

# Diameter Signal Routing User Data Repository Cloud Installation and Configuration Guide for Release 14.0.0.0.0

F79995-01

April 2023

ORACLE®

My Oracle Support (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with My Oracle Support registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>.

See more information on My Oracle Support, see Appendix K .

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are “commercial computer software” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

# TABLE OF CONTENTS

<b>CHAPTER 1. INTRODUCTION.....</b>	<b>9</b>
1.1 Purpose and Scope .....	9
1.2 References.....	9
1.3 Acronyms .....	9
1.4 Terminology.....	10
1.5 Assumptions.....	10

<b>CHAPTER 3. PRE-INSTALLATION PROCEDURE .....</b>	<b>14</b>
3.1 Verify Deployment Options and Cloud Resources .....	14
<b>CHAPTER 4. CLOUD CREATION.....</b>	<b>15</b>
4.1 Deploy Oracle Communications User Data Repository Virtual Machines on VMware....	15
4.2 Deploy Oracle User Data Repository Virtual Machines on OpenStack.....	16
4.3 Deploy Oracle User Data Repository Virtual Machines on Oracle Linux/KVM.....	17
<b>CHAPTER 5. ORACLE COMMUNICATIONS USER DATA REPOSITORY SERVER CONFIGURATION.....</b>	<b>18</b>
5.1 Configure UDR-A Server (1 <sup>st</sup> NOAMP only).....	18
5.2 Create Configuration for Remaining Servers .....	29
5.3 Apply Configuration To Remaining Servers .....	35
5.4 Configure XSI Networks .....	39
<b>CHAPTER 6. OAM PAIRING.....</b>	<b>41</b>
6.1 OAM Pairing for Primary UDR Servers (1 <sup>st</sup> NOAMP site only) .....	41
6.2 OAM Pairing for DR Sites .....	52
<b>CHAPTER 7. APPLICATION CONFIGURATION .....</b>	<b>62</b>
7.1 Configure UDR Signaling Routes (All NOAM Sites).....	62
7.2 Configure Services on Signaling Network.....	65
7.3 Accept Installation .....	68

**CONFIGURATION OF UDR FOR EIR, FABR, MNP AND SFAPP FEATURES .....72**

**APPENDIX A. VMWARE VSPHERE ENVIRONMENT SETUP .....73**

    A.1 Host Datastore configuration using vsphere .....73

    A.2 Host networking configuration using vsphere.....74

**APPENDIX B. VMWARE VSPHERE ORACLE COMMUNICATIONS USER DATA REPOSITORY DEPLOYMENT .....78**

    B.1 Create Guests from OVA.....78

    B.2 Configure Guest Resources .....81

    B.3 Configure Guest Network .....87

**APPENDIX C. VMWARE VCLOUD DIRECTOR ORACLE COMMUNICATIONS USER DATA REPOSITORY DEPLOYMENT .....90**

    C.1 vCloud Director Oracle Communications User Data Repository Media Upload.....90

    C.2 Create vApp .....93

    C.3 Create Guests from vAPP .....95

    C.4 Configure Guest Resources and NETWORKING .....99

    C.5 Create Guest from ISO .....101

**APPENDIX D. OPENSTACK CLOUD ORACLE COMMUNICATIONS USER DATA REPOSITORY .....105**

    D.1 OpenStack Image Creation from OVA.....105

    D.2 Create Resource Profiles (Flavors).....107

    D.3 Create Key Pair .....108

    D.4 Update UDR Stack Yaml File .....109

    D.5 Create VM Instances Using Yaml File .....111

    D.6 Extend VM Instance Volume Size.....114

    D.7 VM Instance Network Configuration .....117

    D.8 Virtual IP Address Assignment .....118

    D.9 Generate Private Key for SSH Access.....122

    D.10 Accessing VM Instance using SSH .....125

    D.11 Clobber the database on VM Instance .....127

    D.12 Associating Floating IPs.....129

**APPENDIX E. SAME NETWORK ELEMENT AND HARDWARE PROFILES..... 131**

**APPENDIX F. HIGH AVAILABILITY CONFIGURATIONS ..... 133**

**APPENDIX G. RESOURCE PROFILE ..... 134**

**APPENDIX H. NETWORK DEVICE ASSIGNMENTS..... 135**

**APPENDIX I. NETWORK AND PORT INFORMATION ..... 136**

**APPENDIX J. INSTALL UDR ON ORACLE LINUX OS VIA KVM..... 138**

**APPENDIX K. MY ORACLE SUPPORT..... 156**

**APPENDIX L. LOCATE PRODUCT DOCUMENTATION ON THE ORACLE HELP CENTER SITE ..... 157**

**APPENDIX M. CREATE AND INSTALL UDR VM VIA KVM GUI..... 158**

**APPENDIX N. ORCHESTRATING UDR VIA OSM..... 164**

    N.1 Configure Openstack VIM to run with OSM ..... 164

    N.2 Configure Config Agent Account (Juju Server) ..... 165

    N.3 Build and Deploy UDR NSD/VNFD Package..... 166

    N.4 Perform Orchestration operations via OSM ..... 173

    N.5 Instantiate UDR ..... 174

    N.6 Terminate UDR ..... 175

**APPENDIX O. ORCHESTRATING UDR VIA TACKER..... 176**

    O.1 Tacker Configuration ..... 176

    O.2 Install UDR Tacker Support Scripts ..... 177

    O.3 Perform Orchestration Operations via Tacker..... 178

    O.4 CREATE UDR VNF (Instantiation)..... 179

    O.5 DELETE UDR VNF (Termination)..... 179

**APPENDIX P. MOUNTING VIRTUAL MEDIA ON ORACLE RMS SERVERS..... 180**

## List of Tables

Table 1. Acronyms.....	9
Table 2. Installation Overview .....	13

## List of Procedures

Procedure 1: Verify Deployment Options and Cloud Resources .....	14
Procedure 2: Deploy Oracle Communications User Data Repository Virtual Machines on VMware.....	15
Procedure 3: Deploy User Data Repository Virtual Machines on OpenStack .....	16
Procedure 4: Deploy User Data Repository Virtual Machines on Oracle Linux/KVM.....	17
Procedure 5: Configure UDR-A Server (1st NOAMP only) .....	18
Procedure 6: Create Configuration for Remaining Servers.....	29
Procedure 7: Apply Configuration to Remaining Servers .....	35
Procedure 8: Configure XSI Networks.....	39
Procedure 9: OAM Pairing for Primary UDR Servers (1st NOAMP site only).....	41
Procedure 10: OAM Pairing for DR Sites.....	53
Procedure 11: SSH Logon to Juju Server and fetch build and deploy source scripts.....	166

## Chapter 1. Introduction

### 1.1 Purpose and Scope

This document describes the application-related installation procedures for an VMware User Data Repository system for Diameter Signal Router 9.0.

This document assumes that platform-related configuration has been completed.

The audience for this document includes Oracle customers as well as these groups: Software System, Product Verification, Documentation, and Customer Service including Software Operations and First Office Application.

### 1.2 References

- [1] Oracle Communications User Data Repository Cloud Resource Profile, E67495, latest revision
- [2] Oracle Communications User Data Repository Installation and Configuration Guide, E72453, latest revision
- [3] Oracle Communications User Data Repository Cloud Disaster Recovery Guide, E72458, latest revision

### 1.3 Acronyms

An alphabetized list of acronyms used in this document.

**Table 1. Acronyms**

Acronym	Definition
BIOS	Basic Input Output System
CD	Compact Disk
UDR	User Data Repository
ESXi	Elastic Sky X Integrated
FABR	Full Address Based Resolution
iDIH	Integrated Diameter Intelligence Hub
IPFE	IP Front End
IPM	Initial Product Manufacture—the process of installing TPD
IWF	Inter Working Function
NAPD	Network Architecture Planning Diagram
OS	Operating System (for example, TPD)
OVA	Open Virtualization Appliance
PDRA	Policy Diameter Routing Agent
PCA	Policy and Charging Application
RBAR	Range Based Address Resolution
SAN	Storage Area Network
SFTP	Secure File Transfer Protocol
SNMP	Simple Network Management Protocol

Acronym	Definition
TPD	Tekelec Platform Distribution
VM	Virtual Machine

## 1.4 Terminology

Multiple server types may be involved with the procedures in this manual. Therefore, most steps in the written procedures begin with the name or type of server to which the step applies.

*Each step has a checkbox for every command within the step that the technician should check to keep track of the progress of the procedure.*

1. <input type="checkbox"/>	<b>ServerX:</b> Connect to the console of the server	Establish a connection to the server using cu on the terminal server/console.  \$ cu -l /dev/ttyS7
-----------------------------	---	--

**Figure 1. Example of an instruction that indicates the server to which it applies**

## 1.5 Assumptions

This procedure assumes that:

- You have the assigned values from the network and used the values to compile XML files (see Appendix C) for each NOAMP NE site before performing this procedure.
- You have at least an intermediate skill set with command prompt activities on an Open Systems computing environment such as Linux or TPD.

## 1.6 XML Files (for installing NE)

The XML files compiled for the installation of each NOAMP NE site must be maintained and accessible for use in Disaster Recovery procedures. The Professional Services Engineer (PSE) gives a copy of the XML files used for installation to the designated Customer Operations POC. You are ultimately responsible for maintaining and providing the XML files to My Oracle Support if needed for use in Disaster Recovery operations. For more details on Disaster Recovery refer to Oracle Communications User Data Repository Cloud Disaster Recovery Guide.

## **1.7 How to use this Document**

Although this document is primarily to be used as an initial installation guide, its secondary purpose is to be used as a reference for Disaster Recovery procedures Oracle Communications User Data Repository Cloud Disaster Recovery Guide. When using this document for either purpose, there are a few points which help to ensure that you understand the intent of the author. These points are as follows;

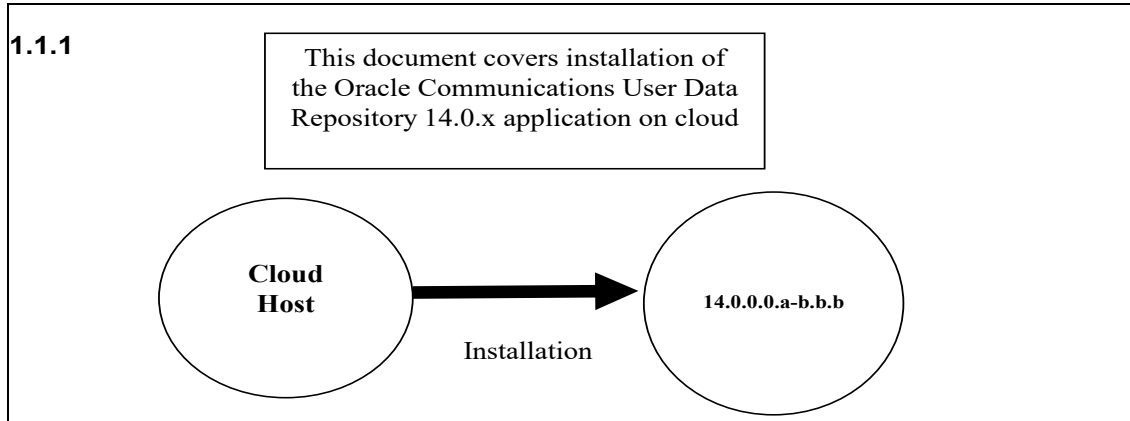

1. Before beginning a procedure, completely read the instructional text (immediately after the Section heading for each procedure) and all associated procedural warnings or notes.
2. Before performing a step in a procedure, completely read the left and right columns including any step specific warnings or notes.

If a procedural step fails to complete successfully, stop and contact My Oracle Support for assistance before attempting to continue.

## Chapter 2. General Description

This document defines the steps to perform the initial installation of the Oracle Communications User Data Repository application on a VMware hypervisor.

Figure 2 show the Oracle Communications User Data Repository installation paths. The general timeline for all processes to perform a software installation/configuration and upgrade is also included below.

**Figure 2. Example of Initial Application Installation Path**

### 2.1 Required Materials

The following materials are required to complete Oracle Communications User Data Repository installation:

1. Target release Oracle Communications User Data Repository OVA Media
2. Target release Oracle Communications User Data Repository ISO Media only for ISO installs
3. Target release TPD Media only for ISO installs

The software media referenced here may be acquired online from the Oracle e-Delivery service at [edelivery.oracle.com](http://edelivery.oracle.com).

This document and others referenced here can be acquired online from the Oracle Document Repository at the <http://docs.oracle.com/en/industries/communications/user-data-repository/index.html>

### 2.2 Installation Overview

This section describes the overall strategy to be used for a single or multi-site installation. It also lists the procedures required for installation with estimated times. Section 3.2.3 lists the steps required to install a Oracle Communications User Data Repository system. These sections expand on the information from the matrix and give a general timeline for the installation.

## 2.3 Installation List of Procedures

The following table illustrates the progression of the installation process by procedure with estimated times. The estimated times and the phases that must be completed may vary due to differences in typing ability and system configuration. The phases outlined are to be performed in the order listed.

**Table 2. Installation Overview**

Procedure	Phase	Elapsed Time (Minutes)	
		This Step	Cum.
<b>Procedure 1</b>	Verify Deployment Options and Cloud Resources	5	5
<b>Procedure 2</b>	Deploy Oracle Communications User Data Repository Virtual Machines on VMware	20	25
<b>Procedure 3</b>	Deploy Oracle User Data Repository Virtual Machines on OpenStack (Only for OpenStack deployments)	20	25
<b>Procedure 4</b>	Deploy Oracle User Data Repository Virtual Machines on Oracle Linux/KVM	20	25
<b>Procedure 5</b>	Configure UDR-A Server (1st NOAMP only)	25	50
<b>Procedure 6</b>	Create Configuration for Remaining Servers	15	65
<b>Procedure 7</b>	Apply Configuration To Remaining Servers	15	80
<b>Procedure 8</b>	Configure XSI Networks	10	90
<b>Procedure 9</b>	OAM Pairing for Primary UDR Servers (1st NOAMP site only)	10	100
<b>Procedure 10</b>	OAM Pairing for DR Sites	15	115
<b>Procedure 11</b>	Configure UDR Signaling Routes ( <b>All NOAM Sites</b> )	10	145
<b>Procedure 12</b>	Configure Services on Signaling Network	5	150
<b>Procedure 13</b>	Accept Installation	5	155

## Chapter 3. Pre-Installation Procedure

### 3.1 Verify Deployment Options and Cloud Resources

This procedure determines appropriate HA Configurations and VM profiles for the deployment, as well as verifies the environment.

#### Procedure 1: Verify Deployment Options and Cloud Resources

Step	Procedure	Result
1. <input type="checkbox"/>	Decide which profile to deploy	<p>The first step in deploying Oracle Communications User Data Repository for cloud is to review the resource profiles stated in Oracle Communications User Data Repository Cloud resource profile. A choice of HA configuration and resource profile must be driven by the available resources and expected use of the Oracle Communications User Data Repository deployment.</p> <ul style="list-style-type: none"> <li>• For demo purposes a OVA lab profile is the best option.</li> <li>• For support of larger datasets, ISO installation may be required.</li> </ul>
2. <input type="checkbox"/>	Ensure availability of cloud resources	<p>If you are using vCloud Director or vSphere as a non-privileged user, contact your cloud administrator to ensure the availability of sufficient process, memory, storage and network resources to meet the requirements of your chosen configuration and profile in Step 1</p> <p><b>NOTE:</b> If you are a privileged user with VMWare vSphere, you can leverage procedures in 0 to configure storage and host networking for hosting Oracle Communications User Data Repository.</p>
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## Chapter 4. Cloud Creation

### 4.1 Deploy Oracle Communications User Data Repository Virtual Machines on VMware

This procedure creates Oracle Communications User Data Repository virtual machines (guests) on VMware infrastructure.

**Requirements:**

- 3.1 Verify Deployment Options and Cloud Resources has been completed.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure 2: Deploy Oracle Communications User Data Repository Virtual Machines on VMware**

Step	Procedure	Result
1. <input type="checkbox"/>	Ready Installation media	<ul style="list-style-type: none"> <li>• If using vSphere client, place installation media (OVA, or ISO) onto your local machine.</li> <li>• If using vCloud Director, upload installation media using Appendix C.1: vCloud Director Oracle Communications User Data Repository Media Upload</li> </ul>
2. <input type="checkbox"/>	Create vApp	<ul style="list-style-type: none"> <li>• If using vCloud Director, follow: Appendix C.2: Create vApp</li> <li>• If using vSphere client proceed to the next step.</li> </ul>
3. <input type="checkbox"/>	Create Oracle Communications User Data Repository guests	<ul style="list-style-type: none"> <li>• If using vSphere client, follow: Appendix B: Create Guests from OVA</li> <li>• If using vCloud Director, follow: Appendix C.5: Create Guests from ISO or Appendix C.3: Create Guests from OVA</li> </ul> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
4. <input type="checkbox"/>	Configure guest resources  <b>Only OVA installs</b>	<ul style="list-style-type: none"> <li>• If using vSphere client to install by OVA, follow: Appendix B.2: Configure Guest Resources</li> <li>• If using vCloud Director to install by OVA, follow: Appendix C.4: Configure Guest Resources</li> <li>• If installing by ISO proceed to the next step.</li> </ul> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
5. <input type="checkbox"/>	Install guest OS  <b>Only ISO installs</b>	<p>Only for ISO installs using vCloud Director, follow Appendix C.6: Install Guests from ISO</p> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>

Step	Procedure	Result
6. <input type="checkbox"/>	Configure guest OAM network	<p>If using vSphere client, follow:</p> <ul style="list-style-type: none"> <li>Appendix B.3: Configure Guest Network</li> </ul> <p>If using vCloud Director, follow:</p> <ul style="list-style-type: none"> <li>Appendix C.7: Configure Guests Network</li> </ul> <p>Mark the check box as addition is completed for each server.</p> <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## 4.2 Deploy Oracle User Data Repository Virtual Machines on OpenStack

This procedure creates User Data Repository virtual machines (guests) on OpenStack.

### Requirements:

- Section 3.1 has been completed

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure 3: Deploy User Data Repository Virtual Machines on OpenStack

Step	Procedure	Result
1. <input type="checkbox"/>	Ready Installation media	Create and import OVA image file to OpenStack using Appendix D.1: OpenStack Image Creation from OVA
2. <input type="checkbox"/>	Create Resource Profile	Create Resource Profile (Flavor) on OpenStack following: Appendix D.2: Create Resource Profiles (Flavors)
3. <input type="checkbox"/>	Create Key Pair	Create Key Pair on OpenStack following: Appendix D.3: Create Key Pair
4. <input type="checkbox"/>	Update the Yaml File	Update the UDR Stack Yaml file following: Appendix D.4: Update UDR Stack Yaml File
5. <input type="checkbox"/>	Create VM Instances	On OpenStack, follow this to create VM instances: Appendix D.5: Create VM Instances Using Yaml File
6. <input type="checkbox"/>	Configure guest OAM network	<p>Follow this step to configure OAM network for VM instances: Appendix D.7: VM Instance Network Configuration</p> <p>Mark the check box as addition is completed for each server.</p> <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B
7. <input type="checkbox"/>	Associate Floating IP	<p>Associate Floating IPs to the VM Instances if Floating IPs are available in cloud following: Appendix D.12: Associating Floating IPs</p> <p>Mark the check box as addition is completed for each server.</p> <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B
		<b>NOTE:</b> This step is only needed if none of the networks assigned to VM Instances is a Public Network.

