1 Preface

This document describes the Administration options available in Oracle FLEXCUBE Development Workbench for Universal Banking and guides the developers on how to use this feature.

1.1 Audience

This document is intended for FLEXCUBE Application developers/users that use Development Workbench to develop various FLEXCUBE components.

To Use this manual, you need conceptual and working knowledge of the below:

Proficiency	Resources
FLEXCUBE Technical Architecture	Training programs from Oracle Financial Software Services.
Working knowledge of Web based applications	Self Acquired
Working knowledge of Oracle Database	Oracle Documentations

1.2 Related Documents

<u>Open Development Tool Installations</u> <u>Development WorkBench - Getting Started</u>

2 Introduction

The information in this document includes:

- <u>Chapter 2 , "Introduction"</u>
- Chapter 3 , "Administration"
- <u>Chapter 4</u>, "User Releases"

3 Administration

Workbench segregates the developmental activity of the developers into different releases. This allows the tool to track the changes done in each release and helps the developer to follow an extensible approach to development.

Administration screens of Development Workbench are as follows:

- i) Release Creation
- ii) Environment Creation
- iii) User Creation

3.1 First Time Log in

After successful installation, user can login to the Tool using the following credentials User Name: **RADTOOL** Password: **RADTOOL**

ORACLE FLEXCUBE Development Workbench for Universal Banking - Windows Internet Explorer	- 0 ×
DRACLE'	
ORACLE FLEXCUBE	
Development Workbench for Universal Banking	
LOGIN	
Password Sign In

lopyright © 2012, Oracle and/or its affiliates. All rights reserved.	

Fig 3.1: Login Screen

RADTOOL user is initially mapped to Default Release. This user is only for initial login to the tool. Developers should not use this user to design new screen or to modify existing screen.

After successful login click on Administration node in left side of Tree under browser Tab.

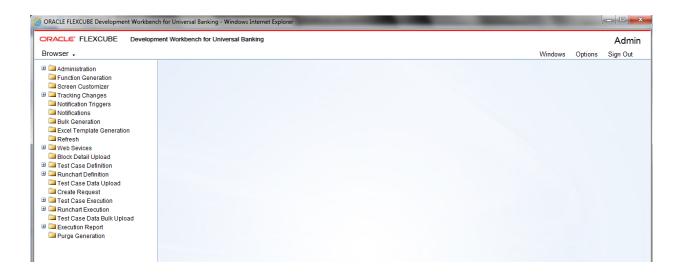

Fig 3.2: The Browser tab with Administration option

We will find 3 options In Administration. Release Environment and User.

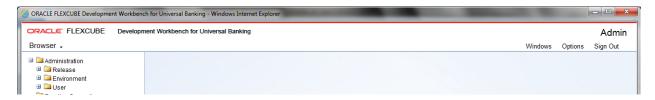

Fig 3.3: Options under Administration

4 Release

Expand the Release node under administration. We will get Detailed and summary options.

Click on Detailed option to create new release. Release screen will be launched.

Fig 3.1.2: The Release detailed Screen

Only a user with Administrator rights can create Release. It is recommended to use RADTOOL user for creating new releases

• **Release Code:** Release code/Project Code is mandatory field. It should follow FLEXCUBE naming convention.

Ex: FC_UBS_V.UM_11.4.US.1.0.0.0

- **Description:** Information about the release. Meaningful description of release can be provided here
- **Release Type:** Select the release type. This is mandatory field.
 - **Kernel:** This option should be used by kernel team only.
 - Cluster: A regional development team has to select this option.

