# My Oracle Support

My Oracle Support (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support can assist you with My Oracle Support registration.

Call the Customer Access Support main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown below on the Support telephone menu:

1. Select **2** for New Service Request.
2. Select **3** for Hardware, Networking and Solaris Operating System Support.
3. Select one of the following options:
  - For Technical issues such as creating a new Service Request (SR), select **1**.
  - For Non-technical issues such as registration or assistance with My Oracle Support, select **2**.

You are connected to a live agent who can assist you with My Oracle Support registration and opening a support ticket.

My Oracle Support is available 24 hours a day, 7 days a week, 365 days a year.

# Acronyms and Terminology

An alphabetized list of acronyms used in the document is listed below:

**Table Acronyms and Terminology**

<b>Acronym</b>	<b>Definition</b>
BNS	Broadband Networking Solutions
DCA	Diameter Custom Applications
CAPM	Computer-Aided Policy Making
DA-MP	Diameter Agent Message Processor
DB	Database
DSR	Diameter Signaling Router
FOA	First Office Application
GUI	Graphical User Interface
HA	High Availability
IMI	Internal Management Interface
IP	Internet Protocol
MP	Message Processing or Message Processor
NE	Network Element
NO	Network OAM
NOAM	Network OAM
OAM	Operations, Administration and Maintenance
SSH	Secure Shell
UI	User Interface
VIP	Virtual IP
VPN	Virtual Private Network
XMI	External Management Interface
NOAM	Network Operations and Maintenance
SOAM	System Operations and Maintenance

---

# What's New in This Guide

This section introduces the documentation updates for release 9.0.0.0.0.

**Release 9.0.0.0.0 - F79940-01, April 2023**

No updates made to this document.

# 1

## Introduction

This document describes the procedure executed to activate the Diameter Custom Applications (DCA) feature (or beyond) Network Element (NE).

This procedure may be executed in either of the following scenarios:

- As part of a new DSR installation, after the standard installation is complete but before the NE is in service.
- On an DSR NE in-service, where the DCA feature is activated during a planned maintenance window to minimize the impact on network traffic.

This document also provides a procedure to deactivate the DCA framework and applications after it has been activated. Refer to the [Feature De-Activation](#) section for the deactivation procedures.

No additional software installation is required prior to executing this procedure. The standard DSR installation procedure has loaded all of the required software, even if the DCA feature is activated at a later time.

# 2

## Feature Activation Overview

This section describes the procedures for activating the DCA feature. In addition, the information tabulated in the following tables provide estimates of the time required to execute the procedure:

1. [Table 4-1](#)
2. [Table 5-1](#)
3. [Table 5-2](#)
4. [Table 6-1](#)
5. [Table 7-1](#)
6. [Table 8-1](#)
7. [Table 8-2](#)
8. [Table 9-1](#)

These tables can be used to estimate the total time necessary to complete the feature activation. The timing values depicted are only estimates. Use the above tables to plan the timing of the activation and not for the execution of the procedure.

The detailed procedure steps to be executed are described in [Feature Activation Preparation](#).

# 3

## Definition of Activation for the DCA Feature

The precise meaning of activation varies from feature to feature. This section briefly defines what activation means with respect to the DCA feature.

All the software required to run Diameter Custom Applications is available by default as part of a DSR installation or upgrade package. The process of activating the feature simply makes proper use of software elements and file system files that are already present to change the behavior of the DSR NE.

**Table 3-1 Behavior of DCA Framework and Application Activation and Deactivation**

SI No.	DCA	Behavior
1.	DCA Framework Activation	<a href="#">DCA Framework Activation</a>
2.	DCA Application Activation	<a href="#">DCA Application Activation</a>
3.	DCA Application Deactivation	<a href="#">DCA Application Deactivation</a>
4.	DCA Framework Deactivation	<a href="#">DCA Framework Deactivation</a>

# 4

## Pre-Feature Activation Overview

The pre-activation procedures provided in the following table can be executed outside a maintenance window (optional). Procedure completion time displayed here are estimates. The actual time taken may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

