This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

# Preface

---

## Understanding the PeopleSoft Online Help and PeopleBooks

The PeopleSoft Online Help is a website that enables you to view all help content for PeopleSoft applications and PeopleTools. The help provides standard navigation and full-text searching, as well as context-sensitive online help for PeopleSoft users.

### Hosted PeopleSoft Online Help

You can access the hosted PeopleSoft Online Help on the [Oracle Help Center](#). The hosted PeopleSoft Online Help is updated on a regular schedule, ensuring that you have access to the most current documentation. This reduces the need to view separate documentation posts for application maintenance on My Oracle Support. The hosted PeopleSoft Online Help is available in English only.

To configure the context-sensitive help for your PeopleSoft applications to use the Oracle Help Center, see [Configuring Context-Sensitive Help Using the Hosted Online Help Website](#).

### Locally Installed Help

If you're setting up an on-premise PeopleSoft environment, and your organization has firewall restrictions that prevent you from using the hosted PeopleSoft Online Help, you can install the online help locally. See [Configuring Context-Sensitive Help Using a Locally Installed Online Help Website](#).

### Downloadable PeopleBook PDF Files

You can access downloadable PDF versions of the help content in the traditional PeopleBook format on the [Oracle Help Center](#). The content in the PeopleBook PDFs is the same as the content in the PeopleSoft Online Help, but it has a different structure and it does not include the interactive navigation features that are available in the online help.

### Common Help Documentation

Common help documentation contains information that applies to multiple applications. The two main types of common help are:

- Application Fundamentals
- Using PeopleSoft Applications

Most product families provide a set of application fundamentals help topics that discuss essential information about the setup and design of your system. This information applies to many or all applications in the PeopleSoft product family. Whether you are implementing a single application, some combination of applications within the product family, or the entire product family, you should be familiar with the contents of the appropriate application fundamentals help. They provide the starting points for fundamental implementation tasks.

In addition, the *PeopleTools: Applications User's Guide* introduces you to the various elements of the PeopleSoft Pure Internet Architecture. It also explains how to use the navigational hierarchy, components, and pages to perform basic functions as you navigate through the system. While your application or implementation may differ, the topics in this user's guide provide general information about using PeopleSoft applications.

## Field and Control Definitions

PeopleSoft documentation includes definitions for most fields and controls that appear on application pages. These definitions describe how to use a field or control, where populated values come from, the effects of selecting certain values, and so on. If a field or control is not defined, then it either requires no additional explanation or is documented in a common elements section earlier in the documentation. For example, the Date field rarely requires additional explanation and may not be defined in the documentation for some pages.

## Typographical Conventions

The following table describes the typographical conventions that are used in the online help.

| <b><i>Typographical Convention</i></b> | <b><i>Description</i></b>                                                                                                                                                                                                                   |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Key+Key</b>                         | Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For <b>Alt+W</b> , hold down the <b>Alt</b> key while you press the <b>W</b> key. |
| . . . (ellipses)                       | Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax.                                                                                                                                        |
| { } (curly braces)                     | Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe ( ).                                                                                                                                            |
| [ ] (square brackets)                  | Indicate optional items in PeopleCode syntax.                                                                                                                                                                                               |
| & (ampersand)                          | When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object.<br><br>Ampersands also precede all PeopleCode variables.                                                  |
| ⇒                                      | This continuation character has been inserted at the end of a line of code that has been wrapped at the page margin. The code should be viewed or entered as a single, continuous line of code without the continuation character.          |

## ISO Country and Currency Codes

PeopleSoft Online Help topics use International Organization for Standardization (ISO) country and currency codes to identify country-specific information and monetary amounts.

ISO country codes may appear as country identifiers, and ISO currency codes may appear as currency identifiers in your PeopleSoft documentation. Reference to an ISO country code in your documentation does not imply that your application includes every ISO country code. The following example is a country-specific heading: "(FRA) Hiring an Employee."

The PeopleSoft Currency Code table (CURRENCY\_CD\_TBL) contains sample currency code data. The Currency Code table is based on ISO Standard 4217, "Codes for the representation of currencies," and also relies on ISO country codes in the Country table (COUNTRY\_TBL). The navigation to the pages where you maintain currency code and country information depends on which PeopleSoft applications you are using. To access the pages for maintaining the Currency Code and Country tables, consult the online help for your applications for more information.

## Region and Industry Identifiers

Information that applies only to a specific region or industry is preceded by a standard identifier in parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear at the beginning of a note or other text.

Example of a region-specific heading: "(Latin America) Setting Up Depreciation"

### Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in the PeopleSoft Online Help:

- Asia Pacific
- Europe
- Latin America
- North America

### Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following industry identifiers may appear in the PeopleSoft Online Help:

- USF (U.S. Federal)
- E&G (Education and Government)

## Translations and Embedded Help

PeopleSoft 9.2 software applications include translated embedded help. With the 9.2 release, PeopleSoft aligns with the other Oracle applications by focusing our translation efforts on embedded help. We are not planning to translate our traditional online help and PeopleBooks documentation. Instead we offer very direct translated help at crucial spots within our application through our embedded help widgets. Additionally, we have a one-to-one mapping of application and help translations, meaning that the software and embedded help translation footprint is identical—something we were never able to accomplish in the past.

# Getting Started With PeopleSoft Application Fundamentals

---

## PeopleSoft Application Fundamentals Overview

PeopleSoft Application Fundamentals discusses the following functionality and processes:

- Using the PeopleSoft Data Migration Workbench for Application Data.
- Using the PeopleSoft Data Export Import Utility.
- Using PeopleSoft Business Process Weaver
- Defining Financials and Supply Chain Management common definitions.
- Setting installation options for PeopleSoft applications.
- Defining user preferences.
- Securing your system.
- PeopleSoft Search for Financials and Supply Chain Management.
- Securing ChartFields.
- Defining and using ChartFields.
- Editing ChartField combinations.
- Configuring ChartFields.
- Summarizing ChartFields using trees.
- Setting up and using Business Request and Approval.
- Setting Up and Using Fluid Financial Structure Requests
- Using entry events.
- Using alternate account.
- Defining accounting calendars.
- Setting up ledgers.
- Using journal generator.
- Using interunit and intraunit accounting and ChartField inheritance.

- Processing allocations.
- Setting up on-demand processing.
- Using common usability features.
- Working with and Personalizing PeopleSoft Fluid WorkCenters
- Setting up and using PeopleSoft Fluid for Financials and Supply Chain management
- PeopleSoft Mobile Applications.
- Third party images provided with sample data
- PeopleSoft Application Fundamentals reports.

---

## Using PeopleSoft Classic Plus

PeopleSoft Classic Plus has replaced the traditional PeopleSoft Classic User Interface as the standard user interface for PeopleSoft applications. PeopleSoft Fluid, introduced in PeopleTools 8.54, has co-existed with the traditional classic user interface in all PeopleSoft applications and will continue to do so. The introduction of Classic Plus is a step toward unifying the look of all pages, the "classic plus" feature allows reworked classic components to be displayed in a Fluid-like manner.

Beginning with PeopleTools 8.56, the pages contained within specific PeopleTools classic components have been reworked and delivered with a "classic plus" setting enabled. Most PeopleSoft pages have been reworked and are delivered with a fluid-like style. This Fluid-like style, for Classic pages, is determined at the PeopleTools level, on the Branding System Options page.

---

**Note:** The page controls on Classic plus pages resemble the page controls on Fluid pages. However, because these components and pages remain as classic definition, certain aspects of the PeopleSoft Fluid User Interface experience are absent, such as dynamic responsive rendering across all supported device types.

---

**Note:** Oracle highly recommends that you adopt the Classic Plus styling across your organization's applications. The styling combines the styling of PeopleSoft Fluid User Interface and brings continuity across applications. If you choose to stay on the Classic style, you may end up having to review and customize delivered pages for future images.

If you have not yet enabled the PeopleSoft Fluid UI, you may want to wait to implement Classic Plus. If you have already adopted the PeopleSoft Fluid UI we highly recommend you adopt the Classic Plus styling as soon as possible to further enhance your user experience with the new styling approach for all your PeopleSoft components and pages

---

## Page Used to Set Up Classic Plus

| <i>Page Name</i>               | <i>Definition Name</i> | <i>Usage</i>                                                                                                                                                            |
|--------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Classic Plus Setup Page</u> | EOCP_SETUP             | To enable or disable the Classic Plus user interface for Classic components. You can also view a list of the application components that are delivered as Classic Plus. |

## Understanding Classic Plus Setup for FSCM

The Classic Plus user interface is enabled for most Classic components when you take PeopleTools 8.56 and FSCM Image 26. However, PeopleSoft recommends PeopleTools 8.56.05 for the Classic Plus feature.

A Classic Plus Setup page is available to review the delivered products and components for Classic Plus. Some of the components also include recommendations regarding screen resolution and other factors that may guide you in adopting Classic Plus.

The Classic Plus Setup page is available for system administrators to view a list of application components delivered as Classic Plus. This page can also be used to enable or disable the Classic Plus user interface for multiple application components.

When the “Fluid like theme for Classic” theme type is enabled on the Branding System Options page, the pages in all components that have the component level theme type enabled are displayed with fluid-like styling, rather than the standard classic pages. These components include any component delivered with PeopleSoft applications that have also been reworked.

### Enabling Classic Plus

To view pages in the Classic Plus theme, you must enable Classic Plus at two levels:

- Level One: PeopleTools level and is performed on the Branding System Options page.

This level must be ON if you want to enable or disable the Classic Plus theme at the component level.

- Level Two: Component level and is performed on the Classic Plus Setup Page.

For more information on Classic Plus components and branding options, see the following PeopleTools documentation:

- PeopleTools: PeopleTools Components Delivered as Classic Plus
- PeopleTools: Configuring Branding System Options

## Classic Plus Setup Page

Use the Classic Plus Setup page (EOCP\_SETUP) to enable or disable the Classic Plus user interface for FSCM components. You can also view a list of the application components that are delivered as Classic Plus.

## System Branding for Classic Plus

| Field or Control                                  | Description                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Setting</b>                            | Displays the current Classic Plus configuration status at the system level (as given in the PeopleTools - Branding System Options page). If System Classic Plus branding is enabled, then the current setting is displayed as <i>Enabled</i> . If system Classic Plus branding is not enabled, then the status is displayed as <i>Disabled</i> . |
| <b>Disable Classic Plus / Enable Classic Plus</b> | Select to disable or enable Classic Plus at the system level.<br><br><b>Note:</b> This field is displayed based on the current system settings. For example, if the Classic Plus feature is enabled at system level, the field appears as 'Disable Classic Plus'.                                                                                |

## Component Search Filters

Use this section to narrow your search results that appear in the Component Classic Plus Branding section.

| Field or Control         | Description                                                                            |
|--------------------------|----------------------------------------------------------------------------------------|
| <b>Delivered Setting</b> | Select <i>Enabled</i> to have the system display all the delivered Classic Plus pages. |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                         |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Component Name</b>                 | Select the component to display in the component list.                                                                                                                                                                                                     |
| <b>Current Setting</b>                | Select the current setting ( <i>Enabled</i> or <i>Disabled</i> ) to filter the component list.                                                                                                                                                             |
| <b>Owner</b>                          | Select the PeopleSoft application owner to filter the component list. For example: General Ledger, Expenses, Purchasing, and so on.                                                                                                                        |
| <b>Minimum Recommended Resolution</b> | Select a resolution to filter the component list.                                                                                                                                                                                                          |
| <b>WorkCenter Homepage</b>            | Select <i>Yes</i> or <i>No</i> to filter the component list. If you select <i>Yes</i> , then the component list displays components that have a WorkCenter landing page such as the AM WorkCenter, Receivables WorkCenter, Expenses WorkCenter, and so on. |
| <b>Action</b>                         | Select <i>Enable</i> or <i>Disable</i> to filter the component list.                                                                                                                                                                                       |

## Enable and Disable All

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable All</b>       | Click to enable the Classic Plus user interface for all components listed in the Component Classic Plus Branding section. After clicking this button, all values in the Action column of the Component Classic Plus Branding section are set to <i>Enable</i> . You must then click the Run button to process the changes made to the Action column.   |
| <b>Disable All</b>      | Click to disable the Classic Plus user interface for all components listed in the Component Classic Plus Branding section. After clicking this button, all values in the Action column of the Component Classic Plus Branding section are set to <i>Disable</i> . You must then click the Run button to process the changes made to the Action column. |

| <b>WorkCenter Homepage</b>                                                                           | <p>Select one of these options:</p> <ul style="list-style-type: none"> <li><i>Yes</i> to apply the Fluid-like theme to Classic WorkCenter Homepages.</li> </ul> <p>When you select <i>Yes</i>, the <b>Apply Fluid like theme Classic</b> check box is automatically selected for the WorkCenter. This check box can be found by accessing the Workcenter, then select WorkCenter Settings, Configure, and Properties.</p> <ul style="list-style-type: none"> <li><i>No</i> to have the WorkCenter appear a Classic - tangerine theme.</li> </ul> |
| <b>Minimum Recommended Resolution</b>                                                                | <p>Select an option from these values:</p> <ul style="list-style-type: none"> <li>1600x900</li> <li>1080p</li> <li>1080p with scrolling</li> <li><i>Not Applicable</i>, which applies to all the components when PeopleSoft recommends that Classic Plus styles not be used.</li> </ul> <p>When you manually add a row, the default value is <i>Not Applicable</i>.</p>                                                                                                                                                                          |

| <b>Field or Control</b>                                                                 | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Action</b>                                                                           | <p>Select <i>Enable</i> or <i>Disable</i> to perform this action when you click the Run button.</p> <p>You can change the Current Setting value for one specific component by changing the value in the Action field, for that specific row. Then click the Run button to process the change. The process will change the setting for that component only.</p> <p>If you perform multiple searches and change the action for individual components, be sure to click the Save button before you click the Run button. This will save all components selected for each search.</p> |
|  (add) | <p>Click to add a new row to the grid. When you add a row, these fields are open for you to complete:</p> <ul style="list-style-type: none"> <li>• Component Name</li> <li>• Market</li> <li>• WorkCenter Homepage</li> <li>• Minimum Recommended Resolution</li> <li>• Action</li> </ul> <p>When a row is added using this button, the system displays a delete row button to the right.</p>                                                                                                                                                                                     |

## Implementation Considerations

Each product's overview contains specific implementation and component interface information for that product. The Application Fundamentals documentation includes information about setup of features common to Financials and Supply Chain products such as ChartFields, ledgers, interunit and intraunit functionality, calendars, security, combination editing, allocations, and so on.

Additionally, PeopleSoft Setup Manager enables you to review a list of setup tasks for your organization for the products that you are implementing. The setup tasks include the components that you must set up, listed in the order in which you must enter data into the component tables, and links to the corresponding PeopleSoft product documentation.

For more information, see the product documentation for *PeopleTools: Setup Manager*.

## Common Elements Used in Application Fundamentals

| <b>Field or Control</b>                 | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>As of Date</b>                       | The last date for which a report or process includes data.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Business Unit</b>                    | An identification code that represents a high-level organization of business information. You can use a business unit to define regional or departmental units within a larger organization.                                                                                                                                                                                                                                                                                                       |
| <b>Description</b>                      | Freeflow text up to 256 characters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Effective Date</b>                   | <p>Date on which a table row becomes effective; the date that an action begins. For example, if you want to close out a ledger on June 30, the effective date for the ledger closing would be July 1. This date also determines when you can view and change the information. Pages and batch processes that use the information use the current row.</p> <p>See <i>PeopleTools: PeopleSoft Applications User's Guide</i>, "Using PeopleSoft Application Pages," <i>Using Effective Dates</i>.</p> |
| <b>EmplID</b> (employee ID)             | Unique identification code for an individual associated with your organization.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Language</b> or <b>Language Code</b> | <p>The language in which you want the field labels and report headings of your reports to print. The field values appear as you enter them.</p> <p>Language also refers to the language spoken by an employee, applicant, or non-employee.</p>                                                                                                                                                                                                                                                     |
| <b>Process Frequency group box</b>      | <p>Designates the appropriate frequency in the Process Frequency group box:</p> <p><i>Once</i> executes the request the next time the batch process runs. After the batch process runs, the process frequency is automatically set to Don't Run.</p> <p><i>Always</i> executes the request every time the batch process runs.</p> <p><i>Don't Run</i> ignores the request when the batch process runs.</p> <p>See <i>PeopleTools: PeopleSoft Process Scheduler</i>.</p>                            |
| <b>Process Monitor</b>                  | <p>Click to access the Process List page, where you can view the status of submitted process requests.</p> <p>See <i>PeopleTools: PeopleSoft Process Scheduler</i>.</p>                                                                                                                                                                                                                                                                                                                            |
| <b>Report ID</b>                        | The report identifier.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                                |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Report Manager</b>            | Click to access the Report List page, where you can view report content, check the status of a report, and see content detail messages (which show you a description of the report and the distribution list).                                                    |
| <b>Request ID</b>                | A request identification that represents a set of selection criteria for a report or process.                                                                                                                                                                     |
| <b>Run</b>                       | Click to access the Process Scheduler request page, where you can specify the location where a process or job runs and the process output format.<br><br><i>See PeopleTools: PeopleSoft Process Scheduler.</i>                                                    |
| <b>Run Control ID</b>            | An identification code that represents a set of selection criteria for a report or process.                                                                                                                                                                       |
| <b>SetID</b>                     | An identification code that represents a set of control table information or TableSets. A TableSet is a group of tables (records) necessary to define your company's structure and processing options.                                                            |
| <b>Short Description</b>         | Freeflow text up to 15 characters.                                                                                                                                                                                                                                |
| <b>Status</b> (effective status) | Indicates whether a row in a table is <i>Active</i> or <i>Inactive</i> . You cannot display inactive rows on transaction pages or use them for running batch processes. Inactivate rather than delete data you no longer use in order to maintain an audit trail. |
| <b>User ID</b>                   | The system identifier for the individual who generates a transaction.                                                                                                                                                                                             |

# Using the PeopleSoft Data Migration Workbench for Application Data

---

## Understanding the PeopleSoft Data Migration Workbench

The PeopleSoft Data Migration Workbench facilitates the process to migrate application configuration data. Using Application Data Sets (ADS) as its underlying transport technology, the Data Migration Workbench enables you to compare, validate, and copy the content data from one database to another.

The Data Migration Workbench is an effective alternative to Data Mover scripts, providing greater visibility and control of managed changes in your environments. Authorized developers or administrators can define application data sets, and compare and copy the data in much the same way as the copy and compare process of managed objects.

---

**Note:** You can still use Data Mover scripts to load application data; however, Data Mover does not provide a way to compare and validate the data that is copied.

---

For more information regarding application data sets and the Data Migration Workbench, see the product documentation for *PeopleTools: Lifecycle Management Guide*.

Currently, PeopleSoft delivers the following Application Data Set (ADS) definitions as sample data:

| <b>Supported Functionality</b>                                                                                                   | <b>Application Data Set Usage</b>                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Delivered Application Data Set Names</b> |

You can use ADS definitions to move selected setup data from a production database to a test database, or from a test database to a production database.           | There are many ADS names delivered. See .                                          |
| WorkCenters<br><br>See <a href="#">Using the Data Migration Workbench for PeopleSoft WorkCenters</a>                                                                | PeopleSoft WorkCenters provide critical My Work Link filters that are based in SQL application classes. You can use the ADS definitions to migrate the My Work Links, Filters, and Pagelet configurations to your production environments. | WORKCENTER_CONFIGURATION<br><br>WORKCENTER_FILTERS<br><br>WORKCENTER_FILTER_VALUES |

**Note:** Although ADS does provide basic validation, you should validate your results by running tests using test environments before using ADS to migrate data to your production environment.

## Using Application Data Sets

### Understanding Data Set Designer and the Data Migration Workbench

The Application Data Set functionality includes the Data Set Designer component (PTADSMMGR) and the Data Migration Workbench component (PTADSDMW):

#### Data Set Designer

Authorized administrators use the Data Set Designer to create data set definitions (ADS definitions) as a hierarchical structure of records and their collective properties.

A data set definition, with its group of records, constitutes a data set. Both record definitions and data set definitions are metadata that define the *shape* of the migration data. The same data set definition must exist in any PeopleSoft database that participates in a data set copy or compare.

For more information about Data Set Designer, see *PeopleTools: Lifecycle Management Guide*, “Using Data Set Designer”.

#### Data Migration Workbench

Authorized administrators can then use the Data Migration Workbench to insert data set instances (data content) into projects that represent a unit of work as a data migration project. Data migration projects are

like managed object projects: a collection of data set instances with various data set definitions. The Data Migration Workbench enables administrators to copy and compare projects containing data sets as well as view compare reports and validation reports.

You can also integrate the Enterprise Components Approval Framework to provide administrative control of the *Project Copy from File* process. Employ enhanced security to ensure that the Data Set definitions are suitable for copying data, to enable user security for the data set pages, and assign access to copy and compare the data. PeopleSoft delivers the MigrateData process ID for enabling data migration Approval Framework.

For more information about security, see *PeopleTools: Lifecycle Management Guide*, "Implementing Data Set Security".

## Steps for Using the Data Migration Workbench

Following is an example of steps for migrating application data sets using the Data Migration Workbench:

1. Create a Project for your migration using the Add New Project page, by entering a Project Name and Description.

Select PeopleTools, Lifecycle Tools, Migrate Data, Data Migration Workbench. From the Project Search page, click the Add a New Value link.

2. On the Data Migration Workbench page, select the Data Set Name look-up icon.
3. On the Look Up Data Set Name, select the Data Set Name referenced for the application data set.
4. On the Insert Data Set Content page, select values (or content) for specific fields that are used for that data set and you want to migrate to another database.

For example, for the SETID field name, select SHARE in the Values column. Additional field names are available depending on the data set.

5. Click the Search button.
6. Review all values in the Search Results section of the Insert Data Set Content page to verify that all desired content is selected.

If you want to narrow your results:

- Repeat steps four through five until you get your desired results.
- Select only the content you want to include.

7. Select the Insert Content or the Insert and Return button:
  - The Insert Content button to insert selected content into your project, but remain on the Insert Data Set Content page to perform another search.
  - The Insert and Return button inserts the selected content and returns you to the Data Set Content page
8. Repeat steps two through seven for all application data sets for the project.

9. On the Data Set Content page, select the desired content for the data set and select the Insert Content button.

The system returns to the Data Migration Workbench page with selected content in the Project Content section.

10. Click Save on the Data Migration Workbench page.

When saving, the Project Status changes from *New Project* to *Created*. You cannot save the project if you have not included data set content for each data set in your project.

11. Click the **Copy to File** button on the Data Migration Workbench page.

You must have a valid file location defined on the Manage File Locations page before you can perform this step. See *PeopleTools: Lifecycle Management Guide*.

12. Click the Run button from the Copy to File page.

Access the process monitor to check progress. When the process completes, the Project Status in the Data Migration Workbench becomes *Copy to file succeeded*.

13. Verify that project files are copied to the file location as specified on the Manage File Locations page.

14. Log in to the target database to import the project file.

15. Access the Data Migration Workbench, Project Search page, and click the Load Project From File link.

16. Select the copied location and the project to import from the Load Project From File page and click the Load button.

17. On the Data Migration Workbench, Project Search page, find your migrated project and select it to access the Data Migration Workbench page.

18. Click the Compare button to launch the Copy and Compare process (PTADSAEPRCS) and click Run.

Access the process monitor to check progress. When the process completes, the Project Status in the Data Migration Workbench for the project becomes *Compare from file succeeded*.

Upon completion, a compare summary is displayed on the project definition page. Statistics are displayed for each data set definition in the project indicating the count of data set instances based on type (additions, deletion, differences, same or message). When you click on a count the compare report is displayed.

19. If all looks as expected, return to the Data Migration Workbench page for your project, click the Submit for Copy button and then click Run.

20. Upon successful completion of the Copy and Compare process (PTADSAEPRCS), you can navigate within your target database and find the migrated Allocation Steps and Allocation Groups.

## Chapter 3

# Using the PeopleSoft Data Export Import Utility

---

## Understanding the Data Export Import Utility

PeopleSoft Financials delivers the Data Export Import Utility, which is a data-mapping utility that empowers you to map fields easily and to interface both incoming and outgoing data between source and target. The data set for the source and target can be in XML, flat file, fixed, or record formats. Examples of typical uses for this mapping utility are:

- Importing external data from third-party systems.
- Exporting data to third-party systems.
- Creating payment files by format.
- Creating statutory audit files.

You can map simple structures or modify complex mappings without having to alter the underlying PeopleCode, thus avoiding customizations. The Data Export Import Utility applies transformation rules to format the data with controls in order to meet third-party system requirements.

## Prerequisite for Using the Data Export Import Utility

The prerequisite for implementing the Data Export Import Utility process includes familiarity with PeopleSoft documents.

See the product documentation for *PeopleTools: Documents Technology*.

## Overview of the Data Export Import Utility Mapping Process

The Data Export Import Utility mapping process enables you to:

- Export PeopleSoft database data to these formats:
  - Delimited files, such as CSV.
  - Fixed format files.
  - Other database records.
  - XML files.
- Import data from these formats into a PeopleSoft database:

- Delimited files, such as CSV.
- Fixed format files.
- XML files.

These steps comprise the Data Export Import Utility mapping process:

1. Define or identify a PeopleSoft document.
2. Define a document relationship.
3. Create a mapping definition for the source and target fields.
4. Define data transformation rules between source and target structures.
5. Run the Application Engine mapping process.

The mapping process is based on a PeopleSoft document and a document relationship definition that sets up the relationship rules between records and fields in the PeopleSoft document. Before running the mapping process, you create a map definition between the source and target data structures. The mapping process then applies the relationship and transformation rules when transferring the data from source to target.

For more information about defining a PeopleSoft document and setting up a document relationship, see [Mapping File Layouts and Document Relationships](#).

For more information about defining the map, see [Defining the Data Source and Target](#).

For more information about executing the mapping process, see [Requesting the Data Export Import Process](#).

## Mapping File Layouts and Document Relationships

### Understanding Mapping File Layouts and Document Relationships

The Data Export and Import Utility uses the PeopleSoft Documents Technology in PeopleTools to retrieve document data. PeopleSoft Documents Technology provides a Document Builder tool that enables you to build the structure of a document and define XML and relational formats for it.

For more information, see the product documentation for *PeopleTools: PeopleSoft Documents Technology*.

The mapping utility supports two source types: PeopleSoft documents and delimited files.

To map file layouts and document relationships:

1. Create or identify a PeopleSoft document.
2. Set up a data relationship for the database table-related document.
3. Create an XML-formatted PeopleSoft document.
4. Define the delimited file layout and associate it with the XML-formatted document.

5. Define code mappings.

## Defining a PeopleSoft Document

Use the Document Builder - Document page (IB\_LOGICALSCHEMA) to view and edit a document in the Document Builder.

For use in the Data Export Import Utility process, define PeopleSoft documents that will be the source, target, or both in the mapping definition.

For more information about defining a PeopleSoft document, see the product documentation for *PeopleTools: PeopleSoft Documents Technology*.

Navigation:

**PeopleTools >Documents >Document Builder**

This example illustrates the fields and controls on the Document Builder - Document page.

The screenshot displays the 'Document Builder - Document' page. At the top, there are tabs for 'Document', 'XML', 'Relational', and 'JSON'. Below the tabs, the 'Package' is set to 'performance', 'Document Name' is 'BI\_TRANSACTIONS', and 'Version Name' is 'v1'. A 'Document Tester' link is visible on the right. The 'Document Details' section shows a tree structure under 'Left | Right'. The tree has a root node 'BI\_TRANSACTIONS' which is expanded to show two child nodes: 'BI\_HDR' (highlighted in yellow) and 'BUS\_UNIT\_TBL\_FS' (highlighted in yellow). 'BUS\_UNIT\_TBL\_FS' is further expanded to show three fields: 'BUSINESS\_UNIT', 'DESCR', and 'DESCRSHORT'. Below the tree, there are icons for document manipulation. At the bottom, there are buttons for 'Validate', 'Copy', 'Rename', 'Export', 'Delete', 'Save', and a 'Return to Search' link. The footer shows the navigation path: 'Document | XML | Relational | JSON'.

In this example, BI\_HDR is the anchor node and BUS\_UNIT\_TBL\_FS is a sibling node that contains fields in the records for billing transactions.

This example illustrates the fields and controls on the Document Builder - Documents page.

The screenshot shows the Document Builder interface for the 'BI\_TRANSACTIONS' document. The 'Document' tab is selected. The package is 'performance', the document name is 'BI\_TRANSACTIONS', and the version is 'v1'. A 'Document Tester' link is visible. The 'Document Details' section shows a tree structure of the document's components:

- BI\_TRANSACTIONS
  - BI\_HDR
    - ACCEPTGIRO\_IND
    - ACCOUNTING\_DT
    - ACCRUE\_UNBILLED
  - ...
  - USER\_AMT2
  - USER\_AMT2\_BSE
  - USER\_AMT2\_XEU
  - USER\_DT1
  - USER\_DT2
  - VAT\_ENTITY
  - VAT\_TREATMENT\_GRP
  - BI\_LINES
    - BI\_LINE
      - ACCRUE\_DT
      - ACCUMULATE
      - ACTIVITY\_ID
      - ACTIVITY\_TYPE
      - ADD\_DTTM

This example, which illustrates the fields and controls on the Document Builder - Document page, shows an XML-formatted PeopleSoft document.

The screenshot shows the Document Builder interface for the 'BI\_HDRs' document. The 'Document' tab is selected. The package is 'FSCM', the document name is 'BI\_HDRs', and the version is 'v1'. A 'Document Tester' link is visible. The 'Document Details' section shows a tree structure of the document's components:

- BI\_HDRs
  - BI\_HDR\_List
    - BI\_HDR
      - Bill\_Source
      - Bill\_Status
      - Customer
      - Bill\_Type
      - Currency\_Code
      - Business\_Unit
      - Invoice
      - Amount
      - Invoice\_Date
      - Invoice\_Form
    - BI\_LINES
      - BI\_LINE\_LIST
        - BI\_LINE
          - Currency\_Code
          - Business\_Unit
          - Description
          - Line\_Amount
          - Identifier
          - Invoice
          - Line\_Sequence\_Number
          - Quantity
          - Unit\_Amount
          - Unit\_Of\_Measure

At the bottom of the interface, there are several icons and buttons: 'Validate', 'Copy', 'Rename', 'Export', 'Delete', and 'Save'.

If the PeopleSoft document is defined from the database record, the next step is to define the relationship among the group nodes.

## Using PeopleSoft Documents for Specific Scenarios

Data Export Import Utility processing identifies and analyzes the **Required** check box on XML-formatted PeopleSoft documents to assemble the data mapping, depending on the map definition.

See also "Understanding How to Use the Data Export Import Utility for Payment Dispatch" (PeopleSoft Financial Gateway).

There are three cases considered by the system:

1. The **Required** check box is selected for the compound node and primitive element, but they are not mapped in the map definition.

This example illustrates the fields and controls on a PeopleSoft Document, showing a Compound Element with the Required check box selected.

The screenshot displays the 'Document Designer' interface for a document named 'PmtTpInf' under the 'FINANCIAL\_GATEWAY' package. The 'Document Details' section is active, showing a tree view on the left and a details pane on the right. The tree view shows a hierarchy: 'PmtTpInf' (Compound) containing 'InstrPrty' (Primitive), 'SvcLvl' (Compound), 'Cd' (Primitive), 'Prtry' (Primitive), 'LclInstrm' (Compound), 'Cd' (Primitive), 'Prtry' (Primitive), 'CtryPurp' (Compound), 'Cd' (Primitive), and 'Prtry' (Primitive). The 'SvcLvl' element is selected. The details pane for 'SvcLvl' shows the 'Required' checkbox checked. Other fields include 'Referenced Document' (FINANCIAL\_GATEWAY), 'Referenced Package' (SvcLvl), 'Referenced Version' (pain\_001\_001\_03), and 'Sequence' (Go to Child Document<sup>2</sup>). At the bottom, there are buttons for 'Validate', 'Copy', 'Rename', 'Export', 'Delete', and 'Save', along with a 'Return to Search' link.

In addition, the mapping details do not exist for this field on the Map Definition - Detail (Step 4 of 6) page.

The XML output in this case would look like this:

```
- <PmtTpInf>
  <InstrPrty>NORM</InstrPrty>
  - <SvcLvl>
    <CD />
  </SvcLvl>
</PmtTpInf>
```

2. The **Required** check box is selected for the compound node and primitive element, and they are mapped in the map definition.

This example illustrates the fields and controls on a PeopleSoft Document, showing a Primitive Element with the Required check box selected.

| 24 (0697) Payment.PMT_HEADER_MAP.PMT_PRTYINF_MAP.DESCR           | Document.CstmrCdtTrfInltm.PmtInf.DtbnNm                |           |             |             |
| 25                                                               | Document.CstmrCdtTrfInltm.PmtInf.DtbnNm                | Constant  | ADIOR       |             |
| 26 (0709) Payment.PMT_HEADER_MAP.PMT_PRTYINF_MAP.POSTAL          | Document.CstmrCdtTrfInltm.PmtInf.DtbnNm                |           |             |             |
| 27 (0665) Payment.PMT_HEADER_MAP.PMT_PRTYINF_MAP.CITY            | Document.CstmrCdtTrfInltm.PmtInf.DtbnNm                |           |             |             |
| 28 (0710) Payment.PMT_HEADER_MAP.PMT_PRTYINF_MAP.STATE           | Document.CstmrCdtTrfInltm.PmtInf.DtbnNm                |           |             |             |

The XML output in this case would look like this:

```
<PmtTpInf>
  <InstrPty>NORM</InstrPty>
  <SvcLvl>
    <Cd>SEPA</Cd>
  </SvcLvl>
</PmtTpInf>
```

- The **Required** check box is not selected for the compound node and primitive element, and they are not mapped in the map definition.

The XML output in this case would look like this:

```
<PmtTpInf>
  <InstrPty>NORM</InstrPty>
```

```
</PmtTpInf>
```

If a compound node is static (that is, there are mappings of this compound node only with a *Constant* transformation type in the map definition), the **Required** check box must be selected for the system to output the value. Otherwise, the system ignores the static node and the value will not appear in the output XML.

For more information about the map definition, see [Defining the Data Source and Target](#).

## Using a Document with a Complex Primitive Compound Element Type

In a target PeopleSoft document tree, the complex primitive compound element type is used to define an XML element with multiple properties. Here is an example of the PeopleSoft document and corresponding XML output:

This example illustrates a PeopleSoft Document with a Complex Primitive Compound Element Type.

|                                                                                                 |                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div> <div>Amt</div> <div> <div>InstdAmt</div> <div>Ccy</div> <div>InstdAmt</div> </div> </div> | <div> <div>Element Name</div> <div>InstdAmt</div> <div><input type="checkbox"/> Required</div> </div> <div> <div>Sequence</div> <div>1</div> </div> <div> <div>Type</div> <div>Complex primitive compound.</div> </div> |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

The XML output for this example would look like this:

```
<InstdAmt Ccy="EUR">1000</InstdAmt>
```

Because you cannot ungroup Primitive Peers in PeopleSoft documents, the ungrouping primitive can be defined as a complex primitive compound element.

## Understanding Parent-Child and Sibling Levels in PeopleSoft Documents for Data Export Import Utility

Two types of relationships in PeopleSoft documents can be defined for Data Export Import Utility processing: parent-child and sibling. This example of a PeopleSoft document illustrates the document structure and the document relationships set up to be used as the data source for exporting data into an XML file.

The INVOICE document in the BILLING package, includes these group nodes:

- BI\_HEADER
- BI\_LINE
- BI\_ACCT\_ENTRY
- BUS\_UNIT\_TBL\_FS

BI\_HEADER is the parent of BI\_LINE, and BI\_LINE is the parent of BI\_ACCT\_ENTRY. In this example, BI\_LINE must have the same BUSINESS\_UNIT and INVOICE ID as BI\_HEADER. The Data Export Import Utility mapping process must know this relationship in order to fetch the correct BI\_LINE that belongs to BI\_HEADER. The document relationship would be shown as follows:

This example illustrates the Parent-Child Relationship on the Document Relationship page.

[Favorites](#) > [Main Menu](#) > [Set Up Financials/Supply Chain](#) > [Common Definitions](#) > [Data Export Import Utility](#) > [Document Relationship](#)

**ORACLE**

Package: BILLING

Document: INVOICE

Version: v1

Level: 1

Scan Document

Search

Criteria Group

Find | View 1 First 1 of 1 Last

Node: INVOICE.BI\_HEADER.BI\_LINE

Add Criteria Level: 1 ☒ Anchor

| Logical | Expression 1                            | Condition Type | Expression 2                    | Edit |   |   |
|---------|-----------------------------------------|----------------|---------------------------------|------|---|---|
|         | INVOICE.BI_HEADER.BI_LINE.BUSINESS_UNIT | equal to       | INVOICE.BI_HEADER.BUSINESS_UNIT | Edit | + | - |
| AND     | INVOICE.BI_HEADER.BI_LINE.INVOICE       | equal to       | INVOICE.BI_HEADER.INVOICE       | Edit | + | - |

In this example, `BUS_UNIT_TBL_FS` and `BI_HEADER` are siblings. The purpose of adding the `BUS_UNIT_TBL_FS` record into this document is that you can translate the `BUSINESS_UNIT` field of `BI_HEADER` (for example, `US001`) into the `DESCR` field of `BUS_UNIT_TBL_FS` (for example, `US001 New York Operator`), thus providing more information in the output.

This example illustrates the Sibling Relationship on the Document Relationship page.

Package: BILLING  
Document: INVOICE  
Version: v1  
Level: 0  
Scan Document  
Search

Criteria Group Find | View 1 First 1-2 of 2 Last

Node: INVOICE.BI\_HEADER  
Add Criteria Level: 0 ☒ Anchor

| Logical | Expression 1 | Condition Type | Expression 2 | Edit | First | 1 of 1 | Last |
|---------|--------------|----------------|--------------|------|-------|--------|------|
|         |              |                |              | Edit |       |        |      |

Node: INVOICE.BUS\_UNIT\_TBL\_FS  
Add Criteria Level: 0 ☐ Anchor

| Logical | Expression 1                          | Condition Type | Expression 2                    | Edit | First | 1 of 1 | Last |
|---------|---------------------------------------|----------------|---------------------------------|------|-------|--------|------|
|         | INVOICE.BUS_UNIT_TBL_FS.BUSINESS_UNIT | equal to       | INVOICE.BI_HEADER.BUSINESS_UNIT | Edit |       |        |      |

However, in this scenario, the goal is to export BI (billing) information, not BU (business unit) information. Thus the BI\_HEADER node becomes the anchor. When exporting BI information, you can translate the BUSINESS\_UNIT ID (for example, US001) to BU Name. When Data Export Import Utility processing fetches data from the sibling table, it must find the foreign key.

## Document Relationship Page

Use the Document Relationship page (FS\_DOC\_RLTS) to define a relationship for each node of a PeopleSoft document.

You must define a document relationship if the document refers to data that is stored in more than one PeopleSoft table.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions >Data Export Import Utility >Document Relationship**

This example illustrates the fields and controls on the Document Relationship page.

Package: BILLING  
 Document: INVOICE  
 Version: v1  
 Level: 0

Refresh Document  
 Search

Criteria Group Find | View 1 First 1-2 of 2 Last

Node: INVOICE.BI\_HEADER  
 Add Criteria Level: 0 ☒ Anchor

| Logical | Expression 1 | Condition Type | Expression 2 | Edit |   |   |
|---------|--------------|----------------|--------------|------|---|---|
|         |              |                |              | Edit | + | - |

Node: INVOICE.BUS\_UNIT\_TBL\_FS  
 Add Criteria Level: 0 ☐ Anchor

| Logical | Expression 1                          | Condition Type | Expression 2                    | Edit |   |   |
|---------|---------------------------------------|----------------|---------------------------------|------|---|---|
|         | INVOICE.BUS_UNIT_TBL_FS.BUSINESS_UNIT | equal to       | INVOICE.BI_HEADER.BUSINESS_UNIT | Edit | + | - |

In this example, only Level 0 document relationships are shown. Use the same logic to define other levels. The INVOICE\_BI\_HEADER is the anchor node for Level 0, which means that INVOICE\_BI\_HEADER is the driver table. It contains the main data, and data in tables from the other nodes will be loaded according to the anchor node.

| Field or Control            | Description                                                                                                                                                                                                                     |

| <b>Level (header-level)</b> | Select a level used in the criteria group. You must define the correct parent-child node relationship for each level.                                                                                                           |
| <b>Search</b>               | Click this button to filter for the selected Level criteria group.                                                                                                                                                              |
| <b>Node</b>                 | Displays the node of the PeopleSoft document to which the relationship criteria apply.                                                                                                                                          |
| <b>Add Criteria or Edit</b> | Click the Add Criteria or Edit button to create new criteria or edit existing criteria, respectively, that define the relationship between the records and fields.                                                              |

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Level</b> (criteria-level) | Shows the level of the node in the PeopleSoft document.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Anchor</b>                 | <p>Identify the node that drives the data. The Data Export Import Utility process first loads the anchor node value and then uses the anchor node value to load sibling node values. For example, the INVOICE_BI_HEADER node (table) contains the BUSINESS_UNIT field, which is the ID of BU. The BUS_UNIT_TBL_FS table contains the BU information. Data Export Import Utility processing first loads the INVOICE_BI_HEADER table and retrieves the BU ID; processing then proceeds to the BUS_UNIT_TBL_FS table, and it uses this BU information.</p> <p>The system distinguishes the anchor nodes from sibling nodes following these rules:</p> <p>The system can display multiple anchors at one level.</p> <p>When the system displays a child node as an anchor, its parent nodes must also be displayed as an anchor.</p> <p>When the system displays a parent node as an anchor, the anchor check boxes of its child nodes are deselected.</p> <p>The mapping utility scans anchor by anchor, and synchronizes at the sibling node.</p> |
| <b>Logical</b>                | Enter the logical relationship between different expressions. In most cases, this value is <i>AND</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Delimited File Layout Page

Instead of using PeopleSoft tables, a user may define a Delimited File as the source or target data structure. The mapping utility uses the PeopleSoft document related to the Delimited File Layout ID to identify the structure of the source or target file.

Use the Delimited File Layout page (FS\_FF\_LAYOUT) to define the structure for the delimited file with a constant delimiter used to map the source or target data set.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions >Data Export Import Utility >Delimited File Layout**

This example illustrates the fields and controls on the Delimited File Layout page.

Layout ID: SAMPLE\_0001

Description:

Field Delimiter:

Sub-Field Delimiter

Record Delimiter:  ☒ Add Line Feed

Comment:

☐ Insert Column Header

\*Package:  

\*Document:  

\*Version:  

PS Document Builder

Define the delimited file layout and associate the layout with the XML-formatted PeopleSoft document.

| <b>Field or Control</b>                   | <b>Description</b>                                                                                                                                                                                                                                      |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Layout ID and Description</b>          | Enter a layout ID and description for this delimited file layout.                                                                                                                                                                                       |
| <b>Field Delimiter</b>                    | <p>Enter up to 5 characters. This delimiter is a constant separator between each field of one row or record.</p> <p>Enter <i>RT</i> to indicate a return symbol when exporting to delimited files</p> <p>Processing recognizes only literal values.</p> |
| <b>Sub-Field Delimiter</b>                | <p>Enter up to 5 characters. This delimiter separates sub-elements.</p> <p>Enter <i>RT</i> to indicate a return symbol when exporting to delimited files</p> <p>Processing recognizes only literal values.</p>                                          |
| <b>Record Delimiter and Add Line Feed</b> | <p>Enter up to 5 characters. This delimiter is a row or record terminator that is followed by a line feed as the default. For no line feed, deselect the line feed option.</p>                                                                          |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                               |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Comment</b>                        | Identify the comment type that will be used in the delimited file. For example, if the comment is “//”, then the information or text after “//” will be ignored. |
| <b>Insert Column Header</b>           | Select to indicate that you want the first line of the delimited file to be the column header. The PS Document node name will be used as the column header.      |
| <b>Package, Document, and Version</b> | Enter a package name, document name, and version to identify the PeopleSoft document that should be associated with this definition.                             |
| <b>PS Document Builder</b>            | Click this link to view the identified document on the Document Builder - Document page.                                                                         |

## Using Code Mappings

Use the Code Mappings page (TR\_CODE\_MAPPINGS) to define input and output values for mappings of a selected code map group.

This page enables you to define the mapping between external bank codes and their equivalent internal PeopleSoft codes for both bank statement and bank payment processing.

Navigation:

**Banking >Administer Bank Integration >Bank Integration Code Map**

For more information, see "Setting Up Common Components for Bank Statement, Payment, and Payment Acknowledgment Processing" (PeopleSoft Financial Gateway).

---

## Defining the Data Source and Target

After you have defined PeopleSoft documents for the source and target, and have set up document relationships for records and fields, use the Map Definition (FS\_MAPPER\_DEF\_WIZ) component to set up the transformation from data source to target output.

## Pages Used to Create a Map Definition

| <b>Page Name</b>                                        | <b>Definition Name</b> | <b>Usage</b>                                           |
|---------------------------------------------------------|------------------------|--------------------------------------------------------|
| <a href="#">Map Definition - Map (Step 1 of 6) Page</a> | FS_MAP_DEF_WIZ         | Create identifying information for the map definition. |

| <b>Page Name</b>                                                   | <b>Definition Name</b> | <b>Usage</b>                                                                                       |
|--------------------------------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------|
| <a href="#"><u>Map Definition - Source (Step 2 of 6) Page</u></a>  | FS_MAP_SRC_DEF_WIZ     | Identify the source, which can be a PeopleSoft document, a delimited file, or a fixed format file. |
| <a href="#"><u>Map Definition - Target (Step 3 of 6) Page</u></a>  | FS_MAP_TRG_DEF_WIZ     | Identify the target, which can be a PeopleSoft document, a delimited file, or a fixed format file. |
| <a href="#"><u>Map Definition - Detail (Step 4 of 6) Page</u></a>  | FS_MAP_DTL_WIZ         | Define map detail for source and target fields as well as the transformation type.                 |
| <a href="#"><u>Map Definition - Filter (Step 5 of 6) Page</u></a>  | FS_MAP_FILTER_WIZ      | Add filter criteria.                                                                               |
| <a href="#"><u>Map Definition - Summary (Step 6 of 6) Page</u></a> | FS_MAP_SUMMARY_WIZ     | Review and submit the map definition.                                                              |

## Understanding the Map Definition

Create a map definition to do this:

- Link the formats for the data source and target output.
- Define the mapping detail, that is, how each field is exported or imported and using which transformation rule.
- Define the data filter criteria.

The horizontal navigation, also known as *train stops*, guides you through these pages for creating a map definition:

1. Map - Step 1 of 6: Create a map ID and define high level map attributes and map security options.
2. Source - Step 2 of 6: Identify the source data structure and fields.
3. Target - Step 3 of 6: Identify the target data structure and fields.
4. Detail - Step 4 of 6: Define field-to-field mappings and data transformation rules.
5. Filter - Step 5 of 6: Define data filter criteria.
6. Summary - Step 6 of 6: Review and submit the map definition.

After creating a map definition, you can run the Data Export Import Utility process to move the data. A run control page allows you to initiate the process that reads the data maps in order to generate the specified output. The run control page generates prompts as defined in the filter criteria of the wizard, allowing users to narrow the data set for processing. The wizard also allows for hard-coded filter criteria that do not need to be entered on the run control page.

## Map Definition - Map (Step 1 of 6) Page

Use the Map Definition - Map (Step 1 of 6) page (FS\_MAP\_DEF\_WIZ) to create identifying information for the map definition.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions >Data Export Import Utility >DEIU Map Definition**

This example illustrates the fields and controls on the Map Definition - Map (Step 1 of 6) page.

| Field or Control | Description                                                                                                                                                      |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Active</b>    | Select to indicate this map definition can be requested from the run control page and copied to create new map definitions.                                      |
| <b>System</b>    | Displays as selected to identify this map definition as provided by the Oracle system. Displays as deselected to indicate the map is defined by the user.        |
| <b>Version</b>   | Enter a value to identify the historical version of the map definition. The same map definition can have several versions.                                       |
| <b>Owner</b>     | Enter the owner ID for the owner of the map definition.                                                                                                          |
| <b>Public</b>    | Indicates that all system users can request DEIU processing based on this map definition. If deselected, enter the roles of users authorized to execute the map. |
| <b>Copy From</b> | Select to copy from an existing map definition. If selected, enter the map ID of the map definition to copy. Only Active map IDs can be selected.                |

## Map Definition - Source (Step 2 of 6) Page

Use the Map Definition - Source (Step 2 of 6) page (FS\_MAP\_SRC\_DEF\_WIZ) to identify the source, which can be a PeopleSoft document or a delimited file.

To export data, select a PeopleSoft document or a database table as the source and identify the corresponding PeopleSoft document.

Navigation:

Click the **Next** button on the Map - Step 1 of 6 page.

This example illustrates the fields and controls on the Map Definition - Source (Step 2 of 6) page.

| Field or Control      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PS Document</b>    | Select to indicate that the source type is a PeopleSoft document. You must indicate whether the physical type of the document is a <i>DB Table</i> (database table) or an <i>XML File</i> and enter the <b>Package</b> , <b>Document</b> , and <b>Version</b> that identify the PeopleSoft document. When you select <i>XML File</i> , you must also enter a character set. Select from <i>UTF-8</i> or <i>GBK18030</i> .                                                                        |
| <b>Delimited File</b> | Select to indicate that the source type is a delimited file. Enter values in these fields: <ul style="list-style-type: none"> <li><b>Layout ID:</b> Enter the layout ID that you defined on the <a href="#">Delimited File Layout Page</a>. You can click the <b>Definition</b> link to view the layout definition on the Delimited File Layout page.</li> <li><b>Character Set:</b> Enter a character set to use in the delimited file. Select from <i>UTF-8</i> or <i>GBK18030</i>.</li> </ul> |

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>File Layout (FIXED)</b> | <p>Select to indicate that the source type uses a fixed file layout format. Enter values in these fields:</p> <ul style="list-style-type: none"> <li>• <b>File Layout:</b> Select a file layout using the lookup prompt. The available layouts are defined with a <i>FIXED</i> file layout format in the <i>PeopleTools: Application Designer Developer's Guide</i>.</li> <li>• <b>Character Set:</b> Enter a character set for the fixed file layout format. Select from <i>UTF-8</i> or <i>GBK18030</i>.</li> </ul> |
| <b>PS Document Builder</b> | Click this link to access the Document Builder - Document page, where you can review the selected PeopleSoft document.                                                                                                                                                                                                                                                                                                                                                                                                |

## Map Definition - Target (Step 3 of 6) Page

Use the Map Definition - Target (Step 3 of 6) page (FS\_MAP\_TRG\_DEF\_WIZ) to identify the target, which can be a PeopleSoft document or a delimited file.

To export data to an XML file, select the option for an XML-formatted PeopleSoft document and identify the target PeopleSoft document.

Navigation:

Click the **Next** button on the Source - Step 2 of 6 page.

This example illustrates the fields and controls on the Map Definition - Target (Step 3 of 6) page.

This page uses the same fields as the Map Definition - Source (Step 2 of 6) page, except for defining the character set and the option to update only existing data in the database.

| <b>Field or Control</b> | <b>Description</b>                                                            |
|-------------------------|-------------------------------------------------------------------------------|
| <b>Character Set</b>    | Select the character set. This value appears in the XML header of the output. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Update Only Flag</b> | <p>Select this check box to update only existing data by matching key fields in the database. The default value is deselected.</p> <p>When this field is deselected, the system concurrently inserts new and updates existing data in the table. Any data that has no matching key fields can be listed in a log file.</p> <p>This option is available only when the Target Type is a <i>PS Document</i> with a physical type of <i>DB Table</i>.</p> |

## Map Definition - Detail (Step 4 of 6) Page

Use the Map Definition - Detail (Step 4 of 6) page (FS\_MAP\_DTL\_WIZ) to define map detail for source and target fields as well as the transformation type.

Navigation:

Click the **Next** button on the Target - Step 3 of 6 page.

This example illustrates the fields and controls on the Map Definition - Detail (Step 4 of 6) page.

Map Definition - Detail (Step 4 of 6)

Map ID: DEMO\_EXPORT\_INVOICE\_TO\_FIX    Version: 1    [Populate Source Fields](#)    [Populate Target Fields](#)

| Source Field | Source Field Name                       | Target Field | Target Field Name                   | Transform       |
|--------------|-----------------------------------------|--------------|-------------------------------------|-----------------|
| 1            |                                         | 0057         | BI_FIX.TEST_HEADER.RUN_CNTL_ID      | Audit Trail     |

| <b>Source Field and Target Field</b> | <p>Enter a pair of one source field and one target field for each row. The following exceptions apply:</p> <ul style="list-style-type: none"><li>• In the map detail grid, the target field must be populated, but the source field can be left blank.</li><li>• If the source field is blank, the target field must use the <i>Constant</i> transform type with a constant value parameter, sequence action, or run control action.</li><li>• You can map one source field to multiple target fields, if necessary.</li></ul> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Transform</b>        | <p>Select one of the following transformation rules for each source/target field pair:</p> <ul style="list-style-type: none"> <li>• <i>&lt;Blank&gt;</i> - The system copies the value of the source field into the target field without alteration or transformation.</li> <li>• <i>Audit Trail</i> - The system enters the Process Instance ID value, which can be used as a batch number to distinguish the batch of exported or imported data.</li> <li>• <i>Calculate</i> - The <i>Multiply</i> operator appears in the <b>Parameter1</b> column and the factor appears in the <b>Parameter2</b> column.<br/><br/>For example, you can use this to multiply amount values by 100 to remove the decimal point value in the target data set.</li> <li>• <i>Code Mappings</i> - Refer to predefined code mapping in the <b>Parameter1</b> and <b>Parameter2</b> columns.<br/><br/>For more information, see "Setting Up Common Components for Bank Statement, Payment, and Payment Acknowledgment Processing" (PeopleSoft Financial Gateway).</li> <li>• <i>Complex</i> - Use this transformation rule to define a series of transformation actions that are executed when specified conditions are met. When you select <i>Complex</i>, the <b>Edit Transform Property</b> secondary page automatically opens. You must add filter criteria and transformation types for operations used in the Map Definition - Detail (Step 4 of 6) page on the secondary page.</li> <li>• <i>Constant</i> - The system displays a constant string in the <b>Parameter1</b> column.</li> <li>• <i>DateTime</i> - Use when XML outbound data transformation is selected. Click the <b>Edit</b> button to enter the Date/DateTime format as business needs require.</li> <li>• <i>Related Field</i> - The <b>Parameter1</b> field must define a source field that has a related value and a document relationship.</li> <li>• <i>Runtime INFO</i> (runtime information): Enter an index in the <i>Index in Parameter</i> field to specify a runtime parameter such as a run control ID or a process instance.</li> <li>• <i>Sequence</i> - No parameters, and the target field increases incrementally by 1, starting from 1.</li> <li>• <i>XLAT</i> - The source field must be a field with translate values, and the <b>Parameter1</b> field must define the translate value type to use, such as XLAT long or XLAT short.</li> </ul> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Edit</b>             | Click the <b>Edit</b> button to access the Edit Transform Property secondary page, where you can edit the parameters for the selected transform value. See the next section for more information. |

## Editing Format Transformation Properties

Click the **Edit** button to access the Edit Transform Property secondary page, where you can edit the parameters for the selected transform rule.

In the **Choose Transform Type** field on the secondary page, select from the following options. The parameter fields shown vary depending on the selected transformation type. The system returns an error message when required field values are missing.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Code Mappings</i>    | Select an available <b>Code Map Group</b> and <b>Mapping Group</b> using the lookup prompts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <i>Related Field</i>    | Select an available related field using the lookup prompt.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <i>XLAT</i>             | Select an XLAT type from the drop-down list. Values are: <ul style="list-style-type: none"> <li>• <i>XLAT Long</i></li> <li>• <i>XLAT Short</i></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <i>Calculate</i>        | Define the calculation rule. Select the <i>Multiplier</i> operator and enter a factor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <i>Constant</i>         | Define the constant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <i>DateTime</i>         | Define the date/date time format. <ul style="list-style-type: none"> <li>• Outbound map definitions: Select <i>Source Field</i>, <i>Current Date</i>, or <i>Current DateTime</i> to output date time data. You can also define a date time format for generating target output data.</li> <li>• Inbound map definitions: Select <i>Source Field</i>, <i>Current Date</i>, or <i>Current DateTime</i> to input date time data. When you define source data as <i>Current Date</i> or <i>Current DateTime</i>, the <i>Input Source Format</i> field is unavailable.</li> </ul> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                            |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Concatenate</i>      | Enter fields that should be concatenated into one output string. The delimiter is an interval character that appears between each field value. Use <code>\b</code> to insert a space between fields in the output string.                                                                                     |
| <i>Trim</i>             | Select <i>Left Trim</i> or <i>Right Trim</i> to remove characters starting at the left or the right, respectively. In the <b>Remain Chars</b> (remaining characters) field, enter the number of characters that should remain in the output string.                                                           |
| <i>Pad</i>              | Select <i>Left Pad</i> or <i>Right Pad</i> to add characters starting at the left or the right, respectively. In the <b>Char</b> field, enter the character that the transformation adds to the source string. In the <b>Length</b> field, enter the total number of characters desired in the target string. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Pattern</i>          | <p>Use this transformation type to match a substring with a pattern that you want to replace in the output. Add the wildcard character “@” to the pattern to identify the length of the entire string to include in the output.</p> <p>For example, when you enter <i>abc@@@</i> in the <b>Pattern</b> field, you want to find substrings with “abc” and include three trailing characters in the output. If the entered source string is <i>dfabc123kkyabc456</i>, DEIU processing identifies the pattern “abc” and inserts “123” in the target field.</p> <ul style="list-style-type: none"> <li>Select the <b>Check Match Value</b> option to determine whether the pattern string matches a substring entered in the <b>Match Value</b> grid. Both the pattern string and substring length must match. If a substring is an exact match with one of the values, the substring appears in the output, otherwise the output is empty.</li> </ul> <p>In the scenario where the source string is “dfabc123kkyabc456” and the pattern is “abc@@@,” the target field would be empty because processing searches for the pattern “abc” and three trailing characters only, for a string of six total characters.</p> <ul style="list-style-type: none"> <li>Enter a value in the <b>Index</b> field to identify which occurrence of the pattern you want in the output. The default value is 1 to use the first occurrence of the pattern in the string.</li> </ul> <p>In the scenario where the source string is “dfabc123kkyabc456” and the pattern is “abc@@@,” the system inserts the substring “123” in the target field when the index value is 1, and “456” when the index value is 2.</p> |
| <i>Extract</i>          | <p>Enter <i>From</i> and <i>To</i> values to extract a substring beginning with a specified location and ending with a specified location.</p> <p>Use the <b>Without</b> field to specify a character or character sequence that should be excluded from the extracted substring.</p> <p>Select the <b>Check Match Value</b> check box to determine whether the extracted substring matches a string entered in the <b>Match Value</b> grid. If a string is an exact match with one of the values, the string appears in the output, otherwise the output is empty.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Envelope Header</i>  | <p>Use this transformation type to include an envelope header in the output. This transformation type is for use only when the target field is defined and the corresponding source field is blank in the map definition. The Envelope Header is not supported with Complex transformation.</p> <p>Select an operator from the drop-down list:</p> <ul style="list-style-type: none"> <li>• <i>Count</i> - When you select this option, you must also enter a source field in the <b>Select Operated Source</b> field. The Data Export Import Utility processing calculates the line count from this source field's parent node level, and enters the count total in the target field.</li> <li>• <i>SUM</i> - When you select this option, enter source fields that belong to the same node in the <b>Select Operated Source</b> field. The Data Export Import Utility processing calculates the total amount from this node's parent node level, and enters this amount in target field.</li> </ul> <p>The envelope header is executed once for each parent node record.</p>                                                                                          |
| <i>Envelope Footer</i>  | <p>Use this transformation type to include an envelope footer in the output. This transformation type is for use only when the target field is defined and the corresponding source field is blank in the map definition. The Envelope Footer is not supported with Complex transformation.</p> <p>Select an operator from the drop-down list:</p> <ul style="list-style-type: none"> <li>• <i>Count</i> - When you select this option, you must also enter a source field in the <b>Select Operated Source</b> field. The Data Export Import Utility processing calculates the line count when the source field changes, and does not affect the target field.</li> <li>• <i>SUM</i> - When you select this option, enter source fields that belong to the same node in the <b>Select Operated Source</b> field. The Data Export Import Utility processing calculates the total amount when the source field changes, and does not affect the target field.</li> </ul> <p>The envelope footer node is designated as a special node. When the output for the parent target node record is complete, the transformation automatically adds the envelope footer node.</p> |

## Using the Complex Format Transformation Method

Use Complex format transformation rule to define a series of transformation actions that are executed when specified conditions are met. You can select *Complex* in the **Transform** column for a field mapping that includes only a target field. Add filter criteria and transformation types for operations on the **Edit Transform Property** secondary page:

This example illustrates the fields and controls on the Edit Transform Property page for Complex transformation.

Map ID: DEMO\_EXPORT\_INVOICE\_TO\_FIX  
Target Field: BI\_FIX.BI\_HDR.BUSINESS\_UNIT

Complex Transform Groups

Group Criteria ☒ Always True

| Transform     | Parameter 1                     | Parameter 2  | Output | Edit |
|---------------|---------------------------------|--------------|--------|------|
| 1 Trim        | INVOICE.BI_HEADER.BUSINESS_UNIT | Right Trim 3 | :1     | Edit |
| 2 Extract     | INVOICE.BI_HEADER.INVOICE       | 7 8 N        | :2     | Edit |
| 3 Concatenate | :2 :1                           |              | :3     | Edit |

OK Cancel

Complex format transformation contains several branches or transformation groups, and each group includes two parts: Criteria and Transform List. Data Export Import Utility processing executes for the first branch or group where the criteria are true.

For example, a customer defines three groups in the complex transformation, each with its own criteria. The processing for the first group returns false, the second group returns true, and the third group returns true. Because the criteria for the second group are true, and the second group is the first group where the criteria are true, the system executes the second group for the complex transformation. The last output of the group is used in the target field.

| Field or Control      | Description                                                                                                                                                                                                                                                                                                                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Group Criteria</b> | Click the this button to access the Edit Criteria Grouping page, where you can insert the opening parenthesis just before one criterion and the closing parenthesis just after the last criterion in the grouping. For more information about criteria grouping, see the product documentation for <i>PeopleTools: Query</i> . |
| <b>Always True</b>    | Select this check box to clear all criteria in the <b>Criteria</b> grid. In this case the filter criteria do not apply and the branch is always included in the transformation.                                                                                                                                                |
| <b>Criteria grid</b>  | Enter criteria for each complex transformation group. The criteria fields are the same as the fields on the <a href="#">Map Definition - Detail (Step 4 of 6) Page</a> . If the Always True check box is selected, this grid is inactive and all groups are true.                                                              |

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                                                                                                                                            |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Transform List grid</b> | Enter the transformation method and operations as shown on the <a href="#">Map Definition - Detail (Step 4 of 6) Page</a> . The output is generated in sequence as shown in the <b>Output</b> column. The transformation method can use the source field for its process, and the transformation method can also use the output variable generated before it. |

## Using the Date/Date Time Format

The format field uses a string value, which indicates how you want the DateTime or Date value converted.

This table shows the valid values for the **Output Format** field.

**Note:** The values for format are case-sensitive. For example, if you specify a lowercase m, the system displays minutes, whereas an uppercase M displays the month.

| <b>Symbol</b> | <b>Definition</b> | <b>Type</b>   | <b>Example</b> |
|---------------|-------------------|---------------|----------------|
| G             | Era designator    | Text          | AD             |
| y             | Year              | Number        | 1996           |
| M             | Month in year     | Text&Number   | July&07        |
| d             | Day in month      | Number        | 10             |
| h             | Hour in am/pm     | Number (1-12) | 12             |
| H             | Hour in day       | Number (0-23) | 0              |
| m             | Minute in hour    | Number        | 30             |
| s             | Second in minute  | Number        | 55             |
| S             | Millisecond       | Number        | 978            |
| E             | Day in week       | Text          | Tuesday        |
| a             | am/pm marker      | Text          | PM             |

| <b>Symbol</b> | <b>Definition</b> | <b>Type</b>   | <b>Example</b> |
|---------------|-------------------|---------------|----------------|
| k             | Hour in day       | Number (1-24) | 24             |
| K             | Hour in am/pm     | Number (0-11) | 0              |
| '             | Escape for text   | Delimiter     |                |
| "             | Single quote      | Literal       | '              |

The number of letters determines the format, as explained in the following table:

| <b>Type</b> | <b>Format</b>                                                                                                                                                                                                           |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Text        | If 4 or more pattern letters are used, the full form is used. If fewer than 4 pattern letters are used, the short or abbreviated form is used, if one exists.                                                           |
| Number      | Use the minimum number of digits. Shorter numbers are zero-padded to this amount.<br><br>The system uses special handling for the year; that is, if the count of y is 2 (as in, yy), the year is truncated to 2 digits. |
| Text&Number | If 3 or more pattern letters are used, text is used. Otherwise, a number is used.                                                                                                                                       |

Characters in the format field that are not in the ranges of ['a'..'z'] and ['A'..'Z'] are treated as quoted text. For example, characters such as colon, period, blank, pound or hash, and at symbol (:, ., ' , '# and '@', respectively) appear in the resulting string even though they are not within single quotes.

A format that contains invalid letters results in a runtime error.

This table presents examples using a locale in the United States:

| <b>Format</b>                | <b>Result</b>             |
|------------------------------|---------------------------|
| "yyyy.MM.dd G 'at' hh:mm:ss" | 1996.07.10 AD at 15:08:56 |
| "EEE, MMM d, 'yy"            | Wed, July 10, '96         |
| "h:mm a"                     | 12:08 PM                  |
| "hh 'o'clock' a"             | 12 o'clock PM             |

| <i><b>Format</b></i>           | <i><b>Result</b></i>     |
|--------------------------------|--------------------------|
| "K:mm a"                       | 0:00 PM                  |
| "yyyyy.MMMMM.dd GGG hh:mm aaa" | 1996.July.10 AD 12:08 PM |

Map Definition - Filter (Step 5 of 6) Page

Use the Map Definition - Filter (Step 5 of 6) page (FS\_MAP\_FILTER\_WIZ) to add filter criteria.

The Filter page is available only when you have selected the PeopleSoft document source and the Physical Type is *DB Table*. The DEIU processing applies the filter to source data to retrieve a subset of the source data, and it controls which subset of the source data will be output to the target.

Navigation:

Click the **Next** button on the Detail - Step 4 of 6 page.

This example illustrates the fields and controls on the Map Definition - Filter (Step 5 of 6) page.

## Requesting the Data Export Import Process

Once a map has been defined, processing can be executed via the Data Export Import Request run control page, or it can be invoked from other Application Engine processes that you develop or customize. If executed via the run control page, the filter criteria defined for the map are displayed on the run control page, allowing you to narrow the dataset for processing.

## Page Used to Request the Data Export Import Process

| <b>File Name</b> | Enter a file name for export or import or click the <b>Select File</b> button to view available files and select a file. |

| <b>Field or Control</b>   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Archived Directory</b> | Enter the filename and path of the directory used to archive files that have been imported into system. This field appears for import processing only.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Runtime Parameters</b> | Enter runtime parameters used during the mapping process. Processing references the index in the file transformation.                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Criteria</b>           | Identify data structures and values for the system to selectively convert data. For example, based on the map definition, you can run the Data Export Import Utility Application Engine processing for a field with a specific value only.                                                                                                                                                                                                                                                                                       |
| <b>Actions</b>            | <p>Select <i>EDI</i> to indicate a processing request for EDI files. For more information, see "Staging EDI Payment Data Using the Data Export Import Utility" (PeopleSoft Receivables).</p> <p>Select <i>D&amp;B</i> to process a request to import Dun &amp; Bradstreet reports in batch by type. For more information, see "Importing Multiple Dun &amp; Bradstreet Reports by Type" (PeopleSoft Receivables).</p> <hr/> <p><b>Note:</b> When neither action type applies to the processing, deselect both options.</p> <hr/> |

## Using Application Data Sets to Migrate DEIU Data

PeopleSoft delivers Application Data Set (ADS) definitions to support data used by the Data Export Import Utility. Oracle's PeopleSoft recommends configuring the Data Export Import Utility in a test database, validating the data, and using ADS to migrate the data to a production environment.

For introductory information about data migration using ADS, see this documentation:

- [Understanding the PeopleSoft Data Migration Workbench.](#)
- [Using Application Data Sets](#)

### Delivered Application Data Set Names for DEIU Data

The following table lists the ADS definitions delivered in Data Set Designer that support the migration of DEIU data:

| <b>ADS Definition</b> | <b>ADS Usage</b>                                                                                                    | <b>Records in the Data Set</b>                                                                                                                                                                                                                                                              |
|-----------------------|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FS_MAP_DEFINITION     | This data set is used to move the map definition data for the Data Export Import Utility.                           | <p>This data set is built on the FS_MAP_HDR_TBL record. It includes these subrecords and related subrecords used for map definitions:</p> <ul style="list-style-type: none"> <li>• FS_MAP_DTL_TBL</li> <li>• FS_MAP_FILT_GRP</li> <li>• FS_MAP_SRC_HDR</li> <li>• FS_MAP_TRG_HDR</li> </ul> |
| FS_DOC_RELATION       | This data set is used to move document relationship data used by map definitions in the Data Export Import Utility. | This data set is built on the FS_DOC_RLTS_HDR record. It includes the FS_DOC_RLTS_GRP subrecord and related subrecords for document relationships.                                                                                                                                          |
| FS_FLAT_FILE          | This data set is used to move delimited file layout data used by map definitions in the Data Export Import Utility. | This data set is built on the FS_FLAT_FILE record and FS_FF_LANG subrecord, which are used for delimited file layouts.                                                                                                                                                                      |
| FS_MAP_RUN            | This data set is used to move run control data used for Data Export Import Utility processing.                      | This data set is built on the FS_MAP_REQUEST record, and FS_MAP_ATT and FS_MAP_RUN_PARA subrecords, which are used for transformation processing.                                                                                                                                           |

You can find complete information about setting up and using ADS definitions for data migration in the *PeopleTools: Lifecycle Management Guide*. This documentation covers the following topics:

- Using the Data Set Designer.
- Copying and comparing projects.
- Validating data sets.
- Implementing data set security.

# Using PeopleSoft Business Process Weaver

## Understanding PeopleSoft Business Process Weaver

PeopleSoft Business Process Weaver (BPW) provides a framework that allows processes (tasks), such as batch programs, to be defined and executed either in parallel or in sequence as part of a business process. You can create the User-Defined type of BPW business process (using the Business Process Definition page) that is executed within PeopleSoft BPW.

In addition, you can use Application Data Set (ADS) definitions to migrate the Business Process Definitions, Task Registry, Business Process Run Controls, and Business Process Weaver Application Class registry between databases—and ultimately to your production environments. For more information, see [Using the Data Migration Workbench for PeopleSoft Business Process Weaver](#).

### Prerequisites

Before using PeopleSoft Business Process Weaver, set up your system with the following:

- Integration Broker: Used to pass the process notification to the process so that status can be updated and successor steps can be triggered. In order for this to work, Integration Broker must be set up and Gateway, domain, and nodes are configured and activated. You must add local-to-local routing for service operation PRCS\_STATUS\_OPER and make sure its queue PSRF\_REPORTING\_FOLDERS is running. For more information, see also configuration and integration setup in the product documentation, *PeopleTools: Integration Broker Administration*.
- PeopleTools 8.54: Required specifically for push notifications (see [Setting Up and Using Business Process Notifications](#)) and ADS configuration (see [Using the Data Migration Workbench for PeopleSoft Business Process Weaver](#)), whereas the main functionality of Business Process Weaver notifications and ADS requires PeopleTools 8.53.
- PeopleTools 8.58.07: Required specifically for using Oracle JET libraries to create BPW business processes.

## Common Elements Used in PeopleSoft Business Process Weaver

The following table describes elements and terminology that are commonly used in PeopleSoft BPW:

| <i>Term</i>             | <i>Definition</i>                                                                                                                                                 |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Business Process</b> | Business Process is the highest level component that defines the flow of a task's execution. It is made up of Process Steps. Each process step executes one task. |

| <b>Term</b>             | <b>Definition</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process Steps</b>    | Process Steps are the sub-components of Business Process. Business Process is a collection of Process Steps, with optional dependencies defined between them.                                                                                                                                                                                                                                                                                                                                                            |
| <b>Task</b>             | A Task is a program or the business logic to be executed as part of the Business Process. A Task is defined in the Task Registry page. The most common tasks are Process Scheduler processes (Jobs). A Task is associated with a Process Step. One Step points to one Task, but the same Task can be associated with multiple Steps within a Business Process.                                                                                                                                                           |
| <b>Batch Programs</b>   | In BPW, Batch Programs are processes (or Jobs) that are defined in Process Scheduler.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Run Control</b>      | Run Control, as is the case in all PeopleSoft documentation, identifies the parameters or input data to the processes. At the Step Thread level, it is the same as the Process Scheduler Run Control. The Run Control can be associated with the Business Process, Process Thread, Step, or Step Thread.                                                                                                                                                                                                                 |
| <b>Process Thread</b>   | When setting up a Business Process Run Control, multiple Process Threads can be created with different run controls. Thus, different sets of input parameters and data can execute concurrent flows of the business process in parallel.                                                                                                                                                                                                                                                                                 |
| <b>Step Thread</b>      | At the Process Step level, (for example, when running an Application Engine program), the input parameters and data can be partitioned to create multiple Step Threads to run multiple copies of the Application Engine programs (with different run controls) concurrently. The step is not considered finished until all its step threads are finished.                                                                                                                                                                |
| <b>Process Instance</b> | When a process (program) is executed, an instance is created to track the execution. Similar to Run Control, several levels of tracking are associated with business process, process thread, step, and step thread. This documentation refers to them as Business Process Instance, Thread Instance, Step Instance, and Step Thread Instance. Since step thread is the level at which processing is scheduled for the Process Scheduler, Step Thread Instance corresponds to the Process Instance in Process Scheduler. |

## Data Model Overview of Business Process Weaver

There are four groups of tables within Business Process Weaver.

This diagram illustrates the BPW core model tables (1 of 2):

This diagram illustrates the BPW core model tables (2 of 2):

## Configuring Business Process Weaver

Use the BPW\_APPCLS\_TBL component to register application classes in Business Process Weaver.

Use the BPW\_ENTYPNT\_REG component to register Business Process entry points.

Use the BPW\_TASK\_TBL component to register Business Process Weaver tasks.

## Pages Used in Configuring Business Process Weaver

| <i><b>Page Name</b></i>                           | <i><b>Definition Name</b></i> | <i><b>Usage</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Application Class Registry Page</u>            | BPW_APPCLS_TBL                | <p>Register Application Classes that will be used in business processes. Any Event Handler or Task Handler used in a business process should be registered on this page.</p> <hr/> <p><b>Note:</b> Typically, only application developers use this page.</p> <hr/>                                                                                                                                                                           |
| <u>Business Process Entry Point Registry Page</u> | BPW_ENTYPNT_REG               | <p>Set up the Entry Point registry. This page is intended for administrators who need to set which process is run for a system- or site-defined transaction entry point. Entry points are used to initiate a business process from a transaction page outside of the Business Process Weaver components.</p> <hr/> <p><b>Note:</b> Typically, only application developers use this page.</p> <hr/>                                           |
| <u>Business Process Task Registry Page</u>        | BPW_TASK_TBL                  | <p>Set up the tasks that will be executed in the business processes. Application developers typically use this page to register the programs, such as Process Scheduler processes, that are part of business processes.</p> <p>Oracle delivers many defined tasks as System data. These are available to use in your Business Process Definitions.</p> <hr/> <p><b>Note:</b> Typically, only application developers use this page.</p> <hr/> |

### Application Class Registry Page

Use the Application Class Registry page (BPW\_APPCLS\_TBL) to register Application Classes that will be used in business processes. Any Event Handler or Task Handler used in a business process should be registered on this page.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions >Business Process Weaver >Application Class Registry**

This example illustrates the fields and controls on the Business Process Weaver - Application Class Registry page. You can find definitions for the fields and controls later on this page.

| Application Class Registry                             |                 |                                  |                         |                              |                       |

**Note:** This page is intended for application developer use.

The purpose of this registry is to assign a single ID to the application class so that a user does not need to know the full path to the application class in order to specify it in the Business Process Definition. It also provides the flexibility to switch the application class that is used without changing the Business Process Definition, run control, or instance.