Step	Procedure	Result
8. <input type="checkbox"/>	Create Virtual IPs	Assigning floating IP address to VIP, see Appendix D.8 Virtual IP Address Assignment  <b>NOTE:</b> This step is only needed if none of the networks assigned to VM Instances is a Public Network.
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

### 4.3 Deploy Oracle User Data Repository Virtual Machines on Oracle Linux/KVM

This procedure creates User Data Repository virtual machines (guests) on Oracle Linux/KVM.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

#### Procedure 4: Deploy User Data Repository Virtual Machines on Oracle Linux/KVM

Step	Procedure	Result
9. <input type="checkbox"/>	Install Oracle Linux/KVM and create VMs	Install Oracle Linux/KVM on the host and create VMs using Virtual Machine Manager by following the below procedure:  Appendix J Install UDR on Oracle Linux OS via KVM
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## Chapter 5. Oracle Communications User Data Repository Server Configuration

### 5.1 Configure UDR-A Server (1<sup>st</sup> NOAMP only)

This procedure does all steps that are necessary for configuring the first UDR server. This includes creating the NOAMP Network Element, configuring Services and creating/configuring the first UDR-A server.

**Requirements:**

- Chapter 4 Cloud Creation has been completed

**Assumptions:**

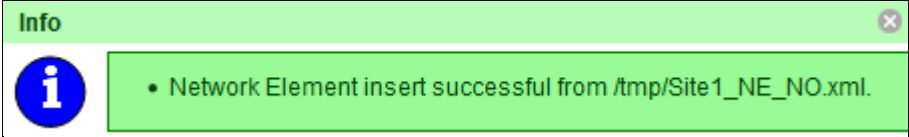

- This procedure assumes that the Oracle Communications User Data Repository Network Element XML file for the Primary Provisioning NOAMP site has previously been created, as described in Appendix E.
- This procedure assumes that the Network Element XML files are either on a USB flash drive or the hard drive of the laptop. The steps are written as if the XML files are on a USB flash drive, but the files can exist on any accessible drive.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure 5: Configure UDR-A Server (1st NOAMP only)**

Step	Procedure	Result
1. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Launch an approved web browser and connect to the UDR Server A IP address</p> <p><b>NOTE:</b> Click <b>Continue to this website (not recommended)</b> if the security certificate warning displays.</p>	
2. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>The login screen opens.</p> <p>Login to the GUI using the default user and password.</p>	

Step	Procedure	Result
3. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>The Oracle Communications User Data Repository Main Menu displays.</p>	
4. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p><b>Configuring Network Element</b></p> <p>Navigate to <b>Main Menu → Configuration → Networking → Networks</b></p>	
5. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Go to the <b>Configuration → Networking → Networks</b> screen.</p> <p>Click <b>Browse</b>.</p>	
6. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p><b>NOTE:</b> This step assumes that the XML files were previously prepared, as described in Appendix C.</p> <ol style="list-style-type: none"> <li>Select the location containing the site XML file.</li> <li>Select the XML file and click the <b>Open</b>.</li> </ol>	

Step	Procedure	Result
7. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Click <b>Upload File</b> (bottom left corner of screen).</p>	
8. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>If the values in the XML file pass validation rules, a banner message displays showing that the data has been successfully committed to the DB.</p> <p><b>NOTE</b> You may have to left mouse click the <b>Info</b> banner option to see the message.</p>	 
9. <input type="checkbox"/>	<p>Navigate to <b>Main Menu -&gt; Configuration -&gt; Networking -&gt; Services</b></p>	
10. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Click <b>Edit</b> (located at the bottom left corner of the page).</p>	

Step	Procedure	Result																								
11. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <ol style="list-style-type: none"> <li>1. Set the services values (see Note section).</li> <li>2. Click <b>Apply</b>.</li> <li>3. Click <b>OK</b>.</li> </ol>	<div style="border: 1px solid black; padding: 10px;"> <h3 style="text-align: center;">Services</h3> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 30%;">Name</th> <th style="width: 35%;">Intra-NE Network</th> <th style="width: 35%;">Inter-NE Network</th> </tr> </thead> <tbody> <tr> <td>OAM</td> <td>IMI <input type="button" value="v"/></td> <td>XMI <input type="button" value="v"/></td> </tr> <tr> <td>Replication</td> <td>IMI <input type="button" value="v"/></td> <td>XMI <input type="button" value="v"/></td> </tr> <tr> <td>Signaling</td> <td>Unspecified <input type="button" value="v"/></td> <td>Unspecified <input type="button" value="v"/></td> </tr> <tr> <td>HA_Secondary</td> <td>IMI <input type="button" value="v"/></td> <td>XMI <input type="button" value="v"/></td> </tr> <tr> <td>HA_MP_Secondary</td> <td>IMI <input type="button" value="v"/></td> <td>XMI <input type="button" value="v"/></td> </tr> <tr> <td>Replication_MP</td> <td>IMI <input type="button" value="v"/></td> <td>XMI <input type="button" value="v"/></td> </tr> <tr> <td>ComAgent</td> <td>IMI <input type="button" value="v"/></td> <td>XMI <input type="button" value="v"/></td> </tr> </tbody> </table> <div style="text-align: center; margin-top: 10px;"> <input type="button" value="Ok"/> <input type="button" value="Apply"/> <input type="button" value="Cancel"/> </div> </div> <p><b>NOTE:</b> Servers do not need to be restarted if this is a fresh installation.</p>	Name	Intra-NE Network	Inter-NE Network	OAM	IMI <input type="button" value="v"/>	XMI <input type="button" value="v"/>	Replication	IMI <input type="button" value="v"/>	XMI <input type="button" value="v"/>	Signaling	Unspecified <input type="button" value="v"/>	Unspecified <input type="button" value="v"/>	HA_Secondary	IMI <input type="button" value="v"/>	XMI <input type="button" value="v"/>	HA_MP_Secondary	IMI <input type="button" value="v"/>	XMI <input type="button" value="v"/>	Replication_MP	IMI <input type="button" value="v"/>	XMI <input type="button" value="v"/>	ComAgent	IMI <input type="button" value="v"/>	XMI <input type="button" value="v"/>
Name	Intra-NE Network	Inter-NE Network																								
OAM	IMI <input type="button" value="v"/>	XMI <input type="button" value="v"/>

## 5.2 Create Configuration for Remaining Servers

This procedure is used to create and configure all Oracle Communications User Data Repository Servers (Primary and DR Servers) except the first UDR-A server.

### Requirements:

- Section 5.1 Configure UDR-A Server (1<sup>st</sup> NOAMP only) has been completed

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure 6: Create Configuration for Remaining Servers

Step	Procedure	Result
1. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Launch an approved web browser and connect to the UDR Server A IP address</p> <p><b>NOTE:</b> Click <b>Continue to this website (not recommended)</b> if the security certificate warning displays.</p> <p>Login to the GUI using the default user and password.</p>	
<p><i>For steps 4 through 8 add the remaining Network Elements one at a time. This includes the NO network Element for the DR elements (NO) if present. (DR elements can be uploaded during DR install)</i></p>		
2. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p><b>Configuring Network Element</b></p> <p>Navigate to <b>Main Menu → Configuration → Network Elements</b></p>	
3. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>On the <b>Configuration → Network Elements</b> screen, click <b>Browse</b>.</p>	

Step	Procedure	Result																								
4. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p><b>NOTE:</b> This step assumes that the xml files were previously prepared, as described in Appendix C.</p> <ol style="list-style-type: none"> <li>1. Select the location containing the site .xml file.</li> <li>2. Select the .xml file and click the <b>Open</b>.</li> </ol>																									
5. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Click <b>Upload File</b> (bottom left corner of screen).</p>																									
6. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>If the values in the XML file pass validation rules, a banner message displays showing that the data has been successfully committed to the DB.</p> <p><b>NOTE:</b> You may have to left mouse click the <b>Info</b> banner option to see the banner message.</p>	 <table border="1" data-bbox="592 1056 1448 1213"> <thead> <tr> <th>Network Name</th> <th>Network Type</th> <th>Default</th> <th>Locked</th> <th>Routed</th> <th>VLAN</th> <th>Configur Interface</th> <th>Network</th> </tr> </thead> <tbody> <tr> <td>xmi</td> <td>OAM</td> <td>Yes</td> <td>Yes</td> <td>Yes</td> <td>3</td> <td>2</td> <td>10.10.1.0/24</td> </tr> <tr> <td>imi</td> <td>OAM</td> <td>No</td> <td>Yes</td> <td>Yes</td> <td>2</td> <td>2</td> <td>10.10.2.0/24</td> </tr> </tbody> </table>	Network Name	Network Type	Default	Locked	Routed	VLAN	Configur Interface	Network	xmi	OAM	Yes	Yes	Yes	3	2	10.10.1.0/24	imi	OAM	No	Yes	Yes	2	2	10.10.2.0/24
Network Name	Network Type	Default	Locked	Routed	VLAN	Configur Interface	Network																			
xmi	OAM	Yes	Yes	Yes	3	2	10.10.1.0/24																			
imi	OAM	No	Yes	Yes	2	2	10.10.2.0/24																			
<p><b>NOTE:</b> The following must be run for all servers except the first UDR-A server. These steps include a check box for UDR-A server. That check box refers to UDR-A servers that are not at the primary provisioning site, such as the UDR-A server at the disaster recovery (DR) site.</p>																										
7. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Navigate to <b>Main Menu → Configuration → Servers</b></p>	 <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>																								

Step	Procedure	Result
8. <input type="checkbox"/>	<p><b>UDR Server A:</b> Click <b>Insert</b> at the bottom left.</p>	 <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
9. <input type="checkbox"/>	<p><b>UDR Server A:</b> The Adding a new server configuration screen opens.</p>	 <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
10. <input type="checkbox"/>	<p><b>UDR Server A:</b> Enter the assigned Hostname for the server.</p>	 <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
11. <input type="checkbox"/>	<p><b>UDR Server A:</b> Select the appropriate server Role from the menu.</p>	 <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>

Step	Procedure	Result

**THIS PROCEDURE HAS BEEN COMPLETED**

## 5.3 Apply Configuration To Remaining Servers

This procedure is used to apply configuration to all Oracle Communications User Data Repository Servers (Primary and DR Servers) except the first UDR-A server.

### Requirements:

- Section 5.2 Create Configuration for Remaining Servers has been completed

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure 7: Apply Configuration to Remaining Servers

Step	Procedure	Result
1. <input type="checkbox"/>	<b>UDR Server A:</b> Connect to the UDR-A Server terminal at the Primary UDR site	SSH to the Primary UDR-A XMI IP_address.  Mark the check box as addition is completed for each server. <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B
2. <input type="checkbox"/>	<b>UDR Server A:</b> 1. Access the command prompt. 2. Log into the Primary UDR-A server as the admusr user.	<pre>login as: admusr admusr@10.250.xx.yy's password: &lt;admusr_password&gt; Last login: Mon Jul 30 10:33:19 2012 from 10.25.80.199 \$</pre> Mark the check box as addition is completed for each server. <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B
3. <input type="checkbox"/>	<b>UDR Server A:</b> Change directory into the file management space	<pre>[admusr@pc9040833-no-a ~]\$ cd /var/TKLC/db/filemgmt</pre> Mark the check box as addition is completed for each server. <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B
4. <input type="checkbox"/>	<b>UDR Server A:</b> Get a directory listing and find the configuration files for the servers.	<pre>[admusr@pc9040833-no-a ~]\$ ls -ltr TKLCConfigData*.sh *** TRUNCATED OUTPUT *** -rw-rw-rw- 1 root root 1257 Aug 17 14:01 TKLCConfigData.UDR-A .sh -rw-rw-rw- 1 root root 1311 Aug 17 14:30 TKLCConfigData.NO-B.sh</pre> Mark the check box as addition is completed for each server. <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B
5. <input type="checkbox"/>	<b>UDR Server A:</b> Copy the configuration files found in the previous step to the target server based on the server name of the configuration file.	<pre>[admusr@pc9040833-no-a ~]\$ scp -p &lt;configuration_file-a&gt; &lt;Associated_Server_XMI_IP&gt;:/tmp admusr@10.240.39.4's password: &lt;admusr_password&gt; TKLCConfigData.so-carync-a.sh          100% 1741    1.7KB/s   00:00 [root@no-mrsvnc-a filemgmt]\$</pre> Mark the check box as addition is completed for each server. <input type="checkbox"/> UDR-A <input type="checkbox"/> UDR-B

Step	Procedure	Result
6. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Connect to the target server which has received a configuration file copy in the previous step</p>	<pre>[admusr@pc9040833-no-a ~]\$ ssh &lt;Associated_Server_XMI_IP &gt; admusr@192.168.1.10's password: &lt;admusr_password&gt;</pre> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
7. <input type="checkbox"/>	<p><b>Target Server:</b></p> <p>Copy the configuration file to the tmp directory.</p>	<p>Copy the server configuration file to the <code>/var/tmp</code> directory on the server, making sure to rename the file by omitting the server hostname from the file name.</p> <p><b>Example:</b></p> <pre>TKLCConfigData&lt;.server_hostname&gt;.sh translates to TKLCConfigData.sh</pre> <pre>[admusr@hostname1326744539 ~]\$ sudo cp -p /tmp/TKLCConfigData.NO- B.sh /var/tmp/TKLCConfigData.sh [admusr@hostname1326744539 ~]\$</pre> <p><b>NOTE:</b> The server polls the <code>/var/tmp</code> directory for the presence of the configuration file and automatically runs the file when it is found.</p> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
8. <input type="checkbox"/>	<p><b>Target Server:</b></p> <p>After the script completes, a broadcast message is sent to the terminal.</p> <p>Ignore the output and press <b>ENTER</b> to return to the command prompt.</p> <p><b>NOTE:</b> The time to complete this step varies by server and may take from approximately 3 to 20 minutes to complete.</p>	<p><b>*** THERE IS NO OUTPUT FOR APPROXIMATELY 20 MINUTES ***</b></p> <pre>Broadcast message from root (Thu Dec 1 09:41:24 2011): Server configuration completed successfully! See /var/TKLC/appw/logs/Process/install.log for details. Please remove the USB flash drive if connected and reboot the server. &lt;ENTER&gt; [admusr@hostname1326744539 ~]\$</pre> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
9. <input type="checkbox"/>	<p><b>Target Server:</b></p> <p>Initiate a reboot of the Server.</p>	<pre>[admusr@hostname1326744539 ~]\$ sudo reboot</pre> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>

Step	Procedure	Result
10. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>The SSH session for the target server was terminated by previous step.</p>	<p>The previous step causes the ssh session for the server to close and you are returned to the UDR server console prompt.</p> <pre>Connection to 192.168.1.16 closed by remote host. Connection to 192.168.1.16 closed. \$</pre> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
11. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Wait until server reboot is complete. Then, SSH into the target server using its XMI address.</p>	<p>Wait approximately 10 minutes until the server reboot is complete.</p> <p>Using an SSH client such as putty, ssh to the target server using admusr credentials and the &lt;XMI IP Address&gt;.</p> <pre>[admusr@pc9040833-no-a ~]\$ ssh 192.168.1.xx admusr@192.168.1.20's password: &lt;admusr_password&gt;</pre> <p><b>NOTE:</b> If the server is not up, wait a few minutes and re-enter the ssh command. You can also run the ping command to see if the server is up.</p> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
12. <input type="checkbox"/>	<p><b>Target Server:</b></p> <p>Verify that the XMI and IMI IP addresses entered in Section 5.2 Step 16 have been applied</p>	<pre>\$ ifconfig  grep in  grep -v inet6 eth0      Link encap:Ethernet  HWaddr FA:16:3E:BB:3D:AC           inet  addr:10.10.1.57  Bcast:10.10.1.255  Mask:255.255.255.0 eth1      Link encap:Ethernet  HWaddr FA:16:3E:56:C1:F9           inet  addr:10.10.2.156 Bcast:10.10.2.255  Mask:255.255.255.0 eth2      Link encap:Ethernet  HWaddr FA:16:3E:B4:BD:0A lo        Link encap:Local Loopback           inet  addr:127.0.0.1  Mask:255.0.0.0</pre> <p><b>NOTE:</b> The XMI and IMI addresses for the server can be verified by reviewing the server configuration through the Oracle Communications User Data Repository GUI.</p> <p>Navigate to <b>Main Menu → Configuration → Servers</b>.</p> <p>Scroll to line containing the hostname for the server.</p> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>

Step	Procedure	Result
13. <input type="checkbox"/>	<p><b>Target Server:</b></p> <p>Use the chronyc command to verify that the server has connectivity to the assigned Primary and Secondary NTP servers.</p>	<pre>\$ chronyc tracking</pre> <p>Reference ID : 0AFA200A (10.250.32.10)            Stratum : 4            Ref time (UTC) : Fri Mar 31 07:18:06 2023            System time : 0.000007780 seconds slow of NTP time            Last offset : -0.000021669 seconds            RMS offset : 0.000076104 seconds            Frequency : 91.397 ppm slow            Residual freq : -0.001 ppm            Skew : 0.070 ppm            Root delay : 0.038859379 seconds            Root dispersion : 0.055777617 seconds            Update interval : 260.2 seconds</p> <p>Leap status : Normal</p> <p>If offset value is in excess of five seconds, run the command below to sync time manually:</p> <pre>\$ sudo systemctl restart chronyd</pre> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
		<p><b><i>IF CONNECTIVITY TO THE NTP SERVERS CANNOT BE ESTABLISHED, STOP AND PERFORM THE FOLLOWING STEPS:</i></b></p>

<p><b>THIS PROCEDURE HAS BEEN COMPLETED</b></p>		

## 5.4 Configure XSI Networks

This procedure configures the XSI networks used on UDR to support signaling traffic.