- **Custom:** Either offshore development team for client changes or development in Onsite has to select this option.
- **Release No:** Enter the version number of FLEXCUBE development.
- **Base Release:** Select base release from the list of values. All available releases will be shown in the List of values. Base release is of significance for migrating test case data *Example: If developer is working on customization on top of 11.3EU Cluster pack, base release will be 11.3EU*
- Environment: Select default environment. While creating new release ignore
- **Remarks:** Enter if any additional info required regarding Release. This is information field.
- **Release SPC:** This would be used for in house developments. This is not required for custom developments
- **Stream Name:** Stream name should be same as DDL stream name. This is not applicable if DDL integration not required
- **Cluster Name:** This is an information field. If the release is a Cluster pack, name of the Cluster release can be provided here .Same name as maintained in DDL Tool.
- **Custom Name:** This is an information field. If the release is a Customization, name of the customer can be provided here .Same name as maintained in DDL Tool
- **Release Stage:** This is information field. Release stage can be Development, SQA, ITR etc
- **Application Name:** Provide the name of application for which the release is . *Example: FLEXCUBE, FCIS, FGL etc*
- **Migrate Test Case Data from Base Release**: If check box is checked ,all the test case data from the base release will be migrated to the new release

The below figure shows a sample entries for creating custom release done for MODEL BANK

5 Environment

Workbench requires at least one environment for each release and the below environment details need to be maintained. Multiple environments can be mapped to a single release.

For instance, different environments can be maintained for different stages of the same release i.e. development, testing etc .

Note that Workbench can interact with multiple FLEXCUBE links .Each environment correspond to a FLEXCUBE environment

ORACLE FLEXCUBE Developme	nt Workbench for Universal Banking - Windows Internet Explorer			- C X

Fig 3.2.2: The Detailed Screen for Environment

• Environment Code: This is mandatory field. Naming convention would be <release code>_ENV.

For Example: FCUBS11.4_MODEL_BANK_ENV

- **Release Code:** This is a **mandatory** field. Select the correct release code from the list of values. This field identifies the release to which the environment is mapped
- Language: This is mandatory field. Select the required language from LOV. This field is very important in environment creation as screen xml will be generated based on the language set up at the environment level. List of values fetches the available languages from RDTM_LANGUAGE. Any new language, if required, has to be maintained in this table
- **Description:** Information field. Meaningful description to environment code.
- **JNDI Name:** Enter valid jndi name. This is **mandatory**. It should match with jndi name used while creation of Data Source for FLEXCUBE in app server. It's case sensitive. Connection to the FLEXCUBE schema is established from Workbench using the JNDI name maintained in environment definition.

If JNDI name does not match data base connection to FLEXCUBE schema won't happen.

For instance:

If server is Apache Tomcat, JNDI provided in environment creation should match with jndi provided in server.xml and context.xml

If server is web logic, JNDI provided in environment creation should match with jndi of the data source created;

Dynamic Registering of Data Source with JNDI

Dynamic Data Source Registering feature avoids the need of creating Data Source manually in the Application Server. To enable this feature, Provider URL value has to be provided during installation .A new data source will be added to the JNDI context using the Data Base details provided while creating Environment (explained below). An Example of Properties to be specified in odt.properties for webLogic Server is given below INITIAL_CONTEXT_FACTORY=weblogic.jndi.WLInitialContextFactory PROVIDER_URL=t3://localhost:7101

Note that this feature won't be available if the JNDI context is read only. *Example : Apache tomcat Server*

Data Base Details:

The FLEXCUBE database server details of the environment can be provided here. These are information fields. *Data base connection is achieved through jndi maintained and not with help of data provided in these fields unless dynamic registering of Data Source feature is available*

- **Data Base Instance:** Enter the valid Data base instance name.
- Data Base Port: Enter data base port number.
- Data Base IP Address: Enter data base IP address.

- Data Base Host Name: Enter host name or IP address of data base.
- Data Base Name: Enter schema name.
- Data Base password: Enter schema password.

If dynamic registering of Data Source feature is not available then the following has to be taken care

- 1) If the password of FLEXCUBE schema is changed, merely changing the password in the Workbench environment wouldn't be of any help. Developer will have to update the data source in the server with the latest credentials.
- 2) If judi of the data source is changed, Application server has also to be updated with the same

Application Details:

• **Application URL:** Enter valid FLEXCUBE url. This will be launched from Workbench.