## System Defined

The System Defined data is display-only. PeopleSoft delivers App Class IDs that are used by PeopleSoft applications.

## User Defined

You can add your own application classes within the **User Defined** group box. The App Class ID must not start with "PS\_".

| Field or Control | Description                                                                                                               |
|------------------|---------------------------------------------------------------------------------------------------------------------------|
| App Class ID     | Unique ID that the application developer assigns to the application class. It is used to reference the application class. |

| <b>Field or Control</b>                                                        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>App Class Type</b>                                                          | <p>Identifies the type of the application class being registered. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Event Handler</i> - The application class is used as event handler. It must be a subclass of BUSINESS_PROCESS_WEAVER:API:EventHandler.</li> <li>• <i>Task Handler</i> - The application class is used as task handler. It must be a subclass of BUSINESS_PROCESS_WEAVER:API:TaskHandler.</li> </ul>                                                                                                                                                                                                                                                                                                                           |
| <b>Root Package ID, Qualified Package/Class Path, and Application Class ID</b> | <p>These required fields provide the full path to the application class. When the data is saved, the fields are edited to ensure that the application class is a proper subclass of either Event Handler or Task Handler. To prevent users from removing an App Class ID that is still being used by Business Process Weaver, App Class ID and App Class Type are display-only, and the row cannot be deleted if the App Class ID is currently being used. App Class IDs are used in the:</p> <ul style="list-style-type: none"> <li>• Task Registry, either as Event Handler or Task Handler.</li> <li>• Business Process Definition.</li> <li>• Business Process Run Control.</li> <li>• Business Process Instance that has not been finished.</li> </ul> |

## Business Process Entry Point Registry Page

Use the Business Process Entry Point Registry page (BPW\_ENTYPNT\_REG\_GBL) to set up the Entry Point registry. This page is intended for administrators who need to set which process is run for a system- or site-defined transaction entry point. Entry points are used to initiate a business process from a transaction page outside of the Business Process Weaver components.

---

**Note:** A user must have access to the first step in the Business Process Weaver definition security data to initiate the Business Process Weaver defined in Entry Point Registry. See [Defining Business Process Weaver Security Options](#) for more information.

| <b>Business Process Type</b>                            | <p>Select from these values:</p> <ul style="list-style-type: none"> <li>• <i>SYS</i>: A system-defined business process.</li> <li>• <i>USER</i>: A user-defined business process.</li> </ul>                                                                                                                                                                                                              |
| <b>Process Weaver ID and Process Weaver Description</b> | Select from all defined Business Process Weaver processes.                                                                                                                                                                                                                                                                                                                                                |
| <b>Dynamic Run Control</b>                              | <p>Select from these values: <i>Y</i> (yes) or <i>N</i> (no).</p> <p><i>Yes</i> indicates that all BPW step run controls are configured at runtime in PeopleCode. There is no need to go to the Business Process Run Control page to configure step run control parameters. The Business Process Weaver step run controls must set up properly before the Business Process Weaver process is started.</p> |
| <b>Active</b>                                           | Indicates that an entry point is active or available to be used.                                                                                                                                                                                                                                                                                                                                          |

## Business Process Task Registry Page

Use the Business Process Task Registry page (BPW\_TASK\_TBL) to set up the tasks that will be executed in the Business Processes. Application developers typically use this page to register the programs, such as Process Scheduler processes, that are part of business processes.

Oracle delivers many defined tasks as System data. These are available to use in your Business Process Definitions.

| <b>Field or Control</b>                          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Task Type</b>                                 | <p>Indicates the type of task. Values are:</p> <ul style="list-style-type: none"> <li>• <i>App Class</i> - The following search fields appear: <b>Task Handler ID</b>, <b>Description</b>, and <b>Event Handler ID</b>. This option indicates that the task is associated with an App Class (Task Handler that is set up in the Application Class Registry page), which is responsible for executing the step. When this value is selected, you must enter the Task Handler ID, and optionally the Description and Event Handler ID.</li> <li>• <i>Job</i> - Indicates that the task is a Process Scheduler job. When this value is selected, you must enter a <b>Process Job Name</b>.</li> <li>• <i>Process</i> - Indicates that the task is a Process Scheduler process. When this value is selected, you must enter values for both <b>Process Type</b> and <b>Process Name</b>.</li> </ul> <hr/> <p><b>Note:</b> Processes that cannot be run individually should not be registered. For example, AR_POST1 through AR_POST8.</p> <hr/> |
| <b>Description</b>                               | Description of the task. If you do not enter a description, the field adopts the description of the App Class, Job, or Process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Process Type and Process Name</b>             | Fields are required when the <b>Task Type</b> is <i>Process</i> to specify the Process Type (for example, Application Engine) and the Process Name (for example, Application Engine program name).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Job Name</b>                                  | Required when the <b>Task Type</b> is <i>Job</i> to specify the Job to execute.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Task Handler ID, Task Handler Parameter</b>   | When the <b>Task Type</b> is <i>App Class</i> , the Task Handler ID must be entered to indicate the application class that is responsible for executing the task. Task Handler Parameter is optional and can be used to pass information to the Task Handler application class.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Event Handler ID, Event Handler Parameter</b> | If an event handler is associated with the task, enter its App Class ID as Event Handler ID. Optionally populate the Event Handler Parameter to provide any parameter value to the event handler.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Field or Control</b>                                             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Run Control Prompt Record</b>                                    | Enter the record name of the run control record used by the task. This usually is keyed by user ID and run control ID. If it is provided, BPW can check the existing run controls and display the run control status on the Business Process Run Control and Review pages.                                                                                                                     |
| <b>Run Control Required</b>                                         | If the Run Control Prompt Record is provided, you can indicate whether the run control is required before the task can be executed. If this is selected and if no run control is found, the step (task) cannot be started or executed. You will need to set up the run control and then manually start the step or choose to skip the step.                                                    |
| <b>Menu Name, Menu Bar Name, Item Name, Panel Name, Menu Action</b> | These fields enable you to set up the menu/component/page to the run control setup page for the task. If these are set up, you can open the run control setup page directly on the Business Process Run Control or Review pages. For batch processes or jobs, the menu action is always “Add”; therefore, Menu Action is not available when <b>Task Type</b> is <i>Process</i> or <i>Job</i> . |
| <b>Output Type, Output Format</b>                                   | Select the output type and format for the task.                                                                                                                                                                                                                                                                                                                                                |

Similar to the Application Class Registry page, if the **Task ID** is currently used by Business Process Weaver, then it cannot be changed or removed. The following are verified:

- Business Process Definition
- Business Process Run Control
- Business Process Instance that has not been finished

---

## Defining Business Processes

Use the BPW\_PROC\_DEFN component to define the business processes in Business Process Weaver.

### Pages Used in Defining Business Processes

| <b>Page Name</b>                        | <b>Definition Name</b> | <b>Usage</b>                                                                                                                               |
|-----------------------------------------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Business Process Definition Page</u> | BPW_PROC_DEFN          | Define the business processes. This page is intended for power users and administrators who understand how tasks are linked and processed. |

| <b>Page Name</b>                     | <b>Definition Name</b> | <b>Usage</b>                                                                                                              |
|--------------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <u>Select Step Predecessors Page</u> | BPW_PRI_STEPS_SEC      | Select the predecessors for each step, if applicable. Predecessors for the steps are used to define sequential execution. |

## Business Process Definition Page

Use the Business Process Definition page (BPW\_PROC\_DEFN) to define the business processes. This page is intended for power users and administrators who understand how tasks are linked and processed.

This example illustrates the fields and controls on the Business Process Definition page (2 of 2). You can find definitions for the fields and controls later on this page.

| Field or Control                                    | Description                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process Weaver ID</b>                            | Identifies a unique business process within the same Business Process Type.                                                                                                                                                                                                                                                                                       |
| <b>Business Process Type</b>                        | <p>Select the type of the business process:</p> <ul style="list-style-type: none"> <li><i>User Defined</i> - Select this business process type for those business processes that you defined.</li> <li><i>SYS (System)</i> - Defined and delivered by PeopleSoft. The system business processes are display-only. These definitions cannot be changed.</li> </ul> |
| <b>Description</b>                                  | Provide a short description of the business process.                                                                                                                                                                                                                                                                                                              |
| <b>Event Handler ID and Event Handler Parameter</b> | Select to attach an event handler and any parameter, at the process level, to the business process.                                                                                                                                                                                                                                                               |
| <b>Active</b>                                       | Select to indicate whether the business definition is active. If not selected, you are unable to create run controls to run the business process.                                                                                                                                                                                                                 |
| <b>Public</b>                                       | Select to allow all users to create a business process run control for this business process definition. When you select this option, the system disables the <b>Security</b> link.                                                                                                                                                                               |
| <b>Security</b>                                     | <p>Click this link to identify users who are authorized to create a business process run control for the process definition.</p> <p>To enable this link, deselect the <b>Public</b> check box.</p>                                                                                                                                                                |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                   |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Notifications</b>         | Click this link to access the Business Process Definition Notifications page, where you can set up notification criteria and delivery channel, including worklist, email, and push to the PeopleSoft Fluid User Interface Home page. |
| <b>Copy from</b>             | Click this button to copy steps from a different business process definition.                                                                                                                                                        |
| <b>Created Date/Time, By</b> | Identifies the time and the user who created this business process definition.                                                                                                                                                       |
| <b>Updated Date/Time, By</b> | Identifies the time and the user who last updated this business process definition.                                                                                                                                                  |

## Process Steps

Use the **Process Steps** group box to define the steps in the business process.

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                         |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Step ID</b>             | Identifies the process step. A unique ID, within the business process.                                                                                                                                     |
| <b>Task ID</b>             | Select the task to be executed in this step. The task must be set up in the Task Registry.                                                                                                                 |
| <b>Description</b>         | Enter a short description of the step. If you do not enter a value, the field populates by default from the description of the task.                                                                       |
| <b>Predecessors</b>        | Displays the predecessor steps that must be executed before this step can be executed. To select the predecessors, click the Select Predecessors button, which launches the Select Step Predecessors page. |
| <b>Select Predecessors</b> | Select this button to launch the Select Step Predecessors page to select step predecessors.                                                                                                                |
| <b>Pause Before</b>        | Select to indicate that the process should pause before executing the step.                                                                                                                                |

| <b>Field or Control</b>                          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Skip Step</b>                                 | Select to indicate that the step should be skipped. <b>Skip Step</b> , <b>Continue on Error</b> and <b>Pause After</b> are mutually exclusive. If <b>Skip Step</b> is selected, then <b>Continue on Error</b> and <b>Pause After</b> are not available. If <b>Continue on Error</b> or <b>Pause After</b> is selected, then <b>Skip Step</b> is not available. |
| <b>Continue on Error</b>                         | Select this check box to indicate that the process should continue to the next steps even if an error occurred during the execution of this step.                                                                                                                                                                                                              |
| <b>Pause After</b>                               | Select this check box to indicate that after this step completes, the process should not automatically continue to the next steps. Instead, the process should pause and wait for the user to resume the process.                                                                                                                                              |
| <b>Event Handler ID, Event Handler Parameter</b> | Select to attach an event handler and any parameter to the step. If an event handler is associated with the task (set up in Task Registry), then it will be overridden.                                                                                                                                                                                        |

## Graph

The Process graph shows the execution flow of the steps in the business process. Each node in the graph represents a step in the business process. The Step ID and Task ID are shown in the node. When you hover over the Step ID, the description of the step appears. If an icon is associated with the task, it appears in the top-left corner of the node.

The system automatically positions the nodes from left to right, top to bottom. However, with complex relationships between the steps, the layout may not be optimal. In this case, you can drag the nodes to rearrange them. The connection lines are automatically redrawn.

The width of the canvas that displays the graph is fixed. However, the height will automatically expand and shrink vertically (up to a certain height) as the user moves the node. The user can use the zoom buttons to zoom in or out.

These buttons enable users to manipulate the graph:

| <b>Field or Control</b>                                                                                    | <b>Description</b>                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  (Zoom In and Zoom Out) | <p>Click the plus (zoom in) icon or the minus (zoom out) icon to adjust the size of the graph. These buttons are available for graphs that are larger than the viewing area.</p> <p>When you reach the minimum zoom rate (0.5), the zoom out icon is not available. Adversely, when you reach the maximum zoom rate (2), the zoom in icon is not available.</p> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                     |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Preview</b>          | In most cases, when the data is updated in the <b>Process Steps</b> group box, the graph will be redrawn automatically to show the updates. However, in the event this does not happen automatically (for example, when deleting a step), you can click the <b>Preview</b> button to update the graph. |
| <b>Auto Layout</b>      | After you have moved the nodes to rearrange them, click the <b>Auto Layout</b> button if you want to restore the layout to the system version.                                                                                                                                                         |
| <b>Revert to Saved</b>  | If you have saved the previously changed node layout, this button will be available to restore to the saved layout after changes.                                                                                                                                                                      |

## Select Step Predecessors Page

Use the Select Step Predecessors page (BPW\_PRI\_STEPS\_SEC) to select predecessors for each step, if applicable. Predecessors for the steps are used to define sequential execution.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions > Business Process Weaver >Business Process Definition**

Click the **Select Predecessor** icon.

This example illustrates the fields and controls on the Select Step Predecessors page . You can find definitions for the fields and controls later on this page.

Business Process Definition  
Select Step Predecessors

Step ID STEP4      Step 4

| Select                              | Step ID | Task ID | Description | Predecessors       |
|-------------------------------------|---------|---------|-------------|--------------------|
| <input checked="" type="checkbox"/> | STEP1   | TASK2   | Step 1      | STEP2              |
| <input checked="" type="checkbox"/> | STEP2   | JOB1    | Step 2      |                    |
| <input type="checkbox"/>            | STEP3   | TASK1   | Step 3      | STEP1,STEP2        |
| <input type="checkbox"/>            | STEP5   | TASK1   | LYL_AE_1    | STEP1,STEP4,STEP5A |
| <input type="checkbox"/>            | STEP5A  | JOB2    | LYLJOB2     |                    |

OK Cancel

Select the predecessors for each step:

| <b>Field or Control</b> | <b>Description</b>                                                                                                                |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>Select</b>           | Select this check box to select the step as a predecessor. The check box is automatically selected if it was selected previously. |
| <b>OK</b>               | Select to confirm the selection or selection changes.                                                                             |
| <b>Cancel</b>           | Select to cancel the selection changes.                                                                                           |

## Defining Business Process Weaver Security Options

This topic discusses the options for Business Process Weaver security. Security can be set up at the business process definition level to manage security at the run control level, or security can be overridden at the run control level by authorized users or users within authorized roles.

## Pages Used to Define Business Process Weaver Security Options

| <b>Page Name</b>                         | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                                              |
|------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <u>Process Run Control Security Page</u> | BPW_PRCRUN_SEC         | Define and modify security access at the business process run control level. Only the users who have access to the first step in the run control security data can run the process run control.<br><br>See the <u>Business Process Run Control Page</u> for more information.             |

## Understanding Business Process Weaver Security

Business Process Weaver uses Process Scheduler to schedule and execute batch programs. Business Process Weaver follows the same security model as Process Scheduler.

- Process Group.

Before the Business Process is executed, the user's access to the batch programs Process Group is verified.

- Permission List.

The Process Profile permission defined in the Permission List for the user controls whether the user has access to view or update the Business Process. Users belonging to “Processscheduleradmin” have administrative capabilities for the Business Process.

There is also optional security set at the Business Process Definition level that allows you to control who can create and process run controls for the steps in a Business Process.

You can mark a Business Process Definition as Public, which means that anyone who can access the component can create a Run Control for the Business Process.

If you need to restrict who can create the Run Controls, you can set security on the Business Process Definition. The security can be inherited or set up when you create the Business Process Run Control.

---

**Note:** The system disables the Start Process button on the Business Process Weaver Run Control page when a user does not have access to the first step in the Business Process Weaver definition. A user must have access to both the first step in the definition and the first step in the run control security data to launch a business process.

---

Here are some examples where setting security might be needed:

- Where the user who created the Business Process Definition wants to authorize others to create the Business Process run controls
- Where one user creates the Business Process Run Control and wants another user to run it.
- Where a Business Process crosses multiple functional areas and the steps will be run by different users. In this case, you can give the users or roles access to create run controls or run the processes for the steps for which they are responsible.

## Business Process Security Page

Use the Business Process Security page (BPW\_PRCDEFN\_SEC) to define and modify security access at the process definition level. Only users who have access to the first step in the business process definition have permission to create a business process run control.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions >Business Process Weaver > Business Process Definition**

Click the **Security** link on the Business Process Definition page.

This example illustrates the fields and controls on the Business Process Security page. You can find definitions for the fields and controls later on this page.

Business Process Security

Business Process Type: System      Process Weaver ID: BI\_LOCDRAW

**Process Security**      Personalize | Find | View All | [Icon] | [Icon]      First 1 of 1 Last

OK      Cancel

| Field or Control | Description                                                                                                                                                           |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type of Security | Select from these options: <ul style="list-style-type: none"> <li>• <i>Role</i>: Identify access by role.</li> <li>• <i>User</i>: Identify access by user.</li> </ul> |
| Value            | Enter a role or user ID, depending on the selected type of security.                                                                                                  |
| All Steps        | Select this check box to indicate that the user or role has access to all of the business process steps in the process definition.                                    |
| Steps and Select | Click the <b>Select</b> lookup icon to select from available steps in the process definition. The step descriptions appear in the <b>Steps</b> field.                 |

## Process Run Control Security Page

Use the Process Run Control Security page (BPW\_PRCRUN\_SEC) to define and modify security access at the business process run control level. Only the creator of the business process run control can define or modify the security access at the business process run control level.

The same fields appear on the page as on the Business Process Security page at the business process definition level.

## Executing and Managing Business Processes

Use the BPW\_PROC\_RUN component to define the business process run control.

Use the BPW\_PROC\_INST component to review and control the business process execution.

Use the BPW\_PRCRUN\_REQ component to schedule business process execution.

Use the BPW\_PURGE\_REQ component to purge the business process instance data.

## Pages Used in Executing and Managing Business Processes

| <i>Page Name</i>                         | <i>Definition Name</i> | <i>Usage</i>                                                                                    |
|------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------|
| <u>Business Process Run Control Page</u> | BPW_PROC_RUN           | Set up run controls for the business process that provide data parameters to execute the tasks. |
| <u>Business Process Instance Page</u>    | BPW_PROC_INST          | Review and control the execution of business processes.                                         |
| <u>Business Process Runner Page</u>      | BPW_PRCRUN_REQ         | Schedule the execution of business processes.                                                   |
| <u>Business Process Purge Page</u>       | BPW_PURGE_REQ          | Set up the options to purge the business process instance data.                                 |

## Business Process Run Control Page

Use the Business Process Run Control page (BPW\_PROC\_RUN) to set up run controls for the business process. It provides data parameters to execute the tasks.

Navigation:

**Background Processes > Business Process Weaver > Business Process Run Control**

This example illustrates the fields and controls on the Business Process Run Control page (1 of 2).

Many of the fields are copied from the Business Process Definition page. See [Defining Business Processes](#).

## Run Control IDs

Run controls identify the data (parameters) that are the inputs to the processes/programs. Each run control is identified by a Run Control ID. Four levels of Run Control IDs are available. A lower level ID is generally provided by default from a higher level if a value is not provided. For example, the Thread Run Control ID is used for a step if the Step Run Control ID is not provided. Step Thread Run Control ID is the lowest level, and it is the Run Control ID that is passed to the Task (for example, batch process/job) when the task is executed.

From high (parent) to low (child):

- **Process Run Control ID** – This ID identifies the business process run control. It is unique per user and per business process.
- **Thread Run Control ID** – This ID identifies a process thread inside the business process. Each process thread should have a different Thread Run Control ID.
- **Step Run Control ID** – This Run Control ID is associated with the step. It is used to create a step thread if no step threads were created explicitly. If an event handler is associated with the step to create step thread run controls dynamically, then this value can be used to pass the “master” run control to the event handler to partition data and create step thread run controls. If the prompt record is set up in the Task Registry for the step’s task, then a user can select existing Run Control IDs from

the prompt table. However, regardless of whether a prompt table is set up, users can enter any desired value as the Step Run Control ID.

- **Step Thread Run Control ID** – This Run Control ID is associated with the step thread and is the run control passed to the task for execution. At least one step thread is created for each step. If a prompt record is set up in the Task Registry for the task of the parent step, then a user can select existing Run Control IDs from the prompt table. However, regardless of whether a prompt table is set up, users can enter any desired value as the Step Thread Run Control ID.

## Header

- **Server Name** – Optionally, you can specify the Process Scheduler Server to run the process.
- **Start Process** – After the run control is set up, you click on the **Start Process** button to start running the business process. You are automatically transferred to the Business Process Instance page with the created business process instance opened.
- **Refresh from Definition** – When a business process run control is created, the business process definition selected is copied. This action will ensure the integrity of the run control. If after the run control is created the definition is changed, then this message and the **Refresh** button will be available for users to sync with the definition manually. The business process run control will be recreated with the same process thread/step/thread run controls (if the step is not deleted).

## Process Threads/Steps

The Process Threads section allows you to create multiple process threads. The Process Steps section allows you to associate run controls to each step.

- **Multiple Threads**– In the Business Process Run Control page, users can create multiple step threads to manually partition the data and create multiple parallel executions. When users select this check box, the **Step Threads** button will be available to allow users to enter multiple step thread run controls, and the Step Run Control ID will be hidden. If a value is already entered in Step Run Control ID, then it will be used as the first Step Thread Run Control ID. This check box is disabled if multiple Step Thread Run Control IDs are already entered.
- **Step Threads** – When **Multiple Threads** is selected, this button is available for users to open a secondary page to enter the Step Thread Run Controls.
- **RC Status** – This value indicates the Run Control Status. Business Process Weaver (BPW) checks and displays the RC Status, depending on the value entered and the task setup and whether event handler will create dynamic run controls. The status icons are described below. You can hover over the icon to see a description, and click the icon to open a pop-up menu that provides more details. The **RC Status** field can have the following values:

| <i>Field or Control</i>                                                                                              | <i>Description</i>                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
|  <b>Run Control Setup Exists</b>  | Run control prompt record is set up in the associated task and the run control entered exists in the record.         |
|  <b>Run Control Setup Missing</b> | Run control prompt record is set up in the associated task and the run control entered does not exist in the record. |

| <i>Field or Control</i>                                                                                            | <i>Description</i>                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  <b>Run Control Not Required</b>  | Run control prompt record is set up in the associated task and the run control entered does not exist in the record.<br>However, the task registry indicates the run control is not required to execute the task. |
|  <b>Run Control Setup Unknown</b> | Run control prompt record is not set up in the associated task and it is not possible to check whether the run control exists.                                                                                    |
|  <b>Dynamic Run Control</b>       | The step is associated with an event handler, which indicates that dynamic run controls will be created.                                                                                                          |

- **Run Control Setup** – If the associated task is set up to have a Run Control Prompt Table and a Run Control Setup page in the Task Registry, then this button will be available to allow users to open the Run Control Setup page directly from the Business Process Run Control page. If the Run Control ID exists, then that run control is opened automatically. If the Run Control ID does not exist, a new run control is created and opened directly. In both cases, users must save (click **OK** or **Apply**) on the Run Control Setup page to save the updated or new run control. After returning from the Run Control Setup page, the RC Status will be refreshed.

## Graph

The Process Graph shows the flow of the process and the run controls for each step. It is displayed by the process thread.

- Each node shows the Step ID and its Run Control ID with RC Status for a step. You can hover over Step ID to see the step description and the task ID for the step. If an icon is associated with the task, it will appear at the top-left of the node.
- If Run Control Setup page is set up (for example, a **Run Control Setup** button is available in the Process Steps section), you can click the Run Control ID to open the run control setup page. Whether this is available is shown by hovering over the Run Control ID to see if the Run Control ID is highlighted.
- If the step has multiple step threads, then the Run Control ID appears as “(Multiple),” and you click it to display a pop-up menu for the list of the step thread run control IDs.

In addition, a count bubble is displayed at the top-right of the node.

- You can click **RC Status Legends** to toggle the display of the RS Status Legends.
- The graph is copied from the business process definition.

Since it has been set up in the Business Process Definition page, you are not able to move and rearrange the nodes. However, you can use the zoom in and zoom out icons, as you do on the [Business Process Definition Page](#).

## Business Process Instance Page

Use the Business Process Instance page (BPW\_PROC\_INST) to review and control the execution of business processes.

Navigation:

**Background Processes > Business Process Weaver > Business Process Instance**

This example illustrates the fields and controls on the Business Process Instance page (1 of 2). You can find definitions for the fields and controls later on this page.

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                             |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Started / By</b>            | Displays the date and time that the business process instance was started and the User ID that initiated the process.                                                                                                                                          |
| <b>Process Status / At</b>     | Displays the Process Status of the business process instance and the date and time when it was last updated. You can click the <b>Process Status</b> link to open the Process Log secondary page, which shows the log entries for the entire business process. |
| <b>Process Instance Number</b> | Displays the instance number that is assigned to the business process instance when it was started.                                                                                                                                                            |

## Business Process

This section provides information from the Business Process Run Control.

## Process Threads

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                         |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Started / By</b>        | Displays the date and time that the business process instance was started and the User ID that initiated the process thread.                                                                                                               |
| <b>Process Status / At</b> | Displays the Process Status of the process thread and the date and time when it was last updated. You can click the <b>Process Status</b> link to open the Process Log secondary page, which shows the log entries for the process thread. |

| <b>Field or Control</b>       | <b>Description</b>                                                   |
|-------------------------------|----------------------------------------------------------------------|
| <b>Thread Instance Number</b> | Displays the instance number that is assigned to the process thread. |

## Process Steps

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                              |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Action</b>               | Select a valid action from the drop-down menu to apply the action to the step. Valid actions are determined by the status and whether the user is the user who set up the run control or whether the user is a process scheduler administrator. |
| <b>Step ID</b>              | Click this link to open the Step Threads for the step.                                                                                                                                                                                          |
| <b>Process Status</b>       | Indicates the process status of the step. Click the link to open the Process Log secondary page, which shows the log entries only for the step.                                                                                                 |
| <b>Status Date/Time</b>     | The date/time the process status is updated. It is a link that users can click to open the Message Log secondary page, which shows the log entries for the step.                                                                                |
| <b>Step Instance Number</b> | The instance number assigned to the step by BPW.                                                                                                                                                                                                |

## Graph

The Process Graph shows the flow of the process and the process status for each step. It is displayed by process thread.

- Each node shows the Step ID and its process status and valid actions. You can hover over the Step ID to see the description and task ID for the step. If an icon is associated with the task, it will appear at the top-left of the node
- Click on the process status to open a pop-up menu to drill down to the Process Log, Message Log, and Step Threads secondary pages, similar to using the **Process Status**, **Status Date/Time**, and **Step ID** links in the Process Steps section. From the pop-up menu, you can also open the Reports and Log/Trace page to review the reports, the logs/trace, or both as generated from the process. For batch, this capability enables you to review the reports and logs/trace without navigating to the Report Manager or Process Monitor.
- An alert icon can appear in front of the process status to indicate whether an error, warning, or information message is available in the Process log, Message log, or both that you should review.
- If valid actions exist, you can click **Action** to open a pop-up menu with a list of the valid actions for the step and select the action to apply to the step, similar to using the Step Action drop-down menu in

the Process Steps section. If related actions are associated with the task, then the related actions will also appear in the pop-up menu. The related actions are created and performed by the event handler associated with the step.

- The graph is copied from the business process definition. Since it has been set up in the Business Process Definition page, users are not able to move and rearrange the nodes. However, you can use the zoom in and zoom out icons, as you do on the [Business Process Definition Page](#).

## Business Process Runner Page

Use the Business Process Runner page (BPW\_PRCRUN\_REQ) to schedule the execution of business processes.

Navigation:

**Background Processes > Business Process Weaver > Run Business Process Log**

This example illustrates the fields and controls on the Business Process Runner page. You can find definitions for the fields and controls later on this page.

| Business Process Run Controls |                    |                            |                         |           |                   |                                     |                             |          |                         |
|-------------------------------|--------------------|----------------------------|-------------------------|-----------|-------------------|-------------------------------------|-----------------------------|----------|-------------------------|
| *Business Process Type        | *Process Weaver ID | *Process Run Control Owner | *Process Run Control ID | RC Status | Run Control Setup | Enabled                             | Last Run                    | Instance | Process Instance Number |
| User Defined                  | AP_TO_GL           | VP1                        | AP_TO_GL_RUN            | ●         | 🔧                 | <input checked="" type="checkbox"/> | 08/18/2014 6:49:08.000000PM | 25190    | 25191                   |

Business processes can be started from the Business Process Run Control page (by clicking the **Start Process** button). However, if you want to schedule the business process or to run multiple business processes at the same time, you can use the transaction/page to run the business processes.

| Field or Control                                                                       | Description                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Run Control, Report Manager, Process Monitor, and Run</b>                           | These are common fields that exist on other Process Scheduler run control pages. When you click the <b>Run</b> button, you can schedule and run the Application Engine process, BPW_PRCRUN, which then starts the business processes that you have specified. |
| <b>Business Process Type, Business Process ID, and Business Process Run Control ID</b> | Specify the business process run controls to be executed. They are set on the Business Process Run Control page and are all required fields.                                                                                                                  |
| <b>RC Status</b>                                                                       | Indicates whether the selected Business Process Run Control ID exists                                                                                                                                                                                         |

| <b>Field or Control</b>                 | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Run Control Setup</b>                | <p>Opens the Business Process Run Control page as a modal component. It is available if the <b>Business Process Type</b>, <b>Business Process ID</b>, and <b>Business Process Run Control ID</b> fields are populated. If the selected Business Process Run Control already exists, it will be opened. If not, a new one with the selected run control ID will be created.</p> <hr/> <p><b>Note:</b> The new run control is not saved automatically; you must make changes and save.</p> <hr/> |
| <b>Enabled</b>                          | Select to enable a particular business process run control.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Last Run, Instance</b>               | <p>If the business processes have been executed previously, these fields indicate the date/time stamp and the Process Instance. The Instance link takes you to the Process Monitor (as modal component).</p>                                                                                                                                                                                                                                                                                   |
| <b>Business Process Instance Number</b> | The instance number of the business process instance of the previous execution. It is a link that takes users to the Business Process Instance (as modal component).                                                                                                                                                                                                                                                                                                                           |

## Business Process Purge Page

Use the Business Process Purge page (BPW\_PURGE\_REQ) to set up the options to purge the business process instance data.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions > Business Process Weaver >Business Process Purge**

This example illustrates the fields and controls on the Business Process Purge page. You can find definitions for the fields and controls later on this page.

### Business Process Purge

Run Control ID

| Instance Data Purge Criteria |                      |          |          |
|------------------------------|----------------------|----------|----------|
| Process Status               | Days Before Purge    | Last Run | Instance |
| Skipped                      | <input type="text"/> |          | -        |
| Cancelled                    | <input type="text"/> |          | -        |
| Complete                     | <input type="text"/> |          | -        |
| Compl w/ Warning             | <input type="text"/> |          | -        |
| Complete w/ Error            | <input type="text"/> |          | -        |
| Paused After                 | <input type="text"/> |          | -        |
| Not Started                  | <input type="text"/> |          | -        |
| Paused Before                | <input type="text"/> |          | -        |
| Started                      | <input type="text"/> |          | -        |
| On Hold                      | <input type="text"/> |          | -        |
| Error                        | <input type="text"/> |          | -        |

- **Run Control ID, Report Manager, Process Monitor, and Run** are the common fields that exist on other Process Scheduler run control pages. When you click the **Run** button, you can schedule and run the Application Engine process, BPW\_PURGE, with business process instance data specified.
- **Process Status** - The process status of the business process instances to be purged.
- **Days Before Purge** – Enter the number of days that must pass since the last status update on the business process instances before the data will be deleted.
- **Enabled** - Select this check box to enable this option. It is available only if Days Before Purge are specified.
- **Last Run, Instance** - If the data purge executed previously, then these fields indicate the date/time stamp and the Process Instance. Instance is a link that takes you to the Process Monitor (as a modal component).

## Setting Up and Using Business Process Notifications

The Business Process Weaver notification framework provides options for generating email, push, and worklist notifications during Business Process Weaver processes and steps identified on the process definition.

## Pages Used to Set Up and Use Business Process Notifications

| <b>Page Name</b>                                               | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                  |
|----------------------------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Business Process Definition Notifications Page</a> | BPW_NOTIFYDEF_SEC      | Select the process status, channel, and recipients for the notification. Channels include email, push, and worklist.                                                                                                                          |
| Business Process Instance Detail Notifications Page            | BPW_NOTIFYINST_SEC     | Provides display-only notification details for notifications that were in place when the process was run. Access from the Business Process Instance page.<br><br>See the <a href="#">Business Process Instance Page</a> for more information. |

## Understanding Business Process Notifications

A notification framework provides an easy way to specify notification options for Business Process Weaver processes and steps. Notification options are available on the Business Process Weaver (BPW) Process Definition page and can be inherited on the BPW Run Control page. The Run Control owner can override the options copied from the process definition.

The notifications can be set up to notify by User or Role (any number and combination) for specific Process Statuses. Notifications can be set at the Step or the Process level.

When the process is run, the notification data is carried over to the process instance.

The following are examples of each type of notification:

- Email

Email notifications use a generic template for all process status notifications and recipients. Email messages are sent in HTML format. Email note text is included in the email if it was entered when the notification was set up. The Email footer displays a URL link to the [Business Process Instance Page](#).

This example illustrates the fields and controls on the Email Notification in Business Process Weaver.

- Push

Push notification is functionality delivered in PeopleTools 8.54 and is available in fluid mode. Select the NavBar then Fluid Home. The flag icon shows a counter for new push notifications. Note that the counter disappears once you view the push notification list.

This example illustrates the fields and controls on the Push Notification in Business Process Weaver.

- Worklist

Worklist notifications can be viewed in the Worklist as Worklist Item: BPW Routing. In this example, the notification was for all completed steps. The link takes the user to the [Business Process Instance Page](#).

This example illustrates the fields and controls on the Worklist Notifications in Business Process Weaver.

## Business Process Definition Notifications Page

Use the Business Process Definition Notifications page (BPW\_NOTIFYDEF\_SEC) to select the process status, channel, and recipients for the notification. Channels include email, push, and worklist.

**Note:** Your system must run on PeopleTools 8.54 to use push notifications.

Navigation:

Click the **Notifications** link on the Business Process Definition page.

This example illustrates the fields and controls on the Business Process Definition Notifications page. You can find definitions for the fields and controls later on this page.

| Field or Control            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process Status</b>       | Select from a list of all existing process statuses except the <i>Not Started</i> value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Notification Channel</b> | <p>Select at least one channel from these options:</p> <ul style="list-style-type: none"> <li><i>Worklist</i> - Creates a worklist entry for the recipients. This is the default option if no channels have been selected for the process status.</li> <li><i>Email</i> - Sends an email to the recipients. In addition, a custom text field is available by recipient row with this option. The information entered in the <b>Email Note Text</b> field appears on the email.</li> <li><i>Push</i> - Generates a push notification item on the PeopleSoft Fluid User Interface Home page for the recipients. Push functionality is available only with PeopleTools 8.54.</li> </ul> <p>Notification links take the user to the <a href="#">Business Process Instance Page</a>.</p> |
| <b>Active</b>               | Select to indicate that this process status notification is available for use. When selected, the notification options associated with this processes status are available to be inherited on the Business Process Run Control page. At least one notification must be active on the process definition to inherit notifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Recipients

Recipients' routing preferences must include **Worklist User** and **Email User** on their user profile (go to **PeopleTools >Security >User Profiles >User Profiles - Workflow**) before they can receive email and worklist notifications.

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Recipient Type and Recipients</b> | Select from <i>User</i> or <i>Role</i> . <i>User</i> is the default value. Depending on the recipient type, enter recipients. The available recipients change based on the selected recipient type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Level</b>                         | <p>Select from these options:</p> <ul style="list-style-type: none"> <li>• <i>Process</i>: Indicates that the notification criteria apply to the process level. Select to notify recipients anywhere in the process that the Process Status occurs.</li> <li>• <i>Steps</i>: Select to notify recipients at specific steps in the process. If you select this option, then you can also select specific steps or All Steps for notification. If you select all steps, then for each step, if the Process status occurs, a notification will be sent.</li> </ul> <p>For example, you could set a notification for Process Status of Complete. If you set this at the Process level, the notification would be sent when the Process completes. If you set it at the Step Level for All Steps, then a notification would be sent when each step is Complete.</p> |
| <b>All Steps</b>                     | <p>Available only when the selected <b>Level</b> is <i>Steps</i>.</p> <p>Select the <b>All Steps</b> option to send a notification for the selected process status to recipients at each step of the process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Select and Steps</b>              | <p>Available for the Step level when the <b>All Steps</b> check box is not selected.</p> <p>Click the <b>Select</b> icon to open a secondary page, where you can select from the list of steps in the process definition. The <b>Steps</b> field lists the steps selected for notification.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Email Note Text</b>               | Available only when the selected <b>Notification Channel</b> is <i>Email</i> . Enter custom text that will be displayed on the email notification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## Working with Notifications for Entry Points

You can set up notifications associated with entry points in a business process.

For more information about entry points, see [Configuring Business Process Weaver](#).

These steps outline the setup necessary for entry point notifications:

1. Activate entry points in a business process on the [Business Process Entry Point Registry Page](#) by clicking the **Active** check box for each entry point and save your changes.
2. Set up the notification definition for the business process on which you want to activate alerts. You can set up notifications for one or more steps in the process.

Access the [Business Process Definition Notifications Page](#) for the Process Weaver ID of the business process and enter notification parameters. Select the **Active** check box and save your changes.

3. Create a run control for the business process on the [Business Process Run Control Page](#).

Select the **Inherit Notifications** check box to use the notification data that you set up on the Business Process Definition Notifications Page (see Step 2) and save your changes.

4. Navigate to the transaction run control page that is the entry point for the business process.

Select the run control created in Step 3, then click the **Launch** button to initiate the first step in the business process sequence.

Alternatively, you can opt to create a new run control and click the **Launch** button. With this option, all defined and active notifications for the business process are automatically inherited.

5. You can monitor the steps on the [Business Process Instance Page](#). To review the notification data, which is copied from the Business Process Definition Notifications Page, click the **Notifications** link.
6. View alerts and notifications generated during processing, such as in email or on the Worklist.

Push notifications appear in the page banner. The notification flag icon shows the number of alerts that have been generated. Click the alert links to access the push notifications on the Business Process Instance page.

---

**Note:** Push notification functionality is delivered in PeopleTools 8.54.

## Using the Data Migration Workbench for PeopleSoft Business Process Weaver

PeopleSoft Business Process Weaver provides a framework for stringing together key jobs. You can use the ADS definitions to migrate the Business Process Definitions, Task Registry, Business Process Run Controls, and Business Process Weaver Application Class registry between databases—and ultimately to your production environments.

The following table lists the delivered ADS definitions (delivered in Data Set Designer) to support the migration of PeopleSoft Business Process Weaver configuration data:

| <b><i>Delivered ADS to Support PeopleSoft Business Process Weaver</i></b> | <b><i>Application Data Set (ADS) Usage</i></b>                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMP_BPW_APPCLS_REG                                                       | <p>This data set includes the records that store the Application Classes used as task or event handlers in Business Process Weaver. Use this if you have created user-defined Application Classes. Select this data set on the Project Definition page to move the Application Class records.</p> <hr/> <p><b>Note:</b> The application classes must exist in the target database.</p> <hr/> |
| COMP_BPW_PROC_DEFN                                                        | <p>This data set includes the records that store the Business Process Definitions. Select this data set on the Project Definition page to move the Business Process Definitions.</p> <hr/> <p><b>Note:</b> If the Business Process uses user-defined Application Classes or tasks, these must be migrated before moving the Process Definition.</p> <hr/>                                    |
| COMP_BPW_TASK_REG                                                         | <p>This data set includes the records that store the Business Process Task Registry. Select this data set on the Data Migration Workbench – Project Definition page to move the Task Registry records.</p>                                                                                                                                                                                   |
| COMP_BPW_PROC_RUN                                                         | <p>This data set includes the records that store the Business Process Run Control definitions. Select this data set on the Data Migration Workbench – Project Definition page to move the Business Process Run Control definitions.</p>                                                                                                                                                      |

All relevant records are delivered in the Query Access Tree, QUERY\_TREE\_GL, within the BPW access group (PeopleTools, Security, Query Security, Query Access Manager).

PeopleSoft delivers an ADS Administrator permission list. For access, the BPW access group should be included on the Data Migration page within the Access Group Permissions and the proper access is granted on the Copy Compare Permissions.

See *PeopleTools: Security Administration, Permission Lists*.

## Defining Agency Location Codes

To set up agency location codes (ALCs) and Government-wide Accounting and Reporting (GWA) options for reporting, use the Agency Location component (AGENCY\_LOC\_CD)

### Pages Used to Define Agency Location Codes

| <b>Page Name</b>                                                  | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Agency Location Code Page</a>                         | AGENCY_LOC_CD          | Define agency location codes by SetID for federal payment schedules and reporting purposes and provide ALC name, location, address, and telephone information.                                                                                                                               |
| <a href="#">Agency Location Code - GWA Reporting Options Page</a> | AGENCY_LOC_CD2         | Assign a Business Activity and one or more effective dated Reporter Categories to an Agency Location Code. When an agency system is ready to pass the BETC code to the U.S. Treasury, the agency will select the appropriate Reporter Category so that the data can be reported as required. |
| <a href="#">IPAC Fields Page</a>                                  | ALC_IPAC_FLDS          | Define additional IPAC fields as required or optional.                                                                                                                                                                                                                                       |

## Understanding Agency Location Codes

The Agency Location Code (ALC) is an identifier that is used to define agencies by SetID for federal payment schedules and reporting purposes.

PeopleSoft supports IPAC Payments (PeopleSoft Payables) and Collections (PeopleSoft Receivables) as well as IPAC adjustments and zero dollar transactions. The department of Treasury and the IPAC system utilize bulk file formats to send and receive IPAC transactions. These formats are flat files that contain the necessary information to accurately report and account for payments, collections, adjustments, and zero dollar (info only) IPAC transaction types.

See "Processing Inbound IPAC Transactions" (PeopleSoft Payables).

See "Processing Outbound IPAC Transactions" (PeopleSoft Payables).

See "(USF) Submitting Transactions Between Agencies Using the IPAC System" (PeopleSoft Receivables).

For General Ledger, by using the ALC field on the Journal Header page, agencies can record cash transactions by journal entry directly to the general ledger. The journal header ALC field can be used by the system to select cash entries that were entered directly to the general ledger for reporting purposes. Journal entries made directly to the general ledger are usually made for the recording of undeposited cash, or collections. However, they can also be used to record cash reclassification for payments or collections.

Undeposited collections are amounts received by an agency that have yet to be deposited with the U.S. Treasury. Some agencies receive small amounts of money that they deposit once a week. Agencies book these amounts to an undeposited collections account until they are officially deposited with the U.S. Treasury.

## Common Terms Used for U.S. Government Agency Reporting

These terms are commonly used when referring to U.S. Government Reporting for Agencies:

| <b>Term</b>                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TAS (Treasury Account Symbol)   | Federal agencies are required to use Treasury Account Symbols (TAS) when reporting cash transactions to the U.S. government. They must also use valid combinations of TAS and Business Event Type Codes (BETC) that the Department of Treasury publishes when entering and reporting GWA Transactions.<br><br>See "Defining Component TAS and BETC Elements in Compliance with Federal Reporting Requirements" (PeopleSoft General Ledger) |
| BETC (Business Event Type Code) | This code identifies the business event type of a transaction for U.S. government reporting.                                                                                                                                                                                                                                                                                                                                               |
| IPAC Payment                    | Originates from PeopleSoft Payables and provides the IPAC system with payment-specific information using bulk file formats.                                                                                                                                                                                                                                                                                                                |
| IPAC Collection                 | Originates from PeopleSoft Receivables and provides the IPAC system with collection-specific information via bulk file formats.                                                                                                                                                                                                                                                                                                            |

## Agency Location Code Page

Use the Agency Location Code page (AGENCY\_LOC\_CD ) to define agency location codes by SetID for federal payment schedules and reporting purposes and provides for ALC name, location, address, and telephone information.

| Field or Control           | Description                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Agency Location Code       | Enter an 8-digit numeric value for the ALC.                                                                                                                                                                                                                                                                                                                                                |
| Non-Treasury Disbursed ALC | <div>Click if the ALC does not use the US Treasury to carry out payments or if the ALC is authorized to create its own payments outside the U.S. Treasury.</div> <div><b>Note:</b> If you set this option incorrectly for an ALC and save it, the incorrect ALC and option remains because you cannot delete the rows online. You must define a new ALC with the appropriate option.</div> |

### IPAC Document Reference Number

IPAC (Intra-governmental Payment and Collection system) is designed to transfer funds between government agencies and provide the capability to include descriptive information related to each transaction. This descriptive information assists with monthly reconciliation.

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                       |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>IPAC Bulk Prefix</b>  | Enter a 3-digit alphanumeric prefix to be used by PeopleSoft in creating unique document reference numbers (to differentiate from the Department of Treasury document reference numbers) for those Agency Location Codes that are used to send payments and collections. |
| <b>IPAC Bulk Counter</b> | Enter the beginning number from which to increment the sequential counter for the document reference number.                                                                                                                                                             |

See "Processing Outbound IPAC Transactions" (PeopleSoft Payables).

See "(USF) Submitting Transactions Between Agencies Using the IPAC System" (PeopleSoft Receivables).

## Sender DUNS

| <b>Field or Control</b>                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sender DUNS and Sender DUNS Plus 4</b> | <p>Enter a Sender DUNS and optionally a Sender DUNS Plus 4 value for the Sender Agency Location Code (ALC). These fields may be required as defined on the IPAC Fields page. (The Receiver DUNS and DUNS Plus 4 values are stored on the Customers - Additional General Information page).</p> <p>If the Sender DUNS and Sender DUNS Plus 4 are defined as required on the IPAC Fields page, the system uses these values as the Sender information defaults on the Receivable IPAC Transactions page.</p> <hr/> <p><b>Note:</b> The Sender and Receiver DUNS and DUNS Plus 4 fields will only appear as defaults on the IPAC transactions if they are marked as required on the <u>IPAC Fields Page</u>. This applies to items created online and from an external interface (therefore derived from the AR Posting program).</p> <hr/> |

## Agency Location Code - GWA Reporting Options Page

Use the GWA Reporting Options page (AGENCY\_LOC\_CD2) to assign a Business Activity and one or more effective dated Reporter Categories to an Agency Location Code.

When an agency system is ready to pass the BETC code to the U.S. Treasury, the agency will select the appropriate Reporter Category.

|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reporter Category</b> | <p>Select a GWA reporter category code for this agency location code. The reporter category can be equivalent to the business activity type, a subset of the business activity type, or a nonreporter. For example, if you select the IPAC and AP Payments business activity type, the valid selections are IPAC Only, AP Payments Only, IPAC and AP Payments, or Non Reporter.</p> <p>If either the Sender or Receiver ALC has one of the following four IPAC Reporter Category values, then that ALC agency is a GWA reporter for IPAC:</p> <ul style="list-style-type: none"> <li>• AP Payments Only</li> <li>• AP Payments and AR</li> <li>• AR Only</li> <li>• IPAC Only (Intra-Governmental Payment and Collection only)</li> <li>• IPAC and AP Payments</li> <li>• IPAC and AR</li> <li>• IPAC, AR, and AP Payments</li> <li>• Non Reporter</li> </ul> <p>The GWA Reporter Category code is specified to identify those interfaces, such as IPAC, CASHLINK and SPS/PAM, that have been modified to interface the Business Event Type Code (BETC) to cash activity with the U.S. Treasury.</p> <p>The GWA Reporter code that you define for each ALC drives functionality in the software related to the Partial SF 224 that:</p> <ul style="list-style-type: none"> <li>• Identifies which agency systems and ALC are ready to interface the BETC with its cash activity to the US Treasury.</li> <li>• Limits the data extracted for the Partial 224 based on the specific GWA Reporter Category code defined for the ALC.</li> <li>• Determines whether cash reclassification from one Treasury Symbol to another needs to be reported on the Partial 224</li> </ul> <p>The GWA Reporter category has no impact on CTA reporting.</p> |

## Business Activity and Reporter Category Combinations

The system requires that the business activity type and reporter category codes are a valid combination. The system displays a warning message if the combination is invalid.

IPAC Fields Page

Use the IPAC Fields page (ALC\_IPAC\_FLDS) to assign a Business Activity and one or more effective dated Reporter Categories to an Agency Location Code.

When an agency system is ready to pass the BETC code to the U.S. Treasury, the agency will select the appropriate Reporter Category so that the data can be excluded from the SF224 report.

| Field or Control              | Description                                                                                                                                                                                                                                                                                                                  |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Required Field and Field Name | Select the Required Field check box to define the selected field as required for this ALC. The IPAC fields available here are delivered as optional; fields that are by default required in PeopleSoft Financials are excluded.                                                                                              |
| Start Date and End Date       | For each Required Field that you select, you must also enter Start Date and End Date values. Effective dating enables an agency to designate fields as optional or required in the future, based on the agency’s business case needs. If you deselect a Required Field check box, the system clears the start and end dates. |

Setting Up Financials Audit Framework (Audit Logging)

To set up the Financials Audit Framework, use the following components:

- Enable Audit Logging (FS\_AUDITLOG\_ENABLE)
- Search Audit Logs (FS\_AUDITLOG\_SEARCH)

- Purge Audit Logs (FS\_AUDITLOG\_PURGE)

## Pages Used to Manage the Financials Audit Framework

| <b>Page Name</b>                 | <b>Definition Name</b> | <b>Usage</b>                                    |
|----------------------------------|------------------------|-------------------------------------------------|
| <u>Enable Audit Logging Page</u> | FS_AUDITLOG_ENABLE     | Enable audit logging by PeopleSoft application. |
| <u>Search Audit Logs Page</u>    | FS_AUDITLOG_SEARCH     | Search for audit logs.                          |
| <u>Purge Audit Logs Page</u>     | FS_AUDITLOG_PURGE      | Use this page to delete selected audit logs.    |

## Understanding the PeopleSoft Financials Audit Framework

The Financials Audit Framework (audit logging) provides efficient tracking of transaction processing that results in enhanced visibility and detailed audit trails. The framework is a centralized structure that allows you to identify the statuses of transactions to be tracked, including online views to search the audit log results by source, transaction and user. You can also archive and purge the audit logs.

Audit logging is available for the following transaction flows:

| <b>PeopleSoft Application</b> | <b>Audit Log Record</b> | <b>Transaction Flows</b>                                                                                                                                      |

The Search Audit Logs page accesses events that are populated in the audit record within the application if the corresponding events are enabled for audit logging. Enter your selection criteria and click the Search button to retrieve the requested audit information in the Search Results grid. The Search Criteria and Search Results fields depend upon the application and the documents that you choose to track.

You can also access the Search Audit Logs page from the View Audit Logs link that is provided on the transaction pages themselves, such as the Journal Entry - Lines page or the Bill Summary Info page, for example. The search result, by default, returns the audit trail for that particular journal or Billing invoice.

See "Enabling Journal Audit Logging" (PeopleSoft General Ledger).

See "Adding and Maintaining Asset Information" (PeopleSoft Asset Management).

See "Understanding Online Bill Entry" (PeopleSoft Billing).

| <b>Field or Control</b>      | <b>Description</b>                                                                                                  |
|------------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>Include Archive</b>       | Select to include archived logs in your search results                                                              |
| <b>Include Batch Changes</b> | Select to include logs of those transactions that are created in batch processes.                                   |
| <b>Include Purge Logs</b>    | Select to include deleted audit logs (logs that were purged using the Purge Audit Logs page) in the search display. |

## Purge Audit Logs Page

Audit log data can become very large as there are multiple events for each document and one particular document can be edited more than once. This data may need to be removed from the system from time to time for system maintenance.

Use the Purge Audit Logs page (FS\_AUDITLOG\_PURGE) to delete selected audit logs.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Audit Logging > Purge Audit Logs > Purge Audit Logs**

This example illustrates the fields and controls on the Purge Audit Logs page. You can find definitions for the fields and controls later on this page.

**Purge Audit Logs**

Application Name Asset Management Document Name AM ASSETS

**Search Criteria**

☐ Include Archive

☐ Include Batch Changes

Purge

Enter search criteria to retrieve the audit logs that you want to purge and click the **Purge** button. You are presented with a message that informs you of the number of rows to be deleted and asks if you want to continue with the deletion of these rows.

---

**Note:** The purge log cannot be purged.

---

## Setting Up Document Management Options

To set up document management options, use the following components:

- Documentum Product Options (DC\_PRODUCT)
- Documentum Component Options (DC\_PNLGRP)
- Documentum Page Options (DC\_PNL\_OPT)

## Pages Used to Set Up Document Management Options

| <i>Page Name</i>                                      | <i>Definition Name</i> | <i>Usage</i>                                                                                                                                                    |
|-------------------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Documentum Product Options Page</u>                | DC_PRODUCT             | Define which PeopleSoft products are Documentum-enabled and define the document management options for a product.                                               |
| <u>Documentum Component Options Page</u>              | DC_PNLGRP              | Used to control by product and component, the document management buttons that the system displays in document components.                                      |
| <u>Documentum Page Options - Page Options Page</u>    | DC_PNL_OPT             | Define Documentum page options by component name and by product and thus control pages within a given component. Use this page to make a page document-enabled. |
| <u>Documentum Page Options - Copy Properties Page</u> | DC_PNL3_OPT            | Control the prompting behavior for key fields related to Documentum-enabled pages.                                                                              |

## Understanding Setting Up Document Management Options

You can enable document management within selected PeopleSoft system pages. Set up active Documentum-enabled components within a PeopleSoft application and define valid buttons that are associated with each of the pages within these components. The PeopleSoft Documentum setup is efficient such that the list of components and individual pages from which to select, are those that are specifically designed for use with Documentum.

## Documentum Product Options Page

Use the Documentum Product Options page (DC\_PRODUCT) to define, which PeopleSoft products are Documentum-enabled and define the document management options for a product.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions >Documentum >Product Options >Product Options.**

**Note:** All fields on this page are case-sensitive.

| <b>Field or Control</b>                         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Document Enabled PS (PeopleSoft)/Product</b> | <p>Values are: <i>Engineering/Manufacturing</i> and <i>Enterprise</i>. The PeopleSoft system delivers Engineering/Manufacturing and Contracts Documentum-enabled pages. Use the Enterprise product option for Documentum-enabled components, which are used within multiple products.</p> <hr/> <p><b>Note:</b> These pages are preloaded with PeopleSoft Engineering information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Documentum Docbase Name</b>                  | <p>Displays the name of the document database that contains the documents that you'll access with PeopleSoft pages for a specific product. When you access the document-enabled PeopleSoft system pages, the system connects you to this document database.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Maximum Documents in Query</b>               | <p>Displays the maximum number of documents retrieved when you run document management system queries within the Documentum-enabled product. This setting prevents you from retrieving more documents than you deem reasonable at any one time.</p> <p>This is the maximum number of documents that the system returns to the Query Result page, not the maximum number of documents that results from the document management system query itself. For example, if you set this field to 10, then the system displays only 10 documents on the Query Results page, although 20 documents were found. The documents displayed are the first 10, ordered by document name.</p> <hr/> <p><b>Note:</b> This setting doesn't limit the maximum number of documents that can be associated on a page, just how many are returned by a single query.</p> |
| <b>Document Object Type</b>                     | <p>Displays the document management system object supertype that you want to use when you access documents within the document database. The object type controls the set of valid attributes of the documents within Documentum. This object type must contain all attributes (fields) that you'll reference from Engineering document query pages.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Use BU/Item/Rev Attributes</b> | This check box determines if you'll use PeopleSoft business unit, item number, and item revision fields when you run queries against the document database. You must first configure the Documentum attributes. To include all three fields—Business Unit (BUSINESS_UNIT), Item ID (INV_ITEM_ID), and Revisions (EN_REVISION)—within the document object type, use the Document Control Options page. |

**Note:** All Documentum product options on this page could also have been set at the installation level with the Installation Options - Documentum page.

[Documentum Page](#)

## Documentum Component Options Page

Use the Documentum Component Options (DC\_PNLGRP) page to control, by product and component, the document management buttons that the system displays in document components.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Documentum > Component Options**

Before you begin to manage documents, you need to decide what level of access capabilities you will make for each individual document component. For example, within PeopleSoft Manufacturing, you may want users to only view and query item revision documents, but in PeopleSoft Engineering you may want them to have full check-in and check-out access on the engineering change order (ECO).

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                   |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Component Name</b>              | Select the PeopleSoft Engineering or PeopleSoft Manufacturing access capabilities that you want.                                                     |
| <b>Document Enabled PS/Product</b> | Select <i>EG</i> (Engineering/Manufacturing) or <i>ER</i> (Enterprise).<br><br>If the component applies to more than one product, select <i>ER</i> . |
| <b>Component Type</b>              | Select whether the component is an inquiry or maintenance component.                                                                                 |

## Valid Actions

While maintenance components can have all **Valid Actions** buttons available, inquiry components can have only the **View Document Detail** and **View Document Contents** buttons available.

You can select any or all valid actions that you want to associate with specific components for specific products.

| <b>Field or Control</b>                                                           | <b>Description</b>             |
|-----------------------------------------------------------------------------------|--------------------------------|
|  | View document detail.          |
|  | Query the Documentum database. |
|  | View document contents.        |
|  | Launch Documentum.             |
|  | Fix or unfix versions.         |
|  | Copy associations.             |

Click a **Valid Actions** button to select and deselect the check boxes.

The system reflects the actions that you select by displaying the appropriate buttons on the relevant document pages. For example, if you select the **View Document Detail** and **Query** buttons for the Engineering Change Order document page, then when you access the ECO Documents page and other Documentum-enabled pages within the component. The **View** and **Query** buttons and disable the **Launch Documentum**, **Fix Vers**, **UnFix Vers**, and **Copy** buttons.

If you don't set a specific action as valid on the component level, then users cannot carry out that action on any pages.

## Documentum Page Options - Page Options Page

Use the Page Options page (DC\_PNL\_OPT) to define Documentum page options by component name and by product and thus control pages within a given component.

Use this page to make a page document-enabled.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Documentum > Page Options > Page Options**

**Note:** Prior to entering information on this page, you must set up Documentum component options on the Documentum Component Options page.

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Documentum Enabled Page</b> | The available options consist of a list of Documentum-enabled pages from the specified component. You can remove or add document-enabled pages.                                                                                   |
| <b>Page Name</b>               | Enter a unique name for each Documentum-enabled page.<br>Because the page name acts as a reference during copying, it is important to create unique names if a page is being added to more than one component.                    |
| <b>Link Record Name</b>        | Displays the record that contains Documentum document information for that page, including object ID, document name, and title. This field is required but is not an editable field. It appears here for reference purposes only. |

**Note:** An individual page can belong to several different components.

## Documentum Page Options - Copy Properties Page

Use the Copy Properties page (DC\_PNL3\_OPT) to control the prompting behavior for key fields related to Documentum-enabled pages.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Documentum > Page Options > Copy Properties**

This example illustrates the fields and controls on the Documentum Page Options - Copy Properties page. You can find definitions for the fields and controls later on this page.

Page Options | **Copy Properties**

Component Name: COMP\_LIST      Component List Inquiry

PS Product: Eng      Engineering / Manufacturing

Page With Copy Capability      Find | View All      First 1 of 1 Last

Documentum Enabled Page: SF\_COMP\_LIST\_DC      + -

Production Component List

Copy Parameters      Personalize | Find | View All      First 1-3 of 5 Last

| Key Fields    | Field Description | Display Field            | Prompt TableName     | Default Value        |
|---------------|-------------------|--------------------------|----------------------|----------------------|
| BUSINESS_UNIT | Unit              | <input type="checkbox"/> | <input type="text"/> | <input type="text"/> |
| COMPONENT_ID  | Component ID      | <input type="checkbox"/> | <input type="text"/> | <input type="text"/> |
| OP_SEQUENCE   | Op Seq            | <input type="checkbox"/> | <input type="text"/> | <input type="text"/> |

The selections on this page determine what you see when you click the **Copy Document Associations** button on a Documentum-enabled page. These copy properties are preset for you for all existing Documentum-enabled pages and need not be modified.

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                               |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Key Fields</b>        | Displays key fields for the link record.                                                                                                         |
| <b>Display Field</b>     | Determines if a key field appears at copy time for the Documentum-enabled page.                                                                  |
| <b>Prompt Table Name</b> | Displays the prompt table or view that the system uses to display valid values for the key field when you copy from the Documentum-enabled page. |
| <b>Default Value</b>     | The system uses this value for display purposes at copy time.                                                                                    |

The combination of display field and default value gives you the flexibility to predefine copy options. For example, clearing the display field and defining a default value of *PR* for the key field BOM\_STATE ensures that only production BOM document associations are copied.

---

**Warning!** Copy properties are preset for all existing Documentum-enabled pages and, in most cases, should not be modified. Incorrectly modifying values on this page can cause unpredictable prompting results when you copy document associations.

---

## Setting Up Resources

This topic discusses how to set up common resource information.

### Page Used to Set Up Resource Information

| <b>Page Name</b>           | <b>Definition Name</b> | <b>Usage</b>                        |
|----------------------------|------------------------|-------------------------------------|
| <u>Resource Setup Page</u> | INSTALLATION_RESRC     | Set up common resource information. |

### Resource Setup Page

Use the Resource Setup page (INSTALLATION\_RESRC) to set up common resource information.

Navigation:

**Set Up Financials/Supply Chain >Common Definitions >Resources Data >Setup Common Resource Options**

This example illustrates the fields and controls on the Resource Setup page. You can find definitions for the fields and controls later on this page.

## Resource Options

| <b>Field or Control</b>                                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Non-Employees to be established as Resources</b> | <p>Select this option to enable individuals who do not have a personnel status of <i>Employee</i> to be eligible to become resources.</p> <p>By selecting this option you can control the eligibility of non-employee resources; maintain their competencies, accomplishments, and schedules; search for non-employee resources; and assign non-employee resources to projects and service orders. In addition, you can view the resources' personnel status throughout the system so that you can distinguish between employees and non-employees.</p>                                                                                                                                                                                                                                     |
| <b>Email Notification to Manager</b>                      | <p>Select to generate automatic email to the resource manager when competencies and accomplishments are updated in the FSCM database. This field is activated if you use the FSCM database as the source database for employee competency information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Evaluation Type</b>                                    | <p>Select the type of evaluation to be used as the valid competency profile in Resource Management. This field is activated if you use the HRMS database as the source database for employee competency information.</p> <p>PeopleSoft HRMS Profile Management enables evaluations to be performed by an employee (self), manager, customer, and so on. In Resource Management you can decide which type of evaluation appears on the resource profile and is used by the Resource Match engine to calculate Competency fit scores. This option only applies if you use the HRMS database as your source database for competencies and accomplishments. If you use the FSCM database as the only source for competencies and accomplishments, the evaluation type value is <i>Self</i>.</p> |

## Resource Options - Data Source

Select the source for your employee and non-employee data.

| <b>Field or Control</b>                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PeopleSoft HCM 8.0+</b>                        | <p>Select <b>PeopleSoft HCM 8.0+</b> to maintain employee and non-employee source data only in PeopleSoft Human Resources (HRMS). This allows the full synchronization process to update (overwrite) resource competencies and accomplishments in Resource Management with information from HRMS.</p> <p>You can review any employee or non-employee records in Resource Management, regardless of the source database.</p>                                                                                                                                                                                                                                                                                                                                                    |
| <b>PeopleSoft HCM8.0+ and Financials Database</b> | <p>Select to maintain employee data records in HRMS, and non-employee data records—employee IDs (EMPLIDs) with a Personnel Status field (PER_STATUS) value of <i>N</i>—in HRMS and Resource Management. This option allows you to create non-employee data records in either database.</p> <p>This option directs the full synchronization process to update the Financials database with HRMS data <i>only</i> for non-employee data records that originate in HRMS. Non-employee data records that originate in Resource Management are not affected by the full synchronization process.</p> <p>In Resource Management you can review employee and non-employee records originating from HRMS, and update non-employee records that originate from Resource Management.</p> |
| <b>PeopleSoft Financials Database</b>             | <p>Select to maintain employee and non-employee data records only in the Financials database.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Setting Up Locations

Use the following components to set up locations:

- Country (COUNTRY\_TABLE)
- State (STATE\_DEFN)
- Location (LOCATION\_TBL)
- Country Statistics (COUNTRY\_STAT)

Use the LOCATION\_TBL\_CI component interface to load data into the tables for these components.

## Pages Used to Set Up Locations

| <b>Page Name</b>                   | <b>Definition Name</b> | <b>Usage</b>                                                                                                 |
|------------------------------------|------------------------|--------------------------------------------------------------------------------------------------------------|
| <u>Country Description Page</u>    | COUNTRY_DEFN           | Add or review country descriptions.                                                                          |
| <u>Address Format Page</u>         | ADDR_FORMAT_TABLE      | Select address fields for a country so that the system displays addresses in the appropriate format.         |
| <u>Location - State Page</u>       | STATE_DEFN             | Add or review a state or province code.                                                                      |
| <u>Location - Definition Page</u>  | LOCATION_TBL           | Define a location code, such as a branch office or shipping office.                                          |
| <u>Location - Detail Page</u>      | LOCATION_TBL2          | Add details to a location definition.                                                                        |
| <u>Country Stat Rpt Codes Page</u> | COUNTRY_STAT_PNL       | Enter country codes requiring reporting as well as reporting options for each country code that you specify. |

## Country Description Page

Use the Country Description page (COUNTRY\_DEFN) to add or review country descriptions.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Country > Country Description**

| <b>Field or Control</b>                               | <b>Description</b>                                                                                                                                                                                                  |
|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>2-Char Country Code</b> (2-character country code) | Enter a two-character country code to meet value added tax (VAT) requirements. The system appends the 2-character country code to the VAT registration ID, which is a 20-character number to meet VAT requirements. |
| <b>EU Member State</b> (European Union member state)  | Select if the country is a member of the European Union. You must select this option to include a country in prompts for Intrastat reporting.                                                                       |

## Address Format Page

Use the Address Format page (ADDR\_FORMAT\_TABLE) to select address fields for a country so that the system displays addresses in the appropriate format.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Country > Address Format**

| <b>Field or Control</b>                                                                | <b>Description</b>                                                                                                                                                   |
|----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Available</b>                                                                       | Select to make the field available everywhere in the system.                                                                                                         |
| <b>Label</b>                                                                           | Enter the name of the field as it is to appear on the page.<br><br>For example, change the value in the <b>State</b> field to <i>Province</i> or <i>Department</i> . |
| <b>Address 1, Address 2, Address 3, and Address 4</b>                                  | Select the address fields normally used by the country that you selected.                                                                                            |
| <b>Postal Search</b>                                                                   | Select if you want the Postal Search link to appear on the Location Definition page. This link enables the user to find a postal delivery code.                      |
| <b>Number 1, Number 2, House Type, Field 1 Label, Field 2 Label, and Field 3 Label</b> | If you select these fields, they replace the <b>Address 4</b> field on pages.                                                                                        |

## Location - State Page

Use the Location - State page (STATE\_DEFN) to add or review a state or province code.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Define State or Province Code**

| <b>Field or Control</b> | <b>Description</b>                                                        |
|-------------------------|---------------------------------------------------------------------------|
| <b>Numeric Code</b>     | Use to assign a number to a state or province for statistics and reports. |
| <b>State</b>            | Enter a state abbreviation.                                               |
| <b>Country</b>          | Select a country.                                                         |
| <b>Description</b>      | Enter a description for the state or locality.                            |

## Location - Definition Page

Use the Location Definition page (LOCATION\_TBL) to define a location code, such as a branch office or shipping office.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Setting Up Locations > Location Definition**

This example illustrates the fields and controls on the Location Definition page. You can find definitions for the fields and controls later on this page.

Enter a description and populate the fields for the telephone and address information.

The address fields that appear are defined on the Address Format page.

| Field or Control               | Description                                                                                                                                                                                                                                       |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>In City Limit</b>           | <p>Select if you use a third-party tax provider product and if you need to access additional city tax information.</p> <hr/> <p><b>Note:</b> The In City Limit is not used by the Vertex O Series tax solution.</p> <hr/>                         |
| <b>Alternate Character Set</b> | <p>Click to access a page where you can enter or display (or both) field values in an alternate character set. This button appears only if you selected the Alternate Character check box on the User Preferences - Overall Preferences page.</p> |
| <b>Address 2 and Address 3</b> | <p>If not used at this location, you can enter values in these fields to provide more information about the location, such as <i>Printing Division</i> or <i>Western Annex</i>.</p>                                                               |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Address 4</b>        | The space available to display addresses on a page is limited. The <b>Address 4</b> field will not appear if you select some of the optional address fields on the Address Format page, such as Number 1 or House Type.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>GeoCode</b>          | <p>This value is used by third-party tax applications to link a location definition to their tax calculation algorithms. If no geocode has been selected, this field displays a <b>Lookup</b> link. Clicking the geocode value or Lookup link accesses the Tax GeoCode Selection page, where you select a geocode value for the location definition.</p> <p>You <i>must</i> select a geocode for each location definition in order to integrate properly with your third-party tax application.</p> <p>Error messages that appear for this field are issued by the third-party application, and more information is provided in the third-party application documentation.</p> |

## Location - Detail Page

Use the Location Detail page (LOCATION\_TBL2) to add details to a location definition.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Setting Up Locations > Location Detail**

This example illustrates the fields and controls on the Location Detail page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Location Detail' page. At the top, there are tabs for 'Location Definition' and 'Location Detail'. The 'Location Detail' tab is active. Below the tabs, there is a header bar with 'Find | View All' and navigation controls 'First 1 of 1 Last'. The main content area includes fields for 'SetID' (SHARE), 'Location Code' (US001), and 'USA - New York'. There is an 'Attention To' text box and a large 'Location Detail' text area. Below these are 'Label Format' options: 'Carton Label', 'Usage Label', and 'Shipping Container Label', each with a dropdown menu. At the bottom is an 'ID Numbers' table with columns 'Type', 'SetID', and 'ID Number'. The table shows one entry: 'GLN' with '222222222222'.

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Attention To</b>             | Enter the name that appears in the attention area of correspondence for this location.                                                                                                                                                                                                                                                                                                                                                   |
| <b>Location Detail</b>          | Enter additional information that you want to maintain for this location.                                                                                                                                                                                                                                                                                                                                                                |
| <b>Carton Label</b>             | Select the default format for printing carton labels for this location.                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Shipping Container Label</b> | Select the default format for printing shipping container labels for this location.                                                                                                                                                                                                                                                                                                                                                      |
| <b>Usage Label</b>              | Select the default format for printing item usage labels for this location.                                                                                                                                                                                                                                                                                                                                                              |
| <b>ID Numbers</b>               | <p>Use this section to specify any additional types of identifiers for the location. The system supports a list of number types, such as GLN (a 13-digit numeric value) or DUNS number. Except for GLNs, other ID numbers entered here are not validated at save.</p> <p>The SetID field is not available for edit for all ID types. For each location specified in the system, you can only enter one ID number for any given type.</p> |

## Country Stat Rpt Codes Page

Use the Country Stat Rpt Codes (country statistics report codes) page (COUNTRY\_STAT\_PNL) to enter country codes requiring reporting as well as reporting options for each country code that you specify.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Country Statistics > Country Stat Rpt Codes**

This example illustrates the fields and controls on the Country Stat Rpt Codes. You can find definitions for the fields and controls later on this page.

**Country Stat Rpt Codes**

Country:

| Country | Use for Statistics                  | 2-Char VAT | 2-Char Intrastat | 2-Char ESL | 3-Dig Cntry | 7-Char Descr | SUT Flag |
|---------|-------------------------------------|------------|------------------|------------|-------------|--------------|----------|
| GRC     | <input checked="" type="checkbox"/> | EL         | GR               | EL         | 009         | GRIECH       | None     |
| GRD     | <input checked="" type="checkbox"/> | GD         | GD               | GD         | 473         | GRENAD       | Sales    |
| GRL     | <input checked="" type="checkbox"/> | GL         | GL               | GL         | 406         | GROENL       | Use      |

| Field or Control                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Use for Statistics</b>                             | If you select this check box, the country recognized by the International Standards Organization (ISO) is also recognized by the European statistical offices as a country. If Use for Statistics is not selected, the country is recognized by the ISO but not by the European statistical offices. If this is the case, the European statistical offices assume that the country is a part of another country for the purposes of producing statistical data such as the GNP. For example, for ISO, the Principality of Monaco has its own country code, while for statistical purposes, Monaco is assumed to be part of France, and therefore has the same statistical country code as France. |
| <b>2-Char VAT</b> (two character value added tax)     | Enter a 2-character country code to meet special value added tax (VAT) requirements for certain countries. This is useful for some countries that are not using the ISO 3166 country code in conjunction with their VAT registration ID. When appending the 2-character country code to the VAT registration ID, Financials accesses this separate country code. The VAT registration ID is a 20-character number to meet VAT requirements.                                                                                                                                                                                                                                                       |
| <b>2-Char Intrastat</b> (two character intrastat)     | Displays the country identifier for the European statistical offices. This code is printed on some of the Intrastat Layout forms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>2-Char ESL</b> (two-character European Sales List) | Used for countries that are members of the European Union. This code is usually printed as part of the VAT Registration Information on the European Sales List (ESL).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Field or Control</b>                           | <b>Description</b>                                                                                                                                                                                     |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>3-Dig Cntry</b> (three-digit country)          | Used as a country identifier for the European statistical offices, the code is usually printed on the Intrastat report to identify source or destination countries to or from which goods are shipped. |
| <b>7-Char Descr</b> (seven-character description) | Used for the German international EFT layout to identify countries into or from which electronic funds are sent or received.                                                                           |
| <b>SUT Flag</b> (sales and use tax flag)          | Informational only.                                                                                                                                                                                    |

## Establishing Regions and Region Codes

To establish regions and region codes, use the Region Type Codes component (REGION\_TYPE) and the Region Codes component (REGION\_CD).

Use the REGION\_CD\_CI and REGION\_TYPE\_CI component interfaces to add data in the tables for these components.

## Pages Used to Establish Regions and Region Codes

| <b>Page Name</b>                                                       | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                    |
|------------------------------------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#"><u>Region Type Codes Page</u></a>                          | REGION_TYPE            | Identify the type of activity that takes place in a particular region.                                                                                          |
| <a href="#"><u>Region Codes Page</u></a>                               | REGION_CD              | Establish territories for sales, to establish special pricing schemes for a geographic region, or to aid in determining the distribution of accounting entries. |
| <a href="#"><u>Procurement Region Supplier Order Location Page</u></a> | REGION_VNDR_LOC        | Select an appropriate supplier SetID, supplier ID, and supplier location for a specific region.                                                                 |
| <a href="#"><u>Region Code Ship To Locations Page</u></a>              | REGION_SHIPTO          | Identify multiple Ship To locations within a designated contract domain.                                                                                        |
| <a href="#"><u>Region Codes Address Page</u></a>                       | REGION_CD_ADDR         | Enter location information if the region code represents a physical entity.                                                                                     |

## Understanding Establishing Regions and Region Codes

Regions may or may not be physical entities or geographical areas. Regions have three categorization levels: category, type, and code. It's important to understand the different uses of each level. For example, you might define a service center region type where equipment repairs take place. You might also use region types to identify the placement of a region in a reporting hierarchy, branch region, headquarters, and so on.