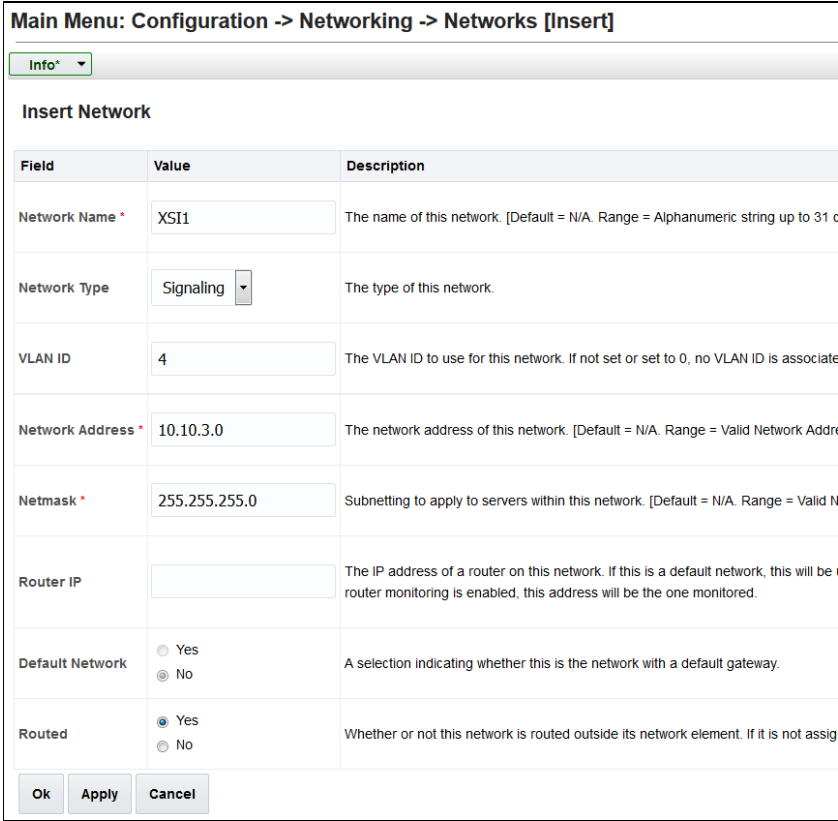

### Requirements:

- Section 5.3 Apply Configuration To Remaining Servers has been completed
- Section 5.1 Configure UDR-A Server (1<sup>st</sup> NOAMP only) has been completed

**NOTE:** If deploying two sites use the same name for both XSI networks.

### Procedure 8: Configure XSI Networks

Step	Procedure	Result
1. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Launch an approved web browser and connect to the UDR Server A IP address</p> <p><b>NOTE:</b> Click <b>Continue to this website (not recommended)</b> if the security certificate warning displays.</p> <p>Login to the GUI using the default user and password.</p>	
2. <input type="checkbox"/>	<p>UDR Server A</p> <p>Navigate to <b>Main Menu → Configuration → Networking → Networks</b></p>	

Step	Procedure	Result																
<p>3. <input type="checkbox"/></p>	<p><b>UDR Server A</b> Add the XSI1 network</p>	<p>Click  <b>Insert</b>.</p>  <p>Enter all of the fields for the XSI1 network according to the network parameters. Retain the default values for Network Element (Signalling), Default Network (No) and Routable (Yes).</p> <p>ComAgent Service may be configured to run on XSI1. In this case, the XSI1 network is used for MP to NOAMP ComAgent Traffic.</p> <p><b>NOTE:</b> Network names can be overloaded to support multiple subnets. When defining network for ComAgent Service, use same network name for Primary and DR Site.</p> <p><b>NOTE:</b> VLANs are not used in the context of this document, though VLAN ID is a required field on this screen. Enter any number in the valid range.</p>																
<p>4. <input type="checkbox"/></p>	<p><b>UDR Server A</b> Repeat as required</p>	<p>Repeat Step 3 of this procedure to Insert additional signaling networks(XSI2, etc) if applicable.</p>																
<p>5. <input type="checkbox"/></p>	<p><b>UDR Server A</b> XSI network is displayed along with a success message.</p>	 <table border="1"> <thead> <tr> <th>Network Name</th> <th>Network Type</th> <th>Default</th> <th>Locked</th> <th>Routed</th> <th>VLAN</th> <th>Configured Interfaces</th> <th>Network</th> </tr> </thead> <tbody> <tr> <td>XSI1</td> <td>Signaling</td> <td>No</td> <td>No</td> <td>Yes</td> <td>4</td> <td>0</td> <td>10.10.3.0/24</td> </tr> </tbody> </table>	Network Name	Network Type	Default	Locked	Routed	VLAN	Configured Interfaces	Network	XSI1	Signaling	No	No	Yes	4	0	10.10.3.0/24
Network Name	Network Type	Default	Locked	Routed	VLAN	Configured Interfaces	Network											
XSI1	Signaling	No	No	Yes	4	0	10.10.3.0/24											
<p><b>THIS PROCEDURE HAS BEEN COMPLETED</b></p>																		

## Chapter 6. OAM Pairing

### 6.1 OAM Pairing for Primary UDR Servers (1<sup>st</sup> NOAMP site only)

During the OAM Pairing procedure, various errors may be seen at different stages of the procedure. While performing a step, ignore errors related to values other than the ones referenced by that step.

This procedure creates an active, standby pair for the UDR servers at the Primary Provisioning Site.

#### Requirements:

- Section 5.3 Apply Configuration To Remaining Servers has been completed

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

#### Procedure 9: OAM Pairing for Primary UDR Servers (1<sup>st</sup> NOAMP site only)

Step	Procedure	Result
1. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Launch an approved web browser and connect to the UDR Server A IP address</p>	<p><b>NOTE:</b> Click <b>Continue to this website (not recommended)</b> if the security certificate warning displays.</p> <p>Login to the GUI using the default user and password.</p> 
2. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Configuring Server Group</p>	<p>Navigate to <b>Main Menu → Configuration → Server Groups</b></p> 
3. <input type="checkbox"/>	<p><b>UDR Server A:</b></p> <p>Click <b>Insert</b> located at the bottom left corner of the page.</p> <p><b>NOTE:</b> Use the vertical scroll-bar to see the <b>Insert</b> button.</p>	<p><b>Main Menu: Configuration -&gt; Server Groups</b> <span style="float: right;">Help</span></p> <p style="text-align: right;">Fri Sep 11 16:46:41 2015 EDT</p> 

Step	Procedure	Result																		
4. <input type="checkbox"/>	<p><b>UDR Server A:</b> The Server Groups [Insert] screen opens.</p>	<p><b>Adding new server group</b></p> <table border="1"> <thead> <tr> <th>Field</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Server Group Name *</td> <td><input type="text"/></td> <td>Unique identifier used to label a Server Group. **THIS PROCEDURE HAS BEEN COMPLETED**

## 6.2 OAM Pairing for DR Sites

During the OAM Pairing procedure, various errors may be seen at different stages of the procedure. While performing a step, ignore errors related to values other than the ones referenced by that step.

The steps in this procedure are for all the DR UDR servers.

This procedure creates an active, standby pair for the DR UDR Servers.

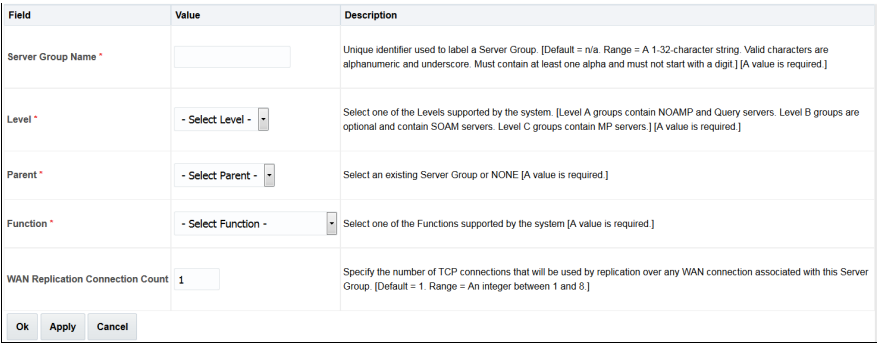

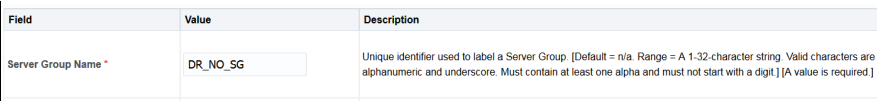

### Requirements:

- Chapter 5 Oracle Communications User Data Repository Server Configuration has been completed
- Section 6.1 OAM Pairing for Primary UDR Servers (1<sup>st</sup> NOAMP site only) has been completed

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure 10: OAM Pairing for DR Sites**

Step	Procedure	Result
<p>1. <input type="checkbox"/></p>	<p><b>Active UDR VIP:</b> Launch an approved web browser and connect to the UDR Server A IP address</p> <p><b>NOTE:</b> Click <b>Continue to this website (not recommended)</b> if the security certificate warning displays.</p> <p>Login to the GUI using the default user and password.</p>	
<p>2. <input type="checkbox"/></p>	<p><b>Active UDR VIP:</b> <b>For primary UDR standby server only:</b></p> <p>Change the HA role to forced standby for the server.</p> <ol style="list-style-type: none"> <li>1. Navigate to <b>Main Menu → Status &amp; Manage → HA</b></li> <li>2. Click <b>Edit</b> on bottom left</li> <li>3. Find the row for the primary UDR standby server and change Max Allowed HA Role to Standby.</li> </ol>	<p><b>NOTE:</b> Do not perform this step for single server installations.</p> 
<p>3. <input type="checkbox"/></p>	<p><b>Active UDR VIP:</b> Navigate to <b>Main Menu → Configuration → Server Groups</b></p>	

Step	Procedure	Result
4. <input type="checkbox"/>	<p><b>Active UDR VIP:</b> Click <b>Insert</b> located at the bottom left corner of the page.</p> <p><b>NOTE:</b> Use the vertical scroll-bar to see the <b>Insert</b> button.</p>	
5. <input type="checkbox"/>	<p><b>Active UDR VIP:</b> Configuring the DR UDR Server Group</p> <p>The Server Groups [Insert] page opens.</p>	
6. <input type="checkbox"/>	<p><b>Active UDR VIP:</b> Enter the Server Group Name.</p>	
7. <input type="checkbox"/>	<p><b>Active UDR VIP:</b> Assign the group Level.</p>	 <p>Use this setting for group level:</p> <ul style="list-style-type: none"> <li>• For DR UDR server group: select <b>A</b> on the Level menu.</li> </ul>

**THIS PROCEDURE HAS BEEN COMPLETED**

### 7.3 Accept Installation

This procedure accepts the installation/upgrade on any servers that have not been accepted. Depending on the manner of installation, there may not be any servers that require acceptance at this point in installation.

***The upgrade needs either to be accepted or rejected before any subsequent upgrades are performed.***

Alarm 32532 (Server Upgrade Pending Accept/Reject) displays for each server until one of these two actions (accept or reject) is performed.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure 13: Accept Installation**

**Configuration of UDR for EIR, FABR, MNP and SFAPP features**

After finishing installation and configuration of UDR, we need to configure the UDR for below feature by executing the loader at Active NOAMP server.

<b>Feature</b>	<b>Loader Path</b>	<b>Enabling the feature</b>
EIR	/usr/TKLC/udr/prod/maint/loaders/upgrade/enableEIRSec	Execute the loader to enable the EIR feature.
FABR	/usr/TKLC/udr/prod/maint/loaders/upgrade/enableFABRSec	Execute the loader to enable the FABR feature.
MNP	/usr/TKLC/udr/prod/maint/loaders/upgrade/enablevMNPSec	Execute the loader to enable the MNP feature.
SFAPP	/usr/TKLC/udr/prod/maint/loaders/upgrade/enableSecurityApp	Execute the loader to enable the SFAPP feature.

## Appendix A. VMWare vSphere Environment setup

### A.1 HOST DATASTORE CONFIGURATION USING VSPHERE

This procedure is performed to configure a datastore on the Host so that the appropriate storage is available for Oracle Communications User Data Repository component VMs. Steps and screenshots are taken from vSphere Client.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

If this procedure fails, contact My Oracle Support, and ask for assistance.

#### Procedure14: Host Datastore Configuration with vSphere

Step	Procedure	Details																					
1. <input type="checkbox"/>	Log into the Vmware client																						
2. <input type="checkbox"/>	<b>VMware client:</b> 1. Select the Host on the left tree menu 2. Click the <b>Configuration</b> tab on right 3. Click <b>Storage</b> under Hardware menu																						
3. <input type="checkbox"/>	<b>VMware client:</b> Click <b>Add Storage</b>	 <table border="1"> <thead> <tr> <th>Identification</th> <th>Device</th> <th>Drive Type</th> <th>Capacity</th> <th>Free</th> <th>Type</th> <th>Last</th> </tr> </thead> <tbody> <tr> <td>datastore1</td> <td>Local LSI Disk (n...</td> <td>Non-SSD</td> <td>550.25 GB</td> <td>549.30 G</td> <td>VMFSS</td> <td>2/3</td> </tr> <tr> <td>ESXi_5.5_255.168</td> <td>SUN iSCSI Disk (...</td> <td>Non-SSD</td> <td>1.17 TB</td> <td>1.17 TB</td> <td>VMFSS</td> <td>2/4</td> </tr> </tbody> </table>	Identification	Device	Drive Type	Capacity	Free	Type	Last	datastore1	Local LSI Disk (n... <b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## A.2 HOST NETWORKING CONFIGURATION USING VSPHERE

The following procedure is performed to configure the recommended Networking on the Host so that the appropriate vNICs are available for Oracle Communications User Data Repository component VMs. Steps and screenshots are taken from vSphere Client.

To view the available Networks on the Host, select the **Summary** tab. In the example below several OAM and Signaling Networks have been configured. Each of these is associated with vSwitch on the Host and physical ethernet.

Oracle Communications User Data Repository VMs can be associated with up to 5 vLAN Networks. All 5 vNICs must be created and configured in order to be available for the Guest. The expected vNICs correspond to the following dedicated interfaces of the Oracle Communications User Data Repository and so the recommendation is to label them similarly:

- XMI  
OAM Management Interface for the application
- XS11  
Signaling Interface
- XS12  
Signaling Interface
- IMI  
Replication Interface
- Guest Management  
Reserved for Guest management activities.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

If this procedure fails, contact My Oracle Support, and ask for assistance.

**Procedure15: Host Networking Configuration with vSphere**

Step	Procedure	Details
7. <input type="checkbox"/>	Log into the VMware client	
8. <input type="checkbox"/>	<p><b>VMware client:</b></p> <ol style="list-style-type: none"> <li>1. Select the <b>Host</b> on the left tree menu</li> <li>2. Click <b>Configuration</b> tab on right</li> <li>3. Click <b>Networking</b> under Hardware menu</li> </ol>	
9. <input type="checkbox"/>	<p><b>VMware client:</b></p> <ol style="list-style-type: none"> <li>1. Select <b>Add Networking</b> from top</li> <li>2. Select connection type <b>Virtual Machine</b> and click <b>Next</b></li> </ol>	

Step	Procedure	Details
<p>10. <input type="checkbox"/></p>	<p><b>VMware client:</b> Select appropriate vSwitch type based on the Host hardware and click <b>Next</b></p>	
<p>11. <input type="checkbox"/></p>	<p><b>VMware client:</b> Label the Network, enter its VLAN ID, click <b>Next</b></p>	 <p><b>NOTE:</b> It is recommended that the name reflect how the Network is used or referenced from in the Guest, ie XMI, IMI, XSI1, and so on.</p>

Step	Procedure	Details
12. <input type="checkbox"/>	<b>VMware client:</b> Review values and click <b>Finish</b>	
13. <input type="checkbox"/>	Repeat this procedure for each network	Repeat this procedure for each network type that is supported by this VMWare host: <input type="checkbox"/> XMI <input type="checkbox"/> IMI <input type="checkbox"/> XSI-1 <input type="checkbox"/> XSI-2 (optional)

## B.3 CONFIGURE GUEST NETWORK

This procedure configures the OAM network on Oracle Communications User Data Repository virtual machines (guests).

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure18: Configure Guest OAM Network

Step	Procedure	Result
1. <input type="checkbox"/>	Log into the Vmware client	
2. <input type="checkbox"/>	<p><b>VMware client:</b></p> <ol style="list-style-type: none"> <li>Select the Oracle Communications User Data Repository virtual machine from the left tree menu</li> <li>Click the <b>Summary</b> tab</li> <li>Click <b>Edit Settings</b> under Commands</li> </ol>	

Step	Procedure	Result
<p>3. <input type="checkbox"/></p>	<p><b>VMware client:</b></p> <ol style="list-style-type: none"> <li>Take note of the Network adapter assignment under Hardware tab for each application network.</li> <li>Click <b>Cancel</b></li> </ol>	 <p>Network adapters are enumerated under the Hardware tab. Their adapter number in the Hardware column corresponds to their zero-based device name assignment in a running guest.</p> <p>For instance, in the example capture above:</p> <ul style="list-style-type: none"> <li>OAM (XMI) is on eth0 device</li> <li>OAM-1 (IMI) is on eth1 device</li> <li>Sig-A (XSI-1) is on eth2 device</li> </ul> <p>Record the NIC device number assignment of these networks:</p> <p>XMI: _____</p> <p>IMI: _____</p> <p>XSI-1: _____</p> <p>XSI-2: _____ (optional)</p>
<p>4. <input type="checkbox"/></p>	<p><b>VMware client:</b></p> <ol style="list-style-type: none"> <li>Click the <b>Console</b> tab</li> <li>Click inside the console window to bring focus there</li> </ol> <p><b>NOTE:</b> Press <b>Ctrl-Alt</b> to escape from console.</p>	
<p>5. <input type="checkbox"/></p>	<p><b>VM Console:</b></p> <p>Login to console as admusr</p>	<pre>login as: admusr Password:</pre>

Step	Procedure	Result
6. <input type="checkbox"/>	<b>VM Console:</b> Configure XMI network	1. Set the XMI device for routable OAM access:  <b>NOTE:</b> Where ethX is the interface associated with the XMI network  <pre>\$ sudo netAdm add --device=eth0 --address=&lt;Guest_XMI_IP_Address&gt; --netmask=&lt;XMI_Netmask&gt; --onboot=yes --bootproto=none</pre> 2. Add the default route for XMI:  <pre>\$ sudo netAdm add --route=default --gateway=&lt;Gateway_XMI_IP_Address&gt; --device=eth0</pre> <b>NOTE:</b> The network device may be different than shown here (eth0) if the order of network adapter insertion was other than shown. Refer to Step 3 for this assignment.
7. <input type="checkbox"/>	<b>VM Console:</b> Configure XSI network	Set the XSI device for routable signaling network access (Only for NO and MP Servers):  <b>NOTE:</b> Where ethX is the interface associated with the XSI network  <pre>\$ sudo netAdm add --device=eth2 --address=&lt;Guest_XSI_IP_Address&gt; --netmask=&lt;XSI_Netmask&gt; --onboot=yes --bootproto=none</pre> <b>NOTE:</b> The network device may be different than shown here (eth2) if the order of network adapter insertion was other than shown. Refer to Step 3 for this assignment.
8. <input type="checkbox"/>	<b>VM Console:</b> Repeat as required	Repeat Step 7 to add XS1-2 (eth3) if a second signaling network. Adjust parameter values as required.
9. <input type="checkbox"/>	<b>VM Console:</b> Exit console	<pre>\$ exit</pre> <b>NOTE:</b> Press <b>Ctrl-Alt</b> to escape from console.
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## Appendix C. VMWare vCloud Director Oracle Communications User Data Repository Deployment

### C.1 VCLLOUD DIRECTOR ORACLE COMMUNICATIONS USER DATA REPOSITORY MEDIA UPLOAD

This procedure uploads Oracle Communications User Data Repository media (ISO or OVA) into vCloud Director Catalogs.

