Cause: The argument provided to dbms_mview.purge_mview_from_log is an invalid materialized view identifier or it does not identify an Oracle 8 fast refreshable materialized view or the materialized view has been already purged.

Action: If the materialized view is an Oracle 8 fast refreshable materialized view then provide purge_mview_from_log with its valid materialized view identifier.

ORA-23426: deferred RPC queue has entries for *string*

Cause: The requested action cannot be performed until the queue is empty for the given site/dblink

Action: Use dbms_defer_sys.push, dbms_defer_sys.purge_queue or dbms_defer_sys.delete_tran to empty the queue.

ORA-23427: deferred purge queue argument *string* out of range

Cause: Specified numeric argument to dbms_defer_sys.purge_queue is invalid.

Action: Fix the argument value and try again.

ORA-23428: job associated instance number *string* is not valid

Cause: A job is associated with an instance that is not running.

Action: Choose a running instance for job affinity, or set force parameter to TRUE.

ORA-23430: argument "*string*" cannot be NULL or empty string

Cause: The caller has provided an argument whose value cannot be NULL or the empty string.

Action: Check that the varchar2 value provided is not NULL or the empty string, and retry the call.

ORA-23431: wrong state: *string*

Cause: The routine was executed against a replicated object group that was in the wrong state.

Action: Make sure that the replicated object group is in the state given in the error message.

ORA-23432: master site *string* already exists

Cause: An attempt was made to instantiate a replicated object group at a master site that was already a part of the object group.

Action: If you were trying to add this site, do nothing because it already exists; otherwise, pick the name of another site, and re-run the routine.

ORA-23433: executing against wrong master site *string*

Cause: An attempt was made to execute the routine at a site that is different from the site specified in the argument of the routine.

Action: Provide an argument to the routine that correctly indicates the site against which the routine should be executing.

ORA-23434: master site *string* not known for object group

Cause: The site name given as an argument to a routine was not already known to the replicated object group.

Action: Execute the `dbms_offline_og.begin_instantiation()` routine to add a new site to the replicated object group.

ORA-23435: cannot create an updatable ROWID materialized view with LOB columns

Cause: The propagation of LOB data from materialized view sites to the master site requires a primary key on the replicated table. Thus updatable ROWID materialized views that contain LOB columns are not supported.

Action: Create a primary key materialized view instead of a ROWID materialized view. If the materialized view already exists, it can be converted to a primary key materialized view using the ALTER MATERIALIZED VIEW DDL command.

ORA-23436: missing template authorization for user

Cause: The specified template authorization does not exist.

Action: Check the values for user name and refresh template name to ensure a valid row exists in the `DBA_REPCAT_USER_AUTHORIZATIONS` view.

ORA-23437: template authorization already exists for user

Cause: The specified user already has been authorized to use the specified refresh group template.

Action: Check the values for user name and refresh template name or query the DBA_REPCAT_USER_AUTHORIZATIONS view to ensure that the correct values were passed as parameters.

ORA-23438: missing refresh group template

Cause: The specified refresh group template does not exist.

Action: Verify that the refresh group template does not exist by querying the DBA_REPCAT_REFRESH_TEMPLATES view.

ORA-23439: refresh group template already exists

Cause: The specified refresh group template already exists.

Action: Verify that the refresh group template exists by querying the DBA_REPCAT_REFRESH_TEMPLATES view.

ORA-23440: incorrect public template value

Cause: The public template parameter is not 'Y', 'N' or NULL.

Action: Correct the value of the public template parameter. It must be 'Y','N' or NULL.

ORA-23441: object does not exist for refresh group template

Cause: The specified object does not exist in the refresh group template.

Action: Correct the object name and object type parameters. Check the DBA_REPCAT_TEMPLATE_OBJECTS view to verify the correct name and type of the object.

ORA-23442: object already exists for the refresh group template

Cause: The specified object already exists in the refresh group template.

Action: Change the object name and object type parameters. Query the DBA_REPCAT_REMPLATE_OBJECTS view to verify the correct name and type of the object.

ORA-23443: missing template parameter

Cause: The specified template parameter does not exist.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

ORA-23444: duplicate template parameter

Cause: The template parameter already exists for the specified refresh group template.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

ORA-23445: missing template site

Cause: The template site specified by the site name, user name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23446: duplicate template site

Cause: The template site specified by the site name, user name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23447: missing user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

ORA-23448: duplicate user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

ORA-23449: missing user name

Cause: The user specified by the user name parameter does not exist in the database.

Action: Correct an invalid user name or create the user in the master database. Use the DBA_USERS view to select the valid database users.

ORA-23450: flavor already contains object "*string*"."*string*"

Cause: The flavor already contains the specified object.

Action: Check that the specified object is correct. To add all columns of a table object, delete the object from the flavor and then add it again.

ORA-23451: flavor *string* already defined for object group "*string*"."*string*"

Cause: The given object group already contains a (possibly unpublished) definition of the specified flavor.

Action: Check the spelling of the flavor name. Check for an unpublished flavor of the desired name.

ORA-23452: flavor *string* of object group "*string*"."*string*" is already published

Cause: The given object group already contains a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name.

ORA-23453: requested operation is not supported on top flavor

Cause: The TOP flavor has a NULL name and may not be directly defined or deleted.

Action: Supply the name of a flavor other than the TOP flavor or use dbms_repcat routines to implicitly change the TOP flavor.

ORA-23454: flavor *string* not defined for object group "*string*"."*string*"

Cause: The given object group does not contain a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name. Ensure the flavor has been defined (and published) for the object group.

ORA-23455: flavor *string* contains object "*string*"

Cause: The given flavor contains the object to be dropped.

Action: Purge the flavor or choose another object to drop.

ORA-23456: flavor *string* does not contain "*string*"

Cause: The flavor does not contain the given object, column, or attribute.

Action: Either drop the flavor or choose a different object, column, or attribute.

ORA-23457: invalid flavor ID *string*

Cause: The given flavor ID is invalid.

Action: Make sure this flavor has been instantiated. If the flavor ID is outside the range (-2147483647, 2147483647), contact customer support.

ORA-23458: inappropriate flavor *string* at *string*

Cause: The given flavor at the given database prevents the operation from succeeding.

Action: Either change the database flavor or choose a different operation.

ORA-23459: flavor *string* must contain "*string*"

Cause: The flavor must contain the given object, column, or attribute.

Action: Either choose a different database flavor or ensure the object, column, or attribute is available.

ORA-23460: missing value for column *string* in resolution method "*string*" for "*string*"."*string*"."*string*"

Cause: before resolving conflicts, some values necessary resolving conflicts are not available, or after resolving conflicts, some values necessary for re-trying of the SQL are not available

Action: define appropriate flavors, provide necessary values through availability vector in USER FLAVOR FUNCTION for conflict resolution

ORA-23461: fail to resolve conflict for "*string*"."*string*"."*string*"

ORA-23462: flavor *string* in use at site *string*

Cause: The given flavor cannot be deleted because it is being used at the given site.

Action: Change the flavor of the site, or unregister it if it is a materialized view site.

ORA-23463: flavor incompatible with object "*string*"."*string*"

Cause: An existing flavor includes the specified object with an incompatible type.

Action: Change the type of the object, or delete the flavor if it is not in use.

ORA-23464: flavor lacks column *string* of "*string*"."*string*"

Cause: The flavor includes some columns of an object group but not all the required columns.

Action: Change the flavor definition to include all required columns.

ORA-23465: flavor already includes column *string* of "*string*".*string*"

Cause: The flavor includes the specified column which is being added.

Action: Check that the specified column is correct.

ORA-23466: flavor requires missing object "*string*".*string*"

Cause: The flavor includes the specified object which does not exist

Action: Check that the specified object name is correct, and create the object if appropriate.

ORA-23467: flavor lacks object "*string*".*string*"

Cause: The flavor does not include the specified object which is being dropped.

Action: Check that the specified object is correct.

ORA-23468: missing *string string*

Cause: The template is missing the object with the specified key.

Action: Add the object to the template.

ORA-23469: *string* is different between templates

Cause: The values for the specified columns are different in each template for the same key values.

Action: Correct the column values to make the templates the same.

ORA-23470: invalid status

Cause: The status should be DELETED, INSTALLING or INSTALLED. Any other status is invalid.

Action: Check that the specified status value is correct.

ORA-23471: template not authorized for user

Cause: The refresh template is private and the user has not been authorized to instantiate the template.

Action: Authorize the user to use the template.

ORA-23472: materialized view "*string*".*string*" must be atomically refreshed

Cause: Non-atomic refresh is not supported for the specified materialized view.

Action: Set the value of the ATOMIC parameter to FALSE in the refresh procedure being used or remove the specified materialized view from the set of materialized views being refreshed.

ORA-23473: replication RPC processing for "*string*".*string*" is disabled

Cause: The processing of replication RPCs for the object group that contains this object is disabled. This includes RPCs in the error queue.

Action: Processing of replication RPCs is disabled when the object group is being offline instantiated. Wait until offline instantiation is finished.

ORA-23474: definition of "*string*".*string*" has changed since generation of replication support

Cause: The current columns in the specified table and their column types do not match the columns and column types when replication support was last generated.

Action: Regenerate replication support for the affected table. All flavors that include the specified table should be checked for validity. Types for any UDT columns should also be checked for validity.

ORA-23475: key column *string* must be sent and compared

Cause: The specified column is a key column and must be sent and compared during replication propagation.

Action: Make sure every key column is sent and compared.

ORA-23476: cannot import from *string* to *string*

Cause: This object was imported from a database with a different global name than the importing database.

Action: Only import this object into a database with the same global name.

ORA-23477: unable to alter propagation mode for object group "*string*".*string*"

Cause: The propagation method of a materialized view object group can only be altered when no other object groups with the same master object group are sharing the materialized view site.

Action: Ensure that there are no other materialized view object groups at the local site with the same master object group.

ORA-23478: object group "*string*" is already mastered at *string*

Cause: There is at least one other materialized view repgroup at the local site with the same group name but a different master site.

Action: Ensure that all materialized view repgroups at the local site with the same group name have the same master.

ORA-23480: Column *string* is not a top-level column of "*string*".*string*".

Cause: The column is either not a top-level column or is not present in the table or materialized view.

Action: Ensure only valid top-level columns are used.

ORA-23481: unexpected name string "*string*"

ORA-23482: column *string* of "*string*".*string*": object types not allowed.

Cause: The column is of Object Type.

Action: Ensure that all the columns are not of Object Type.

ORA-23483: object "*string*".*string*" not allowed in this operation.

Cause: The specified operation does not support the given object.

Action: Do not invoke the operation for this object.

ORA-23484: internal internet Application Server error: *string*

Cause: An internal error occurred in internet Application Server.

Action: Report the error and other information to support.

ORA-23485: Column group "*string*" must consist of a single numeric column only

Cause: The column group doesn't contain only one numeric column.

Action: Use a column group containing a single numeric column.

ORA-23487: object groups "*string*"."*string*" and "*string*"."*string*" do not have the same connection qualifier

Cause: The specified two object groups do not have the same connection qualifier.

Action: Do not invoke the operation on the above object groups, or ensure they have the same connection qualifier.

ORA-23488: propagation mode "*string*" for "*string*" is not allowed for this operation

Cause: This operation does not support the specified dblink in the above propagation mode.

Action: Do not invoke the operation for this dblink, or change the propagation mode for this dblink.

ORA-23489: duplicate entry "*string*"

Cause: The specified value is duplicated in the parameter list.

Action: Remove duplicated entries in the parameter list.

ORA-23490: extension request "*string*" with status "*string*" not allowed in this operation

Cause: The specified operation is not allowed for the extension request with the specified status.

Action: Ensure the extension request has the appropriate status before retrying this operation.

ORA-23491: no valid extension request at "*string*"

Cause: The specified database does not have a valid extension request.

Action: Ensure there is a valid extension request in DBA_REPEXTENSIONS view before retrying this operation.

ORA-23492: no new sites for extension request "*string*"

Cause: There is no new site with the specified extension request.

Action: Ensure there is at least one new site in DBA_REPSITES_NEW view for this request before retrying this operation.

ORA-23493: "*string*" is not a new site for extension request "*string*"

Cause: The specified extension request does not include the specified site as a new site.

Action: Ensure the specified site is a new site for this extension request before retrying this operation.

ORA-23494: too many rows for destination "*string*"

Cause: The specified destination has too many rows in system.def\$_destination table.

Action: Ensure the specified destination has at most two valid rows before retrying this operation.

ORA-23495: serial propagation can not be used for "string"

Cause: The sites involved may be in the process of adding a new site without quiescing.

Action: Check the def\$_destination table for this destination and try parallel propagation.

ORA-23496: can not change disabled status for "string" and "string"

Cause: The disabled status for this site is set internally for synchronization during adding a new master without quiescing.

Action: Ensure adding a new master without quiescing finished before invoking this procedure.

ORA-23497: reppgroup name cannot be null

Cause: The array of Reppgroup names contains a null value.

Action: Ensure that the array of Reppgroup names is dense and is not null terminated.

ORA-23498: reppgroups specified must have the same masters

Cause: The Reppgroup names specified do not have the same masters.

Action: Ensure that the Reppgroup names specified have the same masters.

ORA-23500: cannot switch master for a multi-tier materialized view reppgroup "string"."string"

Cause: An attempt was made to switch master for a materialized view reppgroup when its parent reppgroup is also a materialized view reppgroup. This is not allowed.

Action: Drop and recreate the materialized view reppgroup based on a proper parent reppgroup.

ORA-23501: refresh template cannot be instantiated for database with compatibility equal to or less than 8.0

Cause: Instantiation of a refresh template is not supported for database compatibility 8.0 or less.

Action: Be sure the database compatibility is 8.1 or above.

ORA-23502: valid directory for offline instantiation is not specified

Cause: An attempt was made to offline instantiate to a directory which is not specified or null.

Action: There are two ways to specify the directory: o As a parm offline_dirpath to the API o As an init.ora parm named utl_file_dir Make sure you have specified an appropriate directory in which the offline file can be created.

ORA-23503: error occurred during IAS instantiation

Cause: An attempt was made to instantiate a IAS site. Error occurred during IAS instantiation.

Action: See other errors on the error stack to look for the source of the problem. If the error still persists, contact Oracle Support.

ORA-23504: columns added to table do not match list of columns to be added

Cause: The list of columns passed as a parameter does not match the columns to be added to the table.

Action: Correct the DDL string or list of columns and reexecute.

ORA-23505: Object "*string*"."*string*" is missing.

Cause: The specified object does not exist.

Action: Check that the specified object is correct.

ORA-23514: invalid or incorrect number of arguments

Cause: The arguments passed to the online redefinition API were invalid or missing.

Action: Call the online redefinition API with the right number of valid arguments.

ORA-23515: materialized views and/or their indices exist in the tablespace

Cause: An attempt was made to drop a tablespace which contains materialized views and/or their indices.

Action: Drop the materialized views in this tablespace. Also, find indices belonging to materialized views in this tablespace and drop them. Then try dropping the tablespace.

ORA-23531: site owner already exists in the template.

Cause: Site owner for the template already exists.

Action: Do not create multiple siteowners for this template.

ORA-23532: tables with different synchronization mechanisms are in the same group

Cause: Tables belonging to the same replication group were specified to be cached with different synchronization mechanisms.

Action: Do not specify different synchronization mechanisms while caching tables belonging to the same replication group.

ORA-23533: object "*string*"."*string*" can not be cached

Cause: An attempt was made to cache an object which is not supported.

Action: Do not cache an object which is not supported.

ORA-23534: missing column in materialized view container table "*string*"."*string*"

Cause: After import, the materialized view container table has missing columns.

Action: Check if materialized view container table was imported correctly.

ORA-23535: instantiating templates from multiple back ends is not allowed.

Cause: An attempt was made to set a new non-null back end database for an iAS site.

Action: Call `dbms_ias_configure.set_back_end_db` procedure with null `dblink`. Then, call the same procedure with the new non-null `dblink`.

ORA-23536: the object "*string*"."*string*" is not cached at the middle tier as expected.

Cause: The object may have been dropped or renamed at the back end after `dbms_ias_inst.start_ias_inst` was executed.

Action: Check the validity of the object at the back end and retry the instantiation.

ORA-23537: function or procedure *string* is not allowed to be invoked from this site.

Cause: This function or procedure is restricted to the backend or middle tier site

Action: Connect to the proper site before calling this function or procedure.

ORA-23538: cannot explicitly refresh a NEVER REFRESH materialized view ("*string*")

Cause: An attempt was made to explicitly refresh a NEVER REFRESH MV.

Action: Do not perform this refresh operation or remove the MV(s) from the list.

ORA-23539: table "*string*"."*string*" currently being redefined

Cause: An attempt was made to redefine a table which is currently involved in an ongoing redefinition.

Action: Do not perform this redefinition operation on this table or wait till the ongoing redefinition of the table is completed.

ORA-23540: Redefinition not defined or initiated

Cause: An attempt was made to continue or complete a redefinition which was not defined or initiated.

Action: Define or initiate the redefinition before performing this operation.

ORA-23541: tables do not match tables used while defining the redefinition

Cause: An attempt was made to continue or complete a redefinition by providing different tables than those used while defining or initiating the redefinition.

Action: Repeat this operation and specify the same tables as those that were specified while defining or initiating the redefinition.

ORA-23542: dependent object "*string*"."*string*" already registered

Cause: An attempt was made to register an already registered dependent object to an ongoing redefinition.

Action: Do not attempt to register an already registered dependent object to an ongoing redefinition.

ORA-23543: materialized view log on "*string*"."*string*" is in an inconsistent state

Cause: There was an error while creating the materialized view log and the log is currently in an inconsistent state. A possible cause could be that schema redefinition has occurred on the master table while the log was being created. Another possible cause could be that there were DMLs being applied on the master table concurrently in another session at the time the materialized view log creation started and those DML transactions haven't committed even after a very long period of time.

Action: Drop the materialized view log and recreate it.

ORA-23546: cannot create rowid mapping table *string.string*

Cause: The online partition mover could not create a rowid mapping table.

Action: Rename the conflicting table or rerun the SQL statement. * There may be a concurrent online operation on the same object.

ORA-23547: dml_lock_timeout value is out of the permitted range

Cause: The value for dml_lock_timeout was out of the permitted range of 0 to 1,000,000.

Action: Use a value within the range of 0 to 1,000,000 and reexecute the procedure

ORA-23549: table "*string*"."*string*" involved in reference partitioning

Cause: An attempt was made to redefine a table which is currently involved in reference partitioning.

Action: Do not perform this redefinition operation on this table or remove reference partitioning and retry the operation.

ORA-23550: cannot redefine a table with interim table having identity columns that appear in column mapping

Cause: An attempt was made to redefine a table where the interim table has identity columns that appear in column mapping.

Action: Do not perform this redefinition operation or avoid using identity columns of the interim table in column mapping.

ORA-23551: unsupported UPDATE statement on an index-organized table

Cause: An attempt was made to update primary key columns of an index-organized table.

Action: Do not perform this redefinition operation or avoid updating primary key columns.

ORA-23552: cannot redefine an interval partitioned table with ILM policy

Cause: An attempt was made to redefine a table that has interval partitioning with ILM policy defined on it.

Action: Do not perform this redefinition operation or avoid using interval partitions when ILM policy needs to be used.

ORA-23553: cannot import materialized view "*string*"."*string*" due to synonym mismatch

Cause: Synonym mismatch occurred during the import of materialized views when REMAP_SCHEMA option was specified.

Action: Do not use the REMAP_SCHEMA option for importing materialized views with synonyms.

ORA-23554: cannot modify the contents of a staging log table

Cause: An attempt was made to alter the contents of a staging log table.

Action: Do not use the ALTER TABLE statements on a staging log table.

ORA-23600: cannot create PROPAGATION, *string* already exists

Cause: The propagate_name already exists.

Action: Drop the propagate_name using DROP_PROPAGATE command or specify propagate_name.

ORA-23601: PROPAGATION_NAME *string* does not exist

Cause: Propagation does not exist.

Action: Query DBA_PROPAGATION view to find existing propagation_name

ORA-23602: Invalid *string* process type *string*

Cause: Specified GoldenGate, XStream or Streams process type is not valid.

Action: Specify either capture or apply.

ORA-23603: *string* enqueue aborted due to low SGA

Cause: An attempt to enqueue a GoldenGate, XStream or Streams message was aborted because ORACLE is running low on memory allotted.

Action: Either start consuming messages by enabling any GoldenGate, XStream or Streams propagation or apply which might be disabled. An alternative is to allot more memory to STREAMS, which can be done by increasing the `streams_pool_size` initialization parameter if one was defined or by increasing the `shared_pool_size`.

ORA-23604: cannot create or start an instance, maximum limit reached

Cause: The maximum limit for creating or starting Oracle GoldenGate Extract instances was reached.

Action: Either stop a running Oracle GoldenGate Extract instance or increase the maximum limit.

ORA-23605: invalid value "*string*" for *string* parameter *string*

Cause: An attempt was made to specify an invalid parameter value.

Action: Specify a valid value for the parameter. Check the documentation for valid parameter values.

ORA-23606: invalid object *string*

Cause: An attempt was made to specify an invalid object.

Action: Specify a valid object.

ORA-23607: invalid column "*string*"

Cause: An invalid column was specified in the column list.

Action: Check the columns in the object and specify the right column name.

ORA-23608: invalid resolution column "*string*"

Cause: An invalid column was specified as the resolution column. The resolution column must belong to the list of columns specified in the '`column_list`' parameter.

Action: Check the columns in the `column_list` and specify the right resolution column name.

ORA-23609: unable to find directory object for directory *string*

Cause: There was no entry in `ALL_DIRECTORIES` corresponding to the specified directory.

Action: Grant to the current user appropriate privileges on either a new directory object or an existing directory object.

ORA-23610: internal `dbms_streams_tablespaces` error: [*string*] [*string*] [*string*] [*string*]

Cause: Streams detected an erroneous result.

Action: Look for information in the session trace file and contact customer support.

ORA-23611: tablespace "*string*" has more than one data file

Cause: The specified tablespace had more than one data file and hence did not qualify as a simple tablespace.

Action: Choose a self-contained tablespace with a single data file, or use a procedure that supports any tablespace.

ORA-23612: unable to find tablespace "*string*"

Cause: Either the tablespace did not exist, or the current user did not have sufficient privileges on the tablespace.

Action: Grant appropriate privileges on the tablespace to the current user or choose a different tablespace.

ORA-23613: Script *string* already exists

Cause: A script for the specified invoking package already existed.

Action: Complete the previous invocation or drop the previous invocation before proceeding with the current invocation.

ORA-23614: Script *string* does not exist

Cause: The named script did not exist.

Action: Create the script.

ORA-23615: Block number *string* does not exist for script *string*

Cause: The specified block number did not exist for the script.

Action: Add the block or check the block number and reexecute.

ORA-23616: Failure in executing block *string* for script *string* with *lnstring*

Cause: The execution of specified block failed.

Action: Check the error. Query DBA_RECOVERABLE_SCRIPT_BLOCKS to view the failed block. Rectify and rerun the block or script.

ORA-23617: Block *string* for script *string* has already been executed

Cause: The specified block was already executed.

Action: Check the block number and reissue the command.

ORA-23618: Generation of script *string* is not complete.

Cause: Script generation for the specified script was not completed in a prior invocation.

Action: Purge the specified script by calling the RECOVER_OPERATION API in the package DBMS_STREAMS_ADM and reattempt the entire operation.

ORA-23619: non-Oracle system error: *string*

Cause: A non-Oracle database has returned an error message to STREAMS when attempting to apply a DML statement. The non-Oracle system error message is a parameter to this Oracle error.

Action: Corrective action may or may not be possible (depending on the non-Oracle system error). If corrective action is possible, correct the problem and try applying the transaction again.

ORA-23620: bind value size too large for PL/SQL CALL operation

Cause: In a PL/SQL CALL to a stored procedure, the bind string size exceeded 4K.

Action: Either make the bind string size shorter (less than 4K) or use BEGIN-END to call the procedure instead of CALL.

ORA-23621: Operation corresponding to script *string* is in progress.

Cause: The script was already being run in a different session or was terminated before status for the script was updated to ERROR or EXECUTED.

Action: Make sure the script is not being run in a parallel session. Then call the RECOVER_OPERATION API in the DBMS_STREAMS_ADM package with the appropriate OPERATION_MODE argument.

ORA-23622: Operation *string.string.string* is in progress.

Cause: An attempt was made to execute a procedure which was being executed in a parallel session or failed execution.

Action: Query the DBA_RECOVERABLE_SCRIPT view to identify the operation that is currently in progress for the specified invoking procedure. Complete the operation before proceeding.

ORA-23623: internal DBMS_COMPARISON error: [*string*] [*string*] [*string*] [*string*]

Cause: DBMS_COMPARISON detected an erroneous result.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-23624: A comparison operation is currently in progress for *string*.

Cause: Another session was already performing an operation on this object.

Action: Retry the operation once other sessions are done with the specific comparison object.

ORA-23625: Table shapes of *string.string* and *string.string@string* did not match.

Cause: Table shapes of local and remote tables to compare did not match.

Action: Retry by explicitly specifying columns that match in column_list or create views on the tables as appropriate.

ORA-23626: No eligible index on table *string.string*

Cause: Table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23627: Comparison object *string* already existed.

Cause: A comparison object by the specified name already exists.

Action: Retry with a different name.

ORA-23628: Comparison query too long (actual *string*, allowed *string*).

Cause: A generated query for comparison was too long.

Action: Comparison is unsupported for very large tables with long column names. Retry with a subset of columns or with shorter column names.

ORA-23629: *string.string* is not an eligible index on table *string.string* for comparison

Cause: The specified index was not an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Please specify an eligible index for the table to be compared.

ORA-23630: Cannot switch to apply-state checkpoint mode (value "*string*", *string* parameter *string*), due to the following reason:

Cause: Could not switch to apply-state checkpoint mode, or already in apply-state checkpoint mode.

Action: Can switch to apply-state checkpoint mode only if the capture is new (it never ran), the capture wasn't cloned from a capture with checkpoints, the capture doesn't include any extra attributes, and combined capture and apply is enabled.

ORA-23631: apply-state checkpoint mode cannot change (value "*string*", *string* parameter *string*)

Cause: Could not switch to checkpoints because apply-state checkpoint mode was set.

Action: Drop the apply-state checkpoint capture and create a new one that will / take checkpoints.

ORA-23632: Cannot force checkpoints in apply-state checkpoint mode (value "*string*", *string* parameter *string*)

Cause: The capture process was in apply-state checkpoint mode.

Action: Cannot take checkpoints in apply-state checkpoint mode.

ORA-23633: Cannot turn off combined capture and apply mode in apply-state checkpoint mode (value "*string*", *string* parameter *string*)

Cause: The capture was running in apply-state checkpoint mode and had to run in combined capture and apply mode also.

Action: Ensure that this capture runs in combined capture and apply by dropping additional propagation or apply processes for the same queue.

ORA-23634: Cannot include extra attributes in apply-state checkpoint mode

Cause: The capture process was in apply-state checkpoint mode.

Action: Extra attributes are not supported in apply-state checkpoint mode.

ORA-23635: MAINTAIN_TTS: tablespace(s) already exist(s) in target database.

Cause: The tablespaces were already in existence in the target database when the streams MAINTAIN_TTS APIs were called."

Action: Check whether you can drop the tablespaces to be maintained in the target database. If not, don't use streams MAINTAIN_TTS APIs to setup streams. Check the Oracle documentation on how to setup streams.

ORA-23636: MAINTAIN_TTS: Invalid tablespace name, reason: *string*.

Cause: The tablespace name was either NULL or too long when the streams MAINTAIN_TTS APIs were called.

Action: Check that the specified tablespace names are not NULL and are spelled correctly. If there are too many tablespaces, group them together and call the streams MAINTAIN_TTS APIs for the group.

ORA-23637: Capture started in checkpoint mode

ORA-23638: Capture cloned from a capture with checkpoints

ORA-23639: Extra Attribute included

ORA-23640: Combined capture and apply disabled

ORA-23641: Capture started in apply-state checkpoint mode already

ORA-23642: Cannot switch to checkpoint mode (value "*string*", *string* parameter *string*)

Cause: Capture was cloned from a capture in apply-state checkpoint mode.

Action: Clone from a capture with checkpoints.

ORA-23643: Capture cloned from a capture in apply-state checkpoint mode

ORA-23644: Cannot switch to apply-state checkpoint mode (Capture *string*)

Cause: Switch to apply-state checkpoint mode was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23645: Cannot switch to checkpoints (Capture *string*)

Cause: Switch to checkpoints was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23646: *string string* process *string* does not exist

Cause: Capture or Apply did not exist.

Action: Create a Capture or Apply process, then try again.

ORA-23647: *string string* process *string* is not running

Cause: Capture or Apply were not running.

Action: Start Capture or Apply process, then try again

ORA-23648: Capture *string* is for Change Data Capture

Cause: Capture was for Change Data Capture, and checkpoints were required.

Action: None

ORA-23649: Capture *string* is for Audit Vault

Cause: Capture was for Audit Vault, and checkpoints were required.

Action: None

ORA-23650: No progress Capture *string*

Cause: Capture was not capturing changes.

Action: Make sure Capture is running and capturing changes.

ORA-23651: Capture *string* is already in *string* mode

Cause: Capture was already in the desired mode.

Action: None

ORA-23652: The oldest SCN could not be updated at Apply *string*

Cause: The oldest SCN was not updated before the switch was performed.

Action: Make sure Apply is running and the switch package version is the same at both databases.

ORA-23653: LogMiner session does not exist

Cause: LogMiner session did not exist.

Action: Make sure the Capture process exists.

ORA-23654: Attempting to set the oldest SCN to a greater value (*string*) than the current one (*string*) at Apply *string*

Cause: The new value for the oldest SCN was not computed correctly.

Action: Make sure Capture and Apply are running, and Capture is making progress.

ORA-23655: The SCN range cannot be smaller than 0, (SCN range = *string*)

Cause: The function was invoked with a negative SCN range.

Action: Use a positive SCN range.

ORA-23656: Timeout occurred while *string string* process *string*

Cause: The GoldenGate, XStream or Streams process could not be stopped or started.

Action: Call the switch procedure again.

ORA-23657: the converted file *string* already exists

Cause: The converted file was already in existence. CONVERT FILE call does not overwrite the existing file.

Action: Check whether the existing file can be deleted. If the existing file can be deleted, delete it. Otherwise, specify a different directory or file extension.

ORA-23658: Invalid character set specified when converting column '*string*' in '*string.string*'

Cause: The conversion between two character sets for the column in the given table is not supported.

Action: Check if the implicit conversion between source and destination column is supported.

ORA-23659: Destination buffer is not large enough when converting column '*string*' in '*string.string*' (actual length: *string*; maximum length: *string*)

Cause: The conversion between two character sets failed because a source column value is too large for the destination column.

Action: Check if size of the source and destination column matches.

ORA-23660: Unable to load NLS data object when converting column '*string*' in '*string.string*'

Cause: It may be caused by invalid NLS environment setting.

Action: Check your NLS environment setting.

ORA-23661: Canon capture name "*string*" not found

Cause: There's no such capture process

Action: Pass the right parameter to the function

ORA-23662: subset rule length exceeds maximum allowed value

Cause: The length of an insert, update, or delete subset rule computed from the DML condition input exceeded the maximum allowed length.

Action: Make the DML condition shorter.

ORA-23663: local object *string.string* is not a single table view

Cause: The view was based either on another view or multiple tables or views.

Action: For comparison, specify a view based on a single table.

ORA-23664: remote object *string.string* is not a single table view

Cause: The view was based either on another view or multiple tables or views.

Action: For comparison, specify a view based on a single table.

ORA-23665: DML conflict handler "*string*" not found

Cause: The DML conflict handler was not found for modification or removal.

Action: Make sure the name of the conflict handler is correct and that it exists.

ORA-23666: Default column group in use by DML conflict handler "*string*"

Cause: A default column group was found for the specified Apply name, operation name, and conflict type.

Action: Remove the existing default column group and retry.

ORA-23667: Column "*string*" already used by conflict handler "*string*"

Cause: The column was already in the column group of another conflict handler for the specified Apply name, operation name, and conflict type.

Action: Remove the column from the other conflict handler or specify a different column.

ORA-23668: Column "*string*" does not have a numeric data type.

Cause: The specified column did not have a numeric data type. Delta conflict resolution requires numeric columns.

Action: Check the data type of the column and specify only numeric columns.

ORA-23669: Duplicate conflict handler name

Cause: A DML conflict handler with the specified name was found.

Action: Remove the current DML conflict handler or specify a different name.

ORA-23670: Duplicate column name "*string*"

Cause: The specified value was duplicated in the column group list.

Action: Remove duplicated entries from the column group list.

ORA-23671: Default column group required

Cause: A default column group was not specified. The specified Apply name, operation name, and conflict type is only supported on default column groups.

Action: Specify a default column group.

ORA-23672: Column not specified in column group for DML conflict handling for table "*string*"."*string*"

Cause: The specified table contained a column that was not specified as part of a column group.

Action: Add the column to a column group.

ORA-23673: Invalid resolution column "*string*" for table "*string*"."*string*"

Cause: The specified resolution column was not valid.

Action: Set the resolution column to a valid column.

ORA-23674: Unable to handle delta conflict resolution for table "*string*"."*string*"

Cause: The specified table or the LCR contained a null value in one of the columns belonging to a delta conflict group.

Action: Correct each delta column in the table or the error LCR if it currently has a null value.

ORA-23675: Unsupported OPERATION_NAME, CONFLICT_TYPE, and METHOD_NAME

Cause: The specified OPERATION_NAME, CONFLICT_TYPE, and METHOD_NAME was not a valid set of parameters.

Action: Retry with a valid set of parameters.

ORA-23676: no eligible index on local table "*string*"."*string*"

Cause: The local table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23677: no eligible index on remote table "*string*"."*string*"

Cause: The remote table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23678: index "*string*"."*string*" on local table "*string*"."*string*" is not eligible for comparison

Cause: The specified index was not eligible for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Specify an eligible index for the table to be compared.

ORA-23679: index "*string*"."*string*" on remote table "*string*"."*string*" is not eligible for comparison

Cause: The specified index was not eligible for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Specify an eligible index for the table to be compared.

ORA-23900: no real modification specified

Cause: Tried to modify the property with same value again.

Action: Verify the argument values again and retry the operation.

ORA-23999: *string* is not a kafka topic

Cause: Either an ALTER_DATABASE_KAFKA_TOPIC OR DROP_DATABASE_KAFKA_TOPIC was issued on a topic that was not created as a kafka topic.

Action: Drop the topic using dbms_aqadm.drop_transactional_event_queue or dbms_aqadm.drop_sharded_queue.

ORA-24000: invalid value *string*, *string* should be of the form [SCHEMA.]NAME

Cause: An invalid value was specified for the parameter.

Action: Specify a string of the form [SCHEMA.]NAME .

ORA-24001: cannot create QUEUE_TABLE, *string* already exists

Cause: The queue table already exists in the queueing system.

Action: Drop the table first using the DROP_QUEUE_TABLE() command or specify another table.

ORA-24002: Queue table *string* does not exist.

Cause: The queue table did not exist.

Action: Query on the user view USER_QUEUE_TABLES to list existing queue tables.

ORA-24003: Queue table index *string* is inconsistent with queue table *string*.

Cause: The queue table index was not successfully imported.

Action: Import the queue table index before attempting to use the queue table. If the import fails, correct the problem and import the queue table index again.

ORA-24004: invalid column name *string* in SORT_LIST, should be ENQ_TIME or PRIORITY

Cause: Invalid column name was specified in the SORT_LIST.

Action: The valid column names are ENQ_TIME and PRIORITY.

ORA-24005: inappropriate utility used to perform DDL on advanced queuing table *string.string*

Cause: An attempt was made to use the SQL statement DROP TABLE, TRUNCATE TABLE, or ALTER TABLE on queue metadata or tables.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE to for DROP TABLE operations, DBMS_AQADM.PURGE_QUEUE_TABLE for TRUNCATE TABLE operations. ALTER TABLE redefinition is based on only ALTER_TABLE_PROPERTIES. ALTER_TABLE_PARTITIONING clauses are allowed.

ORA-24006: QUEUE *string* exists.

Cause: The specified queue exists in the users' schema.

Action: Specify another queue name. Query USER_QUEUES for all the existing queues in the schema.

ORA-24007: invalid value *string*, MAX_RETRIES should be non-negative integer

Cause: An invalid value was specified for MAX_RETRIES.

Action: Specify a non-negative integer.

ORA-24008: queue table *string.string* must be dropped first

Cause: An error was detected when dropping a queue table in a cluster, tablespace, or schema.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE procedure to drop the specified queue table first; then, retry the operation.

ORA-24009: invalid value *string*, QUEUE_TYPE should be NORMAL_QUEUE or EXCEPTION_QUEUE

Cause: Invalid queue type parameter

Action: Valid values are NORMAL_QUEUE for normal queue and EXCEPTION_QUEUE for exception queue.

ORA-24010: QUEUE *string* does not exist

Cause: The specified queue does not exist.

Action: Specify a valid queue. Query USER_QUEUES for all the valid queues.

ORA-24011: cannot drop QUEUE, *string* should be stopped first

Cause: The queue was not stopped. Either enqueue or dequeue was still enabled.

Action: Stop the queue first using the STOP_QUEUE command to disable both enqueue and dequeue.

ORA-24012: cannot drop QUEUE_TABLE, some queues in *string* have not been dropped

Cause: A queue exists in the queue table which has not been dropped. All queues need to be dropped first.

Action: Drop all queues belonging to this queue table using the drop_queue() command. Be sure to stop the queues appropriately before dropping them. Alternately, use the force option in drop_queueable.

ORA-24013: invalid value *string*, RETRY_DELAY should be non-negative

Cause: A negative value was specified for RETRY_DELAY.

Action: Specify a non-negative value for RETRY_DELAY.

ORA-24014: invalid value *string*, RETENTION_TIME should be FOREVER or non-negative

Cause: Queue retention was specified, but the retention time was specified to be less than zero.

Action: Specify the retention time to be non-negative or FOREVER. Alternately don't specify retention.

ORA-24015: cannot create QUEUE_TABLE, QUEUE_PAYLOAD_TYPE *string.string* does not exist

Cause: An invalid QUEUE_PAYLOAD_TYPE specified during create_queue_table.

Action: The QUEUE_PAYLOAD_TYPE should be RAW or an object type that already exists in the database.

ORA-24016: cannot create QUEUE_TABLE, user *string* does not have execute privileges on QUEUE_PAYLOAD_TYPE *string.string*

Cause: An invalid object type specified for QUEUE_PAYLOAD_TYPE during create_queue_table.

Action: The user should have execute privileges on the object type specified for the queue.

ORA-24017: cannot enable enqueue on QUEUE, *string* is an exception queue

Cause: An attempt was made to enable enqueue to an exception queue. Exception queues only allow dequeue operations.

Action: None. *Params: 1) queue_name: The queue name where the operation is being attempted.

ORA-24018: STOP_QUEUE on *string* failed, outstanding transactions found

Cause: There were outstanding transactions on the queue, and WAIT was set to false, so STOP_QUEUE was unsuccessful in stopping the queue.

Action: Set WAIT to TRUE and try STOP_QUEUE again. It will hang till all outstanding transactions are completed.

ORA-24019: identifier for *string* too long, should not be greater than *string* characters

Cause: The identifier specified is too long.

Action: Try again with a shorter identifier.

ORA-24020: Internal error in DBMS_AQ_IMPORT_INTERNAL, *string*

Cause: Internal Error occurred in the package DBMS_AQ_IMPORT_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24021: queue table definition not imported for *string.string*

Cause: The queue definition is not updated because the queue table was not imported properly

Action: Import the queue table again.

ORA-24022: The value specified for enqueue and dequeue has no effect on the queue.

Cause: The parameter values for both enqueue and dequeue cannot be NULL or FALSE. This combination will not result in starting or stopping the queue.

Action: None. This is a warning.

ORA-24023: Internal error in DBMS_AQ_EXP_INTERNAL.*string* [*string*] [*string*]

Cause: Internal Error occurred in the package DBMS_AQ_EXP_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24024: Internal error in DBMS_AQ_IMP_INTERNAL.*string* [*string*] [*string*]

Cause: Internal Error occurred in the package DBMS_AQ_IMP_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24025: invalid value *string*, QUEUE_PAYLOAD_TYPE should be RAW or an object type

Cause: Parameter queue_payload_type has invalid value.

Action: Specify a valid object type or RAW.

ORA-24026: operation failed, queue *string.string* has errors

Cause: An attempt was made to enqueue, dequeue or administer a queue which had errors.

Action: Drop the queue table setting the force option to true.

ORA-24027: AQ HTTP propagation encountered error, status-code *string*, *string*

Cause: AQ propagation's HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-24028: cannot create a receiver non-repudiable single consumer queue

Cause: Tried to create a receiver non-repudiable single consumer queue

Action: This feature is not supported

ORA-24029: operation not allowed on a single-consumer queue

Cause: Tried an operation not allowed on a single-consumer queue.

Action: Specify the operation on a multi-consumer queue.

ORA-24030: Only one of rule or rule-set must be specified

Cause: Specified both a rule and rule-set for the operation.

Action: Specify only one of rule or rule-set.

ORA-24031: invalid value, *string* should be non-NULL

Cause: Parameter is NULL.

Action: Specify a non NULL value for the parameter.

ORA-24032: object *string* exists, index could not be created for queue table *string*

Cause: Oracle AQ tried to create an index with the name specified in the error message. The index could not be created for the specified queue table because a object exists with the same name.

Action: Drop the object specified in the error message and retry the command. You can also choose a different name for the queue table.

ORA-24033: no recipients for message

Cause: An enqueue was performed on a queue that was set up for multiple consumers but there were neither explicit recipients specified in the call or were there any queue subscribers determined to be recipients for this message.

Action: Either pass a list of recipients in the enqueue call or add subscribers to the queue for receiving this message.

ORA-24034: application *string* is already a subscriber for queue *string*

Cause: An application name that was already a subscriber for the queue was specified in the DBMS_AQ.SUBSCRIBE call.

Action: None

ORA-24035: AQ agent *string* is not a subscriber for queue *string*

Cause: An AQ agent that was not a subscriber for the queue was specified.

Action: Check the name and/or address of the agent and retry the call.

ORA-24036: invalid SORT_ORDER column *string* specified for queue table

Cause: The create queue table command was issued with message_grouping set to TRANSACTIONAL and a sort order column other than priority. Only the priority column can be specified in the sort order for queue tables with transactional grouping.

Action: Change the sort order list in the create queue table command and retry the call.

ORA-24037: schema *string* in QUEUE_NAME is not same as schema *string* in QUEUE_TABLE

Cause: The schema specified in the QUEUE_NAME parameter of CREATE_QUEUE is not the same as the schema specified in the QUEUE_TABLE parameter.

Action: Use the same schema name for both the QUEUE_NAME and QUEUE_TABLE parameters and retry the command.

ORA-24038: RETRY_DELAY and MAX_RETRIES cannot be used for a 8.0 compatible multiple consumer queue

Cause: The CREATE_QUEUE or ALTER_QUEUE command was issued with a non-zero RETRY_DELAY and a QUEUE_TABLE that was created for multiple consumers and with COMPATIBLE parameter set to '8.0'.

Action: Either set the RETRY_DELAY to zero or upgrade the queue table to 8.1 compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-24039: Queue *string* not created in queue table for multiple consumers

Cause: Either an ADD_SUBSCRIBER, ALTER_SUBSCRIBER, or REMOVE_SUBSCRIBER procedure, or an ENQUEUE with a non-empty recipient list, was issued on a queue that was not created for multiple consumers.

Action: Create the queue in a queue table that was created for multiple consumers and retry the call.

ORA-24041: propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: A SCHEDULE_PROPAGATION was issued for a queue and destination pair which has an existing propagation schedule.

Action: Issue UNSCHEDULE_PROPAGATION to remove the existing schedule and then reissue the SCHEDULE_PROPAGATION call.

ORA-24042: no propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: AN UNSCHEDULE_PROPAGATION was issued for a queue and destination pair which has no existing propagation schedule.

Action: Verify the spelling of the specified QUEUE and DESTINATION and then reissue the call with the correct spelling.

ORA-24043: destination *string* uses a reserved name, names with AQ\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a destination.

Action: Enter a different value or NULL for the local destination. Then retry the operation.

ORA-24044: source *string* and destination *string* object types do not match

Cause: A message recipient's queue has a different object structure than the sender's queue. The message cannot be propagated.

Action: Either remove the recipient from the subscriber's list for the sender's queue or create the destination queue with an object type that matches the source queue's object type.

ORA-24045: invalid agent address *string*, agent address should be of the form [SCHEMA.]NAME[@DATABASE LINK]

Cause: An invalid value was specified for the agent address parameter.

Action: Specify a string of the form [SCHEMA.]NAME[@DATABASE LINK].

ORA-24046: protocol attribute reserved for future use

Cause: The protocol attribute of the AQ agent object type is reserved for future use.

Action: Do not specify the protocol attribute in the agent object type.

ORA-24047: invalid agent name *string*, agent name should be of the form NAME

Cause: An invalid value was specified for the agent name parameter.

Action: Specify a string of the form NAME. Then retry the operation.

ORA-24048: cannot create QUEUE_TABLE, user does not have access to AQ object types

Cause: An attempt was made to issue the CREATE_QUEUE_TABLE command, but the user who issued the command does not have access to internal AQ object types.

Action: Use the DBMS_AQADM.GRANT_TYPE_ACCESS procedure to grant the user access to the AQ object types.

ORA-24049: invalid agent name *string*, names with AQ\$_ prefix are not valid

Cause: An attempt was made to use a reserved prefix in the agent name.

Action: Enter a different value for the agent name. Then, retry the operation.

ORA-24050: subscribers are not supported for exception queue *string*

Cause: An ADD_SUBSCRIBER, ALTER_SUBSCRIBER, or REMOVE_SUBSCRIBER procedure was issued on a queue that was created as an EXCEPTION_QUEUE.

Action: Specify a NORMAL_QUEUE in the procedure.

ORA-24051: Propagation of object type payloads that have a REF attribute is not supported.

Cause: An ADD_SUBSCRIBER or ENQUEUE procedure with a non-NULL address field in the agent type was issued on a queue whose payload has a REF attribute.

Propagation of object type payloads that have a REF attribute is currently not supported.

Action: Specify an agent with a NULL address field so that the agent can dequeue from the same queue. Or, change the object type definition to one that does not use REF attributes.

ORA-24052: cannot propagate object type payloads with LOB attributes to Oracle Database release 8.0

Cause: LOB attributes were using Oracle Database release 8.0. Propagation of LOB attributes is supported only in Oracle Database release 8.1 and later.

Action: Upgrade the target release to Oracle Database release 8.1 and retry. Or, change the object type definition to one that does not use LOB.

ORA-24053: PRIMARY_INSTANCE and SECONDARY_INSTANCE must be non-negative

Cause: One of PRIMARY_INSTANCE or SECONDARY_INSTANCE was negative.

Action: Specify non-negative integers for PRIMARY_INSTANCE and SECONDARY_INSTANCE.

ORA-24054: cannot propagate to an Oracle Database release 8.0.3 or earlier release

Cause: The recipient of a message was using an Oracle Database release 8.0.3 or earlier. Propagation is supported only in Oracle Database release 8.0.4 and later.

Action: Upgrade the target release to Oracle Database release 8.0.4 or later and retry the operation.

ORA-24055: cannot delete propagation status rows that are in prepared state

Cause: An attempt was made to use the internal administration procedure to delete status rows from the SYS.AQ\$_PROPAGATION_STATUS table that were in the prepared state.

Action: Wait for the propagation to complete successfully before retrying the operation.

ORA-24056: internal inconsistency for QUEUE string and destination string

Cause: The sequence numbers used in the SYS.AQ\$_PROPAGATION_STATUS table were inconsistent for the given queue and destination.

Action: Contact Oracle Worldwide Support.

ORA-24057: cannot define subscriber with rule for queue string

Cause: An ADD_SUBSCRIBER or ALTER_SUBSCRIBER procedure with a rule was issued on a queue for which rule based subscribers are not supported. Rule based subscribers currently are supported only for NORMAL (persistent) multi-consumer queues created using an Oracle release 8.1.0 or higher compatible queue table.

Action: Create a NORMAL multi-consumer queue in an Oracle release 8.1.0 or higher compatible queue table, and retry the call. Or, if the queue is a normal (persistent) multi-consumer queue, convert the queue table to Oracle 8.1.0 or higher compatibility and retry.

ORA-24058: cannot downgrade QUEUE_TABLE that has propagation in a prepared state

Cause: An attempt was made to downgrade the queue table when there were messages being propagated that were in the prepared state.

Action: Wait for the propagation to complete before retrying the operation.

ORA-24059: invalid COMPATIBLE parameter setting *string* specified in DBMS_AQADM.*string*

Cause: An invalid compatible parameter was specified in the DBMS_AQADM procedure. The parameter setting must be of the form '8.x.y' where x is the release number and y is the update number.

Action: Specify a valid COMPATIBLE parameter setting, and retry the operation.

ORA-24060: cannot convert QUEUE_TABLE, *string* already is compatible with release *string*

Cause: The source queue table in the DBMS_AQADM procedure is compatible with the specified COMPATIBLE parameter setting.

Action: Choose a different COMPATIBLE parameter setting to convert the queue table to the desired compatibility.

ORA-24061: cannot specify non-zero SECONDARY_INSTANCE if PRIMARY_INSTANCE was zero

Cause: A non-zero value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was zero.

Action: Specify a non-zero primary instance before you specify a non-zero secondary instance.

ORA-24062: Subscriber table *string* inconsistent with queue table *string*.

Cause: The subscriber table was not successfully imported.

Action: Import the subscriber table before attempting to use the queue table. If the import failed, correct the problem and try to import the subscriber table again.

*Params: 1) subscriber_table: The subscriber table for the queue table in question. 2) queue_table: The queue table where the queue is hosted.

ORA-24063: cannot downgrade QUEUE_TABLE that has queues with rule-based subscribers

Cause: An attempt was made to downgrade the queue table when there were queues on which rule based subscribers are defined.

Action: Remove the rule based subscribers for all queues in this queue table and retry.

ORA-24064: propagation for QUEUE *string* and DESTINATION *string* already enabled

Cause: An ENABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was enabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the ENABLE_SCHEDULE_PROPAGATION command.

ORA-24065: propagation for QUEUE *string* and DESTINATION *string* already disabled

Cause: A DISABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was disabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the DISABLE_SCHEDULE_PROPAGATION command.

ORA-24066: invalid object privilege specified for queue object type

Cause: An invalid privilege was specified for granting or revoking an object privilege on a queue object type.

Action: Check Oracle Database documentation to verify which object privileges can be granted or revoked on a queue object type.

ORA-24067: exceeded maximum number of subscribers for queue *string*

Cause: An attempt was made to add new subscribers to the specified, but the number of subscribers for this queue has exceeded the maximum number (1024) of subscribers allowed per queue.

Action: Remove existing subscribers before trying to add new subscribers.

ORA-24068: cannot start queue *string*, queue table *string* is being migrated

Cause: An attempt was made to start a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24069: cannot downgrade queue table *string* while it is being upgraded

Cause: An attempt was made to downgrade a queue table, but a previous command to upgrade the queue table has not yet completed successfully.

Action: Complete the upgrade of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, downgrade the queue table.

ORA-24070: cannot upgrade queue table *string* while it is being downgraded

Cause: An attempt was made to upgrade a queue table, but a previous command to downgrade the queue table has not yet completed successfully.

Action: Complete the downgrade of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, upgrade the queue table.

ORA-24071: cannot perform operation *string*, queue table *string* is being migrated

Cause: An attempt was made to perform an operation on a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24072: cannot execute MIGRATE_QUEUE_TABLE procedure; must own queue table

Cause: An attempt was made to upgrade or downgrade a queue table using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure, but the user who executed the procedure does not own the queue.

Action: Reconnect as the owner of the queue table, and then execute the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-24073: cannot specify RETENTION_TIME on exception queue *string.string*

Cause: An attempt was made to create or alter an exception queue by specifying a non-zero RETENTION_TIME.

Action: Use the default RETENTION_TIME parameter value for exception queues.

ORA-24074: RETRY_DELAY and MAX_RETRIES cannot be used for exception queue *%string*

Cause: The CREATE_QUEUE or ALTER_QUEUE command was issued with a non-zero RETRY_DELAY and an exception queue.

Action: Do not specify RETRY_DELAY or MAX_RETRIES for exception queues.

ORA-24075: cannot specify agent with NULL address and non-NULL protocol

Cause: An ADD_SUBSCRIBER or enqueue was attempted with an agent that had a NULL address and a non-NULL protocol.

Action: Either specify a non-NULL address or set the protocol to NULL.

ORA-24076: cannot perform operation *string* for NON_PERSISTENT queue *string.string*

Cause: One of the operations, SCHEDULE_PROPAGATION, ALTER_QUEUE, LISTEN, DEQUEUE was issued for a NON_PERSISTENT queue.

Action: Do not specify a NON_PERSISTENT queue for these operations.

ORA-24077: cannot create propagation schedule for EXCEPTION queue *string.string*

Cause: A SCHEDULE_PROPAGATION was issued for an EXCEPTION queue. Propagation schedules can be created only for NORMAL queues.

Action: To propagate messages from a queue specify the queue type as NORMAL.

ORA-24078: cannot specify a non-NULL SECONDARY_INSTANCE if PRIMARY_INSTANCE was NULL

Cause: A non-NULL value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was NULL.

Action: Specify a non-NULL primary instance before you specify a non-NULL secondary instance.

ORA-24079: invalid name *string*, names with AQ\$_ prefix are not valid for *string*

Cause: An attempt was made to use a reserved prefix for the object name.

Action: Enter a different name for this object. Then, retry the operation.

ORA-24080: unschedule_propagation pending for QUEUE *string* and DESTINATION *string*

Cause: A propagation administration command was issued for a queue and destination pair whose propagation is being unscheduled.

Action: Do not issue propagation administration commands for a propagation schedule on which there is a pending unschedule request.

ORA-24081: compatible parameter needs to be *string* or greater

Cause: The compatible parameter was not high enough to allow the operation.

Action: Shutdown and restart with a higher compatibility setting.

ORA-24082: propagation may still be happening for the schedule for QUEUE *string* and DESTINATION *string*

Cause: The snapshot process executing the propagation schedule did not respond to the disable propagation command.

Action: Make sure that the job for the propagation schedule has been ended.

ORA-24083: cannot specify remote subscribers for *string* QUEUE *string*

Cause: An add_subscriber call with a non-null address field was issued on a queue which does not support remote subscribers. Remote subscribers are not supported for NON_PERSISTENT QUEUES.

Action: Specify a null address field and retry the call.

ORA-24084: DBLINK name in address field of agent *string* is not unique within the first 24 bytes

Cause: Advanced Queuing requires that the agent's dblink name should be unique within the first 24 bytes (for 8.0 compatible queueables)

Action: Specify a dblink name that is unique within the first 24 bytes or migrate to 8.1 compatible queueables where this restriction is not there.

ORA-24085: operation failed, queue *string* is invalid

Cause: An attempt was made to enqueue, dequeue or administer a queue which is invalid. This could have occurred because the payload type of the queue's queue table was dropped or rules associated with queue subscribers got altered or dropped.

Action: Drop the queue table setting the force option to true.

ORA-24086: cannot create a 8.0 compatible *string* queue

Cause: An attempt was made to create a 8.0 compatible queue table and enable a feature that is supported only on 8.1 style queue tables

Action: This feature is not supported

ORA-24087: Invalid database user *string*

Cause: An invalid database username was specified

Action: Specify a valid database user

ORA-24088: AQ Agent *string* does not exist.

Cause: This AQ Agent did not exist.

Action: Specify a valid Oracle Streams Advanced Queuing (AQ)agent. Check // the DBA_AQ_AGENTS view for a list of valid AQ agents.

ORA-24089: AQ Agent *string* already exists

Cause: This AQ agent has already been created

Action: Specify another agent name or use the ALTER api to modify the agent information.

ORA-24090: at least one protocol must be enabled

Cause: No protocol was enabled for aq agent

Action: Enable one of the protocols by setting one of the enable parameters to true.

ORA-24091: Destination queue *string* is the same as the source queue

Cause: Propagation cannot be scheduled when the destination queue is the same as the source queue.

Action: Specify a different destination queue.

ORA-24092: invalid value *string* specified

Cause: A queue, queue table, rule, or ruleset name that requires double quotes was specified when the database compatibility was less than 10.0.

Action: Specify a value that does not require double quotes and retry the operation.

ORA-24093: AQ agent *string* not granted privileges of database user *string*

Cause: The specified AQ agent does not have privileges of the specified database user

Action: Specify a valid combination of AQ agent and database user. Check the DBA_AQ_AGENT_PRIVS or USER_AQ_AGENT_PRIVS view for user/agent mappings

ORA-24094: invalid transformation, target type does not match that of the queue

Cause: The target type of the transformation specified was different from the type of the queue.

Action: Provide a valid transformation whose target type is the same as the queue type.

ORA-24095: invalid transformation, source type does not match that of the queue

Cause: The source type of the transformation specified was different from the type of the queue.

Action: Provide valid transformation whose source type is the same as the queue type.

ORA-24096: invalid message state specified

Cause: Invalid value is specified for message state

Action: Provide a valid message state as specified in the documentation

ORA-24097: Invalid value *string*, *string* should be non-negative

Cause: A negative value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-24098: invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-24099: operation not allowed for 8.0 compatible queues

Cause: The specified operation is only supported for queues with compatibility 8.1 or greater.

Action: Upgrade the 8.0 compatible queue to release 8.1 using DBMS_AQADM.MIGRATE_QUEUE_TABLE or specify a queue with compatibility 8.1.

ORA-24101: stopped processing the argument list at: *string*

Cause: One of the arguments of the requested operation contained a list of scheduler objects. While processing this list an error was encountered with the specified item.

Action: Resolve the error for this element of the list and then re-issue the command with the remainder of the argument list. See the rest of the error stack to find out what the exact error is.

ORA-24102: invalid prefix "*string*" for generate_job_name

Cause: generate_job_name was called with a prefix longer than 18 characters or a prefix ending in a digit.

Action: Re-issue the command using a prefix no longer than 18 characters and not ending in a digit.

ORA-24103: job "*string*"."*string*" failed to be enabled after creation

Cause: The job failed to be enabled after creation.

Action: Review the reason for the failure, correct it if possible and re-create the job.

ORA-24120: invalid *string* parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid parameter was passed to the specified DBMS_REPAIR procedure.

Action: Specify a valid parameter value or use the parameter's default.

ORA-24121: both cascade and a block range passed to DBMS_REPAIR.CHECK_OBJECT procedure

Cause: Both cascade and a block range were specified in a call to DBMS_REPAIR.CHECK_OBJECT.

Action: Use either cascade or a block range, or do not use either one.

ORA-24122: invalid block range specification

Cause: An incorrect block range was specified.

Action: Specify correct values for the BLOCK_START and BLOCK_END parameters.

ORA-24123: feature *string* is not yet implemented

Cause: An attempt was made to use the specified feature, but the feature is not yet implemented.

Action: Do not attempt to use the feature.

ORA-24124: invalid ACTION parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid ACTION parameter was specified.

Action: Specify CREATE_ACTION, PURGE_ACTION or DROP_ACTION for the ACTION parameter.

ORA-24125: Object *string.string* has changed

Cause: An attempt was made to fix corrupt blocks on an object that has been dropped or truncated since DBMS_REPAIR.CHECK_OBJECT was run.

Action: Use DBMS_REPAIR.ADMIN_TABLES to purge the repair table and run DBMS_REPAIR.CHECK_OBJECT to determine whether there are any corrupt blocks to be fixed.

ORA-24126: invalid CASCADE_FLAG passed to DBMS_REPAIR.*string* procedure

Cause: CASCADE_FLAG was specified for an object that is not a table.

Action: Use CASCADE_FLAG only for tables.

ORA-24127: TABLESPACE parameter specified with an ACTION other than CREATE_ACTION

Cause: The TABLESPACE parameter can only be used with CREATE_ACTION.

Action: Do not specify TABLESPACE when performing actions other than CREATE_ACTION.

ORA-24128: partition name specified for a non-partitioned object

Cause: A partition name was specified for an object that is not partitioned.

Action: Specify a partition name only if the object is partitioned.

ORA-24129: table name *string* does not start with *string* prefix

Cause: An attempt was made to pass a table name parameter without the specified prefix.

Action: Pass a valid table name parameter.

ORA-24130: table *string* does not exist

Cause: An attempt was made to specify a map, repair, or sync table that does not exist.

Action: Specify a valid table name parameter.

ORA-24131: table *string* has incorrect columns

Cause: An attempt was made to specify a map, repair, or sync table that does not have a correct definition.

Action: Specify a table name that refers to a properly created table.

ORA-24132: table name *string* is too long

Cause: An attempt was made to specify a table name is greater than 30 characters long"

Action: Specify a valid table name parameter.

ORA-24133: invalid usage of DBMS_REPAIR in case of GTT table

Cause: An attempt was made to specify a Global Temporary Table (GTT) table name while using DBMS_REPAIR.CHECK_OBJECT.

Action: Specify a non-GTT table name parameter.

ORA-24141: rule set *string.string* does not exist

Cause: An attempt to access or modify a ruleset was made, which failed because the ruleset does not exist.

Action: Only access or modify existing rulesets.

ORA-24142: invalid ruleset name

Cause: An attempt to create a ruleset with an invalid name was made. The ruleset name can not be NULL, and can not be more than 26 characters, unless a rules_table_name is also specified, in which case the ruleset name may be up to 30 characters.

Action: Retry the create with a valid ruleset name.

ORA-24143: invalid evaluation context name

Cause: An attempt to create a rule/ruleset on an invalid evaluation name was made. The `evaluation_context` can not be more than 30 characters. The evaluation context with the name specified must exist.

Action: Retry the create with a valid evaluation context name.

ORA-24144: rules engine internal error, arguments: [string], [string]

Cause: An internal error occurred in the rules engine. This indicates that the rules engine has encountered an exception condition.

Action: Please report this error as a bug. The first argument is the error and the second argument is the package.

ORA-24145: evaluation context *string.string* already exists

Cause: An evaluation context of the given name already exists

Action: Specify another name for the evaluation context being created

ORA-24146: rule *string.string* already exists

Cause: A rule of the given name already exists

Action: Specify another name for the rule being created.

ORA-24147: rule *string.string* does not exist

Cause: The rule of the given name does not exist

Action: create the rule or specify one that exists

ORA-24148: cannot drop rule *string.string* with dependents

Cause: The rule still belongs to some rulesets, cannot be dropped

Action: do not drop a rule that belongs to rulesets without force option

ORA-24149: invalid rule name

Cause: An attempt to create a rule with an invalid name was made. The rule name can not be NULL, and can not be more than 30 characters

Action: n/a

ORA-24150: evaluation context *string.string* does not exist

Cause: The evaluation context of the given name does not exist

Action: create the evaluation context or specify one that exists

ORA-24151: no evaluation context is associated with rule *string.string* or rule set *string.string*

Cause: When adding a rule to a rule set, either the rule or the rule set must have an evaluation context associated with it

Action: do not add a rule without an evaluation context to a ruleset that does not have a default evaluation context

ORA-24152: cannot drop evaluation context *string.string* with dependents

Cause: The evaluation context still belongs to some rules or rule sets, cannot be dropped

Action: do not drop an evaluation context with dependents without force option

ORA-24153: rule set *string.string* already exists

Cause: A rule set of the given name already exists

Action: Specify another name for the rule set being created.

ORA-24154: rule *string.string* already in rule set *string.string*

Cause: a rule can be added to a rule set only once

Action: do not add a rule to a rule set that already contains this rule

ORA-24155: rule *string.string* not in rule set *string.string*

Cause: the rule to be removed from the rule set is not in the rule set

Action: do not remove a rule from a rule set that does not contain the rule

ORA-24156: duplicate table alias *string*

Cause: there is a table alias of the same name in the evaluation context

Action: do not add two table aliases of the same name to an evaluation context

ORA-24157: duplicate variable name *string*

Cause: there is a variable of the same name in the evaluation context

Action: do not add two variables of the same name to an evaluation context

ORA-24158: invalid table alias

Cause: table alias name or base table name is not specified in the table alias definition

Action: specify both alias name and alias base table in the table alias structure

ORA-24159: invalid variable definition

Cause: variable name or variable type is not specified in the variable definition

Action: specify both variable name and variable type in the variable definition structure

ORA-24160: name *string* already exists in the name value pair list

Cause: there is already a name-value pair with the same name in the NVlist

Action: try another name.

ORA-24161: name *string* does not exist in the name value pair list

Cause: there is not such a name-value pair in the NVlist

Action: check the name-value pair exists in the NVList.

ORA-24162: name value pair list is full, cannot add another entry

Cause: The NVList is full (1024 elements) and cannot hold more elements

Action: do not add elements to a full list.

ORA-24163: dblink is not supported in rules engine DDLs

Cause: the object name has a database link in it, which is not supported

Action: Do not specify remote objects in rules engine DDLs.

ORA-24164: invalid rule engine system privilege: *string*

Cause: no such system privilege number for rule engine objects

Action: check specification of `dbms_rule_adm` for valid system privilege numbers

ORA-24165: invalid rule engine object privilege: *string*

Cause: no such object privilege number for rule engine objects

Action: check specification of `dbms_rule_adm` for valid object privilege numbers

ORA-24166: evaluation context *string.string* has errors

Cause: The table aliases and the variable types specified in the evaluation context could not be resolved.

Action: Make sure that all base tables exist and that all variable types are correct. Also, make sure that tables are not composite partitioned or clustered partitioned.

ORA-24167: incompatible rule engine objects, cannot downgrade

Cause: there are rule engine objects in the database that cannot be downgraded.

Action: check `utlincmp.sql` and remove all incompatible rules engine objects before downgrade.

ORA-24168: rule *string.string* cannot have default evaluation context

Cause: If a rule is added to a rule set with more than one evaluation contexts, it must not have an evaluation context itself.

Action: Do not set the evaluation context of such rules to a not-null value

ORA-24169: rule condition has unrecognized variables

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24170: *string.string* is created by AQ, cannot be dropped directly

Cause: This object is created by AQ, thus cannot be dropped directly

Action: use `dbms_aqadm.drop_subscriber` to drop the object

ORA-24171: creation properties are only for internal use

Cause: user specified not null creation properties when creating rules engine objects, which are not for external use

Action: do not set creation properties when creating rules engine objects

ORA-24172: rule set *string.string* has errors

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24173: nested query not supported for rule condition

Cause: user specified nested query in rule condition.

Action: do not use nested query in rule condition.

ORA-24174: The number of *string* per evaluation context is more than *string*

Cause: Number of tables or variables were more than the defined upper limit.

Action: Reduce the number of tables or variables per evaluation context.

ORA-24175: The number of *string* exceeds limit *string* as there exists at least one nonsimple rule condition

Cause: Upper limit of tables or variable per evaluation context exceeded as there exists at least one nonsimple rule condition.

Action: Reduce the number of tables or variables per evaluation context.

ORA-24176: A reference to user defined PL/SQL stored procedures found in the purge condition

Cause: A purge condition contained a reference to one or more user defined PL/SQL stored procedures or functions.

Action: Ensure the purge condition is simple and does not have reference to an user defined PL/SQL stored procedure or function.

ORA-24177: Another purge_queue_table session (sid *string*, serial# *string*) is already active on the same queue table

Cause: An attempt was made to run DBMS_AQADM.PURGE_QUEUE_TABLE in parallel when one purge_queue_table session is already active on the same queue table.

Action: Only one purge_queue_table session can be active at a time on a queue table. Wait for the active session to finish before spawning another purge_queue_table session.

ORA-24180: invalid transformation expression, the transformation expression does not evaluate to the target type or attribute

Cause: The transformation expression did not evaluate to the target type or the target type's specified attribute.

Action: Provide valid transformation expression which evaluates to the target type or the target type's specified attribute.

ORA-24181: The type *string* does not exist

Cause: The source or destination type for the transformation does not exist

Action: Create the type or specify one that exists

ORA-24182: attribute number specified does not exist

Cause: The target type of the transformation does not have the attribute number specified in the ADD_ATTRIBUTE_TRANSFORMATION command

Action: check the target type definition and specify a valid attribute number

ORA-24183: invalid transformation

Cause: The transformation specified is invalid because the source or the target type have been dropped/modified.

Action: Drop and recreate the transformation

ORA-24184: transformation *string.string* already exists

Cause: The named transformation already exists.

Action: Specify another name for the transformation being created.

ORA-24185: transformation *string.string* does not exist

Cause: The specified transformation does not exist.

Action: Create the transformation before using it or specify an existing transformation.

ORA-24186: wrong object type, could not transform message

Cause: The object type of the message to be transformed does not match the source type of the specified transformation.

Action: Specify another transformation, or specify a message of the correct type.

ORA-24190: length of payload exceeds *string*

Cause: the length of payload being taken exceeds the limit of varchar2 or raw.

Action: use clob type or blob type to call `get_text` or `get_bytes`.

ORA-24191: the property name *string* has existed

Cause: the property name being set has existed.

Action: use another property name.

ORA-24192: the property name cannot be null

Cause: the property name cannot be null.

Action: make sure the property name not null.

ORA-24193: the property value exceeds the valid range *string*

Cause: the property value being set exceeds the valid range.

Action: make sure the property value is within the valid range.

ORA-24194: attempt to read data in a message as the wrong type

Cause: According to JMS specification, some type conversions were not allowed.

Action: Make sure to use the correct `READ` function to retrieve message data.

ORA-24195: attempt to retrieve the name list of a map message with size exceeding 1024

Cause: The `GET_NAMES` function returns the names in a varray with a size limit of 1024.

Action: Retrieve in several smaller steps using the `GET_NAMES` function with `OFFSET` and `LENGTH` parameters.

ORA-24196: access the message in a wrong access mode

Cause: `StreamMessage` and `BytesMessage` could not be read when they were in write only mode and vice versa.

Action: Change the access mode using `PREPARE`, `CLEAR_BODY` and `RESET` procedures.

ORA-24197: JAVA stored procedure throws JAVA exceptions

Cause: The JAVA stored procedure threw some exceptions that could not be categorized.

Action: Use `GET_EXCEPTION` procedure to see what the exception is about.

ORA-24198: attempt to use an invalid operation ID

Cause: An attempt was made to use an invalid operation ID to access messages.

Action: Use the correct operation ID returned by `PREPARE` or `CLEAR_BODY` procedure.

ORA-24199: message store is overflow

Cause: An attempt was made to access too many messages at the same time.

Action: Use the CLEAN procedure to clean up some of the messages.

ORA-24201: duplicate publisher, publisher already added to the queue

Cause: Attempted to add a publisher to the queue again.

Action: Specify another publisher or user DBMS_AQADM.ALTER_PUBLISHER to alter the publisher's properties.

ORA-24202: publisher does not exist for the queue

Cause: Attempted to alter or drop a non-existent publisher from a queue.

Action: Specify another publisher.

ORA-24203: operation failed, queue table *string.string* has errors

Cause: An operation attempt was made to a queue table that had errors.

Action: Drop the queue table setting the FORCE option to true.

ORA-24204: existing *string* propagation schedules

Cause: A propagation administrative interface was called when the existing propagation schedules were running in different mode (10.2/11g).

Action: Set appropriate internal parameter and unschedule existing schedules if required.

ORA-24205: feature *string* not supported for sharded queues

Cause: An attempt was made to use a feature that is not supported for sharded queues.

Action: Specify only supported features and try again.

ORA-24206: maximum limit of *string* nondurable subscribers reached for queue *string.string*

Cause: An attempt to add a new nondurable subscriber to the queue failed because the number of nondurable subscribers has exceeded the maximum limit.

Action: Remove existing subscribers and then attempt to add a new subscriber.

ORA-24207: addition of a nondurable subscriber for queue *string.string* aborted due to low SGA

Cause: An attempt to add a new nondurable subscriber on the specified queue was aborted because of memory constraints.

Action: Increase the shared pool size by increasing the value of the SHARED_POOL_SIZE parameter.

ORA-24208: API not supported for classic queues

Cause: An attempt was made to use a non-classic queue API on a classic queue.

Action: Use classic queue APIs.

ORA-24209: nondurable subscriber rule has errors for queue *string*

Cause: An attempt was made to create a nondurable subscriber with a rule condition, but the condition had compilation errors.

Action: Correct the condition statement based on the error stack.

ORA-24210: attempt to *string* *string* on queue *string.string*, *string* already *string*

Cause: An attempt was made to start or stop a queue operation on a queue which was already enabled or disabled for that operation.

Action: Make only one attempt to start or stop the queue operation.

ORA-24211: invalid value for REPLICATION_MODE

Cause: There was an invalid setting of REPLICATION_MODE in the queue creation call.

Action: Specify a valid setting. DBMS_AQADM.REPLICATION_MODE or DBMA_AQADM.NONE are the valid options.

ORA-24212: user operation not permitted on replicated queue *string.string*

Cause: An attempt was made to run a user operation on a replicated queue.

Action: Disable replication on the queue before performing user operations.

ORA-24213: unable to replicate queue *string.string* for sub-shards *number*, *number*

Cause: An attempt to replicate enqueue failed.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-24214: unable to replicate queue *string.string* sequence *number*, maximum sequence *number* failed

Cause: An attempt to replicate enqueue failed.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-24215: unable to modify REPLICATION_MODE, queue has to be stopped

Cause: An attempt was made to modify REPLICATION_MODE on a queue open to user operations.

Action: Stop the queue first using the STOP_QUEUE command. Oracle Support Services.

ORA-24216: *string* not a supported payload type in sharded queue

Cause: An attempt was made to create a sharded queue with an ADT type which was not supported in the queue_payload_type.

Action: Use DBMS_AQADM.JMS_TYPE as the queue_payload_type.

ORA-24217: Operation fails with lower version JMS client

Cause: An Oracle Client application was linked with Oracle Java Message Service (JMS) libraries with version earlier than 19c.

Action: Upgrade the client libraries to version 19c or later.

ORA-24218: feature *string* not supported for transactional event queues

Cause: An attempt was made to use a feature that was not supported for transactional event queues.

Action: Specify only supported features and try again.

ORA-24219: *string* not a supported payload type in transactional event queue

Cause: An attempt was made to create a transactional event queue with an ADT type which was not supported in the queue_payload_type.

Action: Use DBMS_AQADM.JMS_TYPE as the queue_payload_type.

ORA-24220: Dequeue operation on transactional event queue needs new API call.

Cause: Dequeueing from a transactional event queue failed because the OCIAQDeq() function was used.

Action: Use the OCIAQDeq2() function for transactional event queues.

ORA-24221: cannot connect to event stream owner instance *string* of database *string*

Cause: An Oracle Advanced Queuing (AQ) operation was attempted at a non-owner instance of the event stream which could not establish an internal connection to it.

Action: Set the listener information in the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter. If the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter is already set, then retry the operation from the suggested owner instance.

ORA-24222: unable to replicate queue *string.string* for event stream partition *number, number*

Cause: An attempt to replicate enqueue failed.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-24223: The seek requested by element *string* of input array can skip a message that is not dequeued in event stream *string*.

Cause: An attempt was made to skip a message that was not dequeued.

Action: Set the SKIP_OPTION in the seek call to NO_DISCARD_SKIPPED or DISCARD_SKIPPED and retry the seek operation.

ORA-24224: Error while doing reregistration for regid *string*. Error Message: *string*

Cause: Internal Error occurred while doing the reregistration of the registration id.

Action: Internal error, call Oracle Support.

ORA-24225: Transactional Event Queue (TEQ) consumer group leader for consumer: *string* is dead.

Cause: TEQ consumer group leader died during rebalancing. You have been made the new TEQ consumer group leader.

Action: Execute DBMS_TEQK.JOIN_GROUP followed by DBMS_TEQK.SYNC.

ORA-24226: The target tablespace *string* specified to move the queue table does not exist.

Cause: The tablespace name specified as a parameter to DBMS_AQADM.MOVE_QUEUE_TABLE did not exist.

Action: Ensure that the tablespace exists by querying the data dictionary and specifying the valid tablespace name.

ORA-24227: The input flags specified to move the queue table are invalid.

Cause: Invalid input flags were specified as a parameter to DBMS_AQADM.MOVE_QUEUE_TABLE.

Action: Either do not specify the flags or specify one of the following: -
DBMS_AQADM.MOVEQT_OFFLINE - DBMS_AQADM.MOVEQT_ONLINE

ORA-24228: purge by condition not supported for sharded queues/transactional event queues.

Cause: purge by condition not supported for sharded queue/transactional event queues and hence purge_condition should be NULL.

Action: Call the procedure with purge_condition set to NULL.

ORA-24229: Specified purge_options not supported for sharded queues/transactional event queues.

Cause: Unsupported value specified for purge_options hence purge_condition should be NULL.

Action: Call the procedure with correct purge_options. For sharded queues/transactional event queues, block field in purge_options should be TRUE and delivery_mode should be DBMS_AQADM.PERSISTENT_OR_BUFFERED.

ORA-24230: input to DBMS_DDL.WRAP is not a legal PL/SQL unit

Cause: The input supplied to DBMS_DDL.WRAP or DBMS_DDL.CREATE_WRAPPED did not specify a legal PL/SQL package specification, package body, type specification, type body, function or procedure. This error can occur if you used incorrect syntax in the CREATE OR REPLACE statement or specified a unit that cannot be wrapped (e.g., a trigger or anonymous block).

Action: Provide a legal PL/SQL unit as input.

ORA-24231: database access descriptor (DAD) string not found

Cause: The specified Database Access Descriptor (DAD) did not exist.

Action: Make sure the name of the Database Access Descriptor (DAD) is correct and the DAD exists.

ORA-24232: unknown Embedded PL/SQL Gateway attribute string

Cause: The specified Embedded PL/SQL Gateway attribute was not known.

Action: Make sure the name of the Embedded PL/SQL Gateway attribute is correct.

ORA-24233: argument passed to DBMS_UTILITY.VALIDATE is not legal

Cause: One or more input arguments to the DBMS_UTILITY.VALIDATE routine was not legal. This error occurred because the object name or owner or namespace arguments (if specified) were NULL or illegal.

Action: Identify and correct the illegal argument.

ORA-24234: unable to get source of string "string"."string", insufficient privileges or does not exist

Cause: The specified PL/SQL object in a DBMS_PREPROCESSOR subprogram did not exist or you did not have the privileges necessary to view its source.

Action: Make sure the specified object exists and you have the privileges necessary to view its source.

ORA-24235: bad value for object type: string

Cause: The specified object type was not appropriate.

Action: Make sure the specified object type is one of the following: package, package body, procedure, function, trigger, type, and type body.