Region categories are system-defined and determine the function of the region code. For example, you can associate a customer with many region codes, each with a different purpose. You might associate a customer with one region code for pricing, but a different region code for determining transit lead times.

When a region does represent a physical entity, the region code has the same characteristics as a business—that is, address and language. You can use region codes to define territories for your sales force or to establish special pricing schemes for a geographic region. You can also use region codes to aid in determining the distribution of accounting entries.

### Example of Region Code Use

Region codes are useful when you want to assign territories to your sales force—east, west, south, and north. To use region codes in this way, first define a region type called Sales, and then define East, West, South, and North region codes. When you create each one, select Team Member as the region category ID. When you set up your team members, select the appropriate region code on the Team Member Personal Data page.

## Region Type Codes Page

Use the Region Type Codes page (REGION\_TYPE) to identify the type of activity that takes place in a particular region.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Region Type Codes > Region Type Codes**

## Region Codes Page

Use the Region Codes page (REGION\_CD) to establish territories for sales, to establish special pricing schemes for a geographic region, or to aid in determining the distribution of accounting entries.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Region Codes > Region Codes**

This example illustrates the fields and controls on the Region Codes page.

The screenshot shows the 'Region Codes' page with the following details:

- Tabs:** 'Region Codes' (selected) and 'Region Codes Address'.
- Labels:** 'SetID' (SHARE), 'Region Code' (WEST), and 'Region Category ID' (Procurement).
- Region Code Information:** Includes a search icon, pagination (1 of 1), and a 'View All' link.
- Form Fields:**
  - \*Effective Date: 01/01/1900 (with a calendar icon)
  - \*Status: Active (with a dropdown arrow)
  - Description: Western United States
- Buttons:** '+' and '-' buttons.
- Link:** 'Supplier Order Location' at the bottom.

Regions can be physical entities or geographical areas. When a region represents a physical entity, the region code has the same characteristics as a business, that is, address and language.

When you create a new region code, the system prompts you for a region category ID. The Region Category ID determines which fields display on the Region Codes page. PeopleSoft provides the following Region Category ID values:

- *Accounting*
- *Alternate Sources of Supply*
- *Backorder/Reservation*
- *Contract Domain*
- *Contracts*
- *Freight*
- *Pricing*
- *Procurement*
- *Reporting*
- *Resource Management*
- *Team Member*
- *Transportation*

Use the *Procurement* value for regular procurement regions. If you want to set up alternative region types for the region codes, use the Region Types page.

For Manufacturer and Distributor contract types, use the *Contract Domain* Region Category ID. You may consider this option when creating separate regions for multiple applications like PeopleSoft Purchasing and PeopleSoft Services Procurement.

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                       |

## Procurement Region Supplier Order Location Page

Use the Procurement Region Supplier Order Location page (REGION\_VNDR\_LOC) to select an appropriate supplier SetID, supplier ID, and supplier location for a specific region.

Navigation:

Click the **Supplier Order Location** link on the Region Codes page.

| <b>Field or Control</b>  | <b>Description</b>                                                                              |
|--------------------------|-------------------------------------------------------------------------------------------------|
| <b>Supplier SetID</b>    | Select the supplier SetID for the supplier that you want to associate with the sourcing region. |
| <b>Supplier ID</b>       | Select the supplier you want to associate with the sourcing region.                             |
| <b>Supplier Location</b> | Select the location for the supplier.                                                           |

## Region Code Ship To Locations Page

Use the Region Code Ship To Locations page (REGION\_SHIPTO) to identify multiple Ship To locations within a designated contract domain.

Navigation:

Click the **Ship to Location** link on the Region Codes page.

This example illustrates the fields and controls on the Region Code Ship To Locations page.

**Region Code Ship To Locations**

SetID: SHARE      Region Code: NA

Region Category ID:      Contract Domain:      Description:

**Ship To Locations**

| *Ship To SetID | *Ship To Location | Description      |   |   |
|----------------|-------------------|------------------|---|---|
| SHARE          | US015             | USA - Pleasanton | + | - |

OK      Cancel

Add a line for each Ship To location you wish to include with the contract domain. Include the **Ship To SetID** and **Ship To Location** for each line.

This information helps control access and pricing on contracts by business unit, contract domain, and ShipTo.

For more information, see:

"Contract and Vendor Rebate Controls Page" (PeopleSoft Source to Settle Common Information),  
Contract Usage Options

"Creating Distributor and Manufacturer Contracts" (PeopleSoft Source to Settle Common Information)

## Region Codes Address Page

Use the Region Codes Address page (REGION\_CD\_ADDR) to enter location information if the region code represents a physical entity.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Location > Region Codes > Region Codes Address**

## Establishing Distribution Rules and Sets

To establish distribution rules and sets, use the Distribution Sets component (DST\_SET\_OM) and the Distribution Rules component (DST\_RULE\_OM).

## Pages Used to Establish Distribution Rules and Sets

| <i><b>Page Name</b></i>        | <i><b>Definition Name</b></i> | <i><b>Usage</b></i>                                                                                                                                                                |
|--------------------------------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Distribution Sets Page</u>  | DST_SET_OM                    | Define distribution sets. Establish the distribution codes on the Distribution Pcts (percentages) page.                                                                            |
| <u>Distribution Rules Page</u> | DST_RULE_OM                   | Define distribution rules to determine the order in which the system searches for matches against the distribution sets matrix when sales orders, contracts, and RMAs are entered. |

## Understanding Establishing Distribution Rules and Sets

If you want to determine account distribution by products, product groups, customers, customer groups, regions, order groups, Inventory business units, or any combination of these elements on a sales order, RMA, or contract, you need to define distribution sets and distribution rules. You can have multiple revenue, discount, and surcharge codes as long as they add up to 100 percent.

---

**Note:** Contracts, claimback contracts, and RMAs use only revenue codes.

---

Distribution sets assign account distribution information to combinations of defining elements.

During business unit setup, you can select one distribution rule on the PeopleSoft Order Management business unit Accounting and Billing page for sales orders and RMAs. Distribution rules for claimback contracts can be defined on the PeopleSoft Order Management business unit Claimback Settings page. All sales orders entered for that business unit use the distribution rule you select to determine default distribution codes. If the distribution rule fails to find a distribution set match for the sales order, the order uses the distribution codes that you define on the Accounting and Billing Options page. You can override default distribution codes during order entry on the Distribution Accounts page. For RMAs, use the revenue distribution accounts to change the revenue code.

The distribution code for contracts is established on the BU Definition page.

## Sales Order Distribution Set and Rule Example

You base all your account distributions on the warehouse (Inventory business unit) and your products are shipped from four warehouses: A, B, C, and D, except for a single large customer (customer ID 50006). Sales order information for that customer is distributed to unique revenue, discount, and surcharge accounts.

You establish a distribution set with 50006 entered in the Customer field. Then you set up four additional distribution sets, each with a separate value in the Inventory business unit field and unique revenue, discount, and surcharge codes. Next, you establish a distribution rule called Default, with two lines. The first line has the Customer field selected, and the second has the Inv BU field selected.

You link the Default distribution rule with Order Management business unit OM2.

The system searches all sales orders entered in business unit OM2. When you enter orders for customer 50006, the system stops searching at the first line of the distribution rule after finding a match on Customer. The distribution codes that you established in the distribution set for customer 50006 access by default the orders. For all other orders, it continues to line 2, where it finds a match on Inventory business unit. The distribution codes that you selected in the distribution set for Inventory business unit A access by default all the sales orders referencing Inventory business unit A. The same is true for sales orders referencing warehouses B, C, and D.

## Distribution Sets Page

Use the Distribution Sets page (DST\_SET\_OM) to define distribution sets.

Establish the distribution codes on the Distribution Pcts (percentages) page.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Distribution Accounting > Distribution Sets**

| <i><b>Field or Control</b></i>                                                                               | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Valid options are: <i>Claimback Contract</i> , <i>Contracts</i> , <i>Sales Orders</i> , and <i>Returned Material Authorization</i> .                                                                                                                                                                               |
| <b>Product ID, Product Group, Customer, Customer Group, Region, Order Group, and Inventory Business Unit</b> | <p>You can elect to set up account distribution for an individual or a combination of these elements. Select the fields from the available options.</p> <hr/> <p><b>Note:</b> Your combinations cannot include both an individual customer and a customer group or an individual product and a product group.<br/>"Customer" refers to the ship-to customer.</p> <hr/> |
| <b>Distribution Type</b>                                                                                     | The distribution type is an attribute of the distribution set. It is not used in deriving distribution accounting.                                                                                                                                                                                                                                                     |

## Distribution Rules Page

Use the Distribution Rules page (DST\_RULE\_OM) to define distribution rules to determine the order in which the system searches for matches against the distribution sets matrix when sales orders, contracts, and RMAs are entered.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Distribution Accounting > Distribution Rules**

---

**Note:** The same elements that you selected on the Distribution Sets page appear as options on this page.

---

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default</b>          | Select to indicate that this distribution rule is the rule to be used when no other rule is specified on the business unit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Sequence Number</b>  | <p>Determines the search hierarchy for matches with distribution sets. Once a single match is found, the system uses the set to assign distribution codes to the order, contract, claimback contract, or RMA.</p> <p>Select the most detailed set definition for the first sequence and continue entering combinations in decreasing granularity. In other words, if you define a distribution set that applies to a single customer, select only the <b>Customer</b> check box on the first line. If you define a distribution set that applies to a region and customer group, select those check boxes on the second line, and so on.</p> <hr/> <p><b>Note:</b> "Customer" refers to the ship-to customer.</p> <hr/> |

## Establishing Carriers

Use the Carrier Table (CARRIER\_TBL) component to define carrier information.

## Pages Used to Define Carriers

| <b>Page Name</b>                        | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                   |
|-----------------------------------------|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Carrier Page</u>                     | CARRIER_TBL            | Define the carriers that your organization uses to move freight.                                                                               |
| Carrier - Phone Information Page        | CARRIER_PHONEPOP       | <p>Enter phone information for the carrier.</p> <p>See the <u>Carrier Page</u> for more information.</p>                                       |
| Carrier URL<br><u>Carrier Page</u>      | CARRIER_URL            | Set up shipment tracking for deliveries made by external carriers. Enable freight charge calculation by a third-party freight application.     |
| <u>Carrier Calendar Exceptions Page</u> | CARRIER_SHIP_EXCPT     | Establish the times that the carrier does not drive or make pickups in order to calculate transportation lead times as accurately as possible. |

## Understanding Carrier Information

PeopleSoft is delivered with many enterprise integration points (EIPs) to send and receive carrier data with a third-party system or another PeopleSoft application, such as CRM. These EIPs are service operations within PeopleSoft Integration Broker.

PeopleSoft delivers the service operations in PeopleSoft Integration Broker with a default status of *Inactive*. You must activate each service operation before attempting to send or receive data from a third-party source or another PeopleSoft system, such as CRM.

Use the information in the table below and refer to the setup instruction in the PeopleSoft Supply Chain Management Integrations product documentation, "Setting Up Service Operations" (PeopleSoft Supply Chain Management Integration).

| <b>Service Operation</b> | <b>Direction and Type</b> | <b>Handlers</b>               | <b>Chunking Available</b> | <b>Integrates With</b> |
|--------------------------|---------------------------|-------------------------------|---------------------------|------------------------|
| CARRIER_FULLSYNC         | Outbound<br>Asynchronous  |                               |                           | CRM, Third-party       |
| CARRIER_FULLSYNC_EFF     | Outbound<br>Asynchronous  |                               |                           | CRM, Third-party       |
| CARRIER_SYNC             | Inbound<br>Asynchronous   | CarrierSync<br>CarrierSyncEff |                           | CRM, Third-party       |
| CARRIER_SYNC_EFF         | Outbound<br>Asynchronous  |                               |                           | CRM, Third-party       |

See the product documentation for *PeopleTools: PeopleSoft Integration Broker*.

## Carrier Page

Use the Carrier page (CARRIER\_TBL) to define the carriers that your organization uses to move freight.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Carrier Table > Carrier**

This example illustrates the fields and controls on the Carrier page. You can find definitions for the fields and controls later on this page.

**Note:** On the Country – Address Format page, you can select the fields that appear for each country and assign user-defined labels. As a result, the fields that you see on this page may not match the fields described.

| Field or Control | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Language Code    | The language used for printing carrier information on bills of lading and shipping manifests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Freight Vendor   | <p>Select one of the following options:</p> <p><i>Internal:</i> The system calculates freight charges internally using PeopleSoft Order Management.</p> <p><i>External:</i> A third-party provider calculates freight charges. To have freight charges calculated externally, you must install a third-party freight and handling application.</p> <p><b>Note:</b> You can set this option on the Carrier URL page, as well as here on the Carrier page. When you change the Freight Vendor option on the Carrier URL page, the system updates this page.</p> |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Taxpayer ID</b>              | This value is used on export documents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Freight Forwarder</b>        | Carriers that you identify as freight forwarders by selecting this check box may be designated as intermediate consignees on export documents used in PeopleSoft Order Management and PeopleSoft Inventory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Network ID</b>               | Used to identify the carrier for electronic data interchange (EDI) transmittal of shipping documents such as bills of lading and shipping manifests. This field is informational only and is not used in any standard PeopleSoft reports or transactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Exclude From TMS Extract</b> | Select to exclude demand lines that have this carrier from the download process to a transportation management system (TMS). If selected, any order line that has this carrier assigned to it will be bypassed during the TMS download selection process for the TMS Order Release TMS_ORDER_RELEASE enterprise integration point (EIP).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Defer Depletions Default</b> | <p>Using the Defer Depletions feature, you can delay the billing and costing of inventory shipments until you have completed any non-system procedures, such as obtaining signed deliver receipts from your customer or other needed paperwork. See the PeopleSoft Inventory product documentation, "Delaying the Billing and Costing of Inventory Shipments" (PeopleSoft Inventory). The options are:</p> <ul style="list-style-type: none"> <li>• <i>Default Defer Depletions to N:</i> Select to default the value of <i>N</i> (no) to the Defer Depletions field on each demand line that uses this carrier ID. This default is applied during the shipping processes and overrides the value set on the Setup Fulfillment-Shipping page (business unit level).</li> <li>• <i>Default Defer Depletions to Y:</i> Select to default the value of <i>Y</i> (yes) to the Defer Depletions field on each demand line that uses this carrier ID. This default is applied during the shipping processes and overrides the value set on the Setup Fulfillment-Shipping page (business unit level).</li> <li>• <i>Use Business Unit Dflt Value:</i> Select to use the default value defined in the Defer Depletions Default field of the Setup Fulfillment-Shipping page (business unit level).</li> </ul> |
| <b>Country</b>                  | The address fields are dynamically controlled by your selection in this field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>View Phone Information</b>   | Click to access the Phone Information page, where you can enter phone information for this carrier.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Carrier URL Page

Use the Carrier URL page (CARRIER\_URL) to set up shipment tracking for deliveries made by external carriers.

Enable freight charge calculation by a third-party freight application.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Carrier Table > Carrier URL**

**Note:** You can set the **Freight Vendor** option on the Carrier page, as well as here on the Carrier URL page. When you change the **Freight Vendor** option on the Carrier page, the system updates this page simultaneously.

| <i><b>Field or Control</b></i>                                    | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interlink DLL Name</b>                                         | <p>If you select <i>External</i>, you can override the value in this field with the full path for another DLL. Your third-party freight and handling application provides your system with the default interlink .DLL name when you calculate freight charges at shipping. If you want to link directly to a specific carrier such as Federal Express, then enter the interlink .DLL name of that carrier here, overriding the default interlink .DLL name. You obtain a carrier's interlink .DLL name from the carrier.</p> <p>You can add your own customized .DLL link to this fields to integrate to your carrier to obtain freight.</p> <hr/> <p><b>Note:</b> The default interlink DDL name does not appear in this field, but the default is active unless you enter another interlink DLL name.</p>                            |
| <b>Track by PRO Number URL and Track by PRO Number URL Suffix</b> | <p>You can use one of two numbers to track orders externally PRO number or order number. The PRO number is the tracking number assigned to a shipment by an outside carrier. The third-party freight and handling application retrieves this number when you calculate a shipment charge. You can track by the PRO number on the Shipping page from the Order Tracking inquiry.</p> <p>If you want to track shipments by PRO number, enter values in both fields. These are the portions of the outside carrier's order tracking page URL that precede and follow the PRO number, respectively. You get the outside carrier's order tracking page URL from that outside carrier. The system inserts the PRO number in the URL (between the prefix and the suffix) when you click Track by PRO Number on the Shipping History page.</p> |

| <b>Field or Control</b>                                       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Track by Order ID URL and Track by Order ID URL Suffix</b> | <p>The order number is the number that you assign to a sales order that you create in PeopleSoft Order Management. You can track by the order number from the Order Tracking - Track by Order page and the Stock Requests page.</p> <p>If you want to track shipments by PeopleSoft Order Management sales order number, enter values in both fields. These are the portions of the outside carrier's order tracking page URL that precede and follow the sales order number, respectively. You get the outside carrier's order tracking page URL from the outside carrier. The system inserts the order number in the URL (between the prefix and the suffix) when you click Track By Order on the Order Tracking page.</p> <hr/> <p><b>Note:</b> When you track shipments by order number, most outside carriers still assign PRO numbers to your shipments. They enable you to attach your internal sales order number to your shipments, giving those shipments two identifying numbers, the PRO number (assigned by the external carrier) and the order number (assigned by you). The PRO number acts as the primary key. Because most outside carriers allow multiple customers to use the same order numbers (ten shipments from ten different merchants may all carry the same order number), but do not repeat PRO numbers, you may find it more efficient to track orders by PRO number.</p> <hr/> |

## Carrier Calendar Exceptions Page

Use the Carrier Calendar Exceptions page (CARRIER\_SHIP\_EXCPT) to establish the times that the carrier does not drive or make pickups in order to calculate transportation lead times as accurately as possible.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Carrier Table > Carrier Calendar Exceptions**

Establish times the that carrier will not be available for blocks of time such as vacation closures or certain days that the carrier does not make deliveries or pickups. These parameters are used to establish transportation lead times.

| <b>Field or Control</b> | <b>Description</b>                                                       |
|-------------------------|--------------------------------------------------------------------------|
| <b>No Pickup</b>        | Select to identify the times that the carrier will not make any pickups. |
| <b>No Drive</b>         | Select to identify the times that the carrier does not drive.            |

## Defining Sales and Use Tax Authorities and Codes

Use the Sales and Use Tax Authority (TAX\_AUTHORITY) and Sales and Use Tax Codes (TAX\_CODE) components to define tax tables.

### Pages Used to Define Sales and Use Tax Authorities and Codes

| <i>Page Name</i>            | <i>Definition Name</i> | <i>Usage</i>                                    |
|-----------------------------|------------------------|-------------------------------------------------|
| <u>Tax Authorities Page</u> | TAX_AUTHORITY          | Add to or update sales and use tax authorities. |
| <u>Tax Codes Page</u>       | TAX_CODE               | Add or update sales and use tax codes.          |

### Understanding PeopleSoft Tax Tables

The PeopleSoft tax tables meet simple sales tax requirements, and they require you to define and maintain the following sales and use tax information:

- Tax authorities, which contain individual tax rates and accounting information used to post the tax liability to a general ledger.
- Tax codes, which consist of groups of tax authorities.

A tax authority is an agency empowered to set taxes. The types of taxes an authority can impose include local, state, federal, or regulatory commission taxes.

A tax code is a group of tax authorities. The percentage rate of a tax code is the sum of the percentage rates of all the tax authorities contained within that code. If a certain locality has a city tax, trade use tax, county tax, and state tax, create four tax authorities individually and then combine them into a single tax code. You can associate tax codes with a ship-to customer to enable the system to use default tax codes when you enter a ship-to customer at the bill-line level. The tax code defined for a ship-to customer appears automatically in order lines and schedules.

Each bill line in PeopleSoft Billing contains one tax code, but you can view the individual rates and amounts from each tax authority after the taxes have been calculated on the Standard Billing - Line - Tax Info page. In PeopleSoft Order Management, each order line has one tax code, but each order line can have many schedules. In addition, each schedule can have different tax codes for the same order line. In PeopleSoft Order Management, tax information appears in a summary on the Order Entry Form page.

### Tax Authorities Page

Use the Tax Authorities page (TAX\_AUTHORITY) to add to or update sales and use tax authorities.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Sales and Use Tax > Sales and Use tax Authorities > Tax Authorities**

| <b>Field or Control</b> | <b>Description</b>                                  |
|-------------------------|-----------------------------------------------------|
| <b>Tax Percent</b>      | Enter the percent tax rate that the authority uses. |

**Note:** The PeopleSoft system uses the ChartFields in the Details group box in combination with the Percent field when the system posts the tax liability for the tax authority to a general ledger. The Account field is mandatory. Define other ChartFields to track the general ledger information in more detail, depending on your business needs.

## Tax Codes Page

Use the Tax Codes page (TAX\_CODE) to add or update sales and use tax codes.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Sales and Use Tax > Sales & Use Tax Codes > Tax Codes**

## Tax Rates

You can add or delete tax authorities from a tax code in the Tax Rates group box.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                      |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax Authority</b>    | Select a valid predefined tax authority. You can add or update sales and use tax authorities on the Tax Authorities page.                                                                                               |
| <b>Tax Percent</b>      | Enter the rate that each authority uses. The total percentage for the tax code (shown at the top of the page) is updated automatically when you add or delete authorities, or when you update the tax authority tables. |

## Calculation Parameters

Complete the calculation parameters.

| <b>Field or Control</b>                                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Include VAT</b> (include value-added tax)                | Select when the VAT amount also needs to be taxed. If you select this check box, the system adds any VAT amount to the net-extended amount before it calculates sales and use taxes.<br>This option is relevant when there are separate tax code fields for each bill line for sales and use and VAT. If you provide separate tax codes for sales and use and VAT, it is possible to have both on a particular line, resulting in a tax-on-tax situation. In these instances, the system always calculates VAT first. The system then calculates sales and use taxes either on the net-extended amount for the line or on the sum of the net-extended amount and the VAT amount. |
| <b>Include Freight</b>                                      | If selected, indicates that the freight amount must be taxed. The system adds the freight amount to the net-extended amount before calculating sales and use tax.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Include Discount</b>                                     | If selected, the system subtracts the discount amount from the net-extended amount before calculating sales and use tax.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Include Misc Charges</b> (include miscellaneous charges) | If selected, indicates that the miscellaneous charges need to be taxed. The system adds the miscellaneous charges to the net-extended amount before calculating sales and use tax.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**Note:** After you define the tax codes, you can assign those tax codes to ship-to customer addresses. Assigning tax codes to customer addresses ensures that the tax code appears automatically on sales orders and invoice lines that use the associated ship-to customer address.

## Defining Additional Common Information

Use the following components to define additional common information:

- Accounting Entry Template (ACCOUNTINGENTRY)
- Activity Monitor Registry (PV\_WL\_REGISTRY)
- Attachments (ATTACHMENT\_TBL)
- Automatic Numbering (AUTO\_NUM\_PNL)
- Commodity Code (COMMOD\_CODE)
- Distribution Network (DS\_NETWORK)
- Freight Terms (FREIGHT\_TERMS)
- Tax Vendor Geo Code Update (RUN\_TAXGEOUPD)

- Harmonized Tariff Code (HRMN\_TARIFF\_CD)
- Image Location (IMAGE\_LOCATION)
- Personal Data (Edit) (EX\_PERSONAL\_DATA2)
- Planner Code (PLANNER\_CODE)
- Reason Codes (REASON\_CD)
- Ship Via Codes (SHIP\_VIA\_CD)
- Ship To Locations (SHIP\_TO\_CODES)
- Ultimate Use Code (SUT\_USE\_CD)
- Units of Measure (UNITS\_OF\_MEASURE)

Use the following component interfaces to load data into the respective component tables:

- Use the COMMOD\_CODE\_CI component interface to load data into the tables for the Commodity Code component.
- Use the HRMN\_TARIFF\_CD\_CI component interface to load data into the tables for the Harmonized Tariff Code component.
- Use the SHIP\_VIA\_CD\_CI component interface to load data into the tables for the Ship Via Codes component.
- Use the SUT\_USE\_CI component interface to load data into the tables for the Ultimate Use Code component.

The pages described in this section do not represent all of the pages in the Common Definitions menu. Additional common pages are described as part of the business processes that include them.

## Pages Used to Define Additional Common Information

| <b>Page Name</b>                                        | <b>Definition Name</b> | <b>Usage</b>                                                                      |
|---------------------------------------------------------|------------------------|-----------------------------------------------------------------------------------|
| <a href="#">Attachment Type Page</a>                    | ATTACHMENT_TBL         | Define attachment types.                                                          |
| <a href="#">Accounting Entry Template Page</a>          | ACCTG_TEMPLATE_AP      | Define or modify an accounting entry template.                                    |
| <a href="#">Register Worklists for Activity Monitor</a> | PV_WL_REGISTRY         | Select which worklist entries can appear on the buyer's Activity Monitor pagelet. |

| <b><i>Page Name</i></b>                  | <b><i>Definition Name</i></b> | <b><i>Usage</i></b>                                                                                                                                                                                                                                                                                                            |
|------------------------------------------|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Auto Numbering Page</u>               | AUTO_NUM_PNL                  | Define automatic numbering specifications for PeopleSoft fields, such as a unique prefix for regular customers or for customers who are also vendors. The system automatically increments numbers by one.                                                                                                                      |
| <u>Automatic Numbering by BU Page</u>    | AUTO_NUM_BU_PAGE              | Define automatic numbering specifications at the business-unit level for PeopleSoft fields.                                                                                                                                                                                                                                    |
| <u>Commodity Code Page</u>               | COMMOD_CODE                   | Define commodity codes. Commodity codes, also called freight classes, are used on bills of lading to group and identify shipped products for freight rating and insurance purposes.                                                                                                                                            |
| <u>Distribution Network Page</u>         | DS_NETWORK                    | Define distribution network codes.                                                                                                                                                                                                                                                                                             |
| <u>Forecast Sets Page</u>                | FORECAST_SET                  | Define versions of forecasts for PeopleSoft Supply Planning.                                                                                                                                                                                                                                                                   |
| <u>Freight Terms Page</u>                | FREIGHT_TERMS                 | Set up freight terms.                                                                                                                                                                                                                                                                                                          |
| <u>Tax Provider Geo Code Update Page</u> | RUN_TAXGEOUPD                 | <p>Update geocodes for tax-related transactions, locations and addresses using the GeoCodes Mass Update Process Application Engine process (TAXGEOUPD).</p> <p>Generate a report listing any errors that occurred during the GeoCodes Mass Update Process using the GeoCodes Mass Update report, TAXXGEOX0 (BI Publisher).</p> |
| <u>Harmonized Tariff Code Page</u>       | HRMN_TARIFF_CD                | Set up harmonized tariff codes. These codes are required on various documents that accompany shipments across international and Canadian borders. The codes are pre-established for all commodities by the United States Commerce Department.                                                                                  |
| <u>Image Location Page</u>               | IMAGE_LOCATION                | Set location for storing images.                                                                                                                                                                                                                                                                                               |

| <b>Page Name</b>                                            | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                               |
|-------------------------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">File Locations Page</a>                         | FILE_DIR_FS            | Define file extensions that you want the system to recognize, system locations for transaction attachments, email and fax file extensions, and file server directories.                                                    |
| <a href="#">Personal Data Page</a>                          | EX_PERSONAL_DATA       | Review and edit employee address data.                                                                                                                                                                                     |
| Personal Data (Edit) Page                                   | EX_PERSONAL_DATA2      | Add and edit employee information, including address data.<br><br>See the <a href="#">Personal Data Page</a> .                                                                                                             |
| <a href="#">Planner Codes Page</a>                          | PLANNER_TBL            | Enter planner codes.                                                                                                                                                                                                       |
| <a href="#">Reason Codes Page</a>                           | REASON_CD              | Define reason codes to provide explanations for various activities performed in the system.<br><br>You can also define return and reject reason codes for items received in PeopleSoft Purchasing.                         |
| <a href="#">Ship Via Codes Page</a>                         | SHIP_VIA_CD            | Define ship via codes (also called shipping method codes) to use in multiple features in PeopleSoft Inventory, Purchasing, and Order Management. Ship via codes describe the dimensions and options of a shipping vehicle. |
| <a href="#">Ship To Locations - Sales/Use Tax Info Page</a> | SUT_DFLT_TBL           | Enter default sales and use tax information for each ship-to location. The sales and use tax rates are normally based on the final destination of the shipment (the ship-to location).                                     |
| <a href="#">Standard Industry Codes Page</a>                | SIC_CODE_PNL           | View, modify, or add SIC codes for vendors. This page offers you various methods for finding particular codes. You can search by SIC code or by parent SIC code.                                                           |
| <a href="#">Ultimate Use Codes Page</a>                     | SUT_ULTIMATE_USE       | Define ultimate use codes for vendors. Ultimate use codes are used to determine tax applicability.                                                                                                                         |
| <a href="#">Units of Measure Page</a>                       | UNITS_OF_MEASURE       | Establish units of measure for your resources.                                                                                                                                                                             |

## Attachment Type Page

Use the Attachment Type page (ATTACHMENT\_TBL) to define attachment types.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Attachments > Define Attachment Types**

Enter the **Attachment Type**, **Description**, and **Short Description** for the attachment you are defining.

## Accounting Entry Template Page

Use the Accounting Entry Template page (ACCTG\_TEMPLATE\_AP) to define or modify an accounting entry template.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Accounting Entry Templates > Templates > Accounting Entry Template**

This example illustrates the fields and controls on the Accounting Entry Template page. You can find definitions for the fields and controls later on this page.

| Accounting Entry Type        | *Account | Alt Acct | Fund | Oper Unit | Dept  | Program | Class | Bud Ref | Product | Project |
|------------------------------|----------|----------|------|-----------|-------|---------|-------|---------|---------|---------|
| Accounts Payable             | 200000   |          |      |           |       |         |       |         |         |         |
| Payables Period End Accruals | 212000   |          |      |           |       |         |       |         |         |         |
| AR Rebate Control            | 120006   |          |      |           |       |         |       |         |         |         |
| Discount Earned              | 673100   |          |      |           | 14000 |         |       |         |         |         |

**Note:** The data that is entered using this page can also be loaded as an Application Data Set using the Data Migration Workbench. For more information about ADS and the Data Migration Workbench for FSCM applications, see below, “Understanding the Data Migration Workbench for the Accounting Entry Template”.

Although users enter individual expense line items on the voucher, the system generates additional accounting entry lines based on the accounting entry templates that you define and associate with individual vouchers. These additional accounting entry lines include the offset to accounts payable, or freight and tax expense entries.

The PeopleSoft Payables voucher and payment posting processes apply the accounting entry templates to individual vouchers to create balanced accounting entries. You set up accounting entry templates by SetID so that multiple business units can share the same (or different) accounting entries.

When you create a new template, the system presents you with a list of accounting entry types that includes standard types such as *Accounts Payable*, *Cash Distribution*, and *Employee Advances*. This list is

delivered with the system, but you must add the specific account values that your organization uses for the offset.

| <b>Field or Control</b> | <b>Description</b>                                                   |
|-------------------------|----------------------------------------------------------------------|
| <b>Account</b>          | Specify the associated account value for each accounting entry type. |

You can also specify other ChartField values such as Alternate Account, Fund Code, Operating Unit, and so on. There is one row for each account type, which tells the system what ChartField values to use when it performs posting. An account value for each is mandatory; values for other ChartFields are optional.

When setting up inheritance for PeopleSoft Payables, if you select Don't Inherit as the inheritance option for an inheritance group, the system uses the ChartField values established on the accounting entry template to generate the appropriate accounting entry lines.

If you are using PeopleSoft Payables and Project Costing; if you leave the **Project ID** field blank on the accounting entry template and select the **Discount Allocation Policy** field on the General Controls page in PeopleSoft Payables, then you should use ChartField inheritance for the project ID. This allows you to book discounts against same project as the original source amount.

After you have set up accounting entry templates, you can generate a report that displays the data that you have entered for each accounting entry template. The Accounting Entry Template report (APY0012) includes a description as well as a listing of the accounting entry templates that you have defined for your system.

## Understanding the Data Migration Workbench for the Accounting Entry Template

PeopleSoft uses Accounting Entry Templates to generate accounting entries for Payables and Payment Processing . As there are several fields to be entered to create a new Accounting Entry Template, it is advantageous to create the Accounting Entry in a development database and use Application Data Set (ADS) definitions to migrate this data between development environments, test environments, and ultimately to a production environment.

| <b>Delivered ADS to Support PeopleSoft Allocations</b> | <b>Application Data Set (ADS) Usage</b>                                                                                                                                                                   |
|--------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACCOUNTINGENTRY                                        | This data set includes all the records of Accounting Entry setup. Select this data set on the Data Migration Workbench - Project Definition page to move accounting entries from one database to another. |

All relevant records are delivered in the Query Access Tree (QUERY\_TREE\_AP) within the AP TABLES access group (PeopleTools, Security, Query Security, Query Access Manager).

PeopleSoft delivers an ADS Administrator permission list. For access, the AP TABLES access group should be included on the Data Migration page within the Access Group Permissions and access is given on the Copy Compare Permissions.

*PeopleTools: Security Administration.*

## Register Worklists for Activity Monitor

Use the Register Worklists for Activity Monitor page (PV\_WL\_REGISTRY) to select which worklist entries can appear on the buyer's Activity Monitor pagelet.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Activity Monitor > Activity Monitor Registry > Register Worklists for Activity Monitor**

## Auto Numbering Page

Use the Auto Numbering page (AUTO\_NUM\_PNL) to define automatic numbering specifications for PeopleSoft fields, such as a unique prefix for regular customers or for customers who are also vendors. The system automatically increments numbers by one.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Codes and Auto Numbering > Auto Numbering > Auto Numbering**

This example illustrates the fields and controls on the Auto Numbering Page. You can find definitions for the fields and controls later on this page.

| Field or Control                   | Description                                                                                                                                                                                                         |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Field Name</b>                  | Select a field for automatic numbering.                                                                                                                                                                             |
| <b>Start Seq</b> (start sequence)  | Enter a prefix using up to three characters. For example, for the CUST_ID field, you may want to use a unique prefix of <i>CST</i> for regular customers and <i>VND</i> for regular customers who are also vendors. |
| <b>Max Length</b> (maximum length) | Enter a maximum length of number.                                                                                                                                                                                   |

| <b>Field or Control</b>   | <b>Description</b>                                                                                                                                                                                            |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last Number Issued</b> | <p>If you enter the last number assigned, automatic numbering starts by incrementing the last number issued by one.</p> <p>If you leave this field blank, the system uses automatic numbering by default.</p> |
| <b>Default</b>            | Select if you want the system to use automatic numbering by default.                                                                                                                                          |

---

**Note:** Default flag on the Autonumber Table does not apply for Purchase Orders, Requisitions, Receivers, Return to Vendor(Suppliers).

---

## Automatic Numbering by BU Page

Use the Auto Num BU page (AUTO\_NUM\_BU\_PAGE) to define automatic numbering specifications at the business-unit level for PeopleSoft fields.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Codes and Auto Numbering > Auto Numbering by BU > Auto Numbering by BU**

This page is similar to the Auto Numbering page that you use for automatic numbering; however, auto numbering by business unit limits auto numbering to one sequence for each field. Using the page, you can setup a single, auto-numbering sequence for a field across the business unit. This provides broader control of numbering within the business unit. The **Default** field value is always selected because there is only one numbering sequence for a given field in a business unit.

See the previous topic, Setting Up Automatic Numbering, for descriptions of fields on this page.

## Commodity Code Page

Use the Commodity Code page (COMMOD\_CODE) to define commodity codes.

Commodity codes, also called freight classes, are used on bills of lading to group and identify shipped products for freight rating and insurance purposes.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Define Commodity Codes > Commodity Code**

## Distribution Network Page

Use the Distribution Network page (DS\_NETWORK) to define distribution network codes.

Navigation:

## Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Distribution Network > Distribution Network

A distribution network consists of a prioritized list of inventory business units. When a customer orders a product, distribution networks are used to determine the warehouse from which the stock should ship.

You can specify a distribution network code for each of your ship-to customers on the General Information - Ship To Options page. This code then appears by default on the customer's sales order shipment schedules.

When using PeopleSoft Order Management, you can elect to establish a default ship from Inventory business unit on the Order Management business unit Shipping and Returns page. You can use this as the default Inventory business unit for all order lines and schedules. This option is useful if you don't have a complicated distribution network, or if you always ship from one location. The other option on the Shipping and Returns page is to select a default distribution network code that the system uses on orders for ship-to customers who don't have an assigned distribution network code. You are allowed one or the other.

| <b>Field or Control</b> | <b>Description</b>                                                                           |
|-------------------------|----------------------------------------------------------------------------------------------|
| <b>Inventory Unit</b>   | Enter the Inventory business units that you want to be included in the distribution network. |

## Forecast Sets Page

Use the Forecast Sets component (FORECAST\_SETS) to set up forecast sets.

Use the Forecast Sets page (FORECAST\_SET) to define versions of forecasts for PeopleSoft Supply Planning.

Navigation:

### Inventory >Forecast Items >Forecast Sets

You can define different versions of forecasts for PeopleSoft Supply Planning. For example, you might have three different versions of a forecast; conservative, most likely, and optimistic. For each case, you can define forecast quantities by product or item to create what-if scenarios with different versions of the material and capacity plan based on different forecasts. You associate forecast sets with product forecasts in PeopleSoft Order Management and with item forecasts in PeopleSoft Inventory.

You might want to create two unique forecast sets—for example, *OPTIMISTIC* and *LIKELY*. Each item or product forecast record that you define in the system ties to one of these sets. This enables multiple versions of a forecast to exist for the same item or product. This table gives an example of how this works:

| <b>Optimistic Forecast</b> | <b>Likely Forecast</b> |
|----------------------------|------------------------|
| Item: 1000                 | Item: 1000             |
| Date: 12/1/00              | Date: 12/1/00          |

|                                   |                               |
|-----------------------------------|-------------------------------|
| <b><i>Optimistic Forecast</i></b> | <b><i>Likely Forecast</i></b> |
| Qty: 3500                         | Qty: 2500                     |
| Forecast Set: Optimistic          | Forecast Set: Likely          |

## Freight Terms Page

Use the Freight Terms page (FREIGHT\_TERMS) to set up freight terms.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Freight Terms > Freight Terms**

Freight terms determine when the title passes for shipments. PeopleSoft Order Management passes freight term information to PeopleSoft Inventory along with requests for stock fulfillment. Freight term codes and descriptions print on quotations, order acknowledgments, packing lists, bills of lading, shipping manifests, and invoices.

|                                |                                                                                       |
|--------------------------------|---------------------------------------------------------------------------------------|
| <b><i>Field or Control</i></b> | <b><i>Description</i></b>                                                             |
| <b>Delivery Terms 1</b>        | Values are used in Intrastat reporting for European Union member states.              |
| <b>Intermediate Consignee</b>  | Select if you use a freight company that assumes responsibility for goods in transit. |

| <b>Geocode Selection Option</b>      | Choose whether the GeoCodes Mass Update Process should use the first geocode record encountered or flag the address record as an error when more than one geocode entry is found for an address. Run the GeoCodes Mass Update report (TAXGEOX0 or TAXXGEOX0) to view a list of geocode update errors.                                                                                                                                                                                                                          |
| <b>Additional Selection Criteria</b> | Set the additional selection criteria fields to limit the addresses processed                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Note:** Refer to your Taxware or Vertex documentation for recommendations on how often you should update your geocodes. The GeoCodes Mass Update Process Application Engine process (TAXGEOUPD) can be scheduled to run accordingly.

## Harmonized Tariff Code Page

Use the Harmonized Tariff Code page (HRMN\_TARIFF\_CD) to set up harmonized tariff codes.

These codes are required on various documents that accompany shipments across international and Canadian borders. The codes are pre-established for all commodities by the United States Commerce Department.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Harmonized Tariff Code > Harmonized Tariff Code**

## Image Location Page

Use the Image Location page (IMAGE\_LOCATION) to define file extensions that you want the system to recognize, system locations for transaction attachments, email and fax file extensions, and file server directories.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > File Locations and Images > Define Image Locations**

## File Locations Page

Use the File Locations page (FILE\_DIR\_FS) to review and edit employee address data.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > File Locations and Images > Setup File Extension/Locations**

## Personal Data Page

Use the Personal Data page (EX\_PERSONAL\_DATA) to review and edit employee address data.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Employee Data > Review Personal Data**

**Set Up Financials/Supply Chain > Common Definitions > Employee Data > Update Personal Data**

Use the Personal Data (Edit) page (EX\_PERSONAL\_DATA2) to add and edit employee information, including address data.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Employee Data > Create/Update Personal Data > Personal Data (Edit)**

It is recommended that you update employee tables in your human resources system and load the employee data into your PeopleSoft application. However, you may need to add or edit employee profiles in the Financials or Supply Chain Management database. Because employee information is sensitive, it is suggested that you authorize access to these pages carefully.

---

**Note:** If your system receives data from human resources, any changes you make using Personal Data pages may be overwritten in subsequent updates from human resources unless you configure your loading process.

---

## Planner Codes Page

Use the Planner Codes page (PLANNER\_TBL) to enter planner codes.

Navigation:

**Set Up Financials/Supply Chain > Product Related > Planning > Planner Code > Planner Codes**

## Reason Codes Page

Use the Reason Codes page (REASON\_CD) to define reason codes to provide explanations for various activities performed in the system.

You can also define return and reject reason codes for items received in PeopleSoft Purchasing.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Codes and Auto Numbering > Reason Codes > Reason Codes**

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SetID</b>                  | Set up reason codes with a SetID on the Add a New Value page so that they can be accessed by multiple applications and multiple business units.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Reason Type                   | Enter information that categorizes the Reason Code. For example, there are three reasons codes set up with the <b>Reason Type</b> <i>Prenote Reasons</i> to indicate that the code is used with direct debit prenotes. Another example is <i>Sales Contracts</i> , to indicate that the reason code is used in relationship with sales contracts.                                                                                                                                                                                                                                      |
| <b>Reason Code</b>            | <p>Enter a code that best represents the reason that you are defining, such as <i>BANKEFT</i> to indicate that the status of a direct debit prenote was changed by the Bank EFT File process; or, you might set up a reason code called CUST-CA for orders that have been cancelled at the customer's request. Reason codes provide explanations for returned stock, changes to order headers, lines, or schedules, direct debit prenote confirmations and more.</p> <hr/> <p><b>Note:</b> Reason codes are effective dated to enable you to make and track changes by date.</p> <hr/> |
| <b>Description</b>            | Enter a short and long descriptions defining what the reason code stands for.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Email Long Description</b> | <p>Select this check box to generate an email based on workflow. You use PeopleSoft Workflow Administrator to access, monitor, analyze, and control workflow in your organization.</p> <p><i>See PeopleTools: Workflow Technology</i></p>                                                                                                                                                                                                                                                                                                                                              |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Include in Quality Metric</b> | <p>Select this check box for the system to automatically include this reason code in the quality metric that tracks the percentage and actual number of vendor shipment quantities that are inspected, accepted, rejected, and returned by period. If you leave this check box blank, you can exempt (or include) certain receiving reject or return reason codes from the percentage of defectives that your supplier performance metrics reflect.</p> <p>For example, you may not want to use incomplete shipments as a performance measurement for product quality. You can use the Return/Reject Reasons page to remove the Include in Quality Metric flag from that particular reason code.</p> <hr/> <p><b>Note:</b> This field only appears reason codes defined for quality metrics related to supplier performance in PeopleSoft eSupplier.</p> <hr/> <p>See "Understanding Supplier Performance Metrics" (PeopleSoft eSupplier Connection).</p> |

## Ship Via Codes Page

Use the Ship Via Codes page (SHIP\_VIA\_CD) to define ship via codes (also called shipping method codes) to use in multiple features in PeopleSoft Inventory, Purchasing, and Order Management.

Ship via codes describe the dimensions and options of a shipping vehicle.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Shipping and Receiving > Ship Via Codes > Ship Via Codes**

This example illustrates the fields and controls on the Ship Via Codes page. You can find definitions for the fields and controls later on this page.

### Ship Via Codes

SetID SHARE
Ship Via RAIL

\*Description Rail (Boxcar)

\*Short Description Rail

Customer Pick Up No

Transport Mode Transport by Rail

Shipping Capacity

Minimum Weight
Maximum Weight 80.0000

Weight UOM TON Tons

Minimum Volume
Maximum Volume 20000.0000

Volume UOM CUY Cubic Yards

Define ship via codes (also called shipping method codes) to use in multiple features in PeopleSoft Inventory, Purchasing, and Order Management. Ship via codes describe the dimensions and options of a shipping vehicle.

| <b>Field or Control</b>                                                                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Customer Pick-Up</b>                                                                           | Select <i>Yes</i> to note that the customer will be picking up the order instead of the order being shipped from the warehouse. This field is used with the counter sales feature in PeopleSoft Order Management. You would most likely establish a separate ship via code for counter sales. The ship via code can default from the ship-to customer (or short-term customer template), the order group, or the buying agreement. |
| <b>Transport Mode</b>                                                                             | Select the method that the order will be transported.                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Minimum Weight, Maximum Weight, Minimum Volume, Maximum Volume, Weight UOM, and Volume UOM</b> | The system uses this information to monitor shipment capacity in PeopleSoft Inventory when it establishes delivery ID, load IDs, routes, and shipping IDs.                                                                                                                                                                                                                                                                         |

## Standard Industry Codes Page

Use the Standard Industry Codes page (SIC\_CODE\_PNL) to view, modify, or add SIC codes for vendors.

This page offers you various methods for finding particular codes. You can search by SIC code or by parent SIC code.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Customers > Standard Industry Codes > Standard Industry Codes**

Standard Industrial Classification (SIC) codes identify different types of industries. These SIC codes are organized in a hierarchical structure that, at its most detailed level, contains thousands of different industry types. The PeopleSoft system delivers the standard hierarchy of codes from Canada, Germany, France, the United Kingdom, the United States, and Australia.

You can use the SIC identifiers as an additional means of classifying your vendors or customers. You can also use the parent SIC code for reporting your vendor transactions by industry groups if you need to analyze your purchases based on the industrial classifications of your vendors.

## Search Criteria

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                        |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SIC Code</b>         | Enter or select a SIC code to search the system for existing values by SIC code. To find all existing SIC codes for the selected SIC code type, click the <b>Search</b> button without entering any data. |

| <b>Field or Control</b> | <b>Description</b>                                                                             |
|-------------------------|------------------------------------------------------------------------------------------------|
| <b>Parent SIC Code</b>  | Enter or select a parent SIC code to search the system for existing values by parent SIC code. |

## Standard Industrial Classification Codes

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                              |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SIC Code</b>         | Displays the SIC codes that you selected for your search. If you are adding a new SIC code, enter the new code in this field.                                   |
| <b>Parent SIC Code</b>  | Displays the parent SIC code that you selected for your search. If you are adding a new SIC code, select the parent SIC code to which the new SIC code belongs. |

## Ultimate Use Codes Page

Use the Ultimate Use Codes page (SUT\_ULTIMATE\_USE) to define ultimate use codes for vendors.

Ultimate use codes are used to determine tax applicability.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Sales and Use Tax > Sales and Use Tax Use Code > Ultimate Use Codes**

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ultimate Use Code</b> | <p>Enter the ultimate use code and its description. The PeopleSoft system uses ultimate use codes as qualifiers for sales and use tax (SUT) applicability. For each ship-to location, you can associate these codes with a tax rate and other criteria—such as item ID and vendor ID—to set up alternate tax rates that depend on the ultimate use of an item.</p> <p>You can enter any ultimate use code defined for a voucher's ship-to location directly on a voucher in the Voucher component.</p> <p>For example, if you buy a computer for personal or office use, you may be charged a 5% tax rate. If you buy the same computer and use it to manufacture something else, you may only be charged a 3% tax rate. If you set up your ship-to location sales and use tax defaults with an ultimate use code defined at the 3% tax rate, you can assign that ultimate use code to the voucher to retrieve the 3% rate instead of the 5% rate.</p> |

## Ship To Locations - Sales/Use Tax Info Page

Use the Ship To Locations - Sales/Use Tax Info page to attach ultimate use codes to a ship to location.

Navigation:

**Set Up Financials/Supply Chain >Product Related >Procurement Options >Purchasing >Ship To Locations.** Click the **Sales/Use Tax** link.

This example illustrates the fields and controls on the Ship To Locations - Sales/Use Tax Info Page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Ship To Locations - Sales/Use Tax Info' page. At the top, there's a 'Return' link and a breadcrumb trail: 'SetID SHARE' > 'Ship To Location ALBERTA' > 'Alberta - Canada'. The 'Ship To Details' section includes 'Effective Date' (01/01/1900) and 'Status' (Active). Below this is the 'Tax Exception' section with fields for '\*Status' (Active), '\*Exception Type' (Exempt/Exonerated), 'Excpn End Date' (06/30/2005), and 'Sales/Use Tax Exception Certif' (4456789133). The 'Sales/Use Tax Info' section has tabs for 'Details', 'Supplier', and a table. The table has columns for '\*Sales/Use Tax Applicability', 'Sales Tax', 'Use Tax', 'Ultimate Use Code', 'Category', and 'Item ID'. The '\*Sales/Use Tax Applicability' dropdown is set to 'Exempt'. There are also search icons and navigation controls at the bottom of the table.

At the ship-to location level you have five options:

1. Enter an ultimate use code, select *Taxable* in the **Sales/Use Tax Applicability** field, and enter a tax code in the Sales Tax field.

This allows you to have an alternate tax rate based on how the item being purchased will be used.

2. Enter an ultimate use code and select *Exempt* in the **Sales/Use Tax Applicability** field.

When you select this ultimate use code on a voucher for this ship-to location, it will be tax exempt.

3. Enter an ultimate use code and attach it to a specific vendor and vendor location.

The default tax code for vendors and vendor locations shipping to this ship-to location will be the one that you enter here, unless you override it on the voucher.

4. Enter an ultimate use code and attach it to a specific item category.

Items in that category for the ship-to location will be taxed at the rate indicated by the tax code, unless you override it on the voucher.

5. Enter an ultimate use code and attach it to a specific item.

For the ship-to location, the default tax rate for this item will be the one indicated by the tax code that you enter here.

## Units of Measure Page

Use the Units of Measure page (UNITS\_OF\_MEASURE) to establish units of measure for your resources.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Units of Measure > Define System UOM**

To assign a default conversion rate between this UOM and another unit of measure, select a convert-to UOM and enter a conversion rate. The system automatically calculates the inverse conversion rate.

You can view information about units of measure and the resources to which they are assigned in the Units of Measure report.

## Defining Common Journal Definitions

To define common journal definitions, use the following components:

- Journal Class (JRNL\_CLASS)
- Journal Entry Template (GL\_JRNL\_TMPLT)
- Journal Source (SOURCE)
- Schedules (SCHEDULES)

## Pages Used to Define Common Journal Definitions

| <i><b>Page Name</b></i>                         | <i><b>Definition Name</b></i> | <i><b>Usage</b></i>                                                                                                                                                                                 |
|-------------------------------------------------|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Partition ChartField Entry Page</u>          | PROC_PART_CF_ENTRY            | Create and modify your partition IDs. PeopleSoft General Ledger processes use partition IDs to group transaction data when you run Journal Post processes (GL_JP) concurrently.                     |
| <u>Journal Class Page</u>                       | JRNL_CLASS                    | Journal classification values that can be selected on the Header page for all types of journal entries and some reports and are used for reporting purposes added to JRNL_CLASS_TBL using this page |
| <u>Journal Entry Template - ChartField Page</u> | GL_JRNL_TMPLT                 | Use the Journal Entry Template page to control which grid columns you want to show on your Journal Entry page.                                                                                      |
| <u>Journal Source - Definition Page</u>         | SOURCE1                       | Use the Journal Source - Definition page to define a journal source.                                                                                                                                |

| <b>Page Name</b>                                          | <b>Definition Name</b> | <b>Usage</b>                                                                                                 |
|-----------------------------------------------------------|------------------------|--------------------------------------------------------------------------------------------------------------|
| <u>Journal Source - Journal Options Page</u>              | SOURCE2                | Use the Journal Source - Options page to specify the journal error processing options for a specific source. |
| <u>Journal Source - Balance Suspense ChartFields Page</u> | SRC_JE_BS_CFS_SEC      | Specify the ChartField and the ChartField value for the suspense account.                                    |
| <u>Journal Source - Edit Suspense ChartFields Page</u>    | SRC_JE_ES_CFS_SEC      | Specify the ChartField and the ChartField value for the suspense account.                                    |
| <u>Journal Source - Amount Suspense ChartFields Page</u>  | SRC_JE_AS_CFS_SEC      | Specify the ChartField and the ChartField value for the suspense account.                                    |
| <u>Journal Source - Currency Options Page</u>             | SOURCE3                | Specify currency options for a specific source.                                                              |
| <u>Journal Source - Approval Options Page</u>             | SOURCE4                | Specify journal entry approval options for standard journals and budget journals for a specific source.      |
| <u>Schedules Page</u>                                     | SCHEDULE               | Create schedules that automate and control the generation of standard or recurring journal entries.          |

## Partition ChartField Entry Page

Use the Partition ChartField Entry page (PROC\_PART\_CF\_ENTRY) to create and modify your partition IDs.

PeopleSoft General Ledger processes use partition IDs to group transaction data when you run Journal Post processes (GL\_JP) concurrently.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Process Partition ID > Partition ChartField Entry > Partition ChartField Entry**

This example illustrates the fields and controls on the Partition ChartField Entry page, specifying ChartField as a range. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Partition ChartField Entry' page. At the top, 'Partition ID' is set to 'PART2' and 'Description' is 'Partition ID - US005'. Under 'Business Unit', '\*Business Unit' is 'US005' and 'US005 FLORIDA OPERATIONS' is displayed. There are checkboxes for 'Additional ChartField' and 'Default Election', both of which are checked. In the 'Chartfields' section, '\*ChartField' is 'DEPTID' and '\*How to Specify ChartField' is set to 'Range'. Below this, the 'ChartField Ranges' section shows '\*Range From' as '13000' and '\*Range To' as '15000'. Navigation links like 'Find', 'View All', 'First', '1 of 1', and 'Last' are visible throughout the interface.

This example illustrates the fields and controls on the Partition ChartField Entry page, specifying ChartField as a value. You can find definitions for the fields and controls later on this page.

This screenshot shows the same 'Partition ChartField Entry' page, but with '\*How to Specify ChartField' set to 'Value' instead of 'Range'. The 'ChartField Values' section is now visible, showing '\*ChartField Value' as an empty field. All other fields and controls remain the same as in the previous screenshot.

**Note:** Only a DBA or system administrator should have access to this table.

To add a new instance of a partition ID, select the tab to add a new value, enter its name in the Partition ID field, and click the Add button. The Process Partition page appears, enabling you to define the new instance of the partition ID.

| Field or Control     | Description                                                                                                                                                                                                                                                                                  |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Partition ID</b>  | Displays the partition ID that you entered that uniquely identifies a group of transactions that you want to process together as a single set of data.                                                                                                                                       |
| <b>Description</b>   | Enter a description for your partition ID.                                                                                                                                                                                                                                                   |
| <b>Business Unit</b> | First, you create a business-unit and ChartField scheme to classify transactions into mutually exclusive data sets. Then, for each partition ID (unique data set) defined in your scheme, enter the appropriate business unit here. You can have multiple business units for a partition ID. |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                                                                                    |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Additional ChartField</b>     | Select this option to group data by ChartField in addition to business unit. If, for this business unit, you want to process transactions by business unit only, and do not want to further subdivide your transactions for processing, leave this blank. You can put more than one ChartField under a business unit. |
| <b>Default Election</b>          | Specifies this partition ID as the default for the business unit. Transactions not included in any other process partition will be placed into this default group. There can only be one default election for a business unit.                                                                                        |
| <b>ChartField</b>                | Select the ChartField by which to group your data sets.                                                                                                                                                                                                                                                               |
| <b>How to Specify ChartField</b> | You can define your ChartField values as either a range or a single value.                                                                                                                                                                                                                                            |

Select *Range* to specify a range of ChartField values. When you select this option, edit boxes for the following two fields appear:

| <b>Field or Control</b> | <b>Description</b>                                                                          |
|-------------------------|---------------------------------------------------------------------------------------------|
| <b>Range From</b>       | Specify the lowest value of the ChartField that you want to include in your process group.  |
| <b>Range To</b>         | Specify the highest value of the ChartField that you want to include in your process group. |

Select *Value* to specify a single ChartField value to define your process group. When you select this option, an edit box for the following field appears:

| <b>Field or Control</b> | <b>Description</b>                                                               |
|-------------------------|----------------------------------------------------------------------------------|
| <b>ChartField Value</b> | Specify the single value for the ChartField that you want in your process group. |

Use SQL to delete an unwanted partition ID.

## Journal Class Page

Use the Journal Class page (JRNL\_CLASS) to add and maintain journal classes.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Define Journal Class**

This example illustrates the fields and controls on the Journal Class page. You can find definitions for the fields and controls later on this page.

**Journal Class**

PeopleSoft General Ledger is delivered with a number of fields shown on the Journal Entry page grid. When you are using fewer than the delivered number of fields, you can use this page to eliminate the unwanted columns from the grid. For example, if the journal you are entering does not use InterUnit transactions, you can eliminate InterUnit fields from that journal's entry page.

You can define journal entry templates to be used by all users, a specific user ID, or users of a specific primary permission list.

## ChartField

Use the ChartField tab to control which columns of data you want included on your journal entry page for the template.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                        |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Template ID</b>      | The name of a journal entry template.                                                                                                     |
| <b>Default</b>          | Select if you want to use this template as the default when you use a journal entry page.                                                 |
| <b>Action</b>           | Select action to check/uncheck all the check boxes except the default check box.                                                          |
| <b>Unit</b>             | The application business unit that is the source of a transaction.                                                                        |
| <b>Ledger</b>           | Specific ledger to which an accounting entry should post.                                                                                 |
| <b>Speed Type</b>       | A code that represents a combination of ChartField values. Speed types simplify the entry of ChartFields that are commonly used together. |

The names of the remaining check boxes correspond to the ChartFields that appear on the journal entry page as it is delivered with your application. Select a check box for each field that you want to appear on the journal entry page.

**Note:** When you select the Project ChartField check box, all the associated project ChartFields become available on the Journal Entry Page. The ChartFields associated with the Project ChartField are, Activity, Source Type, Category, Subcategory, PC Business Unit, and Analysis Type. If the Project ChartField is not selected or it is deselected, the associated ChartFields are not available.

## Amount

Select the Amount tab.

This example illustrates the fields and controls on the Journal Entry Template page - Amount tab. You can find definitions for the fields and controls later on this page.

When you add a journal line on the journal Lines page the fields you selected on the journal entry template are copied down from the preceding line.

The Journal Entry Template page enables you to define various copy down templates. For example, you can define one template to copy down all fields, another to copy down all fields except the amount fields.

Select **Default** to designate the template as the default.

## Journal Source - Definition Page

Use the Journal Source - Definition page (SOURCE1) to define a journal source.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Source > Definition**

This example illustrates the fields and controls on the Journal Source - Definition page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Journal Source - Definition' page. At the top, there are four tabs: 'Definition', 'Journal Options', 'Currency Options', and 'Approval Options'. The 'Definition' tab is selected. Below the tabs, there are two labels: 'SetID SHARE' and 'Source EXT'. A search bar with 'Find | View All' and navigation buttons 'First', '1 of 1', and 'Last' is present. The main form area contains the following fields:
 

- \*Effective Date**: A date picker showing '01/01/1900'.
- \*Status**: A dropdown menu showing 'Active'.
- \*Description**: A text input field containing 'External Application'.
- Physical Nature**: A dropdown menu.
- VAT Default**: A link.

| Field or Control       | Description                                                                                                                                |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>  | Displays the current date by default. Enter an effective date that is early enough to accommodate any historical data that you might load. |
| <b>Status</b>          | Select either <i>Active</i> or <i>Inactive</i> . Determines whether this source is valid for processing as of the effective date.          |
| <b>Description</b>     | Enter a description to use system-wide in reports, other pages, and online inquiries.                                                      |
| <b>Physical Nature</b> | You can enter a value for VAT if this source is typically associated with goods or services affected by VAT.                               |
| <b>VAT Default</b>     | Click this link to access the central VAT defaults page to enter additional default options for journal source.                            |

In addition to identifying the origin of each journal entry, PeopleSoft applications enable you to define special processing options for specific data entry sources, giving you control over when certain sources are active.

The *source* identifies the origin of a journal entry. It can also define any special journal entry error handling options. You can also use a source to associate journal entries with a type of transaction or a group of transactions. Sources could include individuals who enter journals, departments such as Finance or Accounting, and subsystems that generate transactions such as accounts payable or payroll entries to the general ledger.

You can use sources to facilitate inquiries and reporting. Typically, sources appear on screens and reports that reference journal entries; you can use them to identify and group journal entries from similar sources. For example, you might define sources that identify different revenue types (such as sales, services,

interest, late charges) or different expense origins (such as payroll processing, payroll accruals and reversals, refunds, supplies expense).

Settings generally *override* from the source to the ledger and then to the business unit level. Conversely, the *default* is from the business unit to the ledger and then to the source level. For example, a ledger setting will override a business unit setting, but a source setting will override both a setting at the ledger and at the business unit level for the same option.

## Journal Source - Journal Options Page

Use the Journal Source - Journal Options page (SOURCE2) to specify the journal error processing options for a specific source.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Source > Journal Options**

This example illustrates the fields and controls on the Journal Source - Journal Options page. You can find definitions for the fields and controls later on this page.

You use the Journal Balance option, Journal Edit Errors option, Journal Amount Errors option, Control Total option, and Document Type option in entry error processing.

| Field or Control               | Description                                                                                                                                                                                                                  |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Default to Higher Level</i> | Uses the error processing options defined on the Ledgers for a Business Unit and General Ledger Definition pages. (For document type, options can be defined only at the source or on the Ledgers for a Business Unit page.) |
| <i>Recycle</i>                 | Marks journal entries that contain errors as invalid and does not allow them to be posted. Once you've made the corrections and re-edited the journal, you can post the journal successfully.                                |
| <i>N/A</i>                     | Available only for control total errors. Doesn't check control totals against actual totals.                                                                                                                                 |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Suspend</i>                  | <p>Posts, to a suspense account, the amount required to bring each journal into balance (if it is out of balance). For Journal Edit errors, it posts the amounts from those lines that reference invalid ChartFields. The amounts on the lines in error are zeroed out.</p> <p>If you select Suspend, click the Balance Suspense ChartFields, Edit Suspense ChartFields, or Amount Suspense ChartFields links to access a page where you can specify the ChartField and ChartField value for the suspense account.</p> |
| <i>Specify</i>                  | Available only for <b>Document Type</b> . If you are using document sequencing, you can specify the document type.                                                                                                                                                                                                                                                                                                                                                                                                     |
| <i>Change to Open From Date</i> | Available only for Journal Date < Open From Date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <i>Change to Open To Date</i>   | Available only for Journal Date > Open To Date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Note:** When you define journal options at the source level, they override any error handling that you specified at the business-unit or ledger levels for journals using that source only.

You can determine how the system will process a journal entry entered with errors for that source. Remember that settings generally override from the source to the ledger and then to the business unit level. Conversely, the default is from the business unit to the ledger and then to the source level. For example, a ledger setting will override a business unit setting, but a source setting will override both a setting at the ledger and at the business unit level for the same option.

Settings for the following types of errors can be specified at the source level.

## Journal Balance Errors

Use the options in the **Journal Balance Error** group box to define how the system should handle errors when an unbalanced journal is targeted to a balanced ledger. You can post unbalanced journals only to ledgers that have been set up as unbalanced ledgers, such as a budget ledger.

## Journal Edit Errors Option

Use the options in the **Journal Edit Errors** group box to define how the system should handle errors when invalid ChartField values or combinations are entered on journal lines. As you enter journal lines, PeopleSoft General Ledger checks to see that all ChartField values are valid as of the journal entry date. An error occurs if the system finds an invalid ChartField value or ChartField combination. This error category also includes other line errors, such as a blank currency code or an invalid OpenItem reference value.

## Journal Amount Errors Option

Use the options in the **Journal Amount Errors Option** group box to define how the system should handle errors when the foreign amounts and the monetary amounts are not the same sign. For example,

it determines how to handle errors for a journal that has a foreign amount that is 10.00 USD and the monetary amount is -200.00 USD.

## Control Total Errors

As you enter journal lines, PeopleSoft General Ledger displays a running total of the number of lines, debits, credits, and units that you've entered on the journal. Use the options in the **Control Total Errors** group box to define how the system should handle errors when the journal line totals do not match the control totals you entered at the journal header level. This feature is optional.

## Document Type Option

This only applies if you have enabled document sequencing within the Installation Options component. This document type will be the default for journals entered through the General Ledger Journal Entry component.

## Journal Source - Balance Suspense ChartFields Page

Use the Journal Source - Balance Suspense ChartFields page (SRC\_JE\_BS\_CFS\_SEC) to specify the ChartField and the ChartField value for the suspense account.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Source > Journal Options > Balance Suspense ChartFields**

Click the **Balance Suspense ChartFields** link.

Enter a ChartField and a ChartField value for the suspense account.

## Journal Source - Edit Suspense ChartFields Page

Use the Journal Source - Edit Suspense ChartFields page (SRC\_JE\_ES\_CFS\_SEC) to specify the ChartField and the ChartField value for the suspense account.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Source > Journal Options > Edit Suspense ChartFields**

Click the **Edit Suspense ChartFields** link.

Enter a ChartField and a ChartField value for the suspense account.

## Journal Source - Amount Suspense ChartFields Page

Use the Amount Suspense ChartFields page (SRC\_JE\_AS\_CFS\_SEC) to specify the ChartField and the ChartField value for the suspense account.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Source > Journal Options > Amount Suspense ChartFields**

Click the **Amount Suspense ChartFields** link.

Enter a ChartField and a ChartField value for the suspense account.

## Journal Source - Currency Options Page

Use the Journal Source - Currency Options page (SOURCE3) to specify currency options for a specific source.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Source > Currency Options**

This example illustrates the fields and controls on the Journal Source - Currency Options page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Define Journal Source' page with the 'Currency Options' tab selected. The page includes a navigation bar at the top with 'Employee Self Service' and 'Define Journal Source'. Below the navigation bar are tabs for 'Definition', 'Journal Options', 'Currency Options', and 'Approval Options'. The main content area shows a table with columns 'SetID', 'SHARE', 'Source', and 'EXT'. The first row is for 'Effective Date' with a value of '01/01/1900' and status 'Active'. Below the table are five options, each with a dropdown menu: '\*Currency Balancing Option', '\*Base Currency Adjust Option', '\*Foreign Currencies per Journal', '\*Rounding Adjustment Option', and '\*Translate Ledger Exchange Rate'. All dropdowns are set to 'Default to Higher Level Value'.

| SetID          | SHARE | Source     | EXT           |
|----------------|-------|------------|---------------|
| Effective Date |       | 01/01/1900 | Status Active |

Options:

- \*Currency Balancing Option: Default to Higher Level Value
- \*Base Currency Adjust Option: Default to Higher Level Value
- \*Foreign Currencies per Journal: Default to Higher Level Value
- \*Rounding Adjustment Option: Default to Higher Level Value
- \*Translate Ledger Exchange Rate: Default to Higher Level Value

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Currency Balancing Option</b>      | <p>Select a currency balancing option, which specifies how journal lines are balanced for this source:</p> <ul style="list-style-type: none"> <li>• <i>Default to Higher Level Value</i> - Use the currency options defined on the Ledgers For A Unit and General Ledger Definition pages.</li> <li>• <i>Balance by All Currencies</i> - Balance foreign amounts on foreign currency journal lines by individual currency type. For example, all lines in Canadian dollars are balanced together, and all lines in Mexican pesos are balanced together.</li> <li>• <i>Balance by Base Currency Only</i> - Balances all journal lines by the base currency only.</li> </ul>                                                                                                                                                                                                                                                                                            |
| <b>Base Currency Adjust Option</b>    | <p>Select a base currency adjust option, which controls manual adjustments to the base currency in foreign currency journals:</p> <ul style="list-style-type: none"> <li>• <i>Default to Higher Level Value</i> - Uses the currency options defined on the Ledgers For A Unit and General Ledger Definition pages.</li> <li>• <i>Allow Base Currency Adjustment</i> - Enables you to change the base currency amount directly on foreign currency journal lines.</li> <li>• <i>Disallow Base Currency Adjustment</i> - Does not allow you to change the base currency amount directly on foreign currency journal lines.</li> </ul>                                                                                                                                                                                                                                                                                                                                   |
| <b>Foreign Currencies per Journal</b> | <p>Select a foreign currencies per journal option, which controls the number of foreign currencies for each journal:</p> <ul style="list-style-type: none"> <li>• <i>Default to Higher Level Value</i> - Uses the currency options defined on the Ledgers For A Unit and General Ledger Definition pages.</li> <li>• <i>Multiple Foreign Currencies</i> - Enables journals to contain lines in multiple foreign currencies.</li> <li>• <i>Only One Foreign Currency</i> - Enables journals to contain lines only in the base currency or a single foreign currency. You must specify the foreign currency in the journal header.</li> <li>• <i>No Foreign Currencies</i> - Enables journals to contain lines only in the base currency.</li> </ul> <hr/> <p><b>Note:</b> When you define currency options at the source level, they override any currency handling you specified at the business unit or ledger levels for journals using that source only.</p> <hr/> |

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Rounding Adjustment Option</b>     | <p>Select an option that determines how the system handles an out of balance situation due to rounding.</p> <ul style="list-style-type: none"> <li>• <i>Default to Higher Level Value</i> - Uses the currency options defined on the Ledgers For A Unit page.</li> <li>• <i>Skip Rounding Adjustment</i> - Not created. The system does not make an adjustment.</li> </ul> <p>See also: <a href="#">Ledgers For A Unit - Currency Options Page</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Translate Ledger Exchange Rate</b> | <p>Select the source of the currency exchange rate to be used for the translate ledger for a given journal source:</p> <ul style="list-style-type: none"> <li>• <i>Default to Higher Level Value</i> - Uses the <b>Translate Ledger Exchange Rate</b> option that is defined on the Ledgers For A Unit or General Ledger Definition levels.</li> <li>• <i>Inherit From Primary Ledger</i> - This option applies only to Journal Edit. During the edit process, if the foreign currency of a primary ledger line is the same as that of the base currency of the translate ledger line, then the exchange rate of the primary ledger line is copied to the translate ledger line and the foreign amount of the primary line is the same as the base amount of the translate line.</li> <li>• <i>Retain Exchange Rate</i> - This option applies only to Journal Edit. When this option is selected, there is no change in the base amount exchange rate of the translate ledger line.</li> </ul> <hr/> <p><b>Note:</b> If the translate ledger line already has the exchange rate of the primary line, then the values are retained. Therefore, if the journal is edited once with <i>Inherit From Primary Ledger</i> selected, and it is then re-edited with the <i>Retain Exchange Rate</i> (do not inherit) option, then the exchange rate that was inherited during first edit is retained. The second option is to retain the exchange rate values.</p> <hr/> |

## Journal Source - Approval Options Page

Use the Approval Options page (SOURCE4) to specify journal entry approval options for standard journals and budget journals for a specific source.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Journals > Source > Approval Options**

This example illustrates the fields and controls on the Journal Source - Approval Options. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Approval Options' tab in the 'Journal Source' configuration. It includes fields for 'SetID', 'SHARE', 'Source', and 'ACC'. A search bar and pagination controls (1 of 1) are visible. The 'Effective Date' is set to 01/01/1900 and the 'Status' is 'Active'. There are two main sections: 'Journal Approval Option' and 'Budget Journal Approval Optn'. Each section has a dropdown menu set to 'Default to Higher Level' and a checkbox for 'Journal Unpost Approval'.

You have the option to use either the Virtual Approver method or Approval Framework method for the journal approval process. You select the approval methodology for journal approval on the Installation Options - General Ledger page. The selection choices on the Approval Options page depend upon which methodology that you select to use in Installation Options. When using the Virtual Approver method, the **Business Process Name** and **Approval Rule Set** fields appear on the page. When using the Approval Framework method, these fields are not visible, since the Approval Framework provides its own Business Process and Approval Rule Set to communicate with PeopleTools.

See "Understanding Configurable Workflow" (PeopleSoft General Ledger).

See ".Approving Journals Using the GL Journal Approval Components" (PeopleSoft General Ledger)

Select a journal approval option and a budget journal approval option:

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pre-Approved</b>            | Enables journal entry without approval through workflow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Default to Higher Level</b> | Uses the approval options defined on the Ledgers For A Unit and General Ledger Definition pages.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Require Approval</b>        | Requires approval through workflow. If you select this option and the approval methodology on the Installation Options - GL page is Virtual Approver, you must select a <b>Business Process Name</b> and associated <b>Approval Rule Set</b> . The Business Process Name and Approval Rule Set fields are not visible when the approval methodology is Approval Framework in Installation Options. You must also select <b>Submit Journal</b> from the Process drop-down list box on the Journal Entry - Lines page when processing journals. |

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Journal Unpost Approval</b> | Select check box for approving journal unposting. If Journal approval option is set to <i>Default to Higher Level</i> or <i>Pre-Approved</i> for posting, then same is applicable for unposting. Also, if approval is not required for posting then same is applicable for unposting. If approval is required for posting then approval can be enabled for unposting by selecting this check box. |

**Note:** When you define approval options at the source level, they override any approval handling that you specified at the business unit or ledger levels for journals using that source only.

## Schedules Page

Use the Schedules page (SCHEDULE) to create schedules that automate and control the generation of standard or recurring journal entries.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Calendars/Schedules > Create Schedules**

This example illustrates the fields and controls on the Schedules page. You can find definitions for the fields and controls later on this page.

Schedules are used to automate and control the generation of recurring journal entries. You can define daily, weekly, monthly, or annual schedules for recurring transactions such as closing schedules or schedule specific user-defined events such as expense report due dates.

Schedules control the frequency of processing. For example, if you pay your rent on the 15th of each month, select a monthly schedule that specifies the day of the month as the 15th. By defining schedules that are tailored to your accounting environment, you can easily automate the creation of a Standard Journal Entry (SJE) or a group of SJE. You can set up daily, weekly, monthly, annual, or user-defined schedules. User-defined schedules enable you to specify specific dates and times.

**Note:** When you define schedules for use with standard journal entries, don't define multiple occurrences for a single day.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Frequency</b>        | <p>This specifies how often the event will recur. Values are:</p> <p><i>Annually</i>: Specifies an annual schedule. This option activates the Month and Day of the Month for you to enter the values.</p> <p><i>Daily</i>: Specifies a daily schedule. The <i>Daily</i> option activates the Days of the Week check boxes for you to select or deselect specific days.</p> <p><i>Monthly</i>: Specifies a monthly schedule. This option activates the Day of the Month and Last Day of the Month and the Months check boxes for you to select or exclude individual months.</p> <p><i>User Defn</i> (user defined): Sets up user-defined events schedules for specific dates when an event will take place. When you use this option, you can enter an occurrence number (for multiple occurrences), the date, and a description. Do not specify hours or minutes for schedules used for SJE's.</p> <p><i>Weekly</i>: Specifies a weekly schedule. The Weekly option activates the days of the week for you to enter a value.</p> |

**Note:** When you specify a day of the month for monthly schedules, use the **Day of the Month** edit box to enter any day up to and including day 28. Use the **Last Day of Month** edit box to enter the absolute last day of the month, whether it's day 28, 29, 30, or 31.