**Table 4-1 Pre-Feature Activation Overview**

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation
	This Step	Cum.	
<a href="#">System Topology Check</a>	0:10-0:30	0:20-1:00	<ul style="list-style-type: none"> <li>• Verify network element configuration data.</li> <li>• Verify the system group configuration data.</li> </ul>
<a href="#">Perform Health Check</a>	0:01-0:05	0:21-1:05	<ul style="list-style-type: none"> <li>• Verify DSR release.</li> <li>• Verify server status.</li> <li>• Log all current alarms.</li> </ul>

# 5

## Feature Activation Execution Overview

The procedures shown in the following table are executed within a single maintenance window. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

**Table 5-1 DCA Framework Activation Execution Overview**

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation	Impact
	This Step	Cum.		
Perform Health Check - Pre-Feature Activation	0:01-0:05	0:01-0:05	<ul style="list-style-type: none"> <li>Verify DSR release.</li> <li>Verify proper DCA feature state.</li> <li>Verify server status.</li> <li>Log all current alarms.</li> </ul>	None.
DCA Framework Activation	0:10-0:30	0:11-0:35	<ul style="list-style-type: none"> <li>Log out of NOAM GUI.</li> <li>SSH to active NO.</li> <li>Change to the feature activation directory.</li> <li>Execute the feature activation script.</li> <li>Log into active NOAM and SOAM GUI.</li> <li>Verify the DCA framework folder.</li> <li>Close SSH connections to both NOAM.</li> </ul>	DCA framework is activated on DSR.

The procedures shown in the following table are executed inside a single maintenance window. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Table 5-2 DCA Application Activation Execution Overview

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation	Impact
	This Step	Cum.		
DCA Application Activation	0:10-0:30	0:11-0:35	<ul style="list-style-type: none"> <li>• Log out of NOAM GUI.</li> <li>• SSH to active NO.</li> <li>• Change to the feature activation directory.</li> <li>• Execute the feature activation script.</li> <li>• Log into active NOAM and SOAM GUI.</li> <li>• Verify the DCA application folder.</li> <li>• Close SSH connections to both NOAMs.</li> </ul>	DCA application is activated on DSR.

# 6

## Post-Feature Activation Overview

The procedures given in the following table are executed inside a maintenance window. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

**Table 6-1 Post-Feature Activation Overview**

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation	Impact
	This Step	Cum.		
<a href="#">Perform Health Check Post-Feature Activation</a>	0:01-0:05	0:01-0:05	<ul style="list-style-type: none"><li>• Verify Server status.</li><li>• Log all current alarms.</li></ul>	DCA has been activated on DSR.

# 7

## Pre-Feature Deactivation Overview

The procedures given in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

**Table 7-1 Pre-Feature Deactivation Overview**

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation	Impact
	This Step	Cum.		
<a href="#">Pre-Feature Deactivation</a> <a href="#">Perform Health Check</a>	0:01-0:05	0:01-0:05	<ul style="list-style-type: none"><li>• Verify the DSR release.</li><li>• Verify proper DCA state.</li><li>• Verify server status.</li><li>• Log current alarms</li></ul>	None.

# 8

## Feature Deactivation Execution Overview

The procedures given in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates, as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

**Table 8-1 DCA Application Deactivation Overview**

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation	Impact
	This Step	Cum.		
Deactivation set up.	0:10-0:30	0:10-0:30	The reason to deactivate has a direct impact on any additional backout preparation that must be done. Since all possible reasons cannot be predicted ahead of time, only estimates are given here. Execution time varies.	None.
<a href="#">DCA Application Deactivation</a>	00:10-00:20	0:20-0:50	<ul style="list-style-type: none"> <li>• Log out of active NOAM GUI.</li> <li>• SSH into active NO.</li> <li>• Change directory.</li> <li>• Execute the feature deactivation script.</li> <li>• Log into active NOAM and SOAM GUI.</li> <li>• Verify the DCA application folder.</li> <li>• Close SSH connections to both NOAMs.</li> </ul>	DCA application is deactivated on DSR.

Table 8-2 DCA Framework Deactivation Overview

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation	Impact
	This Step	Cum.		
Deactivation set up.	0:10-0:30	0:10-0:30	The reason to deactivate has a direct impact on any additional backout preparation that must be done. Since all possible reasons cannot be predicted ahead of time, only estimates are given here. Execution time varies.	None.
<a href="#">DCA Framework Deactivation</a>	00:10-00:20	0:20-0:50	<ul style="list-style-type: none"> <li>• Log out of active NOAM GUI.</li> <li>• SSH into active NO.</li> <li>• Change directory.</li> <li>• Execute the feature deactivation script.</li> <li>• Log into active NOAM and SOAM GUI.</li> <li>• Verify the DCA folder.</li> <li>• Close SSH connections to both NOAMs.</li> </ul>	DCA framework is deactivated on the DSR.

