amendment Field | Indicates the field for which the adjustment or billable charge is created. |
| Contract Type | Indicates the contract type which is associated while defining the off-process request type. |
| Adjustment Type/Billable Charge Line Type | Indicates the adjustment or billable charge line type using which the adjustment or billable charge should be created through the off-process request. |

- **Characteristics** - The **Characteristics** section lists the characteristics of the off-process request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - The **Record Actions** section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the off-process request type. |
| Delete | Used to delete the off-process request type. Note: You can delete a off-process request type when you have not created a off-process request using the off-process request type. |
| Duplicate | Used to create a new off-process request type using an existing off-process request type. |

- **Record Information** - The **Record Information** section contains the following fields:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the off-process request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Off-Process Request Type** zone does not appear in the **Off-Process Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the off-process request type in the **Off-Process Request Type List** zone.

Defining an Off-Process Request Type

Prerequisites

To define an off-process request type, you should have:

- Off-process request type business objects defined in the application
- Off-process request business objects defined in the application
- Required approval profiles defined in the application
- Required To Do role assigned to the **C1-OFPAP** To Do type in the application
- Accumulation category defined in the application
- Amendment field and amendment mode defined in the application
- Contract type defined in the application
- Adjustment type and billable charge line type defined in the application
- Off-process request type status defined in the application

Procedure

To define an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Off-Process Request Type** sub-menu.

The **Off-Process Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request type.
- **Accumulation Amendment Details** - Used to specify the accumulation amendment details for the off-process request type.
- **Characteristics** - Used to define the characteristics for the off-process request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|---|
| Off-Process Request Type | Used to specify the off-process request type. | Yes |
| Business Object | Indicates the business object using which you are defining the off-process request type. | Not applicable |
| Description | Used to specify the description for the off-process request type. | Yes |
| Detailed Description | Used to specify additional information about the off-process request type. | No |
| Off-Process Request Business Object | Used to indicate the business object using which you want to create the off-process request. | Yes |
| Status | <p>Used to indicate the status of the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive <p>Note: You cannot change the status of an off-process request type to Inactive when the corresponding off-process request is in a status other than Processed or Rejected. By default, the Active option is selected.</p> | Not applicable |
| Amendment Mode | <p>Used to indicate the amendment mode selected for the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> Adjustment Billable Charge | Yes |
| Approval Required | Used to indicate whether the approval is required before generating adjustments or billable charges through an off-process request. | No |
| Approval To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when an off-process request is submitted for approval.</p> <p>Note: The Search  icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field. This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|--|
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve an off-process request submitted for approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |

4. Enter the required details in the **Main** section.
5. Define the accumulation amendment details for the off-process request type, if required.
6. Define characteristics for the off-process request type, if required.
7. Click **Save**.

The off-process request type is defined.

Adding the Accumulation Amendment Details in an Off-Process Request Type

Prerequisites

To add accumulation amendment details in an off-process request type, you should have:

- Accumulation categories defined in the application
- Amendment fields defined in the application
- Contract types defined in the application
- Adjustment type and billable charge line type defined in the application

Procedure

To add accumulation amendment details in an off-process request types:

1. Ensure that the **Accumulation Amendment Details** section is expanded when you are adding the accumulation amendment details in an off-p

The **Accumulation Amendment Details** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Accumulation Category | Used to indicate the category that you want to use for accumulation. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop Loss | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| | <ul style="list-style-type: none"> Discount Arrangement Level Funded Specific Stop-Loss | |
| Amendment Field | <p>Used to indicate the field that you want to use for accumulation purposes. The valid values are:</p> <ul style="list-style-type: none"> ASL Limit Aggregated Amount Cumulative ASL Credit Cumulative SSL Credit Maximum Limit Minimum Limit Run Out Fund Settlement Fund | Yes |
| Contract Type | <p>Used to indicate the contract that you want to use for accumulation and amendment purposes.</p> <p>Note: The Search  icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are defining accumulation amendment details in an off-process request type.</p> |
| Adjustment Type/Billable Charge Line Type | <p>Used to indicate the type of charge using which you want to create adjustments or billable charges.</p> <p>The Search () icon appears corresponding to the Adjustment Type/Billable Charge Line Type field. On clicking the Search icon, the Adjustment Type/Billable Charge Line Type Search window appears.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are defining accumulation amendment details in an off-process request type.</p> |

- Enter the required details in the **Accumulation Amendment Details** section.
- If you want to define more than one accumulation amendment details for the off-process request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an accumulation amendment detail(s) from the off-process request type, click the **Delete** () icon corresponding to the accumulation amendment details.

Defining a Characteristic for an Off-Process Request Type

Prerequisites

To define a characteristic for an off-process request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Off-Process Request**)

Procedure

To define a characteristic for an off-process request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an off-process request type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Off-Process Request . | Note: This field is required when you are defining a characteristic for the off-process request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the off-process request type. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the off-process request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the off-process request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Off-Process Request Type

Prerequisites

To edit an off-process request type, you should have:

- Off-process request business objects defined in the application
- Adjustment type and billable charge line type defined in the application
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-OFPPAP** To Do type in the application
- Accumulation category defined in the application
- Amendment field and amendment mode defined in the application
- Contract type defined in the application
- Off-process request type status defined in the application

Procedure

To edit an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Off-Process Request Type** sub-menu.
The **Off-Process Request Type** screen appears.
4. In the **Off-Process Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the off-process request type whose details you want to edit.

The **Off-Process Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request type.
- **Characteristics** - Used to define the characteristics for the off-process request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Off-Process Request Type | Displays the off-process request type. | Not applicable |
| Business Object | Indicates the business object using which you are defining the off-process request type. | Not applicable |
| Description | Used to specify the description for the off-process request type. | Yes |
| Off-Process Request Business Object | Used to indicate the business object using which you want to create the off-process request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Detailed Description | Used to specify additional information about the off-process request type. | No |
| Status | <p>Used to indicate the status of the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive <p>Note: You cannot change the status of an off-process request type to Inactive when the corresponding off-process request is in a status other than Processed or Rejected. If you do not specify the status, by default, it is set to Active.</p> | Yes |
| Amendment Mode | <p>Used to indicate the amendment mode selected for the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> Adjustment Billable Charge | Yes |
| Approval Required | Used to indicate whether the approval is required before generating adjustments or billable charges through an off-process request. | No |
| Approval To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when an off-process request is submitted for approval.</p> <p>Note: The Search  icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field. This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve an off-process request submitted for approval. | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p> | |

Tip: Alternatively, you can edit the details of a off-process request type by clicking the **Edit** button in the **Off-Process Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove accumulation amendment details from the off-process request type, if required.
7. Define, edit, or remove characteristics of the off-process request type, if required.
8. Click **Save**.

The changes made to the off-process request type are saved.