**Needed material:**

- Oracle Communications User Data Repository OVA

**Optional material (required for ISO install only):**

- Oracle Communications User Data Repository ISO
- TPD Platform ISO

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure19: vCloud Director Oracle Communications User Data Repository Media Upload**

Step	Procedure	Result
1. <input type="checkbox"/>	Log into the VMware vCloud Director	
2. <input type="checkbox"/>	<p><b>vCloud Director:</b> Enter Oracle Communications User Data Repository catalog name in the search field and hit Enter.</p>	

Step	Procedure	Result																																				
3. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>Click the name for the appropriate catalog and proceed to Step 6</p>	 <table border="1"> <thead> <tr> <th>Name</th> <th>Version</th> <th>Status</th> <th>Shared</th> <th>External</th> <th>Owner</th> </tr> </thead> <tbody> <tr> <td>ISOS</td> <td>17</td> <td>Ready</td> <td>☞</td> <td>-</td> <td>administrator</td> </tr> <tr> <td>OCCNE</td> <td>394</td> <td>Ready</td> <td>☞</td> <td>-</td> <td>daniel.a.gonzalez</td> </tr> <tr> <td>RDVCD</td> <td>74</td> <td>Ready</td> <td>☞</td> <td>-</td> <td>ahmed.boujelben</td> </tr> <tr> <td>vAPPS</td> <td>10</td> <td>Ready</td> <td>☞</td> <td>-</td> <td>administrator</td> </tr> <tr> <td>vUDRapps</td> <td>3</td> <td>Ready</td> <td>☞</td> <td>-</td> <td>siddhartha.p.pandey@oracle.co..</td> </tr> </tbody> </table> <p><b>NOTE:</b> If a catalog for Oracle Communications User Data Repository does not exist, create one using steps 4 and 5.</p>	Name	Version	Status	Shared	External	Owner	ISOS	17	Ready	☞	-	administrator	OCCNE	394	Ready	☞	-	daniel.a.gonzalez	RDVCD	74	Ready	☞	-	ahmed.boujelben	vAPPS	10	Ready	☞	-	administrator	vUDRapps	3	Ready	☞	-	siddhartha.p.pandey@oracle.co..
Name	Version	Status	Shared	External	Owner

4. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>Click Catalogs from Content Libraries menu.</p> <p>Click the 'NEW'.</p>	 <p>The screenshot shows the 'Catalogs' page in vCloud Director. On the left, there is a 'Content Libraries' menu with options for 'vApp Templates', 'Media &amp; Other', and 'Catalogs'. The 'Catalogs' option is selected. On the right, there is a 'NEW' button and a table showing the 'ISOS' catalog with version 17 and status 'Ready'.</p>																																				
5. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>1. Enter the catalog name and description.</p> <p>2. Unless this catalog requires special storage or sharing, click <b>Finish</b>.</p>	 <p>The screenshot shows the 'New Catalog' dialog box. It has a 'Name this Catalog' section with a text input field containing 'OCUDR' and a red asterisk indicating a required field. Below it is a 'Description' text area containing 'Media catalog for OCUDR'. At the bottom, there are 'Back', 'Next', 'Finish', and 'Cancel' buttons.</p> <p><b>NOTE:</b> After clicking Finish, return to Step 2 of this procedure to access the catalog.</p>																																				

Step	Procedure	Result
6. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <ul style="list-style-type: none"> <li>• Select. <b>vApp Templates</b> for OVA upload</li> <li>• Select <b>Media &amp; Other</b> for ISO upload</li> </ul>	
7. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>Click the Blue Gear Symbol and then select <b>Upload</b></p>	

Step	Procedure	Result
8. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>Select Source as either URL or local file then enter a Name.</p> <p>Click <b>Upload</b>.</p>	
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## C.2 CREATE VAPP

This procedure creates and configure a vApp virtual appliance.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure20: Create vApp

Step	Procedure	Result
1. <input type="checkbox"/>	<p>Log into the VMware vCloud Director</p>	
2. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>Select <b>Libraries</b> tab, then click <b>vApp Template</b> and click 'NEW'</p>	

Step	Procedure	Result
3. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>1.. Enter the link of ova or uploaded and Click <b>Next</b>.</p>	
4. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>click '<b>NEXT</b>'</p>	
5. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p><b>Select vApp Template Name.</b></p> <p>Provide Name and chose catalog Click <b>Next</b>.</p>	

Step	Procedure	Result
6. <input type="checkbox"/>	<b>vCloud Director:</b> Review and Click <b>FINISH</b> .	 <p style="text-align: center;"><b>THIS PROCEDURE HAS BEEN COMPLETED</b></p>

### C.3 CREATE GUESTS FROM VAPP

This procedure creates Oracle Communications User Data Repository virtual machines (guests) from vApp.

Note: Appendix C.2 should be completed.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

#### Procedure21: Create Guests from vAPP with vCloud Director

Step	Procedure	Result
1. <input type="checkbox"/>	Log into the VMware vCloud Director	

Step	Procedure	Result
<p>2. <input type="checkbox"/></p>	<p><b>vCloud Director:</b> Click <b>Applications</b> tab and search <b>vAPP</b> created on <b>Appendix c.2</b>.</p>	 <p>The screenshot shows the VMware Cloud Director interface. At the top, there are tabs for 'Data Centers' and 'Applications'. The 'Applications' tab is active, showing 'Virtual Applications' and 'Virtual Machines' sub-tabs. A search bar is present with the text 'Find by: Name'. Below the search bar, it indicates '5 Virtual Applications' and 'Expired: No'. A 'NEW' button is visible. The main content area features a card for 'UDR-14.0' which is 'Powered on'. The card displays details: 'Runtime lease: Never Suspends', 'Created On: 12/07/2022, 03:29:50 PM', and 'Owner: siddhartha.p.pandey@oracle.c...'. Below these details, there are links for 'VMs' (6) and 'VM Consoles'. At the bottom of the card, there are icons and values for 'CPUs' (84), 'Storage' (2.3 TB), 'Memory' (352 GB), and 'Networks' (4).</p>
<p>3. <input type="checkbox"/></p>	<p><b>vCloud Director:</b> Click on UDR-14.0 vAPP and choose <b>Add VM</b> from 'ALL ACTION' drop down.</p>	 <p>The screenshot shows the VMware Cloud Director interface for the 'UDR-14.0' vAPP. The left sidebar contains a navigation menu with categories like 'Compute', 'Networking', 'Storage', and 'Settings'. The main area shows the 'Info' tab for 'UDR-14.0', which is 'Powered on'. The 'Info' tab displays fields: Name (UDR-14.0), State (Powered on), Description (UDR 14.0), Data center (vCNE), Owner (siddhartha.p.pandey@oracle.c...), and Snapshot (-). An 'Add' dropdown menu is open over the 'Info' tab, showing options: 'Add VM', 'Add Network', 'Add', 'Create Template', 'Convert To VM', 'Edit Badges', and 'Delete'. The 'Add' option is highlighted.</p>

Step	Procedure	Result
4. <input type="checkbox"/>	<b>vCloud Director:</b> 1. Click on 'ADD VIRTUAL MACHINE'	 <p>Add VMs to UDR-14.0</p> <p>You can search the catalog for virtual machines to add to this vApp or add a new, blank VM. Once the vApp is created, you can power on the new VM and install an operating system.</p> <p>Virtual Machines   OS   Compute</p> <p>ADD VIRTUAL MACHINE</p> <p>CANCEL ADD</p>

Step	Procedure	Result
5. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <ol style="list-style-type: none"> <li>1. Fill the details, chose the vApp Name created on C.2</li> <li>2. Select the storage, network details</li> <li>3. Accept the Licence and press 'Ok'</li> </ol>	<p>The result consists of three sequential screenshots from the vCloud Director 'New VM' wizard:</p> <ul style="list-style-type: none"> <li><b>First Screenshot:</b> Shows the 'New VM' dialog with fields for Name (OCUDR-NOAMP-A), Computer Name (OCUDR-NOAMP-A), and Description (Active node server). The 'Type' is set to 'From Template'. A table of 'All VM templates' is shown below, with the selected template being 'vm' (UDR 14.0, vUDRapps, Oracle Linux 4/5/6/7 (64-bit), CPU 1, Memory 6 GB).</li> <li><b>Second Screenshot:</b> Shows the 'NICs' configuration screen. A table lists network adapters with columns for Primary NIC, NIC, Connected, Network Adapter Type, Network, IP Mode, IP Address, and MAC Address. One NIC is configured with 'oam-network' and 'Static - IP P' mode.</li> <li><b>Third Screenshot:</b> Shows the 'End User License Agreements' screen. It contains a warning message about Oracle proprietary software and provides 'ACCEPT' and 'REJECT' buttons.</li> </ul>

Step	Procedure	Result
6. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>1. Click on 'virtual machines' VM will be shown.</p>	
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

### C.4 CONFIGURE GUEST RESOURCES AND NETWORKING

This procedure configures Oracle Communications User Data Repository virtual machines (guests) which have been created from OVA.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure22: Configure Guests from OVA with vCloud Director**

Step	Procedure	Result
1. <input type="checkbox"/>	Log into the VMware vCloud Director	
2. <input type="checkbox"/>	<p><b>vCloud Director:</b></p> <p>Navigate to <b>Compute</b> → <b>vAPPS</b> → <b>Virtual Machines</b></p>	

Step	Procedure	Result
<p>3. <input type="checkbox"/></p>	<p><b>vCloud Director:</b>                      1. Select the VM.                      2. Click the 'POWER OFF'</p>	
<p>4. <input type="checkbox"/></p>	<p><b>vCloud Director:</b>                      Chose the resource type from left side menu.</p>	

Step	Procedure	Result
5. <input type="checkbox"/>	<b>vCloud Director:</b> 1. Go to the <b>Hardware</b> tab. 2. Adjust the number of Virtual CPUs and Total Memory to match the role of the servers in [1]. 3. Select <b>Expose hardware-assisted CPU virtualization to guest OS</b> . 4. Adjust NICs to match the role of the server role in [1]. 5. Click <b>SAVE</b> .	 
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

### C.5 CREATE GUEST FROM ISO

This procedure creates Oracle Communications User Data Repository virtual machines (guests) from ISO.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure23: Create Guests from ISO with vCloud Director**

Step	Procedure	Result
1. <input type="checkbox"/>	Log into the VMware vCloud Director	
2. <input type="checkbox"/>	<b>vCloud Director:</b> Click <b>Applications</b> tab and then 'Virtual Machines' tab	
3. <input type="checkbox"/>	<b>vCloud Director:</b> Click on 'NEW VM' and choos 'Virtual Data Center' followed by 'NEXT' button.

## Appendix D. OpenStack Cloud Oracle Communications User Data Repository

This appendix contains procedures for deploying Oracle Communications User Data Repository on the Openstack platform. The steps here contain references to third party interfaces, the accuracy of which cannot be guaranteed. Appearance and function may differ between versions of Openstack software and deployments of Openstack cloud computing.

**IMPORTANT NOTE:** The content of this appendix is for informational purposes only. Consult the latest documents from the vendor of your OpenStack distribution.

### D.1 OPENSTACK IMAGE CREATION FROM OVA

This procedure converts application media (OVA) to qcow2 format and upload it into OpenStack.

#### Needed material:

- Oracle Communications User Data Repository OVAs

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

#### Procedure26: OpenStack Image Creation from OVA

Step	Procedure	Result
1. <input type="checkbox"/>	1. Login to OpenStack Controller Node using root user 2. Create /home/ova dir	login as: root root@100.65.218.136's password: <root_password> Last login: Thu Feb 9 21:10:59 2016 from 10.182.167.73 [root@pc12107008 ~]# mkdir -p /home/ova [root@pc12107008 ~]# cd /home/ova
2. <input type="checkbox"/>	Transfer OVA file this dir using sftp tool	[root@pc12107008 ova]# ll -rw-r--r-- 1 root root 1519329280 Feb 2 03:40 UDR-12.5.1.0.0_17.7.0.ova
3. <input type="checkbox"/>	Untar this ova file	[root@pc12107008 ova]# tar xvf UDR-12.5.1.0.0_17.7.0.ova UDR-17_7_0.ovf UDR-17_7_0.mf UDR-17_7_0.vmdk
4. <input type="checkbox"/>	Convert this vmdk file to qcow2 file	[root@pc12107008 ova]# qemu-img convert -O qcow2 UDR-17_7_0.vmdk UDR-17_7_0.qcow2

Step	Procedure	Result																
5. <input type="checkbox"/>	Import converted qcow2 file into OpenStack	<pre>[root@pcl2107008 ova]# source /root/keystonerc_admin [root@pcl2107008 ova(keystone_admin)]# time glance image-create --name UDR-17_7_0 --disk-format=qcow2 --container-format=bare -- visibility=public--          file= UDR-17_7_0.qcow2 +-----+   Property            Value                                  +-----+   checksum            81e7f682231b108e29053e9516ff91ac       container_format    bare                                      created_at          2019-02-9T06:56:51                      deleted             False                                    deleted_at          None                                      disk_format         qcow2                                     id                  ee0ffa59-356b-4b32-aea2-b0cdf9063653     is_public           True                                      min_disk            0   min_ram             0   name                UDR-17_7_0                               owner               63efbafd70864562aa6440abfca60ca5        protected           False                                     size                3615227904                               status              active                                    updated_at          2016-03-29T06:57:16                     virtual_size        None                                    +-----+  real    0m26.267s user    0m2.435s sys     0m2.691s</pre>

## D.2 CREATE RESOURCE PROFILES (FLAVORS)

This procedure creates resource profiles called flavors to aid in VM creation.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure27: Create Resource Profiles (Flavors)

Step	Procedure	Result																																			
1. <input type="checkbox"/>	Login to the OpenStack GUI  <b>NOTE:</b> Flavor profile creation may require administrative privilege.																																				
2. <input type="checkbox"/>	Select Main Menu → Admin → System Panel → Flavors	 <table border="1"> <thead> <tr> <th>Flavor Name</th> <th>VCPUs</th> <th>RAM</th> <th>Root Disk</th> <th>Ephemeral Disk</th> <th>Swap Disk</th> <th>ID</th> </tr> </thead> <tbody> <tr> <td>m1.tiny</td> <td>1</td> <td>512MB</td> <td>1GB</td> <td>0GB</td> <td>0MB</td> <td>1</td> </tr> <tr> <td>m1.small</td> <td>1</td> <td>2048MB</td> <td>20GB</td> <td>0GB</td> <td>0MB</td> <td>2</td> </tr> <tr> <td>m1.medium</td> <td>2</td> <td>4096MB</td> <td>40GB</td> <td>0GB</td> <td>0MB</td> <td>3</td> </tr> <tr> <td>udr-so</td> <td>4</td> <td>4096MB</td> <td>60GB</td> <td>0GB</td> <td>0MB</td> <td>dd866eaf-ac35-24b</td> </tr> </tbody> </table>	Flavor Name	VCPUs	RAM	Root Disk	Ephemeral Disk	Swap Disk	ID	m1.tiny	1	512MB	1GB	0GB	0MB	1	m1.small	1	2048MB	20GB	0GB	0MB	2	m1.medium	2	4096MB	40GB	0GB	0MB	3	udr-so	4	4096MB	60GB	0GB	0MB	dd866eaf-ac35-24b
Flavor Name	VCPUs	RAM	Root Disk	Ephemeral Disk	Swap Disk	ID																															
m1.tiny	1	512MB	1GB	0GB	0MB	1																															
m1.small	1	2048MB	20GB	0GB	0MB	2																															
m1.medium	2	4096MB	40GB	0GB	0MB	3																															
udr-so	4	4096MB	60GB	0GB	0MB	dd866eaf-ac35-24b																															
3. <input type="checkbox"/>	Click Create Flavor																																				

Step	Procedure	Result
4. <input type="checkbox"/>	Enter Flavor Details using Appendix G as a guide *  Name: udr-no ID: auto VCPUs: vCPUs* RAM: RAM* Root Disk: Storage* Ephemeral Disk: 0 Swap Disk: 0  <b>NOTE:</b> UDR does not require Ephemeral or Swap Disk.  Then click <b>Create Flavor</b> .	
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

### D.3 CREATE KEY PAIR

This procedure creates Key Pair to be used in VM creation.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

#### Procedure28: Create Key Pair

Step	Procedure	Result
1. <input type="checkbox"/>	Login to the OpenStack GUI  <b>NOTE:</b> Flavor profile creation may require administrative privilege.	

Step	Procedure	Result
2. <input type="checkbox"/>	Select: <b>Main Menu</b> → <b>Compute</b> → <b>Access &amp; Security</b> → <b>Key Pairs</b>	
3. <input type="checkbox"/>	Click <b>Create Key Pair</b> .	
4. <input type="checkbox"/>	Enter Key Pair Name Then click <b>Create Key Pair</b> .	
5. <input type="checkbox"/>	The Key pair automatically get downloaded to your computer.	The generated Key Pair gets downloaded automatically on creation. This is used for SSH Access to VM Instances.
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## D.4 UPDATE UDR STACK YAML FILE

This procedure updates UDR Stack Yaml File to be used in VM creation.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure29: Create Key Pair

Step	Procedure	Result
1. <input type="checkbox"/>	Download the yaml file	Go to the Oracle Help Center and download the zip file containing the <a href="#">UDR Heat Templates</a> .
2. <input type="checkbox"/>	Update Image name or ID with the name of the UDR Qcow2 to be used	Change the default value. <pre>label: Image name or ID description: UDR Image to be used for launching UDR VM default: <b>UDR-12.5.1.0.0_17.7.0</b></pre>

Step	Procedure	Result
3. <input type="checkbox"/>	Update the NTP Server IP	Change the default value. label: NTP server description: IP address of the NTP server used for UDR VM syncing time default: 192.168.56.180
4. <input type="checkbox"/>	Update the UDR flavor name if different	Change the default value. label: Flavor for UDR description: Type of instance (flavor) to be used for launching UDR VM default: UDR
5. <input type="checkbox"/>	Update the XMI Network name if different	Change the default value. label: UDR XMI network description: Network name or ID to attach UDR XMI network to. default: xmi

## D.5 CREATE VM INSTANCES USING YAML FILE

This procedure creates and configure all VM instances needed for UDR configuration.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure30: Create VM Instances Using Yaml File

Step	Procedure	Result
1. <input type="checkbox"/>	Login to the OpenStack GUI	
2. <input type="checkbox"/>	1. Select project, (for example, UDR). 2. Navigate to <b>Project</b> → <b>Orchestration</b> → <b>Stacks</b> to show all Stacks created under this project.	
3. <input type="checkbox"/>	Click <b>Launch Stack</b>	

Step	Procedure	Result
4. <input type="checkbox"/>	Select the Template File and Click <b>Next</b>	

Step	Procedure	Result
5. <input type="checkbox"/>	1. Enter the Stack Name 2. Enter the password for Openstack user 3. Click Launch to create UDR Stack	
6. <input type="checkbox"/>	Wait for stack creation to finish.	
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## D.6 EXTEND VM INSTANCE VOLUME SIZE

This procedure extends the storage capacity of a VM instance using filesystem utilities.