## Setting Up Workflow Transactions

To set up workflow transactions, use the following components:

- Workflow Transaction Categories (EO\_TRAN\_CATS)
- Workflow Transactions (EO\_TRANSACTIONS)
- Workflow System Rule (EO\_SYS\_WF\_RULES)

## Pages Used to Set Up Workflow Transactions

| <b>Page Name</b>                            | <b>Definition Name</b> | <b>Usage</b>                            |
|---------------------------------------------|------------------------|-----------------------------------------|
| <u>Workflow Transaction Categories Page</u> | EO_TRAN_CATS           | Create workflow transaction categories. |

| <b>Page Name</b>                           | <b>Definition Name</b> | <b>Usage</b>                  |
|--------------------------------------------|------------------------|-------------------------------|
| <a href="#">Workflow Transactions Page</a> | EO_TRANSACTIONS        | Create workflow transactions. |
| <a href="#">Workflow System Rules Page</a> | EO_SYS_WF_RULES        | Create workflow system rules. |

## Understanding Setting Up Workflow Transactions

If you use PeopleSoft Workflow, the functionality of workflow approval processing is based on specific rules that are defined by three setup transactions. You can create transactions that notify appropriate parties about business events such as approvals, requests, or transfers. By setting up categories of workflow transactions, you can associate groups of transactions with a workflow function that triggers the notification process.

### Workflow Transaction Categories Page

Use the Workflow Transaction Categories page (EO\_TRAN\_CATS) to create workflow transaction categories.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Workflow > Categories > Workflow Transaction Categories**

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                  |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Transaction Category</b> | Name of the group that classifies a workflow transaction.<br>Each workflow transaction is placed in a workflow category.<br>Because workflow rules are defined for categories, the rules apply to each transaction in the category. |

### Workflow Transactions Page

Use the Workflow Transactions page (EO\_TRANSACTIONS) to create workflow transactions.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Workflow > Delegate Workflow Transactions**

| <b>Field or Control</b> | <b>Description</b>                                        |
|-------------------------|-----------------------------------------------------------|
| <b>Category</b>         | Name of the group that classifies a workflow transaction. |
| <b>Description</b>      | Explanation or comments about the workflow transaction.   |

## Workflow System Rules Page

Use the Workflow System Rules page (EO\_SYS\_WF\_RULES) to create workflow system rules.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Workflow > System Rules > Workflow System Rules**

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Transaction Category</b>       | Name of the group that classifies a workflow transaction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Workflow Rule</b>              | Specify how users are notified when they are required to perform a function. Select from the following values:<br><br><i>Both:</i> Notify by email and worklist.<br><br><i>Email:</i> Notify the user with an electronic message.<br><br><i>None:</i> No notification takes place.<br><br><i>User:</i> Notification method is specified in the User Preferences page during system setup. This varies, depending on which application is implementing PeopleSoft Workflow.<br><br><i>Worklist:</i> Notify the user by placing an entry on the user's worklist. |
| <b>Notify User – Entry</b>        | User receives a confirmation when initiating a transaction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Notify – All</b>               | User receives a notification when anyone processes a transaction that the user originated. If more than one person is required to process the user's transaction, the user receives notification each time it is processed.                                                                                                                                                                                                                                                                                                                                    |
| <b>Notify – Final Disposition</b> | User is notified only when the transaction has completed processing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Understanding Credit Card Groups

Use credit card groups to associate credit card types with a specific payment processor, which controls which credit card types a user can select when paying by credit card. At a minimum, you must set up credit card groups and specify defaults at the system level. You can also associate a credit card group with a business unit. PeopleSoft recommends that source systems that feed into Receivables use the same credit card group.

---

**Note:** Before setting up credit card groups, you must set up the payment processors. See "Setting Up Credit Card Interface Elements" (Integration Interfaces).

---

In the traditional implementation, the credit card type lookup is always editable and values are filtered based on the credit card group.

For hosted implementations, the user will only be able to access the credit card type lookup if there are multiple processors assigned to a group. If there is only one processor in a group, then the card type can be selected on the hosted site. If there are multiple processors in the group, the system first needs to know which one will be used so it can transfer the payment to the correct hosted site.

Default Credit Card Group

## Payment Tokenization

| <i>Field or Control</i>                                                    | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Profile Tokenization and Hosted Entry for Order to Cash</b>      | <p>Automatically selected by the system when you run the the Convert Credit Card Data Application Engine process (FS_CCHOST_CV). This field indicates that the system uses the hosted credit card model. If you want to use traditional credit card implementation, never run this process, and this option will remain deselected.</p> <p>See <a href="#">Setting Up Credit Card Processing for a Hosted Implementation</a>.</p> <p>If this option is selected, define when the system should create temporary credit card profiles:</p> <ul style="list-style-type: none"> <li>• Create Temporary Profiles Before Online Credit Card Transactions</li> </ul> <p>This option requires the existence of a tokenized profile prior to online transmission.</p> <ul style="list-style-type: none"> <li>• Create Temporary Profiles After Online Credit Card Transactions</li> </ul> <p>A tokenized profile is not required prior to online transmission, if you select this option. The tokenized profile is saved after a successful transaction.</p> <p>The option you select here also appears on the <a href="#">Convert Credit Card Data Page</a> (FS_CCHOST_CNV).</p> |
| <b>Purge Active Temporary Profiles after Settlement Plus <i>n</i> Days</b> | <p>Enter a numerical value for the number of days. The purge process removes the temporary profiles after the <i>n</i>th day after settlement. This option enables you to keep the temporary profiles available for other transactions. The maximum value is 9999.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Security Codes

| <i>Field or Control</i>                                       | <i>Description</i>                                                                                                                                                         |
|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Security Code</b>                                   | Select to enable the display of or prompting for the security code value.                                                                                                  |
| <b>Allow Security Codes to be Purged After <i>n</i> Hours</b> | Defines out-of-date security codes and allows them to be automatically purged when a process is run. A value of zero indicates that the security codes will not be purged. |

## Authorization Reversals

| <b>Field or Control</b>                                            | <b>Description</b>                                                                                                                                                                                                                                        |
|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Authorization Reversals</b>                              | Select to enable the use of authorization reversals in Order Management and Billing. Authorization reversals are used when an order amount or an invoice amount is increased and a prior authorization was performed.                                     |
| <b>Process Auth Reversals for Amounts Greater Than</b>             | Enter a tolerance amount to be used when determining if an authorization reversal should be performed or not. This value prevents the system from processing reversals for minor amounts.                                                                 |
| <b>Currency Code</b>                                               | Enter the currency code to be used for the Authorization Reversal tolerance amounts.                                                                                                                                                                      |
| <b>Currency Exchange Rate Type</b>                                 | Enter the exchange rate type to be used when converting authorization reversal tolerance amounts in comparison to transaction amounts when determining if an Authorization Reversal should be performed.                                                  |
| <b>Enable Authorization Reversals for Decrements</b>               | Select to enable the use of authorization reversals for changes to a credit card amount. Authorization Reversals for decrements are used in PeopleSoft Order Management when an order amount is decreased after a credit card authorization is performed. |
| <b>Process Authorization Reversals for Decrements Greater Than</b> | Enter a minimum value below which Authorization Reversals are not performed. This value prevents the system from processing minor decrements.                                                                                                             |

## Other Options

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                             |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Online Validation</b>  |                                                                                                                                                                |
| <b>Default Credit Card Group</b> | Enter a default credit card group. If there is no default credit card group specified for the business unit, then this default credit card group will be used. |

## Credit Card Groups Page

Use the Credit Card Groups page (CR\_CARD\_GROUPS) to set up credit card groups to link credit card types with payment processors.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Credit Cards > Define Credit Card Groups**

This example illustrates the fields and controls on the Credit Card Groups page. You can find definitions for the fields and controls later on this page.

| Credit Card Type | Credit Card Name          | Processor Name |   |   |
|------------------|---------------------------|----------------|---|---|
| 01               | VISA                      | CYBER-FSCM     | + | - |
| 02               | MASTERCARD                | CYBER-FSCM     | + | - |
| 03               | DINERS CLUB/CARTE BLANCHE | CYBER-FSCM     | + | - |
| 04               | AMERICAN EXPRESS          | CYBER-FSCM     | + | - |
| 05               | DISCOVER                  | CYBER-FSCM     | + | - |

| Field or Control        | Description                                                                                                                                                                                                                                                   |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Credit Card Type</b> | Enter the code for the credit card type.                                                                                                                                                                                                                      |
| <b>Processor Name</b>   | Specify the defined name of the credit card processor.<br><br>To set up integration with credit card processors, see the following Enterprise Components documentation: "Setting Up Credit Card Integration for Integration Broker" (Integration Interfaces). |

## Defining a Default Credit Card Group at the Business Unit Level

Define a default credit card group for individual Billing, Receivables, and Order Management business units.

### Billing Definition - Business Unit 4 Page

Use the "Billing Definition - Business Unit 4 Page" (PeopleSoft Billing) (BUS\_UNIT\_TBL\_BI4) to specify a default credit card group for an individual Billing business unit.

### Order Management Definition - Order Entry Features Page

Use the "Order Entry Features Page" (PeopleSoft Order Management) (BUS\_UNIT\_TBL\_OM9) to specify a default credit card group for an individual Order Management business unit.

## Receivables Definition - Bank/Payment Options Page

Use the "Receivables Definition - Bank/Payment Options Page" (PeopleSoft Receivables) (BUS\_UNIT\_TBL\_AR4) to define a default credit card group for an individual Receivables business unit.

## Changing Credit Card Encryption

To change the credit card encryption key, use the FS\_CC\_CNVRT component.

### Page Used to Change the Encryption Key

| <i>Page Name</i>                           | <i>Definition Name</i> | <i>Usage</i>                                                                                                                                          |
|--------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Change Encryption Key Page</a> | FS_CC_CNVRT            | Use this utility to change the key used to encrypt credit card numbers. Run the utility to re-encrypt credit card numbers using a new encryption key. |

## Understanding Credit Card Encryption

**Note:** Credit card encryption is needed only for systems using a traditional credit card implementation. It is *not* needed for systems using a third-party credit card payment processor in a hosted implementation.

PeopleTools Pluggable Cryptography is an advanced security framework that provides a security model for applications to encrypt credit card data. The system encrypts data using 3DES algorithms and 168-bit encryption keys. The system also modifies the display of credit card numbers to show only the last four digits. The system displays an *X* in place of each credit card number other than the last four digits. This includes credit card numbers that are display-only as well as those that are editable.

Use of PeopleTools Pluggable Cryptography supports compliance with the cardholder data protection requirements of the Payment Card Entry (PCI) Data Security Standard and with Visa's Cardholder Information Security Program (CISP). With this feature, credit card numbers for external third-party payers, such as customers or students, are encrypted.

### Steps for Changing the Encryption Key

To change the credit card encryption key:

1. Navigate to the Credit Card Number Re-Encrypt page.
2. Click the **Generate Random Key** button to generate a new random hexadecimal encryption key.

Clicking this button generates a new, random hexadecimal encryption key. You can modify this key, however, you must format it as a 24-byte string in hexadecimal notation. The first two characters must be *0x*, and the remainder must be exactly 48 characters consisting of a combination of numeric digits and the lowercase letters *a* through *f*.

3. If the values in the **Re-encrypt Action** column do not say *Decrypt*, then *Encrypt*, click the **Crypt Action** button until *Decrypt*, then *Encrypt* appears in the column.

4. Click the Run button to start the conversion process.

The Credit Card Conversion process converts each field in the grid. If the process fails for any reason, the process can be restarted in the standard way and the process picks up where it left off. If the process cannot be restarted, the process can be run from the beginning and it automatically bypasses fields that have already been processed.

See the product documentation for *PeopleTools: Security Administration*, “Securing Data with Pluggable Cryptography.”

## Change Encryption Key Page

Use the Change Encryption Key page (FS\_CC\_CNVRT) to change the key used to encrypt credit card numbers.

Run the utility to re-encrypt credit card numbers using a new encryption key.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > Credit Cards > Change Encryption Key > Change Encryption Key**

This example illustrates the fields and controls on the Change Encryption Key page. You can find definitions for the fields and controls later on this page.

This field value enables the process to be rerun if an error occurs without reprocessing the converted fields.</li> </ul>                                                  |

## Setting Up Credit Card Processing for a Hosted Implementation

This topic covers the steps used to convert from the traditional credit card model to the hosted credit card model:

1. Define tokenization.

For FSCM applications that provide online transmission, the system supports a tokenized credit card profile created by a third-party host.

2. Convert credit card data.

In this phase, you convert locally stored credit card data into profiles and transfer the profiles to a third-party credit card processor.

For information about integrating with a third-party credit card processor, see the setup information in Enterprise Components: "Setting Up Credit Card Integration for Integration Broker" (Integration Interfaces).

3. Erase locally stored credit card data.

A secure wipe program permanently erases all credit card information once a PeopleSoft Order to Cash system switches to the hosted credit card implementation.

## Understanding Conversion to the Hosted Credit Card Model

PeopleSoft FSCM provides a framework in the Order to Cash modules (Order Management, Billing, eBill Payment, and Accounts Receivable) to facilitate the collection and processing of payment information by third-party credit card hosts. Businesses with an Order to Cash system can convert from a traditional credit card model (local storage of credit card data) to a hosted model, where a third party hosts or stores credit card data.

---

**Note:** If you choose to convert to a hosted model, data cannot be rolled back. Please ensure that this is the credit card payment model you really want.

---

In a *traditional* implementation, the following data are stored locally:

- First and last name
- Credit card number (encrypted)
- Last four digits of the credit card number
- Credit card type
- Expiration month and year
- Credit card address fields
- Email address
- Phone number

The PeopleSoft Order to Cash system maintains only these fields after conversion to the *hosted* implementation:

- Credit card type
- Last four digits of the credit card number
- Payment processor
- Profile ID

The profile ID provides a means for identifying the customer and payment in both the PeopleSoft system and the third-party processor.

---

**Note:** There may be a fee associated with converting the data of each credit card to a profile. The actual cost is determined by your chosen payment processor.

---

This diagram illustrates the steps for moving from a traditional to a hosted implementation:

## Flow of the conversion to the hosted credit card model

**Prerequisites**

You must setup a third-party payment processor. Multiple processors can now be set up and assigned to a specific credit card type. See the information about setting up credit card interfaces in *Enterprise Components: PeopleSoft Integration Interfaces*.

You must create a default credit card group for a specific credit card type at the system level, and optionally at the business unit level. Refer to Setting Up Credit Card Options and Groups.

You must also map processor credit card types to PeopleSoft credit card types using processor-specific code in the following functions: Function GetPSCardType and Function GetVendorCardType. Sample

code is provided in each function. You must reference your own processors in the code before running the conversion process.

On FUNCLIB\_CREDCRD.CR\_CARD\_TYPE.FieldFormula, add processor specific-code to the following functions:

- **Function GetPSCardType** - Maps processor credit card types to PeopleSoft-defined credit card types.

```
Function GetPSCardType(&Vendor As string, &CardType As string, &PSCardType As ⇒
string);
  rem =====;
  rem Vendor Credit Card Types to PS Credit Card Types          ;
  rem =====;
  /* Declare Function GetPSCardType PeopleCode FUNCLIB_CREDCRD.CR_CARD_TYPE F⇒
fieldFormula; */
  /* Dev Note: Modify codeline to support your processors */
```

- **Function GetVendorCardType** - Maps PeopleSoft-defined credit card types to processor credit card types.

```
Function GetVendorCardType(&PSCardType As string, &Vendor As string, &CardType⇒
As string);
  rem =====;
  rem PS Credit Card Types to Vendor Credit Card Types          ;
  rem =====;
  /* Declare Function GetVendorCardType PeopleCode FUNCLIB_CREDCRD.CR_CARD_TY⇒
PE FieldFormula; */
  /* Dev Note: Modify codeline to support your processors */
```

Or, see the product documentation for *PeopleSoft Financials/Supply Chain Management 8.9 to 9.2 Upgrade*, *PeopleSoft Financials/Supply Chain Management 9.0 to 9.2 Upgrade*, or *PeopleSoft Financials/Supply Chain Management 9.1 to 9.2 Upgrade*.

## Credit Card Conversion

In this phase, you convert your existing credit card data into profiles and transfer locally stored credit card data to the third-party credit card processor. This option is only available for Order to Cash systems in PeopleSoft FSCM. The only credit card data that are stored in PeopleSoft tables after conversion are the following: last four digits of the credit card number, profile ID, credit card type, and payment processor.

Before you run the conversion process:

1. Evaluate all credit card transactions to determine the cut-off date for transactions.
2. Evaluate your customer base. Do you have any inactive customers? If yes, you can choose to exclude their data in the conversion process.

## Credit Card Wipe

After converting credit card data to profiles and transferring the data to your choice of third-party payment processor, you must purge all credit card data from records in your PeopleSoft system.

---

**Note:** The Remove Credit Card Data process permanently removes all credit card data from records in your PeopleSoft system. You cannot undo this process.

---

This component displays all records that contain fields CR\_CARD\_NBR and CR\_CARD\_CVNUM. The user can select the records that should be securely wiped and then run the process to erase them.

The Remove Credit Card Data process generates a random sequence of characters, writes it to the credit card fields, and saves it in the database by performing a database commit. The process overwrites the data between 8 and 30 times, depending on the value you enter in the Number of Overwrites field. The default value is 8.

PeopleSoft Billing invokes the Remove Credit Card Data process directly from PeopleCode to process a specific interface record, as discussed in the documentation for the Remove Credit Card Data page.

## Understanding the Remove Credit Card Data Process

Depending on the number of lines of data contained in the records to be wiped, the process can take a long time to complete. Oracle's PeopleSoft recommends running several secure wipe processes in parallel. To run several processes in parallel, create multiple run control IDs and select a distinct set of records for each run control ID. If there is overlap of records in the run control IDs, one of the processes may skip this record, because the system avoids wiping the same record at the same time in multiple instances.

If for any reason the Remove Credit Card Data process abnormally terminates, you can return to the page to restart the process with the same run control ID. The system returns an error for the record that was being processed when the process terminated. You can select the record with the error along with other records and rerun the process.

### Wipe Status and Process Status

A master credit card wipe record (FS\_CCWIPE\_MST) contains all the records that should be wiped. All run control IDs read data from this master record, and each execution of the process updates line (by record) statuses in the master record. The system updates the status directly in the master credit card wipe record. You may need to refresh the Remove Credit Card Data page to view the current status.

| <b>Term</b>                             | <b>Definition</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Wipe Status by Record</b>            | <p>View the processing status for each record or line:</p> <p>Available for Processing – The record in that line has not yet been wiped.</p> <p>Processing – When the process begins to wipe a specific record, the status changes to Processing, and parallel processes skip this record. As soon as the wipe process of this record finishes the status is updated to Complete.</p> <p>Complete – As soon as the wipe process finishes the wiping of a record, its status changes to Complete. Records with a Complete status can still be selected and reprocessed.</p> <p>Error – Indicates the specific record where the process abnormally terminated. The record can be reselected, and processing treats this record the same as records with an Available for Processing status.</p>         |
| <b>Process Status by Run Control ID</b> | <p>View the processing status in the header for the run control ID:</p> <p>Available for Processing – When the header Wipe Status field shows Available for Processing, you can select lines and run the secure wipe process.</p> <p>You also see the Available for Processing status when the process finishes, but unprocessed records still exist in the master credit card wipe record.</p> <p>Processing – The status changes to Processing upon clicking the Run button. Create a different run control ID to select other lines or records and run processing.</p> <p>All Records Wiped – When all the records in the master credit card wipe record are marked as Complete at the line level, all new and existing Remove Credit Card Data pages display All Records Wiped in the header.</p> |

After converting to a hosted credit card implementation, the "Credit Card Data Page" (PeopleSoft Order to Cash Common Information) shows only the credit card data needed to create a token ID that matches up information between the PeopleSoft Order to Cash system and the profile now administered by the third-party processor. For more information, see "Understanding Credit Card Processing" (PeopleSoft Order to Cash Common Information).

| <b>Convert Inactive Customers</b>                                     | Select this check box to include credit card data for inactive customers in the conversion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Convert only customers having transactions after</b>               | Enter a calendar date cutoff to convert only credit card data for customers having transactions after the specified date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Key Separator</b>                                                  | Enter a key separator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Remove Credit Card Data Page

Use the Remove Credit Card Data page (FS\_CCWIPE) to run the FS\_CCWIPE Application Engine process, which clears existing database fields containing credit card data.

Navigation:

**Set Up Financials/Supply Chain >Upgrade >Credit Card Hosting >Remove Credit Card Data >Remove Credit Card Data**

This example illustrates the fields and controls on the Remove Credit Card Data page. You can find definitions for the fields and controls later on this page.

### Remove Credit Card Data

Run Control ID: EXAMPLE
Report Manager
Process Monitor
Run

Process Status: Available for Processing
Number of Overwrites: 8

Action: Select All
Wipe Status: Available for Processing
Go

|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process Status</b>       | <p>Displays the processing status of the master record for the run control ID:</p> <p>Available for Processing – When the header Wipe Status field shows Available for Processing, you can select lines and run the secure wipe process. You also see the Available for Processing status when the process finishes, but unprocessed records still exist in the master credit card wipe record.</p> <p>Processing – The status changes to Processing upon clicking the Run button. Create a different run control ID to select other lines or records and run processing.</p> <p>All Records Wiped – When all the records in the master credit card wipe record are marked as Complete at the line level, all new and existing Remove Credit Card Data pages display All Records Wiped in the header.</p> |
| <b>Number of Overwrites</b> | <p>Enter a value between 9 and 30, or accept the default of 8. The process overwrites the data between 8 and 30 times, depending on the value you enter in the Number of Overwrites field.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Action</b>               | <p>Choose from these options:</p> <ul style="list-style-type: none"> <li>Select All</li> <li>De-Select All</li> </ul> <p>The action you choose selects or deselects the records with the Wipe Status you specify, when you click the Go button. You can also manually select individual records or lines by clicking the Select check box for a record or line.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Wipe Status</b>       | <p>Use this field to filter records with a specific Wipe Status, choose an action, and click the Go button to select or deselect sets of records with a specific Wipe Status.</p> <p>Choose from these options:</p> <ul style="list-style-type: none"> <li>• <i>Available for Processing</i> – Filters for records that are available for first-time processing.</li> <li>• <i>Complete</i> – Filters for records that have already been wiped. However, you can select records with a Complete status and run the process again, if desired.</li> <li>• <i>Error</i> – Filters for records at which the secure wipe processing terminated abnormally. You can select this record and run the process again.</li> <li>• <i>Processing</i> – Filters for records that are currently being processed.</li> </ul> |
| <b>Go</b>                | <p>Click this button to apply the Wipe Status filter and then select or deselect the records depending on your choice in the Action field. Use the Go button along with the Wipe Status filter and Action field to make a batch selection of records.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Conversion Status</b> | <p>Displays which records have been converted or not (only when this information is available). When you select a record not yet converted, the system issues a warning.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Working with the Remove Credit Card Data Process in PeopleSoft Billing

PeopleSoft Billing may receive credit card transactions from legacy third-party systems on a daily basis. After a PeopleSoft Billing system converts credit card data received from the interface into a hosted profile, the Remove Credit Card Process must clean a specific set of lines in INTFC\_BI\_HDR records. To use the secure wipe process in an ongoing scenario, PeopleSoft Billing system administrators working with the hosted model should call FS\_CCWIPE Application Engine processes following certain requirements.

This table contains the directions for populating fields in the FS\_CCWIPE record before invoking the FS\_CCWIPE Application Engine process for PeopleSoft Billing.

| <b>Field</b>      | <b>Required value for this field</b>             | <b>Comments</b>                                    |
|-------------------|--------------------------------------------------|----------------------------------------------------|
| OPRID             | %operatorid                                      |                                                    |
| RUN_CNTL_ID       | BI Publisher should create a new run control ID. |                                                    |
| PROCESS_FREQUENCY | 'A'                                              |                                                    |
| CCWIPE_STATUS     | 'N'                                              |                                                    |
| PROCESS_INSTANCE  | 0                                                |                                                    |
| CCWIPE_QTY        | Enter a number between 8 and 30.                 | It is the number the CC fields will be overwritten |
| CCWIPE_INTERF     | 'Y'                                              | It identifies the groups coming from Billing       |

This table contains the directions needed to populate fields in the FS\_CCWIPE\_DTL record before invoking FS\_CCWIPE Application Engine process for PeopleSoft Billing.

| <b>Field</b> | <b>Required value for this field</b>             | <b>Comments</b>                                                                                                                     |
|--------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| RUN_CNTL_ID  | BI Publisher should create a new run control ID. | Populate with the same run control ID entered in FS_CCWIPE.                                                                         |
| RECNAME      | 'INTFC_BI_HDRCMP'                                | If you need to clean another record, one more line can be added under the same RUN_CNTL_ID; update this field with the new RECNAME. |
| FIELDNAME1   | 'CR_CARD_NBR'                                    | Typically 'CR_CARD_NBR', but in case you need to wipe another field (Char 44 only), simply add the name here.                       |
| FIELDNAME2   | ' '                                              | Typically ' ' for this use, but if you need to clean a second field in the same record (Char 44 only), you can use this field.      |
| FIELDNAME3   | ' '                                              | Typically ' ' for this use, but if you need to clean a second field in the same record (Char 44 only), you can use this field.      |

| <b>Field</b> | <b>Required value for this field</b>                 | <b>Comments</b>                                                                                                                                        |
|--------------|------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| CCWIPE_SEL   | 'Y'                                                  |                                                                                                                                                        |
| SQL_STMT_254 | <statement to determine which lines should be wiped> | <p>Must start with '<b>WHERE</b>', otherwise the AE will ignore it and will not process anything.</p> <p>For example,</p> <p>'WHERE INTFC_ID = 41'</p> |

After the Remove Credit Card Data Application Engine process successfully cleans a record, the value for FS\_CCWIPE. CCWIPE\_STATUS is C (Complete). If processing terminates abnormally, the value for CCWIPE\_STATUS is P (Processing), because the process will not have a way to update the field to something else. If the process sends a Where clause not started by WHERE, then the value for FS\_CCWIPE. CCWIPE\_STATUS changes to E (Error),

## Setting Up Profile Tokenization and Hosted Entry

Tokenization is a data security model that replaces sensitive credit card data profiles in the applications and databases. The credit card data profile—which normally consists of the credit card type, credit card number, first name, last name, billing address, phone, and email address—is sent to a third-party host site, which stores and encrypts it. The third-party host creates a token from the profile, and sends the token back to the source PeopleSoft system, where it is saved.

In the process of payment tokenization, the credit card data profile—which normally consists of the credit card type, credit card number, first name, last name, billing address, phone, and email address—is sent to a third-party host site (secure storage provider), which stores and encrypts it. The third-party host creates a token from the profile, and sends the token back to the source PeopleSoft system, where it is saved.

**Note:** The system does not support a combination of hosted and traditional implementations. Once the transition to the hosted model has been made, it is not possible to move back to the traditional model.

Use the [Credit Card Options Page \(CR\\_CARD\\_OPT\)](#) to set up tokenization and hosted entry. Not all fields will be available for editing. See [Setting Up Credit Card Options and Groups](#) for more information.

Profile tokenization and hosted entry are enabled automatically by the credit card data conversion process to indicate that the system supports only hosted entry and storage of credit cards in PeopleSoft Order to Cash applications. If this option is deselected, the system uses only the traditional credit card model; that is, it collects and stores credit card data in the PeopleSoft system.

## Setting Up Electronic Payment Options

This topic provides information about setting up installation-level payment options for PeopleSoft eBill Payment. Billers can configure settings available to users as well as enable available payment methods. Setup pages are available on the employee portal in the classic interface.

## Pages Used to Set Up Electronic Payment Options

| <b>Page Name</b>                        | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                |
|-----------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>eBill – General Page</u>             | INSTALLATION_EB1       | Configure installation-level options that apply to all Fluid eBill users.<br><br>The installation options here appear in the classic interface and apply to only Fluid eBill Payment.                                                                       |
| <u>eBill – Electronic Payments Page</u> | INSTALLATION_EB2       | Enable direct debit, credit card, electronic check, and PayPal payment methods in eBill Payment.<br><br>The installation options on the eBill – Electronic Payments page appear in the classic interface and apply to both Classic and Fluid eBill Payment. |

### eBill – General Page

Use the eBill - General page to configure installation-level options that apply to all Fluid eBill users.

The installation options here appear in the classic interface and apply to only Fluid eBill Payment.

## Transaction History Options

Use fields in the Transaction History Options region to filter the transaction dates available to users. Selections here limit transaction history to increase performance and reduce search results. Users can further filter the transactions shown using filters on specific pages, including Invoices, Payment History, and the Message Center.

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                               |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Exclude Invoice Dates Before</b> | Enter a date to show eBill users only invoices with an invoice date greater than or equal to the specified date.<br><br>Excluded invoices are not included in customer balances. |
| <b>Exclude Payment Dates Before</b> | Enter a date to show eBill users only payments with a payment date greater than or equal to the specified date.                                                                  |
| <b>Exclude Message Dates Before</b> | Enter a date to show users only messages with a message date greater than or equal to the specified date.                                                                        |

## Alert Options

Use these options to enable different types of alerts for eBill users. Users can choose from the enabled alerts on the My Preferences page. If alert options are not set up for eBill, the Alerts section will not appear on the My Preferences page.

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                 |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Days Before Invoice Due</b> | Select to enable alerts that invoices are due in a specified number of days.                                                                                                                                                                                                                       |
| <b>Missed Invoice Due Date</b> | Select to enable alerts for late payments.                                                                                                                                                                                                                                                         |
| <b>New Statement Available</b> | Select to enable alerts that new statements are available.                                                                                                                                                                                                                                         |
| <b>Payment Processed</b>       | Select to enable alerts that payments have been successfully processed.                                                                                                                                                                                                                            |
| <b>Default Delivery Method</b> | Select from these options: <ul style="list-style-type: none"> <li>• <i>Email</i> - Users receive one email containing an alert for each event or transaction.</li> <li>• <i>Push Notification</i> - This is the default setting. Users receive one alert for each event or transaction.</li> </ul> |

The alerts process must be run on a regular basis.

## Currency Options

| <i>Field or Control</i> | <i>Description</i>                                                                                                          |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Rate Type</b>        | Enter the rate type used to convert invoice balances into the customer's default currency or the user's preferred currency. |

## Call Options

| <i>Field or Control</i>    | <i>Description</i>                                                                                                                                                                                                                                                                   |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Display Call Option</b> | <p>Select to display the Call option on the Contact Us page. This option is deselected by default.</p> <p>Enter the phone number including an international prefix, phone number, and extension, if applicable.</p>                                                                  |
| <b>Message</b>             | If <b>Display Call Option</b> is enabled, the eBill Payment user sees a message above the phone number on the Call page, which is accessed through the Contact Us tile. The sample message shown is delivered in the message catalog entry indicated and may be modified as desired. |

## eBill – Electronic Payments Page

Use the eBill - Electronic Payments page to enable direct debit, credit card, electronic check, and PayPal payment methods in eBill Payment.

The installation options on the eBill – Electronic Payments page appear in the classic interface and apply to both Classic and Fluid eBill Payment.

Navigation:

**Set Up Financials/Supply Chain >Install >Installation Options >eBill – General**

This example illustrates the fields and controls on the Installation Options, eBill - Electronic Payments page (1 of 2), where direct debit and credit card payment methods are enabled. You can find definitions for the fields and controls later on this page.

| Installation Options                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | eBill - Electronic Payments |

## Direct Debit

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                      |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Direct Debit Payments accepted</b> | Select this check box to enable direct debits as a payment method in the Payment Cart in eBill Payment.                                                                                                                                 |
| <b>Instructions</b>                   | Displays the setup instructions for the direct debit payment method, subsequent to enabling it as a self-service payment option. You can modify the message catalog entry (6200, 152) to customize the direct debit setup instructions. |

## Credit Card

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                    |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Credit Card Payments accepted</b> | Select this check box to enable credit cards as a payment method in the Payment Cart in eBill Payment.                                                                                                                                |
| <b>Instructions</b>                  | Displays the setup instructions for the credit card payment method, subsequent to enabling it as a self-service payment option. You can modify the message catalog entry (6200, 153) to customize the credit card setup instructions. |

## Electronic Check

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                      |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>eCheck Payments accepted</b> | Select this check box to enable electronic check as a payment method in the Payment Cart in eBill Payment.                              |
| <b>Processor Name</b>           | Specify the defined name of the electronic check processor. This field is required when you select the electronic check payment method. |
| <b>Settlement Method</b>        | Displays Automated Clearing House to indicate that U.S. transactions are deposited using the Automated Clearing House (ACH) Network.    |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Authentication Method</b> | <p>Displays PIN (personal identification number). Processing for electronic checks may require a 6-digit value if enabled in the contact profile, to identify the user who initiates an electronic check transaction.</p> <p>See the fields and control definitions on the "Contact Information - Maintain Contacts Page" (PeopleSoft Order to Cash Common Information).</p>                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>ACH Class</b>             | Displays WEB (web-initiated entry) to indicate that electronic authorization occurs through National ACH. See <a href="http://www.nationalach.com">http://www.nationalach.com</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>PIN for eCheck</b>        | <p>Select <i>Mandatory</i> or <i>Optional</i>. The system determines PIN requirements for payments by electronic check using this field and the PIN entered on the Maintain Contacts page as follows:</p> <ul style="list-style-type: none"> <li>• <i>Mandatory</i> - A PIN must be designated on the Maintain Contacts page. Self-service users must enter the matching PIN correctly in the Payment Cart to proceed with the electronic check payment.</li> <li>• <i>Optional</i> - When a PIN exists on the Maintain Contacts page, the user must enter this PIN in the Payment Cart to proceed with the electronic check payment. When no PIN value exists on the Maintain Contact page, the system hides the <b>PIN</b> field in the Payment Cart and bypasses the validation.</li> </ul> |
| <b>Terms and Conditions</b>  | Enter the payment terms and conditions for electronic check payments. Modify the message catalog entry (6200, 127) to display custom terms and conditions for payments by electronic check on the self-service Make Payment page in eBill Payment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## PayPal

| <b>Field or Control</b>         | <b>Description</b>                                                                                                   |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>PayPal Payments accepted</b> | Select this check box to enable PayPal as a payment method in the Payment Cart in eBill Payment.                     |
| <b>Processor Name</b>           | Specify the defined name of the PayPal processor. This field is required when the PayPal payment method is selected. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                  |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Instructions</b>     | Displays the setup instructions for the PayPal payment method, subsequent to enabling it as a self-service payment option. Modify the message catalog entry (6200, 160) to customize the PayPal setup instructions. |

## Defining File Attachments

This topic discusses how to set up new servers and identify the active server.

Use the File att. admin (file attachments administration) component to set up attachment servers to use with customers, products, buying agreements, sales orders, quotes, RMAs, and more.

### Page Used to Define File Attachments

| <b>Page Name</b>                                 | <b>Definition Name</b> | <b>Usage</b>                                    |
|--------------------------------------------------|------------------------|-------------------------------------------------|
| <a href="#">Administer File Attachments Page</a> | SAC_ATT_ADMIN          | Define the servers where you store attachments. |

### Administer File Attachments Page

Use the Administer File Attachments page (SAC\_ATT\_ADMIN) to define the servers where you store attachments.

Attachments to PeopleSoft Payables transactions are stored and retrieved from the locations defined on this page.

Navigation:

- **Set Up Financials/Supply Chain >Common Definitions >File Attachments >Administer File Attachments**
- **Services Procurement > Define Services Procurement > General Setup > System-Wide Definitions > File Attachment Server**

This example illustrates the fields and controls on the Administer File Attachments Page.

**Administer File Attachments**

\*Pick Active Server 3 ▼ Add URL Server Add FTP Server Add Database Server

| ID | Type | *Login  | *Password | Confirm Password | *Server/Record Name/URL Id | Path   | Search URL Equivalent |
|----|------|---------|-----------|------------------|----------------------------|--------|-----------------------|
| 1  | FTP  | ftpuser | *****     | *****            | 10.244.0.253               | FSCM91 | PSSESATT_1            |
| 2  | FTP  | ftpuser | *****     | *****            | pf-sun07                   | fscm90 | PSSESATT_2            |
| 3  | DB   |         |           |                  | PV_ATT_DB_SRV              |        | PSSESATT_3            |
| 4  | URL  |         |           |                  | COMMON_ATT_S_R             |        |                       |

► Component Subdirectories

System administrators can configure one or more servers to store attachments. These servers can be URL, FTP or database servers.

System administrators can set up new servers and identify the active server. Administrators can add or modify the FTP root folder and the component-specific subfolder for FTP servers.

**Note:** You cannot delete a server after you save the row and exit the component. After you exit the component, the system assumes that attachments could already be stored on this server location.

## File Attachments Servers

| Field or Control   | Description                                                                                                                                                                                                                                                                                                                                     |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pick Active Server | Select the server ID of the active (or default) server where all newly created attachments are stored. You can switch the active server at any time. All previously created attachments are still retrieved from the server where they originally were stored. The attachments keep a reference to the original server. This field is required. |
| Add URL Server     | <p>Select to insert a new row in the grid so that you can define a URL Server for attachments.</p> <hr/> <p><b>Note:</b> Oracle's PeopleSoft recommends using URL attachment servers instead of other types of servers for PeopleSoft release 9.2 or higher. URL servers provide the ability to encrypt passwords.</p> <hr/>                    |

| <b>Field or Control</b>                                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Add FTP Server</b> (add file transfer protocol server) | <p>Select to insert a new row in the grid to define a new FTP server for attachments.</p> <hr/> <p><b>Note:</b> Users using an FTP server for attachment should keep in mind that upload time will be affected by both the connection from the file location to the database, and the connection from the database to the FTP server. The number of possible simultaneous connections is limited, which increases the upload time for any upload that has to wait.</p> <hr/>              |
| <b>Add Database Server</b>                                | Select to insert a new row in the grid to define a new database server for attachments.                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>ID</b>                                                 | Displays the system-assigned ID number for each server on this page. When an attachment is stored to the server, the server ID is inserted into the attachment record. When you request to download (view) this attachment, the system retrieves it from the original server based on the server ID.                                                                                                                                                                                      |
| <b>Type</b>                                               | <p>Identifies the type of server based on whether you click the <b>Add URL Server</b>, <b>Add FTP Server</b>, or the <b>Add Database Server</b> button. After you have saved the row and exited the component, you cannot change the server type. Values are:</p> <ul style="list-style-type: none"> <li>• <i>FTP</i> (file transfer protocol server).</li> <li>• <i>DB</i> (database server).</li> <li>• <i>URL</i> (universal resource locator) such as HTTP, SFTP, or FTPS.</li> </ul> |
| <b>Login</b>                                              | Enter or change the login name. This is required for FTP servers only.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Password</b>                                           | Enter or change the password corresponding to the login. The password is required for FTP servers only.                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>Server/Record Name/URL Id</b> | <p>Enter a value for the server:</p> <ul style="list-style-type: none"> <li>For FTP servers, <ul style="list-style-type: none"> <li>Enter the machine name.</li> <li>After you save the information, change the machine name only if the same FTP server is renamed.</li> <li>To add a different FTP server, click the Add FTP Server button to insert a new row into the grid and define the new server.</li> </ul> </li> <li>For database servers: <ul style="list-style-type: none"> <li>Enter the record name of the database in which to store attachments. This is the only entry that is needed for database servers.</li> <li>This field automatically changes to PV_ATT_DB_SRV for PeopleSoft eProcurement attachments.</li> </ul> </li> <li>For URL IDs: <ul style="list-style-type: none"> <li>Enter a valid URL name that has been created using the PeopleTools URL function (PeopleTools&gt;Utilities&gt;Administration&gt;URL).</li> <li>A URL can be a substitute for FTP or DB servers. For example, you can define a URL as an FTP, SFTP, or record.</li> </ul> </li> </ul> <hr/> <p><b>Note:</b> You cannot delete servers because attachments could already be stored on them.</p> <p>A warning is issued if you change information on this page. This is because changing the server ID can cause unintended data loss by orphaning attachments. You should change the server name only when all data is migrated.</p> <hr/> |
| <b>Path</b>                      | <p>Enter the subdirectory path under the server's FTP root where all attachments are to be stored. This is required for FTP servers only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search URL Equivalent</b> | <p>Automatically creates and displays the search URL equivalent when you click the save button. The system displays values such as “PSSESATT_&lt;#&gt;” in this field. The system creates values based on the number of non-URL attachment types that are defined. Changes to this page are automatically reflected in the PeopleTools URL page. Changes to the URLIDs named PSSESATT_&lt;#&gt; should never be made on the PeopleTools URL page.</p> <p>This URL should be reflected in the PeopleSoft Search Framework Attachment URLID List if PeopleSoft Search is enabled. (PeopleTools, Search Framework, Administration, Attachment URLID List).</p> <p>For additional information about the Attachment URL ID list, see <i>PeopleTools: Search Technology</i>.</p> |

## Component Subdirectories

System administrators can use this section to specify a subdirectory under the root for any component. When uploading files, the system looks to this combination of record and component and uses any subdirectory that is defined. The directory can be modified at any time. Define the component (in the installed applications) with a subdirectory, which appears below the root directory defined on the external system. Oracle’s PeopleSoft recommends that you limit the subdirectories to one level. Subdirectories can only be used with URL IDs that have appropriate servers defined. Subdirectories are not supported for record or HTTP URLs.

| <b>Field or Control</b> | <b>Description</b>                                 |
|-------------------------|----------------------------------------------------|
| <b>Component Name</b>   | Enter the component for the installed application. |
| <b>Subdirectory</b>     | Enter the subdirectory path.                       |

# Setting Installation Options for PeopleSoft Applications

---

## Setting Up Cross-Application Installation Options

Use the Installation Options component (INSTALLATION) to set up cross-application installation options.

### Pages Used to Set Up Cross-Application Installation Options

| <b>Page Name</b>                            | <b>Definition Name</b> | <b>Usage</b>                                                                                               |
|---------------------------------------------|------------------------|------------------------------------------------------------------------------------------------------------|
| Installation Options Page                   | INST_LINKS             | Access the general options and the product options.                                                        |
| <u>Installation Options - Products Page</u> | INSTALLATION_FS        | Select the PeopleSoft products that you have licensed.                                                     |
| <u>Installation Options - Overall Page</u>  | INSTALLATION_FS1       | Configure installation information and indicate how you want to use cross-application features.            |
| <u>Financial Sanctions Options Page</u>     | SDN_SRCH_OPT_SEC       | Define financial validation options for PeopleSoft Treasury, Payables, eSettlements, and Order Management. |
| <u>D&amp;B Account Page</u>                 | DB_ACCOUNT_SEC         | Enter logon IDs and passwords by SetID for each Dun and Bradstreet account.                                |
| <u>Alternate Character Page</u>             | ALT_CHAR_PNL           | Select the alternate characters that the system uses for a specific language code.                         |
| <u>Documentum Page</u>                      | OPER_DEF_TABLE_DC      | Set Documentum installation options.                                                                       |
| <u>Federal Processing Options Page</u>      | INSTALLATION_FD        | Enable SAM processing for suppliers or customers.                                                          |

| <b>Page Name</b>                                      | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                     |
|-------------------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Entry Event Page</u>                               | INSTALLATION_EE        | Enable the use of entry events in General Ledger, Payables, Purchase Orders, Receivables, and Billing, as well as upward and downward adjustments to commitment control budgets. |
| <u>Installation Options - Commitment Control Page</u> | INSTALLATION_KK        | Enter various commitment control installation options for default budget date, reversal date, budget period liquidation, funding source, and online budget checking.             |
| <u>Installation Options - Customer Page</u>           | INSTALLATION_CU        | Define overall customer hierarchy default options.                                                                                                                               |

## Installation Options - Products Page

Use the Installation Options - Products page (INSTALLATION\_FS) to select the PeopleSoft products that you have licensed.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Products**

This example illustrates the fields and controls on the Installation Options - Products page.

| Installation Options                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

Deselect the check boxes for all products that you have not licensed. Select the check boxes for the products that you have licensed and need to enable in your database.

All PeopleSoft products are delivered with the purchased and licensed products. Deselect the check boxes for all products that you have not licensed. Select the check boxes for the products that you have licensed and enabled in your database.

Unless you deselect the unlicensed products, you are likely to encounter performance issues or other processing problems when unnecessary processes or database activity is triggered that is related to the unlicensed products.

For example, unlicensed products for which the check boxes remain selected can cause unnecessary processing due to ChartFields that are specifically related to the unlicensed products. If you have not licensed any of these products—Project Costing, Expenses, Resource Management—you will see these ChartFields: PC Business Unit, Activity, Source Type, Category, or Subcategory on pages. Deselect the check boxes for these three products on the Installation Options - Products page, and then run ChartField configuration to inactivate the ChartFields (as they are specific to these three products).

| <b>Enable Commitment Control</b> | <p>Click the check box for each PeopleSoft product, or application, for which you want to enable Commitment Control.</p> <p>You can enable or disable Commitment Control for each of these products at any time, but disabling Commitment Control for an application during a budget period may corrupt the consistency and integrity of your data.</p> <p>Many applications have dependencies with other applications that require you to maintain integration points between those applications for valid budget checking and notification. Do not enable or disable Commitment Control for an application unless you know precisely what effect your action will have on other applications.</p> <hr/> <p><b>Note:</b> Also, if you have not licensed Project Costing but have licensed Expenses or Resource Management and you still see Source Type, Category, or Subcategory on pages, deselect the check boxes for the unlicensed products on the Installation Options - Products page and use ChartField configuration to inactivate these ChartFields because they are specific to Project Costing.</p> <p>Other areas where you can encounter problems if unlicensed product check boxes are not deselected include on demand processing, and defining Ledgers for A Unit and ledger templates.</p> <p>Enable or disable Commitment Control processing for listed applications.</p> <hr/> |

| <b>Last Journal Number Assigned</b>                                      | Displays a number that represents where to begin numbering journals. You can change the numbering for your journals so that the next journal number assigned is one number greater than the journal number that appears in this field. All journals increment sequentially from the first journal created.                                                                                                                                                                          |
| <b>Default Country</b>                                                   | Select a country to appear by default on your pages. You can override the default on the actual pages.                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Last VAT Authority Number</b> (last value-added tax authority number) | Enter the last value-added tax (VAT) authority number used for the system to automatically start assigning when you create new VAT authority numbers. You can edit this field only if the VAT authority number changes. When you use the Express VAT Code function, the system automatically creates a VAT authority number at the time that you create a VAT code. You then assign one or more tax authorities to a VAT code, to define the VAT rate applicable for that VAT code. |

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SubCustomer Usage</b>    | History, aging, events, and some profiles are available for subdivisions within customers if you enable subcustomer levels in your system. Select whether you want to use the first <b>SubCustomer</b> field, both <b>SubCustomer</b> fields, or no <b>SubCustomer</b> fields. These fields appear on any pages where a customer that has subcustomers appears.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Tax Provider</b>         | <p>Select <i>None</i>, <i>Taxware</i>, or <i>Vertex</i> as the type of tax provider software that you use. This option determines what fields appear on PeopleSoft application pages that have implications for sales and use tax. Before selecting a third-party tax application, the application should be installed and configured to communicate with the PeopleSoft system.</p> <hr/> <p><b>Note:</b> When you change tax providers, a process will run to update the geocodes and business unit tax settings. You can view the status of this process on the Tax Provider Installation page. Geocodes will be deselected when changing the tax provider to <i>None</i>. No taxes can be computed through a third-party solution until the process has finished. Transactions for business units set to use the PeopleSoft tax tables will not be affected by the change.</p> <hr/> |
| <b>Tax Provider Setup</b>   | The <b>Tax Provider Setup</b> link appears when you choose a third-party from the <b>Tax Vendor</b> list. Click the link to complete setup for the chosen tax vendor solution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Reconciliation Level</b> | <p>Identify the type of business unit-level security to use for the bank reconciliation process. Select <i>All BUs</i> if you want the reconciliation process to include all business units set up in the system. Select <i>Single BU</i> if you want reconciliation to adhere to the business unit security that you have already defined.</p> <p>When you select <i>Single BU</i>, the run parameters for the Auto Reconciliation process requires you to select the business unit that you want to perform reconciliation. The list displays the business units that the user is allowed to access.</p>                                                                                                                                                                                                                                                                               |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>InterUnit Method</b>               | <p>Select one of the due-to and due-from balancing methods for InterUnit transactions from the following values.</p> <p><i>Direct:</i> The due-to and due-from ChartFields used to balance each entity in the transaction are retrieved from the Inter/IntraUnit template definition of the entity.</p> <p><i>Indirect:</i> The due-to and due-from ChartFields used to balance each entity in the transaction are retrieved from the Inter/IntraUnit template definition of the affiliate entity.</p> <p><i>Pairs:</i> The due-to and due-from ChartFields used to balance each entity in the transaction are retrieved from a definition for the pair of entities, or business units, involved in the transaction. Pairs are defined on the InterUnit Pair Maintenance page.</p> <p>See <a href="#">Setting Overall Interunit Installation Options</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>InterUnit Summarization Option</b> | <p>Select one of the following options.</p> <hr/> <p><b>Note:</b> The <b>InterUnit Summarization Option</b> is not available to users of Sybase because of technical limitation of that database.</p> <hr/> <ul style="list-style-type: none"> <li>• <i>Summarize:</i> The <b>Summarize</b> option affects processing only if you are not using affiliate ChartFields. Select this option for the system-generated Inter/IntraUnit offset lines to be summarized together whenever all the fields (except for the amount and line sequence fields) are equal. For example, if business unit A pays expenses for business units B and C, without InterUnit summarization, two InterUnit balancing lines are created for business unit A (one for B and one for C). However, with InterUnit summarization, InterUnit processing creates only one InterUnit receivable journal line for business unit A instead of two. If there is additional activity among business units A, B, and C, the InterUnit processor summarizes the activity to create a minimal number of InterUnit journal lines while maintaining the overall balance among the business units.</li> <li>• <i>No Summarization:</i> Select if you do not want to summarize system-generated Inter/IntraUnit offset lines or if you are using affiliate ChartFields.</li> </ul> <p>See <a href="#">Setting Overall Interunit Installation Options</a>.</p> |
| <b>Enable India GST</b>               | <p>Select this check box to enable India GST.</p> <hr/> <p><b>Note:</b> Selection of this check box is a one-time setup. Once selected, you cannot deselect this check box or disable India GST.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Field or Control</b>                                  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Financial Sanctions Options</b>                       | Click to access the Financial Sanctions Options page, where you can set up financial sanctions validation.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Enable Document Sequencing</b>                        | Select to use document sequencing for the overall installation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Enable Alternate Account</b>                          | Select to enable alternate account processing. Alternate account produces journal-line and transaction-level balances for statutory reporting requirements. The primary account field contains the corporate accounts, and an alternate account contains the statutory accounts. You define mapping options for each alternate account or the system accesses by default the suspense account defined on the Ledger For a Unit page. It is not necessary to install General Ledger to use alternate accounts in other applications. |
| <b>Create MultiBook Accounting Entries in Subsystems</b> | Select to enable the system to create multibook accounting entries on an auxiliary page in the subsystems. General Ledger must be installed for this option to be available.                                                                                                                                                                                                                                                                                                                                                        |
| <b>Process Partition for GL</b>                          | Select to improve processing performance. You must have performed the procedures necessary to enable multiple General Ledger Post processes to run concurrently with unique data partitions. This option is available only if you have installed General Ledger.                                                                                                                                                                                                                                                                    |
| <b>Item Approval Required: Method</b>                    | Select <i>Manual</i> or <i>Workflow</i> as your approval method. If you select <i>Manual</i> , an authorized user can set the status of individual items on the Item Approval page to <i>Approved</i> or <i>Denied</i> . If you select workflow approval, you must establish item approval as a business process in PeopleSoft Workflow.                                                                                                                                                                                            |
| <b>Enable Document Tolerance</b>                         | Select to perform document tolerance checking, which is an edit that checks the percentage or monetary amount discrepancy between a requisition and purchase order document or a purchase order and voucher. This tolerance checking is performed at the distribution line level. You define these tolerance thresholds by ChartField value. In the <b>ChartField</b> field, enter the ChartField whose values you use to define document tolerance checking.                                                                       |
| <b>Document Approval Required</b>                        | Select to have the Document Tolerance Checking Application Engine process (FS_DOC_TOL) check that the voucher has been approved. If the voucher is not approved, the process issues an exception. If you do not select this option, the process proceeds with the regular validation—whether or not the voucher has been approved—passing vouchers that are within tolerance and generating exceptions for those that are over tolerance.                                                                                           |
| <b>ChartField</b>                                        | Enter the ChartField whose values you use to define document tolerance checking.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enforce Budgetary Only Edit</b>                                                | <p>Select to enforce the budgetary only edit when you save a transaction. This enables edit of Budgetary Only ChartField values if there are multiple effective-dated values with different Budgetary Only values. Deselect this option if you do not require this edit.</p> <p>This option provides additional editing on transaction pages that are not supported by existing edits on the ChartField page (Set Up Financials/Supply Chain, Common Definitions, Design ChartFields, Define Values, ChartField Values, &lt;ChartField&gt;). Within some transaction pages, the existing prompt table edit restricts users from selecting ChartFields that are budgetary only ChartFields. However, if there are multiple effective dated rows on the ChartField page, then the prompt table edit may not recognize the budgetary only flag. This option provides additional online editing that is needed, in addition to the existing online edits.</p> |
| <b>Use Flatten Tree Data</b>                                                      | Select to indicate that General Ledger processes that use PeopleSoft tree data should use flattened tree data if available and current.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Maintain Flatten Tree Data</b>                                                 | <p>Click this link to access the Tree Flattener Options page where you can select <i>Detail List</i>.</p> <p><i>Detail List</i> indicates that you want to maintain a detailed list of flattened tree data. This option requires that the user maintain EDR data. The Maintain Chartfield EDR Data check box (below this link) must be selected if the user is maintaining a detailed list of tree data.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Maintain Chartfield EDR Data</b>                                               | Select this check box to indicate that ChartField effective date range data is to be maintained by Online ChartField components.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Federal Reporting Element</b>                                                  | This is a display only field and drives the transaction for federal reporting. The field name is used as a cross reference when reporting federal transactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Enable Realtime D&amp;B Access</b> (enable realtime Dun and Bradstreet access) | Select to enable users to use the Dun and Bradstreet interface to order and purchase Dun and Bradstreet reports.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Maximum Response Number</b>                                                    | Enter the maximum number of rows that you want to receive from the Dun and Bradstreet system when you are searching for a Data Universal Numbering System (DUNS) number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Account Balancing Attributes</b> | <p>Select the appropriate check box to activate the following account balancing attributes:</p> <p><b>Balance Sheet Indicator:</b> If you define an account value as balance sheet or off-balance sheet, you must also assign various General Ledger processes, such as Journal Edit, Revaluation, Closing, Position Accounting, and so on, with the appropriate balance sheet or off-balance sheet account to perform the necessary balancing.</p> <p><b>Book Code:</b> If you use the Book Code feature to further segregate transactions into balancing subsets within the same ledger, it is particularly important that the Book Code ChartField values and the Balance Sheet Indicator values be properly grouped and matched with your account ChartField to ensure proper balancing. You define a combination of a book code and a balance sheet indicator value as an account balancing group. You associate the two with an account as an attribute.</p> <p>You can activate any one of the account balancing attributes. You do not need to activate both if you want to activate only one. The system populates the <b>Default Value</b> field with the default account balancing group value that you set up when you configure your ChartFields.</p> <hr/> <p><b>Note:</b> Book Code is only supported by the General Ledger and Asset Management products. You might require a blank Book Code if Asset Management has a mix of asset business units with some using and some not using Book Codes, which need new Account Balancing Groups and interunit templates to use the blank Book Code value.</p> |

**Note:** When you enable India GST the system disables the earlier sales tax, excise and VAT but retains customs duty as is.

Once enabled, before you transact in the new tax regime, it is mandatory to manually run the data conversion application engine program DCLC25709172 to disable excise rows that exist within PeopleSoft data structures.

You can validate payees, banks, vendors, and customers against any search index you specify on the Financial Sanctions Options page. Depending upon how you set up the validation options, these applications provide a process for administrators to ensure the match is correct and to prevent any financial transactions from occurring with that individual or entity.

| <b>Enable in Treasury Settlements</b> | <p>Select to enable financial-sanctions validation in PeopleSoft Cash Management. Selecting this option initiates an SDN payee validation search during a settlement process involving transactions from banks for which the <b>Financial Sanctions Validation</b> check box is selected on the Bank Information page.</p> <p>See "Bank Information Page" (PeopleSoft Banks Setup and Processing).</p> <p>See "Understanding the Settlements Payment Process" (PeopleSoft Cash Management).</p>                                                                                                                                                                                                                  |
| <b>Procure to Pay</b>                 | <p>Select one of the following options to enable Financial Sanctions validation of PeopleSoft Payables and eSettlements suppliers.</p> <p><i>Enabled at Bank:</i> Enables financial sanctions validation of suppliers whose banks are specified as requiring financial sanctions validation on the Bank Information component (COUNTERPARTY_DEFN).</p> <p><i>Enabled at Installation:</i> Enables financial sanctions validation for all suppliers.</p> <p><i>No Validation:</i> The system does not perform any financial sanctions validation.</p>                                                                                                                                                             |
| <b>Order to Cash</b>                  | <p>Select an option to enable financial sanctions validation of PeopleSoft Billing, Order Management, and Inventory customers. Options include:</p> <p><i>Enable at Business Unit:</i> Enables financial sanctions validation of customers whose business units are specified as requiring financial sanctions screening in the Inventory Definition, Order Management Definition, and Billing Definition components (INV_BUSIN_UNIT, BUS_UNIT_TBL_OM and BUS_UNIT_TBL_BI, respectively).</p> <p><i>Enable at Install:</i> Enables financial sanctions validation for the entire system and all business units.</p> <p><i>No Validation:</i> The system does not perform any financial sanctions validation.</p> |

## Search Options

You perform a search in one of two ways: invoke a search on the financial sanctions data stored in the FSCM database or invoke a search using a third-party web service. A common application package (FS\_SDN\_SEARCH) provides a search interface for accessing the financial sanctions data stored in the FSCM database or by using a third-party web service.

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Score Threshold</b>               | <p>Enter a score that the system uses to determine if there is a potential match. The system performs a search on the search definitions created on the financial sanctions data. The score returned by the Search Framework is compared to the score that you enter. If the score returned is greater than, or equal to, the score that you enter, it is considered a potential match.</p> <hr/> <p><b>Note:</b> The higher the number you enter, the more accurate the match has to be to the financial sanctions data. The lower the number you enter, the system returns more potential matches. You need to determine what is acceptable for your organization.</p> <hr/> <p><b>Warning!</b> To modify the delivered score threshold amount, you must have a thorough understanding of how the PeopleSoft Search Framework search engine functions. You cannot modify this field if you are using Elastic Search as the Search Instance, and the Elastic Search version greater than 2.3.</p> <hr/> <p>See <i>PeopleTools: PeopleSoft Search Technology</i></p> |
| <b>Use Enterprise Search Service</b> | Select to access the financial sanctions data stored in the FSCM database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Use Third Party Web Service</b>   | Select to use a third-party web service to access financial sanctions data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Message Node Name</b> | <p>Enter the node name for the exchange of XML-formatted, IP messages between PeopleSoft and the third-party web service. You must configure this node to invoke the third-party web service. Also, you must transform the outbound IP request message received by the third-party web service, as well as the inbound IP response message sent from it.</p> <p>See "Understanding the Financial Sanctions Service" (PeopleSoft Banks Setup and Processing).</p> <p>See "Defining Integration Broker Settings for Payments" (PeopleSoft Financial Gateway).</p> <hr/> <p><b>Note:</b> This PeopleSoft application provides a web service (SDN Search) that accesses the financial sanctions data stored in the FSCM database. The web service is delivered using either Integration Broker or by using a Business Process Execution Language (BPEL) map. Enabling web services is discussed in <i>PeopleTools: Integration Broker</i> in the "Creating Third-Party Integrations Using WSDL" topic.</p> <hr/> |

## List of Search Definitions

The Search Framework search engine performs the search on the financial sanctions data.

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search Definition</b> | <p>Enter a name search definition and an address search definition to use for financial sanctions validation. For the system to identify the most accurate match results, the system searches only the name fields against the name search definition and the address fields against the address search definition. Both the name and address search definitions are required. You must first build the search definitions using the Search Index Admin page in PeopleTools.</p> <hr/> <p><b>Note:</b> Oracle's PeopleSoft provides both a name and address search index (AP_SDN_ADDRESS and AP_SDN_AKA_NAME) for the Specially Designated Nationals (SDN) list.</p> <hr/> |
| <b>Stoplist Words</b>    | <p>Enter stop-list words, which control how Financial Sanction validation flags your entities. When validation is run, the system removes any words that match the entries made here.</p> <p>You can edit the existing list of words available for each of the Index types – Address and Name.</p>                                                                                                                                                                                                                                                                                                                                                                         |

## D&B Account Page

Use the DB Account (Dun and Bradstreet account) page (DB\_ACCOUNT\_SEC) to enter logon IDs and passwords by SetID for each Dun and Bradstreet account.

Navigation:

Clickk the DB Account Information link on the Installation Options - Overall page.

For each business unit that has a separate billing account to purchase reports through the Dun and Bradstreet interface, enter the SetID. Enter the user ID and password that is used to log on for each SetID.

## Alternate Character Page

Use the Alternate Character page (ALT\_CHAR\_PNL) to select the alternate characters that the system uses for a specific language code.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options.** Click the **Alternate Character** link.

PeopleSoft Alternate Character architecture accommodates language phonetic requirements, primarily supporting Japanese Furigana requirements for EFT processing. You can expand its implementation to include other language needs.

| <i><b>Field or Control</b></i>                                                      | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Language Code</b>                                                                | Select a code to which you can assign an alternate character value from the available options. When you select a code for a user (during security setup) and enable for that user the use of alternate characters, the system allows the user to use only the character set assigned to the user's language code for all fields with an associated <b>Alternate Character</b> field.                                                                                                                                                         |
|  | When you enable alternate characters for a specific user, this button is activated to the right of all the fields in the system with an associated Alternate Character field. Click the <b>Alternate Character</b> button to enter and display the field value in the Alternate Character set. Alternate character sets are linked with language codes and then selected for use by user ID. Only the character set specified on this page for the specific language code of the user ID is allowed in the <b>Alternate Character</b> field. |

## Documentum Page

Use the Documentum page (OPER\_DEF\_TABLE\_DC) to set Documentum installation options.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options.** Click the **Documentum** link.

You can set several specific document management control options that both enable the document management system and specify system-level configurations.

**Note:** All fields on this page are case-sensitive.

| <i><b>Field or Control</b></i>    | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Document Management</b>        | Select if you want to enable the embedded enterprise document management system. Selecting this option activates the Documentum installation options.                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Documentum Docbase Name</b>    | Displays the name of the document database that contains the documents that you access with pages for a specific PeopleSoft product.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Maximum Documents in Query</b> | <p>Displays the maximum number of documents that the system retrieves when you run document management system queries within the Documentum-enabled product. This value is the maximum number of documents that the system returns to the Query Result page, not the maximum number of documents that result from the document management system query itself.</p> <hr/> <p><b>Note:</b> This setting does not limit the maximum number of documents that can be associated on a page, just the number that are returned by a single query.</p> <hr/> |
| <b>Document Object Type</b>       | Displays the document management system object supertype that you want to use when you access documents within the document database. The object type controls the set of valid attributes of the documents within Documentum. This object type must contain all attributes (fields) that you reference from PeopleSoft Engineering document query pages.                                                                                                                                                                                             |

## Federal Processing Options Page

Use the Federal Processing Options page (INSTALLATION\_FD) to enable SAM processing for suppliers or customers.

| Field or Control     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Default Budget Date  | <p>Select a budget date default scheme for your requisitions, purchase orders, and vouchers.</p> <p>Values include:</p> <p><i>Accounting Date Default:</i> Select to provide the document accounting date as the budget date default.</p> <p><i>Predecessor Doc Date Default:</i> Select to copy the budget date from the predecessor document.</p>                                                                                                                                                                                                                                                                                                                                                                                                   |
| Reversal Date Option | <p>Select the date to control reversal (re-budget checking) of documents.</p> <p>Values are:</p> <p><i>Prior Date:</i> Select this option for the system to back out old entries, using the fiscal year and accounting period as they were originally recorded. For example, a purchase order originally created in period 1 is recorded as an encumbrance entry in period 1. However, if you then change the purchase order in period 2, giving it a new accounting date, the system reverses the purchase out of period 1 and rebooks it to period 2.</p> <p><i>Current Date:</i> Using the current date option, entries are backed out and rebooked in period 2, leaving period 1 unchanged. Period 2 then has the net change to the document.</p> |

| <b>Field or Control</b>                                         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>BP Liquidation Option</b> (budget period liquidation option) | <p>Values are:</p> <p><i>Current Document Budget Period:</i> Select for liquidation to be the default budget period of the document being processed. For example, a purchase order originally recorded as an encumbrance for budget period 1 results in the liquidation of the encumbrance in the budget period of the expenditure that might have actually occurred in and been assigned to budget period 2.</p> <p>This option has one special scenario: if the ruleset ChartField was changed between the current document and its predecessor and the two ruleset ChartFields belong to different rulesets that have different budget period calendar, the budget period of the liquidation entry does not use that of the current document. Instead, the system uses the ruleset ChartField of the predecessor to get the corresponding budget period calendar, and it determines the liquidation budget period based on the calendar and the budget date of the current document.</p> <p><i>Prior Document Budget Period:</i> Select to provide the budget period of the prior document as the default. For example, if a purchase order has a budget period of 1, then, when the expenditure occurs that liquidates the encumbrance, the liquidation occurs in the budget period assigned to the purchase order that created the original encumbrance, which is budget period 1.</p> |

## Funding Source Options

| <b>Field or Control</b>                 | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Activate Date and Date Label</b>     | Select the check box to make available a user-defined information only date field to which you can give a user-defined label of up to 15 characters. The field name appears on the funding source (KK_FUND_SOURCE) page, but the field is for information only; it has no logical operations associated with it nor is it delivered as a part of fund source inquiry.                            |
| <b>Activate Char 1 and Char 1 Label</b> | Select the check box to make available a user-defined 30 characters information field and give the field a user-defined label of up to 15 characters. Once defined, the field name appears on the funding source (KK_FUND_SOURCE) page, but the field is informational only; it has no logic or programmatic operations associated with it nor is it delivered as a part of fund source inquiry. |

| <b>Field or Control</b>                 | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Activate Char 2 and Char 2 Label</b> | Select the check box to make available a second user-defined 30-character information field and give the field a user-defined label of up to 15 characters. The field name appears on the funding source (KK_FUND_SOURCE) page. The field is for information only; it has no logic or programmatic operations associated with it nor is it delivered as a part of fund source inquiry. |

## On-Line Budget Checking Option

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Online Mode</b>           | <p>Select to run the budget check process on the application server, which starts immediately without having to wait in a process scheduler queue.</p> <p>Deselect to run the budget check process on the process scheduler.</p> <hr/> <p><b>Note:</b> You can check the status of the budget check process on the process monitor only if you run the process using the process scheduler.</p> <hr/> |
| <b>Execute on Server</b>     | Select the Process Scheduler server on which to perform online budget checking. If no server is specified, the system selects any available server during runtime.                                                                                                                                                                                                                                    |
| <b>Run Control Prefix</b>    | Enter a prefix to distinguish an online budget process run control. When you run budget checking for an online transaction, the system creates a run control budget checking request for the online transaction and runs the budget processor. The system increments the Last Process Instance by 1 and concatenates it with the Run Control Prefix to create a unique run control ID.                |
| <b>Last Process Instance</b> | This is the last process instance used by the system to create a run control ID for the online budget checking request. The Last Process Instance value is maintained by the system, and you do not need to change it.                                                                                                                                                                                |

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum Wait Time (Minutes)</b>  | <p>This is the maximum time in minutes that a user waits for an online budget checking request to complete. While waiting for the process to complete, the online transaction page is frozen.</p> <p>After the process is complete, the page is refreshed to show the budget checking status (whether the transaction passed or failed budget checking). However, if the maximum wait time has elapsed but the budget processor has not yet completed, the budget processor continues processing but the page is no longer frozen. The user does not need to wait any longer, but the page is not refreshed to show the budget checking status.</p> <p>Use the Process Monitor to check the budget processor status. You need to exit the component and re-enter to see the updated Budget Status once the budget processor is finished in the Process Monitor.</p> |
| <b>Pop Up Error/Warning Message</b> | <p>Select this option to have the system provide a pop-up message box after the online budget checking process is complete. This message only appears if the transaction encountered any budget checking errors or warnings.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Enable Budget Pre-Check

Select the PeopleSoft applications in the **Enable Budget Pre-check** group box for which you want to enable check-only budget checking. The check-only feature allows you to budget-check transactions and budget journals online or in batch without posting transactions or budgets to the commitment control budget ledgers. The applications that appear in this group box vary, depending upon the products that are enabled for commitment control as specified in the **Enable Commitment Control** group box on the Installation Options - Products page.

"Understanding Budget Check Only (Budget Pre-Check)" (PeopleSoft Commitment Control)

## Installation Options - Customer Page

Use the Installation Options - Customer page (INSTALLATION\_CU) to define overall customer hierarchy default options.

Navigation:

**Set Up Financials/Supply Chain >Install >Installation Options >Customer**

This example illustrates the fields and controls on the Installation Options - Customer Page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web interface with two tabs: "Installation Options" and "Customer". The "Customer" tab is active. Below the tabs is a section titled "Hierarchy Display Options". Inside this section, there are three controls:

- Maximum Customers in Display**: A text input field containing the value "100".
- \*Default Hierarchy View**: A dropdown menu with "Corporate" selected and a downward arrow.
- Three checkboxes, all of which are unchecked:
  - ☐ Show Customer Setid
  - ☐ Show Customer Counts
  - ☐ Show Inactive Customer

The values selected on this page affect the way the Customer Hierarchy page is presented in these components.

- Customer Information, General Information, Customer Hierarchy page (Customers, Customer Information, General Information, click the Correspondence Selection link, the Remit From Selection link, or the Corporate Selection link).
- Customer Hierarchy component (Accounts Receivable, Customer Accounts, Customer Information, Customer Hierarchy).
- Collections Workbench component (Accounts Receivable, Customer Accounts, Collections Workbench, click the Hierarchy tab).

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum Customers in Display</b> | <p>Displays a default value of 100. You can override this value.</p> <p>This value controls the number of customers that will be displayed AS WELL AS the number of customers that the user will be able to add to a hierarchy.</p> <p>There is no limit to the number of customers that you can add to a hierarchical relationship (corporate, correspondence, or remit from). However, if the number of customers that you add exceeds either the default value of 100 or the number that you enter in this field, then the entire tree will not be displayed on the page and a message will appear in the graphical hierarchy explaining that the hierarchy contains more customers than the Maximum Customers in Display entered on this page allows.</p> |

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Hierarchy View</b> | <p>Accept the default value of <i>Corporate</i> or select one of these values to appear in the level field on the Customer Hierarchy page.</p> <ul style="list-style-type: none"> <li>• <i>Corporate</i></li> <li>• <i>Correspondence</i></li> <li>• <i>Remit From</i></li> </ul>                                                                                                                                                 |
| <b>Show Customer Setid</b>    | Select this check box to display the customer's SetID on the customer detail nodes and the summary nodes of customer hierarchy tree in the Customer Hierarchy page or the Collections Workbench Hierarchy tab.                                                                                                                                                                                                                    |
| <b>Show Customer Counts</b>   | Select this check box to display the number of customers associated with each node on the customer hierarchy tree in Customer Hierarchy page or the Collections Workbench Hierarchy tab.                                                                                                                                                                                                                                          |
| <b>Show Inactive Customer</b> | <p>Select this check box to display inactive customers on the customer summary and detail nodes of the customer hierarchy tree on the Customer Hierarchy page or the Hierarchy tab of the Collections Workbench. The check box is selected as the default option.</p> <hr/> <p><b>Note:</b> Customer balances are not impacted by your choice of not displaying inactive customers. These always roll up to the parent.</p> <hr/> |

## Defining Tax Provider Installation Options

Specifying a tax vendor and tax certificate information is a two-step process. First, specify a tax vendor at the installation level on the Installation Options - Overall page. Then, establish tax vendor installation options on the Tax Provider Installation page.

Use the Tax Provider Installation component (TAX\_PROV\_INFO) to define tax provider installation options.

## Page Used to Define Tax Provider Installation Options

| <u>Installation Options - Expenses Page</u>               | INSTALLATION_EX        | Define installation options for Expenses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <u>Installation Options - Urgency (in Days) Page</u>      | EX_URGENCY_SETUP       | Configure urgency levels for expense reports, time reports, travel authorizations, and cash advances by entering the number of days that the system uses to calculate and trigger a high, medium, or low urgency level for a transaction.                                                                                                                                                                                                                                                                                            |
| <u>Installation Options - General Ledger Page</u>         | INSTALLATION_GL        | Define installation options and mobile approval options for General Ledger.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <u>Installation Options - Grants Page</u>                 | INSTALLATION_CSR       | Define Grants installation options. Use this page to indicate that you can include optional attachments, to establish cost-sharing analysis types for each feeder system with which you plan to use the Grants cost-sharing features, and to determine the source for calculating unliquidated obligation balances for the Federal Financial Report.                                                                                                                                                                                 |
| <u>Installation Options - Grants Portal Page</u>          | INSTALLATION_GMPT      | Define Grants Portal options.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <u>Installation Options - Inventory Page</u>              | INSTALLATION_INV       | Define several settings used by PeopleSoft Inventory; including staged date options, interunit transaction options, unit of measure conversion methods for bar code transactions, methods to number accounting entry lines, search limitations for the Storage Location Search page, and default values for lot IDs, serial numbers, and receiver information. In addition, use this page to define the default hold code applied to material stock requests when they fail to pass the Screen For Denied Parties process (SCM_FSS). |
| <u>Installation Options - Inventory Counters Page</u>     | INSTALL_IN_COUNTERS    | Define the starting values for your automatically generated numbers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <u>Installation Options - Lease Administration Page</u>   | INSTALLATION_RE        | Select to enable lease activation for a lease. If selected, the roles defined can activate leases. Also, set mapping instructions for the Site Map page.                                                                                                                                                                                                                                                                                                                                                                             |
| <u>Installation Options - Maintenance Management Page</u> | INSTALLATION_WM        | Define installation options for Maintenance Management.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Page Name</b>                                               | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Installation Options - Manufacturing Page</u>               | INSTALLATION_MG        | Set the calculated quantity per assembly (QPA) rounding precision. This rounding precision is reflected in PeopleSoft Manufacturing, Engineering, Cost Management, and Supply Planning.                                                                                                                                                                       |
| <u>Installation Options - Mobile Inventory Page</u>            | INSTALLATION_MIN       | Define installation options for Mobile Inventory Management.                                                                                                                                                                                                                                                                                                  |
| <u>Installation Options - Payables Page</u>                    | INSTALLATION_AP        | Define the posting method and enable federal payment schedule processing, late interest charge calculation, evaluated discount, and document association processing options for your Payables application. Configure the Document Content Management Interface at the time of using a third party imaging solution for capturing invoice data from an image.  |
| <u>Installation Options - Planning Page</u>                    | INSTALLATION_PL        | Define the message numbers and default planning instance for Supply Planning.                                                                                                                                                                                                                                                                                 |
| <u>Installation Options - Program Management Page</u>          | INSTALLATION_PGM       | Establish program management system defaults for workflow and email notification.                                                                                                                                                                                                                                                                             |
| <u>Installation Options - Project Costing Page</u>             | INSTALLATION_PC        | Establish default settings for project fields and control fields used across .                                                                                                                                                                                                                                                                                |
| <u>Installation Options - Project Costing Integration Page</u> | INSTALLATION_PCINT     | Establish the parameters for integration processes between and other applications.                                                                                                                                                                                                                                                                            |
| <u>Installation Options - Purchasing Page</u>                  | INSTALLATION_PO        | Define general purchasing controls, requisition loader parameters, procurement card controls, and vendor attributes. In addition, you can define the maximum number of rows to display on various PeopleSoft Purchasing pages and select Oracle BI Publisher as the purchase order reporting tool for both PeopleSoft Purchasing and PeopleSoft eProcurement. |
| <u>Installation Options - Receivables Page</u>                 | INSTALLATION_AR        | Define the installation options that are particular to your Receivables application.                                                                                                                                                                                                                                                                          |

| <b>Page Name</b>                                                 | <b>Definition Name</b> | <b>Usage</b>                                                                                                                           |
|------------------------------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <u>AR Account Overview Balances Page</u>                         | ACCT_BAL_SBP           | Specify which balances to display on the Account Overview - Balances page.                                                             |
| <u>Installation Options - Order Management Page</u>              | INSTALLATION_OM        | Set order, quote, and buying agreement chunking parameters and enable searching, claimback, and feature function security.             |
| <u>Defining Resource Management Installation Options</u>         | INSTALLATION_RS        | Define the installation options that are specific to your Resource Management application.                                             |
| <u>Services Procurement Installation Options Page</u>            | INSTALLATION_SP        | Define Services Procurement installation options.                                                                                      |
| <u>Installation Options - Staffing Installation Page</u>         | INSTALLATION_FO        | Define Staffing Front Office and Pay/Bill Management installation options.                                                             |
| <u>PeopleTools Options Page</u>                                  | PSOPTIONS              | Enable multiple jobs. Doing so will enable the employee record number to appear on the Employees search page and on the Job Data page. |
| <u>Installation Options - Sourcing Installation Options Page</u> | INSTALLATION_AUC       | Use to set up award details bid display options and multichannel framework sourcing defaults.                                          |
| <u>Installation Options - Supplier Contract Management Page</u>  | INSTALLATION_CS        | Set up Supplier Contract Management installation options.                                                                              |
| <u>Installation Options - Treasury Page</u>                      | INSTALLATION_TR        | Define integration options for accounting, JD Edwards General Ledger, and PeopleSoft Financial Gateway functionality.                  |

## Installation Options - Asset Management Page

Use the Asset Management page (INSTALLATION\_AM) to review delivered transaction types, enable asset processing features, enable depreciation attributes, set system-wide options, and enable Asset Lifecycle Management solution integration options.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Asset Management**

This example illustrates the fields and controls on the Installation Options - Asset Management page (1 of 2). You can find definitions for the fields and controls later on this page.

| Installation Options                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Asset Management |

## Transaction Types

The transaction types shown are delivered with the system and represent the types of asset transactions commonly used. You can rename the transaction types using new abbreviations as needed but only until you begin entering actual asset transactions into the system. Once you have done so, you can no longer modify the transaction types table.