RACLE' FLEXCUBE Development W	Vorkbench for Universal Banking		Admii

Administration		User Prefe	erences
🗉 🚞 Release		Change Pa	assword
Environment		Launch FL	EXCUBE UB
Detailed Summary		Accessibil	lity Help
I I User		About	

Fig 3.2.3: The Application URL maintained will be launched on clicking Launch FCUBS

- Application IP Address: Enter application IP address.
- Application Name: Enter application name. Information field.
- **Application Operating System:** Select on which operating system FLEXCUBE is running; two options are provided: windows or UNIX.
- Application transfer Type: If user requires Deploy option (Check the document <u>05-Development WorkBench Screen Development-II</u> to get more details about deploy option), file transfer type has to be selected.
 File Transfer type depends on the operating system of application server in which FLEXCUBE is hosted
 Windows: File manager/File Copy
 UNIX: File Manager
 File Copy: Directly copies files into specified location.
 File Manager: It is a Servlet (please check the File manager section in appendix to get more details) running in app server where FLEXCUBE is hosted for copying files from Workbench server. This has to be selected if operating system is UNIX. Refer Appendix section on further details on File Manager

• **JS Directory Path:** Enter shared path of JavaScript files in FLEXCUBE server. This is also required for deploy feature of Workbench .All the system JavaScript files generated will be copied to the path mentioned in this field

Example:

Windows \rightarrow <u>|||10.184.46.209||js||</u> (Each forward slash should be appended by one more)

UNIX →

/oraint1/web1034/Oracle/Middleware/user_projects/domains/FCUBSDevDomain/servers/FC114 EXT/tmp/_WL_user/FC114EXT/eiq6wn/war/Script/JS/ (It should contain only single backward slash).

Note that slash has to be provided, at the end, in the path provided. Make sure write permission is provided on this folder.

• **UIXML Directory Path:** Enter shared path of UIXML (language xml) files. This is also required for deploy feature of WORKBENCH .All the system JavaScript files generated will be copied to the path mentioned in this field

Example:

Windows → \ \ \ \ 10.184.46.209 \ \ eng \ \

UNIX→

/oraint1/web1034/Oracle/Middleware/user_projects/domains/FCUBSDevDomain/servers/FC114 EXT/tmp/_WL_user/FC114EXT/eiq6wn/war/UIXML/ENG/

Note that slash has to be provided, at the end, in the path provided. Make sure write permission is provided on this folder.

If Transfer Type is File manager then the below details has to be provided mandatorily

- Server User Name: Enter application server user name.
- **Serve Password:** Enter application server password.
- **File Manager URL:** Enter file manager url as shown below.

Format: http://<ipaddress>:<portnumber>/FileManager/FileManageServlet

Eg: <u>http://10.184.74.143:7755/FileManager/FileManageServlet</u>

- File Manager User Name: Enter user name. This is optional field
- File Manager Password: Enter password. This is optional field

The below figure shows a sample environment with data input.

Fig 3.3.1: User Detailed Screen

6.1 User Detailed

- User ID: This is the unique ID given to each user, used to login into Workbench
- **User Name:** Enter User Name.
- User Password: The password the user has to enter to login to Workbench
- **Default Release:** Select Release code from the List of values. This will be the release to which user will be mapped on logging in to the Tool. If user mapped to more than one release ,user can switch between the releases using User Preferences screen .Refer <u>03-Development WorkBench Getting Started</u> for further details on User Preferences
- **Default Environment:** Select the corresponding environment code created for the selected default release.. If not selected user can set environment in User Preferences screen after logging in