# 9

## Post Feature Deactivation Overview

The procedures given in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates, as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

**Table 9-1 Post-Feature Deactivation Overview**

Procedure	Elapsed Time (Hours:Minutes)		Activity Feature Activation Preparation
	This Step	Cum.	
<a href="#">Perform Health Check Post-Feature Deactivation</a>	0:01-0:05	0:01-0:05	<ul style="list-style-type: none"><li>• Verify server status.</li><li>• Log all current alarms.</li></ul>

# 10

## Feature Activation Preparation

It is expected that Oracle personnel following this Feature Activation Procedure document will activate the DCA framework first on a customer's DSR, then activate the DCA application as required for that customer.

This section provides detailed procedures for preparing a system for DCA feature activation. These procedures are executed outside a maintenance window.

### 10.1 System Topology Check

This procedure is part of feature activation preparation and is used to verify the system topology of the DSR network and servers.

1. Log in to the NOAM VIP GUI establish a GUI session on the NOAM server by using the VIP address of the NOAM server.
2. Open the web browser and enter the URL, `http://<Primary_NOAM_VIP_IP_Address>`
3. Log in as the `guiadmin` user.

Figure 10-1 Oracle System Log in

4. Verify the network configuration data.
5. Expand the **Configuration** option, click **Networking**, and select **Network**.

Figure 10-2 Network Folder

6. Click **Report**

**Figure 10-3 Report**

7. Verify if the configuration data is correct for your network. Click **Save** or **Print** this report to keep copies for future reference.

**Figure 10-4 Save or Print**

8. Verify the server configuration. Expand the **Configuration** and click the **Server Groups** option.

**Figure 10-5 Server Group**

9. Click **Report**

**Figure 10-6 Report**

10. Verify if the configuration data is correct for your network. Click **Save** or **Print** this report to keep copies for future reference.

**Figure 10-7 Save or Print**

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

## 10.2 Perform Health Check

This procedure is part of feature activation preparation and is used to determine the health and status of the DSR network and servers. This can be run more than once, but it must be run at least once within 24-36 hours of the start of the maintenance window during which the feature activation will take place.

Log in to the NOAM VIP GUI and establish a GUI session on the NOAM server by using the VIP address of the NOAM server.

1. Open the web browser and enter the URL, `http://<Primary_NOAM_VIP_IP_Address>`
2. Log in as the `guiadmin` user.

**Figure 10-8 Oracle System Log in**

3. Verify DSR release.
4. Expand **Administration** option and click **Software Version** to verify the Eagle XG DSR RPM version shows version 8.0.0 or greater.
5. Verify the Server Status. Expand **Status & Manage** and click **Server**.

**Figure 10-9 Status and Manage**

6. Verify all Server Status is Normal (Norm) for Alarm (Alm), Database (DB), Reporting Status, and Processes (Proc).

**Figure 10-10 Alarms**

Appl State	Alm	DB	Reporting Status	Proc
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm

Do not proceed to feature activation if any of the above states are not Norm. If any of these are not Norm, corrective action should be taken to restore the non-Norm status to Norm before proceeding with the feature activation.

If the Alarm (Alm) status is not Norm but only Minor alarms are present, it is acceptable to proceed with the feature activation. If there are Major or Critical alarms present, these alarms should be analyzed before proceeding with the feature activation. The activation may be able to proceed in the presence of certain Major or Critical alarms.

7. In the NOAM VIP GUI, log the current alarms. Expand the **Alarms & Events** option and click **View Active**

**Figure 10-11 View Active Alarms**

8. Click **Report**.

**Figure 10-12 Report**

9. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

**Figure 10-13 Save or Print**

10. In the NOAM VIP GUI, log the alarm history. Expand **Alarms & Events** option and click **View History**.
11. Click **Report**

**Figure 10-14 Report**

12. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

**Figure 10-15 Save or Print**

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

# 11

## Feature Activation

Before feature activation, perform the system health check as described in [Perform Health Check](#). This check ensures the system is ready for feature activation. Performing the system health check determines the alarms present in the system and helps to determine if the feature can be activated with the alarms present in the system.