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accretion Expense</b> | <p>This transaction type is used in recording the period-to-period changes in the carrying amount of the asset retirement obligation recorded as expense for income statement purposes.</p> <p>This field appears when you enable the Asset Retirement Obligations feature (Asset Retirement Obligations check box in the Features group box). See "Accounting for Asset Retirement Obligations" (PeopleSoft Asset Management).</p> |

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                                                                                                                    |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prior Lease Payment</b> | This transaction type is used when a lease payment is made in the current period for a prior period. The Prior Lease Payment (PLP) transaction type functions similarly to the Lease Payment (LPY) transaction type for accounting entry purposes. See "Accounting Entry Template IDs Page" (Asset Lifecycle Management Fundamentals) |

## "Creating Accounting Entries" (PeopleSoft Asset Management)

### Features

Asset management supports various processing features to meet the requirements of your location or industry.

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Joint Venture</b>                | Select to enable joint venture options in Asset Management.<br>This enables two or more business units to share ownership of an asset. The default for this feature is disabled.                                                                                                                                                                                                  |
| <b>Group Asset</b>                  | Select to enable group asset processing features. The default for this feature is disabled.                                                                                                                                                                                                                                                                                       |
| <b>Child Inherits Parent's Life</b> | Select to enable a feature that enables child component assets to inherit the remaining life of their parent asset. The default for this feature is disabled.                                                                                                                                                                                                                     |
| <b>Inflation</b>                    | Select to use the Inflation Processing feature, which provides for monthly inflation adjustment transactions (transaction type <i>INF</i> ) that adjust the asset balances (cost, period depreciation, year-to-date depreciation, and accumulated depreciation) for inflation. This is primarily used in countries other than the U. S. The default for this feature is disabled. |
| <b>Impairment</b>                   | Select to use impairment processing, which provides for testing of assets that may meet impairment standards for your country.                                                                                                                                                                                                                                                    |
| <b>Revaluation</b>                  | Select to use revaluation processing, which provides for periodic asset cost adjustment to fair market value.                                                                                                                                                                                                                                                                     |

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                           |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Copy Zero Impair/Revalue Rows</b> | Select to create zero impairment or revaluation rows to the other books in order to maintain synchrony, even though those books do not process impairment or revaluation.                                                                                    |
| <b>Effective Rate</b>                | Select this option to enable functionality that converts transaction currency to base currency using the effective date that PeopleSoft provides rather than using the asset's transaction date. This option is valid only for transactions originating in . |

| <b>Field or Control</b>                                              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Trans Currency Translation</b> (transaction currency translation) | Select this option to direct the accounting entries (AM_ AMAEDIST) and depreciation close (AM_DPCLOSE) processes to utilize the primary book's base currency as the transaction currency. Deselect this option if you want the accounting entries and depreciation close processes to keep the original transaction currency balanced for each individual transaction. This option directly impacts PeopleSoft General Ledger journal entries. |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Capitalization Threshold</b> | <p>Select this option to enable capitalization threshold processing at the system level. If this option is not enabled within installation options, any capitalization thresholds set at the business unit or profile levels are ignored. When implemented, the capitalization threshold feature enables PeopleSoft Asset Management to automatically assess the need to capitalize assets according to user-defined rules for different profiles of assets based on asset cost. The system uses the specified thresholds to determine whether to classify an asset as capital, noncapital or expense.</p> <p>See <i>PeopleSoft Asset Lifecycle Management Fundamentals</i>, <i>Setting Up Accounting Entry and Financial Processing for PeopleSoft Asset Management</i>, "Defining Financial Processing for PeopleSoft Asset Management."</p> |

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Asset Retirement Obligations</b> | <p>Select this option to enable asset retirement obligation processing. This functionality provides asset retirement obligation measurement and reporting in compliance with Financial Accounting Standards (FAS 143) for leased assets, group assets, and asset impairment.</p> <p>See "Accounting for Asset Retirement Obligations" (PeopleSoft Asset Management)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Project ChartField Detail</b>    | <p>Select a value to enable the interface of (PC) detail ChartField values from the source systems into PeopleSoft Asset Management. When this check box is set properly, the ChartField values (Project, PC Business Unit, Activity, Source Type, Category, and Subcategory) are carried over to Asset Management pages and on through to General Ledger. The values are:</p> <ul style="list-style-type: none"> <li>• Project ID Only - Retain only the Project ID</li> <li>• Project ID through Activity ID - Retain Business Unit, Project ID, and Activity ID</li> <li>• Retain All – Retain all of the ChartFields, i.e. Business Unit, Activity ID, Resource Type, Resource Category, and Recourse Subcategory</li> </ul> <p>The default value is 'Project ID Only', meaning that only the Project ID value from system sources will be carried over by the interface programs to Asset Management, and ultimately to General Ledger.</p> |

## System Wide Options

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last Interface ID</b> | <p>Primarily informational, assigned incrementally by the system. After you set this number, the next interface will be assigned a value one greater than the number you set.</p> |

| <b>Field or Control</b>                        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last Pre-Interface ID</b>                   | <p>Primarily informational, assigned incrementally by the system. After you set this number, the next pre-interface will be assigned a value one greater than the number you set.</p> <hr/> <p><b>Note:</b> Pre-Interface ID is one of the keys to the Pre-Interface table used by the PeopleSoft Payables/Purchasing to Asset Management interface. When inserting data into the Pre-Interface table, Payables and Purchasing use the <b>Last Pre-Interface ID</b> field and then increment the ID counter by one. You can enter a different Last Pre-Interface ID before using the interface; otherwise, the system uses a value of 1. If the Pre-Interface table contains rows of data, the last pre-interface ID must be greater than or equal to the largest pre-interface ID number found in the table.</p> <hr/> |
| <b>Account Entry Template ID</b>               | Select the default that you want to use. Account entry template IDs help speed up entry of the accounting templates by enabling you to associate more than one chart of accounts with an asset.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>File Size for chunking (MB)</b> (Megabytes) | Specify the chunk size for the message, Get PIDATA, which is generated by Asset Management's Physical Inventory feature for usage by third party vendors. If the <b>File Size for chunking (MB)</b> is 8, and the total size of the message is 18 MB, the message is split into three chunks based upon the value provided in this field: the first and second chunks of 8 megabytes each and the third chunk of 2 MB. If this field is assigned a value of zero, the Tools Installation level variable (%MaxMessageSize) is used to determine the size of chunk.                                                                                                                                                                                                                                                       |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Precision for ARO Calculations</b> | <p>This field appears when you enable the Asset Retirement Obligations feature (Asset Retirement Obligations check box in the Features group box). Enter the number of characters for the calculation of asset retirement obligations.</p> <p>Example: The formula for Liability is: (Expected Cash Flows Adjusted for Market Risk) * (1/(1+credit adjusted risk free rate) ^ estimated life).</p> <p>This formula can produce a large number of decimal places and reporting precision requirements vary; therefore, the system uses the number as specified in this field to round the result.</p> <p>Suppose that Precision for the ARO Calculation is 4. The Liability is calculated as follows:</p> <p>A = Expected Cash Flows Adjusted for Market Risk</p> <p>B = round((1+credit adjusted risk free rate) ^ estimated life, 4)</p> <p>Liability = A * round(1/B,4)</p> <p>For more information, see "Accounting for Asset Retirement Obligations" (PeopleSoft Asset Management).</p> |
| <b>Federal Fund Attribute</b>         | <p>Enter a name for the Federal fund attribute.</p> <p>The Federal fund attribute will be used to set up chartfield attributes on the ChartField Attribute page in order to specify whether a fund is Federal.</p> <p>See "Understanding Federal Funds Transfers" (PeopleSoft Asset Management)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Depreciation Attributes

| <b>Field or Control</b>                                                                                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current FY PDP for Reglr Asset</b> (current fiscal year prior depreciation period for regular asset)   | <p>Select this option when adding assets with the <b>Calculation Type</b> of <i>Remaining Value</i> and the asset <b>In Service</b> date is earlier than the transaction date. If adding assets within the same fiscal year, the system calculates prior depreciation period (PDP) based on the <b>In Service</b> date as long as this option is selected. It is selected by default.</p> <p>For example, if the fiscal year is 01/01/05 to 12/31/05, asset in service date is 03/01/05, transaction date is 05/01/05, accounting date is 05/01/05, calculation type is <i>Remaining Value</i>, and convention is <i>Following Month</i>, the system calculates PDP from 04/01/05.</p> |
| <b>Current FY PDP for Grp Asset</b> (current fiscal year prior depreciation period for group asset)       | <p>Select this option when adding assets with the <b>Calculation Type</b> of <i>Remaining Value</i> and the asset <b>In Service</b> date is earlier than the transaction date. If adding assets within the same fiscal year, the system will calculate PDP based on the <b>In Service</b> date as long as this option is selected. It is selected by default.</p> <p>For example, if the fiscal year is 01/01/05 to 12/31/05, asset in service date is 03/01/05, transaction date is 05/01/05, accounting date is 05/01/05, calculation type is <i>Remaining Value</i>, and convention is <i>Following Month</i>, the system calculates PDP from 04/01/05.</p>                         |
| <b>Stop Depr when NBV &lt; Salvage</b> (stop depreciation when net book value is less than salvage value) | <p>Select to stop the depreciation calculation when the net book value becomes less than its salvage value. This selection prevents the generation of negative depreciation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Solutions

Asset Management is the core product in the PeopleSoft Asset Lifecycle Management (ALM) Solution suite of integrated products. The other products are:

- Lease Administration.
- IT Asset Management.
- Maintenance Management.

| <b>Field or Control</b>                             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enter Property Details</b>                       | Select this option to enable the <b>Asset Property page</b> for the Asset - Basic Add and Define Asset Operational Info components.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>IoT Installed</b> (Internet of Things Installed) | <p>Select this option to indicate your organization has enabled integration with Oracle Internet of Things Asset Monitoring Cloud Service.</p> <p>When you select this option, the Add Asset - Basic Add component includes an additional option to indicate the asset is an IoT asset as well as a separate IoT page to assign IoT attributes to your asset.</p> <p>See:</p> <p>"Understanding the Integration with Oracle Internet of Things Asset Monitoring Cloud Service" (Asset Lifecycle Management Fundamentals)</p> <p>"General Information Page" (PeopleSoft Asset Management)</p> <p>"IoT (Internet of Things) Page" (PeopleSoft Asset Management)</p> <p>"Upload Assets to IoT (Oracle Internet of Things) Page" (PeopleSoft Asset Management)</p> |
| <b>IT Asset Management Installed</b>                | Select this option to enable IT Asset Management options.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Discovery Request Timeout (Sec):</b>             | Enter the time out threshold in seconds when interfacing with asset discovery tools.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Batch Limit</b>                                  | Enter the maximum limit for rows processed in a batch.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Source Device Groups from ARM</b>                | <p>Select to set the default for group creation to source device groups from the <b>Asset Repository</b> field (ARM) when creating new Software Device Groups within IT Asset Management.</p> <p>This default can be overridden at the time of group creation or edit.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Financial Impact</b>      | Select this option to include Financial Impact Analysis during IT Asset Management processing for the Manage Exceptions and Assets not Reporting pagelets and detail. This option displays financial information (asset cost, net book value, and fair market value) that provides financial managers with immediate visibility of the financial impact of IT assets for proper disclosure in accordance with regulatory requirements. |
| <b>Default ITAM Currency</b> | Set the currency code to the base currency for Financial Impact values. This option is visible only when the <b>Financial Impact</b> check box is selected. The values for Financial Impact for Manage Exceptions and Assets not Reporting will be stored in the currency that is specified here. When the actual values display, they are converted to the currency that is specified within individual user preferences.             |
| <b>Rate Type</b>             | Set the rate type for Financial Impact values. This option is visible only when the <b>Financial Impact</b> check box is selected. The values for Financial Impact for Manage Exceptions and Assets not Reporting will be stored as specified here. When the actual values appear, they will be converted to the rate type that is specified within individual user preferences.                                                       |

## Asset Tracking Options

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scan By Field</b>    | <p>Select the field value to be scanned for in the Physical Inventory, Scan By Location, and Scan Asset pages or tiles. The available options are the following:</p> <ul style="list-style-type: none"> <li>• <i>Serial ID Only</i>: If Scan By Field option is Serial ID Only, then the Scan By Default option will have Serial ID selected as the default value and the radio buttons will be display-only and unavailable for editing.</li> <li>• <i>Tag Number Only</i>: If Scan By Field option is Tag Number Only, then the Scan By Default option will have Tag Number selected as the default value and radio buttons will be display-only and unavailable for editing.</li> <li>• <i>Tag Number or Serial ID</i>: If Scan By Field option is Tag Number or Serial ID, then the Scan By Default option will have Tag Number selected as the default value and the radio buttons will be available for editing.</li> </ul> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                      |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scan By Default</b>  | The Scan By Default option specifies the default value for the Scan By Field drop down. This default value is used in the Physical Inventory, Scan By Location, and Scan Asset tiles. The Scan By Default option determines the default value for the toggle switch on the Fluid pages. |

## Billing - General Options Page

Use the Billing - General Options page (INSTALLATION\_BI) to define installation options specific to Billing.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Billing - General Options**

This example illustrates the fields and controls on the Installation Options - Billing - General Options page (1 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Installation Options' page with the 'Billing - General Options' tab selected. The page contains the following sections and controls:

- Auto-Numbering Parameters:**
  - Radio buttons: System, Business Unit, **Bill Type** (selected), Bill Source, User Defined.
  - Fields: Invoice Number ID, Consolidated Invoice Number ID, Temp Bill Invoice Num ID (NBR-TMP).
  - Checkbox: ☐ Enable Con Invoice Numbering.
- Bill Entry Page Series:**
  - Radio buttons: System, Business Unit, **Bill Type** (selected), Bill Source.
  - Fields: Page Series ID, Default Page Series ID (MISC).
- General Parameters:**
  - Fields: Bill Entry Max Rows (5), Max Number of Rows in Scrolls (40), \*Euro Currency (EUR), Last BI Interface ID (196).
  - Checkboxes: ☐ Enable Manual Line Numbering, ☒ Enable Online Rendering, ☒ Allow Changes to Credit Invoice Header, ☐ Process Feature Security.
- Express Bill Entry Parameters:**
  - Field: Bill Entry Hyperlink Option (Express Bill Entry).
  - Field: Default # of Lines to Add (5).
  - Field: Express Bill Entry Template.
- Bill Finalization Process:**
  - Checkbox: ☐ Enable Performance Loop.
- Identifier Look Up Options:**
  - Checkboxes: ☐ Use Invoice Date as Identifier Look Up Date, ☐ Allow Override of Identifier Look Up Date.

This example illustrates the fields and controls on the Installation Options - Billing - General Options page (2 of 2). You can find definitions for the fields and controls later on this page.

**Use Effective Dated Identifier Description for Generating Recurring Bills and Copied Bills**

☐ Use Effective Dated Identifier Description for Generating Recurring Bills and Copied Bills

**Kibana Reporting Preferences**

Reporting Currency: USD

Rate Type: CRRNT

**Authorize Delete Attachments**

☒ Authorize Delete Attachments

**Roles Authorized to Delete Attachments**

1-2 of 2

|   | Role Name                               |   |   |
|---|-----------------------------------------|---|---|
| 1 | Billing Manager <input type="text"/>    | + | - |
| 2 | Billing Specialist <input type="text"/> | + | - |

**Note:** You must first define valid invoice number IDs on the Invoice Number page and define valid page series IDs on the Bill Entry Page Series page.

The **Auto-Numbering Parameters** group box determines the system level that controls the assignment of invoice numbers. The **Bill Entry Page Series** group box determines which Billing pages you want to access and in what order during bill entry or inquiry. For example, you can place pages that you rarely use at the end of your page series. In each group box, select from the following options:

| Field or Control                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>System</b>                                    | When selected in either the <b>Auto-Numbering Parameters</b> or <b>Bill Entry Page Series</b> group box, the field adjacent to the <b>System</b> field is available for entry. For auto-numbering parameters, select a valid predefined invoice ID. You define valid invoice IDs on the Invoice Number page. All billing activity uses this same invoice number-sequencing scheme. For Bill Entry Page Series, select a valid predefined page series ID to ensure that all billing activity uses the same page series definition. You define page series IDs on the Bill Entry Page Series page. |
| <b>Business Unit, Bill Type, and Bill Source</b> | To specify a default invoice number or page series ID at a level other than system-wide, you are required to define the default value for the level desired on a different page. For example, to define page series navigation at the business unit level, select <b>Business Unit</b> . Selecting this option activates the Page Series ID field on the Billing Definition - Business Unit 1 page, and requires you to return to the Business Unit 1 page to specify the Bus Unit Level (business unit level) default page series ID.                                                           |

## Changing the Default Level of the Invoice Number and Page Series IDs

| <i>To Define at the Level of:</i>                          | <i>Move to:</i>                           |
|------------------------------------------------------------|-------------------------------------------|
| <b>Business Unit</b>                                       | Billing Definition - Business Unit 1 page |
| <b>Bill Type</b>                                           | Bill Type 2 page                          |
| <b>Bill Source</b>                                         | Bill Source 2 page                        |
| <b>User Defined</b> criteria (for invoice number IDs only) | Invoice Number page                       |

**Important!** The invoice number ID is required at the level that you define in the **Auto-Numbering Parameters** group box. If you change the parameters in this group box, you must move to the appropriate page and define the default value for the level that you want. For example, if you change the autonumber parameters from **Bill Type** to **Bill Source**, you must go to the Bill Source page and assign an invoice numbering ID at the bill source level. You must also ensure that every bill source you set up in your system has an invoice number ID definition. Failing to follow these implementation requirements can cause unexpected results in future process runs.

| <i>Field or Control</i>                                                        | <i>Description</i>                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Temp Bill Invoice Num ID</b> (temporary bill invoice number identification) | Assigns each temporary bill to a temporary bill invoice number identification. Define your temporary bill invoice number identification on the Invoice Number page.                                                                               |
| <b>Enable Con Invoice Numbering</b>                                            | Select the check box to allow users to define their own consolidated invoice numbering rule. If the check box is selected for the Business Unit level, then the Consolidated Invoice Number ID field will appear on the Business Unit setup page. |
| <b>Default Page Series ID</b>                                                  | If you define your Bill Entry Page Series options at a business-unit, bill-type, or bill-source level, the system uses this default ID if a page series ID is undefined for any business unit, bill type, or bill source.                         |

## General Parameters

| <b>Field or Control</b>                                      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Bill Entry Max Rows and Max Number of Rows in Scrolls</b> | <p>Define the default number of maximum rows to limit the number of rows that appear within the scroll area at one time in bill entry or express bill entry, and define the maximum number of rows that appear in scroll areas in bill search or bill line search.</p> <p>If you define search parameters that normally fetch 200 rows of billing data, for example, but you set the maximum number of rows to 40, you see 40 rows per chunk of the scroll. You can view the rest of the fetched data, 40 rows at a time, using the chunking arrows. You can also change the maximum number of rows displayed directly in bill entry, express bill entry, bill search, and bill line search.</p> |

**Warning!** The larger the values that you enter in these fields, the greater the possibility that system response time will degrade.

| <b>Field or Control</b>                                         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Euro Currency</b>                                            | The currency control code used for euro currency amounts throughout the Billing tables. Displays <i>EUR</i> by default, which is the euro currency code that the PeopleSoft system delivers in the Currency Code table. If you are not using the International Standards Organization (ISO) currency codes, change this default value to the euro currency code that you are using. |
| <b>Last BI Interface ID</b> (last billing interface identifier) | Stores the last interface ID used by external sources that pass billing transactions into the Bill Interface structure. External sources that use this ID are responsible for updating and maintaining its value every time they use a number from this field.                                                                                                                      |

| <b>Field or Control</b>                       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Manual Line Numbering</b>           | <p>Enables manual invoice line numbering. The Billing invoice line numbering feature enables you to enter invoice line numbers during online bill entry. You can control invoice line numbers when you insert bill lines into a new or existing bill, delete existing bill lines, or update invoice line numbers for existing bill lines. Manual invoice line numbering only applies to bill lines entered online. It does not apply to bill lines imported through the Billing Interface.</p> <p>Selecting this option activates a Manual Line Numbering flag on the Header - Info 2 page. Manual line numbering functions only if you enable the feature here and set the <b>Manual Line Numbering</b> flag on the bill header to <i>ON</i>.</p> <hr/> <p><b>Note:</b> Manual invoice line numbering bypasses the Billing chunking feature. When you select this option, the system disables the chunking buttons and sets the value of Bill Entry Max Rows on the Bill Entry Bill Line pages to 99999. In this scenario, when you access a bill, the entire set of rows appears.</p> <hr/> |
| <b>Enable Online Invoice Render</b>           | <p>Select this check box to enable online invoice rendering for the print pro forma job where the invoice form is in BI Publisher format. The invoice document will be rendered online in PDF format if the check box is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Allow Changes to Credit Invoice Header</b> | <p>Select this check box to change certain header fields on a Credit Invoice. If the check box is selected, the user can edit the fields and save them. However, a warning message that the changes are not recommended will be displayed to the user. If the check box is not selected, an error will be displayed when the user tries to change some of the fields on the Credit Invoice Header and the change will not be allowed.</p> <p>The header fields that can be edited using this option are Currency, Customer, Type, Source, Cycle ID, Pay Terms, Billing Specialist and Sales person.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process Feature Security</b> | <p>Select this check box to enable Process Feature Security.</p> <p>Feature function security enables you to define user/role security down to the feature and field level to control access to entire features or individual fields within certain Order Management features.</p> <p>In Billing, Feature Security will impact customers who use third-party taxes and use the option to Calculate Use Tax on Free Goods on the Billing Business Unit. It limits the entry and/or display of the Use tax basis and Use tax amount on Entry (Line Tax), Inquiry(Line Tax) and Interface pages.</p> <p>See "Defining Feature Function Security" (PeopleSoft Order Management).</p> |

## Express Bill Entry Parameters

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Bill Entry Hyperlink Option</b> | Determines whether links on the Bill Search pages navigate you to <i>Standard Bill Entry</i> , which is the default value, or <i>Express Bill Entry</i> .                                                                                                                                                                                                                               |
| <b>Default # of Lines to Add</b>   | The system populates the Lines to Add field on the Bill Entry Express - Line List page with this value.                                                                                                                                                                                                                                                                                 |
| <b>Express Bill Entry Template</b> | <p>Select a template from the list of templates available.</p> <p>The express bill entry template allows you to configure the express bill entry page based on your requirement. Header sections and line tabs can be hidden. Within the line tabs, only the fields you select will be displayed. A single Accounting Distributions page is also configurable through the template.</p> |

## Bill Finalization Process

| <i>Field or Control</i>        | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Performance Loop</b> | <p>Select to instruct the Finalization process to sequentially loop through business units when processing bills.</p> <p>This option improves processing performance by looping through business units instead of processing transactions in a random order.</p> <p>This option applies to the Finalization process for non-consolidated bills only. Consolidated bills can comprise of bills from multiple business units, thus eliminating the ability for the Finalization process to perform this task on consolidated bills.</p> |

## Identifier Look Up Options

| <i>Field or Control</i>                            | <i>Description</i>                                                                                                                                                                                                                                      |
|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Use Invoice Date as Identifier Look Up Date</b> | Select to set the invoice date as the default date for Identifier Look Up. If the option is not selected, current date will be used for Identifier Look Up. This will allow the user to retain the functionality of using current date for all pricing. |
| <b>Allow Override of Identifier Look Up Date</b>   | Select to allow override of the Identifier Look Up Date. If this option is selected, the Identifier Look Up Date is displayed for each Bill Line in Bill Entry or Express Bill Entry. The field may be changed for each line.                           |

## Update Bill Line Description

| <i>Field or Control</i>                                                                           | <i>Description</i>                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Use Effective Dated Identifier Description for Generating Recurring Bills and Copied Bills</b> | Select this flag to update the latest identifier description on the newly created invoices. The description will be updated for the new invoices created through Copy Bill and Recurring Bill. |

## Kibana Reporting Preferences

| <i>Field or Control</i>   | <i>Description</i>                                                                                                                                                                                                                                                                                                                                          |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reporting Currency</b> | <p>According to the selected currency, all the transaction amounts are displayed on the Kibana dashboard pages.</p> <p>Click the Search icon and select the currency type from the <b>Look Up Reporting Currency</b> pop-up window.</p> <p>For example, if you select the currency type as USD, all the transaction amounts are displayed in US Dollar.</p> |
| <b>Rate Type</b>          | <p>According to the selected Rate Type, the currency is converted and displayed on the Kibana dashboard page.</p> <p>For example, if the Reporting Currency is USD and Rate Type is <b>CRRNT</b>, all the transaction amounts are displayed in US Dollar as per current exchange rate.</p>                                                                  |

## Authorize Delete Attachments

| <i>Field or Control</i>             | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Authorize Delete Attachments</b> | <p>Select to indicate that you want to authorize specific roles to delete attachments from the "Header Documentation Page" (PeopleSoft Billing) and the "Line Documentation page" (PeopleSoft Billing) of an invoice. When you select this check box, the Roles Authorized to Delete Attachments appears.</p> <p>Deselect to allow all users to delete attachments from invoices.</p> |
| <b>Role Name</b>                    | <p>Select the roles that you want to grant the ability to delete attachments from "Header Documentation Page" (PeopleSoft Billing) and the "Line Documentation page" (PeopleSoft Billing) of an invoice. The user who originally attached the file can delete as well.</p>                                                                                                            |

☐ Category

☐ SubCategory

☒ None

| Field or Control | Description                                                                         |
|------------------|-------------------------------------------------------------------------------------|
| Region Code      | Enter a 2 character Region Code. There is no prompt list for the Region Code field. |
| State Code       | Select a value for state code from the prompt list.                                 |

Select one of the options in the Federal Appropriation Number group box to define which field will be used to store the value for Federal Appropriation. The available options are *Source Type*, *Category*, *SubCategory*, and *None*. The field selected is used by the Federal Highway Billing flat file extract process to group detail rows. If the Federal Appropriation Number is set to a value other than *None*, the Region Code and State Code fields cannot be left blank since they are going to create the extract flat file if the flag is not set to *None*.

## Billing - Integration Options Page

Use the Billing-Integration Options page (INSTALLATION\_BI2) to define installation options specific to Billing.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Billing Integration Options**

This example illustrates the fields and controls on the Installation Options - Billing - Integration Options page. You can find definitions for the fields and controls later on this page.

| Installation Options                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Billing - Integration Options |

|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>GL Options</b>              | <p>Define the level of detail that you pass to the system that generates your general ledger accounting entries.</p> <p>If you select <b>Business Unit</b> or <b>Bill Type</b>, the GL Options page appears, where you can define the GL level options that default to all existing business units or bill types, respectively.</p> <hr/> <p><b>Note:</b> In deferred mode, when you select Business Unit or Bill Type, the GL Options page appears after you click the save or refresh button.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                |
| <b>GL Level</b>                | <p>(Required) Define how the system passes accounting entries to your general ledger system.</p> <p>If you select <b>System</b> in the <b>GL Options</b> group box, the <b>GL Level</b> field on this page becomes available for entry. Select one of the following values:</p> <p><i>AR Creates GL Acct (accounting) Entries:</i> Receivables creates accounting entries and passes them to your general ledger system. Select this value to indicate that Billing will not track accounting information, and to disable any validation requirements for values defined for each revenue line of a bill when you change the status to <i>RDY</i>.</p> <p><i>BI Creates GL Acct Entries:</i> Billing creates accounting entries and passes them to your general ledger system.</p> <p><i>No GL Accounting Entries:</i> You pass no accounting entries to your general ledger system.</p> |

## Contract Liability Options

If you select System in the GL Options group box, the following fields are available for entry. If you select Business Unit or Bill Type in the GL Options group box, the following fields are available for entry on the GL Options page, where you can define default values for the business unit or bill type definition.

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Contract Liability</b>      | <p>Enables calculation and creation of accounting entries to be posted to your general ledger for future accounting periods. Use this to process bills that contain revenues to be realized in a future accounting period. This option is available for entry only if you selected <i>BI Creates GL Acct Entries</i> in the GL Level field.</p> <p>Before you can generate contract liability, you must select this check box and define the future period accounting dates parameter at the same level that you set the GL options. For example, if you defined the GL options at the business unit level, select Enable Contract Liability and define the future period accounting dates parameter on the GL Options page to display by default all business units. On the Billing Definition - Business Unit 2 page, you can select values different from the defaults selected on the GL Options page. If you defined the GL options at the bill-type level, select Enable Contract Liability and define the future period accounting dates parameter on the GL Options page to display by default all bill types. On the Bill Type 2 page, you can select values different from the defaults selected on the GL options page.</p> |
| <b>Future Period Accounting Dates</b> | <p>Determines the accounting date that the system uses when you create future-dated accounting entries, and is available only when you select the Enable Contract Liability check box. Select <i>First Day in Accounting Period</i> to post contract liability to the proper realized income account on the first day of the realized accounting period; select <i>Last Day in Accounting Period</i> to post on the last day of the realized accounting period.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Proration Method</b>     | <p>The calculation method used to divide and distribute contract liability across accounting periods. Click the <b>Detail</b> button to access the following valid proration method values:</p> <p>(1) <i>By Days Within Range</i>: The system divides the number of revenue days in the period by the number of days in range.</p> <p>(2) <i>Evenly Using All Pds</i> (periods): The system divides the total invoice line amount by the number of periods in the range. Revenue is recognized in equal portions for each accounting period, regardless of the number of days in each period.</p> <p>(3) <i>Evenly Using Mid-Period Rule</i>: The system divides the total invoice line amount by the number of recognizable periods in the range. The number of recognizable periods is derived from applying rules to start/end days and mid-period day to determine whether the first and the last periods are recognizable or excluded entirely from the calculations.</p> <p>(4) <i>Evenly/Partial by Days</i>: The system divides the total invoice line amount by the number of recognizable periods in the range. The number of recognizable periods is derived from applying rules to start/end days and mid-period day to determine whether the first and the last periods are recognizable or excluded entirely from the calculations.</p> <p>(5) <i>User Defined Proration Method</i>: Available if you want to create your own proration method.</p> |
| <b>Mid-Period # of Days</b> | <p>Enter the day in an accounting period that determines whether the accounting period is either fully recognizable or not recognizable at all. You can specify the mid-period day here, or allow the system to assign the date. The system defines the mid-period day by dividing the number of days in the accounting period by two and rounding to the nearest whole number. This field is available only when you select the proration method <i>Evenly Using Mid-period Rule</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>AR / AP Options</b>  | <p>Define the level of detail to pass to your accounts receivable and accounts payable system.</p> <p>If you select in this group box <b>Business Unit</b> or <b>Bill Type</b>, the Default AR/AP Level page appears, where you can define the AR Level, AR distribution or AP Level option that displays by default all existing business units or bill types, respectively.</p> <hr/> <p><b>Note:</b> In deferred mode, when you select Business Unit or Bill Type, the Default AR/AP Level page appears after you click the save or refresh button.</p> <hr/> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AR Level</b>         | <p>Define the level at which Billing passes open items to your receivables system. This field is available for entry only when you select System in the AR Options group box. Select from the following values:</p> <p><i>Bill Line is AR Open Item:</i> Billing passes each bill line as an open item in the receivables system.</p> <p><i>Header is AR Open Item:</i> Billing passes each bill as an open item in the receivables system.</p> <p><i>No AR Open Items:</i> Billing passes no open items to the receivables system.</p> |

**Note:** For invoices subject to ChartField inheritance processing, the Load AR Pending Items process creates pending items in the receivables system based on a summarized set of balanced ChartFields of accounting entry type *AR* when the AR level is set to *Header is AR Open Item* and the AR option is set to *Use Header for Distribution*.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AR Option</b>        | <p>Define the level of detail for passing AR account distribution to your accounts receivable system. This field is available for entry only when you select System in the AR Options group box. Select from the following values:</p> <p><i>Use Header for Distribution:</i> Send an AR account with each invoice/open item. Use this AR option only in conjunction with the AR level <i>Header is AR Open Item</i> or <i>No AR Open Items</i>.</p> <p><i>Use Line for Distribution:</i> Send an AR account for each line of the invoice. This is the only option available if you select the AR level <i>Bill Line is AR Open Item</i>.</p> |

**Note:** Select the AR option *Use Line for Distribution* if you want one invoice as an open item, but you want to use more than one receivables account. Project data is tracked in Receivables at the item distribution level. If you want project cost data to flow through Billing to Receivables, you may need to use this option.

| <b>Field or Control</b>   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>InterUnit AP Level</b> | <p>Define the level at which PeopleSoft Billing populates the AP Voucher Staging records. Select from the following values:</p> <p><i>Bill Line is AP Voucher:</i> Billing generates an AP voucher for each bill line.</p> <p><i>Header is AP Voucher:</i> Billing generates an AP voucher for each bill header.</p> <p><i>No AP Voucher:</i> No voucher is created.</p> |

## Update Distribution

Select to control the Project Costing ChartField entries that are generated for AR, VAT, and GST when inheritance is not being used. If inheritance is not being used for a ChartField and a distribution code is not available, then Project Costing ChartFields are copied from the line value, to the AR, VAT, and GST entry.

ChartField inheritance is determined on the [ChartField Inheritance Page](#).

## Projects/Contracts

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Bills Created Online</b>       | <p>If this check box is selected, the contract number and bill plan as well as project information are required to be populated for the manually entered bill to interface with . If the check box is deselected, only the project information is required for a manually entered bill to interface with .</p>                               |
| <b>Bills Created by Interface</b> | <p>This option is available only if Bills Created Online option does not require contract information. This option determines if bills loaded through billing interface for system source of BBI or blank will require contract information in order to interface to . This option has no impact on interface from other system sources.</p> |

## Accounting Display Template

| <i>Field or Control</i>            | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accounting Display Template</b> | <p>Bill entry accounting templates enable you to define a selection of ChartFields that you want to work with while in the bill entry pages. If there are ChartFields that remain a constant value when you enter accounting information for your invoices, you may configure a template to exclude this ChartField. Defining an accounting template minimizes keystrokes in data entry, and keeps your page free of redundant information. Define accounting templates on the Bill Entry - Acctg Template page.</p> <p>You can define your bill entry accounting template at the system, business-unit, bill-type, or bill-source level. If you select System, the <b>Template</b> field option becomes available for entry, where you can select a valid predefined bill entry accounting template ID to ensure that all billing activity uses the same bill entry accounting template.</p> <p>If you define a bill entry accounting template at the business unit, bill type, or bill source level, enter a default template ID.</p> <hr/> <p><b>Note:</b> In deferred mode, the template ID fields appear when you click the save or refresh buttons.</p> <hr/> |

**Note:** Bill entry accounting templates affect which ChartFields appear online. They do not determine whether a ChartField is populated with a value. A ChartField may be populated automatically with a value defined in the distribution code.

## Processing Options

| <i>Field or Control</i>         | <i>Description</i>                                                                                                                                                                                                                                                     |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Currency Conversion Date</b> | Select the date for the system to use for currency conversion by the Contracts billing process. Values include: <i>Accounting Date</i> and <i>Transaction Date</i> . This field is also used for as-incurred revenue processing (PSA_ACCTGGL) for currency conversion. |

## Limit Options

The limit options enable you to apply retainages to limits that you have defined for a contract line. For example, you could have a contract line associated with a project that has a 10,000.00 USD limit and have that contract line associated with a retainage of 10%. If you select **Reduce by retainage first**, the system applies the 10% retainage to the transaction before the transaction is compared to the limit. Thus, if a 5,000.00 USD transaction comes through, the system applies only 4,500.00 USD (5,000.00 USD–500.00 USD retainage) against the limit. If you select **Apply retainage upon release**, the system applies accumulated retainages to the limit for the contract line once you have released the retainages on the billing plan with which you have associated the contract line. In this example, when you release the retainage on the Billing Plan, the system applies the 500.00 USD to the limit. If you do not select either option, the system applies the gross transaction to the limit up-front.

|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reduce by retainage first and Apply retainage upon release</b> | <p>If you select <b>Reduce by Retainage First</b> and do not select <b>Apply Retainage Upon Release</b>, the system applies the reduced transaction to the limit and never applies the retainage to the limit.</p> <p>If you select both <b>Reduce by Retainage First</b> and <b>Apply Retainage Upon Release</b>, the system backs the retainage out of the transaction; upon your releasing the retainage on the billing plan, the system applies the retainage to the limit.</p> <hr/> <p><b>Warning!</b> Do not select <b>Apply Retainage Upon Release</b> without also selecting <b>Reduce by Retainage First</b>. Doing this would result in a double application of the retainage against the limit. (Using our example above, the system would apply 5,000.00 USD against the limit when the transaction is first processed, and then 500.00 USD more against the limit when the retainage is released, resulting in a double application of 500.00 USD on a 5,000.00 USD transaction.)</p> <hr/> |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Summ. Limit for Govt Contracts</b> | <p>Select to enable summary limits to be calculated when the Limits process (CA_LIMITS) runs. This option is used only for government contracts.</p> <p>This option determines if certain fields and pages appear that are used with summary limits for government contracts. For example, if this option is selected, the <b>PVN Generation Level</b> field is shown on the Contracts Business Unit - Defaults page and the Contract Header - Billing Options page.</p> <p>If this option is selected, the Limits process summarizes the excess amounts for each contract line when adding rows to PROJ_RESOURCE. The summarized rows are passed to PeopleSoft Billing with a billable (BIL) and revenue (REV) analysis type, and potentially to General Ledger and Receivables.</p> <p>If this option is not selected, the Limits process does not summarize the incoming transactions when adding them to PROJ_RESOURCE. Instead, if the limit is exceeded, the process creates over the limit (OLT) and revenue over the limit (ROL) analysis type rows. In other words, if this option is not selected then the logic of the Limits process when it processes a government contract, is same as a standard contract. However, if this option is selected, for only government contracts, the Limits process summarizes incoming transactions.</p> <hr/> <p><b>Note:</b> If you select this option, the <b>Split to Match Limit Exactly</b> option applies only to regular contracts, not government contracts. If you deselect this option, the <b>Split to Match Limit Exactly</b> option applies to regular contracts and government contracts.</p> <hr/> <p>For more information about the summary limits process:</p> <p>See "Understanding Summary Limits" (PeopleSoft Contracts for Government Contracting).</p> |

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Split to Match Limit Exactly</b> | <p>Select to enable OLT splits for contract lines with limits. When you select this option, the system splits a OLT row into one BIL line and one OLT line. This allows you to reach the limit amount exactly with the BIL line and the system places the remaining amount onto an OLT line.</p> <p>If the <b>Enable Summary Limits</b> option is selected, this option applies only to regular contracts, not government contracts.</p> <hr/> <p><b>Note:</b> With retainages, the Contracts Billing interface optionally checks for limits when retainages are released. If the row is over the limit, it is returned to as OLT rather than RRT. With OLT splits, the RRT is split into an RRT and an OLT.</p> <hr/> <p>For contracts with a classification of <i>Government</i>, when the Limits process evaluates revenue transactions against revenue limits, the resulting revenue (REV) rows are either passed to the general ledger or marked as revenue over the limit (ROL) and passed to . Select the <b>Split to Match Limits Exactly</b> check box to enable the system to split a REV (revenue) row into one REV line and one ROL (revenue over-the-limit) line when a revenue transaction breeches the limit defined for the contract line. This selection enables you to reach the limit amount exactly with the REV line, while passing the remaining transaction amount on to a ROL line.</p> <hr/> <p><b>Note:</b> Creating separate revenue transaction rows and applying them to a separate revenue limit is only applicable to government contracts containing rate-based contract lines associated with a fee type (cost-plus), where the <b>Separate Billing and Revenue</b> check box is selected.</p> <hr/> |

| <b>Field or Control</b>   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Processing Order Template | <p>Select a template that you want the system to use during the Limits Process to determine the sequence in which transactions are processed based on your business process. This list is based on the Processing Order Templates defined in the Process Order Template page.</p> <p>See "Setting Up a Processing Order Template" (PeopleSoft Contracts).</p> <hr/> <p><b>Note:</b> Processing Order Templates are optional. If Processing Order Template is not used then by default transactions are processed based on RESOURCE_ID_FROM and RESOURCE_ID field values.</p> <hr/> |

See "Understanding Accounting Distributions" (PeopleSoft Contracts).

## Other Installed Options

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay/Bill Management Installed</b>  | Select if you have the Pay/Bill Management application installed on your system.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Defer Line Attributes to Batch</b> | Select to defer processing from real time to batch. When you save contract lines to a contract, the system creates accounting distributions, and optionally, billing and revenue plans. In high volume cases, deferring processing of these attributes from real time to batch may speed up contract data entry. However, if you choose this selection, the contract attributes are not immediately available.                                                                                                               |
| <b>Federal Reimbursable Agreement</b> | <p>Select to enable reimbursable agreement functionality.</p> <p>By selecting this option, the <i>Federal Reimbursable Agreement</i> value appears in the drop-down list for the contract classification field when adding a new contract. While the value in the contract classification field defaults to <i>Standard</i>, you can select to specify the contract as a reimbursable agreement. Reimbursable agreements are subject to additional edits as described in the <i>PeopleSoft Contracts</i>. documentation.</p> |

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Agreement Amount Restricted</b> | <p>Controls whether the amount field on the Contract General page is open and editable upon adding a contract or unavailable for entry. If you select this check box, the amount field on the Contract General page is unavailable for entry and the system populates the amount field.</p> <p>This field appears on the page only if you select the <b>Federal Reimbursable Agreement</b> check box.</p> |

## Billing and Revenue Options

| <b>Field or Control</b>                         | <b>Description</b>                                                                                                                                                                                                                                                      |
|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Separate Fixed Billing and Revenue</b>       | <p>Select to define and apply different amounts for billing and revenue on amount based and percent based contract lines. Options selected here default to the Contracts Business Unit when new business units are created. By default this option is not selected.</p> |
| <b>Separate As Incurred Billing and Revenue</b> | <p>Select to define and apply different rates for billing and revenue on rate-based contract lines. Options selected here default to the Contracts Business Unit when new business units are created. By default this option is not selected.</p>                       |
| <b>Hold Billing on Unpaid Cost</b>              | <p>The value selected here defaults to a similar selection on the Sponsor (Customer) when one is created.</p>                                                                                                                                                           |
| <b>Hold Revenue on Unpaid Cost</b>              | <p>The value selected here defaults to a similar selection on the Contract when one is created.</p>                                                                                                                                                                     |

## Revenue Forecast

The Detail and Summary calendars control the time period for which you forecast revenue. For forecasting based on predetermined dates (such as an In Progress apportionment revenue plan), the events are summarized into the corresponding period of each calendar. For forecasting that uses the estimated start and end date (such as an as-incurred revenue plan), the amount is spread evenly over the periods of the detail calendar, and then those periods are grouped into the periods of the summary calendar.

| <b>Field or Control</b> | <b>Description</b>                 |
|-------------------------|------------------------------------|
| <b>Calendar SetID</b>   | Select a SetID for your calendars. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                        |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Detail Calendar</b>  | Select a calendar with the lowest level of time periods for which you want to sum and display forecasted revenue.                         |
| <b>Summary Calendar</b> | Select a calendar with a higher level of time periods than the detail calendar, for which you want to sum and display forecasted revenue. |

**Note:** Use the budget period calendar to modify the choices that appear on the detail and summary calendars.

### Accounting Definition Name

| <b>Field or Control</b>                                                           | <b>Description</b>                                                                                                                                                            |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acctg Definition SetID</b> (accounting definition SetID)                       | Select an accounting definition SetID for the Journal Generator. The system uses the value in this field for streamlined revenue processing.                                  |
| <b>Acctg Definition Fix Fee</b> (accounting definition fix fee)                   | Select an accounting definition for fixed fee contract lines.<br>The system uses the value in this field for streamlined revenue processing.                                  |
| <b>Acctg Definition Projects</b> (accounting definition projects)                 | Select an accounting definition for rate-based contract lines.<br>The system uses the value in this field for streamlined revenue processing.                                 |
| <b>Acctg Definition TBP</b> (accounting definition Transaction Billing Processor) | Select an accounting definition for contract lines coming from the Transaction Billing Processor. The system uses the value in this field for streamlined revenue processing. |

### Kibana Reporting Preferences

| <b>Field or Control</b>   | <b>Description</b>                                                                                                        |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Reporting Currency</b> | Select the currency that will be used across all Business Units for reporting in the Contract Analytics Kibana dashboard. |
| <b>Rate Type</b>          | Select the rate type to be used for converting amounts to the defined reporting currency.                                 |

**Note:** Changes to the Reporting Currency or Rate Type will require a full refresh of the Contracts Kibana Index. For more information on the processing of currency in the Contract Analytics dashboard, see "Using Kibana Dashboards for Contracts" (PeopleSoft Contracts).

| Last Banner ID Used           | The last sequence number for the advertising banner used in the system. Banner IDs are system-generated and stored here.                                                                                                                                                                                                                                                                                                       |
| eSettlements Matching Process | Select to require additional, subsequent voucher approval to occur after the Payables Matching Application Engine process (AP_MATCH) completes. eSettlements uses the Matching process, established at the payables business unit level. However, you can specify additional voucher approval during buyer registration. If you do not select this check box, any voucher that passes the Matching process is set to approved. |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Market Rate Index</b>              | The highest level of organization throughout your PeopleSoft system. Enter an index to be used throughout eSettlements when calculating exchange rates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Buyer Direct</b>                   | Select for a buyer direct implementation wherein a single buying organization (buyer) controls the application and provides an interface for many suppliers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Business Service Provider</b>      | Select for a business service provider implementation wherein a consolidator controls the application and provides an interface between multiple suppliers and buyers, acting as an intermediary and collecting or aggregating invoices from multiple suppliers for multiple buyers                                                                                                                                                                                                                                                                                                                                                   |
| <b>Activate Notifications</b>         | Select to enable email notifications to be sent to buyers and suppliers. Notifications are sent to recipients according to the notification setup that you define on the Define Buyer Notifications - Define Notification Types page in the Review Buyer Details component in eSettlements.                                                                                                                                                                                                                                                                                                                                           |
| <b>Expose ChartFields to Supplier</b> | <p>Select to enable suppliers to see the accounting information on invoices. Depending on buyer specifications, the supplier may be able to edit information as well as view it.</p> <p>Selecting this check box enables the buyer to, at the buyer registration level, define ChartFields to display, be editable, or remain hidden. Selecting this check box means that all buyers have access to the ChartField Configuration page in the Review Buyer Details component.</p> <hr/> <p><b>Note:</b> By selecting this option, you are enabling supplier access to update the ChartFields on non-purchase order invoices.</p> <hr/> |
| <b>Withholding</b>                    | Select to enable users to enter withholding information for suppliers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>XSL Location</b>                   | Enter the location of the CXML_IN.XSL file on the application server for use with the cXML attachment upload feature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>External Node</b>                  | Enter the external node for cXML routing. In the delivered data, the external node is PSFT_SUPPLIER_NETWORK. This value is used by the cXML attachment upload feature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Purge Upload Message</b>           | <p>Select the number of days for the Upload Message to purge. The Purging process is initiated whenever a pre-validation batch is processed.</p> <p>See "Pre-validating Invoices" (PeopleSoft eSettlements)</p>                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                    |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Transaction Age</b>       | Enter the age of the transaction to be selected in years, months and days.                                                                                                                                                                                                            |
| <b>Use Master Agreements</b> | <p>Indicates that Master Agreement is implemented by the internal buying organization.</p> <hr/> <p><b>Note:</b> This check box is hidden if Master Agreement is not implemented. To implement Master Agreement, see "Creating Master Agreements" (PeopleSoft eSettlements)</p> <hr/> |

## Field Name

| <i>Field or Control</i> | <i>Description</i>                                                                                                                                                                                                              |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Field Name</b>       | Displays <i>DEPTID</i> by default. If you have performed ChartField configuration or created another field that represents a department in your organizational structure, select the field name for your department ChartField. |

## Travel Services

Expenses delivers an integration solution that enables Expenses customers to connect quickly and easily to their online travel partners to manage employee travel profiles and their associated travel reservations. To use the travel services feature for Expenses, you must enable the travel services features at the Installation Options level.

| <i>Field or Control</i>    | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Use Travel Services</b> | <p>Select to activate the travel services feature for the Expenses application. If the <b>Use Travel Services</b> check box is selected, then any time that an employee profile is added, modified, or deleted, the system sets a flag on the employee travel profile tables to indicate that a change was made.</p> <p>When the Import or Export Travel Profile processes are run, the system passes employee travel profile data to the travel partner for travel profiles with the change flag (CHANGE_FLAG) on the Travel Profile table (TV_TRVL_PROF) set to <i>Y</i> (yes).</p> |

## Chatbot Card Display Limit

| <i><b>Field or Control</b></i> | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Limit</b>                   | <p>Enter the number of expense reports that the system displays when a user accesses the Expense Inquiry Bot. The default is 10, which indicates that the system displays the last 10 expense reports based on the date submitted. You can change this setting.</p> <p>For more information about the Expense Inquiry Bot, see "Inquiring on Expense Reports Using the Expenses Skill" (PeopleSoft Expenses)</p> |

## Expenses Options

Decide if you want to implement any or all of the following expense system options:

| <i><b>Field or Control</b></i>  | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Combo Edit</b>               | Activates combination editing, which prevents adding rows containing invalid combinations of ChartFields.                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Workflow Enabled</b>         | Links the expense system to PeopleSoft Workflow so that you can automate your expense-related business processes and send emails to employees regarding expense reports, approvals, cash advances, and so forth.                                                                                                                                                                                                                                                                               |
| <b>Allow Overage Accounting</b> | <p>Select to enable Expenses to process amounts exceeding approved limits for expense types. When you set up an expense type, you can select a billing code parameter called Overage for that expense type.</p> <p>Selecting this option activates the Overage column on the Expense Types 2 page, which allows employees to charge a different account for the amount they spend over their approved limits for the expense types. This option must be selected if you are enabling DCAA.</p> |

| <b>Field or Control</b>                                      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DCAA Enabled</b> (Defense Contract Audit Agency enabled). | <p>Select to enforce DCAA audit requirements for time reporting. When selected, Expenses enforces DCAA compliance and functionality, unless you disable DCAA processing for specific business units or employees.</p> <p>See "Expenses Definition - Business Unit 1 Page" (PeopleSoft Expenses).</p> <p>See "Maintaining Employee Organizational Data" (PeopleSoft Expenses).</p>                                                                                                                                                                                                                                                                                                                               |
| <b>One Step Project Staging</b>                              | <p>Select to enable users to stage time reports and adjustments in Expenses and automatically call the PC_EX_TO_PC Application Engine to stage the data into the PeopleSoft tables. If this option is disabled, the Expenses process only stages the transactions. You must then manually execute the PC_EX_TO_PC process from the menu.</p> <hr/> <p><b>Note:</b> Expenses displays this check box only if is installed. If you are using the one-step staging process to automatically load expense data into , you must set up identical run control IDs for both the EX_PC_TM_STG and PC_EX_TO_PC application engine processes for the functionality to successfully stage the Expenses data to .</p> <hr/> |
| <b>Use Expense Type Category</b>                             | <p>Select this check box to allow users to search expense types by categories. By default, this check box is not selected. When this check box is selected, the <b>Select Expense Type Category</b> button will be displayed next to the <b>Expense Type</b> field whenever you create or modify an expense reports.</p>                                                                                                                                                                                                                                                                                                                                                                                        |

## Barcode Scanning Options

Expenses supports the use of bar code scanning to facilitate document tracking. Select one of the following scanning options:

| <b>Field or Control</b>     | <b>Description</b>                                                  |
|-----------------------------|---------------------------------------------------------------------|
| <b>Scanning not enabled</b> | Select to prevent your expense system from using bar code scanning. |

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Preprinted Envelopes used</b>     | <p>When you select this option, scanning a preprinted envelope from the Receipt Barcode Verification page populates the <b>Receipt ID</b> field with a value different from the <b>Report ID</b> field. Track receipts by placing them in an envelope printed with a bar code; track expense reports by using a bar code printed on the report itself.</p> <p>If this option is not selected, the <b>Receipt ID</b> field on the Receipt Barcode Verification page is inactive.</p> |
| <b>Preprinted Envelopes not used</b> | <p>When you select this option, selecting an expense report ID from the Receipt Barcode Verification page populates the <b>Report ID</b> field and the <b>Receipt ID</b> field. Therefore, you can track receipts using the same bar code as for the expense report.</p>                                                                                                                                                                                                            |
| <b>Method</b>                        | <p>Select <i>Font</i> to use a font stored on the client machine; select <i>None</i> for no bar coding.</p>                                                                                                                                                                                                                                                                                                                                                                         |

---

**Note:** To scan bar codes, you must acquire and install the Code 39 True Type Font, which is not delivered with PeopleSoft applications.

---

## Receipts Configuration

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Option</b>              | <p>Select an option that indicates how you want to store receipts.</p> <hr/> <p><b>Note:</b> Keep in mind that this is at the installation level.</p> <hr/> <p>Options include:</p> <ul style="list-style-type: none"> <li>• <b>Attachments Only</b> – Select to indicate that you want to use the attachments feature with expense transactions. Business unit configuration can refine or override this option.</li> <li>• <b>Both Imaging and Attachments</b> – Select to indicate that you want to use the receipt imaging functionality and the attachment functionality with expense transactions. Business unit configuration can refine or override this option.</li> </ul> <p>When this option is selected, all fields are active on the "Receipts Required Page" (PeopleSoft Expenses).</p> <ul style="list-style-type: none"> <li>• <b>No Imaging/Attachments</b> – Select to indicate that you are not using this feature for all business units.</li> </ul> <p>When this option is selected, all fields are gray (not active) on the "Receipts Required Page" (PeopleSoft Expenses).</p> <ul style="list-style-type: none"> <li>• <b>Receipt Imaging Only</b> – Select to use the receipt imaging functionality without using the attachment functionality.</li> </ul> |
| <b>Attachment Location</b> | <p>Select an option to indicate where attachments are allowed for expense transactions at the installation level. This field appears only when <i>Attachments Only</i> or <i>Both Imaging and Attachments</i> is selected in the <b>Option</b> field.</p> <p>Options include:</p> <ul style="list-style-type: none"> <li>• <b>Header Level</b></li> <li>• <b>Header and Line</b></li> <li>• <b>Line Level</b></li> <li>• <b>No Attachments Allowed</b></li> </ul> <p>The value you select in this field determines the open fields on the "Receipts Required Page" (PeopleSoft Expenses).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Additional Information

| <i>Field or Control</i>                                                                                    | <i>Description</i>                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last Advance ID, Last Report ID, Last Time Report ID, Last Travel Auth ID</b> and Last My Wallet Doc Id | Expenses uses automatic numbering to identify expense documents. This region displays the most recently used number for cash advances, expense reports, time reports, and travel authorizations. |

## Projects Approver Information

If you use , you can enable project managers to approve expense documents before they undergo final processing. This option is used by PeopleSoft Workflow and your email system to route expense documents for first-line approvals.

| <i>Field or Control</i>              | <i>Description</i>                                                                                                                 |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Manager</b>               | If selected, the system searches for the designated project manager in the system and routes the expense documents to that person. |
| <b>HR Manager - Supervisor</b>       | If selected, the system searches the employee table to find the employee's manager who is the designated approver.                 |
| <b>Project Approval List Routing</b> | Select to require special or supplemental approvals following the Project Manager approval.                                        |

## Approver Information

Select **HR Manager - Supervisor**, **Approval List Routing**, or both; however, you must select at least one. Selecting both check boxes implies special or supplemental approvals after the HR Supervisor approval. Expenses approval system use these options to route expense documents for approvals.

| <i>Field or Control</i>        | <i>Description</i>                                                                                                  |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>HR Manager - Supervisor</b> | The system searches the employee table to find the employee's manager or supervisor who is the designated approver. |
| <b>Approval List Routing</b>   | The system searches the approval tables to find the correct approver for the employee's business unit.              |

## Payment Destination

| <i>Field or Control</i>            | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accounts Payable or Payroll</b> | <p>Select where the employee expense reimbursements should come from, when the Stage Payments process runs. See "Staging Payments" (PeopleSoft Expenses).</p> <p>This setting applies to the installation level only. This option is also specified at the business unit level using the "Expenses Definition - Business Unit 1 Page" (PeopleSoft Expenses) and at the employee level using the "User Payment Option Page" (PeopleSoft Expenses).</p> <p>This selection applies only to expense payments for employees. You still use your payables system for expense payments to other recipients, such as credit card vendors.</p> |

## Email Approvals

| <i>Field or Control</i>       | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Email Approvals</b> | <p>Select to enable email approvals for expense transactions when no risk template is defined in the system or no risk template is assigned to an approver. When a risk template is defined and assigned to an approver, the template overrides the email approval setting on the Installation Options - Expenses page.</p> <hr/> <p><b>Note:</b> When this option is used, there is a hierarchy that determines email approvals.</p> <hr/> <p>See "Setting Up Risk Templates for PeopleSoft Expenses" (PeopleSoft Expenses).</p> |

## Bank Information

This section contains fields used to set up the movement of direct deposit data from your payroll system to Expenses.

| <i>Field or Control</i>  | <i>Description</i>                                                                   |
|--------------------------|--------------------------------------------------------------------------------------|
| <b>Bank ID Qualifier</b> | Displays part of the bank table used to differentiate banks within the same country. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payment Method</b>   | <p>Select how expense payments will be made. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Automated Clearing House</i>: Send all expense payments to a central location for distribution to individual employee bank accounts.</li> <li>• <i>Electronic Funds Transfer</i>: Reimbursement will occur using an electronic funds transfer or a direct deposit to the employee's bank account.</li> <li>• <i>Giro - EFT</i>: Reimbursement will occur using an electronic fund transfer. This type of EFT is a form of payment that is supported only in Singapore.</li> <li>• <i>System Check</i>: Reimbursement is in the form of a paper check. This is the default payment method.</li> </ul> |

## Inter/Intra Unit

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                          |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Expense Transaction Code</b> | Select the transaction code to use for interunit and intraunit processing of expense reports. The transaction code is associated with ChartField values for various accounting entry types. |
| <b>Advance Transaction Code</b> | Select the transaction code to use for interunit and intraunit processing of cash advances. The transaction code is associated with ChartField values for various accounting entry types.   |

## External Data Load Options

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                                                                                                                                                       |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Include Account Maintenance</b> | <p>Select to indicate that the account maintenance process should run during the Load External Data process. This applies to American Express, Visa, and MasterCard credit cards.</p> <p>Deselect to indicate that only transaction data loads during the Load External Data process</p> |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Update Profile for New Account</b> | <p>Select to indicate that the Load External Data process automatically adds a new account to the employee profile if there are credit card numbers in the file that can be matched with an existing employee. This applies to American Express, Visa, and MasterCardV3 (xml file).</p> <hr/> <p><b>Note:</b> MasterCardV2 (flat file), employee identification is not passed, therefore all the new accounts are sent to the error table where the error message must be corrected. In addition, you must manually add the new account to the employee profile if it is received from a MasterCardV2 flat file.</p> <hr/> <p><b>Note:</b> You must select <b>Include Account Maintenance</b> before selecting this option.</p> <hr/> <p>Deselect to indicate that all new credit card information is sent to the error table where the error message must be reviewed and corrected.</p> |
| <b>Credit Card Multiple Vendor</b>    | <p>Select to enable multi-vendor credit card load. This option allows you to map one or more card issuer for each data source on the "Payment Type - Corporate Card Page" (PeopleSoft Expenses). When this option is selected, you need to provide a SetID for the credit card issuer, when loading external data using credit card files on the "Load External Data Page" (PeopleSoft Expenses), and when mapping credit card codes to payment types on the Payment Type – Corporate Card page.</p>                                                                                                                                                                                                                                                                                                                                                                                      |

## Urgency Setup

| <b>Field or Control</b> | <b>Description</b>                          |
|-------------------------|---------------------------------------------|
| <b>Urgency Options</b>  | Click to access the Urgency (in Days) page. |

## Kibana Reporting Preferences

Changes to (or when entering for the first time) **Reporting Currency** or **Rate Type** requires a full refresh of the Expense Kibana index. Use these values:

- Search Instance = PTSF\_DEFAULT
- Search Definition = EP\_EX\_SRCH\_RISK\_EXCP\_KIB
- Indexing Type = Full Index

| <b>Field or Control</b>   | <b>Description</b>                                                                                   |
|---------------------------|------------------------------------------------------------------------------------------------------|
| <b>Reporting Currency</b> | Select the currency to use across all business units for reporting in the Expenses Kibana dashboard. |
| <b>Rate Type</b>          | Select the rate type to use for converting amounts to the defined reporting currency.                |

For more information about processing currency in the Expenses dashboard, see "Understanding Kibana Dashboards in Expenses" (PeopleSoft Expenses).

## Duplicate Line

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Duplicate Review Required</b> | <p>Select to indicate that expense reports cannot be submitted if duplicate conditions exist.</p> <p>If selected, the system checks for duplicate conditions and displays an Expense Entry Error at the top of the Expense Entry page indicating that there are duplicate lines. You are required to enter a reason code in order to submit the expense report using the "Possible Duplicates Exist Page" (PeopleSoft Expenses).</p> <p>If not selected, you can submit expense reports without selecting the Review Duplicate Lines button and reviewing the duplicate information.</p> <p>Regardless of whether this check box is selected, PeopleSoft Expenses checks for duplicate conditions.</p> |

## Installation Options - Urgency (in Days) Page

Use the Installation Options - Urgency (in Days) page (EX\_URGENCY\_SETUP) to configure urgency levels for expense reports, time reports, travel authorizations, and cash advances by entering the number of days that the system uses to calculate and trigger a high, medium, or low urgency level for a transaction.

Navigation:

Click the **Urgency Options** link on the Installation Options - Expenses page.

This example illustrates the fields and controls on the Installation Options – Expenses Urgency (in Days) page. You can find definitions for the fields and controls later on this page.

| Urgency (in Days)                               |                                |                                |         |                                |                                |

|                                                 | From                           | To                             |         | From                           | To                             |
| Low:                                            | <input type="text" value="0"/> | <input type="text" value="0"/> | Low:    | <input type="text" value="0"/> | <input type="text" value="0"/> |
| Medium:                                         | <input type="text" value="0"/> | <input type="text" value="0"/> | Medium: | <input type="text" value="0"/> | <input type="text" value="0"/> |
| High:                                           | <input type="text" value="0"/> | <input type="text" value="0"/> | High:   | <input type="text" value="0"/> | <input type="text" value="0"/> |
| Advance Purchase <input type="text" value="0"/> |                                |                                |         |                                |                                |

Urgency settings enable approvers to determine which expense transactions need immediate attention. You use the Urgency (in Days) page to configure the number of days that trigger a low, medium, or high urgency icon for each expense transaction. When an urgency level is triggered for an expense transaction, the appropriate urgency icon appears next to the transaction on the Summary Approvals page, on the report, as well as in email approvals.

When viewing the expense transaction, the Urgency column displays these symbols for the different levels of urgency:

| <b><i>Urgency Level</i></b> | <b><i>Icon</i></b> |
|-----------------------------|--------------------|
| High                        | Red square         |
| Medium                      | Yellow triangle    |
| Low                         | Green circle       |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>From and To</b>      | <p>Enter the number of days that represents the days outstanding that each report is considered to be a low, medium, or high level of urgency.</p> <p>For Expense Reports, Cash Advances, Time Reports, and Time Report Adjustments, the difference in days is calculated from the date the report is submitted to the current date. For example, if a report is considered a low level urgency when it is 0-10 days outstanding, then enter 0 in the <b>From</b> field and enter 10 in the <b>To</b> field. If the report is considered a medium level urgency when it is 11-20 days outstanding, then enter 11 in the <b>From</b> field and enter 20 in the <b>To</b> field. If the report is considered a high level urgency when it is 21-999 days outstanding, then enter 21 in the <b>From</b> field and enter 999 in the <b>To</b> field. As a result, any report that has been in the approvers' queue for more than 21 days is displayed as a high urgency.</p> <p>For travel authorizations, the difference in days is calculated from the current date to the <b>Date From</b> field on the Travel Authorization Entry page. The setup is different from the other reports. An example of a travel authorization is: a low level urgency is from 999 to 15 days; a medium level urgency is from 14 to 4 days; and a high level urgency is from 3 to 0 days.</p> |
| <b>Adv Purchase</b>     | <p>Enter the number of days to be added to the high, medium, or low value when calculating advance purchases.</p> <p>In some industries, advanced purchases (for example 2 weeks) can result in lower prices. To accommodate this, travel authorizations include the <b>Adv Purchase</b> field. This field includes a number that is added to the low, medium, and high values when calculating urgency. For example if high urgency is set from 3-0 days, and the Adv Purchase field is set to 14 days, high urgency is triggered from 17-0 days before travel begins. This insures that the travel authorization report is displayed as a high urgency so that the report can be approved before the price goes up.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Installation Options - General Ledger Page

Use the Installation Options - General Ledger page (INSTALLATION\_GL) to specify the journal workflow options for general ledger journal entries and standard budget journals.

Set Up Financials/Supply Chain, Install, Installation Options, General Ledger

This example illustrates the fields and controls on the Installation Options - General Ledger page (1 of 2).

**Installation Options**

Employee Self Service | New Window | Help | Personalize Page

**General Ledger**

**Journal Entry Options**

\*Journal Approval Method: Approval Framework

☐ Automatically Approve Non-Anchor BU Journals

☐ Automatically Post Journals after Fluid Approval

\*Journal Delete Method: Physical Delete

**Spreadsheet Journal Import Options**

Process Scheduler Switch RowCount: 0

☐ Receive Import Logs from Process Scheduler

Maximum Row for Online Processing: 0

Process Scheduler Sleep Time: 0

**Online Edit / Post Options**

Execute on Server: [Search]

Sleep Time: 10

☐ Online Mode

☐ Validate Journal Source in Journal Copy

**Journal Edit Options**

☐ Bypass IU for Journal Balanced By Base Currency

☐ Generate IU Lines for Non-Zero Balanced Lines

This example illustrates the fields and controls on the Installation Options - General Ledger page (2 of 2).

**Mobile Approval Options**

**GL Journal ChartFields to Display**

1-3 of 3

| *ChartField Order | *ChartField    | Long Name      |   |   |
|-------------------|----------------|----------------|---|---|
| 1                 | ACCOUNT        | Account        | + | - |
| 2                 | DEPTID         | Department     | + | - |
| 3                 | OPERATING_UNIT | Operating Unit | + | - |

## Journal Entry Options

| <b>Field or Control</b>                             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Journal Approval Method</b>                      | <p>Specify one of the following journal workflow approval methods for general ledger journal entries and standard budget journals:</p> <ul style="list-style-type: none"> <li> <b>Approval Framework:</b> Select this workflow methodology, which provides a configurable framework to simplify the approval process implementation. Also, select this option if you are enabling Mobile Approval Framework. This is the default value for the field.         </li> </ul> <p>See "Understanding Configurable Workflow" (PeopleSoft General Ledger)</p> <p>See also "Understanding the Journal Entry Approval Process" (PeopleSoft General Ledger)</p> <ul style="list-style-type: none"> <li> <b>Virtual Approver:</b> Select this journal approval workflow methodology, which requires the use of PeopleSoft Application Designer to define business processes, activities, business events, worklists, routings, and approval rule sets.         </li> </ul> <hr/> <p><b>Note:</b> You must reference previous releases of this documentation for setup steps using Application Designer.</p> <hr/> |
| <b>Automatically Approve Non-Anchor BU Journals</b> | <p>Select to indicate that the system only submits the combination of (anchor BU, journal ID, journal date, line BU = anchor BU) for approval. All other combinations of (anchor BU, journal ID, journal date, line BU <math>\neq</math> anchor BU) is set to "Approved to Post" (per existing logic, the InterUnit journal can't be posted until the anchor BU is approved). This way, only one approval instance is assigned to an InterUnit journal, which triggers one set of notifications.</p> <p>This option does not impact non-InterUnit journal approvals.</p> <p>This option is only available when the Journal Approval Method is <i>Approval Framework</i>. This option is hidden when the Journal Approval Method is <i>Virtual Approver</i>.</p> <hr/> <p><b>Note:</b> When using Fluid Approvals for Journal Entries, this option determines where to display the Line Business Unit field. If deselected, the line business unit is displayed at the header level. If selected, the line business unit is displayed at the line level.</p> <hr/>                                      |

| <b><i>Field or Control</i></b>                   | <b><i>Description</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Automatically Post Journals after Fluid Approval | <p>Select to automatically post journals that are selected to be approved using PeopleSoft Fluid pages such as the "Pending Approvals (summary) Page" (PeopleSoft General Ledger) or the "Pending Approvals - Journal Entry Page" (PeopleSoft General Ledger).</p> <p>This option removes the requirement to run the Post Journals process separately.</p> <p>The post process only runs for approvers who have authority to post journals.</p> |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Journal Delete Method</b> | <p>Select one of the following methods for handling journal deletion:</p> <ul style="list-style-type: none"> <li> <b>Physical Delete:</b> When using this option and you delete a journal from the Journal Entry - Lines page, the system deletes all the related journal data from all relevant journal tables. This is the default and historical method of deleting journals (same method in prior releases).<br/>           With this method, the only remaining trace of the deleted journal is if audit logging was enabled for deleted journals.         </li> <li> <b>Logical Delete:</b> When using this option and you delete a journal using the Journal Entry - Lines page, the system treats the following in the same way as the Physical Delete:           <ul style="list-style-type: none"> <li>Removes Commitment Control data from the Commitment Control records.</li> <li>Removes approval data, regardless of approval method (Virtual Approver or Approval Framework (AF, formerly AWE)).</li> <li>Removes Suspense cross references.</li> </ul> <p>Unlike the Physical Delete method, the system retains the deleted journal data in the following records:</p> <ul style="list-style-type: none"> <li>Journal Header (JRNL_HEADER)</li> <li>Journal Header Attachments (JRNL_HEADER_ATT)</li> <li>Journal Line (JRNL_LN)</li> <li>Journal Balance (JRNL_CF_BAL_TBL)</li> <li>Journal InterUnit Anchor (JRNL_IU_ANCHOR)</li> <li>Journal VAT (JRNL_VAT)</li> <li>Open Item (OPEN_ITEM_GL)</li> <li>Journal Header Error (TSE_JHDR_FLD)</li> <li>Journal Line Error (TSE_JLNE_FLD)</li> </ul> <p>You can view the logical deleted journal via the journal entry components (and journal inquiry components) in the same way as you would view a posted journal (Display Only mode) and the only action that you can perform is</p> </li> </ul> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                         | <p>to copy the deleted journal. The system marks the logical deleted journal as follows:</p> <ul style="list-style-type: none"> <li>Journal Header Status = <i>D</i> (Deleted).</li> <li>Budget Header Status = <i>N</i> (Not Budget Checked).</li> <li>Approval Status = <i>N</i> (None).</li> </ul> <p>"Journal Entry - Lines Page" (PeopleSoft General Ledger)</p> |

## Online Edit / Post Options

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Execute on Server</b> | Enter a default process scheduler server name for the online journal edit process to use when journals are edited online. If this field is blank, the online journal edit process is scheduled without a process scheduler name. In this case, the process is typically picked up by the master scheduler and assigned to the next available process scheduler server.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Sleep Time</b>        | Enter the time interval (in seconds) that the online PeopleCode sleeps between checking the journal edit process status. Once the journal edit process is complete, and after the system checks the status, it refreshes the component to show the edited journal. Supplying the right interval to meet your organization's needs can be an important factor in preventing a bottleneck or deadlock when multiple journal edit processes are continually submitted. The Online Journal Edit does not release the journal entry page until the previous edit process finishes. In prior releases, the interval in seconds that the PeopleCode would check the process scheduler server status was 10 seconds. This may be too long, particularly when using Commitment Control. Select the ideal number of seconds for your organization depending on your environment and your process scheduler server settings. |
| <b>Online Mode</b>       | <p>Select to indicate that the Journal Edit and Journal Post processes run in online mode, which calls the Application Engine process from the page.</p> <p>Deselect to indicate that the Journal Edit and Journal Post Processes are to run in batch mode.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Bypass IU for Journal Balanced By Base Currency</b> (bypass inter unit for journal balanced by base currency)  | Select to bypass InterUnit processing for journals when all journal lines are balanced by base currency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Generate IU Lines for Non-Zero Balanced Lines</b> (generate Inter/IntraUnit lines for non-zero balanced lines) | Select this option to generate InterUnit and IntraUnit lines for non-zero-transaction-amount lines in the event that the summarized transaction amount is equal to zero but the summarized base amount is not equal to zero. The fields that are used to group the journal lines to calculate the summarized amounts are: Business Unit, Balancing ChartFields, Other Balancing Fields specified in System Transaction Definition for Inter/IntraUnit processing, Foreign Currency, Base Currency, Rate Type, Rate Divisor, Rate Multiplier, and Account Balancing Attributes (if selected). |

## Mobile Approval Options – GL Journal ChartFields to Display

Use this section to select the ChartFields to display along with the display order for journal Mobile Approvals. You can only display nine active ChartFields. There is no validation of these field values; be careful not to select the same ChartField to display more than once.