Deleting an Off-Process Request Type

Procedure

To delete an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Off-Process Request Type** sub-menu.
The **Off-Process Request Type** screen appears.
4. In the **Off-Process Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the off-process request type that you want to delete.
A message appears confirming whether you want to delete the off-process request type.

Note: You can delete an off-process request type when you have not created an off-process request using the off-process request type.

Tip: Alternatively, you can delete an off-process request type by clicking the **Delete** button in the **Off-Process Request Type** zone.

5. Click **OK**.

The off-process request type is deleted.

Copying an Off-Process Request Type

Instead of creating an off-process request type from scratch, you can create a new off-process request type using an existing off-process request type. This is possible through copying an off-process request type. On copying an off-process request type, the details including the characteristics are copied to the new off-process request type. You can then edit the details, if required.

Prerequisites

To copy an off-process request type, you should have:

- Off-process request type (whose copy you want to create) defined in the application
- Off-process request business objects defined in the application
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-OFPAP** To Do type in the application
- Accumulation category defined in the application
- Amendment field and amendment mode defined in the application
- Contract type defined in the application
- Adjustment type and billable charge line type defined in the application
- Off-process request type status defined in the application

Procedure

To copy an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Off-Process Request Type** sub-menu.
The **Off-Process Request Type** screen appears.
4. In the **Off-Process Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the off-process request type whose copy you want to create.

The **Off-Process Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request type.

- **Characteristics** - Used to define the characteristics for the off-process request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|---|
| Off-Process Request Type | Used to specify the off-process request type. | Yes |
| Business Object | Indicates the business object using which you are defining the off-process request type. | Not applicable |
| Description | Used to specify the description for the off-process request type. | Yes |
| Off-Process Request Business Object | Used to indicate the business object using which you want to create the off-process request. | Yes |
| Detailed Description | Used to specify additional information about the off-process request type. | No |
| Off-Process Request Business Object | Used to indicate the business object using which you want to create the respective off-process request type. | Yes |
| Status | <p>Used to indicate the status of the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of an off-process request type to Inactive when the corresponding off-process request is in a status other than Processed or Rejected. If you do not specify the status, by default, it is set to Active.</p> | Yes |
| Amendment Mode | <p>Used to indicate the amendment mode selected for the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> • Adjustment • Billable Charge | Yes |
| Approval Required | Used to indicate whether the approval is required before generating adjustments or billable charges through an off-process request. | No |
| Approval To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when an off-process request is submitted for approval. | Yes (Conditional) |
| | | Note: This field is required when the Approval Required option is selected. |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|---|
| | <p>Note:</p> <p>The Search  icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> | |
| Approval To Do Role | <p>Used to indicate that users with the specified To Do role can only approve an off-process request submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

Tip: Alternatively, you can copy an off-process request type by clicking the **Duplicate** button in the **Off-Process Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove the accumulation amendment details from the off-process request type, if required.
7. Define, edit, or remove characteristics of the off-process request type, if required.
8. Click **Save**.

The new off-process request type is defined.

Off-Process Request (Used for Searching)

The **Off-Process Request** screen allows you to search for an off-process request using various search criteria. It also allows you to define an off-process request. It contains the following zone:

- [Search Off-Process Request](#) on page 3412

Through this screen, you can navigate to the following screen:

- [Off-Process Request \(Used for Viewing\)](#) on page 3417

Search Off-Process Request

The **Search Off-Process Request** zone allows you to search for an off-process request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for an off-process request using the off-process request or adjustment/billable charge details. The valid values are: <ul style="list-style-type: none"> • Request Details • Adjustment/Billable Charge Details | Yes |
| | Note: By default, the Request Details option is selected. | |
| Off-Process Request ID | Used to search a particular off-process request. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Created From | Used to search off-process requests which are created from a particular date onwards. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Created Until | Used to search off-process requests which are created till a particular date. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Off-Process Request Type | Used to search off-process requests using a particular off-process request type. | No |
| Status | Used to search off-process requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Draft • Processed • Rejected | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Parent Person ID | Used to search off-process requests which include adjustments or billable charges of a particular parent person. | No |
| | Note: The Search  icon appears corresponding to the Parent Person ID field. On clicking the Search icon, the Person Search window appears. This field appears when the Request Details option is selected from the Search By list. | |
| Creation Mode | Used to search off-process requests which are created using a particular mode. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |

Note: You must specify at least one search criterion while searching for an off-process request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------------|--|
| Creation Date Time | Displays the date and time when the off-process request is created. |
| Off-Process Request Information | Indicates the information about the off-process request. Note: It has a link. On clicking the link, the Off-Process Request screen appears where you can view the details of the respective off-process request. |
| Parent Person Information | Indicates the information about the parent person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. |
| Created By | Indicates the user who has created the off-process request. |
| Status | Indicates the status of the off-process request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Draft • Processed • Rejected |
| Creation Mode | Indicates how the off-process request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Off-Process Request

Prerequisites

To search for an off-process request, you should have:

- Off-process request types defined in the application

Procedure

To search for an off-process request:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Transaction and Audit Event Management** and then click **Off-Process Request**.

A sub-menu appears.

- Click the **Search** option from the **Off-Process Request** sub-menu.

The **Off-Process Request** screen appears.

- Enter the search criteria in the **Search-Off Process Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of off-process requests that meet the search criteria appears in the **Search Results** section.

Defining an Off-Process Request

Prerequisites

To create an off-process request, you should have:

- Off-Process request types defined in the application
- Accumulation category and accumulation group defined in the application
- Amendment field defined in the application
- Persons defined in the application
- Account ID defined in the application
- Characteristic types defined in the application
- Adjustment types or billable charge line types defined in the application

Procedure

To create an off-process request:

- Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Transaction and Audit Event Management** and then click **Off-Process Request**.

A sub-menu appears.

- Click the **Add** option from the **Off-Process Request** sub-menu.

The **Add Off-Process Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Off-Process Request Type | Used to indicate the off-process request type using which you want to create the off-process request. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Off-Process Request** screen.

- Select the required off-process request type from the **Off-Process Request Type** field.
- Click **OK**.

The **Off-Process Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request.
- **Off-Process Request Information** - Used to specify the off-process request information.
- **Characteristics** - Used to define the characteristics for the off-process request.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Off-Process Request Type | Indicates the off-process request type using which you want to create the off-process request. | Not applicable |
| Creation Mode | Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual | Not applicable |
| Parent Person Id | Used to indicate the parent customer (.e. person whose person type is set to Parent Customer) for which you want to create an off-process request. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parent Person ID field. On clicking the Search icon, the Parent Customer Search window appears.</p> <p>On specifying the parent person, the description of the parent person appears corresponding to the Parent Person ID field.</p> </div> | Yes |
| Comments | Used to specify the comments for an off-process request. | No |

- Enter the required details in the **Main** section.
- Add the accumulation amendment details in the off-process request, if required.
- Define characteristics for the off-process request, if required.
- Click **Save**.