**Figure 11-1 Warning**

Read the following notes on feature activation procedures:

- Where possible, command response outputs are shown as accurately as possible. EXCEPTIONS are as follows:
  - Session banner information such as time and date.
  - System-specific configuration information such as hardware locations, IP addresses, and host names.
  - ANY information marked with “XXXX” or “YYYY” where appropriate, instructions are provided to determine what output should be expected in place of “XXXX or YYYY”.
  - Aesthetic differences unrelated to functionality such as browser attributes: window size, colors, toolbars, and button layouts.
- After completing each step and at each point where data is recorded from the screen, the technician performing the feature activation must track each step. The technician must track each iteration of the step that is executed.
- Captured data is required for future support reference.

# 12

## Perform Health Check - Pre-Feature Activation

This section describes the procedure to perform a health check pre-feature activation.

Log in to the NOAM VIP GUI and establish a GUI session on the NOAM server by using the VIP address of the NOAM server.

1. Open the web browser and enter the URL, `http://<Primary_NOAM_VIP_IP_Address>`
2. Log in as the `guiadmin` user.

**Figure 12-1 Oracle System Log in**

3. In the NOAM (2-Tiered) VIP GUI, verify if the DCA Framework folder is not present. Expand the **Main Menu** option and click **Diameter**.
4. In the SOAM (2-Tiered) VIP GUI, verify if the DCA Framework folder is not present. Expand the **Main Menu** option and click **Diameter**.
5. Verify the Server Status. Expand **Status & Manage** and click on **Server**.

**Figure 12-2 Status and Manage**

6. Verify all Server Status is Normal (Norm) for Alarm (Alm), Database (DB), Reporting Status, and Processes (Proc).

**Figure 12-3 Alarms**

Appl State	Alm	DB	Reporting Status	Proc
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm

Do not proceed to feature activation if any of the above states are not Norm. If any of these are not Norm, corrective action should be taken to restore the non-Norm status to Norm before proceeding with the feature activation.

If the Alarm (Alm) status is not Norm but only Minor alarms are present, it is acceptable to proceed with the feature activation. If there are Major or Critical alarms present, these alarms should be analyzed before proceeding with the feature activation. The activation may be able to proceed in the presence of certain Major or Critical alarms.

7. In the NOAM VIP GUI, verify the server configuration. Expand the **Configuration** option, and then click **Server Groups**. Verify if the configuration data is correct in the network.

**Figure 12-4 Server Group**

8. In the NOAM VIP GUI, log the current alarms. Expand the **Alarms & Events** option and click **View Active**.

**Figure 12-5 View Active Alarms**

9. Click **Report**

**Figure 12-6 Report**

10. Verify if the configuration data is correct for your network. Click **Save** or **Print** to keep report copies for future reference.

**Figure 12-7 Save or Print**

11. In the NOAM VIP GUI, log the alarm history. Expand **Alarms & Events** option and click **View History**.

12. Click **Report**.

**Figure 12-8 Report**

13. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

**Figure 12-9 Save or Print**

14. In the NOAM VIP GUI, check the Upgrade Acceptance status on all servers. Expand the **Administration** option, navigate to **Software Management**, and click **Upgrade**. Verify if the Upgrade State column does not show ACCEPT or REJECT.

 **Note:**

Upgrade must be accepted on all servers before activating DCA.

**Figure 12-10 Upgrade**

DSR\_DR\_NO\_SG | **DSR\_NO\_SG** | DSR\_SO\_SG

Hostname	Upgrade State	OAM HA Role	Server Role	Function	Application Version
	Server Status	Appl HA Role	Network Element		Upgrade ISO
DSR-NO2	Ready	Standby	Network OAM&P	OAM&P	8.0.0.0-80.18.1
	Norm	N/A	NO_SetupA		
DSR-NO-1	Ready	Active	Network OAM&P	OAM&P	8.0.0.0-80.18.1
	Norm	N/A	NO_SetupA		

Upgrade State should be **Ready**. If the Upgrade State is **ACCEPT** or **REJECT**, follow the procedure documented in DSR C-Class Software Installation and Configuration guide or DSR Software Upgrade Guide (as applicable) to accept the upgrade on all servers before activating DCA.

