1. Preface

1.1 Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.2 **Documentation Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

1.3 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs_if you are hearing impaired.

1.4 Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual.

Introduction provides brief information on the overall functionality covered in the User Manual. The subsequent chapters provide information on transactions covered in the User Manual. Each transaction is explained in the following manner:

- Introduction to the transaction
- Screenshots of the transaction
- The images of screens used in this user manual are for illustrative purpose only, to provide improved understanding of the functionality; actual screens that appear in the application may vary based on selected browser, theme, and mobile devices.
- Procedure containing steps to complete the transaction- The mandatory and conditional fields of the transaction are explained in the procedure. If a transaction contains multiple procedures, each procedure is explained. If some functionality is present in many transactions, this functionality is explained separately.

1.5 Related Information Sources

3. Passwordless Login through Passkeys

A passkey can meet multifactor authentication requirements in a single step. Usernames are often easy to discover; sometimes they're just your email address. Since passwords can be hard to remember. A passkey is an alternative method of user authentication that eliminates the need for usernames and passwords. Passkeys are end-to-end encrypted and stored securely either on your device locally or in a vault, such as your device's keychain or password manager.

Passkeys **protect users from phishing attacks**. Passkeys work only on their registered websites and apps; a user cannot be tricked into authenticating on a deceptive site because the browser or OS handles verification. Passkey are more secure because every passkey is unique, passkeys tend to be more secure than passwords. That means passwords will no longer be reused across multiple sites and platforms. And because passkeys are generated automatically, users won't need to rely on passwords that are either easy to remember and unfortunately, easy for others to guess or so complicated that they're easily forgotten and also passkey protects from server leaks.

When you attempt to log in to a site that uses passkey technology, the site will send a push notification to the smartphone you used when you registered the account. When you use your face, fingerprint or personal identification number (PIN) to unlock the device, it will create a unique passkey and communicate it to the website you are attempting to access and to give the site or app permission to grant the login request.

3.1 Setting up Passkey

How to setup a passkeys on another device:

1. Launch the futura bank App. The futura bank pre-login screen appears.

futura bank pre-login page

		Copyright	Statement	

3. User can also authenticate using a **security key** or **use passkey from a device with camera.**

Note: If the user selects passkey from a device with camera option, he will be shown a QR code which he can scan using a mobile device and login using saved passkey on that device by undergoing same passkey authentication mechanism as was used during passkey registration.

- 4. Click **Allow**, then **Allow** again to use your passkeys to sign in future.
- 5. The system displays the success message of allowing you to use your passkeys to sign in future.
- 6. Click OK.

Note:

1.Goto **Deregister your Passkey** section to deregister the passkey set for a devices. 2. You can log into your account using the biometric data, PIN, or whatever method you use to sign in to your Android phone/web browser/iOS devices.

<u>FAQ</u>

1. Does deregister passkey remove passkey from device?

No. When you deregister the passkey it only gets removed from server and not from device or your device's keychain or password manager. Since passkey works on public-private key infrastructure, and deregistering the passkey removes public key from server, the device's private key cannot be used to authenticate and access login to the application or for any other use.

2. Does the user need to re-register for passkey after certain time duration?

No. Passkeys have no expiry. Hence the passkey created once does not require any reregistration.

3. Is there support for cross-platform application for passkey?

No. As of May'23, cross platform support for passkeys is not enabled. So a passkey created for android device cannot be used to authenticate an iPhone device and same is for similar other cross channel cases.

4. Can I still use "alternate login" for application login?

No. If the bank provides option for passkey login then alternate login cannot be used for application login on mobile devices. It's an either "Passkey" or "Alternate Login" option.

5. Can I use passkey for siri/iMessage type payments?

No. Passkeys can only be used for application login.

6. What versions of Android and iOS are supported for passkeys?

Android 9 and higher. iOS/iPad OS 16 and higher.

For more on info on passkey support for chrome and android refer to this link : <u>https://developers.google.com/identity/passkeys/supported-environments#chrome-passkey-support-summary</u>