The off-process request is created in the **Draft** status.

| | Note: The Submit button appears when the off-process request is in the Draft status. |
| Approve | Used to approve the off-process request. |
| | Note: The Approve button appears when: <ul style="list-style-type: none"> The off-process request is in the Approval In Progress status. A user with the approval To Do role is reviewing the off-process request. |
| Reject | Used to reject the off-process request. |
| | Note: The Reject button appears when: <ul style="list-style-type: none"> The off-process request is in the Approval In Progress status. A user with the approval To Do role is reviewing the off-process request. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | Indicates the business object using which the off-process request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the off-process request status is updated |
| Create Date/Time | Displays the date and time when the off-process request is created. |

- **Characteristics** - Lists the characteristics defined for the off-process request. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Effective Date | Displays the date from when the characteristic is effective for the off-process request. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

Off-Process Request Details

The **Off-Process Request Details** zone lists the accumulation and amendment details of the off-process request. This zone contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Accumulation Category | Displays the category whose field value is amended through an off-process request. The valid values are: <ul style="list-style-type: none"> Aggregate Stop Loss Discount Arrangement Level Funded Specific Stop-Loss |
| Accumulation Group ID | Indicates the accumulation group for which the (accumulation and amendment) changes are reflected in the system. |
| Amendment Field | Indicates the accumulation field whose value is amended through the off-process request. The valid values are: <ul style="list-style-type: none"> ASL Limit Aggregated Amount Cumulative ASL Credit Cumulative SSL Credit Maximum Limit Minimum Limit Run Out Fund Settlement Fund |
| Off-Process Amount | Displays the amount which is amended through the off-process request. |
| Member/Subscriber ID | Displays the member or the main subscriber for whom the field value is amended in the system. |
| Status | Displays the current status of the off-process request. |
| Account Information | Indicates the account for which the adjustment or billable charge is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> </div> |
| Effective Date | Indicates the date when the field value is amended in the system. |
| Coverage Start Date | Indicates the date from when the amendment is applicable for the off-process request. |

| Column Name | Column Description |
|-----------------------------|--|
| Coverage End Date | Indicates the date till when the amendment is applicable for the off-process request. |
| Adjustment Type | Indicates the adjustment type using which the adjustment should be created when the amendment mode is set to Adjustment in the respective off-process request type. |
| Adjustment Information | Displays information about the adjustment. |
| | Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. |
| Billable Charge Line Type | Indicates the billable charge line type using which the billable charge should be created when the amendment mode is set to Billable Charge in the respective off-process request type. |
| Billable Charge Information | Displays information about the billable charge. |
| | Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge. |

On clicking the **Broadcast** (📡) icon corresponding to an off-process request detail record, the **Error Message** zone is displayed.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using **Record Status** field as the search criteria available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Adding the Off-Process Request Details in an Off-Process Request

Prerequisites

To add the off-process request details in an off-process request, you should have:

- Off-process request types defined in the application
- Categories defined in the application (where the characteristic entity is set to **Off-Process Request**)
- Applicable adjustments and billable charge line types defined in the application.

Procedure

To add the off-process request details in an off-process request:

1. Ensure that the **Off-Process Request Details** section is expanded when you are editing an off-process request.

The **Off-Process Request Details** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|------------------------------|
| Accumulation Category | Used to indicate the accumulation category whose field value you want to amend through the off-process request. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop Loss • Discount Arrangement • Level Funded • Specific Stop-Loss | Yes |
| Accumulation Group ID | Used to indicate the accumulation group for which the (accumulation and amendment) changes should be reflected in the system. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Accumulation Group ID field. On clicking the Search icon, the Accumulation Group Search window appears.</p> <p>On specifying the accumulation group Id, the description of the accumulation group Id appears corresponding to the Accumulation Group ID field.</p> <p>If the accumulation category is set to Specific Stop-Loss, you can only select the accumulation group defined at the bill group level. However, if the accumulation category is set to Aggregate Stop-Loss, Discount Arrangement, or Level Funded, you can only select the accumulation group defined at the parent customer level.</p> | |
| Amendment Field | <p>Used to indicate the accumulation field whose value you want to amend through the off-process request. The valid values are:</p> <ul style="list-style-type: none"> • ASL Limit • Aggregated Amount • Cumulative ASL Credit • Cumulative SSL Credit • Maximum Limit • Minimum Limit • Run Out Fund • Settlement Fund <p>Note: You can select only those accumulation categories and fields for which the contract type and adjustment type or billable charge line type information is available in the respective off-process request type.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the Accumulation Category for the off-process request.</p> |
| Account ID | <p>Used to indicate the account for which the adjustment or billable charge should be created in the system.</p> <p>Note:</p> <p>The account ID and the account information appear automatically when you select the appropriate option from the Amendment Field field.</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p> <p>On specifying the account ID, the description of the account appears corresponding to the Account ID field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the Accumulation Group ID for the off-process request.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| Off-Process Amount | Used to specify the amount which you want amend through the off-process request. | Yes (Conditional) Note: This field is required when you select the Accumulation Category for the off-process request. |
| Adjustment Type/ Billable Charge Line Type | Used to indicate the adjustment type or billable charge line type using which the adjustment or billable charge should be created when the amendment mode is set to Adjustment or Billable Charge in the respective off-process request type. Note: The Search (🔍) icon appears corresponding to the Adjustment Type/Billable Charge Line Type field. On clicking the Search icon, the Adjustment Type/Billable Charge Line Type Search window appears. On specifying the value for a predefined adjustment type or billable charge line type, the description of the adjustment type or billable charge line type appears corresponding to the Adjustment Type/Billable Charge Line Type Search field. Once the Amendment Field is selected, its respective adjustment type or billable charge line type appears in the Adjustment Type/Billable Charge Line Type field. | Yes (Conditional) Note: This field is required when you select the Accumulation Category for the off-process request. |
| Member/Subscriber ID | Used to specify member or the main subscriber for whom the field value should be amended in the system. | No |
| Effective Date | Used to indicate the date from when the field value should be amended in the system. | Yes (Conditional) Note: This field is required when you select the Accumulation Category for the off-process request. |
| Coverage Start Date | Used to indicate the date from when the amendment is applicable for the off-process request. | No |
| Coverage End Date | Used to indicate the date till when the amendment is applicable for the off-process request. | No |

- Enter the required details in the **Off-Process Request Details** section.
- If you want to define more than one off-process request detail for the off-process request, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an off-process request detail from the off-process request, click the **Delete** (🗑️) icon corresponding to the off-process request detail.