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

# 13

## Activation Procedures

This section provides the detailed procedure steps of the feature activation execution. These procedures are executed inside a maintenance window.

### 13.1 DCA Framework Activation

This procedure verifies that the feature activation steps have been completed.

1. Log out of any active NOAM VIP GUI sessions.
2. Establish a secure shell session on the active NOAM VIP GUI by using the XMI VIP address. Log in as `admusr`. Use your SSH client to connect to the server (for example, Putty).

 **Note:**

You must consult your own software client's documentation to learn how to launch a connection. For example:

```
# ssh <active NO XMI VIP Address>
```

3. Change to the following directory:

```
$ cd /usr/TKLC/dsr/prod/maint/loaders/activate
```

4. Execute the DCA activation script. Run the DCA activation script by executing the following command:

```
# ./featureActivateDeactivate
```

Choose **Activate** and **DCA Framework** options.

There is an option to choose to activate this feature on all SOAMs or on a specific SOAM. It is recommended to select **Activate on all SOAM**.

 **Note:**

If a new site is added or if a SOAM site framework was not activated, the activation script can be executed again to add the application on new sites. The script does not have any impact on the sites on which the framework is already active.

Verify the screen output is similar to [Sample DCA Framework Activation](#).

5. Log in to the active NOAM VIP and SOAM VIP GUIs.
6. Verify the **DCA Framework** folder and the **Configuration** sub-menu.  
On NOAM VIP GUI, verify if the **DCA Framework** folder displays under the **DSR Main Menu** with **Configuration** as a sub-menu. On SOAM VIP GUI, verify if the **DCA Framework** folder displays under the **DSR Main Menu** with **Configuration** as a sub-menu.
7. Close SSH connection to active NOAM VIP GUIs. Log out of the active NOAM VIP GUI log in shell and close the SSH connections by executing the following command:

```
# exit
```

Close the SSH connection.

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

## 13.2 DCA Application Activation

The DCA framework must be activated before any application can be activated.

1. Log out of any active NOAM VIP GUI sessions.
2. Establish a secure shell session on the active NOAM VIP GUI by using the XMI VIP address. Log in as `admusr`. Use your SSH client to connect to the server (for example Putty).

### Note:

You must consult your own software client's documentation to learn how to launch a connection. For example:

```
# ssh <active NO XMI VIP Address>
```

3. Change to the DCA activation directory, execute the following command:  

```
# cd /usr/TKLC/dsr/prod/maint/loaders/
```
4. Execute the DCA activation script. Run the DCA activation script by executing the following command:

```
# ./featureActivateDeactivate
```

Choose **Activate** and **DCA Application** options.

When asked, select **Activate a DCA Application**.

### Note:

The above option is not asked the DCA is not active on the system. The script goes directly to **Activate a DCA Application** mode.

When asked, **Enter the long name for the DCA application**.

 **Note:**

The DCA long name should consist of a combination of letters, numbers, and spaces and should not begin with a space. It has a maximum of 32 characters.

When asked, **Enter the short name for the DCA application.**

 **Note:**

The DCA short name should consist of a combination of letters and numbers. It has a maximum of 6 characters.

Verify the screen looks similar to the sample [DCA Application Activation](#).

Expand the option **Status & Manage** and click **Server** to restart the DSR MP.

5. Log in to the active NOAM VIP and SOAM VIP GUIs.
6. In the NOAM VIP and SOAM VIP GUIs, verify the DCA Application folder and sub-menus.

On the NOAM VIP GUI, verify the DCA folder with the name provided in [step 4](#) displays under the DCA Framework menu. Sub-menus should include: General Options, Trial MP assignment, and Application Control.

On SOAM VIP GUI, verify the DCA folder with the name provided in [step 4](#) displays under the DCA Framework menu. Sub-menus should include: General Options, Trial MP assignment, Application Control, and System Options.

7. Close SSH connection to active NOAM VIP GUIs. Log out of the active NOAM VIP GUI log in shell and close the SSH connections by executing the following command:

```
# exit
```

Close the SSH connection.

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

## 13.3 DCA Application Re-activation

DCA Feature reactivation option is executed mainly during Disaster Recovery. It allows reactivating all the activated DCA Applications in the system after Disaster Recovery procedure is executed. Detailed steps are given in the procedure below.

This procedure verifies that the global admin has been enabled.