**Important: The steps in this procedure only apply to servers where storage demands exceed the default size of 60GB. The numbers here vary depending on the unique needs of each deployment and the specific hardware resource availability. This is to be taken as an example only. The suitability of these steps cannot be guaranteed across all deployment scenarios.**

This procedure must be performed only under these conditions:

- UDR Instance with resource profile other than lab profile

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure31: Extend VM Instance Volume Size

Step	Procedure	Result
1. <input type="checkbox"/>	Login to the VM Instance as per D.10 Accessing VM Instance using SSH	<pre>hostnamea0c2d9aa8bce login: admusr</pre>
2. <input type="checkbox"/>	Switch to root user	<pre># su - root password: &lt;root_password&gt;</pre>
3. <input type="checkbox"/>	Use fdisk to create a partition on /dev/vda  <b>NOTE:</b> First cylinder of /dev/vda3 is calculated from end cylinder of /dev/vda2, say 124810 is the next of the end cylinder of /dev/vda2	<pre>[root@hostnameb267a6968148 ~]#fdisk /dev/vda Command (m for help): p Disk /dev/vda: 171.8 GB, 171798691840 bytes 16 heads, 63 sectors/track, 332881 cylinders Units = cylinders of 1008 * 512 = 516096 bytes Sector size (logical/physical): 512 bytes / 512 bytes I/O size (minimum/optimal): 512 bytes / 512 bytes Disk identifier: 0x0008a531     Device Boot      Start         End      Blocks   Id  System /dev/vda1    *            3          523       262144   83   Linux Partition 1 does not end on cylinder boundary. /dev/vda2            523       124809    62640128   8e   Linux LVM Partition 2 does not end on cylinder boundary. ## D.9 GENERATE PRIVATE KEY FOR SSH ACCESS

This procedure is used to generate Private Key to be used for accessing VM instance via SSH.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure34: Generate Private Key for SSH Access

Step	Procedure	Result
1. <input type="checkbox"/>	Launch PuTTYGen	 <p>The screenshot shows the PuTTY Key Generator application window. The window title is 'PuTTY Key Generator'. The menu bar includes 'File', 'Key', 'Conversions', and 'Help'. The main area displays 'Key' and 'No key.'. Below this, there are three action buttons: 'Generate' (highlighted with a blue dashed border), 'Load', and 'Save private key'. There are also 'Save public key' and 'Save private key' buttons. The 'Parameters' section shows 'Type of key to generate:' with three radio buttons: 'SSH-1 (RSA)', 'SSH-2 RSA' (selected), and 'SSH-2 DSA'. The 'Number of bits in a generated key:' is set to '2048'.</p>

Step	Procedure	Result
2. <input type="checkbox"/>	Load the key file i.e *.pem generated in D.3 Create Key Pair  Click <b>OK</b>	

Step	Procedure	Result
3. <input type="checkbox"/>	<p>Save the Private Key by clicking <b>Save Private Key</b></p> <p>Click <b>Yes</b></p> <p>Click <b>Save</b></p>	 
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## D.10 ACCESSING VM INSTANCE USING SSH

This procedure is used to access VM instance via SSH. This procedure assumes following:

- Network configuration on VM insatance is complete or floating IPs have been associated with VM instance
- Private Key has been generated as per D.9 Generate Private Key for SSH Access

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure35: SSH Access to VM Instance

Step	Procedure	Result
1. <input type="checkbox"/>	Launch Putty  Specify IP Address of the VM Instance	 <p>The screenshot shows the PuTTY Configuration dialog box. On the left, a tree view shows categories: Session, Terminal, Window, and Connection. The 'SSH' option under the 'Connection' category is selected. On the right, the 'Basic options for your PuTTY session' are configured. The 'Host Name (or IP address)' is '10.75.183.194' and the 'Port' is '22'. The 'Connection type' is set to 'SSH'. Below, a list of 'Saved Sessions' includes 'Default Settings', 'BC-NO', 'axle', 'bmw-8', 'bmwhst', 'florence', and 'kors-1'. At the bottom, there are 'About', 'Help', 'Open', and 'Cancel' buttons.</p>

Step	Procedure	Result
2. <input type="checkbox"/>	<p>Navigate to <b>SSH → Auth</b></p> <p>Select the *.ppk file generated by D.9 Generate Private Key for SSH Access</p>	 <p>The screenshot shows the PuTTY Configuration dialog box with the 'SSH' category expanded to 'Auth'. The 'Auth' sub-category is selected and highlighted in blue. The right-hand pane shows the following settings:</p> <ul style="list-style-type: none"> <li><b>Options controlling SSH authentication:</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> Bypass authentication entirely (SSH-2 only)</li> <li><input checked="" type="checkbox"/> Display pre-authentication banner (SSH-2 only)</li> </ul> </li> <li><b>Authentication methods:</b> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Attempt authentication using Pageant</li> <li><input type="checkbox"/> Attempt TIS or CryptoCard auth (SSH-1)</li> <li><input checked="" type="checkbox"/> Attempt "keyboard-interactive" auth (SSH-2)</li> </ul> </li> <li><b>Authentication parameters:</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> Allow agent forwarding</li> <li><input type="checkbox"/> Allow attempted changes of username in SSH-2</li> </ul> </li> <li><b>Private key file for authentication:</b> <ul style="list-style-type: none"> <li>Text field: \Users\kotharej\Desktop\UDR_key.ppk</li> <li>Button: Browse...</li> </ul> </li> </ul> <p>Buttons at the bottom include 'About', 'Help', 'Open', and 'Cancel'.</p>

Step	Procedure	Result
3. <input type="checkbox"/>	<p>From Session Category, click Open to launch the SSH connection</p> <p>Specify username admusr when prompted</p>	
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

### D.11 CLOBBER THE DATABASE ON VM INSTANCE

This procedure clobbers the database on VM instance.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure36: Clobber Database on VM Instance**

Step	Procedure	Result
1. <input type="checkbox"/>	<p>Login to the VM with admusr via SSH as per D.10 Accessing VM Instance using SSH</p>	<pre>hostnameea0c2d9aa8bce login: admusr</pre>
2. <input type="checkbox"/>	<p>Switch to root user</p>	<pre># su - root password: &lt;root_password&gt;</pre>

Step	Procedure	Result
3. <input type="checkbox"/>	Run prod.clobber on the created instances	<pre>[root@hostname2c6772f9819e ~]# prod.clobber ...prod.clobber (RUNID=88)... ...getting current state... ## D.12 ASSOCIATING FLOATING IPS

This procedure associates Floating IP to VM instance.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure37: Associate Floating IP

Step	Procedure	Result
1. <input type="checkbox"/>	Login to the OpenStack GUI	
2. <input type="checkbox"/>	Login to the VM instance by navigating to <b>Project</b> → <b>Instances</b> → <b>More</b> → <b>Associate Floating IP</b>	

Step	Procedure	Result
3. <input type="checkbox"/>	Select the IP Address and Port to be associated  Click <b>Associate</b>	
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## Appendix E. Same Network Element and Hardware Profiles

In order to enter all the network information for a network element into an Appworks-based system, a specially formatted XML file needs to be updated with the required network information. The network information is needed to configure both the NOAMP and any SOAM Network Elements.

It is expected that the maintainer/creator of this file has networking knowledge of this product and the site at which it is being installed. The following is an example of a Network Element XML file.

The SOAM Network Element XML file needs to have same network names for the networks as the NOAMP Network Element XML file has. It is easy to accidentally create different network names for NOAMP and SOAM Network Element, and then the mapping of services to networks is not possible.

### Example Network Element XML file:

Example NOAMP Network Element XML	Example SOAM Network Element XML
<pre>&lt;?xml version="1.0"?&gt; &lt;networkelement&gt;   &lt;name&gt;NO_UDR_NE&lt;/name&gt;   &lt;networks&gt;     &lt;network&gt;       &lt;name&gt;XMI&lt;/name&gt;       &lt;vlanId&gt;3&lt;/vlanId&gt;       &lt;ip&gt;10.2.0.0&lt;/ip&gt;       &lt;mask&gt;255.255.255.0&lt;/mask&gt;       &lt;gateway&gt;10.2.0.1&lt;/gateway&gt;       &lt;isDefault&gt;true&lt;/isDefault&gt;     &lt;/network&gt;     &lt;network&gt;       &lt;name&gt;IMI&lt;/name&gt;       &lt;vlanId&gt;4&lt;/vlanId&gt;       &lt;ip&gt;10.3.0.0&lt;/ip&gt;       &lt;mask&gt;255.255.255.0&lt;/mask&gt;       &lt;nonRoutable&gt;true&lt;/nonRoutable&gt;     &lt;/network&gt;   &lt;/networks&gt; &lt;/networkelement&gt;</pre>	<pre>&lt;?xml version="1.0"?&gt; &lt;networkelement&gt;   &lt;name&gt;SO_UDR_NE&lt;/name&gt;   &lt;networks&gt;     &lt;network&gt;       &lt;name&gt;XMI&lt;/name&gt;       &lt;vlanId&gt;3&lt;/vlanId&gt;       &lt;ip&gt;10.2.0.0&lt;/ip&gt;       &lt;mask&gt;255.255.255.0&lt;/mask&gt;       &lt;gateway&gt;10.2.0.1&lt;/gateway&gt;       &lt;isDefault&gt;true&lt;/isDefault&gt;     &lt;/network&gt;     &lt;network&gt;       &lt;name&gt;IMI&lt;/name&gt;       &lt;vlanId&gt;4&lt;/vlanId&gt;       &lt;ip&gt;10.3.0.0&lt;/ip&gt;       &lt;mask&gt;255.255.255.0&lt;/mask&gt;       &lt;nonRoutable&gt;true&lt;/nonRoutable&gt;     &lt;/network&gt;   &lt;/networks&gt; &lt;/networkelement&gt;</pre>

**NOTE:** Do not include the XSI networks in a Network Element XML file.

The server hardware information is needed to configure the Ethernet interfaces on the servers. This server hardware profile data XML file is used for Appworks deployments. It is supplied to the NOAMP server so that the information can be pulled in by Appworks and presented in the GUI during server configuration. Figure 4 is an example of a server hardware profile XML file stored in the `/var/TKLC/appworks/profiles` directory.

**Figure 4: Example Server Hardware Profile XML—Virtual Guest**

```
<profile>
  <serverType>Cloud UDR</serverType>
  <available>
    <device>eth0</device>
    <device>eth1</device>
    <device>eth2</device>
    <device>eth3</device>
  </available>
  <devices>
    <device>
      <name>eth0</name>
      <type>ETHERNET</type>
    </device>
    <device>
      <name>eth1</name>
      <type>ETHERNET</type>
    </device>
    <device>
      <name>eth2</name>
      <type>ETHERNET</type>
    </device>
    <device>
      <name>eth3</name>
      <type>ETHERNET</type>
    </device>
  </devices>
</profile>
```

## Appendix F. High Availability Configurations

VM Name	Non HA		HA			
	Min number of VMs	Max number of VMs	Min number of VMs	Max number of VMs	HA config	Affinity
UDR	1	2	2	2	Active-Standby	Anti-affinity. UDRs must be hosted on different servers

**NOTES:**

Non-HA configuration is for labs and demonstrations only.

The UDR VMs raise HA alarms when deployed as singletons. For this reason, standby VMs are often deployed even in non-HA labs.

The HA Max number of VMs was used for performance testing

For Geo-Diverse configurations, DR site VMs must be hosted at a geo-diverse location from the first site

## Appendix G. Resource Profile

VM Name	VM Purpose	vCPUs					RAM(GB)					Storage(GB)				
		Small	Medium	vEIR	vMNP	vFABR-Large	Small	Medium	vEIR	vMNP	vFABR-large	Small	Medium	vEIR	vMNP	vFABR-Large
UDR	Network Operation, Administration, Maintenance, and Provisioning	6	12	18	32	56	16	32	70	120	256	220	400	400	800	800

**NOTES:**

- Lab numbers are for demonstration of functionality only and can only support 100/s SOAP provisioning with 2k/s traffic.
- 1:1vCPU to CPU ratio based on Intel(R) Xeon(R) CPU E5-2699 v3 @ 2.30GHz
- vMNP flavor must be used for Signaling Security Application(For vSTP and DSA).

### Appendix H. Network Device Assignments

Product	Role	Interface Assignment						
		Control	Platform Management	OAMP (XMI)	Local (IMI)	Signaling A (XS11)	Signaling B (XS12)	NetBackup
Platform	TVOE							
	PMAC							
UDR	NOAMP			eth0	eth1	eth2		

Legend				
Mandatory	Not Applicable	Unsupported	Optional	Suggested

## Appendix I. Network and Port Information

Network	Description	Also Known As	Optional/ Mandatory	Type	IPv6	VMs using	Services	Notes
OAMP	Routable operations, administration, maintenance and provisioning flows	External Management Interface (XMI)	Mandatory	External	No	All	AppWorks SOAP Server (TCP/18081) AppWorks GUI (TCP/443, TCP/80) AppWorks File Transfer (TCP/22) AppWorks Online Help (TCP/8081) DNS (TCP/53, UDP/53) NTP (UDP/123) SNMP gets (UDP/161) SSH (TCP/22) X11 Forwarding (TCP/6010) RPC Bind (TCP/111) Prov REST (TCP/8787) Prov SOAP (TCP/62001) Prov GUI (TCP/16530) Prov Import (TCP/16531) Prov OnDemand (TCP/16532) Prov Notifications (TCP/16535)	Local services may also run on OAM network when the target is outside the Network Element.  ComAgent Services may run over OAMP Network between Network Elements unless configured to run on Signaling A.

Local	Application internal communications	Internal Management Interface (IMI)	Mandatory	Internal	No	All	COMCOL SOAP Server (TCP/15360) COMCOL Merging (TCP/16878) COMCOL Replication (TCP/17398,17399, TCP/17400) COMCOL HA (TCP/17401,17402,17406 UDP/17401) ComAgent EventTransfer (TCP/16529) ComAgent EventTransfer Alert (TCP/16541) Imysql (TCP 15616)	OAM services may be configured to run on the Local network when the destination is inside the Network Element.

## Appendix J. Install UDR on Oracle Linux OS via KVM

**Important: The content of this appendix is for informational purposes only.**

This procedure installs UDR configuration on Oracle Linux OS with direct KVM as hypervisor.

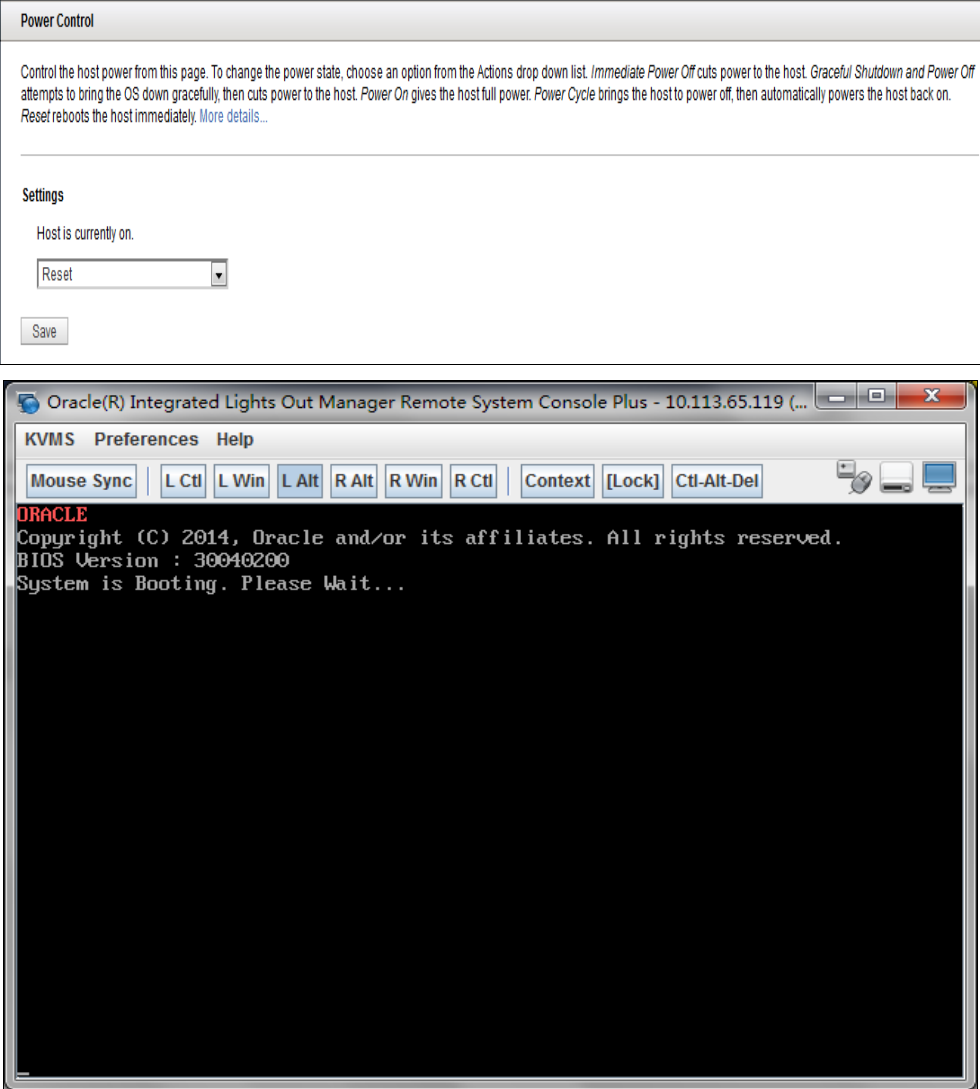

**NOTE:**

- This installation procedure only applies when installing UDR on Oracle Linux OS via direct KVM
- For the Oracle Linux OS, Oracle Linux 7.2 GA release is used and verified OK. **But 8.6 is not verified.**

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

**Procedure 38: Install UDR on Oracle Linux/KVM**

Step	Procedure	Result
1. <input type="checkbox"/>	For each Oracle X5-2 RMS, mount virtual media contains Oracle Linux OS software	Follow steps defined in <a href="#">Appendix P.1</a> Mounting Virtual Media on Oracle RMS Server to mount the Oracle Linux OS software ISO.