ORA-24236: source text is empty

Cause: The input source text supplied to a DBMS_PREPROCESSOR subprogram was empty.

Action: Pass a non-empty input source text as the input.

ORA-24237: object id argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the p_object_id argument passed to the DBMS_UTILITY.INVALIDATE routine was NULL, there was no object with the specified object id, or the user calling the routine did not have sufficient privileges to invalidate the object.

Action: Correct the illegal argument.

ORA-24238: object settings argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the p_plsql_object_settings argument passed to the DBMS_UTILITY.INVALIDATE routine was NULL or malformed.

Action: Correct the illegal argument.

ORA-24239: object could not be invalidated

Cause: A call to the DBMS_UTILITY.INVALIDATE routine failed. This error occurred because the object type of the object specified by the p_object_id argument is not one of the types that can be handled by this routine. Alternately, the object was an object type specification with table dependents, or the object was the specification of the STANDARD, DBMS_STANDARD, DBMS_UTILITY package, or the body of the DBMS_UTILITY package.

Action: Call DBMS_UTILITY.INVALIDATE only on supported object types.

ORA-24240: invalid database access descriptor (DAD) name

Cause: The specified Database Access Descriptor (DAD) name was invalid.

Action: Ensure that the name of the Database Access Descriptor (DAD) is valid and the length of the name does not exceed its limit.

ORA-24241: source text is in wrapped format

Cause: The input source text supplied to a DBMS_PREPROCESSOR subprogram was in wrapped format.

Action: Pass input source text that is not wrapped.

ORA-24242: anonymous access through a dynamically authenticated Database Access Descriptor (DAD) prohibited

Cause: An attempt to allow anonymous access through a dynamically authenticated Database Access Descriptor (DAD) was prohibited.

Action: Make sure the Database Access Descriptor (DAD) is not dynamically authenticated before allowing anonymous access through it.

ORA-24243: access control entry (ACE) already exists

Cause: An access control entry (ACE) for the principal with the same grant or deny attribute in the IS_GRANT argument already existed.

Action: Add the privilege to the existing access control entry (ACE) instead.

ORA-24244: invalid host or port for access control list (ACL) assignment

Cause: The host or port to which the access control list (ACL) was assigned was invalid.

Action: Ensure that the host and port to which you are assigning the access control list (ACL) are valid.

ORA-24245: invalid network privilege

Cause: The network privilege being added to the access control list (ACL) was invalid.

Action: Ensure the network privilege that you are adding to the access control list (ACL) is valid.

ORA-24246: empty access control list (ACL) not allowed

Cause: An attempt was made to store an empty access control list (ACL).

Action: Ensure that the access control list (ACL) has at least one

ORA-24247: network access denied by access control list (ACL)

Cause: No access control list (ACL) has been assigned to the target host or the privilege necessary to access the target host has not been granted to the user in the access control list.

Action: Ensure that an access control list (ACL) has been assigned to the target host and the privilege necessary to access the target host has been granted to the user.

ORA-24248: XML DB extensible security not installed

Cause: XML DB extensible security necessary for this operation has not been installed.

Action: Ensure that XML DB has been installed.

ORA-24249: Authentication scheme "string" not supported

Cause: An unsupported authentication scheme was used.

Action: Retry with a supported authentication scheme.

ORA-24250: No supported authentication scheme found

Cause: A supported authentication scheme was not found.

Action: Retry with a supported authentication scheme.

ORA-24251: This statement is not supported by the DBMS_UTILITY.EXPAND_SQL_TEXT procedure.

Cause: The DBMS_UTILITY.EXPAND_SQL_TEXT procedure supports only SELECT statements.

Action: Submit only a SELECT statement.

ORA-24252: SQL translation profile does not exist

Cause: An attempt was made to access a SQL translation profile that either did not exist or for which the current user did not have privileges on.

Action: Check the SQL translation profile name and verify that the current user has appropriate privileges on the SQL translation profile.

ORA-24253: translation of SQL statement or error code not found

Cause: An attempt to translate a SQL statement, or error code, or to change a SQL or error code translation failed because the translation was not found.

Action: Ensure the following: * That the SQL statement or error code is valid, and * That a custom translation is registered, or the translator package in the SQL translation profile can translate it.

ORA-24254: appropriate SQL translation profile not set

Cause: An attempt to translate a SQL statement or error code failed because either a SQL translation profile was not set or the profile could not translate the given SQL syntax.

Action: Set an appropriate SQL translation profile before attempting to translate a SQL statement or error code.

ORA-24255: implementation restriction: bind variables cannot change in the translated SQL statement

Cause: An attempt to register or use a translated SQL statement failed because the number or the order of bind variables were changed in the statement.

Action: Do not change the number or the order of bind variables in the translated SQL statement.

ORA-24256: EXPAND_SQL_TEXT failed with *string*

Cause: See the string parameter at the end of the message.

Action: See the string parameter at the end of the message and take corrective action.

ORA-24257: The database role should be a primary or physical standby database.

Cause: The database role was not a primary database or a physical standby database.

Action: Check the database role and try this command again.

ORA-24258: unable to create output file or file already exists

Cause: Either a file with the same name as the specified output file name already existed, or the file creation process failed.

Action: Check and change the output file name and try the command again.

ORA-24259: Slave process or processes for this PL/SQL function terminated abnormally, or could not be created or initialized.

Cause: Slave process or processes failed to operate properly for one of the following reasons: - Inadequate SGA size. - Slave pool could not be initialized. - Slave process or processes were abnormally terminated.

Action: Ensure that the SGA size is sufficient to call this PL/SQL function.

ORA-24260: unable to communicate with remote databases

Cause: Remote database or databases were not available due to network connection failures.

Action: Check the status of the network and ensure that the database or databases are mounted or open.

ORA-24261: Unable to read data file correctly on the remote database.

Cause: The remote database was unable to read the data file.

Action: Check the status of the data file.

ORA-24262: unable to read data file correctly on the local database

Cause: The data file on the local database could not be accessed.

Action: Check the status of the data file.

ORA-24264: The data file *string* is not in the current container.

Cause: An attempt was made to access the data file outside of the current container.

Action: Check the current container and change it to root or a specific container that is able to access this data file.

ORA-24265: Insufficient privileges for SQL profile operation

Cause: A DDL operation was attempted on a SQL profile by a session without the proper privileges.

Action: Grant the user the appropriate privilege.

ORA-24266: Inconsistent host access control list (ACL) resolution type: expected *string* got *string*

Cause: An API in DBMS_NETWORK_ACL_ADMIN PL/SQL package was invoked with a PRIVATE_TARGET argument value that was inconsistent with the host resolution type of the network host.

Action: If you were setting the access control list (ACL) or appending an access control entry (ACE) to the access control list (ACL) of a network host using an API in DBMS_NETWORK_ACL_ADMIN PL/SQL package, please query the DBA_HOST_ACLS dictionary view for the network host to confirm whether the host name is to be resolved privately. If PRIVATE_TARGET column field for the host is set to TRUE, the DBMS_NETWORK_ACL_ADMIN API call needs to be executed with PRIVATE_TARGET argument passed as TRUE. Otherwise avoid specifying PRIVATE_TARGET argument as TRUE, if PRIVATE_TARGET column field for the host is set to FALSE.

ORA-24270: a row already exists in the *string* table for these parameters

Cause: A call was made to create a new row in the specified table. A row already exists in the table with the specified values.

Action: Delete the existing row using the appropriate API or check the parameters used to create the row.

ORA-24271: translation type must be either T, S or M

Cause: The translation type parameter is not a T, S or an M. A value other than T, S or M was specified.

Action: Correct the translation type and reexecute the API call.

ORA-24272: initialization value must be either F or T

Cause: The initialization value must be either F or T. A value other than F or T was specified.

Action: Correct the initialization value and reexecute the API call.

ORA-24273: translation text is required if translation type is T or S

Cause: If a translation type of T or S is specified, translation text must be supplied.

Action: Provide translation text and reexecute the API call.

ORA-24274: no row exists in the *string* table for these parameters

Cause: A call was made to update a row that does not exist or a foreign key value supplied to create a table does not exist.

Action: Create the row using the appropriate API or check the parameters used to create the new row to ensure that all specified values exist.

ORA-24275: function '*string*' parameter '*string*' missing or invalid

Cause: The function <pkgname.funcname> was called with a parameter *parmname* that was null, 0 length, or had an invalid value.

Action: Correct the parameter to supply values that comply with its datatype and limits as specified in the documentation.

ORA-24276: function '*string*' output '*string*' maximum value exceeded

Cause: The function <pkgname.funcname> computed a value for the output *parmname* that exceeded the maximum allowed. This can occur when multiple input parameters, each valid separately, combine to specify an invalid result. For example, when a length parameter multiplied by a copies parameter yields a total length exceeding the maximum for the output datatype.

Action: Correct the input values to produce a result that will comply with the limits as specified in the documentation.

ORA-24277: invalid database link *string*

Cause: The database link did not exist.

Action: Make sure the database link name is correct.

ORA-24278: remote table *string* not found

Cause: The table did not exist in the remote database.

Action: Make sure the remote table name is correct.

ORA-24279: view *string* is not a parallel access view

Cause: The view was not created by CREATE_OR_REPLACE_VIEW API.

Action: Provide the correct view name that was created by CREATE_OR_REPLACE_VIEW API.

ORA-24280 to ORA-28727

ORA-24280: invalid input value for parameter *string*

Cause: The parameter has been provided a negative, out of range, or NULL input value.

Action: Correct the input value such that it is valid, and is within the range as specified in the documentation.

ORA-24281: invalid access past the maximum size of LOB parameter *string*

Cause: The value of positional or size parameters exceeded the maximum allowed LOB size of (4 Gigabytes - 1) * DB_BLOCK_SIZE.

Action: Correct the input values for amount and offset such that their sum is less than or equal to (4 Gigabytes - 1) * DB_BLOCK_SIZE. If an error occurs in a read or write loop, check the looping conditions and offset increments.

ORA-24291: Sort Hash Cluster error *string***ORA-24292: no more tables permitted in this sorted hash cluster**

Cause: A sorted hash cluster only supports a maximum of 2 tables

Action: n/a

ORA-24295: max key length (*string*) for sorted hash cluster exceeded

Cause: Sorted hash clusters have a maximum key size

Action: n/a

ORA-24296: error in processing the XML configuration file *string*

Cause: Parameters or their values were specified incorrectly in the configuration file.

Action: Check and correct the configuration parameters or their values.

ORA-24300: bad value for mode

Cause: An undefined mode value was specified.

Action: Check that the correct mode is selected and that an allowed value for that mode is specified.

ORA-24301: null host specified in thread-safe logon

Cause: A host data area (HDA) was not specified in the logon call while running in a thread-safe environment.

Action: Ensure that HDA is not NULL when calling the logon routine.

ORA-24302: host connection in use by another thread

Cause: An attempt was made to use the host connection while it was in use by another thread.

Action: Wait for another thread to finish before using this connection.

ORA-24303: call not supported in non-deferred linkage

Cause: One of the calls that is supported in deferred mode linkage exclusively was invoked when the client was linked non-deferred.

Action: Use this call in deferred mode of linkage.

ORA-24304: datatype not allowed for this call

Cause: Data of this datatype cannot be sent or fetched in pieces.

Action: Use other bind or define calls for this datatype.

ORA-24305: bad bind or define context

Cause: The call was executed on a cursor for which this is invalid.

Action: Verify that this call is valid for this cursor. For example, Get piece information and set piece information are valid on a cursor if appropriate binds and defines have been done on this cursor.

ORA-24306: bad buffer for piece

Cause: A zero length buffer or a null buffer pointer was provided.

Action: Verify that the buffer pointing to this piece or its length is non-zero. The buffer pointer for the next piece or its length can be zero if it is the last piece to be inserted and there are no more data for the column.

ORA-24307: Length provided in piecewise bind operation exceeded the maximum size.

Cause: The length of the piece exceeded the maximum size provided in an Oracle Call Interface (OCI) bind by position or bind by name call.

Action: Verify that the length of this piece plus the cumulative length of all the previous pieces is not more than the maximum size allowed by the application.

ORA-24308: illegal define position

Cause: Call to modify attributes was done for a non-existent position

Action: Verify that a define has been done for this position

ORA-24309: already connected to a server

Cause: This server handle is already attached to a server.

Action: Disconnect from the server and then retry the call to establish a connection.

ORA-24310: length specified for null connect string

Cause: The connect string is null, but a length was specified for it.

Action: Set length to zero if connect string is null.

ORA-24311: memory initialization failed

Cause: Cannot initialize user memory.

Action: Contact customer support.

ORA-24312: illegal parameters specified for allocating user memory

Cause: An illegal size or null pointer was specified for user memory.

Action: Specify a legal size and a valid pointer for user memory.

ORA-24313: user already authenticated

Cause: A user has already been authenticated on this service handle.

Action: Terminate the service context before using it for another user.

ORA-24314: service handle not initialized

Cause: The server context did not exist.

Action: Establish the server context in the service context.

ORA-24315: illegal attribute type

Cause: An illegal attribute type was specified for the handle.

Action: Consult user manual to specify an attribute valid for this handle.

ORA-24316: illegal handle type

Cause: An illegal handle type was specified.

Action: Consult user manual to specify a valid handle type.

ORA-24317: define handle used in a different position

Cause: A define was done with an existing handle on a different position.

Action: Specify the same position as before on a re-define.

ORA-24318: call not allowed for scalar data types

Cause: This call is valid only for object types.

Action: Verify that the data-type for this variable is an object type

ORA-24320: unable to initialize a mutex

Cause: An attempt to initialize a mutex failed.

Action: Contact customer support.

ORA-24321: inconsistent parameters passed

Cause: One of the three memory function pointers is null or non-null.

Action: Verify that either all the memory functions are null or non-null.

ORA-24322: unable to delete an initialized mutex

Cause: An attempt to delete an initialized mutex failed.

Action: Contact customer support.

ORA-24323: value not allowed

Cause: A null or invalid value was passed in for a mandatory parameter.

Action: Verify that all mandatory parameters are properly initialized.

ORA-24324: service handle not initialized

Cause: An attempt was made to use an improper service context handle.

Action: Verify that the service context handle has all the parameters initialized prior to this call.

ORA-24325: this OCI operation is not currently allowed

Cause: An attempt was made to use a context handle outside its scope.

Action: Verify that the context handle is set to a service context handle that has been converted to a logon data area for other OCI calls. The logon data area must be converted back to a service context before it can be used.

ORA-24326: handle passed in is already initialized

Cause: An attempt was made to pass an initialized handle.

Action: Verify that the parameter passed in to retrieve a handle does not already point to a handle.

ORA-24327: explicitly attach before authenticating a user

Cause: The server context was not initialized before user authentication was attempted.

Action: Create and initialize a server handle. A server context must be initialized before attempting to authenticate a user.

ORA-24328: illegal attribute value

Cause: The attribute value passed in is illegal.

Action: Consult the users manual and specify a legal attribute value for the handle.

ORA-24329: invalid character set identifier

Cause: The character set identifier specified was invalid.

Action: Specify a valid character set identifier in the OCI call.

ORA-24330: internal Oracle Call Interface error

Cause: An internal Oracle Call Interface (OCI) error has occurred.

Action: Contact Oracle Support.

ORA-24331: user buffer too small

Cause: The user buffer to contain the output data is too small.

Action: Specify a bigger buffer.

ORA-24332: invalid object type

Cause: An invalid object type is requested for the describe call.

Action: Specify a valid object type to the describe call.

ORA-24333: zero iteration count

Cause: An iteration count of zero was specified for the statement

Action: Specify the number of times this statement must be executed

ORA-24334: no descriptor for this position

Cause: The application is trying to get a descriptor from a handle for an illegal position.

Action: Check the position number.

ORA-24335: cannot support more than 1000 columns

Cause: The number of columns exceeds the maximum number supported.

Action: Specify a number of columns less than 1000.

ORA-24336: invalid result set descriptor

Cause: The result set descriptor should have valid data fetched into it before it can be converted to a statement handle

Action: Fetch valid data into the descriptor before attempting to convert it into a statement handle

ORA-24337: statement handle not prepared

Cause: A statement cannot be executed before making preparing a request.

Action: Prepare a statement before attempting to execute it.

ORA-24338: statement handle not executed

Cause: A fetch or describe was attempted before executing a statement handle.

Action: Execute a statement and then fetch or describe the data.

ORA-24339: cannot set server group name after connecting to server

Cause: An attempt was made to set the server group in a server handle after connecting to the server. However, once the connection is established to a server, the server group name cannot be set anymore.

Action: Attach to the server after setting the server group name in the server handle.

ORA-24340: cannot support more than 255 columns

Cause: The number of columns exceeds maximum supported by the server.

Action: Limit your operation to 255 columns.

ORA-24341: bad mode specified

Cause: OCI_ENV_NO_MUTEX mode was specified for a non-threaded client.

Action: OCI_ENV_NO_MUTEX may be specified when OCI_THREADED had been specified at process initialization.

ORA-24342: unable to destroy a mutex

Cause: An attempt to destroy a mutex failed.

Action: Contact Oracle Support Services.

ORA-24343: user defined callback error

Cause: The only valid return value for a user defined callback function is OCI_CONTINUE or OCI_ROWCBK_DONE. Any other value will cause this error.

Action: Ensure that OCI_CONTINUE or OCI_ROWCBK_DONE is returned from the user-defined callback function.

ORA-24344: A compilation error occurred while creating an object.

Cause: A SQL or PL/SQL compilation error occurred while creating an object.

Action: Return OCI_SUCCESS_WITH_INFO with the error code.

ORA-24345: A Truncation or null fetch error occurred

Cause: A truncation or a null fetch error"

Action: Please ensure that the buffer size is long enough to store the returned data.

ORA-24347: Warning of a NULL column in an aggregate function

Cause: A null column was processed by an aggregate function

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24348: Update or Delete without Where

Cause: An update or delete was executed without where clause

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24349: Array DML row counts not available

Cause: One of the following occurred: -The attribute in OCIAttrGet was used incorrectly. -The version of the database used does not support this feature -There was an error in the array DML for all of the iterations.

Action: Ensure that the statement is an array DML and also ensure that the database version is Oracle 12 or higher and the correct mode is used.

ORA-24350: OCI call not allowed

Cause: OCI used is not permitted from external procedures.

Action: Refer to user manual for usage restrictions.

ORA-24351: invalid date passed into OCI call

Cause: A bad date was passed into one of the OCI calls.

Action: Check your date bind values and correct them.

ORA-24352: conversion of data from COBOL display data type to Oracle number type failed

Cause: An invalid COBOL display type was used in an Oracle Call Interface (OCI) bind or define call.

Action: Use the proper COBOL display type when binding or defining number data.

ORA-24353: user buffer too small to accommodate COBOL display type

Cause: User supplied buffer for a COBOL display type was too small to accommodate fetched number.

Action: Increase the allocation for COBOL display type buffer.

ORA-24354: Number fetched from database is too large to fit in COBOL display type buffer.

Cause: The number fetched was beyond the range that can be displayed.

Action: Ensure that the COBOL display type buffer is large enough to hold the Oracle number value.

ORA-24355: attempt to store a negative number in an Unsigned Display type.

Cause: An attempt was made to convert a negative number into an unsigned display type.

Action: Please check the number in the database or change the defined datatype.

ORA-24356: Conversion from Oracle number type to COBOL display type failed.

Cause: An error was encountered during the conversion of an Oracle number type to the COBOL display type.

Action: Contact Oracle Support.

ORA-24357: internal error while converting from to OCIDate.

Cause: An internal error was encountered during conversion to OCIDate type.

Action: Contact customer support.

ORA-24358: OCIBindObject not invoked for a Object type or Reference

Cause: OCIBindObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIBindObject call for all Object Types and References.

ORA-24359: OCIDefineObject not invoked for a Object type or Reference

Cause: OCIDefineObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIDefineObject call for all Object Types and References.

ORA-24360: Type Descriptor Object not specified for Object Bind/Define

Cause: Type Descriptor Object is a mandatory parameter for Object Types Binds and Defines.

Action: Please invoke the OCIBindObject() or OCIDefineObject() call with a valid Type Descriptor Object.

ORA-24361: basic bind call not invoked before invoking advanced bind call

Cause: One of the basic bind calls was not invoked on this bind handle before performing an advanced bind call.

Action: Please invoke the advanced bind call on this bind handle only after performing a basic bind call.

ORA-24362: improper use of the character count flag

Cause: When the character count flag is set, then the maximum size of the buffer in the server should be specified as a non-zero value.

Action: Use a non-zero value for the maximum size of the buffer in the server.

ORA-24363: measurements in characters illegal here

Cause: Measurements in characters instead of bytes are illegal if either the server's or client's character set is varying width.

Action: If either the client's or server's character set is varying width then do not use the OCI_ATTR_CHAR_COUNT attribute for the bind handle. Use OCI_ATTR_MAXDATA_SIZE instead.

ORA-24364: internal error while padding blanks

Cause: An internal error has occurred while attempting to blank pad string data. This error should not occur normally.

Action: Contact customer support.

ORA-24365: data conversion from one character set to another character set failed

Cause: This error occurs during conversion of a multibyte character data when the source data is abnormally terminated in the middle of a multibyte character. Usually caused by incorrect character set specification or corrupted data

Action: Ensure that the correct character set is specified and data is not // corrupted.

ORA-24366: cannot create a new session using a migratable session

Cause: A user handle that can be migrated was set in the service handle during user authentication. A session that can be migrated cannot create another session.

Action: When a user handle that can be migrated is set in the service handle, do not use this session to authenticate because another session cannot be created.

ORA-24367: The user handle is not set in the service handle.

Cause: During authentication of a session that can be migrated, the user handle was not set in the service handle.

Action: Set the user handle in the service handle when using it to authenticate a session that can be migrated.

ORA-24368: OCI mutex counter non-zero when freeing a handle

Cause: This is an internal OCI error.

Action: Contact customer support.

ORA-24369: required callbacks not registered for one or more bind handles

Cause: No callbacks have been registered for one or more of the bind handles which are part of the RETURNING clause.

Action: The bind handles which are to receive data in a DML statement with a RETURNING clause must have their mode set as DATA_AT_EXEC and callback functions must be registered for these bind handles using OCIBindDynamic.

ORA-24370: illegal piecewise operation attempted

Cause: Data of a certain datatype that does not support piecewise operation is being sent or fetched in pieces.

Action: Always set the piece value to OCI_ONE_PIECE for datatypes that does not support piecewise operation.

ORA-24371: data would not fit in current prefetch buffer

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24372: invalid object for describe

Cause: The object to be described is not valid. It either has compilation or authorization errors.

Action: The object to be described must be valid.

ORA-24373: invalid length specified for statement

Cause: The length specified for the statement is either 0 or too large.

Action: Specify a valid length for the statement.

ORA-24374: define not done before fetch or execute and fetch

Cause: The application did not define output variables for data being fetched before issuing a fetch call or invoking a fetch by specifying a non-zero row count in an execute call.

Action: Issue OCI define calls for the columns to be fetched.

ORA-24375: Cannot use V6 syntax when talking to a V8 server

Cause: V6 syntax is no longer supported in V8 server.

Action: Change syntax to V7 syntax or higher.

ORA-24376: cannot register/get user callback for non-environment handle

Cause: A user callback registration or get was attempted on a handle which is not an environment handle.

Action: Pass the environment handle to register/get user callback.

ORA-24377: invalid OCI function code

Cause: An invalid Oracle Call Interface (OCI) function code was used.

Action: Use a valid OCI function code.

ORA-24378: user callbacks not allowed for this call

Cause: An attempt was made to register a user callback for an OCI call for which it not allowed to register user callbacks.

Action: Do not register user callback for this OCI call.

ORA-24379: invalid user callback type

Cause: An invalid type of user callback was specified.

Action: Specify a valid user callback type.

ORA-24380: invalid mode specification

Cause: The mode parameter in an OCI call is invalid

Action: Use only valid mode parameter

ORA-24381: error(s) in array DML

Cause: One or more rows failed in the DML.

Action: Refer to the error stack in the error handle.

ORA-24382: statement handled already executed or described

Cause: The Statement handle was already executed or described successfully.

Action: Perform an OCIStmtPrepare again before OCI_PARSE_ONLY.

ORA-24383: Overflow segment of an IOT cannot be described

Cause: The name specified in the OCIDescribeAny call referred to an IOT overflow segment.

Action: Use OCIDescribeAny to describe only documented objects.

ORA-24384: Application context size is not initialized

Cause: The size of the application context must be initialized before populating each context element.

Action: Issue OCIAttrSet with OCI_ATTR_CTX_SIZE to initialize context size

ORA-24385: Application context size or index is not valid

Cause: The size or index of the application context must be non-zero and non-negative.

Action: Use an appropriate value for the size.

ORA-24386: statement/server handle is in use when being freed

Cause: This is an internal OCI error.

Action: The user should reset in-use flag in statement handle before freeing the handle.

ORA-24387: Invalid attach driver

Cause: Trying to attach using the wrong driver

Action: Relink the application in the right mode

ORA-24388: Unsupported functionality in fast path mode

Cause: Feature not supported in fast path mode

Action: Avoid using the functionality in this mode

ORA-24389: Invalid scrollable fetch parameters

Cause: All the requested rows in this fetch could not be received.

Action: Check the fetch orientation, scroll offset, OCI_ATTR_CURRENT_POSITION and number of rows in OCISmtFetch2 call. If required, change some of above parameters and fetch again.

ORA-24390: Unsupported scrollable cursor operation

Cause: The scrollable cursor execute or fetch has failed.

Action: Check the documentation for supported types, and other restrictions while using scrollable cursors.

ORA-24391: invalid fetch operation

Cause: Scrollable cursor operation requested with non-scrollable cursor.

Action: Check if the statement was executed in the scrollable mode. Else the only acceptable orientation is OCI_FETCH_NEXT that ignores the scroll offset parameter.

ORA-24392: no connection pool to associate server handle

Cause: OCIServerAttach called in OCI_POOL mode but no connection pool found to associate the server handle.

Action: 1) Verify that OCIConnectionPoolCreate is called before calling OCIServerAttach. 2) Verify that the database link specified in OCIServerAttach matches with that of the connection pool database link.

ORA-24393: invalid mode for creating connection pool

Cause: Mode specified in OCIConnectionPoolCreate is invalid.

Action: Use a valid mode.

ORA-24394: invalid mode for destroying connection pool

Cause: Mode specified in OCIConnectionPoolDestroy is invalid.

Action: Use a valid mode.

ORA-24395: cannot reinitialize non-existent pool

Cause: OCIConnectionPoolCreate was not called in OCI_DEFAULT mode for this pool handle.

Action: Create a connection pool prior to reinitializing it.

ORA-24396: invalid attribute set in server handle

Cause: Attribute OCI_ATTR_NONBLOCKING_MODE has been set on the server handle and attached in OCI_POOL mode. Connection pooling does not support non blocking mode.

Action: Do not set the OCI_ATTR_NONBLOCKING_MODE attribute on the server handle while attaching in OCI_POOL mode.

ORA-24397: error occurred while trying to free connections

Cause: An internal error occurred while trying to free connections.

Action: Contact customer support.

ORA-24398: connection pool already exists

Cause: A connection pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new connection pool. 2) If you wish to modify the pool parameters, call OCIConnectionPoolCreate in OCI_CPOOL_REINITIALIZE mode.

ORA-24399: invalid number of connections specified

Cause: An invalid combination of minimum, maximum and increment number of connections was specified in the OCIConnectionPoolCreate call.

Action: Specify a valid combination of parameters.

ORA-24400: error occurred while creating connections in the pool

Cause: The database link specified in OCIConnectionPoolCreate might be an invalid one.

Action: Specify a valid database link.

ORA-24401: cannot open further connections

Cause: Sufficient number of connections are not present in the pool to execute the call. No new connections can be opened as the connMax parameter supplied in OCIConnectionPoolCreate has been reached.

Action: Call OCIConnectionPoolCreate in OCI_CPOOL_REINITIALIZE mode and increase the value of the connMax parameter.

ORA-24402: error occurred while creating connections in the pool

Cause: The username and password specified in `OCIConnectionPoolCreate` might be invalid.

Action: Specify a valid username and password.

ORA-24403: error occurred while trying to destroy the connection pool

Cause: Some connections in the pool were busy when an attempt to destroy the connection pool was made.

Action: Ensure no connections from the pool are being used.

ORA-24404: connection pool does not exist

Cause: An attempt was made to use the connection pool before creating it.

Action: Create the connection pool.

ORA-24405: error occurred while trying to create connections in the pool

Cause: An internal error occurred while creating connections in the pool.

Action: Contact customer support.

ORA-24406: API mode switch is disallowed when a call is in progress.

Cause: A mode switch from OCI8 to OCI7 was attempted in a callback.

Action: The user should perform the API mode switch either prior to initiating the top call or after the main call is done.

ORA-24407: connection pool already exists

Cause: A connection pool has already been created for the specified pool name.

Action: Specify a different pool name to create a new connection pool.

ORA-24408: could not generate unique server group name

Cause: An internal error occurred while generating unique server group name.

Action: Contact customer support.

ORA-24409: client cannot understand the object

Cause: The client cannot process all the new features in the object.

Action: Upgrade the client so that features like inheritance and SQLJ objects can be used.

ORA-24410: scrollable cursor max size exceeded

Cause: Result set size exceeded the max limits.

Action: Check the documentation for allowable maximum result set size for scrollable cursors. Re-execute with a smaller expected result set size or make the cursor non-scrollable.

ORA-24411: Session pool already exists.

Cause: A session pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new session pool. 2) If you wish to modify the pool parameters, call `OCISessionPoolCreate` in `OCI_SPOOL_REINITIALIZE` mode.

ORA-24412: Cannot reinitialize non-existent pool

Cause: `OCISessionPoolCreate` was not called in `OCI_DEFAULT` mode for this pool handle.

Action: Create a session pool prior to reinitializing it.

ORA-24413: Invalid number of sessions specified

Cause: An invalid combination of minimum, maximum, max per shard and increment number of sessions was specified in the `OCISessionPoolCreate` call.

Action: Specify a valid combination of parameters.

ORA-24414: Only *number* sessions could be started.

Cause: The number of sessions specified by the `minSess` parameter of `OCISessionPoolCreate` could not be started, possibly because the value supplied was larger than that supported by the server."

Action: This is a warning. Check the maximum number of sessions allowed on the server.

ORA-24415: Missing or null username.

Cause: Username and password must be specified when pool is created in this mode.

Action: Specify a valid username and password.

ORA-24416: Invalid session Poolname was specified.

Cause: An attempt was made to use a Session Pool that does not exist.

Action: Create a Session Pool before using it.

ORA-24417: Session pool size has exceeded the maximum limit

Cause: The number of sessions has exceeded the maximum size of the Session Pool.

Action: This is a warning. You can tune the session pool with appropriate minimum and maximum parameters.

ORA-24418: Token based authentication does not support heterogeneous session pool.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using heterogeneous session pool.

Action: Change the session pool mode used for connecting to Oracle Database to homogenous.

ORA-24419: Proxy sessions are not supported in this mode.

Cause: A proxy session was requested for from a Session Pool which does not support proxy sessions.

Action: Do not specify mode `OCI_CRED_PROXY`.

ORA-24420: OCISessionRelease must be used to release this session.

Cause: The session was retrieved using `OCISessionGet`, and an attempt has been made to release it using a call other than `OCISessionRelease`.

Action: Call `OCISessionRelease`.

ORA-24421: OCISessionRelease cannot be used to release this session.

Cause: The session was not retrieved using OCISessionGet, and an attempt has been made to release it using OCISessionRelease.

Action: Release the session using an appropriate call.

ORA-24422: error occurred while trying to destroy the Session Pool

Cause: An attempt was made to destroy the session pool while some sessions in the pool were busy.

Action: Ensure that no sessions from the pool are being used OR call OCISessionPoolDestroy with mode set to OCI_SPD_FORCE.

ORA-24423: Cannot set the ROWID attribute - OCI_ATTR_FETCH_ROWID

Cause: An attempt was made to set the implicit ROWID attribute.

Action: Use a SELECT ... FOR UPDATE statement that has not previously been described or executed before setting this ROWID attribute.

ORA-24424: Invalid attempt to define at position 0

Cause: An invalid attempt was made to call OCIDefineByPos for position 0.

Action: Ensure that the implicit ROWID attribute, OCI_ATTR_FETCH_ROWID, is set on the statement handle before doing the execute.

ORA-24425: Invalid mode passed when defining at position 0

Cause: An invalid mode was passed to OCIDefineByPos.

Action: Ensure a valid mode is passed to OCIDefineByPos when defining at position 0.

ORA-24427: Invalid attributes on user handle

Cause: Some of the attributes set on the user handle were not allowed in pooled mode.

Action: Unset the attributes on the user handle and call OCISessionGet or use sessions that are not pooled.

ORA-24428: Sessions with SYSDBA privileges are not supported in this mode.

Cause: A session with SYSDBA privileges was requested from a Session Pool which does not support sessions with SYSDBA privileges.

Action: Do not specify mode OCI_SESSGET_SYSDBA.

ORA-24429: External authentication is not supported in this mode.

Cause: An externally authenticated session was requested from a Session Pool which does not support external authentication.

Action: Do not specify mode OCI_SESSGET_CREDEXT.

ORA-24430: Null values for sqltext and key were specified.

Cause: An attempt was made to call OCISmtPrepare2 and neither sqltext nor key were specified.

Action: Specify valid values for sqltext or key or both.

ORA-24431: Statement does not exist in the cache

Cause: The statement that was requested for does not exist in the statement cache.

Action: Please request for a valid statement.

ORA-24432: The statement that was returned is not tagged.

Cause: A tagged statement was requested for, but an untagged statement has been returned.

Action: This is a warning. Please modify and tag the statement as desired.

ORA-24433: This statement has already been prepared using OCISstmtPrepare2.

Cause: A statement that was earlier prepared using OCISstmtPrepare2 is now being reprepared using OCISstmtPrepare."

Action: Please use a different statement handle.

ORA-24434: OCISstmtRelease called before OCISstmtPrepare2.

Cause: An attempt was made to release a statement without first preparing it using OCISstmtPrepare2.

Action: Call OCISstmtPrepare2 before OCISstmtRelease.

ORA-24435: Invalid Service Context specified.

Cause: The statement was prepared using a service context that is different from the one specified in OCISstmtExecute.

Action: Please specify the same service context that the statement was prepared with.

ORA-24436: Invalid statement Handle.

Cause: OCIHandleFree called on a statement that was prepared using OCISstmtPrepare2.

Action: Release the statement using OCISstmtRelease.

ORA-24437: OCISstmtExecute called before OCISstmtPrepare2.

Cause: An attempt was made to execute a statement without first preparing it using OCISstmtPrepare2.

Action: Call OCISstmtPrepare2 before OCISstmtExecute.

ORA-24438: Invalid Authentication Handle specified.

Cause: The statement was prepared using an authentication handle that is different from the one specified in OCISstmtExecute.

Action: n/a

ORA-24439: success with PLSQL compilation warning

Cause: A plsql compilation warning occurred.

Action: Return OCI_SUCCESS_WITH_INFO along with the error code.

ORA-24440: OCI Easy Install mode cannot be initialized

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24441: Invalid cookie, resend sql text

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24442: SCN exceeds the capability of the target OCI database or client

Cause: An attempt was made to transfer a system change number (SCN) to an Oracle database or client that is older than Release 12.2 and the SCN exceeds the maximum value that such a system can handle.

Action: If needed, update the target database or client to Release 12.2 or higher.

ORA-24443: error status from OCI call: *string*

Cause: Oracle Call Interface (OCI) returned status.

Action: Contact Oracle Support Services.

ORA-24444: TTC RPC (*string*) not allowed by the security policy configured on the database

Cause: The database security policy configuration did not allow the specified Two-Task Common (TTC) RPC.

Action: Do not use functionality that issues the specified TTC RPC which is disallowed by the database security policy.

ORA-24445: object type input parameter in TTC RPC not allowed by the security policy configured on the database

Cause: The database security policy configuration did not allow object types as input parameters (including IN bind variables) in Two-Task Common (TTC) RPCs.

Action: Do not use the functionality that relies on object type input parameter usage in a TTC RPC.

ORA-24446: OCI worker thread pool task queue is full.

Cause: The maximum number of tasks were scheduled in the Oracle Call Interface (OCI) worker thread pool.

Action: Submit this task at a later time.

ORA-24447: OCI worker thread pool failed to initialize

Cause: The Oracle Call Interface (OCI) worker thread pool creation failed internally.

Action: Contact Oracle Support Services for more information.

ORA-24448: Internal handle allocation for *string* Handle failed

Cause: Handle allocation failed internally.

Action: Contact Oracle Support Services.

ORA-24449: could not reexecute statement after server side metadata changes

Cause: Statement from statement cache executed after server side metadata changes.

Action: Restart the application after column metadata changes or call OCISmtRelease() with OCI_STRLS_CACHE_DELETE mode and reattempt the database operation.

ORA-24450: Cannot pre-process OCI statement

Cause: An error occurred during statement pre-processing. E.g., SQL statement has invalid usage of N' or Q' literals.

Action: Correct the SQL statement.

ORA-24451: *string*, *string*, maximum call depth exceeded

Cause: The program had too many levels of recursion.

Action: Restructure the program to eliminate some levels of recursion.

ORA-24452: value_sz exceeding SB4MAXVAL is not supported

Cause: value_sz specified in OCIBindByPos2, OCIBindByName2 or OCIDefineByPos2 exceeds SB4MAXVAL and is not supported in this release.

Action: Specify a value less than or equal to SB4MAXVAL for value_sz in OCIBindByPos2, OCIBindByName2 or OCIDefineByPos2.

ORA-24453: too many application context settings for *number*

Cause: The number of application context settings supplied during authentication exceeded the supported limit.

Action: Reduce the number of application context settings that are passed during authentication.

ORA-24454: client host name is not set

Cause: The network host name in files like /etc/hosts was not set.

Action: Set the host name and try again.

ORA-24456: invalid OCI function code

Cause: An invalid Oracle Call Interface (OCI) function code was used.

Action: Use a valid OCI function code.

ORA-24457: OCISessionGet() could not find a free session in the specified timeout period

Cause: The contention on OCI Session Pool is high.

Action: Increase the timeout for OCISessionGet() using the OCI_ATTR_SPOOL_WAIT_TIMEOUT setting or reduce the number of threads accessing the pool concurrently.

ORA-24458: OCISessionGet() timed out trying to find a free session to the desired shard and max connections per shard limit is reached

Cause: OCISessionGet() could not find a free session to the appropriate shard in the specified timeout period. No new sessions can be opened to the shard either as the number of connections open to the shard is already at the value specified by OCI_ATTR_SPOOL_MAX_PER_SHARD.

Action: Increase value of OCI_ATTR_SPOOL_MAX_PER_SHARD or increase the timeout specified by or use OCI_SPOOL_ATTRVAL_WAIT

ORA-24459: OCISessionGet() timed out waiting for pool to create new connections

Cause: The OCISessionGet() timeout expired waiting for OCI Session Pool to create new sessions

Action: Retry the request later. Use OCISessionGet() with OCI_SPOOL_ATTRVAL_TIMEDWAIT mode (with an appropriate OCI_ATTR_SPOOL_WAIT_TIMEOUT setting) or OCI_SPOOL_ATTRVAL_WAIT mode.

ORA-24460: Native Net Internal Error

Cause: Internal error.

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24461: operation not permitted because OCISessionPoolDestroy() is in progress

Cause: One or more of the following was true: 1. OCISessionGet() was invoked while OCISessionPoolDestroy() was in progress. 2. OCISessionPoolDestroy() was invoked while another OCISessionPoolDestroy() was in progress.

Action: Do not invoke OCISessionGet() or OCISessionPoolDestroy() while another OCISessionPoolDestroy() is in progress.

ORA-24462: OCI Encountered internal error (*number*) from sharding library

Cause: OCI encountered an internal error when calling into the sharding library

Action: Contact Oracle Support Services

ORA-24463: invalid index passed into OCIPShardConnStrGet() call

Cause: Index passed to OCIPShardConnStrGet() exceeds shard count

Action: Check index value passed to OCIPShardConnStrGet() call

ORA-24464: OCI Session Pool does not support pooling sessions of different server types specified in the connect string *string*

Cause: Value for "SERVER=" clause of connect data for all descriptors in the description list of the connect string did not match.

Action: Set same value for "SERVER=" clause in connect data for all descriptors in the description list of the connect string mentioned in the error message.

ORA-24477: Error encountered while spawning a background thread

Cause: Spawning of a background thread for OCI Session Pool's session management failed. Failure may be encountered due to multiple reasons like insufficient thread's stacksize configuration on the operating system, low system memory etc.

Action: Configure your operating system to allocate more and sufficient memory for each thread and process.

ORA-24480: invalid OCI mode

Cause: An attempt was made to invoke OCI API with an invalid mode.

Action: Provide the OCI API with legitimate mode.

ORA-24481: Failed to initialize multithreaded environment

Cause: Operating system did not support multithreaded mode.

Action: Use single thread mode instead.

ORA-24482: Pool size was less than 1 in shared mode

Cause: Pool size must be positive in shared mode.

Action: Set a positive pool size.

ORA-24483: Invalid parameters were passed into environment creation call

Cause: Invalid parameters were passed into the environment creation call. Check the passed in parameters for the following conditions: -envp should not be NULL -xtrmem_sz should not be negative -Either both xtrmem_sz and usrmempp have to be provided. Or, neither should be provided.

Action: Pass in legitimate parameters.

ORA-24484: Setting authentication handle not allowed after pool create

Cause: An attempt was made to set the authentication handle on session pool handle after OCISessionPoolCreate.

Action: Set the authentication handle on session pool handle before calling OCISessionPoolCreate.

ORA-24485: Invalid attributes in session pool authentication handle

Cause: Some of the attributes set on the authentication handle being set on the session pool handle are invalid.

Action: Unset the illegal attributes on the authentication handle being set on session pool handle and then call OCIAttrSet. Refer to OCI documentation for details.

ORA-24486: Conflicting attributes in session pool authentication handle

Cause: Some attributes could not be set both on the authentication handle passed to OCISessionGet and the authentication handle set on session pool handle.

Action: Unset the conflicting attributes on the authentication handle and call OCISessionGet.

ORA-24487: Invalid properties or values provided for OCISessionGet

Cause: Some of the properties or their values provided during OCISessionGet with mode OCI_SESSGET_MULTIPROPERTY_TAG were invalid.

Action: Provide valid properties and values when calling OCISessionGet with mode OCI_SESSGET_MULTIPROPERTY_TAG. Refer to Oracle Call Interface documentation for details.

ORA-24488: Invalid properties or values provided for OCISessionRelease

Cause: Some of the properties or their values provided during OCISessionRelease with mode OCI_SESSRLS_MULTIPROPERTY_TAG were invalid.

Action: Provide valid properties and values when calling OCISessionRelease with mode OCI_SESSRLS_MULTIPROPERTY_TAG. Refer to Oracle Call Interface documentation for details.

ORA-24489: reserved OCI error

Cause: A reserved Oracle Call Interface (OCI) error has occurred.

Action: Contact Oracle Support Services.

ORA-24490: error while getting shard instances

Cause: There was a mismatch in the shard keys or group keys with the corresponding connect string.

Action: Check if the keys are properly specified along with the corresponding connection string.

ORA-24491: attempt to get sharding-related topology information failed

Cause: An unexpected error was encountered while building and processing sharding-related information.

Action: Contact Oracle Support Services.

ORA-24492: Shard library initialization failed

Cause: An attempt to initialize the shard library failed.

Action: Contact Oracle Support Services.

ORA-24493: general sharding error

Cause: An unexpected error was encountered while processing sharding-related information.

Action: Contact Oracle Support Services.

ORA-24494: error in constructing shard key or shard group key

Cause: An invalid column value was passed.

Action: Pass in a column value in the appropriate format specified by the data type.

ORA-24495: OCISessionGet() timed out waiting for a suitable writable chunk

Cause: There was no instance available with a writable chunk for the specified shard key at the time the OCISessionGet() request was issued. This may be a transient condition due to chunk migration.

Action: Retry the request later. If needed, increase the timeout specified in OCI_ATTR_SPOOL_WAIT_TIMEOUT to minimize or eliminate the chances of running into this error during chunk migrations.

ORA-24496: OCISessionGet() timed out waiting for a free connection

Cause: There was no free connection as the pool reached its maximum and all connections were in use at the time the request was issued.

Action: Retry the request later. Use OCISessionGet() with OCI_SPOOL_ATTRVAL_TIMEDWAIT mode (with an appropriate OCI_ATTR_SPOOL_WAIT_TIMEOUT setting) or OCI_SPOOL_ATTRVAL_WAIT mode. If needed, increase the maximum size of the OCI session pool.

ORA-24497: PL/SQL fix up callback name too long

Cause: The PL/SQL fix up callback name was too long.

Action: Use a shorter PL/SQL fix up callback name.

ORA-24498: The OCIShardingKey descriptor is not supported by the function OCISessionBegin().

Cause: The descriptor OCIShardingKey was set on a user handle passed to the function OCISessionBegin().

Action: Use the function `OCISessionGet()` with the descriptor `OCIShardingKey`.

ORA-24499: Setting session get mode not allowed after pool create

Cause: An attempt was made to set the `OCI_ATTR_SPOOL_GETMODE` attribute on session pool handle after `OCISessionPoolCreate`.

Action: Set the `OCI_ATTR_SPOOL_GETMODE` attribute on session pool handle before calling `OCISessionPoolCreate`.

ORA-24500: invalid UTF16 mode

Cause: UTF16 mode is allowed only at environment handle creation time.

Action: Remove UTF16 mode for functions other than `OCIEnvCreate()`

ORA-24501: invalid UTF16 string passed in

Cause: Non-UTF16 string is passed in while UTF16 string is expected

Action: Check the parameter which is actually a string

ORA-24502: codepoint length overflows

Cause: Returned buffer has more codepoints than allowed

Action: Set `OCI_MAXCHAR_SIZE` large enough to accommodate

ORA-24503: codepoint length overflows for piecewise operation

Cause: Accumulated codepoint length exceeds allowed codepoint length

Action: Set `OCI_MAXCHAR_SIZE` large enough to accommodate

ORA-24504: data length larger than expected

Cause: Incoming data larger than receiving buffer

Action: Set `OCI_MAXDATA/MAXCHAR_SIZE` appropriately or remove the setting

ORA-24505: cannot change character set id on the handle

Cause: Attempts to change character set id on non-environment handles

Action: Only try to change character set id on environment handles

ORA-24506: invalid attempt to change character set id on env handle

Cause: Attempts to change character set id after other handles have been allocated from the env handle

Action: Change character set id after creating environment handle but before allocating any handles from it.

ORA-24507: invalid combination of character set ids

Cause: Attempts to set one character set id as zero

Action: Set both `charset` and `ncharset` as zero or non-zero in `OCIEnvNlsCreate()`

ORA-24508: Buffer is not aligned correctly.

Cause: Alignment error occurred in buffer when converting between character sets.

Action: Align buffer appropriately. For UTF16 buffer, pass a `ub2` pointer.

ORA-24509: OCI function currently not supported in UTF16 mode.

Cause: Attempt to call an OCI function that was not supported in OCI_UTF16ID mode.

Action: Remove the offending function or do not create an OCI environment with OCI_UTF16ID mode or OCI_UTF16ID character set ID.

ORA-24510: Invalid value of POOL_PURITY is specified in connect string

Cause: Invalid value of POOL_PURITY was specified in connect string. Valid value was either SELF or NEW.

Action: Check the value of POOL_PURITY in connect string.

ORA-24511: Invalid value of POOL_CONNECTION_CLASS is specified in connect string.

Cause: The specified value was either empty or exceeded MAX allowed.

Action: Use a non-empty value or within the MAX allowed.

ORA-24512: sharding key is not provided while connecting to a sharded database

Cause: OCIShardingKey was not set to the auth handle through OCIAttrSet.

Action: Set OCIShardingKey to the auth handle before checking sessions out from the pool.

ORA-24513: Configuration Store not supported with connection pool.

Cause: Configuration store login credentials were detected. This is not compatible with connection pool.

Action: Use a homogeneous session pool.

ORA-24514: Configuration Store login not supported with heterogeneous session pool.

Cause: Configuration store login credentials was detected. This is not compatible with heterogeneous session pool.

Action: Use a homogeneous session pool.

ORA-24530: User not authorized to access column value.

Cause: Column security is enabled and column value is not authorized.

Action: The program needs to handle this error and take appropriate action.

ORA-24531: Column value authorization is unknown.

Cause: Column security is unknown for the column.

Action: Verify the fetched data. It may or may not contain a meaningful value because it is probably the result of an expression that operated on unauthorized values.

ORA-24536: Warning - column authorization unknown.

Cause: Column security is unknown for one or more columns.

Action: Verify the fetched data. It may or may not contain a meaningful value because it is probably the result of an expression that operated on unauthorized values.

ORA-24542: PRELIM mode logon not allowed to a pluggable database

Cause: PRELIM mode logon was attempted to a pluggable database.

Action: Create PRELIM mode connections to CDB\$ROOT only.

ORA-24543: instance startup or shutdown not allowed in pluggable database

Cause: An instance startup or shutdown operation was attempted when connected to a pluggable database.

Action: Perform instance startup or shutdown operations by connecting to CDB\$ROOT.

ORA-24544: Oracle RAC One Node instance is already running.

Cause: An instance startup failed because an instance of the Oracle RAC One Node database was already running on one of the cluster nodes.

Action: In Oracle RAC One Node, avoid any attempt to start a second instance by any means while the instance is already running.

ORA-24550: unhandled signal *#number* received. *string*

Cause: Serious error: signal received

Action: Refer to the platform-specific signal code, and see if the application code caused the error. Otherwise, record all error state and notify Oracle Support Services.

ORA-24557: error *string* encountered while handling error *string*; exiting server process

Cause: A second-level error occurred in an Oracle server process that required that process to exit.

Action: None. If an excessive number of incidents are dumped, contact Oracle Support Services.

ORA-24558: syntax error encountered in the input string

Cause: The string to be validated had a syntax error.

Action: Remove the syntax error and try again.

ORA-24559: The input string attempts to insert or substitute another substring.

Cause: The input string attempted to insert or substitute a Name Value Pair or SQL syntax.

Action: Validate the string.

ORA-24560: general input validation error

Cause: The input string had issues other than the syntax error.

Action: Check if the input string length or mode are passed accordingly and then try again.

ORA-24601: bind buffer not allocated by caller

Cause: A valid buffer was not provided for the bind call.

Action: Provide a non-NULL pointer for the bind call, and a valid length for the buffer.

ORA-24750: incorrect size of attribute

Cause: Transaction ID attribute size is incorrect.

Action: Verify that the size parameter is correct.

ORA-24752: OCI_TRANS_NEW flag must be specified for local transactions

Cause: Application attempted to start a local transaction without using OCI_TRANS_NEW.

Action: Use OCI_TRANS_NEW when starting local transactions.

ORA-24753: local transactions cannot be detached

Cause: An attempt to detach a local transaction was made.

Action: Local transactions may only be committed or rolled back.

ORA-24754: cannot start new transaction with an active transaction

Cause: An attempt to start a new transaction was made when there was an active transaction.

Action: Commit, rollback or detach the existing transaction before starting a new transaction.

ORA-24755: OCI_TRANS_NOMIGRATE, OCI_TRANS_JOIN options are not supported

Cause: These flags are currently not supported.

Action: No action required.

ORA-24756: transaction with identifier *string* does not exist

Cause: An invalid transaction identifier was used or the transaction has completed.

Action: Supply a valid identifier if the transaction has not completed and retry the call.

*Params: 1) transaction_identifier: The transaction identifier.

ORA-24757: duplicate transaction identifier

Cause: An attempt was made to start a new transaction with an identifier already in use by an existing transaction.

Action: Verify that the identifier is not in use.

ORA-24758: not attached to the requested transaction

Cause: An attempt was made to detach or complete a transaction that is not the current transaction.

Action: Verify that the transaction context refers to the current transaction.

ORA-24759: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that only one of the following values is specified: OCI_TRANS_NEW, OCI_TRANS_JOIN, OCI_TRANS_RESUME, or OCI_TRANS_PROMOTE.

ORA-24760: invalid isolation level flags

Cause: An invalid isolation level flag was passed.

Action: Verify that only one of following values is used: OCI_TRANS_READONLY, OCI_TRANS_READWRITE, or OCI_TRANS_SERIALIZABLE.

ORA-24761: transaction rolled back

Cause: The application tried to commit a transaction and the server rolled it back.

Action: No action required.

ORA-24762: Server failed due to an internal error.

Cause: An internal error occurred in the server commit protocol.

Action: Contact Oracle Support.

ORA-24763: transaction operation cannot be completed

Cause: The commit or rollback could not be performed because the session could not switch to the specified transaction.

Action: Retry the operation later.

ORA-24764: transaction branch has been heuristically committed

Cause: This is an informational message.

Action: No action required.

ORA-24765: Transaction branch has been heuristically rolled back.

Cause: This is an informational message.

Action: None

ORA-24766: transaction branch has been partly committed and aborted

Cause: This is an informational message.

Action: No action required.

ORA-24767: transaction branch prepare returns read-only

Cause: The transaction is read-only, or this is the outcome of an optimization for two-phase commit protocol.

Action: None. Informational only.

ORA-24768: commit protocol error occurred in the server

Cause: This is an internal error.

Action: Contact customer support

ORA-24769: cannot forget an active transaction

Cause: Transaction identifier refers to an active transaction.

Action: Verify that the identifier of an active transaction was not passed as an argument.

ORA-24770: cannot forget a prepared transaction

Cause: Transaction identifier refers to a prepared transaction.

Action: Verify that the identifier of a prepared transaction was not passed as an argument.

ORA-24771: cannot detach, prepare or forget a local transaction

Cause: Service handle contains a local transaction context.

Action: Verify that the transaction context does not refer to a local transaction.

ORA-24772: Cannot mix tightly-coupled and loosely-coupled branches

Cause: Application attempted to start a transaction with a global transaction identifier and a wrong option.

Action: Verify that all branches of a global transaction are started with either OCI_TRANS_TIGHT or OCI_TRANS_LOOSE option. If the application is correct and uses distributed updates, contact customer support.

ORA-24773: invalid transaction type flags

Cause: OCI_TRANS_TIGHT or OCI_TRANS_LOOSE mode was not specified.

Action: Verify that the right parameters are being used.

ORA-24774: cannot switch to specified transaction

Cause: The transaction specified in the call refers to a transaction created by a different user.

Action: Create transactions with the same authentication so that they can be switched.

ORA-24775: cannot prepare or commit transaction with non-zero lock value

Cause: An attempt was made to detach the transaction with a non-zero lock value.

Action: Detach the transaction with lock value set to zero and then try to prepare or commit the transaction.

ORA-24776: cannot start a new transaction

Cause: An attempt was made to start a new transaction when session was already attached to an existing transaction.

Action: End the current transaction before creating a new transaction.

ORA-24777: use of non-migratable database link not allowed

Cause: The transaction, which needs to be migratable between sessions, tried to access a remote database from a non-multi threaded server process.

Action: Perform the work in the local database or open a connection to the remote database from the client. If multi threaded server option is installed, connect to the Oracle instance through the dispatcher.

ORA-24778: cannot open connections

Cause: The migratable transaction tried to access a remote database when the session itself had opened connections to remote database(s).

Action: Close the connection(s) in the session and then try to access the remote database from the migratable transaction. If the error still occurs, contact Oracle customer support.

ORA-24779: detach not allowed with open remote cursor

Cause: The migratable transaction tried to detach from the current session while having an open remote cursor.

Action: Close any open remote cursor prior to detach.

ORA-24780: cannot recover a transaction while in an existing transaction

Cause: An attempt was made to commit or roll back a transaction while in a different transaction, and the transaction for which the action is requested is in a recovery state (this happens if it is idle too long).

Action: Detach from the current transaction and retry the operation.

ORA-24781: branches don't belong to the same global transaction

Cause: The list of xids passed into kpotxmp() don't have the same gtrid

Action: n/a

ORA-24782: cannot detach from a non-migratable transaction

Cause: An attempt was made to detach from a non-migratable transaction.

Action: Either commit or rollback the transaction.

ORA-24783: Cannot switch non-migratable transactions

Cause: An attempt was made to prepare/commit a txn different from current.

Action: n/a

ORA-24784: Transaction exists

Cause: An attempt was made to start a transaction, while attached to a non-migrateable transaction

Action: n/a

ORA-24785: Cannot resume a non-migratable transaction

Cause: An attempt was made to resume a non-migrateable transaction.

Action: n/a

ORA-24786: separated transaction has been completed

Cause: The current transaction has been completed by another process.

Action: Start a new transaction

ORA-24787: remote cursors must be closed before a call completes

Cause: The previous operation did not close all the remote cursors it opened. Since separated transactions are enabled, this is not allowed.

Action: Close all remote cursors in each call, or start a regular (non-separated) transaction.

ORA-24788: cannot switch to specified transaction (server type)

Cause: The transaction specified was created by a shared server and the requestor is a dedicated server, or the transaction was created by a dedicated server and the requestor is a shared server.

Action: All parts of this application should connect as dedicated or as shared.

ORA-24789: start not allowed in recursive call

Cause: Oracle RM will not start/resume a branch in a recursive call

Action: Reconsider your application stack design

ORA-24790: cannot mix OCI_TRANS_RESUME and transaction isolation flags

Cause: An attempt was made to change the isolation level of an existing transaction.

Action: No action required

ORA-24791: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that OCI_TRANS_LOOSE was not passed along with OCI_TRANS_JOIN, OCI_TRANS_RESUME. Also, verify that other flags (such as OCI_TRANS_SEPARABLE) passed by the client are supported by the version of the Oracle server.

ORA-24792: cannot mix services in a single global transaction

Cause: Oracle RM will not serve global (distributed) transaction requests if branches are created using different services

Action: Configure clients such that those participating in the same distributed transaction use the same service name.

ORA-24794: no active DTP service found

Cause: Oracle RM will not serve global (distributed) transaction requests until DTP services are configured in RAC. It is possible that a service was stopped while transactions were in-flight.

Action: Provision/Start DTP services first.

ORA-24795: Illegal *string* attempt made

Cause: An illegal attempt was made to commit/rollback current transaction

Action: Use appropriate commit/rollback mechanism

ORA-24796: operation completed; resume of original transaction rolled back

Cause: The commit, rollback, or prepare completed successfully, but the current transaction for this thread was rolled back.

Action: If desired, retry the current transaction. If the operation was prepare, then end transaction appropriately with a commit or rollback operation.

ORA-24797: cannot promote the current transaction to a distributed transaction

Cause: The current transaction was not allowed to be promoted to a distributed transaction.

Action: Verify that the OCI_ATTR_XID, OCI_ATTR_INTERNAL_NAME and OCI_ATTR_EXTERNAL_NAME attributes have been set properly. Verify that the current transaction has neither performed a direct path insert (a.k.a. IDL) or Parallel DML (PDML) operations, nor has it already been a distributed transaction. Also, verify that the local transaction is in the same isolation level if the isolation flag value is set.

ORA-24798: cannot resume the distributed transaction branch on this instance

Cause: An attempt was made to resume a distributed transaction branch that is physically located on another RAC instance.

Action: Connect to the instance where the transaction branch is located.

ORA-24801: illegal parameter value in OCI lob function

Cause: One of the parameter values in the OCI lob function is illegal.

Action: Check every parameter in the OCI Lob function call to make sure they are correct. Offsets should be greater than or equal to one.

ORA-24802: user defined lob read callback error

Cause: The only valid return value for a user defined lob read callback function is OCI_CONTINUE. Any other value will cause this error.

Action: Verify that OCI_CONTINUE is returned from the user defined lob read callback function.

ORA-24803: illegal parameter value in lob read function

Cause: Internal error .

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24804: Lob read/write functions called while another OCI LOB read/write streaming is in progress

Cause: Internal error.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() abort the current LOB streaming call.

ORA-24805: Source LOB type does not match destination LOB type.

Cause: When performing a LOB copy or append operation, the source LOB locator and destination LOB locator were not the same CLOB or BLOB data type.

Action: Use LOB locators of same data type in LOB copy and append operations. You can copy CLOB to CLOB, or copy BLOB to BLOB.

ORA-24806: character set form of buffer and LOB do not match

Cause: When reading from or writing into large objects (LOBs), the character set form of the user buffer did not match with that of the LOB.

Action: Ensure that the buffer you are using to read or write has the same form as that of the LOB.

ORA-24807: LOB form mismatch

Cause: When copying or appending LOBs, both source and destination LOB locators should have the same character set form.

Action: Pass locators of the same character set form for copying or appending LOBs.

ORA-24808: streaming of lob data is not allowed when using lob buffering

Cause: Attempted to stream lob data via the polling mode or a callback when lob buffering was enabled for the input lob locator.

Action: Lob buffering is useful when reading/writing small amounts of lob data so streaming should not be necessary. Rewrite the OCILobRead/OCILobWrite call so that it does not use streaming. If streaming of data is required, lob buffering should not be used. In this case, flush buffers associated with the input lob locator as necessary, disable buffering on the input lob locator and reissue the OCILobRead/OCILobWrite call.

ORA-24809: amount specified will not fit in the lob buffers

Cause: LOB buffering is enabled for the input lob locator so buffering will be used. However, the amount of lob data to read or write is larger than what the lob buffers can hold.

Action: Either disable buffering on the input lob locator and reissue the command or pass a smaller amount.

ORA-24810: attempting to write more data than indicated

Cause: While writing into a LOB, more data was supplied than indicated.

Action: If data is written in pieces, then make sure that you do not provide more data in the pieces (cumulatively), than you indicated.

ORA-24811: less data provided for writing than indicated

Cause: While writing into a LOB, less data was provided than indicated.

Action: If writing data in single pieces, then make sure that the buffer length specified is big enough to accommodate the data being provided. If data is written in pieces, then make sure that all the data has been provided before specifying OCI_LAST_PIECE.

ORA-24812: character set conversion to or from UCS2 failed

Cause: If the database character set is varying-width, the CLOB/NCLOB value is implicitly converted to or from UCS2. This implicit conversion failed.

Action: Contact Oracle Worldwide Support.

ORA-24813: cannot send or receive an unsupported LOB

Cause: An attempt was made to send a LOB across the network, but either the server does not support the LOB sent by the client, or the client does not support the LOB sent by the server. This error usually occurs when the client and server are running different versions of Oracle.

Action: Use a version of the Oracle that supports the LOB on both the client and the server.

ORA-24814: OCILobAssign cannot be used for temporary LOBs.

Cause: A temporary LOB locator was passed to OCILobAssign, but this function only supports persistent LOBs.

Action: For temporary LOBs, use the OCILobLocatorAssign function.

ORA-24815: Invalid character set form

Cause: An invalid character set form was passed into an OCI LOB function. For example, the only valid cs form for OCILobCreateTemporary() is OCI_DEFAULT(0), SQLCS_IMPLICIT(1) or SQLCS_NCHAR(2).

Action: Specify a valid character set form.

ORA-24816: Expanded non LONG bind data supplied after actual LONG or LOB column

Cause: A Bind value of length potentially > 4000 bytes follows binding for LOB or LONG.

Action: Re-order the binds so that the LONG bind or LOB binds are all at the end of the bind list.

ORA-24817: Unable to allocate the given chunk for current lob operation

Cause: The given size is increased to accommodate the number of bytes from server due to varying width db char/nchar set.

Action: Use smaller chunk sizes when you have character set conversion between client/server or perform piece-wise read or write.

ORA-24818: Operation not permitted on Abstract LOBs

Cause: Abstract LOB locators were not allowed in the operation. For example, OCILobAssign only takes persistent LOB locators as parameters, not Abstract (i.e., client-side created) LOBs.

Action: Avoid the operation on Abstract LOBs.

ORA-24819: invalid reference count encountered while freeing a temporary LOB

Cause: A reference count value of a temporary LOB was zero or less than zero while freeing the temporary LOB.

Action: Contact Oracle Support.

ORA-24820: different LOB function called while another OCI LOB call is in progress

Cause: An attempt was made to execute a new Oracle Call Interface (OCI) LOB call while another OCI LOB call was in progress.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() to abort the current LOB streaming call.

ORA-24821: LOB prefetch size supplied is larger than the supported limit.

Cause: A very large LOB prefetch size was specified during a query.

Action: Reduce the prefetch size to an acceptable value.

ORA-24822: operation not allowed for value LOBs

Cause: An attempt was made to execute a disallowed large object (LOB) operation on a value LOB.

Action: Execute only allowed LOB operations on value LOBs. Only read operations are allowed on value LOBs.

ORA-24823: The write operation is not allowed for read-only LOB

Cause: An attempt was made to execute a large object (LOB) write operation on a read-only LOB.

Action: Only execute read operations on a read-only LOB or change the LOB to read/write.

ORA-24824: LOB QUERY property cannot be used at partition level.

Cause: An attempt was made to set LOB QUERY property at partition level.

Action: Use the 'query as' syntax at the table level instead.

ORA-24825: invalid use of LOB_VALUE operator

Cause: The LOB_VALUE operator could not be used in certain operations. For example, in DML-returning or select-for-update operations.

Action: Remove the LOB_VALUE operator.

ORA-24826: Value LOB is no longer available.

Cause: Attempted to access a value LOB that was freed automatically.

Action: Finish reading from value LOBs before the next SQL fetch.

ORA-24827: invalid byte amount parameter value in LOB read function

Cause: An invalid byte amount value was passed in the large object (LOB) read function.

Action: If the number of characters to read is zero, then the number of bytes to read must be greater than or equal to the maximum client character width.

ORA-24828: database version does not support LOB array read or write operations

Cause: The application used a large object (LOB) array operation but the server does not support these array operations.

Action: Use single LOB Oracle Call Interface (OCI) operations to read or write instead of array operations. Alternatively, upgrade the database server to the latest supported version.

ORA-24829: QUERY clause is not compatible with ALTER TABLE MOVE

Cause: The use of ALTER TABLE MOVE to change the QUERY mode of a LOB column was not supported.

Action: Use ALTER TABLE MODIFY to change the QUERY mode of LOB column.

ORA-24830: array iterator is more than array size

Cause: The array iterator was more than the array size. It may go out of sync due to internal errors.

Action: Contact Oracle Support.

ORA-24831: The write operation is not allowed for read-only LOB column *string* in *string.string*.

Cause: An attempt was made to execute a large object (LOB) write operation on a read-only LOB.

Action: Only execute read operations on a read-only LOB or change the LOB to read/write.

ORA-24850: failed to startup shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in starting up the shared subsystem.

Action: Contact Oracle Customer support.

ORA-24851: failed to connect to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the process to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24852: protocol error during statement execution

Cause: An internal protocol error occurred while receiving describe data from the server during execution of a statement.

Action: Contact Oracle Customer Support.

ORA-24853: failed to connect thread to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the thread to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24854: invalid pieceinfo provided

Cause: While making the first call to write LOB data, an invalid pieceinfo value provided.

Action: Correct the call to use OCI_ONE_PIECE or OCI_FIRST_PIECE. If using OCCI, make sure to call writeBuffer before calling writeLastBuffer.

ORA-24855: attempt to pass a LOB locator over an invalid database link

Cause: There was an attempt to send a LOB locator over a database link which was different from the one on which it was obtained.

Action: Ensure that remote LOB locators are passed back on the same database link from which they were obtained.

ORA-24856: invalid use of TO_LOB operator

Cause: You can apply this function only to a LONG or LONG RAW column, in the select list of a subquery in an INSERT statement. Also, it is possible to use the TO_LOB function to convert a LONG column to a LOB column in the subquery of a CREATE TABLE ... AS SELECT statement, if you are not creating an INDEX organized table. TO_LOB function is not allowed within a PL/SQL package.

Action: Remove the TO_LOB operator. In the case the operator is in a

ORA-24857: LOB Locator belongs to another statement

Cause: The LOB locator is being used by another statement.

Action: There are 2 possible solutions: - Release the statement that is using the LOB locator
- Create a new LOB locator descriptor.

ORA-24858: value LOB is very large

Cause: The value LOB was larger than 256 MB and was trying to send to the

Action: There are 2 possible solutions: - Enable fetch duration for value LOBs. - Do not use value LOBs.

ORA-24900: invalid or unsupported mode parameter passed in notification registration call

Cause: The mode parameter passed into the Oracle Call Interface (OCI) notification registration call was incorrect.

Action: Correct the mode parameter passed into OCI notification registration call.

ORA-24901: handles belonging to different environments passed into an OCI call

Cause: The handles that were passed in the call that returned this error belonged to different environments. All handles passed into an Oracle Call Interface (OCI) call should belong to the same environment.

Action: Ensure that the handle parameters in the call come from the same OCI Environment.

ORA-24902: invalid subscription name or name length in subscription handle

Cause: The subscription handle passed into the Oracle Call Interface (OCI) call did not have a proper name or name length attribute.

Action: Set the name and name length attributes by using the OCIAttrSet() call.

ORA-24903: invalid namespace attribute passed into OCI call

Cause: The subscription handle passed into the Oracle Call Interface (OCI) call did not have a proper namespace attribute.

Action: Set the namespace attribute to use the OCIAttrSet() call.

ORA-24904: Callback attribute was not set in subscription handle.

Cause: The subscription handle passed into the Oracle Call Interface (OCI) call did not have the callback attribute OCI_ATTR_SUBSCR_CALLBACK set.

Action: Set the callback attribute OCI_ATTR_SUBSCR_CALLBACK using the OCIAttrSet() call.

ORA-24905: invalid recipient protocol attribute in subscription handle

Cause: The subscription handle passed into the Oracle Call Interface (OCI) call did not have a proper recipient protocol attribute.

Action: Set the recipient protocol attribute using the OCIAttrSet() call.

ORA-24906: invalid recipient attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient attribute.

Action: Please set the recipient attribute using the OCIAttrSet() call.

ORA-24907: invalid pair of callback and recipient protocol attributes

Cause: The subscription handle passed into the OCI call can't have both the callback defined and a recipient protocol other than OCI_SUBSCR_PROTO_OCI at the same time.

Action: Please set the appropriate callback and recipient protocol attributes using the OCIAttrSet() call.

ORA-24908: invalid recipient presentation attribute

Cause: The subscription handle passed into the OCI call does not have a valid recipient presentation attribute.

Action: Set the recipient presentation attribute using the OCIAttrSet() call

ORA-24909: call in progress. Current operation cancelled

Cause: The OCI call was invoked when another call on the connection was in progress.

Action: Check if the OCI call is supported when the call is in progress under special conditions; for example, if it is being used by a signal handler.

ORA-24911: Cannot start listener thread at specified port

Cause: Thread already running at a different port.

Action: Set the correct port in the environment handle or let the system choose the port.

ORA-24912: Listener thread failed. *string*

Cause: Thread listening for event notification exited because of an error. The error encountered is appended to the error message.

Action: The client needs to be restarted.

ORA-24913: Event to enable NLS validation

Cause: N/A

Action: Set this event in your environment to enable NLS character validation even when character sets are the same for client/server.

ORA-24915: Cannot start Listener at specified IP address

Cause: Thread was already listening at a different IP address.

Action: Set the correct IP address in the environment handle or let the system choose the correct IP address.

ORA-24916: cannot use IP address attribute before release 11.2 compatible notifications

Cause: An attempt was made to use OCI_ATTR_SUBSCR_IPADDR attribute before release 11.2 compatible notifications.

Action: Change the compatibility to 11.2.

ORA-24918: secure notification mode not supported

Cause: An attempt was made to use OCI_SECURE_NOTIFICATION before release 12.0 compatible notifications.

Action: Change the compatibility to 12.0.

ORA-24919: subscription to Fast Application Notification failed

Cause: An error occurred while subscribing to Fast Application Notification. This could be due to problems in the Oracle clusterware configuration.

Action: Look at the client trace files for additional information. Ensure that the Oracle clusterware is properly configured.

ORA-24920: column size too large for client

Cause: Client attempted to fetch a column whose size is larger than the maximum size that can be handled by the client.

Action: Upgrade the client stack to Oracle 12c or higher.

ORA-24922: cannot send or receive an SCN value that is too high for the current compatibility setting

Cause: An attempt was made to send or receive a high value system change number (SCN) over the network, but either the server or the client did not support such a high value SCN. This error usually occurs when either the server or client compatibility is Oracle Database release 12c version 12.2 or later.

Action: Ensure that the database compatibility is Oracle Database release 12c version 12.2 or later on both the client and the server.

ORA-24923: event notification not supported for *string*

Cause: An event notification operation was called on an unsupported object type or schema.

Action: Only register user schemas and tables for event notification. Event notification is not supported on SYS, SYSTEM, or Oracle maintained schemas. Refer to the Oracle

Documentation for further information. *Params: 1) unsupported object: either a schema name or a schema-qualified object name

ORA-24940: invalid combination of *string* namespace, *string* presentation and *string* receive protocol

Cause: An invalid combination of namespace, presentation and receive protocol was specified during notification registration. Currently, only AQ namespace is supported with XML presentation. Non-AQ namespace is not supported for e-mail and HTTP receive protocols.

Action: Please change the register call appropriately.

ORA-24941: invalid combination of notification grouping attributes

Cause: An invalid combination of notification grouping attributes was specified. Currently, only TIME notification grouping class is supported. If notification grouping class is zero, all other notification grouping attributes must be zero.

Action: Refer to documentation and change the attributes appropriately.

ORA-24942: cannot use ntfn grouping attributes on before release 11.0 compatible ntfns

Cause: An attempt was made to use notification grouping on before release 11.0 compatible notifications.

Action: Change the compatibility to 11.0.

ORA-24943: cannot use ntfn grouping with this receive protocol, presentation, client initiated connection(CIC)/secure notification mode and/or QoS

Cause: An attempt was made to use notification grouping with e-mail or HTTP receive protocol or XML presentation or payload delivery or CIC delivery mode or reliable QoS. Currently, only OCI and PLSQL receive protocols and default presentation are supported with notification grouping. As of now, notification grouping feature is not supported for CIC/secure notification mode.

Action: Refer to documentation and change the call appropriately.

ORA-24944: Cannot use registration timeout or notification grouping features with an ANONYMOUS namespace.

Cause: Attempted to use registration timeout or notification grouping features with an ANONYMOUS namespace. These are only supported with Oracle Advanced Queuing (AQ) and DBCHANGE namespaces.

Action: Do not pass registration timeout or group notification attributes in the notification registration call.

ORA-24945: cannot use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications

Cause: An attempt was made to use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications.

Action: Change the database compatibility to 10.2.

ORA-24946: invalid registration callback

Cause: An attempt was made to use a reserved callback for notification registration.

Action: Choose a different name for the notification callback and change the register call appropriately.

ORA-24947: Invalid namespace attribute specified for the subscription *string*

Cause: An attempt was made to register with invalid namespace attribute.

Action: Refer to documentation and change the namespace appropriately.

ORA-24948: number of registrations for this subscription exceeds the limit

Cause: The maximum number of registrations already existed for this subscription.

Action: Change the queue policy or close any existing registrations and try again.

ORA-24950: unregister failed, registration not found

Cause: The registration that was asked to be unregistered could not be found.

Action: Please check the callback function name and the subscription name in the unregister call.

ORA-24952: register, unregister or post has incorrect collection count

Cause: The register, unregister or post function was invoked with a collection that was smaller than the size specified by the parameter to the function.

Action: Please check the function's use and ensure that the size parameter is correct.

ORA-24960: the attribute *string* is greater than the maximum allowable length of *number*

Cause: The user attempted to pass an attribute that is too long

Action: Shorten the specified attribute and retry the operation.

ORA-24962: connect string could not be parsed, error = *string*

Cause: The address portion of the connect string could not be parsed. The client may be using a format of the connect string that the server does not understand.

Action: Correct the connect string.

ORA-24964: ALTER SESSION SET CONTAINER error

Cause: An attempt to switch to a PDB with different settings such as character set, time zone or time zone file version on an Oracle 12c Release 1 (12.1) or earlier client failed.

Action: Upgrade client to Oracle 12 Release 2 (or later) to support such operations.

ORA-24969: iteration count of *number* not supported for this statement

Cause: This statement was not supported with iteration count greater than one.

Action: Execute the statement with an iteration count of one.

ORA-24970: Oracle Database client cannot handle SQL function codes exceeding 255.

Cause: Oracle Database clients earlier than release 21c cannot handle SQL function codes larger than 255.

Action: Upgrade the Oracle Database client library to release 21c or later.

ORA-24981: deferred SGA thread spawn failed

Cause: This is an internal error.

Action: None

ORA-24982: deferred SGA segment allocation failed, index = *string* location = *string*

Cause: System-defined shared memory limits are inadequate for Oracle.

Action: Consult the alert file for details.

ORA-24983: Process (*string*) failed to attach to deferred SGA segments.

Cause: The process failed to attach to deferred SGA segments.

Action: Consult the alert file for details and contact Oracle Support Services.

ORA-24984: SGA allocation slaves termination failed

Cause: This is an internal error.

Action: None

ORA-25000: invalid use of bind variable in trigger WHEN clause

Cause: A bind variable was used in the when clause of a trigger.

Action: Remove the bind variable. To access the table columns use (new/old).column_name.

ORA-25001: cannot create this trigger type on this type of view

Cause: INSTEAD OF triggers can be created on any view which is not an Editioning View, while BEFORE and AFTER triggers may only be created on Editioning Views.

Action: Change the trigger type to INSTEAD OF or change the view on which you are attempting to create a DML trigger.

ORA-25002: cannot create INSTEAD OF triggers on tables

Cause: Only BEFORE or AFTER triggers can be created on a table.

Action: Change the trigger type to BEFORE or AFTER.

ORA-25003: cannot change NEW values for this column type in trigger

Cause: Attempt to change NEW trigger variables of datatype object, REF, nested table, VARRAY or LOB datatype which is not supported.

Action: Do not change the NEW trigger variables in the trigger body.

ORA-25004: WHEN clause is not allowed in INSTEAD OF triggers

Cause: WHEN clause is specified in an INSTEAD OF trigger.

Action: Remove the WHEN clause when creating an INSTEAD OF trigger.

ORA-25005: cannot CREATE INSTEAD OF trigger on a read-only view

Cause: attempt to create an INSTEAD OF trigger on a view created with read-only option. The view cannot be updated using INSTEAD OF triggers.

Action: Do not create the trigger.

ORA-25006: cannot specify this column in UPDATE OF clause

Cause: Attempt to create a trigger on update of a column whose datatype is disallowed in the clause, such as LOB and nested table.

Action: Remove the UPDATE OF clause.

ORA-25007: functions or methods not allowed in WHEN clause

Cause: PLSQL function call or method invocation is not allowed in the WHEN clause when creating a trigger.

Action: Remove the function call or method invocation from the WHEN clause.

ORA-25008: no implicit conversion to LOB datatype in instead-of trigger

Cause: When inserting or updating a view using instead-of trigger, the new value for a LOB view column is of a different datatype.