1. Log out of any active NOAM VIP GUI sessions.
2. Establish a secure shell session on the active NOAM VIP GUI by using the XMI VIP address. Log in as `admusr`. Use your SSH client to connect to the server (for example Putty).

 **Note:**

You must consult your own software client's documentation to learn how to launch a connection. For example:

```
# ssh <active NO XMI VIP Address>
```

3. Change to the DCA activation directory, execute the following command:

```
# cd /usr/TKLC/dsr/prod/maint/loaders/
```

4. Execute the DCA activation script. Run the DCA activation script by executing the following command:

```
# ./featureActivateDeactivate
```

Choose **Activate** and **DCA Application** options.

When asked, select **Activate a DCA Application**.

 **Note:**

The above option is not asked the DCA is not active on the system. The script goes directly to **Activate a DCA Application** mode.

When asked, **Enter the long name for the DCA application**.

 **Note:**

The DCA long name should consist of a combination of letters, numbers, and spaces and should not begin with a space. It has a maximum of 32 characters.

When asked, **Enter the short name for the DCA application**.

 **Note:**

The DCA short name should consist of a combination of letters and numbers. It has a maximum of 6 characters.

Verify the screen looks similar to the sample [DCA Application Re-activation](#).

Expand the option **Status & Manage** and click **Server** to restart the DSR MP.

5. Log in to the active NOAM VIP and SOAM VIP GUIs.
6. In the NOAM VIP and SOAM VIP GUIs, verify the DCA Application folder and sub-menus.

On the NOAM VIP GUI, verify the DCA folder with the name provided in [Step 4](#) displays under the DCA Framework menu. Sub-menus should include: General Options, Trial MP assignment, and Application Control.

On SOAM VIP GUI, verify the DCA folder with the name provided in [Step 4](#) displays under the DCA Framework menu. Sub-menus should include: General Options, Trial MP assignment, Application Control, and System Options.

7. Close SSH connection to active NOAM VIP GUIs. Log out of the active NOAM VIP GUI log in shell and close the SSH connections by executing the following command:

```
# exit
```

Close the SSH connection.

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

## 13.4 Perform Health Check Post-Feature Activation

This procedure is used to determine the health and status of the DSR network and servers. This procedure performs a health check.

Log in to the NOAM VIP GUI, establish a GUI session on the NOAM server by using the VIP address of the NOAM server.

1. Open the web browser and enter the URL, `http://<Primary_NOAM_VIP_IP_Address>`
2. Log in as the `guiadmin` user.

**Figure 13-1 Oracle System Log in**

3. Verify the Server Status. Expand **Status & Manage** click on **Server**

**Figure 13-2 Status and Manage**

4. Verify all Server Status is Normal (Norm) for, Alarm (Alm), Database (DB), Reporting Status, and Processes (Proc).

**Figure 13-3 Alarms**

Appl State	Alm	DB	Reporting Status	Proc
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm

Do not proceed to feature activation if any of the above states are not Norm. If any of these are not Norm, corrective action should be taken to restore the non-Norm status to Norm before proceeding with the feature activation.

If the Alarm (Alm) status is not Norm but only Minor alarms are present, it is acceptable to proceed with the feature activation. If there are Major or Critical alarms present, these alarms should be analyzed before proceeding with the feature activation. The activation may be able to proceed in the presence of certain Major or Critical alarms.

5. In the NOAM VIP GUI, verify the server configuration. Expand the option **Configuration** and click **Server Groups**.

**Figure 13-4 Server Groups**

Verify the configuration data is correct for your network.

6. In the NOAM VIP GUI, log the current alarms. Expand the **Alarms & Events** option and click **View Active**

**Figure 13-5 View Active Alarms**

7. Click **Report**

**Figure 13-6 Report**

8. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

**Figure 13-7 Save or Print**

9. In the NOAM VIP GUI, log the alarm history. Expand **Alarms & Events** option and click **View History**.
10. Click **Report**

**Figure 13-8 Report**

11. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

**Figure 13-9 Save or Print**

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

# 14

## Feature Deactivation

This section describes the procedures to deactivate the DCA feature.

# 15

## Pre-deactivation Procedures

Before beginning the feature deactivation, complete the pre-deactivation procedure below.

### 15.1 Pre-Feature Deactivation Perform Health Check

This procedure is used to determine the health and status of the DSR network and servers.