Defining a Characteristic for an Off-Process Request**Prerequisites**

To define a characteristic for an off-process request, you should have:

- Off-process request types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Off-Process Request**)

Procedure

To define a characteristic for an off-process request:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an off-process request.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the off-process request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the off-process request. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Off-Process Request . | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the off-process request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the off-process request. |

2. Enter the required details in the **Characteristic** section.
3. If you want to define more than one characteristic for the off-process request, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the off-process request, click the **Delete (🗑)** icon corresponding to the off-process request information.

Editing an Off-Process Request

Procedure

To edit an off-process request:

1. Search for the off-process request in the **Off-Process request** screen.
2. In the **Search Results** section, click the link in the **Off-Process Request Information** column corresponding to the off-process request whose details you want to edit.

The **Off-Process Request** screen appears.

3. Click the **Edit** button in the **Off-Process Request** zone.

Note: The **Edit** button appears only when the off-process request is in the **Draft** status.

The **Edit Off-Process Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request.
- **Off-Process Request Information** - Used to specify the off-process request information.
- **Characteristics** - Used to define the characteristics for the off-process request.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Off-Process Request Information | Displays information about the off-process request. | Not applicable |
| Off-Process Request Type | Indicates the off-process request type. | Not applicable |
| Creation Mode | Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual | Not applicable |
| Parent Person ID | Indicates the parent customer (.e. person whose person type is set to Parent Customer) whose off-process request you want to edit. | No |
| Comments | Used to specify the comments for an off-process request | No |

4. Modify the details of the off-process request, if required.
5. Define, edit, or remove off-process request details from the off-process request, if required.
6. Define, edit, or remove characteristics of the off-process request, if required.
7. Click **Save**.

The changes made to the off-process request are saved.

Submitting an Off-Process Request

Prerequisites

To submit an off-process request, you should have:

- Accumulation and amendment details defined in the off-process request
- Adjustment types or billable charge line types defined in the off-process request

Procedure

To submit an off-process request:

1. Search for the off-process request in the **Off-Process Request** screen.
2. In the **Search Results** section, click the link in the **Off-Process Request Information** column corresponding to the off-process request that you want to submit.

The **Off-Process Request** screen appears.

3. Click the **Submit** button in the **Off-Process Request** zone.

The system behaves in the following manner:

| If... | Then... |
|--|---|
| The Approval Required option is selected in the respective off-process request type | A To Do of the C1-OFPAP To Do type is created and sent to the approver. The status of the Off-Process Request is then changed to Approval In Progress . Once the approver approves the off-process request, the status of the off-process request is changed to Approved . The system then creates the adjustments or billable charges to amend the accumulation field values. Finally, the status of the off-process request is changed to Processed . |
| The Approval Required option is not selected in the respective off-process request type | The system creates the adjustments or billable charges to amend the accumulation field values. Finally, the status of the off-process request is changed to Processed . |

Note: The **Submit** button appears when the off-process request is in the **Draft** status.

Approving an Off-Process Request

You can view the number of off-process requests which are pending for approval in the **Off-Process Request** screen. The approver can review, and accordingly approve, reject, or submit the off-process request based on the observations.

Note: The system will not allow you to approve, reject or submit an off-process request submitted by you.

Procedure

To approve an off-process request:

1. Do either of the following:

| If you want to... | Then... |
|--|---|
| Approve an off-process request through the Off-Process Request screen | <ol style="list-style-type: none"> 1. Search for the off-process request in the Off-Process Request screen. 2. In the Search Results section, click the link in the Off-Process Request Information column corresponding to the off-process request which you want to review. |
| Approve an off-process request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFPAP in the To Do Type field. |

| If you want to... | Then... |
|-------------------|--|
| | <ol style="list-style-type: none"> 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the off-process request that you want to review. |

The **Off-Process Request** screen appears.

2. Review the off-process request details in the **Off-Process Request** screen.
3. If the information in the off-process request is accurate, click the **Approve** button in the **Off-Process Request** zone.

| If you are... | Then... |
|----------------------------------|---|
| Approving an off-process request | The status of the off-process request is changed to Approved . The system then creates the adjustments or billable charges to amend the accumulation field values. Finally, the status of the off-process request is changed to Processed . |

Note: The **Approve** button appears when:

- The off-process request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the off-process request.

Rejecting an Off-Process Request

Prerequisites

To reject an off-process request, you should have:

- Reasons defined for the **Rejected** status of the **C1-OffProcessRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve, reject or submit an off-process request submitted by you.

Procedure

To reject an off-process request:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Reject an off-process request through the Off-Process Request screen | <ol style="list-style-type: none"> 1. Search for the off-process request in the Off-Process Request screen. 2. In the Search Results section, click the link in the Off-Process Request Information column corresponding to the off-process request which you want to review. |
| Reject an off-process request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFPAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the off-process request that you want to review. |

The **Off-Process Request** screen appears.

2. Review the off-process request details in the **Off-Process Request** screen.
3. If the information in the off-process request is incorrect, then click the **Reject** button in the **Off-Process Request** zone.

The **Reject Off-Process Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the off-process request. Note: The list includes only those reasons which are defined for the Rejected status of the C1-OffProcessRequest business object in the Status Reason screen. | Yes |
| Comments | Used to specify additional information while rejecting the off-process request. | No |

Note: The **Reject** button appears when:

- The off-process request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the off-process request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the off-process request is changed to **Rejected**.

Chapter 41

Individual Health Insurance Pricing

Topics:

- [Business Rules](#)
- [Young Adult Coverage in an Individual Membership](#)

Oracle Revenue Management and Billing enables you to define pricing for different services offered in a health plan. Each service offered in a health plan should be defined as a price item in the system. For example, services may include medical insurance, home care, hospital visits, etc.

You can define the age based, tier based, or additional fee pricing for a price item using the respective pricing rule. You can create an age based, tier based, and additional fee pricing rule using the respective pricing rule type. The following pricing rule type and pricing rule business objects are enhanced to support the fully-insured individual business:

- C1-PrcRuleTypeAgeBased
- C1-PricingRuleAgeBased
- C1-PrcRuleTypeTierBased
- C1-PricingRuleTierBased
- C1-PrcRuleTypeCapitationFee
- C1-PricingRuleCapitationFee
- C1-PrcRuleTypeBenefit

You can create a pricing rule for a health plan using a pricing rule type only when the pricing rule type is associated with the health plan. The system enables you to define pricing rules for various services offered in the health plan. You must add the required price items in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type. While defining an age based pricing rule for a price item, you can offer different rates to different member persons based on the age, member relationship, geographic rating area, member person attributes, etc. You can also charge additional fee or given discount to a member person based on modifier attributes. For example, you may charge more premium to an alcoholic person compared to a non-alcoholic person for the same service (i.e. price item). While defining a tier based pricing rule for a price item, you can offer different rates to different memberships based on the subscription tier, geographic rating area, member person attributes, etc.