See "Understanding the Journal Entry Approval Process" (PeopleSoft General Ledger).

## Installation Options - Grants Page

Use the Installation Options - Grants page (INSTALLATION\_CSR) to define Grants installation options.

Use this page to indicate that you can include optional attachments, to establish cost-sharing analysis types for each feeder system with which you plan to use the Grants cost-sharing features, and to determine the source for calculating unliquidated obligation balances for the Federal Financial Report.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Grants**

This example illustrates the fields and controls on the Installation Options - Grants page. You can find definitions for the fields and controls later on this page.

Unliquidated Obligation Source

☒ Projects

☐ Commitment Control

Use the Cost Sharing Analysis Types group box to establish cost-sharing analysis types for each feeder system with which you plan to use the Grants cost-sharing feature. Depending on the feeder systems in which the transactions originated, the system automatically assigns a cost-sharing analysis type to a transaction that includes designated cost-sharing ChartFields.

Use the Unliquidated Obligation Source group box to indicate the source for calculating federal and recipient unliquidated obligation balances for the Federal Financial Report.

| <i>Field or Control</i>         | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Budget Group by</b>          | <p>If the Transaction Source is <i>Project</i>, select the ChartField that is defined in the PROJ_RESOURCE table. Only values with a PC transaction source are shown.</p> <p>If the Transaction Source is <i>Commitment Control</i>, select the ChartField that is defined in the KK_TRANS_LOG table. Only values with a KK transaction source are shown.</p> <hr/> <p><b>Warning!</b> If you choose to use the Activity ChartField, you may receive an unrestricted list of all activities. This unrestricted list of activities can be very large and adversely impact the performance of your system. For example, if your organization is using PeopleSoft for capital projects and IT projects, which can contain thousands of activities, the system will return all of the activities when a user clicks the prompt for the Budget Group By field.</p> <hr/> |
| <b>Third Party Cost Account</b> | <p>Select the account to use to display transactions in the <b>Third Party Cost</b> section of the Expenditure Details Inquiry page. This is an optional field. If you leave this field blank and the transaction source is <i>Commitment Control</i>, the system does not separate third party costs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Overlap Award Budget Period

Use the Overlap Award Budget Period group box to set grants portal staging rules for overlapping budget periods within the same award.

Select **First** if you want the grants portal staging process to set budget periods that fall in the same time period to the earlier budget period.

Select **Last** if you want the grants portal staging process to set budget periods that fall in the same time period to the later budget period.

## Reporting Tree Selection

| <i>Field or Control</i> | <i>Description</i>                                                                                                                        |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tree SetID</b>       | Select a SetID to use for calculating actuals balances that appear on the Budget Status tab of the Award Detail and Project Detail pages. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reporting Tree</b>   | Select the tree to use for calculating actuals balances that appear on the Budget Status tab of the Award Detail and Project Detail pages. Only account-based trees are available. If no reporting tree is selected, or if the account in the transaction data cannot be found in the reporting tree, then the transaction data is summed using <i>UNKNOWN</i> as the budget category. |

## Reporting Analysis Group

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sponsor Expenditures</b>     | Select the analysis group for reporting sponsor expenditure balances. The Grants Sponsor Actual Costs (SPACT) analysis group appears as the default. The analysis group that is selected controls the analysis types that are included in the transaction balance calculations, which appear on the award and project summary and detail pages. The analysis types that are included in the SPACT analysis group are ACT, GLE, PAY, and SFA. |
| <b>Sponsor Encumbrances</b>     | Select the analysis group for reporting sponsor encumbrance balances. The Grants Sponsor Encumbrances (SPENC) analysis group appears as the default. The analysis group that is selected controls the analysis types that are included in the transaction balance calculations, which appear on the award and project summary and detail pages. The analysis type that is included in the SPENC analysis group is COM.                       |
| <b>Sponsor Pre-encumbrances</b> | Select the analysis group for reporting sponsor pre-encumbrance balances. The Grants Sponsor Requisitions (SPREQ) analysis group appears as the default. The analysis group that is selected controls the analysis types that are included in the transaction balance calculations, which appear on the award and project summary and detail pages. The analysis type that is included in the SPREQ analysis group is REQ.                   |
| <b>Third Party Expenditures</b> | Select the analysis group for reporting third-party expenditure balances. The analysis type and analysis group for third-party expenditures is user-defined. Therefore an analysis group does not appear by default.                                                                                                                                                                                                                         |

| <b><i>Field or Control</i></b>    | <b><i>Description</i></b>                                                                                                                                   |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Cost Share Expenditures</b>    | Select the analysis group for reporting cost share expenditure balances. The Cost Sharing Analysis Group (CSTSH) analysis group appears as the default.     |
| <b>Cost Share Encumbrance</b>     | Select the analysis group for reporting cost share encumbrance balances. The Cost Sharing Commitment Balance (CSCOM) analysis group appears as the default. |
| <b>Cost Share Pre-encumbrance</b> | Select the analysis group for reporting cost share pre-encumbrance balances. The Cost Sharing Requisition (CRQ) analysis group appears as the default.      |

## Budget and Transaction Detail

Select the ChartFields to appear on the Transaction Inquiry pages.

## Installation Options - Inventory Page

Use the Installation Options - Inventory page (INSTALLATION\_INV) to define several settings used by PeopleSoft Inventory; including staged date options, interunit transaction options, unit of measure conversion methods for bar code transactions, methods to number accounting entry lines, search limitations for the Storage Location Search page, and default values for lot IDs, serial numbers, and receiver information.

In addition, use this page to define the default hold code applied to material stock requests when they fail to pass the Screen For Denied Parties process (SCM\_FSS).

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Inventory**

This example illustrates the fields and controls on the Inventory page. You can find definitions for the fields and controls later on this page.

| Lot ID, Serial ID, Recv No (receiver number), Recv Line (receiver line), and Default Staged Date | <p>Enter filler values for fields that would otherwise be blank. These values are recorded in your system tables only when an item is <i>not</i> serial-controlled, staged date-controlled, or lot-controlled, or when the receiver ID and line number do not apply or are not known for specific inventory.</p> <p>Once you set lot, serial, and staged date default column values and begin to put stock away, you cannot modify these fields. This restriction preserves the integrity of the transaction tables.</p> |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Staged Date Control</b>      | <p>Select to track any of your inventory materials by staged date. This is the date that the stock is received and put away into Inventory. The system uses this setting as the default when items are set up in the Define Item component. Staged date tracking is required for FIFO (first in, first out) and LIFO (last in, first out) picking.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Initial Search Row Limit</b> | <p>Specify the maximum number of material storage locations to retrieve on the initial display of the Storage Location Search page. If this field is blank or contains zero, then there is no limitation to the number of locations retrieved in the initial search.</p> <p>Several PeopleSoft Inventory pages are linked to the Storage Location Search page by the <b>Storage Location Search</b> icon. This feature enables inventory pages for setup, putaway, fulfillment, and other activities to access a list of material storage locations and select the most appropriate location. However, if the search criteria information on the initial inventory page is incomplete, then a large number of material storage locations could be retrieved resulting in a delay to access the Storage Location Search page. Use the <b>Initial Search Row Limit</b> field to limit the initial display. Once users are on the Storage Location Search page, the search criteria are not limited by this field in order to allow broader searches for the correct material storage location. To prevent performance delays once you are on the Storage Location Search page, be sure to enter enough search criteria before performing another search.</p> |
| <b>Set based Sequencing</b>     | <p>In the <b>Accounting Line Options</b> group box, select the this check box to generate sequential accounting line numbers for the Accounting Line Creation process in Cost Management. These line numbers are used to number accounting entry lines.</p> <p>In the <b>Fulfillment Engine Options</b> group box, select this check box to generate the sequential transaction history line numbers for the Deplete On Hand Qty process in Inventory. These line numbers are used to number transaction history entries (demand lines) from order fulfillment.</p> <p>Deselect these check boxes to use row-based processing. These fields are hidden unless you are on an Oracle platform or have run the DMS for other database platforms.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Field or Control</b>                                      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>InterUnit Transaction Options</b>                         | <p>Indicate how the system should derive parameters for InterUnit stock transfers. Options are:</p> <p><i>Use GL BU Setting Only:</i> The system derives all InterUnit transfer parameters from the centralized accounting model as defined for the InterUnit method on the Installation Options, Overall page.</p> <p><i>Use IN BU Settings Only:</i> The system derives all InterUnit transfer parameters from the Inventory business unit.</p> <p><i>Use Both:</i> The system derives InterUnit transfer parameters by first looking at the Inventory business unit. If no parameters are found, the system looks at the centralized accounting model as defined for the InterUnit method on the Installation Options, Overall page.</p>                      |
| <b>Transfer Price Lines Displayed</b>                        | Enter the chunking size for the Transfer Pricing Definition component.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>UOM Conversion Flag</b> (unit of measure conversion flag) | <p>If your system is bar code-enabled, you can process transactions in one of three ways:</p> <p><i>Convert to Default Stock UOM</i> (convert to the default stocking unit of measure [UOM]): The system converts the unit of measure on incoming transactions to the default stocking UOM.</p> <p><i>Convert to Standard UOM</i> (convert to the standard unit of measure): The system converts the UOM on incoming transactions to the item's standard UOM. This option enables you to stock all your inventory in the standard UOM and to perform material movement transactions using any valid UOM for the item.</p> <p><i>Use Entered UOM</i> (use the entered unit of measure): The system processes transactions using whatever UOM the user enters.</p> |
| <b>Hold Code</b>                                             | Enter the hold code to be automatically applied when a material stock request fails to pass screening by the Screen For Denied Parties process (SCM_FSS). This field must be populated in order to run this financial sanctions process for material stock requests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Field or Control</b>                              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default RTV Customer ID</b>                       | Enter a ship-to customer ID to be used when creating a material stock request to return stock to a vendor. This customer ID is placeholder that enables you to ship returned stock to your vendors without having to define each of them as customers on the customer table. When the stock request is created, the RTV customer ID defaults to the customer ID fields, the name of the vendor (from the RTV) is put in the customer name fields, and the vendor address is put in the IN_DEMAND_ADDR record as an override to the stock request. For a return to vendor stock request, the address override is required; the override address can be changed but not deleted.                                                                                                          |
| <b>Create Requisition for Par Replenishment</b>      | <p>The Create Requisition for Par Replenishment option allows you to choose if you want to invoke the Load Requisition process or continue with the existing Create Par Replenishment Requests process (INPGCDMD) to generate orders for items that require replenishment.</p> <p>By default, the option is set to No. If you select Yes, the Par replenishment process(INPGCDMD) invokes the Load Requisition process(PO_REQLOAD) which creates requisition for non-stock items. Select No to proceed with the Create Par Replenishment process(INPGCDMD) for creating requisition for non-stock items.</p> <p>You must select this option to view the Requisition Details tab on the Review Par Location count page. See "Review Par Location Count Page" (PeopleSoft Inventory).</p> |
| <b>Data Retention days in Putaway Staging Record</b> | Enter the number of days for retaining data in the staging record for reprinting Putaway Plan reports. The default value is set to 7 days. You can specify a value between 0-99 days.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Reporting Currency</b>                            | <p>Select the currency that will be used across all business units for reporting in the Inventory Kibana dashboards.</p> <hr/> <p><b>Note:</b> It is recommended not to change the reporting currency frequently. If you change the currency, a full index needs to be run before using the visualizations to get correct values of amount. Incremental index will corrupt the indexed data in ES with partial data being in one currency and the remaining in another.</p> <hr/>                                                                                                                                                                                                                                                                                                       |
| <b>Rate Type</b>                                     | Select the rate type to be used for converting amounts to the defined reporting currency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Installation Options - Inventory Counters Page

Use the Inventory Counters page (INSTALL\_IN\_COUNTERS) to define the starting values for your automatically generated numbers.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Inventory Counters**

| <i><b>Field or Control</b></i>     | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                 |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default InterUnit ID Prefix</b> | Initializes automatically generated InterUnit transfer IDs. Automatic numbering for InterUnit IDs is established at the installation level to ensure that InterUnit IDs are unique throughout your enterprise.                                                                                            |
| <b>Auto Reserve Counter</b>        | Defines the starting number for new run control IDs created when the Material Reservations process is initiated from the Material Stock Request component. The system only uses this counter if the <b>Auto-Reserve</b> option is selected for the Inventory business unit on the Fulfillment Setup page. |
| <b>Auto Confirm Counter</b>        | Defines the starting number for new run control IDs created when the Picking Confirmations process is initiated from the Picking Feedback page. The system only uses this counter if the <b>Auto-Confirm</b> option is selected for the Inventory business unit on the Fulfillment Setup page.            |
| <b>Auto Deplete Counter</b>        | Defines the starting number for new run control IDs created when the Depletion process is initiated from the Shipping/Issues component. The system uses this counter only if the <b>Auto-Deplete</b> option is selected for the Inventory business unit on the Fulfillment Setup page.                    |
| <b>InterUnit ID Counter</b>        | Defines the sequence number to be used for InterUnit transfers between Inventory business units.                                                                                                                                                                                                          |

## Installation Options - Lease Administration Page

Use the Installation Options - Lease Administration page (INSTALLATION\_RE) to select to enable lease activation for a lease.

If selected, the roles defined can activate leases. Also, set mapping instructions for the Site Map page.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Lease Administration**

## System Defaults

| <b>Field or Control</b>                              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Automatic Lease Approval</b>                      | <p>Select to enable lease activation for a lease. If selected, the roles defined as an <i>Internal Administrator</i> and <i>Internal Manager</i> can activate leases. If deselected, only the roles defined as <i>Internal Manager</i> can activate leases.</p> <p>See "Defining Lease Administration Roles" (PeopleSoft Lease Administration).</p>                                                   |
| <b>Apply ASC 842, IFRS 16 and GASB 87 Accounting</b> | <p>Select to apply ASC 842, IFRS 16, and GASB 87 accounting standards.</p> <p>Certain functionality such as the identification of initial direct costs and lease incentives becomes available after this check box is selected. This is a one-time selection that cannot be changed after save and should not be selected until the organization is transitioning to the new accounting standard.</p> |

## Installation Options - Maintenance Management Page

Use the Installation Options - Maintenance Management page (INSTALLATION\_WM) to define installation options for Maintenance Management.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Maintenance Management**

| <b>Field or Control</b>                      | <b>Description</b>                                                                                                                                                                                                                                                            |
|----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Work Order Attachment Print Installed</b> | <p>Select the check box to enable the Print Attachments option on the Work Order Task Detail Report Options (WM_RPT_OPTNS) page.</p> <p>For additional information, see "Using the Technician Workbench to Complete Work Order Tasks" (PeopleSoft Maintenance Management)</p> |
| <b>Display Asset Detailed Description</b>    | <p>Select the check box to display the asset detailed description. This allows the user to view a detailed description of the asset.</p>                                                                                                                                      |

## Installation Options - Manufacturing Page

Use the Installation Options - Manufacturing page (INSTALLATION\_MG) to set the calculated quantity per assembly (QPA) rounding precision.

This rounding precision is reflected in PeopleSoft Manufacturing, Engineering, Cost Management, and Supply Planning.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Manufacturing**

This example illustrates the fields and controls on the Manufacturing page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Manufacturing' tab in the 'Installation Options' window. The 'QPA Rounding Precision' is set to 4. The 'PDX Setup' section includes 'Default Values' (Business Unit: US008, Standard Unit of Measure: EA) and 'Item Status Mapping' (Active: Production, Discontinue: Obsolete, Hold: Hold). The 'User Defined Fields Mapping' section is at the bottom, showing a table with columns for 'PeopleSoft Field' and 'Agile Field Name'.

| Field or Control                                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>QPA Rounding Precision</b> (quantity per assembly rounding precision) | <p>Enter any value between 4 and 10 places to the right of the decimal.</p> <p>Setting the quantity rounding precision is especially important when you use a large bill of materials (BOM) quantity and a relatively small quantity per assembly (QPA). When you maintain a BOM and define the QPA or per order, you are limited to a precision of 4 places to the right of the decimal.</p> <p>However, the system will calculate the quantity <i>per</i> by dividing the entered quantity <i>per</i> by the BOM quantity, maintained to the precision defined on the Manufacturing page. So, for example, if a calculated QPA results in 6.54321, and the installation setting is set to 4 places, the system recognizes this as 6.5432.</p> |

## PDX Setup

| <i><b>Field or Control</b></i>  | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Business Unit</b>            | <p>Select the value for the Manufacturing business unit that will receive changes from the PeopleSoft Product Lifecycle Management (PLM) system.</p> <hr/> <p><b>Note:</b> The PeopleSoft system presumes a single site, so you are defining it here for the PeopleSoft system.</p> <hr/>                                                                                                                                                                                                                                                                                                                                      |
| <b>Standard Unit of Measure</b> | <p>Define a value for all inbound items being added. This is useful if all inbound items will share the same UOM from the PLM system (such as EA).</p> <hr/> <p><b>Note:</b> Alternatively, you can maintain a user-defined field in the PLM system for the appropriate Item and map this field from the additional attributes value within the PDX XML to the <b>PeopleSoft Field</b> value, <i>Item Unit of Measure</i> in the <b>User Defined Field Mappings</b> group box on this page.</p> <hr/> <p><b>Important!</b> The value in the <b>PLM</b> field <i>must</i> match the field that is defined in the XML.</p> <hr/> |

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Item Status Mappings</b> | <p>Define the item life cycle status mapping for items with a status of:</p> <ul style="list-style-type: none"> <li>• <i>Active</i></li> <li>• <i>Discontinue</i></li> <li>• <i>Hold</i></li> </ul> <p>This value is used when change orders are released to the PeopleSoft system. The PeopleSoft item status (SetID and business unit) is based on the affected item life cycle value for each item on a change order within the PDX XML. Therefore, any valid life cycle status that can be included on a change order sent to the PeopleSoft system <i>must</i> be mapped in this group box.</p> <p>The <b>LifeCycle Phase</b> field on this page can contain commas to define a one-to-many mapping between the PeopleSoft system and the PLM system. For example, the screen shot shows how the life cycle status of <i>Production</i> and <i>Preliminary</i> are to be considered an Active item status for the PeopleSoft system item status.</p> <hr/> <p><b>Note:</b> When a <i>new</i> item with an Active status is added from the PLM system with an effective date greater than today's date, the PLM system effective date of the affected item is ignored in the PeopleSoft system and the current date (today) is used at the item level (SetID and business unit). This allows revisions and manufacturing BOMs to be created for the item in the PeopleSoft system.</p> <p>However, <i>future</i> PLM system effective dates are used for the start date of the item or revision, and also for future effective dates associated with a Future item status. For example, if an item is currently active in the PeopleSoft system, you can send a PLM system change order to specify future obsolescence of the item by having a PLM system affected item with a future date and a future status intended to obsolete the item. In this case, the current PeopleSoft system status will remain Active and a future status will be specified as Discontinue.</p> <hr/> |

## Installation Options - Mobile Inventory Page

Use the Installation Options – Mobile Inventory page (INSTALLATION\_MIN) to define installation options for Mobile Inventory Management.

Navigation:

Set Up Financials/Supply Chain, Install, Installation Options, Mobile Inventory

This example illustrates the fields and controls on the Installation Options - Mobile Inventory: Guided Count task flow page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Installation Options - Mobile Inventory' page. It has two main tabs: 'Installation Options' and 'Mobile Inventory'. The 'Mobile Inventory' tab is active. Below the tabs, there are two sections: 'System Options' and 'Task Options'.

**System Options:**

- Key Concatenation Separator: [Text Field]
- Role Name: [Text Field] MIN User [Search Icon]
- ☐ Delivery Signature Required

**Task Options:**

Find | View All First 3 of 15 Last

- \*Task Flow: [Dropdown] Guided Count
- Rows Displayed: [Text Field] 10
- \*Initial Display Mode: [Dropdown] Single Item
- \*Sort By: [Dropdown] Sort By Order Entered
- \*Group by: [Dropdown] No Grouping
- \*All Item Filter: [Dropdown] Display All
- Alternate Item Display: [Dropdown] Item Only
- ☒ Display Lookups
- ☒ Display Description
- ☒ Display Filter Related Fields
- ☒ Display Prior Entry Caption
- ☐ Display Show/Hide in tables
- ☒ Pre-Load Serial IDs
- ☐ Count UOM Enabled
- ☐ Filter All Alternate Items

**Count Status to Include**

- ☒ New
- ☒ Counting
- ☐ Quantity Entered - Hold
- ☐ Ready to Update Stock Quantity

Use Mobile Inventory Management installation options pages to tailor PeopleSoft Mobile Inventory Management task flows for mobile devices. Values for this page are the same values used for user preferences.

You can define installation options these task flows in Mobile Inventory Management:

- Adjustments
- Bin to Bin Transfer
- Delivery, Delivery Cart
- Express Issue
- Count by Location, Count by Item, Guided Count, and Manual Count
- Item Stock Inquiry
- Par Count
- Perform Putaway
- Receiving Ad Hoc and Receiving PO

## Installation Options - Payables Page

Use the Payables page (INSTALLATION\_AP) to define the posting method and enable federal payment schedule processing, late interest charge calculation, evaluated discount, document association processing options, and Document Content Management Interface options for your Payables application.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Payables**

This example illustrates the fields and controls on the Installation Options - Payables page (1 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Installation Options' page for 'Payables' in Kibana Visualizer. The page has a dark header with navigation links and a search icon. Below the header, there are tabs for 'Installation Options' and 'Payables'. The main content area is divided into three sections:

- Posting Method:** A dropdown menu labeled '\*Posting Method' with 'Detail Offset Method' selected.
- Federal Government Options:** A section with a checkbox 'Enable Federal Payment'. Below it, there are three rows of input fields for 'Transportation Start Number', 'Other Start Number', and 'Manual Start Number', each followed by 'End Number' and 'Last ID Number' fields. There is also a checkbox 'Enable Date Calc Basis'.
- Payment Options:** A section with a checkbox 'Enable Late Charge' (checked) and a checkbox 'Evaluate Discount Rate'.

This example illustrates the fields and controls on the Installation Options - Payables page (2 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Installation Options' page for 'Payables' in Kibana Visualizer, page 2 of 2. The page has a dark header with navigation links and a search icon. Below the header, there are tabs for 'Installation Options' and 'Payables'. The main content area is divided into three sections:

- Matching Options:** A section with a dropdown menu labeled '\*Document Association Group' with 'DEFAULT' selected, a search icon, and a checkbox 'Enable Match Collaboration' (checked).
- Document Management Interface:** A section with a checkbox 'Enable Document Content Management Interface' (checked) and a dropdown menu labeled '\*Document URL Option' with '3rd party solution-No link' selected.
- Kibana Reporting Currency:** A section with a dropdown menu labeled 'Reporting Currency' with 'USD' selected, a search icon, and the text 'US Dollar'. There is also a dropdown menu labeled 'Rate Type' with 'CRRNT' selected.

At the bottom of the page, there are three buttons: 'Save', 'Notify', and 'Refresh'. Below the buttons, there is a breadcrumb trail: 'Installation Options | Payables'.

## Posting Method

| <i>Field or Control</i> | <i>Description</i>                                                                                                                                                                                                                                                                                                                     |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Posting Method</b>   | <p>Select from the following values:</p> <p><i>Detail Offset Method:</i> Balances each individual distribution line. Offsets to the distribution lines inherit the non-account ChartField values based on the established inheritance rules.</p> <p><i>Summary Control:</i> Balances the voucher rather than the individual lines.</p> |

---

**Warning!** Select one posting method at implementation and *do not* change it. If you go back later and select another posting method, there could be ramifications to general ledger journals, such as out-of-balance entries.

---

## Federal Government Options

| <i>Field or Control</i>                                                                     | <i>Description</i>                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Federal Payment</b>                                                               | <p>Select to enable U.S. federal payment schedule generation for the installation. Schedule numbers must be unique, so these ranges cannot overlap. This option is for U.S. federal agencies only.</p> <p>When you select this option, you must enter start and end schedule numbers for Transportation, Other, and Manual schedule types.</p> |
| <b>Transportation Start Number, Other Start Number, Manual Start Number, and End Number</b> | Define a schedule number range for various schedule payment types. Enter a beginning transportation, other, and manual number, and an end number for each to define the range for each payment schedule type.                                                                                                                                  |
| <b>Last ID Number</b>                                                                       | <p>For each payment schedule type, enter the last used payment schedule ID. The system automatically begins numbering subsequent payment schedules with the next higher number.</p> <p>The Pay Cycle Application Engine process (AP_APY2015) updates the last ID number.</p>                                                                   |
| <b>Enable Date Calc Basis</b> (enable date calculation basis)                               | Select to enable Prompt Payment Due Date calculation for the installation.                                                                                                                                                                                                                                                                     |

## Payment Options

| <i>Field or Control</i>       | <i>Description</i>                                                                                                                                                                                                                                                                                   |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Late Charge</b>     | Select to enable late charge calculation at the installation level.<br>If you do not select this option, all late charge information is hidden from users.                                                                                                                                           |
| <b>Evaluate Discount Rate</b> | Select to have the system compare if it is more beneficial to take a discount by paying a discounted voucher early or by waiting for the due date, earning the interest income during that time.<br><br>You set up your discount evaluation parameters when you set up bank accounts and pay cycles. |

## Matching Options

| <i>Field or Control</i>           | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Document Association Group</b> | Specify the document association group to use in the Matching process. The document association group defines the types of match associations and the sequence that the Matching process performs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Enable Match Collaboration</b> | <p>Select to enable match collaboration.</p> <hr/> <p><b>Note:</b> Once you enable match collaboration, all notifications will be routed using the PeopleTools notification framework instead of the matching notification (worklist/email).</p> <hr/> <p>For more information on notification framework, see <i>PeopleSoft: Events and Notifications Framework</i>.</p> <hr/> <p><b>Important!</b> Customers using PeopleTools 8.58 and have taken the Match Exception Collaboration from Image 40 will experience new configurable notifications that replace Match Exception Workflow/Email.<br/>Customers using PeopleTools release less than 8.58 and have taken the Match Exception Collaboration from Image 40 will continue to use Match Exception Workflow/Email. When they decide to upgrade to a PeopleTools release at or higher than 8.58.00, they can take the Match Exception Collaboration from Image 40 again which will apply the necessary configuration data to run the new configurable notifications.</p> <hr/> |

## Document Management Interface

| <i>Field or Control</i>                              | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Document Content Management Interface?</b> | Select to enable the Document Content Management Interface after a third party imaging solution is integrated with PeopleSoft. This ensures that the imaging links are active on the various pages of Payables and eSettlements.                                                                                                                                                                                                                                                                                                                                                             |
| <b>Document Url creation option</b>                  | <p>Select the option from:</p> <ul style="list-style-type: none"> <li>• <b>URL Definition + GUID:</b> Enter the URL followed by an identifier at the end of the URL value. If this option is selected, you also enter a document content server URL.</li> <li>• <b>3rd Party Solution - No link:</b> Select this option to enable a third party imaging solution to choose a different approach to linking to their image repository.</li> </ul> <p>See "Understanding Third Party Imaging Solution Integration with PeopleSoft Accounts Payable and eSettlements" (PeopleSoft Payables)</p> |

## Kibana Reporting Currency

| <i>Field or Control</i>   | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reporting Currency</b> | <p>Select the currency that will be used across all business units for reporting in the Payables Kibana dashboards.</p> <hr/> <p><b>Note:</b> It is recommended not to change the reporting currency frequently. If you change the currency, a full index needs to be run before using the visualizations to get correct values of amount. Incremental index will corrupt the indexed data in ES with partial data being in one currency and the remaining in another.</p> <hr/> |
| <b>Rate Type</b>          | Select the rate type to be used for converting amounts to the defined reporting currency.                                                                                                                                                                                                                                                                                                                                                                                        |

## Installation Options - Planning Page

Use the Installation Options - Planning page (INSTALLATION\_PL) to define the message numbers and default planning instance for Supply Planning.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Planning**

| <i>Field or Control</i>          | <i>Description</i>                                                                                                                                                   |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Planning Instance</b> | Displays a default set of data (business units, items, supplies and demands) constituting the inputs and outputs of a supply plan.                                   |
| <b>Message Numbers</b>           | Displays numbers used by the system as starting points to automatically number Supply Planning messages for purchase orders, transfer orders, and production orders. |

## Installation Options - Program Management Page

Use the Installation Options - Program Management page (INSTALLATION\_PGM) to establish program management system defaults for workflow and email notification.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Program Management**

This example illustrates the fields and controls on the Installation Options - Program Management page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Installation Options - Program Management' page. It features a tabbed interface with 'Installation Options' and 'Program Management' tabs. The 'Program Management' tab is active, showing several sections:

- System Defaults:** Includes a checkbox for 'Project Portfolio Mgt Installed'.
- Project Request:** Contains checkboxes for 'Enable Project Request Workflow' and 'Require Funding Department Manager approval'.
- E-Mail Notifications:** A list of checkboxes for notifications triggered by project request events: 'Notify when Project Request is created', 'Notify when Project Request is updated', 'Notify when Detail Plan is created', 'Notify when Project Request is approved', and 'Notify when Project Request is denied'.
- Issue Management:** Includes a checkbox for 'Enable Issue Management Workflow' and a grid of checkboxes for 'Issue Summary', 'Issue Priority', 'Resolution Description', 'Issue Notes', 'Issue Description', 'Issue Status', 'Actual Resolution Date', and 'Issue Attachments'.
- Activity Resource:** Contains a checkbox for 'Enable Activity Resource Workflow' and a text field for 'Resource Name'.
- Deliverables:** Includes a checkbox for 'Enable Deliverables Workflow' and a text field for 'Assigned To'.
- Program Budgeting:** Contains a checkbox for 'Enable Workflow'.

## System Defaults

| <b>Field or Control</b>                                                         | <b>Description</b>                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Portfolio Mgt Installed</b> (Project Portfolio Management installed) | Select to indicate that PeopleSoft Project Portfolio Management is installed. When Project Portfolio Management is installed, project requests can begin only in Project Portfolio Management and not in Program Management. |

See *PeopleSoft Project Portfolio Management*

## Project Request

| <b>Field or Control</b>                            | <b>Description</b>                                                                                                                         |
|----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Project Request Workflow</b>             | Select to activate the project request workflow options on this page.                                                                      |
| <b>Require Funding Department Manager approval</b> | Select to require that project requests be approved by a funding department manager before projects can be created and assigned resources. |

## Project Request - E-Mail Notifications

| <b>Field or Control</b>                        | <b>Description</b>                                                                                                                                       |
|------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Notify when Project Request is created</b>  | Select to indicate that an electronic notification is sent to the appropriate parties when a project request is created.                                 |
| <b>Notify when Project Request is updated</b>  | Select to indicate that an electronic notification is sent to the appropriate parties when a project request is updated.                                 |
| <b>Notify when Detail Plan is created</b>      | Select to indicate that an electronic notification is sent to the appropriate parties when a detail plan is created for a project request.               |
| <b>Notify when Project Request is approved</b> | Select to indicate that an electronic notification is sent to the appropriate parties when a project request is approved and the project can be created. |
| <b>Notify when Project Request is denied</b>   | Select to indicate that an electronic notification is sent to the appropriate parties when a project request is rejected.                                |

## Program Budgeting

| <i>Field or Control</i> | <i>Description</i>                           |
|-------------------------|----------------------------------------------|
| <b>Enable Workflow</b>  | Select to enable program budgeting workflow. |

## Issue Management

| <i>Field or Control</i>                 | <i>Description</i>                                                     |
|-----------------------------------------|------------------------------------------------------------------------|
| <b>Enable Issue Management Workflow</b> | Select to activate the Issue Management workflow options on this page. |

| <i>Field or Control</i> | <i>Description</i>                                                                                                                         |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issue Summary</b>    | Select to trigger workflow to the appropriate program, project, or activity owner when a user changes the issue summary on the Issue page. |

| <i>Field or Control</i> | <i>Description</i>                                                                                                                          |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issue Priority</b>   | Select to trigger workflow to the appropriate program, project, or activity owner when a user changes the issue priority on the Issue page. |

| <i>Field or Control</i>       | <i>Description</i>                                                                                                                                        |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Resolution Description</b> | Select to trigger workflow to the appropriate program, project, or activity owner when a user changes the issue resolution description on the Issue page. |

| <i>Field or Control</i> | <i>Description</i>                                                                                                                                               |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issue Notes</b>      | Select to trigger workflow to the appropriate program, project, or activity owner when a user changes the issue notes on the Issue - Notes and Attachments page. |

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                             |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issue Description</b> | Select to trigger workflow to the appropriate program, project, or activity owner when a user changes the issue description on the Issue page. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                        |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issue Status</b>     | Select to trigger workflow to the appropriate program, project, or activity owner when a user changes the issue status on the Issue page. |

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                        |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Actual Resolution Date</b> | Select to trigger workflow to the appropriate program, project, or activity owner when a user changes the issue actual resolution date on the Issue page. |

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                              |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issue Attachments</b> | Select to trigger workflow to the appropriate program, project, or activity owner when a user adds issue attachments on the Issue - Notes and Attachments page. |

## Activity Resource

| <b>Field or Control</b>                  | <b>Description</b>                                                                                                         |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Activity Resource Workflow</b> | Select to activate the <b>Resource Name</b> workflow option on this page.                                                  |
| <b>Resource Name</b>                     | Select to enable the ability for project managers to notify resources of new activity assignments from the Resources page. |

## Deliverables

| <i>Field or Control</i>             | <i>Description</i>                                                                                                        |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Deliverables Workflow</b> | Select to activate the <b>Assigned To</b> workflow option on this page.                                                   |
| <b>Assigned To</b>                  | Select to provide the project manager the option to trigger email notification to the resource for assigned deliverables. |

## Installation Options - Project Costing Page

Use the Installation Options - Project Costing page (INSTALLATION\_PC) to establish default settings for project fields and control fields used across .

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Project Costing**

This example illustrates the fields and controls on the Installation Options - Project Costing Page (1 of 2). You can find definitions for the fields and controls later on this page

The screenshot displays the 'Installation Options - Project Costing' page. It features several sections for configuring system defaults, options, and reporting roll-up calendars.

- System Defaults:** Includes fields for SetID (SHARE), Temporary File Path (C:\TEMP\), Last Project ID (319), and Last Transaction ID (10023838).
- Options:** Includes checkboxes for 'Enable Separate Debit/Credit' and 'Allow Multiple Report Summary'.
- Organizational Accounting:** Includes checkboxes for 'Enable Organization' and 'Enable Sharing'.
- Projects Budgeting Options:** Includes a checked checkbox for 'Enable Projects Budgeting', a Default Calendar ID (MN), a Default Number of Periods (12), a checked checkbox for 'Allow Get Plan Distribution by Department', and a Max Budget Items to Retrieve field.
- Analysis Group Defaults:** Includes fields for Cost Budget (BUD), Revenue Budget (RBUD), Actual Cost (PSCST), Actual Revenue (PSREV), Billing (PSWKS), Forecast Cost (EAC), and Forecast Revenue (FREV).
- Reporting Roll Up Calendars:** Includes fields for Weekly Calendar (WK), Monthly Calendar (01), Quarterly Calendar (QT), and Yearly Calendar (YR).

This example illustrates the fields and controls on the Installation Options - Project Costing Page (2 of 2). You can find definitions for the fields and controls later on this page

The Installation Options - Project Costing page and Installation Options - Project Costing Integration page are built over core tables that are shared among many PeopleSoft applications. The values entered on these pages affect the table structures that are used to define operational defaults. Because certain tables work together in groups, the order in which they are set up requires that data on some of the tables must be established before others. If you already use other PeopleSoft applications, such as General Ledger to track financial transactions, much of the financial framework is already set up.

Many of the project and control field default values that you set up on the Installation Options - page can be overridden at the individual project and activity level, and in some cases the individual user's Project Preferences.

You must enter at least one record on this page.

**Warning!** If is installed, do not create projects through the Design ChartFields menu, since it represents a subset of project information and is driven by SetID instead of by business unit.

System Defaults

| Field or Control    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SetID               | Enter a SetID that identifies the default control tables tableset.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Temporary File Path | <div>Enter a file path and directory on the application server that are needed to import a third-party application and project tree into . The Load Projects and Activities Application Engine process (PC_INTF_GEN), which is used to load projects and activities into , stages the project tree as a flat file to this directory and invokes the Projects Tree Integration Application Engine process (PC_TREE_LOAD) to load it into .</div> <div>The default value is c:\temp\.</div> |

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last Project ID</b>               | Enter a numeric value that specifies the last project ID issued.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Last Transaction ID</b>           | Enter a numeric value that specifies the last transaction ID issued. The default value is <i>10000000</i> .                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Enable Separate Debit/Credit</b>  | Select to enable separate debit and credit entries for account processing. The default value is deselected.                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Allow Multiple Report Summary</b> | <p>Select to refresh the rows in the Project Transactions Reporting table (PC_RPO) based on the user's operator ID and the security defined for that user. If deselected, the system overwrites the Project Transactions Reporting table each time that the Report Summarization Application Engine process (PC_RPO) runs and is not subject to project-level security.</p> <p>See "Creating and Modifying Reports Using the Report Summarization Process" (PeopleSoft Project Costing).</p> |

## Organizational Accounting

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                             |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Organization</b> | Select to enable transorganizational accounting, which is the ability to charge transactions to an organizational entity that differs from that of the resource creating them. |
| <b>Enable Sharing</b>      | Select to enable cost and revenue sharing between a resource's organization and the organization that owns the project or activity.                                            |

## Projects Budgeting Options

| <i>Field or Control</i>                          | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Projects Budgeting</b>                 | <p>Select to activate budgeting functionality including the creation of budgets through online pages or integration with Microsoft Project 2002.</p> <p>When this option is selected and you create budget plans, the budgets are stored in the Project Budget Plan (PC_BUD_PLAN) and Project Budget Detail (PC_BUD_DETAIL) tables. Upon finalization of these budgets, transactions are sent to the Project Transaction table (PROJ_RESOURCE) and updated in the Summary Budget Data table (PC_BUD_SUMMARY). The Summary Budget Data table is used for delivered reporting analytics.</p> <p>Deselect this option for the system to send transactions to the Project Transaction table only. The default value is deselected.</p> |
| <b>Default Calendar ID</b>                       | <p>Select a default calendar to use for project budgeting. The default value is <i>MN</i> (monthly period calendar beginning January 1). This field is available only if you select the <b>Enable Projects Budgeting</b> option.</p> <p>If you use Program Management, this field is used as the default budget period when you create budget detail lines by using the Program Budgeting feature. Each plan may use a different budget calendar.</p>                                                                                                                                                                                                                                                                              |
| <b>Default Number of Periods</b>                 | <p>Enter a default number of time periods to use in budgeting. The default value is <i>12</i>, and the field is a two-digit field. Therefore, you cannot exceed a value of <i>99</i>. This field is available only if you select the <b>Enable Projects Budgeting</b> option.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Allow Get Plan Distribution by Department</b> | <p>Select to enable users to enter one or more general ledger (GL) business units, departments, and distribution percentages during the budgeting process for the system to use to distribute resource costs to budget detail rows. Deselect this option to distribute costs to budget detail rows based on the GL business unit and department from the budget items that are entered on the Resources by Activity page in Program Management.</p> <p>When you select this option, the Distribute Activity Resource Amounts page appears when you click the <b>Get Plan</b> button on the Budget Plan page.</p> <p>This field appears only if you use Program Management. The default value is option selected.</p>               |

| <i><b>Field or Control</b></i>      | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Max Budget Items to Retrieve</b> | <p>Enter a value to control how many budget items are initially displayed on the "Budget Detail Page" (PeopleSoft Project Costing). A value of 0 (zero) displays all budget items, which is recommended unless the you are experiencing performance issues. This field can be used to improve the time required to initially display the page for budget plans that may have many activities or budget items.</p> <p>This installation level field is the default value when adding new budget plans. However, it can be overridden on the "Budget Plan Page" (PeopleSoft Project Costing), per budget plan.</p> |

## Analysis Group Defaults

| <i><b>Field or Control</b></i> | <i><b>Description</b></i>                                                                                                                                                                                                                                                                 |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Cost Budget</b>             | Select a default analysis group to use for cost budgets in budgeting. The analysis group that you enter in this field appears as a default value for the <b>Cost Budget</b> analysis group on new projects. You can override the default value at the project level.                      |
| <b>Revenue Budget</b>          | Select a default analysis group to use for revenue budgets in budgeting. The analysis group that you enter in this field appears as a default value for the <b>Revenue Budget</b> analysis group on new projects. You can override the default value at the project level.                |
| <b>Actual Cost</b>             | Select a default analysis group to use for actual cost transactions throughout the system. The analysis group that you enter in this field appears as a default value for the <b>Actual Cost</b> analysis group on new projects. You can override the default value at the project level. |
| <b>Actual Revenue</b>          | Select a default analysis group to use for revenue transactions throughout the system. The analysis group that you enter in this field appears as a default value for the <b>Actual Revenue</b> analysis group on new projects. You can override the default value at the project level.  |
| <b>Billing</b>                 | Select a default analysis group to use for billing transactions throughout the system.                                                                                                                                                                                                    |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Forecast Cost</b>    | Select a default analysis group to represent the estimate at completion costs for a project. The analysis group that you enter in this field appears as a default value for the <b>Forecast</b> analysis group on new projects. You can override the default value at the project level.                                                                                                                                                 |
| <b>Forecast Revenue</b> | Select a default analysis group that appears as the default forecast revenue analysis group on the Definition page. The <i>FREV</i> analysis group is predefined and contains the same analysis types as the PSREV analysis group plus the ETB (billing estimate to complete) analysis type. Users can modify this value to any analysis group that is defined in the system.<br><br>See "Analysis Groups" (PeopleSoft Project Costing). |

## Reporting Roll Up Calendars

Enter the calendar ID that determines how the system summarizes the Project Transaction table by week, month, quarter, and year. The calendars contain the start and end dates of each period.

## Purchasing Adjustment Options

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Requisition Reversal</b> | Select an option that determines the calculation method that the system uses to reduce the balance of purchase requisitions as corresponding purchase orders are dispatched. Available values are:<br><br><i>COM Amount</i> : Reduces purchase requisitions by the quantity and amount of corresponding purchase orders when they are dispatched.<br><br><i>REQ Rate</i> : Reduces requisitions by using the committed quantity multiplied by the cost per unit on the purchase requisition. This is the default option.<br><br><i>REQ Total</i> : Reverses the purchase requisition entirely when any corresponding purchase order is committed. |
| <b>From Feed</b>            | Select to automatically run the Purchasing Adjustment process (PC_POADJUST) when the Purchasing to Application Engine process (PC_PO_TO_PC) runs. The Purchasing Adjustment process creates a requisition reversal row in the Project Transaction table.                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Purchase Order Reversal</b> | <p>Select an option that determines the calculation method that the system uses to reduce the balance of purchase requisitions as corresponding vouchers and material requests are processed. Available values are:</p> <p><i>COM Rate:</i> Reduces the purchase order based on the actual quantity from purchase order vouchers or material requests multiplied by the line cost per unit on the purchase order. This is the default option.</p> <p><i>ACT Rate:</i> Reduces the purchase order in the amount of the actual quantity and cost.</p> |
| <b>From Feed</b>               | Select to automatically run the Purchasing Adjustment process when the Payables to Application Engine process (PC_AP_TO_PC) runs. The Purchasing Adjustment process creates a purchase order reversal row in the Project Transaction table.                                                                                                                                                                                                                                                                                                         |

## File Attachment Option

A file storage system uses a file transfer protocol (FTP) to store files to either a database or a file server. The system used is determined by the URL that is passed as the first parameter in the attachment built-in function and maintained on the URL Maintenance page.

See *PeopleSoft Asset Lifecycle Management, Enterprise Service Automation, Financial Management, Staffing Front Office, and Supply Chain Management Product-Specific Installation Instructions*.

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>File Attachment Option</b> | <p>Select a location to store file attachments. Available values are:</p> <p><i>File Server</i> Select to store files on a file server. This option is a more efficient way to store files; however, it requires that you set up an FTP to the file server. This is the default option. If you select this option, you must enter an attachment directory in <b>FTP Root</b> field.</p> <p><i>Database</i> Select to store files in a database.</p> <hr/> <p><b>Important!</b> If you want to send file attachments in email messages, you must select the <i>File Server</i> option.</p> <hr/> |
| <b>FTP Root</b>               | If you store attachments on a file server, enter the home directory where the attachment files are stored. This field appears only if you select the <b>File Server</b> option.                                                                                                                                                                                                                                                                                                                                                                                                                 |

## Open Period Control

| <i><b>Field or Control</b></i>    | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Open Period Control</b> | Select to enable open-period validation of newly created project transactions. The system validates the accounting date on project transactions against the open periods or the GL open periods. If the accounting date does not fall within the open period, the system overrides the date with the closest, open-period date. The default value is deselected. Budget transactions are not validated.           |
| <b>Open Period Source</b>         | <p>Select the source against which the system validates the accounting date on project transactions. This field appears only if you select <b>Enable Open Period Control</b>. Available options are:</p> <p><i>Projects</i> Validates open periods based on a business unit's calendar. This is the default option.</p> <p><i>General Ledger</i> Validates open periods based on a GL business unit calendar.</p> |

## My Projects Options

*My Projects* is used to filter and secure information in the My Work section of the Fluid Projects WorkCenter and the My Projects page. It must be populated either manually by the project user or by using one of the automation options before the user can view My Work exceptions on the WorkCenter.

Use this section to determine whether the list of My Projects for each user is populated manually by each user individually or auto-populated using the Populate My Projects process (RUN\_PC\_MY\_PRJ) in "Populate My Projects Page" (PeopleSoft Project Costing).

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Method to Populate My Projects</b> | <p>Select an option to determine whether the system automatically populates the list of My Projects for each user. The method selected impacts options available for users as a User Project Preference too. Options are:</p> <ul style="list-style-type: none"> <li> <p><i>Manual Identification by Users:</i> With this option, there is no automated load of My Projects for users. All additions and changes to the project list are maintained manually by the user.</p> <p>When selected, the Populate My Projects process is not used and the additional check boxes for this section do not appear.</p> </li> <li> <p><i>Auto Populate, No Overrides:</i> Select to apply the same method for all users.</p> <p>Users will not have the ability to change the way projects are loaded as a User Preference. The additional check boxes for this section appear. With this option the user can manually delete projects from their list and they will not be added again through the automated process. Users cannot add projects to their list of My Projects manually.</p> </li> <li> <p><i>Auto Populate, Allow Overrides:</i> With this option, the organization defines a default method for auto-populating My Projects for each user and the project user can change or override their method for populating My Projects on the <u>User Preferences – Project Costing Page</u>.</p> <p>With this method, the process does not remove any projects already on the user's list. Removing a project added through the automation or added manually through the project general definition page must be done manually by the user. Changes to remove an individual from the project team, or remove a project from the project tree or grants portal security will not be reflected in My Projects. These deletions must be done manually.</p> </li> </ul> <p>Business Unit and Project Security, if implemented by the organization, will be enforced with all options.</p> |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Auto Populate Options</b> | <p>Select one or more methods of populating project lists for users.</p> <ul style="list-style-type: none"> <li>• If the My Projects Set Up option is <i>Manual Identification by Users</i>, then this section does not appear.</li> <li>• If the My Projects Set Up option is <i>Auto Populate, No Overrides</i>, then this section appears and the options selected apply to all users.</li> <li>• If the My Projects Set Up option is <i>Auto Populate, Allow Overrides</i>, then this section appears. In addition to a default method for the organization, each user can select their own methods to auto-populate their own list of projects using the <a href="#">User Preferences – Project Costing Page</a>. However, if no method is selected on the User Preferences - page for the user, then the system uses the check boxes selected on this page to determine the methods used when the Populate My Projects process runs.</li> </ul> <p>At least one option must be selected. Options include:</p> <ul style="list-style-type: none"> <li>• <i>Business Unit Security and Project Security</i>: Displays as selected or deselected. The automation applies Business Unit security and/or Project Security if enabled. This option is display-only.<br/><br/>If Project Security is enabled, this option is selected because project security is always enforced. Therefore, the Populate My Projects process only selects projects that a user is authorized to access.</li> <li>• <i>All Projects</i>: With this method, My Projects will include all projects. If Business Unit and/or Project Security is enabled, then the list of projects is filtered for those options. This is the recommended setting if you are applying business unit security and would like My Projects controlled by business unit.</li> <li>• <i>Project Team</i>: Select to indicate that the Populate My Projects process should select all projects where the user is a team member.<br/><br/>If a person is added to a team in error, then the project must be removed manually. Projects that have ended must be removed manually as well.</li> <li>• <i>User Default Tree Node</i>: Select to indicate that the Populate My Projects process should select all projects</li> </ul> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>Analysis Group</b>   | <p>Select an analysis group that contains the analysis types that will be secured. Transaction rows of these analysis types appear as read-only rows on the Transaction List page. You can add or delete transactions that belong to secured analysis types only if you open the page in the Correct History mode.</p> |

## Project Super User

| <i><b>Field or Control</b></i>        | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Super User Role ID</b>             | <p>Select suitable role name for the Super User Role. This field is optional. Super users have the following privileges:</p> <ul style="list-style-type: none"> <li>• <b>Status Control</b> - Super user can override the restriction laid by the status control rule. For example if transactions with certain analysis types are prevented by a status control rule from being entered against projects or activities with certain statuses then super users can override this restriction. They will encounter a warning message instead of an error message and will be allowed to save the transaction.</li> <li>• <b>GL Analysis Type Assignment</b> - Super user can edit the Analysis Type field on the Journal Entry page. Super user will be able to edit this field although by default if the GL Analysis Type Assignment feature is enabled, the Analysis Type field on the Journal Entry page will be read-only.</li> <li>• <b>Restrict Analysis Type</b> - If the Restrict Analysis Type feature is enabled super user will encounter a warning message instead of an error message and will be able to save the transaction when using an account with an account type that is not allowed for a restricted analysis type.</li> </ul> |
| <b>PC Compression Super User Role</b> | <p>Select an unique Compression Super User Role. This super user will have the privilege to allow users to run or schedule project compression from the Projects WorkCenter page. Users with this privilege can only run or schedule project compression. They cannot edit projects that are approved for compression.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Installation Options - Project Costing Integration Page

Use the Installation Options - Project Costing Integration page (INSTALLATION\_PCINT) to establish the parameters for integration processes between and other applications.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Project Costing Integration**

This example illustrates the fields and controls on the Project Costing Integration page. You can find definitions for the fields and controls later on this page.

| Analysis Group - Budget  | BUD | Work Analysis Type | TLX |
| Analysis Group - Actuals | ACT | Unit of Measure    | MHR |

## System Analysis Types

Enter analysis types to associate with transactions that come into from each of the installed feeder applications. During the integration process, Application Engines use the analysis types that you enter on this page.

| <b>Field or Control</b>                                                  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Proposal Mgmt Bill Estimate</b> (proposal management bill estimate)   | Enter the default analysis type for revenue budget rows that are created when you run the Generate process in Proposal Management. The default value is <i>ESB</i> (Bill Estimate).<br><br>See "Configuring Labor Defaults, Bill Options, and Security" (PeopleSoft Proposal Management).                                                                                       |
| <b>Proposal Mgmt Cost Estimate</b> (proposal management cost estimate)   | Enter the default analysis type for cost budget rows that are created when you run the Generate process in Proposal Management. The default value is <i>ESC</i> (Cost Estimate).                                                                                                                                                                                                |
| <b>Maintenance Mgmt Tools Usage</b> (maintenance management tools usage) | Enter the default analysis type to identify actual tools usage rows from Maintenance Management. The default value is <i>TUG</i> (Tools Usage).<br><br>See "Maintenance Management Tools Usage Process" (PeopleSoft Project Costing).                                                                                                                                           |
| SPro Progress Log                                                        | Enter the default analysis type for importing deliverables progress log rows from PeopleSoft Services Procurement. The delivered default value is <i>SPL</i> .                                                                                                                                                                                                                  |
| <b>Cost Estimate to Complete</b>                                         | Enter the analysis type that the system assigns to rows that are created when activity remaining work (estimated work – actual work) is multiplied by the activity cost rate. The default value is <i>ETC</i> . This field is available only if you use Program Management.<br><br>See "Viewing and Loading Estimate to Complete Transactions" (PeopleSoft Program Management). |
| <b>Bill Estimate to Complete</b>                                         | Enter the analysis type that the system assigns to rows that are created when activity remaining work (estimated work – actual work) is multiplied by the activity bill rate. The default value is <i>ETB</i> . This field is available only if you use Program Management.                                                                                                     |

The *PeopleSoft* documentation contains separate topics on integration with other PeopleSoft applications that discuss analysis types that the system uses for each integration.

## General Integration Options

| <i>Field or Control</i>                   | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Status Control</b>              | Select to enable status control functionality, which enables you to control transactions based on analysis types and effective dates. By using status control options, you can stop transactions from a feeder application if a project or activity status changes on the project Status page or activity Status page. The default value is deselected.<br><br>See "Controlling Incoming Transactions" (PeopleSoft Project Costing). |
| <b>Assign GL Analysis Types</b>           | Select check box to auto-assign General Ledger Analysis Types on the Journal Entry page.                                                                                                                                                                                                                                                                                                                                             |
| <b>Set Up GL Analysis Type Assignment</b> | Click to access the Assign General Ledger Analysis Types page where you can define the assignment rules. Based on the values defined on this page, appropriate analysis types will be assigned on the Journal Entry page.                                                                                                                                                                                                            |
| <b>Restrict Analysis Types</b>            | Select check box to restrict particular analysis types to allowable account types.                                                                                                                                                                                                                                                                                                                                                   |
| <b>Set Up Restricted Analysis Types</b>   | Click to access the Restrict Analysis Types page where you can define permissible account types for the restricted analysis types.                                                                                                                                                                                                                                                                                                   |

## Set Up GL Analysis Type Assignment

Use this page to define the Analysis Type to be populated by the system on the Journal Entry page based on the Account entered on each journal entry line.

This example illustrates the fields and controls on the Assign General Ledger Analysis Types page. You can find definitions for the fields and controls later on this page.

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                 |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SetID</b>                 | Displays the SetID, which is controlled by the GL Business Unit field on the Journal Entry page.                                                                                                                                   |
| <b>Default Analysis Type</b> | Select a default analysis type that will be used if values matching the mapping rules are not found for the journal line.                                                                                                          |
| <b>Account Type</b>          | Select suitable account type. The account types displayed on this page are associated with the journal entry transaction line account. These values are dependent on the definition of Account Types when the accounts are set up. |
| <b>Book Code</b>             | <p>Select book code that is associated with the account.</p> <hr/> <p><b>Note:</b> This field is visible only if the Book Code check box is selected on the Installation Options — Overall page.</p> <hr/>                         |
| <b>Cost Sharing Flag</b>     | <p>Select check box if the journal entry line transaction is cost sharing.</p> <hr/> <p><b>Note:</b> This check box appears only if Grants is installed in the system.</p> <hr/>                                                   |
| <b>Analysis Type</b>         | Click the prompt button to select the analysis type to be assigned. On clicking the prompt button the analysis types displayed are a list of all analysis types in the GL analysis group.                                          |

## Set Up Restricted Analysis Types

Use this page to define the allowable Account Types that can be used when entering transactions from systems that feed into Project Costing for a restricted Analysis Type.

This example illustrates the fields and controls on the Restrict Analysis Types page. You can find definitions for the fields and controls later on this page.

| <i>Field or Control</i> | <i>Description</i>                                                                                                                                                                     |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SetID</b>            | Displays the SetID of the restricted analysis type, which is controlled by PC Business Unit field.                                                                                     |
| <b>Analysis Type</b>    | Displays the analysis type that is restricted.                                                                                                                                         |
| <b>Account Type</b>     | Select the account type(s) that is(are) allowable for the restricted analysis type. The account type values are dependent on the definition of Account Types when accounts are set up. |

**Note:** The Assign GL Analysis Types and Restrict Analysis Types functionalities are applicable only for online transactions and not for batch transactions entered through Project Costing or third party applications.

## Integration Analysis Groups

| <i>Field or Control</i>              | <i>Description</i>                                                                                                                                                                                                                                                                   |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>General Ledger Analysis Group</b> | Specify an analysis group that contains analysis types to use for journal entry.                                                                                                                                                                                                     |
| <b>Receivables Analysis Group</b>    | Specify an analysis group that contains analysis types to use for integrating with receivables transactions.<br><br>See "Understanding Transaction-Related Control Data" (PeopleSoft Project Costing) and "Setting Up Transaction-Related Information" (PeopleSoft Project Costing). |

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                             |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Billing Analysis Group</b> | <p>Specify an analysis group that contains analysis types to use for integrating with manual billing transactions.</p> <p>See "Understanding Transaction-Related Control Data" (PeopleSoft Project Costing) and "Setting Up Transaction-Related Information" (PeopleSoft Project Costing).</p> |

## Time and Labor Integration

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Load Time Automatically</b> | <p>Select for PeopleSoft Time and Labor to publish time and labor actual PAY rows to the Project Transaction table (PROJ_RESOURCE) as soon as payroll is complete. If deselected, you must run the Time and Labor to Application Engine process (PC_TL_TO_PC) manually to load the data into the Project Transaction table from a staging table. The default value is deselected.</p> <p>See "Reviewing and Loading Data to PeopleSoft Project Costing Tables" (PeopleSoft Project Costing).</p> |

## Pricing/Funds Distribution

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Date Option</b>                 | <p>Specify the type of date (accounting or transaction) to use for resolving rates for both pricing and funds distribution. The rates for both of these processes are effective-dated. The default value is accounting date.</p>                                                                                                                                      |
| <b>Reprice Deferrals</b>           | <p>Select to reprice a row that has been priced but not billed. The default value is deselected.</p>                                                                                                                                                                                                                                                                  |
| <b>Review Required for Billing</b> | <p>Select to review project transactions before they can be billed. You can override this option at the project type level and for individual projects. Conduct reviews by using the Project Manager Review component (PC_PM_REVIEW). The default value is selected.</p> <p>See "Reviewing and Adjusting Project Cost Transactions" (PeopleSoft Project Costing).</p> |

| <b>Field or Control</b>                          | <b>Description</b>                                                                                                                                                                                                                                     |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Review Required for Period of Performance</b> | <p>Select to separate Period Of Performance exceptions on the "Manager Transaction Review page" (PeopleSoft Project Costing).</p> <hr/> <p><b>Note:</b> This check box is enabled only if Review Required for Billing check box is selected.</p> <hr/> |

## Funds Distribution Options

The system uses these settings to determine how to handle fund distribution at the installation level.

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Funds Distribution</b>     | <p>Select to enable the Funds Distribution feature. Use the Funds Distribution page to identify cost transactions that are eligible for distribution, and the Funds Distribution - Target Definition page to define target rows to distribute costs among funding sources.</p>                                                                                                                                                                                                                                                                                                                                           |
| <b>Run for Incoming Transactions</b> | <p>Select to indicate that the Funds Distribution (PC_FND_DIST) process should automatically run when processing incoming transactions from the feeder systems that send transactions to . This includes transactions created from the Add Transactions page and the Third Party Loader process. When this option is selected, the Funds Distribution process assumes that the <b>Apply Burden Rates</b> and the <b>Run Pricing After Funds Distribution</b> options are enabled on the Funds Distribution run control page.</p> <p>This option is only enabled if the Enable Funds Distribution option is selected.</p> |
| <b>Update Threshold Amounts</b>      | <p>Select to allow a threshold amount to be modified on the Distribution Rules page after costs have been processed against the threshold. The threshold may not be lowered below the distributed amount.</p> <p>Deselect to indicate that threshold amounts can not be changed once costs have been processed against the threshold.</p> <p>This option is only enabled if the Enable Funds Distribution option is selected.</p>                                                                                                                                                                                        |

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Group Target Definition</b> | <p>Select to indicate that the funding source rules can be grouped manually. Each target definition can be associated to a set of rules.</p> <p>Deselect to indicate that each funding source rule will be associated with separate target definition.</p> <p>This option can be overridden at the business unit level</p> <p>This option is only enabled if the Enable Funds Distribution option is selected.</p> |
| <b>Allow Reversals</b>         | <p>Select to display a <b>Reversals</b> check box on the Funds Distribution - Target page. Reversal transactions are generated to send through budget checking and balance general ledger entries.</p> <p>Deselect to hide a <b>Reversals</b> check box on the Funds Distribution - Target page.</p> <p>This option is only enabled if the Enable Funds Distribution option is selected.</p>                       |
| <b>Balancing Analysis Type</b> | <p>Select the analysis type that should have the Balancing check box automatically selected when defining Funds Distribution target rows.</p>                                                                                                                                                                                                                                                                      |

See "Understanding Funds Distribution" (PeopleSoft Project Costing).

## Summarization Options

Use this group box to determine feeder and pricing summarization options. This group box enables you to select the integrating applications (such as Expenses, General Ledger, Third-Party Loader, and so on) and the Pricing engine processes in which you want to invoke transaction summarization.

| <b>Field or Control</b>   | <b>Description</b>                                                                                         |
|---------------------------|------------------------------------------------------------------------------------------------------------|
| <b>Expenses</b>           | Select to invoke the summarization process during the Expenses to Integration process (PC_EX_TO_PC).       |
| <b>General Ledger</b>     | Select to invoke the summarization process during the General Ledger to Integration process (PC_GL_TO_PC). |
| <b>Third Party Loader</b> | Select to invoke the summarization process during the Third Party Loader to Integration processes.         |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pricing Engine</b>           | Select to invoke the summarization process during the Pricing Engine process (PC_PRICING).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Variance Pricing</b>         | <p>Select to indicate that the Variance Pricing process should use the Summarization engine to net target and history rows.</p> <p>Deselect to indicate that the Variance Pricing process should net rows using a fixed set of fields. These fields are: Business Unit, Project, Activity, Resource ID From, Analysis Type, Resource Type, Category, Subcategory, Contract Number, Contract Line Number, Unit of Measure, General Ledger Business Unit, Account, Department ID, Operating Unit, Product, Fund Code, Class, Program, Budget Reference, Affiliate, Affiliate Intra1, Affiliate Intra2, ChartField1, ChartField2, ChartField3, Foreign Currency, Currency Code, and Currency Effective Date.</p> <p>A Summarization Template for the Variance Pricing product code must also be set up. Otherwise, the fixed set of fields are used.</p> |
| <b>Time and Labor</b>           | Select to invoke the summarization process during the Time and Labor to Integration process (PC_TL_TO_PC).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Payables / Purchasing</b>    | Select to invoke the summarization process during the Accounts Payable to Integration process (PC_AP_TO_PC), the Purchasing to Integration process (PC_PO_TO_PC), and the Purchasing Adjustment Integration process (PC_POADJUST).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Project Reporting Tables</b> | Select to indicate that the project resources are to be summarized using the Refresh Reporting Tables process (PC_SUM_PR), the Refresh Summary Tables (PC_SUM_RFSH) process, or using any of the feeder processes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

For additional information about Feeder and Pricing Summarization:

See "Understanding Feeder and Pricing Summarization" (PeopleSoft Project Costing).

## Time Report Date Option

| <i><b>Field or Control</b></i> | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Date Option</b>             | <p>Select the date option that the system uses to process time reports that are created in Expenses and brought into .</p> <p>Available options are:</p> <p><i>Date Under Report:</i> The dates entered on time reports when they are created in Expenses are the same dates that the system uses when the time reports are imported into . This is the default value.</p> <p><i>Period End Date:</i> The time report end date determines the accounting period to which the system charges time in . This setting is particularly important when the reporting period spans the end of one accounting period and the beginning another accounting period. For example, assume that you use monthly accounting periods and enter weekly time reports. If a month ends in the middle of a week, and therefore the reporting period spans the end and beginning of two accounting periods, the time is charged in to the accounting period for which the reporting period ended—the latter of the two accounting periods.</p> <p>See "Setting Up Time and Expense ChartFields for PeopleSoft Project Costing" (PeopleSoft Project Costing).</p> |

## Asset Management Integration

| <i><b>Field or Control</b></i>        | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                     |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Cost Type From Transaction</b>     | <p>Select to group and summarize the transactions to send to Asset Management by the cost types of the rows in the Project Transaction table instead of the cost type specified on the Define Assets page. The default value is deselected.</p> <p>See "Define Assets Page" (PeopleSoft Project Costing).</p> |
| <b>Department ID from Transaction</b> | <p>Select to group and summarize the transactions to send to Asset Management by the department ID of the rows in the Project Transaction table instead of the department specified on the Define Assets page. The default value is selected.</p>                                                             |

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Require Asset Approval</b>        | <p>Select to require approval of asset capitalization transactions before they are sent to the Asset Management Loader tables. This option applies to assets that you create or adjust in . It does not apply to asset retirement transactions.</p> <p>Deselect the option to enable optional approval of assets. If approval is optional, assets with statuses of <i>New</i> and <i>Approved</i> are eligible to be sent to Asset Management. The default value is deselected.</p> <p>See "Reviewing and Approving Assets" (PeopleSoft Project Costing).</p>                 |
| <b>Single Currency Summarization</b> | <p>Select this option in a single currency environment if you have no need to send transaction currency detail to Asset Management when you capitalize assets. The capitalization processes ignore the five currency fields—Transaction Currency Code, Currency Effective Date, Rate Multiplier, Rate Divisor, and Rate Type—to achieve a greater level of summarization.</p> <p>Deselect this option if you want to send currency transaction detail to Asset Management when you capitalize assets.</p> <p>See "Currency Summary Options" (PeopleSoft Project Costing).</p> |

## Third-Party Data Exchange

The system uses these settings to exchange data between and the Microsoft Project 2002 scheduling application.

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Analysis Group - Budget</b> | <p>Select the analysis group from which to assign an analysis type for budget rows that you import from Microsoft Project. The analysis type from this group is later selected during the Microsoft Project integration process.</p> <p>See "Understanding Integration of PeopleSoft Project Costing with Microsoft Project" (PeopleSoft Project Costing).</p> |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                     |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Analysis Group - Actuals</b> | Select the analysis group by which all transaction rows with an analysis type belonging to the group will be sent from to Microsoft Project. Only transactions with analysis types in the specified analysis group will be synchronized between and Microsoft Project. |
| <b>Work Analysis Type</b>       | Select an analysis type to assign to work transactions (time entries) that are sent from Microsoft Project to the Project Transaction table. The default value is <i>TLX</i> .                                                                                         |
| <b>Unit of Measure</b>          | Select the unit of measure for budget rows brought into from Microsoft Project. The default setting is hours (MHR).                                                                                                                                                    |

## Installation Options - Purchasing Page

Use the Installation Options - Purchasing page (INSTALLATION\_PO) to define general purchasing controls, requisition loader parameters, procurement card controls, and vendor attributes.

In addition, you can define the maximum number of rows to display on various PeopleSoft Purchasing pages and select Oracle BI Publisher as the purchase order reporting tool for both PeopleSoft Purchasing and PeopleSoft eProcurement.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Purchasing**

This example illustrates the fields and controls on the Installation Options - Purchasing Page. You can find definitions for the fields and controls later on this page.

## General Purchasing Controls

| Field or Control                                                                 | Description                                                                                                     |
|----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Last Used Fax File Number, Last EDX File Number, and Last Used Email File Number | Displays the last used file number. The system automatically numbers the files with the next sequential number. |

| <b>Field or Control</b>                                                   | <b>Description</b>                                                                            |
|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Value for Max Qty on Breaks</b> (value for maximum quantity on breaks) | Displays the maximum quantity to be used for quantity break price calculations.               |
| <b>Enter Custom Fields</b>                                                | Select the checkbox to make the user defined fields available on the procurement transactions |

## Max Rows to Retrieve For

Use this group box to define the number of rows that the system retrieves when you perform a search function. For example, if you are using the PeopleSoft Purchasing application to search for purchase orders, and if there are 500 purchase order lines and the purchase order chunk size is set to 20, then the system only loads and displays 20 purchase order lines at a time when you click the **Search** button.

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                     |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Purchase Orders              | Enter the maximum number of rows that you want returned when you search for purchase order-related information.                        |
| Requisitions                 | Enter the maximum number of rows that you want returned when you search for requisition-related information.                           |
| PO Approval Monitor          | Enter the maximum number of rows that you want returned when you search for purchase order approval information.                       |
| Requisition Approval Monitor | Enter the maximum number of rows that you want returned when you search for requisition approval information.                          |
| Requisition to PO Select     | Enter the maximum number of rows that you want returned when you search for requisitions that have been selected for purchase orders.  |
| Close Short                  | Enter the maximum number of rows that you want returned when you search for purchase orders that have been closed with a short amount. |
| Contracts                    | Enter the maximum number of rows that you want returned when you search for contract information.                                      |
| Receiver Workbench           | Enter the maximum number of receipts that you want returned when you search in the Receiver Workbench.                                 |

| <b>Field or Control</b>              | <b>Description</b>                                                                                  |
|--------------------------------------|-----------------------------------------------------------------------------------------------------|
| Procurement Card Reconcile Statement | Enter the maximum number of rows that you want returned when you search in the Reconcile Statement. |

## Initial Advanced Search Behavior When Max Rows Exceeded

Use this region to specify the default method for the system to use to initialize searches for purchase order and requisition lines. Chunking controls the number of lines that the system initially loads when you open a purchase order or requisition. This is a process in which the system places a small subset of transaction lines in a buffer.

---

**Note:** A chunk is not the same as a page full of data. It represents all of the rows that are in the scroll at a given point in time.

---

The system uses the default method when the maximum number of rows defined for chunking has been exceeded. The default methods are specified in the Purchase Orders and Requisitions fields in the Max Rows to Retrieve for region. For example, if the chunk size is 10, and 20 lines are in the purchase order or requisition, the system uses the method that you define on this page to handle the initial search for lines when you open the transaction. Or, if the chunk size is 10, and only two lines are in the purchase order or requisition, then the system does not implement chunking and displays the two lines when the transaction is opened.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Purchase Orders</b>  | <p>Select the method for the system to use when purchase order lines exceed the chunk size. Values include:</p> <ul style="list-style-type: none"> <li>• <i>Display Advanced Search Page:</i> Select to have the system display the Advanced Search page when you select to open a purchase order with more lines than the maximum row limit. The system will not load any lines until you define search criteria for the purchase order lines.</li> <li>• <i>Load First Set of Lines:</i> Select to have the system display purchase orders based on the chunking rule. The system loads the first chunk of purchase order lines and displays the Maintain Purchase Order page. This value is the default value for this field.</li> </ul> |
| <b>Requisitions</b>     | <p>Select the method for the system to use when requisition lines exceed the chunk size. The values for purchase orders also apply to requisitions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## Requisition Loader Parameters

| <i>Field or Control</i>                                              | <i>Description</i>                                                                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last PO Req Loader ID</b> (last purchasing requisition loader ID) | Displays the number of the last requisition loader request processed by the system. At initial setup, this is probably zero. As the Purchasing Requisition Loader Application Engine process (PO_REQLOAD) handles requests, it automatically numbers them beginning with the number that you enter here. |
| <b>Min Loader ID</b> (minimum loader ID)                             | Enter the lowest number that you want to use to identify requisition loader requests.                                                                                                                                                                                                                    |
| <b>Max Loader ID</b> (maximum loader ID)                             | Enter the highest number that you want to use to identify requisition loader requests. When the requisition loader reaches this number, it resets request numbering to the number that you enter in Min Loader ID.                                                                                       |
| <b>Max Load Lines</b> (maximum load lines)                           | Enter the maximum number of lines that can be loaded in a requisition loader process instance. Lines that exceed this number are ignored.                                                                                                                                                                |

## Procurement Card Controls

| <i>Field or Control</i>            | <i>Description</i>                                                                                                                                          |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Number of Digits to Display</b> | Enter the number of digits that appear for the procurement card.<br><br><b>Note:</b> By default, the system displays only the last four digits of the card. |

| <i>Field or Control</i>      | <i>Description</i>                                                                                                                                                                               |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Voucher Lines</b> | Enter the maximum number of procurement card transactions that are created for a voucher.<br><br><b>Note:</b> The value from this page appears by default on the Voucher Stage Run Control page. |
| <b>Transaction Date Days</b> | Enter the maximum number of days to set the Transaction From Date, when searching for procurement card transactions.                                                                             |

## Vendor Attributes

| <i>Field or Control</i>        | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Create Bill To Customer</b> | Select this check box if you want to provide the ability to automatically create the bill to customer when defining a vendor using the Vendor Information - Identifying Information page. When you select this check box, the <b>Create Bill-To Customer</b> group box appears on the Vendor Information - Identifying Information page selected by default so that you can quickly create the bill to customer with default information. |

## Dispatch Process

| <i>Field or Control</i>                       | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable XML Publisher</b> (or BI Publisher) | Select this check box to use Oracle's XML Publisher (BI Publisher) to format and print purchase orders during the dispatch process. Oracle BI Publisher is a Java-based product within the Oracle Fusion Middleware family used for reporting. This check box impacts the dispatch processes within PeopleSoft Purchasing and PeopleSoft eProcurement. If this check box is not selected, then the system uses SQR to format and print purchase orders. |

See the product documentation for *PeopleTools: BI Publisher for PeopleSoft*.

## Kibana Reporting Preferences

| <i>Field or Control</i>   | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reporting Currency</b> | <p>Select the currency that will be used across all business units for reporting in the Procurement Kibana dashboards.</p> <hr/> <p><b>Note:</b> It is recommended not to change the reporting currency frequently. If you change the currency, a full index needs to be run before using the visualizations to get correct values of amount. Incremental index will corrupt the indexed data in ES with partial data being in one currency and the remaining in another.</p> <hr/> |
| <b>Rate Type</b>          | Select the rate type to be used for converting amounts to the defined reporting currency.                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Field or Control</b>                                                    | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Track Direct Journal Customer</b>                                       | Select to enable users to enter a customer ID for a direct journal payment on the Regular Deposit - Payments page. This enables users to view the customer for direct journal payments on inquiry pages.                                                                                                                                                                                                                                                                            |
| Enable Unpost Reason                                                       | Select this check box , which will require users to select a reason code every time they unpost a PeopleSoft Receivables transaction. If you do not select this check box, user selection of an unpost reason is optional.                                                                                                                                                                                                                                                          |
| <b>No Mult Pending Item Selection</b> (no multiple pending item selection) | Select to prevent the selection of an item on a transfer, maintenance, draft, or payment worksheet if an unposted pending item exists for that item or if it is already selected on another worksheet. This limitation also applies to Payment Predictor.                                                                                                                                                                                                                           |
| <b>Parallel Processing Options</b>                                         | Click to access the AR Parallel Processing Options page, where you define how many data partitions are generated for the Payment Predictor (ARPREDC), Receivable Update (ARUPDATE), Aging (AR_AGING), and Statements (AR_STMTS) parallel processes. The parallel processing options are AR_AGE, AR_PGG, AR_POST, AR_PREDICT, and AR_STMT. Enter the maximum partitions for each process.                                                                                            |
| <b>Account Overview Balance Display Options</b>                            | Click to access the AR Account Overview Balances page, where you specify which balances you want to display on the Account Overview - Balances page.                                                                                                                                                                                                                                                                                                                                |
| <b>Statement Number, Dunning Number, and Overdue Charge Number</b>         | Enter the last number used on statements, dunning letters, and overdue charge invoices. The system increments the number by one each time that you print the correspondence.                                                                                                                                                                                                                                                                                                        |
| <b>Reporting Currency</b>                                                  | <p>Select the currency that will be used across all business units for reporting in the Receivables Kibana dashboards.</p> <hr/> <p><b>Note:</b> It is recommended not to change the reporting currency frequently. If you change the currency, a full index needs to be run before using the visualizations to get correct values of amount. Incremental index will corrupt the indexed data in ES with partial data being in one currency and the remaining in another.</p> <hr/> |
| <b>Rate Type</b>                                                           | Select the rate type to be used for converting amounts to the defined reporting currency.                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>1099-C Forms</b>                                                        | Select if your organization must generate the 1099-C, Cancellation of Debt form. This form is required by the Internal Revenue Service to summarize how much debt has been written off for a specific individual.                                                                                                                                                                                                                                                                   |

| <b>Field or Control</b>                                                                    | <b>Description</b>                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DMS Interface</b> (Debt Management Services interface)                                  | Select if your company is a U.S. federal entity and uses the U. S. Department of Treasury DMS interface.                                                                                                                                                                                                                                        |
| <b>Treasury Report on Receivables</b>                                                      | Select if your company is a U.S. federal entity and requires the Treasury Report on Receivables (TROR).<br><br>The TROR serves as a management report that informs Federal decision makers of the gross book value of the non-tax receivables owed by the public to Federal agencies and the status of the Federal Government's debt portfolio. |
| <b>Use Memo Status</b>                                                                     | Select if your company is a U.S. federal entity to enable users to enter memo status codes that track changes in status for delinquent items. Other organizations, should select this option only if they want to create user-defined memo status codes and track changes.                                                                      |
| <b>AR IPAC Interface</b> (Receivables Intra-Governmental Payment and Collection interface) | Select if your company is a U.S. federal entity and uses the U. S. Department of Treasury IPAC interface.                                                                                                                                                                                                                                       |

## Collection Credit Exposure

The fields in the **Collection Management Credit Exposure** group box determine how the Condition Monitor process (AR\_CNDMON) calculates a customer's outstanding balance. The process uses the adjusted balance to determine whether customers are approaching or have exceeded their credit limits.