Step	Procedure	Result
2. <input type="checkbox"/>	For each Oracle X5-2 RMS, reboot the host.	<p>1. Login to the X5-2 iLo GUI browser page and launch remote console</p> <p>2. In ILO GUI, navigate to <b>Host Management</b> → <b>Power Control</b></p> <p>3. Select <b>Reset</b></p> <p>4. Click <b>Save</b> to reboot host.</p> <p>In remote console window, you see that the host is rebooting. Wait for the reboot to complete.</p>  <p>The screenshot shows two parts. The top part is the 'Power Control' web interface. It has a title bar 'Power Control' and a paragraph of instructions: 'Control the host power from this page. To change the power state, choose an option from the Actions drop down list. Immediate Power Off cuts power to the host. Graceful Shutdown and Power Off attempts to bring the OS down gracefully, then cuts power to the host. Power On gives the host full power. Power Cycle brings the host to power off, then automatically powers the host back on. Reset reboots the host immediately. More details...' Below this is a 'Settings' section with the text 'Host is currently on.' and a dropdown menu currently showing 'Reset'. A 'Save' button is at the bottom. The bottom part of the screenshot is a remote console window titled 'Oracle(R) Integrated Lights Out Manager Remote System Console Plus - 10.113.65.119 (...)'. It has a menu bar with 'KVMS', 'Preferences', and 'Help'. Below the menu bar are several keyboard shortcuts: 'Mouse Sync', 'L Ctl', 'L Win', 'L Alt', 'R Alt', 'R Win', 'R Ctl', 'Context', '[Lock]', and 'Ctl-Alt-Del'. The console output shows: 'ORACLE Copyright (C) 2014, Oracle and/or its affiliates. All rights reserved. BIOS Version : 30040200 System is Booting. Please Wait...' The rest of the console is black.</p>

Step	Procedure	Result
3. <input type="checkbox"/>	For each Oracle X5-2 RMS, initiate Oracle Linux Platform installation	<p>After the reboot is complete, the host boots with Oracle Linux installation ISO and the Oracle Linux GUI with the installation option opens.</p> <p>Select <b>Install Oracle Linux 7.x</b>.</p>  <p>The screenshot shows a remote system console window titled "Oracle(R) Integrated Lights Out Manager Remote System Console Plus - 10.113.65.119 (...)". The window contains a red background with the Oracle logo at the top. Below the logo, the text "Oracle Linux 7.1" is displayed. The main menu includes "Install Oracle Linux 7.1", "Test this media &amp; install Oracle Linux 7.1", and "Troubleshooting". A note at the bottom says "Press Tab for full configuration options on menu items." At the bottom left, it says "Oracle Linux" next to a penguin icon.</p>

Step	Procedure	Result
<p>4. <input type="checkbox"/></p>	<p>For each Oracle X5-2 RMS, select Oracle Linux OS language</p>	<p>1. When prompted, select <b>English</b> as Oracle Linux OS language:</p>  <p>2. Click <b>Continue</b>.</p>

Step	Procedure	Result
<p>5. <input type="checkbox"/></p>	<p>For each Oracle X5-2 RMS, setup time zone</p>	<p>The next page prompts you for Oracle Linux OS installation required information to start installation.</p>  <p>The screenshot shows the 'INSTALLATION SUMMARY' window for Oracle Linux 7.1. The window is titled 'Oracle(R) Integrated Lights Out Manager Remote System Console Plus - 10.113.65.119 (Full Control) (Full Encryption)'. It features a menu bar with 'KVMs', 'Preferences', and 'Help'. Below the menu bar are keyboard shortcuts: 'Mouse Sync', 'L Ctl', 'L Win', 'L Alt', 'R Alt', 'R Win', 'R Ctl', 'Context', '[Lock]', and 'Ctl-Alt-Del'. The main content area is divided into sections: 'LOCALIZATION' (with a sub-section 'DATE &amp; TIME' set to 'Americas/New York timezone'), 'LANGUAGE SUPPORT' (set to 'English (United States)'), 'SOFTWARE' (with 'INSTALLATION SOURCE' set to 'Local media' and 'SOFTWARE SELECTION' set to 'Server with GUI'), and 'SYSTEM' (with 'INSTALLATION DESTINATION' set to 'Automatic partitioning selected' and 'KDUMP' set to 'Kdump is enabled'). A 'NETWORK &amp; HOST NAME' section is highlighted in blue and shows 'Not connected'. At the bottom right, there are 'Quit' and 'Begin Installation' buttons. A footer note reads: 'We won't touch your disks until you click 'Begin Installation''.</p> <ol style="list-style-type: none"> <li>1. Navigate to <b>LOCALIZATION</b> → <b>DATE &amp; TIME</b>.</li> <li>2. Set time zone as Americas/New York.</li> <li>3. Click <b>Done</b> to save the changes and return to the main configuration page.</li> </ol>

Step	Procedure	Result
<p>6. <input type="checkbox"/></p>	<p><b>For each Oracle X5-2 RMS:</b> Setup installation base environment</p>	<p>1. Navigate to <b>SOFTWARE</b> → <b>SOFTWARE SELECTION</b> menu. 2. Select <b>Server with GUI</b>, and verify that these add-ons are selected:</p> <ul style="list-style-type: none"> <li>- Virtualization Client</li> <li>- Virtualization Hypervisor</li> <li>- Virtualization Tools</li> <li>- Compatibility Libraries</li> </ul>  <p>Click <b>Done</b> to save the changes and go back to the main configuration page.</p>

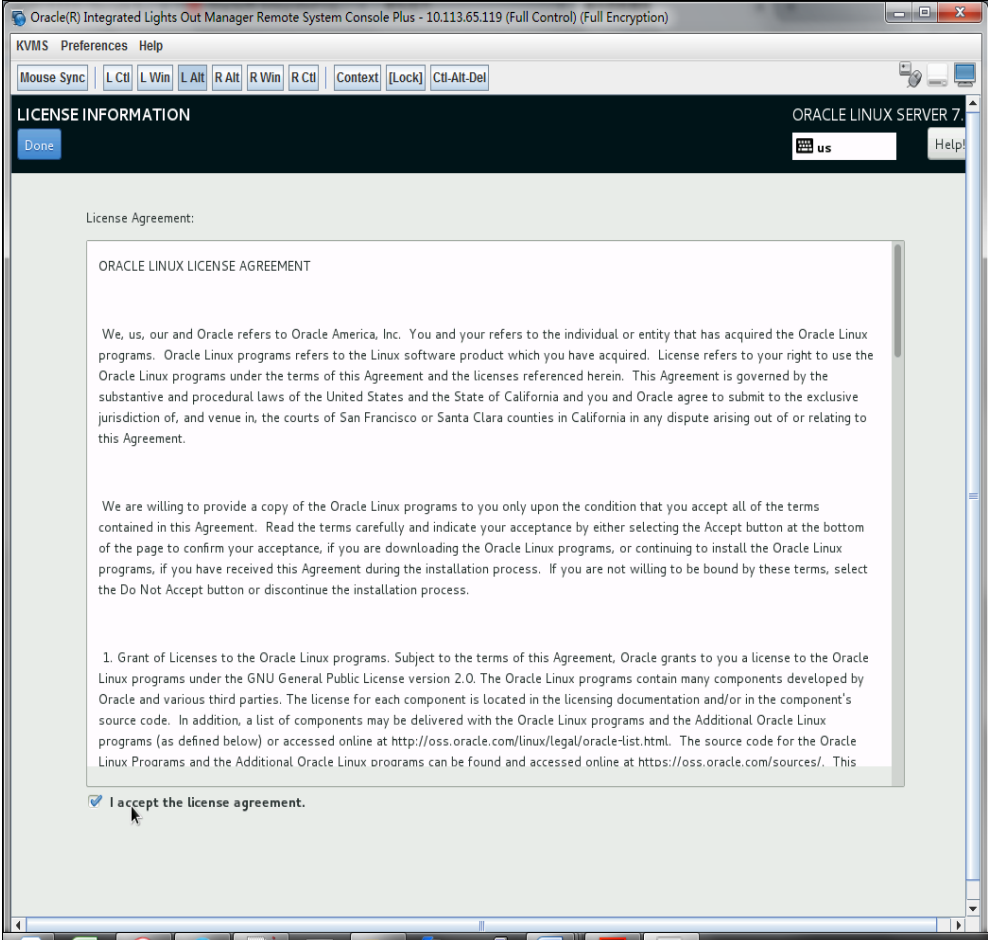

Step	Procedure	Result
<p>7. <input type="checkbox"/></p>	<p>For each Oracle X5-2 RMS, setup installation destination</p>	<ol style="list-style-type: none"> <li>1. Navigate to <b>SYSTEM</b> → <b>INSTALLATION DESTINATION</b> menu.</li> <li>2. Select <b>sda</b> and <b>sdb</b>.</li> <li>3. Select <b>Automatically configure partitioning</b>.</li> <li>4. Click <b>Done</b>.</li> </ol> 

Step	Procedure	Result
<p>8. <input type="checkbox"/></p>	<p>For each Oracle X5-2 RMS, review configuration and start to install</p>	<p>Review all information before clicking <b>Begin Installation</b>.</p> <p>(You do not need to configure the network at this time, network configuration is performed after the Oracle Linux OS is installed.)</p> 

Step	Procedure	Result
<p>9. <input type="checkbox"/></p>	<p>For each Oracle X5-2 RMS, create login credential</p>	<p>At the same time Oracle Linux installation software is putting files onto the Oracle X5-2 local hard disk, you can configure the root credentials or any other login credentials required.</p>  <p>The screenshot shows the 'CONFIGURATION' window for Oracle Linux 7.1 installation. It features a 'USER SETTINGS' section with a 'ROOT PASSWORD' indicator showing 'Root password is set'. A 'USER CREATION' button indicates 'Administrator admusr will be created'. A progress bar at the bottom shows 'Starting package installation process'.</p>

Step	Procedure	Result
<p>10. <input type="checkbox"/></p>	<p>For each Oracle X5-2 RMS, reboot host after installation completed</p>	<p>Wait for the installation to complete.</p>  <p>Click <b>Reboot</b>.</p>

Step	Procedure	Result
<p>11. <input type="checkbox"/></p>	<p>For each Oracle X5-2 RMS, read and accept the license agreement</p>	<p>After reboot is complete, the license agreement page opens.</p>  <p>1. Select <b>I accept the license agreement.</b></p> <p>2. Click <b>Finish Configuration.</b></p> <p>If you are prompted for ULN setting, skip that step.</p>

Step	Procedure	Result
12. <input type="checkbox"/>	For each Oracle X5-2 RMS, verify kernel version and KVM version	<p>Open SSH console window and check following:</p>  <pre> Oracle(R) Integrated Lights Out Manager Remote System Console Plus - 10.113.65.119 (Full Control) (Full Encryption) KVMs Preferences Help Mouse Sync L Ctl L Win L Alt R Alt R Win R Ctl Context [Lock] Ctl-Alt-Del Applications Places Terminal admusr@udr-x5-2-62:/home/admusr  File Edit View Search Terminal Help [admusr@udr-x5-2-62 ~]\$ lvsdisplay bash: lvsdisplay: command not found... 23. <input type="checkbox"/>	Untar this ova file	<pre>[root@pc9112020 ova]# tar xvf UDR-12.5.1.0.0_17.7.0.ova UDR-17_7_0.ovf UDR-17_7_0.mf UDR-17_7_0.vmdk</pre>
24. <input type="checkbox"/>	Convert this vmdk	<pre>[root@pc9112020 ova]# qemu-img convert -O qcow2 DR- UDR-12.5.1.0.0_17.7.0.ova.vmdk UDRNO-17_7_0.qcow2</pre>

Step	Procedure	Result
	file to qcow2 file	
25. <input type="checkbox"/>	Copy the qcow2 files for SO and MP	<pre>[root@pc9112020 ova]# cp UDRNO-17_7_0.qcow2 UDRSO-17_7_0.qcow2 [root@pc9112020 ova]# cp UDRNO-17_7_0.qcow2 UDRMP-17_7_0.qcow2</pre>
26. <input type="checkbox"/>	Configure storage for correspond ing qcow2 files	<p>Configure storage qcow2 files as per corresponding VMs. Refer <a href="#">Appendix G</a> to get the required storage.</p> <p>Run the following command for each VM to set the storage:</p> <pre>qemu-img resize &lt;NO_qcow2_filename&gt;.qcow2 &lt;storage_in_gigabytes&gt;G</pre> <p>Run the command for a VM if storage required is greater than 60G. You do not have to run this command if the storage required is 60G or less.</p> <p>For example, if resource profile is EIR and VM is UDR, the storage required is 400G. The command in that case is:</p> <pre>qemu-img resize UDRNO-17_7_0.qcow2 400G</pre>
27. <input type="checkbox"/>	Create UDR VMs. Repeat this sep for each VM.	<p>Create UDR VMs: NO, SO and MP using appendix below. Repeat the below procedure for each VM</p> <p><a href="#">Appendix J Install UDR on Oracle Linux OS via KVM</a></p> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR</p>
28. <input type="checkbox"/>	For each UDR VMs:  Add the network device	<p>Login to each VM created and add the network devices:</p> <p>UDR:</p> <pre># netAdm add -device=eth0 # netAdm add -device=eth1 # netAdm add -device=eth2</pre> <p><b>NOTE:</b> eth0 is XMI, eth1 is IMI and eth2 is XSI1 and eth3 is XSI2 (create eth3 if XSI2 is required).</p>
29. <input type="checkbox"/>	<b>For each UDR VMs:</b>  Configure XMI network address	<p>Set XMI network address for each UDR VM:</p> <pre># netAdm set --device=eth0 --onboot=yes --netmask=&lt;XMI_netmask&gt; -- address=&lt;XMI_network_address&gt; # netAdm add --device=eth0 --route=default --gateway=&lt;XMI_gateway&gt;</pre>
30. <input type="checkbox"/>	<b>For each UDR VMs:</b>  Configure NTP service	<p>Use Step 5 to 6 of Appendix L.6 Configure TVOE Server (Hostname, Time Zone, SNMP, NTP, etc) in [2] to configure NTP service for each VM.</p>
31. <input type="checkbox"/>	Extend VM Instance volume	<p>Extend volumes for various VM Instances depending on flavor following:</p> <p>Appendix D.6 Extend VM Instance Volume Size</p> <p>Mark the check box as addition is completed for each server.</p> <p><input type="checkbox"/> UDR-A      <input type="checkbox"/> UDR-B</p>
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## Appendix K. My Oracle Support

My Oracle Support (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with My Oracle Support registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in sequence on the Support telephone menu:

1. Select **2** for New Service Request.
2. Select **3** for Hardware, Networking and Solaris Operating System Support.
3. Select one of the following options:
  - o For Technical issues such as creating a Service Request (SR), Select **1**.
  - o For Non-technical issues such as registration or assistance with My Oracle Support, Select **2**.

You are connected to a live agent who can assist you with My Oracle Support registration and opening a support ticket.

My Oracle Support is available 24 hours a day, 7 days a week, 365 days a year.

## Appendix L. Locate Product Documentation on the Oracle Help Center Site

Oracle Communications customer documentation is available on the web at the Oracle Help Center (OHC) site, <http://docs.oracle.com>. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at <http://www.adobe.com>.

1. Access the Oracle Help Center site at <http://docs.oracle.com>
2. Click **Industries**.
3. Under the Oracle Communications subheading, click the **Oracle Communications documentation** link.
4. The Communications Documentation page displays. Most products covered by these documentation sets appear under the headings Network Session Delivery and Control Infrastructure or Platforms.
5. Click your Product and then the Release Number.
6. A list of the documentation set for the selected product and release displays.
7. To download a file to your location, right-click the **PDF** link, select **Save target as** (or similar command based on your browser), and save to a local folder.

## Appendix M. Create and install UDR VM via KVM GUI

**IMPORTANT:** The content of this appendix is for informational purposes only.

This procedure installs UDR VMs NO, SO and MP using KVM GUI.

**NOTE:** This procedure needs to be done for each VM: NO, SO and MP

### Requirements:

- [Appendix J Install UDR on Oracle Linux OS via KVM](#) Steps: 1 to 25 must be complete.

Mark (✓) each step as it is completed. Boxes have been provided for this purpose by each step number.

### Procedure39: Create and Install UDR VMs via KVM GUI

Step	Procedure	Result
1. <input type="checkbox"/>	Login to the host machine and open the Virtual Machine Manager	<p>Login to the host machine which has Oracle Linux installed and open the Virtual Machine Manager via command-line using <code>virt-manager</code> command.</p> <p><b>NOTE:</b> Verify that X11 forwarding is enabled before running the <code>virt-manager</code> command.</p>  <pre>login as: root root@10.75.173.137's password: Last login: Thu May  4 23:51:47 2017 from 10.75.11.141 [root@pc9112020 ~]# virt-manager</pre>

Step	Procedure	Result
2. <input type="checkbox"/>	Create a Virtual Machine using the Virtual Manager GUI	<p>On Virtual Manager GUI,</p> <ol style="list-style-type: none"> <li>1. Navigate to <b>File</b> → <b>New Virtual Machine</b>.</li> <li>2. Select <b>Import existing disk image</b>.</li> </ol> 

Step	Procedure	Result
3. <input type="checkbox"/>	Select the image file	<p>Select the qcow2 from the location: <code>/home/ova</code> (as done Steps 24 and 25 in Appendix J) by browsing the location and clicking <b>Forward</b></p> 
4. <input type="checkbox"/>	Select RAM and vCPUs for VM	<p>For each VM, select the RAM and vCPUs as per the required resource profile. Refer to <a href="#">Appendix G</a>. Click <b>Forward</b>.</p> 

Step	Procedure	Result
5. <input type="checkbox"/>	Verify and customize VM	<p>Update the VM name and select <b>Customize configuration before install</b>.</p> <p>In Network selection, select XMI bridge and click <b>Finish</b>:</p> 

Step	Procedure	Result
6. <input type="checkbox"/>	<p>Customize the network configuration</p>	<p>On the next screen, click <b>Add Hardware</b>. Under Network, select the IMI bridge.</p> <ul style="list-style-type: none"> <li>• For NO and SO, select IMI bridge only.</li> <li>• For MP, add XSI1 along with IMI by repeating this step.</li> </ul> <p>Click <b>Finish</b>.</p> 

Step	Procedure	Result
7. <input type="checkbox"/>	Verify and begin installation	<p>After adding all bridges, verify and begin the VM installation:</p> 
<b>THIS PROCEDURE HAS BEEN COMPLETED</b>		

## Appendix N. Orchestrating UDR Via OSM

### Pre-requisites:

- OSM Release Two must be successfully installed.
- A standalone Juju server must be successfully bootstrapped .