You can associate one or more pricing rule types with a health plan through a health product and plan inbound message. You can define one or more pricing rules for a health plan through a health product and plan inbound message. The system creates the pricing rule for a price item using the business object which is specified in the pricing rule type. While creating a pricing rule for a health plan, you can define pricing eligibility rules for a pricing rule. The system considers the pricing rule for an individual membership when the pricing eligibility rule (i.e. eligibility criteria) is satisfied.

The system enables you to define a pricing rule for a price item without the pricing rule eligibility. Such pricing rule is considered as a default pricing rule for the price item. If an individual membership is not eligible for any pricing rule, the system uses the default pricing rule of the price item for the individual membership.

Note: On inactivating a health plan, the system will not automatically inactivate the pricing rules defined for the health plan.

Business Rules

Oracle Revenue Management and Billing facilitates you to calculate the premium for each individual membership differently based on various health product, health plan, membership, or member person attributes. You can define different set of business rules for the following categories:

- **Binder Payment** - If an individual membership meets the criteria of a binder payment business rule, the system derives the following information from the business rule:
 - Binder Payment Applicability
 - Threshold Percentage
 - Grace Days
 - Hold Billing
- **Fully-Insured Pricing** - If an individual membership meets the criteria of a fully-insured pricing business rule, the system derives the following information from the business rule:
 - Maximum Age Limit of Dependents
 - Dependent Order Priority
 - Age Calculation Date
 - Age Recalculation Date
 - Young Adult Applicability
 - Young Adult Max Age Limit
 - Member Relationship Derivation Date
- **New Born** - If an individual membership meets the criteria of a new born business rule, the system derives the following information from the business rule:
 - Gift Days Applicability
 - New Born Gift Days
- **Rate Guarantee** - If an individual membership meets the criteria of a rate guarantee business rule, the system derives the following information from the business rule:
 - Rate Guarantee Applicability
 - Rate Guarantee Period
- **Refund/Write Off** - If an individual membership meets the criteria of a refund/write-off business rule, the system derives the following information from the business rule:
 - Refund Threshold Amount
 - Defer Refund (in Days)
 - Write Off Threshold Amount
 - Defer Write Off (in Days)
- **Delinquency Grace Period** - If an individual membership meets the criteria of a delinquency grace period business rule, the system derives the following information from the business rule:
 - Criteria Description
 - Effective Date
 - Status
 - Grace Period (Days)

- **Delinquency Event Attributes** - If an individual membership meets the criteria of a delinquency event attributes business rule, the system derives the following information from the business rule:
 - Criteria Description
 - Effective Date
 - Status
 - Wait Days
 - Wait Month
 - Wait Day of Month
 - Send Membership Level Notification
- **Delinquency Termination Date** - If an individual membership meets the criteria of a delinquency termination date business rule, the system derives the following information from the business rule:
 - Criteria Description
 - Effective Date
 - Status
 - Termination Date Rule
- **Delinquency Miscellaneous Options** - If an individual membership meets the criteria of a delinquency miscellaneous options business rule, the system derives the following information from the business rule:
 - Criteria Description
 - Effective Date
 - Status
 - Trigger Date Recalculation On Hold Release
 - Trigger Date Recalculation On Resume
 - Trigger Termination Process
 - Immediate
 - Month End
 - After X Days
 - Termination Wait Days
 - Add Days to Coverage End Date
 - Add Days to Paid Through Date
 - Add Months to Paid Through Date
 - Add Days to Grace End Date
 - Add Days to Date of Processing of Termination Request

A business rule contains a criteria. If the criteria of the business rule is met, the information is derived from the business rule. This information is used while deriving the member relationship for a member person, subscription tier for an individual membership, and while deriving eligible member persons for premium calculation.

You can define criteria for a business rule using a set of parameters which are associated with a business rule type. The system enables you to associate only those parameters in a business rule type where the parameter usage is set to **Business Rule Eligibility Criteria**.

To implement the business rule feature, the following new screens are introduced in this release:

- **Business Rule Type** - Used to specify a list of parameters where the parameter usage is set to **Business Rule Eligibility Criteria**. You can then use the parameter while defining a criteria in the business rule.
- **Business Rule** - Used to search business rules of a particular category (i.e. Fully-Insured Pricing or New Born).

Binder Payment Business Rules

Oracle Revenue Management and Billing enables you to define business rules for binder payment. A new category named **Binder Payment Business Rule** is introduced in this release. The binder payment business rules are used for used for monitoring and processing the binder payments of an individual membership.

The system derives the binder payment business rules for an individual membership while creating or editing an individual membership, or while adding, editing, or inactivating a member person in an individual membership. While deriving a business rule of the **Binder Payment Business Rule** category, the ORMB application considers the respective business rules which are effective on the membership start date. Once the effective business rules are identified, the ORMB application executes these business rules in the order of their priority.

Once the criteria of the business rule is met, the business rule is stamped against the individual membership. If two or more business rules have the same priority, the ORMB application sorts the business rules for execution, based on the business rule criteria sequence. The ORMB application derives the binder payment details for an individual membership through a binder payment business rule only when the binder payment details are not available for an individual membership in the respective table.

While defining the binder payment business rule criteria, you can use the parameters which are defined on the following entities:

- Health Plan
- Health Product
- Individual Membership
- Member Person of an Individual Membership

You can define, edit, and delete a binder payment business rule through the **Business Rule** screen. While defining a binder payment business rule, you need to set its category to **Binder Payment Business Rule**. The binder payment business rule enables you to define the following parameters:

- **Binder Payment Applicability** – Used to indicate that you want the system to monitor whether the binder payment is received or not before activating the individual membership.
- **Threshold Percentage** – Used to specify the threshold percentage using which the threshold amount should be calculated.
- **Grace Days** – Used to calculate the grace date for the individual membership.
- **Hold Billing** – Used to indicate whether you want to hold the bill generation process for the individual membership until the binder payment is received.

You can view the binder payment business rules through the **Business Rule** screen.

Fully-Insured Pricing Business Rules

Oracle Revenue Management and Billing enables you to define business rules for fully-insured pricing. A new category named **Fully-Insured Pricing Business Rule** is introduced in this release. The premium calculation process for an individual membership is described as follows:

- If you want to calculate the premium for an individual membership using an **Age Based Pricing** rule, the system derives the rate for each eligible member person. Once the rate is derived, the system identifies members that are eligible for premium calculation using the fully-insured pricing business rules. On creating or editing an individual membership through a health care inbound message or membership repricing inbound web service, the system determines the fully-insured pricing business rules which are applicable for the individual membership. If an individual membership meets the criteria of the fully-insured pricing business rule, the system then stamps the fully-insured pricing business rule corresponding to the individual membership.