Action: Specified a LOB value as the new value for the LOB view column.

ORA-25009: Nested table clause allowed only for INSTEAD OF triggers

Cause: Triggers on nested tables can only be created on view columns using INSTEAD OF triggers.

Action: Use view nested table columns for defining nested table triggers.

ORA-25010: Invalid nested table column name in nested table clause

Cause: The column name specified in the nested table clause of an INSTEAD OF trigger does not correspond to a nested table column.

Action: Specify a nested table column on which the trigger is to be defined.

ORA-25011: cannot create trigger on internal AQ table

Cause: An attempt was made to try to create a trigger on a table that is used internally to support the Advanced Queueing (AQ) feature.

Action: Do not create the trigger.

ORA-25012: PARENT and NEW values cannot be identical

Cause: The referencing clause specifies identical values for PARENT and OLD.

Action: Re-specify either the PARENT or NEW referencing value.

ORA-25013: OLD and PARENT values cannot be identical

Cause: The referencing clause specifies identical values for OLD and PARENT.

Action: Re-specify either the OLD or PARENT referencing value.

ORA-25014: cannot change the value of a PARENT reference variable

Cause: Parent values can only be read and not changed.

Action: Do not attempt to change a Parent variable.

ORA-25015: cannot perform DML on this nested table view column

Cause: DML cannot be performed on a nested table view column except through an INSTEAD OF trigger

Action: Create an INSTEAD OF trigger over the nested table view column and then perform the DML.

ORA-25016: cannot specify column list for insert into nested table view column

Cause: A column list cannot be specified for inserts into the nested table view column.

Action: Specify all the columns for insert into the nested table.

ORA-25017: cannot reference NEW ROWID for movable rows in before triggers

Cause: NEW ROWID was referenced in a before row trigger which is defined on an index-organized table, or a partitioned table with enabled movement of rows. The ROWID cannot be computed in a before row update trigger because it depends on the actual values of the row

Action: Remove references to NEW ROWID from the trigger definition.

ORA-25018: conflicting trigger *string* already exists

Cause: Conflicting instead of DDL trigger on schema/database already exists.

Action: Remove the old trigger

ORA-25019: too much concurrency

Cause: cannot pin the database/schema because of too much concurrency

Action: try the operation later

ORA-25020: renaming system triggers is not allowed

Cause: renaming system triggers is not allowed

Action: Drop the trigger, and create a new one for the same

ORA-25021: cannot reference a trigger defined on another table

Cause: Referenced trigger in the FOLLOWS clause was defined on another table.

Action: Create the referenced trigger on the same table

ORA-25022: cannot reference a trigger of a different type

Cause: Referenced trigger in the FOLLOWS or PRECEDES clause was either a different type or not a compound trigger.

Action: Create the referenced trigger as the same type or a compound trigger.

ORA-25023: Cyclic trigger dependency is not allowed

Cause: A cycle of trigger dependency can be formed.

Action: Do not create a trigger that can formed a cyclic dependency.

ORA-25024: cannot specify FOLLOWS for a REVERSE CROSSEDITION trigger

Cause: The FOLLOWS clause was specified when creating the REVERSE CROSSEDITION trigger.

Action: Do not create a REVERSE CROSSEDITION trigger with a FOLLOWS clause.

ORA-25025: cannot specify PRECEDES clause

Cause: The PRECEDES clause was specified when creating a FORWARD CROSSEDITION trigger or a regular trigger.

Action: Do not create a FORWARD CROSSEDITION or a regular trigger with a PRECEDES clause.

ORA-25026: FOR EACH ROW was specified with compound triggers

Cause: FOR EACH ROW is not allowed with compound triggers.

Action: Remove the FOR EACH ROW clause.

ORA-25027: compound triggers cannot be used as system triggers

Cause: Compound trigger was defined as system trigger.

Action: Do not use compound trigger as system trigger.

ORA-25028: regular trigger body can not start with keyword COMPOUND

Cause: Regular triggers body should start with BEGIN/DECLARE etc .

Action: Fix the syntax and recompile.

ORA-25029: compound triggers should always start with keyword COMPOUND

Cause: Compound trigger body was started with incorrect keyword.

Action: Fix the syntax and recreate.

ORA-25030: crossedition trigger cannot be owned by a non-editioned user

Cause: An attempt was made to create a crossedition trigger in a schema where triggers were not editionable.

Action: Enable editions for the user for triggers and then create the crossedition trigger.

ORA-25031: a crossedition trigger must be specified

Cause: The trigger specified was not a crossedition trigger.

Action: Specify a crossedition trigger.

ORA-25032: crossedition trigger cannot be created in ORA\$BASE

Cause: An attempt was made to create crossedition trigger in the ORA\$BASE edition.

Action: Do not create a crossedition trigger in the ORA\$BASE edition.

ORA-25033: triggers cannot be executed at this time

Cause: An attempt was made to execute a trigger when the session was almost finished.

Action: Do not attempt to DML with triggers that are expected to execute when session has almost ended.

ORA-25034: cannot bypass trigger owned by another user

Cause: An attempt was made to do DML from a crossedition trigger on an object that has a non-crossedition trigger owned by another user. DML from a crossedition trigger bypasses the running of non-crossedition triggers; this cannot be allowed for triggers owned by other users.

Action: Permit the non-crossedition trigger to be bypassed by attaching it to the editioning view rather than the table, moving one of the triggers to be in the same schema as the other, or explicitly disabling the non-crossedition trigger.

ORA-25035: cannot perform DML on remote object from a crossedition trigger

Cause: An attempt was made to do DML from a crossedition trigger that would modify data in a remote database. DML from a crossedition trigger has special rules applied regarding what triggers will fire as part of that DML; these special rules cannot be applied across database links and therefore the DML cannot be allowed.

Action: Perform the DML in a helper function separate from the crossedition trigger itself; the special rules are not applied when the DML is not issued from within the crossedition trigger itself.

ORA-25036: error happens during PL/SQL compound trigger execution: [string]

Cause: Some error happens during PL/SQL compound trigger execution.

Action: Contact Oracle Customer Support.

ORA-25100: TABLESPACE option can only be used with ALTER INDEX REBUILD

Cause: The TABLESPACE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD TABLESPACE tablespace name.

ORA-25101: duplicate REBUILD option specification

Cause: The REBUILD option to ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-25102: PARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The PARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25103: NOPARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The NOPARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25104: UNRECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The UNRECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25105: RECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The RECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25106: only one of PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses.

ORA-25107: duplicate TABLESPACE option specification

Cause: the TABLESPACE was specified more than once in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the TABLESPACE clauses.

ORA-25108: standby lock name space exceeds size limit of *string* characters

Cause: The lock name space for the standby database exceeded the maximum string length.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a character string of less than the specified characters.

ORA-25109: standby lock name space has illegal character '*string*'

Cause: An invalid lock name space was specified for the standby database. The lock name space for the standby database can only contain A-Z, 0-9, '_', '#', '\$', '.' and '@' characters.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a valid character string.

ORA-25110: NOSORT may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the NOSORT option.

Action: Remove NOSORT from the CREATE BITMAP INDEX statement.

ORA-25111: creation of BITMAP cluster indices is not supported

Cause: An attempt was made to create a cluster index with the BITMAP attribute.

Action: Remove BITMAP from the CREATE INDEX statement.

ORA-25112: maximum number of BITMAP index columns is 30

Cause: Too many columns were specified for the index.

Action: Create an index on fewer columns.

ORA-25113: GLOBAL may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the GLOBAL option.

Action: Remove GLOBAL from the CREATE BITMAP INDEX statement, and/or add a LOCAL partition descriptor if the table is partitioned.

ORA-25114: invalid file number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid file number was used in dumping a datafile or tempfile.

Action: Specify a valid file number.

ORA-25115: duplicate BLOCK option specification

Cause: BLOCK (MIN/MAX) was specified more than once in the DUMP DATAFILE/TEMPFILE command.

Action: Specify only one BLOCK option.

ORA-25116: invalid block number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid block number was used in dumping a datafile or tempfile.

Action: Specify a valid block number.

ORA-25117: MIN/MAX/Block Number expected

Cause: A value other than MIN/MAX, or a block number was entered in the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25118: invalid DUMP DATAFILE/TEMPFILE option

Cause: An invalid option was specified for the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25119: LOGGING/NOLOGGING option already specified

Cause: In CREATE TABLESPACE, the LOGGING and/or NOLOGGING options were specified more than once.

Action: Remove all but one of the logging specifications.

ORA-25120: MINIMUM EXTENT option already specified

Cause: In CREATE TABLESPACE, the MINIMUM EXTENT option was specified more than once.

Action: Remove all but one of the MINIMUM EXTENT specifications.

ORA-25121: MINIMUM EXTENT value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the MINIMUM EXTENT option was greater than the maximum extent size.

Action: Choose a lower value for the MINIMUM EXTENT option.

ORA-25122: Only LOCAL bitmap indexes are permitted on partitioned tables

Cause: An attempt was made to create a global bitmap index on a partitioned table.

Action: create a local bitmap index instead.

ORA-25123: Too many components specified in the name.

Cause: Specifying more components to a name than allowed.

Action: Check the name specified for the operation.

ORA-25124: Scoped table *string* cannot be a remote table.

Cause: A remote table was specified as a scoped table for a scoped REF.

Action: Use a local table as a scoped table. *Params: 1) table: The scoped table.

ORA-25125: BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE storage option not allowed

Cause: An attempt was made to specify the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE storage option. This option may only be specified during - CREATE or ALTER TABLE - CREATE or ALTER CLUSTER - CREATE or ALTER INDEX

Action: Remove this option and retry the statement.

ORA-25126: Invalid name specified for BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE

Cause: The name of the cache hints specified by was invalid. The only valid names for BUFFER_POOL are KEEP, RECYCLE and DEFAULT. The only valid names for FLASH_CACHE and CELL_FLASH_CACHE are KEEP, NONE and DEFAULT.

Action: Use a valid name or remove the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE clause.

ORA-25127: RELY not allowed in NOT NULL constraint

Cause: An attempt to set RELY on for NOT NULL constraint.

Action: only NORELY may be specified for a NOT NULL constraint.

ORA-25128: No insert/update/delete on table with constraint (*string.string*) disabled and validated

Cause: Try to insert/update/delete on table with DISABLE VALIDATE constraint.

Action: Change the constraint's states.

ORA-25129: cannot modify constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-25130: cannot modify primary key - primary key not defined for table

Cause: An attempt was made to modify a primary key that was not defined for the table.

Action: None

ORA-25131: cannot modify unique(*string*) - unique key not defined for table

Cause: attempted to modify a unique key that is not defined for the table.

Action: None

ORA-25132: UNIQUE constraint (*string.string*) disabled and validated in ALTER TABLE EXCHANGE PARTITION

Cause: The ALTER TABLE EXCHANGE PARTITION statement could not be issued while the partition and the table had disabled and validated unique constraints and the unique keys in the partition were not mutually exclusive from the rest of the table.

Action: Change the constraint's status.

ORA-25133: duplicate SINGLE TABLE option specified

Cause: The SINGLE TABLE option was specified more than once.

Action: Specify the SINGLE TABLE option only once.

ORA-25134: keyword TABLE expected

Cause: The keyword TABLE is missing from the SINGLE TABLE option.

Action: Place the keyword TABLE after the keyword SINGLE in the command.

ORA-25135: cannot use the SINGLE TABLE option

Cause: The SINGLE TABLE option is only valid for hash clusters.

Action: Do not specify the SINGLE TABLE option.

ORA-25136: this cluster can contain only one table

Cause: An attempt was made to store more than one table in a cluster that was created with the SINGLE TABLE option.

Action: Do not attempt to store more than one table in the cluster.

ORA-25137: Data value out of range

Cause: Value from cast operand is larger than cast target size.

Action: Increase size of cast target.

ORA-25138: *string* initialization parameter has been made obsolete

Cause: An obsolete initialization parameter has been specified

Action: The system will come up, but parameters must be examined

ORA-25139: invalid option for CREATE TEMPORARY TABLESPACE

Cause: An invalid option appears.

Action: Specify one of the valid options: TEMPFILE, EXTENT MANAGEMENT LOCAL, UNIFORM

ORA-25140: *string* space policy cannot be specified for the *string* extent management

Cause: An invalid option appears.

Action: Make sure that for LOCAL extent management UNIFORM or AUTOALLOCATE is specified, and for DICTIONARY extent management UNIFORM or AUTOALLOCATE are not specified

ORA-25141: invalid EXTENT MANAGEMENT clause

Cause: An invalid option appears for EXTENT MANAGEMENT clause

Action: Specify one of the valid options: UNIFORM SIZE, AUTOALLOCATE

ORA-25142: default storage clause specified twice

Cause: default storage clause was specified twice for create tablespace

Action: Specify it once.

ORA-25143: default storage clause is not compatible with allocation policy

Cause: default storage clause was specified for a tablespace with AUTOALLOCATE or UNIFORM policy

Action: Omit the storage clause

ORA-25144: invalid option for CREATE TABLESPACE with TEMPORARY contents

Cause: An invalid option appears.

Action: Specify one of the valid options: EXTENT MANAGEMENT DICTIONARY, USER

ORA-25145: allocation policy already specified

Cause: In CREATE TABLESPACE, the allocation policy was specified more than once, for example, AUTOALLOCATE and UNIFORM.

Action: Remove all but one of the allocation policy specifications.

ORA-25146: EXTENT MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the EXTENT MANAGEMENT option was specified more than once.

Action: Remove all but one of the EXTENT MANAGEMENT specifications.

ORA-25147: UNIFORM SIZE value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the UNIFORM SIZE option was greater than the maximum extent size.

Action: Choose a lower value for the UNIFORM SIZE option.

ORA-25148: ONLINE option not permitted

Cause: An attempt was made to specify ONLINE for ALTER TABLE MOVE on a table that is not index-organized. The ONLINE option is currently supported only for index-organized tables.

Action: Remove the ONLINE option from the command.

ORA-25149: Columns of UROWID type may not be indexed

Cause: An attempt was made to create an index on a column of UROWID type

Action: Remove the column from the list of indexed columns

ORA-25150: ALTERING of extent parameters not permitted

Cause: An attempt was made to alter the extent parameters for a segment in a tablespace with autoallocate or uniform extent allocation policy.

Action: Remove the appropriate extent parameters from the command.

ORA-25151: Rollback Segment cannot be created in this tablespace

Cause: An attempt was made to create a rollback segment in a tablespace with autoallocate extent allocation policy.

Action: Specify a different tablespace for the rollback segment

ORA-25152: TEMPFILE cannot be dropped at this time

Cause: An attempt was made to drop a TEMPFILE being used by online users

Action: The TEMPFILE has been taken offline. Try again, later.

ORA-25153: Temporary Tablespace is Empty

Cause: An attempt was made to use space in a temporary tablespace with no files.

Action: Add files to the tablespace using ADD TEMPFILE command.

ORA-25154: column part of USING clause cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25155: column used in NATURAL join cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25156: old style outer join (+) cannot be used with ANSI joins

Cause: When a query block uses ANSI style joins, the old notation for specifying outer joins (+) cannot be used.

Action: Use ANSI style for specifying outer joins also.

ORA-25157: specified block size *string* is not valid

Cause: An attempt was made to create a tablespace with a block size that was not supported.

Action: Specify a valid block size that is either the standard block size or one of 2K, 4K, 8K, 16K, or 32K subject to the maximum and minimum block sizes supported by the platform.

ORA-25158: Cannot specify RELY for foreign key if the associated primary key is NORELY

Cause: RELY was specified for the foreign key constraint, when the associated primary key constraint was NORELY.

Action: Change the option of the primary key also to RELY.

ORA-25159: Must specify a valid tablespace number

Cause: A valid tablespace number was missing.

Action: Specify a valid tablespace number.

ORA-25160: Must specify a valid relative data block address

Cause: A valid relative data block address was missing.

Action: Specify a valid relative data block address.

ORA-25161: Cannot have both DBA and RDBA options

Cause: Both the DBA and RDBA options were passed to ALTER SYSTEM DUMP REDO.

Action: Use either the DBA option or the RDBA option but not both.

ORA-25162: Must specify both RDBA MIN and RDBA MAX options

Cause: Only one RDBA option was passed to ALTER SYSTEM DUMP REDO.

Action: Specify both RDBA MIN and RDBA MAX.

ORA-25163: Invalid tablespace number or relative data block address

Cause: The relative data block address was invalid for the given tablespace number or the table space number was invalid.

Action: Specify a valid tablespace number or relative data block address.

ORA-25164: The tag expression is too complex.

Cause: The statement tag value was not specified using a simple expression.

Action: Reduce the complexity of the statement tag expression. For example, assign the tag expression to a variable and reference the variable in the error logging clause.

ORA-25165: number of passwords in statement exceeds maximum limit of *string*

Cause: The SQL statement had more passwords than the maximum limit allowed.

Action: Reconstruct the SQL statement to have a number of passwords less than or equal to the maximum allowed.

ORA-25175: no PRIMARY KEY constraint found

Cause: A PRIMARY KEY constraint must be defined for a table with this organization

Action: Define a PRIMARY KEY

ORA-25176: storage specification not permitted for primary key

Cause: Storage parameters cannot be defined for a PRIMARY KEY constraint for a table with this organization

Action: Remove storage specification for primary key

ORA-25177: UNRECOVERABLE option not permitted

Cause: The UNRECOVERABLE option may not be specified for a primary key for a table with this organization

Action: Remove UNRECOVERABLE option for primary key

ORA-25178: duplicate PCTTHRESHOLD storage option specification

Cause: The storage option PCTTHRESHOLD is specified more than once.

Action: Specify storage options at most once.

ORA-25179: invalid PCTTHRESHOLD storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-25180: PCTTHRESHOLD only valid for certain table organizations

Cause: PCTTHRESHOLD can only be specified for tables with certain organizations.

Action: Remove the PCTTHRESHOLD option.

ORA-25181: missing ON keyword for NESTED INDEX

Cause: ON keyword required to specify nested index column nest

Action: Add ON keyword

ORA-25182: feature not currently available for index-organized tables

Cause: An attempt was made to use one or more of the following feature(s) not currently supported for index-organized tables: CREATE TABLE with LOB/BFILE/VARRAY columns, partitioning/PARALLEL/CREATE TABLE AS SELECT options, ALTER TABLE with ADD/MODIFY column options, CREATE INDEX ALTER TABLE MOVE with LOB/PARALLEL

Action: Do not use the disallowed feature(s) in this release.

ORA-25183: index-organized table top index segment is in a different tablespace

Cause: An attempt was made to drop a tablespace which contains an index only table's overflow segment but not the top index segment"

Action: find index-organized tables which span the tablespace being dropped and some other tablespace(s). Drop these tables.

ORA-25184: column name expected

Cause: A column name is not present where required by the CREATE TABLE for specifying last column to be included in the index segment of the index-organized table

Action: Specify a column name where required by the syntax.

ORA-25185: index column other than last can not be specified for INCLUDE clause

Cause: An index column name other than the last is specified as including column

Action: Specify either a column name which is not part of index-organized table primary key index , or the last key column of the primary key for the INCLUDING clause.

ORA-25186: INCLUDING clause specified for index-organized table without OVERFLOW

Cause: INCLUDING clause of a CREATE TABLE is an valid option only for index-organized tables with OVERFLOW clause (at creation time) or if an OVERFLOW segment already exists (at ALTER time).

Action: Specify OVERFLOW clause for the index-organized table : For ALTER, perform ADD OVERFLOW first.

ORA-25187: specified exceptions table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-25188: cannot drop/disable/defer the primary key constraint for index-organized tables or sorted hash cluster

Cause: An attempt was made to DROP, DISABLE, or DEFER the primary key constraint for an index-only table. This is not allowed.

Action: Do not DROP, DISABLE, or DEFER the primary key constraint for an index-only table.

ORA-25189: illegal ALTER TABLE option for an index-organized table

Cause: While altering an index-organized table, an attempt was made to enter either the PCTFREE or PCTUSED value for IOT top index segment.

Action: Remove the illegal option(s).

ORA-25190: an index-organized table maintenance operation may not be combined with other operations

Cause: ALTER TABLE statement attempted to combine an index-organized table maintenance operation (e.g. changing physical attributes) with some other operation (e.g. ADD constraint) which is illegal

Action: Ensure that a index-organized table maintenance operation is the sole operation specified in ALTER TABLE statement;

ORA-25191: cannot reference overflow table of an index-organized table

Cause: An attempt to directly access the overflow table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified overflow table.

ORA-25192: invalid option for an index-organized table

Cause: An attempt to specify one or more of the following options for an index-organized table: [NO]CACHE, NO LOGGING, CLUSTER

Action: Remove the illegal option(s)

ORA-25193: cannot use COMPRESS option for a single column key

Cause: An attempt to use COMPRESS option on single column key

Action: Remove the COMPRESS option.

ORA-25194: invalid COMPRESS prefix length value

Cause: The specified value must be a positive integer less than the number of key columns

Action: Specify an appropriate value.

ORA-25195: invalid option for index on an index-organized table

Cause: An attempt to specify one or more of the following options for index on an IOT: BITMAP, REVERSE, PCTUSED, COMPRESS ADVANCED HIGH

Action: Specify an appropriate option.

ORA-25196: keyword MOVE in ALTER TABLE MOVE must immediately follow table name

Cause: MOVE specified after one/more other ALTER options

Action: Change order of options, MOVE should be first Remove the illegal option(s)

ORA-25197: an overflow segment already exists for the indexed-organized table

Cause: An attempt was made to ADD OVERFLOW segment on an index-organized table that already has an overflow segment

Action: No action required.

ORA-25198: partitioning method is not supported for index-organized table

Cause: An unsupported partitioning method was specified.

Action: Select a different partitioning scheme. Consult the documentation for supported partitioning methods.

ORA-25199: partitioning key of a index-organized table must be a subset of the primary key

Cause: An attempt to specify a partitioning key which is not a prefix of the primary key of the index-organized table

Action: Select a different partitioning key

ORA-25200: invalid value string, QUEUE_NAME should be [SCHEMA.]NAME

Cause: A NULL parameter was specified for QUEUE_NAME.

Action: Specify a non-NULL queue name.

ORA-25201: Invalid value. VISIBILITY should be ON_COMMIT or IMMEDIATE.

Cause: An invalid value was specified for the parameter VISIBILITY.

Action: Specify either ON_COMMIT or IMMEDIATE.

ORA-25202: invalid value NULL, string should be non-NULL

Cause: A NULL value was specified for the parameter.

Action: Specify a non-NULL value.

ORA-25203: invalid value *string*, DELAY should be a positive value

Cause: A negative value or NULL was specified for DELAY.

Action: Specify a non-negative integer for DELAY. *Params: 1) message_delay: The message delivery delay time.

ORA-25204: invalid value, SEQUENCE_DEVIATION should be BEFORE or TOP

Cause: An invalid value for SEQUENCE_DEVIATION was specified.

Action: Specify either 'BEFORE' or 'TOP' for SEQUENCE_DEVIATION.

ORA-25205: The QUEUE *string.string* does not exist.

Cause: The specified queue does not exist.

Action: Create the queue first before specifying it for enqueue or dequeue.

ORA-25206: enqueue failed, enqueue to exception queue *string.string* not permitted

Cause: An attempt was made to enqueue to an exception queue.

Action: Try enqueueing to another queue.

ORA-25207: enqueue failed, queue *string.string* is disabled from enqueueing

Cause: The queue was stopped to prevent enqueueing more messages.

Action: 1. Verify the enable status by querying DBA_QUEUES view. 2. If not enabled, use DBMS_AQADM.START_QUEUE interface to enable it.

ORA-25208: RELATIVE_MSGID must be specified if SEQUENCE_DEVIATION is BEFORE.

Cause: A relative message identifier was not specified. A relative message identifier must be specified if the sequence deviation is specified as BEFORE.

Action: Either specify an existing relative message identifier or do not specify sequence deviation as BEFORE.

ORA-25209: invalid value *string*, EXPIRATION should be non-negative or NEVER

Cause: The expiration was less than zero or NULL.

Action: Specify a value for expire_after that is either greater than or equal to zero or NEVER.

ORA-25210: invalid value for RELATIVE_MSGID, no message in queue with that msgid

Cause: No message in the queue with the message ID equal to the specified RELATIVE_MSGID.

Action: Try again with a valid RELATIVE_MSGID.

ORA-25211: invalid DELAY specified when using sequence deviation

Cause: The DELAY value that was specified in the enqueue was greater than the delay of the message with the given relative message ID.

Action: Set the DELAY to be less than or equal to the delay of the message with the given relative message ID. If the TOP option is used, then the delay must be less than or equal to the delay of all the messages in the queue.

ORA-25212: invalid PRIORITY specified when using sequence deviation

Cause: The PRIORITY specified in the enqueue was less than the priority of the message with the given relative message ID.

Action: Set the PRIORITY to be less than the delay of the message with the given relative message ID. If the TOP option is used, the priority must be greater than or equal to the priority of all the messages in the queue.

ORA-25213: message with specified RELATIVE_MSGID has been dequeued

Cause: The message specified by the RELATIVE_MSGID field in the sequence deviation BEFORE option was dequeued.

Action: None. This is only an informational message.

ORA-25214: Enqueue of a message with delay or expiration into an exception queue is not supported.

Cause: A message was enqueued to the exception queue with either delay or expiration specified.

Action: Enqueue a message without delay or expiration.

ORA-25215: user data type *string.string* and queue type *string.string* do not match

Cause: An attempt was made to enqueue an object to a queue that was created for objects of a different type.

Action: Change the data type of the enqueued object to match the queue. Refer to the query to identify the data type in the queue: `SELECT data_type_owner, data_type FROM dba_tab_columns WHERE table_name = '<table_name_in_caps>' AND owner = '<owner_in_caps>' AND column_name = 'USER_DATA';`

ORA-25216: invalid recipient, either NAME or ADDRESS must be specified

Cause: Both attributes, NAME and ADDRESS, were specified as null for one of the recipients in the recipient list.

Action: Specify a non-null NAME or ADDRESS for the recipient.

ORA-25217: enqueue failed, visibility must be IMMEDIATE for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue without setting visibility to IMMEDIATE.

Action: Set visibility to IMMEDIATE.

ORA-25218: enqueue failed, delay must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with delay greater than zero seconds.

Action: Set delay to zero.

ORA-25219: enqueue failed, sequence deviation not allowed for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with sequence deviation specified.

Action: Do not specify sequence deviation.

ORA-25220: enqueue failed, signature not specified for a non-repudiable queue

Cause: An attempt was made to enqueue to a non-repudiable queue without specifying the signature

Action: Give the signature

ORA-25221: enqueue failed, signature specified queue not supporting non-repudiation

Cause: An attempt was made to enqueue to a queue specifying the signature for a queue not supporting non-repudiation

Action: Remove the signature

ORA-25222: Enqueue failed. Complete sender information was not provided for a queue supporting non-repudiation.

Cause: Attempted to enqueue to a queue without giving the complete sender information (name) for a queue supporting non-repudiation. Oracle Advanced Queuing (AQ) maintains the entire history of information about a message along with the message itself. This information serves as proof of sending and receiving of messages, and does not allow the sender to dispute (repudiate) this.

Action: Provide the sender information.

ORA-25223: user_data type used is not supported

Cause: An attempt was made to enqueue data into a non persistent queue that is of a type other than the supported raw or object type.

Action: Enqueue the message again with data of raw or object type.

ORA-25224: sender name must be specified for enqueue into secure queues

Cause: An attempt was made to enqueue into a secure queue without specifying a sender name.

Action: Enqueue the message with sender name specified.

ORA-25225: invalid value *string*, DEQUEUE_MODE should be REMOVE or BROWSE or LOCKED

Cause: An invalid parameter has been specified for DEQUEUE_MODE.

Action: Specify either REMOVE, BROWSE or LOCKED.

ORA-25226: dequeue failed, queue *string.string* is not enabled for dequeue

Cause: The queue was not enabled for dequeue. Messages could not be consumed from the queue.

Action: 1. Verify the enable status by querying DBA_QUEUES view. 2. If not enabled, use DBMS_AQADM.START_QUEUE interface to enable it.

ORA-25227: Propagation job *string* doesn't exist

Cause: The job doesn't exist in AQ\$_SCHEDULES or cache.

Action: n/a

ORA-25228: timeout or end-of-fetch during message dequeue from *string.string*

Cause: One of the following happened: * The user-specified dequeue wait time passed. * The end of the queue was reached but no message was retrieved. * An external event was set to break the blocking dequeue.

Action: Try dequeue again with the appropriate `WAIT_TIME` or the `FIRST_MESSAGE` option.

ORA-25229: error on transformation of message *string string*

Cause: There was an error when transforming a message at enqueue, dequeue or propagation time.

Action: Correct the transformation function.

ORA-25230: invalid value *string*, WAIT should be non-negative

Cause: A negative value was specified for `WAIT`.

Action: Specify either a non-negative value or `FOREVER` for `WAIT`. *Params: 1) `wait_time`: The message dequeue wait time.

ORA-25231: cannot dequeue because `CONSUMER_NAME` not specified

Cause: A user tried to dequeue from a queue that has been created for multiple consumers but a `CONSUMER_NAME` was not been specified in the dequeue options.

Action: Specify the `CONSUMER_NAME` in the dequeue options.

ORA-25232: duplicate recipients specified for message

Cause: An enqueue was performed with duplicate queue agents in the recipients parameter.

Action: Remove the duplicate queue agent and retry the call.

ORA-25233: invalid parameter specified for `NAVIGATION`

Cause: An invalid parameter was specified for `NAVIGATION`.

Action: Choose one of the following: - `FIRST_MESSAGE` for dequeuing the first message that satisfies the criterion - `NEXT_MESSAGE` for dequeuing the next message that satisfies the criterion, and - `NEXT_TRANSACTION` for moving to a set of messages enqueued by another transaction.

ORA-25234: `DBMS_AQ.NEXT_TRANSACTION` navigation option invalid for queue table *string.string*

Cause: The `DBMS_AQ.NEXT_TRANSACTION` procedure was used when you tried to dequeue from a queue in a queue table that was not created for transactional grouping.

Action: Specify either `DBMS_AQ.FIRST_MESSAGE` or `DBMS_AQ.NEXT_MESSAGE` as the navigation option. If you want to dequeue messages using transactional grouping, then create the queue in a queue table that has transactional grouping enabled.

ORA-25235: fetched all messages in current transaction from *string.string*

Cause: The `NEXT_TRANSACTION` navigation option was used in a dequeue when there were no more messages that belong to the same transaction.

Action: Use the `NEXT_TRANSACTION` navigation option to move to the next also use the `FIRST_MESSAGE` option to start from the head of the queue again.

ORA-25236: buffer too small for user data

Cause: The variable or buffer used for the `OUT` parameter payload was too small for the user data to be dequeued.

Action: Increase the size of the buffer or the size of the variable. The maximum size allowed is 32K.

ORA-25237: navigation option used out of sequence

Cause: The NEXT_MESSAGE or NEXT_TRANSACTION option was specified after dequeuing all of the messages.

Action: Reset the dequeuing position using the FIRST_MESSAGE navigation option and then specify the NEXT_MESSAGE or NEXT_TRANSACTION option.

ORA-25238: too many recipients specified for message destination *string*

Cause: An ENQUEUE was performed with more than 32 recipients for the given destination (address).

Action: Reduce the number of recipients to 32 or less, and retry the call.

ORA-25239: message ID not supplied when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from a release 8.0-compatible exception queue without including a message ID in the dequeue options.

Action: Check the application to ensure that the queue name has been specified correctly. If the queue name is correct supply a message ID when dequeuing from a release 8.0-compatible exception queue. Otherwise, upgrade the queue_table containing the queue to release 8.1-compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-25240: multiple dequeue criteria specified in dequeue options

Cause: An attempt was made to dequeue by specifying more than one dequeue criteria in the dequeue options. Specify either a message ID or dequeue condition or the correlation ID, or neither.

Action: To dequeue a message, specify a message ID or a dequeue condition or a correlation ID in the dequeue options, but do not specify multiples of them together. If you want to dequeue in the queue's sort order, then do not specify either the message ID or dequeue condition or correlation ID in the dequeue options.

ORA-25241: cannot change correlation ID from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the correlation ID while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a correlation ID that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25242: cannot change subscriber name from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the subscriber name while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a subscriber name that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25243: CONSUMER_NAME cannot be specified when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from an exception queue by specifying the CONSUMER_NAME in the dequeue options. CONSUMER_NAME can only be specified when dequeuing from a normal queue created for multiple consumers.

Action: Specify only the message id in the dequeue options to dequeue a message from an exception queue.

ORA-25244: dequeue index key not found, QUEUE *string*, rowid *string*

Cause: An internal error was encountered. There may be an inconsistency in the queue table index.

Action: Contact your Oracle customer support representative. You may need to provide the trace file and information about reproducing the error.

ORA-25245: agent name cannot be specified if address is a single-consumer queue or an exception queue

Cause: The agent name for the agent in the LISTEN call was specified when the agent address was a single-consumer queue or an exception queue.

Action: Do not specify the agent name.

ORA-25246: listen failed, the address *string* is an 8.0 style exception queue

Cause: An 8.0 style exception queue was specified in the agent-list for the LISTEN call.

Action: Specify a normal 8.0 style queue or an 8.1 style queue in the agent-list.

ORA-25247: *string* is not a recipient of specified message

Cause: The consumer name specified in the dequeue options is not a recipient of the message specified by the message id.

Action: Ensure that the agent specified by the consumer name is a recipient of the message specified by the message id.

ORA-25248: duplicate agent specified in the agent list

Cause: An agent was specified more than once in the agent list of the LISTEN call.

Action: Remove the duplicate agent specification(s), and retry the call.

ORA-25249: dequeue failed, dequeue not allowed for queue *string.string*

Cause: An attempt was made to dequeue from a non-persistent queue.

Action: Dequeue from a different queue.

ORA-25250: Cannot specify a remote recipient for the message

Cause: A recipient for the message enqueued to a non-persistent queue had a non-local address.

Action: Do not specify the address field or specify the queue which is the target of the enqueue

ORA-25251: exceeded maximum number of recipients for message

Cause: An attempt was made to issue an ENQUEUE call that exceeded the maximum number (1024) of recipients per message.

Action: Reduce the number of recipients to 1024 or less, and retry the call.

ORA-25252: listen failed, the address *string* is a non-persistent queue

Cause: A non-persistent queue was specified as an address for an agent in the LISTEN call.

Action: Specify a normal queue as address for the agent, and retry the LISTEN call.

ORA-25253: listen failed, queue *string.string* is not enabled for dequeue

Cause: An attempt was made to specify a queue that is not enabled for dequeue in a LISTEN call.

Action: Enable the queue for dequeue using START_QUEUE, and retry the LISTEN call.

ORA-25254: time out in LISTEN while waiting for a message

Cause: Either the specified wait time elapsed and there were no messages for any of the agents in the agent list or an external event was set to break the blocking listen.

Action: Try the LISTEN call with an appropriate time out.

ORA-25255: incorrect subscription string *string*

Cause: An incorrect subscription string was specified with OCIRegister.

Action: Specify a subscription string using the [CONSUMER:]SCHEMA.QUEUE form.

ORA-25256: consumer cannot be specified with a single-consumer queue or an exception queue

Cause: An attempt was made to specify a consumer in the subscription string when registering for notification on a single-consumer queue or an exception queue.

Action: Do not specify the consumer in the subscription string.

ORA-25257: consumer must be specified with a multi-consumer queue

Cause: An attempt was made to register on a multi-consumer queue without specifying a consumer in the subscription string.

Action: Specify a consumer in the subscription string.

ORA-25258: cannot register for notifications on an 8.0 style exception queue

Cause: An attempt was made to specify an 8.0 style exception queue in the subscription string of OCIRegister.

Action: Specify a normal queue or a non-persistent queue.

ORA-25259: cannot specify protocol for agent

Cause: The user specified the protocol attribute for an agent in the agent list.

Action: Do not specify the protocol attribute of the agent object type.

ORA-25260: AQ latch cleanup testing event

Cause: N/A.

Action: event used for AQ statistics latch cleanup testing.

ORA-25261: JOB_QUEUE_PROCESSES must be at least 2 for AQ propagation

Cause: AQ Propagator encountered a setting for JOB_QUEUE_PROCESSES that is insufficient for AQ propagation.

Action: Set the number of JOB_QUEUE_PROCESSES to at least 2 for AQ propagation.

ORA-25262: agent name cannot be NULL if address is a multi-consumer queue

Cause: The name for the agent in the LISTEN call was not specified when the agent address was a multi-consumer queue.

Action: Specify a non-null name for the agent.

ORA-25263: no message in queue *string.string* with message ID *string*

Cause: An attempt was made to dequeue a message with a specific message ID, but no such message exists in the queue.

Action: Try dequeue again with a valid message ID.

ORA-25264: cant get signature for this queue

Cause: An attempt was made to dequeue the signature from this queue, which is not receiver non-repudiable.

Action: Try dequeue again without the get signature option

ORA-25265: Supplied a signature for a queue which does not support receiver non-repudiation.

Cause: Attempted to dequeue the message from a queue which does not support receiver non-repudiation, but the signature was specified for verification. Oracle Advanced Queuing (AQ) maintains the entire history of information about a message along with the message itself. This information serves as proof of sending and receiving of messages, and does not allow the receiver to dispute (repudiate) this.

Action: Try dequeue again without the signature.

ORA-25266: didnt try to dequeue by message id. with the signature

Cause: The signature was specified for a queue, but the dequeue was not done by message id.

Action: Try dequeue again by message id.

ORA-25267: Did not specify the signature for a receiver non-repudiable queue.

Cause: The signature was not specified for a receiver non-repudiable queue. Oracle Advanced Queuing (AQ) maintains the entire history of information about a message along with the message itself. This information serves as proof of sending and receiving of messages, and does not allow the receiver to dispute (repudiate) this.

Action: Try dequeue again along with the signature.

ORA-25268: didnt dequeue in browse mode with get signature option

Cause: The dequeue was not performed in browse mode with get signature option

Action: Try dequeue again in browse mode

ORA-25269: cannot specify signature with get signature option

Cause: The signature was not required for the dequeue with the get signature option.

Action: Try dequeue again without the signature in dequeue options.

ORA-25270: sender info does not match with the actual sender of the message

Cause: The sender info. and the message id. do not match

Action: Provide the right sender info. Try dequeue again without the signature in dequeue options

ORA-25271: queue table not found for the given user

Cause: The queue table did not exist for the given user.

Action: Provide a valid queue table name.

ORA-25272: Signature does not exist for the given receiver and message id.

Cause: Signature does not exist for the given receiver and message id.

Action: Check the message id. and the receiver's information

ORA-25273: AQ QMN process alternate cleanup event

Cause: N/A.

Action: event used for AQ QMN alternate cleanup mode.

ORA-25274: AQ Buffered Queue event

Cause: N/A.

Action: event used for AQ Buffered Queue mode.

ORA-25276: table specified is not a queue table

Cause: An invalid queue table name was specified.

Action: Check the dictionary views to see if the table is a queue table.

ORA-25277: cannot grant or revoke object privilege on release 8.0 compatible queues

Cause: An attempt was made to grant or revoke object privilege on release 8.0 style queues. The grant or revoke of object privilege on 8.0 compatible queues are supported on release 8.1.

Action: Convert the release 8.0 compatible queue table to release 8.1 compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure before granting or revoking object privilege.

ORA-25278: grantee name cannot be NULL

Cause: An attempt was made to specify NULL for the grantee parameter.

Action: Specify a valid grantee parameter.

ORA-25279: dequeue as select not supported before 8.2

Cause: Dequeue as select not supported before 8.2.

Action: Don't use select condition while dequeuing

ORA-25280: complete sender information not provided to non-repudiate sender

Cause: complete sender information not provided to non-repudiate sender

Action: Provide the complete sender information

ORA-25281: complete receiver information not provided to non-repudiate receiver

Cause: The complete receiver information was not provided to the non-repudiate receiver.

Action: In Action, add a period at the end of the sentence.

ORA-25282: message id. not provided for non-repudiation

Cause: message id. was not provided

Action: Provide the message id.

ORA-25283: either agent's name or address needed for non-repudiation

Cause: neither agent's name nor address provided for non-repudiation"

Action: Provide the agent info.

ORA-25284: Invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-25285: Invalid value *string* for *array_mode*

Cause: An Invalid value or NULL was specified for the *array_mode*.

Action: Check the documentation for valid values.

ORA-25286: Invalid number of elements in the message properties array

Cause: Number of elements in the message properties array do not match the number of elements in the payload array.

Action: Create a message property array with one element (that applies for all the elements in the payload array) or create a message property array with the same number of elements as there are in the payload array.

ORA-25287: Invalid value *string*, *string* should be non-negative

Cause: An Invalid value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-25288: AQ HTTP propagation encountered error, status-code *number*, *string*

Cause: AQ propagation's HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-25289: Buffer already exists.

Cause: Buffer already exists for the specified queue.

Action: None

ORA-25290: Cannot complete operation on queue *string* with existing messages

Cause: Queue already has messages. Cannot complete operation

Action: Truncate the queue before adding/dropping a buffer

ORA-25291: A buffer does not exist for the specified queue.

Cause: The buffer does not exist for the specified queue.

Action: Create the buffer and retry the operation.

ORA-25292: Buffer operations are not supported on the queue

Cause: Buffer operations are not supported on the specified queue type

Action: Buffered operations are only supported on to 8.1 style queues, which do not have transaction grouping.

ORA-25293: Lob attributes must be null for buffered operations

Cause: Enqueue of a buffered message with a non-null lob attribute was attempted

Action: Set the lob attributes to null before enqueueing the buffered message

ORA-25294: Cannot propagate user buffered messages to a database with version lower than 10.2

Cause: Propagation of user buffered messages was attempted to a database with version lower than 10.2.

Action: Do not propagate buffered messages to the database.

ORA-25295: Subscriber is not allowed to dequeue buffered messages.

Cause: Subscriber is only allowed to dequeue persistent messages.

Action: Drop the subscriber and re-create it, or dequeue only persistent messages for the subscriber.

ORA-25296: Queue Table *string* has a buffered queue *string*

Cause: Buffered message was enqueue by specifying delay or sequence deviation.

Action: Do not specify delay of sequence deviation when enqueueing buffered messages.

ORA-25298: Only immediate visibility mode supported for buffered message enqueue or dequeue

Cause: A visibility of `dbms_aq.ON_COMMIT` was supplied with the buffered message enqueue or dequeue

Action: Supply a visibility of `dbms_aq.IMMEDIATE`

ORA-25299: invalid message delivery mode

Cause: Invalid value was specified for parameter `delivery_mode`.

Action: Specify `DBMS_AQ.BUFFERED` or `dbms_aq.PERSISTENT` during Enqueue or `DBMS_AQ.BUFFERED`, `DBMS_AQ.PERSISTENT`, or `DBMS_AQ.PERSISTENT_OR_BUFFERED` during Dequeue and Listen.

ORA-25300: Cannot drop buffer for queue with buffered subscribers

Cause: Cannot drop buffer for queue with buffered subscribers

Action: Either drop buffered subscribers or forcibly drop the buffer

ORA-25301: Cannot enqueue or dequeue user buffered messages to a database with version lower than 10.2

Cause: Enqueue or dequeue of user buffered messages was attempted to queues in a database with version lower than 10.2.

Action: Do not attempt to enqueue or dequeue user buffered messages.

ORA-25302: Operation not possible for non-buffered queue *string*

Cause: Last `enqd/ackd` message is only supported for buffered queues

Action: The operation is not supported.

ORA-25303: Buffered operation allowed only on the owner instance

Cause: Operation was not performed on the owner instance.

Action: Perform operation on the owner instance.

ORA-25304: Using priority order queues for capture LCRs is not supported.

Cause: Captured logical change records (LCRs) can only use commit time or enqueue time ordered queues.

Action: Use the appropriate type of queue for captured LCRs.

ORA-25305: enqueue failed, expiration must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a buffered queue with expiration greater than zero seconds.

Action: Set expiration to zero.

ORA-25306: cannot connect to the buffered queue's owner instance

Cause: Cannot connect to the owner instance of the buffered queue.

Action: Set the listener information in REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter.

ORA-25307: Enqueue rate is too high; flow control enabled.

Cause: Subscribers could not keep pace with the enqueue rate.

Action: Try enqueue after waiting for some time.

ORA-25310: Dequeue is attempted by a notification-only subscriber.

Cause: Notification-only subscribers were not allowed to dequeue.

Action: Re-create subscriber, if necessary.

ORA-25311: *string* not supported for non-persistent queue

Cause: Specified QOS is not supported for non-persistent queues.

Action: Specify the right QOS.

ORA-25312: Cannot specify nonzero sender protocol.

Cause: Sender protocol was specified during an enqueue operation.

Action: Specify the enqueue sender protocol as null or zero.

ORA-25313: a queue may not subscribe to itself for propagation

Cause: The specified subscriber had a NULL name and an address equal to the queue name.

Action: Provide a valid subscriber and retry the operation.

ORA-25314: a commit-time queue table cannot be migrated to 8.0

Cause: An attempt was made to migrate a commit-time queue table to an unsupported compatibility level.

Action: Provide an appropriate compatibility level, and retry the operation.

ORA-25315: unsupported configuration for propagation of buffered messages

Cause: An attempt was made to propagate buffered messages with the database link pointing to an instance in the destination database which was not the owner instance of the destination queue.

Action: Use queue to queue propagation for buffered messages.

ORA-25316: Too late in the current transaction to begin an enqueue or dequeue operation.

Cause: Check if the enqueue or dequeue operation was performed using triggers on materialized views which is not supported.

Action: Triggers on materialized views are not supported. Workarounds are on demand materialized views or execution of trigger code within an autonomous transaction.

ORA-25317: Propagation stopped because of instance shutdown

Cause: A propagation job has stopped because the instance is shutting down.

Action: No user action is required.

ORA-25318: Propagation stopped because of instance affinity change

Cause: A propagation job has stopped because its instance affinity has changed.

Action: No user action is required. The job will restart on the appropriate instance.

ORA-25319: Queue table repartitioning aborted

Cause: During instance restart in an Oracle RAC environment, queue table repartitioning aborted due to errors.

Action: Look at the incident generated for this error and report the problem to Oracle Support Services.

ORA-25320: Failed to create, alter, or remove Subscriber

Cause: There is a pending enqueue or dequeue operation on this queue from the same session.

Action: Either COMMIT or ROLLBACK pending enqueue or dequeue operation before attempting to create, alter, or remove the subscriber.

ORA-25321: enqueue failed, user property specified but queue *string.string* is not an 8.1 style queue

Cause: user properties can only be specified when enqueueing into 8.1 style queues.

Action: Specify an 8.1 style queue or pass user property as NULL.

ORA-25322: message priority is out of range

Cause: The message priority range of 0 to 9 was exceeded.

Action: Set the message priority in the range of 0 to 9.

ORA-25323: incorrect input to the seek call - *string*

Cause: Some fields in one or more elements of the input array were not correct.

Action: Correct the fields of the specified elements. *Params: 1) error_string: The description of what is not correct with the input.

ORA-25324: The seek requested by element *string* of input array can skip a message that is not dequeued in shard *string*.

Cause: An attempt was made to skip a message that was not dequeued.

Action: Set the SKIP_OPTION in the seek call to NO_DISCARD_SKIPPED or DISCARD_SKIPPED and retry the seek operation.

ORA-25325: The *string* field of queue properties is incorrect.

Cause: Invalid input in the queue properties was specified.

Action: Correct the specified field in the queue properties.

ORA-25326: Array *string* operation failed for message at index *string*.

Cause: Array operation fails for the message at the specified index. Look at the remainder of the error stack to see what the problem was.

Action: Fix cause of error and retry array operation.

ORA-25327: Array size is invalid.

Cause: Array size must be a positive, non-zero integer.

Action: Use a valid array size and retry array operation.

ORA-25328: *string* argument size *string* is smaller than array size

Cause: The size of the message properties array was smaller than the ARRAY_SIZE parameter.

Action: Use a message property array size that equals the array size specified. *Params: 1) argument_size: The size of the input argument array. 2) array_size: The specified array size.

ORA-25329: Oracle Database Advanced Queuing (AQ) array operations are not allowed on 8.0 queues.

Cause: An array enqueue or dequeue was attempted on an 8.0 style queue.

Action: Use single enqueue or dequeue with this queue.

ORA-25330: PL/SQL associative arrays may not be used with AQ array operations

Cause: A PL/SQL associative array was provided for the payload parameter in an enqueue/dequeue array operation.

Action: Use VARRAY or NESTED TABLE types with AQ array operations.

ORA-25331: cannot downgrade because there are commit-time queue tables

Cause: An attempt was made to downgrade a database that has commit-time queue tables.

Action: Drop all commit-time queue tables before attempting the downgrade.

ORA-25332: Invalid release value *string* for queue table compatible parameter.

Cause: The release level given for the queue table compatible parameter was invalid.

Action: Specify a valid release value for the queue table compatible parameter.

ORA-25333: Buffered Queue to Queue propagation did not connect to the correct instance.

Cause: Queue to Queue propagation for buffered messages did not connect to the correct instance, most likely because service was not started for the destination queue.

Action: No user action is required. Propagation will start the service for the destination queue and retry.

ORA-25334: Buffered propagation must restart because the destination queue was re-created or moved.

Cause: The buffered propagation destination queue was re-created or its ownership was moved to another instance during propagation.

Action: No user action is required. Propagation will reinitialize its metadata and retry.

ORA-25335: AQ array operations not allowed for buffered messages

Cause: An array enqueue/dequeue was attempted for buffered messages

Action: Use single enqueue/dequeue for buffered messages or an array size of one.

ORA-25336: Cannot contact instance *string* during Streams AQ operation

Cause: The specified instance was not responding to AQ requests.

Action: Set parameter `aq_tm_processes` to a non-zero value. If the problem persists, contact Oracle Support Services.

ORA-25337: Cannot propagate in queue-to-queue mode to a database with version lower than 10.2

Cause: Remote subscriber with `queue_to_queue` mode set to TRUE was added. The remote subscriber is on a database version lower than 10.2. Propagation was scheduled to a destination database with version lower than 10.2.

Action: Remove the remote subscriber with `queue_to_queue` mode and add the subscriber back with `queue_to_queue` set to FALSE. Unschedule the queue-to-queue propagation and schedule propagation in queue-to-dblink mode.

ORA-25338: operation '*string*' is not allowed for sync_capture '*string*'

Cause: An attempt was made to execute the specified operation for a `sync_capture` process.

Action: Remove the offending call.

ORA-25339: STREAMS '*string*' must be sync_capture

Cause: The specified capture STREAMS did not exist or was not a `sync_capture` process.

Action: Remove the offending call.

ORA-25340: must use commit-time queue for sync_capture

Cause: An attempt was made to create a `sync_capture` without using a commit-time queue.

Action: Rerun statement with a commit-time queue.

ORA-25341: sync_capture does not support "*string*". "*string*" because of the following reason:

Cause: `sync_capture` encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One option is to remove the rule that captures changes from the unsupported table. Check `DBA_STREAMS_TABLE_RULES` to determine the rule on the table specified in the

error. Also query the DBA_STREAMS_UNSUPPORTED view to determine which tables are not supported by STREAMS and for what reason. For potential workarounds to certain unsupported properties, see Metalink.

ORA-25342: cannot downgrade because there are apply processes for user buffered messages

Cause: An attempt was made to downgrade a database that has apply process for user-buffered messages.

Action: Drop all the apply processes for user-buffered messages before attempting the downgrade.

ORA-25343: Streams error queue cannot be exported

Cause: An attempt was made to export a database that has apply errors.

Action: Delete or reexecute errors before attempting the export.

ORA-25344: statement has bind variables

Cause: Current API could not handle a statement with bind variables.

Action: Use alternative API which handles bind variables.

ORA-25345: requested AQ minimum Oracle Streams Pool size *string* greater than Oracle Streams Pool size *string*

Cause: The minimum value requested for the Oracle Streams Advanced Queuing (AQ) pool size was greater than the Oracle Streams pool size.

Action: Set the minimum value for the Oracle Streams AQ pool size to less than or equal to the Oracle Streams pool size.

ORA-25346: requested AQ maximum Oracle Streams Pool size *string* less than AQ minimum Oracle Streams Pool size *string*

Cause: The maximum value requested for the Oracle Streams Advanced Queuing (AQ) pool size was less than the minimum value of the Oracle Streams (AQ) pool size.

Action: Set the maximum value for the Oracle Streams AQ pool size to greater than or equal to the minimum value of the Oracle Streams AQ pool size.

ORA-25347: Dequeue operation on sharded queue is not possible.

Cause: Dequeue of a buffered subscriber or JMS sharded queue failed with OCIAQDeq().

Action: Use OCIAQDeq2() for buffered subscribers and JMS sharded queues.

ORA-25348: cannot connect to shard owner instance *string* of database *string*

Cause: An Oracle Advanced Queuing (AQ) operation was attempted at a non-owner instance of the shard which could not establish an internal connection to it.

Action: Set the listener information in the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter. If the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter is already set, then retry the operation from the suggested owner instance.

ORA-25349: A parallel *string* operation is in progress for *string*.

Cause: An Oracle Database Advanced Queuing (AQ) operation was attempted when another parallel operation seek, enqueue, or dequeue was already in progress.

Action: Retry the operation again after the parallel operation is done. *Params: 1) operation_name: The name of the parallel operation. 2) subscriber_name: The subscriber name along with the queue name.

ORA-25350: maximum number of concurrent transaction branches exceeded

Cause: the limit on the number of concurrent transaction branches has been reached

Action: Increase the INIT.ORA parameter 'transactions' and restart the system.

ORA-25351: transaction is currently in use

Cause: The transaction is currently used by a different session.

Action: Do not switch to a transaction attached to some other session.

ORA-25352: no current transaction

Cause: The user session is not attached to any transaction.

Action: Do not attempt to detach when there is no current transaction.

ORA-25353: branch marked for deletion

Cause: The branch specified cannot be killed immediately because another session is using the branch, but it has been marked for kill. This means it will be deleted as soon as possible after the current uninterruptable operation is completed.

Action: No action is required for the branch to be deleted.

ORA-25401: can not continue fetches

Cause: A failure occurred since the last fetch on this statement. Failover was unable to bring the statement to its original state to allow continued fetches.

Action: Reexecute the statement and start fetching from the beginning

ORA-25402: transaction must roll back

Cause: A failure occurred while a transaction was active on this connection.

Action: The client must roll back.

ORA-25403: could not reconnect

Cause: The connection to the database has been lost, and attempts to reconnect have failed.

Action: Manually reconnect.

ORA-25405: transaction status unknown

Cause: A failure occurred while a transaction was attempting to commit. Failover could not automatically determine instance status.

Action: The user must determine the transaction's status manually.

ORA-25406: could not generate a connect address

Cause: Failover was unable to generate an address for a backup instance.

Action: Contact Oracle customer support.

ORA-25408: can not safely replay call

Cause: The connection was lost while doing this call. It may not be safe to replay it after failover.

Action: Check to see if the results of the call have taken place, and then replay it if desired.

ORA-25409: failover happened during the network operation,cannot continue

Cause: The connection was lost when fetching a LOB column.

Action: Failover happened when fetching LOB data directly or indirectly. Please replay the top level statement.

ORA-25410: Application requested failover retry

Cause: The application failover callback requested failover retry.

Action: None. Informational only.

ORA-25411: transaction replay was not successful

Cause: Replay was not able to restore the transaction state to match the pre-failover state.

Action: Manually determine if it is safe to resubmit the transaction.

ORA-25412: transaction replay disabled by call to *string*

Cause: The application called an Oracle Call Interface (OCI) function that is not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-25413: transaction replay disabled by user request

Cause: The application explicitly disabled transaction replay by setting attribute OCI_ATTR_TRANSACTIONAL_TAF=FALSE.

Action: This message is informational only.

ORA-25414: Uncommitted transaction detected after TAF callback.

Cause: The Transparent Application Failover (TAF) callback started a transaction and did not commit or rollback prior to exiting.

Action: End the transaction with a COMMIT or a ROLLBACK prior to exiting the TAF callback.

ORA-25415: Application Continuity replay initiation timeout exceeded.

Cause: Application Continuity replay was attempted after REPLAY_INITIATION_TIMEOUT expired. The value for REPLAY_INITIATION_TIMEOUT is configured for the service to which the application is connected.

Action: Manually recover the pending transaction.

ORA-25417: replay disabled; call (*string*) too large to record

Cause: Oracle Call Interface (OCI) Application Continuity replay was attempted after a large call that could not be recorded due to excessive memory requirements.

Action: Break up the call into smaller pieces and retry failover, or manually retry the user operation.

ORA-25418: transaction replay disabled by the use of object type in function *string*

Cause: The application used an Oracle Call Interface (OCI) object type that is not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-25419: transaction replay disabled in function *string* by the use of unsupported type *string*

Cause: The application used an Oracle Call Interface (OCI) type that is not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-25420: more than *number* non-fetch calls in request; replay disabled

Cause: Application Continuity failover was attempted after executing a request with a large number of Oracle Call Interface (OCI) calls, so replay of the request was not possible.

Action: Resubmit and consider partitioning application work into more requests with fewer OCI calls in each request.

ORA-25421: more than *number* fetch calls in request; replay disabled

Cause: Application Continuity failover was attempted after executing a request with a large number of Oracle Call Interface (OCI) Fetch calls, so replay of the request was not possible.

Action: Resubmit and consider partitioning application work into more requests with fewer OCI calls in each request.

ORA-25422: more than *number* cursor calls in request; replay disabled

Cause: Application Continuity failover was attempted after executing a request with a large number of Oracle Call Interface (OCI) OCISmtPrepare2 calls, so replay of the request was not possible.

Action: Resubmit and consider partitioning application work into more requests with fewer OCI calls in each request.

ORA-25425: connection lost during rollback

Cause: The connection was lost while issuing a rollback and the application failed over.

Action: The connection was lost and failover happened during rollback. If the transaction is not externally coordinated, then Oracle implicitly rolled back, so no action is required. Otherwise examine `pending_trans$` to determine if "rollback force" is required.

ORA-25426: remote instance does not support shared dblinks

Cause: A shared dblink is being used to connect to a remote instance that does not support this feature because it is an older version.

Action: Use a normal dblink if you need to connect to this instance.

ORA-25427: cannot downgrade database links after database link data dictionary has been upgraded

Cause: An attempt was made to downgrade after the upgrade of the database link data dictionary.

Action: Drop the database links before attempting the downgrade.

ORA-25428: authentication failure while connecting through database link

Cause: An attempt to connect using the database link failed.

Action: Ensure connection details for the database link are correct.

ORA-25429: Break request cannot be propagated over shared database link.

Cause: No call in progress over shared database link.

Action: No action required. This is an informational message only.

ORA-25430: connected user database links are not supported in proxy session

Cause: A connected user database link is being used to connect to a remote database from a proxy user session.

Action: No action required. This was an informational message only.

ORA-25431: Connection with protocol *string* is disallowed by the outbound_dblink_protocols parameter.

Cause: An attempt to connect using the database link failed because the network protocol used for the database link is disallowed.

Action: Either set the value of the `outbound_dblink_protocols` initialization parameter appropriately to include the required protocol or change the protocol used by the database link to conform to the protocols allowed by the `outbound_dblink_protocols` parameter.

ORA-25433: User *string* does not have INHERIT REMOTE PRIVILEGES privilege on connected user *string*.

Cause: An attempt was made to use a connected user database link inside a definer's rights function, procedure or view, and the owner of the function, procedure or view lacked INHERIT REMOTE PRIVILEGES privilege on the connected user.

Action: Either do not start the function, procedure or view, or grant the owner of the function, procedure or view INHERIT REMOTE PRIVILEGES privilege on the connected user.

ORA-25434: Connected user database link usage by the common user *string* is not allowed.

Cause: The `COMMON_SCHEMA_ACCESS` lockdown profile feature was disabled.

Action: Either do not use the database link as a common user or have the administrator enable `COMMON_SCHEMA_ACCESS` lockdown profile feature.

ORA-25435: Database link cannot be used after failing over with Transparent Application Continuity.

Cause: The use of database link was detected in the failed-over session while Transparent Application Continuity was in use.

Action: Consider whether the application can use Transaction mode of Application Continuity that supports failover with database links. (Use `FAILOVER_TYPE=TRANSACTION`). Use Fast Application Notification with Oracle connection pools for planned maintenance.

ORA-25436: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the table values specified had an invalid alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid alias.

ORA-25437: duplicate table value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because some of the table values specified had the same table alias.

Action: Check the table values specified, and try again with only one value per table.

ORA-25438: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had an invalid name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25439: duplicate variable value for variable: *string*

Cause: An attempt to evaluate was made, which failed because some of the variable values specified had the same variable name.

Action: Check the variable names specified, and try again with only one value per variable.

ORA-25440: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values specified had an invalid table alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid name.

ORA-25441: duplicate column value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values supplied a value for a table alias, which already had a table value supplied.

Action: Check the table and column values specified, and try again with either a table value or column values for each table alias.

ORA-25442: too many column values for table alias: *string*

Cause: An attempt to evaluate was made, which failed because too many column values were supplied for the specified table alias.

Action: Check the column values specified, and try again with the right number of column values.

ORA-25443: duplicate column value for table alias: *string*, column number: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column number.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25444: invalid ROWID: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid ROWID was supplied for the specified table alias.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25445: invalid column number: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid column number was supplied for the specified table alias as a part of a column value.

Action: Check the column values specified, and try again with a valid column number.

ORA-25446: duplicate column value for table alias: *string*, column: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column name.

Action: Check the column values specified, and try again with only one column value for each table alias, and column name.

ORA-25447: encountered errors during evaluation of rule *string.string*

Cause: An attempt to evaluate was made, which failed during the evaluation of the specified rule.

Action: Check the rule and the values passed to evaluate, and try again with valid values.

ORA-25448: The *string string.string* has errors.

Cause: An attempt to load the specified rule or expression failed due to errors in the rule or expression.

Action: Check the rule or expression and retry the operation.

ORA-25449: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values specified had an invalid variable name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25450: error *string* during evaluation of rule set *string.string*

Cause: The specified error occurred during evaluation of the rule set.

Action: Check the error and take appropriate action.

ORA-25451: too many attribute values for variable: *string*

Cause: An attempt to evaluate was made, which failed because too many attribute values were supplied for the specified variable.

Action: Check the attribute values specified, and try again with the right number of attribute values.

ORA-25452: duplicate attribute value for variable: *string*, attribute: *string*

Cause: An attempt to evaluate was made, which failed because duplicate attribute values were supplied for the specified variable and attribute name.

Action: Check the attribute values specified, and try again with only one attribute value for each variable, and attribute name.

ORA-25453: invalid iterator: *string*

Cause: An attempt to get rule hits or to close an iterator was made, which failed because an invalid iterator was passed in.

Action: Check the iterator, and try again with a valid iterator.

ORA-25454: error during evaluation of rule set: *string.string* for iterator: *string*

Cause: An attempt to get rule hits for an iterator was made, which failed because of an error in evaluation of the specified rule set.

Action: Check the validity of the rule set and try again.

ORA-25455: evaluation error for rule set: *string.string*, evaluation context: *string.string*

Cause: An attempt to evaluate the specified rule set using the evaluation context specified failed due to some errors.

Action: Check additional errors signalled to determine the problem.

ORA-25456: rule set was modified or evaluation terminated for iterator: *string*

Cause: An attempt to get rule hits was made, which failed because the underlying rule set was modified after the iterator was returned.

Action: Try again after re-evaluating the rule set.

ORA-25457: evaluation function *string* returns failure

Cause: The specified evaluation function returned a failure during evaluation, causing evaluation to terminate.

Action: Check arguments to evaluate and retry.

ORA-25458: Value not supplied for *string string*

Cause: Variable or table column values were not supplied for evaluation.

Action: Supply all the required variable and column data points for Independent Expression Evaluation.

ORA-25459: Data conversion for *string string* failed

Cause: The attempt to convert data to the data type of the variable or column failed.

Action: Supply the correct data for variable or column.

ORA-25461: rule set not specified

Cause: An attempt to evaluate was made, which failed because the ruleset name specified was null.

Action: Check the rule set name, and try again with a valid name.

ORA-25462: evaluation context not specified

Cause: An attempt to evaluate was made, which failed because the evaluation context specified was null.

Action: Check the evaluation context name, and try again with a valid name.

ORA-25463: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the table values specified had a NULL alias name.

Action: Check the list of table values, and try again with a valid alias name.

ORA-25464: ROWID not specified for table alias: *string*

Cause: An attempt to evaluate was made, which failed because the table value for the specified table alias had a NULL ROWID.

Action: Check the list of table values, and try again with a valid ROWID.

ORA-25465: variable name not specified

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had a NULL variable name.

Action: Check the list of variable values, and try again with a valid variable name.

ORA-25466: data not specified for variable name: *string*

Cause: An attempt to evaluate was made, which failed because the variable value for the specified variable name had NULL data.

Action: Check the list of variable values, and try again with valid data.

ORA-25467: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the column values specified had a NULL alias name.

Action: Check the list of column values, and try again with a valid alias name.

ORA-25468: column name not specified for alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values for the specified alias name had a NULL column name.

Action: Check the list of column values, and try again with a valid column name.

ORA-25469: data not specified for alias: *string* column name: *string*

Cause: An attempt to evaluate was made, which failed because the column value for the specified alias and column name had NULL data.

Action: Check the list of column values, and try again with valid data.

ORA-25470: duplicate attribute value for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values supplied a value for a variable, which already had a variable value supplied.

Action: Check the variable and attribute values specified, and try again with either a variable value or attribute values for each variable.

ORA-25471: attribute name not specified for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values for the specified variable had a NULL attribute name.

Action: Check the list of attribute values, and try again with a valid attribute name.

ORA-25472: maximum open iterators exceeded

Cause: The open rule hit iterators in the session exceeded $2 * OPEN_CURSORS$.

Action: Close some rule hit iterators.

ORA-25473: cannot store *string* in rule action context

Cause: The user attempted to put unsupported data types, such as LOBs and evolved ADTs, into the rule action context.

Action: Use only supported data types in rule action context.

ORA-25476: use pre-5523578 behaviour when looking up enabled roles

Cause: N/A

Action: Derive the enabled roles under the rules engine using the old method that existed before the fix to bug 5523578.

ORA-25477: hot cursor limit reached: *string*

Cause: An attempt to mark a cursor as hot failed because maximum number of allowable cursors were marked hot.

Action: Unmark any other hot cursor using `dbms_shared_pool.unmarkhot` and retry operation.

ORA-25500: database is not open

Cause: Database must be open to perform ALTER SYSTEM QUIESCE RESTRICTED command.

Action: Open the database and retry this command.

ORA-25501: ALTER SYSTEM QUIESCE RESTRICTED command failed

Cause: Database resource manager failed to change plan.

Action: Look at the alert logs to see detailed description of the error.

ORA-25502: concurrent ALTER SYSTEM QUIESCE/UNQUIESCE command is running

Cause: There is a concurrent ALTER SYSTEM QUIESCE RESTRICTED or ALTER SYSTEM UNQUIESCE command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-25503: cannot open database because the database is being quiesced

Cause: Database cannot be opened because the system is being or has been quiesced.

Action: Open the database after the system has been quiesced.

ORA-25504: the system is already in quiesced state

Cause: Cannot quiesce the system because the system is already quiesced.

Action: n/a

ORA-25505: the system is not in quiesced state

Cause: Cannot unquiesce the system because the system is not in quiesced state.

Action: n/a

ORA-25506: resource manager has not been continuously on in some instances

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup in this or some other instances.

Action: n/a

ORA-25507: resource manager has not been continuously on

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup.

Action: n/a

ORA-25508: database is not mounted

Cause: Database must be mounted to perform ALTER SYSTEM UNQUIESCE command.

Action: Mount the database and retry this command.

ORA-25509: operation on "*string*"."*string*".*string* not allowed

Cause: A column has been added to a replicated table, but replication support processing has not completed.

Action: Wait until replication support processing has completed before updating the column

ORA-25510: quiesce not supported for the root container

Cause: Could not quiesce the root container.

Action: This operation is not supported for the root container.

ORA-25511: quiesce not supported for pluggable databases

Cause: Could not quiesce the pluggable database.

Action: This operation is not supported for pluggable databases.

ORA-25526: bad format of `_DB_MTTTR_SIM_TARGET`: *string*

Cause: One value in `_DB_MTTTR_SIM_TARGET` is not a valid MTTTR.

Action: Alter the value of `_DB_MTTTR_SIM_TARGET`.

ORA-25527: bad format of `_DB_MTTTR_SIM_TARGET`

Cause: One value in `_DB_MTTTR_SIM_TARGET` is empty.

Action: Set the value of `_DB_MTTTR_SIM_TARGET` properly.

ORA-25528: too many candidate MTTTRs are specified in `_DB_MTTTR_SIM_TARGET`

Cause: Too many candidate MTTTRs are specified in `_DB_MTTTR_SIM_TARGET`.

Action: Alter the value of `_DB_MTTTR_SIM_TARGET`.

ORA-25530: `FAST_START_MTTTR_TARGET` is not specified

Cause: An attempt to start MTTTR advisory was made, which failed because `FAST_START_MTTTR_TARGET` was not specified.

Action: Set `FAST_START_MTTTR_TARGET`.

ORA-25531: MTTTR specified is too small: *string*

Cause: The current `FAST_START_MTTTR_TARGET` setting or a candidate MTTTR setting is too small for MTTTR advisory.

Action: Set a larger `FAST_START_MTTTR_TARGET` or candidate MTTTR.

ORA-25532: MTTTR specified is too large: *string*

Cause: The current `FAST_START_MTTTR_TARGET` setting or a candidate MTTTR setting is too large for MTTTR advisory.

Action: Set a smaller `FAST_START_MTTTR_TARGET` or candidate MTTTR.

ORA-25533: `FAST_START_IO_TARGET` or `LOG_CHECKPOINT_INTERVAL` is specified

Cause: An attempt to start MTTTR advisory was made, which failed because either `FAST_START_IO_TARGET` or `LOG_CHECKPOINT_INTERVAL` was specified.

Action: Set FAST_START_IO_TARGET and LOG_CHECKPOINT_INTERVAL to 0.

ORA-25551: process not initialized in threaded mode

Cause: OCI process started without threaded mode.

Action: Specify OCI_THREADED mode when calling OCIEnvCreate()/OCIEnvNLSCreate().

ORA-25552: lateral view with old style outer join (+) cannot participate on the left side of an ANSI outer join

Cause: When a query block used a lateral view syntax with old style outer join (+), the lateral view could not participate in another ANSI left outer join or ANSI right outer join as the left operand.

Action: Use ANSI style instead of lateral view for specifying outer joins.

ORA-25553: lateral view with old style outer join (+) cannot participate in an ANSI full outer join

Cause: When a query block used a lateral view syntax with old style outer join (+), the lateral view could not participate in another ANSI full outer join.

Action: Use ANSI style instead of lateral view for specifying outer joins.

ORA-25555: complex predicate not allowed in operand of OR or IN when outer join operator (+) is present

Cause: When an outer join operator (+) is used in a predicate of either OR or IN, the outer join operator (+) is not allowed to include a complex predicate in OR or IN. For example, a predicate that contains a subquery is complex.

Action: Use ANSI outer join syntax instead.

ORA-25556: A predicate without outer join operator (+) not allowed in operand of OR or IN when outer join operator (+) is present

Cause: When an outer join operator (+) is used in a predicate of either OR or IN, the outer join operator (+) is not allowed to include a predicate without outer join operator (+) in OR or IN.

Action: Use outer join operator (+) in all predicates of OR or IN.

ORA-25600: Invalid shard: *string*

Cause: An invalid shard ID was specified.

Action: Specify valid shard and retry the queueing operation.

ORA-25601: Maximum number of shards are already created for the queue *string.string*

Cause: Maximum number of shards were already created.

Action: Please review SHARD_NUM and SHARD_MAX parameters of the queue using GET_QUEUE_PARAMETER and SET_QUEUE_PARAMETER API.

ORA-25602: Migration is already running on the queue *string.string*.

Cause: INIT_MIGRATION is already executed on the queue.

Action: Do not call the API twice.

ORA-25603: Migration has not started on the queue *string.string*.

Cause: INIT_MIGRATION API was not called on the queue.

Action: Call INIT_MIGRATION API first to initiate the migration.

ORA-25604: Migration can only run on classic queue and queue *string.string* is not classic queue.

Cause: Migration API input parameter was not a classic queue.

Action: Insert a valid classic queue as an input parameter to the migration API.

ORA-25605: Migration cannot run because *string* feature is unsupported in Transactional Event Queues.

Cause: The migration API captured the unsupported feature.

Action: Review the unsupported feature details from the migration status table and call the API again.

ORA-25606: This operation is restricted because migration is ongoing on the *string.string* queue.

Cause: This operation was restricted because the migration operation was running.

Action: Process this operation after migration is completed.

ORA-25607: cannot execute *string* migration because *string* is not empty. You can use PURGE_QUEUE_MESSAGES API

Cause: The queue was not empty.

Action: Either consume messages in the queue using dequeue API or use PURGE_QUEUE_MESSAGES API to drain the messages.

ORA-25608: wrong value entered for *string* input parameter

Cause: The input parameter was not in the valid range.

Action: Choose a valid input parameter value.

ORA-25609: switch queue code path for migration routing

Cause: JDBC layer managed the routing.

Action: No action is needed; used for internal switching.

ORA-25610: cannot assign same Transactional Event Queue name to multiple migration queues

Cause: Either CQNAME was not specified, or TXEVENTQNAME was specified in the INIT_MIGRATION API call.

Action: Either specify CQNAME or do not specify TXEVENTQNAME.

ORA-25611: Warning: *string* feature is used which is unsupported in Transactional Event Queues.

Cause: The migration API captured the unsupported feature.

Action: Review the unsupported feature details from the migration status table and if the user wants to ignore the warning, then pass TRUE as the ignore_warning parameter to commit_migration API.

ORA-25612: The queue is enabled for *string*. Please execute stop_queue before executing the rename_queue operation.

Cause: The queue was enabled for enqueue or dequeue operations.

Action: Before executing rename_queue, the queue should be disabled for enqueue/dequeue operation. Execute dbms_aqadm.stop_queue on the queue.

ORA-25613: not able to migrate the given rule condition for the target queue

Cause: While in migration, an internal function cannot convert a given rule condition.

Action: Execute without condition or complete migration and then execute the rule condition.

ORA-25614: The migration procedure cannot run because *string*.

Cause: The input parameter was not valid.

Action: Choose a valid input parameter value.

ORA-25700: The database client to server connection does not use Transport Layer Security (TLS). TLS is required when using tokens for database access.

Cause: An attempt was made to pass a token from an external identity provider to the database without first enabling TLS on the connection between the database client and database server.

Action: Configure the database client to server connection using TLS. Both one-way and mutual TLS is allowed when passing tokens.

ORA-25702: Role mapping for IAM_PRINCIPAL_NAME is not supported.

Cause: An attempt was made to map a database global role to an IAM_PRINCIPAL_NAME. A global role can only be mapped to an IAM_GROUP_NAME. An IAM_PRINCIPAL_NAME can only be mapped to a global schema.

Action: Create a global role mapping to an IAM_GROUP_NAME.

ORA-25704: Token-based authentication requires client parameter SSL_SERVER_DN_MATCH=TRUE.

Cause: An attempt was made to access Oracle Database using an external identity provider token with the client parameter SSL_SERVER_DN_MATCH=FALSE.

Action: Change the client parameter to SSL_SERVER_DN_MATCH=TRUE to connect to Oracle Database.

ORA-25705: Schema "*string*" does not exist.

Cause: An attempt was made to grant schema privileges on a schema that did not exist.

Action: Ensure that the schema specified in ON SCHEMA exists. *Params: 1) schema_name: The schema on which schema privilege is being granted.

ORA-25707: The token is invalid.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using an invalid token.

Action: Request a new token and try again. If the new token also returns this error, check with your IT help desk for the correct process to request a database access token.

ORA-25708: The expiration time of the token has passed.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using an expired token.

Action: Request a new authorization token used for connecting to Oracle Database.

ORA-25709: schema privileges not granted to "string"

Cause: An attempt was made to revoke a schema privilege that was not granted to the user.

Action: Ensure that the privileges being revoked are granted to the user. *Params: 1) schema_name: The schema name where the constraint resides.

ORA-25710: failed to revoke a schema privilege from "string"

Cause: An attempt was made to revoke a schema privilege that was granted with a different scope.

Action: Retry the operation with the correct value for the CONTAINER clause. *Params: 1) schema_name: The schema name whose schema privilege is being revoked.

ORA-25711: The private key is missing or invalid.

Cause: An attempt was made to authenticate to the database using a token provided by an external identity provider and its associated private key. The private key that was retrieved with the token was either missing or invalid.

Action: Request a new token, then try again. You should receive a token from the external identity provider and its associated private key. If the problem persists, check with your internal IT support on what steps to take to get a token with a valid private key.

ORA-25712: could not lock object string.string

Cause: An attempt to lock the object failed while executing the operation. This might have happened because the object was locked by another session.

Action: Objects are usually locked for a short duration. Retry the operation. If the operation continues to fail, contact Oracle Support. *Params: 1) owner: The name of the owner of the object. 2) object: Then name of the object.

ORA-25713: could not lock the user 'string' while auditing an event

Cause: Timeout occurred while trying to take a lock on the user object row cache as part of loading audit options for the user.

Action: Retry the operation. *Params: 1) user_name: The name of the database user object.

ORA-25714: invalid value of PASSWORD_AUTH or TOKEN_AUTH in the client configuration

Cause: An attempt was made to authenticate a user from an external identity provider to Oracle Database using an invalid PASSWORD_AUTH or TOKEN_AUTH value. This parameter can be found in SQLNET.ORA, TNSNAMES.ORA, or used as part of the connect string.

Action: Specify the correct PASSWORD_AUTH or TOKEN_AUTH value. Refer to the Oracle Database documentation for the allowed values.

ORA-25715: External identity provider key is not supported.

Cause: An attempt was made to create a global schema or role mapping with an invalid external identity provider key. Examples of valid external identity provider keys are: AZURE_ROLE, AZURE_USER, IAM_SERVICE_NAME, IAM_GROUP_NAME, IAM_PRINCIPAL_NAME, IAM_PRINCIPAL_OCID

Action: Check the spelling of the external identity provider key that you specified in the CREATE USER, CREATE ROLE, ALTER USER, or ALTER ROLE statement.

ORA-25716: The identifier contains a double quotation mark (") character

Cause: The identifier contained a double quotation mark (") character which is not allowed in identifiers. The double quotation mark characters may only enclose an identifier as delimiters. If a password was provided in the IDENTIFIED BY clause of a CREATE USER or ALTER USER command, or as a new password when prompted by an application, such as SQL*Plus, it was syntactically treated as an identifier and was not allowed to contain a double quotation mark character either.