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                   |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Include Unapplied Payments</b>  | Select to have the process subtract all identified payments from the customer's outstanding balance.                                                 |
| <b>Include In Process Payments</b> | Select to have the process subtract any express deposit, worksheet, or applied payment associated with a customer item from the outstanding balance. |
| <b>Exclude Disputed Items</b>      | Select to have the process subtract the balance due on items in dispute from the outstanding balance.                                                |

The following table shows what the available credit and outstanding receivables (AR) balance would be if you select none of the check boxes or if you select a single option when a customer's credit limit is 65,000,000.00:

| <i><b>Type of Amount</b></i> | <i><b>No Selection</b></i> | <i><b>Select Unapplied Payments</b></i> | <i><b>Select In-Process Payments</b></i> | <i><b>Select Disputed Items</b></i> |
|------------------------------|----------------------------|-----------------------------------------|------------------------------------------|-------------------------------------|
| Credit Limit                 | 65,000,000.00              | 65,000,000.00                           | 65,000,000.00                            | 65,000,000.00                       |
| Open AR Balance              | 65,475,343.21              | 65,475,343.21                           | 65,475,343.21                            | 65,475,343.21                       |
| Unapplied Payments           | not applicable (N/A)       | 35,876,525.91                           | N/A                                      | N/A                                 |
| In Process Payments          | N/A                        | N/A                                     | 125,000.00                               | N/A                                 |
| Disputed Items               | N/A                        | N/A                                     | N/A                                      | 91,276.10                           |
| Outstanding AR Balance       | 65,475,343.21              | 29,598,817.30                           | 65,350,343.21                            | 65,384,067.11                       |
| Available Credit             | -475,343.21                | 35,401,182.70                           | -350,343.21                              | -387,067.11                         |

## Collection Options

The fields in the **Collection Options** group box define additional options for collection and exception monitoring.

| <i><b>Field or Control</b></i>                              | <i><b>Description</b></i>                                                                                                                                                            |
|-------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Auto Escalation</b> (enable automatic escalation) | Select to establish a new action plan for a collection (COLL) condition when a customer that already has a collection action plan violates a collection rule with a higher priority. |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Business Unit Monitoring</b> | <p>Select if you want to monitor the collection (COLL), entry type/reason code (ETRC), key statistics exceeded (KSTE), and large amount coming due (LACD) conditions by business unit. The Condition Monitor treats each business unit and collection customer combination as a separate customer.</p> <p>Business unit monitoring also affects the assignment of the action owner for these conditions. The Condition Monitor groups all open items for the business unit and collection customer combination together. If all these transactions have the same value in the action owner field, it uses that value for the assigned action owner. Otherwise, it assigns the owner based on the collection customer.</p> <p>Here is an example:</p> <p>Customer FRA01 has transactions in business unit FRA02 and FRA05. You assigned collector DKB to this customer. All of the transactions for this customer in the FRA02 business unit are assigned to collector JKB. All of the transactions in the FRA05 business unit are assigned to collector MLM. If the customer violates the collection criteria in both business units, the Condition Monitor creates two action plans: one for FRA02/FRA01 that it assigns to collector JKB and one for FRA05/FRA01 that it assigns to collector MLM. However, if some of the transactions in the FRA02 business unit are assigned to collector JKB and some are assigned to collector CCC, then the action plan for FRA02/FRA01 will be assigned to the collector for the customer, which is DKB.</p> |
| <b>Default Assigned Owner</b>         | <p>Select the user ID for the individual in your organization who you want to be the action owner for action list items when the assigned action owner does not have a user ID. You must designate a default owner before you can define conditions for the Condition Monitor process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Payment Predictor Options

| <i>Field or Control</i>               | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Include Hierarchy</b>              | <p>Select this check box to remit payment for all customers in the specified Customer hierarchy tree or Corporate hierarchy tree of a particular customer reference. Two options are available:</p> <ul style="list-style-type: none"> <li>Remit From - All customers in the customer hierarchy tree will be selected for processing by the Payment Predictor.</li> <li>Corporate - All customers in the corporate hierarchy tree will be selected for processing by the Payment Predictor.</li> </ul> <hr/> <p><b>Note:</b> The Remit drop-down menu will be available only if the Include Hierarchy check box is selected.</p> <hr/>                   |
| <b>Multiple Payments for One Item</b> | <p>Select this check box to apply multiple payments to the same item in the same run.</p> <p>When you select this check box, the Mulpay algorithm (from the #REFS algorithm group) is used to apply multiple payments.</p> <p>You can only apply multiple payments when certain criteria is met. For more information about the criteria required to use this field, see "Using #REFS to Handle Multiple Payments for a Single Item" (PeopleSoft Receivables).</p> <hr/> <p><b>Note:</b> This check box is not available for editing when you select the <b>No Mult Pending Item Selection</b> (no multiple pending item selection) check box.</p> <hr/> |

## Authorize Delete Attachments

| <i>Field or Control</i>             | <i>Description</i>                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Authorize Delete Attachments</b> | <p>If <b>Authorize Delete Attachments</b> check box is selected, only users with the selected roles will be allowed to delete attachments along with the user who has originally attached the file.</p> <p>Once the check box is selected, <b>Roles Authorized to Delete Attachments</b> group box appears to select roles who can delete the attachments.</p> |

## AR Account Overview Balances Page

Use the AR Account Overview Balances page (ACCT\_BAL\_SBP) to specify which balances to display on the Account Overview - Balances page.

Navigation:

Click the **Account Overview Balance Display Options** link on the Receivables page.

The Account Overview - Balances page displays a list of balances for a customer. By default, all balances appear in the list. Deselect the check boxes for the balances that you do not want to display for your organization.

## Installation Options - Order Management Page

Use the Order Management page (INSTALLATION\_OM) to set order, quote, and buying agreement chunking parameters and enable searching, claimback, and feature function security.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Order Management**

### Order/Quote Defaults

| <i>Field or Control</i>               | <i>Description</i>                                                                                                                                                                      |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum Lines Displayed</b>        | Enter the maximum number of lines to be displayed on the sales order or quote before chunking is used.                                                                                  |
| <b>Maximum Schedules Per Line</b>     | Enter the maximum number of schedules per order line displayed before chunking is used.                                                                                                 |
| <b>Maximum Online Pricing Rows</b>    | Enter the maximum number of schedules to be priced online.<br>If the sales order number of schedules exceeds the maximum, you are directed to the Order Repricing process (OM_REPRICE). |
| <b>Maximum Sources of Supply Rows</b> | Enter the maximum number of rows that can be sources before chunking is used.                                                                                                           |

| <b>Field or Control</b>                          | <b>Description</b>                                                                                                                                                                                                                    |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PTSF Search</b> (PeopleSoft Search Framework) | Select to enable PeopleSoft Search Framework to enhance searching capabilities for customers and products during sales order entry.<br><br><i>See PeopleTools: PeopleTools Global Technology, Translating Application Definitions</i> |
| <b>Process Claimback</b>                         | Select to process claimbacks.                                                                                                                                                                                                         |
| <b>Prompt for save when chunking</b>             | Select to have the system prompt you to save a chunk. If deselected, the system automatically saves your order when you navigate from chunk to chunk.                                                                                 |
| <b>Process Feature Security</b>                  | Select to enable the system to use feature function security.                                                                                                                                                                         |

## Buying Agreement Defaults

| <b>Field or Control</b>        | <b>Description</b>                                                                                 |
|--------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Maximum Lines Displayed</b> | Enter the maximum number of lines to be displayed on the buying agreement before chunking is used. |

## Hold Workbench Defaults

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                                                                                                                             |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum Hold Workbench Rows</b> | Enter the maximum number of lines to be displayed on the Order Hold Workbench. The rows that display in the Order Hold Workbench depends on the search criteria for the type of rows (header, line, or schedule) that are selected and counted as the maximum. |

## RMA Shipment History Defaults

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum Lines Displayed in RMA</b> | Enter the maximum number of RMA lines to be displayed on the Customer Shipment History page. If you enter a number lower than the available number of lines, the Customer Shipment History page displays a message indicating that there are more entries available. You can refine your search to view more lines. If you do not specify a number, the system defaults maximum number of RMA lines to 300. |

## Defining Resource Management Installation Options

This section discusses how to set up Resource Management application-specific installation options. The field values that appear by default on this page when you first install Resource Management are required to support demonstration data that is delivered with your application. You must evaluate each option and enter values based on your organization's business structure, practices, rules, and procedures.

The Installation Options - Resource Management page is divided into these regions:

- Service Order Options
- Organization Structure
- Reporting Options - Billing Rates
- Reporting Options - Task Categories
- Calendar Options
- PeopleSoft Services Procurement Integration Options
- PeopleSoft Services Procurement Integration Options - Job Defaults for Person
- Profile Secure Data Options
- Profile Display Options
- Capacity Planning Setup - Default UOM Display
- Capacity Planning Setup - Default Capacity Planning Region
- Capacity Planning Setup - Unit of Measure Conversions

See "Understanding PeopleSoft Resource Management and PeopleSoft HCM" (PeopleSoft Resource Management).

See "Resource Matching" (PeopleSoft Resource Management).

See "PeopleSoft Resource Management Implementation" (PeopleSoft Resource Management).

## Installation Options - Resource Management Page

Use the Installation Options - Resource Management page (INSTALLATION\_RS) to define the installation options that are specific to your Resource Management application.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Resource Management**

This example illustrates the fields and controls on the Installation Options - Resource Management page (1 of 7). You can find definitions for the fields and controls later on this page.

| <b>Organization Field Name</b>    | <p>Enter the field name that represents the organizational unit, which categorizes all resources that are managed in Resource Management. The organizational unit field is used:</p> <ul style="list-style-type: none"> <li>• When users select a service order owning organization.</li> <li>• To define resource groups that are used to direct a search for resources to different parts of the organization.</li> <li>• To define resource groups that appear on the Staffing Workbench - Manage Utilization page.</li> <li>• To indicate which organizational unit to analyze on reports for scheduled utilization, unassigned resources, assignments ending, assignments listing, chart resource schedules, and average staffing time.</li> <li>• To match resource organizational units with service order owning organizations for resources to be evaluated for service orders by the Resource Match engine.</li> </ul> <p>Most organizations use departments to organize resources into logical groupings by functional area, in which case the organization field name value is <i>DEPTID</i>.</p> |
| <b>Organizational Unit Record</b> | <p>Enter the application record name that defines the organizational unit field.</p> <p>If you use department as the organizational unit field, the organizational unit record is <i>DEPT_TBL</i>, which defines the Department (DEPTID) field.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Field or Control</b>                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organizational Structure Tree Name</b> | <p>Enter the name of the tree that contains the organizational unit arranged in a hierarchical business structure. The tree represents the organizational structure in the application. The organizational unit tree is available in Resource Management when users:</p> <ul style="list-style-type: none"> <li>• Select an owning organization for individual service orders or service order templates, or as a service order default owning organization.</li> <li>• Define resource groups.</li> <li>• Indicate which organizational unit to analyze on reports.</li> </ul> <p>The organizational unit tree must be one whose foundation is a tree structure built on the record specified in the <b>Organizational Unit Record</b> field.</p> <hr/> <p><b>Note:</b> Every resource that is tracked in Resource Management must belong to an organizational unit that is included in the organizational unit tree.</p> <hr/> |
| <b>Employee - Organization Record</b>     | <p>Enter the name of the record that keeps track of the organizational unit to which each resource belongs.</p> <p>If the organizational unit field is the Department field (DEPTID), you can use the Employee-Organization record <i>RS_ORGEMPLBR_VW</i> as delivered. The Employee-Organization record is a view of the Job record (JOB) that identifies the department for every employee. The Job record is the PeopleSoft HRMS record that identifies the department, location, job code, and a variety of other attributes for every employee in the organization.</p>                                                                                                                                                                                                                                                                                                                                                     |

See "Understanding the Organizational Unit Tree Structure" (PeopleSoft Resource Management).

## Reporting Options - Billing Rates

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                          |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Billing Rate</b>     | <p>This field is not used by Resource Management at this time. You can accept the default value, leave the field blank, or enter a value that can be used in the future if you create a configuration that uses a default billing rate.</p> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                               |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Currency Code</b>    | Enter the currency code to convert all resource billing rates into one currency for comparison.                                                                                                  |
| <b>Rate Type</b>        | Select the rate type from the Market Rate Data Types table (RT_TYPE_TBL) that determines the default conversion rate for converting resource billing rates and currency codes.                   |
| <b>Unit of Measure</b>  | This field is not used by Resource Management at this time. You can enter a value that can be used in the future if you create a configuration that uses a default billing rate unit of measure. |

## Reporting Options - Task Categories

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Category and Task Chart Color</b> | <p>Select task categories and corresponding chart colors to appear on the Resource Schedule chart if you enter the chart from the:</p> <ul style="list-style-type: none"> <li>Assign Resource page.</li> <li>My Assignments Workbench - Assignments page.</li> <li>Staffing Workbench - Manage Utilization page, if you do not specify task categories and color options on the Utilization options page.</li> </ul> <p>See "Specifying Staffing Workbench and Resource Utilization Options" (PeopleSoft Resource Management).</p> <ul style="list-style-type: none"> <li>Resources page in Program Management.</li> <li>Assignments Ending detail report.</li> </ul> |

## Calendar Options

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                      |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Upd by Mgr</b> (update by manager) | Select the nonassignment (appointment) task categories that can be modified by managers with access to resource schedules. This selection applies to managers with access to the Monthly Schedule page. |

| <b>Field or Control</b>                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Upd by Res</b> (update by resource)    | Select the nonassignment task categories that can be modified by resources in their own resource schedules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Notify by Mgr</b> (notify by manager)  | <p>Select the nonassignment task categories that trigger a notification message to the resource and the resource manager if a manager with authority to modify resource schedules changes a task in the specified category in the resource schedule.</p> <hr/> <p><b>Note:</b> After you select the task categories, you must select the <b>Calendar Email Notification</b> check box to activate workflow.</p> <hr/>                                                                                                                                                                                                                                        |
| <b>Notify by Res</b> (notify by resource) | <p>Select the nonassignment task categories that trigger a notification message to the resource manager if a resource changes a task in the specified category in the resource schedule.</p> <hr/> <p><b>Note:</b> After you select the task categories, you must select the <b>Calendar Email Notification</b> check box to activate workflow.</p> <hr/>                                                                                                                                                                                                                                                                                                    |
| <b>Category and Task Description</b>      | Displays all nonassignment task category names and descriptions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Synchronous Calendar Update</b>        | <p>By default this check box is selected. Deselect this check box to decouple the calendar update process from the assignment component.</p> <p>With this check box deselected, the calendar update process is deferred when assignments are created. Therefore, assignments can be created much faster despite the assignment duration.</p> <p>Calendar entries are created or updated only when the “Update Assignment Calendar” option in the Cache Administration process is run.</p> <hr/> <p><b>Note:</b> Calendar update for assignment status <b>Cancel</b> or <b>Complete</b> occurs synchronously regardless of the check box selection.</p> <hr/> |

| <b>Field or Control</b>                        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calendar Email Notification</b>             | <p>Select this check box to activate the Resource Management email notification workflow feature to notify the resource or resource manager of changes to selected task categories.</p> <hr/> <p><b>Note:</b> You must select this option to activate workflow notification messages for the selected task categories.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Synchronize To</b>                          | <p>Select the <i>Outlook</i> desktop calendar application to synchronize with Resource Management resource schedules, or leave the field blank.</p> <p>You must first separately implement Microsoft Exchange or Microsoft Outlook, and set up your PeopleSoft application to integrate with it, before any synchronization functions can occur.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Do not schedule assignments on Holidays</b> | <p>Select this option to skip resource holidays that are on the resource's holiday schedule when you create assignments. An assignment is created for a specified date range; however, if you select this option, and there are holidays from the resource's holiday schedule within the date range of the assignment, the system will not schedule the assignment on those dates on the resource's calendar.</p> <p>Deselect this option to schedule assignments on every working day within the assignment date range, including resource holidays.</p> <p>This option appears only if Program Management is not installed. If Program Management is installed, the system always skips holidays when creating Resource Management assignments.</p> <hr/> <p><b>Note:</b> Resource calendars and availability will be affected if you change the <b>Do not schedule assignments on Holidays</b> installation option. After you change this option, you must run these two processes in this order: Holiday Load Application Engine process (RS_HOLIDAY) and Cache Administration - Refresh Resource Schedule Cache.</p> <hr/> |

| <i><b>Field or Control</b></i>               | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Task Category for Assignments</b> | <p>Select a task category that appears as the default category value on:</p> <ul style="list-style-type: none"> <li>• Resource assignments that you create from the Express Search page in Resource Management.</li> <li>• Service order resource requests that originate in Resource Management.</li> <li>• The Resource Detail page in Program Management.</li> </ul> <p>Users can change the default value on these pages.</p> <p>Available values are based on task categories that have the <b>Use for Assignment</b> option selected on the Task Categories page in Resource Management.</p> |

See "Defining Holidays on Resource Schedules" (PeopleSoft Resource Management).

## PeopleSoft Services Procurement Integration Options

This group box appears only if you install Services Procurement and select the **Allow Non-Employees to be established as Resources** option on the Resource Setup - Common Installation Options page.

| <i><b>Field or Control</b></i>                            | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable PeopleSoft Services Procurement Integration</b> | <p>Select to enable the integration between Resource Management and Services Procurement that allows user to initiate Services Procurement service requisitions from Resource Management to fulfill resource requests, and navigate to requisitions to make updates.</p> <p>If you do not select this option, the <b>Find External Resource</b> icon does not appear on the Staffing Workbench - Fulfill Orders page.</p> |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Requestor Defaults</b> | <p>Select this option for the project manager to be used as the requestor name for Services Procurement service requisitions that initiate in Resource Management. If you do not select this option, users are prompted to enter the name of the requestor when initiating a service requisition.</p> <hr/> <p><b>Important!</b> If you select this option, users must associate a project with the service order and assign a project manager to the project, and the project manager must be established as a valid requestor in Services Procurement. When a service requisition is initiated in Resource Management, the project manager name is passed from Resource Management to Services Procurement to use as the requestor name, and users cannot change the requestor name on the service requisition.</p> <hr/> |

See "Understanding Integration with PeopleSoft Services Procurement" (PeopleSoft Resource Management).

## PeopleSoft Services Procurement Integration Options - Job Defaults for Person

If you allow non-employee data to be maintained in the FSCM database, you can create new non-employee data records—automatically or manually—for Services Procurement person IDs that are established as resources. The values that you enter in these fields appear by default on the Convert Person ID to Resource page when you establish a person ID as a resource. Users can modify the values as needed on the Convert Person ID to Resource page or in the Employee Personal Data component (RS\_CM\_PERSONAL).

| <b>Field or Control</b>                      | <b>Description</b>                                                                                                                                                                                                      |
|----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Business Unit</b>                         | Select a business unit to serve as the default HR business unit for new non-employee data records (EMPLIDs) that are created for Services Procurement person IDs. This is a required field on the person's data record. |
| <b>Department</b>                            | Select the default department. This is a required field on the person's data record.                                                                                                                                    |
| <b>Location, Supervisor ID, and Job Code</b> | Select a default value for each field. These are not required fields on the person's data record.                                                                                                                       |
| <b>Standard Hours</b>                        | Enter a default value for standard hours per work day. Standard hours are used by the Resource Match engine to calculate Availability fit scores for each combination of eligible resource-and-open resource request.   |

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Standard Work Period</b> | Select the default standard work period. Standard work period is used by the Resource Match engine to calculate Availability fit scores for each combination of eligible resource-and-open resource request.                                                                                                                                                                                                                                               |
| <b>Holiday Schedule</b>     | Select a default holiday schedule to populate resource schedules that are created for new non-employee data records (EMPLIDs).                                                                                                                                                                                                                                                                                                                             |
| <b>Employee ID Prefix</b>   | Enter up to three characters to serve as the prefix for new resource employee IDs that are created for Services Procurement person IDs. When a user establishes a person ID as a non-employee resource, the employee ID default value is a concatenation of this prefix and the <b>Last Emplid Used</b> field value.                                                                                                                                       |
| <b>Last Emplid Used</b>     | <p>Enter a number, up to eight characters, to serve—along with the <b>Employee ID Prefix</b> field value—as the last system-generated employee ID that is created for a Services Procurement person ID.</p> <p>For example, if the employee ID prefix is <i>EXT</i> and the last employee ID used is <i>500</i>, the system assigns an employee ID of <i>EXT00000501</i> to the next person ID that is converted to a resource in Resource Management.</p> |

See "Creating Employee Data" (PeopleSoft Resource Management).

See "Establishing PeopleSoft Services Procurement Service Providers as Resources" (PeopleSoft Resource Management).

## Profile Secure Data Options

The Profiles Secure Data Options group box enables you to secure or unsecure data tabs for Resource Profiles. When entering this page, the group box is expanded to display the Enable Secure Data 1 and Enable Secure Data 2 Tab check boxes along with the corresponding Data Field check boxes.

Until you select the Enable Secure Data 1 Tab check box, the corresponding Data Field check boxes are unavailable for selection. Selecting a data field under either column will enable the field to be displayed on the secured tabs in the Resource Profile component.

---

**Note:** You can choose one or more fields to appear on either or both tabs. When you select a field to appear on either Secure Data 1 tab or the Secure Data 2 tab or both, it is considered to be a secure field.

---

| <b>Field or Control</b>          | <b>Description</b>                                                           |
|----------------------------------|------------------------------------------------------------------------------|
| <b>Job Code</b>                  | Select this option to secure the resource's job code field                   |
| <b>Address</b>                   | Select this option to secure the Address lines 1 through 4 for the resource. |
| <b>City/Town</b>                 | Select this option to secure the city or town of the resource                |
| <b>Postal</b>                    | Select this option to secure the post code/zip code of the resource          |
| <b>Home Phone Number</b>         | Select this option to secure the phone number when Phone Type = Home         |
| <b>Passport and Visa Numbers</b> | Select this option to secure the passport numbers and Visa Numbers           |
| <b>Areas of Speciality</b>       | Select this option to secure the entire Areas of Specialty section           |
| <b>Licenses and Certificates</b> | Select this option to secure the entire Licenses and Certificates section    |
| <b>Test Results</b>              | Select this option to secure the entire Test Results section                 |

**Note:** Passport and visas, and the expiry date of those visas would still be visible to users who do not have access to the secure data. Just the passport and visa numbers will not be visible to users without security access to this data.

## Profile Display Options

| <b>Field or Control</b>                  | <b>Description</b>                                                                                                                                                                                                                                                                                         |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>&lt;Resource profile sections&gt;</b> | Select the check boxes that correspond to the resource profile sections that you want to appear on the Resource Profile review-only summary page. Sections that are not selected are hidden from the summary page, but remain visible in the profile to users with security permission to update profiles. |

See "Maintaining Resource Profiles" (PeopleSoft Resource Management).

## Capacity Planning Setup - Default UOM Display

| <i>Field or Control</i> | <i>Description</i>                                                                                                                                                                                             |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hours or Days</b>    | Select the unit of measure that determines whether the effort is in hours or days. If you select <b>Hours</b> , all of the capacity planning data appears with the primary display and update fields in hours. |

## Capacity Planning Setup - Default Capacity Planning Region

| <i>Field or Control</i> | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Region SetID</b>     | Enter the default region SetID that is used in Capacity Planning - Consolidated Scenario analysis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Region Code</b>      | <p>Enter the default region code that is used in Capacity Planning - Consolidated Scenario analysis. This region is used for:</p> <ul style="list-style-type: none"> <li>Adding or removing supply in a Combined Scenario analysis.</li> </ul> <hr/> <p><b>Note:</b> You can add or remove capacity at a high level without specifying region. In that case, the default region code will be used.</p> <hr/> <ul style="list-style-type: none"> <li>Calculating full-time resources in the demand forecast.</li> <li>Calculating full-time resources for demand in a Combined Scenario analysis.</li> </ul> |

## Capacity Planning Setup - Unit of Measure Conversions

| <i>Field or Control</i>             | <i>Description</i>                                                                                                                                                                                                         |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Standard Hours per Work Day</b>  | <p>Displays the number of hours that equal one full work day. The standard hours per work day are specified on the Resource Setup - Common Installation Options page.</p> <p>See <a href="#">Setting Up Resources</a>.</p> |
| <b>Standard Work Days per Month</b> | Enter the number of work days that equal one full month for the purpose of planning capacity.                                                                                                                              |

| <i>Field or Control</i>                | <i>Description</i>                                                                                                                                                               |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Work Days to Full Time Resource</b> | Enter the number of days per month that equal one full-time resource for the purpose of planning capacity. Typically this value is the same as the standard work days per month. |

## Services Procurement Installation Options Page

Use the Services Procurement Installation Options page (INSTALLATION\_SP) to define Services Procurement installation options.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Services Procurement**

This example illustrates the fields and controls on the Services Procurement Installation Options page. You can find definitions for the fields and controls later on this page.

| <i>Field or Control</i>                       | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Managed Services Provider Installation</b> | <p>Click to enable the managed services provider (MSP) functionality in Services Procurement. This check box should not be selected unless your organization is an MSP.</p> <p>If selected, the <b>PO Work Order Integration</b> and <b>PO Service Contracts</b> check boxes are disabled. The <b>HCM Integration</b> check box will also be disabled.</p> <p>Conversely, if the <b>PO Work Order Integration</b> or <b>HCM Integration</b> check boxes are selected, the <b>Managed Service Provider Installation</b> check box is disabled.</p> |

| <b>Field or Control</b>                                                        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SP Fulfillment Enabled</b> (Services Procurement fulfillment enabled)       | Select to enable Services Procurement fulfillment, where you can source requisitions to suppliers, receive candidate submittals, and perform bid negotiations.                                                                                                                                                                                            |
| <b>SP Administration Enabled</b> (Services-Procurement-administration-enabled) | Select to enable Services Procurement administration so that you can set up procurement base data such as projects and activities.                                                                                                                                                                                                                        |
| <b>SP Expense Enabled</b> (Services-Procurement-expense-enabled)               | <p>Select to enable suppliers to submit expenses, which is based on the setting for a particular work order.</p> <hr/> <p><b>Note:</b> This option is only available when SP Administration is enabled.</p> <hr/>                                                                                                                                         |
| <b>SP Settlement Enabled</b> (Services-Procurement-settlement-enabled)         | <p>Select to enable access to invoicing functionality, which includes the creation, modification, approval, and printing of invoices, as well as integration to Accounts Payables.</p> <hr/> <p><b>Note:</b> This option is only available when SP Administration is enabled.</p> <hr/>                                                                   |
| <b>SP Pay Types Enabled</b> (Services-Procurement-pay-types-enabled)           | <p>Select to enable the use of pay types. You use Pay types to break down the total supplier rate into the following rate components : pay rate, fixed cost, vendor markup, and third-party markup.</p> <hr/> <p><b>Note:</b> When you select this option, the rate breakdown is available on rate sheets, requisitions, bids, and work orders.</p> <hr/> |
| <b>PO WO Integration</b> (work-order integration with purchase orders)         | Select to produce purchase orders from work orders. This option is available only if Purchasing is installed.                                                                                                                                                                                                                                             |
| <b>PO Service Contracts Enabled</b>                                            | <p>Select to enable the use of Purchasing service contracts in Services Procurement to validate supplier bid amounts against existing contracts for the specified service.</p> <hr/> <p><b>Note:</b> This option is available only if Purchasing is installed and PO WO Integration is enabled.</p> <hr/>                                                 |
| <b>Use Region Tree Structure</b>                                               | Select to use a graphical tree structure to associate locations and suppliers to regions.                                                                                                                                                                                                                                                                 |
| <b>Schedule Sourcing Emails</b>                                                | Select to schedule sourcing emails in a batch process.                                                                                                                                                                                                                                                                                                    |
| <b>Use HCM Terminology?</b>                                                    | Select to use HCM terminology throughout Services Procurement. When you select this option, the terms of <i>Service</i> and <i>Service Type</i> are changed to <i>Job Code</i> and <i>Job Family</i> on all labels.                                                                                                                                       |

| <b>Field or Control</b>                                      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Recruiting Solutions Integration Enabled</b>              | Select to enable the integration with Recruiting Solutions. When you select this option, all requisitions created in the Recruiting Solutions product can be passed over to Services Procurement for fulfillment.                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>HCM Person Integration Enabled</b>                        | Select to use the HCM database as the system of record for contingent labor associated to Services Procurement work orders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Enable Approval Chunking</b>                              | <p>Select to enable chunking of Approvals in the sPro Invoice Save Confirmation and View Invoice Approver(s) pages of the Manage Invoices component.</p> <p>If this check box is selected and you set a value in the <b>Invoice Approval Monitor</b> field, then the sPro Invoice Save Confirmation and View Invoice Approver(s) pages display invoice lines in chunks.</p> <p>For example: With this check box selected, if you set a value “3” in the <b>Invoice Approval Monitor</b> field, then the sPro Invoice Save Confirmation and View Invoice Approver(s) pages display invoice lines in chunks of 3.</p> |
| <b>Use Service Provider Acceptability Status Reason Code</b> | Enter the reason code that identifies an unacceptable service provider. This code tracks service providers that have been identified as not eligible for new assignments. The system tracks and monitors unacceptable service providers and issues warnings that these service providers should not be selected to fill new work orders.                                                                                                                                                                                                                                                                            |
| <b>Last Expense Report ID Used</b>                           | Displays a starting number for the expense sheet ID assignment. Click the <b>Sync</b> button to synchronize the displayed number with the current next number in the system.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Resource ID Last Used</b>                                 | <p>Unique identifier for time sheet, progress log, or expense sheet amounts passed through the integration.</p> <hr/> <p><b>Note:</b> This option is only available when is installed.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Field or Control</b>                                                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Max Search Result to Retrieve</b> (maximum search results to retrieve) | <p>Enter the maximum number of values that the system retrieves on roster page searches. This field applies to projects or activities search pages only.</p> <p><b>Invoice Approval Monitor</b> field: Enter a value to control the display of invoices lines for approval on the sPro Invoice Save Confirmation and View Invoice Approver(s) pages. Invoice lines are displayed in chunks to make approvals more manageable. The number of invoice lines that must be displayed on the sPro Invoice Save Confirmation and View Invoice Approver(s) pages is determined by the value entered in the <b>Invoice Approval Monitor</b> field.</p> <p>If the <b>Enable Approval Chunking</b> check box is selected and the <b>Invoice Approval Monitor</b> value is set to, for example 3, then the sPro Invoice Save Confirmation page displays invoice lines in chunks of 3.</p> <p>If the <b>Enable Approval Chunking</b> check box is deselected, the <b>Invoice Approval Monitor</b> field is disabled.</p> |
| <b>Base Unit of Measure</b>                                               | <p>Enter the standard UOM. Only UOMs that have conversions defined for this standard UOM appear in UOM prompt fields. For example, if you specify hours, the system includes units such as days in UOM prompts, rather than unrelated units such as pounds.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Base Units Per Week</b>                                                | <p>Select the number of base units that are included in a typical workweek.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

**Warning!** If your organization uses PeopleSoft Customer Relationship Management and Services Procurement, the source tables containing the PERSON\_ID field are not integrated in this release of Services Procurement. Depending on how you implement the use of PERSON\_ID in Services Procurement, the values in one table may override the values in the other table.

## Installation Options - Staffing Installation Page

Use the Installation Options - Staffing Installation page (INSTALLATION\_FO) to define Staffing Front Office and Pay/Bill Management installation options.

Navigation:

**Set Up Financials/Supply Chain, >Install, >Installation Options, >Staffing.**

**Note:** This page is shared by Staffing Front Office and Pay/Bill Management. Some of the options are common to both applications and some apply only to either Staffing Front Office or Pay/Bill Management.

This example illustrates the fields and controls on the Staffing Installation page (1 of 2). You can find definitions for the fields and controls later on this page.

Installation Options

| Default Job Board Distributor                           |  |
| Apply Online URL                                        |  |

Review the information in the Installation Options table before completing any transactions in the system. The installation options table is global, not driven by SetID. It has only one row of data.

**Note:** The four organization structure fields are necessary when using Staffing Front Office and when using resource groups to narrow the criteria of PeopleMatch and PeopleSearch. The page shown provides an example of how to populate these fields using a department tree.

| Field or Control                                | Description                                                                                                                                                                                                                                                                              |
|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Country                                         | Select the default country for Staffing Front Office and Pay/Bill Management. The system uses the entry in this field as a default for formatting addresses on multiple pages throughout these two applications.                                                                         |
| Last Emplid Used(last employee identifier used) | Enter the last employee ID that was given to an employee when hired into Staffing Front Office. This field is only used when Staffing Front Office is installed but Pay/Bill Management is not. If Pay/Bill Management is installed, a similar field from HRMS is used for this purpose. |

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last History ID Assigned</b>    | Enter the last history ID number used for creating history items in Staffing Front Office.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Last Order ID Used</b>          | Enter the last order ID used to create orders in Staffing Front Office, Pay/Bill Management, and Resource Management. These three applications share the same order tables and follow the same automatic numbering logic.                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Last Mass Change Run</b>        | Enter the last number used for the Mass Assignment Rate Change Request process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Role Name</b>                   | Select the user role for those who will have manager access to the Review Agenda/History process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>PeopleSoft Domain</b>           | Enter the domain name if you are using 3rd party integrations. This field defines the PSFT domain for mapping processes with 3rd party suppliers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Map Selection</b>               | <p>Enter the URL string used for mapping addresses. For example: <a href="http://maps.mapapplication.com/maps_result?addr=%Addr%&amp;csz=%City%%2C+%State%%2C+%Postal%&amp;country=%Country%&amp;new=1&amp;name=&amp;qty=">http://maps.mapapplication.com/maps_result?addr=%Addr%&amp;csz=%City%%2C+%State%%2C+%Postal%&amp;country=%Country%&amp;new=1&amp;name=&amp;qty=</a></p> <p>You must use these values in your string, regardless of what mapping software you use: %Addr%, %City%, %State%, %Postal%, and %Country%.</p> <p>The system uses these variables when launching the map within the Customer component.</p> |
| <b>System Email Address</b>        | Enter a generic email address to be used when sending system emails.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Email Event for History Log</b> | Select an event that the system uses when a user logs a history item for sent emails.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Default Task Category</b>       | Select a task category that the system uses when assignments are created in the resource calendar.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## General Options

| <b>Field or Control</b>                                   | <b>Description</b>                                                                                                                                                                       |
|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Add Assignments to Calendar</b>                        | Select this check box to populate the resource calendar whenever an assignment is created. This option is only used when Staffing Front Office is installed.                             |
| <b>Change ‘Ship-to’ Customer/Address Labels to ‘Work’</b> | Select this check box to enable the system to change the <i>ship to</i> labels to <i>worksite</i> for ship-to addresses and ship-to customers within the Customer Information component. |
| <b>Enable Resource Request Quantity Tracking</b>          | Select this check box to enable the system to track resource request quantity changes.                                                                                                   |
| <b>Enable Assignment Date Tracking</b>                    | Select this check box to enable the system to track assignment date changes.                                                                                                             |

## Reopen Assignments Options

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Reactivate Closed Assign</b> | Select to enable users with the appropriate permissions to reactivate previously closed assignments. If you select this option, you cannot select the Allow Additional Assignments option. Once you save the page, you cannot change this option. |
| <b>Allow Additional Assignments</b>   | Select to allow the creation of additional assignments. If you select this option, you cannot select the Allow Reactivate Closed Assign option. Once you save the page, you cannot change this option.                                            |

## Additional Job Options

These options apply only when Pay/Bill Management is installed. They enable you to choose to have your system reuse employee job records across different assignments or to always create a new employee job record for each assignment. Even if you decide to reuse job records across assignments, the system still provides the option to power users to force the creation of an additional job for one specific assignment when needed.

When Staffing Front Office is installed but Pay/Bill Management is not, the application will use employee job record number 0 (zero) for all assignments.

| <b>Field or Control</b>   | <b>Description</b>                                                                                                                                                                                          |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hourly Employees</b>   | Select this check box to have the system automatically create an additional job for every new assignment for hourly employees. The system attempts to reuse job records unless you select this check box.   |
| <b>Salaried Employees</b> | Select this check box to have the system automatically create an additional job for every new assignment for salaried employees. The system attempts to reuse job records unless you select this check box. |

## Recruiting Funnel Options

Setting up these options allows you to integrate the onboarding process with the assignment and hire process. From the Recruiting Funnel, Candidate Summary page, the system can automatically bring up the Assignment Header or the Applicant – Contact Information page by adding an event type.

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Express Assignment Event</b> | <p>Enter an assignment event type. This event type provides additional functionality from the Candidate Summary page in the Recruiting Funnel. When you click the assignment event on this page, the system brings up the Assignment Header page.</p> <p>See "Candidate Summary Page" (PeopleSoft Staffing Front Office)</p>                                                                          |
| <b>Hire Event</b>               | <p>Enter a hire event type. This event type provides additional functionality from the Candidate Summary page in the Recruiting Funnel. When you click the hire event on this page, the system brings up the Applicant – Contact Information page. From here, you can hire the applicant as an employee or a non-employee.</p> <p>See "Candidate Summary Page" (PeopleSoft Staffing Front Office)</p> |

## Organization Structure

These options apply only when Staffing Front Office is installed. They capture information about the tree used to define resource groups. Resource groups can be used to narrow the search criteria in PeopleMatch and PeopleSearch. You can use a tree by candidate department ID or location code to define resource groups.

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                       |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization Unit Field</b>        | Enter the name of the field that will be used to join with the Organization Unit Tree.                                                                   |
| <b>Organization Unit Record</b>       | Enter the table that contains the valid values and descriptions for the organization unit field you entered in the <b>Organization Unit Field</b> field. |
| <b>Organization Unit Tree</b>         | Enter the name of the tree to use to define your resource groups.                                                                                        |
| <b>Employee - Organization Record</b> | Enter the record that tracks the organizational unit to which the resource belongs through the specified <b>Organization Unit Field</b> .                |

## Apply Online

These options appear only when Staffing Front Office is installed. The functionality is not available when only Pay/Bill Management is installed.

| <b>Field or Control</b>                                                           | <b>Description</b>                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Department SetID</b>                                                           | Enter the default department SetID that is to be automatically associated with the candidates who use the Apply Online component. All applicants in the system must have a department. However, this information is not captured in the component used by candidates who use the Apply Online functionality. |
| <b>Employee Self Service Deptid</b> (employee self service department identifier) | Enter the default department ID that is to be automatically associated with the candidates who use the Apply Online component. All applicants in the system must have a department. However, this is not an available field for candidates using the Apply Online functionality.                             |
| <b>Default Attachment Type</b>                                                    | Select the default attachment type that the system automatically associates with the resumes attached through the Apply Online component.                                                                                                                                                                    |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Candidate Registration  | <p>Select an option that determines whether candidates are required to register. Options include:</p> <p><i>Optional Registration:</i> Candidates are not required to register but are able to if they want to.</p> <p><i>Registration Not Required:</i> Candidates are not required to login to the system prior to applying.</p> <p><i>Registration Required:</i> Candidates must register prior to accessing the Apply Online component.</p> |
| After Update Status     | <p>Select an option that the system uses to determine the applicant status after the candidates update their records. Options include: <i>Applicant Active</i> and <i>Applicant Pending</i>.</p>                                                                                                                                                                                                                                                |

### 3rd Party Integrations

|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Resume Parsing Provider        | Select to indicate that your organization used a resume parsing provider.                                                                                                                                                                                                                                                  |
| Supplier ID                    | <p>Select the resume parsing provider. Suppliers must be setup through the Open Integration Framework before they can be selected here.</p> <p>See <i>PeopleSoft Staffing Front Office</i> product documentation. "Structuring PeopleSoft Staffing Front Office Processing Environment," Understanding Resume Parsing.</p> |
| Language Code                  | Select the language of the resumes being loaded.                                                                                                                                                                                                                                                                           |
| Job Board Distributor Provider | Select this check box to indicate that you are using a job board distribution provider.                                                                                                                                                                                                                                    |
| Default Job Board Distributor  | Select job board distributor. Distributors must be setup through the Open Integration Framework before they can be selected here.                                                                                                                                                                                          |
| Apply Online URL               | Enter a valid URL for the Job Board Distributor.                                                                                                                                                                                                                                                                           |

## PeopleTools Options Page

Use the PeopleTools Options page (PSOPTIONS) to enable multiple jobs.

Doing so will enable the employee record number to appear on the Employees search page and on the Job Data page.

Navigation:

**PeopleTools > Utilities > Administration > PeopleTools Options**

In the **General Options** group box, select the **Multiple Jobs Allowed** check box and save the page.

## Installation Options - Sourcing Installation Options Page

Use the Installation Options - Sourcing Installation Options page (INSTALLATION\_AUC) to use to set up award details bid display options and multichannel framework sourcing defaults.

Navigation:

**Set Up Financials/Supply Chain > Install > Installation Options > Strategic Sourcing**

This example illustrates the fields and controls on the Installation Options - Sourcing Installation Options page. You can find definitions for the fields and controls later on this page.

## MultiChannel Framework Sourcing Defaults

| <b>Field or Control</b>                                                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Automatically create Agent profiles for Event Creators with these defaults</b> | <p>Entering information here enables event creator to chat with bidders using the MultiChannel Framework chat capabilities.</p> <p>If selected, the system automatically creates users as MCF agents upon posting their first sourcing event. Bidders can then request to chat with the event creator from the bid response pages.</p> <hr/> <p><b>Note:</b> Any defaults set here can be overridden for a selected agent on the MCF Agent setup page (MCF_AGENT_PG) in PeopleTools.</p> <hr/>                |
| <b>Logical Queue</b>                                                              | <p>Complete the MultiChannel Framework default only if you have selected the <b>Automatically create Agent profiles for Event Creators with these defaults</b> check box.</p> <p>A logical queue is an application-level queue that receives work requests (tasks) relating to an application area, such as chat requests regarding sales information, and routes them to agents capable of handling the work. For example, you might configure a logical queue called <i>SOURCING</i> for bidder issues.</p> |
| <b>Physical Queue</b>                                                             | <p>The system randomly selects this queue so that the tasks in a logical queue are distributed by the framework among all available physical queues for scalability. For example, the <i>SOURCING</i> queue could be serviced by two MCF clusters across two physical queues: <i>SOURCING1</i> and <i>SOURCING2</i>.</p>                                                                                                                                                                                      |
| <b>Skill Level</b>                                                                | <p>Specify the minimum agent skill required to handle this task.</p> <p>The queue server assigns this task type to an available agent with the lowest skill level on that queue greater than or equal to the skill level required by the task.</p> <p>The minimum value is 0, and there is no maximum value.</p> <p>The value specified here can be overridden in the EnQueue() or InitChat() built-in function call.</p>                                                                                     |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum Workload</b> | <p>Select the maximum load that this agent can be assigned before tasks are held or assigned to other agents. This is a required field.</p> <p>The cost of each accepted task is added to the agent's current workload. A task is not assigned to an agent if its cost pushes the agent's current workload over the maximum.</p>  |
| <b>Response ID</b>      | <p>Use to create default chat templates for each agent's profile. Chat templates are used to send responses to bidders. Values include: <i>Abandon</i>, <i>Accept</i>, <i>Deny</i>, <i>End</i>, <i>Forward</i>, and <i>Other</i>. For each response ID, you can add a response name, response description, and response text.</p> |
| <b>Presence State</b>   | <p>Use to define one or more default presence states for each agent's profile. Options include: <i>Available</i> and <i>Unavailable</i>. Add a presence description that appears when checking to see if an agent is available.</p>                                                                                               |

Use this page to define servers, server paths, compare and render options, searching, syndication options, and required approvals.

## Server Path

Use this group box to define default server locations for use in the file creation processes within PeopleSoft Supplier Contract Management.

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Application Server Path</b> | <p>Enter a directory that is on the server where the system creates temporary server-side files. For example, when the system generates authored documents, it uses this temporary document on the application server to create the file prior to transferring it to the file attachment server. You might want to select a directory such as <i>c:\temp</i>, which exists on Windows application servers.</p> <hr/> <p><b>Note:</b> The temporary directory should be operating-system specific if a single operating system is being used in the implementation for all application servers. If multiple operating-system application servers are in the implementation, for example, Unix and Windows, you should leave this field blank.</p> <hr/> |

## Document Compares and Rendering

Use this section to enable server-side Microsoft Word processing. This includes comparisons of the current authored document with a temporarily created version of a refreshed or re-created document. After you enable server-side processing, the system makes a **Compare** button available on the Document Management page.

Optionally, you can also create a Microsoft Word .doc or Adobe .pdf version of the XML-generated documents to send to suppliers who may be using a version of Microsoft Word that is prior to the Microsoft Word version that is on your system. After you enable rendering, the system displays the correct rendering options on the Send to Contacts and Dispatch to Contacts pages. You can test the URL and gateway settings to verify that they are correct and running.

For additional information about document comparisons and rendering, see [Setting Up Document Comparison and Rendering](#).

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Compare Functionality</b> | Select to permit the document administrator to run a server-side comparison of the current authored document against a recreated version or refreshed version of the document. The comparison displays the differences and is for information purposes only. The compare functionality also enables the system to compare a main amended contract with the last executed version. |
| <b>Enable Rendering .doc</b>        | Select to permit the generation of a .doc format document when dispatching a document or sending it to contacts. You select this check box in case a supplier does not use the same version of Microsoft Word that your organizations uses and cannot read an .xml version of the file.                                                                                           |

| <b>Field or Control</b>                                                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Enable Rendering .pdf</b>                                                      | Select to permit the generation of an Adobe .pdf format document when dispatching a document or sending it to contacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Compare/Render Server/Path</b>                                                 | <p>Enter a directory path name for the Windows application server that serves as a temporary location for document processing for server-side comparisons and document rendering of .xml documents. An example of a temporary location might be c:\temp.</p> <hr/> <p><b>Note:</b> If a single operating system is being used in the implementation for all applications servers, then the temporary directory should be operating-system specific. If multiple operating-system application servers are in the implementation (for example, Unix and Windows), then leave the <b>Application Server Path</b> field blank on the Installation Options page.</p> <hr/>                                                                                                                                                                                                                    |
| <b>Compare/Render Server URL</b> (compare/render server uniform resource locator) | <p>Enter the machine name of the Windows application server and port that have been set up with Microsoft Word and the CSDOCUTIL.DLL file. The <b>Compare/Render Server URL</b> field does not require a web server. This communication is within PeopleTools and messaging is at the application-server level. The request from the application is sent to the application server specified by the URL.</p> <p>The machine and port are passed as parameters using an internal synchronous message that is interpreted by PeopleTools and ensures that the request is run on the Windows machine where Microsoft Word or Adobe Acrobat is installed so that the comparison or rendering to .doc or .pdf can take place.</p> <p>The port is the Jolt Server Listener port and should be the same port that was set up with the PeopleSoft application server on the Windows machine.</p> |

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Verify Server Path</b>  | <p>Click to test the render feature. When you test rendering in DOC or PDF, the system verifies that the application server that you entered in the <b>Compare/Render Server URL</b> field and the gateway are set up correctly and running. The system tests for document rendering setup for Microsoft Word and Adobe PDF formats if those check boxes are selected. The testing assists with establishing the compare and render features for the Document Management component, such as document comparisons, dispatch formats, and digital signatures.</p> <p>During the testing, the system provides information messages related to the server connection. For example, if the <b>Compare/Render Sever URL</b> field is blank, a message appears indicating that data was not found in the field.</p> <p>When the test is complete and successful, the system displays this message if rendering check boxes in the Document Compares and Rendering section are selected: "Connect to application server (<i>SERVER NAME</i>): SUCCESSFUL, Test to render document in .doc format: PASSED, Test to render document in PDF: PASSED." The button name is then updated to <b>Setup is Successful</b>, which you can use to test the connection at anytime.</p> <hr/> <p><b>Note:</b> Upon successful testing of each of the features, the system saves the data that you entered.</p> <hr/> <p>Other conditions for test results include:</p> <ul style="list-style-type: none"> <li>• If the local gateway is not set up, a system error appears with the failure information.</li> <li>• If a response is not received from the gateway, the system provides a message.</li> <li>• If the application server specified by Compare/Render Server URL is not running, a system error appears.</li> <li>• If the Enable Compare Functionality, Enable Rendering .doc, or Enable Rendering .pdf check box is selected, and you enter an incorrect URL, the system times out.</li> </ul> |
| <b>Setup is Successful</b> | <p>Click to test the compare and render features again. This button appears after an initial test has been successful. You can use the button to retest the features, for example if you click the Enable Rendering .doc, the system will verify that the rendering setup is correct and running.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## Search Parameters

Use this section to specify search options when using PeopleSoft Search Technology to perform content searches on elements in the library. For example, you can search clauses and sections, the latest versions contract document content, and transactional-related contract data for purchasing contracts.

| <b>Field or Control</b>                | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search Content Chunk Size</b>       | <p>Enter the number of returned rows that you want to retrieve and display when you perform a search. If you do not enter a value, the system retrieves 20 rows at a time.</p> <hr/> <p><b>Note:</b> This applies to the Search Content function in Supplier Contracts.</p> <hr/>                                                                                   |
| <b>Workbench Search Method</b>         | <p>You can do either real-time or keyword searches based on the settings on the Installation page.</p> <p>Select <i>Real Time Searching</i> to employ the SQL based where-used search method on the Supplier Contract Workbench.</p> <p>Select <i>Search Engine</i> to employ the PeopleSoft Search Framework search method on the Supplier Contract Workbench.</p> |
| <b>Contract Workbench Display Rows</b> | <p>Enter a numerical value that tells the system how many rows to display when viewing results in the Supplier Contract Workbench.</p> <hr/> <p><b>Warning!</b> Use caution when entering this value. A number that is too high may impact system performance.</p> <hr/>                                                                                            |

## Processing Options

Use this group box to determine system processing options for purchasing contract syndication and document preferences on various features. Syndication is the exchange of contract information between PeopleSoft contracts and third-party systems. Using syndication, the system publishes contract information from PeopleSoft Purchasing contracts to third-party systems. This enables the third-party system to create the contract. Using syndication, the system can also receive and consolidate contract performance information from third-party systems.

The syndicate options control additional information that the system might publish with the contract. Depending on the capabilities of the remote system and the consistency of setup data between the two systems, you may not want to syndicate this optional information.

The default value for all check boxes in this group box is deselected. See [Understanding Contract Syndication](#).

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Contract Syndication</b>     | <p>Select to indicate that you want to include syndication as part of the contract process. When you select this check box, the system shows the Syndication tab on the "Contract Entry - Contract Page" (PeopleSoft Source to Settle Common Information).</p> <p>If you use contract syndication and the <b>Allow Contract Syndication</b> check box is deselected later, the syndication features appear only for contracts that have already been syndicated. For contracts that have not been syndicated, the system hides the syndication features.</p> |
| <b>Syndicate Contract Defaults</b>    | Select to include purchase order defaults as part of the syndicated contracts. The defaults include header and shipping information. To view these defaults, click the <b>PO Defaults</b> link on the "Contract Entry - Contract Page" (PeopleSoft Source to Settle Common Information).                                                                                                                                                                                                                                                                     |
| <b>Syndicate Miscellaneous Charge</b> | Select to include miscellaneous charges in the syndicated contract. You can add miscellaneous charges to purchase orders in addition to sales taxes, use taxes, and value-added taxes. Miscellaneous charges can include freight, setup costs, insurance, and a variety of other costs that are incurred to deliver purchased goods to a location.                                                                                                                                                                                                           |
| <b>Syndicate Milestones</b>           | Select to include milestone information in syndicated contracts. Milestones are points in a contract cycle, such as a specified period of time or a percentage of contract fulfillment, at which an approval or reevaluation is made by contract participants. Often, partial compensation is linked to a milestone. PeopleSoft Supplier Contract Management verifies the release of milestone lines for merchandise amount changes.                                                                                                                         |
| <b>Syndicate Shipping Schedules</b>   | Select to include syndicated shipping schedules in syndicated contracts. The system verifies that the line quantity on the shipping template is greater than the minimum line quantity.                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Syndicate Distributions</b>        | Select to include syndicated distributions in syndicated contracts. During syndication, the system processes distribution percentages and amounts, and verifies that the distribution amount does not exceed the contract line amount.                                                                                                                                                                                                                                                                                                                       |

| <b>Field or Control</b>                          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Subscriber Node</b>                           | <p>Select a default node to which contracts can be syndicated. The system cannot syndicate a contract until you define a subscriber node. This subscriber node is supplied as a default value on the supplier contract if <b>Allow Contract Syndication</b> has been selected.</p> <p>If a node is not defined at the header level, the system generates a message during processing. If you run syndication as a batch process, only those contracts that have nodes defined can be selected for processing.</p>                                                                                                                                                                               |
| <b>Protect Bind Values in Document</b>           | <p>Select to protect bind values in a document. When you protect bind values and the system generates authored documents, Microsoft Word places a protection tag around each transactional or wizard bind value in the document. This can be useful if you do not want bind values to be readily changed within an authored document, but you do want them to be primarily controlled by wizard or transactional changes within the PeopleSoft system.</p> <p>When Microsoft Word protection is in place, bind values cannot be easily changed. Controls for overriding protection exist within Microsoft Word. For more information about protecting documents, see Microsoft Word - Help.</p> |
| <b>Use Track Changes in Word</b>                 | <p>Select to make <b>Track Changes</b> the default option when the system generates documents. If you do not select this check box, users can manually set the Track Changes feature in Microsoft Word.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Enforce clause protection during check in</b> | <p>Select to indicate that the system should protect clauses. This places Microsoft Word protection tags around a specific clause to help prevent users from making any changes to the clause. When you select the check box, the system prevents a document from being checked in if any of its protected clauses have been changed by users within Microsoft Word.</p> <p>If you do not select this check box, the system displays a warning about a protected clause that has been modified; however, it allows the document to be checked in.</p>                                                                                                                                           |

| <b>Field or Control</b>                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Update Version and Amendment Binds</b> | <p>Select to indicate that the system should automatically update version and amendment bind values, if they exist, within an authored contract document. The update is performed as part of checking in, re-creating, or refreshing a document or when creating amendments.</p> <p>If you do not select this check box, the system does not automatically update any version or amendment bind values within an authored contract document.</p>                                                                                                                                                                                                                                                      |
| <b>Use Document Type</b>                  | <p>Select to indicate that you want to categorize document types for contract documents. Document types enable you to categorize documents and enables additional functionality within the system. When you select this check box, all new documents that are created in the system will require a document type value to be specified.</p> <p>Using document types, you can define specific settings, defaults, and security that provide better control over the flow of document creation and document life cycles.</p> <p>When you select this check box, the system also makes the <b>Use with PO Requisition</b> check box available.</p> <p>See <a href="#">Setting Up Document Types</a>.</p> |

| <b>Field or Control</b>                                                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Use with PO Requisition</b> (use with purchase order requisition)</p> | <p>Select this check box if you intend to create documents related to requisitions that require new contracts. In this scenario, you can define a related document and wizard that capture additional information from the requestor. This information can be pulled into the actual purchasing contract document when it is created. Selecting this check box enables you to set up document types that allow this association to requisitions.</p> <p>When a document type is set up for the contract request situation, you can specify that the system use this type with a PeopleSoft eProcurement or Purchasing requisition. In this case, along with the requisition, the requestor can generate a supplemental request document by launching a wizard that captures the information that pertains to the contract request. The requestor then provides the required information in the supporting document. When the requisition is awarded to a contract, the specialist can reference the original request document and make use of any wizard responses within that request document to help drive the content and fill in required data for the actual contract.</p> <p>When this option is selected, the system displays the <b>Add Request Document</b> link on Maintain Requisitions page in Purchasing and on the Create Requisition page in eProcurement .</p> <p>The default value for the check box is deselected. You must select the <b>Use Document Type</b> check box before you can select this option because the Use with PO Requisition feature is enabled on the <u>Document Type Page</u>.</p> <p>If you clear the field, the system validates that no document types are currently enabled for use with purchase order requisitions. If document types are enabled, an error message appears when you attempt to save the update.</p> |

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Log at Document Generation</b> | <p>Select the default method by which you want the system to log errors when it generates a document. The system provides the value as a default value to document configurators when you first create them. Two levels of logging are available. Select <i>Details</i> to indicate that the system should log full error details during the document generation process. Full logging can slow the generation process, but is useful for debugging and testing wizard paths when you create new configurators. Full logging also validates bind variables that the system uses within a configurator and validates the expansion of a configurator by checking rules that are evaluated during document generation.</p> <p>Select <i>Log Warnings and Wizard</i> to log only warnings, such as missing bind values and the summary wizard history for a given document generation. You should use this setting after a configurator is made available for general use.</p> |
| Override Attachment Server ID     | <p>Select an attachment server ID. You use this field to override the installed server so that you can define an attachment server specifically for PeopleSoft Supplier Contract Management-related documents and attachments. When you select another server, the system displays a warning message about overriding the installed server.</p> <hr/> <p><b>Warning!</b> Overriding an attachment server should be an exception and only performed when absolutely necessary. Overriding the server also affects the use of searching in PeopleSoft Supplier Contract Management. If you choose to use a database server for Supplier Contract Management the Attachment Server Override values must be left blank.</p> <hr/> <p>See <a href="#">Setting Up Document Comparison and Rendering</a> and <a href="#">Overriding SFTP Attachment Servers</a>.</p>                                                                                                               |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Document Retention Option</b>      | <p>Select a document retention option to indicate how you want the system to retain executed documents. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Keep All Versions</i>: Select to keep all versions of a document after the document is executed. Document history will continue to provide links to all intermediate versions.</li> <li>• <i>Keep Only Executed Versions</i>: Select to purge all intermediate versions from the system after the document is executed. During a new document cycle, all versions are accessible until the document is executed. After the document is executed, the system purges all intermediate versions from the system and from the SFTP server. This includes intermediate collaboration copies and intermediate signed copies. Only the final executed version remains in the system.</li> </ul>                                                                                                                           |
| <b>External History Settings</b>      | <p>Select an option that determines the view access for external users of the Supplier Portal. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Disable Viewing once Executed</i>: Select to prevent external suppliers from viewing the executed contract in the Supplier Portal. This assumes that the supplier has an internal copy for reference because they were the last signers. Or, you can send them the signed version.</li> <li>• <i>View All Documents and Details</i>: Select to provide supplier view access to all document details including their collaboration versions, attachments, and all versions that were previously executed.</li> <li>• <i>View Only Executed Documents</i>: Select to provide external suppliers with only view access to the final signed and executed document after each negotiation is completed. This option displays summary action and history rows, but does not include review and collaborations details.</li> </ul> |
| <b>Notify When Available Template</b> | <p>Select a notification template that is used with the <b>Notify Me</b> button on the <a href="#">Document Management Page</a>. The <b>Notify Me</b> button is used to indicate that the system should notify you when a document is checked back into the PeopleSoft system. When the document is checked in, the system notifies any users who have asked to be notified for the document.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Enabled Transactional Sources

Use this section to define whether PeopleSoft Supplier Contract Management users can author contracts using purchasing contracts or the purchase orders in the PeopleSoft Purchasing application.

When you select a check box, the system includes that selection in the list of values for source transactions, such as when you add a document or a document type. You can also perform Search Framework searches based on the transactional source that you select. You do not need to enable the ad hoc source because it is always available.

| <i><b>Field or Control</b></i> | <i><b>Description</b></i>                                                                                                                                                                                                                        |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Purchasing Contract</b>     | Select to enable document creation from a transactional purchasing contract using the Contract Entry feature in PeopleSoft Purchasing. The default value for the check box is selected. See <a href="#">Transactional Purchasing Contracts</a> . |
| <b>Purchase Orders</b>         | Select to enable document creation or association with transactional purchase orders in PeopleSoft Purchasing. The default value for the check box is deselected. See <a href="#">Transactional Purchase Orders</a> .                            |
| <b>Sourcing Event</b>          | Select to enable document creation or association with transactional sourcing events in PeopleSoft Strategic Sourcing. The default value for the check box is deselected.                                                                        |

## Cycle Time Settings

Use this section to define cycle-time settings for completing contract documents and amendments. For example, you can ensure that contract requirements are achieved in a timely manner by establishing a time frame for completing documents. The settings that you define on this page apply to this installation of PeopleSoft Supplier Contract Management; however, you can override these settings for specific document types using the Document Type feature.

You can also set the number of days before the target cycle time that you want the system to display indicators. Use the **Red: Number of Days Prior to Due Date** and **Yellow: Number of Days Prior to Due Date** fields to set the indicators for documents and amendments.

After defining cycle settings, you use the Find Existing Documents page to search for and access documents. Using the results from document searches, you can view which documents and amendments are overdue or pending for collaboration and for approvals. You can also search for documents based on their cycle-time settings using the workbench.

| <b>Field or Control</b>                       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Cycle Time</b>                      | Select to indicate that cycle times should be enabled for this installation of PeopleSoft Supplier Contract Management.<br>After you select the check box, the system makes the related fields available.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Business Calendar</b>                      | Select the business calendar that you want to use for document and amendment cycle times. You use business calendars to determine the days, such as holidays or weekends, that should be removed from any cycle-time calculations. You can also create a calendar specifically for use with documents. To define a business calendar, select <b>Set Up Financials/Supply Chain &gt; Common Definitions &gt; Calendar/Schedules &gt; Business Calendar &gt; Business Calendar</b> .                                                                                                                                                           |
| <b>Complete when Status is</b>                | Select the status at which you want to stop tracking a document's cycle time. For example, you might want to track document cycles during more critical stages when numerous reviewers or approvers are involved in the cycle and not track it for its entire review cycle. Or, the organization might want to track a critical contract document until it has been signed and executed.<br><br>You can end document and amendment cycle tracking at these statuses: <ul style="list-style-type: none"> <li>• <i>Approved</i></li> <li>• <i>Dispatched</i></li> <li>• <i>Executed/Complete</i></li> <li>• <i>Pending Approval</i></li> </ul> |
| <b>Target Cycle Time per Document (days)</b>  | Enter the target number of business days that a contract document should take to complete. This cycle begins when you create the document and ends when the document goes into the status that you select in the <b>Complete when Status is</b> field. The system calculates the cycle time using the business calendar so that only official business days are counted based on the calendar.                                                                                                                                                                                                                                               |
| <b>Target Cycle Time per Amendment (days)</b> | Enter the target number of days that a contract amendment should take to complete.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Field or Control</b>                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Red: Number of Days Prior to from Due Date</b> | <p>Enter the number of days prior to the due date that you want to flag the document with a red flag indicator. When a document falls within the number of days that you enter, the system inserts a red flag indicator on the search results for the Find an Existing Document page. For example if you enter 2 for a document with a due date of March 10, depending on the business calendar, the system inserts the flag on March 8.</p> <p>You use this field to define a more urgent warning, so the number of days that you enter should be fewer than the days that you enter for the yellow flag indicator. You can define the value for documents and amendments.</p> |
| <b>Yellow: Number of Days Prior to Due Date</b>   | <p>Enter the number of days prior to the due date that you want to insert a yellow flag indicator in the document workbench. You can define the value for documents and amendments.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Internal Collaboration

Use this section to define internal and external collaboration settings. Internal and external collaboration are similar; however, with external collaboration, you must set up external users so that they can access documents.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Notifications</b>    | <p>Select the method that the system should use to notify internal collaborators that a document has been routed to them for collaboration. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Email</i>: Select to notify collaborators using email only.</li> <li>• <i>Email and Worklist</i>: Select to notify collaborators using both email and worklist methods.</li> <li>• <i>None</i>: Select to indicate that a notification is not required.</li> <li>• <i>User Preference</i>: Select to use the method defined on a user's preference.</li> <li>• <i>Worklist</i>: Select to notify collaborators using worklist only.</li> </ul> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Routing Template</b> | Select the generic template that the system should use in routing documents for internal collaboration. This template controls the format of information for email notifications when the system routes a document for collaboration. The <i>DocumentCollabReview</i> system-supplied value appears as the default value for the template. See Defining Generic Templates, "Using Notification Templates," <i>PeopleTools: Workflow Technology</i> |
| <b>Done Template</b>    | Select the template that the system should use when internal collaboration has been completed for a document. The template controls the information that appears in the email to the administrator when the collaboration cycle is complete. The <i>DocumentCollabComplete</i> system-supplied value appears as the default value for the Done template.                                                                                           |
| <b>Cancel Template</b>  | Select the template that the system should use to alert any pending collaborators when internal collaboration has been canceled for a document. The <i>DocumentStopCollab</i> system-supplied value appears as the default value for the Cancel template.                                                                                                                                                                                          |

## External Collaboration

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>External Collaboration</b> | <p>Select to enable external collaboration with suppliers who have access to PeopleSoft Supplier Contract Management documents through the Supplier Portal. To perform external collaboration, Oracle recommends that supplier users use the same Microsoft Word version that your organization uses. This ensures that suppliers can make changes and check in the document as an .xml document. If suppliers do not use the same Microsoft Word version, they can check in a .doc version of the document, but the contract administrator will have to manually reconcile any changes.</p> <hr/> <p><b>Note:</b> You must enable external collaboration using this check box before you can enable them for a document type on the Document Type page.</p> <hr/> <p>See Document Collaboration for External Users in the <a href="#">Understanding Document Collaboration</a> topic.</p> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Notifications</b>    | <p>Select the method that the system should use to notify external collaborators when they are listed as collaborators in the document collaboration process. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Email</i>: Select to notify collaborators using email only.</li> <li>• <i>Email and Worklist</i>: Select to notify collaborators using both email and the worklist.</li> <li>• <i>None</i>: Select to indicate that a notification is not required.</li> <li>• <i>User Preference</i>: Select to use the method defined on the user's preference.</li> <li>• <i>Worklist</i>: Select to notify collaborators using worklist only.</li> </ul> |
| <b>Routing Template</b> | <p>Select the generic template that the system should use in routing documents for external collaboration. This template controls the format of information for email notifications when the system routes a document for external collaboration. The <i>DocumentExternalCollabReview</i> system-supplied value appears as the default value for the template. See Defining Generic Templates, "Using Notification Templates," <i>PeopleTools: Workflow Technology</i>.</p>                                                                                                                                                                                            |
| <b>Done Template</b>    | <p>Select the template that the system should use when external collaboration has been completed for a document. The template controls the information that appears in the email to the administrator when collaboration is complete. The <i>DocumentExternalCollabComplete</i> system-supplied value appears as the default value for the Done template.</p>                                                                                                                                                                                                                                                                                                          |
| <b>Cancel Template</b>  | <p>Select the template that the system should use to alert the external collaborator when an external collaboration cycle has been canceled for a document. The <i>DocumentStopExternalCollab</i> system-supplied value appears as the default value for the Cancel template.</p>                                                                                                                                                                                                                                                                                                                                                                                      |

## Approvals and Signatures

Use this section to indicate whether workflow approvals are required for clauses and documents, and whether internal and external users can electronically sign a document.

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Clause Approval</b>                | <p>Select to indicate that approvals are required for clauses.</p> <p>When you select this check box, the system enables workflow approvals for clauses. If you do not select this check box, the person maintaining the clause can set the clause status to approved.</p> <p>See <a href="#">Understanding PeopleSoft Supplier Contract Management Workflow</a>, and <a href="#">Understanding Document Approvals</a>.</p>            |
| <b>Document Approval</b>              | <p>Select to indicate that approvals are required for documents.</p> <p>If you select this check box, the system requires the document administrator to submit documents for approval. If you do not select this check box, the document administrator can click the <b>Approve</b> button to approve the document and to dispatch it to the supplier for a final signature. See <a href="#">Understanding Document Approvals</a>.</p> |
| <b>Document Reapproval After Edit</b> | <p>Select to indicate that a document must be reapproved if the document is edited after it was initially approved. Depending on internal controls for documents in your organization, this may or may not be required.</p>                                                                                                                                                                                                            |

For additional information about Digital Signatures, see [Understanding Digital Signatures](#)

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Internal Signatures</b> | <p>Select to allow internal users to digitally sign a document using Adobe or Microsoft Word signatures. When this check box is selected: .</p> <ul style="list-style-type: none"><li>• You must select an option in the <b>Signature Method</b> field.</li><li>• The system opens the <b>Enable External Signatures</b> check box.</li></ul> <p>Typically, an electronic version of a contract can replace a paper-based version.</p> <p>When you enable internal signatures, the <b>Prepare Document for Signing</b> button appears on the <u>Document Management Page</u>. This button enables you to convert a document to a .pdf file, stage it to be signed, and indicate that it is available to be signed. This causes additional buttons to appear on the Document Management page that enable you to convert the document.</p> <hr/> <p><b>Note:</b> Because digital signature methods are determined at the installation level, you must enable internal signatures using this check box before you can enable them for a document type on the <u>Document Type Page</u>.</p> <hr/> |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Signature Method</b> | <p>Select a method for signing a contract document or for rendering contract documents in PDF. Signature methods include:</p> <ul style="list-style-type: none"> <li> <p><i>Adobe (Deprecated)</i>: Select to sign documents using Adobe Systems software.</p> <p>To use this signature method, you must have Adobe Acrobat on a windows machine, the server must be set up, and a URL must be defined in the Document Compares and Rendering section. In addition, the administrator must have Adobe Professional 8 installed and users, who are required to sign a document, must have Adobe Reader installed.</p> </li> <li> <p><i>Adobe (Word)</i>: Select to dispatch contract documents in PDF or to use Adobe digital signatures.</p> <p>To use this signature method you need Microsoft Word 2007, or a later version, installed on the Windows machine. In addition, to use Adobe digital signatures, the document administrator must have Adobe Acrobat installed and users who are required to sign documents must have Adobe Reader installed.</p> </li> <li> <p><i>Adobe Sign</i>: Select to sign documents using Adobe Sign.</p> <p>To use this signature method, you must have an Adobe Sign account. In addition you must have Microsoft Word 2007 (minimum) on the Windows machine and the URL for the application server must be defined in the Document Compares and Rendering section.</p> </li> <li> <p><i>DocuSign</i>: Select to sign documents using DocuSign.</p> <p>To use this signature method, you must have a DocuSign account. All documents pending signature must be cancelled before you select DocuSign as the signature method.</p> </li> <li> <p><i>Word</i>: Select to sign documents using Microsoft Word.</p> <p>To use this signature method, you must have Microsoft Word 2007, or later version, on the Windows machine and the URL for the application server must be defined in the Document Compares and Rendering section. In addition, users who are required to sign the document must use Microsoft Word 2007, or later version, to sign the document.</p> </li> </ul> |

| <b>Field or Control</b>         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                 | <p>If you selected the Enable Internal Signatures check box, or dispatch contract documents in a .doc, .docx, or .pdf file format, then you must select a value for this field. If you do not select an option, the system displays an error message when you save the settings.</p> <p>For Adobe signature methods, Oracle recommends that you use Adobe (Word) for Adobe digital signatures and Adobe PDF to dispatch documents.</p> <hr/> <p><b>Note:</b> You cannot change signature methods while there are documents pending signature.</p> <hr/> |
| <b>Sign Template</b>            | <p>Select a template that you want internal signers to use when a document is routed to them for electronic signatures. The system-supplied value for the Sign template, <i>DocumentSign</i>, appears as the default value for the field.</p> <hr/> <p><b>Note:</b> All templates are for Adobe and Word digital signature methods.</p> <hr/>                                                                                                                                                                                                           |
| <b>Decline Signing Template</b> | <p>Select a template that you want internal users to use when they decline to sign a document. The system-supplied value for the Decline Signing template, <i>DocumentRejectSigning</i>, appears as the default value for the field.</p>                                                                                                                                                                                                                                                                                                                |
| <b>Complete Template</b>        | <p>Select a template that you want internal signatures to use when the routing process is complete. The system-supplied value for the Complete template, <i>DocumentSignComplete</i>, appears as the default value for the field.</p>                                                                                                                                                                                                                                                                                                                   |
| <b>Cancel Template</b>          | <p>Select a template that you want to use to alert pending signers when the routing for internal signatures process is canceled. The system-supplied default value for the Cancel template, <i>DocumentSignCancel</i>, appears as the default value for the field.</p>                                                                                                                                                                                                                                                                                  |

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable External Signatures</b> | <p>Select to enable external users to sign documents using digital signatures. When you select this check box, the system makes the external signature templates available. These are generic templates that you can use to define the content of emails for certain actions between document approvers.</p> <hr/> <p><b>Note:</b> Because digital signature methods are defined at the installation level, you must enable external signatures using this check box before you can enable them for a document type on the <a href="#">Document Type Page</a> .</p> <hr/> |
| <b>Signed Template</b>            | Select a template that you want to use when an external user has electronically signed a document. The system-supplied value for the Signed template, <i>DocumentSupplierSigned</i> , appears as the default value for the field.                                                                                                                                                                                                                                                                                                                                         |
| <b>Cancel Template</b>            | <p>Select a template that you want to use to alert external users when the external signature process is canceled.</p> <p>The system-supplied value for the Cancel template, <i>DocumentStopExternalSignatures</i>, appears as the default value for the field.</p>                                                                                                                                                                                                                                                                                                       |
| <b>Decline Signing Template</b>   | Select a template that you want to use to alert the contract administrator when an external user declines to sign a document. The system-supplied value for the Decline Signing template, <i>DocumentExternalRejectSigning</i> , appears as the default value for the field.                                                                                                                                                                                                                                                                                              |

| <b>Enable Accounting Integration</b> | Select to enable integration of PeopleSoft Treasury applications with JD Edwards (EnterpriseOne) General Accounting.                                                                                                                                                                                                                                                                                                          |
| <b>Integration Engine Run Option</b> | Select when the Integration Engine process (TR_JRNL_INT) should run. Values are: <ul style="list-style-type: none"> <li><i>After Accounting Engine:</i> The Integration Engine runs immediately after every financial event requiring the Treasury Accounting Application Engine process (TR_ACCTG) to run.</li> <li><i>Scheduled:</i> The Integration Engine runs based on the settings of the Process Scheduler.</li> </ul> |

## EnterpriseOne Connection Data

The fields in the EnterpriseOne Connection Data group box are required only for importing data from Oracle's JD Edwards (EnterpriseOne) General Accounting tables for the purpose of generating a cash position worksheet in Enterprise Cash Management.

| <b>Field or Control</b>           | <b>Description</b>                                                                                                     |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>DBID</b> (database identifier) | Enter the (EnterpriseOne) JD Edwards database from which the data is imported.                                         |
| <b>Password</b>                   | Enter the password required for logging in the (EnterpriseOne) JD Edwards database specified in the <b>DBID</b> field. |
| <b>Server</b>                     | Enter the (EnterpriseOne) JD Edwards Integration Server.                                                               |

See *JD Edwards EnterpriseOne Application Integrations with PeopleSoft Enterprise Applications*.