- If you want to calculate the premium for an individual membership using a **Tier Based Pricing** rule, the system derives the subscription tier using the fully-insured pricing business rules. Once the premium is calculated for an individual membership, the system creates a billable charge for the premium. If the account is defined for the individual membership using the characteristic types specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration, the system uses the account to bill the charge for the premium. However, if these characteristics are not defined for the individual membership, the system considers the account of the financially responsible member person to the charge for the premium.

Note: While deriving a business rule of the **Fully-Insured Pricing Business Rule** category, the system considers the respective business rules which are effective on the audit event's effective date.

You can define, edit, and delete a fully-insured pricing business rule through the **Business Rule** screen. While defining a fully-insured pricing business rule, you need to set its category to **Fully-Insured Pricing Business Rule**. The fully-insured pricing business rule enables you to define the following parameters:

- **Maximum Dependents** - Used to specify the maximum number of children which are eligible for premium calculation.
- **Dependent Max Age Limit** - Used to specify the maximum age limit for children eligible for premium calculation.
- **Dependent Order Priority** - Used to indicate the order priority of the dependent during premium calculation.
- **Age Calculation Date** - Used to indicate whether the member person's age should be calculated using the member person's enrollment date or policy's start or renewal date.
- **Age Recalculation Date** - Used to indicate whether the member person's age should be recalculated using the member person's enrollment date or policy's start or renewal date.
- **Young Adult Applicability** - Used to indicate that the child or dependent enrolling in the membership becomes the young adult in the enrollment period.
- **Young Adult Max Age Limit** - Used to specify the maximum age limit for young adults which are eligible for premium calculation.
- **Member Relationship Derivation Date** - Used to indicate the member relationship for a member person.

You can view the fully-insured pricing business rules through the **Business Rule** screen.

New Born Business Rules

Oracle Revenue Management and Billing enables you to define business rules for new born pricing. A new category named **New Born Business Rule** is introduced in this release. The premium calculation process for an individual membership is described as follows:

- If you want to calculate the premium for an individual membership using an age based pricing rule, the system derives the rate for each eligible member person. Once the rate is derived, the system identifies members that are eligible for premium calculation using the new born business rules. On creating or editing an individual membership through a health care inbound message or membership repricing inbound web service, the system determines the new born business rules which are applicable for the individual membership. If an individual membership meets the criteria of the new born business rule, the system then stamps the new born business rule corresponding to the individual membership.
- If you want to calculate the premium for an individual membership using a tier based pricing rule, the system derives the subscription tier using the new born business rules. Once the premium is calculated for an individual membership, the system creates a billable charge for the premium. If the account is defined for the individual membership using the characteristic types specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration, the system uses the account to bill the charge for the premium. However, if these characteristics are not defined for the individual membership, the system considers the account of the financially responsible member person to the charge for the premium.

Note: While deriving a business rule of the **New Born Business Rule** category, the system considers the respective business rules which are effective on the audit event's effective date.

You can define, edit, and delete a new born business rule through the **Business Rule** screen. While defining a new born business rule, you need to set its category to **Fully-Insured Pricing Business Rule**. The new born business rule enables you to define the following parameters:

- **Gift Days Applicability** - Used to indicate whether you want to offer gift days in case of a new born child.
- **New Born Gift Days** - Used to specify the number of days you want to offer as gift days from the new born child's birth date.

You can view the new born business rules through the **Business Rule** screen.

Rate Guarantee Business Rules

Oracle Revenue Management and Billing enables you to define a rate guarantee business rule for an individual membership. A new category named **Rate Guarantee Business Rule** is introduced in this release.

While deriving a business rule of the **Rate Guarantee Business Rule** category, the system considers the respective business rules which are effective on the membership start date. Once the effective business rules are identified, the system executes these business rules in the order of their priority. Once the criteria of the business rule is met, the business rule is stamped against the individual membership. If two or more business rules have the same priority, the system sorts the business rules for execution based the business rule criteria sequence.

While defining the rate guarantee business rule criteria, you can use the parameters which are defined on the following entities:

- Health Plan
- Health Product
- Individual Membership
- Member Person of an Individual Membership

You can define, edit, and delete a rate guarantee business rule through the **Business Rule** screen. While defining a rate guarantee business rule, you need to set its category to **Rate Guarantee Business Rule**. The rate guarantee business rule enables you to define the following parameters:

- **Rate Guarantee Applicability** – Used to indicate whether the rate guarantee is available for the individual membership.
- **Rate Guarantee Period** – Used to derive the rate guarantee start and end dates.

Note: The system sets the rate guarantee start date to the membership start date and the rate guarantee end date to the rate guarantee start date + rate guarantee period.

You can view the rate guarantee business rules through the **Business Rule** screen.

Refund/Write Off Business Rules

Oracle Revenue Management and Billing enables you to define business rules for automatic refund and write off creation. A new category named **Refund/Write Off Business Rule** is introduced in this release. The refund/write off business rules are used for creating automatic refund and write off requests for accounts when the fully-insured group policy or individual membership is terminated.

While terminating a fully-insured group policy or individual membership, the system derives the refund/write off business rule for the fully-insured group policy or individual membership. While deriving the refund/write off business rule for a fully-insured group policy or individual membership, the system considers the business rules which are effective on the termination date. Once the effective business rules are identified, the system executes these business rules in the order of their priority. Once the criteria of the business rule are met, the business rule is stamped against the

fully-insured group policy or individual membership. If two or more business rules have the same priority, the system sorts the business rules for execution based the business rule criteria sequence.

While defining the refund/write off business rule criteria, you can use the parameters which are defined on the following entities:

- Individual Membership
- Member Person of Individual Membership
- Health Plan
- Health Product
- Policy
- Account

You can define, edit, and delete a refund/write off business rule through the **Business Rule** screen. While defining a refund/write off business rule, you need to set its category to **Refund/Write Off Business Rule**. The refund/write off business rule enables you to define the following parameters:

- **Refund Threshold Amount** – Used to specify the threshold amount for refund. If the account balance is greater than or equal to the refund threshold amount, the system creates automatic refund for an account.
- **Defer Refund (in Days)** – Used to specify the number of days till when you want to defer the automatic refund for an account. It is used while calculating the automatic refund request creation date.
- **Write Off Threshold Amount** – Used to specify the threshold amount for write off. If the account balance is less than or equal to the write off threshold amount, the system creates automatic write off for an account.
- **Defer Write Off (in Days)** – Used to specify the number of days till when you want to defer the automatic write off for an account. It is used while calculating the automatic write off request creation date.

You can view the refund/write off business rules through the **Business Rule** screen.