Action: Provide an identifier or password that does not contain a double quotation mark (") character.

ORA-25800: Maximum length of a saga entity cannot exceed 106 characters.

Cause: The length of the saga broker, coordinator, or the participant being created exceeded the maximum allowed length.

Action: Retry the operation after reducing the length of the saga entity.

ORA-25801: Unsupported version 'string'

Cause: An attempt was made to perform a saga operation with an unsupported version.

Action: Retry the operation after specifying the correct version or use the default version.

ORA-25802: Insufficient privileges to access schema *string*

Cause: An attempt was made to perform a saga operation with an invalid or inaccessible schema.

Action: Retry the operation after specifying the correct or accessible schema.

ORA-25803: Saga entity *string* already exists

Cause: The saga broker, coordinator or the participant being created already existed.

Action: Retry the operation after specifying a different name.

ORA-25804: Saga entity *string* does not exist.

Cause: The saga broker, coordinator or the participant was either remote or did not exist.

Action: Retry the operation after specifying a different name.

ORA-25805: Saga entity *string* cannot be dropped

Cause: An attempt was made to drop a saga broker or coordinator which still had saga participants attached to it.

Action: Retry the operation after dropping all the saga participants attached to this broker or coordinator.

ORA-25806: Missing package or execution rights for package '*string*'.*string*'

Cause: An attempt was made to register a saga package that did not exist or execution rights on the saga package were missing.

Action: Retry the operation after specifying the correct or accessible package.

ORA-25807: Callback package cannot be registered for a coordinator

Cause: An attempt was made to register a saga package for a coordinator.

Action: No action required.

ORA-25808: Participant or coordinator database link cannot be null

Cause: An attempt was made to add a participant or coordinator with a null database link when broker database link was non-null.

Action: Retry the operation after specifying the correct database link for the participant or specifying a null broker database link.

ORA-25809: Unable to make remote calls using database link '*string*'

Cause: An attempt was made to add or drop a participant with an invalid or inaccessible broker database link.

Action: Retry the operation after specifying the correct database link for the broker.

ORA-25810: Saga entity *string* already exists at broker

Cause: The saga coordinator or the participant being created was already managed by the specified broker.

Action: Retry the operation after specifying a different name.

ORA-25811: Saga entity *string* cannot be created

Cause: An attempt was made to create a saga participant or coordinator with an invalid broker name or schema.

Action: Retry the operation after specifying the correct broker name or schema.

ORA-25812: Cannot drop queue table '*string*'

Cause: An attempt to drop the saga entity failed because the queue table associated with the entity could not be dropped.

Action: Retry the operation or contact administrator to manually drop queue table associated with this entity.

ORA-25813: Cannot clear dictionary entry for entity '*string*'

Cause: An attempt to drop the saga entity failed because the dictionary table entry associated with this entity could not be cleared.

Action: Retry the operation or contact administrator to manually clear the dictionary table entry associated with this entity.

ORA-25814: Cannot unschedule propagation for queue '*string*'

Cause: An attempt to drop the saga entity failed because the propagation schedule associated with this entity could not be uncheduled.

Action: Retry the operation or contact administrator to manually unchedule the propagation schedule associated with this entity.

ORA-25815: Cannot unregister notification callback for queue '*string*'

Cause: An attempt to drop or update the saga entity failed because the notification callback associated with this entity could not be unregistered.

Action: Retry the operation or contact administrator to manually unregister the notification callback associated with this entity.

ORA-25816: Cannot update dictionary entry for entity '*string*'

Cause: An attempt to update the saga entity failed because the dictionary table entry associated with this entity or broker could not be updated.

Action: Retry the operation or contact administrator to manually update the dictionary table entry associated with this entity.

ORA-25817: Drop operation failed for entity '*string*'

Cause: An attempt to drop the saga entity failed either at broker database or locally.

Action: Retry the operation after verifying the broker still exists.

ORA-25818: Invalid coordinator name '*string*'

Cause: An attempt was made to create a saga participant with an invalid coordinator name.

Action: Retry the operation after specifying the correct coordinator name.

ORA-25819: unauthorized access

Cause: An attempt was made to perform a saga operation using a participant that the current user did not own.

Action: No action required.

ORA-25820: Invalid opcode *string*

Cause: An attempt was made to perform a saga operation using an invalid opcode.

Action: No action required.

ORA-25821: Invalid saga id *string*

Cause: An attempt was made to perform a saga operation using an invalid saga id.

Action: Retry the operation after specifying the correct saga id.

ORA-25822: Cannot drop subscriber for queue '*string*'

Cause: An attempt to drop the saga entity failed because the subscriber associated with this entity could not be dropped.

Action: Retry the operation or contact administrator to manually drop the subscriber associated with this entity.

ORA-25823: The saga *string* has timed out.

Cause: A timeout occurred before the saga initiator could propagate the request, commit, or rollback to the participants.

Action: Retry the operation with a forced commit or rollback. *Params: 1) *saga_id*: The ID of the saga.

ORA-25824: Cannot enroll participant for saga id '*string*'

Cause: An attempt to enroll a saga participant failed because the saga id did not exist or the initiator of the saga was not found or the saga was already committed or rolledback.

Action: No action required.

ORA-25825: Saga *string* is already finalized.

Cause: An attempt was made to operate on a finalized saga.

Action: No action required. *Params: 1) `saga_id`: The ID of the saga.

ORA-25826: Queue Partition mismatch between broker '*string*' and entity '*string*'.

Cause: An attempt was made to create a saga entity with a different number of partitions than the broker.

Action: Retry the operation after specifying the `queue_partitions` equal to the `queue_partitions` of the broker.

ORA-25827: Queue Type mismatch between broker '*string*' and entity '*string*'.

Cause: An attempt was made to create a saga entity with a different queue type than the broker.

Action: Retry the operation after creating the entity with the same queue type as that of the broker.

ORA-25950: The WHERE clause is missing in the join index specification.

Cause: An attempt to create a join index failed because a valid WHERE clause was not found.

Action: Ensure that a WHERE clause with valid join conditions is specified in the CREATE INDEX statement.

ORA-25951: join index where clause cannot contain OR condition

Cause: An attempt to create a join index was made, which failed because there was an OR branch in the where clause.

Action: Reformulate the where clause without using ORs.

ORA-25952: join index must only contain inner equi-joins

Cause: An attempt to create a join index was made, which failed because it included a predicate which wasn't an equi-inner join.

Action: Remove the inappropriate predicate.

ORA-25953: join index cannot be a functional index

Cause: An attempt to create a join index was made, which failed because a functional index was requested or necessary (such as is the case for indexing columns using timezone).

Action: Remove any functional indexing columns.

ORA-25954: missing primary key or unique constraint on dimension

Cause: An attempt to create a join index was made, which failed because one or more dimensions did not have an appropriate constraint matching the join conditions.

Action: Ensure that the where clause is correct (contains all of the constraint columns) and that an enforced constraint is on each dimension table.

ORA-25955: all tables must be joined in the where clause

Cause: An attempt to create a join index was made, which failed because one of the tables in the from clause did not appear in the where clause.

Action: Ensure that the where clause contains all from clause tables.

ORA-25956: join index cannot be created on tables owned by SYS

Cause: An attempt to create a join index was made, which failed because one of the tables was owned by SYS.

Action: Ensure that no join index related table is owned by SYS.

ORA-25957: join index where clause cannot contain cycles

Cause: An attempt to create a join index was made, which failed because the where clause contains a cycle.

Action: Ensure that the where clause is in the form of a star or snowflake schema.

ORA-25958: join index where clause predicate may only contain column references

Cause: An attempt to create a join index was made, which failed because a predicate in the where clause contained something other than a simple column.

Action: Ensure that the where clause only contains columns.

ORA-25959: join index must be of the bitmap type

Cause: An attempt to create a join index was made, which failed because no bitmap keyword was used.

Action: Make the index a bitmap index.

ORA-25960: join index cannot be based on a temporary table

Cause: An attempt to create a join index was made, which failed because one of the tables was temporary.

Action: Ensure no underlying tables are temporary.

ORA-25961: join index prevents dml cascade constraint operation

Cause: An attempt to execute dml resulted in the need to perform dml on another table because of a cascade constraint. The join index only allows one of its underlying tables to be modified at a time.

Action: Drop the join index or remove the constraint.

ORA-25962: join index prevents multitable insert or merge

Cause: An attempt to execute an merge or multitable insert on a table that was used to create a bitmap join index was made. Merge and multitable inserts are not supported on tables that were used to create a bitmap join index.

Action: Drop the join index.

ORA-25963: join index must be created on tables

Cause: An attempt to create a join index was made, which failed because the from clause contains non table object.

Action: Ensure that the from clause only contains tables.

ORA-25964: column type incompatible with join column type

Cause: The datatype of the join column is incompatible with the datatype of the joined column.

Action: Select a compatible datatype for the join column.

ORA-25965: fact table must be included in the from clause

Cause: An attempt to create a join index was made, which failed because the from clause does not contain the fact table.

Action: Ensure that the from clause contains the fact table.

ORA-25966: join index cannot be based on an index organized table

Cause: An attempt to create a join index was made, which failed because one of the tables was an index organized table.

Action: Ensure no underlying tables are index organized.

ORA-26000: partition load specified but table *string* is not partitioned

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not partitioned.

Action: Remove the partition specification from the SQL*Loader control file and retry the load.

ORA-26001: Index *string* specified in SORTED INDEXES does not exist on table *string*

Cause: A nonexistent index was specified in the SORTED INDEXES clause.

Action: Do not specify as a SORTED INDEX.

ORA-26002: Table *string* has index defined upon it.

Cause: Parallel load was specified into a table which has index defined upon it.

Action: Drop index(es) defined upon table, or don't use parallel load, or use SKIP_INDEX_MAINTENANCE option.

ORA-26003: parallel load not supported for index-organized table *string*.

Cause: Parallel load is not supported for index-organized tables.

Action: load the index-organized table without the PARALLEL option.

ORA-26004: Tables loaded through the direct path may not be clustered

Cause: User attempted to load a clustered table via the direct path.

Action: Use the conventional path.

ORA-26005: Invalid handle for direct path load

Cause: In direct path load, the handle passed in does not match the type listed.

Action: Verify the handle and type are correct.

ORA-26006: Incorrect bind variable in column *string*'s sql expression - *string*

Cause: In direct path load, the bind variables listed in the sql expression do not match the input argument column names.

Action: Verify all the input arguments are listed in the expression as bind variables, and all the bind variables are listed as input arguments to the expression. Or verify that there were no errors in executing the OCI statements when getting the bind variable list.

ORA-26007: invalid value for SETID or OID column

Cause: The value passed in a Direct Path API stream for a column containing a SETID or OID has an invalid value. SETIDs and Object IDs must be either 16 bytes of RAW data or 32 bytes of hexadecimal characters.

Action: Regenerate the Direct Path API stream with a valid value for the SETID column.

ORA-26008: Invalid syntax or bind variable in SQL string for column *string*.

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

ORA-26009: stream verification error: *string*

Cause: An error has occurred in a Data Pump stream verification operation.

Action: Contact Oracle Support Services.

ORA-26010: Column *string* in table *string* is NOT NULL and is not being loaded

Cause: A column which is NOT NULL in the database is not being loaded and will cause every row to be rejected.

Action: Load the column by specifying the NOT NULL column in the INTO TABLE clause in the SQL*Loader control file.

ORA-26011: Cannot load type *string* into column *string* in table *string*

Cause: A column can only store data of type declared for that column. And a substitutable column can only store data of valid subtypes of the supertype declared for that column.

Action: Check that the type or subtype specified is valid for that column.

ORA-26012: header in file *string* has an incompatible version number

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

ORA-26013: List allocated may not be big enough

Cause: There seems to be a discrepancy between the size for a list or buffer allocated by direct path api and the size needed.

Action: Contact Oracle Customer Support.

ORA-26014: unexpected error on *string string* while retrieving *string\string*

Cause: The SQL error was returned from an OCIStmtExecute call.

Action: Correct the SQL error that was returned.

ORA-26015: Array column *string* in table *string* is not supported by direct path

Cause: User attempted to load an array column via the direct path.

Action: Use the conventional path.

ORA-26016: Virtual column *string* in table *string.string* cannot be loaded by direct path

Cause: You attempted to load an virtual column using the direct path.

Action: Virtual columns cannot be loaded using the direct path.

ORA-26017: global indexes not allowed for direct path load of table partition *string*

Cause: Global indexes are defined on a table when direct path loading a single partition of the table.

Action: Remove the global index from the named table and retry the operation.

ORA-26018: Column *string* in table *string* does not exist

Cause: Column specified in the loader control file does not exist.

Action: Make sure the column exists and that you have privileges on it. Correct the loader control file if it is wrong.

ORA-26019: Column *string* in table *string* of type *string* not supported by direct path

Cause: The Specified column of SQL column type %s is not supported by the direct path loader.

Action: If the column is NULLable, remove it from the control file description. Then it will be loaded as a NULL.

ORA-26020: index *string.string* loaded successfully with *string* keys

Cause: Non-partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26021: index *string.string* partition *string* loaded successfully with *string* keys

Cause: Partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26022: index *string.string* was made unusable due to:

Cause: A Non-partitioned index was made index unusable due to the error displayed below this error.

Action: Depending on the error, either rebuild the index, or drop and re-create it.

ORA-26023: index *string.string* partition *string* was made unusable due to:

Cause: A partition of a partitioned index was made index unusable due to error displayed below this error.

Action: Depending on the error, either rebuild the index partition, or drop and re-create the entire index.

ORA-26024: SKIP_UNUSABLE_INDEXES requested and index segment was initially unusable

Cause: User requested SKIP_UNUSABLE_INDEXES option, and the index segment was in unusable state prior to the beginning of the load.

Action: Informational only. User will need to either rebuild the index or index partition, or re-create the index.

ORA-26025: SKIP_INDEX_MAINTENANCE option requested

Cause: User requested that index maintenance be skipped on a direct path load.

Action: The listed index was put into Index Unusable state due to the user requesting that index maintenance be skipped. Either rebuild the index or index partitions, or drop and re-create the index.

ORA-26026: unique index *string.string* initially in unusable state

Cause: A unique index is in IU state (a unique index cannot have index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26027: unique index *string.string* partition *string* initially in unusable state

Cause: A partition of a unique index is in IU state (a unique index cannot have index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26028: index *string.string* initially in unusable state

Cause: An index is in IU state prior to the beginning of a direct path load, it cannot be maintained by the loader.

Action: Either rebuild the index, re-create the index, or use either SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26029: index *string.string* partition *string* initially in unusable state

Cause: A partition of an index is in IU state prior to the beginning of a direct path load, it cannot be maintained by the loader.

Action: Either rebuild index partition, re-create the index, or use either SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26030: index *string.string* had *string* partitions made unusable due to:

Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: The affected index partitions will have to be re-built, or, the entire index dropped and re-created.

ORA-26031: index maintenance error, the load cannot continue

Cause: A index error occurred during the index maintenance phase of a direct path load. The load cannot continue. See error message below this message.

Action: See action for the error message which follows this one.

ORA-26032: index *string.string* loading aborted after *string* keys

Cause: An index error occurred during direct-load of an index-organized table. Loading had to be aborted. No rows were loaded.

Action: Check the key just following the number of keys mentioned above. This key caused the index problem mentioned in an earlier message.

ORA-26033: column *string.string* encryption properties differ for source or target table

Cause: The source and destination columns did not have the same encryption properties.

Action: For security reasons, check that the source and target table have the same encryption properties.

ORA-26034: Column *string* does not exist in stream

Cause: Column specified in the column list does not exist in the stream.

Action: Make sure the column exists or remove it from the list.

ORA-26035: Error attempting to encrypt or decrypt column

Cause: An error occurred while attempting to encrypt or decrypt a database column.

Action: Verify correct encryption key was specified.

ORA-26036: subpartition load specified but table *string* is not subpartitioned

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not subpartitioned.

Action: Remove the subpartition specification from the SQL*Loader control file and retry the load.

ORA-26037: must specify partition name(s) for system partitioned table *string*

Cause: An attempt was made to load a system partitioned table with no partition name(s) specified.

Action: Specify the partition name(s) explicitly.

ORA-26038: attempt to write audit record for SQL*Loader direct path load of *string.string* failed with error code: *number*

Cause: An attempt to write an audit record during a SQL*Loader direct path load failed.

Action: Contact Oracle Support Services.

ORA-26040: Data block was loaded using the NOLOGGING option

Cause: Trying to access data in block that was loaded without redo generation using the NOLOGGING/UNRECOVERABLE option

Action: Drop the object containing the block.

ORA-26041: DATETIME/INTERVAL datatype conversion error

Cause: The column could not be converted from DATETIME datatype to internal DATETIME/ CHARACTER datatype.

Action: Contact Oracle Customer Support.

ORA-26045: REF column *string* expects *string* arguments; found *string*.

Cause: The number of arguments for the REF column is incorrect.

Action: Specify the correct number of input arguments for REFs. 1. Unscoped system-generated REFs can have exactly 1 or 2 input arguments. a) It has exactly 1 input argument (one for the OID value) if a fixed table name was specified through OCI_DIRPATH_EXPR_REF_TBLNAME. b) It has exactly 2 input arguments (one for the table name and one for the OID value) if a fixed table name was not specified through OCI_DIRPATH_EXPR_REF_TBLNAME. 2. Scoped system-generated REFs can have 1 or 2 input arguments. Because a table name argument is not needed for a scoped ref, only 1 argument (OID value) is expected. But if the table name argument is given, it's still accepted. 3. Scoped primary-key REFs with N columns in its primary-key OID can have N or N+1 input arguments. Because a table name argument is not needed for a scoped ref, only N arguments (making up the OID value) is expected. But if the table name argument is given, it's still accepted.

ORA-26046: REF column *string* expects scoped table name *string*; user passed in *string*.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26048: Scoped REF column has wrong table name.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26049: Unscoped REF column has non-existent table name.

Cause: The table name passed in by the user does not exist in the schema.

Action: Specify a valid table name for the unscoped REF column.

ORA-26050: Direct path load of domain index is not supported for this column type.

Cause: Direct path can not load a domain index of that column type.

Action: Drop the index and try again or load using conventional path.

ORA-26051: internal error parsing packed decimal format string

Cause: A packed decimal field with a non-zero scale factor is mapped to a character column. In order to perform the datatype conversion, a numeric format string must be created based on the input field's precision and scale specifications. Direct path loader encountered an error in creating this format string.

Action: Examine the packed decimal field's precision and scale specifications and make sure that they contain valid values.

ORA-26052: Unsupported type *number* for SQL expression on column *string*.

Cause: The direct path api does not support a SQL expression on a column of that type.

Action: Make sure the types are correct.

ORA-26053: Row was not loaded due to conversion error.

Cause: The current row was not loaded due to a conversion error.

Action: Continue with the load anyways. 260xx - 260xx Direct Path API

ORA-26054: Direct Path Context prepared for a different mode than operation requested.\n

Cause: The user prepared the direct path context for one operation (Load, Unload, Convert), but then tried to perform a different operation.

Action: Make sure the direct path context mode and operation matches.

ORA-26055: Invalid buffer specified for direct path unload\n

Cause: The user specified a zero length or null buffer to be used for the Direct Path Unload operation.

Action: Specify a valid buffer and length.

ORA-26056: Requested direct path operation on a view is not supported.\n

Cause: An attempt was made to load into a view using direct path that has user-defined types, XML data, object type table or SQL expressions.

Action: Do not attempt to use direct path when loading a view that has nonscalar columns or when using SQL expressions on input columns.

ORA-26057: Conversion is not necessary for this direct path stream.\n

Cause: User attempted to convert a direct path stream that does not require conversion.

Action: Load the stream without conversion it.

ORA-26058: unexpected error fetching metadata for column *string* in table *string*\n

Cause: The direct path API encountered an unexpected error while retrieving metadata for a column.

Action: Contact Oracle support.

ORA-26059: Data is too large for column *string*\n

Cause: The direct path API encountered a column that can not be loaded because the input data is too large for a column.

Action: Make the target column larger.

ORA-26060: Can not convert type identifier for column *string*\n

Cause: The direct path API encountered a type identifier for a column that can not be loaded because a mapping can not be found for the input value.

Action: Verify the input data.

ORA-26061: Concurrent direct unloads is not allowed.\n

Cause: User attempted a direct unload when another is still in progress.

Action: Complete the current direct unload before starting another.

ORA-26062: Can not continue from previous errors.\n

Cause: User attempted to continue a direct path load after receiving an error which indicates the load can not continue.

Action: Address the original error that was returned.

ORA-26063: Can not flashback to specified SCN value - Wrap: *string* Base: *string*.\n

Cause: User specified an SCN which occurs before the last time the table definition was modified.

Action: Specify a more recent SCN.

ORA-26064: Invalid SCN specified - Wrap: *string* Base: *string*.ln

Cause: User specified an invalid SCN.

Action: Specify a valid SCN.

ORA-26065: check constraint cannot reference column, *string*, in direct path load\n

Cause: An enabled check constraint was found on a column stored as a lob.

Action: Either disable the check constraint before loading the table data using the direct path mode, or use the conventional path mode instead.

ORA-26066: cannot load duplicate tables with a domain index because not all domain index keys are being loaded\n

Cause: User SQLLDR control file loaded the same table multiple times but did not load all domain index keys for each INTO clause.

Action: Load all domain index keys when loading the table multiple times.

ORA-26076: cannot set or reset value after direct path structure is allocated

Cause: Client attempted to set or reset the number of rows in a direct path structure after it has already been allocated and initialized. Attributes used is one of the following: - OCI_ATTR_NUM_ROWS: to set # of rows in a direct path column array - OCI_ATTR_DIRPATH_DCACHE_SIZE: to set size of a date cache (default is 0) - OCI_ATTR_DIRPATH_DCACHE_DISABLE: to set whether date cache will be disabled on overflow (default is FALSE)

Action: Set the following attributes before: - OCI_ATTR_NUM_ROWS: before calling OCIHandleAlloc for column array - OCI_ATTR_DIRPATH_DCACHE_SIZE: before calling OCIDirPathPrepare - OCI_ATTR_DIRPATH_DCACHE_DISABLE: before calling OCIDirPathPrepare

ORA-26077: direct path column array is not initialized

Cause: Client attempted to allocate a column array for a direct path function context before allocating a column array for the table-level direct path context.

Action: Allocate the table-level direct path context's column array via OCIHandleAlloc before allocating column arrays for direct path function contexts.

ORA-26078: file "*string*" is not part of database being loaded\n

Cause: A parallel load file was specified which is not part of the database.

Action: Check filename and pathname for correctness.

ORA-26079: file "*string*" is not part of table *string.string*\n

Cause: A parallel load file was specified which is not in the tablespace of the table being loaded.

Action: Check to make sure that the specified parallel load file is in the tablespace of the table being loaded.

ORA-26080: file "*string*" is not part of table *string.string* partition *string*\n

Cause: A parallel load file was specified which is not in the tablespace of the table (partition, subpartition) being loaded. When a partitioned table is being loaded, the file

must be in the tablespace of every partition or subpartition (i.e. each (sub)partition must be in the same tablespace).

Action: Specify a different parallel load file, or no file at all.

ORA-26082: load of overlapping segments on table *string.string* is not allowed

Cause: Client application is attempting to do multiple direct path load operations on the same table, but the segments overlap.

Action: Check the partition names (subname attribute of the direct path context) being loaded. Make sure you are not loading a table, and a partition of the same table. Make sure you are not loading a partition, and a sub-partition within the same partition.

ORA-26083: unsupported direct path stream version *string*

Cause: The stream version requested is not supported by the server.

Action: Check to make sure that the VERSION attribute of the direct stream is not being set to an invalid value.

ORA-26084: direct path context already finished

Cause: An OCIDirPathLoadStream operation was attempted after OCIDirPathFinish was called. Once a direct path operation has been finished, no more data can be loaded.

Action: Check program logic to make sure OCIDirPathLoadStream is not called after OCIDirPathFinish.

ORA-26085: direct path operation must start its own transaction

Cause: A direct path operation is being attempted within a transaction that has already been started.

Action: Commit the transaction and Prepare the direct path operation again.

ORA-26086: direct path does not support triggers

Cause: A direct path operation is being attempted on a table which has enabled triggers.

Action: Disable the triggers on the table and try again.

ORA-26088: scalar column "*string*" must be specified prior to LOB columns

Cause: All scalar columns (i.e. non-LOB and non-LONG columns) must be specified by the client of the direct path API prior to specifying any LOB columns.

Action: Specify all scalar columns prior to specifying any LOB columns.

ORA-26089: LONG column "*string*" must be specified last

Cause: A client of the direct path API specified a LONG column to be loaded, but the LONG column was not the last column to be specified.

Action: Specify the LONG column last.

ORA-26090: row is in partial state

Cause: A direct path operation is being finished or a data save request has been made, but the table for which the request is being made on has a row in partial state. The row must be completed before the segment high water marks can be moved.

Action: Either complete the row, or abort the direct path operation.

ORA-26091: requested direct path operation not supported

Cause: A direct path operation was requested that is not supported

Action: Do not use that operation. Currently, UNLOAD is not supported.

ORA-26092: only LONG or LOB types can be partial

Cause: A column which is not a LONG or LOB had the OCI_DIRPATH_COL_PARTIAL flag associated with it. Only LONG or LOB type columns can be loaded in pieces.

Action: Do not use the OCI_DIRPATH_COL_PARTIAL flag for the column.

ORA-26093: input data column size (*number*) exceeds the maximum input size (*number*)

Cause: The user attempted to specify a column size (%d) that exceeded the maximum allowable input size (%d)."

Action: Make sure the input column metadata matches the column definition.

ORA-26094: stream format error: input column overflow

Cause: An input stream contained data for more input columns than specified by the client of the direct path API.

Action: Make sure that the stream being loaded is for the correct table. Check initialization sequence.

ORA-26095: unprocessed stream data exists

Cause: Either a OCIDirPathLoadStream call was made which provided more stream data prior to the server being able to fully process the stream data that it already has, or a OCIDirPathFinish call was made when the server had unprocessed stream data.

Action: Most likely an application mis-use of the direct path API. Make sure that the stream is not being reset inadvertently prior to any previous stream data being processed, or, that OCIDirPathFinish is not being called prematurely (i.e. stream pushed, error encountered and LoadStream not called to process the remainder of the stream before Finish is called.)

ORA-26096: transfer size too small for row data (*number bytes required*)

Cause: Either the transfer buffer size specified, or the default transfer buffer size (if you did not specify a size), is too small to contain a single row of the converted row data.

Action: Set the transfer buffer size attribute of the direct path context to be larger.

ORA-26097: unsupported conversion required for column *string*

Cause: The conversion required for the column was not supported. For example, conversion from date to number was not supported.

Action: Ensure that the type is correct for the source and destination.

ORA-26098: direct path context is not prepared

Cause: A direct path api function was called with a direct path context which has not been prepared.

Action: Make sure all necessary attributes in the direct path context have been set, and the context is prepared via OCIDirPathPrepare.

ORA-26099: direct path context is already prepared

Cause: OCIDirPathPrepare was called with a context that has already been prepared.

Action: Free the direct path context, set necessary attributes, and call OCIDirPathPrepare.

ORA-26100: unused error

Cause: This error is not used.

Action: No action required.

ORA-26101: tablespace # in file header is *string* rather than *string* for file *string*

Cause: The tablespace number in the file header is inconsistent with that in the control file.

Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26102: relative file # in file header is *string* rather than *string* for file *string*

Cause: The relative file number in the file header is inconsistent with that in the control file.

Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26103: V6 or V7 data file used to create control file

Cause: The file header of the referenced file is in V6 or V7 format.

Action: Either remove the file from the create control file command, or somehow migrate the file header to V8 format.

ORA-26104: unexpected error on *string string* while locking object, return code: *string*, obj: *string*

Cause: An attempt to lock the object failed.

Action: Retry the operation. If the operation continues to fail, contact Oracle Support Services.

ORA-26301: An i/o exception occurred**ORA-26302: The year *{0}* is not supported****ORA-26303: Overflow, value too large: *{0}*.****ORA-26304: Unsupported option (not implemented).****ORA-26305: Binary JSON is invalid or corrupt.****ORA-26306: Unsupported binary JSON version: *{0}*.****ORA-26307: The UTF-8 encoded key length must not be greater than 256 bytes. The following key exceeds this limit: *{0}*.****ORA-26308: The specified JSON is too large to be encoded as binary JSON. The encoded images size must not exceed 2GB.****ORA-26309: Binary JSON is invalid or corrupt. Specified image only contains *{0}* bytes.****ORA-26310: The specified `java.time.Period` has `days` set but the Oracle year to month interval does not support days.**

- ORA-26311:** Generator closed before before end.
- ORA-26312:** An object key must be specified in this context.
- ORA-26313:** Invalid write. A complete value has already been written.
- ORA-26314:** End not allowed in this context.
- ORA-26315:** Key not allowed in this context.
- ORA-26316:** Expected value after key.
- ORA-26317:** Parser state must be {0}.
- ORA-26318:** Parser state must not be {0}.
- ORA-26319:** Parser must be on a value.
- ORA-26320:** \{0} is not a supported wrapper type.
- ORA-26321:** This object can not be modified. To make a modifiable copy, use `OracleJsonFactory.createObject(OracleJsonObject)`.
- ORA-26322:** This array can not be modified. To make a modifiable copy, use `OracleJsonFactory.createArray(OracleJsonArray)`.
- ORA-26323:** JSON object contains duplicate key: {0}.
- ORA-26324:** Cannot auto-detect encoding, not enough chars.
- ORA-26325:** Expected EOF token, but got {0}.
- ORA-26326:** Unexpected character {0} at line {1}, column {2}.
- ORA-26327:** Unexpected character {0} at line {1}, column {2}. Expected: {3}.
- ORA-26328:** Invalid token {0} at line {1}, column {2}. Expected tokens are: {3}.
- ORA-26329:** `JsonParser#getString()` is valid only `KEY_NAME`, `VALUE_STRING`, `VALUE_NUMBER` parser states. But current parser state is {0}.
- ORA-26330:** `JsonParser#isIntegralNumber()` is valid only `VALUE_NUMBER` parser state. But current parser state is {0}.
- ORA-26332:** `JsonParser#getLong()` is valid only `VALUE_NUMBER` parser state. But current parser state is {0}.
- ORA-26333:** `JsonParser#getBigDecimal()` is valid only `VALUE_NUMBER` parser state. But current parser state is {0}.
- ORA-26334:** `JsonParser#getArray()` is valid only for `START_ARRAY` parser state. But current parser state is {0}.
- ORA-26335:** `JsonParser#getObject()` is valid only for `START_OBJECT` parser state. But current parser state is {0}.
- ORA-26336:** A timestamp with a region is not supported. Only offset timezones are supported.

ORA-26337: The objects and arrays in the JSON value may not nest deeper than {0} levels

Cause: The JSON document being encoded has objects and arrays that nest deeper than 65,535 levels.

Action: Change the JSON document so that it has fewer than 65,535 levels of nesting.

ORA-26500: error on caching "string"."string"

Cause: Attempt to cache the replication information which is unavailable in the catalog for the object.

Action: Use `dbms_reutil.sync_up_rep` to validate the replication catalog, or use `dbms_reutil.make_internal_pkg` to validate internal package.

ORA-26501: RepAPI operation failure

Cause: An external RepAPI operation failed.

Action: consult detail error message.

ORA-26502: error resignal

Cause: An internal service failed and signalled an error"

Action: consult detail error message.

ORA-26503: internal RepAPI operation failure on object *string.string*

Cause: An unexpected internal RepAPI failure was detected

Action: Contact Oracle support.

ORA-26504: operation not implemented

Cause: The caller requested a RepAPI operation that was not implemented

Action: Do not issue this call.

ORA-26505: unexpected internal null

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26506: null global context

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26507: null master connection

Cause: The master connection handle was or became invalid.

Action: Verify that the master connection is valid.

ORA-26508: null materialized view connection

Cause: The client connection handle was or became invalid.

Action: Verify that the client connection is valid.

ORA-26509: null materialized view control structure

Cause: An internal materialized view control structure could not be obtained.

Action: Check that the owner and users provided are correct.

ORA-26510: materialized view name: '*string*' is greater than max. allowed length of *string* bytes

Cause: The specified materialized view name was too long.

Action: Shorten the materialized view name.

ORA-26511: master table '*string.string*' not found

Cause: A RepAPI operation was attempted against a non-existent or invalid master table

Action: Verify that the master table object exists.

ORA-26512: error pushing transaction to def\$error

Cause: An unexpected error occurred while sending an def\$error rpc to the master site

Action: Verify that the DBMS_DEFER package is valid and executable by the RepAPI client. Contact the local or master site administrator, if necessary.

ORA-26513: push error: master proc. *string*\$RP.*string* failed for trans:*string* seq:*string*

Cause: A conflict/error occurred at the master site while executing a \$RP.rep_insert(), rep_update(), or rep_delete() function which was not handled by conflict resolution logic at the master.

Action: Notify master site system administrator or DBA.

ORA-26514: object '*string.string*' not found

Cause: The specified object was expected but not found.

Action: Verify that the specified object exists and is valid.

ORA-26515: no master log available for '*string.string*'

Cause: The specified master log was not found or available for the named table.

Action: Create the master log at the master site or correct any problems that may exist with the log.

ORA-26516: no push transaction acknowledgement

Cause: RepAPI was unable to confirm that the last pushed transaction was successfully committed by the master site.

Action: Verify that the communications link between the local site and the master site is still valid. If the transaction has not been committed at the master, repush the transaction.

ORA-26517: materialized view control entry for '*string.string*' was not found

Cause: The specified materialized view catalog control reocrd was not found.

Action: Verify that the local materialized view catalog is valid and that the local materialized view is properly defined.

ORA-26518: push queue synchronization error detected

Cause: Client tried to repush a transaction has already been committed at the master site. A common cause of this problem is an error at the local site in initializing or updating the local site transaction sequence mechanism.

Action: Verify that transaction data that RepAPI was attempting to repushed to the master site exists at the master table and is valid and consistent with the local site. If this error occurs, redundantly identified transactions are ignored and then purged from the local updatable materialized view logs. Check that the local site is correctly assigning new transactionIDs and is not accidentally generating non-unique values.

ORA-26519: no memory available to allocate

Cause: There was no memory left for the RepAPI process. This error may occur when RepAPI is trying to allocate a new table buffer area.

Action: Shutdown one or more local applications to attempt to free heap memory and retry the RepAPI operation.

ORA-26520: internal memory failure

Cause: An internal memory error was detected.

Action: Check if other errors have occurred or determine if any local application may have corrupted the memory subsystem.

ORA-26521: rpc initialization error

Cause: An error occurred during the initialization of a PL/SQL rpc.

Action: Verify that the procedure to be invoked exists and is valid at the master site and is executable by the RepAPI user.

ORA-26522: rpc execution error

Cause: An error occurred during the execution of a PL/SQL rpc.

Action: Check the error messages from the remote procedure and fix any remote site problems that may be preventing the execution of the invoked rpc.

ORA-26523: rpc termination error

Cause: An error occurred during the termination of a PL/SQL rpc. This is usually caused by master site being unable to close an opened cursor or if RepAPI cannot deallocate internal memory.

Action: Fix any server side problems first, determine if the RepAPI memory subsystem has been corrupted.

ORA-26524: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

ORA-26525: session connection attempt failed for *string* (@*string*)

Cause: A connection could not be established to the specified database using the provided connection string.

Action: Check that the user, password, connect string, names services, network, and any remote site listener process are properly installed and working.

ORA-26526: materialized view sql ddl parse/expansion failed for *string.string*

Cause: The client sql materialized view definition query could not be properly parsed by the master Oracle site.

Action: Check that materialized view ddl sql is compatible with the currently connected version of Oracle and does not violate any of the RepAPI sql limitations or restrictions.

ORA-26527: local store callback init phase failed for '*string.string*'

Cause: The client callback failed during its INIT phase for the named object.

Action: Verify that the objects referenced by the client callback exist and are valid. Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26528: local store callback proc phase failed for '*string.string*'

Cause: The client callback failed during its PROC phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26529: local store callback term phase failed for '*string.string*'

Cause: The client callback failed during its TERM phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26530: unable to build materialized view refresh control list

Cause: The materialized view control list could not be constructed. This is generally the result of an error while accessing the local materialized view catalog.

Action: Verify that the named materialized view(s) are properly defined and valid.

ORA-26532: replication parallel push simulated site failure

Cause: A parallel push executed with event 26531 enabled raises this error to simulation failure of network or destination site.

Action: Do not enable the event for normal operation.

ORA-26534: collision: tranID *number* ignored and purged

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: See the action section for E_QUEUESYNC (26518).

ORA-26535: *number* byte row cache insufficient for table with rowsize=*number*

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: Increase the RepAPI row buffer size or reduce the width of the replicated tables.

ORA-26536: refresh was aborted because of conflicts caused by deferred transactions

Cause: There are outstanding conflicts logged in the DEFERROR table at the materialized view's master site.

Action: Resolve the conflicts in the master DEFERROR table and refresh again after the table is empty. Alternatively, refresh with REFRESH_AFTER_ERRORS, even if there are conflicts in the master's DEFERROR table. Proceeding despite conflicts can result in an updatable materialized view's changes appearing to be temporarily lost, until a refresh succeeds after the conflicts are resolved.

ORA-26537: Integrated Replicat is not supported in Oracle Autonomous Database Cloud.

Cause: An Integrated Replicat, which is not supported in Oracle Autonomous Database Cloud, attempted to start to an apply process in Oracle Autonomous Database Cloud.

Action: Use Parallel Replicat instead.

ORA-26538: XStream In is not supported in Oracle Autonomous Database Cloud.

Cause: An attempt was made to create or start an XStream inbound server, which is not supported in Oracle Autonomous Database Cloud.

Action: None

ORA-26539: Owner has insufficient privileges to enable automatic CDR.

Cause: Schema owner without create table privilege is attempting to configure automatic conflict detection and resolution (CDR) on a table in the schema.

Action: Grant create table privilege to the schema owner.

ORA-26562: last RepAPI error

ORA-26563: renaming this table is not allowed

Cause: An attempt was made to rename a replicated table, an updatable materialized view table, a table that had logical partition tracking created, or the master table of a materialized view for which a materialized view log was created.

Action: Either, drop the logical partition tracking, unregister the replicated table with `dbms_repcat.drop_master_repobject`, or use the recommended procedure to rename the master table of a materialized view.

ORA-26564: *string* argument is not of specified type

Cause: User passed type of the given argument number doesn't match with the type of the argument in the stored arguments.

Action: Invoke correct type procedure (i.e. `get_XXX_arg`)

ORA-26565: Call to *type_arg* made before calling `dbms_defer.call`

Cause: User invoked `type_arg` procedure before starting a deferred call

Action: Invoke various procedures in the correct order.

ORA-26566: Couldn't open connect to *string*

Cause: Failed to open connection using given dblink

Action: Make sure that the dblink is valid and remote m/c is up.

ORA-26571: *string.string.string*: number of arguments (*string*) does not match replication catalog

Cause: number of arguments does not match replication catalog

Action: examine total number of arguments for the rpc call

ORA-26572: *string.string.string*: argument *string* does not match replication catalog

Cause: the (rpc) call is corrupted

Action: examine total number of arguments and each argument for the rpc call

ORA-26575: remote database does not support replication parallel propagation

Cause: The remote database has a version lower than Oracle 8.0 and hence does not understand replication parallel propagation.

Action: Use serial propagation or upgrade the remote database to Oracle 8.0 or above.

ORA-26576: cannot acquire SR enqueue

Cause: An attempt to acquire the SR enqueue in exclusive mode failed.

Action: n/a

ORA-26577: PRESERVE TABLE can not be used when dropping old style materialized view *string.string*

Cause: The materialized view consists of a view and a container table.

Action: Drop the materialized view without PRESERVE TABLE option.

ORA-26578: No capture in this multitenant container database associated with queue "*string*".

Cause: An outbound server's queue was not associated with a capture from the same multitenant container database (CDB) before adding or starting an outbound server.

Action: Execute the DBMS_STREAMS_ADM.CREATE_CAPTURE procedure to create a capture before adding or starting an outbound server.

ORA-26579: Restarting capture worker because *string* PDBs have been assigned to capture worker.

Cause: Capture worker restarted because there were too many pluggable databases (PDBs) assigned to it.

Action: None. The Shared Capture Service will restart.

ORA-26580: Must use *string.string* procedure for shared capture *string*.

Cause: An incorrect procedure was executed for a shared capture."

Action: Run the suggested procedure.

ORA-26581: LCR packing error (*number* bytes remaining, required *number* bytes).

Cause: There was not enough space in the LCR buffer to pack the logical change record (LCR).

Action: Capture will automatically restart.

ORA-26582: cannot alter this parameter because previous ALTER statement is in progress

Cause: An attempt was made to alter the parameter when the previous operation was still in progress.

Action: Retry after the previous ALTER statement is complete.

ORA-26583: modifying *string* parameter requires SID='*' qualifier

Cause: The SID='*' qualifier was not specified in the command. The setting for the specified parameter must be exactly the same on all Oracle RAC database instances.

Action: Reenter the command using SID='*' or without the SID qualifier.

ORA-26584: Altering '*string*' parameter requires SCOPE=BOTH.

Cause: An attempt was made to alter a system parameter without SCOPE=BOTH.

Action: Reexecute the statement with SCOPE=BOTH.

ORA-26585: cannot configure more shared capture instances than number of Oracle RAC instances (*string*)

Cause: The specified NUM_INSTANCES was greater than the number of Oracle RAC instances.

Action: Retry the operation with a lower number of instances.

ORA-26586: Shared Capture Service has already been enabled.

Cause: An attempt was made to enable the Shared Capture Service when it was already enabled.

Action: Disable the service before enabling it.

ORA-26587: cannot disable Shared Capture Service while there are PDBs still registered to it

Cause: An attempt was made to disable Shared Capture Service while there were pluggable databases (PDBs) registered to it.

Action: Query the CDB_SHARED_CAPTURE_PDBS view from the root container to check which PDBs are still registered and unregister all Extracts from those PDBs.

ORA-26588: Shared Capture Service is not enabled.

Cause: Shared Capture Service was not enabled.

Action: Run the DBMS_SHARED_CAPTURE_ADM.ENABLE_SERVICE procedure to enable the service before retrying the operation.

ORA-26589: cannot stop Shared Capture Service while there are PDBs still registered to it

Cause: An attempt was made to stop Shared Capture Service while there were pluggable databases (PDBs) registered to it.

Action: Perform one of the following: 1) Retry the same command with FORCE argument set to TRUE. 2) Check the CDB_SHARED_CAPTURE_PDBS view to see which PDBs are still registered and unregister all Extracts from those PDBs.

ORA-26590: The JOB_QUEUE_PROCESSES parameter must be greater than zero.

Cause: Parameter JOB_QUEUE_PROCESSES was set to zero.

Action: Run the ALTER SYSTEM statement to increase the parameter value.

ORA-26591: The specified tablespace is not an automatic segment space management tablespace.

Cause: Shared Capture Service required an automatic segment space management tablespace.

Action: Specify an automatic segment space management tablespace.

ORA-26592: An invalid tablespace name specified.

Cause: An attempt was made to use SYS, SYSAUX, or SYSEXT for the Shared Capture Service.

Action: Specify a valid tablespace name.

ORA-26593: cannot drop capture *string* because one or more PDBs are currently registered to this capture

Cause: One or more pluggable databases (PDBs) were currently registered to the specified capture.

Action: Retry dropping the capture with the FORCE option set to TRUE or unregister all PDBs from the capture then re-drop the capture.

ORA-26594: Change table *string* for PDB *string* has been dropped.

Cause: The specified change table was dropped.

Action: Delete the pluggable database (PDB) Extract then register and re-create it.

ORA-26595: Pluggable database (PDB) '*string*' is already captured by '*string*'.

Cause: The specified PDB was captured by the Shared Capture Service.

Action: Provide another pluggable database name.

ORA-26596: Updating parameter *string* is not allowed for Shared Capture Service.

Cause: An attempt was made to update a forbidden parameter.

Action: Remove the specified parameter.

ORA-26597: Capture *string* encountered error *string* while obtaining the Logminer dictionary for object number *string* and version *string* at SCN *string*.

Cause: The Logminer dictionary was not populated correctly.

Action: Contact Oracle support.

ORA-26598: Unable to send LCR for a DML operation on "*string*". "*string*" (object_id=*string*). The LCR has more columns (old=*string*, new=*string*) than the receiver supports.

Cause: A logical change record (LCR) for a DML operation contained more than 1000 new or old columns, which is only supported by Oracle 23c and newer releases.

Action: Upgrade the receiver of the LCR or exclude the source table from the replication.

ORA-26599: Oracle GoldenGate Apply Receiver received an invalid LCR.

Cause: A field in a logical change record (LCR) contained unexpected or inconsistent data.

Action: Ensure the version of the Oracle GoldenGate installation is compatible with the database version.

ORA-26600: No tablespace remaining for the Shared Capture worker to write to the change table

Cause: The Shared Capture worker was unable to write to the change table because it ran out of tablespace.

Action: Add more files to the tablespace used by the Shared Capture Service.

ORA-26601: Capture *string* failed to mine database changes from SCN *string* to SCN *string* due to missing LogMiner dictionary.

Cause: The capture is unable to mine the redo logs from the specified system change number (SCN) range due to missing LogMiner dictionary.

Action: Alter the extract to start at an SCN higher than the given SCN range.

ORA-26602: Invalid source database while creating or altering XStream outbound server

Cause: While connected to a PDB parameters `source_database`, `source_root_name` and `source_container_name` must be either NULL or the current PDB.

Action: Remove `source_database`, `source_root_name` and `source_container_name` from `DBMS_XSTREAM_ADM.CREATE_OUTBOUND`, `DBMS_XSTREAM_ADM.ALTER_OUTBOUND` or `DBMS_CAPTURE_ADM.CREATE_CAPTURE` call or set `source_database`, `source_root_name` to the current PDB global name and `source_container_name` to the current PDB short name.

ORA-26603: cannot create a capture in CDB root while the Shared Capture Service is enabled

Cause: An attempt is being made to create a capture in a multitenant container database (CDB) root while the Shared Capture Service is enabled.

Action: Disable the Shared Capture Service before retrying.

ORA-26604: cannot enable the Shared Capture Service in the presence of a logmining capture in CDB root

Cause: An attempt is being made to enable the Shared Capture Service while a logmining capture already exists in a multitenant container database (CDB) root.

Action: Drop the logmining capture before retrying.

ORA-26650: *string string* background process *string* might not be started successfully

Cause: An error occurred during creation of a capture or apply background process.

Action: Review `V$STREAMS_CAPTURE` and `V$STREAMS_APPLY_COORDINATOR` views for the status of these processes. Also check the trace file for more information.

ORA-26651: Unable to start or stop capture process *string*

Cause: An attempt was made to start or stop a capture process while another capture process was concurrently starting or stopping.

Action: You cannot concurrently start or stop capture processes. Wait before attempting to start or stop additional capture processes.

ORA-26652: Capture *string* did not start properly and is currently in state *string*

Cause: An attempt to restart a capture process failed.

Action: Review V\$STREAMS_CAPTURE view for the state of the capture process. Also check the trace files for more information.

ORA-26653: Apply *string* did not start properly and is currently in state *string*

Cause: An attempt to restart an apply process failed.

Action: Streams: Review V\$STREAMS_APPLY% views for the state of the apply process. Also check the trace files for more information. XStream: Review V\$XSTREAM_APPLY% views for the state of the apply process. Also check the trace files for more information. GoldenGate: Review V\$GG_APPLY% views for the state of the apply process. Also check the trace files for more information.

ORA-26654: Capture *string* attempted to connect to apply *string* already configured for *string*

Cause: An attempt was made by a GoldenGate, XStream or Streams Capture or XStream In to connect to an Apply that is already connected in the other mode.

Action: You cannot connect a capture to an apply already configured for another apply mode. Create or connect to another apply.

ORA-26655: Invalid *string* specified for *string* procedure

Cause: An attempt was made to execute the specified procedure with an invalid SCN value.

Action: Resubmit procedure with a valid SCN value.

ORA-26656: Incompatible supplemental log encountered: *string*.

Cause: The supplemental logging versions of the capture side and apply side were incompatible.

Action: For incompatibility caused by a newer apply side, bypass or migrate the incompatible logs manually. Consider upgrading or patching the capture side. For incompatibility caused by an unrecognizable version group or an older apply side, upgrade or patch the apply side. For invalid versions, the logs might have been corrupted; verify the integrity of the supplemental logging data on the capture side.

ORA-26660: Invalid action context value for *string*

Cause: The value specified in the action context is invalid for use in GoldenGate, XStream or Streams.

Action: Check that the type and value are correct.

ORA-26662: unable to process *string* data dictionary information for object

Cause: The database was unable to process Oracle GoldenGate, XStream or Oracle Streams data dictionary for this object.

Action: Check that the compatibility for the database supports the object, and check the trace file for information about the object.

ORA-26663: error queue for apply process *string* must be empty

Cause: The error queue for this apply process contains error entries.

Action: Execute or delete errors in the error queue.

ORA-26664: cannot create *string* process *string*

Cause: An attempt was made to create a GoldenGate, XStream or Streams process when another was being created concurrently.

Action: Wait for the creation of the other GoldenGate, XStream or Streams process to finish before attempting to create the process.

ORA-26665: *string* process *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams process that already exists.

Action: Either specify another process or remove the existing GoldenGate, XStream or Streams process.

ORA-26666: cannot alter *string* process *string*

Cause: An attempt was made to alter a GoldenGate, XStream or Streams process that is currently running.

Action: Stop the GoldenGate, XStream or Streams process with FORCE parameter set to TRUE and reissue the command.

ORA-26667: invalid *string* parameter *string*

Cause: An attempt was made to specify an invalid parameter.

Action: Check the documentation for valid parameters.

ORA-26668: *string* process *string* exists

Cause: An attempt to remove the component failed because it is associated with the GoldenGate, XStream or Streams process.

Action: Either remove the process manually or specify the "cascade" option in `dbms_streams_adm.remove_queue`.

ORA-26669: parameter *string* inconsistent with parameter *string*

Cause: An attempt was made to specify a subprogram parameter value that is inconsistent with another parameter value.

Action: Check the documentation for valid parameter values.

ORA-26670: No capture is found for queue '*string*'

Cause: An attempt was made to add an XStream outbound server to a queue using uncommitted data mode when no co-located XStream capture was configured for that queue.

Action: Change to committed data mode or configure a local XStream capture for the specified queue then retry the operation.

ORA-26671: maximum number of *string* processes exceeded

Cause: Cannot create additional GoldenGate, XStream or Streams processes since the maximum number of processes has been reached.

Action: Remove existing GoldenGate, XStream or Streams processes and retry the operation.

ORA-26672: timeout occurred while stopping *string* process *string*

Cause: Timeout occurred while waiting for a GoldenGate, XStream or Streams process to shut down.

Action: Retry the operation. If the error persists, try stopping the process with the FORCE option, or contact Oracle Support Services.

ORA-26673: duplicate column name *string*

Cause: An attempt was made to specify a duplicate column name in an LCR.

Action: Remove the duplicate column and retry the operation.

ORA-26674: Column mismatch in '*string.string*' (LCR: *string type=string*; DB: *string type=string*)

Cause: The columns in the LCR were not the same or not found in the database table.

Action: Alter the database table.

ORA-26675: cannot create *string* capture process *string*

Cause: GoldenGate, XStream or Streams capture process could not be created because one or more parameters contain invalid value.

Action: Refer to trace file for more details.

ORA-26676: Table '*string.string*' has *string* columns in the LCR and *string* columns in the replicated site

Cause: The number of columns in the LCR was not the same as the the replicated site.

Action: Alter the table structure

ORA-26677: *string* downstream capture process *string* cannot proceed

Cause: Database global name has been set to a value which is same as the source database name of the downstream capture process.

Action: Change database global name to a value other than the source database name for the downstream capture.

ORA-26678: *string* downstream capture process for source database *string* must be created at database *string* first

Cause: A GoldenGate, XStream or Streams downstream capture process was nonexistent when this operation was attempted.

Action: Create a GoldenGate, XStream or Streams downstream capture process, then retry the operation.

ORA-26679: operation not allowed on LOB or LONG columns in LCR

Cause: Certain operations on LOB/LONG columns of the LCR through rule-based transformations, DML handlers, or error handlers were not allowed.

Action: Do not perform restricted operations on LOB or LONG columns in LCRs. See the documentation for operations that are restricted on LOB/LONG columns in LCRs.

ORA-26680: object type not supported

Cause: The specified object type is not supported.

Action: Retry with a supported object type.

ORA-26681: command type not supported

Cause: The specified command type is not supported.

Action: Retry with a supported command type.

ORA-26682: invalid value for publication_on

Cause: The publication_on parameter should be either 'Y' or 'N'

Action: Retry with a proper value for publication_on.

ORA-26683: invalid value for value_type

Cause: The value_type parameter should be either 'OLD' or 'NEW'

Action: Retry with proper value_type.

ORA-26684: invalid value for value_type

Cause: The value_type parameter should be one of 'OLD', 'NEW' or '*'

Action: Retry with proper value_type.

ORA-26685: cannot apply transactions from multiple sources

Cause: Transactions from multiple sources were sent to the same apply process.

Action: Create multiple apply processes and create appropriate rules so that transactions from only one source reach an apply process.

ORA-26686: cannot capture from specified SCN

Cause: An attempt was made to specify an invalid SCN.

Action: Retry with a valid SCN.

ORA-26687: no instantiation SCN provided for "string"."string" in source database "string"

Cause: Object SCN was not set. If the object is a table, then both fields will be filled, for example "SCOTT"."EMP". If the object is a schema, only one field will be set, for example "SCOTT"."". And if the object is the entire database, no fields will be set, for example ""."".

Action: Set the SCN by calling DBMS_APPLY_ADM.SET_%_INSTANTIATION_SCN

ORA-26688: missing key in LCR

Cause: Metadata mismatch, or not enough information in the user generated LCR.

Action: Alter the database object, or provide all defined keys in the LCR.

ORA-26689: column datatype mismatch in LCR

Cause: The datatypes of columns in the LCR are not the same as the datatypes in the database object.

Action: Alter the database object.

ORA-26690: datatype not supported at non-Oracle system

Cause: One of the columns of the LCR being applied was of a datatype not supported by either the target non-Oracle system or by the Oracle transparent gateway through which the apply is being done.

Action: Do not apply data of this type. If possible, filter out columns containing such datatypes before applying.

ORA-26691: operation not supported at non-Oracle system

Cause: The apply process attempted an operation that is either not supported by the non-Oracle system or by the Oracle transparent gateway through which the apply is being done. Some kinds of DML (like procedure and function calls) and all DDL will cause this error to be raised.

Action: Do not attempt to apply such LCRs to non-Oracle systems. If possible, filter out such LCRs before applying.

ORA-26692: invalid value *string*, *string* should be in *string* format

Cause: The parameter specified was not in the correct format.

Action: Specify the parameter value in the correct format.

ORA-26693: *string string* process dropped successfully, but error occurred while dropping rule set *string*

Cause: An attempt to drop an unused rule set failed after dropping the GoldenGate, XStream or Streams process successfully.

Action: Check existence of rule set and manually drop if necessary.

ORA-26694: error while enqueueing into queue *string.string*

Cause: An error occurred while enqueueing a message.

Action: If the situation described in the next error on the stack can be corrected, do so.

ORA-26695: error on call to *string*: return code *string*

Cause: A locking related call failed.

Action: Try the call again after fixing the condition indicated by the return code.

ORA-26696: no *string* data dictionary for object with number *string* and version number *string* from source database *string*

Cause: An attempt to access the database object failed because the data dictionary for the object was either never populated or it was purged.

Action: Make sure the GoldenGate, XStream or Streams data dictionary is created by calling DBMS_CAPTURE_ADM.PREPARE_%_INSTANTIATION.

ORA-26697: LCR contains extra column '*string*'

Cause: The LCR contained more columns than the replicated table.

Action: Alter the database object.

ORA-26698: *string* did not have a *string* rule set

Cause: The GoldenGate, XStream or Streams client does not have a rule set of the indicated type.

Action: Verify that the GoldenGate, XStream or Streams client has a rule set of the specified type, and retry the operation.

ORA-26699: *string* message consumer *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams message consumer that already exists.

Action: Either specify another message consumer or remove the existing GoldenGate, XStream or Streams message consumer.

ORA-26701: *string* process *string* does not exist

Cause: An attempt was made to access a GoldenGate, XStream or Streams process which does not exist.

Action: Check with the relevant security views for the correct name of the object.

ORA-26704: The Owner instance *string* of the queue table is not up or the QMN0 process is down.**ORA-26705: cannot downgrade capture process after Streams data dictionary has been upgraded**

Cause: An attempt was made to downgrade a capture process after it has upgraded the GoldenGate, XStream or Streams data dictionary.

Action: Drop the capture process before attempting the downgrade.

ORA-26706: cannot downgrade capture process

Cause: An attempt was made to downgrade a capture process that has a higher version than the downgrade release version.

Action: Drop the capture process after capture has finished consuming all the redo logs before attempting the downgrade.

ORA-26708: remote DDL not supported by STREAMS : *dblink string*

Cause: The apply process attempted to apply a DDL LCR via a *dblink*. This is not supported.

Action: Do not attempt to apply DDL LCRs via a *dblink*. If possible, filter out DDL LCRs before applying.

ORA-26709: remote file server (RFS) restart due to real-time mining change in Oracle GoldenGate

Cause: The remote file server (RFS) process was restarted due to a change in the real-time mining option of Oracle GoldenGate.

Action: No action required. This is an informational message only.

ORA-26710: incompatible version marker encountered during Capture

Cause: Capture process cannot mine redo from a version higher than the current software release version.

Action: Drop and recreate the capture process.

ORA-26711: remote table does not contain a primary key constraint

Cause: The master table for remote apply does not contain a primary key constraint or the primary key constraint has been disabled.

Action: Create a primary key constraint on the master table or enable the existing constraint.

ORA-26712: remote object is "string"."string"\@"string"

Cause: See the preceding error message to identify the cause. This message names the remote object, usually a table or view, for which an error occurred when GoldenGate, XStream or Streams tried to access it for remote apply.

Action: See the preceding error message.

ORA-26713: remote object does not exist or is inaccessible

Cause: GoldenGate, XStream or Streams replication could not access the named table or view at a remote database to apply changes.

Action: Confirm that the given remote table or view exists and is accessible through the given database link. When using a Heterogeneous Services database link to access a non-Oracle system, it may be necessary to check administration details for network connections at the non-Oracle system.

ORA-26714: User Error *string* encountered during apply process

Cause: An error was encountered during an apply process.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action.

ORA-26715: time limit reached

Cause: The specified time limit was reached for the GoldenGate, XStream or Streams process.

Action: Restart the GoldenGate, XStream or Streams process, increasing the TIME_LIMIT parameter if necessary.

ORA-26716: message limit reached

Cause: The specified message limit was reached for the Capture process.

Action: Restart the Capture process, increasing the MESSAGE_LIMIT parameter if necessary.

ORA-26717: SCN limit reached

Cause: The specified SCN limit was reached for the GoldenGate, XStream or Streams process.

Action: Change the MAXIMUM_SCN parameter, then restart the GoldenGate, XStream or Streams process.

ORA-26718: transaction limit reached

Cause: The specified transaction limit was reached for the Apply process.

Action: Restart the Apply process, increasing the TRANSACTION_LIMIT parameter if necessary.

ORA-26721: enqueue of the LCR not allowed

Cause: An apply process attempted to enqueue an LCR with a LONG column. This is not supported.

Action: Modify rules or unset the enqueue destination to prevent LCRs with LONG columns from being enqueued by the apply process.

ORA-26723: user "*string*" requires the role "*string*"

Cause: The caller did not have the specified role or called the procedure from a definer's rights package or procedure.

Action: Grant the specified role to the caller. If the procedure is called from a definer's rights package or procedure, change the definer's rights package or procedure to an invoker's rights package or procedure. Or grant all the privileges for the specified role explicitly.

ORA-26724: only SYS is allowed to set the Capture or Apply user to SYS.

Cause: The Capture or Apply user was specified as SYS by a user other than SYS.

Action: Set SYS as the Capture or Apply user while logged in as SYS.

ORA-26725: cannot downgrade apply handlers

Cause: An attempt was made to downgrade apply handlers that are not associated with a local database object, or the apply handlers are associated with a specific apply process.

Action: Drop the associated apply handlers before attempting the downgrade.

ORA-26726: standby and DOWNSTREAM_REAL_TIME_MINE are incompatible

Cause: An attempt was made to set the standby database and DOWNSTREAM_REAL_TIME_MINE option of the Oracle GoldenGate, XStream or Oracle Streams capture process on the same database.

Action: Do not attempt to set the DOWNSTREAM_REAL_TIME_MINE option for a Oracle GoldenGate, XStream or Oracle Streams capture process on a standby database. Do not attempt to change a database role to standby if there exists a capture process with the DOWNSTREAM_REAL_TIME_MINE parameter set to Y.

ORA-26727: Cannot alter queue_to_queue property of existing propagation.

Cause: The queue_to_queue property was specified for an existing propagation.

Action: Pass NULL for the queue_to_queue argument.

ORA-26741: cannot assemble lob

Cause: An attempt was made to assemble lob, but the compatibility of the source database for the LOB information is lower than 10.2.0.

Action: Set ASSEMBLE_LOBS to FALSE in the DML or error handler while this handler is processing LOB information from a source database with a compatibility level lower than 10.2.0.

ORA-26742: Maximum number of ignored transactions exceeded

Cause: An attempt was made to add more than the allowed number of ignored transactions.

Action: Please clear the current list of ignored transactions.

ORA-26744: *string* capture process "*string*" does not support "*string*".*string* because of the following reason: *string*

Cause: GoldenGate, XStream or Streams capture encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One way might be to add a negative rule excluding changes from the unsupported table from being captured. Streams: Also query the DBA_STREAMS_UNSUPPORTED view to determine which tables are not supported by Streams and for what reason. Consider adding negative rules for any tables

that may be captured, but are present in this view. XStream: Also query the DBA_XSTREAM_OUT_SUPPORT_MODE view to determine which tables are not supported by XStream and for what reason. Consider adding negative rules for any tables that may be captured, but are present in this view. GoldenGate: Also query the DBA_GOLDENGATE_SUPPORT_MODE view to determine which tables are not supported by GoldenGate and for what reason. Consider adding EXCLUDETABLE statements for any tables that may be captured, but are present in this view. For potential workarounds to certain unsupported properties, see Metalink.

ORA-26745: cursors (*string*) are not sufficient

Cause: The maximum number of open cursors was too small for GoldenGate, XStream or Streams Apply.

Action: Increase the value of open_cursors.

ORA-26746: DDL rule "*string*"."*string*" not allowed for this operation

Cause: A DDL rule was specified for this operation.

Action: Specify a non-DDL rule for this operation.

ORA-26747: The one-to-many transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not process or return DDL LCRs. Also ensure that the function does not return NULL.

ORA-26748: The one-to-one transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not return an LCR that has a different type from the LCR which was passed to the function. Also ensure that the function does not return NULL. For DDL transformation functions, creating and returning a new DDL LCR is not allowed.

ORA-26752: Unsupported LCR received for "*string*"."*string*"

Cause: GoldenGate, XStream or Streams capture process received an LCR with unsupported operation from LogMiner.

Action: Stream: If this object is listed in DBA_STREAMS_UNSUPPORTED view, modify rules to prevent changes made to this object from getting captured. XStream: If this object is listed in DBA_XSTREAM_OUT_SUPPORT_MODE view, modify rules to prevent changes made to this object from getting captured. GoldenGate: If this object is listed in DBA_GOLDENGATE_SUPPORT_MODE view, modify rules to prevent changes made to this object from getting captured.

ORA-26753: Mismatched columns found in '*string.string*'

Cause: The columns in the LCR were not the same as the table in the database.

Action: Alter the database table.

ORA-26754: cannot specify both one-to-one transformation function *string* and one-to-many transformation function *string*

Cause: Both a one-to-one transformation function and a one-to-many transformation function were specified for a rule.

Action: Remove either the one-to-one transformation function, or the one-to-many transformation function.

ORA-26757: Timed out waiting for remote operation on instance *string* to finish

ORA-26760: Could not find message number *string* for transaction with id *string*

Cause: Error

Action: Contact Oracle support"

ORA-26761: Standby Redo Logs not available for real time mining

Cause: Standby Redo Logs required for real time mining by downstream capture process were not available.

Action: Check the configuration of Standby Redo Logs and retry the operation at a later time. To start the capture process without real time mining property, reset `DOWNSTREAM_REAL_TIME_MINE` parameter of the capture process and retry the operation.

ORA-26762: Cannot autogenerate name for parameter *string* because of the following reason: *string*

Cause: An error was encountered while attempting to generate a name for a parameter which was passed a NULL value.

Action: If possible, fix the error, otherwise specify the parameter name explicitly.

ORA-26763: invalid file type "*string*"

Cause: An invalid file type was specified for the ASM file.

Action: Check documentation for valid ASM file types.

ORA-26764: invalid parameter "*string*" for local capture "*string*"

Cause: An invalid parameter was specified for the local capture process.

Action: Check documentation for valid parameters.

ORA-26765: invalid parameter "*string*" for downstream capture "*string*"

Cause: An invalid parameter was specified for the downstream capture process.

Action: Check documentation for valid parameters.

ORA-26766: Unexpected redo pattern encountered by LogMiner

Cause: LogMiner encountered an unexpected redo pattern. This is usually caused by tables with unsupported data types or newer table features.

Action: Remove the capture rule for the table and restart capture.

ORA-26767: Not enough redo log information for LogMiner

Cause: Direct-path SQL with NOLOGGING option or a SQL*Loader operation with UNRECOVERABLE clause was specified for the table.

Action: Remove the capture rule for the table and restart capture.

ORA-26768: Maximum number of unsupported tables exceeded

Cause: An attempt was made to add more than the allowed number of unsupported tables.

Action: Clear the current list of unsupported tables.

ORA-26770: Index-organized table not supported

ORA-26771: User-defined column type not supported

ORA-26772: Encrypted column not supported

ORA-26773: Invalid data type for column "*string*"

ORA-26774: Queue table not supported

ORA-26775: Temporary table not supported

ORA-26776: Subordinate object not supported

ORA-26777: External table not supported

ORA-26778: File column not supported

ORA-26779: Materialized view not supported

ORA-26780: Object table not supported

ORA-26781: Nested table not supported

Cause: Any DML to Nested table is not supported if the table or its parent is being replicated.

Action: n/a

ORA-26782: Function-based index not supported

ORA-26783: Column data type not supported

ORA-26785: Object has a NULL value

Cause: A method was invoked on a NULL object.

Action: Initialize the object with a non-NULL value.

ORA-26786: A row with key *string* exists but has conflicting column(s) *string* in table *string*

Cause: The row to update or delete exists in the table but had conflicting value for some columns.

Action: For Streams and XStream, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status of the database guard to ensure local modifications are not allowed, then re-instantiate the table and contact support if the problem persists. For GoldenGate, configure Conflict Resolution (CDR) or REPEROR handler for the table and restart replicat.

ORA-26787: The row with key *string* does not exist in table *string*

Cause: The row to update or delete does not exist in the table.

Action: For Streams and XStream, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status of the database guard to ensure local modifications are not allowed, then re-

instantiate the table and contact support if the problem persists. For GoldenGate, configure Conflict Resolution (CDR) or REPERROR handler for the table and restart replicat.

ORA-26788: The column *string* is not encrypted in the local database.

Cause: The column in the destination database is NOT encrypted while it is encrypted in the source database.

Action: Set the corresponding column property in the destination database to 'encrypted' or change the apply parameter, PRESERVE_ENCRYPTED_COLS, to 'N' to suppress the error.

ORA-26789: Cannot split propagation *string* because only one propagation originates from its source queue "*string*". "*string*"

Cause: Only one propagation originated from the propagation source queue.

Action: Please do not split this propagation.

ORA-26790: Requesting a lock on *string* "*string*" timed out

Cause: Could not get a lock on the object because another process was holding the lock.

Action: Please try later.

ORA-26791: Cannot split or merge propagation "*string*"

Cause: A process tried to split or merge this propagation, but failed and left STREAMS in an inconsistent state.

Action: Query DBA_RECOVERABLE_SCRIPT_BLOCKS view, and roll back the script which tried to split or merge this propagation.

ORA-26792: Invalid source database name *string*

Cause: The value for the source database global name was not valid.

Action: Specify a valid database global name. If the source database is not the local database, check the listener is up and running.

ORA-26793: Number of capture processes that enqueued message to queue "*string*". "*string*" not equal to one

Cause: Split-merge API requires only one capture process enqueued message to the queue where the propagation originated

Action: Please drop one capture, or split or merge another propagation.

ORA-26794: Hierarchically enabled tables not supported

Cause: Hierarchically enabled tables are not supported.

Action: Disable hierarchy for the table.

ORA-26795: Cannot modify an LCR received from an XStream outbound server

Cause: An attempt was made to modify an LCR generated by an XStream outbound server.

Action: Clone the LCR generated by the XStream outbound server by using the provided OCILCR* functions, such as OCILCRNew, OCILCRHeaderSet, and OCILCRRowColumnInfoSet. Then modify the cloned LCR.

ORA-26798: LOB logical change record (LCR) missing LOB column in table "*string*". "*string*"

Cause: The apply server could not fill update LOB because of missing LOB column.

Action: Check that all LOB columns have been sent correctly.

ORA-26799: unique constraint *string.string* violated for table *string.string* with column values *string*

Cause: The row to update or insert violated the unique constraint.

Action: For XStreams, define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR.

ORA-26800: Apply not the only subscriber for "*string*"."*string*".

Cause: The combined capture and apply optimization could not be used since Apply was not the lone subscriber to the queue.

Action: Apply has to be the only subscriber to the queue.

ORA-26801: More than one subscriber for "*string*"."*string*".

Cause: Multiple subscribers were found when the combined capture and apply optimization was configured to only work for one subscriber.

Action: Configure a single subscriber, apply or propagation for the queue, or enable the optimization for multiple subscribers.

ORA-26802: Queue "*string*"."*string*" has messages.

Cause: The combined capture and apply optimization could not be used since the queue had messages.

Action: Make sure queue is empty before starting apply and capture.

ORA-26803: Subscribers have changed for queue "*string*"."*string*".

Cause: The combined capture and apply optimization could not be used since the subscribers had changed.

Action: Optimization can be used only if the queue has a single subscriber.

ORA-26804: Apply "*string*" is disabled.

Cause: The apply process was disabled or aborted.

Action: Start the apply process.

ORA-26805: Queue "*string*"."*string*" has rule based subscribers.

Cause: The combined capture and apply optimization could not be used since the queue had rule based subscribers.

Action: Make sure queue has no rule based subscribers before starting apply and capture.

ORA-26806: Remote database could not support combined capture and apply optimization.

Cause: The remote database has a version lower than Oracle 11.0 and hence does not understand combined capture and apply optimization.

Action: Upgrade the remote database to Oracle 11.0 or above in order to use the combined capture and apply optimization.

ORA-26807: Database link is not NULL for Apply with the name "*string*".

Cause: The combined capture and apply optimization could not be used since apply_database_link was not NULL.

Action: Drop and recreate the apply with NULL value for `apply_database_link`.

ORA-26808: Apply process *string* died unexpectedly.

Cause: Apply process died unexpectedly.

Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26809: Capture aborted: checkpoint-free mode requires combined capture and apply mode.

Cause: The requirements for combined capture and apply mode were broken.

Action: Restore the combined capture and apply mode and then restart the capture. If combined capture and apply mode is no longer desired, drop the existing checkpoint-free capture and create another one that will take checkpoints.

ORA-26810: Apply "*string*" on database "*string*" is in the mode of combined capture and apply.

Cause: The combined capture and apply optimization could not be used because Apply was already in the mode of combined capture and apply.

Action: Do not configure two captures for one apply.

ORA-26811: Client has already attached to *string* apply "*string*".

Cause: The client has already attached to the specified apply process.

Action: Detach apply process before reattach.

ORA-26812: An active session currently attached to XStream server "*string*".

Cause: An attempt was made to attach to the specified XStream server while another session was attached to it.

Action: Retry when there is no session attaching to the specified XStream server.

ORA-26813: The value for argument "ARRAY_SIZE" is too small

Cause: The value for argument "ARRAY_SIZE" was less than the number of columns in the requested column list.

Action: Check the return value for "NUM_COLUMNS" parameter then allocate all input arrays to at least that size and invoke the same OCI function again.

ORA-26814: The value for argument *string* exceeds maximum *string*

Cause: The value for specified value exceeded the maximum allowed.

Action: Correct the value of specified argument.

ORA-26815: Error from Apply Network Receiver for Apply "*string*" and Capture "*string*".

Cause: The Apply Network Receiver aborted due to an unexpected error.

Action: Query `DBA_APPLY_ERROR` to determine the error and then restart the Capture and Apply.

ORA-26816: *string* apply process "*string*" (OS id *string*) is exiting due to ORA-*string*.

Cause: An apply process encountered an unexpected error.

Action: Query `DBA_APPLY` to examine the status of Apply and restart Apply if needed.

ORA-26817: *string* capture process "*string*" is unable to communicate with capture server *string* during initialization.

Cause: Capture server might not be started properly

Action: Fix any errors during capture server creation and re-start capture process

ORA-26818: *string* capture process *string* receives an error from capture server.

Cause: Capture server received an error.

Action: Check log for error details.

ORA-26819: *string* capture server for apply "*string*" and capture "*string*" encounters disabled or aborted propagation "*string*".

Cause: Propagation was disabled or aborted.

Action: Start propagation.

ORA-26820: *string* capture server for apply "*string*" and propagation "*string*" becomes active and needs join capture process "*string*".

Cause: Capture server was waiting for propagation or apply to start

Action: Capture process needs restart (done automatically).

ORA-26821: No propagation process found between source queue "*string*". "*string*" and destination queue "*string*". "*string*".

Cause: Propagation has not been configured.

Action: Configure a propagation between specified queues and restart capture.

ORA-26822: Failure in creating capture servers (ksv error code *string*).

Cause: Failure in ksv slave creation.

Action: Identify the actual ksv error and act accordingly.

ORA-26823: *string* capture server *string* is unable to communicate with capture process "*string*".

Cause: Capture process was not started properly or was aborted.

Action: If Oracle GoldenGate, XStream or Streams capture process was stopped, then restart the capture process. Otherwise, fix any errors during the capture process creation and restart the capture process.

ORA-26824: user-defined XStream callback error

Cause: A value other than OCI_CONTINUE or OCI_SUCCESS was returned for the user-defined XStream callback function. Any returned value other than OCI_CONTINUE or OCI_SUCCESS is invalid.

Action: Verify that either OCI_CONTINUE or OCI_SUCCESS is returned from the user-defined XStream callback function.

ORA-26825: STREAMS process "*string*" is not configured as an XStream outbound server.

Cause: An attempt was made to attach to a STREAMS apply process, which was not configured as an XStream outbound server.

Action: Check the apply name or re-create the apply process as an XStream outbound server.

ORA-26826: *string* apply coordinator and apply slave are unable to communicate.

Cause: GoldenGate, XStream or Streams Apply process may have died unexpectedly.

Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26827: Insufficient privileges to attach to XStream outbound server "*string*".

Cause: Sufficient privileges were not granted to attach to the specified XStream outbound server.

Action: Query DBA_XSTREAM_OUTBOUND view to get the connect_user value for the specified outbound server. Then modify the application to connect to the outbound server's database using this value.

ORA-26828: XStream outbound server "*string*" requires combined capture and apply mode.

Cause: The specified XStream outbound server was not in combined capture and apply mode.

Action: Restore the combined capture and apply mode and then restart the capture.

ORA-26829: cannot set DISABLE_ON_ERROR parameter to 'N'

Cause: An attempt was made to change the DISABLE_ON_ERROR parameter for an XStream outbound server to 'N'.

Action: Remove the invalid statement.

ORA-26830: Cannot define handler for an XStream outbound server.

Cause: An attempt was made to define a handler for an XStream outbound server.

Action: Remove invalid statement.

ORA-26831: Cannot delete or execute error transaction from XStream outbound server "*string*".

Cause: An attempt was made to delete or execute an error transaction from the specified XStream outbound server.

Action: Remove invalid statement.

ORA-26832: Unable to create XStream outbound server "*string*" due to existing handler.

Cause: An attempt was made to create the specified XStream outbound server while there was a handler defined for the specified server.

Action: Use DBMS_APPLY_ADM.SET_DML_HANDLER procedure to remove all handlers defined on the specified server then retry statement.

ORA-26833: *string* failed to update acknowledgment SCN for propagation "*string*" from capture "*string*" to apply "*string*".

Cause: propagation might have been modified after GoldenGate, XStream or Streams was started.

Action: Ensure propagation is configured properly and restart GoldenGate, XStream or Streams.

ORA-26834: Unable to alter parameter '*string*' because *string* capture process is not configured to run locally

Cause: An attempt was made to alter the specified capture parameter when the GoldenGate, XStream or Streams capture process was not configured to run on the local database.

Action: Remove the invalid parameter or use DBMS_CAPTURE_ADM.ALTER_CAPTURE procedure to alter the parameter.

ORA-26835: The source database for XStream outbound server "*string*" is invalid

Cause: An attempt was made to add an XStream outbound server with a source database that was different from the associated capture's source database.

Action: Correct the value for the 'source_database' parameter in the call.

ORA-26836: The specified rules must be created from the same subsetting condition

Cause: An attempt was made to remove an outbound server's subset rules when the specified INSERT, UPDATE, and DELETE rules were not created from the same subsetting condition.

Action: Correct the rules in the statement.

ORA-26837: Server "*string*" is not an XStream inbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream inbound server.

Action: Replace with a procedure appropriate for an XStream inbound server and resubmit.

ORA-26838: Setting apply parameter "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply parameter that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid parameters. Check the documentation for valid parameter values.

ORA-26839: Apply tag for apply "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply tag that was not applicable for XStream Outbound Server.

Action: Do not set the apply tag when using XStream Outbound Server.

ORA-26840: Combined capture and apply optimization is disabled because *string* is unable to identify an apply for the source database "*string*".

Cause: There were multiple Streams apply processes using the same queue which made combined capture and apply (CCA) optimization not possible.

Action: If Streams performance is an issue, check the "Combined Capture and Apply Optimization" chapter in the "Oracle Streams Concepts and Administration" book. Then reconfigure the Streams processes to meet this optimization's requirements.

ORA-26841: No subscribers are found for queue "*string*". "*string*".

Cause: No propagation or apply was configured for the specified queue.

Action: Configure propagation or apply for the specified queue.

ORA-26842: Setting apply directive "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply directive that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid directives. Check the documentation for valid directives.