## Financial Gateway Options

| <b>Field or Control</b>                | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Password Prompt on Dispatch</b>     | Select this check box to enable a security measure that requires the user to reenter the password when dispatching payments from the Dispatch Payments page.                                                                                                                                                                                                                 |
| <b>Online Dispatch Server Name</b>     | Enter the name of the server to run the Dispatch Payment Application Engine process (PMT_DISPATCH). Once entered, Process Scheduler only runs the Dispatch Payment Application Engine process on the selected server, rather than the next available server. This option is available to accommodate the transmission of security-sensitive payment files.                   |
| <b>Import Max Payments per Message</b> | Enter the number of payments allowed in a PAYMENT_REQUEST application message passed from source systems, such as Payables, to Financial Gateway. Increasing the number of payments per message requires fewer messages to be sent, but it requires more memory to process—a system limitation that can affect performance. The default value is 1,500 payments per message. |

## Chapter 7

# Defining User Preferences

---

## Understanding User Preferences

Before you set up user preferences for PeopleSoft applications, you must set up user IDs for those who will define default codes and values. After you have completed table setup and defined all default values, use the User Preferences pages to define profiles for your PeopleSoft system users.

After setting up user preferences, generate the User Preferences report (FIN0006) to display information that includes a listing of the preferences that are defined for each user.

---

## Defining Cross-Application User Preferences

Use the User Preferences component (OPR\_DEFAULT) to define cross-application user preferences.

Use the OPR\_DEFAULT\_FIN component interface to load data into the tables for this component.

## Pages Used to Define Cross-Application User Preferences

| <i>Page Name</i>                                   | <i>Definition Name</i> | <i>Usage</i>                                                                                                                |
|----------------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <u>User Preferences - Overall Preferences Page</u> | OPR_DEF_TABLE_FS1      | Define overall default user preferences for specific PeopleSoft system users.                                               |
| <u>OLE Information Page</u>                        | OPR_DEF_TABLE_OLE1     | Identify the object linking and embedding (OLE) information, namely the client operating system and the user's web browser. |
| <u>User Preferences - Process Group Page</u>       | OPR_DEF_TBL_RTM        | Specify by source transaction the process groups that a user can use for on-demand processing.                              |

## User Preferences - Overall Preferences Page

Use the Overall Preferences page (OPR\_DEF\_TABLE\_FS1) to define overall default user preferences for specific PeopleSoft system users.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Overall Preferences**

This example illustrates the fields and controls on the User Preferences - Overall Preferences page. You can find definitions for the fields and controls later on this page.

| User Preferences                                                                                                                                                                                                                                                                                                                      | Overall Preferences |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <p>User ID    DVP1</p> <p>Name    Development User</p>                                                                                                                                                                                                                                                                                |                     |
| <p>Business Unit    US001    US001 NEW YORK OPERATIONS</p> <p>SetID    SHARE    CORPORATE SETID</p> <p>As of Date    11/30/2012    31</p> <p>Localization Country    USA    USA</p> <p><input type="checkbox"/> Alternate Character Enabled</p> <p><input checked="" type="checkbox"/> Display Debit/Credit Amounts in Subsystems</p> |                     |

| Field or Control                                  | Description                                                                                                                                                                                                                                    |
|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Business Unit and SetID</b>                    | Select values that become the user's default values in business unit and SetID search fields.                                                                                                                                                  |
| <b>As of Date</b>                                 | Displays the default as of date for the Combo Edit process.                                                                                                                                                                                    |
| <b>Localization Country</b>                       | Displays the default localization country for this user ID.                                                                                                                                                                                    |
| <b>Alternate Character Enabled</b>                | Select to activate alternate description buttons or links, which appear to the right of fields on many of the application pages. Click a button or link to enter or display alternate characters on the auxiliary page that appears.           |
| <b>Display Debit/Credit Amounts in Subsystems</b> | Select to display debit and credit amounts of the default business unit on journal entry and inquiry pages. A subsystem is any PeopleSoft application, such as Payables or Receivables, that contributes entries to PeopleSoft General Ledger. |

## OLE Information Page

Use the OLE Information (object linking and embedding information) page (OPR\_DEF\_TABLE\_OLE1) to identify the client operating system and the user's web browser.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > OLE Information > OLE Information**

OLE functionality enables you to store internet addresses with vendor identification information. When using a page that offers web access (such as the Location page in the Vendor Information component (VNDR\_ID), users can click a button or link that activates a web browser to access the vendor's website.

| <i><b>Field or Control</b></i>              | <i><b>Description</b></i>           |
|---------------------------------------------|-------------------------------------|
| <b>Client Operating System</b>              | Select the user's operating system. |
| <b>WWW Browser</b> (World Wide Web browser) | Select the user's web browser.      |

---

**Note:** Some browsers do not support an OLE interface that enables this function.

## User Preferences - Process Group Page

Use the User Preferences - Process Group page (OPR\_DEF\_TBL\_RTM) to specify by source transaction the process groups that a user can use for on-demand processing.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Process Group > Process Group**

See [Understanding Setting Up On-Demand Processing](#).

---

## Defining Application-Specific User Preferences

Use the User Preferences component (OPR\_DEFAULT) to define PeopleSoft application-specific user preferences.

Use the OPR\_DEFAULT\_FIN component interface to load data into the tables for this component.

## Pages Used to Define Application-Specific User Preferences

| <b>Page Name</b>                                    | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                              |
|-----------------------------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Asset Management - User Preferences Page</u>     | OPR_DEF_TABLE_AM1      | Establish date default values, transaction loader processing options, interface table transaction edit options, and property pagelet defaults for a user.                                                                 |
| <u>User Preferences - IT Asset Management Page</u>  | OPR_DEF_TABLE_IT1      | Define user preferences that are specific to IT Asset Management.                                                                                                                                                         |
| <u>User Preferences - Billing Page</u>              | OPR_DEF_TABLE_BI1      | Define default user preferences that are specific to Billing.                                                                                                                                                             |
| <u>User Preferences - Contracts Page</u>            | OPR_DEF_TABLE_CA1      | Define default user preferences that are specific to Contracts.                                                                                                                                                           |
| <u>User Preferences - General Ledger Page</u>       | OPR_DEF_TABLE_GL1      | Set up user defaults for General Ledger.                                                                                                                                                                                  |
| <u>User Preferences - Inventory Page</u>            | OPR_DEF_TABLE_IN1      | Define preferences for Inventory users.                                                                                                                                                                                   |
| <u>Lease Administration - User Preferences Page</u> | RE_OPR_DFLT5           | Define default lease administration preferences for Lease Administration users.                                                                                                                                           |
| <u>User Preferences - Manufacturing Page</u>        | OPR_DEF_TABLE_MG1      | Maintain the default server by user ID. Configure a default server to run the Update Pick Plan and Automatic Material Release process (SFCONREL).                                                                         |
| Orders - Quotations Page                            | OPR_DEF_TABLE_OM2      | Click the <b>Orders - Quotations</b> link on the User Preferences page to set up the default business unit for quotation processing pages for a user. You can also specify a beginning sequence code for your quotations. |
| Orders - Other Page                                 | OPR_DEF_TABLE_OM3      | Click the <b>Orders - Other</b> link on the User Preferences page to set up defaults for users who are entering returned material authorizations (RMAs).                                                                  |
| <u>User Preferences - Orders - Sales Page</u>       | OPR_DEF_TABLE_OM1      | Set up business unit, order source, and order group defaults for a user who enters sales order information. You can also specify a beginning sequence code for your sales orders.                                         |

| <b>Page Name</b>                                          | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                |
|-----------------------------------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>User Preferences - PayCycle Page</u>                   | OPR_DEF_TBL_PYCYCL     | Define default output destinations for the Pay Cycle Manager and the Express Payment Manager components (PYCYCL_MGR and EXP_PYCYCL_MGR, respectively). These default values are not required to perform any pay cycle process.              |
| <u>User Preferences – Supply Planning Page</u>            | OPR_DEF_TABLE_PL1      | Select a default planning instance.<br>A planning instance is a set of data (business units, items, supplies, and demands) constituting the inputs and outputs of a supply plan.                                                            |
| <u>User Preferences – Project Costing Page</u>            | OPR_DEF_TABLE_PC1      | Assign default parameters for transaction processing and set up data entry defaults.                                                                                                                                                        |
| <u>User Preferences – Procurement Page</u>                | OPR_DEF_TABLE_PM1      | Define options and authorizations for procurement users.                                                                                                                                                                                    |
| Procurement - Contract Process Page                       | OPR_DEF_CNTRCT_SEC     | Define contract process preferences by specifying the default contract status and authorized actions for a user.<br><br>See the <u>User Preferences – Procurement Page</u> .                                                                |
| <u>User Preferences – Rebate Authorizations Page</u>      | OPR_DEF_VRBT_SEC       | Define rebate manager maintenance authorization and access rights for vendor rebate agreements.                                                                                                                                             |
| Procurement - Request for Quote Process Page              | OPR_DEF_RFQ_SEC        | Click the <b>Request for Quote Process</b> link on the Procurement page to specify the default request for quote (RFQ) status and authorized actions for a user, including the ability to select the vendors to which an RFQ is dispatched. |
| <u>User Preferences – Payables Online Vouchering Page</u> | OPR_DEF_TABLE_AP1      | Specify user voucher authorities, online voucher processing, and quick invoice configuration options for a user.                                                                                                                            |

| <b>Page Name</b>                                                               | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Asset Management - User Preferences Page

Use the Asset Management - User Preferences page (OPR\_DEF\_TABLE\_AM1) to establish date default values, transaction loader processing options, interface table transaction edit options, and property pagelet defaults for a user.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Asset Management > Asset Management - User Preferences**

This example illustrates the fields and controls on the Asset Management - User Preferences page. You can find definitions for the fields and controls later on this page.

|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Accounting Date  | Supply a default date on which you want this transaction distributed to the general ledger. The accounting date is validated against the open periods that you establish for Asset Management in the FIN_OPEN_PERIOD table to determine to which period the system posts. The difference between the transaction date and the accounting date determines whether any prior period depreciation must be calculated. For example, suppose that a computer was acquired and placed in service on March 15, 2006 but was not entered in Asset Management until August 1, 2006. All general ledger periods prior to August are closed. In this case, Asset Management automatically calculates depreciation starting in March and posts it to the general ledger in August. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                  |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Transaction Date</b> | <p>Supply a default date for asset transactions or leave this field blank to use the system date.</p> <hr/> <p><b>Note:</b> The transaction date must always be prior to or equal to the accounting date.</p> <hr/> |

## Edit Options for Interface Transactions

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Edit Review AP/PO Information</b> | <p>Select the options for this user for editing the Review AP/PO Information component. The available options are:</p> <ul style="list-style-type: none"> <li>• <i>All</i>: Select this option to allow user to make edits to the following entries; Load Status, Asset ID, Dates Only fields and Operation Asset Details fields.</li> <li>• <i>Dates Only</i>: Select this option to allow user to make edits to Load Status, Accounting Date and Transaction Date.</li> <li>• <i>Operational Asset Details</i>: This is the default option. Select this option to allow user edits to asset operational fields only.</li> <li>• <i>None</i>: Select this option to allow edits to only the Load Status.</li> </ul> <hr/> <p><b>Note:</b> Some fields cannot be edited because of the Interface Type and Load Type. |---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Edit Unitization Information</b>   | <p>Use this field to manage user editing privileges of the asset unitization details on the Unitize - TO Asset page.</p> <ul style="list-style-type: none"> <li>Select <i>All</i> to allow user edits to all fields except for Interface ID and Interface Line Number.</li> </ul> <hr/> <p><b>Note:</b> PeopleSoft 9.2 release enables split-funding for assets. Therefore, you cannot edit all the fields on the Unitize – To Asset page for any asset. This is to avoid potential issues when updating the Transaction Amount of an asset with multiple chartfields. The respective transaction amount fields must first be updated.</p> <hr/> <p>For example, assume that the total cost of the asset is 1,000 USD and it belongs to two different departments (Dept A = 600 USD and Dept B = 400 USD). If you want to edit the total cost of the asset to 2,000 USD, you cannot directly edit the transaction amount. Instead, you must update the individual chartfield rows and properly distribute the amount, that is, update the transaction amount for the Dept A to 11,000 USD and that of the Dept B to 900 USD (or whatever the distribution actually is). The total Cost will be computed from the adjustments to the chartfields of each of the departments and the transaction amount will be automatically updated.</p> <ul style="list-style-type: none"> <li>Select <i>Operational Asset Details</i> to allow user edits to asset operational fields only. Users granted this edit option cannot edit transaction amounts or distribution details.</li> <li>Select <i>None</i> to restrict user edits to all fields.</li> </ul> |
| <b>Edit Consolidation Information</b> | <p>Use this field to manage user editing privileges of the asset consolidation details on the Consolidate - TO Asset page.</p> <ul style="list-style-type: none"> <li>Select <i>All</i> to allow user edits to all fields except for Interface ID and Interface Line Number.</li> <li>Select <i>Operational Asset Details</i> to allow user edits to asset operational fields only. Users granted this edit option cannot edit transaction amounts or distribution details.</li> <li>Select <i>None</i> to restrict user edits to all fields.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                                                 |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>To Default Distribution Only</b> | Select this option to consolidate interface lines with different ChartFields to a single ChartField distribution. If you do not select this option, interface lines with different ChartFields will be consolidated into a single asset ID with multiple ChartField distributions. |

**Note:** When the interface status is in the status of *Errored*, *On Hold*, or *Pending*, the options to edit the transaction tables come into effect. Depending on the load type, some fields may not be editable even when the *All* option has been selected. For example, you cannot enter proceeds or removal costs in an *FAD* (Financial Addition) transaction because those fields are related to retirements.

## Auto-Run Transaction Loader

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Asset Management Integration</b>   | Select to add transactions from Maintenance Management to the transaction loader process (AMIF1000).                                                                                                                                                                                                                                                                               |
| <b>Impairment/Revaluation Process</b> | Select to always run impairment and revaluation processing when running the transaction loader process.<br><br>See "Understanding Adjusting, Transferring, Reversing, and Evaluating Assets" (PeopleSoft Asset Management)                                                                                                                                                         |
| <b>Asset Retirement Obligations</b>   | Select this option to enable automatic always run Asset Retirement Obligation transaction processing when you click the Generate ARC button from either the ARO Measurement page or from the ARO Measurement in Mass – Process Parameters page when running the transaction loader process (AMIF1000).<br><br>See "Reviewing ARO Processing Results" (PeopleSoft Asset Management) |

## Property Pagelets

| <b>Field or Control</b> | <b>Description</b>                                                                                                   |
|-------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>Business Unit</b>    | Select the business unit. This user will then have access to property assets from within the selected business unit. |

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                               |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Space Unit of Measure</b> | <p>Select the default unit of measure to access when a user is working with space allocations. The available options are:</p> <p><i>Acres</i></p> <p><i>Feet</i></p> <p><i>Hectares</i></p> <p><i>Meters</i></p>                                                 |
| <b>Property Class</b>        | <p>Select the property class to be commonly used by default for this user ID when he or she is working with property assets. The available options are:</p> <p><i>Area</i></p> <p><i>Building</i></p> <p><i>Floor</i></p> <p><i>Site</i></p> <p><i>Space</i></p> |

## Asset Tracking Options

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Business Unit</b>    | <p>Select a default business unit to use with the Scan Asset, Scan By Location, and Find Asset pages:</p> <ul style="list-style-type: none"> <li>• The business unit you select here will appear in the search criteria for the Scan Asset and Find Asset pages.</li> <li>• For the Scan By Location page, the business unit you select here controls the scan location prompt values.</li> </ul> <p>See "Tracking Assets with the Asset Tracking Homepage" (PeopleSoft Asset Management).</p> |

## Kibana Reporting Preferences

Use this section to specify default **Business Unit** and **Book** filter values for the Asset Management Kibana dashboards.

See "Using Kibana Dashboards for Asset Management" (PeopleSoft Asset Management)

## User Preferences - IT Asset Management Page

Use the User Preferences - IT Asset Management page (OPR\_DEF\_TABLE\_IT1) to define user preferences that are specific to IT Asset Management.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > IT Asset Management > IT Asset Management**

This example illustrates the fields and controls on the User Preferences - IT Asset Management page. You can find definitions for the fields and controls later on this page.

| User Preferences                                                                                                                                                                               | IT Asset Management                                                                                                                                                                                                                              |

| Field or Control     | Description                                                                                                                                                                                                                                                     |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Currency Code</b> | Enter a currency code to be used by financial values, statistics, and reports for a given user within IT Asset Management. The currency code at the User ID level overrides the currency code that is supplied at the Installation Options level for this user. |
| <b>Rate Type</b>     | Enter a rate type to be used by financial values, statistics, and reports for a given user within IT Asset Management. The rate type at the User ID level overrides the rate type that is supplied at the Installation Options level for this user.             |

## IT Financial Statistics

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                               |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tree Name</b>        | Select a default tree to be used by the user within the application pages and for reporting within IT Asset Management.                                                                                                                          |
| <b>Level Name</b>       | Select a default tree level within the tree to be used in reporting within IT Asset Management by user.                                                                                                                                          |
| <b>View Amount in</b>   | Select to present financial statistics within the application as rounded amounts based on the designation in this field according to the user's preference. If this field is blank, the financial statistics will be presented as whole numbers. |

## Financial Impact

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                                                                 |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Show Net Book Value</b> | Select to display the net book value (NBV) of assets within the application pages and portal pagelets in IT Asset Management for a given user. The NBV is used for financial impact analysis in compliance with regulatory requirements.                                           |
| <b>Show Cost</b>           | Select this option to display the cost basis of assets within the application pages and portal pagelets in IT Asset Management for a given user. The cost basis is used for financial impact analysis in compliance with regulatory requirements.                                  |
| <b>Show Fair Value</b>     | Select to display the fair value of assets within the application pages and portal pagelets in IT Asset Management for a given user. The fair value is used for financial impact analysis in compliance with regulatory requirements.                                              |
| <b>View Amount in</b>      | Select to present financial impact amounts within the Assets not Reporting and Manage Exceptions pagelets as rounded amounts based on the designation in this field according to user preference. If this field is blank, the financial impact will be presented as whole numbers. |

## Reconciliation Option

| <i>Field or Control</i>               | <i>Description</i>                                                                                                                                                                                                                                                      |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Run Trans Loader Automatically</b> | Select to invoke the Transaction Loader process automatically. When Manage Exceptions processes asset additions, Transaction Loader must be run to complete the additions. Selecting this option automatically runs the Transaction Loader and processes the additions. |

## Software

| <i>Field or Control</i>    | <i>Description</i>                                                                                                                                                                                                                                                                    |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Authorization</b> | Select to enable a user to authorize employees for software titles from the Discover Software Inventory Detail page.                                                                                                                                                                  |
| <b>Device Monitor</b>      | Select the software device group to be used as the default value in the Software Device Monitor portal pagelet. This effectively assigns to users the device group (within the enterprise software device group hierarchy) that they will see on the Software Device Monitor pagelet. |

## Assets Not Reporting

| <i>Field or Control</i> | <i>Description</i>                                                                                                      |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Inventory Age</b>    | Select the default inventory age for both the Assets Not Reporting Inquiry and the Assets Not Reporting portal pagelet. |

## User Preferences - Billing Page

Use the User Preferences - Billing page (OPR\_DEF\_TABLE\_BI1) to define default user preferences that are specific to Billing.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Billing > Billing**

---

**Note:** Before you define user preferences, you must configure your default process scheduler servers.

---

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Server Name</b>           | Select the server with the default output destination that you want the system to use when you run Billing processes from a button.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Job Run Opt</b>           | <p>Select a job run option, which determines whether multiprocess jobs run with or without the Currency Conversion, Load AR Pending, Pre-load, Load GL Interface, Commitment Control, and Federal Invoice Formats 1080 and 1081 processes, when you initiate multiprocess jobs from a button. Options are:</p> <p><i>No Load:</i> Select to run the processes in the job except for the Currency Conversion, Load AR, Pre-load, Load GL, Commitment Control, and Standard Form 1080 and 1081 processes.</p> <p><i>Print/Load:</i> Select to run all of the processes in a multiprocess job, including Currency Conversion, Load AR, Pre-Load, Load GL, Commitment Control, and Federal Invoice Formats 1080 and 1081.</p> <hr/> <p><b>Note:</b> The system initiates the Commitment Control process only if commitment control is enabled on the Installation Options - Installed Products page.<br/>The system does not print Federal Invoice Formats 1080 and 1081 for Direct Invoice jobs.</p> <hr/> |
| <b>Print Listing</b>         | <p>Enables the printing of reports that are produced by the PeopleSoft Billing Load AR, Load GL, and Generate AP Voucher (generate accounts payable voucher) processes whenever you initiate these processes from a button.</p> <p>The Load AR, Load GL, and Generate AP processes write summary information to the message log, regardless of whether the process generates a printed report. On the Message Log page, you can view the summary information that is written to the message log, such as what input parameters were used in a particular process run and how many bills it processed.</p> <p>You can also review process summary information for the Load AR and Load GL processes on the Load AR Pending Items page, the Accounting Entries By Journal - Accounting Entry page, and Accounting Entries By Invoice - Accounting Entries page.</p>                                                                                                                                       |
| <b>Web, File, or Printer</b> | Displays the invoice destination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Output Destination</b>    | <p>Specify the path to the file or printer.</p> <hr/> <p><b>Note:</b> The system does not use the billing job defaults when you initiate processes from a process menu. Use the Schedule Process Request page to specify output type and destination.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

You can initiate Billing processes from a button in the Bill Entry, Bill Inquire, and Bill Summary components as well as from the Direct Invoice Test page.

---

**Note:** If you are running a multiprocess job from a button, you can specify only one output destination for all processes within the job. You cannot vary the output destination for individual processes within a job.

---

In Inventory, you can initiate Billing processes by clicking a link on the Shipping/Issues Order Summary page. When you initiate the process, you can select process options such as the server name and output destination.

## Single Action and Direct Invoicing Alternates

Single Action Invoice and Direct Invoice multiprocess jobs comprise groups of processes that you submit to the server as a unit. Billing delivers an alternate set of corresponding Single Action and Direct Invoicing multiprocess jobs that run only up to invoice printing, enabling you to run the remaining processes at another time.

The alternate set of corresponding Single Action and Direct Invoicing multiprocess jobs do not include the following processes:

- Currency Conversion (BICURCNV).
- Load AR Pending Items (load accounts receivable pending items) (BILDAR01).
- Billing Pre-load (BIPRELD).
- Load GL Interface (load general ledger interface) (BILDGL01).
- Federal Invoice Formats SF1080 and SF1081 Report (BISF108X).
- Commitment Control Budget Processor (FSPKBDP3).

## Single Action and Direct Invoice Jobs and Corresponding Alternates

The following table lists multiprocess jobs that include certain processes and the corresponding alternate jobs that do not include the processes.

| <b><i>Multiprocess Jobs That Include<br/>BICURCNV, BILDAR01, BIPRELD,<br/>BILDGL01, FSPKBDP3, and<br/>BISF108X</i></b> | <b><i>Initiated From</i></b>                        | <b><i>Corresponding Alternate Jobs<br/>That Do Not Include BICURCNV,<br/>BILDAR01, BIPRELD, BILDGL01,<br/>FSPKBDP3, and BISF108X</i></b> |

## User Preferences - Contracts Page

Use the User Preferences - Contracts page (OPR\_DEF\_TABLE\_CA1) to define default user preferences that are specific to Contracts.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Contracts > Contracts**

This example illustrates the fields and controls on the User Preferences - Contracts page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'User Preferences - Contracts' page. At the top, there are tabs for 'User Preferences' and 'Contracts'. Below the tabs, the 'User ID' is set to 'DVP1' and the user is identified as 'Development User'. The 'Business Unit' is set to 'US001' (US001 NEW YORK OPERATIONS), the 'Beginning Sequence' is 'CON' (Contract Number Beginning Seq), and the 'Region Code' is empty. Below these fields is a table titled 'Dummy Page' with columns for 'Contract Status', 'Processing Status', and 'Description'. The table contains one row with 'PENDING' status and 'P' processing status, with a description 'Contract is Pending'. The table has a 'Personalize' button and a 'Find' button. The table also has a 'View All' button and a 'First' button. The table has a '1 of 1' indicator and a 'Last' button. The table has a '+' button and a '-' button.

**Note:** If you have enabled contract status security, you must define the list of contract statuses to which this user is authorized to set a contract.

| <b>Field or Control</b>   | <b>Description</b>                                                                                                                                                                                                                                        |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Business Unit</b>      | To minimize data entry on contract processing pages, select the default Contracts business unit that this user will use most frequently.                                                                                                                  |
| <b>Beginning Sequence</b> | Select the three-character value that the system will use as a prefix for system-generated contract numbers for this user. For example, contracts for the western region might begin with <i>WES</i> .                                                    |
| <b>Region Code</b>        | Select the default region code for setting up new contracts for this user. Contracts uses region codes to enable you to categorize your contracts by region, for example, East, West, North, and South. Region codes in Contracts are informational only. |

## Contract Status Authorizations

| <b>Field or Control</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Contract Status</b>   | <p>If you selected to enforce contract status security on the Contracts Definition - BU Definition page, define the list of contract statuses to which this user can change the contract status. If contract status security is enabled, this user is able to change the contract status only to contract status values that you've specified here.</p> <p>Select the contract statuses to which this user can change a contract.</p> |
| <b>Processing Status</b> | When you select a contract status, the system displays the processing status to which the contract status is mapped.                                                                                                                                                                                                                                                                                                                  |
| <b>Description</b>       | Displays the contract status description.                                                                                                                                                                                                                                                                                                                                                                                             |

| Field or Control                   | Description                                                                                                                                                                                                                                                                       |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Change Date on Correction Journals | Select to change the journal date in the corrections journal (which is on the Journal Suspense Correction page).                                                                                                                                                                  |
| Use Next Journal ID                | Select to limit this user ID to the <i>NEXT</i> journal ID that is automatically entered by the system during online journal entry. If this option is selected, the <b>Journal ID</b> field becomes unavailable to this user ID, and the user cannot manually enter a journal ID. |

| <b>Field or Control</b>                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Change Journals from Journal Generator</b>     | <p>Select to allow a specific user to update the ChartField and amounts on the Journal Entry page for a journal that was created by the Journal Generator process.</p> <hr/> <p><b>Warning!</b> If you select <b>Change Journal from Journal Generator</b>, and then you change the ChartField values and reedit the journal, you can create inconsistencies between the subsystem data and the general ledger data. Also, for journals that are generated for a subsystem that supports commitment control, the journal will not be budget checked again even though the ChartField values or the amounts are changed.</p> <hr/> |
| <b>Enter Adjustment Type Journal</b>              | <p>Select to allow a specific user to enter a Book Code adjustment type journal.</p> <hr/> <p><b>Note:</b> This option is used for the Book Code feature, not the Adjusting Entry feature.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Save Journal Incomplete Status</b>             | <p>When you select this option for a specific user and the user adds a new journal, the selected option appears on the Journal Header page of various journal entry options. This option enables the user to save journal entry transactions with an incomplete status and prevents them from being edited or posted until they are complete.</p> <hr/> <p><b>Note:</b> The option is a default option. When it is deselected, it does not prevent the user from seeing the option on the header, but the user cannot set the default journal header status to incomplete.</p> <hr/>                                              |
| <b>Allow GL Entry Event Bypass</b>                | <p>Select to enable the user to bypass selecting entry events in PeopleSoft General Ledger journal entry, even if they are required on the Installation Options - Entry Event page.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Allow Copy Journal with Control Accounts</b>   | <p>Select to allow journals that contain Control Accounts to be copied. This applies to online or batch journal copy.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Allow Delete Journal with Control Accounts</b> | <p>Select to allow journals that contain Control Accounts to be deleted. This applies to online or batch journal delete.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Field or Control</b>                              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Unpost Journal with Control Accounts</b>    | <p>Select to allow journals that contain Control Accounts to be unposted.</p> <hr/> <p><b>Note:</b> Accounts are designated as Control Accounts on the Account page and generally represent a summarization of detail from a feeder application (such as PeopleSoft Payables) that is posted by PeopleSoft to the general ledger. The intent is that these accounts can only be updated by the Journal Generator or a load process from a spreadsheet or third-party system to prevent manual posting to the account, thereby altering a control balance that is used for reconciliation of subledger to general ledger. Be aware that if you allow posting to Control Accounts in General Ledger by selecting the options above, the Control Account balance in the subledger may not match the control account balance in the general ledger.</p> <hr/> |
| <b>Enter Date Code Adjustments</b>                   | <p>Select to enable a user to enter date code adjustments for journal entries. The Date Code is displayed on journal lines only for users with the Enter Date Code Adjustments check box selected.</p> <p>If the user is enabled to enter date code adjustments, and the Date Code is enabled for the ledger group, the user can flag the journal entry as a Date Code Adjustment on the Journal Entry - Header page.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Enabled Online Journal Post</b>                   | <p>Select this check box to indicate that the user can select the <i>Post Journal</i> option from the <b>Process</b> field on the "Journal Entry - Lines Page" (PeopleSoft General Ledger).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Update Amortization Journal ChartField Values</b> | <p>Select to enable a user to update ChartField values on the "Amortization Journal – Stage Journal Page" (PeopleSoft General Ledger) and the Journal Entry page for the actual amortization journals created.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## User Preferences - Inventory Page

Use the User Preferences - Inventory page (OPR\_DEF\_TABLE\_IN1) to define preferences for Inventory users.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Inventory > Inventory**

### Order Key Defaults

Enter default values to be used in prompts for the order keys in Inventory.

| <b>Field or Control</b>                       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Demand Source</b>                          | <p>Select a demand source. Options are based on the PeopleSoft applications that you have installed, and can include:</p> <p><i>IN</i>: Material stock requests originating in Inventory.</p> <p><i>OM</i>: Sales orders originating in Order Management.</p> <p><i>PL</i>: Planning requisitions originating in Supply Planning.</p> <p><i>PO</i>: (not used).</p> <p><i>PR</i>: Purchasing requisitions originating in Purchasing.</p> <p><i>RT</i>: Return-to-vendor requests originating in Purchasing.</p> <p><i>SF</i>: Production requests from the shop floor, originating in Production Management.</p> <p><i>WM</i>: Work order.</p> |
| <b>Source Bus Unit</b> (source business unit) | The business unit from which the demand originated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

### Auto Numbering

| <b>Field or Control</b>                                       | <b>Description</b>                                                                                  |
|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>MSR Beginning Sequence and Receiver Beginning Sequence</b> | Enter values if you plan to use automatic numbering to manage your stock requests and item numbers. |

## Putaway Default

| <i>Field or Control</i>            | <i>Description</i>                                                       |
|------------------------------------|--------------------------------------------------------------------------|
| <b>Flag Items for Auto-Putaway</b> | Select to use the auto-putaway function that is provided with Inventory. |

## Schedule Process Defaults

| <i>Field or Control</i> | <i>Description</i>                                                                                                                    |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>Server Name</b>      | The default server that is used when processes are initiated automatically from Inventory pages instead of through Process Scheduler. |

## Lease Administration - User Preferences Page

Use the User Preferences - Lease Administration page (RE\_OPR\_DFLT5) to define default lease administration preferences for Lease Administration users.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Lease Administration > Lease Administration - User Preferences**

Access the Lease Administration page (Set Up Financials/Supply Chain, Common Definitions, User Preferences, Define User Preferences, Lease Administration, Lease Administration - User Preferences).

This example illustrates the fields and controls on the Lease Administration - User Preferences page. You can find definitions for the fields and controls later on this page.

**User Preferences** | **Lease Administration**

### Lease Administration - User Preferences

User ID DVP1 Development User

---

Business Unit  US001 NEW YORK OPERATIONS

Currency

Region

Information that you enter on this page applies solely to the specific user ID that is identified at the top of the page. You can select default values to help minimize data entry.

| <b>Field or Control</b> | <b>Description</b>                                                                                              |
|-------------------------|-----------------------------------------------------------------------------------------------------------------|
| <b>Business Unit</b>    | Select the business unit that you want as the default for the system when creating leases and viewing pagelets. |
| <b>Currency</b>         | Select the currency to which you want the system to default when creating leases and viewing pagelets.          |
| <b>Region</b>           | Select the region to which you want the system to default when creating new leases and viewing pagelets.        |

## User Preferences - Manufacturing Page

Use the User Preferences - Manufacturing page (OPR\_DEF\_TABLE\_MG1) to maintain the default server by user ID.

Configure a default server to run the Update Pick Plan and Automatic Material Release process (SFCNREL).

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Manufacturing**

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                            |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Server Name</b>      | Select a default server to run the Update Pick Plan and Material Release process (SFCNREL). This process can be run only on a server. When you review the production pick plan, you can optionally release the material after you've confirmed the pick plan. |

## User Preferences - Orders - Sales Page

Use the User Preferences - Orders - Sales page (OPR\_DEF\_TABLE\_OM1) to set up business-unit, order-source, and order-group defaults for a user who enters sales order information.

You can also specify a beginning sequence code for your sales orders.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Orders - Sales**

## Order Defaults

Select options as defaults for the sales order for the user ID.

| <b>Field or Control</b>                                     | <b>Description</b>                                                                                                                                                                                                            |
|-------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Management BU</b> (order management business unit) | Specify the business unit to default on the sales order.                                                                                                                                                                      |
| <b>Default Order Source Code</b>                            | Specify the source of the order for the user.                                                                                                                                                                                 |
| <b>Beginning Sequence</b>                                   | Select the default prefix for the sales order number.                                                                                                                                                                         |
| <b>Default Order Quantity</b>                               | Specify the order quantity to default to the sales order.                                                                                                                                                                     |
| <b>Ship From INV BU</b> ship from inventory business unit)  | Select the Inventory business unit where the order will typically be picked up. This option is used in the counter sales environment where the customer will come to the location and take the order with them.               |
| <b>Cash Drawer ID</b>                                       | Select the cash drawer that the user will be using.                                                                                                                                                                           |
| <b>Price Adjustment Reason</b>                              | Select a reason code for price adjustments. This option is used for margin adjustments to default a reason code so that the user doesn't have to enter a code for each product that is adjusted.                              |
| <b>Order Owner</b>                                          | Select the owner for the order. The field is used for counter sales.                                                                                                                                                          |
| <b>Printer Path</b>                                         | <p>Select a printer path to print a Pick Plan report.</p> <hr/> <p><b>Note:</b> You can print a Pick Plan report when the Display Pick Report on Screen check box is not selected on the Order Entry Features page.</p> <hr/> |

## Sales Order Display

This section shows how information is initially displayed during sales order entry based on the default for the business unit.

| <b>Field or Control</b>                                                                                                                                                                                                                                                                                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Customer Address</b>                                                                                                                                                                                                                                                                                     | <i>Init</i> (initial): Display the customer address on the Order Header Page only when entering a new order header or displaying an existing order header from the add or search page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Header Summary, Header Information Area, Purchase History Area, Price Summary Area, Order Summary, margin Adjustments, Line Express Entry Tab, Bill To Area, Bill-to Customer Options, Sold To Area, Sold-To Customer Options, Ship To Area, Ship-to Customer Options, Line Filter, and Line Actions</b> | <p>Select to move by default the display of information in the designated areas of the Order Entry Form page. During order entry, you can open or close the area as needed. ## User Preferences - PayCycle Page

Use the User Preferences - PayCycle page (OPR\_DEF\_TBL\_PYCYCL) to define default output destinations for the Pay Cycle Manager and the Express Payment Manager components (PYCYCL\_MGR and EXP\_PYCYCL\_MGR, respectively).

These default values are not required to perform any pay cycle process.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Paycycle**

### Output Destination

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Server File Destination</b> | <p>Enter a default output destination for files. When you are specifying the server file destination, a meta string (such as %OutputDirectory%%) is not permitted. You must specify a full directory path followed by a backslash (for example, C:\TEMP\).</p> <hr/> <p><b>Note:</b> Make sure that you do not specify the root directory of a shared drive, as it is not supported by this functionality.</p> <hr/> |

| <b>Field or Control</b>                                          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Server Destination Printer</b>                                | Enter a default output destination printer.                                                                                                                                                                                                                                                                                                                                                         |
| <b>Server</b>                                                    | Select a server.                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Email ID</b> Financial Gateway integration email notification | <p>Specify a recipient email address for payment error notifications. This field is limited to 70 characters.</p> <p>You can enter multiple email addresses, separated by a comma (.). This is helpful in the following situations:</p> <ul style="list-style-type: none"> <li>• When multiple users share the same user ID.</li> <li>• When a single user has multiple email addresses.</li> </ul> |

**Note:** If these default values are not specified, the output destination will be required to be entered for every report process that is initiated from the Pay Cycle Manager and Express Check components (PYCYCL\_MGR and PYMNT\_EXPRESS, respectively).

## User Preferences – Supply Planning Page

Use the Planning page (OPR\_DEF\_TABLE\_PL1) to select a default planning instance.

A planning instance is a set of data (business units, items, supplies, and demands) constituting the inputs and outputs of a supply plan.

Navigation:

**Setting Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Planning**

Access the Planning page (Setting Up Financials/Supply Chain, Install, Installation Options, Planning).

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                             |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Planning Instance</b> | Displays the default planning instance for the user. A planning instance is a set of data (business units, items, supplies, and demands) constituting the inputs and outputs of a supply plan. |
| <b>Order Key Separator</b>       | Displays a character that is used by the system to format the display for a single field that contains a line, schedule, and kit number for sales orders and quotes in Supply Planning grids.  |

## User Preferences – Project Costing Page

Use the User Preferences - Project Costing page (OPR\_DEF\_TABLE\_PC1) to assign default parameters for transaction processing and set up data entry defaults.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Project Costing**

This example illustrates the fields and controls on the User Preferences - Project Costing page (1 of 2).

| User Preferences           |                                             | Project Costing            |                                        |

### Data Entry Default Values

| <i>Field or Control</i>                                     | <i>Description</i>                                                                                               |
|-------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| <b>Tree Name, Tree Effective Date, and Parent Tree Node</b> | Enter values that appear by default when you assign projects to trees.                                           |
| <b>Project Business Unit</b>                                | Enter a value that appears by default in project business unit search fields in the Project Costing application. |

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                  |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project</b>                    | Enter a value that appears by default in project search fields.                                                                                                                                     |
| <b>Integration</b>                | Enter the integration template that appears by default in the <b>Integration</b> field on the Project Definitions - General Information page when you create projects.                              |
| <b>Analysis Group</b>             | Enter a value that appears by default when you search for transactions on the Transaction List page.                                                                                                |
| <b>Rate Type</b>                  | Enter the default conversion rate that the system uses when you add transactions by using the Add Transactions page and the incoming transaction rate type for the business unit is <i>Source</i> . |
| <b>Currency Code</b>              | Enter a value that appears by default in the <b>Source Currency</b> field when you add transactions by using the Add Transactions page.                                                             |
| <b>Flexible Analysis Template</b> | Enter the default template that specifies how flexible analysis data appears on the Flexible Analysis page.                                                                                         |
| <b>Edit Project List Option</b>   | Select an option to specify how projects appear for selection on the My Projects page. Available options are:<br><br><i>BYBU</i> : By business unit.<br><br><i>BYTR</i> : By project tree.          |

## Date Default Values

| <b>Field or Control</b>             | <b>Description</b>                                                           |
|-------------------------------------|------------------------------------------------------------------------------|
| <b>From Date</b> and <b>To Date</b> | Enter a date range that appears by default when you search for transactions. |

## Default Method to Populate My Projects

Options for populating My Projects are impacted by selections at the [Installation Options - Project Costing Page](#).

Use this section to view the Auto Populate Options that were selected on the [Installation Options - Project Costing Page](#). This section appears only when *Auto Populate*, *Allow Override* is selected for the **Method to Populate My Projects** field. This section is display-only and is intended to help the user determine

whether they want to override the installation-level options. To override the installation level option, use the My Projects Options section of the page.

## Method to Populate My Projects

Use this section to select Auto Populate Options for the user and override installation-level options. This section appears only when *Auto Populate, Allow Override* is selected for the **Method to Populate My Projects** field on the Installation Options - Project Costing Page.

- *Manual*: Select to indicate that you want to maintain your projects list manually. When selected, the Populate My Projects process will bypass your user ID and all other options in this section are not available.
- *All Projects*: Select to indicate that the Populate My Projects process should select all projects.
- **Project Security**: Select to indicate that the Populate My Projects process adds projects to the user's project list that he/she is authorized to access, if project security is enabled.
- *Project Team*: Select to indicate that the Populate My Projects process should select all projects where the user is a team member.

If a person is added to a team in error, then the project must be removed manually. Projects that have ended must be removed manually as well.

- *User Default Tree Node*: Select to indicate that the Populate My Projects process should select all projects under the default tree node identified on the user's preferences to add to their project list.
- *Grants Portal Security*: Select to indicate that the Populate My Projects process should select all projects that a user is authorized to access according to the Grants Portal Security - Project Level setting to add to their project list.

This option is only available when Grants is an installed product.

---

**Note:** Similar to Project Team option, if a project is removed from a tree or the grants portal security or the tree is changed, you need to manually remove projects from My Projects.

---

- *Include Inactive Projects*: Select to indicate that inactive projects are to be included in project lists.

Inactive projects do not appear by default.

- *Remove Inactive Projects*: Select to indicate that the Populate My Projects process should remove inactive projects from your projects list. This option is available only if the organization has selected *Include Inactive Projects* as a default setting on the Installation options page.

You cannot select this option in conjunction with the *Include Inactive Projects* option because they are contradictory.

## User Preferences – Procurement Page

Use the User Preferences - Procurement page (OPR\_DEF\_TABLE\_PM1) to define options and authorizations for procurement users.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Procurement**

| <b><i>Field or Control</i></b> | <b><i>Description</i></b>                                                                                    |
|--------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Location</b>                | Enter the default location where requested items should be delivered when they are received from the vendor. |
| <b>Origin</b>                  | Enter the default origin of this user's POs. The origin is used for reporting purposes.                      |
| <b>Requester</b>               | Enter the name of the requester for whom this user will be authorized to enter requisitions.                 |
| <b>Buyer</b>                   | Enter the name of the buyer for whom this user will be authorized to enter POs.                              |

**Contract Process Page**

Use the Contract Process page (OPR\_DEF\_CNTRCT\_SEC) to define contract process preferences by specifying the default contract status and authorized actions for a user.

Navigation:

Click the **Contract Process** link on the User Preferences - Procurement page.

This example illustrates the fields and controls on the Contract Process page. You can find definitions for the fields and controls later on this page.

## Contract Process

| <b>Field or Control</b>                                                      | <b>Description</b>                                                                                                                                              |
|------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Contract Status</b>                                                       | Select the status at which you want this user to open contracts. When the user creates a contract, the status appears by default based on the value you select. |
| <b>Approve Contracts</b>                                                     | Select to provide the user the authority to approve procurement contracts.                                                                                      |
| <b>Enter Contracts/New Version</b>                                           | Select to provide the user the authority to create contracts and new contract versions.                                                                         |
| <b>Hold Contracts</b>                                                        | Select to provide the user the authority to place procurement contracts on hold.                                                                                |
| <b>Close Contracts</b>                                                       | Select to provide the user the authority to close procurement contracts.                                                                                        |
| <b>Cancel Contract</b>                                                       | Select to provide the user the authority to cancel procurement contracts.                                                                                       |
| <b>Allow PO Contract Releases</b> (allow purchase order contract releases)   | Select to provide the user the authority to release purchase order contracts.                                                                                   |
| <b>Allow AP Contract Releases</b> (allow accounts payable contract releases) | Select to provide the user the authority to release accounts payable contracts.                                                                                 |

## Default Display

Use this grid to define how the system initially displays the collapsible areas on the Contract page. The system applies display settings by expanding and collapsing group boxes as you indicate on this page. Group boxes appear based on the contract process type. So, for example, if the system is applying display options to a contract with a process type of Prepaid Voucher, then only the Header, Amount Summary, and Add Items group boxes are expanded or collapsed.

| <b>Field or Control</b>                                                                                                                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Process Option</b>                                                                                                                       | <p>Select a contract process option that you want to set up as default for the user. Contract process options enable you to determine a specific contract process for use throughout the contract's life cycle. You can use other process options, but the value you choose here defaults on the Contract Entry page (for the selected user).</p> <p>Values include:</p> <ul style="list-style-type: none"> <li>• <i>AP (Recurring Voucher)</i></li> <li>• <i>BRO (Release to Single PO Only)</i></li> <li>• <i>DST (Distributor)</i></li> <li>• <i>GN (General Contract)</i></li> <li>• <i>GRPM (Group Multi Supplier)</i></li> <li>• <i>GRPS (Group Single Supplier)</i></li> <li>• <i>MFG (Manufacturer)</i></li> <li>• <i>PADV (Prepaid Voucher with Advance PO)</i></li> <li>• <i>PO (Purchase Order)</i></li> <li>• <i>PPAY (Prepaid Voucher)</i></li> <li>• <i>RPOV (Recurring PO Voucher)</i></li> <li>• <i>SPP (Special Purpose)</i></li> </ul> |
| <b>Contract Style</b>                                                                                                                       | <p>Select a contract style that you want to set up as the default style for this user. You can use other contract styles, but the value you choose here defaults on the Contract Entry page.</p> <p>"Contract Style page" (PeopleSoft Source to Settle Common Information)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Header Information, Contract Control, Voucher Options, Amount Summary, Order Options, Item Lines, Category Lines, and PO Information</b> | <p>Select a group box option that you want to apply for this user. The value you select controls how the group box initially appears on the Contract page. Valid values for the group boxes are:</p> <ul style="list-style-type: none"> <li>• <i>Collapsed</i>: Select to collapse (hide) the group box when the user initially accesses the Contract page.</li> <li>• <i>Open</i>: Select to expand (open) the group box when the user initially accesses the Contract page.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## User Preferences – Rebate Authorizations Page

Use the User Preferences - Procurement - Rebate Authorizations page (OPR\_DEF\_VRBT\_SEC) to define rebate manager maintenance authorization and access rights for vendor rebate agreements.

Navigation:

Click the **Rebate Authorizations** link on the User Preferences – Procurement page.

### Rebate Agreement Defaults

| <i>Field or Control</i>        | <i>Description</i>                                                                                                                              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rebate Agreement Status</b> | Select the default status for the rebate manager when you are creating vendor rebate agreements. Statuses are <i>Approved</i> and <i>Open</i> . |

### Allowed Rebate Agreement Actions

Select the check box next to the specific actions that you want the rebate manager to have.

### Rebate Manager Access

| <i>Field or Control</i>            | <i>Description</i>                                                                                                                                                                                                                                                              |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Unrestricted Rebate Manager</b> | This check box is deselected by default. Select this check box if you want this rebate manager to have unrestricted access to all vendor rebate agreements. This manager can view, modify (perform all the actions checked), process, and analyze all vendor rebate agreements. |

For more information, see *PeopleSoft Purchasing: Defining Supplier (Vendor) Rebate Agreements*.

## User Preferences – Payables Online Vouchering Page

Use the User Preferences - Procurement - Payables Online Vouchering page (OPR\_DEF\_TABLE\_AP1) to specify user voucher authorities, online voucher processing, and quick invoice configuration options for a user.

Navigation:

Click the **Payables Online Vouchering** link on the User Preferences - Procurement page.

This example illustrates the fields and controls on the Procurement - Payables Online Vouchering page. You can find definitions for the fields and controls later on this page.

| Payables Online Vouchering                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Origin</b>                                                                   | Select the voucher origin for this user. The system tags all vouchers that are entered by this user with this origin, and uses the processing settings for this origin when it processes the voucher.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Pay Unmatched Vouchers</b> and <b>Pay Unmatch Amt</b> (pay unmatched amount) | <p>Select <b>Pay Unmatched Vouchers</b> to give users the authority to pay vouchers that have not been matched up to the maximum amount that is specified in the <b>Pay Unmatch Amt</b> field. Authorized users must select the <b>Pay UnMatched Voucher</b> check box on the Voucher Attributes page in the Voucher component (VCHR_EXPRESS) for the system to select the voucher during the Pay Cycle Application Engine process (AP_APY2015).</p> <hr/> <p><b>Note:</b> If you select the <b>Pay Unmatched Voucher</b> option, vouchers with the following match statuses (MATCH_STATUS_VCHR) are available for payment: <i>T</i> (ready), <i>E</i> (exception), <i>D</i> (dispute), <i>O</i> (overridden), and <i>C</i> (credit note). If you do not select the <b>Pay Unmatched Voucher</b> option, only vouchers with the match status of <i>M</i> (matched) or <i>N</i> (no match) are available for payment.</p> <hr/> |

| <b>Field or Control</b>                                                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Copy Matched and Closed PO</b> (copy matched and closed purchase orders) | <p>Select to enable the user to copy matched and closed POs.</p> <hr/> <p><b>Note:</b> If this option is selected for your user preferences and you create a voucher that references a PO that has a matched line (because an earlier voucher also referenced the PO) and an unmatched line, then when you copy the PO to the voucher, the matched PO line copies with both the amount and the quantity at zero.</p> <hr/> |
| <b>Override Accounting Date Edit</b>                                        | Select to enable the user to override the accounting date edit option on the Procurement Control - General Controls page.                                                                                                                                                                                                                                                                                                  |
| <b>Security for Voucher Styles</b>                                          | Click to access the Voucher Styles page, where you can define the user authority for each of the voucher styles by selecting the appropriate check boxes.                                                                                                                                                                                                                                                                  |
| <b>Do Not Check Voucher Amount</b> and <b>Check Voucher Amount</b>          | Select one of these options to determine whether the system performs an edit during online voucher entry against the voucher gross amount. Voucher build will also perform an edit against the voucher gross amount based on the selected option.                                                                                                                                                                          |
| <b>Entry Limit</b>                                                          | If you selected <b>Check Voucher Amount</b> , specify the voucher entry limit amount for this user. When you specify the entry limit, you must also specify its currency and a rate type.                                                                                                                                                                                                                                  |
| <b>Prepay Limit</b>                                                         | If this user has the authority to prepay vouchers, you can specify a maximum amount for each prepayment that the user can enter. You must also specify a currency and a rate type for the prepayment.                                                                                                                                                                                                                      |
| <b>Currency</b>                                                             | Specify a currency for the entry limit or prepay limit amount.                                                                                                                                                                                                                                                                                                                                                             |
| <b>Rate Type</b>                                                            | Specify a rate type for conversion to the transaction currency that is entered on the voucher.                                                                                                                                                                                                                                                                                                                             |
| <b>Enter Vouchers Only in Groups</b>                                        | Select to enable the user to enter only vouchers that are attached to a control group ID as defined on the Control Group Information page.                                                                                                                                                                                                                                                                                 |
| <b>Post Vouchers</b>                                                        | Select to enable the user to post approved vouchers.                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Manually Schedule Payments</b>                                           | Select to enable the user to schedule payments manually, overriding the system's automatic payment scheduling. If you do not select this option, the user is unable to modify any of the scheduled payment information on the Voucher - Payments page.                                                                                                                                                                     |

| <b>Field or Control</b>              | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Authority to Override Match</b>   | <p>Select to enable the user to override the match status of a voucher. If the voucher requires matching, the user has the authority to change the voucher match status to <i>Not Applicable</i>.</p> <p>In addition, if the Matching Application Engine process (AP_MATCH) has been run but the process encountered match exceptions or errors, the user can override the match exceptions. When the exceptions are overridden, the user can rerun the Matching process; the Matching process updates the voucher match status to <i>Matched</i>.</p> <hr/> <p><b>Note:</b> The Matching process still generates workflow notifications for exceptions to the user even if the <b>Authority to Override Match</b> option is not selected. However, the user is not able to override the match status.</p> <hr/> |
| <b>Record Payment</b>                | <p>Select to enable the user to manually record payments for a voucher. When this option is deselected, the user is unable to specify <i>Record</i> as a payment action on the Payments page of the Voucher component.</p> <hr/> <p><b>Note:</b> You must also select the <b>Manually Schedule Payments</b> option to be able to record payments for a voucher.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Override Withhold Calculation</b> | <p>Select to enable the user to override the timing of the withholding calculation on the Withholding page of the Voucher component. Withholding calculation can be at payment time or voucher posting time based on the withholding entity setting.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Field or Control</b>                                                       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Exception Collaboration Authority</b>                                      | <p>Click to access the Match Exception Collaboration Authority page.</p> <p>The Exception Collaboration Authority page has the following options available:</p> <ul style="list-style-type: none"> <li>• <i>Enable Group/Users Assigned</i>: Select to assign or reassign match exceptions. Selection allows users the capability to assign/reassign Match Exceptions within the Match Exception Collaboration Detail page. The Assign/Reassign button will be hidden on the Match Exception Collaboration Detail page if the option is not selected.</li> <li>• <i>Work All Exceptions Authority</i>: Select to allow user access and authority to work all Match Exceptions.</li> <li>• <i>Include Resolved Exceptions</i>: Select to include resolved exceptions. This option is available only if <i>Work All Exceptions Authority</i> has been selected.</li> <li>• <i>Match Exception View</i>: Select to determine the context the user views when they access the Match Exception Collaboration Summary landing page. The available options are Payables, Receiving and Purchasing. You can also select Blank, the default option, which will direct the user to the Match Exceptions tab on the Match Exception Collaboration Center Summary landing page.</li> </ul> <p>For more information, see "Understanding Match Exception Collaboration Center" (PeopleSoft Payables)</p> |
| <b>Req. Valid Chart Field Combo's</b> (require valid ChartField combinations) | Select this check box for the system to automatically validate ChartField combinations on Quick Invoice vouchers. If the ChartField combination is invalid, the system prevents the user from saving the voucher.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Require Balanced Invoice</b>                                               | Select this check box for the system to automatically perform balancing algorithms on Quick Invoice vouchers. If the vouchers are out of balance, the system prevents the user from saving the voucher.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

The AP Operator Profile report (APY0003) displays accounts payable user defaults by SetID.

## User Preferences – Receiving and RTV Page

Use the User Preferences - Procurement - Receiver Setup page (OPR\_DEF\_RECV\_SEC) to define receiver and RTV user preferences.

Navigation:

Click the **Receiver/RTV Setup** link on the User Preferences - Procurement page.

This example illustrates the fields and controls on the User Preferences - Procurement - Receiver Setup page. You can find definitions for the fields and controls later on this page.

| <i>Field or Control</i>                                                      | <i>Description</i>                                                                                                              |
|------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Override Non-Qualified Receipts for close</b>                             | Select to enable the user to force close Non-Qualified receipts.                                                                |
| <b>Change Non PO Receipt Price</b> (change non purchase order receipt price) | Select to enable the user to change the receipt price for an item on a non-purchase order receipt.                              |
| <b>Interface Receipt</b>                                                     | Select to automate the passing of inventory and asset information through the Receiver Interface Push process (PO_RECVPUSH).    |
| <b>Run Close Short</b>                                                       | Select to call the Close Short Process (PO_CLSSHORT) automatically during the Receiver Interface Push processing (PO_RECVPUSH). |

| <b>Field or Control</b>                                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Subcontract Streamline</b>                               | <p>Select this check box if you want the <b>Subcontract Streamline</b> check box to appear selected by default for a subcontracted purchase order receipt for this user. The user will be able to override this field setting for a subcontracted purchase order receipt. The system determines whether to perform subcontract streamlining (purchase order receipt and production completion for the production ID in a single step) from the receipt.</p> <p>Streamline processing for subcontract RTVs enables you to process RTVs if completions have been performed on the associated receipt. The system includes negative production completion and production scrap for operations being returned against the subcontract.</p> <p>If this check box is deselected, the <b>Subcontract Streamline</b> check box will appear deselected for a subcontracted purchase order receipt for this user. The user will not be able to change this field setting for the subcontracted purchase order receipt. That is, this assumes subcontract streamlining is not enabled for this user.</p> |
| <b>Blind Receiving Only</b>                                 | <p>Select to prevent the receiver from seeing the order quantity or the remaining quantity from the purchase order. The receiver needs to count the items before entering the quantity received. When you select this check box, the <b>No Order Qty</b>, <b>Ordered Qty</b>, and <b>PO Remaining Qty</b> check boxes are deselected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>No Order Qty</b> (no order quantity)                     | Select to prevent the receiver from seeing the purchase order quantity. The receiver must specify the actual quantity that is received by doing a live count of the items.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Ordered Qty</b> (ordered quantity)                       | Select to use the purchase order quantity as the default quantity received.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>PO Remaining Qty</b> (purchase order remaining quantity) | Select to use the remaining quantity (original order quantity minus previously received quantities) on the purchase order as the default quantity received.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Receiving Business Unit</b>                              | Select the user's default receiving business unit. This business unit can be overridden during the receiving process so that you can receive goods into any valid Purchasing business unit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Days +/- Today</b>                                       | Enter the number of days plus or minus the current system date to be used as default search criteria on receiving pages when you are selecting purchase order schedules against which to receive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Field or Control</b>                                       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>RTV Dispatch Option</b> (return to vendor dispatch option) | <p>Select the dispatch method as this user's preference for the return to vendor functionality. This functionality provides a default value for dispatching the RTV to the Supplier.</p> <p>RTV dispatch option values include:</p> <p><i>Default to Business Unit:</i> Select to use the dispatch option that is defined at the business-unit level. You define the business unit RTV dispatch option value using the Business Unit Options tab on the Purchasing Definition page. When processing RTV options, the system initially checks the user preference and then the business unit when you select the <i>Default to Business Unit</i> option.</p> <p><i>Manual:</i> Select to indicate that the Dispatch processing for the RTV must be performed manually.</p> <p>Often collaboration must take place between procurement personnel and another group before a RTV line can be dispatched. For example, you might have to verify the disposition of goods with warehouse personnel before dispatching the RTV.</p> <p>See "Inventory Return Records" (PeopleSoft Purchasing).</p> <p>See "Selecting RTV Source Details" (PeopleSoft Purchasing).</p> |

|---------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>RTV Inventory Ship Option</b> (return to vendor inventory ship option) | <p>Select the return to vendor ship option that you want to use as this user's default value for the <b>Inventory Process</b> field on the RTV line. This option will only be used by the RTV function when the disposition on the RTV line has a value of Ship. The system determines the ship option default value by first checking the user preference ship option value. If the user preference value is <i>Manual</i>, <i>Express</i>, or <i>Fulfillment</i> then the system uses the value as the default value. If the user preference value is <i>Default to Business Unit</i>, the system uses the ship option value defined at the business-unit level.</p> <p>RTV Inventory ship option values are:</p> <p><i>Default to Business Unit</i>: Select to use the inventory ship option that is defined at the business-unit level.</p> <p><i>Express</i>: Select to use the RTV express option to process Purchasing and Inventory data collection transactions at the same time. This means that the user can perform Inventory issue (automatic issue) action from within the Purchasing RTV component. If the RTV line disposition is Ship, the system creates a material stock request with a status of Shipped to update inventory.</p> <hr/> <p><b>Note:</b> The value of <i>Express</i> will not be defaulted onto the RTV line if the RTV line is associated with an Inventory business unit which is defined as a Warehouse Management System (WMS) type. You define the warehouse setting using the <b>Use External Warehouse Control</b> check box on the Business Unit Options page for Inventory.</p> <hr/> <p><i>Fulfillment</i>: Select to set the user's preference to perform Inventory fulfillment processing for RTV transactions. This enables the user to create an Inventory material stock request transaction and to process it through Inventory fulfillment processing. The <i>Fulfillment</i> value is only valid for RTV processing when RTV line disposition is Ship.</p> <p><i>Manual</i>: Select to indicate that the RTV ship transaction must be completed manually. This option requires that the inventory Express Issue function be used to ship the items to the supplier. When you use the <i>Manual</i> Inventory Ship option, the system does not perform RTV express functions. The user must use the Inventory Express Issue component to issue inventory returns that are being shipped to the vendor.</p> |

| <b>Field or Control</b>                                                         | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>RTV Inventory Destroy Option</b> (return to vendor inventory destroy option) | <p>Select the return to vendor destroy option that you want to use as this user's default value for the Inventory Process field on the RTV line. This option is only used by the RTV function when the disposition on the RTV line has a value of Destroy. The system determines the destroy option default value first by checking the user preference destroy option. If the user preference value is <i>Manual</i> or <i>Express</i> then the system uses that default value. If the user preference value is <i>Default to Business Unit</i>, the system uses destroy option defined at the business-unit level.</p> <p>RTV Inventory destroy option values are:</p> <p><i>Default to Business Unit</i>: Select to use the inventory destroy option setting at the business-unit level.</p> <p><i>Express</i>: Select to use the RTV express option to process Purchasing and Inventory data collection transactions at the same time. This means that the user can perform Inventory adjustment (automatic adjustment) actions from within the Purchasing RTV component.</p> <p><i>Manual</i>: Select to indicate that the RTV destroy transaction must be completed manually. This option requires that the Inventory Adjustment function be used to update inventory for the items being returned to the vendor.</p> |

|------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| <b>Can Work Approved POs</b> (can work approved purchase orders) | Select to enable a user to change a purchase order that has already been approved or dispatched. |

| <b>Field or Control</b>                     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Can Dispatch Un-Approved POs</b>         | Select to enable a user to dispatch purchase orders with a status of pending approval.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Full Authority for All Buyers</b>        | Select to give the user authority to add, update, cancel, delete, and close purchase orders for all buyers. If you select this option, you don't need to configure the rest of the page.                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Override Non-Qualified POs for Close</b> | Select to enable a user to close purchase orders that are nonqualified for close.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Rebate ID Security Control</b>           | <p>Select the vendor rebate agreement security control option for purchase orders. Options are:</p> <ul style="list-style-type: none"> <li>• <i>Hidden:</i> Vendor rebate agreement fields are hidden from this user when he or she is maintaining purchase orders.</li> <li>• <i>Update:</i> Vendor rebate agreement fields can be updated by this user when he or she is maintaining purchase orders.</li> <li>• <i>View Only:</i> Vendor rebate agreement fields are only able to be viewed by this user when he or she is maintaining purchase orders.</li> </ul> |
| <b>Can Send Approval Reminder</b>           | Select to enable a user to send reminders to pending approvers of purchase orders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Buyers User Authorization

| <b>Field or Control</b>                               | <b>Description</b>                                                                                       |
|-------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Buyers User Authorized For</b>                     | Select the buyers for whom this user can enter purchase orders.                                          |
| <b>Add, Update, Cancel, Delete, Close, and Reopen</b> | Select to enable the user to add, update, cancel, delete, close, and reopen requisitions for this buyer. |

## Procurement - Supplier Processing Authority Page

Use the Procurement - Supplier Processing Authority Page (OPR\_DEF\_TABLE\_VND1) to authorize users to perform supplier maintenance functions (enter, approve, deactivate).

Navigation:

Click the **Supplier Processing Authority** link on the User Preferences - Procurement page.

This example illustrates the fields and controls on the Procurement - Supplier Processing Authority page.

Select **Authority to Enter** check box to authenticate the user to create or update the Supplier details. The Supplier Audit check box is selected by default. You can set up audit at SetID level or supplier level if the check box is selected. If the check box is not selected, then users cannot set up audit but can inquire the supplier audit and run the audit log report.

Use the supplier audit configuration template to select the desired fields to audit and to set the Reason flag which requires Reason Code and comments to be captured.

Supplier Audit Template has H-Grid (Hierarchical Grid) for Supplier Address, Phone Information, and Supplier Contact Phone fields where it allows the user to enable and disable the audit and reason flag for the main field. When saved, it will enable the audit and reason flag for dependent fields attached to main field. One default Template ID is allowed per SetID.

## User Preferences - Document Tolerance Exceptions Override Page

Use the User Preferences - Document Tolerance Exceptions Override page (OPR\_DEF\_DOC\_TOL) to provide authority to users to override document tolerances.

Navigation:

Click the **Doc Tolerances** link on the User Preferences - Procurement page.

| <b>Field or Control</b>                                  | <b>Description</b>                                                                                                                                          |
|----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Override Purchase Order to Requisition Exceptions</b> | Enables you to override document tolerance exceptions that are generated when an encumbrance exceeds the preencumbrance during document tolerance checking. |
| <b>Override Voucher to Purchase Order Exceptions</b>     | Enables you to override document tolerance exceptions that are generated when an expenditure exceeds the encumbrance during document tolerance checking.    |

## User Preferences – Promotions Management Page

Use the User Preferences - Promotions Management page (OPR\_DEF\_TABLE\_TD1) to define default user preferences for promotions management.

Navigation:

**Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Promotions Management**

| <i>Field or Control</i>                                                | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Bank SetID, Bank Code, and Bank Account</b>                         | Select the values to use as defaults in the payments process. When you create a claim with a payment method of field draft, the system provides the bank code and bank account values that are defined here. (You can override these values.) You then use the payment interface to send this claim to Payables, and the system creates a voucher or payment.                                                                                                                  |
| <b>National Allowance Prefix, Promotions Prefix, and Claims Prefix</b> | Select the prefixes. The system uses these prefixes in the automatic numbering process when creating national allowances or customer promotions or when processing claims. You create the prefix values when you define number types on the Automatic Numbering page. When you create the claim number type, you are creating the values for the claims prefix. The values for the national allowance prefix and promotions prefix are tied to the promotion code number type. |

| <i>Field or Control</i>   | <i>Description</i>                                                                                                                                                                                                                                             |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>View Product Cost?</b> | Select to enable the user to view product cost details in PeopleSoft Promotions Management. If you have access to view product cost details, you can consider this data as a determining factor in analyzing planned versus actual customer promotion metrics. |

| Field or Control            | Description                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Group Unit and Deposit Unit | Enter values that become the user's default values for business units. Although the user can override these default values, you can minimize data entry by entering the user's most frequently used business unit. The system uses the group unit and deposit unit as the default business unit for online pending groups, deposits, and worksheets. |

Use the address fields to store addresses for followup letters. The address information that you enter on this page is not validated against any table.

## User Preferences - Receivables Data Entry 2 Page

Use the User Preferences - Receivables Data Entry 2 page (OPR\_DEF\_TABLE\_AR2) to specify write-off tolerances and discount tolerances.

Navigation:

## Set Up Financials/Supply Chain > Common Definitions > User Preferences > Define User Preferences > Receivables Data Entry 2

This example illustrates the fields and controls on the User Preferences – Receivables Data Entry 2 page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'User Preferences – Receivables Data Entry 2' page. At the top, there are tabs for 'User Preferences' and 'Receivables Data Entry 2'. Below the tabs, the page is divided into two main sections: 'Payment Worksheet' and 'Maintenance Worksheet'. The 'Payment Worksheet' section contains the following fields: 'Discount Tolerance Percent' (0), 'Discount Tolerance' (0.00 USD), 'Write Off Percent Under' (0), 'Underpayment Write-Off' (0.00 USD), 'Write Off Percent Over' (0), 'Overpayment Write-Off' (0.00 USD), and 'Item Write-Off' (0.00 USD). The 'Maintenance Worksheet' section contains: 'Max Write Off' (0.00 USD), 'Max Refund' (0.00 USD), 'Write-off Days' (0), 'Max WO Percent' (0), and an 'Override Write off Tolerance' checkbox. At the bottom, there is a 'Currency Precision' section with '\*Format Currency' set to 'USD' and 'US Dollar'.

## Payment Worksheet

Enter the write-off tolerances and discount tolerances for the payment worksheet.

| Field or Control                                                                                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Discount Tolerance Percent</b> and <b>Discount Tolerance</b>                                                                     | <p>Enter the percent and amount to use to calculate the discount tolerance. These tolerances enable the user to enter an unearned discount amount that is less than or equal to the value that you enter. Enter the additional percentage that the user can add to the payment terms.</p> <p>For example, if an item is 700.00 and the discount terms are 2 percent for 10/Net30, the normal discount would be 14.00. If you enter 10 in the percent field, the user can take up to an additional 10 percent of the discount amount, which is 1.40. The total discount would be 15.40. However, the total discount can never be more than the value in the amount field.</p> |
| <b>Write-Off Percent Under</b> and <b>Underpayment Write-Off</b> and <b>Write-Off Percent Over</b> and <b>Overpayment Write-Off</b> | <p>Enter the percent and amount that define the maximum write-off for underpayments and overpayments. These values apply <i>only</i> to write-offs (such as Entry Types WAU and WAO). These values do not apply to adjustments or deductions associated with overpayments or underpayments (these are not write-offs). The user can enter a write-off amount as long as the amount does not exceed the specified write-off percentage of the payment.</p>                                                                                                                                                                                                                    |
| <b>Item Write-Off</b>                                                                                                               | <p>Enter the highest amount that this user can write off when the user writes off an amount for an individual item on a payment worksheet.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Maintenance Worksheet

Enter the write-off tolerances for the maintenance worksheet.

**Warning!** If you do not define write-off tolerances for the user, the system uses zero for the user's write-off tolerances, and the user cannot write off items.

| <b>Field or Control</b>                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Max Write Off</b> (maximum write-off)          | Enter the maximum amount that the user can write off for either an individual item or for the remaining balance for a normal group or match group. The user can write off an amount below the maximum amount as long as it does not exceed the percentage of the original amount for the item. For example, if you enter an amount of 25.00, the user can write off amounts up to 25.00. However, if you enter a maximum write-off percentage of 10 percent, and the total original amount of an item is 240.00, the user cannot write off more than 24.00.<br><br>For no limit, enter all 9s. |
| <b>Max Refund</b> (maximum refund)                | Enter the maximum refund amount that a user can create.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Write-off Days</b>                             | Enter the minimum age of an item before a user can write it off on the maintenance worksheet. For no limit, enter 0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Max WO Percent</b> (maximum write-off percent) | Enter the maximum percentage of an item that this user can write off. For no limit, enter 100.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Override Write off Tolerance</b>               | Select to enable the user to write off items or amounts that do not meet the write-off tolerances that are defined for the business unit, customer, or entry reason as long as the write-off meets the user's write-off tolerances. If the user's write-off action exceeds the tolerances in the business unit, customer, or entry reason levels, the system issues only a warning.                                                                                                                                                                                                            |

## Currency Precision

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                            |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Format Currency</b>  | Enter the currency for the write-off tolerance amounts for conversion purposes. The system uses this currency to calculate the tolerance amounts for an item. |

| <b>Permissions and Defaults</b> | Set up the formats and types of events that the user can create and that are defaults. You can give the user permission to create buy, sell, or RFI events of auction or RFx types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Event Authorizations</b>     | <p>Select the event actions that are authorized for the selected user ID so that the user can approve, cancel, award events, or award more than the requested quantity.</p> <hr/> <p><b>Note:</b> If you are integrating with Purchasing, you must have the authority to enter and approve vendors using the Procurement User Preferences - Vendor Processing Authority page. Selecting the option to award events here does not mean that you have access to Purchasing vendor pages, but it enables you to actually post an award on the Award Details page. Also, you must have the authority to create POs and contracts in Purchasing to award events to a PO or contract.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Copy-From Transactions</b>   | You can use requisitions, manufacturing BOMs, POs, engineering BOMs, contracts, or planning orders as the basis of Strategic Sourcing events. While creating events, you can copy from any transactions that are selected on the user preferences page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Award Type</b>               | <p>If you select the Award Events option in the Event Authorizations region, you must select at least one Award Type option. The user will have access to create only the documents selected here. Options are:</p> <ul style="list-style-type: none"> <li>• <b>Purchase Order</b></li> <li>• <b>PO Contract</b></li> <li>• <b>General Contract</b></li> <li>• <b>Single Release PO Contract</b></li> </ul> <hr/> <p><b>Note:</b> To award purchase orders or contracts, users must have access on the User Preferences – Procurement page to create contracts and purchase orders. If the Allow Vendor Creation at Award option is selected in the Strategic Sourcing business unit definition, the user must also have the appropriate vendor processing authority on the Procurement – Vendor Processing Authority page to enter and approve vendors.</p> <hr/> <p>See <i>PeopleSoft Strategic Sourcing</i>, "Analyzing Bids and Awarding Events," Posting Awards.</p> <p>See <i>PeopleSoft Strategic Sourcing</i>, "Setting Up Business Units in PeopleSoft Strategic Sourcing."</p> <p>See <u>User Preferences – Procurement Page</u>.</p> |

| <b>Field or Control</b>               | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sourcing Constraint Permission</b> | <p>Select the constraint types for which you want to allow overwriting of default mandatory constraints. Options are:</p> <ul style="list-style-type: none"> <li>• <b>Event</b></li> <li>• <b>Business Unit</b></li> <li>• <b>Global</b></li> </ul> <p>During the posting of the award, the system will check the user's permissions. If one or more default mandatory constraints have been violated, the following will occur:</p> <ul style="list-style-type: none"> <li>• If you have the authority to override a mandatory constraint, you will receive a warning that the constraint has been violated.</li> </ul> <p>You can then choose to cancel or proceed with the award.</p> <ul style="list-style-type: none"> <li>• If you do not have the authority to override a mandatory constraint, you will receive an error that the constraint has been violated.</li> </ul> <p>You will not be able to post the award.</p> <hr/> <p><b>Note:</b> If you manually add a mandatory constraint to an event, the system does not prevent you from posting an award if that constraint was violated. Only <i>mandatory</i> constraints are passed as default constraints onto an event. These mandatory constraints are based on the default rules, and the system checks to determine whether the award can proceed.</p> <hr/> <p>See "Understanding Global Policies and Constraints" (PeopleSoft Strategic Sourcing).</p> |
| <b>Template Type</b>                  | <p>Select the sourcing template type to enable for the selected user ID. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Business Unit:</i> User will have access to all sourcing business unit templates that are created for the user's default business unit.</li> <li>• <i>Department:</i> User will have access to all sourcing department templates that are created for the user's specified department ID.</li> <li>• <i>Personal:</i> User will have access to all sourcing personal templates that are created by that user.</li> </ul> <p>Select the appropriate check box to give the user access to add, update, or delete templates.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|             |                   |                    | <input checked="" type="checkbox"/> | + | - |

| Field or Control  | Description                                                                        |
|-------------------|------------------------------------------------------------------------------------|
| <b>Branch</b>     | Enter the staffing branch to be associated with the user ID.                       |
| <b>As of Date</b> | Select a date to be used on some reports to populate the <i>AsOfDate</i> variable. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                               |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Currency Code</b>    | Select an option that the system will use to automatically default to the Customer - General Information page (Customers, Customer Information, General Information) when adding a new customer. |
| <b>Rate Type</b>        | Select an option that the system will use to automatically default to the Customer - General Information page (Customers, Customer Information, General Information) when adding a new customer. |
| <b>National ID Type</b> | Select a default format for the applicant and employee pages to track a person's tax identification number, such as social security number or social insurance number.                           |
| <b>My Searches</b>      | Set up the searches you want to appear on the My Searches pagelet. You can also define this by clicking the Customize button on the pagelet.                                                     |

## Email Notification Options

| <b>Field or Control</b>                               | <b>Description</b>                                                                                                                                                                                                                                |
|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Email Signature</b>                                | Enter a signature to be used on emails that are sent using the Send Email page.                                                                                                                                                                   |
| <b>Automatically Send Mail For Pending Applicants</b> | Select to indicate that the system should automatically send an e-mail to the applicant when a user changes the applicant's status to Valid or Invalid. This procedure is performed by using the Action button on the Pending Applicants pagelet. |

## Agenda Options

| <b>Field or Control</b>            | <b>Description</b>                                                                                                                                  |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Show Completed Agenda Items</b> | Select to indicate that the completed items initially appear in the agenda pages. This option only applies when Staffing Front Office is installed. |

## Order Options

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Approval Security</b> | This option indicates whether a user can save orders with a status of <i>Approved</i> . When this check box is deselected, users can save only orders with a status of <i>Pending Approval</i> . Orders pending approval can only be saved with a status of <i>Draft</i> and cannot have assignments created. Consider using this feature with the order customer self-service component. For example, you may not want to give order approval access to the user IDs that are granted to your customers. |

## Hot List Options

| <b>Field or Control</b>                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