Delinquency Grace Period Business Rule

Oracle Revenue Management and Billing enables you to define business rules for determining the grace period during the delinquency management. The insurance company may offer different grace period to different individuals based on certain parameters, such as division, customer class, region, and jurisdiction in which the individual customer has availed for the health plan coverage. The system will then accordingly use the grace period to calculate the following:

- Trigger dates for the delinquency events
- Termination request date when you want to send the outbound message to the external system requesting to terminate the individual membership

The system considers the delinquency grace period business rules to determine the grace period only when the grace period source is set to **Algorithm** in the respective delinquency process type. If the grace period source is set to **Algorithm**, the system executes the **C1-DERGRBR** algorithm attached to the **Grace Period Derivation** system event of the delinquency process type when you execute the **C1-DPEVL** batch. For more information on how the grace period is derived, refer to the respective algorithm description in the [Delinquency Process Type Algorithms](#) section.

While defining the delinquency grace period business rule criteria, you can use the parameters which are defined on the following entities:

- Account
- Customer Class
- Delinquency Event Type
- Division
- Health Plan
- Health Product

- Membership
- Membership Person
- Policy
- Policy Plan

You can define, edit, and delete a delinquency grace period business rule through the **Business Rule** screen. While defining a delinquency grace period business rule, you need to set its category to **Delinquency Grace Period Business Rule** and specify the following details:

- **Criteria Description** – Used to indicate the business criteria that an individual membership must satisfy in order to derive the grace period from the business rule.
- **Effective Date** – Used to specify the date from when the business rule is effective.
- **Status** – Used to indicate the status of the business rule. The valid values are **Active** and **Inactive**.
- **Grace Period (Days)** – Used to specify the grace period in days.

You can view the delinquency grace period business rules through the **Business Rule** screen.

Delinquency Events Attribute Business Rule

Oracle Revenue Management and Billing enables you to define business rules for determining the waiting time (in days or months) before triggering a delinquency event in the delinquency process. The insurance company may offer different waiting time for different delinquency event types (such as sending letters, sending To Do notification, or initiating the termination request) based on certain parameters, such as division, customer class, region, and jurisdiction in which the individual customer has availed for the health plan coverage. The system will then accordingly use the wait days or the wait months and the day of month (depending on the wait period that is configured) to calculate the trigger dates for the delinquency events.

The system considers the delinquency event attributes business rules to determine the wait period only when the wait period source is set to **Algorithm** in the respective delinquency process type. If the wait period source is set to **Algorithm**, the system executes the **C1-DERWDBR** algorithm attached to the **Wait Days Derivation** system event of the delinquency process type when you execute the **C1-DPMON** batch. For more information on how the wait period is derived, refer to the respective algorithm description in the [Delinquency Process Type Algorithms](#) section.

While defining the delinquency event attributes business rule criteria, you can use the parameters which are defined on the following entities:

- Account
- Customer Class
- Delinquency Event Type
- Division
- Health Plan
- Health Product
- Membership
- Membership Person
- Policy
- Policy Plan

You can define, edit, and delete a delinquency event attributes business rule through the **Business Rule** screen. While defining a delinquency event attributes business rule, you need to set its category to **Delinquency Event Attributes Business Rule** and specify the following details:

- **Criteria Description** – Used to indicate the business criteria that an individual membership must satisfy in order to derive the wait period from the business rule.

- **Effective Date** – Used to specify the date from when the business rule is effective.
- **Status** – Used to indicate the status of the business rule. The valid values are **Active** and **Inactive**.
- **Wait Days** – Used to indicate the number of days for which you want to delay a delinquency event in a delinquency process.
- **Wait Month** – Used to indicate the number of months for which you want to delay a delinquency event in a delinquency process.
- **Wait Day of Month** – Used to indicate the day of the month when you want to trigger a delinquency event of a delinquency process.
- **Send Membership Level Notification** – This parameter is not applicable for the fully insured individual business.

You can view the delinquency event attributes business rules through the **Business Rule** screen.

Delinquency Termination Date Rule Business Rule

Oracle Revenue Management and Billing enables you to define business rules for determining the termination date rule during the delinquency management. The termination date rule is used to derive the termination date for a policy or individual membership. The insurance company may derive different termination date rule for different policies or individual memberships based on certain parameters, such as division, customer class, region, and jurisdiction, in which the group or individual customer has availed for the policy plan or health plan coverage. The system will then accordingly use the termination date rule to calculate the termination date for the delinquency event type that requests to terminate the following:

- Policies billed to the delinquent person or account
- Individual memberships billed to the delinquent account

The system always derives the termination date rule through a delinquency termination date rule business rule. The system executes the **C1-DERTBR** algorithm attached to the **Termination Date Rule Derivation** system event of the respective delinquency process type to derive the termination date rule for the delinquency event. For more information on how the termination date rule is derived, refer to the **C1-DERTBR** algorithm description in the [Delinquency Process Type Algorithms](#) section.

While defining the delinquency termination date rule business rule criteria, you can use the parameters which are defined on the following entities:

The following table lists the entities on which the parameters are used while defining the delinquency termination date rule business rule criteria

| Line of Business | Source Entity | Supported Source Type |
|---|-------------------|--------------------------|
| Fully Insured Group Health Insurance | Account | Field and Characteristic |
| | Customer Class | Field |
| | Division | Field |
| | Membership | Field and Characteristic |
| | Membership Person | Field and Characteristic |
| | Policy | Field and Characteristic |
| | Policy Plan | Field and Characteristic |
| Fully Insured Individual Health Insurance | Account | Field and Characteristic |
| | Customer Class | Field |

| Line of Business | Source Entity | Supported Source Type |
|------------------|-------------------|--------------------------|
| | Division | Field |
| | Health Plan | Field and Characteristic |
| | Health Product | Field and Characteristic |
| | Membership | Field and Characteristic |
| | Membership Person | Field and Characteristic |

Note:

If the delinquency process is created at the person level and if an attribute of a division or customer class is used in the business rule criteria, the system will check whether the division or customer class is present on the person (i.e. on the parent customer or bill group, respectively) while evaluating the business rule criteria. If so, the system will use the details of the person to evaluate the business rule criteria. However, if the division or customer class is not present on the person, the system will use the details of any account where the person is added as the main customer to evaluate the business rule criteria.

If the delinquency process is created at the account level and if an attribute of a division or customer class is used in the business rule criteria, the system will use the details of the respective account to evaluate the business rule criteria.

You can define, edit, and delete a delinquency termination date rule business rule through the **Business Rule** screen. While defining a delinquency termination date rule business rule, you need to set its category to **Delinquency Termination Date Rule Business Rule** and specify the following details:

- **Criteria Description** - Used to indicate the business criteria that a policy or individual membership must satisfy in order to derive the termination date rule from the business rule.
- **Effective Date** - Used to specify the date from when the business rule is effective.
- **Status** - Used to indicate the status of the business rule. The valid values are:
 - Active
 - Inactive
- **Termination Date Rule** - Used to indicate the termination date rule using which you want to calculate the termination date. The valid values are:
 - Latest Billed Coverage End Date
 - Latest Due Coverage End Date
 - X days After Paid Through Date
 - X Months After Paid Through Date
 - Month End of Grace Period Start
 - Month End of Termination Letter Creation
 - Month End of Termination Request Event
 - X days After Grace End Date
 - X days After Termination Request Event

Once the business rule is created, the business rule ID is generated. While creating a business rule, the status is, by default, non-editable and set to **Active**. While editing a business rule, you can change its status from **Active** to **Inactive** and vice-versa. Note that you cannot edit or delete a business rule if it is referred in the system. You can view the delinquency termination date rule business rules through the **Business Rule** screen.