ORA-26843: Local propagation "*string*" found for capture queue "*string*".*string*".

Cause: The combined capture and apply optimization could not be used because a local propagation was attached to the capture queue.

Action: Remove the local propagation and restart capture.

ORA-26844: Found "*string*" active automatic split jobs for *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active split job is allowed for each GoldenGate, XStream or Streams Capture, but multiple active automatic split jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26845: Found "*string*" active split rows with the same cloned *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: In DBA_STREAMS_SPLIT_MERGE, for active split rows, the column CLONED_CAPTURE_NAME should be unique. However, multiple rows were found whose ACTION_TYPE column is 'SPLIT', ACTIVE column is 'ACTIVE' and have the same CLONED_CAPTURE_NAME.

Action: Check trace to see how the rows were inserted and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26846: Found "*string*" active automatic merge jobs for cloned *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active merge job is allowed for each cloned GoldenGate, XStream or Streams Capture, but multiple active automatic merge jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26847: Found invalid *string* type: "*string*"

Cause: Invalid GoldenGate, XStream or Streams type to split off was found. Type should only be 'PROPAGATION'(1) or 'APPLY'(2).

Action: Check trace to see how the invalid GoldenGate, XStream or Streams type was created and correct it.

ORA-26848: Split a nonexistent Streams Capture process "*string*" in job "*string*"

Cause: The job attempted to split a non-existent original Streams Capture.

Action: Drop the split job, or wait until the Streams Capture comes to existence.

ORA-26849: Split a nonsplittable *string* Capture process "*string*" in job "*string*"

Cause: The job tried to split a GoldenGate, XStream or Streams Capture that was not splittable. That is, the Capture either had less than two subscribers, or it was not the only Capture of its queue.

Action: Drop the split job, or wait until the GoldenGate, XStream or Streams Capture becomes splittable.

ORA-26850: Changes to queue subscribers were detected by *string* capture process.

Cause: The subscribers for capture queue might have changed.

Action: Capture process will restart automatically.

ORA-26851: Unable to connect to apply "*string*" because it has connected to another capture.

Cause: Another capture process is already connected to apply.

Action: Wait for the connected capture process to terminate or abort the connected capture process.

ORA-26852: Invalid NULL value for *column_value* parameter.

Cause: NULL is not allowed to be passed as the column value.

Action: Replace NULL with a proper AnyData instance containing NULL, e.g., `sys.AnyData.ConvertVarchar2(NULL)`, as the column value if the column value is NULL.

ORA-26853: invalid *cca* maximum percentage *string*

Cause: Specified percentage value was not in range 0 - 100.

Action: Specify a percentage value in the range 0 - 100.

ORA-26854: *string string* has no enqueue or dequeue privileges to the queue.

Cause: The GoldenGate, XStream or Streams user did not have enqueue or dequeue privilege to the queue.

Action: Grant GoldenGate, XStream or Streams user enqueue or dequeue privileges to the queue.

ORA-26855: *string string* has insufficient database privilege to access the queue.

Cause: The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.

Action: Grant GoldenGate, XStream or Streams user database privileges to access the queue.

ORA-26856: STREAMS *string* has insufficient database privilege to access the queue.

Cause: The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.

Action: Grant GoldenGate, XStream or Streams user database privileges to access the queue.

ORA-26857: LCR position cannot be null (XID=*string*).

Cause: The position of an LCR in the specified transaction was null.

Action: Use OCILCRHeaderSet to define the LCR position.

ORA-26858: LCR position must be strictly increasing (XID=*string*, LCR position=*string*, previous position=*string*).

Cause: The position of an LCR in the specified transaction was less than or equal to the previous LCR in transaction.

Action: Use OCILCRHeaderSet to correct the LCR position.

ORA-26859: Server "*string*" is not an XStream outbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream outbound server.

Action: Replace with a procedure appropriate for an XStream outbound server and resubmit.

ORA-26860: Different transactions must have different transaction IDs (XID=*string*, LCR position=*string*, previous commit position=*string*).

Cause: The position of an LCR in the specified transaction was greater than the position of the previous commit LCR in transaction with same transaction ID.

Action: Use different transaction IDs for different transactions.

ORA-26862: LCR position must be greater than the processed low position of the XStream inbound server (XID=*string*, LCR position=*string*).

Cause: The position of a logical change record (LCR) in the specified transaction was less than or equal to the processed low position of the XStream inbound server.

Action: Use OCILCRHeaderSet to correct the LCR position.

ORA-26863: Job "*string*" showing as an active job in DBA_STREAMS_SPLIT_MERGE does not exist in DBA_SCHEDULER_JOBS.

Cause: An active job showing in DBA_STREAMS_SPLIT_MERGE did not exist. It may have been dropped accidentally or something was wrong with it.

Action: Check trace to identify the problem and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26864: Error occurred in *string* automatic job: "*string*"

Cause: An error has happened inside GoldenGate, XStream or Streams automatic job.

Action: Check trace for more detail.

ORA-26865: must send a COMMIT LCR to end transaction '*string*' before sending another transaction

Cause: An attempt was made by a client application to send LCRs for a new transaction before sending a COMMIT LCR for the specified transaction.

Action: Modify the client application to send a COMMIT LCR at the end of the specified transaction.

ORA-26866: The Queue of *string* Apply process "*string*" is not changeable.

Cause: Not all of the conditions for the Queue of a GoldenGate, XStream or Streams Apply process to be changeable were met. Conditions are: -The Apply process is not running. -The Apply process has no error. -The Apply process has no spilling. -The Apply process is not

used for XStream Outbound or Inbound Servers. -The Apply process is a local Apply process. -The corresponding GoldenGate, XStream or Streams Capture process should be stopped.

Action: Make sure all of the conditions are met.

ORA-26867: *string* must be called during OCIXStreamOutLCRReceive execution

Cause: An attempt was made to execute the specified function while OCIXStreamOutLCRReceive call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamOutLCRReceive callback function.

ORA-26868: *string* must be called during OCIXStreamInLCRSend execution

Cause: An attempt was made to execute the specified function while OCIXStreamInLCRSend call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamInLCRSend callback function.

ORA-26869: must attach to an XStream inbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamInAttach call.

Action: Add OCIXStreamInAttach call before the specified function.

ORA-26870: cannot call *string* while OCIXStreamInLCRCallbackSend call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamInLCRCallbackSend call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamInLCRCallbackSend call in progress.

ORA-26871: unexpected *string* call (expecting *string*)

Cause: Could be one of the following reasons: 1) An attempt was made to invoke OCIXStreamInChunkSend when the most recent LCR or chunk sent did not have the OCI_XSTREAM_MORE_ROW_DATA flag set; 2) An attempt was made to invoke OCIXStreamInLCRSend when the most recent LCR or chunk sent had OCI_XSTREAM_MORE_ROW_DATA flag set.

Action: n/a

ORA-26872: must attach to an XStream outbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamOutAttach call.

Action: Add OCIXStreamOutAttach call before the specified function.

ORA-26873: cannot call *string* while OCIXStreamOutLCRCallbackReceive call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamOutLCRCallbackReceive call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamOutLCRCallbackReceive call in progress.

ORA-26874: string Capture process "string" cannot be split.

Cause: An attempt was made to split a GoldenGate, XStream or Streams Capture process that could not be split. That is, the Capture process either had less than two subscribers, or it was not the only Capture process of its queue.

Action: Wait until the GoldenGate, XStream or Streams Capture process can be split.

ORA-26875: Timeout while string automatic split job "string" waits for the subscriber "string" of Capture process "string" to acknowledge split

Cause: To split a subscriber of a GoldenGate, XStream or Streams Capture process, an automatic split job needs to wait until the subscriber acknowledges the split. The wait timed out.

Action: n/a

ORA-26876: invalid processed low-watermark (current position=string; new position=string)

Cause: An attempt was made to set the processed low-watermark to a value that was less than the current processed low-watermark.

Action: Correct the processed low-watermark in OCIXStreamOutProcessedLWMSets call.

ORA-26877: must reattach after an OCIXStreamOut call was interrupted

Cause: An attempt was made to execute another OCIXStreamOut API when an earlier call was interrupted because the XStream outbound server was disabled or the client requested cancellation of the operation.

Action: Execute OCIXStreamOutAttach call to reattach to the same XStream outbound server.

ORA-26878: inconsistent input LCR (LCR is 'string' type, expecting 'string')

Cause: An attempt was made to send an LCR that was not consistent with the specified LCR type.

Action: Correct your application to specify an LCR type that agrees with the LCR to be sent.

ORA-26879: "SET_ENQUEUE_DESTINATION" directive is not permitted on rules used by XStream outbound server "string"

Cause: One or more rules, used by the specified XStream outbound server, had SET_ENQUEUE_DESTINATION directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_enqueue e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = *specified outbound server*; 2) For each rule returned, execute DBMS_APPLY_ADM.SET_ENQUEUE_DESTINATION procedure to set the destination queue to null, or execute DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26880: "SET_EXECUTE" directive is not permitted on rules used by XStream outbound server "string"

Cause: One or more rules, used by the specified XStream outbound server, had SET_EXECUTE directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_execute e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = *specified outbound server*; 2) For each rule returned, use DBMS_APPLY_ADM.SET_EXECUTE procedure to set the EXECUTE parameter to TRUE, or use DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26881: ORA-string: string raised in string automatic string job:"string"."string" for Capture process "string" and cloned Capture process "string".

Cause: An error was raised in a GoldenGate, XStream or Streams automatic split/merge job for the given original and cloned Capture processes.

Action: Check the corresponding split/merge row in DBA_STREAMS_SPLIT_MERGE view, alert log and trace file for details.

ORA-26882: Timeout while string automatic split/merge job:"string"."string" tried to lock Capture process "string".

Cause: The GoldenGate, XStream or Streams Capture process could be locked by other automatic split/merge jobs.

Action: No action required. The GoldenGate, XStream or Streams automatic split/merge job will retry automatically.

ORA-26883: Timeout due to string Apply process "string" while merge original Capture process "string" and cloned Capture process "string".

Cause: When merging two GoldenGate, XStream or Streams Capture processes, the merge needs to wait until the Apply process of the cloned Capture process goes ahead of the slowest subscriber of the original Capture process. This wait timed out.

Action: Make sure the GoldenGate, XStream or Streams Apply process still works properly.

ORA-26884: Not allowed to specify OCI_LCR_ROW_COLVAL_OLD with OCILCR_NEW_ONLY_MODE.

Cause: An attempt was made to call OCILCRRowColumnInfoGet function with OCI_LCR_ROW_COLVAL_OLD and OCILCR_NEW_ONLY_MODE.

Action: Change OCI_LCR_ROW_COLVAL_OLD to OCI_LCR_ROW_COLVAL_NEW or remove OCILCR_NEW_ONLY_MODE argument.

ORA-26885: OCIXStreamInCommit called before OCIXStreamInFlush

Cause: An attempt was made to call OCIXStreamInCommit before calling OCIXStreamInFlush.

Action: Call OCIXStreamInFlush prior to calling OCIXStreamInCommit.

ORA-26886: LCR commit position ('string') must be greater than the applied high position of the XStream inbound server (position='string').

Cause: The position of the commit logical change record (LCR) was less than or equal to the applied high position of the XStream inbound server.

Action: Set the commit position higher than the applied high position.

ORA-26887: Insufficient privileges to attach to XStream inbound server "*string*".

Cause: Sufficient privileges were not granted to attach to the specified XStream inbound server.

Action: Query DBA_XSTREAM_INBOUND view to get the apply_user value for the specified XStream outbound server. Then, modify the application to connect to the inbound server's database using this value.

ORA-26888: Redo compatibility must be release 10.2 or later.

Cause: XStream Out redo compatibility was not release 10.2 or later.

Action: Drop the outbound server.

ORA-26889: LOB assembly not supported for PDML parent transaction *string*, child transaction *string*.

Cause: LOB assembly is not supported for PDML transactions.

Action: Disable LOB assembly, or filter out the PDML transaction.

ORA-26890: Invalid update LCR on Oracle Sequence "*string*". "*string*"

Cause: The new value column list of an update LCR on an Oracle Sequence did not have non-null columns "CYCLE#", "INCREMENT\$", "CACHE" and "HIGHWATER".

Action: Make sure the new value column list has all the required columns. This might be a user error if the LCR is from an XStream In client.

ORA-26891: Target Oracle Sequence "*string*". "*string*" has inconsistent parameters with the source.

Cause: The source and target Oracle Sequences did not have the identical cache size, increment value, and cycle flag needed for replication purposes.

Action: Make sure the source and target Oracle Sequences have identical parameters. This might be a user error if the LCR is from an XStream In client.

ORA-26892: XStream feature not supported

Cause: The XStream feature was not supported.

Action: No action necessary.

ORA-26893: Input LCR must be a commit LCR

Cause: The input LCR was not a commit LCR.

Action: Make sure the input LCR is a commit LCR.

ORA-26894: Invalid "*string*" in Apply Progress redo

Cause: The value of the field reported was possibly corrupted.

Action: Contact Oracle Support Services.

ORA-26895: Setting parameter "*string*" of Streams process "*string*" is only permitted for Oracle GoldenGate or XStream.

Cause: An attempt was made to set a parameter that is only allowed for XStream.

Action: Oracle GoldenGate license is needed to use this parameter.

ORA-26896: Attempted to connect multiple Oracle GoldenGate Capture processes, including "string", with XStream outbound server "string" through queue "string"."string"

Cause: An attempt was made to connect multiple Oracle GoldenGate Capture processes through a queue with the XStream outbound server.

Action: Each XStream outbound server can only connect with one co-located Capture process. Remove extra Capture processes.

ORA-26897: Unable to start string capture "string" because its subscribers "string" and "string" have different purpose

Cause: An attempt was made to start an Oracle Capture process but it failed to start because its subscribers had conflicting purpose.

Action: Remove one of the specified subscribers from the capture queue.

ORA-26898: Unable to create "string" because there is an Oracle Capture process using the same queue "string"."string"

Cause: An attempt was made to create an inbound server using the same queue that was used by an Oracle Capture process.

Action: Resubmit the statement using another queue name.

ORA-26899: internal string error

Cause: An internal Streams, XStream or GoldenGate error has occurred.

Action: Please contact Oracle customer support.

ORA-26900: Streams failed to update data dictionary table for propagation "string" from capture "string" to apply "string".

Cause: The data dictionary table was corrupted.

Action: Validate the data dictionary table to restart GoldenGate, XStream or Streams capture process.

ORA-26901: string propagation sender in the combined capture and apply mode is to be suspended while apply is disabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26902: string propagation sender in the combined capture and apply mode is to be suspended while apply is enabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26903: Invalid edition name "string"

Cause: The edition associated with the LCR did not exist in the destination database.

Action: Check if the edition needs to be created manually on the destination database or if the CREATE EDITION statement for this edition has been applied properly on the destination database.

ORA-26904: Invalid bind variable "string" in LCR field expression.

Cause: In the statement handler, the bind variables listed in the SQL expression did not match the allowed Logical Change Record field names.

Action: Verify that all the bind variables listed in the expression are legal Logical Change Record fields.

ORA-26905: Invalid LCR method expression "*string*" in statement handler.

Cause: The Logical Change Record method listed was not allowed in the statement handler.

Action: Verify that the Logical Change Record method listed in the expression is a legal DBMS_LCR method.

ORA-26906: No change handler exists.

Cause: There was no change handler for the specified apply, operation, source table, change table, and capture values.

Action: Query DBA_APPLY_CHANGE_HANDLERS view to find the correct change handler.

ORA-26907: Insufficient privileges to set converge tag

Cause: Privileges were insufficient to set converge tag.

Action: The invoker needs EXECUTE_CATALOG_ROLE or execute privilege on DBMS_STREAMS_ADM to set converge tag. Grant appropriate privileges to the invoker.

ORA-26908: XStream API must be executed using a dedicated server process.

Cause: An attempt was made to execute XStream API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26909: cannot reexecute an eager error

Cause: An attempt was made to reexecute an eager error transaction. An eager transaction is applied before the apply process sees the commit or rollback for the transaction.

Action: Fix the cause of the eager error and restart the apply process. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26910: user error *string* encountered in eager mode

Cause: An error was encountered during eager apply. An eager transaction is applied before the apply process sees the commit or rollback for the transaction. If an error occurs during an eager transaction, the transaction will be rolled back.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action. The apply process will need to be restarted to apply the transaction that had the error. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26911: invalid oldest position (current position=*string*; new position=*string*)

Cause: An attempt was made to set the oldest position to a value that was less than the current value.

Action: Correct the oldest_position argument in OCIXStreamOutProcessedLWMSets2 call.

ORA-26912: not allowed to invoke '*string*' while in committed data-only mode

Cause: An attempt was made to call the specified API while the attached XStream server was in committed data-only mode.

Action: Perform one of the following: 1) If the invalid call is OCIXStreamOutProcessedLWMSet2, then change it to OCIXStreamOutProcessedLWMSet or pass a null oldest_position to OCIXStreamOutProcessedLWMSet2 call. 2) If the invalid call is OCIXStreamInProcessedLWMGet2, then change it to OCIXStreamInProcessedLWMGet or pass a null oldest_position to OCIXStreamInProcessedLWMGet2 call.

ORA-26913: must connect to instance *string* where *string* server "*string*" is running

Cause: The client application was not connected to the same Oracle RAC instance as the specified Oracle GoldenGate or XStream server.

Action: Connect to the specified instance using the network service name obtained from the following query: SELECT network_name FROM all_queues q, all_xstream_outbound ob WHERE q.owner = ob.queue_owner AND q.name = ob.queue_name AND server_name = '<server_name>';

ORA-26914: Unable to communicate with *string* capture process "*string*" from outbound server "*string*".

Cause: Capture process might not have been started properly or was aborted.

Action: If Oracle GoldenGate or XStream capture process was stopped, then restart the capture process. Otherwise, query the DBA_CAPTURE view to determine the reason and take the appropriate action. If the error is ORA-4031, either increase the initialization parameter STREAMS_POOL_SIZE or increase the capture parameter MAX_SGA_SIZE or increase both. Refer to the XStream documentation for additional information on these parameters.

ORA-26915: Unable to return Logical Change Record (LCR) information due to missing data dictionary.

Cause: The current session was unable to return the requested information on the given LCR due to missing dictionary data on that LCR.

Action: Detach and reattach the XStream outbound server. Then retry the current call.

ORA-26916: Must call OCIPOGGRedoLogOpen function before OCIPOGGRedoLogRead

Cause: An attempt was made to call OCIPOGGRedoLogRead before calling OCIPOGGRedoLogOpen.

Action: Add OCIPOGGRedoLogOpen call before OCIPOGGRedoLogRead.

ORA-26917: OCIPOGG API must be executed using a dedicated server process.

Cause: An attempt was made to execute OCIPOGG API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26918: Must use '*string*' procedure for outbound server "*string*".

Cause: An attempt was made to execute START_APPLY on an outbound server that uses uncommitted data mode.

Action: Use the specified procedure instead.

ORA-26919: Capture "*string*" is not associated with queue "*string*".*string*".

Cause: The capture specified in the ADD_OUTBOUND procedure was not associated with the specified queue.

Action: Resubmit the ADD_OUTBOUND procedure after removing either the capture_name or the queue_name argument.

ORA-26920: *string* outbound server "*string*" has been stopped.

Cause: The specified outbound server was stopped.

Action: Execute START_OUTBOUND procedure to restart the outbound server or execute OCIXStreamOutAttach function to reattach to the outbound server.

ORA-26921: Cannot alter the start SCN or time of *string* Capture "*string*".

Cause: An attempt was made to alter the start SCN or time for a capture while other outbound servers were still attached to it.

Action: Execute the following: 1) Get the names of other outbound servers currently attached to the specified Capture using the query: SELECT server_name FROM dba_xstream_outbound WHERE (status = 'ATTACHED') AND (server_name '<altered_server>') AND (capture_name = '<specified_capture_name>'); 2) Detach the client application from each server_name returned. 3) Retry the operation.

ORA-26922: user *string* does not have LOGMINING privilege

Cause: An attempt was made to start the capture process or attach to an outbound server when the specified user did not have LOGMINING privilege.

Action: Grant LOGMINING privilege to the specified user and resubmit the failed operation.

ORA-26923: cannot configure *string* outbound server "*string*" with *string* capture "*string*" due to different purpose

Cause: An attempt was made to configure an outbound server with a capture used for different purpose.

Action: Execute the following: 1) Get the purpose of each capture and its associated queue: SELECT capture_name, queue_owner, queue_name, purpose FROM dba_capture; 2) Resubmit the statement using a queue or capture with the same purpose.

ORA-26924: cannot configure *string* using "*string*".*string*" queue because it is used by "*string*" for *string* purpose

Cause: An attempt was made to configure the specified process using a queue already used by another process for different purpose.

Action: Resubmit the statement using another queue of the same purpose.

ORA-26925: cannot configure outbound server "*string*" with capture "*string*" because it is not using apply-state checkpoint

Cause: An attempt was made to configure an outbound server with a capture not using apply-state checkpoint.

Action: Specify a different capture in the ADD_OUTBOUND procedure or re-create the capture and resubmit the statement.

ORA-26926: Unable to attach because capture "*string*" is missing dictionary redo logs

Cause: The specified capture was unable to locate the dictionary redo log.

Action: Check the state of the specified capture from gv\$streams_capture to determine the SCN or filename of the missing log file. Confirm that the filename exists and is accessible online and also in the DBA_REGISTERED_ARCHIVED_LOG view. In addition, for local capture, confirm that an entry exists for the file in the V\$ARCHIVED_LOG view. If an entry is missing, it can be added using the ALTER DATABASE REGISTER LOGFILE command, specifying the keyword LOGICAL LOGFILE or PHYSICAL LOGFILE as appropriate.

ORA-26927: Unable to communicate with *string* capture process "*string*" from outbound server "*string*".

Cause: A timeout occurred while waiting for capture to respond.

Action: Check the state of the specified capture from GV\$XSTREAM_CAPTURE view. Determine the reason for capture's unresponsiveness. If streams_pool_size is not set or set with an inadequate value, consider setting or increasing the value of this parameter.

ORA-26928: Unable to communicate with *string* apply coordinator process "*string*" from outbound server "*string*".

Cause: A timeout occurred while waiting for apply coordinator to respond.

Action: Check the state of the specified apply coordinator from GV\$STREAMS_APPLY_COORDINATOR view. Determine the reason for apply coordinator's unresponsiveness. If streams_pool_size is not set or set with an inadequate value, consider setting or increasing the value of this parameter.

ORA-26929: altering an outbound server with a remote capture is not allowed

Cause: An attempt was made to alter an outbound server with a remote capture.

Action: None

ORA-26930: User "*string*" does not have privileges to perform this operation

Cause: An attempt was made to create, alter, or drop a process that has a different user (such as capture user or apply user) than the invoking user.

Action: Perform this operation as the owner of the process. Alternatively, perform the operation with the DBA role enabled.

ORA-26931: This procedure can only be run from the root container.

Cause: An attempt was made to run a procedure in a multitenant container database (PDB) or a non-container database.

Action: Run the procedure from the root container.

ORA-26932: Streams configuration is not allowed in a container database.

Cause: An attempt was made to configure a Streams environment in a container database.

Action: None

ORA-26933: Cannot start Streams process "*string*" while in a container database.

Cause: An attempt was made to start the specified Streams process while in a container database.

Action: None

ORA-26934: Streams synchronous capture is not supported in a container database.

Cause: An attempt was made to perform a DML operation on a table being captured by a Streams synchronous capture in a container database.

Action: Remove all Streams synchronous captures then reexecute the DML operation.

ORA-26935: Unsupported type *string.string* for parameter for procedure *string.string.string*.

Cause: Apply encountered a procedure call with a parameter with an unsupported type.

Action: Modify the rules to filter out the procedure call.

ORA-26936: must execute OCIPOGGCaptureAttach before invoking *string* function

Cause: An attempt was made to invoke the specified function before executing OCIPOGGCaptureAttach call.

Action: Add OCIPOGGCaptureAttach call before the specified function.

ORA-26937: client has already attached to *string* capture "*string*".

Cause: The client was already attached to the specified capture.

Action: Detach from the specified capture before reattaching.

ORA-26938: cannot pack LCR into LCR buffer (buffer size is *string*, LCR size is *string*)

Cause: The logical change record (LCR) buffer was not large enough to store the current LCR.

Action: Increase the buffer size in the OCIPOGGCaptureAttach call.

ORA-26939: *string* capture "*string*" is disabled.

Cause: The capture process was disabled or aborted.

Action: Start the capture process.

ORA-26940: OCIPOGGCapture API must be executed using a dedicated server process.

Cause: An attempt was made to execute OCIPOGGCapture API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26941: unable to perform LOB assembly for table *string.string*

Cause: The apply process was unable to perform the LOB assembly for a DML for the specified table.

Action: Verify that the storage type for the columns are compatible at the source and destination.

ORA-26942: LCR should not contain old value for column *string* in table *string.string*

Cause: The LCR contained old values for LOB, XMLType and object columns.

Action: Remove old values for any LOB, XMLType and object columns in the LCR.

ORA-26943: cross PDB operation not allowed

Cause: An attempt was made to perform an operation on a container database different from the container database where the call was made.

Action: Log into the root container or into the container where you want to perform the requested action.

ORA-26944: User "*string*" attempted to invoke a procedure without proper permissions.

Cause: An attempt was made to invoke a procedure without proper permissions.

Action: Grant the user any of the roles for using Oracle GoldenGate. The roles are OGG_CAPTURE_ADMIN, OGG_APPLY_ADMIN, and OGG_APPLY_PROCREP.

ORA-26945: unsupported hint *string*

Cause: The specified hint was not supported.

Action: Remove the hint from the SQL statement.

ORA-26946: OCIPOGGRedoLog API not supported in CDB.

Cause: An attempt was made to call an OCIPOGGRedoLog API in a multitenant container database (CDB).

Action: Do not call the OCIPOGGRedoLog API in a CDB.

ORA-26947: Oracle GoldenGate replication is not enabled.

Cause: The 'enable_goldengate_replication' parameter was not set to 'true'.

Action: Set the 'enable_goldengate_replication' parameter to 'true' and retry the operation. Oracle GoldenGate license is needed to use this parameter.

ORA-26948: Streams API must be executed using a dedicated server process.

Cause: The dblink configured for the propagation from the capture queue to the apply queue is using a shared server connection.

Action: Modify the dblink for this propagation to use a dedicated server connection.

ORA-26949: Advanced Replication is not allowed in a container database.

Cause: An attempt was made to configure an advanced replication in a multitenant container database (CDB).

Action: Do not call the Advanced Replication API in a CDB.

ORA-26951: table "*string*"."*string*" has column data type not supported by conflict resolution

Cause: A conflict was detected, but unsupported columns prevented resolving the conflict.

Action: Remove conflict resolution configuration for tables with LOB, LONG, XML, object, or extended types.

ORA-26952: could not clone from the specified clone_capture_name *string* while creating capture process *string*

Cause: The specified clone_capture_name could not be used as a clone candidate while creating the capture process.

Action: Re-create the capture without setting clone_capture_name.

ORA-26953: source database character set is not a subset of the mining database character set

Cause: An attempt was made to configure a downstream capture but the source database character set was not a subset of the mining database character set.

Action: Use AL32UTF8 character set or other compatible character set for the mining database.

ORA-26954: invalid protocol (opcode *string*) received during XStream execution

Cause: An internal protocol error occurred while executing an XStream function.

Action: Contact Oracle Support Services.

ORA-26955: cannot capture TIMESTAMP WITH LOCAL TIME ZONE data type

Cause: The capture process was unable to capture TIMESTAMP WITH LOCAL TIME ZONE data type because the source database time zone was not available.

Action: Refer to My Oracle Support Note 1928808.1 to set the source database time zone for the specified capture process.

ORA-26956: capture *string* created successfully but the source database time zone is not available

Cause: The capture process was created successfully; however, it will not be able to capture TIMESTAMP WITH LOCAL TIME ZONE data type unless the source database time zone is set.

Action: Refer to My Oracle Support Note 1928808.1 to set the source database time zone for the specified capture process.

ORA-26957: LCR identifier length is invalid.

Cause: A logical change record (LCR) identifier with an incompatible length was used.

Action: Use an LCR identifier compatible with release 12.2 or higher specification.

ORA-26958: LCR identifier version is invalid.

Cause: An invalid logical change record (LCR) identifier version number was used.

Action: Use an LCR identifier version compatible with release 12.2 or higher specification.

ORA-26959: SCN value does not fit in SCN version 1.

Cause: The system change number (SCN) value was too big to fit in the original SCN specification.

Action: Use an SCN value compatible with the original SCN specification.

ORA-26960: automatic CDR already configured for table "*string*". "*string*"

Cause: Automatic conflict detection and resolution was already configured.

Action: Remove the automatic conflict detection and resolution configuration and retry.

ORA-26961: automatic CDR not configured for table "*string*". "*string*"

Cause: Automatic conflict detection and resolution was not configured.

Action: None

ORA-26962: automatic CDR delta resolution not configured for column "*string*"

Cause: Automatic conflict detection and resolution delta resolution was not configured.

Action: None

ORA-26963: automatic CDR column group cannot be created

Cause: Automatic conflict detection and resolution was configured with column granularity.

Action: Remove the column-level configuration and retry.

ORA-26964: column "*string*" already assigned to a column group

Cause: The column was already part of a column group.

Action: Remove the column from the column group and retry.

ORA-26965: column group name "*string*" not available

Cause: The column group name was already in use.

Action: Remove the existing column group and retry.

ORA-26967: delete tombstone table "*string*"."*string*" cannot be dropped

Cause: An attempt was made to drop a delete tombstone table.

Action: Remove the automatic conflict detection and resolution from the base table.

ORA-26968: column group "*string*" not found

Cause: The column group did not exist.

Action: Check if the column group needs to be created.

ORA-26969: column "*string*" not part of column group "*string*"

Cause: The column did not belong to the column group.

Action: Check the column list and retry.

ORA-26970: table "*string*" does not contain a primary key constraint

Cause: An attempt was made to configure automatic conflict detection and resolution with delete tombstones on a table without a primary key.

Action: Add a primary key and retry.

ORA-26971: resolution column "*string*" not present

Cause: The resolution column was not set in the logical change record (LCR).

Action: Manually resolve the conflict.

ORA-26972: An apply process attempted to modify the SYSAUX tablespace.

Cause: An ALTER TABLESPACE DDL to SYSAUX was attempted by Oracle GoldenGate, XStream or Streams process.

Action: Only SYS is allowed to modify SYSAUX.

ORA-26973: Automatic CDR not supported for table "*string*"."*string*" which has unsupported column "*string*".

Cause: Automatic conflict detection and resolution (CDR) support for long, nested table, non-scalar abstract data type (ADT) attribute or reservable column failed. CDR does not support long, nested table, non-scalar ADT attribute or reservable columns.

Action: None

ORA-26974: Apply process is stuck in synchronous error handling mode.

Cause: The apply process ran out of memory or queue space while suspended for synchronous error handling.

Action: Restart Oracle GoldenGate Replicat process.

ORA-26975: Only one instance of an Oracle GoldenGate downstream live standby is permitted.

Cause: An attempt was made to create an additional capture session for an Oracle GoldenGate downstream live standby system.

Action: None

ORA-26976: Oracle Streams is no longer supported.

Cause: An attempt was made to use a feature of Oracle Streams.

Action: None

ORA-26977: Parameter '*string*' is not a valid parameter for an XStream inbound server.

Cause: An attempt was made to alter a parameter that was not valid for an XStream inbound server.

Action: None

ORA-26978: cannot specify more than 1000 key columns

Cause: An attempt was made to define more than 1000 key columns.

Action: Reduce the number of key columns.

ORA-26979: missing BLOCKING keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE GOLDENGATE BLOCKING MODE.

ORA-26980: missing MODE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE GOLDENGATE BLOCKING MODE.

ORA-26981: operation was unsupported during Oracle GoldenGate blocking mode

Cause: An unsupported operation was attempted while Oracle GoldenGate was in blocking mode.

Action: Execute ALTER DATABASE DISABLE GOLDENGATE BLOCKING MODE and retry the operation.

ORA-26982: unable to drop minimal supplemental logging when Oracle GoldenGate blocking mode is enabled

Cause: Minimal supplemental logging could not be dropped while Oracle GoldenGate Blocking was enabled.

Action: Issue ALTER DATABASE DISABLE GOLDENGATE BLOCKING MODE, then reissue the command.

ORA-26984: Automatic Conflict Detection and Resolution site priority action can only be OVERWRITE or IGNORE

Cause: Site priority action was ambiguous.

Action: Choose either OVERWRITE or IGNORE as site priority action.

ORA-26985: Automatic Conflict Detection and Resolution conflict resolution require keyvers column 'string.string'

Cause: ACDR conflict resolution other than latest timestamp requires keyver.

Action: Alter the database table to add keyver with ACDR procedures.

ORA-26986: cannot string Oracle GoldenGate downstream capture process string

Cause: The Oracle GoldenGate downstream capture process could not be created or dropped because the capture process failed to acquire a lock to enable or disable the client.

Action: Refer to the trace file for more details.

ORA-26987: cannot rename delete tombstone table

Cause: Renaming a delete tombstone table was not supported.

Action: Do not rename an Oracle GoldenGate automatic conflict detection and resolution delete tombstone table.

ORA-26988: Cannot grant Oracle GoldenGate privileges. The procedure GRANT_ADMIN_PRIVILEGE is disabled.

Cause: An attempt was made to grant privileges for using Oracle GoldenGate by calling the DBMS_GOLDENGATE_AUTH.GRANT_ADMIN_PRIVILEGE procedure. Starting with Oracle Database release 23c, the procedure has been disabled and replaced by roles.

Action: Grant the corresponding Oracle GoldenGate roles: OGG_CAPTURE role for using Extract. OGG_APPLY role for using Replicat. OGG_APPLY_PROCREP role for using procedural replication with Replicat.

ORA-26989: Cannot grant XStream privileges. The procedure GRANT_ADMIN_PRIVILEGE is disabled.

Cause: An attempt was made to grant privileges for using XStream by calling the DBMS_XSTREAM_AUTH.GRANT_ADMIN_PRIVILEGE procedure. Starting with Oracle Database release 23c, the procedure has been disabled and replaced by roles.

Action: Grant the corresponding XStream roles: XSTREAM_CAPTURE role for using the XStream Out APIs. XSTREAM_APPLY role for using the XStream In APIs.

ORA-26990: cannot modify or drop columns or constraints on tombstone table key

Cause: Modifications and drops of tombstone table key columns and constraints was not allowed.

Action: If you need to make modifications to the tombstone table key columns or constraints, remove the tombstone table and re-add it.

ORA-26991: Automatic Conflict Detection and Resolution conflict resolution cannot format existing data timestamp'

Cause: ACDR conflict resolution is unable to format existing data timestamp.

Action: Fix the existing data timestamp provided.

ORA-26992: cannot create a capture in CDB root when database has a DGPDB

Cause: An attempt was made to create an Oracle GoldenGate or XStream Out capture in a multitenant container database (CDB) root on a database where a Data Guard per Pluggable Database existed and this was not allowed.

Action: If possible, create the capture from within the pluggable database (PDB) of interest.

ORA-26993: Cannot have unique index on Automatic Conflict Detection and Resolution enabled blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution could not be added to this blockchain or immutable table because a unique index is present.

Action: Remove the unique index and instead create a unique constraint.

ORA-26994: Can have only one unique or primary key constraint on Automatic Conflict Detection and Resolution enabled blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution could not be added to this blockchain or immutable table because there was not exactly one unique or primary key constraint.

Action: Have at most a single unique constraint or primary key.

ORA-26995: Automatic Conflict Detection and Resolution is not supported on version v1 blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution is not supported on version v1 blockchain or immutable tables.

Action: If Automatic Conflict Detection and Resolution is needed, the table data will need to be moved to a version v2 immutable or blockchain table.

ORA-26996: Automatic Conflict Detection and Resolution procedure is not supported for blockchain or immutable table *string.string*.

Cause: Only add and remove Automatic Conflict Detection and Resolution procedures are supported on blockchain or immutable tables. Column groups, delta resolution, setting columns unused, and custom handlers features are not supported for blockchain or immutable tables.

Action: If changes besides the unsupported features are needed in the Automatic Conflict Detection and Resolution configuration then the configuration will need to be removed and then added with the new configuration.

ORA-26997: Automatic Conflict Detection and Resolution cannot be added to blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution could not be added to this blockchain or immutable table because of the option requested. Neither column resolution nor custom handlers are supported

Action: Remove the unsupported option requested.

ORA-26998: Invalid JSON update at table *string.string* column *string*.

Cause: LCR column metadata indicated data format is JSON update but it cannot be parsed.

Action: Consult XStream Interface in the Oracle Call Programmer's Guide for valid column flags and formats.

ORA-26999: User has insufficient privileges to enable automatic CDR.

Cause: User does not have the required privileges to create any table, create any index, drop any table, and alter any table to configure automatic conflict detection and resolution (CDR) on a table in another user's schema.

Action: Grant the privileges to the user.

ORA-27000: skgfsbi: failed to initialize storage subsystem (SBT) layer

Cause: sbtinit returned an error, additional information indicates error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27001: unsupported device type

Cause: the specified device type is supported on this platform

Action: check V\$BACKUP_DEVICE for supported device types

ORA-27002: function called with invalid device structure

Cause: internal error, additional information indicates which function encountered error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27003: cannot open file on device allocated with NOIO option

Cause: internal error, a file is being created/retrieved on a device allocated with NOIO option, additional information indicates which function encountered error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27004: invalid blocksize specified

Cause: Internal error. An incorrect block size was specified for the device on which the file was created. Additional information indicated the specified block size and the function that encountered the error.

Action: Check the trace file, and contact Oracle Support.

ORA-27005: cannot open file for async I/O on device not supporting async

Cause: internal error, a file is being opened for async I/O on a device that does not support async I/O, additional information indicates which function encountered error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27006: The SBT REMOVE operation returned an error.

Cause: The System Backup Tape (SBT) REMOVE operation returned an error. This happens when backup files are deleted.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27007: failed to open file

Cause: sbtopen returned error, additional information indicates error returned from sbtopen, and the function that encountered the error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27008: function called with invalid file structure

Cause: Internal error. Additional information indicated the function that encountered the error.

Action: Check for the trace file and contact Oracle Support Services.

ORA-27009: cannot write to file opened for read

Cause: This is an internal error.

Action: Check for errors in trace file and contact Oracle Support.

ORA-27010: skgfwrt: write to file failed

Cause: sbtwrite returned error, additional information indicates error returned from sbtwrite

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27011: skgfrd: cannot read from file opened for write

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27012: SBT read from file failed.

Cause: System Backup Tape (SBT) read returned an error. Additional information indicates further details on the error encountered.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27014: skgfpini: translation error while expanding SS_UDMPDIR

Cause: Failure of sltn in skgfpini

Action: Check additional return error for more information.

ORA-27015: skgfcls: failed to close the file

Cause: sbtclose returned error, additional information indicates error returned from sbtclose

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27016: skgfcls: sbtinfo returned error

Cause: additional information indicates error returned from sbtinfo

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27017: skgfcls: media handle returned by sbtinfo exceeds max length(SSTMXQMH)

Cause: media handle string length exceeds SSTMXQMH

Action: verify that vendor's storage subsystem product is operating correctly, and that the platform limit (SSTMXQMH) is at least 64 (the limit specified for sbtinfo). additional information indicates the media handle string length returned by sbtinfo, and the limit (SSTMXQMH)

ORA-27018: BLKSIZE is not a multiple of the minimum physical block size

Cause: User-specified BLKSIZE (blocking factor) is not a multiple of the minimum block size that is permitted on this platform.

Action: Two ADDITIONAL INFORMATION messages are displayed which show the blocking factor provided by the user and the minimum physical block size. Specify a BLKSIZE that is an integral multiple of the minimum block size.

ORA-27019: tape filename length exceeds limit (SBTOPMXF)

Cause: length of tape filename provided to sequential I/O OSD functions is too long

Action: additional information indicates in which function this error is encountered, the length of filename provided, and the limit on filename

ORA-27020: named devices not supported

Cause: the platform or the specified device type does not support named devices

Action: do not specify device name or use a device type that supports named devices. Use V\$BACKUP_DEVICE view to see what device types and names (if any) are available.

ORA-27021: sequential file handle must be specified

Cause: The filename which will be passed to sbtopen was not specified.

Action: Specify a filename and continue. If this is a backup set being created via Recovery Manager, use the 'format' option to specify the backup piece handle name.

ORA-27022: skgfsbi: could not allocate memory for media manager

Cause: Oracle could not allocate memory required by the media management software which is linked with Oracle to provide backup/restore services.

Action: Increase the amount of memory available to the Oracle process and retry the backup/restore.

ORA-27023: skgfsbi: media manager protocol error

Cause: The media management software which is linked with Oracle to provide backup/restore services did not provide its function pointer structure to Oracle.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27024: skgfsbi: sbtinit2 returned error

Cause: sbtinit2 returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27025: SBT initialization encountered invalid media manager context area size

Cause: The media management software requested a context area size that is greater than the maximum allowable size.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27026: skgfrls: sbtend returned error

Cause: sbtend returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27027: The SBT REMOVE operation returned an error.

Cause: The SBT REMOVE operation returned an error. This happens when backup files are deleted.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages that explain the cause of the error. This error usually requires you to contact the media management vendor.

ORA-27028: SBT backup returned error.

Cause: System Backup Tape (SBT) backup returned an error. This happens when creating a backup file during a backup operation.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27029: skgfrtrv: sbtrestore returned error

Cause: sbtrestore returned an error. This happens when retrieving a backup file during a restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27030: skgfwrt: sbtwrite2 returned error

Cause: sbtwrite2 returned an error. This happens while writing a backup file during a backup operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27031: mirror resilvering functions not supported

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27032: failed to obtain file size limit

Cause: getrlimit system call returned an error

Action: check errno

ORA-27033: failed to obtain file size limit

Cause: ulimit system call returned an error

Action: check errno

ORA-27034: maximum length of ORACLE_SID exceeded

Cause: too many characters in the ORACLE_SID string

Action: rename the ORACLE_SID to a string of up to the maximum number of characters specified for your system

ORA-27035: logical block size is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: block size specified is returned as additional information, check init.ora parameters, additional information also indicates which function encountered the error

ORA-27036: translation error, unable to expand file name

Cause: additional information indicates stltn/slnrm error, and also indicates which function encountered the error

Action: check additional information

ORA-27037: unable to obtain file status

Cause: stat system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27038: created file already exists

Cause: trying to create a database file, but file by that name already exists

Action: verify that name is correct, specify reuse if necessary

ORA-27039: create file failed, file size limit reached

Cause: an attempt was made to create a file that exceeds the process's file size limit, additional information indicates which function encountered the error

Action: raise the file size limit

ORA-27040: file create error, unable to create file

Cause: create system call returned an error, unable to create file

Action: verify filename, and permissions

ORA-27041: unable to open file

Cause: open system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27042: not enough space on raw partition to fulfill request

Cause: The file was too large for a raw partition. Additional information indicates which function encountered an error.

Action: Check the trace file and contact Oracle Support Services.

ORA-27043: unable to seek to beginning of file

Cause: seek system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27044: unable to write the header block of file

Cause: write system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27045: unable to close the file

Cause: close system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27046: file size is not a multiple of logical block size

Cause: file size as indicated by stat is not correct, additional information indicates which function encountered the error

Action: verify that the file has not been overwritten or truncated

ORA-27047: unable to read the header block of file

Cause: read system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27048: skgfifi: file header information is invalid

Cause: possibly trying to use a non-database file as a database file

Action: verify that file is a database file

ORA-27049: unable to seek to and read the last block

Cause: An attempt was made to seek to and read the last block in the file. Additional information indicates which function encountered error.

Action: Check errno.

ORA-27052: unable to flush file data

Cause: fsync system call returned error, additional information indicates which function encountered the error

Action: check errno

ORA-27053: blocksize in file header not a multiple of logical block size

Cause: the logical block size is invalid, additional information indicates the logical block size and the blocksize in the file header

Action: use a different logical block size, or do not reuse file

ORA-27054: NFS file system where the file is created or resides is not mounted with correct options

Cause: The file was on an NFS partition and either reading the mount tab file failed or the partition was not mounted with the correct mount option.

Action: Make sure mount tab file has read access for Oracle user and the NFS partition where the file resides is mounted correctly. For the list of mount options to use refer to your platform specific documentation.

ORA-27055: failed to allocate disk space

Cause: The call to allocate disk space failed. Additional information indicates the function that errored out and the space requested.

Action: Check errno. It might indicate a more detailed reason for failure.

ORA-27056: could not delete file

Cause: unlink system call returned error

Action: check errno

ORA-27057: cannot perform async I/O to file

Cause: internal error, query is being asked about async vector I/O when the file does not support async I/O

Action: Check for the trace file and contact Oracle Support Services.

ORA-27058: file I/O question parameter is invalid

Cause: internal error, invalid query is being asked

Action: Check for the trace file and contact Oracle Support Services.

ORA-27059: could not reduce file size

Cause: An attempt to reduce file size using ftruncate system call returned an error.

Action: Check for additional errno messages for more information.

ORA-27060: could not set close-on-exec bit on file

Cause: fcntl system call returned error

Action: check errno

ORA-27061: waiting for async I/Os failed

Cause: aiowait function returned error

Action: check errno

ORA-27062: could not find pending async I/Os

Cause: There should have been some async I/Os in the system but a blocking aiowait indicates that there are no more I/Os. It could be either because of an Oracle bug or the vendor's OS bug, or it could be due to a NFS server not responding.

Action: Check Oracle trace file, OS message files and contact Oracle Support.

ORA-27063: number of bytes read/written is incorrect

Cause: the number of bytes read/written as returned by aiowait does not match the original number, additional information indicates both these numbers

Action: check errno

ORA-27064: cannot perform async I/O to file

Cause: internal error, asked to perform async I/O when IOV indicates that it cannot be performed on the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27065: cannot perform async vector I/O to file

Cause: internal error, asked to perform async vector I/O when it cannot be performed on the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27066: number of buffers in vector I/O exceeds maximum

Cause: internal error, number of buffers in vector I/O exceeds maximum allowed by the OSD, additional information indicates both these numbers

Action: Check for the trace file and contact Oracle Support Services.

ORA-27067: size of I/O buffer is invalid

Cause: internal error, buffer size is either 0, or greater than SSIOMAX or not a multiple of logical block size, additional information indicates where in function the error was encountered and the buffer size

Action: Check for the trace file and contact Oracle Support Services.

ORA-27068: I/O buffer is not aligned properly

Cause: internal error, buffer is not aligned to SSIOALIGN boundary, additional information indicates where in function the error was encountered and the buffer pointer

Action: Check for the trace file and contact Oracle Support Services.

ORA-27069: attempt to do I/O beyond the range of the file

Cause: internal error, the range of blocks being read or written is outside the range of the file, additional information indicates the starting block number, number of blocks in I/O, and the last valid block in the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27070: async read/write failed

Cause: aioread/aiowrite system call returned error when an asynchronous read/write operation was submitted to the OS kernel.

Action: Check the error number provided by the OS kernel, and contact Oracle Support. The additional information indicates the starting block number of I/O. This is the number for which the request is submitted in the underlying database file.

ORA-27071: unable to seek to desired position in file

Cause: lseek system call returned error, additional information indicates block number in file to which seek was attempted

Action: check errno

ORA-27072: File I/O error

Cause: read/write/readv/writev system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27073: Trying to close a file which has async I/Os pending to be dequeued

Cause: internal error, the file is being closed but not all async I/Os to the file have been dequeued, additional information indicates number of I/Os pending on the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27074: unable to determine limit for open files

Cause: The getrlimit() system call returned an error.

Action: Check errno.

ORA-27075: SSTMOFRC constant too large

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27076: unable to set limit for open files

Cause: The setrlimit() system call returned an error.

Action: Check errno.

ORA-27077: too many files open

Cause: internal error, the number of files opened through skgfofi has reached the limit

Action: Check for trace file and contact Oracle Support.

ORA-27078: Unable to determine limit for open files.

Cause: The getrlimit() system call was unable to determine the limit for open file, and returned an error.

Action: Check Oracle trace file and see the corresponding Operating System error on the cause of the failure. Contact Oracle Support.

ORA-27079: unable to set async IO limit

Cause: The setting of the limit for async I/O has failed.

Action: Check errno.

ORA-27080: too many files open

Cause: The number of files opened has reached the system limit.

Action: Check the error, and set system configuration values.

ORA-27081: unable to close the file

Cause: The close() system call failed.

Action: Check errno.

ORA-27083: waiting for async I/Os failed

Cause: The aio_waitn() library call returned an error.

Action: Check errno.

ORA-27084: unable to get/set file status flags

Cause: The fcntl() system call with F_GETFL/F_SETFL flag returned an error.

Action: Check errno.

ORA-27085: Asynchronous I/O operation failed

Cause: lio_listio() system call returned an error.

Action: Check errno. Also, determine if the disk space is sufficient.

ORA-27086: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by a database instance.

Action: determine which database instance legitimately owns this file.

ORA-27087: Unable to get share lock. File not readable.

Cause: A share lock request was made on a file that did not have read access.

Action: Ensure that the file has read-only or read/write access.

ORA-27088: unable to get file status

Cause: file not open or file descriptor is invalid.

Action: Make sure the file is open and the descriptor is valid.

ORA-27089: unable to release advisory lock

Cause: The release of the file lock failed because: * Either the file descriptor was invalid, or * The process was interrupted, or * The kernel failed due to other reasons

Action: Check the additional error messages for more information about the cause of the error.

ORA-27090: Unable to reserve kernel resources for asynchronous disk I/O

Cause: The system call to reserve kernel resources for asynchronous I/O has failed.

Action: Check errno

ORA-27091: unable to queue I/O

Cause: read/write/readv/writev system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27092: size of file exceeds file size limit of the process

Cause: an attempt was made to open a file that exceeds the process's file size limit (ulimit), additional information shows the current limit (logical blocks) and the size of the file (logical blocks)

Action: increase the processes file size limit (ulimit) and retry

ORA-27093: could not delete directory

Cause: rmdir system call returned error

Action: check errno

ORA-27094: raw volume used can damage partition table

Cause: A raw device with VTOC information was provided as a database file.

Action: Make sure the disk partition that is provided to Oracle does not start at sector 0

ORA-27095: fail to get the disk sector size

Cause: The system call to get the sector size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27096: fail to get file size

Cause: The system call to get file size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27097: failed to set Access Control List ownership for ASM devices

Cause: The system call to set ACL ownership for ASM devices failed. Additional information indicates which function encountered the error.

Action: Refer to Microsoft documentation for an explanation of the accompanying error code and text.

ORA-27098: failed to rename file

Cause: The system call to change the file name failed. Additional information indicates which function encountered the error.

Action: Check the Oracle trace file for additional information on file name and reason for failure.

ORA-27099: failed to create file

Cause: The system call to create this file type in this file system failed. Check if the creation of this file type is supported in this file system. Additional information indicates which function encountered the error.

Action: Refer to Oracle documentation for additional details.

ORA-27100: shared memory realm already exists

Cause: Tried to start duplicate instances, or tried to restart an instance that had not been properly shutdown

Action: Use a different instance name, or cleanup the failed instance's SGA

ORA-27101: shared memory realm does not exist

Cause: Unable to locate shared memory realm

Action: Verify that the realm is accessible

ORA-27102: out of memory

Cause: Out of memory

Action: Consult the trace file for details

ORA-27103: internal error

Cause: internal error

Action: contact Oracle support

ORA-27104: system-defined limits for shared memory was misconfigured

Cause: System-defined shared memory limits were inadequate for Oracle.

Action: Consult the alert file for details.

ORA-27105: unable to support any system page size for shared memory allocation

Cause: Current configuration was not supported by any system page size.

Action: Consult the alert file for details.

ORA-27106: system pages not available to allocate memory

Cause: System page count for supported page sizes was misconfigured.

Action: Configure system page count as recommended in the alert file.

ORA-27107: AUTO value for USE_LARGE_PAGES parameter is no longer supported.

Cause: The USE_LARGE_PAGES configuration parameter was set to AUTO.

Action: Refer to the alert file for details.

ORA-27108: shared global area (SGA) creation failed due to configuration issue

Cause: System configuration issue.

Action: Refer to the alert file for details.

ORA-27109: Setting of values for parameters related to SGA creation is not compatible.

Cause: Values set for parameters used in creating the system global area (SGA) were not compatible.

Action: Check the alert log and relevant trace file for more information. Modify the parameter values that are incompatible.

ORA-27120: unable to remove shared memory segment

Cause: shmctl() call failed

Action: check permissions on segment, contact Oracle support

ORA-27121: unable to determine size of shared memory segment

Cause: shmctl() call failed

Action: check permissions on segment, contact Oracle support

ORA-27122: unable to protect memory

Cause: mprotect() call failed

Action: contact Oracle support

ORA-27123: unable to attach to shared memory segment

Cause: shmat() call failed

Action: check permissions on segment, contact Oracle support

ORA-27124: unable to detach from shared memory segment

Cause: shmdt() call failed

Action: contact Oracle support

ORA-27125: unable to create shared memory segment

Cause: shmget() call failed

Action: contact Oracle support

ORA-27126: unable to lock shared memory segment in core

Cause: insufficient privileges to lock shared memory segment in core

Action: make sure process is running with necessary privileges.

ORA-27127: unable to unlock shared memory segment

Cause: insufficient privileges to unlock shared memory segment

Action: make sure process is running with necessary privileges.

ORA-27128: unable to determine pagesize

Cause: sysconf() call failed

Action: contact Oracle support

ORA-27133: unable to determine stacksize

Cause: getrlimit() call failed

Action: Contact Oracle Support Services.

ORA-27134: unable to set stacksize

Cause: setrlimit() call failed

Action: Contact Oracle Support Services.

ORA-27135: Operating System hard stack limit is set too low

Cause: Operating System hard stack limit was set too low.

Action: Check additional information for current and minimum limit. Increase the Operating System hard stack limit and retry.

ORA-27136: MPMT and VLM are both enabled

Cause: When the `_mpmt_enabled` parameter is set to TRUE, none of the following parameters should be set to TRUE: `* use_indirect_buffers` `* _db_block_cache_protect` `* _db_block_cache_clone`

Action: Either turn off Multi Process Multi Threads (MPMT) or turn off all the other parameters.

ORA-27137: unable to allocate large pages to create a shared memory segment

Cause: Parameter `USE_LARGE_PAGES` set to only, but large pages were not configured properly

Action: Check alert file for more information

ORA-27138: unable to allocate large pages with current parameter setting

Cause: The `USE_LARGE_PAGES` parameter setting was not compatible with other parameters used.

Action: Check the alert log for more information. Modify the `USE_LARGE_PAGES` parameter setting, or adjust the other parameters. Large pages are compatible with `SGA_TARGET`, `SGA_MAX_SIZE` and `SHARED_POOL_SIZE` parameters. Large pages are not / compatible with `MEMORY_TARGET`, `MEMORY_MAX_TARGET` and `_DB_BLOCK_CACHE_PROTECT` parameters. The database instance using Exadata storage and large System Global Area (SGA) must set `USE_LARGE_PAGES` to `ONLY` or `AUTO_ONLY`.

ORA-27139: unable to reserve Oracle VM mapping in process address space

Cause: The address space region was already mapped.

Action: Contact Oracle Support Services.

ORA-27140: attach to post/wait facility failed

Cause: The program attempted to initialize the post/wait facility, but the facility could not be attached.

Action: Check for additional errors and contact Oracle Support.

ORA-27141: invalid process ID

Cause: process operation attempted using invalid process ID

Action: contact Oracle Support

ORA-27142: could not create new process

Cause: OS system call

Action: check errno and if possible increase the number of processes

ORA-27143: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27144: attempt to kill process failed

Cause: OS system call error

Action: check errno and contact Oracle Support

ORA-27145: insufficient resources for requested number of processes

Cause: OS system call error

Action: check errno and contact Oracle Support

ORA-27146: post/wait initialization failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27147: post/wait reset failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27148: spawn wait error

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27149: assignment out of range

Cause: internal error, requested conversion too large for type

Action: contact Oracle Support

ORA-27150: attempt to notify process of pending oradebug call failed

Cause: OS system call

Action: check errno contact Oracle Support

ORA-27151: buffer not large enough to hold process ID string

Cause: internal error

Action: contact Oracle Support

ORA-27152: attempt to post process failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27153: wait operation failed

Cause: OS system called failed

Action: check errno contact Oracle Support

ORA-27154: post/wait create failed

Cause: internal error, multiple post/wait creates attempted simultaneously

Action: check errno and contact Oracle Support

ORA-27155: could not execute file

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27156: request for process information failed

Cause: internal error

Action: contact Oracle Support

ORA-27157: OS post/wait facility removed

Cause: the post/wait facility for which the calling process is awaiting action is removed from the system

Action: check errno and contact Oracle Support

ORA-27158: process control failure

Cause: Oracle was unable to set the specified process control.

Action: Consult the Oracle Administrator's Guide.

ORA-27159: failure setting process scheduling priority

Cause: Oracle was unable to set the scheduling priority desired.

Action: Consult the Oracle Administrator's Guide.

ORA-27160: process requested to perform operation

Cause: The current process was requested to perform an operation by another process.

Action: This is used internally; no action is required.

ORA-27161: request for Oracle binary information failed

Cause: The program was unable to get information about the Oracle binary.

Action: Check for additional errors and contact Oracle support.

ORA-27162: thread creation failed

Cause: The program was unable to create a thread.

Action: Check errno and contact Oracle support.

ORA-27163: out of memory

Cause: The program ran out of memory when allocating a temporary data structure.

Action: Increase the amount of memory on the system.

ORA-27164: tried to join detached thread

Cause: The program tried to join a detached thread.

Action: This is an internal error; contact Oracle support.

ORA-27165: tried to join thread that does not exist

Cause: The program tried to join a thread that does not exist.

Action: This is an internal error; contact Oracle support.

ORA-27166: tried to join current thread

Cause: A thread in the program tried to join itself.

Action: This is an internal error; contact Oracle support.

ORA-27168: Translation from hostname to network address failed

Cause: Internal error

Action: Contact Oracle Support Services.

ORA-27180: failed to create memory protection key

Cause: An attempt to create a memory protection key for a virtual memory range failed.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27181: failed to destroy memory protection key

Cause: An attempt to destroy a memory protection key for a virtual memory range failed.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27182: failed to protect virtual memory range using memory protection key

Cause: An attempt to protect a virtual memory range using a memory protection key failed.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27183: unable to locate symbol name in the SGA (system global area) symbol table

Cause: An attempt was made to locate or operate on a symbol that was not present in the SGA symbol table.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27184: specified symbol number is not in the range of symbols in the SGA (system global area) table

Cause: An attempt was made to locate or operate on a symbol that was not present in the SGA symbol table.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27185: buffer of insufficient length specified for reading symbol data

Cause: An attempt was made to read the symbol data using a read buffer of insufficient length.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27186: large buffer specified for writing into symbol data

Cause: An attempt was made to write into the symbol data using a write buffer of length greater than the symbol maximum size.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27187: SGA (system global area) symbol table operations not supported

Cause: An attempt was made to do a system global area (SGA) symbol table operation, but symbol table operations were not enabled for database, Oracle Automatic Storage Management (Oracle ASM) instances or non-Linux setups.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27188: specification for parameter controlling the number of granules per SGA file is invalid

Cause: Setting of the parameter that controls the number of granules per system global area (SGA) file was not compatible with the other parameters used. The number of granules per SGA file cannot be greater than 1 when the dynamic SGA functionality is enabled.

Action: Check the alert log for more information. Set the parameter that controls the number of granules per SGA file to 1 or appropriately modify the parameters to disable the dynamic SGA functionality.

ORA-27190: SBT read returned error.

Cause: System Backup Tape (SBT) read returned an error. This happens while reading a backup file during a restore operation.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27191: SBT information returned error.

Cause: System Backup Tape (SBT) information returned an error. This happens while retrieving backup file information from the media manager's catalog.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27192: SBT close returned error; failed to close file.

Cause: System Backup Tape (SBT) close returned an error. This happens while closing a backup file during a backup or restore operation.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27193: SBT information did not return volume label.

Cause: System Backup Tape (SBT) information did not return the volume label information for the backup file that was just created.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27194: sbt command operation returned error

Cause: sbt command returned an error. This occurred when an rman SEND command was issued.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27195: proxy copy not supported

Cause: An attempt was made to do a proxy backup or restore, but the media management software installed with Oracle does not support proxy copy.

Action: Re-run the backup in non-proxy mode, or contact the media management vendor if the software is supposed to support proxy copy.

ORA-27196: SBT proxy copy backup returned error.

Cause: System Backup Tape (SBT) proxy copy backup returned an error. This happens when a proxy backup begins.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages which explain the cause of the error. Contact the media management vendor.

ORA-27197: SBT: SBT proxy copy restore operation returned error

Cause: SBT proxy copy restore operation returned an error. This happens when a proxy restore is begun.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27198: skgfpvl: sbtpcvalidate returned error

Cause: sbtpcvalidate returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27199: skgfpst: sbtpcstatus returned error

Cause: sbtpcstatus returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27200: SBT Proxy Copy file status returned error

Cause: The Proxy Copy file status returned an error during a proxy backup or restore operation.

Action: This error is returned by the Media Management software which is linked with Oracle. Check the additional messages which explain the cause of the error. Contact the Media Management vendor.

ORA-27201: SBT: proxy commit operation returned error

Cause: The System Backup Tape (SBT) commit operation returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27202: SBT: end proxy copy session returned error

Cause: The System Backup Tape (SBT) end proxy copy session returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27203: SBT proxy query restore returned error.

Cause: System Backup Tape (SBT) proxy query restore returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of the error. Contact the media management vendor.

ORA-27204: SBT proxy query restore returned error

Cause: System Backup Tape (SBT) proxy query restore returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages which explain the cause of the error. Contact the media management vendor.

ORA-27205: skgfpcn: sbtpccancel returned error

Cause: sbtpccancel returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27206: requested file not found in media management catalog

Cause: A backup file used in a recovery manager catalog maintenance command was not found in the media management catalog.

Action: Retry the command with a different file.

ORA-27207: syntax error in device PARMS - parentheses mismatch or missing

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27208: syntax error in device PARMS - environment variable value missing

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(var1=val1,var2=val2,..)

ORA-27209: syntax error in device PARMS - unknown keyword or missing =

Cause: User-supplied PARMS value has incorrect syntax. The server expected to find ENV or BLKSIZE, but found an unknown keyword.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27210: syntax error in device PARMS

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27211: failed to load media management library

Cause: User-supplied SBT_LIBRARY or libobk.so could not be loaded. Call to dlopen for media library returned error. See additional information for the error code.

Action: Retry the command with proper media library. Or re-install the media management module for Oracle.

ORA-27212: some entrypoints in Media Management Library are missing

Cause: media library does not have one of the following entrypoints : sbtinfo, sbtread, sbtwrite, sbtremove, sbtopen, sbtclose, sbtinit

Action: Retry the command with proper media library.

ORA-27213: failed to unload Media Management Library

Cause: dlclose for media library returned error. See Additional Additional information for error code.

Action: contact Oracle Support.

ORA-27214: skgfrsfe: file search failed

Cause: The FindNextFile function returned unexpected error.

Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.

ORA-27215: skgfgsmcs: sbtinfo2 returned unknown file

Cause: During an sbtinfo2() call, the media management software returned information about an unknown backup file.

Action: Contact the media management vendor.

ORA-27216: SBT information returned a malformed response.

Cause: The media management software returned a malformed response during a System Backup Tape (SBT) information operation.

Action: This error is returned from the media management software that is linked with Oracle. There should be additional messages that explain the cause of this error. Contact the media management vendor.

ORA-27217: failed to load Media Management Library from secure location

Cause: SBT libraries were not installed in a secure location.

Action: Remove SBT_SECURE parameter or Request third party vendors to provide patch that installs SBT libraries in secured locations as mandated by Oracle.

ORA-27218: failed to read Oracle ACFS mirror

Cause: An attempt to communicate with the Oracle Advanced Cluster File System (Oracle ACFS) kernel driver failed.

Action: Check errors on the error stack for an explanation of why communication with Oracle ACFS was not successful.

ORA-27219: syntax error in device PARMS - quotes missing or mismatch

Cause: An incorrect syntax was specified for the PARMS parameter value. Either the quotes were missing or there was a mismatch in the ENV parameter.

Action: Retry the command with matching quotes inside the ENV parameter.

ORA-27230: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27231: unable to close file

Cause: A file could not be closed.

Action: See accompanying errors.

ORA-27232: unable to get file information

Cause: Information about the file could not be obtained.

Action: See accompanying errors.

ORA-27233: file is not an ELF file

Cause: A file was not an ELF file.

Action: Check for file corruption and contact Oracle Support Services.

ORA-27234: unable to read file

Cause: A file could not be read.

Action: See accompanying errors.

ORA-27235: unable to map file region into memory

Cause: A file region could not be mapped into memory.

Action: See accompanying errors.

ORA-27236: unable to unmap file from memory

Cause: A file region could not be unmapped from memory.

Action: See accompanying errors.

ORA-27237: ELF file is not a relocatable object file

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27238: ELF file is not an executable

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27239: ELF file is not a shared object file.

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27240: ELF file does not have a required section

Cause: An ELF file did not have a required section.

Action: Contact Oracle Support Services.

ORA-27241: ELF-shared library has multiple sections of the same type

Cause: An ELF-shared library had multiple sections of the same type.

Action: Contact Oracle Support Services.

ORA-27242: ELF file has invalid hash table entry size

Cause: An ELF file had an invalid hash table entry size.

Action: Contact Oracle Support Services.

ORA-27243: ELF file has too many relocation sections

Cause: An ELF file had too many relocation sections.

Action: Contact Oracle Support Services.

ORA-27244: unable to determine base value for data relocation from ELF file

Cause: An ELF file was missing important information.

Action: Contact Oracle Support Services.

ORA-27245: unable to dlopen() binary image

Cause: A file could not be accessed via dlopen().

Action: See accompanying errors and make file available.

ORA-27246: unable to open file

Cause: A file could not be opened.

Action: See accompanying errors and make file available.

ORA-27247: unable to add a file section

Cause: A file section could not be added.

Action: Contact Oracle Support Services.

ORA-27248: operating system call failure

Cause: Operating system call failed.

Action: Contact Oracle Support Services.

ORA-27250: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27270: Memory allocation for a group list object failed.

Cause: An attempt was made to allocate memory for a group list object.

Action: Contact Oracle Support to determine if this an operating system issue or an internal Oracle error.

ORA-27271: Group name lookup in operating system failed.

Cause: A process failed to determine the members of a UNIX group.

Action: This is an internal error. When encountered, please contact Oracle Support Services for assistance.

ORA-27275: operating system debug library call failure

Cause: Operating system debug library call failed.

Action: This is an internal error. Contact Oracle Support Services.

ORA-27276: operating system call failure

Cause: Operating system call failed.

Action: This is an internal error. Contact Oracle Support Services.

ORA-27277: invalid address

Cause: Incorrect or badly formatted address was supplied.

Action: Specify a valid address.

ORA-27278: no debug attribute found

Cause: The expected debug attribute was not found.

Action: This object file is malformed, use different object file.

ORA-27279: Cannot find referred type.

Cause: Malformed debug object.

Action: This object file is malformed, use different object file.

ORA-27300: OS system dependent operation:*string* failed with status: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27301: OS failure message: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27302: failure occurred at: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27303: additional information: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27351: conflicting values of job attributes *string* and *string*

Cause: The values of two attributes passed in to the CREATE_JOBS call or the JOB object constructor conflicted with each other. This is usually because both attributes cannot be non-NULL at the same time.

Action: Resolve the conflict by changing the value of one of the attributes and issue the call again.

ORA-27353: job attribute *string* is missing

Cause: An attribute needed to fully specify a job was not passed in to a call to CREATE_JOBS or the JOB object constructor.

Action: Issue the call again with the required attribute set.

ORA-27354: attribute *string* cannot be set for *string* jobs

Cause: The CREATE_JOBS call or the JOB object constructor was called with an argument that is illegal in the case of lightweight or in-memory jobs.

Action: Set the argument to the default value and issue the call again.

ORA-27356: invalid job argument

Cause: An invalid job argument was passed into either the CREATE_JOBS call or the JOB object constructor.

Action: Correct the argument value and issue the call again.

ORA-27357: duplicate reference to job object *string*

Cause: The scheduler CREATE_JOBS call had two or more references to the same job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27359: duplicate reference to attribute *string* of job *string*

Cause: The scheduler SET_JOB_ATTRIBUTES call had two or more references to a specific attribute of a job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27361: scheduler API invoked with illegal or inconsistent arguments

Cause: A DBMS_SCHEDULER API call was invoked with either illegal or inconsistent arguments.

Action: Refer to scheduler documentation for the call, make the necessary changes and issue the call again.

ORA-27362: batch API call completed with errors

Cause: Some of the commands submitted to a scheduler batch API call could not be successfully carried out because of errors. Other commands in the batch may have completed successfully.

Action: Check the view SCHEDULER_JOB_ERRORS to see which commands failed and why. Make the appropriate corrections and submit the failed commands again.

ORA-27363: invalid program for *string* job

Cause: An attempt was made to create a lightweight or in-memory job using an invalid program. A program used in a lightweight or in-memory job has to be enabled, has to be in

the same schema as the job, and the program action has to be either a PL/SQL block or a stored procedure.

Action: Use a valid program for the lightweight job.

ORA-27364: remote database "*string*" already registered as *string*

Cause: The user attempted to register a remote database that was already registered.

Action: To update the registration information, the REPLACE argument of the REGISTER_REMOTE_DATABASE procedure should be set to TRUE. If the registration information is already current, no further action is needed.

ORA-27365: job has been notified to stop, but failed to do so immediately

Cause: The job specified in the stop_job command cannot be stopped immediately (because it is rolling back or blocked on a network operation), but it has been notified to stop. This means it will be stopped as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the job to be stopped, but calling stop_job with force (if you have the privilege) may cause the job to be stopped sooner.

ORA-27366: job "*string*"."*string*" is not running

Cause: An attempt was made to stop a job that was not running.

Action: Verify the status of the job. If the job is running but this message is still being returned, contact Oracle support.

ORA-27367: program "*string*"."*string*" associated with this job is disabled

Cause: An attempt was made to run a job whose program has been disabled.

Action: Reenable the program before running the job.

ORA-27369: job of type *string* failed with exit code: *string*

Cause: A problem was encountered while running a job of type EXECUTABLE. The cause of the actual problem is identified by the exit code.

Action: Correct the cause of the exit code and reschedule the job.

ORA-27370: job slave failed to launch a job of type EXECUTABLE

Cause: The scheduler ran into an error when the job slave tried to start a job of type EXECUTABLE. The rest of the error stack will provide more detailed information on what the exact problem was.

Action: Correct the problem specified in the error stack and reschedule the job.

ORA-27371: jobs of type EXECUTABLE are not supported on this platform

Cause: The user tried to create a job or program of type EXECUTABLE on a platform where such jobs are not supported.

Action: Switch to a different platform or create a different type of job or program.

ORA-27372: length of action and arguments exceeds platform limit *string*

Cause: The total length of the job or program action and the arguments exceeds the platform limit specified.

Action: Reduce the total length by specifying fewer and/or shorter arguments

ORA-27373: unknown or illegal event source queue

Cause: The source queue specified for the event based job or event based schedule was either not found or was of the wrong type.

Action: Check if the queue exists. If it does make sure it is a multiple consumer queue and it is a post 8.1 compatible queue. Single consumer queues and old-style queues cannot be used as event source queues.

ORA-27374: insufficient privileges on event source queue

Cause: The job owner had insufficient privileges on the event source queue that was specified for the job.

Action: The job owner has to have dequeue privileges on event source queue or he has to have manage queue or dequeue any queue system privileges. Make sure one of these privileges is granted.

ORA-27375: valid agent name must be specified for secure queues

Cause: The queue specified for the event based job or schedule was a secure queue and either no agent name was specified or an invalid agent name was specified.

Action: If no agent name was specified, retry the call with a valid agent name. If the agent name was valid, check if the agent is currently subscribed to the queue and, in the case of jobs, check if the agent has been authorized to act as the job owner.

ORA-27376: event condition cannot be NULL

Cause: A null event condition was passed in for an event based job or schedule. This is not allowed.

Action: Pass in a legal event condition.

ORA-27377: windows cannot have event based schedules

Cause: Event based schedules for windows are currently not supported.

Action: Use a time-based schedule instead.

ORA-27378: cannot stop jobs of type EXECUTABLE on this platform

Cause: An attempt was made to stop a job of type EXECUTABLE on a platform where the stop operation was not supported.

Action: If the attempt to stop the job was made with the FORCE option set to FALSE, try again but change the FORCE option to TRUE.

ORA-27379: INSTANCE_ID attribute conflicts with job class settings

Cause: The value of the INSTANCE_ID attribute of the job conflicted with the value of the SERVICE attribute of its job class.

Action: Change the value of the INSTANCE_ID attribute or place the job in a job class whose settings do not conflict with the INSTANCE_ID attribute. Then re-enable the job.

ORA-27380: not enough units to satisfy the constraint

Cause: There were not enough resources to satisfy the constraint.

Action: Add more resource units.

ORA-27381: job cannot run, state is RESOURCE_UNAVAILABLE

Cause: The job could not run because one of the resources was in a BLOCKED_ALL_JOBS state.

Action: Change the resource to either ENFORCE_CONSTRAINTS or IGNORE_CONSTRAINTS.

ORA-27382: job type *string* has errors in the job action

Cause: There were errors in the job action when the FAIL_ON_SCRIPT_ERROR job attribute was set to TRUE.

Action: Ensure that the job action has no errors or set FAIL_ON_SCRIPT_ERROR job attribute to FALSE. FAIL_ON_SCRIPT_ERROR is only valid for SQL_SCRIPT, BACKUP_SCRIPT, EXECUTABLE and EXTERNAL_SCRIPT job types.

ORA-27398: Job *string* cannot be enabled. The associated program has been dropped.

Cause: The program associated with this job was force dropped. The job could not be enable.

Action: Retry with a job that has a valid program.

ORA-27399: job type EXECUTABLE requires the CREATE EXTERNAL JOB privilege

Cause: The owner of a job of type EXECUTABLE does not have the CREATE EXTERNAL JOB system privilege.

Action: Grant the CREATE EXTERNAL JOB system privilege to the job owner or create another job in a schema which does have the CREATE EXTERNAL JOB system privilege.

ORA-27400: In a PDB, the JOB_QUEUE_PROCESSES initialization parameter must be between 0 and *string*.

Cause: An invalid value was specified for the JOB_QUEUE_PROCESSES initialization parameter.

Action: Specify a proper value for this parameter.

ORA-27405: invalid schema or handler name for attribute "*string*"

Cause: A nonexistent or invalid schema name or scheduler job notification handler name was specified. This occurred when an attempt was made to set JOB_NOTIFICATION_HANDLER global attribute for the scheduler to a user-provided value and either of the following was true: - The JOB_NOTIFICATION_HANDLER_OWNERS system parameter was not configured to allow user-provided job notification handler. - The user schema was not allowed to own the job notification handler. - The current user executing either of the following API calls did not have EXECUTE privilege granted on the job notification handler procedure. * DBMS_SCHEDULER.set_scheduler_attribute to set the JOB_NOTIFICATION_HANDLER global attribute for the scheduler * DBMS_SCHEDULER.add_job_notification to add notifications for a scheduler job - The job notification handler procedure was created as an INVOKER rights PL/SQL procedure. - The job notification handler procedure was invalid. - The job notification handler procedure did not have the required number and type of input arguments.

Action: Specify a valid schema name or job notification handler for JOB_NOTIFICATION_HANDLER attribute. Depending on the error, either one of the

following should be done: - If the JOB_NOTIFICATION_HANDLER_OWNERS system parameter is set to NULL (default value), then contact your database administrator to have it set to an appropriate value (comma-separated list of database users) to allow user-provided job notification handler. - If the user schema is not allowed to own the job notification handler, then contact your database administrator to add the user as part of JOB_NOTIFICATION_HANDLER_OWNERS system parameter value. Only users specified as part of JOB_NOTIFICATION_HANDLER_OWNERS system parameter value are allowed to own job notification handler. - If you need EXECUTE privileges on the job notification handler procedure, then contact your database administrator. - If the job notification handler procedure is created as an INVOKER rights PL/SQL procedure, then create it as DEFINER rights PL/SQL procedure and retry operation setting JOB_NOTIFICATION_HANDLER global attribute. INVOKER rights PL/SQL procedures are not allowed as job notification handler procedure due to security reasons. - If the job notification handler procedure is in an INVALID state, then check DBA_ERRORS and DBA_OBJECTS view for more information. - Check the input and output arguments for the job notification handler procedure. It can only have one input argument of type IN with datatype CLOB and no arguments of type IN OUT or OUT are allowed.

ORA-27411: Empty or NULL string is not a valid repeat interval.

Cause: An empty or NULL string was provided as a repeat interval for a window, a job or a schedule.

Action: Specify a valid repeat interval. For example, 'FREQ=DAILY;BYHOUR=8;BYMINUTE=0;BYSECOND=0' for a job that executes daily at 8 a.m. For a PL/SQL expression, ensure that it evaluates to a specific point in time and not NULL.

ORA-27412: repeat interval or calendar contains invalid identifier: *string*

Cause: The calendar string or calendar definition for the repeat interval of a job, schedule or window contained an unsupported keyword or reference to an undefined calendar.

Action: Correct the repeat interval such that it no longer contains the invalid keyword.

ORA-27413: repeat interval is too long

Cause: The repeat interval consisted of a calendar string larger than the maximum size allowed.

Action: Use a shorter calendar string for the repeat interval.

ORA-27414: Invalid *string* clause value

Cause: The BY clause value was not recognized or was out-of-range for the frequency specified.

Action: Specify a valid BY clause value.

ORA-27415: repeat interval or calendar must start with a frequency clause

Cause: The specified calendar string for the repeat interval did not start with a frequency clause.

Action: Create a repeat interval that starts with a frequency clause, for example 'FREQ=YEARLY;BYMONTH=FEB'

ORA-27416: BYDAY clause in repeat interval or calendar contains an invalid weekday

Cause: The BYDAY clause of the repeat interval contained a value that did not represent a weekday.

Action: Use the correct three letter abbreviations for weekdays, for example MON for Monday and FRI for Friday.

ORA-27417: BYWEEKNO clause requires YEARLY clause

Cause: A repeat interval or calendar contained a BYWEEKNO clause with a frequency other than yearly.

Action: Remove the BYWEEKNO clause or change the frequency to YEARLY.