Log in to the NOAM VIP GUI and establish a GUI session on the NOAM server by using the VIP address of the NOAM server.

1. Open the web browser and enter the URL, `http://<Primary_NOAM_VIP_IP_Address>`
2. Log in as the `guiadmin` user.

**Figure 15-1 Oracle System Log in**

3. Verify the Server Status. Expand **Status & Manage** and click **Server**

**Figure 15-2 Status and Manage**

4. Verify all Server Status is Normal (Norm) for Alarm (Alm), Database (DB), Reporting Status, and Processes (Proc).

**Figure 15-3 Alarms**

Appl State	Alm	DB	Reporting Status	Proc
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm

Do not proceed to feature activation if any of the above states are not Norm. If any of these are not Norm, corrective action should be taken to restore the non-Norm status to Norm before proceeding with the feature activation.

If the Alarm (Alm) status is not Norm but only Minor alarms are present, it is acceptable to proceed with the feature activation. If there are Major or Critical alarms present, these alarms should be analyzed before proceeding with the feature activation. The activation may be able to proceed in the presence of certain Major or Critical alarms.

5. In the NOAM VIP GUI, verify the server configuration. Expand the option **Configuration** and click **Server Groups**.

**Figure 15-4 Server Groups**

Verify the configuration data is correct for your network.

6. In the NOAM VIP GUI, log the current alarms. Expand the **Alarms & Events** option and click **View Active**

**Figure 15-5 View Active Alarms**

7. Click **Report**.

**Figure 15-6 Report**

8. Verify if the configuration data is correct for your network. Click **Save** or **Print** to keep report copies for future reference.

**Figure 15-7 Save or Print**

9. In the NOAM VIP GUI, log the alarm history. Expand **Alarms & Events** option and click **View History**.
10. Click **Report**

**Figure 15-8 Report**

11. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

**Figure 15-9 Save or Print**

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

# 16

## Deactivation Procedures

This sections describe the procedures to deactivate the DCA feature.

### 16.1 DCA Application Deactivation

This procedure verifies that the feature deactivation steps have been completed.

1. Log out of any active NOAM VIP GUI sessions.
2. Establish a secure shell session on the active NOAM VIP GUI by using the XMI VIP address. Log in as `admusr`. Use your SSH client to connect to the server (for example, Putty).

 **Note:**

You must consult your own software client's documentation to learn how to launch a connection. For example:

```
# ssh <active NO XMI VIP Address>
```

3. Change to the DCA activation directory, execute the following command:

```
# cd /usr/TKLC/dsr/prod/maint/loaders/
```

4. Execute the DCA activation script. Run the DCA activation script by executing the following command:

```
# ./featureActivateDeactivate
```

Choose **Activate** and **DCA Application** options.

When asked, select **Enter the name for the DCA application to be deactivated**.

Verify the screen looks similar to the sample [DCA Application Deactivation](#).

Expand the option **Status & Manage** and click **Server** to restart the DSR MP.

5. Log in to the active NOAM VIP and SOAM VIP GUIs.
6. In the NOAM VIP and SOAM VIP GUIs, verify the DCA Application folder and sub-menus.

On NOAM VIP GUI, expand **Diameter** and click **DCA Framework**, and verify the DCA Application folder no longer exists.

On SOAM VIP GUI, expand **Diameter** and click **DCA Framework**, and verify the DCA Application folder no longer exists.

7. Close SSH connection to active NOAM VIP GUIs. Log out of the active NOAM VIP GUI, log in to the shell, and close the SSH connections by executing the following command:

```
# exit
```

Close the SSH connection.

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

## 16.2 DCA Framework Deactivation

All DCA applications must be deactivated before executing the following procedure.

1. Log out of any active NOAM VIP GUI sessions.
2. Establish a secure shell session on the active NOAM VIP GUI by using the XMI VIP address. Log in as `admusr`. Use your SSH client to connect to the server (for example Putty).

 **Note:**

You must consult your own software client's documentation to learn how to launch a connection. For example:

```
# ssh <active NO XMI VIP Address>
```

3. Change to the DCA activation directory, execute the following command:

```
# cd /usr/TKLC/dsr/prod/maint/loaders/
```

4. Execute the DCA activation script. Run the DCA activation script by executing the following command:

```
# ./featureActivateDeactivate
```

Choose **Activate** and **DCA Application** options.