For more information on how the termination date rule is used to calculate the termination date, refer to the **C1-DETERMDT** algorithm description in the **Delinquency Event Activation** section.

Delinquency Miscellaneous Options Business Rule

Oracle Revenue Management and Billing enables you to define business rules for determining the following during the delinquency management:

- Whether the trigger dates of delinquency events should be recalculated when the hold on the delinquency process is released
- Whether the trigger dates of delinquency events should be recalculated when the delinquency process is resumed after cancellation
- Whether you want to send an outbound message to the enrollment system for terminating the individual memberships billed to the delinquent account immediately, at the end of the month when the termination event is triggered, or after X number of days (i.e. termination wait days) from the termination event trigger date
- The number of days that you want to add to the base date while calculating the termination effective date

The insurance company may offer different delinquency arrangements to different individuals based on certain parameters, such as division, customer class, region, and jurisdiction in which the individual customer has availed for the health plan coverage. The system will then accordingly use the business rule to calculate the following:

- Trigger dates for the delinquency events
- Termination request date when you want to send the outbound message to the external system requesting to terminate the individual membership
- Termination effective date for the delinquency event type that requests to terminate the individual memberships billed to the delinquent account

The system considers the delinquency miscellaneous options business rules to determine the following:

- The value for the **Trigger Date Recalculation On Hold Release** flag when the trigger date recalculation on hold release source is set to **Algorithm** in the respective delinquency process type. If the trigger date recalculation on hold release source is set to **Algorithm**, the system executes the **C1-DERRTDBR** algorithm attached to the **Trigger Date Recalculation Option Derivation** system event of the delinquency process type when you execute the **C1-DPMON** batch. For more information on how the value is derived for the **Trigger Date Recalculation On Hold Release** flag, refer to the respective algorithm description in the [Delinquency Process Type Algorithms](#) section.
- The value for the **Trigger Date Recalculation On Resume** flag when the trigger date recalculation on resume source is set to **Algorithm** in the respective delinquency process type. If the trigger date recalculation on resume source is set to **Algorithm**, the system executes the **C1-DERRTDBR** algorithm attached to the **Trigger Date Recalculation Option Derivation** system event of the delinquency process type when you execute the **C1-DPMON** batch. For more information on how the value is derived for the **Trigger Date Recalculation On Resume** flag, refer to the respective algorithm description in the [Delinquency Process Type Algorithms](#) section.
- The value for the **Trigger Termination Process** flag and the termination wait days when the termination reinstatement configuration source is set to **Algorithm** in the respective delinquency process type. If the termination reinstatement configuration source is set to **Algorithm**, the system executes the **C1-DERTROBR** algorithm attached to the **Termination and Reinstatement Configuration Derivation** system event of the delinquency process type when you execute the **C1-DPMON** batch. For more information on how the value is derived for the **Trigger Termination Process** flag, refer to the respective algorithm description in the [Delinquency Process Type Algorithms](#) section.
- The number of days that you want to add to the base date while deriving the termination effective date. The system executes the **C1-DETERMDT** algorithm attached to the **Event Activation** system event of the respective delinquency event type whenever the delinquency event is triggered manually or automatically on the trigger date.
 - Add Days to Coverage End Date
 - Add Days to Paid Through Date

- Add Months to Paid Through Date
- Add Days to Grace End Date
- Add Days to Date of Processing of Termination Request

While defining the delinquency miscellaneous options business rule criteria, you can use the parameters which are defined on the following entities:

- Account
- Customer Class
- Delinquency Event Type
- Division
- Health Plan
- Health Product
- Membership
- Membership Person
- Policy
- Policy Plan

You can define, edit, and delete a delinquency miscellaneous options business rule through the **Business Rule** screen. While defining a delinquency miscellaneous options business rule, you need to set its category to **Delinquency Miscellaneous Options Business Rule** and specify the following details:

- **Criteria Description** – Used to indicate the business criteria that an individual membership must satisfy in order to derive the required parameters from the business rule.
- **Effective Date** – Used to specify the date from when the business rule is effective.
- **Status** – Used to indicate the status of the business rule. The valid values are **Active** and **Inactive**.
- **Trigger Date Recalculation On Hold Release** – Used to indicate whether the trigger dates of delinquency events should be recalculated when the hold on the delinquency process is released. The valid values are – **Yes** and **No**.
- **Trigger Date Recalculation On Resume** – Used to indicate whether the trigger dates of delinquency events should be recalculated when the delinquency process is resumed after cancellation. The valid values are – **Yes** and **No**.
- **Trigger Termination Process** – Used to indicate when you want the system to send an outbound message to the enrollment system for terminating the individual memberships billed to the delinquent account. The valid values are:
 - **Immediate** – Used when you want the system to send an outbound message for termination on the same day when the termination event is triggered.
 - **Month End** - Used when you want the system to send an outbound message for termination at the end of the month when the termination event is triggered.
 - **After X Days** – Used when you want the system to send an outbound message for termination after X number of days from the date when the termination event is triggered.
- **Termination Wait Days** – Used to specify the number of days after which an outbound message for termination should be sent to the enrollment system. This parameter is required only when the **Trigger Termination Process** parameter in the business rule is set to **After X Days**.
- **Add Days to Coverage End Date** – Used to specify the number of days that you want to add to coverage end date in order to derive termination effective date.
- **Add Days to Paid Through Date** – Used to specify the number of days that you want to add to the paid through date (of the account) in order to derive termination effective date.

- **Add Months to Paid Through Date** – Used to specify the number of months that you want to add to the paid through month (derived from the paid through date of the account) in order to derive termination effective date.
- **Add Days to Grace End Date** – Used to specify the number of days that you want to add to grace end date in order to derive termination effective date.
- **Add Days to Date of Processing of Termination Request** – Used to specify the number of days that you want to add to termination request date in order to derive termination effective date.

Note: The **Allow Automatic Reinstatement, Maximum Automatic Reinstatement Count, Trigger Reinstatement Process, Reinstatement Wait Days, Reinstatement Threshold (%)**, **Days Since Termination**, and **Member Notification Days** parameters in the delinquency miscellaneous options business rule are not applicable for the fully insured individual business.

You can view the delinquency miscellaneous options business rules through the **Business Rule** screen.

Business Rule Type