ORA-27418: syntax error in repeat interval or calendar

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27419: unable to determine valid execution date from repeat interval

Cause: The specified repeat interval contained conflicting clauses that made it impossible to ever find a matching date, e.g., 'FREQ=YEARLY;BYMONTH=FEB;BYMONTHDAY=31'. Alternatively, the scheduler reached its maximum number of attempts to try to find a valid execution date. This occurs when theoretically there is a valid execution date far in the future, but the scheduler took too many attempts to determine this date.

Action: Remove the conflicting clauses, or simplify the repeat interval so that it is easier to determine the next execution date.

ORA-27420: Following message from *string* interval interpreter

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27421: calendar expression restriction *string* encountered

Cause: The calendar expression was not valid because a limit test failed. For example, the maximum value of the interval that can be specified in the INTERVAL clause is limited to a value derived from the frequency clause.

Action: Specify a valid calendar definition.

ORA-27422: usage of *string* not supported in embedded calendar application "*string*". "*string*"

Cause: The main calendar definition used an embedded calendar in an INCLUDE, EXCLUDE, INTERSECT, or FREQ clause for which extra limitations apply.

Action: Remove the specific clause from the calendar definition.

ORA-27423: calendar clause *string* specified more than once

Cause: The calendar definition contained a clause that was specified twice or more times.

Action: Append the values in the second clause to the first clause and remove the second clause.

ORA-27424: calendar clauses *string* and *string* are incompatible

Cause: The calendar definition contained clauses that were incompatible.

Action: Change or remove either clause.

ORA-27425: instance_id cannot be specified if database is not in Oracle RAC mode

Cause: 'stop_job' was called with 'instance_id' outside Oracle RAC mode.

Action: Do not specify this parameter for 'stop_job' unless in Oracle RAC mode.

ORA-27431: chain "string"."string" has a user-managed rule set

Cause: An attempt was made to modify a rule set that is not managed by the Scheduler.

Action: Modify the rule set directly using the dbms_rule_adm package or create another chain without specifying a rule set.

ORA-27432: step "string" does not exist for chain "string"."string"

Cause: The step specified does not exist for the given chain.

Action: Reissue the command using a step that exists for this chain.

ORA-27433: cannot alter state of step "string" for job "string"."string" to string

Cause: The step cannot be changed to the requested state. The state of a running step cannot be changed. A step which is running or has already run cannot be run again.

Action: Wait until the step has finished running.

ORA-27434: cannot alter chain step job "string"."string"."string"

Cause: A step job of a running chain cannot be altered, only stopped or dropped.

Action: Stop or drop the chain step job or alter the running chain step instead.

ORA-27435: chain job terminated abnormally

Cause: A chain job has ended abnormally. The error code for the running chain could not be retrieved.

Action: No action necessary. The job will run again when it is scheduled to.

ORA-27436: Scheduler agent operation failed with message: string

Cause: The Scheduler agent encountered an unexpected error when trying to perform the specified action.

Action: Review the provided message and the Scheduler agent log for information on how to fix the issue or contact Oracle Support Services.

ORA-27451: string cannot be NULL

Cause: An attempt was made to set a NOT NULL scheduler attribute to NULL.

Action: Reissue the command using a non-NULL value for the specified attribute.

ORA-27452: "string" is an invalid name for a database object.

Cause: An invalid name was used to identify a database object.

Action: Reissue the command using a valid name.

ORA-27453: "string" is an invalid job or program argument name.

Cause: An invalid job or program argument name was specified.

Action: Reissue the command using a valid name for this argument.

ORA-27454: argument name and position cannot be NULL

Cause: The name or position of a program or job argument was defined as NULL.

Action: Reissue the command providing either a valid argument name or valid argument position.

ORA-27455: Only "SYS" is a valid schema for a *string*.

Cause: A non-SYS schema was specified for an object that must be in the SYS schema.

Action: Reissue the command, leaving out the schema name or using the schema name of SYS.

ORA-27456: not all arguments of program "*string*"."*string*" have been defined

Cause: The `number_of_arguments` attribute of the named program did not match the actual number of arguments that have been defined.

Action: Define as many arguments as the number of arguments, or change the number of arguments.

ORA-27457: argument *string* of job "*string*"."*string*" has no value

Cause: No value was provided for the job argument with the specified position.

Action: Provide a value for the job argument using any of the `set_job_xxxx_value()` routines. Or, when using a named program, specify a default value for the corresponding argument of the program.

ORA-27458: A program of type PLSQL_BLOCK cannot have any arguments.

Cause: An attempt was made to create or enable a program of type PLSQL_BLOCK with arguments. This is not allowed.

Action: Change the number of arguments to zero, or change the type of the program.

ORA-27459: A program of type EXECUTABLE must have character-only arguments.

Cause: A program of type EXECUTABLE was created or enabled with one or more arguments of non-character datatypes.

Action: Change the arguments to be of character-only datatypes.

ORA-27460: cannot execute disabled job "*string*"."*string*"

Cause: An attempt was made to run a job that is disabled.

Action: Enable the job and then reschedule the job.

ORA-27461: The value for attribute *string* is too large.

Cause: The value that was provided for the specified attribute was too large.

Action: Reissue the command using a smaller or shorter value.

ORA-27463: invalid program type *string*

Cause: An invalid program type was specified.

Action: Reissue the command using a valid program type.

ORA-27464: invalid schedule type *string*

Cause: An invalid schedule type was specified.

Action: Reissue the command using a valid schedule type.

ORA-27465: invalid value *string* for attribute *string*

Cause: An invalid value was provided for the specified attribute.

Action: Reissue the command using a valid value for this attribute.

ORA-27467: invalid datatype for *string* value

Cause: The value provided for the named scheduler attribute was of an invalid datatype.

Action: Reissue the command using a value of the correct datatype.

ORA-27468: "*string*"."*string*" is locked by another process

Cause: An attempt was made to read or modify the state of the named scheduler object when another process was also updating the same object and held the lock.

Action: Retry the operation. Scheduler locks are held for a very short duration. If the error persists, contact Oracle Support.

ORA-27469: *string* is not a valid *string* attribute

Cause: A nonexistent attribute was specified.

Action: Reissue the command using a valid attribute for that specific scheduler object.

ORA-27470: failed to re-enable "*string*"."*string*" after making requested change

Cause: A change was made to an enabled scheduler object that caused it to become disabled.

Action: Alter the object so that it becomes valid and then enable it.

ORA-27471: window "*string*"."*string*" is already closed

Cause: An attempt was made to close a window that was not open.

Action: No action required.

ORA-27472: invalid metadata attribute *string*

Cause: An invalid metadata attribute was specified.

Action: Reissue the command using a valid metadata attribute.

ORA-27473: argument *string* does not exist

Cause: An argument which was specified does not exist.

Action: Reissue the command using an argument name defined by the program or using a valid argument position.

ORA-27474: cannot give both an argument name and an argument position

Cause: An argument was specified using both a name and a position.

Action: Reissue the command using either the argument name or the argument position but not both.

ORA-27475: unknown *string* "*string*"."*string*"

Cause: The specified object did not exist, privileges were not granted, or the object was of the wrong type.

Action: Specify an object of the correct type on which you have privileges.

ORA-27476: "string"."string" does not exist

Cause: A database object was specified that does not exist.

Action: Reissue the command using an object that exists or create a new object and then reissue this command.

ORA-27477: "string"."string" already exists

Cause: An attempt was made to create an object with a name that has already been used by another object in the same schema.

Action: Reissue the command using a different name or schema.

ORA-27478: job "string"."string" is running

Cause: An attempt was made to drop a job that is currently running.

Action: Stop the job and then reissue the command, or reissue the command specifying the force option to stop the job first.

ORA-27479: Cannot string "string"."string" because other objects depend on it

Cause: An attempt was made to drop or disable a scheduler object that has jobs associated with it without specifying the force option.

Action: Alter the associated jobs so they do not point to the scheduler object being dropped or disabled and then reissue the command. Alternatively reissue the command specifying the force option. If the force option is specified and a scheduler object is being dropped, all associated jobs will be disabled.

ORA-27480: window "string" is currently open

Cause: An attempt was made to drop a window that is currently open, or to manually open a window while another window is already open.

Action: Close the window that is open and then reissue the command, or reissue the command while setting the force option to TRUE.

ORA-27481: "string"."string" has an invalid schedule

Cause: An attempt was made to enable a job or window that has an invalid schedule.

Action: Alter the schedule of the job or window so that it is valid and then reissue the enable command.

ORA-27482: The scheduler credential "string"."string" is unusable.

Cause: An attempt was made to use a scheduler credential for which the key to decrypt its password was lost. Therefore, the password of the credential could not be retrieved.

Action: Reset the PASSWORD attribute of the credential by calling DBMS_CREDENTIAL.UPDATE_CREDENTIAL.

ORA-27483: "string"."string" has an invalid END_DATE

Cause: An attempt was made to enable a job or window that has an invalid end_date. Either the end_date is before the start_date or the end_date is in the past.

Action: Alter the job or window so that the end date becomes valid (possibly null) and then reissue the command.

ORA-27484: Argument names are not supported for jobs without a program.

Cause: An attempt was made to set or reset a job argument by using the name of the argument. Identifying job arguments by their name is only supported in combination with jobs that are based on programs. Jobs that are not using a program cannot have named arguments.

Action: Use argument position instead of name and then issue the command again.

ORA-27485: argument "*string*" already exists at a different position

Cause: An attempt was made to create or replace an argument with a name that is already used by an argument at a different position.

Action: Use a different name for the argument or drop or alter the argument which already exists with this name and then reissue the command.

ORA-27486: insufficient privileges

Cause: An attempt was made to perform a scheduler operation without the required privileges.

Action: Ask a sufficiently privileged user to perform the requested operation, or grant the required privileges to the proper user(s).

ORA-27487: An attempt was made to grant an invalid object privilege for a *string* scheduler object type.

Cause: An attempt was made to grant an object privilege that was not valid for the specified scheduler object.

Action: Check the Oracle Database scheduler documentation to verify which object privileges can be granted on scheduler objects. *Params: 1) scheduler_object: One of the scheduler object types.

ORA-27488: unable to set *string* because *string* was/were already set

Cause: An attempt was made to set an object's attribute even though one or more conflicting attributes of the same object had already been set.

Action: Set the other conflicting attributes to NULL and then reissue the command.

ORA-27489: unable to process job "*string*". "*string*" from job class "*string*"

Cause: An error was encountered while processing the named job from the specified job class.

Action: Resolve the error for this job and then reissue the command. See the next error message on the stack to find out what the error for the job is.

ORA-27490: cannot open disabled window "*string*". "*string*"

Cause: The user tried to open a disabled window.

Action: Enable the window and then try to open it again.

ORA-27491: repeat_interval and start_date cannot both be NULL

Cause: An attempt was made to set both repeat_interval and start_date to equal NULL for a Scheduler window or schedule.

Action: If either repeat_interval or start_date is set to equal NULL, the other should be set to a non-NULL value.

ORA-27492: unable to run job "*string*"."*string*": scheduler unavailable

Cause: A job run with current session set to false can not be issued if the scheduler is not active. Check value of job_queue_processes parameter, issue dbms_ijob.set_enabled(true), database is in upgrade/migrate mode, database is in data guard mode, or scheduler attribute SCHEDULER_DISABLED is set to TRUE

Action: Run the job in the current session or activate the scheduler

ORA-27493: In-memory job "*string.string*" cannot be modified

Cause: Once enabled, the full in-memory job could not be further modified.

Action: The only actions that can be taken now are to stop or drop the job.

ORA-27494: operation not permitted on lightweight and in-memory jobs

Cause: An attempt was made to perform an action that was not permitted.

Action: Check Oracle Scheduler documentation to see which actions can be performed on the desired job.

ORA-27495: attribute *string* cannot be set for in-memory jobs

Cause: An attempt was made in a CREATE or SET_ATTRIBUTE call to set an attribute that could not be set for run-time in-memory jobs.

Action: If you need to set this attribute, use either regular or lightweight jobs.

ORA-27496: credential "*string*"."*string*" is disabled

Cause: An attempt was made to run a job, file watcher or external procedure whose credential was disabled.

Action: Reenable the credential before running the job, file watcher or external procedure.

ORA-27497: operation is not permitted inside a pluggable database

Cause: An attempt was made to process an operation that was not allowed in a pluggable database.

Action: Log into the root database and retry the operation.

ORA-27498: resource constraint object type mismatch

Cause: Not all of the resource constraints of a resource were of the same type.

Action: Delete existing constraints for the resource.

ORA-27499: in-memory job metadata is too large

Cause: The in-memory job was too large. Due to the need to keep in-memory jobs efficient and performing well, we limit the size of in-memory job metadata to 8 kilobytes. This includes the space used for job argument values.

Action: Reduce the size of the job metadata and try again. If all the metadata is needed, then you should create some other type of job.

ORA-27500: Interprocess Communication (IPC) error between nodes in the cluster

Cause: An IPC error occurred during the communication between nodes in the Oracle Cluster using the cluster interconnect.

Action: Check the extra information specified in any follow-up errors, check the log files, and fix the underlying error. If the issue persists or assistance is needed, contact Oracle Support.

ORA-27501: error creating an Interprocess Communication port

Cause: This was an operating system or cluster interconnect error.

Action: Check the value of the error number and contact Oracle Support.

ORA-27502: An Interprocess Communication (IPC) error occurred when deleting operating system dependent (OSD) context.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services.

ORA-27503: An Interprocess Communication (IPC) error occurred when attempting to cancel a request.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27504: Interprocess Communication (IPC) error creating operating system-dependent context.

Cause: There was an operating system or cluster interconnect error.

Action: Check the value of errno and contact Oracle Support.

ORA-27505: Interprocess Communication (IPC) error destroying a port.

Cause: This was an operating system or cluster interconnect error.

Action: Check the value of the error number and contact Oracle Support.

ORA-27506: An Interprocess Communication (IPC) error occurred when connecting to a port.

Cause: This is an operating system/cluster interconnect error.

Action: Contact Oracle Support Services.

ORA-27507: An Interprocess Communication (IPC) error occurred when disconnecting from a port.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27508: An Interprocess Communication (IPC) error occurred when sending a message.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27509: An Interprocess Communication (IPC) error occurred when receiving a message.

Cause: This is an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27510: An Interprocess Communication (IPC) error occurred when waiting for a request to complete.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27512: An Interprocess Communication (IPC) error occurred while posting a process.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno provided.

ORA-27513: parameter *string* contains invalid value *string*

Cause: The program could not identify the value as an IP address.

Action: Change the value to be a valid IP address.

ORA-27514: An Interprocess Communication (IPC) error occurred copying memory to a remote process.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27515: inadequate memlock limit or driver settings

Cause: Inter Process Communication(IPC) queue creation failed due to inadequate memlock limit or driver settings.

Action: Set a higher memlock limit and review the network driver settings to ensure that this limit is accepted.

ORA-27528: Transport: *string* required by *string* is not available.

Cause: The IP addresses assigned to the instance did not support the specified transport.

Action: Check the IP addresses used in the alert log and contact Oracle Support Services.

ORA-27529: IP address *string* is not available.

Cause: The internet protocol (IP) address assigned to the instance was not associated with any network adapters.

Action: Ensure that the IP address is assigned to a network adapter. *Params: 1) IP_address: The IP address for Oracle Real Application Clusters (Oracle RAC) communication.

ORA-27530: Interprocess socket call (IPC) ephemeral ports on internet protocol (IP) address *string* are exhausted.

Cause: There was an operating system or cluster interconnect error.

Action: Contact Oracle Support. *Params: 1) IP_address: The address of the loopback or Oracle Real Application Clusters (Oracle RAC) communication interface.

ORA-27532: interprocess communication (IPC) global name service *string* error

Cause: The global name space service used by cross instance communication reported an error.

Action: Check additional error messages in the process trace file and contact Oracle Support. *Params: 1) operation: The name service operation that failed.

ORA-27534: Out of RDMA device contexts

ORA-27541: NMON event service background process terminated with error

Cause: The NMON event service process died.

Action: No action required.

ORA-27542: Failed to unprepare a buffer prepared for remote update

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27543: Failed to cancel outstanding IPC request

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27544: Failed to map memory region for export

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27545: Failed to prepare buffer for remote update.

Cause: There was an operating system/cluster interconnect error.

Action: Contact Oracle Support Services with the errno.

ORA-27546: Oracle compiled against IPC interface version *string.string* found version *string.string*.

Cause: A misconfiguration or installation error occurred.

Action: Install the IPC library for this release of Oracle Database. *Params: 1) IPC_major_version: The expected IPC major version. 2) IPC_minor_version: The expected IPC minor version. 3) runtime_IPC_major_version: The runtime IPC major version. 4) runtime_IPC_minor_version: The runtime IPC minor version.

ORA-27547: Unable to query Interprocess Communication (IPC) operating system dependent (OSD) attribute *string*.

Cause: There was an OSD IPC error.

Action: Contact Oracle Support. *Params: 1) attribute: The OSD attribute that could not be queried.

ORA-27548: Unable to prepare Interprocess Communication (IPC) buffer.

Cause: There was an operating system-dependent IPC error.

Action: Contact Oracle Support Services with the errno.

ORA-27550: Target ID protocol check failed. tid vers=*string*, type=*string*, remote instance number=*string*, local instance number=*string*

Cause: The local Oracle Real Application Cluster instance and remote instance are running with incompatible implementation of the inter-instance IPC protocol library. A misconfiguration or installation error occurred.

Action: Check additional error messages in the alert log and the process trace file.

ORA-27552: exception accessing GSM in Oracle RAC cluster

Cause: Global Shared Memory (GSM) was used to provide shared memory semantics on an Oracle RAC cluster. An error occurred while accessing GSM hosted on a remote node.

Action: Contact Oracle Support Services.

ORA-27553: incompatible IPC settings in Oracle RAC cluster

Cause: Inter-process Communication (IPC) settings were not compatible with other instances in the Oracle RAC cluster.

Action: Check additional error messages in the alert log and IPC0 trace file.

ORA-27554: On-Demand Paging capability is disabled

Cause: On-Demand Paging capability is required in Host Channel Adapter (HCA) for features such as Dynamic SGA (system global area).

Action: Check additional error messages in the alert log and startup process trace file.

ORA-27601: Cell storage initialization failed, cell library error code [string]

Cause: Cell storage client did not succeed in initializing.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27602: Failure to publish network status information, cell library error code [string]

Cause: Network status information publishing failed.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27603: Cell storage I/O error, I/O failed on disk string at offset string for data length string

Cause: Cell storage I/O read or write failed, possibly due to a configuration problem or a hardware failure.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27604: Cell storage ioctl error, ioctl failed on disk string

Cause: ioctl operation on a cell storage disk failed.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27605: Smart I/O failed as a handle could not be obtained to the cell "string" as the cell is not accessible.

Cause: The cell could have been unavailable.

Action: Ensure the cell is available. Check the network connectivity.

ORA-27606: Smart I/O failed because the diskgroup was found to be unmounted. tablespace number: "string", file number: "string"

Cause: The diskgroup to which the specified file belongs was found to be unmounted.

Action: Ensure that the diskgroup to which the specified file belongs is mounted.

ORA-27607: Smart I/O failed because there were no online disks. tablespace number: "string", file number: "string"

Cause: There were no online disks found for the specified file.

Action: Ensure the diskgroup to which the specified file belongs to is mounted. Ensure that the disks are online. Check the availability of cells and check the network.

ORA-27608: Smart I/O failed because the disk "string" on the cell "string" was not open. error code: "string", "string"

Cause: The specified disk on the specified cell could not be opened.

Action: Ensure the cell is available. Check the network.

ORA-27609: Smart I/O failed due to a network error to the cell "string". error code "string", "string"

Cause: The specified cell could not be connected to.

Action: Ensure that the cell is available. Check the network.

ORA-27610: Smart I/O failed due to shortage of memory on the cell "string"

Cause: The specified cell had a shortage of memory to perform smart I/O.

Action: Reduce the parallel degree or number of Oracle sessions executing smart I/O.

ORA-27611: Smart I/O failed due to a block corruption detected on the host. The block was received from cell "string". disk: "string", block: "string", disk offset: "string"

Cause: The data block indicated was corrupted on the host, but a corruption was not found on the cell.

Action: This may be due to a transient network error or a real block corruption. Check your network for any errors. Analyze the segment to which the file belongs. If there is indeed a corruption, try to restore the block using RMAN block recovery. If there is a trace file, report the errors in it to Oracle Support Services. If analyze did not report an error and network did not have any error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27612: Smart I/O failed due to a block corruption detected on the cell "string". disk: "string", block: "string", disk offset: "string"

Cause: The data block indicated was found to be corrupted on the cell.

Action: This may be due to a software error or a real data corruption. Analyze the segment. If there is indeed a block corruption, try to restore the block using RMAN block level recovery. If there is a trace file, report the errors in it to Oracle Support Services. If analyze did not report an error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27613: Smart I/O failed due to an I/O error on the cell "string". disk: "string", block: "string", disk offset: "string" I/O size: "string"

Cause: An I/O request failed on the specified cell and disk.

Action: Check the specified disk on the cell.

ORA-27614: Smart I/O failed due to an error "string, string" from the cell "string". disk: "string", block: "string", disk offset: "string" I/O size: "string"

Cause: An I/O request failed, due to an internal error on the specified cell and disk.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27615: Smart I/O file to disk translation failed with error: string.

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27616: Exadata Allocation Unit: *string*

Cause: This error message is usually accompanied by another message, indicating the real problem. This message exists to provide additional information to Oracle Support Services.

Action: Check the next error message.

ORA-27617: Smart I/O failed because of an internal error. Cell "*string*", disk "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27618: Smart I/O failed because of an internal error. Cell "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27619: Smart I/O failed because of an internal error when determining the time zone file version. Error code "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27621: The value of *string* is not valid for parameter *string*

Cause: Incorrect value is specified for an internal parameter.

Action: This parameter should only be set by Oracle Support Services. Check the additional diagnostic information in the trace file and contact Oracle Support Services for recommendations on setting this parameter.

ORA-27623: Cell automation SQL action failed

Cause: Cell automation manager or worker process failed to execute SQL action through OCI recursive call.

Action: Check the alert log and process trace file for additional information. Contact Oracle Support Services if the errors specified in the trace file cannot be corrected.

ORA-27624: Smart I/O failed because the number of reconnects to the cell "*string*" exceeded the maximum allowed "*string*".

Cause: The number of reconnects to a cell exceeded the maximum allowed. This problem indicates a possible network problem or a software problem on the cell.

Action: If the cellsv is being restarted repeatedly, in a short interval, check the system load. The problem may be corrected by rebooting the cell. If the system is not overloaded, the repeated restarts are likely due to software problem. Report the problem to Oracle Support Services along with alert log and trace files. If the cellsv is not restarting, the problem may be in the IB network. Check the network between the host and all the cells.

ORA-27625: Exadata configuration failed.

Cause: One or both of the files, cellinit.ora and cellip.ora, were either invalid or missing.

Action: Check if the files, cellinit.ora and cellip.ora, are both present. They can be found in the \$OSSCONF directory. If both are present, check if their contents are valid and correct. If the files are invalid or missing, produce files with valid information in the \$OSSCONF directory. For information on how to set up these files, see the Exadata Users Guide.

ORA-27626: Exadata error: *string* (*string*)

Cause: The cause of this error is dependent on the context in which this error is reported.

Action: See the primary error reported with this error.

ORA-27627: Software edition incompatible with Exadata storage.

Cause: Oracle Exadata can be used only with Oracle Database Enterprise Edition.

Action: Check if Oracle is linked with the Enterprise Edition options.

ORA-27628: An invalid value was specified for the parameter *string*.

Cause: An invalid value was specified for a parameter.

Action: Check the additional diagnostic information in the trace file and contact Oracle Support Services if further help is required.

ORA-27629: External table smart I/O failed because the cell is not accessible.

Cause: The cell was unavailable.

Action: Ensure the cell is available.

ORA-27631: External encryption or decryption is disabled.

Cause: Either decryption was disabled in the cellinit.ora initialization parameter file, or the cryptography mode requested by the database was incompatible with what was available on the cell.

Action: No action is necessary. The Exadata cell returns data in pass-through mode when encryption or decryption is required.

ORA-27778: MGA namespace is already marked for deletion.

Cause: Managed Global Area (MGA) namespace was already marked for deletion. No further attaches are allowed.

Action: This is a diagnostic message; no action is needed.

ORA-27779: MGA segment creation failure

Cause: The Managed Global Area (MGA) segment creation failed.

Action: Check other error messages for additional information.

ORA-27780: MGA segment deletion failure

Cause: The Managed Global Area (MGA) segment deletion failed.

Action: Check other error messages for additional information.

ORA-27781: MGA segment attach failure

Cause: The Managed Global Area (MGA) segment attach failed.

Action: Check other error messages for additional information.

ORA-27782: MGA segment detach failure

Cause: The Managed Global Area (MGA) segment detach failed.

Action: Check other error messages for additional information.

ORA-27800: invalid configuration (*string*) for event creation (*string*)

Cause: An invalid configuration value was specified while creating the event.

Action: Make sure all configuration values are valid and retry the operation. Consult the manuals for valid configuration values. If the issue persists, contact Oracle Support Services.

ORA-27890: invalid namespace context type

Cause: The namespace context type was invalid.

Action: None

ORA-27891: Namespace invalid *string*

Cause: An invalid parameter was passed to namespace layer.

Action: None

ORA-27892: invalid namespace context handle

Cause: The namespace context handle was invalid.

Action: None

ORA-27893: given namespace context handle not attached

Cause: The namespace context handle not attached.

Action: None

ORA-27894: given namespace context handle attached

Cause: The namespace context handle attached.

Action: None

ORA-28000: The account is locked; login denied.

Cause: This occurs when any of the following are true: - Incorrect credentials were used for too many consecutive failed login attempts. - The account was locked by an administrator. - The user was a common user locked in the root container.

Action: Wait for the `PASSWORD_LOCK_TIME` to elapse before retrying, or contact the DBA to unlock the account manually using the `ALTER USER` command with the `ACCOUNT UNLOCK` clause. The `PASSWORD_LOCK_TIME` is the password profile limit which specifies how long the account remains in the `LOCKED(TIMED)` status after the wrong credential was used for `FAILED_LOGIN_ATTEMPTS` consecutive login attempts. A user's account status can be found in the `ACCOUNT_STATUS` column of the `DBA_USERS` view.

ORA-28001: The account has expired. The password must be changed.

Cause: The account expired and the password must be changed. This occurs when any of the following are true: * An administrator expired the account. * The account has an associated password profile with a limited password duration, and the password has not been changed in accordance with the `PASSWORD_LIFE_TIME` parameter. * The account was created as part of either a database import inside a pluggable database (PDB) or as a clone of an existing PDB. The password does not meet the requirements of the mandatory profile enforced in the PDB.

Action: Change the password. If necessary, contact a database administrator for the rules for setting a password which complies with the mandatory password profile.

ORA-28002: *string* is not unlimited. The password will expire within *string* days.

Cause: The password of the user's account expired and entered the grace period and should be changed. This can happen if any of the following is true: - The user account was associated with a password profile with a limited PASSWORD_LIFE_TIME and a non-zero PASSWORD_GRACE_TIME. - The user account was created as part of either a database import inside a pluggable database (PDB) or clone of an existing PDB and the user's password did not meet the requirements of the mandatory profile (that was configured with a limited password grace period) enforced in the PDB. Since the password grace period has not yet elapsed, the user is not prompted to input a new password and an ORA-28002 warning message will continue to be displayed upon each successful login to the user account, until the user changes their password. After the grace period has elapsed, the password expires and until the user successfully changes their password their login will continue to fail with an ORA-28001 error.

Action: Change the password or contact the database administrator to understand the rules for choosing a new password that complies with the mandatory profile.

ORA-28003: The password chosen did not meet the required complexity rules set by your organization.

Cause: The new password did not meet the complexity rules which may include the minimum number of characters, integers, and special characters.

Action: Enter a different password that meets your organization password complexity requirements. If you don't know the password requirements, check with your system administrator or help desk.

ORA-28004: invalid argument for function specified in PASSWORD_VERIFY_FUNCTION *string*

Cause: The password verification function does not have the required number and type of input/output arguments and/or the return argument

Action: Check the manual to find out the format of the password verification function

ORA-28005: invalid mode for OCISessionBegin

Cause: The mode was not set properly when calling OCISessionBegin.

Action: Use the correct mode when calling OCISessionBegin.

ORA-28006: conflicting values for parameters *string* and *string*

Cause: The parameters PASSWORD_REUSE_TIME and PASSWORD_REUSE_MAX cannot both be set. One parameter should be unlimited while other is set

Action: Set one value to UNLIMITED explicitly

ORA-28007: The password cannot be reused.

Cause: The password provided violated a password reuse policy defined in the user profile.

Action: Provide a password that you have not used for the specified number of days or password changes. Refer to the password reuse parameters in the profile applied to the user.

ORA-28008: incorrect old password

Cause: The old password supplied was incorrect, and the user could not be authenticated to perform a change password operation.

Action: Retry the operation with the correct old password.

ORA-28009: connection as SYS should be as SYSDBA or SYSOPER

Cause: An attempt was made to connect as SYS without an administrative connection clause.

Action: Use the appropriate administrative connection clause. For example: * connect SYS/*password* AS SYSDBA * connect SYS/*password* AS SYSOPER Attempting to connect as SYS without an administrative connection clause is no longer supported. To connect as SYS specify either the AS SYSDBA database administrator clause or one of the separation-of-duty clauses (AS SYSOPER, AS SYSASM, AS SYSBACKUP, AS SYSDG, AS SYSKM, or AS SYSRAC).

ORA-28010: cannot expire external users, global users, or users with no authentication method

Cause: If a user account was created as IDENTIFIED EXTERNALLY, IDENTIFIED GLOBALLY or NO AUTHENTICATION then this account password could not be expired.

Action: Only expire the password of a user that has PASSWORD as the AUTHENTICATION_TYPE in the DBA_USERS views.

ORA-28011: The password has expired. Change the password now.

Cause: The password of the user's account expired. Since the user's account is associated with a password profile with an UNLIMITED password grace period, the user will not be prompted to input a new password (which happens for accounts with a limited grace period). Instead, ORA-28011 warning message will continue to be displayed upon each successful login to the user account, until the user changes their password.

Action: Change the password or contact the database administrator.

ORA-28012: The connection as *string* should use AS *string*.

Cause: An attempt was made to connect as an administrative user without specifying an administrative connection clause (AS SYSDBA, AS SYSOPER, AS SYSASM, AS SYSBACKUP, AS SYSDG, AS SYSKM, or AS SYSRAC).

Action: Use the appropriate administrative connection clause, for example: CONNECT SYS AS SYSDBA Enter password: *password* CONNECT SYS AS SYSOPER Enter password: *password* Attempting to connect as SYS without an administrative connection clause is no longer supported. To connect as an administrative user, specify either the AS SYSDBA database administrator clause or one of the separation-of-duty clauses (AS SYSOPER, AS SYSASM, AS SYSBACKUP, AS SYSDG, AS SYSKM, or AS SYSRAC).

ORA-28013: The proxy user password expired.

Cause: The proxy user password expired.

Action: Connect directly as proxy user to change the password or contact the database administrator.

ORA-28014: cannot drop administrative user or role

Cause: An attempt was made to drop an administrative user or role. An administrative user or role can be dropped only by SYS during migration mode.

Action: Drop the administrative user or role during migration mode.

ORA-28015: ACCOUNT UNLOCK attempted on standby database while there is a conflicting ACCOUNT LOCK status on the primary database.

Cause: An attempt to unlock an account on a standby database was prevented because the account was previously marked as locked on the primary database. All attempts to unlock the account on the standby database will be prevented as long as the overriding ACCOUNT LOCK condition exists on the primary database.

Action: If this database is part of an Oracle Data Guard configuration, perform the ACCOUNT UNLOCK action on the primary database. If this database is read-only, then set the database to read/write and perform the ACCOUNT UNLOCK action.

ORA-28016: Privilege *string* cannot be granted to SYS.

Cause: An attempt was made to grant SYSBACKUP, SYSDG or SYSKM to the SYS user. These administrative privileges cannot be granted to SYS.

Action: Try granting the administrative privilege to other users. *Params: 1) privilege_name: The name of the administrative privilege.

ORA-28017: The password file is in the LEGACY format.

Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the password file is in LEGACY format: - Attempting to grant SYSBACKUP, SYSDG, or SYSKM privileges. - Attempting to grant an administrative privilege to a user who had large password verifiers (for example, SHA-512 hashed verifiers). - Attempting to grant a common administrative privilege to a common user in a multitenant container database (CDB).

Action: Create the password file in the new format ("12" or higher) or migrate the existing password file in LEGACY format to the new format ("12" or higher) using the INPUT_FILE option. Retry the operation after the file creation.

ORA-28018: This operation requires connection as SYS or SYSBACKUP.

Cause: An attempt was made to execute a command even though the user was not connected as SYS or SYSBACKUP.

Action: Connect as SYS or SYSBACKUP and retry this command.

ORA-28019: Audit cannot be configured on administrative privileges.

Cause: An attempt was made to configure audit on an administrative privilege using either the CREATE AUDIT POLICY, ALTER AUDIT POLICY, AUDIT, or NOAUDIT command.

Action: For traditional audit, use AUDIT_SYS_OPERATIONS to audit administrative privileges. If this is a unified audit, use CREATE AUDIT POLICY to audit the actions of administrative users.

ORA-28021: Global roles cannot be granted to a database user or to another role.

Cause: An attempt was made to grant a role identified as global to a database user or role. A global role can only be granted to an enterprise user if they are assigned to the mapped group or role in the external identity service (such as IAM or OUD).

Action: If you need the global role and need a similar role granted to a database user or role, create another role with the same roles and privileges granted to the global role and grant the new role to the database user or role. If the global role is no longer required to be a global role mapped to an external group or role anymore, then use ALTER ROLE to change the type of the role (from IDENTIFIED GLOBALLY to another role such as IDENTIFIED BY password).

ORA-28022: External roles cannot be granted to a global user or global role.

Cause: The role used in the GRANT statement was an external role. Roles that are created with IDENTIFIED EXTERNAL cannot be granted to global users or global roles or any other roles.

Action: Review your authorization design to select your action. Some options to consider: - Use another non-external role instead. - Use ALTER ROLE to change the role type so that it is not external. - Change the global role or global user (ALTER ROLE or ALTER USER) so that it is not a global role or user anymore.

ORA-28023: must revoke grants of this role to other user(s) first

Cause: The role altered to IDENTIFIED GLOBALLY was granted to one or more other users and/or roles. Global roles cannot be granted to any user or role.

Action: Use REVOKE to revoke the role from other users or roles first.

ORA-28024: Cannot alter database user or role that has external roles granted to the user or role.

Cause: The user or role had external roles granted to the user or role. A database user or role that is being altered (ALTER USER or ALTER ROLE) with IDENTIFIED GLOBALLY must not have external roles directly granted to it. These external roles must first be revoked since external roles cannot be granted to global users or roles.

Action: Use REVOKE to revoke the external roles from the database user or role to be altered. Query DBA_ROLE_PRIVS to find the external roles of the users and roles. Query DBA_ROLES with AUTHENTICATION_TYPE=EXTERNAL to identify external roles.

ORA-28025: missing or null external name

Cause: The IDENTIFIED EXTERNALLY AS or IDENTIFIED GLOBALLY AS clause was specified with a valid external name.

Action: Provide a valid external name.

ORA-28026: user with same external name already exists

Cause: The external name specified for the user being created or altered already exists for another user.

Action: External names must be unique among users. Specify another.

ORA-28027: privileged database links may be used by global users

Cause: Only users IDENTIFIED GLOBALLY may use a privileged database link.

Action: Either change the user to a global user or try to use a different database link.

ORA-28028: could not authenticate remote server

Cause: During the course of opening a privileged database link, the remote server was not securely identified using the network security service. Additional errors should follow.

Action: Consult the network security service documentation on how to properly configure the remote server.

ORA-28029: could not authorize remote server for user *string*

Cause: During the course of opening a privileged database link, the remote server was found to lack the necessary authorizations to connect as the current global user. This may be because the server was not authorized by the network security service. Or it may be because the local server is restricting access by the remote server using the DBMS_SECURITY_DOMAINS_ADMIN package.

Action: Grant the remote server the proper authorization to connect as the given global user, and check that the local server is not restricting access.

ORA-28030: Server encountered problems accessing the LDAP directory service.

Cause: Either the Lightweight Directory Access Protocol (LDAP) connection was not configured correctly, or the LDAP directory service is unavailable.

Action: Contact your system administrator.

ORA-28031: The number of enabled roles exceeds the maximum allowed limit for this session.

Cause: An attempt was made to enable more than the allowed limit of 148 roles in a session.

Action: Either enable fewer roles if all the roles are not required or group more privileges into a smaller number of roles. Note that roles granted to an enabled role also count toward the total of enabled roles limit.

ORA-28032: Your password has expired and the database is set to read-only.

Cause: Your password expired and must be changed. Because the database is currently open in read-only mode, the password change operation cannot be performed on this database.

Action: Log in to the primary database to change your password, then retry your login request on the standby database.

ORA-28034: cannot grant *string* to an Oracle-maintained user

Cause: The KEEP DATE TIME, KEEP SYSGUID or KEEP SEQUENCE privileges could not be granted to an Oracle-maintained user.

Action: Specify a non-Oracle-maintained user when granting these privileges. *Params: 1) privilege_name: The name of the privilege being granted.

ORA-28035: cannot get session key for authentication

Cause: The client and server could not negotiate a shared secret during authentication.

Action: Contact the system administrator.

ORA-28036: HTTP digest authentication cannot be configured for this user.

Cause: An attempt was made to configure HTTP digest authentication for a global user, an external user, a no authentication type user, or a SYS user which is not allowed.

Action: Change the authentication mechanism for this user and enable HTTP digest authentication.

ORA-28037: cannot get session key for RACF authentication

Cause: The client and server could not negotiate shared secret during log in.

Action: The user should not see this error. Contact your system administrator.

ORA-28038: Authentication with O2LOGON is not allowed.

Cause: A client attempted to authenticate using O2LOGON.

Action: Authenticate using a newer client. Authentication using O2LOGON is not supported.

ORA-28039: cannot validate Kerberos service ticket

Cause: The Kerberos service ticket provided was invalid or expired

Action: Provide a valid, unexpired service ticket.

ORA-28040: The database does not accept your client's authentication protocol; login denied.

Cause: No common authentication protocol was found between the database client and server.

Action: Set the values of the SQLNET.ALLOWED_LOGON_VERSION_SERVER and SQLNET.ALLOWED_LOGON_VERSION_CLIENT parameters on both the client and on the server to values that match the minimum software version supported in the system. This error is also raised when the client is authenticating to a user account which was created without a verifier suitable for the client software version. In this situation, the password of the account must be reset to generate the required verifier and allow the authentication to proceed successfully.

ORA-28041: authentication protocol internal error

Cause: Authentication protocol failed with an internal error.

Action: Contact Oracle Support Services.

ORA-28042: Server authentication failed

Cause: Server failed to authenticate itself to the client

Action: Confirm that the server is a valid database server.

ORA-28043: invalid bind credentials for DB-OID connection

Cause: The Database password stored in the wallet did not match the one in OID .

Action: Use DBCA to reset the database password so that it is the same in database wallet and in OID.

ORA-28044: unsupported directory type

Cause: The database tried to work with a directory which is not OID.

Action: Enterprise User Security works only with Oracle Internet Directory. Update the ldap.ora file to reflect an appropriate OID.

ORA-28045: SSL authentication between database and OID failed

Cause: Server failed to authenticate itself to the Directory.

Action: Make sure the sqlnet.ora used is pointing to the wallet with the right certificate.

ORA-28046: The password change for the SYS user is not allowed.

Cause: The REMOTE_LOGIN_PASSWORDFILE parameter is set to SHARED, which prohibits SYS password changes.

Action: Change the REMOTE_LOGIN_PASSWORDFILE parameter to EXCLUSIVE.

ORA-28047: database is not a member of any enterprise domain in OID

Cause: An enterprise user login was attempted on a database that is not a member of any enterprise domain in OID.

Action: An administrator should put the database into an enterprise domain in OID, and then the user should reconnect.

ORA-28048: database is a member of multiple enterprise domains in OID

Cause: An enterprise user login was attempted on a database that is a member of multiple enterprise domains in OID.

Action: An administrator should put the database into only one enterprise domain in OID, and then the user should reconnect.

ORA-28049: the password has expired

Cause: The password of the enterprise user has expired.

Action: Change the password in the directory or contact the database administrator.

ORA-28050: The specified database user or role cannot be dropped.

Cause: The database user or role specified in the DROP statement was a reserved Oracle user or role name that could not be dropped.

Action: None

ORA-28051: The account is locked.

Cause: The enterprise user provided the wrong password during a number of consecutive authentication attempts that exceeded the maximum number of failed authentication attempts specified in the realm's password policy profile.

Action: Contact the directory administrator.

ORA-28052: the account is disabled

Cause: The enterprise user's account in the directory has been disabled.

Action: Contact the directory administrator.

ORA-28053: the account is inactive

Cause: The enterprise user's account in the directory is currently not active.

Action: Contact the directory administrator.

ORA-28054: the password has expired. *string* Grace logins are left

Cause: The enterprise user's password has expired. The user is able to login because he has gracelogins left.

Action: change the password in the directory or contact the directory administrator.

ORA-28055: the password will expire within *string* days

Cause: The enterprise user's password is about to expire.

Action: Change the password in the directory or contact the directory administrator.

ORA-28056: Writing audit records to Windows Event Log failed

Cause: Unable to write an audit entry to the Windows event log used as the audit trail.

Action: Check the error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-28057: name of the password file could not be constructed

Cause: Possibly environment variable ORACLE_SID was not set.

Action: Set value for the ORACLE_SID environment variable.

ORA-28058: Login is allowed only through a proxy.

Cause: This account is marked "proxy only connect".

Action: Connect through a proxy user.

ORA-28059: User account update failed in one or more Oracle RAC instances.

Cause: An attempt to propagate the user account information or flush the password file metadata cache across the Oracle RAC instances failed.

Action: Ensure that every Oracle RAC instance is operational and retry the operation.

ORA-28060: A data redaction policy already exists on this column.

Cause: A data redaction policy was already in existence on this column.

Action: Specify a column that does not already have a redaction policy defined on it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this column.

ORA-28061: This object cannot have a data redaction policy defined on it.

Cause: An attempt was made to define a data redaction policy on an object other than a table or view. Note that a data redaction policy cannot be defined on an editioned view, or on specialized tables created internally by the server in conjunction with various features such as materialized view.

Action: Specify the name of a table or view.

ORA-28062: The policy expression is too long.

Cause: The policy expression was longer than 4000 characters.

Action: Specify a policy expression no longer than 4000 characters.

ORA-28063: The policy expression is empty.

Cause: The EXPRESSION parameter to DBMS_REDACT.ADD_POLICY was empty.

Action: Specify a nonempty policy expression in the EXPRESSION parameter of the DBMS_REDACT.ADD_POLICY procedure.

ORA-28064: The redaction function is not valid.

Cause: The FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY was invalid.

Action: Specify the FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY as one of the following: DBMS_REDACT.NONE DBMS_REDACT.FULL DBMS_REDACT.RANDOM DBMS_REDACT.PARTIAL DBMS_REDACT.REGEXP DBMS_REDACT.NULLIFY Note that: 1. BLOB columns can only support: None redaction Full redaction NULL redaction 2. CLOB or NCLOB columns can only support: None redaction Full redaction NULL redaction Regular expression-based

redaction. 3. Boolean columns can only support: Full redaction NULL redaction Random redaction

ORA-28066: invalid column "*string*"

Cause: The specified column is invalid in the COLUMN_NAME parameter.

Action: Check the columns in the object and specify a valid column name.

ORA-28067: missing or invalid column name

Cause: An invalid column name was specified in the COLUMN_NAME parameter when a column name was required. Note that when using DBMS_REDACT.ALTER_POLICY, the default action is DBMS_REDACT.ADD_COLUMN.

Action: Specify a valid column name.

ORA-28068: The object "*string*" does not have a data redaction policy.

Cause: The specified object did not have a data redaction policy defined on it.

Action: Specify the name of an object that has a data redaction policy, or use DBMS_REDACT.ADD_POLICY to add a data redaction policy.

ORA-28069: A data redaction policy already exists on this object.

Cause: An attempt was made to define a redaction policy on an object that has an existing data redaction policy.

Action: Specify a table or view that does not have a redaction policy defined for it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this object.

ORA-28070: The column "*string*" does not have a data redaction policy.

Cause: A data redaction policy was not defined on the specified column.

Action: Specify the name of a column for which a data redaction policy is defined.

ORA-28071: The action is not valid.

Cause: The value provided for the ACTION parameter in the DBMS_REDACT.ALTER_POLICY procedure was invalid.

Action: Specify the ACTION parameter to DBMS_REDACT.ALTER_POLICY as one of the following values: DBMS_REDACT.MODIFY_EXPRESSION, DBMS_REDACT.MODIFY_COLUMN, DBMS_REDACT.ADD_COLUMN, or DBMS_REDACT.DROP_COLUMN.

ORA-28072: The specified policy name is incorrect.

Cause: The POLICY_NAME parameter was incorrect.

Action: Specify the POLICY_NAME parameter with the name of the redaction policy currently defined on the object.

ORA-28073: The column "*string*" has an unsupported data type or attribute.

Cause: The column had a data type or attribute which is not supported by data redaction. The supported data types are CHAR, NCHAR, VARCHAR2, NVARCHAR2, NUMBER, BINARY_FLOAT, BINARY_DOUBLE, DATE, TIMESTAMP, CLOB, NCLOB, BLOB, and BOOLEAN except as listed below for certain function types: - For DBMS_REDACT.PARTIAL, the following datatypes are not supported: CLOB NCLOB BLOB BOOLEAN - For DBMS_REDACT.RANDOM, the following datatypes are not supported: CLOB NCLOB BLOB - For DBMS_REDACT.REGEXP, the following datatypes are not supported: NUMBER

BINARY_FLOAT BINARY_DOUBLE DATE TIMESTAMP BLOB BOOLEAN - Virtual columns and base columns of virtual columns are not supported by data redaction. - Columns with the INVISIBLE attribute are not supported by data redaction (this applies to both user-specified hidden columns and system-generated hidden columns). - Vector encoded columns are not supported by data redaction. - Columns with the IS JSON constraint are not supported.

Action: Specify the name of a column which has a supported data type and supported attributes. For columns with the IS JSON constraint, create a view on the columns and add the redaction policy to the view.

ORA-28074: The "*string*" field of the redaction parameters is not valid.

Cause: The redaction parameters that were specified had one or more invalid fields.

Action: Specify the redaction parameters with valid fields. Refer to Oracle Database documentation for additional information.

ORA-28075: The data redaction policy expression has an error.

Cause: The data redaction policy expression had an error.

Action: Contact the data redaction policy administrator. To correct this error, when invoking the ADD_POLICY and ALTER_POLICY procedures of the data redaction DBMS_REDACT package, the policy administrator must specify a valid policy expression for the EXPRESSION parameter. Check the trace file for the name of the affected policy and the error, and correct the data redaction policy expression.

ORA-28076: empty role name specified as SYS_SESSION_ROLES attribute

Cause: A role name was not specified for the SYS_SESSION_ROLES namespace in a SYS_CONTEXT function.

Action: Specify a valid role name as an attribute for the SYS_SESSION_ROLES namespace and retry the function.

ORA-28077: The specified role name (*string*) for SYS_SESSION_ROLES exceeds the maximum length.

Cause: The role name that was specified for SYS_SESSION_ROLES exceeded the maximum length of 128 bytes. Role names cannot be longer than 128 bytes.

Action: Specify a role name that is less than or equal to 128 bytes for SYS_SESSION_ROLES. *Params: 1) role_name: Name of the attribute mentioned for SYS_SESSION_ROLES namespace.

ORA-28078: A regular expression parameter is missing or invalid.

Cause: Even though the function_type was DBMS_REDACT.REGEXP, the possible causes for this error include: - One or more of the regular expression parameters were missing or invalid. - The REGEXP_PATTERN failed to compile properly. - The regular expression replacement operation failed.

Action: Specify the regular expression parameters according to Oracle Database documentation. At a minimum, specify the REGEXP_PATTERN and REGEXP_REPLACE_STRING parameters. Ensure that the REGEXP_PATTERN can compile properly as a regular expression. For example, test it with REGEXP_REPLACE in a SQL query against a column containing some of the data to be redacted.

ORA-28079: Policy is already enabled.

Cause: The data redaction policy specified was already enabled.

Action: Only disabled data redaction policies can be enabled. To find the status of the data redaction policy, query the POLICY_NAME and ENABLE columns of the REDACTION_POLICIES data dictionary view.

ORA-28080: Policy is already disabled.

Cause: The data redaction policy specified was already disabled.

Action: You can only disable enabled data redaction policies. To find the status of the data redaction policy, query the POLICY_NAME and ENABLE columns of the REDACTION_POLICIES data dictionary view.

ORA-28081: Insufficient privileges. The command references a redacted object.

Cause: The command referenced a redacted column in an object protected by a data redaction policy.

Action: Do one of the following and then retry the operation: - Modify the command to avoid referencing any redacted columns. - Drop the data redaction policies that protect the referenced tables and views. - Ensure that the user issuing the command has the EXEMPT REDACTION POLICY system privilege. The EXEMPT REDACTION POLICY system privilege is required for: - Creating or refreshing a materialized view when the materialized view is based on an object protected by a data redaction policy. - Performing a data pump schema-level export including any object protected by a data redaction policy. - DML or DDL operations if a column with data redaction policy appears as the source. - Creating mining models on tables that have a column with data redaction policy as internally Oracle Data Mining issues DDL and DML statements. All data redaction policies are listed in the REDACTION_COLUMNS catalog view.

ORA-28082: The parameter *string* is invalid.

Cause: The specified parameter was either empty or too long. If the DBMS_REDACT.ADD_POLICY or DBMS_REDACT.ALTER_POLICY was invoked and the function_parameters was not NULL, the operation was prevented because you can only specify a value for the function_parameters argument only when the function_type is DBMS_REDACT.PARTIAL.

Action: Specify a parameter of correct length. See the Oracle documentation for length requirements.

ORA-28083: A redacted column was referenced in a virtual column expression.

Cause: This redacted column was referenced in a virtual column expression.

Action: Ensure the column expression definition for any virtual column does not refer to any redacted columns. To check for columns with redaction policies, use the REDACTION_COLUMNS catalog view which lists all data redaction policies.

ORA-28085: The input and output lengths of the redaction do not match.

Cause: As specified, the redaction parameters produced an output with a length different to that of the input.

Action: Use regular expression redaction instead of partial redaction.

ORA-28086: The data redaction policy expression has an error.*lnstring*

Cause: The data redaction policy expression had an error.

Action: Specify a valid policy expression. Write the data redaction policy expression in SQL, and include a valid predicate to use in the following SQL query: `SELECT 1 FROM DUAL WHERE <policy_expression>;`

ORA-28087: The policy expression has an unsupported (use of) operator *'string'*.

Cause: The policy expression used an unsupported operator, or used an operator in an unsupported way.

Action: Modify the policy expression to use only the supported operators in a supported way. Supported operators include "=", "!=", ">", "<", ">=", "<=", the length operators, the substring operators, and the context operators (SYS_CONTEXT and XS_SYS_CONTEXT). For a complete list of the supported operators, and the supported ways the allowed operators can be used, refer to the section on data redaction policy expressions in the Oracle documentation.

ORA-28088: The policy expression has an unsupported PL/SQL function *string.string.string*.

Cause: The policy expression had an unsupported PL/SQL function.

Action: Modify the policy expression to use a supported PL/SQL function. The supported PL/SQL functions include the Oracle Label Security dominates functions, and the Oracle Apex session state functions, V and NV. Refer to Oracle database documentation for additional information.

ORA-28089: invalid SYS_CONTEXT namespace *string* in policy expression

Cause: The SYS_CONTEXT (or XS_SYS_CONTEXT) namespace used in the policy expression was not valid.

Action: Modify the policy expression to use a valid namespace. Supported namespaces include USERENV, SYS_SESSION_ROLES, XS\$SESSION and the namespaces listed in the DBA_CONTEXT catalog view.

ORA-28090: unsupported nesting of function *string.string.string* within function *string.string.string* in policy expression

Cause: The policy expression had an unsupported PL/SQL function nesting.

Action: Modify the policy expression to use only supported PL/SQL function nesting. The Oracle Label Security functions NUMERIC_LABEL, CHAR_TO_LABEL, and SA_SESSION can only be used from within the Oracle Label Security dominates functions. For a complete list of supported PL/SQL function nesting, refer to the section on writing policy expressions in the Oracle documentation for data redaction.

ORA-28091: unsupported use of PL/SQL function *string.string.string* in policy expression

Cause: The policy expression used a PL/SQL function in an unsupported way.

Action: Modify the policy expression to use the PL/SQL function properly. The parameters to the Oracle Label Security functions NUMERIC_LABEL, CHAR_TO_LABEL, and SA_SESSION must be constants. For a complete list of the supported ways that PL/SQL functions can be used in a policy expression, refer to the Oracle documentation.

ORA-28092: The parameter *string* with value *'string'* has an error.

Cause: The value of the parameter had an error. If DBMS_REDACT.CREATE_POLICY_EXPRESSION was invoked and the

POLICY_EXPRESSION_NAME parameter had an error, the policy expression name either already existed, or was invalid. If DBMS_REDACT.DROP_POLICY_EXPRESSION was invoked and the POLICY_EXPRESSION_NAME parameter had an error, the policy expression either did not exist, was still in use (was applied to a column), or was invalid. If DBMS_REDACT.APPLY_POLICY_EXPR_TO_COL was invoked and the POLICY_EXPRESSION_NAME parameter had an error, a policy expression may already exist on this column. Only one policy expression may be associated with any given column. The name of any Oracle Data Redaction policy expression associated with a given column can be found in the REDACTION_EXPRESSIONS catalog view. If the DBMS_REDACT.ADD_POLICY was invoked and the OBJECT_SCHEMA parameter referenced the APEX, Sharding (GSMADMIN_INTERNAL), or Spatial installation schema, the operation was prevented. Data redaction policies are not supported on objects within the APEX, Sharding (GSMADMIN_INTERNAL), or Spatial installation schema. If the DBMS_REDACT.ADD_POLICY was invoked and the OBJECT_NAME referenced a metadata-linked view, the operation was prevented. Data redaction policies are not supported on metadata-linked views. If the DBMS_REDACT.ADD_POLICY was invoked and the OBJECT_NAME referenced an OLAP analytic workspace table, the operation was prevented. Data redaction policies are not supported on OLAP analytic workspaces.

Action: Provide a valid value for the parameter. If DBMS_REDACT.CREATE_POLICY_EXPRESSION was invoked and the parameter was POLICY_EXPRESSION_NAME, provide a valid (new or existing) policy expression name. The names of all existing Oracle Data Redaction policy expressions can be found in the REDACTION_EXPRESSIONS catalog view. For the POLICY_EXPRESSION_NAME parameter of the DBMS_REDACT.DROP_POLICY_EXPRESSION procedure, provide a valid existing policy expression name that is not currently in use (applied to any column). The names of the columns to which a given policy expression is currently applied can be found in the REDACTION_EXPRESSIONS catalog view. For the POLICY_EXPRESSION_NAME parameter of the DBMS_REDACT.APPLY_POLICY_EXPR_TO_COL procedure, either provide NULL to remove the current policy expression association of the column, or provide a valid existing policy expression name. There is currently no API to alter an existing association. It must first be dropped followed by applying the new association. The names of all existing policy expressions can be found in the REDACTION_EXPRESSIONS catalog view. If DBMS_REDACT.ADD_POLICY was invoked, provide an OBJECT_SCHEMA that is not the APEX or Spatial installation schema. Data redaction policies are not supported on objects within the APEX or Spatial installation schema. If DBMS_REDACT.ADD_POLICY was invoked, provide an OBJECT_NAME that does not reference either a metadata-linked view or an OLAP analytic workspace table. *Params: 1) parameter_name: The name of the parameter that had an error. 2) parameter_value: The value that had an error.

ORA-28093: operation on column *string* is not supported by data redaction

Cause: The operation was not supported by data redaction.

Action: Perform only supported operations on any object which has a data redaction policy or which depends on an object with a data redaction policy. To check for columns with redaction policies, use the REDACTION_COLUMNS catalog view which lists all of the data redaction policies.

ORA-28094: SQL construct not supported by data redaction.

Cause: The query had a SQL construct that was not supported by data redaction.

Action: Check the Oracle Documentation for the correct syntax, rewrite the query to avoid using an unsupported construct, and retry.

ORA-28095: The parameter *string* is unexpected for ACTION *string* for ALTER_POLICY.

Cause: The parameter in PL/SQL function was not NULL or was not equal to the default value. If DBMS_REDACT.ALTER_POLICY was invoked, the parameters object_name and policy_name are required. If the action is DBMS_REDACT.ADD_COLUMN or DBMS_REDACT.MODIFY_COLUMN, only the following parameters are accepted: - Required: * column_name * Only when function_type is DBMS_REDACT.PARTIAL * function_parameters * Only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH * regexp_pattern * regexp_replace_string - Optional: * function_type * policy_description * column_description * Only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH * regexp_position * regexp_occurrence * regexp_match_parameter If the action is DBMS_REDACT.DROP_COLUMN, it only accepts the required column_name parameter. If the action is DBMS_REDACT.MODIFY_EXPRESSION, it only accepts the following parameters: - Required: * expression - Optional: * policy_description If the action is DBMS_REDACT.SET_POLICY_DESCRIPTION, it only accepts the optional policy_description parameter. If the action is DBMS_REDACT.SET_COLUMN_DESCRIPTION, it only accepts the following parameters: - Required: * column_name - Optional: * column_description Other parameters are not supported.

Action: Do not use parameters that are not supported. *Params: 1) parameter_name: The parameter name that is unexpected. 2) action: The action chosen for ALTER_POLICY.

ORA-28096: The parameter *string* is unexpected for ADD_POLICY.

Cause: The parameter in the call to the PL/SQL procedure was not NULL or was not equal to the default value. If DBMS_REDACT.ADD_POLICY was called, the parameters OBJECT_NAME and POLICY_NAME are required. If no COLUMN_NAME parameter was provided to DBMS_REDACT.ADD_POLICY, then it only accepts the EXPRESSION, OBJECT_SCHEMA, ENABLE, and POLICY_DESCRIPTION parameters. The EXPRESSION parameter is required. The OBJECT_SCHEMA, ENABLE, and POLICY_DESCRIPTION parameters are optional. If a COLUMN_NAME parameter was provided to DBMS_REDACT.ADD_POLICY and the FUNCTION_TYPE parameter was DBMS_REDACT.PARTIAL, then the parameter FUNCTION_PARAMETERS is required and the parameters FUNCTION_TYPE, POLICY_DESCRIPTION, and COLUMN_DESCRIPTION are optional. If a COLUMN_NAME parameter was provided to DBMS_REDACT.ADD_POLICY and the FUNCTION_TYPE parameter was DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH, then the parameters REGEXP_PATTERN and REGEXP_REPLACE_STRING are required and REGEXP_POSITION, REGEXP_OCCURRENCE, REGEXP_MATCH_PARAMETER, FUNCTION_TYPE, POLICY_DESCRIPTION, and COLUMN_DESCRIPTION are optional.

Action: Do not use combinations of parameters that are not supported. *Params: 1) parameter_name: The parameter name that is unexpected.

ORA-28097: A data redaction policy cannot be applied to an object owned by SYS.

Cause: An attempt was made to apply a data redaction policy to an object owned by SYS. Redaction policies cannot be applied to SYS-owned objects.

Action: Do not apply a redaction policy to any SYS-owned object. You can apply a redaction policy to an object that is not owned by SYS.

ORA-28098: Profile limits PASSWORD_LIFE_TIME and PASSWORD_GRACE_TIME are not unlimited, password will expire within *string* days.

Cause: The password of the user's account expired and entered the grace period and should be changed. This can happen if any of the following is true: - The user account is associated with a password profile with a limited PASSWORD_LIFE_TIME and a non-zero PASSWORD_GRACE_TIME. - The user account is created as part of either a database import inside a pluggable database (PDB) or clone of an existing PDB and the user's password does not meet the requirements of the mandatory profile (that is configured with a limited password grace period) enforced in the PDB. Since the password grace period has not yet elapsed, the user is not prompted to input a new password and an ORA-28098 warning message continues to be displayed upon each successful login to the user account, until the user changes their password. After the grace period has elapsed, the password expires and until the user successfully changes their password their login continues to fail with an ORA-28001 error.

Action: Change the password or contact the database administrator to understand the rules for choosing a new password that complies with the mandatory profile.

ORA-28100: VPD policy function does not exist.

Cause: The schema owning the Virtual Private Database (VPD) policy function did not exist.

Action: Drop the VPD policy and re-create it with a policy function owned by a valid user.

ORA-28101: A VPD or FGA policy already exists for the specified object.

Cause: A Virtual Private Database (VPD) or Fine-Grained Auditing (FGA) policy with the same name for the same object already existed. Policy names applied to an object must be unique for VPD or FGA.

Action: Check if the policy has already been added or use a different policy name: - If adding a VPD policy, check DBA_POLICIES to see if a policy with the same name exists. - If adding an FGA policy, check DBA_AUDIT_POLICIES to see if a policy with the same name exists.

ORA-28102: The OLS, VPD or FGA operation failed because the security policy does not exist.

Cause: The Oracle Label Security (OLS), Virtual Private Database (VPD), or Fine-Grained Audit (FGA) operation on a non-existent security policy failed.

Action: Try the operation on an existing security policy. Check the following database dictionary views to find valid policies for the feature: - OLS: DBA_SA_POLICIES - VPD: DBA_POLICIES - FGA: ALL_AUDIT_POLICIES

ORA-28103: An Oracle Label Security (OLS) policy cannot be applied to an object owned by SYS.

Cause: An attempt was made to apply an OLS policy to an object owned by SYS. OLS policies cannot be applied to SYS-owned objects.

Action: Do not apply an OLS policy to any SYS-owned object. You can apply an OLS policy to an object that is not owned by SYS.

ORA-28104: input value for *string* is not valid

Cause: Input value for the argument was not valid.

Action: Specify a valid argument value.

ORA-28105: could not create security-relevant column policy on an object view

Cause: The security-relevant column argument was not null in the policy creation for an object view.

Action: Do not specify a security-relevant column argument during the policy creation for an object view.

ORA-28106: Input value for argument #string is invalid.

Cause: Input values for the argument were missing or invalid.

Action: Correct the input value for the specified argument. *Params: 1) argument_number: The argument number whose input is invalid.

ORA-28107: Oracle Virtual Private Database (VPD) policy is disabled.

Cause: An attempt was made to refresh the VPD policy that had been disabled.

Action: Ensure that the VPD policy is enabled before refreshing it.

ORA-28108: Circular Oracle Virtual Private Database (VPD) security policies detected.

Cause: VPD security policies for the same object referenced each other which could lead to infinite looping while processing the object.

Action: Examine the policy function for the predicate generated by the function. If the predicate references the object on which the policy has been created, then change the predicate because this could lead to infinite looping of applying the policy on the same object.

ORA-28109: Number of related policies exceeded the maximum allowed limit of 16.

Cause: Too many policies were enabled on the same object.

Action: Drop or disable one or more policies.

ORA-28110: The VPD policy function or package "string.string" has error.

Cause: The Oracle Virtual Private Database (VPD), row-level security, or fine-grained access control policy function was either invalid or may have been dropped.

Action: Check the status of the VPD policy function by querying DBA_OBJECTS and correct the problem. If the policy refers to a missing function, then either re-create the function or use a different function. *Params: 1) owner: Owner of the function or package. 2) name: Name of the function or package.

ORA-28111: insufficient privilege to evaluate policy predicate

Cause: Predicate has a subquery which contains objects that the owner of policy function does not have privilege to access.

Action: Grant appropriate privileges to the policy function owner.

ORA-28112: failed to execute policy function

Cause: The policy function encountered one or more errors during execution.

Action: Check the trace file and correct the errors.

ORA-28113: A virtual private database policy (VPD) predicate error has occurred.

Cause: A virtual private database (row-level security, fine-grained access control) policy function generated an invalid predicate for a statement.

Action: Contact your database administrator. The DBA will need to review the existing VPD policy and trace files for more detailed error information.

ORA-28115: policy with check option violation

Cause: Policy predicate was evaluated to FALSE with the updated values.

Action: Check the trace file and correct the errors.

ORA-28116: insufficient privileges to do direct path access

Cause: Users with insufficient privileges attempting to do direct path access of tables with fine grain access control policies.

Action: Ask the database administrator to do the operation. Note that users can work with security administrator to temporarily drop/disable the policies at time of export, import, or load, but this has security implication, and thus access of the database must be controlled carefully.

ORA-28117: integrity constraint violated - parent record not found

Cause: try to update/insert a child record with new foreign key values, but the corresponding parent row is not visible because of fine-grained security in the parent.

Action: make sure that the updated foreign key values must also visible in the parent

ORA-28118: The VPD policy group name already exists for the table or view.

Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy group with a name that already exists for that table or view.

Action: Review the list of existing VPD policy groups for an object in DBA_POLICY_GROUPS. Either use the existing VPD policy group if appropriate or create a new VPD policy group name that is unique for the object.

ORA-28119: policy group does not exist

Cause: An attempt was made to drop a policy group that did not exist or an attempt was made to create a policy in a policy group that did not exist.

Action: Specify an existing policy group name.

ORA-28120: driving context already exists

Cause: An attempt was made to create a context that already existed in the system.

Action: Create the context with a name that is not already in use.

ORA-28121: The VPD driving context does not exist for the object.

Cause: An attempt was made to drop a Virtual Private Database (VPD) driving context that did not exist. Either the driving context was already removed or the parameter values were incorrect.

Action: Review the existing VPD driving contexts in the DBA_POLICY_CONTEXTS view for valid parameter values and run the statement again.

ORA-28122: cannot update SYS_DEFAULT policy group

Cause: An attempt was made to execute either DBMS_RLS.CREATE_POLICY_GROUP or DBMS_RLS.DELETE_POLICY_GROUP using SYS_DEFAULT as the policy group name.

Action: Do not attempt to CREATE or DELETE the SYS_DEFAULT policy group.

ORA-28123: Driving context "*string,string*" contains invalid group "*string*".

Cause: The previous call to the DBMS_SESSION.SET_CONTEXT package specified an invalid policy group.

Action: Review the DBA_POLICY_CONTEXTS and DBA_POLICY_GROUPS views to review driving contexts, objects, and policy associations. Ensure that a valid policy group is passed to the DBMS_SESSION.SET_CONTEXT package when initializing a policy driving context. *Params: 1) context: The driving context. 2) attribute: The driving attribute. 3) group_name: The invalid group name.

ORA-28124: Column *string* in SEC_RELEVANT_COLS cannot be of an object data type.

Cause: A column specified in the SEC_RELEVANT_COLS argument in a DBMS_RLS package procedure was of an object data type that is not allowed.

Action: Ensure that none of the columns specified in SEC_RELEVANT_COLS argument is of an object data type or XMLType. *Params: 1) Name: Name of the column.

ORA-28125: A protected base column was referenced in an unprotected virtual column expression.

Cause: A protected base column was referenced in an unprotected virtual column expression. Referencing the unprotected virtual column is not allowed because it could disclose data contained in the protected base column.

Action: Check the policy definition and ensure that the virtual column is also protected.

ORA-28126: Attribute association failed for Oracle Virtual Private Database policy "*string*".

Cause: An attempt was made to associate a global application context attribute to either a context-sensitive or shared context-sensitive policy. Only local application context attribute association is supported.

Action: Retry the operation specifying a local application context attribute. *Params: 1) policy_name: The name of the row-level security (RLS) policy.

ORA-28127: DDL statements are not allowed inside the FGA handler

Cause: An attempt was made to execute a DDL statement inside the FGA (Fine Grained Audit) handler.

Action: Remove the DDL statement from the handler and retry the operation.

ORA-28132: The MERGE INTO syntax does not support the security policy.

Cause: The MERGE INTO syntax did not support a security policy on the destination table, because the policy's statement types did not include INSERT, UPDATE and DELETE or the policy had a security-relevant column.

Action: If you do not have the privilege to modify the security policy, then instead of MERGE INTO, use the INSERT, UPDATE, and DELETE DML statements on the table with a security policy defined. If you have the privilege to modify the security policy, then redefine the policy so that statement types include all of the DML statement types (INSERT, UPDATE and DELETE) or ensure that the policy does not have a security-relevant column.

ORA-28133: Full table access is restricted by Oracle Virtual Private Database (VPD) policy.

Cause: The command required full table access but the user was not SYS and did not have the privilege to bypass VPD policies.

Action: Grant appropriate privileges, or change the policy function so that it returns a NULL predicate under certain session environments.

ORA-28134: This object cannot have VPD row-level security policy.

Cause: An attempt was made to apply a virtual private database (VPD) (row-level security, fine-grained access) policy on an object. Only tables, views, or synonyms of tables or views can have VPD policies.

Action: Apply the virtual private database policy only on tables, views, or synonyms.

ORA-28135: VPD check option silent error event

ORA-28136: Ignore check option error

ORA-28137: invalid schema for the fine-grained auditing (FGA) audit handler

Cause: An invalid schema was specified for the audit handler.

Action: Specify a valid schema for the audit handler.

ORA-28138: error in evaluating the fine grained audit policy predicate

Cause: An invalid policy predicate was specified for the FGA (Fine Grained Audit) policy.

Action: Specify a valid policy Predicate for the FGA (Fine Grained Audit) policy.

ORA-28139: Maximum allowed fine-grained audit policies exceeded.

Cause: A maximum of 256 fine-grained audit policies can be enabled on an object.

Action: Drop or disable existing policies before creating more fine-grained audit policies.

ORA-28140: invalid column specified during fine-grained audit policy creation

Cause: An invalid column name was specified during fine-grained audit policy creation.

Action: Specify a valid column name. Do not specify an object column.

ORA-28141: error in creating XML audit index file

Cause: The file holding XML audit file names could not be created. This is relevant in traditional audit with AUDIT_TRAIL=XML.

Action: Examine the directory pointed to by the initialization parameter AUDIT_FILE_DEST. Ensure that all of the following are true: - The directory exists. - The name points to a directory and not to a file. - The directory is accessible and writable to the Oracle user.

ORA-28142: error in accessing XML audit index file

Cause: The file holding XML audit file names could not be accessed. This is relevant in traditional audit with AUDIT_TRAIL=XML initialization parameter.

Action: Ensure that the file exists in the directory pointed to by the AUDIT_FILE_DEST initialization parameter and can be read by the Oracle user.

ORA-28143: Invalid argument passed to DBMS_FGA.ADD_POLICY procedure.

Cause: Invalid input argument was specified for the DBMS_FGA.ADD_POLICY procedure.

Action: Specify correct type and number of arguments to the DBMS_FGA.ADD_POLICY procedure.

ORA-28144: failure to process fine-grained audit handler

Cause: An error was encountered while executing fine-grained audit handler.

Action: Refer to the trace file for details.

ORA-28145: XDS policy already exists for *string*

Cause: An XDS policy was enabled for an object that already has an associated XDS policy.

Action: Specify a different policy name or call enable_xds with the overwrite parameter set to TRUE.

ORA-28146: invalid operation for Oracle Virtual Private Database policy "*string*"

Cause: Attribute association (NAMESPACE, ATTRIBUTE) was specified for an invalid policy type. Attribute association can be set only for context-sensitive and shared context-sensitive policy types.

Action: Use a context-sensitive or shared context-sensitive policy when specifying the attribute association. *Params: 1) policy_name: The name of the row-level security (RLS) policy.

ORA-28147: The specified attribute association ("*string*", "*string*") is already attached to VPD policy "*string*".

Cause: An attempt was made to create an attribute association to the existing Virtual Private Database (VPD) policy using namespace and attribute names that were already used by an existing attribute association of the policy.

Action: Review the existing set of namespace and attribute associations for the VPD policy in DBA_POLICY_CONTEXTS view, and retry the operation with valid namespace and attribute values. *Params: 1) namespace: The name of the namespace. 2) attribute: The name of the attribute. 3) name: The name of the policy.

ORA-28148: The specified attribute association ("*string*", "*string*") is not attached to policy "*string*".

Cause: An attempt was made to drop the attribute association that was not attached to the policy.

Action: Review the existing set of namespace and attribute associations for the Virtual Private Database (VPD) policy in the DBA_POLICY_CONTEXTS view, and retry the operation with valid namespace and attribute values. *Params: 1) namespace: The name of the namespace. 2) attribute: The name of the attribute. 3) policy_name: The name of the policy.

ORA-28149: Value for "*string*" is either invalid or missing.

Cause: The value provided for the NAMESPACE or ATTRIBUTE argument was invalid or missing.

Action: Provide a valid value for both NAMESPACE and ATTRIBUTE arguments. *Params: 1) policy_argument: The NAMESPACE or ATTRIBUTE argument.

ORA-28150: The proxy user is not authorized to connect as client.

Cause: A proxy user attempted to connect as a client, but the proxy user was not authorized to act on behalf of the client.

Action: Grant the proxy user permission to perform actions on behalf of the client by using the ALTER USER ... GRANT CONNECT command.

ORA-28151: more than one user name specified for command

Cause: More than one user name was specified for an ALTER USER command.

Action: Try the command again with only one user name.

ORA-28152: proxy user 'string' may not specify initial role 'string' on behalf of client 'string'

Cause: A proxy user attempted to specify an initial role for a client, but the client does not possess the role.

Action: Change the proxy user so that it does not specify the role or grant the role to the client.

ORA-28153: invalid client initial role specified: "string"

Cause: A role specified by a proxy user as an initial role to be activated upon connecting on behalf of a client was invalid.

Action: Connect again as the client specifying a valid role. *Params: 1) role_name: The name of the role.

ORA-28154: proxy user may not act as client 'string'

Cause: A proxy user attempted to assume the identity of a privileged user in order to limit the privileges that a proxy may possess.

Action: Call the statement again specifying a client other than a privileged user. *Params: 1) user_name: The proxy client user name.

ORA-28155: user 'string' specified as a proxy is actually a role

Cause: A user specified in an AUDIT operation BY proxy ON BEHALF OF client is actually a role.

Action: Execute the statement again with a valid proxy user.

ORA-28156: Proxy user 'string' not authorized to set role 'string' for client 'string'

Cause: A proxy user has not been granted the right to use a role on behalf of a client.

Action: Execute the command ALTER USER client GRANT CONNECT THROUGH PROXY proxy to grant the needed role.

ORA-28157: Proxy user 'string' forbidden to set role 'string' for client 'string'

Cause: A proxy user was forbidden to use a role on behalf of a client through the command ALTER USER client GRANT CONNECT THROUGH proxy WITH ALL ROLES EXCEPT role

Action: Execute the command ALTER USER client GRANT CONNECT THROUGH PROXY proxy to grant the needed role.

ORA-28158: missing ALL keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28159: missing BEHALF keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28160: missing EXCEPT keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28161: missing ROLES keyword in the statement

Cause: The keyword ROLES was not specified in the statement.

Action: Check the syntax of the statement and ensure that the keyword ROLES is part of the statement. Then, run the statement again.

ORA-28162: missing THROUGH keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28163: GRANT already specified

Cause: The GRANT clause was specified twice.

Action: Use only one GRANT clause.

ORA-28164: REVOKE already specified

Cause: The REVOKE clause was specified twice.

Action: Use only one REVOKE clause.

ORA-28165: proxy '*string*' may not specify password-protected role '*string*' for client '*string*'

Cause: A proxy user attempted to activate a role on behalf of a client which has a password associated with it. Since the proxy does not have a password, this activation cannot be allowed.

Action: Attempt to activate a different role or change the role administratively so that there is no password.

ORA-28166: A role has been listed more than once in the Audit Policy statement.

Cause: The name of a role has been specified more than once in the Audit Policy statement. Each role must be listed only once.

Action: Review the Audit Policy statement, and ensure that each role is listed only once.

ORA-28168: unused error

ORA-28169: unsupported certificate type

Cause: The type of certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported type.

ORA-28170: unsupported certificate version

Cause: The version of the certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported version.

ORA-28171: unsupported Kerberos version

Cause: the version the Kerberos ticket which the server is to use to validate the identity of the client is not supported.

Action: Specify a supported version.

ORA-28174: Kerberos ticket not provided by proxy

Cause: A client user is to be authenticated using a Kerberos ticket but none was provided by the proxy user.

Action: Provide a Kerberos ticket.

ORA-28175: incorrect certificate type

Cause: the type of certificate provided by the proxy user to identify a client user does not match the type that is required.

Action: Provide a certificate of the correct type.

ORA-28176: incorrect certificate version

Cause: the version of certificate provided by the proxy user to identify a client user does not match the version that is required.

Action: Provide a certificate of the correct version.

ORA-28177: incorrect Kerberos ticket version

Cause: the version of Kerberos ticket provided by the proxy user to authenticate a client user does not match the version that is required.

Action: Provide a Kerberos ticket of the correct version.

ORA-28179: client user name not provided by proxy

Cause: No user name was provided by the proxy user for the client user.

Action: Either specify a client database user name, a distinguished name or an X.509 certificate.

ORA-28180: multiple authentication methods provided by proxy

Cause: More than one authentication method was specified by the proxy user for the client user.

Action: Specify only one of the following: a client database user name, a distinguished name or an X.509 certificate.

ORA-28181: The proxy user "*string*" failed to enable one or more of the specified default roles for client user "*string*".

Cause: One or more default roles specified for the client user were not enabled for the proxy user. Only roles directly granted to the client user, not password protected and not a secure application role, can be enabled as a default role.

Action: Review the roles granted to the client user in the DBA_ROLES_PRIVS view. The default role must be directly granted to the client user. Check the DBA_ROLES.AUTHENTICATION_TYPE view for the roles. Only roles with AUTHENTICATION_TYPE=NONE can be default roles. You can do one or more of the following: - Remove the non-compliant role from the list of default roles. - Change the AUTHENTICATION_TYPE for the role. - Enable the role as an application role or password role after login. *Params: 1) proxy_user_name: The name of the proxy user. 2) client_user_name: The name of the client user.

ORA-28182: cannot acquire Kerberos service ticket for client

Cause: An attempt to use a Kerberos ticket that can be forwarded to obtain a Kerberos service ticket for the client failed.

Action: Ensure that: - The Kerberos ticket required for the Kerberos service ticket is valid. - The key distribution center is available.

ORA-28183: proper authentication not provided by proxy

Cause: A client user must be authenticated but no authentication credentials were provided by the proxy user.

Action: Provide the proper authentication credentials.

ORA-28184: Global user cannot have proxy permissions managed in the directory.

Cause: The client name specified was a global user that could not have proxy permissions.

Action: Use ALTER USER to change the type of user (from IDENTIFIED GLOBALLY to something else such as IDENTIFIED BY password or IDENTIFIED EXTERNALLY) and then grant proxy permissions.