 **Note:**

For Tier 3 SOAM, this feature can be deactivated on all SOAMs or a specific SOAM VIP GUI.

Verify the screen looks similar to the sample [DCA Framework Deactivation](#).

5. Log in to the active NOAM VIP and SOAM VIP GUIs.
6. Verify if the DCA Framework folder no longer exists under the **Diameter** menu.
7. Close SSH connection to active NOAM VIP GUIs. Log out of the active NOAM VIP GUI log in shell and close the SSH connections by executing the following command:

```
# exit
```

Close the SSH connection.

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

# 17

## Post-Deactivation Procedures

To complete a deactivation, complete the Post-Deactivation procedure described below.

### 17.1 Perform Health Check Post-Feature Deactivation

This procedure performs a health check to determine the health and status of the DSR network and servers.

Log in to the NOAM VIP GUI and establish a GUI session on the NOAM server by using the VIP address of the NOAM server.

1. Open the web browser and enter the URL, `http://<Primary_NOAM_VIP_IP_Address>`
2. Log in as the `guiadmin` user.

**Figure 17-1 Oracle System Log in**

3. Verify the Server Status. Expand **Status & Manage** and click **Server**.

**Figure 17-2 Status and Manage**

4. Verify all Server Status is Normal (Norm) for Alarm (Alm), Database (DB), Reporting Status, and Processes (Proc).

**Figure 17-3 Alarms**

Appl State	Alm	DB	Reporting Status	Proc
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm

Do not proceed to feature activation if any of the above states are not Norm. If any of these are not Norm, corrective action should be taken to restore the non-Norm status to Norm before proceeding with the feature activation.

If the Alarm (Alm) status is not Norm but only Minor alarms are present, it is acceptable to proceed with the feature activation. If there are Major or Critical alarms present, these alarms should be analyzed before proceeding with the feature activation. The activation may be able to proceed in the presence of certain Major or Critical alarms.

5. In the NOAM VIP GUI, verify the server configuration. Expand the option **Configuration** and click **Server Groups**.

**Figure 17-4 Server Groups**

Verify the configuration data is correct for your network.

6. In the NOAM VIP GUI, log the current alarms. Expand the **Alarms & Events** option and click **View Active**

**Figure 17-5 View Active Alarms**

7. Click **Report**

**Figure 17-6 Report**

8. Verify if the configuration data is correct for your network. Click **Save** or **Print** to keep report copies for future reference.

**Figure 17-7 Save or Print**

9. In the NOAM VIP GUI, log the alarm history. Expand **Alarms & Events** option and click **View History**.
10. Click **Report**.

**Figure 17-8 Report**

11. Verify if the configuration data is correct for your network. Click **Save** or **Print** to keep report copies for future reference.

**Figure 17-9 Save or Print**

If this procedure fails, contact [My Oracle Support \(MOS\)](#) for assistance.

## Emergency Response

In the event of a critical service situation, emergency response is offered by the CAS main number at 1-800-223-1711 (toll-free in the US), or by calling the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities and requires immediate corrective action. Critical situations affect service and/or system operation resulting in one or several of these situations:

- A total system failure that results in loss of all transaction processing capability
- Significant reduction in system capacity or traffic handling capability
- Loss of the system's ability to perform automatic system reconfiguration
- Inability to restart a processor or the system
- Corruption of system databases that requires service affecting corrective actions
- Loss of access for maintenance or recovery operations
- Loss of the system ability to provide any required critical or major trouble notification

Any other problem severely affecting service, capacity or traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.

## Locate Product Documentation on the Oracle Help Center

Oracle Communications customer documentation is available on the web at the Oracle Help Center (OHC) site, <http://docs.oracle.com>. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at <http://www.adobe.com>.

1. Access the Oracle Help Center site at <http://docs.oracle.com>
2. Click Industries.
3. Under the Oracle Communications subheading, click the Oracle Communications documentation link. The Communications Documentation page appears. Most products covered by these documentation sets will appear under the headings “Network Session Delivery and Control Infrastructure” or “Platforms.”
4. Click on your Product and then the Release Number. A list of the entire documentation set for the selected product and release appears.
5. To download a file to your location, right-click the PDF link, select Save target as (or a similar command based on your browser), and save to a local folder.