- Save Format : User can access the generated files in one of the following modes
 - **Zip:** Files will be zipped and downloaded from the server to the client . This is the default save format.
 - Server Path: If user has access to Server, then this mode can be selected. A path in Server has to be specified as Work Directory. Files will be copied to this path from where user can pick it up
 - Client Path: For ease of use for users of Older Versions, the earlier mode has also been retained. Here user has to provide a path in his machine as the Work Directory. Note that this mode uses ActiveX Scripting; hence settings have to be set accordingly. This option is available only in Internet Explorer.
- Work Directory: It is the path of the folder where the Workbench generated files will be saved. User can specify default directory where all his work should be saved. This field is applicable only if Save format is either Server Path or Client Path
 If the Save Format is Server Path, a path in the server has to be specified.
 If the Save Format is Client Path, a path in the client machine has to be specified.
 If value is specified as CURRENT_DIRECTORY generated files will be saved to location path specified at the design screen level.
- **Excel Format:** This field defines the default extension of the excel files generated from the Tool. XLS and XLSX are the supported formats
- **XML Formatting:** Any XML file which is generated by Workbench will be formatted.
- **LDAP Authentication:** This option can be selected if the user has to be authenticated against a LDAP. Password need not be specified in this case. LDAP properties has to be specified in the *odt.properties* file for availing this feature

Sample LDAP Properties LDAPSSLEn = N LDAP_DOMAIN=MODELBANK.COM LDAP_SERVER_URL=Idap://10.184.xx.xx.389

6.1.1 User Releases

Single user can be mapped to many releases. Make sure that selected default release is available here. Along with release code user role should be specified

The tool has below User Roles for controlling the access rights

- Release Administrator
- o Developer
- o TCM User

• VERCON

User will be allowed to perform various tasks based on the Role assigned to the user. Same user can have different role for different releases.

6.1.1.1 Release Administrator

- This role is meant for project leaders and team leaders and allows them to perform release administration activities.
- Users with this role would be allowed to perform the below tasks
 - Creation of Environment(s) for the Release
 - Creation of users
 - Provide access to the Release for required Users

6.1.1.2 Developer

- This Role is for Developers. Users mapped with this role would be able to access the Function development related features of the Workbench
- User will also be able to Switch between the releases and Environments using the "User Preferences" Option.

6.1.1.3 TCM User

- This Role is for meant for users of TCM. Users mapped with this role would be able to access only the TCM screens through the console
- User will also be able to Switch between the releases and Environments using the "User Preferences" Option.

6.1.1.4 Vercon

- This Role is for meant for Vercon Team. Users mapped with this role would be able to access only the bulk gen operation through the console
- User will also be able to Switch between the releases and Environments using the "User Preferences" Option.

New User will be created by RADTOOL user. After adding one user as Release Administrator, using same user we can create as many users. Use RADTOOL user to create only one user with role as Release Administrator.

Fig 4.6.1: Summary Screen for User

7 Key Points:

- 1. Use user name RADTOOL to create new release.
- 2. In Release Creation, Release Code and Release type are mandatory.
- 3. In Environment creation Environment Code, Release Code, Language and JNDI Name are mandatory.
- 4. In user creation provide User Id, Password, Default Release, Default environment, Save Format ,Work Directory
- 5. Default release selected should be available in the user releases multi record grid. Otherwise Login would be un successful

8 Appendix

8.1 File Manager

File Manager Servlet will be shipped along with Workbench sources. This application helps in copying files from one machine to another

This application has to be deployed for successfully deploying files to the FLEXCUBE application server from Workbench

8.1.1 File Manager Deployment:

File Manager has to be deployed in the server hosting FLEXCUBE (for which environment is created in Workbench)

IP address of the Workbench server has to be mentioned in the property file of File Manager

Path: **FileManager\WEB-INF\classes\com\ofss\manager** File: **fileupload.properties**

This file should have the IP address of the server where ODT is hosted. If more than one Workbench server is accessing the same FLEXCUBE application (or in case of servers in cluster), multiple IP address can be provided separated by semi colon

Fig 4.1.1: ODT File Manager path of fileupload.properties

After modifying the property file , file manager has to deployed in the server where FLEXCUBE is hosted

8.1.2 Maintenance in Development Workbench

File Manager has to maintained in the environment.(which links to the particular FLEXCUBE environment) .

File Manager url has to be provided in the Server File Manager url as shown in the figure

Format: http://<ipaddress>:<portnumber>/FileManager/FileManageServlet *Example:* <u>http://10.184.74.143:7755/FileManager/FileManageServlet</u>