ORA-28185: cannot change a user with administrative privilege to proxy-only connect user

Cause: An attempt was made to alter a user with an administrative privilege to a proxy-only connect user. This is not permitted because proxy users cannot connect to the database with administrative privilege.

Action: Remove the PROXY ONLY CONNECT property for the user and retry granting an administrative privilege to the user.

ORA-28186: cannot grant *string* to a proxy-only connect user

Cause: An attempt was made to grant an administrative privilege like SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, or SYSRAC to a proxy-only connect user. Since proxy authentication using an administrative privilege is not supported, such grants are not allowed.

Action: Grant administrative privileges only to accounts that are not marked "proxy only connect". *Params: 1) privilege_name: The name of an administrative privilege.

ORA-28187: cannot alter global user to proxy-only connect user

Cause: An attempt was made to alter global user to proxy-only connect.

Action: None

ORA-28188: cannot alter user SYS/SYSBACKUP/SYSDG/SYSKM/SYSRAC to be identified as globally

Cause: An attempt was made to alter SYS/SYSBACKUP/SYSDG/SYSKM/SYSRAC to be identified as globally.

Action: None

ORA-28190: SYSRAC administrative privilege cannot be granted to database users.

Cause: An attempt was made to grant SYSRAC administrative privilege to a database user. The SYSRAC administrative privilege is used only by the Oracle agent of Oracle Clusterware to connect to the database using operating system authentication.

Action: Use connection string '/' as 'SYSRAC' from an operating system account in the OSRAC group to connect to the database with the SYSRAC privilege.

ORA-28191: cannot grant administrative privileges to a user with non-ASCII or non-EBCDIC characters in the user name

Cause: Attempt to grant an administrative privilege to a user failed. Administrative privileges like SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, and SYSKM cannot be granted to a user with non-ASCII or non-EBCDIC characters in the user name.

Action: Grant administrative privileges to a user whose name contains ASCII or EBCDIC characters only.

ORA-28192: Enabling or disabling read-only property is not allowed on a common user.

Cause: An attempt was made to enable or disable the read-only property on a common user. Only local users can be set to read-only.

Action: Do not attempt to enable or disable the read-only property on a common user.

ORA-28193: Can perform read operations only

Cause: Session is marked read only

Action: Unset read_only parameter for the session

ORA-28194: Can perform read operations only

Cause: User is marked read only

Action: Please contact your database administrator

ORA-28195: cannot enable hybrid read only mode when pluggable database is open in upgrade mode

Cause: An attempt was made to enable hybrid read only mode when pluggable database was opened in upgrade mode.

Action: Open the pluggable database in read write mode to set the hybrid read only mode.

ORA-28200: IDENTIFIED USING already specified

Cause: The IDENTIFIED USING clause was specified twice.

Action: Use only one IDENTIFIED USING clause.

ORA-28201: An invalid command was used to enable secure application role "*string*".

Cause: An attempt was made to enable the secure application role without using the designated package that enables the role. Secure application roles can only be enabled by executing the package that secures the role.

Action: Enable the secure application role by executing the designated package for the role. *Params: 1) role_name: The name of the secure role.

ORA-28206: password length less than *number* characters

Cause: The password entered by the user did not meet the minimum length criteria.

Action: Enter a password which meets the minimum length criteria.

ORA-28207: password contains the user name

Cause: The provided password contained the user name.

Action: Enter a password that does not contain the user name.

ORA-28208: password contains the user name in reverse

Cause: The provided password contained the reverse of the user name.

Action: Enter a password that does not contain the reverse of the user name.

ORA-28209: password contains the server name

Cause: The provided password contained the server name.

Action: Enter a password that does not contain the server name.

ORA-28210: password too simple

Cause: The password was simple enough to guess.

Action: Enter a complex password.

ORA-28211: new password should differ from the old password by *string* or more characters

Cause: The new and old passwords should differ by at least the minimum number of characters as defined by the administrator.

Action: Enter a password that differs from the previous password by at least the minimum required number of changed characters, as defined by the administrator.

ORA-28212: password must NOT contain a double-quotation

Cause: The double-quotation mark character is reserved as a password delimiter.

Action: Enter a password without any double-quotation marks.

ORA-28213: password must contain *number* or more letters

Cause: The password did not meet the minimum required number of alphabetic characters.

Action: Enter a password containing at least the minimum number of alphabetic characters.

ORA-28214: password must contain *number* or more uppercase characters

Cause: The password did not meet the minimum required number of uppercase alphabetic characters.

Action: Enter a password containing at least the minimum number of uppercase alphabetic characters.

ORA-28215: password must contain *number* or more lowercase characters

Cause: The password did not meet the minimum required number lowercase alphabetic characters.

Action: Enter a password containing at least the minimum number of lowercase alphabetic characters.

ORA-28216: password must contain *number* or more digits

Cause: The password did not contain the minimum number of digits.

Action: Enter a password containing at least the minimum number of digits.

ORA-28217: password must contain *number* or more special characters

Cause: The password did not contain the minimum number of special characters.

Action: Enter a password containing at least the minimum number of special characters.

ORA-28218: password length more than 1024 bytes

Cause: The length of the password exceeded 1024 bytes.

Action: Enter a password containing a maximum of 1024 bytes.

ORA-28219: password verification failed for mandatory profile

Cause: The new password did not meet the necessary password complexity requirements defined by the mandatory profile.

Action: Contact your system administrator for the rules about choosing the new password.

ORA-28220: invalid schema name *string* or password verification function *string*

Cause: A nonexistent or invalid schema name or password verification function was specified. This occurred when you attempted to create or alter a profile with PASSWORD_VERIFY_FUNCTION parameter value containing a non-SYS user owned schema qualified function and either of the following was true: - The ALLOWED_PVF_OWNERS system parameter was not configured to allow schema qualified password verification function. - The user schema was not allowed to own the password verification function. - The password verification function was created as an INVOKER rights PL/SQL function.

Action: Specify a valid schema name or password verification function for PASSWORD_VERIFY_FUNCTION parameter. Depending on the error, either one of the following should be done: - If the ALLOWED_PVF_OWNERS system parameter is set to NULL (default value), please contact your database administrator to have it set it to an appropriate value (comma separated list of database users) to allow schema qualified password verification function. - If the user schema is not allowed to own the password verification function, please contact your database administrator to add the user as part of ALLOWED_PVF_OWNERS system parameter value. Only users specified as ALLOWED_PVF_OWNERS system parameter value are allowed to own password verification function. - If the password verification function is created as an INVOKER rights PL/SQL function, please create it as DEFINER rights PL/SQL function and retry {CREATE|ALTER} PROFILE operation. INVOKER rights PL/SQL functions are not allowed as password verification function due to security reasons.

ORA-28221: REPLACE clause not specified

Cause: An attempt was made to change the password with the password verification function enabled and the original password was not specified in the REPLACE clause. This is required if the user does not have ALTER USER system privilege.

Action: Provide the original password in the REPLACE clause and retry the operation.

ORA-28222: Operations cannot be performed on Oracle reserved user or role "string".

Cause: An attempt was made to either change the Oracle reserved user or role, or grant a role or privilege to the Oracle reserved user or role. Operations are not allowed on this Oracle reserved user or role.

Action: Do not perform this operation on the Oracle reserved user or role.

ORA-28223: first login requires password change

Cause: This user was globally authenticated. Password policy settings in Oracle Internet Directory (OID) requires the password to be changed for the first connection. Further connections to the database will be denied if the password in OID is not changed.

Action: Connect to the OID to change the password.

ORA-28225: The EXPIRE PASSWORD ROLLOVER PERIOD clause is specified with a disallowed IDENTIFIED clause or a NO AUTHENTICATION clause

Cause: The ALTER USER statement incorrectly included a disallowed IDENTIFIED clause or a NO AUTHENTICATION clause with the EXPIRE PASSWORD ROLLOVER PERIOD clause.

Action: Use only one of the above clauses in the ALTER USER statement and resubmit the command.

ORA-28226: EXPIRE PASSWORD ROLLOVER PERIOD clause already specified

Cause: In ALTER USER statement the EXPIRE PASSWORD ROLLOVER PERIOD clause was specified more than once.

Action: Remove all but one of the EXPIRE PASSWORD ROLLOVER PERIOD clauses and resubmit the command.

ORA-28227: Gradual password rollover is not supported for administrative users.

Cause: An attempt was made to grant an administrative privilege to a user that was associated with a password profile having a non-zero value for the PASSWORD_ROLLOVER_TIME profile limit. The gradual password rollover feature is not supported for administrative users.

Action: Ensure that the user being granted the administrative privilege is not associated with a password profile having a non-zero PASSWORD_ROLLOVER_TIME limit, and retry the operation.

ORA-28228: REPLACE clause not specified when the password was being changed.

Cause: An attempt was made to change the password of a user who had been granted one or more administrative privileges. A user with an administrative privilege (SYSOPER, SYSBACKUP...) must supply both the existing and new passwords.

Action: Provide the original password using the REPLACE clause. ALTER USER *user* IDENTIFIED BY *new* REPLACE *old*; If you don't know your old password anymore, contact your user or security administrator.

ORA-28229: The password verification function "*string*" was not found or did not have enough privileges.

Cause: A nonexistent or invalid function name was specified as the password verification function. This occurs when either of the following was true: - The current user executing the {CREATE|ALTER} PROFILE DDL did not have EXECUTE privilege granted on the password verification function. - The password verification function was either created as an invalid function or it was invalidated due to dependencies on other database objects.

Action: Use a valid function name. Depending on the error, either one of the following should be done: - If you need EXECUTE privilege on the password verification function, contact your database administrator to have the privilege granted. - If the password verification function is in an INVALID state, check the DBA_ERRORS and DBA_OBJECTS view for more information. *Params: 1) *function_name*: The name of the function that could not be executed.

ORA-28231: no data passed to obfuscation toolkit

Cause: A NULL value was passed to a function or procedure.

Action: Make sure that the data passed is not empty.

ORA-28232: invalid input length for obfuscation toolkit

Cause: Length of data submitted for encryption or decryption is not a multiple of 8 bytes.

Action: Make sure that the length of the data to be encrypted or decrypted is a multiple of 8 bytes.

ORA-28233: double encryption not supported

Cause: The obfuscation toolkit did not support the encryption of already-encrypted data.

Action: Do not attempt to encrypt already-encrypted data.

ORA-28234: invalid key length

Cause: The specified key length is invalid for the algorithm. DES requires a key of at least 8 bytes. Triple DES requires a key of least 16 bytes in two-key mode and 24 bytes in three-key mode. AES keys must be exactly 16 bytes long for AES128, 24 bytes long for AES192, and 32 bytes long for AES256.

Action: Specify a key of valid length.

ORA-28235: algorithm not available

Cause: The encryption algorithm desired is not available.

Action: Run the installer to install the needed algorithm in Oracle Advanced Security.

ORA-28236: invalid Triple DES mode

Cause: An unknown value was specified for the mode in which triple DES encryption is to run.

Action: Specify a valid value. See the package declaration for a list of valid values.

ORA-28237: seed length too short

Cause: The seed specified for the key generation routine must be at least 80 characters.

Action: Specify a longer seed.

ORA-28238: no seed provided

Cause: A NULL value was passed in as the seed to be used in generating a key.

Action: Provide a non-NULL value for the seed.

ORA-28239: A NULL value was used for the encryption or decryption key.

Cause: A NULL value was passed in as an encryption or decryption key.

Action: Provide a non-NULL value for the key.

ORA-28261: CURRENT_USER can not be used in PLSQL Definer's Right procedure.

Cause: An attempt to retrieve CURRENT_USER using SYS_CONTEXT PLSQL interface.

Action: Use a SQL statement to query CURRENT_USER inside a DR procedure.

ORA-28262: Global application context cannot be used after failing over with Transparent Application Continuity.

Cause: An attempt was made to retrieve the global application context value in a failed-over session.

Action: Determine if the application can use Application Continuity instead of Transparent Application Continuity, or use the local application context instead of the global application context.

ORA-28263: unused error

ORA-28264: Client identifier is too long.

Cause: The length of the client identifier was longer than 64 bytes.

Action: Set a client identifier with a length less than or equal to 64 bytes.

ORA-28265: Namespace beginning with 'SYS_' is not allowed.

Cause: Namespace beginning with 'SYS_' was not allowed.

Action: Use a namespace that does not begin with 'SYS_'.

ORA-28267: An invalid value was provided for the context namespace.

Cause: Either the value of the context namespace conflicts with reserved keywords or a secure namespace was not allowed for this type of application context.

Action: Specify a valid value for the context namespace.

ORA-28268: Exceeded maximum number of entries for context information in a session.

Cause: The number of entries in the current session context exceeded 10,000 which is the maximum number allowed for a session.

Action: Review session context entries in the SESSION_CONTEXT view and clear unwanted context entries before setting new context entries.

ORA-28270: Malformed user nickname for password authenticated global user.

Cause: An attempt to login as password-authenticated global user with a malformed user nickname.

Action: Make sure the nickname is valid and re-login.

ORA-28271: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user nickname's X.500 user entry.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are right.

ORA-28272: Domain policy restricts password based GLOBAL user authentication.

Cause: Domain policy does not allow password-authenticated GLOBAL users.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure orclDBAuthTypes attributes within Oracle enterprise domain object is either set to PWD or ALL.

ORA-28273: No mapping for user nickname to LDAP distinguished name exists.

Cause: ORACLE server cannot map the given user nickname to LDAP distinguished name.

Action: Make sure user entries in LDAP are correctly provisioned with correct user nickname attribute values.

ORA-28274: No ORACLE password attribute corresponding to user nickname exists.

Cause: LDAP user entry corresponding to user nickname does not have a ORACLE password attribute or the attribute is not initialized.

Action: Make sure user entries in LDAP are correctly provisioned with correct ORACLE password attribute values.

ORA-28275: Multiple mappings for user nickname to LDAP distinguished name exist.

Cause: The given user nickname maps to more than one LDAP distinguished name.

Action: Make sure user nickname is unique within the enterprise.

ORA-28276: Invalid ORACLE password attribute.

Cause: The ORACLE password attribute of a user entry has an invalid format.

Action: Make sure ORACLE password attribute value is RFC-2307 compliant.

ORA-28277: LDAP search, while authenticating global user with passwords, failed.

Cause: The LDAP search for finding the appropriate user entry and ORACLE password failed.

Action: Make sure LDAP directory service is up and running.

ORA-28278: No domain policy registered for password based GLOBAL users.

Cause: No policy about password authenticated GLOBAL users has been registered.

Action: Add attribute orclDBAuthTypes to the database server's Enterprise domain.

ORA-28279: Error reading ldap_directory_access init parameter.

Cause: ldap_directory_access parameter is not specified correctly.

Action: Make sure spfile.ora has ldap_directory_access set correctly. Possible correct values are PASSWORD, SSL and NONE.

ORA-28280: Multiple entries for ORACLE database password exist.

Cause: The ORACLE password attribute of a user entry has multiple entries of ORACLE database password.

Action: Make sure ORACLE password attribute has one entry for ORACLE Database password.

ORA-28281: Global application context is not updated on one or more Oracle RAC instances.

Cause: There was a failure while propagating the global application context values across Oracle Real Application Clusters (Oracle RAC) instances. The background process may have hit an error or the request timed out.

Action: Ensure every Oracle RAC instance is operational and retry the operation.

ORA-28290: Multiple entries found for the same Kerberos Principal Name

Cause: Multiple user entries has been configured with the same krbPrincipalName

Action: Modify enterprise user's entry to assign its Kerberos principal name Make sure the user entries in LDAP are provisioned correctly.

ORA-28291: No Kerberos Principal Value found.

Cause: Oracle server fails to get value of krbPrincipalName attribute

Action: Make sure user entries are correctly provisioned with correct Kerberos principal value

ORA-28292: No Domain Policy registered for Kerberos based authentication

Cause: The enterprise domain entry is not configured for Kerberos based global authentication.

Action: Modify orclDBAuthType of the database server's enterprise domain entry and assign it "ALL" or "KRB5"

ORA-28293: No matched Kerberos Principal found in any user entry

Cause: Oracle server fails to find the principal in the user search base

Action: Make sure the user search base is correct. Use ESM to configure the enterprise user its Kerberos principal name

ORA-28300: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user entries.

Action: Make sure ORACLE server is using right credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are configured correctly.

ORA-28301: Domain Policy hasn't been registered for SSL authentication.

Cause: An attempt was made to authenticate with SSL, but the database enterprise domain was not configured for SSL authentication.

Action: Modify orclDBAuthType of the server's enterprise domain entry and assign it "ALL" or "SSL".

ORA-28302: User does not exist in the LDAP directory service.

Cause: An attempt was made to authenticate with SSL using the user's certificate, but there was no user entry in the LDAP server that matched the user's Distinguished Name.

Action: Add an user entry whose DN matches the user's PKI DN in the LDAP directory.

ORA-28303: Distinguished name for user exceeds maximum supported length.

Cause: The user's distinguished name exceeded the maximum supported length. The maximum allowed length for a distinguished name is 1023 bytes.

Action: Create global users with a distinguished name that is less than or equal to 1023 bytes.

ORA-28304: Oracle encrypted block is corrupt (file # *string*, block # *string*)

Cause: The indicated encrypted block was corrupt. This was an in-memory corruption. The exact cause is unknown. Possible causes could be: - the encryption wallet is incorrect or corrupted - the tablespace encryption key is incorrect or corrupted - decryption engine failure - actual logical error exists in decrypted block

Action: Review the encryption wallet and the keys stored in it to ensure they are valid and correct.

ORA-28305: unable to get valid WALLET_LOCATION

Cause: An invalid WALLET_LOCATION was specified in the sqlnet.ora file, or the ORACLE_BASE or ORACLE_HOME environment variable was not set properly.

Action: Correct WALLET_LOCATION in the sqlnet.ora file, or properly set the ORACLE_BASE or ORACLE_HOME environment variable.

ORA-28306: The directory user has *string* groups mapped to different database global users.

Cause: A directory user connected to the database while there were multiple directory user groups mapped to different shared database global users (shared schemas).

Action: No action is required if, by design, the user's multiple groups need to be mapped to different database global users. However, the database will only pick one global schema for the directory user to map to during login. If only one database global schema mapping is desired, then either create an exclusive database global user mapping for the directory user, or ensure that the directory user has only one mapped shared database global user.

*Params: 1) number: The number of groups.

ORA-28307: The directory current time *string* is not valid.

Cause: Either the directory service time was earlier than the year 1900, or the format was incorrect.

Action: Ensure that the directory service clock is set properly. *Params: 1) timestamp: The current time in the directory.

ORA-28308: The directory server type *string* is not supported.

Cause: The database tried to work with a directory service which was not supported.

Action: Update the dsi.ora or ldap.ora file to reflect an appropriate directory server type.

ORA-28309: failed to get the service user's credential from the wallet.

Cause: An attempt was made to get the service user's credential from the wallet. However, either the wallet was not found or the service user's credential was missing in the wallet.

Action: Check the wallet path and update the wallet with the service user's credential.

ORA-28310: An external or global role with the same external name already exists.

Cause: The external name (a distinguished name) specified for the external or global role being created or altered is already mapped to another role.

Action: External names must be unique among roles. Review existing roles and associated external names in the DBA_ROLES view. Specify a different external name for the role or use the existing role instead.

ORA-28311: Oracle encrypted data block not encrypted (file # *string*, block # *string*)

Cause: The indicated data block was found unencrypted in a fully encrypted tablespace. The exact cause is unknown. Possible causes could be: - An encrypted data block is tampered and replaced with an unencrypted data block. - An Oracle internal issue.

Action: Collect block dump and redo dump for this block, and contact Oracle Support Services.

ORA-28312: Proxy user is not supported with DSI.

Cause: Proxy user authentication is currently not supported with Directory Service Integration (DSI).

Action: Do not use proxy user authentication with DSI.

ORA-28313: LDAP server connection is down.

Cause: The LDAP server is down or the connection to the LDAP server is closed.

Action: Retry the connect operation.

ORA-28314: The current user database link is not supported with DSI.

Cause: An attempt was made to use the current user database link with Directory Services Integration (DSI).

Action: Do not use the current user database link with DSI.

ORA-28315: encryption key mismatched for file # *string*

Cause: Oracle tablespace encryption could not verify the master key or the tablespace key for this data file. The exact cause is unknown. Possible cause could be: - The encryption wallet was incorrect. - The encryption wallet was incorrectly shared between databases. - The tablespace encryption key was incorrect or corrupted.

Action: Review the encryption wallet and the keys stored in it to ensure that they are valid, and contact Oracle Support Services.

ORA-28316: LDAP user, group or domain is not found.

Cause: The user, group or domain was not found on the LDAP server.

Action: Check the LDAP user name or domain name.

ORA-28330: The encryption is not allowed for this data type or the data type is invalid.

Cause: The data type was not supported for column encryption or the data type was invalid.

Action: Use a correct data type.

ORA-28331: encrypted column size too long for the data type

Cause: The column was both encrypted and one of the following: - For VARCHAR2 when extended character data types were disabled, the length specified was greater than 3932. - For VARCHAR2 when extended character data types were enabled, the length specified was greater than 32699. - For CHAR, the length specified was greater than 1932. - For NVARCHAR2 when extended character data types were disabled, the length specified was greater than 1966. - For NVARCHAR2 when extended character data types were enabled, the length specified was greater than 16349. - For NCHAR, the length specified was greater than 966. - For RAW when extended character data types were disabled, the length specified was greater than 3932. - For RAW when extended character data types were enabled, the length specified was greater than 32699.

Action: Reduce the column size, or use TDE tablespace encryption.

ORA-28332: Cannot have more than one password for the encryption key.

Cause: More than one password was specified in the command.

Action: Revise the command to supply a single password and retry.

ORA-28333: The column is not encrypted.

Cause: An attempt was made to rekey or decrypt an unencrypted column.

Action: n/a

ORA-28334: The column is already encrypted.

Cause: An attempt was made to encrypt a column that is already encrypted.

Action: Do not attempt to encrypt a column that is already encrypted.

ORA-28335: referenced or referencing FK constraint column cannot be encrypted

Cause: encrypted columns were involved in the referential constraint

Action: n/a

ORA-28336: cannot encrypt SYS owned objects

Cause: An attempt was made to encrypt columns in a table that were owned by SYS.

Action: Do not attempt to encrypt columns in a table that are owned by SYS or consider using tablespace encryption.

ORA-28337: the specified index may not be defined on an encrypted column

Cause: The index column was a functional, domain, or join index.

Action: Do not create a functional, domain, or join index on an encrypted column, or encrypt a column that is already a part of a functional, domain, or join index.

ORA-28338: Columns cannot be both indexed and encrypted with salt.

Cause: An attempt was made to encrypt an index column with salt or an attempt was made to create an index on an encrypted column with salt.

Action: Alter the table and specify column encrypting without salt.

ORA-28339: Missing or invalid encryption algorithm - *string*

Cause: The specified encryption algorithm was either missing or invalid in the command.

Action: Specify a valid algorithm. Refer to the Oracle Database documentation for the list of supported algorithms. *Params: 1) algorithm_name: The name of the algorithm.

ORA-28340: A different encryption algorithm has been chosen for the table or tablespace.

Cause: Existing encrypted columns or tablespace were associated with a different algorithm.

Action: Do not specify an algorithm, or specify the same one for the existing encrypted columns or tablespace.

ORA-28341: cannot encrypt constraint columns with salt

Cause: An attempt was made to encrypt the constraint columns with salt.

Action: Encrypt the constraint columns without salt.

ORA-28342: integrity check failures on column key

Cause: Encryption metadata may have been improperly altered.

Action: Contact Oracle Support.

ORA-28343: failure to encrypt data or redo

Cause: Data or encryption metadata might have been improperly altered or the security module might not have been properly set up: - For redo, a key change might have been in progress or might have been in an invalid key state. - For redo transport, other attempts will be attempted. See the trace files for additional information.

Action: For redo, if the problem persists, remove the ENCRYPTION attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-28344: fails to decrypt data

Cause: Either the data or encryption metadata was improperly altered, or the security module was not properly set up.

Action: None

ORA-28345: cannot downgrade because there exists encrypted column

Cause: An attempt was made to downgrade when there was an encrypted column in the system.

Action: Decrypt these columns before attempting to downgrade.

ORA-28346: An encrypted column cannot serve as a partitioning column.

Cause: An attempt was made to encrypt a partitioning key column or to create a partitioning index with encrypted columns.

Action: Do not encrypt a partitioning key column or decrypt the column before creating the partitioning index.

ORA-28347: encryption properties mismatch

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command, but encryption properties were mismatched.

Action: Make sure encryption algorithms and columns keys are identical. The corresponding columns must be encrypted on both tables with the same salt and non-salt flavor.

ORA-28348: The index that was defined on the specified column cannot be encrypted.

Cause: An attempt was made to encrypt a column which is in a functional index, domain index, or join index.

Action: Drop the index.

ORA-28349: cannot encrypt the specified column recorded in the materialized view log

Cause: An attempt was made to encrypt a column which is already recorded in the materialized view log.

Action: drop the materialized view log

ORA-28350: cannot encrypt the specified column recorded in CDC synchronized change table

Cause: An attempt was made to encrypt a column which is already recorded in CDC synchronized change table.

Action: drop the synchronized change table

ORA-28351: cannot encrypt the column of a cluster key

Cause: An attempt was made to encrypt a column of the cluster key. A column of the cluster key in a clustered table could not be encrypted.

Action: None

ORA-28353: Failed to open wallet.

Cause: The database was unable to open the security module wallet due to an incorrect wallet path or password. It is also possible that a wallet had not been created. If the database is configured to use external keystore (OKV/KMS) as the TDE keystore, the database may be having difficulty finding the external configuration file of the keystore.

Action: Execute the command again using the correct wallet password or verify that a wallet exists in the specified directory. If necessary, create a new wallet and initialize it. When using external keystore (OKV/KMS), check if the configuration file is in the right directory. When the instance initialization parameter `WALLET_ROOT` is configured, the Oracle Key Vault configuration file should be located at one of the following paths: `$WALLET_ROOT/okv/conf` (for `CDB$ROOT` and untrusted PDBs) `$WALLET_ROOT/PDB-GUID/okv/conf` (for an isolated PDB) The pluggable database (PDB) GUID can be obtained by querying `GUID` from the `DBA_PDBS` view. Also in the case of an external keystore, refer to the documentation for information on endpoint enrollment and provisioning.

ORA-28354: Encryption wallet, auto login wallet, or HSM is already open.

Cause: Either the encryption wallet, auto login wallet, or hardware security module (HSM) keystore was already open.

Action: None

ORA-28355: failed to initialize security module

Cause: An attempt to perform the cryptographic library operation failed or an invalid operation was attempted.

Action: Check the trace file for more details.

ORA-28356: invalid open wallet syntax

Cause: The command to open the wallet contained improper spelling or syntax.

Action: If attempting to open the wallet, verify the spelling and syntax and execute the command again.

ORA-28357: password required to open the wallet

Cause: A password was not provided when executing the open wallet command, the isolate keystore command, or the unite keystore command.

Action: Retry the command with a valid password.

ORA-28358: improper set key syntax

Cause: The command to set the master key contained improper spelling or syntax.

Action: If attempting to set the master key for Transparent Database Encryption, verify the spelling and syntax and execute the command again.

ORA-28359: invalid certificate identifier

Cause: The certificate that was specified did not exist in the wallet.

Action: Query the V\$WALLET fixed view to find the proper certificate identifier for certificate to be used.

ORA-28360: security module internal error

ORA-28361: Master key not yet set.

Cause: The master key for the instance was not set.

Action: Execute the ADMINISTER KEY MANAGEMENT SET KEY command to set a master key for the database instance.

ORA-28362: master key not found

Cause: The required master key could not be located. This may be caused by the use of an invalid or incorrect wallet.

Action: Check the wallet location parameters to see if the correct wallet is specified. Also, verify that a single sign-on (SSO) wallet is not being used when an encrypted wallet is intended.

ORA-28363: buffer provided not large enough for output

Cause: The provided output buffer was too small to contain the output.

Action: Check the size of the output buffer to ensure that it is initialized to the proper size.

ORA-28364: invalid wallet operation

Cause: The command to operate the wallet contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28365: Wallet is not open.

Cause: The keystore (FILE wallet or OKV/KMS) was not open.

Action: Open the keystore using the keystore password or EXTERNAL STORE.

ORA-28366: invalid database encryption operation

Cause: The command for database encryption contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28367: wallet does not exist

Cause: The Oracle wallet was not created or the wallet location parameters in sqlnet.ora or the initialization parameter, WALLET_ROOT, specifies an invalid wallet path.

Action: Verify that the ENCRYPTION_WALLET_LOCATION or the initialization parameter, WALLET_ROOT, is correct and that a valid wallet exists in the specified path. In case of an external (OKV/KMS) keystore, verify that the external keystore is reachable.

ORA-28368: cannot auto-create wallet

Cause: The database failed to auto create an Oracle wallet. The Oracle process may not have proper file permissions or a wallet may already exist.

Action: Confirm that proper directory permissions are granted to the Oracle user and that neither an encrypted or obfuscated wallet exists in the specified wallet location and try again.

ORA-28369: cannot add files to encryption-ready tablespace when offline

Cause: You attempted to add files to an encryption-ready tablespace when all the files in the tablespace were offline.

Action: Bring the tablespace online and try again

ORA-28370: ENCRYPT, DECRYPT or REKEY option not allowed

Cause: An attempt was made to specify the ENCRYPT, DECRYPT or REKEY option on an unsupported tablespace.

Action: Remove this option and retry the statement.

ORA-28371: ENCRYPTION clause or ENCRYPT option not allowed

Cause: An attempt was made to specify the ENCRYPTION clause or ENCRYPT option for system and undo tablespaces.

Action: Remove one or both of these options and retry the statement.

ORA-28372: missing ENCRYPT option for encrypted tablespace

Cause: An attempt was made to specify the ENCRYPTION property for the CREATE TABLESPACE statement without specifying the ENCRYPT option to encrypt the tablespace.

Action: Add the ENCRYPT option and retry the statement.

ORA-28373: missing or out of order ENCRYPTION clause

Cause: An attempt was made to specify the ENCRYPT or DECRYPT option in the CREATE TABLESPACE statement or to specify the ENCRYPT or REKEY option in the ALTER TABLESPACE statement without first specifying the ENCRYPTION property for the tablespace.

Action: Add the ENCRYPTION clause or correct the syntax, and retry the statement.

ORA-28374: typed master key not found in wallet

Cause: You attempted to access encrypted tablespace or redo logs with a typed master key not existing in the wallet.

Action: Copy the correct Oracle Wallet from the instance where the tablespace was created.

ORA-28375: cross-endian backup conversion of encrypted tablespace is not supported

Cause: You attempted to perform a cross-endian backup conversion for encrypted tablespaces.

Action: Do not attempt to perform a cross-endian backup conversion of encrypted tablespaces because it is not supported.

ORA-28376: Cannot find Public-Key Cryptographic Standards #11 (PKCS11) library.

Cause: The external keystore (OKV/KMS) vendor PKCS11 library was not found.

Action: Place the external keystore (OKV/KMS) vendor library in the following directory structure: For Unix-like systems: /opt/oracle/extapi/[32,64]/hsm/{VENDOR}/ {VERSION}/ libapiname.ext For Windows systems: %SYSTEM_DRIVE% \oracle\extapi\[32,64]\hsm\{VENDOR}\{VERSION}\ libapiname.ext Where: [32, 64] - refers to 32bit or 64bit binary. {VENDOR} - The name of the vendor supplying the library. {VERSION} - Version of the library, preferably in number.number.number format.

ORA-28377: no need to migrate from FILE wallet to external keystore (OKV/KMS)

Cause: The external keystore (OKV/KMS) was already the primary keystore that had the current Transparent Data Encryption (TDE) master key.

Action: No action required.

ORA-28378: Wallet is not opened after setting the master key.

Cause: The master key has been set or reset. The wallet needs to be reopened.

Action: Reopen the wallet.

ORA-28379: A different integrity algorithm was used for the column.

Cause: The encrypted columns are associated with a different integrity algorithm.

Action: Either do not specify an algorithm, or specify the same algorithm used for the existing encrypted columns. The INTALG field of enc\$ table provides the current algorithm used by the column.

ORA-28382: Global wallet operation in Oracle Real Application Clusters (RAC) failed.

Cause: The global wallet operation in RAC failed.

Action: For an operation to open or close the wallet, check gv\$encryption_wallet view to verify if the wallet operation failed on any instance and retry the operation on the instance where it failed. For an operation to set a new key or secret, check the gv\$encryption_keys and gv\$client_secrets views to verify if the new secret is correctly shown for all instances. Reopen the wallet on the instances where the new secrets are not correctly listed.

ORA-28383: Cannot execute a public key infrastructure (PKI) certificate-based master key migration.

Cause: A PKI certificate-based master key migration is not allowed.

Action: Execute a symmetric master key migration.

ORA-28384: cannot perform tablespace encryption

Cause: Tablespace encryption was attempted when the public key infrastructure (PKI) certificate-based primary key was in use.

Action: Perform a rekey operation to change to a symmetric Transparent Data Encryption (TDE) master encryption key.

ORA-28385: cannot perform a PKI certificate-based migration

Cause: A PKI certificate-based migration to HSM was attempted.

Action: Perform a symmetric Master Key migration.

ORA-28386: cannot perform a PKI certificate-based master encryption key rekey operation

Cause: A public key infrastructure (PKI) certificate-based master encryption key rekey operation was attempted.

Action: Perform a symmetric master encryption key rekey operation.

ORA-28387: could not acquire an enqueue for wallet operation in Oracle Real Application Clusters (Oracle RAC)

Cause: Enqueue to block TDE operations in the Oracle RAC database could not be obtained.

Action: Retry the wallet operation.

ORA-28388: database is not open in read/write mode

Cause: Database was not open in read/write mode and could not perform these wallet operations.

Action: Open the database in read/write mode and retry this command.

ORA-28389: Cannot close auto login keystore.

Cause: Auto login keystore could not be closed because the keystore type that is currently open is of password type and not auto-login.

Action: Close the keystore with a password.

ORA-28390: auto login wallet is not open but the password wallet may be open

Cause: The auto login wallet was not open. The password wallet may still be open and subsequent Transparent Data Encryption (TDE) operations might succeed.

Action: If the auto login wallet is closed but TDE operations succeed, check the status of the encryption wallet and close the wallet, if required.

ORA-28391: cannot close FILE or external (OKV/KMS) keystore, password mismatch

Cause: Password provided did not match the password of the open FILE or external (OKV/KMS) keystore.

Action: Provide the correct password for FILE or external (OKV/KMS) keystore to close the wallet.

ORA-28392: invalid close wallet syntax

Cause: The command to close the wallet contained improper spelling or syntax.

Action: If attempting to close the wallet, verify the spelling and syntax and execute the command again.

ORA-28393: password required to close the wallet

Cause: A password was not provided when executing the close wallet command.

Action: Retry the command with a valid password.

ORA-28394: decryption of data of length *string* failed

Cause: Decryption of data failed. Error may be due to plain text data in an external file being submitted for decryption, data encrypted with a different key or a utility being submitted for decryption, or TDE encrypted data in data files being corrupted.

Action: Verify that the correct external file is being specified or contact Oracle Support.

ORA-28395: could not write the new master key to the wallet

Cause: An attempt was made to write the new master key to the wallet. The wallet or the parent directory may not have the required file permissions to write the master key to the wallet.

Action: Verify and ensure that the password-protected wallet, auto-login wallet, and parent directory have read/write file permissions. Also, check the disk space availability on the file system. Retry the command.

ORA-28396: Rekey failed to process column key rewrap.

Cause: One or more master encryption keys required for the rekey operation could not be found in the wallet. Either incorrect master encryption key identifiers were inserted into the ENC\$ dictionary table or the wallet that contained the referenced master encryption keys was improperly modified or deleted.

Action: Restore the most recent copy of the wallet and try again.

ORA-28397: cannot bring file *string* online since it has a passphrase-wrapped key

Cause: The encrypted tablespace file was rewrapped using passphrase through the DBMS_TTS.PASSPHRASE_REWRAP_KEY procedure. Therefore it cannot be part of the database until it is converted by RMAN.

Action: Do not attempt to bring files with passphrase-wrapped keys online.

ORA-28398: cannot rewrap encryption key for this file

Cause: Cannot rewrap encryption key for this file because it was not from an encrypted tablespace, or it had already been rewrapped.

Action: Verify that the file is a copy of a file from an encrypted tablespace.

ORA-28403: file *string* cannot be modified because it is an online data file

Cause: An attempt was made to modify an online data file when the file was not expected to be part of the database.

Action: Check the status of the file and its tablespace and make sure it is offline or is a copy of a data file

ORA-28404: role cannot be altered

Cause: An attempt was made to alter the role to become a global, external, password protected, or secure application role. The role could not be altered because it was already granted to one or more other roles or program units.

Action: Use REVOKE to revoke the role from other roles first.

ORA-28405: cannot grant secure role to a role

Cause: The role being granted is a password protected or secure application role. This role can only be granted directly to a user.

Action: Grant the role directly to a user.

ORA-28407: Operation on external keystore (OKV/KMS) failed with PKCS#11 error *string(string)*.

Cause: The connection to the external keystore (OKV/KMS) may have been lost or another internal error happened at the external keystore.

Action: Check the error. For more information on the error, check the trace files and try the following: 1) Retry the command. If the error repeats, go to step 2. 2) Verify that the external keystore is configured correctly and connected. Retry the command. If the error repeats, go to step 3. 3) Ask your Security Officer to close and open the security module. Retry the command. If the error repeats, go to step 4. 4) Start the database, if possible. Retry the command. If the error repeats, contact Oracle Support or your vendor for external keystore support.

ORA-28408: encryption using passphrase failed

Cause: Encryption with the passphrase failed, which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists contact Oracle Support.

ORA-28409: decryption using passphrase failed

Cause: Decryption with the passphrase failed which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists, contact Oracle Support.

ORA-28410: No need to migrate from external (OKV/KMS) keystore to FILE keystore.

Cause: There were either no encrypted columns and tablespaces or all column and tablespace keys were already encrypted with the master encryption key from the FILE-based keystore.

Action: No action required.

ORA-28411: auto login wallet cannot be open during migration

Cause: Auto login wallet could not be opened during migration.

Action: Close the auto login wallet and try the migration again.

ORA-28412: cannot determine the keystore migration status

Cause: The migration status of the keystore could not be determined.

Action: Verify if the migration status is correct in props\$ and, if not, correct it by updating props\$. Set NAME (TDE_PRIMARY_KEYSTORE and TDE_SECONDARY_KEYSTORE) to VALUE\$ (FILE or OKV) based on the correct migration status. Shutdown and startup the database.

ORA-28414: Current master key is in the external keystore (OKV/KMS).

Cause: The rekey or activate operation of the master key failed because the keys were in the External keystore (OKV/KMS), but the configuration indicated that the keys were in the FILE wallet.

Action: If using `sqlnet.ora`, set the configuration to OKV, or if using `WALLET_ROOT`, set `TDE_CONFIGURATION` to OKV|FILE. If 'FILE' configuration is intended for migration to the FILE wallet, migrate to the FILE wallet.

ORA-28415: current master key is in the FILE wallet

Cause: The master encryption key rekey or activation failed because the keys were in the FILE wallet but the configuration indicated that the keys were in an external keystore (OKV/KMS).

Action: If using `sqlnet.ora`, set the configuration to FILE, or if using `WALLET_ROOT`, set `TDE_CONFIGURATION` to FILE|OKV. If 'OKV' configuration is intended for migration to external keystore (OKV/KMS) wallet, migrate to the external keystore.

ORA-28416: Specify the correct keystore in the sqlnet.ora file or in TDE_CONFIGURATION.

Cause: Either the keystore specified in the `sqlnet.ora` file or the `TDE_CONFIGURATION` parameter was incorrect.

Action: When migrating to an external keystore (OKV/KMS), the keystore specified in `sqlnet.ora` file should be OKV and, similarly, when reverse migrating to wallet, the keystore specified in `sqlnet.ora` should be FILE. Check if the `sqlnet.ora` file configuration is correct and, if not, correct it. If the `WALLET_ROOT` parameter is configured, during migration to an external keystore (OKV/KMS), the `KEYSTORE_CONFIGURATION` attribute of the dynamic instance `TDE_CONFIGURATION` parameter should be set to OKV|FILE. Similarly, when reverse migrating to wallet, the `KEYSTORE_CONFIGURATION` attribute of the `TDE_CONFIGURATION` parameter should be set to FILE|OKV.

ORA-28417: password-based keystore is not open

Cause: Password-based keystore was not opened.

Action: Close the auto login keystore, if required, and open a password-based keystore or use the `FORCE KEYSTORE` clause.

ORA-28418: password-based external keystore (OKV/KMS) is not open

Cause: Password-based external keystore (Oracle Key Vault (OKV) / Oracle Cloud Infrastructure (OCI) Key Management Service (KMS)) was not opened.

Action: Close the auto login keystore, if required, and open a password-based external keystore (OKV/KMS) or use the `FORCE KEYSTORE` clause.

ORA-28419: migration from FILE to external (OKV/KMS) keystore failed

Cause: The `TDE_MASTER_KEY_ID` entry did not exist in `PROPS$` table. A subsequent attempt to add `TDE_MASTER_KEY_ID` entry into `PROPS$` failed.

Action: Verify why the `TDE_MASTER_KEY_ID` entry was deleted from the `props$` table. Retry the command.

ORA-28420: cannot open resetlogs from a restore point prior to wallet creation

Cause: The open resetlogs, open read-only, or standby activation operation failed because the restore point is prior to the wallet creation, and the data file does not contain the database key information as stored in the control file.

Action: Restore to a restore point after the wallet creation, or rebuild the control file with existing data files.

ORA-28421: cannot FINISH a tablespace encrypt, decrypt or rekey command which has not started

Cause: The ALTER TABLESPACE FINISH [ENCRYPT | DECRYPT | REKEY] command did not find a failed attempt for tablespace encrypt, decrypt or rekey.

Action: Check if tablespace already has a desired key version and reissue the command without FINISH keyword if necessary.

ORA-28422: operation disallowed: concurrent master key rekey

Cause: Concurrent master key rekey was detected.

Action: Wait for the master key rekey operation to complete and retry the command.

ORA-28423: current operation disallowed: *string* tablespace is being encrypted, decrypted, or rekeyed

Cause: The specified tablespace was being concurrently encrypted, decrypted, or rekeyed.

Action: Wait for the concurrent operation to complete and retry the command.

ORA-28424: ENCRYPT, DECRYPT or REKEY option already specified

Cause: In the CREATE or ALTER TABLESPACE statement, the ENCRYPT, DECRYPT or REKEY option was specified more than once.

Action: Remove all but one of the ENCRYPT, DECRYPT or REKEY options.

ORA-28425: missing a valid FILE_NAME_CONVERT clause

Cause: A valid FILE_NAME_CONVERT clause was not specified with the ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] statement. The FILE_NAME_CONVERT clause is required unless Oracle Managed Files are being used.

Action: Specify a valid FILE_NAME_CONVERT clause and retry the command.

ORA-28426: must FINISH a tablespace encrypt, decrypt or rekey command first

Cause: The ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] command found a previously failed attempt for tablespace encrypt, decrypt or rekey.

Action: Issue the ALTER TABLESPACE FINISH [ENCRYPT | DECRYPT | REKEY] command to complete the attempt for tablespace encrypt, decrypt or rekey.

ORA-28427: cannot create, import or restore unencrypted tablespace: *string* in Oracle Cloud

Cause: The specified tablespaces were not encrypted, or were not allowed to be decrypted. Oracle Cloud mandates that all tablespaces must be encrypted.

Action: Create, import or restore an encrypted tablespace, or encrypt the specified tablespace, or do not decrypt the specified tablespace.

ORA-28428: cannot encrypt or decrypt a data file in mount mode when the database is open elsewhere

Cause: An attempt was made to encrypt or decrypt a data file in mount mode when the database was already opened by another Oracle RAC instance.

Action: Ensure that the database is not open anywhere and retry the command.

ORA-28429: cannot encrypt or decrypt a data file on standby when it is open read-only

Cause: An attempt was made to encrypt or decrypt a data file on a standby database when it was already opened in read-only mode.

Action: Restart the standby instance in mount mode and retry the command.

ORA-28430: cannot encrypt or decrypt a data file for online tablespace *string*

Cause: An attempt was made to encrypt or decrypt a data file for an online tablespace.

Action: Bring the tablespace offline and retry the command.

ORA-28431: cannot encrypt an already encrypted data file *string*

Cause: An attempt was made to encrypt a data file that was already encrypted in an encrypted tablespace.

Action: Check if the data file belongs to an encrypted tablespace.

ORA-28432: cannot encrypt data file *string* in seed pluggable database

Cause: An attempt was made to encrypt a data file that was part of a seed pluggable database, which is not allowed.

Action: Check if the data file belongs to a seed pluggable database.

ORA-28433: mismatched encryption property between data file *string* and tablespace *string*

Cause: Either an unencrypted data file in an encrypted tablespace or an encrypted data file in an unencrypted tablespace was found. When bringing a tablespace online or opening the database, all data files in an encrypted tablespace must be encrypted, and all data files in an unencrypted tablespace must be unencrypted.

Action: Encrypt all of the data files in the tablespace before resuming the operation.

ORA-28434: cannot decrypt an unencrypted data file *string*

Cause: An attempt was made to decrypt a data file that was unencrypted.

Action: Check if the data file belongs to an encrypted tablespace.

ORA-28435: cannot decrypt data file *string* which is not encrypted with the database key

Cause: An attempt was made to decrypt a data file that was not encrypted with the database key. Only data files encrypted with the ALTER DATABASE DATAFILE ENCRYPT or ALTER TABLESPACE ENCRYPTION OFFLINE ENCRYPT statement are encrypted with the database key.

Action: Check if the data file belongs to an encrypted tablespace with a different key from the database key in the V\$DATABASE_KEY_INFO view, or use the ALTER TABLESPACE ENCRYPTION ONLINE DECRYPT statement instead.

ORA-28436: cannot encrypt data file *string* in SYSTEM or SYSAUX tablespace

Cause: An attempt was made to encrypt a data file that was a part of the SYSTEM or SYSAUX tablespace, which is not allowed in compatibility lower than 12.2.

Action: Check if the data file belongs to SYSTEM or SYSAUX tablespace, or change the database compatibility to 12.2 or later.

ORA-28437: unexpected FILE_NAME_CONVERT clause with Oracle Managed Files

Cause: A FILE_NAME_CONVERT clause was specified with the ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] statement, which is not allowed when the database is using Oracle Managed Files.

Action: Remove the FILE_NAME_CONVERT clause and retry the command.

ORA-28438: ALTER TABLESPACE *string* ENCRYPTION *stringstring* operation not complete

Cause: The ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] command started but could not complete for all the data files of this tablespace.

Action: Check if all the data files are online and if the specified FILE_NAME_CONVERT clause covers all the data files of this tablespace, and retry the command with FINISH keyword, if V\$ENCRYPTED_TABLESPACES shows that the tablespace is not in NORMAL status.

ORA-28439: cannot close wallet when SYSTEM, SYSAUX, UNDO, or TEMP tablespaces are encrypted

Cause: An attempt was made to close the wallet for a database with an encrypted SYSTEM, SYSAUX, UNDO, or TEMP tablespace.

Action: Decrypt the tablespace and then retry the command.

ORA-28440: cannot offline encrypt or decrypt data file *string* - file is in use or recovery

Cause: An attempt was made to offline encrypt or decrypt a data file that was online in an open instance, being encrypted or decrypted by another session, or was being recovered.

Action: Ensure that the tablespace is offline and no other encrypt or decrypt operation is performed on this data file, and end all recovery sessions.

ORA-28441: RMAN clone instance cannot open wallet

Cause: The RMAN clone instance failed to open the auto login wallet in an operation such as a pluggable database (PDB) or tablespace point-in-time recovery because the auto login wallet was incorrectly configured, or did not exist.

Action: Check and correct the auto-login wallet configuration or create an auto-login wallet from the password wallet, and retry the operation.

ORA-28442: attempted to rekey a tablespace while the database is in restricted mode

Cause: An attempt to rekey a Transparent Data Encryption (TDE) tablespace failed because the database was in restricted mode.

Action: Open the database in read/write mode and then retry the command.

ORA-28443: cannot access the TDE wallet

Cause: An attempt was made to access the Transparent Data Encryption (TDE) master encryption key in the TDE wallet.

Action: Create a TDE wallet, provision a TDE master encryption key in the wallet and ensure that the wallet is open.

ORA-28444: Encryption of dictionary data is already enforced.

Cause: Database dictionary encryption was already enforced.

Action: No action is required.

ORA-28446: cannot perform database dictionary rekey or delete key operation due to missing current encryption key

Cause: The database dictionary rekey or delete key operation requires access to the current encryption key. The database could not find an existing data encryption key.

Action: Review the ALTER DATABASE DICTIONARY entry in the Oracle Database documentation. Ensure the following: - The Transparent Data Encryption (TDE) keystore exists. - The TDE keystore is open. - The data encryption key exists in the TDE keystore.

ORA-28447: The user has insufficient privilege to execute the ALTER DATABASE DICTIONARY statement.

Cause: An attempt was made to execute the ALTER DATABASE DICTIONARY statement without the necessary SYSKM privilege. The SYSKM privilege is required when executing ALTER DATABASE DICTIONARY locally. If this is executed with the CONTAINER=ALL clause, the user must have SYSKM granted commonly.

Action: Grant SYSKM to the user either locally or commonly depending on the requirement.

ORA-28448: The ALTER DATABASE DICTIONARY statement was used incorrectly.

Cause: ALTER DATABASE DICTIONARY statement was used incorrectly.

Action: Ensure that a valid ALTER DATABASE DICTIONARY statement is executed.

ORA-28449: cannot use an invalidated database link

Cause: An attempt was made to use an invalid database link.

Action: Reset the password of the invalidated database link.

ORA-28450: Encryption specified with CREATE DATABASE or CREATE PLUGGABLE DATABASE.

Cause: The encryption option was specified in a CREATE DATABASE or a CREATE PLUGGABLE DATABASE statement.

Action: Do not specify encryption in the CREATE DATABASE or CREATE PLUGGABLE DATABASE statement.

ORA-28451: incomplete ALTER DATABASE LINK statement

Cause: An attempt was made to reset the password for an invalid shared database link without providing either the CONNECT TO clause, the AUTHENTICATED BY schema_name clause or the IDENTIFIED BY password clause.

Action: In the ALTER SHARED DATABASE LINK statement, ensure to provide all these clauses - - CONNECT TO - AUTHENTICATED BY schema_name - IDENTIFIED BY password

ORA-28452: ALTER DATABASE DICTIONARY statement is not allowed during rolling upgrade if LOB signature is enabled.

Cause: An attempt was made to executing the ALTER DATABASE DICTIONARY statement during rolling upgrade when large object (LOB) signature was enabled.

Action: Temporarily disable the LOB signature by executing ALTER SYSTEM SET LOB_SIGNATURE_ENABLE = FALSE. Reenable LOB signature afterward.

ORA-28453: ENCRYPT option not allowed

Cause: An attempt was made to specify the ENCRYPT option on an already encrypted tablespace.

Action: Remove this option and retry the statement with another option.

ORA-28454: DECRYPT option not allowed

Cause: An attempt was made to specify the DECRYPT option on a tablespace that was not encrypted.

Action: Remove this option and retry the statement with another option.

ORA-28455: ENCRYPT option not allowed.

Cause: An attempt was made to specify the ENCRYPT option on a tablespace with an incompatible setting of TABLESPACE_ENCRYPTION.

Action: If TABLESPACE_ENCRYPTION=DECRYPT_ONLY, then do not specify the CREATE or ALTER TABLESPACE statement with an ENCRYPT clause.

ORA-28456: ENCRYPTED files found with TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY.

Cause: An attempt was made to open a database with encrypted tablespace files and an incompatible setting of TABLESPACE_ENCRYPTION.

Action: If TABLESPACE_ENCRYPTION=DECRYPT_ONLY, then decrypt all the encrypted tablespaces.

ORA-28457: ENCRYPT_NEW_TABLESPACES can only be set to ALWAYS when TABLESPACE_ENCRYPTION is set to AUTO_ENABLE.

Cause: An attempt was made to modify ENCRYPT_NEW_TABLESPACES to a value other than ALWAYS when TABLESPACE_ENCRYPTION is set to AUTO_ENABLE.

Action: Modify TABLESPACE_ENCRYPTION either in the server parameter file (SPFILE) or parameter file (PFILE) before the instance startup to a value other than AUTO_ENABLE, if ENCRYPT_NEW_TABLESPACES need not to be ALWAYS.

ORA-28458: cannot create, import or restore unencrypted tablespace: string when TABLESPACE_ENCRYPTION is set to AUTO_ENABLE.

Cause: The specified tablespace was not allowed to be decrypted because TABLESPACE_ENCRYPTION was set to AUTO_ENABLE.

Action: Either do not decrypt the tablespace or change the TABLESPACE_ENCRYPTION setting.

ORA-28459: cannot encrypt the unencrypted tablespace: string when TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY.

Cause: The specified tablespace was not allowed to be encrypted because TABLESPACE_ENCRYPTION was set to DECRYPT_ONLY.

Action: Either do not encrypt the tablespace or change the `TABLESPACE_ENCRYPTION` setting.

ORA-28460: ENCRYPT_NEW_TABLESPACES can only be set to DDL when TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY.

Cause: An attempt was made to modify `ENCRYPT_NEW_TABLESPACES` to a value other than DDL when `TABLESPACE_ENCRYPTION` is set to `DECRYPT_ONLY`.

Action: Modify `TABLESPACE_ENCRYPTION` either in the server parameter file (SPFILE) or parameter file (PFILE) before the instance startup to a value other than `DECRYPT_ONLY`, if `ENCRYPT_NEW_TABLESPACES` need not to be DDL.

ORA-28461: The requested cryptographic operation (*string*) is not FIPS-compliant.

Cause: The attempt was not compliant with the Federal Information Processing Standards (FIPS).

Action: Review the Federal Information Processing Standards (FIPS) and retry with FIPS compliant operations, such as a different algorithm or longer key size. *Params: 1) `operation_name`: Name of requested cryptographic operation.

ORA-28462: invalid object metadata

Cause: The metadata of an object from the Transparent Data Encryption (TDE) keystore was incorrectly formatted.

Action: Check the trace file to find the object ID and to determine if the object was created on the database in the FILE wallet or an external keystore (OKV/KMS), imported from another database or imported from an external keystore (OKV). Contact Oracle Support for further assistance.

ORA-28500: connection from ORACLE to a non-Oracle system returned this message:

Cause: The cause is explained in the forwarded message.

Action: See the non-Oracle system's documentation of the forwarded message.

ORA-28501: communication error on heterogeneous database link

Cause: An unexpected communication failure occurred on a heterogeneous database link to a non-Oracle system. The message above will be followed by a second message generated by the connected non-Oracle system.

Action: See the documentation for the non-Oracle system for an explanation of the second error message.

ORA-28502: internal communication error on heterogeneous database link

Cause: A communication error internal to ORACLE's heterogeneous services has occurred.

Action: Contact Oracle customer support.

ORA-28503: The bind value cannot be translated into SQL text for the non-Oracle system.

Cause: A SQL statement used bind variables on a heterogeneous services database link to a non-Oracle system, but the non-Oracle system does not support bind variables.

Action: Change the SQL statement so that it does not use bind variables.

ORA-28504: The ROWID was not found in the ROWID cache for the Heterogeneous Services database link.

Cause: The ROWID cache for Heterogeneous Services held no entry that corresponded to the specified ROWID. The ROWID entry may have been overwritten in the ROWID cache.

Action: Enlarge the Heterogeneous Services ROWID cache size by increasing the value of the Heterogeneous Services initialization parameter `HS_ROWID_CACHE_SIZE`.

ORA-28505: cannot get non-Oracle system capabilities from *string*

Cause: ORACLE was unable to retrieve capability information for the non-Oracle system connected through a heterogeneous database link. This capability information should be stored in data dictionary tables viewable with the `HS_CLASS_CAPS` or `HS_INST_CAPS` data dictionary views.

Action: Contact the DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data dictionary content for this `FDS_CLASS_NAME` and/or `FDS_INST_NAME`. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28506: A parsing error has occurred in data dictionary translation for *string* stored in *string*.

Cause: A reference to an Oracle data dictionary table or view name on a Heterogeneous Services database link to a non-Oracle system cannot be translated. The Oracle data dictionary tables shown with view `HS_CLASS_DD` contain invalid SQL for the data dictionary translation.

Action: Contact Oracle Support. *Params: 1) `data_dictionary_name`: The name of the data dictionary table or view being used in the query. 2) `translation_table`: The name of the translation table containing the data dictionary object name and its translation.

ORA-28507: error in data dictionary view *string*

Cause: The initialization parameter table for the Heterogeneous Services was not available, or its structure (number of columns or column types) was incorrect.

Action: Verify correct installation of the following Heterogeneous Services' initialization parameter views: `HS_CLASS_INIT` and `HS_INST_INIT`. If these views are not available, make sure you ran the script `CATHS.SQL` in the `$ORACLE_HOME/rdbms/admin` directory.

ORA-28508: invalid value *string* for Heterogeneous Services initialization parameter *string*

Cause: The specified Heterogeneous Services initialization parameter had an invalid value when attempting to connect to a non-Oracle system.

Action: Check the Heterogeneous Services and agent documentation to determine acceptable values

ORA-28509: unable to establish connection to a system outside the Oracle network

Cause: The initialization of the database link failed to connect to a system outside the Oracle network. The database could not connect to the Heterogeneous Services agent process of this system.

Action: Check the Net8 service name definition in the following: - the `USING` clause in the `CREATE DATABASE LINK` statement - the `TNSNAMES.ORA` file - the Oracle Names Server
Check the following to resolve the issue with name mismatch: - The `USING` clause in the `CREATE DATABASE LINK` statement matches with the service name defined in the

TNSNAMES.ORA file or in the Oracle Names Server. - The protocol-specific information in the service name definition matches with the protocol-specific definition of the responding listener. - The SID=*name* in the service name definition (in the TNSNAMES.ORA file or in Oracle Names Server) matches with the value in the LISTENER.ORA file for the responding listener.

ORA-28510: heterogeneous database link initialization failed

Cause: Initialization of a heterogeneous database link to a non-Oracle system failed due to an error identified by the agent for this non-Oracle system.

Action: Make sure the non-Oracle system is up and running and that all of the environment and initialization values for the agent are set correctly.

ORA-28511: lost RPC connection to heterogeneous remote agent using SID=*string*

Cause: A fatal error occurred in one of the following places: -- the connection between the ORACLE server and the agent -- the heterogeneous services remote agent itself -- the connection to the non-Oracle system This error occurred after communication had been established successfully.

Action: Check for network problems and remote host crashes. The problem is probably in the agent software. If so, contact a customer support representative of the agent vendor.

ORA-28512: cannot get data dictionary translations from *string*

Cause: ORACLE was unable to retrieve data dictionary translation information for the non-Oracle system connected through a heterogeneous database link. This data dictionary translation information should be stored in data dictionary tables viewable with the HS_CLASS_DD or HS_INST_DD data dictionary views.

Action: Ask your DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28513: internal error in heterogeneous remote agent

Cause: An internal error has occurred in the Oracle remote agent supporting a heterogeneous database link.

Action: Make a note of how the error was produced and contact the customer support representative of the agent vendor.

ORA-28514: heterogeneous database link initialization could not convert system date

Cause: The system date was not retrievable.

Action: Verify that the ORACLE server's host machine and operating system are operational. This error should not occur unless low level system functions are failing.

ORA-28515: cannot get external object definitions from *string*

Cause: ORACLE was unable to retrieve definitions of distributed external procedures or remote libraries registered for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is malformed.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory.

ORA-28518: data dictionary translation has illegal translation type

Cause: A data dictionary translation definition, either in the ORACLE server data dictionary or in data dictionary content uploaded from a Heterogeneous Services agent, specified an illegal translation type code. Legal values are 'T' or 't' for 'translate', 'M' or 'm' for 'mimic'. Information on the exact data dictionary translation causing the error is written to a trace (*.TRC) file for the ORACLE instance and to the ORACLE instance's alert log. This error occurs when a Heterogeneous Services agent uploads data dictionary content to an ORACLE server on the first connection from the server to the agent.

Action: Contact the customer support of the agent vendor.

ORA-28519: no heterogeneous data dictionary translations available

Cause: The ORACLE server's data dictionary did not define data dictionary translations for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest solution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28520: error initializing heterogeneous data dictionary translations

Cause: ORACLE was unable to retrieve data dictionary translations for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If the connected agent, identified by FDS_CLASS_NAME, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28521: no heterogeneous capability information available

Cause: The ORACLE server's data dictionary did not contain capability definitions for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest resolution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28522: error initializing heterogeneous capabilities

Cause: ORACLE was unable to retrieve capability definitions for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If the connected agent, identified by FDS_CLASS_NAME, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28523: Oracle Database and the Heterogeneous Services agent are not at compatible levels.

Cause: An operation on a database link attempted to connect to a non-Oracle system, but the version of Oracle Database and the version of the agent for the non-Oracle system were not compatible.

Action: Ask your DBA to confirm configuration of both the Oracle instance and the agent. Additional information on the version incompatibility is logged in trace (*.TRC) files, the Oracle instance and the agent, and in the Oracle instance alert log. Check the documentation for your agent to find out which releases of the Oracle server are supported.

ORA-28525: unable to create Heterogeneous Services error message text

Cause: Incorrect arguments were passed into the error message creation routine.

Action: Contact Oracle customer support.

ORA-28526: invalid describe information returned to Heterogeneous Services

Cause: The Heterogeneous Services received invalid describe information for a select list, bind list, or stored procedure from the Heterogeneous Services agent. This indicates a problem with the Heterogeneous Services' non-Oracle system agent.

Action: Contact customer support of the agent vendor.

ORA-28527: Heterogeneous Services datatype mapping error

Cause: Either an Oracle datatype could not be mapped to a non-Oracle datatype, or a non-Oracle datatype could not be mapped to an Oracle datatype. These mappings are defined as capability definitions in the ORACLE server's data dictionary.

Action: Verify that the ORACLE server's data dictionary has been initialized with correct capability definitions for the connected FDS_CLASS_NAME and FDS_INST_NAME. If table contents are incorrect, a DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server. If the error persists contact the customer support representative of the agent vendor.

ORA-28528: Heterogeneous Services datatype conversion error

Cause: Either an Oracle datatype could not be converted to a non-Oracle datatype, or a non-Oracle datatype could not be converted to an Oracle datatype. The following are possible reasons for the conversion failure: -- overflow problems (in the case of numbers) -- length limitations (in the case of character strings) -- invalid values passed into the conversion routines

Action: Contact customer support of the agent vendor. If the problem is due to size discrepancies between Oracle and the non-Oracle system, it may not be possible to convert the value.

ORA-28529: invalid or missing parameter in Net8 service name definition

Cause: There was an invalid or missing Heterogeneous Services parameter in the Net8 service name definition stored in either the TNSNAMES.ORA file or in the Oracle Names Server.

Action: Ask your DBA to make sure the information in the Net8 service definition is correct and complete. The correct information that should be included in the Net8 service definition can be found in the agent's documentation.

ORA-28530: Heterogeneous Services initialization error in NLS language ID

Cause: Heterogeneous Services was unable to initialize an NLS language ID. Both the ORACLE server and the Heterogeneous Services agent for the connected non-Oracle system must have language IDs.

Action: Contact Oracle customer support.

ORA-28533: An error in Heterogeneous Services data coercion has occurred.

Cause: The Heterogeneous Services (HS) encountered an error in coercion handling. The HS can, if the agent vendor chooses, perform extra processing on SQL statements that contain implicit coercions or that contain coercion functions such as TO_CHAR, TO_NUMBER or TO_DATE. This functionality was controlled by coercion-related capabilities. HS logic reported this error when it encountered an error in one of these capability definitions.

Action: Contact Oracle Support.

ORA-28534: Heterogeneous Services preprocessing error

Cause: One of the things that the Heterogeneous Services can do is to preprocess parts of SQL statements that contain implicit coercions or calls to explicit coercion functions like TO_CHAR TO_NUMBER or TO_DATE. For example, it could convert a call to TO_DATE to a bind variable, pre-evaluate the TO_DATE function call and pass the resulting value to the non-Oracle system as the bind value. This behavior is controlled by some coercion related capabilities. If the capabilities are set incorrectly, the HS could encounter errors when it attempts to do the preprocessing. If it does then this error will be signaled.

Action: The capability table settings are controlled by the agent vendor and can be modified by the DBA. Contact your DBA and agent vendor and get the correct set of capabilities installed.

ORA-28535: invalid Heterogeneous Services context

Cause: A Heterogeneous Services agent's driver module called an HS service routine with an invalid HS context value. This probably is a logic error in the driver.

Action: Contact Oracle customer support or your agent vendor.

ORA-28536: error in processing Heterogeneous Services initialization parameters

Cause: An error described by a subsequent error message prevented successful processing of Heterogeneous Services initialization parameters from the ORACLE server data dictionary.

Action: Check server data dictionary views HS_CLASS_INIT, HS_INST_INIT, and HS_ALL_INITS. Look for conditions which could produce the error identified in the error message immediately following this one.

ORA-28537: no more result sets

Cause: This error code was used internally within Oracle Database Gateway and Heterogeneous Services code and should not be reported to a client program.

Action: Contact Oracle customer support.

ORA-28538: result set not found

Cause: The client program tried fetching from a result set that is not open anymore. Many gateways will, on execution of a stored procedure, automatically close all result sets that were returned by any previously executed stored procedure.

Action: Check the documentation for the gateway that you are using and see if it will automatically close currently open result sets each time a stored procedure is executed. Then check if your client program is doing anything that violates this rule. If it is, fix your program. If it is not then contact Oracle customer support.

ORA-28539: gateway does not support result sets

Cause: The client program tried executing a stored procedure that returns one or more result sets through a gateway that does not have result set support.

Action: Check the documentation for the gateway that you are using and see if it supports result sets returned from stored procedures. If it does not, then the only way of accessing such stored procedures is to upgrade to a version of the gateway that does support result sets (if such a version exists). If the gateway does have result set support and you are still seeing this error then contact Oracle customer support.

ORA-28540: internal result set error

Cause: A protocol error internal to Heterogeneous Services or Oracle Database Gateway code has occurred.

Action: Contact Oracle customer support.

ORA-28541: Error in HS init file on line *number*.\n

Cause: A syntax error occurred in the gateway initialization file.

Action: Check gateway init file to correct the syntax error. For further information, check the error message in the gateway trace file.

ORA-28542: Error in reading HS init file \n

Cause: Reading the gateway init file generated an error.

Action: Check the gateway initialization file name to see that the gateway initialization file actually exists. Check the ifile parameter to see that it points to the correct location.

ORA-28543: Error initializing apply connection to non-Oracle system

Cause: Attempt to initialize connection to non-Oracle for heterogeneous replication failed.

Action: Check if the listener used to connect to the gateway is up and is correctly configured. Make sure that the database link used has been configured correctly and, if a tnsnames alias has been used in the database link definition, make sure that the configuration of the entry in tnsnames.ora has been done correctly.

ORA-28544: connect to agent failed, probable Net8 administration error

Cause: Net8 reported a failure to make a RSLV connection or a protocol mode error when the Oracle server attempted to establish communication with a Heterogeneous Services agent or an external procedure agent. This usually is due to an administration error in setting up Net8 service definitions in TNSNAMES.ORA or LISTENER.ORA: A basic network connection is opened, but it connects to a program which does not use the appropriate protocol. This often is a sign that the connection goes to the wrong program.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct service name or SID. -- Check LISTENER.ORA on the agent's host machine to assure that the service name or SID refers to the correct agent executable in its (PROGRAM=...) clause. -- Confirm in TNSNAMES.ORA or the equivalent service definition that service 'extproc_connection_data' does NOT contain (HS=), or that the service definition used by a Heterogeneous Services database link DOES contain (HS=).

ORA-28545: A networking error occurred when connecting to an agent.

Cause: An attempt to call an external procedure or to issue SQL to a non-Oracle system on a Heterogeneous Services database link failed at connection initialization. The error diagnosed by the SQL*Net NCR layer was reported separately.

Action: Refer to the SQL*Net NCRO error message. If this is unclear, check the connection administrative setup in the Transparent Network Substrate (TNS) naming service and Listener configuration for the service associated with the Heterogeneous Services database link being used, or with 'extproc_connection_data' for an external procedure call.

ORA-28546: connection initialization failed, probable Net8 admin error

Cause: A failure occurred during initialization of a network connection from the Oracle server to a second process: The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Net8 administrative setup for database links or external procedure calls. The most frequent specific causes are: -- Database link setup for an Oracle-to-Oracle connection instead connects to a Heterogeneous Services agent or an external procedure agent. -- Database link setup for a Heterogeneous Services connection instead connects directly to an Oracle server. -- The extproc_connection_data definition in tnsnames.ora connects to an Oracle instance instead of an external procedure agent. -- Connect data for a Heterogeneous Services database link, usually defined in tnsnames.ora, does not specify (HS=). -- Connect data for an Oracle-to-Oracle database link, usually defined in tnsnames.ora, specifies (HS=).

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct service name or SID. -- Check LISTENER.ORA on the connection end point's host machine to assure that this service name or SID connects to the correct program. -- Confirm in TNSNAMES.ORA or the equivalent service definition that service 'extproc_connection_data' does NOT contain (HS=), or that the service definition used by a Heterogeneous Services database link DOES contain (HS=).

ORA-28547: connection to server failed, probable Oracle Net admin error

Cause: A failure occurred during initialization of a network connection from a client process to the Oracle server. The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Oracle Net administrative setup for database links or external procedure calls. The most frequent specific causes are: -- The connection uses a connect string which refers to a

Heterogeneous Services agent instead of an Oracle server. -- The connection uses a connect string which includes an (HS=) specification. -- Hitting Ctrl+C before connection initialization is complete. -- Using DRCP on Windows with SQLNET.AUTHENTICATION_SERVICES set to NTS. -- Connection timeout due to SQLNET.INBOUND_CONNECT_TIMEOUT parameter when all shared servers are busy in shared server configuration. -- The character set of the database is not recognized by the client process, which may be caused by an incorrect or unnecessary setting of the ORA_NLS10 client environment variable or by a new or user-defined character set installed in the Oracle server and used for the database.

Action: Check Oracle Net administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the client connection to the Oracle server uses the correct service name or SID. -- Check LISTENER.ORA on the connection end point's host machine to assure that this service name or SID refers to the correct server. -- Confirm in TNSNAMES.ORA or the equivalent service definition that the connect string does not contain (HS=). -- Set SQLNET.AUTHENTICATION_SERVICES to NONE when using DRCP on Windows. -- Verify the NLS configuration of the Oracle client process. Ensure that the database character set is supported by the Oracle client software. If necessary, upgrade the Oracle client software or install the missing user-defined character set.

ORA-28550: pass-through SQL: cursor not found

Cause: A value passed to a pass-through SQL function or procedure call as the cursor did not identify a currently open cursor.

Action: Use a cursor number returned by the pass-through SQL OPEN_CURSOR call.

ORA-28551: pass-through SQL: SQL parse error

Cause: A non-Oracle system rejected text supplied as a pass-through SQL statement.

Action: Ensure that the SQL supplied to the pass-through SQL PARSE call is valid for the non-Oracle system.

ORA-28552: pass-through SQL: call flow error

Cause: A pass-through SQL function was called in an invalid order.

Action: Correct the program flow by changing the order of API calls to match the flow described in the manual.

ORA-28553: pass-through SQL: invalid bind-variable position

Cause: A pass-through SQL function referring to the position of a bind variable in the currently parsed SQL statement supplied an invalid bind-variable position. Valid values are 1 through N, where N is the number of bind-variable place-holders in the SQL text.

Action: Verify that the bind-variable position parameter is in the correct range to represent a place-holder in the SQL text. Confirm that the SQL text uses the correct syntax for a bind-variable place holder, as required by the non-Oracle system.

ORA-28554: pass-through SQL: out of cursors

Cause: The pool of available cursors had been exhausted.

Action: Close existing open cursors by using the pass-through SQL CLOSE_CURSOR function.

ORA-28555: pass-through SQL: required parameter missing or NULL

Cause: An attempt was made to pass a NULL value to a non-NULL parameter.

Action: Use a non-NULL value for the parameter.

ORA-28556: authorization insufficient to access table

Cause: A query attempted to access a table in the non-Oracle system that is either privileged or has privileged columns.

Action: Contact the DBA for the non-Oracle system. The DBA can grant permission to access the privileged table or columns.

ORA-28557: unknown string for database link to non-Oracle system

Cause: When attempting to connect to a non-Oracle system through a Heterogeneous Services database link, the agent supporting this non-Oracle system failed to return FDS_CLASS_NAME and/or FDS_INST_NAME. ORACLE requires these names to configure the heterogeneous database link.

Action: Contact the DBA to check setup of the connection and the Heterogeneous Services agent.

ORA-28558: HS_FDS_CONNECT_STRING undefined for non-Oracle system

Cause: A database link to a non-Oracle system had no HS_FDS_CONNECT_STRING initialization parameter in the ORACLE server's data dictionary for Heterogeneous Services. Without this parameter, the connection could not be completed.

Action: Contact your DBA to verify correct setup of an HS_FDS_CONNECT_STRING entry in the ORACLE Heterogeneous Services data dictionary.

ORA-28559: FDS_CLASS_NAME is string, FDS_INST_NAME is string

Cause: An associated error was reported in another message, and this message supplies supplementary information to assist diagnosis of that error. FDS_CLASS_NAME and FDS_INST_NAME are used to access information in tables and views of the ORACLE data dictionary that direct operation of Heterogeneous Services on a database link to a non-Oracle data store.

Action: Use the FDS_CLASS_NAME and FDS_INST_NAME values to check ORACLE data dictionary contents when necessary to diagnose the cause of the associated error.

ORA-28560: error in configuration of agent process

Cause: An ORACLE server invoked a function not supported by the connected agent (Heterogeneous Services or external procedures). The most probable cause is incorrect Net8 setup, resulting in use of the wrong agent executable.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct SID. -- Check LISTENER.ORA on the agent's host machine to assure that this SID refers to the correct agent executable in its (PROGRAM=...) clause.

ORA-28561: unable to set date format on non-Oracle system

Cause: Initialization of a Heterogeneous Services connection to set the date format to be used on the connected non-Oracle system.

Action: If the Oracle data dictionary supplies a value for the HS_NLS_DATE_FORMAT parameter, confirm that this value is formatted correctly by the rules of the non-Oracle

system. Also check for additional information in log and trace files generated by the Heterogeneous Services agent.

ORA-28562: Heterogeneous Services data truncation error

Cause: A select operation was attempted with an insufficient data buffer to satisfy the request.

Action: Contact your DBA to verify whether your gateway initialization parameter HS_KEEP_REMOTE_COLUMN_SIZE is set appropriately based on your requirement. If it is, make sure the sizes of bind parameters are sufficient. If the problem persists, contact Oracle Support Services.

ORA-28575: unable to open RPC connection to external procedure agent

Cause: Initialization of a network connection to the Extproc agent did not succeed. This problem could be caused by network problems, incorrect listener configuration, or incorrect transfer code.

Action: Check listener configuration in LISTENER.ORA and TNSNAMES.ORA, or check Oracle Names Server.

ORA-28576: lost RPC connection to external procedure agent

Cause: A fatal error occurred in either an RPC network connection, the extproc agent, or the invoked 3GL after communication had been established successfully.

Action: First check the 3GL code you are invoking; the most likely cause of this error is abnormal termination of the invoked "C" routine. If this is not the case, check for network problems. Correct the problem if you find it. If all components appear to be normal but the problem persists, the problem could be an internal logic error in the RPC transfer code. Contact your customer support representative.

ORA-28577: argument *string* of external procedure *string* has unsupported datatype *string*

Cause: While transferring external procedure arguments to the agent, an unsupported datatype was detected.

Action: Check your documentation for the supported datatypes of external procedure arguments.

ORA-28578: A protocol error occurred during a callback from an external procedure.

Cause: An internal protocol error occurred while trying to process a callback to the Oracle server from an external procedure or function.

Action: Contact Oracle Support.

ORA-28579: network error during callback from external procedure agent

Cause: An internal network error occurred while trying to execute a callback to the Oracle server from the user's 3GL routine.

Action: Contact Oracle customer support.

ORA-28580: recursive external procedures are not supported

Cause: A callback from within a user's 3GL routine resulted in the invocation of another external procedure.

Action: Make sure that the SQL code executed in a callback does not directly call another external procedure, or indirectly results in another external procedure, such as triggers calling external procedures, PL/SQL procedures calling external procedures, etc.

ORA-28581: protocol error while executing recursive external procedure

Cause: An internal protocol error occurred while trying to execute an external procedure resulting from a callback in another external procedure.

Action: Contact Oracle customer support.

ORA-28582: a direct connection to this agent is not allowed

Cause: A user or a tool tried to establish a direct connection to either an external procedure agent or a Heterogeneous Services agent, for example: "SVRMGR> CONNECT SCOTT/TIGER@NETWORK_ALIAS". This type of connection is not allowed.

Action: When executing the CONNECT statement, make sure your database link or network alias is not pointing to a Heterogeneous Option agent or an external procedure agent.

ORA-28583: remote references are not permitted during agent callbacks

Cause: A Heterogeneous Services agent issued a callback to the Oracle server which attempted to access a remote system. This is not supported.

Action: Make sure that SQL code issued by Heterogeneous Services agents does not reference a database link.

ORA-28584: heterogeneous apply internal error

Cause: The apply slave process encountered an error while trying to apply changes through a gateway to a non-Oracle system.

Action: Make sure that the apply database link is correctly configured and that the gateway listener and the non-Oracle system are correctly set up and are up and running. If everything is configured correctly and the problem still occurs, contact Oracle customer support. errors 28590 - 28599 are reserved for the HS agent control utility

ORA-28590: agent control utility: illegal or badly formed command

Cause: The user has issued an unrecognized or syntactically incorrect command.

Action: Refer to documentation and correct the syntax of the command.

ORA-28591: agent control utility: unable to access parameter file

Cause: The agent control utility was unable to access its parameter file. This could be because it could not find its admin directory or because permissions on directory were not correctly set.

Action: The agent control utility puts its parameter file in either the directory pointed to by the environment variable AGTCTL_ADMIN or in the directory pointed to by the environment variable TNS_ADMIN. Make sure that at least one of these environment variables is set and that it points to a directory that the agent has access to.

ORA-28592: agent control utility: agent SID not set

Cause: The agent needs to know the value of the AGENT_SID parameter before it can process any commands. If it does not have a value for AGENT_SID then all commands will fail.