### N.1 CONFIGURE OPENSTACK VIM TO RUN WITH OSM

On the OSM GUI, navigate to the Accounts tab and click **Add VIM Account**. Enter the OpenStack VIM details and add the VIM account.

Procedure	Result
<p>Add the VIM details on the <b>Account</b> → <b>VIM ACCOUNTS</b> on OSM GUI.</p>	 <p>The screenshot shows the OSM GUI 'ACCOUNTS' page. On the left, there are three sections: 'VIM ACCOUNTS' with an 'ADD VIM ACCOUNT' button, 'SDN ACCOUNTS' with an 'ADD SDN ACCOUNT' button, and 'CONFIG AGENT ACCOUNTS' with an 'ADD CONFIG AGENT ACCOUNT' button. The 'VIM ACCOUNTS' section is active, showing a list with 'MRV X5-2 CLOUD 2' and a green status indicator. The main area displays the configuration for this account, including fields for KEY (*), SECRET (*), AUTHENTICATION URL (*), TENANT (*), MANAGEMENT NETWORK (*), FLOATING IP POOL NETWORK NAME, USER DOMAIN, PROJECT DOMAIN, and REGION. The values entered are: KEY: udrsw, SECRET: udrsw, AUTHENTICATION URL: http://10.75.173.145:5000/v2.0, TENANT: udrsw, MANAGEMENT NETWORK: int-xmi, FLOATING IP POOL NETWORK NAME: EXT-XMI, USER DOMAIN: Default, PROJECT DOMAIN: Default, and REGION: RegionOne. At the bottom, there are buttons for 'REMOVE ACCOUNT', 'CANCEL', and 'UPDATE'. A 'SUCCESS' message is visible under 'CONNECTION STATUS'.</p>

## N.2 CONFIGURE CONFIG AGENT ACCOUNT (JUJU SERVER)

Add the details of standalone Juju server as a Config Agent account in order to enable OSM to communicate with Juju Server. On the OSM GUI, navigate to Accounts tab and **Add Config Agent Account**. A screen like the one below displays. Enter in the Juju Server details and add the account.

Procedure	Result
<p>Add the CONFIG AGENT (Juju) account details in the <b>Account</b> → <b>CONFIG AGENT ACCOUNTS</b> on OSM GUI.</p>	 <p>The screenshot shows the OSM GUI 'ACCOUNTS' page. The navigation bar includes 'MANO', 'ACCOUNTS', 'CONFIG', 'LAUNCHPAD', and 'CATALOG'. The main content area is titled 'ACCOUNTS' and includes a 'CHECK ALL CONNECTIVITY STATUS' button. There are three sections: 'VIM ACCOUNTS' with an 'MRV X5-2 CLOUD 2' account, 'SDN ACCOUNTS', and 'CONFIG AGENT ACCOUNTS' with an 'OSMJUU' account. The 'OSMJUU' account is selected, and its configuration details are shown in a form: 'ACCOUNT' (osmjuju), 'CONNECTION STATUS' (SUCCESS), 'UPDATE ACCOUNT DETAILS' (IP ADDRESS: 10.75.173.185, PORT: 17070, USERNAME: admin, SECRET: admin). Buttons for 'REMOVE ACCOUNT', 'CANCEL', and 'UPDATE' are at the bottom.</p>

### N.3 BUILD AND DEPLOY UDR NSD/VNFD PACKAGE

Build and deploy scripts must be run in order to upload UDR NSDs and VNFDs to OSM.

#### Procedure 11 SSH Logon to Juju Server and fetch build and deploy source scripts

Step	Procedure	Result
<p>1. <input type="checkbox"/></p>	<p>SSH Logon to Juju server and fetch the build and deploy source scripts</p>	<p>1. Copy the qcow2 file made from the ova file of UDR image to the Juju server.                  2. Run the following commands:</p> <pre>\$ sudo guestmount -a UDR-12.5.1.0.0_17.7.0.qcow2 -m /dev/mapper/vgroot-plat_usr /mnt</pre> <pre>\$ sudo cp /mnt/TKLC/udr/cloud/OSM-support.tar.gz ./</pre> <pre>\$ sudo guestunmount /mnt</pre> <p>3. These commands extract osm-supprt.tar.gz file from qcow2 image                  4. Untar the file to osm-support directory</p> <p>Copied Image on Juju Server:</p> <pre>ubuntu@edward-juju-server:~\$ ls -l UDR-12.4.0.0.0_16.13.0.qcow2 -rw-r--r-- 1 ubuntu ubuntu 4345757696 Jan 23 09:57 UDR-12.4.0.0.0_16.13.0.qcow2 ubuntu@edward-juju-server:~\$</pre> <p>Extracted osm-support directory from qcow2 Image</p> <pre>ubuntu@edward-juju-server:~\$ cd osm-support/ ubuntu@edward-juju-server:~/osm-support\$ ls build build.sh charms deploy.sh doc nsd vnfd ubuntu@edward-juju-server:~/osm-support\$</pre>
<p>2. <input type="checkbox"/></p>	<p>Navigate to OSM-Support directory and Run the build script</p> <pre>\$ ./build.sh</pre> <p><b>NOTE:</b> Monitor the console output to verify that the build script completed successfully</p>	<pre>ubuntu@edward-juju-server:~/osm-support\$ ./build.sh ocudr_soa_2k_vnf/ ocudr_soa_2k_vnf/ocudr_soa_2k_vnfd.yaml ocudr_soa_2k_vnf/README ocudr_soa_2k_vnf/icons/ ocudr_soa_2k_vnf/icons/oracle-64.png ocudr_soa_2k_vnf/checksums.txt ocudr_soa_2k_vnf/cloud_init/ ocudr_soa_2k_vnf/cloud_init/ocudr_soa_2k_vnfd-VM.init ocudr_sob_2k_vnf/ ocudr_nob_12_5k_vnf/cloud_init/ocudr_nob_12_5k_vnfd-VM.in build: Composing into /home/ubuntu/osm-support/charms build: Destination charm directory: /home/ubuntu/osm-suppo nfaproxyd build: Processing layer: layer:basic build: Processing layer: layer:sshproxy build: Processing layer: layer:vnfproxy build: Processing layer: nfaproxyd (from charms/nfaproxyd proof: I: Includes template icon.svg file. proof: W: Includes template README.ex file proof: W: README.ex includes boilerplate: Step by step in g the charm: proof: W: README.ex includes boilerplate: You can then br address to configure the service. proof: W: README.ex includes boilerplate: - Upstream mail t information proof: W: README.ex includes boilerplate: - Feel free to useful for users proof: I: all charms should provide at least one thing</pre>

Step	Procedure	Result
		<pre> ocudr_12_5k_level1_ns/ ocudr_12_5k_level1_ns/README ocudr_12_5k_level1_ns/icons/ ocudr_12_5k_level1_ns/icons/oracle-64.png ocudr_12_5k_level1_ns/ocudr_12_5k_level1_nsd.yaml ocudr_12_5k_level1_ns/checksums.txt ocudr_12_5k_level2_ns/ ocudr_12_5k_level2_ns/README ocudr_12_5k_level2_ns/icons/ ocudr_12_5k_level2_ns/icons/oracle-64.png ocudr_12_5k_level2_ns/checksums.txt ocudr_12_5k_level2_ns/ocudr_12_5k_level2_nsd.yaml ubuntu@edward-juju-server:~/osm-supports\$                     </pre>
<p>3. <input type="checkbox"/></p>	<p>After the build script completes, run the deploy script inside OSM-support directory</p> <p><b>Pre-requisite:</b> OSM host IP is required to run deploy.sh, Open the deploy script with an editor and change the env variable of OSM_HOSTNAME to your OSM host IP before running deploy.sh.</p> <pre> \$ ./deploy.sh                     </pre>	<pre> ubuntu@edward-juju-server:~/osm-supports\$ ./deploy.sh failed to delete vnfid ocudr_noa_2k_vnfd failed to delete vnfid ocudr_nob_2k_vnfd failed to delete vnfid ocudr_soa_2k_vnfd failed to delete vnfid ocudr_sob_2k_vnfd failed to delete vnfid ocudr_mp1_2k_vnfd failed to delete vnfid ocudr_mp2_2k_vnfd                     </pre>
<p>4. <input type="checkbox"/></p>	<p>Logon to OSM GUI, verify that UDR NSD/VNFD has been uploaded successfully:</p>	

Step	Procedure	Result
		
<p>5. <input type="checkbox"/></p>	<p><b>Optional Step: Change UDR image name</b></p> <ol style="list-style-type: none"> <li>1. Open The OSM GUI and select <b>CATALOG</b>.</li> </ol> <p>Follow the steps in the image to change UDR Image Name:</p> <ol style="list-style-type: none"> <li>2. Double click <b>VNFD</b> to open edit pane</li> <li>3. Double click VDU to edit its properties</li> <li>4. Change the image name</li> <li>5. Click <b>Update</b> to save changes</li> </ol> <p><b>NOTE:</b> UDR image name must match the one you intend to use and an image with the same name is available on openstack</p>	

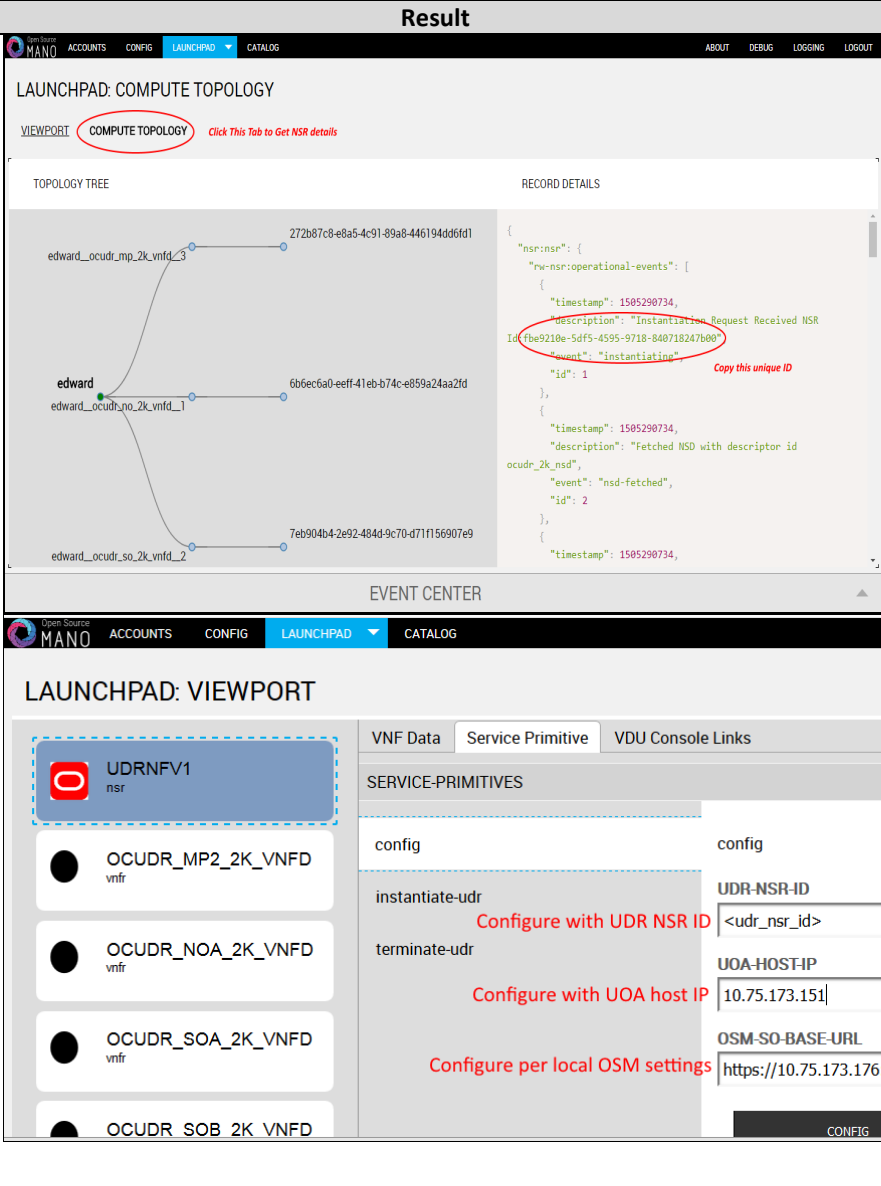

Step	Procedure	Result
<p>6. <input type="checkbox"/></p>	<ol style="list-style-type: none"> <li>1. Open the OSM GUI.</li> <li>2. Click <b>LAUNCHPAD</b></li> <li>3. Click <b>Instantiate Service</b></li> <li>4. Select <b>UDR_2k_nsd.</b></li> <li>5. Click <b>Next.</b></li> </ol>	 <p>The screenshot shows the OSM GUI interface. The main window is titled 'LAUNCHPAD: INSTANTIATE'. Below the title bar, there are navigation tabs: 'MANO', 'ACCOUNTS', 'CONFIG', 'LAUNCHPAD', and 'CATALOG'. The 'LAUNCHPAD' tab is active. The main content area is divided into two panes. The left pane is titled 'SELECT DESCRIPTOR' and contains a list of descriptors. One descriptor, 'ocudr_2k_nsd', is selected and highlighted with a dashed blue border. The right pane is titled 'OCUDR_2K_NSD DESCRIPTOR PREVIEW' and displays the details of the selected descriptor. The details include: version: '1.0', description: 'OCUDR Sh 2k profile Network Service Descriptor', vendor: 'Oracle', and a list of configuration parameters such as 'name', 'mgmt.network', 'type', 'vndf connection point ref.', and 'vndf id ref.'. At the bottom of the main window, there are two buttons: 'CANCEL' and 'NEXT'. Below the main window, there is an 'EVENT CENTER' section.</p>

Step	Procedure	Result
<p>7. <input type="checkbox"/></p>	<p>Enter the required information and click <b>Launch</b>, enter the instance name.</p>	<p><b>NOTE:</b> Enter the VLD:*_network: VLD:IMI_NETWORK → int-imi, VLD:XSI1_NETWORK → int-xsi1, VLD:XSI2_NETWORK → int-xsi2</p>  

Step	Procedure	Result
<p>8. <input type="checkbox"/></p>	<p>Wait for the instantiation operation to complete</p>	<p><b>NOTE:</b> In OSM Release 2, UDR NSR information may be incorrectly shown on GUI.</p> <p>To verify the status, logon to the Juju server and issue the command</p> <pre style="background-color: #f0f0f0; padding: 5px;">\$watch juju status</pre> <p>The screen displays a message. Wait for the cleanup of the message. The cleanup of message indicates success. (Refer to the second figure in this step)</p>  

Step	Procedure	Result								
<p>9. <input type="checkbox"/></p>	<p>After instantiation is complete, query UDR NSR ID from OSM GUI and configure the parameter of udr-nsr-id in NO charm.</p> <p>Follow the steps in the image to Add UDR NSR ID in NO charm</p>	 <p>The screenshot shows the MANO LAUNCHPAD interface. On the left, under 'NETWORK SERVICES', there is a table with the following data:</p> <table border="1"> <thead> <tr> <th>NS NAME</th> <th>NSD</th> <th>STATUS</th> <th>UPTIME</th> </tr> </thead> <tbody> <tr> <td>edward</td> <td>ocudr_2k_nsd</td> <td>Configura...</td> <td>1h:17m</td> </tr> </tbody> </table> <p>On the right, the 'NETWORK SERVICE DETAILS' panel shows a green banner for 'edward' with a red circle around the name and a red arrow pointing to the text '1. click here'. Below this, it indicates 'Configuration Failed 1h:17m'. Other sections like 'MONITORING PARAMETERS NOT LOADED', 'NFVI-METRICS', and 'EPA-PARAMS' are visible but empty.</p>	NS NAME	NSD	STATUS	UPTIME	edward	ocudr_2k_nsd	Configura...	1h:17m
NS NAME	NSD	STATUS	UPTIME							
edward	ocudr_2k_nsd	Configura...	1h:17m							

Step	Procedure	Result
		 <p>The screenshot shows the MANO Launchpad interface. The top section is titled "LAUNCHPAD: COMPUTE TOPOLOGY". It features a "VIEWPORT" tab and a "COMPUTE TOPOLOGY" tab (circled in red). Below this is a "TOPOLOGY TREE" diagram showing a central node "edward" connected to three other nodes: "edward_ocudr_mp_2k_vnfd_3", "edward_ocudr_no_2k_vnfd_1", and "edward_ocudr_so_2k_vnfd_2". To the right is a "RECORD DETAILS" section showing JSON data for an NSR. One instance of the NSR is circled in red, with its ID "f9e9210e-5d45-4595-9718-840718247600" and event "instantiating" highlighted. A red note says "Copy this unique ID". Below the topology is an "EVENT CENTER" section. The bottom section is titled "LAUNCHPAD: VIEWPORT". It shows a list of service primitives for "UDRNFV1 nsr": "OCUDR_MP2_2K_VNFD", "OCUDR_NOA_2K_VNFD", "OCUDR_SOA_2K_VNFD", and "OCUDR SOB 2K VNFD". The "OCUDR_MP2_2K_VNFD" is selected. To the right, the "SERVICE-PRIMITIVES" section shows configuration fields for "instantiate-udr" and "terminate-udr". Red text indicates "Configure with UDR NSR ID" for the "UDR-NSR-ID" field, "Configure with UOA host IP" for the "UOA-HOST-IP" field (value: 10.75.173.151), and "Configure per local OSM settings" for the "OSM-SO-BASE-URL" field (value: https://10.75.173.176).</p>

## N.4 PERFORM ORCHESTRATION OPERATIONS VIA OSM

After the UDR NSR ID is added in the NO charm, UDR Orchestration operations can be performed. OSM supports two operations:

1. Instantiation
2. Termination

## N.5 INSTANTIATE UDR

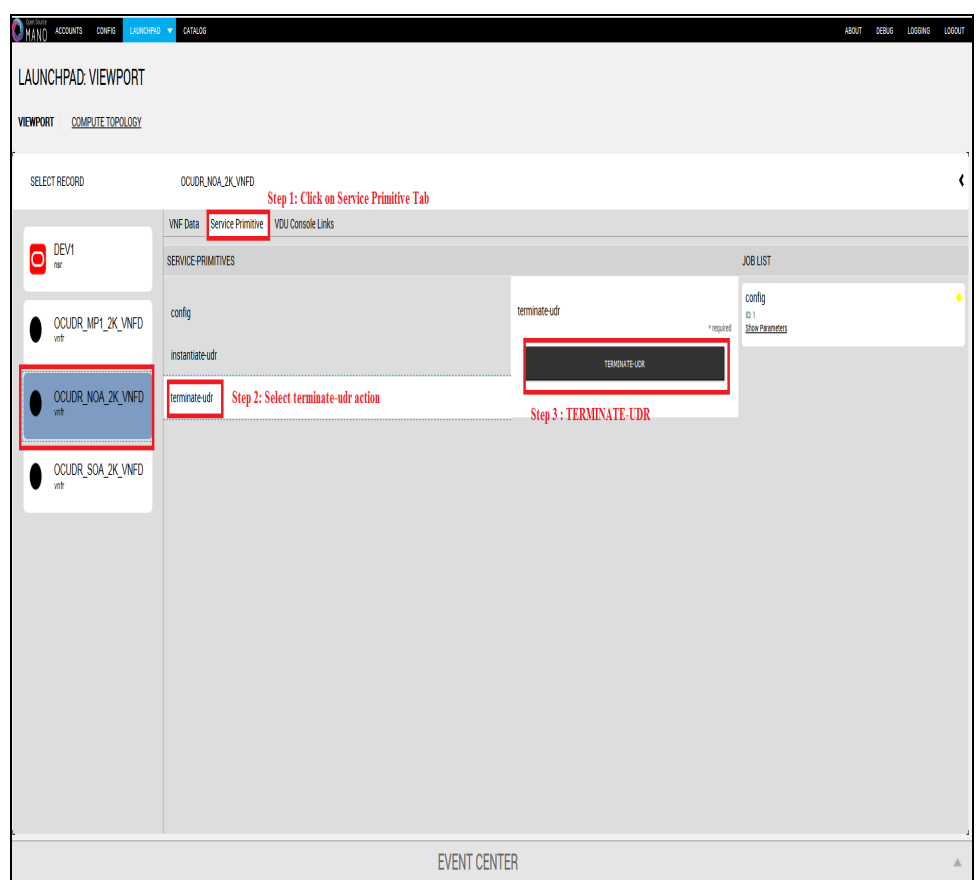

After the steps in [Appendix N-3](#) are completed successfully, a UDR instance can be instantiated either to level1 or level 2.

1. Navigate to **Launchpad**  
→ **Viewport** →  
**UDR\_NO\_VM**
2. Click the **Service Primitive** tab
3. Select **instantiate-udr** action
4. Enter the levelId to instantiate UDR
5. Click **instantiate-UDR**

The screenshot displays the Oracle Cloud Launchpad interface for the 'UDR\_NO\_VM' service. The 'Service Primitive' tab is selected, showing a list of service primitives. The 'instantiate-udr' primitive is highlighted, and its configuration form is open. The form includes a 'LEVELID' field with the value '1' entered. A modal dialog with the 'INSTANTIATE-UDR' button is visible, indicating the final step in the process.

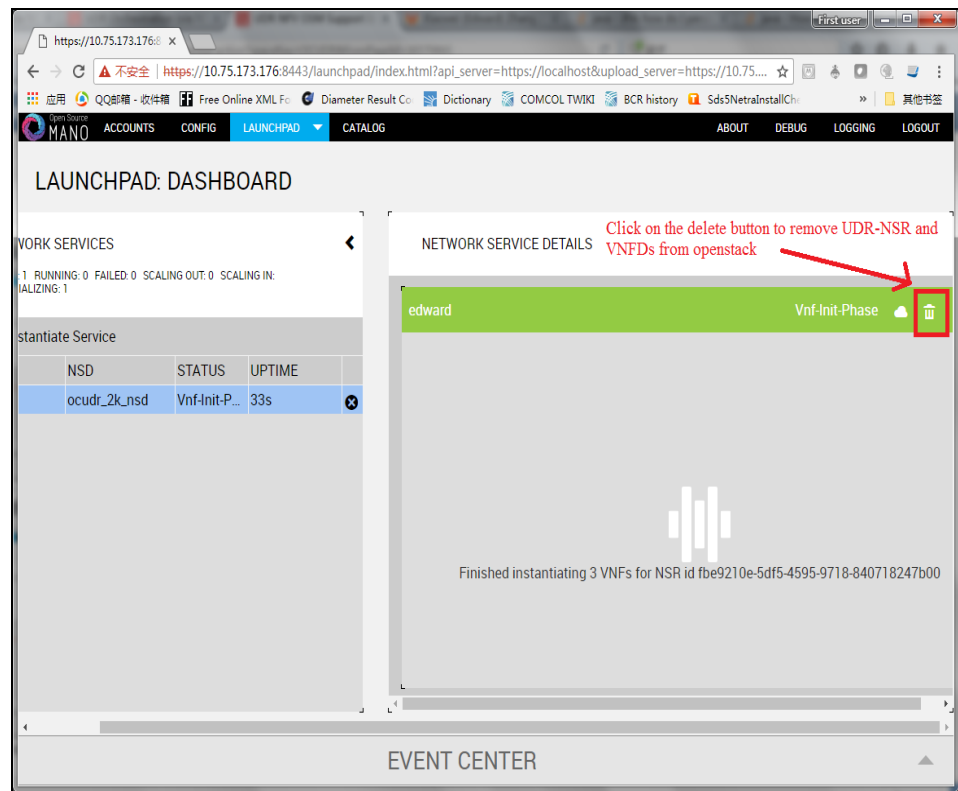

## N.6 TERMINATE UDR

1. Navigate to **Launchpad** → **Viewport** → **UDR\_NO\_VM**
2. Click the **Service Primitive** tab
3. Select **terminate-udr** action
4. Click **terminate-UDR**

Manually remove the UDR NSR to remove the deployed VNFDs from openstack

Navigate to **LAUNCHPAD** → **DASHBOARD** on OSM GUI and click the delete icon for the corresponding UDR-NSR

## Appendix O. Orchestrating UDR via Tacker

Pre-requisites:

1. Openstack Pike with Tacker service must be installed
2. UDR is successfully instantiated and NFAgent service is up and running. Also a public IP is available to access the NFAgent service.

### O.1 TACKER CONFIGURATION

Edit the tacker.conf file location, `/usr/local/etc/tacker/tacker.conf`, and add the following configuration options to it:

```
[udr]

#
# From tacker.vnfm.mgmt_drivers.udr.udr
#

# IP address on which host NFAgent service is deployed (string value)
nfagent_ip = 10.113.79.112

# user name to login NFAgent (string value)
#user = admusr

# password to login NFAgent (string value)
#password =

# time to wait for UDR VMs to be ready for application configuration (seconds)
#udr_init_wait_sec = 600
udr_init_wait_sec = 900
```

#### Configuration Options

- `nfagent_ip`: The public IP Address of the NFAgent service deployed as a pre-requisite before this step
- `user`: user name to login NFAgent (string value)
- `password`: password to login NFAgent (string value)
- `udr_init_wait_sec`: time to wait for UDR VMs to be ready for application configuration (seconds)

**O.2 INSTALL UDR TACKER SUPPORT SCRIPTS**

Step	Procedure	Result
1. <input type="checkbox"/>	<p>SSH Logon to Tacker server</p> <p>1. Copy the qcow2 file made from the ova file of UDR image to the tacker server (controller Node).</p> <p>2. Run the following commands:</p> <pre>\$ sudo guestmount -a UDR- 12.5.1.0.0_ 17.7.0.qcow 2 -m /dev/mapper /vgroot- plat_usr /mnt \$ sudo cp /mnt/TKLC/u dr/cloud/Ta cker- support.tar .gz ./ \$ sudo guestunmoun t /mnt</pre> <p>These commands extract Tacker-supprt.tar.gz file from qcow2 image</p> <p>3. Untar the file to tacker-support directory</p>	<p>Copied Image on Tacker server:</p> <pre>root@nj-x52-61 image]# ls -l UDR-12.4.0.0_16.13.0.qcow2 -rwxrwxrwx 1 root root 4345757696 Jan 24 18:05 UDR-12.4.0.0_16.13.0.qcow2 root@nj-x52-61 image]#</pre> <p>Extracted tacker-support directory from qcow2 image</p> <pre>[root@nj-x52-61 tacker-support]# ls bin  mgmt_driver  requirements.txt  vnfd</pre>

Step	Procedure	Result
2. <input type="checkbox"/>	Browse to the directory where the tacker scripts are copied on the controller Node.	<p>Run the following commands:</p> <ol style="list-style-type: none"> <li>1. <code>sudo mkdir -p /usr/lib/python2.7/site-packages/tacker/vnfm/mgmt_drivers/udr</code></li> <li>2. <code>edit mgmt_driver/udr/udr.py</code> to navigate to line 102:</li> <li>3. <code>level = str(self.cluster_info['options']['LEVEL'])</code></li> <li>4. <code>sudo cp mgmt_driver/udr/*.py /usr/lib/python2.7/site-packages/tacker/vnfm/mgmt_drivers/udr/</code></li> <li>5. <code>sudo service openstack-tacker-server restart</code></li> </ol> <p><b>NOTE:</b> Substitute <code>/usr/lib/python2.7/site-packages/tacker</code> with the tacker script installation directory for your local tacker installation path.</p> <p>Inspect <code>tacker.log</code> to verify that UDR management driver installed successfully.</p> <pre>[root@nj-x52-61 tacker-support]# mkdir -p /usr/lib/python2.7/site-packages/tacker/vnfm/mgmt_drivers/udr/ [root@nj-x52-61 tacker-support]# /bin/cp -rf mgmt_driver/udr/*.py /usr/lib/python2.7/site-packages/tacker/vnfm/mgmt_drivers/udr/ [root@nj-x52-61 tacker-support]# service openstack-tacker-server restart Redirecting to /bin/systemctl restart openstack-tacker-server.service [root@nj-x52-61 tacker-support]#</pre>
3. <input type="checkbox"/>	Deploy VNFD for UDR 2k level 2 VNF	<ol style="list-style-type: none"> <li>1. Edit <code>vnfd/udr-2k-vnfd.yaml</code> and find occurrences of <code>init 6</code> (there are 6 occurrences in total), prepend line with: <pre>echo 'ifconfig eth0 mtu 1450' &gt;&gt; /etc/rc.d/rc.local</pre> before each occurrence of <code>'init 6'</code>, like following: <pre>echo 'ifconfig eth0 mtu 1450' &gt;&gt; /etc/rc.d/rc.local init 6</pre> </li> <li>2. Source keystone rc file of openstack: <pre>source ~/keystonerc_admin</pre> </li> <li>3. Deploy the updated VNFD file with following command: <pre>tacker vnfd-create --vnfd-file vnfd/udr-2k-vnfd.yaml udrvnfd</pre> </li> <li>4. Verify that VNFD is deployed successfully. <pre>[root@nj-x52-61 tacker-support]# vim vnfd/udr-2k-vnfd.yaml [root@nj-x52-61 tacker-support]# tacker vnfd-create --vnfd-file vnfd/udr-2k-vnfd.yaml udr-2k-vnfd You must provide a username or user ID via --os-username, env[OS_USERNAME] or --os-user-id, env[OS_USER_ID] [root@nj-x52-61 tacker-support]# source ~/keystonerc_admin [root@nj-x52-61 tacker-support(keystone_admin)]# tacker vnfd-create --vnfd-file vnfd/udr-2k-vnfd.yaml udr-2k-vnfd Created a new vnfd: +-----+   Field            Value                                       +-----+-----+   created_at       2018-02-05 03:47:24.167240                  description      Demo with udr cluster                       id               0874def4-0ac5-4352-bc7a-cff6139d6df4        name            udr-2k-vnfd                                 service_types   vnfd   template_source   onboarded                                   tenant_id       45a69279f4be47d89556b5299bdec769           updated_at   +-----+-----+ [root@nj-x52-61 tacker-support(keystone_admin)]#</pre> </li> </ol>

### O.3 PERFORM ORCHESTRATION OPERATIONS VIA TACKER

After the successful completion of [Appendix O-2](#), you can proceed with the orchestration of UDR. Tacker supports two orchestration operations:

1. Instantiation (CREATE UDR VNF)
2. Termination (DELETE UDR VNF)

## O.4 CREATE UDR VNF (INSTANTIATION)

Issue the following command to create UDR VNF (assumes to have sourced the keystone rc file for openstack):

```
tacker vnf-create --vnfd-name udrvnfd <udr_vnf_name> --param-file udrvnf-param.yaml
```

Where:

- `udr_vnf_name` is replaced with the name you specify for udr vnf.
- `udrvnf-param.yaml` is the configuration file used for customizing parameters in UDR VNFD template. Change the file parameters to specify the configuration.

**Figure 5 Example of udrvnf-param.yaml**

```
xmi_network: int-xmi
imi_network: int-imi
xsi1_network: int-xsi1
xsi2_network: int-xsi2image: UDR-12.5.1.0.0_17.7.0.0
```

```
[root@nj-x52-61 tacker-support]# source ~/keystonerc_admin
[root@nj-x52-61 tacker-support(keystone_admin)]# tacker vnf-create --vnfd-name udr-2k-vnfd udrpv1
Created a new vnf:
+-----+
| Field          | Value                                     |

| updated_at     |                                           |
| vim_id         | 7ae4f37b-056b-45de-a131-62463bdfce6d   |
| vnfd_id        | 0874def4-0ac5-4352-bc7a-cff6139d6df4   |
+-----+-----+
[root@nj-x52-61 tacker-support(keystone_admin)]#
```

To inspect the detailed log for creating UDR VNF, refer to tacker log use following command:

```
$ sudo tail -f /var/log/tacker/tacker.log
```

## O.5 DELETE UDR VNF (TERMINATION)

Issue the following command to delete UDR VNF:

```
tacker vnf-delete <udr_vnf_name>
```

Where:

- `udr_vnf_name` is replaced with the name of udr vnf you want to terminate.

```
[root@nj-x52-61 tacker-support]# source ~/keystonerc_admin
[root@nj-x52-61 tacker-support(keystone_admin)]# tacker vnf-delete udrpv1
All specified vnf(s) delete initiated successfully
[root@nj-x52-61 tacker-support(keystone_admin)]#
```

## Appendix P. Mounting Virtual Media on Oracle RMS Servers

This procedure contains steps to mount virtual media on Oracle RMS servers via ILO.

### Appendix P.1: Mounting Virtual Media on Oracle RMS Servers

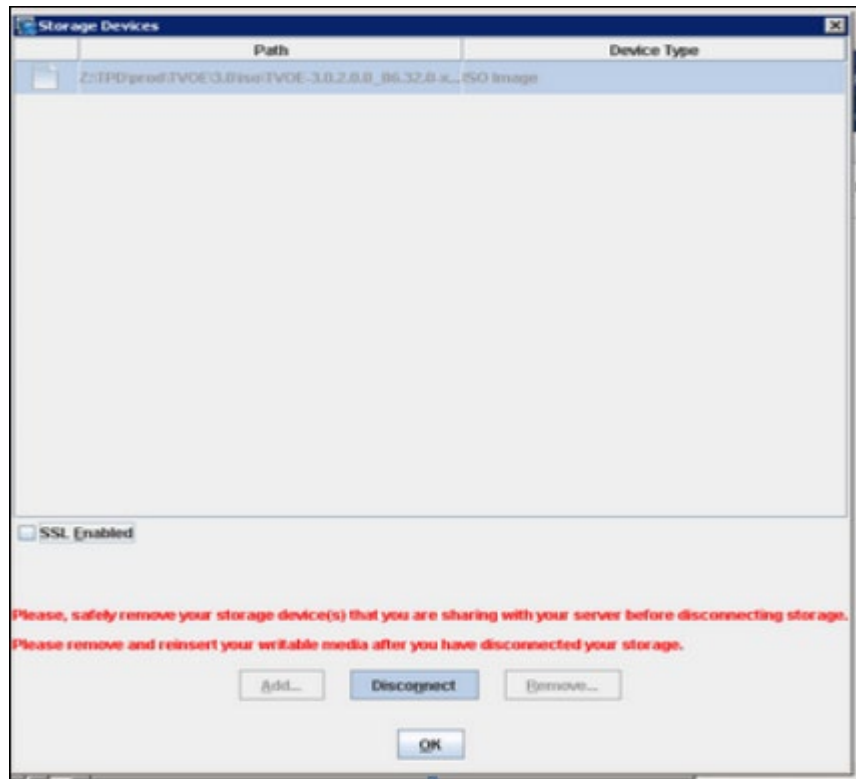

<b>Step</b>	In this procedure you will mount media on Oracle RMS servers via ILO, for ISO access or other file transfer.	
1. <input type="checkbox"/>	Access the server's ILO VGA.	Connect to the server's ILO VGA using the access method: Accessing the iLo VGA Redirection Window for Oracle RMS Servers.
2.	<p><b>ILO Admin GUI:</b></p> <p>Change the Next Boot Device</p> <p>Select <b>"Host Management/Host Control"</b></p> <p>Select <b>"CDROM"</b> from <b>"Next Boot Device"</b> drop down box.</p> <p>Click <b>"Save"</b></p>	
3.	<p><b>ILO Admin GUI:</b></p> <p>Go to <b>"Host Management/Power Control"</b></p> <p>Verify <b>"Host is currently on"</b></p> <p>Note: If it's turned off, turn it back on.</p>	

<p>4.</p> <p><input type="checkbox"/></p>	<p><b>ILO Remote Console:</b></p> <p>Select "KMVS/Storage" from the top menu bar.</p> <p>Select "Add" button on next screen near bottom of the screen.</p>	 <p>The screenshot shows the Oracle(R) Integrated Lights Out Manager Remote System Console Plus interface. At the top, there is a menu bar with 'KVMS', 'Preferences', and 'Help'. The 'Storage...' menu is open, showing options: 'Virtual Keyboard...', 'Turn local monitor on', 'Turn local monitor off', 'Take Full Control...', 'Relinquish Full Control', and 'Exit'. Below this, the 'Storage Devices' dialog box is displayed. It has a table with columns 'Path' and 'Device Type'. At the bottom of the dialog, there is a checked checkbox for 'SSL Enabled' and three buttons: 'Add...', 'Connect', and 'Remove...'. An 'OK' button is also present.</p>
<p>5.</p> <p><input type="checkbox"/></p>	<p><b>ILO Remote Console:</b></p> <p>Select desired <b>Image File</b> from files on your laptop/desktop client machine.</p>	 <p>The screenshot shows the 'Add Storage Device' dialog box. It features a file selection window with a 'Look In:' dropdown set to 'Downloads'. The file list contains: '909-2277-001.docx', 'ActiveAlarmsReport_2014Apr24_144031_EDT.txt', 'ActiveAlarmsReport_2014Apr24_144100_EDT.txt', 'ActiveAlarmsReport_2014Apr24_144129_EDT.txt', 'ActiveAlarmsReport_2014Apr24_144248_EDT.txt', and 'ActiveAlarmsReport_2014Apr24_144428_EDT.txt'. Below the list, there is a 'File Name:' field and a 'Files of Type:' dropdown set to 'All Files'. 'Select' and 'Cancel' buttons are at the bottom right.</p>

6.

**ILO Remote Console:**

1. Select/highlight the ISO file
2. **Uncheck SSL Enabled** checkbox before connecting to the TVOE iso.
3. Click **Connect**
4. Click **OK**