Action: Issue the command SET AGENT_SID *value* and then retry the command that failed.

ORA-28593: agent control utility: command terminated with error

Cause: An error occurred during the processing of the command. There could be several causes. A SET or an UNSET command could have been issued after the agent was started. This is illegal. The user may have attempted to start two agents with the same SID value or the user could have attempted to shutdown an agent that is no longer running.

Action: If the user wishes to issue a SET or an UNSET command, he should make sure the agent is shutdown first by issuing the SHUTDOWN command.

ORA-28594: agent control utility: invalid parameter name

Cause: The user tried to set or unset an invalid agent parameter.

Action: Refer to documentation and correct the parameter name.

ORA-28595: Extproc agent: Invalid DLL Path

Cause: The path of DLL supplied for the extproc execution was invalid.

Action: Ensure that the DLL path is set properly using the EXTPROC_DLLS environment variable.

ORA-28596: Extproc agent : invalid or disabled credential string

Cause: The credential of the PL/SQL library supplied for extproc processing was invalid or disabled.

Action: Ensure that the credential of the PL/SQL library is both valid and enabled.
*Params: 1) credential_name: The name of the credential.

ORA-28601: invalid [no]MINIMIZE option

Cause: user didn't type this alter table <table_name> MINIMIZE RECORDS_PER_BLOCK or alter table <table_name> NOMINIMIZE RECORDS_PER_BLOCK

Action: reenter correct sql command

ORA-28602: statement not permitted on tables containing bitmap indexes

Cause: table has bitmap indexes and user is minimizing or nominimizing records_per_block

Action: drop all bitmap indexes before changing records_per_block

ORA-28603: statement not permitted on empty tables

Cause: table is empty and statement does not work on empty tables

Action: try statement after loading your data

ORA-28604: table too fragmented to build bitmap index (string,string,string)

Cause: The table has one or more blocks that exceed the maximum number of rows expected when creating a bitmap index. This is probably due to deleted rows. The values in the message are: (data block address, slot number found, maximum slot allowed)

Action: Defragment the table or block(s). Use the values in the message to determine the FIRST block affected. (There may be others).

ORA-28605: bitmap indexes cannot be reversed

Cause: user tried to create reverse bitmap index

Action: don't do this; it is not supported

ORA-28606: block too fragmented to build bitmap index (*string,string*)

Cause: The block(s) exceed the maximum number of rows expected when creating a bitmap index. This is probably due to maximum slot allowed set too low. The values in the message are: (slot number found, maximum slot allowed)

Action: alter system flush shared_pool; update tab\$ set spare1 = 8192 where obj# = (select obj# from obj\$ where NAME=<table_name> AND owner# = <table_owner>; commit;

ORA-28611: bitmap index is corrupted - see trace file for diagnostics

Cause: Validate Index detected bitmap corruption in its argument index

Action: Drop this bitmap index and create a new one.

ORA-28650: Primary index on an IOT cannot be rebuilt

Cause: An attempt is made to issue alter index rebuild on IOT-TOP

Action: Use Alter table MOVE to reorganize the table(IOT)

ORA-28651: Primary index on IOTs can not be marked unusable

Cause: An attempt is made to mark IOT-TOP unusable thru ALTER INDEX

Action: Remove the option UNUSABLE

ORA-28652: overflow segment attributes cannot be specified

Cause: During ALTER MOVE ONLINE of a index-organized table, the user attempted to enter one or more of the following options: OVERFLOW, PCTTHRESHOLD,INCLUDING.

Action: Remove the illegal option(s).

ORA-28653: tables must both be index-organized

Cause: Attempt to exchange a non IOT table/partition with a partition/table respectively

Action: Ensure that non-partitioned and partitioned tables are both index-organized.

ORA-28654: table and partition not overflow compatible

Cause: If one of the tables (partitioned/non-partitioned) has overflow data segment and the other one doesn't.

Action: Ensure that non-partitioned and partitioned tables both have overflow data segment or neither one does.

ORA-28655: Alter table add overflow syntax error

Cause: Syntax error

Action: Check the syntax.

ORA-28656: incomplete attribute specification

Cause: The attribute specification is not done for all partitions"

Action: Specify the storage attributes either for ALL partitions or NONE

ORA-28658: This operation is supported only for Index-Organized tables

Cause: Attempt to perform some IOT specific operation on a non-IOT

Action: don't do this. This is not supported

ORA-28659: COMPRESS must be specified at object level first

Cause: Attempt to specify COMPRESS at partition level without first specifying at the table level

Action: Specify COMPRESS at table level. Use ALTER TABLE xxx MODIFY DEFAULT ATTRIBUTES COMPRESS ...

ORA-28660: Partitioned Index-Organized table may not be MOVED as a whole

Cause: Attempt to MOVE partitioned IOT as a whole

Action: don't do this. This is not supported

ORA-28661: Object already has COMPRESS clause specified

Cause: Attempt to specify compress for iot/index which already has a compression clause.

Action: This is a 'create time only' attribute

ORA-28662: IOT index and overflow segments must share the same LOGGING attribute

Cause: Attempt to specify LOGGING for one segment and NOLOGGING for the other segment.

Action: don't do that

ORA-28663: Logging/NoLogging attribute can not be specified in the statement ALTER TABLE ADD OVERFLOW

Cause: Attempt to specify LOGGING for a Alter Table Add Overflow.

Action: don't do that

ORA-28664: a partitioned table may not be coalesced as a whole

Cause: User attempted to coalesce a partitioned IOT using ALTER TABLE COALESCE statement, which is illegal

Action: Coalesce the table a partition at a time (using ALTER TABLE MODIFY PARTITION COALESCE)

ORA-28665: table and partition must have same compression attribute

Cause: User attempted to EXCHANGE a compression enabled partition with a compression disabled table or vice versa OR the # of columns compressed is different for table and partition

Action: Make sure the compression attributes match If they don't, fix it using ALTER TABLE MOVE [PARTITION] COMPRESS

ORA-28666: option not allowed for an index on UROWID column(s)

Cause: User attempted to build a REVERSE or COMPRESSED or GLOBAL partitioned index on UROWID column(s)

Action: Build the index without these options

ORA-28667: USING INDEX option not allowed for the primary key of an IOT

Cause: User attempted to define storage attributes for the primary key index of an Index-Organized table with USING INDEX clause. All the storage attribute defined for the (IOT)table applies to the primary key index and a separate USING INDEX clause is not required.

Action: Remove the USING INDEX clause and specify all attributes directly for the table

ORA-28668: cannot reference mapping table of an index-organized table

Cause: An attempt to directly access the mapping table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified mapping table.

ORA-28669: bitmap index can not be created on an IOT with no mapping table

Cause: User attempted to create a bitmap index on an index-organized table without a mapping table.

Action: Enable bitmap indexes on the Index-organized table by creating a mapping table using 'ALTER TABLE .. MOVE MAPPING TABLE'.

ORA-28670: mapping table cannot be dropped due to an existing bitmap index

Cause: User attempted to drop the mapping table with NOMAPPING option when the IOT has one or more bitmap indexed.

Action: Drop the bitmap index(es) before dropping the mapping table.

ORA-28671: UPDATE BLOCK REFERENCES may not be used on a partitioned index as a whole

Cause: User attempted to UPDATE BLOCK REFERENCES on a partitioned index using ALTER INDEX UPDATE BLOCK REFERENCES statement, which is illegal.

Action: Issue a partition level operation with ALTER INDEX .. PARTITION .. UPDATE BLOCK REFERENCES

ORA-28672: UPDATE BLOCK REFERENCES may not be used on a global index

Cause: User attempted to UPDATE BLOCK REFERENCES on a global partitioned or non-partitioned index. This feature is not supported for non-partitioned or global partitioned index on a partitioned IOT and a global partitioned index on a non-partitioned IOT.

Action: Use online index [partition] rebuild to fix the block references

ORA-28673: Merge operation not allowed on an index-organized table

Cause: User attempted merge operation on an index-organized table. Merge is not supported on a IOT .

Action: Use updates and inserts on index-organized table .

ORA-28674: cannot reference transient index-organized table

Cause: An attempt was made to directly access a transient table created created on behalf of a index-organized table partition maintenance operation.

Action: Issue the statement against the associated permanent index-organized table.

ORA-28700: Only roles can be granted to or revoked from program units.

Cause: An attempt was made to grant or revoke object privileges or system privileges to program units.

Action: Grant the privileges to a role first, and then grant the role to the program units. Also, do not attempt to revoke privileges from a program unit.

ORA-28701: Keyword PROCEDURE, FUNCTION, or PACKAGE is either missing or not correct.

Cause: The keyword PROCEDURE, FUNCTION, or PACKAGE was either missing before the program unit, or it was not consistent with the type of the program unit.

Action: Include the correct keyword PROCEDURE, FUNCTION or PACKAGE right before each program unit according to its type.

ORA-28702: Program unit *string* is not owned by the grantor.

Cause: An attempt was made to attach roles to or detach roles from one or more program units by someone other than the owner or SYS. Only a program unit owner or SYS can attach roles to or detach roles from a program unit.

Action: Specify only the program units owned by the grantor in the command.

ORA-28703: Only regular database roles can be attached to or detached from program units.

Cause: An attempt was made to attach non-supported types of roles to or detach them from program units. Application roles, secure application roles, external roles, global roles, and light-weight roles cannot be attached to or detached from program units.

Action: Remove any application role, secure application role, external role, global role, and light-weight role from the command.

ORA-28704: Role *string* is not directly granted to the owner of the program units.

Cause: An attempt was made to attach roles that were not directly granted to the owner of the program units. The roles must be granted to the owner directly in order to attach them to the owner's program units.

Action: Grant the role to the owner of the program unit first.

ORA-28705: The grantor does not have privileges to grant the role *string* to the program units.

Cause: Privileges to grant a role to a program unit were insufficient. The grantor must have the GRANT ANY ROLE privilege or the ADMIN option or the DELEGATE option for the role to do the operation.

Action: Obtain the required privilege and retry.

ORA-28706: duplicate program unit *string* found in grantee list

Cause: A duplicate program unit was found in the GRANTEE clause.

Action: Specify each program unit in the grantee list only once.

ORA-28707: Reserved word ALL was used with roles in the REVOKE command to detach roles from program units.

Cause: An attempt was made to use reserved word ALL jointly with roles in a REVOKE command to detach roles from program units.

Action: Do not specify roles in the privilege clause except for the reserved word ALL.

ORA-28708: More than *string* roles were attached to the program unit.

Cause: Too many roles were attached to the program unit.

Action: Detach some roles from the program unit and retry the operation.

ORA-28709: Role with DELEGATE option can only be granted to user.

Cause: One of the grantees was not a user when trying to grant a role with the DELEGATE option.

Action: Verify that each grantee is a user and try the operation again.

ORA-28714: OCI_BATCH_ERRORS or OCI_RETURN_ROW_COUNT_ARRAY mode can only be specified for INSERT, UPDATE, DELETE or MERGE statement.

Cause: OCI_BATCH_ERRORS or OCI_RETURN_ROW_COUNT_ARRAY mode was specified in a statement which is not INSERT, UPDATE, DELETE or MERGE.

Action: Specify OCI_BATCH_ERRORS or OCI_RETURN_ROW_COUNT_ARRAY only for INSERT, UPDATE, DELETE or MERGE statements.

ORA-28715: OCI_STMT_SCROLLABLE_READONLY can only be specified for SELECT statements.

Cause: OCI_STMT_SCROLLABLE_READONLY mode was specified for a non-SELECT statement.

Action: Specify OCI_STMT_SCROLLABLE_READONLY only for SELECT statements.

ORA-28716: Invalid buffer or buffer size for OCIServerRelease2() \n

Cause: A zero length or null buffer was specified for the OCIServerRelease2().

Action: Specify a valid buffer and length.

ORA-28721: invalid argument *string*

Cause: Passed an invalid argument to an Oracle Call Interface (OCI) application programming interface (API).

Action: Check the validity of parameters passed to the API. If the error persists, contact Oracle Support Services.

ORA-28722: invalid file handle

Cause: The file parameter handle was not valid.

Action: Ensure that the correct parameter handle is provided.

ORA-28724: OCI encountered OraCoroutine Error(*number*) from (*string*)

Cause: OCI encountered an internal error

Action: Contact Oracle Support Services

ORA-28725: Connection initialization failed, probable invalid configuration for CMAN in Traffic Director mode\n

Cause: A failure occurred during initialization of connection to connect to Connection Manager (CMAN) in Traffic director mode. The most frequent specific causes are: -- Invalid configuration specified in Connection Manager (CMAN) in Traffic Director mode. -- The database instance/service was down -- Instance does not currently know of requested service

Action: Check CMAN in Traffic Director mode administration in the following ways: --
Correct the configuration of CMAN in Traffic Director mode before starting it. --
Check and correct the wallet credentials and proxy authorization. -- Ensure that the specified service is valid and reconnect. -- Check with CMAN in Traffic Director mode administrator to get more information from traces and sqlnet.log.

ORA-28726: set current schema operation failed because the given schema name is either invalid or does not exist

Cause: An attempt was made to set the schema to a non-existent value.

Action: Specify an existing schema name or ask the database administrator to create a new schema.

ORA-28727: trace event set or reset operation failed

Cause: An attempt was made to set or reset a trace event dynamically.

Action: Use the correct event number and trace level.

ORA-29250 to ORA-32799

ORA-29250: invalid index specified in call to DBMS_SQL.BIND_ARRAY

Cause: An invalid index was specified in a call to the BIND_ARRAY procedure of the DBMS_SQL package. The index may have been null or an improper value.

Action: Correct the index value by modifying your PL/SQL program and try the BIND_ARRAY call again.

ORA-29251: DBMS_SQL.BIND_ARRAY: parameter index1 is greater than parameter index2.

Cause: The value for parameter index1 was greater than the value for parameter index2 in the call to DBMS_SQL.BIND_ARRAY. This is invalid because the elements of the table that will be bound are those with indexes greater than or equal to index1 and less than or equal to index2.

Action: Correct the value of the two parameters and try the call to again DBMS_SQL.BIND_ARRAY.

ORA-29252: Collection does not contain elements at index locations in the call to dbms_sql.bind_array.

Cause: The bound table did not contain elements at both index locations in the call to bind_array of dbms_sql. This was not allowed. Both index locations must contain elements. tab.exists(index1) and tab.exists(index2) must both return true.

Action: Either modify the two indexes or the contents of the table and retry the call.

ORA-29253: The cnt argument of DBMS_SQL.DEFINE_ARRAY must be a positive integer.

Cause: The cnt argument specified in the call to DBMS_SQL.DEFINE_ARRAY was invalid. The argument must be a positive integer.

Action: Correct your PL/SQL program so that only valid arguments are passed to DBMS_SQL.DEFINE_ARRAY and try again.

ORA-29254: Invalid lower_bound argument passed to procedure dbms_sql.define_array

Cause: The lower_bound argument specified in the call to procedure define_array had an invalid value. Legal values are all integers (both positive and negative) including zero. The null value is illegal.

Action: Correct your PL/SQL program so that only valid arguments are passed to define_array and try again.

ORA-29255: Cursor contains both bind and define arrays which is not permissible

Cause: Both define_array and bind_array have been called on this cursor. This was illegal. It was not possible for a cursor to contain both array binds and array defines. The semantics of this setting were invalid. Array defines were used to move data from select queries into PL/SQL tables and array binds to bind PL/SQL tables to non-select queries.

Action: Modify your PL/SQL program to only perform calls to one of the two functions depending on the kind of cursor at hand.

ORA-29256: Cursor contains both regular and array defines which is not valid.

Cause: Both DEFINE_ARRAY and DEFINE_COLUMN were called on this cursor. It is not valid for a cursor to contain both regular and array defines. Array defines are used to move data from SELECT queries into PL/SQL tables and regular defines are used to move data from SELECT queries into PL/SQL variables.

Action: Modify your PL/SQL program to only perform calls to one of the two functions.

ORA-29257: host string unknown

Cause: The specified host was unknown.

Action: Check the spelling of the host name or the IP address. Ensure that the host name or the IP address is valid.

ORA-29258: buffer too small

Cause: The input or output buffer was too small for the operation.

Action: Increase the size of the buffer and retry the operation.

ORA-29259: end-of-input reached in UTL_HTTP call

Cause: Either the UTL_HTTP call failed to retrieve data because of an error or no data was left in the buffer to process. The possible causes for the UTL_HTTP call failure include issues with proxy servers or SSL handshakes.

Action: If no data was retrieved previously, ensure that the call to the UTL_HTTP destination was successful. If the connection was successful and data was retrieved, close the connection as no more data is available in the buffer.

ORA-29260: network error: string

Cause: A network error occurred.

Action: Fix the network error and retry the operation.

ORA-29261: bad argument

Cause: A bad argument was passed to the PL/SQL API.

Action: Check the arguments passed to the PL/SQL API and retry the call.

ORA-29262: bad URL

Cause: An improperly formed URL was passed to the PL/SQL API.

Action: Check the URL and retry the call.

ORA-29263: HTTP protocol error

Cause: A HTTP protocol error occurred during the HTTP operation.

Action: Check the HTTP server that the HTTP operation was performed to make sure that it follows the HTTP protocol standard.

ORA-29264: unknown or unsupported URL scheme

Cause: The URL scheme was unknown or unsupported.

Action: Check the URL to ensure that the scheme is valid and supported.

ORA-29265: HTTP header not found

Cause: The requested HTTP header was not found.

Action: Check to make sure that the requested HTTP header is present.

ORA-29266: end-of-body reached

Cause: The remote system reported that no more data is available in the response body or that the location of the data has changed. This could be a normal situation where all available data has been retrieved. It could also be caused by an abnormal situation where the remote system stopped responding, returned an error, or redirected the request to another location.

Action: Close the HTTP request. If the error was unexpected, check the HTTP headers for more information (for example, a 302 redirect message to a new URL), and then retry the operation.

ORA-29267: illegal call

Cause: The call to the PL/SQL API was illegal at the current stage of the operation.

Action: Retry the call at a different stage of the operation.

ORA-29268: HTTP client error *string*

Cause: The HTTP response indicated that an HTTP client error occurred.

Action: Determine from the error message the underlying cause of the client error, address the cause, and retry the HTTP request. *Params: 1) error_message: The detailed HTTP response error message.

ORA-29269: HTTP server error *string*

Cause: The HTTP response indicated that an HTTP server error occurred.

Action: Fix the HTTP server error and retry the HTTP request. Contact the administrator of the HTTP server if necessary.

ORA-29270: too many open HTTP requests

Cause: Too many HTTP requests were opened.

Action: End some HTTP requests and retry the HTTP request.

ORA-29271: UTL_TCP operation failed because the connection was not successful.

Cause: A UTL_TCP call was made that can only be executed after a successful connection. Since there was no successful initial connection, the UTL_TCP call failed.

Action: Ensure that your code establishes a successful connection before the UTL_TCP call is executed.

ORA-29272: initialization failed

Cause: The UTL_HTTP package failed to initialize.

Action: Free up some memory or other system resources and retry the operation.

ORA-29273: HTTP request failed

Cause: The UTL_HTTP package failed to execute the HTTP request.

Action: Use the GET_DETAILED_SQLERRM function to check the detailed error message. Fix the error and retry the HTTP request.

ORA-29274: fixed-width multibyte character set not allowed for a URL

Cause: The character set used as an encoding of the URL is a fixed-width multibyte character set and is not allowed for a URL.

Action: Use the corresponding variable-width multibyte character set for the URL instead.

ORA-29275: partial multibyte character

Cause: The requested read operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the complete multibyte character is sent from the remote server and retry the operation. Or read the partial multibyte character as RAW.

ORA-29276: transfer timeout

Cause: Timeout occurred while reading from or writing to a network connection.

Action: Check the remote server or the network to ensure that it responds within the timeout limit. You can also increase the timeout value.

ORA-29277: invalid SMTP operation

Cause: The SMTP operation was invalid at the current stage of the SMTP transaction.

Action: Retry the SMTP operation at the appropriate stage of the SMTP transaction.

ORA-29278: SMTP transient error: *string*

Cause: A SMTP transient error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29279: SMTP permanent error: *string*

Cause: A SMTP permanent error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29280: invalid directory object

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-29281: invalid mode

Cause: An invalid value was specified for file open mode.

Action: Correct the mode to be one of the values: 'r', 'a', or 'w'.

ORA-29282: invalid file ID

Cause: A file ID handle was specified for which no corresponding open file exists.

Action: Verify that the file ID handle is a value returned from a call to UTL_FILE.FOPEN.

ORA-29283: invalid file operation *string*

Cause: An attempt was made to perform an operation on a file that either did not exist, or the file or directory access was denied by the operating system, or the operation on the file type was not supported.

Action: Check the root cause at the end of the error message. If you are using DBMS_HPROF and no root cause is provided, verify that you have write access privileges on the directory object and on the underlying file system path. *Params: 1) root_cause: This provides the root cause error for the invalid file operation. If a number is provided at the end of the text, it indicates the error number of the root cause error.

ORA-29284: file read error

Cause: An attempt to read from a file failed.

Action: Verify that the file exists, and that it is accessible, and that it is open in read mode.

ORA-29285: file write error

Cause: Failed to write to, flush, or close a file.

Action: Verify that the file exists, that it is accessible, and that it is open in write or append mode.

ORA-29286: internal error

Cause: A fatal error occurred while allocating PL/SQL session memory.

Action: Verify that the PL/SQL session is connected and that adequate memory resources are available.

ORA-29287: invalid maximum line size

Cause: An invalid maximum line size value was specified.

Action: Correct the maximum line size to be in the range [1, 32767].

ORA-29288: invalid file name

Cause: An invalid file name or a file name of an invalid length was specified.

Action: Correct the file name.

ORA-29289: directory access denied

Cause: A directory object was specified for which insufficient privilege was granted.

Action: Grant access to the directory object using the command GRANT [privilege] ON DIRECTORY [object] TO [username];.

ORA-29290: invalid offset specified for seek

Cause: An attempt was made to seek past the end of the file, or both the absolute and relative offsets were NULL, or absolute offset was less than zero.

Action: If specifying an absolute offset, ensure it is in the range [0, *total number of bytes in the file*], or if specifying a relative offset, ensure it is no greater than the current byte position plus the number of bytes remaining in the file.

ORA-29291: file remove operation failed

Cause: A file deletion attempt was refused by the operating system.

Action: Verify that the file exists and delete privileges granted on the directory and the file.

ORA-29292: file rename operation failed

Cause: A file rename attempt was refused by the operating system either because the source or destination directory does not exist or is inaccessible, or the source file isn't accessible, or the destination file exists.

Action: Verify that the source file, source directory, and destination directory exist and are accessible, and that the destination file does not already exist.

ORA-29293: A stream error occurred during compression or uncompression.

Cause: The stream state was discovered to be invalid during compression or uncompression, or an invalid compression quality was requested or a NULL or invalid compression parameter was detected.

Action: Verify that quality is within the range [0,9] and that valid input source data exists.

ORA-29294: A data error occurred during compression or uncompression.

Cause: An error occurred while compressing or uncompressing input source.

Action: Verify that source data is a valid compressed or uncompressed data set.

ORA-29295: invalid mime header tag

Cause: An error occurred while scanning string for mime header tag

Action: Verify that source data is a valid mime header string, in the format: `=?charset?encoding?encoded string?=`

ORA-29296: invalid encoded string

Cause: An error occurred while decoding the input string

Action: Verify that source data is a valid encoded string.

ORA-29297: The compressed representation is too big.

Cause: The compressed output was too big to return.

Action: Do not attempt to compress the source data.

ORA-29298: Character set mismatch

Cause: The character set mode in which the file was opened did not match the character set of the read or write operation.

Action: Use the correct UTL_FILE read and write procedures which correspond to the character set mode in which the file was opened.

ORA-29299: invalid handle for piecewise compress or uncompress

Cause: The process program opened too many handles, and the specified handle was either uninitialized or outside a valid range.

Action: Close some handles and verify that the specified handle is opened or within a valid range.

ORA-29300: ORACLE error, tablespace point-in-time recovery

Cause: Another ORACLE error occurred in the DBMS_PITR package.

Action: See the text of the error message for a description of the error.

ORA-29301: wrong DBMS_PITR package function/procedure order

Cause: The DBMS_PITR package function/procedure was called in an incorrect order.

Action: Restart tablespace point-in-time recovery with a correct procedure.

ORA-29302: database is not open clone

Cause: The database was not opened as a clone database.

Action: Mount the database clone and open the database.

ORA-29303: user does not login as SYS

Cause: The user did not log in as SYS to perform tablespace point-in-time recovery in a clone database.

Action: Log in as SYS and restart tablespace point-in-time recovery.

ORA-29304: tablespace '*string*' does not exist

Cause: The selected tablespace does not exist in the database.

Action: Check the list of tablespaces in V\$TABLESPACE and select a valid tablespace.

ORA-29305: cannot point-in-time recover tablespace '*string*'

Cause: An attempt was made to ALTER the tablespace to be read only.

Action: Check if the tablespace is SYSTEM or with online rollback segment.

ORA-29306: datafile *string* is not online

Cause: The selected datafile was not online.

Action: Bring the the datafile online and rename it if necessary.

ORA-29307: datafile *string* error, *string*

Cause: The datafile is not ready for tablespace point-in-time recovery.

Action: Check the correct tablespace point-in-time recovery procedure.

ORA-29308: view TS_PITR_CHECK failure

Cause: Some objects which crossed the boundary of the recovery set were not allowed in the tablespace point-in-time recovery.

Action: Query TS_PITR_CHECK and resolve the boundary crossing objects.

ORA-29309: export dump file was generated by different version of DBMS_PITR package

Cause: The version of DBMS_PITR is different from the version of the cloned database.

Action: Load the version of DBMS_PITR which matches the version of the cloned database.

ORA-29310: database is not open, or opened as a clone

Cause: Either the database was not open, or an attempt was made to open it as a cloned database.

Action: Open the production database instead.

ORA-29311: export dump file was not generated by this database, *string* does not match

Cause: The export dump files were imported to an incorrect database.

Action: Open the correct production database and try the import again.

ORA-29313: tablespace '*string*' cannot be imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29314: tablespace '*string*' is not OFFLINE FOR RECOVER nor READ ONLY

Cause: Tablespace clean SCN is either 0 or invalid.

Action: ALTER the tablespace OFFLINE FOR RECOVER.

ORA-29315: tablespace '*string*' has been recreated

Cause: An attempt was made to recover a tablespace to a point-in-time before it was recreated.

Action: Choose a different point in time for recovery.

ORA-29316: datafile *string* been imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29317: datafile *string* does not exist

Cause: The specified datafile could not be found in the production database.

Action: Copy the datafile from the clone database.

ORA-29318: datafile *string* is online

Cause: The datafile is online.

Action: Take the datafile offline.

ORA-29319: datafile *string* is not correct

Cause: An incorrect datafile was copied to the production database. The datafile information in the export dump file differs with the information in the datafile in the production database.

Action: Copy the datafile from the clone database to the production database.

ORA-29320: datafile header error

Cause: An error occurred during reading datafile header.

Action: Copy the correct datafile from the clone database to the production database, then retry the operation.

ORA-29321: too many datafiles added since the point-in-time

Cause: Too many datafiles were added to the recovery set since the point-in-time recovery.

Action: Divide the recovery set into smaller subsets and retry.

ORA-29322: SCN string size too long -- maximum size 58 bytes/characters

Cause: Too many characters in specifying the SCN string

Action: Remove all unnecessary characters. Only 15 characters are required for both the hex and decimal representation of the 48 bit SCN.

ORA-29323: ALTER DATABASE SET COMPATIBILITY command not supported by *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances do not support dynamic compatible setting change.

Action: No action required.

ORA-29324: SET COMPATIBILITY release string format is wrong

Cause: It should be of the form x.x.x

Action: Use the correct format.

ORA-29325: SET COMPATIBILITY release number lower than *string*

Cause: The SET COMPATIBILITY release compatibility release number was lower than the current compatible setting.

Action: Specify a higher release number.

ORA-29326: SET COMPATIBILITY release number higher than *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances had a lower release number.

Action: Specify a lower release number.

ORA-29327: unsupported client compatibility mode used when talking to the server

Cause: The client compatibility mode is higher than the version of the server.

Action: Using SET COMPATIBILITY command, specify the same release number as the server.

ORA-29328: too many datafiles in this tablespace '*string*'

Cause: Too many datafiles in this bitmap tablespace. ORACLE does not support at this moment.

Action: Call Oracle Support.

ORA-29329: Table not of type XMLType

Cause: Table is not XMLType table

Action: Ensure table is a XMLType table

ORA-29330: Source script length too big

Cause: Source script length exceeded the maximum size of 4 Gigabytes.

Action: Make sure source script length is not greater than 4 Gigabytes.

ORA-29331: HTTP redirection *string*

Cause: The HTTP response indicated a redirection to another location.

Action: Retry the HTTP request at the redirected location.

ORA-29332: Network access control list check failed with unexpected error:\n*string*

Cause: An unexpected error occurred while performing network ACL check.

Action: Turn on network ACL tracing event 10937 level 6 to gather more information.

ORA-29335: tablespace '*string*' is not read only

Cause: The tablespace is not read only.

Action: Make the tablespace read only and retry the operation.

ORA-29336: Internal error [*string*] [*string*] from DBMS_PLUGTS

Cause: Internal error from package DBMS_PLUGTS.

Action: Call Oracle Support.

ORA-29337: tablespace '*string*' has a non-standard block size (*string*)

Cause: The tablespace has a non-standard block size and making such a tablespace read-write is not permitted.

Action: Use some other mechanism to import the data

ORA-29338: datafile *string* is in an undesired state (*string*, *string*)

Cause: The referred datafile is not in a state ready for tablespace copy operation. For example, the datafile may be offline. The datafile needs to be ONLINE, and either READ ONLY or READ WRITE.

Action: Put the datafile into the desired state.

ORA-29339: tablespace block size *string* does not match configured block sizes

Cause: The block size of the tablespace to be plugged in or created does not match the block sizes configured in the database.

Action: Configure the appropriate cache for the block size of this tablespace using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

ORA-29340: export file appears to be corrupted: [*string*] [*string*] [*string*]

Cause: This is caused either by a corrupted export file or by an Oracle internal error.

Action: Make sure the export file used for transportable tablespace is not corrupted. If the error still occurs, call Oracle support.

ORA-29341: The transportable set is not self-contained

Cause: The set of objects in the set of tablespaces selected are not self-contained.

Action: Consider using different export options, or removing some of the pointers that caused the violation, or selecting a different set of tablespaces.

ORA-29342: user *string* does not exist in the database

Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.

Action: Consider either creating the user in the database or map the user to a different user via FROM_USER and TO_USER import options.

ORA-29343: user *string* (mapped from user *string*) does not exist in the database

Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.

Action: Consider either creating the user or map the original user to a different user.

ORA-29344: Owner validation failed - failed to match owner '*string*'

Cause: The system failed to match the referred owner. There are two cases that this may occur. (1) This user owns data in the transportable set, but this user is not specified in the TTS_OWNERS list of the import command line option, assuming that

TTS_OWNERS is specified. (2) This user is specified in the TTS_OWNER list, but this user does not own any data in the transportable set.

Action: Retry import with a different OWNER list.

ORA-29345: cannot plug a tablespace into a database using an incompatible character set

Cause: Oracle does not support plugging a tablespace into a database using an incompatible character set.

Action: Use import/export or unload/load to move data instead.

ORA-29346: invalid tablespace list

Cause: the tablespace list supplied to dbms_tts.transport_set_check PL/SQL routine is in an incorrect format.

Action: Check the manual and use the correct format.

ORA-29347: Tablespace name validation failed - failed to match tablespace '*string*'

Cause: The system failed to match the referred tablespace. There are 2 cases that this may happen. (1) This tablespace is in the transportable set, but it is not specified in the TABLESPACES list of the import command line option, assuming that TABLESPACES is specified. (2) This tablespace is in the TABLESPACES list, but it is not in the transportable set.

Action: Retry the operation with the correct TABLESPACES list.

ORA-29348: You must specify the datafiles to be plugged in

Cause: The datafiles to be plugged in are not specified.

Action: Specify the datafiles via the import DATAFILES command line option.

ORA-29349: Tablespace *string* already exists.

Cause: The tablespace transport command tried to use a tablespace name which exists in the target database.

Action: Use one of these actions to resolve the conflict. 1. Rename the tablespace in the target database before import. 2. Rename the tablespace in the source database before export.

ORA-29350: server version *string* incompatible with package *string* version *string*

ORA-29351: can not transport system, sysaux, or temporary tablespace '*string*'

Cause: The referred tablespace is either the system tablespace, the sysaux tablespace, or a temporary tablespace.

Action: Do not include this tablespace in the transportable set.

ORA-29352: event '*string*' is not an internal event

Cause: The DBMS_SYSTEM.WAIT_FOR_EVENT procedure was called with an event name that is not an internal event.

Action: Check the list of events from X\$KSLED and verify the event name parameter passed to the WAIT_FOR_EVENT procedure.

ORA-29353: The transportable list is too long.

Cause: The transportable list exceeds the buffer size of 32767.

Action: Reduce the list of tablespaces to transport.

ORA-29354: cannot transport rekeying tablespace '*string*'

Cause: An attempt to transport a tablespace, or unplug a pluggable database containing a tablespace in the middle of a tablespace encrypt, decrypt, or rekey failed.

Action: Wait for the tablespace rekey to finish, or use the ALTER TABLESPACE ENCRYPTION FINISH [ENCRYPT | DECRYPT | REKEY] command to resume and finish the encrypt, decrypt, or rekey operation first.

ORA-29355: NULL or invalid *string* argument is specified.

Cause: The named argument was either invalid or specified as NULL.

Action: Specify a non-null and valid argument.

ORA-29356: These parameters can be specified only for directives that refer to consumer groups.

Cause: A parameter was specified as an argument to procedure CREATE_PLAN_DIRECTIVE or UPDATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER that is not allowed when the GROUP_OR_SUBPLAN is a plan. Only the following parameters are allowed when GROUP_OR_SUBPLAN is a plan: - MGMT_P1, MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8 - UTILIZATION_LIMIT

Action: Specify only these parameters when GROUP_OR_SUBPLAN is a plan.

ORA-29357: object *string* already exists

Cause: The name specified as an argument to procedure CREATE_PLAN, CREATE_CDB_PLAN, CREATE_CONSUMER_GROUP, or CREATE_CATEGORY of package DBMS_RESOURCE_MANAGER was already in use.

Action: Specify an unused name.

ORA-29358: resource plan *string* does not exist

Cause: An invalid plan name was specified as an argument to procedure UPDATE_PLAN or UPDATE_CDB_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan name.

ORA-29359: invalid method name *string* specified for resource plan *string*

Cause: An invalid method was specified as an argument to procedure CREATE_PLAN or UPDATE_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29360: resource plan *string* contains multiple directives for subplan *string*

Cause: A resource plan and its subplans had more than one directive for a particular subplan.

Action: Modify the resource plan or its subplans so that there is at most one directive for this subplan.

ORA-29361: value *string* for *string* is outside valid range of 0 to 100

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 100 inclusive.

ORA-29362: plan directive *string*, *string* does not exist

Cause: A nonexistent plan directive was specified for procedure UPDATE_PLAN_DIRECTIVE or UPDATE_CDB_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan directive for update.

ORA-29363: plan directive *string*, *string* is mandatory and cannot be modified or deleted

Cause: An attempt was made to modify a mandatory plan directive.

Action: Do not attempt to modify mandatory plan directives because they are required by the Resource Manager and cannot be modified.

ORA-29364: plan directive *string*, *string* already exists

Cause: An attempt was made to create a plan directive that already exists.

Action: Retry the create operation using different values.

ORA-29365: parameters *string* and *string* cannot both be set

Cause: An attempt was made to set both parameters.

Action: Only set one of parameters or neither of them.

ORA-29366: invalid CONSUMER_GROUP argument specified

Cause: An invalid consumer group name was specified.

Action: Specify a non-NULL, valid consumer group name.

ORA-29367: object *string* does not exist

Cause: A non-existent object name was specified as an argument to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid plan or consumer group name.

ORA-29368: consumer group *string* does not exist

Cause: A non-existent consumer group was specified.

Action: Specify an existing consumer group.

ORA-29369: invalid method name *string* specified for consumer group *string*

Cause: An invalid method name was specified as an argument to procedure CREATE_CONSUMER_GROUP or UPDATE_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29370: pending area is already active

Cause: An attempt was made to activate a pending area that is already active.

Action: Wait until the pending area is no longer active; then, retry the operation.

ORA-29371: pending area is not active

Cause: An attempt was made to make changes without creating a pending area.

Action: Invoke procedure CREATE_PENDING_AREA before making any changes.

ORA-29372: value for argument *string* is too long; it must be less than or equal to *string* characters

Cause: An attempt was made to specify a string that exceeded the maximum length for that parameter.

Action: Use a value that fits within the specified limit.

ORA-29373: resource manager is not on

Cause: An attempt was made to execute an operation that cannot be executed with the resource manager being off

Action: Turn on the resource manager and try again.

ORA-29374: resource plan *string* in top-plan *string* has no plan directives

Cause: A plan was created in the pending area that is an orphan or stand-alone.

Action: Create plan directives if needed. Otherwise, delete the plan.

ORA-29375: sum of values *string* for level *string*, plan *string* exceeds *string*

Cause: The sum of plan directive parameter values for the specified plan level exceeded the limit specified.

Action: Alter the values for the level so that the sum is less than the limit specified.

ORA-29376: number of consumer groups *string* in plan *string* exceeds *string*

Cause: The number of consumer groups in the specified plan was more than the limit specified.

Action: Change the plan so that the number of consumer groups is less than the limit specified.

ORA-29377: consumer group *string* is not part of top-plan *string*

Cause: OTHER_GROUPS was not included as part of the specified top-plan. Each top plan must include the built-in consumer group OTHER_GROUPS.

Action: Create a plan directive with the argument GROUP_OR_SUBPLAN being OTHER_GROUPS somewhere in the top-plan.

ORA-29378: invalid consumer group mapping priorities

Cause: The mapping priorities were not unique integers within the valid range.

Action: Set the mapping priorities to unique integers within the documented range.

ORA-29379: resource plan *string* is involved in a loop in top-plan *string*

Cause: A loop was discovered while validating a top-plan.

Action: Check the plans that have the specified plan as a GROUP_OR_SUBPLAN, and remove the plan directive that causes the loop.

ORA-29380: resource plan *string* is currently active and cannot be deleted

Cause: An attempt was made to delete an active plan in the pending area. No changes can be made to active plans.

Action: Delete the plan when it is not in use.

ORA-29381: plan/consumer_group string referred to by another plan and cannot be deleted

Cause: An attempt was made to delete a plan or consumer group that is referred to by another plan.

Action: Remove all plan directives that have the plan or consumer group as GROUP_OR_SUBPLAN; then delete the plan or consumer group.

ORA-29382: validation of pending area failed

Cause: Invalid changes were attempted in the pending area.

Action: See documentation and the error messages that follow this one.

ORA-29383: all leaves of top-plan string must be consumer groups

Cause: An attempt was made to create or modify the specified top-plan but it has some plans as leaves.

Action: To identify which plans and/or plan directives need to be modified, look at all plans that have no plan directives. Then, alter the top-plan so that all its leaves are consumer groups.

ORA-29384: number of consumer groups and subplans for plan string exceeds string

Cause: An attempt was made to create or modify the specified plan, but the plan has more than 28 consumer groups or subplans.

Action: Make sure the specified plan points to no more than 28 distinct consumer groups or subplans.

ORA-29385: cannot create plan directive from string to string

Cause: An attempt was made to create a plan directive from a plan to itself.

Action: Make sure the arguments PLAN and GROUP_OR_SUBPLAN to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER are different.

ORA-29386: plan or consumer_group string is mandatory and cannot be deleted or modified

Cause: An attempt was made to delete or modify the specified mandatory plan or consumer group.

Action: Do not attempt to delete or modify mandatory plans and consumer groups.

ORA-29387: no top-plans found in the pending area

Cause: The VALIDATE_PENDING_AREA procedure found that either the intended top-plan(s) are involved in a loop or there are no top-plans.

Action: Check all edges going from a subplan to the intended top-plan. Make sure the top plan does not have any plan referring to it.

ORA-29388: plan/consumer_group string is part of more than one top-plan

Cause: An attempt was made to delete a subtree that includes a plan or consumer group that is part of more than one top-plan as part of procedure DELETE_PLAN_CASCADE or package DBMS_RESOURCE_MANAGER. Such a plan or consumer group cannot be deleted.

Action: Check the ancestors of the plan or consumer group and make sure it is only part of the top-plan that includes the subtree being deleted.

ORA-29389: too many errors during validation

Cause: The number of errors detected during validation is too high.

Action: Perform the necessary actions to remove some errors, and retry validation.

ORA-29390: some resource plans are not part of any top-plan

Cause: An attempt was made to create or modify some plans in the pending area that are not part of any top-plan

Action: Remove these plans and try validation again.

ORA-29391: *string* and *string* must be mandatory to create a mandatory plan directive

Cause: An attempt was made to create a mandatory plan directive where either PLAN or GROUP_OR_SUBPLAN or both were not mandatory

Action: Recreate these objects as mandatory and then create the plan directive.

ORA-29392: cpu parameters for level *string* for plan *string* must be zero

Cause: The cpu parameters for the specified level had a non-zero value, which is not a valid value for the plan's current cpu policy.

Action: Change the cpu level parameters for the specified level to zero or change the plan cpu policy.

ORA-29393: user *string* does not exist or is not logged on

Cause: An invalid user name was specified as argument to procedure SET_INITIAL_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER or SWITCH_CONSUMER_GROUP_FOR_USER of package DBMS_SYSTEM or the specified user was not logged on.

Action: Specify a valid user name.

ORA-29394: session id *string* and serial# *string* do not exist

Cause: Invalid session id and serial# were specified as arguments to procedure SWITCH_CONSUMER_GROUP_FOR_SESS of package DBMS_SYSTEM.

Action: Specify valid values from the view V\$SESSION.

ORA-29395: cannot set the initial consumer group to *string*

Cause: An attempt was made to set the initial consumer group of a user to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29396: cannot switch group to *string*

Cause: An attempt was made to switch the consumer group of a user or a session to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29397: cannot grant/revoke switch privilege for *string*

Cause: An attempt was made to grant or revoke the privilege to switch to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29398: invalid privilege name specified

Cause: An invalid privilege name was specified as an argument to procedure GRANT_SYSTEM_PRIVILEGE or REVOKE_SYSTEM_PRIVILEGE of package DBMS_RESOURCE_MANAGER_PRIVS.

Action: Specify a valid privilege name.

ORA-29399: user *string* does not have privilege to switch to consumer group *string*

Cause: An attempt was made to set the initial consumer group of the specified user but the user does not have the privilege to switch to that group.

Action: Grant the privilege to switch to the consumer group to the user and then set the initial group.

ORA-29400: data cartridge error\in*string*

Cause: An error occurred in a data cartridge external procedure.

Action: Review the message subsequent to this error and any other error messages associated with this error. Take the appropriate action to resolve them. If the data cartridge was implemented by an external vendor, then consult the data cartridge documentation for an explanation of the underlying error messages. *Params: 1) errors_summary: A string describing the underlying errors encountered by the data cartridge routine.

ORA-29401: data cartridge internal error [*string*]

Cause: The data cartridge encountered an unexpected condition. The argument is a string that identifies the internal error to Oracle development. This argument and the database version number are critical in identifying the root cause.

Action: Contact Oracle Support Services.

ORA-29430: too many files open

Cause: Too many UTL_FILE files were opened.

Action: Close some files and retry the UTL_FILE call.

ORA-29431: empty directory path

Cause: The directory object mapped to an empty directory.

Action: Ensure that the directory path is not empty.

ORA-29432: invalid file access

Cause: The file was opened in an unexpected mode.

Action: Correct the mode of opening the file.

ORA-29433: path traverses a symlink

Cause: The directory path contained a symlink.

Action: Ensure that the directory path does not contain a symlink.

ORA-29434: nonexistent file or path

Cause: The expected file or path did not exist.

Action: Ensure that the file or directory path exists.

ORA-29435: cannot open file

Cause: There was an access error on the file.

Action: Ensure that Oracle process has access to the directory path and file.

ORA-29436: link file object is disallowed

Cause: The file was a link.

Action: Ensure that the file is not a link.

ORA-29437: unexpected "LFI" error

Cause: An internal error occurred in the UTL_FILE.

Action: Contact Oracle Support Services.

ORA-29470: effective user or roles are not the same when the cursor was parsed

Cause: The effective user or roles on this call to DBMS_SQL were not the same as those during the time when the cursor was parsed.

Action: Ensure that the effective user and roles are the same as those when the cursor was parsed.

ORA-29471: DBMS_SQL access denied

Cause: DBMS_SQL access was denied due to security reasons.

Action: Refer to the DBMS_SQL Security Model section in the Oracle Database PL/SQL Packages and Types Reference documentation.

ORA-29472: DBMS_SQL.OPEN_CURSOR failed. security_level is outside the valid range of 0 to 2

Cause: An invalid security_level value was specified.

Action: Specify a valid range of 0 to 2.

ORA-29473: privilege checking level specified for *string* must be between 0 and 2

Cause: Specified privilege checking level was invalid because it was out of the acceptable range.

Action: Specify a valid privilege checking level, which is between 0 and 2.

ORA-29474: DBMS_SQL.OPEN_CURSOR failed. security_level of 0 is not allowed

Cause: Security level of 0 is specified with DBMS_SQL.OPEN_CURSOR.

Action: Specify a valid security level.

ORA-29475: useLogonRoles=>TRUE not permitted with userid=>NULL

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29476: DBMS_SQL.CLOSE_CURSOR failed

Cause: An attempt was made to close a DBMS_SQL cursor while it was executing under its own context.

Action: Rewrite the program so that it does not attempt to close a DBMS_SQL cursor while it is executing under its own context.

ORA-29477: The SQL statement is too long.

Cause: The size of the SQL statement exceeded 4 gigabytes -1 byte.

Action: Reduce the size of the SQL statement.

ORA-29478: Implicit result cannot be returned through this statement.

Cause: An attempt was made to return an implicit result through a statement type other than a PL/SQL or DML statement.

Action: Implicit results can only be returned through a PL/SQL or DML statement.

ORA-29479: Cannot return any more implicit results, limit 2,147,483,647 reached.

Cause: An attempt was made to return more than the maximum number of implicit results permitted.

Action: Ensure the number of implicit results does not exceed 2,147,483,647.

ORA-29480: No more implicit results to retrieve.

Cause: An attempt was made to retrieve implicit results when none were available.

Action: This is an internal error.

ORA-29481: Implicit results cannot be returned to client.

Cause: An attempt was made to return implicit results to an older version client that is not capable of receiving these implicit results.

Action: Upgrade the Oracle Database Client software.

ORA-29485: Complex type bind or define is not a linked type.

Cause: A complex type bound or defined in one container, where cursor execution occurs in another container, was not an object or metadata linked type.

Action: Verify that all complex types that are bound or defined in one container while execution occurs in another container are object or metadata linked types.

ORA-29486: Specifying the container parameter is not allowed in the PARSE_AS_USER call.

Cause: The container parameter was specified in the DBMS_SYS_SQL.PARSE_AS_USER call.

Action: Replace the DBMS_SYS_SQL.PARSE_AS_USER call with the DBMS_SQL.PARSE call.

ORA-29490: insufficient privilege

Cause: The ADM_PARALLEL_EXECUTE role needed to execute the subprogram was not granted.

Action: Obtain ADM_PARALLEL_EXECUTE role and try again.

ORA-29491: invalid table for chunking

Cause: An attempt was made to chunk a table by ROWID, but the table was not a physical table or the table was an IOT. physical table or the table is an IOT.

Action: Use a table which has physical ROWID.

ORA-29492: invalid state for create chunk

Cause: An attempt was made to create chunks on a task which was not in the CREATED state.

Action: Make sure that the task is in the CREATED state.

ORA-29493: invalid status

Cause: An attempt was made to set an invalid value to the chunk status.

Action: Make sure that the status value is valid.

ORA-29494: invalid state for run task

Cause: An attempt was made to execute the task which was not in the CHUNKED state.

Action: Make sure that the task is in the CHUNKED state.

ORA-29495: invalid state for resume task

Cause: An attempt was made to resume execution but the task was not the FINISHED_WITH_ERROR or CRASHED state.

Action: Make sure that the task is in the FINISHED_WITH_ERROR or CRASHED state.

ORA-29496: Parameter [*string*] is null or its value length exceeds the maximum limit [*string*]

Cause: The input argument was null, or it exceeded the maximum length limit.

Action: Make sure that the argument is not null, and its length is within the limit.

ORA-29497: duplicate task name

Cause: A task with the same name was already in existence.

Action: Use another name.

ORA-29498: task not found

Cause: The task did not exist.

Action: Use an existing task.

ORA-29499: chunk not found

Cause: The specified chunk did not exist.

Action: Specify an existing chunk.

ORA-29500: NAMED keyword is invalid in CREATE JAVA CLASS

Cause: A NAMED keyword was specified in the CREATE JAVA CLASS statement. NAMED keywords are valid only in CREATE JAVA SOURCE or RESOURCE statements.

Action: Remove the NAMED keyword from the CREATE JAVA CLASS statement.

ORA-29501: invalid or missing Java source, class, or resource name

Cause: The required name for a Java source, class, or resource was invalid or missing.

Action: Specify a valid name.

ORA-29502: NAMED keyword required in CREATE JAVA RESOURCE

Cause: The name for a Java resource was not specified. The name must be specified with the NAMED keyword.

Action: Specify a valid name with the NAMED keyword.

ORA-29503: SCHEMA keyword not valid with NAMED keyword

Cause: SCHEMA and NAMED keywords were used together in the same CREATE JAVA command, but only one may be used in a CREATE JAVA command.

Action: Remove either the NAMED or the SCHEMA keyword.

ORA-29504: invalid or missing schema name

Cause: The required schema name was invalid or missing.

Action: Specify a valid schema name.

ORA-29505: AS keyword is invalid in CREATE JAVA CLASS or RESOURCE

Cause: The AS keyword was used in CREATE JAVA CLASS or RESOURCE. The AS keyword is valid only in CREATE JAVA SOURCE.

Action: Use the USING keyword in CREATE JAVA CLASS or RESOURCE.

ORA-29506: invalid query derived from USING clause

Cause: The USING clause did not form a valid query.

Action: Correct the USING clause.

ORA-29507: query derived from USING clause found zero or many rows

Cause: The USING clause defined a query that either did not return any values, or returned more than one value.

Action: Correct the USING clause.

ORA-29508: query derived from USING clause did not select a value of type *string*

Cause: The USING clause did not form a query that selects a value of the type specified by the term following the USING keyword.

Action: Correct the USING clause.

ORA-29509: incorrectly formed Java binary class definition

Cause: An attempt was made to create a Java class using data expected to be in binary (Java .class) format. The data was found not to be in this format, or to be incorrectly formed.

Action: Correct the definition data.

ORA-29510: name, *string.string*, already used by an existing object

Cause: A CREATE JAVA command attempted to create a source, class, or resource object with a name that is already in use.

Action: Drop the existing object that is using the desired name, or use a different name for the new object.

ORA-29511: could not resolve Java class

Cause: A CREATE AND RESOLVE NOFORCE JAVA CLASS command specified definition data that could not be resolved, or resolution failed for some referenced class.

Action: Remove the NOFORCE option or remove impediments to resolution.

ORA-29512: incorrectly formed name resolver specification

Cause: A name resolver was not specified in the required form: ((*name pattern* , *schema name*) ...)

Action: Correct the specification.

ORA-29513: referenced class name too long

Cause: An attempt was made to import a .class file containing a class name of length greater than %d. The .class file could not be imported because the referenced class name was too long.

Action: Shorten the referenced class name in the .class file.

ORA-29514: class name contains illegal character

Cause: An attempt was made to import a .class file containing a character that cannot be converted to the server character set. The .class file could not be imported because of the illegal character.

Action: Correct the illegal character in the .class file.

ORA-29515: exit called from Java code with status *string*

Cause: Java code included a call to java.lang.Runtime.exitInternal.

Action: Do not include this call unless non-local exit is desired.

ORA-29516: Aurora assertion failure: *string*

Cause: An internal error occurred in the Aurora module.

Action: Contact Oracle Worldwide Support.

ORA-29517: recursive resolution failed for a referenced class

Cause: An attempt to resolve a referenced class failed.

Action: Review the errors for referenced classes and complete the necessary actions to correct them.

ORA-29518: name *string* resolved to an object in schema *string* that is not a Java class

Cause: A referenced name was resolved to an object that is not a Java class.

Action: Adjust name resolver or add missing Java class.

ORA-29519: name *string* resolved via a synonym in schema *string* to a class with a different name

Cause: A referenced name was resolved to a synonym, which translated to a class whose name does not match the referenced name.

Action: Adjust name resolver or add missing Java class.

ORA-29520: name *string* resolved to a class in schema *string* that could not be accessed

Cause: An attempt to access a referenced class failed.

Action: Adjust authorizations or name resolution.

ORA-29521: referenced name *string* could not be found

Cause: Name resolution failed to find an object with the indicated name.

Action: Adjust name resolver or add missing Java class.

ORA-29522: authorization error for referenced name *string.string*

Cause: An attempt was made to resolve a class that is not authorized to use the indicated referenced class.

Action: Adjust authorizations or name resolution.

ORA-29523: authorization error for unknown referenced name

Cause: An attempt was made to resolve a class that is not authorized to use a referenced class. The name of the referenced class could not be determined.

Action: Adjust authorizations or name resolution.

ORA-29524: wrong types of arguments in call to '*string*'

Cause: A method was called with arguments of incompatible type or types.

Action: Correct the arguments of the specified method. *Params: 1) method_name: The method name.

ORA-29525: referenced name is too long: '*string*'

Cause: An attempt was made to create a class that references a name longer than 4000 characters. The class could not be created because the name is too long.

Action: Adjust the definition.

ORA-29526: created Java class *string"string"*

Cause: An informational message, not an error.

Action: None

ORA-29527: created Java source *string"string"*

Cause: An informational message, not an error.

Action: None

ORA-29528: invalid Java call in trigger *string*

Cause: The Java method specified in trigger does not exist or cannot be called as used.

Action: Adjust trigger definition.

ORA-29529: invalid function or method call *string* in trigger *string*

Cause: The function or method specified in Java trigger call expression could not be resolved.

Action: Adjust trigger definition.

ORA-29530: could not create shortened name for *string*

Cause: Insert into shortened name translation table failed.

Action: Retry the insert.

ORA-29531: no method *string* in class *string*

Cause: An attempt was made to execute a non-existent method in a Java class.

Action: Adjust the call or create the specified method.

ORA-29532: Java call terminated by uncaught Java exception: *string*

Cause: A Java exception or error was signaled and could not be resolved by the Java code.

Action: Modify Java code, if this behavior is not intended.

ORA-29533: attempt to overwrite class or resource *string* while defining or compiling *string.string*

Cause: A class or resource defined by a SQLJ source conflicted with an existing object.

Action: Remove existing object, or modify SQLJ source.

ORA-29534: referenced object *string.string* could not be resolved

Cause: Name resolution determined that the indicated object is referenced but could not be resolved.

Action: Correct name resolver or address resolution problems in the referenced class, or correct compilation problems in its source.

ORA-29535: source requires recompilation

Cause: The reason the current class object was invalid is recorded with the source object from which it was compiled.

Action: Inspect errors in the source object and take the necessary corrective actions.

ORA-29536: badly formed source: *string*

Cause: An attempt was made to create a Java source object with text that could not be parsed adequately to determine the class(es) defined by it.

Action: Correct errors in source.

ORA-29537: class or resource cannot be created or dropped directly

Cause: An attempt was made to create or drop a Java class or resource that is known to result from compilation of an existing Java source object.

Action: Act on the class or resource by acting on the source, or change the source so that it no longer defines the class or resource.

ORA-29538: Java not installed

Cause: An attempt was made to use a Java command when Java is not installed.

Action: Install Java, or do not use the command.

ORA-29539: Java system classes already installed

Cause: An attempt was made to use the CREATE JAVA SYSTEM command in a database where the Java system classes already are installed.

Action: Use CREATE OR REPLACE JAVA SYSTEM.

ORA-29540: class *string* does not exist

Cause: Java method execution failed to find a class with the indicated name.

Action: Correct the name or add the missing Java class.

ORA-29541: class *string.string* could not be resolved

Cause: An attempt was made to execute a method in a Java class that had not been previously and cannot now be compiled or resolved successfully.

Action: Adjust the call or make the class resolvable.

ORA-29542: class *string* already defined by source *string*

Cause: An attempt was made to create a Java source object that would define a class that is already defined by a different Java source object.

Action: Either drop the old source or modify the new source.

ORA-29543: Java command *string* not yet implemented

Cause: An attempt was made to use a Java command that is not yet implemented.

Action: Do not use the command.

ORA-29544: invalid type

Cause: The type argument in a call to a Java export or import command did not have a recognized value.

Action: Correct the value.

ORA-29545: badly formed class: *string*

Cause: An attempt was made to create a Java class object with bytecodes that were rejected by the Java verifier.

Action: It is possible that an attempt was made to create the Java class from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29546: badly formed resource: *string*

Cause: An attempt was made to create a Java resource object with data that was rejected by the Java verifier.

Action: Correct the data.

ORA-29547: Java system class not available: *string*

Cause: An attempt was made to use a command that requires a Java system class that was not yet present or was invalid.

Action: Load the system classes, or do not use the command.

ORA-29548: Java system class reported: *string*

Cause: A command that uses a Java system class was aborted due to an error reported by the Java system class.

Action: Correct the error that was reported.

ORA-29549: class *string.string* has changed, Java session state cleared

Cause: A class in use by the current session was redefined or dropped, invalidating the current Java session state and requiring that it be cleared.

Action: No action required.

ORA-29550: Java session state cleared

Cause: The Java state in the current session became inconsistent and was cleared.

Action: No action required.

ORA-29551: could not convert *string* to Unicode

Cause: A string in the database character set could not be converted to Unicode, as required for use by Java.

Action: Correct the string.

ORA-29552: verification warning: *string*

Cause: An attempt was made to create a Java class object with bytecodes that caused the Java verifier to issue a warning.

Action: It is possible that the Java class was created from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29553: class in use: *string.string*

Cause: An attempt was made to modify a Java class that is in use in the current call.

Action: Correct the code in use in this call.

ORA-29554: unhandled Java out of memory condition

Cause: The session encountered an out of memory condition in Java from which it could not recover. Java session state was cleared.

Action: No action required.

ORA-29555: Java source, class or resource is not allowed here

Cause: A Java source, class, or resource was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

ORA-29556: object type has changed

Cause: A database object name that named a Java source, class, or resource now names an object of a different type.

Action: No action required.

ORA-29557: Java system class *string* cannot be modified

Cause: A command was attempted that would have modified a Java system class.

Action: No action required.

ORA-29558: JAccelerator (NCOMP) not installed. Refer to Install Guide for instructions.

Cause: JAccelerator (NCOMP) is not installed.

Action: Please refer to the Post-installation Tasks section in the Database Install Guide for instructions on how to install JAccelerator (NCOMP).

ORA-29561: Java VM JIT not supported on this platform.

Cause: Java VM JIT is not supported on this platform.

Action: No action required.

ORA-29655: USING clause is incompatible with its supertype

Cause: The USING clause of a type has to be the same as its supertype or compatible with it.

Action: Make sure the USING clause is compatible with its supertype.

ORA-29656: Invalid option for USING

Cause: The class has to implement the required interface for the value of the option for USING.

Action: Make sure the USING clause is supported.

ORA-29657: class defined in EXTERNAL NAME clause is used in another subtype

Cause: The supertype has an existing type that has the same value for the EXTERNAL NAME.

Action: Make sure the EXTERNAL NAME clause is unique among subtypes.

ORA-29658: EXTERNAL NAME clause is not compatible with its supertype.

Cause: The EXTERNAL NAME clause of the type is not a subclass of the supertype EXTERNAL NAME.

Action: Ensure that the EXTERNAL NAME clause of the type is a subclass of the EXTERNAL NAME of its supertype.

ORA-29659: SQLJ Object Type validation failed to get default connection

Cause: Unable to connect using the JDBC default connection.

Action: No action required.

ORA-29660: Unable to find the class defined in the EXTERNAL NAME clause

Cause: The class is not loaded in the database.

Action: Make sure the EXTERNAL NAME corresponds to a loaded class in the the database.

ORA-29661: Unable to find the superclass of the defined in the EXTERNAL NAME

Cause: The class is not loaded in the database.

Action: Make sure the superclass of the EXTERNAL NAME is loaded in the the database.

ORA-29662: Unable to find a field that matches one or more of the attributes

Cause: The EXTERNAL NAME option of one or more attributes do not match any fields in the defined class.

Action: Make sure the EXTERNAL NAME option of each attribute matches a field in the defined in the defined class.

ORA-29663: Unable to find a method that matches one or more of the functions

Cause: The EXTERNAL NAME option of one or more functions do not match any method in the defined class.

Action: Make sure the EXTERNAL NAME option of each function matches a method in the defined in the defined class.

ORA-29664: Unable to generate the helper class for the defined type

Cause: The helper class used for supporting SQLJ Object Type is not generated.

Action: No Action is required.

ORA-29665: Java thread deadlock detected

Cause: The Java VM has detected a thread deadlock.

Action: Modify the Java program to avoid the deadlock condition.

ORA-29701: unable to connect to Cluster Synchronization Service

Cause: Connect to CSS failed or timed out.

Action: Verify the state of the CSS. If the CSS was not started, start it and then retry the database startup. If the CSS died or is not responding, check the Oracle and CSS trace files for errors and contact Oracle Support Services.

ORA-29702: error occurred in Cluster Group Service operation

Cause: An unexpected error occurred while performing a CGS operation.

Action: Verify that the LMON process is still active. Check the Oracle LMON trace files for errors. Also, check the related CSS trace file for errors.

ORA-29703: error occurred in global enqueue service operation

Cause: An unexpected error occurred while performing a global enqueue service operation.

Action: Check oracle trace files for errors.

ORA-29704: cannot specify ACTIVE_INSTANCE_COUNT in 8.1.5 or earlier release

Cause: The ACTIVE_INSTANCE_COUNT parameter was specified when one of the instances in the cluster was running Oracle 8.1.5 or an earlier release.

Action: Restart the instance without specifying the ACTIVE_INSTANCE_COUNT parameter. Or, upgrade all instances to Oracle 8.1.6 or later release and then specify the parameter.

ORA-29705: ACTIVE_INSTANCE_COUNT is *string* which is incompatible with the value in other instances

Cause: The value of the ACTIVE_INSTANCE_COUNT parameter must be the same in all Oracle cluster database instances.

Action: Check your initialization parameter files in all instances and ensure that the ACTIVE_INSTANCE_COUNT parameter has the same value. Then restart the instance.

ORA-29706: incorrect value *string* for parameter ACTIVE_INSTANCE_COUNT

Cause: The ACTIVE_INSTANCE_COUNT parameter must be set to 1 in a two node cluster database configuration or unspecified if a secondary instance is not needed.

Action: Check your initialization parameter files and correct the value of the ACTIVE_INSTANCE_COUNT parameter. If you are configuring a two node primary/secondary cluster database, set this value to 1. Otherwise, do not specify any value for the parameter.

ORA-29707: inconsistent value *string* for initialization parameter *string* with other instances

Cause: The value of the initialization parameter in error must be identical on all Oracle cluster database instances and was not.

Action: Check your INIT.ORA files on all instances and ensure that the initialization parameters in error have the same value.

ORA-29708: error occurred in Cluster Synchronization Services

Cause: An unexpected error occurred while performing a CSS operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29709: Communication failure with Cluster Synchronization Services

Cause: Could not communicate with CSS to complete the operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29710: Current operation aborted by Cluster Synchronization Services

Cause: The operation could not be performed or CSS was shutting down.

Action: Check the log file of Cluster Synchronization Services daemon to verify the state of the service. Start the service if needed; otherwise, contact Oracle Support Services.

ORA-29711: error occurred during registration of Oracle process with CSS

Cause: An unexpected error occurred while performing a Cluster Synchronization Services (CSS) operation.

Action: Confirm that the database, and any ASM instances on which it depends, is operating normally. An outage in one of these can cause this error and it is an expected result. Otherwise, contact Oracle Support Services.

ORA-29735: instance specified no longer exists

Cause: A client of the global enqueue service specified an instance that no longer existed.

Action: Process aborts current operation due to termination of an instance

ORA-29736: Instances running in the cluster are only read-mostly or read-only instances.

Cause: The instances that were running were only read-mostly or read-only instances which causes the whole cluster to shut down.

Action: Start the regular read/write instances and then restart read-mostly or read-only instances.

ORA-29738: This feature is not allowed on read-mostly instances.

Cause: The attempted feature was not allowed on read-mostly instances.

Action: The feature is not supported on read-mostly instances as this can be achieved on the other cluster instances which are not read-mostly.

ORA-29739: Read-mostly and Read-only instances cannot be part of same cluster

Cause: The Read-mostly and Read-only instances were part of the same cluster.

Action: Start the instance using an instance mode of the already existing Read-only Instance Mode nodes.

ORA-29740: evicted by instance number *string*, group incarnation *string*

Cause: This instance was evicted from the group by another instance of the cluster database group for one of several reasons, which may include a communications error in the cluster and failure to issue a heartbeat to the control file.

Action: Check the trace files of other active instances in the cluster group for indications of errors that caused a reconfiguration.

ORA-29741: The Instance Membership Resolution (IMR) feature is active for some instances, but not all, on the cluster.

Cause: The Instance Membership Resolution (IMR) feature was not active for this instance, but was active for another instance in the cluster database.

Action: Ensure that all instances have the same consistent IMR setting. Consult with the Oracle Support for assistance.

ORA-29742: incompatible Instance Membership Recovery protocol among instances

Cause: The selected Instance Membership Recovery protocol was not compatible with other running instances in the cluster database.

Action: Check the Instance Membership Recovery initialization parameters of all instances to ensure their consistency.

ORA-29743: exiting from instance membership recovery protocol because this instance is not in good health

Cause: This instance did not participate in the instance membership recovery protocol because it was not in good health. Some or all of its receivers were not making progress. Therefore, this instance terminated itself.

Action: Check the alert log, LMON and LMHB trace files for any errors and contact Oracle Support Services

ORA-29744: Oracle RAC is not supported in SE release 19c and later

Cause: The database was configured with Oracle Real Application Clusters (Oracle RAC) enabled in Oracle Database Standard Edition (SE).

Action: If you plan to continue using Oracle RAC with Oracle Database 19c or later releases, install Oracle Database Enterprise Edition (EE) to upgrade your database. If you plan to continue using SE without Oracle RAC enabled, convert your database to a single instance Oracle Database before upgrading.

ORA-29746: Cluster Synchronization Service is being shut down.

Cause: The administrator has shut down the Cluster Synchronization Service daemon. This error message is intended to be informative to users on the status of the service.

Action: Check the log file of the Cluster Synchronization Service daemon to verify the state of the service.

ORA-29760: instance_number parameter not specified

Cause: The init.ora file did not contain a value for the instance_number which is required to identify this instance to other instances of the database running on the same cluster

Action: Assign a value to the instance_number parameter in the init.ora parameter file

ORA-29770: The global enqueue process *string* (OSID *string*) is hung for more than *string* seconds.

Cause: The specified process made no progress within the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support with the incident information. *Params: 1) process_name: The name of the process that is not making progress. 2) process_id: The operating system process ID of the process that is not making progress. 3) max_allowed_time: The maximum time that the process is allowed to not make process.

ORA-29771: The process *string* (OSID *string*) blocks *string* (OSID *string*) for more than *string* seconds.

Cause: The specified process blocked a global enqueue process for the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support with the incident information. *Params: 1) blocker_process_name: The name of the blocking process. 2) blocker_process_id: The operating system process ID of the blocking process. 3) blocked_process_name: The name of the blocked process. 4) blocked_process_id: The operating system process ID of the blocked process. 5) max_allowed_time: The maximum time that the blocked process is allowed to not make progress.

ORA-29780: unable to connect to GPnP daemon [*string*]

Cause: Attempt to connect to the GPnP daemon failed with the error reported.

Action: Take the corrective action to resolve the error reported. Refer to GPnP logs and documentation to figure out why the call failed.

ORA-29783: Setting GPnP attribute failed with error [*string*].

Cause: An attempt to set an attribute in Grid Plug and Play (GPnP) profile failed. See the information within the brackets for the cause.

Action: Resolve the problem in the included message and retry the request. *Params: 1) error: Describes the error in setting the GPnP attribute.

ORA-29784: Update to GPnP attributes is not supported at this time.

Cause: The update operation for a Grid Plug And Play (GPnP) attribute was not permitted because Cluster Synchronization Services (CSS) was not running on the host.

Action: Start Cluster Synchronization Services (CSS) and retry the operation.

ORA-29785: Getting a GPnP attribute has failed with error [string].

Cause: An attempt to get a Grid Plug and Play (GPnP) attribute failed. See the information within the brackets for the cause.

Action: Resolve the problem in the included message and retry the request. *Params: 1) error: The error causing the failure.

ORA-29786: Oracle Restart attribute GET failed with error [string]

Cause: An attempt to get the Oracle Restart attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29787: Oracle Restart attribute SET failed with error [string]

Cause: An attempt to set the Oracle Restart attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29788: Network interface query failed with error [string].

Cause: An attempt to get the network information failed. See the information in brackets for the cause.

Action: Resolve the problem in the included message and retry the request. *Params: 1) error: The error causing the network interface query to fail.

ORA-29790: Cannot change user session parameters for a non-user session

Cause: An attempt was made to change user session parameters for a non-user session.

Action: Execute the operation when connected with a user session

ORA-29791: Transactions cannot be replayed

Cause: The user attempted to replay a transaction.

Action: Reconnect and re-execute the transaction.

ORA-29800: invalid identifier *string* found while parsing operator name

Cause: The specified schema or object identifier for the operator was invalid.

Action: Specify a valid identifier for the operator. *Params: 1) invalid_identifier: The string that is not a invalid identifier.

ORA-29801: missing RETURN keyword

Cause: The CREATE OPERATOR or ALTER OPERATOR statement expected the RETURN keyword, but it was missing or a different token was used.

Action: Check the syntax for the CREATE OPERATOR or ALTER OPERATOR statement and specify the RETURN keyword where appropriate.

ORA-29802: missing CONTEXT keyword

Cause: The CREATE OPERATOR or ALTER OPERATOR statement was expecting the CONTEXT keyword, but it was missing or a different token was used.

Action: Check the syntax for the CREATE OPERATOR or ALTER OPERATOR statement and then specify the CONTEXT keyword where appropriate.

ORA-29803: missing ANCILLARY keyword

Cause: The CREATE OPERATOR or ALTER OPERATOR statement expected the ANCILLARY keyword, but it was missing or a different token was used.

Action: Check the syntax for the CREATE OPERATOR or ALTER OPERATOR statement and specify the ANCILLARY keyword where appropriate.

ORA-29804: missing DATA keyword

Cause: The CREATE OPERATOR, ALTER OPERATOR, CREATE INDEXTYPE or ALTER INDEXTYPE statement was expecting the DATA keyword, but it was missing or a different token was used.

Action: Check the syntax for the statement and specify the DATA keyword where appropriate.

ORA-29805: COLUMN keyword missing.

Cause: The CREATE OPERATOR, ALTER OPERATOR, CREATE INDEXTYPE or ALTER INDEXTYPE statement expects the COLUMN keyword. COLUMN is missing or an incorrect token was used.

Action: Check the syntax for the statement and specify the COLUMN keyword.

ORA-29806: could not find binding #string for operator string.string during indextype export

Cause: An attempt was made to export an indextype but one of the operator bindings could not be found.

Action: Verify that the indextype and the dependent operators are valid. Retry the operation. *Params: 1) operator_bind_number: The binding number identifying the signature of the operator. 2) operator_schema: The schema of the operator. 3) operator_name: The name of the operator.

ORA-29807: operator does not exist

Cause: The current operation could not find the specified operator or it was not in a valid state.

Action: Verify that the operator exists, it is in a valid state, and the user has the EXECUTE privilege on this operator.

ORA-29808: The specified binding for primary operator string.string does not exist.

Cause: An attempt was made to specify a primary operator for an ancillary operator, but the primary operator binding did not exist.

Action: Ensure that the specified binding for the primary operator exists. *Params: 1) operator_schema: The schema of the primary operator. 2) operator_name: The name of the primary operator.

ORA-29809: cannot drop an operator with dependent objects

Cause: An attempt was made to drop or replace an operator that has dependent objects.

Action: Drop the dependent objects then retry the operation, or specify the FORCE option in the DROP OPERATOR statement.

ORA-29810: inadequate operator privileges

Cause: The user did not have the appropriate privileges to perform the specified operation on the operator.

Action: Grant the appropriate privileges to the user and then reissue the statement.

ORA-29811: missing STATISTICS keyword

Cause: This is not a valid option with the ASSOCIATE command.

Action: Specify STATISTICS keyword after the ASSOCIATE command.

ORA-29812: incorrect object name specified

Cause: The specified name is not a valid name.

Action: Specify the correct name of the object with for which an association needs to be defined.

ORA-29813: non-supported object type with associate statement

Cause: The type of object specified is not supported with the associate statistics statement.

Action: Use a valid object type with the associate command.

ORA-29814: expecting USING or DEFAULT keyword

Cause: Expecting the USING or DEFAULT keyword after the names of object(s).

Action: Provide the USING or DEFAULT keyword.

ORA-29815: object being associated is not present

Cause: The object for which the association is being defined is not present.

Action: Ensure that all the objects for which the association is being defined are present.

ORA-29816: object being disassociated is not present

Cause: Object which is being disassociated is not present.

Action: Ensure that the object which needs to be disassociated is present.

ORA-29817: non-supported option with disassociate statement

Cause: The type of object specified is not supported with the disassociate statistics statement.

Action: Use a object type which is supported with the disassociate command.

ORA-29818: column name not properly specified

Cause: Name of the column should contain the table and the column name.

Action: Specify a valid column name.

ORA-29819: cannot associate default values with columns

Cause: User tried to associate DEFAULT values with columns which is not a valid option .

Action: Specify a valid option.

ORA-29820: the statistics type is not present

Cause: The statistics type which is being associated with object(s) is not present.

Action: Ensure that the type which contains the statistics functions is present.

ORA-29821: Primary operator *string.string* does not exist.

Cause: Attempted to link a primary operator to an ancillary operator, but the primary operator does not exist, or the user does not have the access privileges needed.

Action: Verify that the primary operator exists, and it is accessible to the user. *Params: 1) operator_schema: The schema of the primary operator. 2) operator_name: The name of the primary operator.

ORA-29822: selectivity cannot be specified for the type of object

Cause: User tried to associate selectivity with index or indextypes which is not allowed .

Action: Specify a valid option.

ORA-29823: object being analyzed is not a table

Cause: The object being analyzed is not a table and is not supported

Action: Specify only a supported option.

ORA-29824: Operator is invalid.

Cause: An attempt was made to use an operator in an invalid state.

Action: Compile the operator using the ALTER OPERATOR COMPILE statement and retry the operation.

ORA-29825: invalid indextype identifier: *string*

Cause: The identifier used during a Data Definition Language (DDL) statement affecting indextype objects had invalid characters.

Action: Ensure that the all characters in the identifier are valid and that the name is not a reserved word. *Params: 1) identifier_string: The identifier with invalid characters.

ORA-29826: missing FOR keyword

Cause: The CREATE INDEXTYPE statement was expecting the FOR keyword, but it was missing or a different token was used.

Action: Check the syntax for the CREATE INDEXTYPE statement and specify the FOR keyword where appropriate.

ORA-29827: missing USING keyword

Cause: The CREATE INDEXTYPE, ALTER INDEXTYPE, CREATE OPERATOR, or ALTER OPERATOR statement was expecting the USING keyword, but it was missing or a different keyword was used.

Action: Check the syntax for the current statement and specify the USING keyword where appropriate.

ORA-29828: invalid name for implementation type

Cause: The name or schema of the implementation type was invalid.

Action: Verify that all the characters in the name and schema of the implementation type are valid and are not reserved words.

ORA-29829: implementation type does not exist

Cause: The implementation type specified with USING clause could not be found.

Action: Check to see if the type exists and the user has EXECUTE privilege on this type.

ORA-29830: The operator *string.string* does not exist.

Cause: The current operation could not find the specified operator or it was not in a valid state.

Action: Verify that the operator exists, that it is in a valid state, and that the user has the EXECUTE privilege on this operator. *Params: 1) operator_schema: The schema of the operator. 2) operator_name: The name of the operator.

ORA-29831: failed to find matching bind for operator *string.string*

Cause: An attempt was made to add or drop operator bindings to an indextype, but the specified operator binding could not be found.

Action: Ensure that the operator bind is an existing bind for the specified operator. *Params: 1) operator_schema: The schema of the operator. 2) operator_name: The name of the operator.

ORA-29832: cannot drop or replace an indextype with dependent indexes

Cause: One or more indexes are dependent upon the indextype.

Action: Drop all the indexes which are dependent upon the indextype before dropping the indextype itself.

ORA-29833: The indextype does not exist.

Cause: There is no indextype by the specified name.

Action: Use public data dictionary views for the indextypes to see if an indextype by the specified name has been created.

ORA-29834: REF data type is not supported with operators.

Cause: An attempt was made to create an operator binding that contained at least one REF data type argument.

Action: Create the operator without using a REF data type.

ORA-29835: ODCIGETINTERFACES routine does not return required interface(s)

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the interface(s) required by the current usage.

Action: Ensure that the ODCIGetInterfaces routine returns the name(s) of the required interface(s).

ORA-29836: failed to validate indextype operator *string*

Cause: One of the operators that was referenced by the indextype could not be validated implicitly.

Action: Recompile the operators referenced by the indextype. Use the USER_INDEXTYPE_OPERATORS, ALL_INDEXTYPE_OPERATORS, or DBA_INDEXTYPE_OPERATORS views to identify the dependent operators of the indextype. *Params: 1) operator_name: The name of the operator that could not be validated.

ORA-29837: insufficient privileges to execute implementation type

Cause: User does not have privileges to execute the implementation type.

Action: The owner of the implementation type must grant appropriate privileges to the user.

ORA-29838: insufficient privileges on operators referenced by indextype

Cause: An attempt was made to create or alter an indextype, but the user does not have the correct privileges to use the dependent operators.

Action: The owner of the operators must grant the appropriate privilege on the operators to the user before the operation is retried.

ORA-29839: failed to validate implementation type *string.string*

Cause: An attempt was made to operate on an indextype for which its underlying implementation type could not be implicitly validated.

Action: Compile the implementation type and then retry the operation. *Params: 1) `implementation_type_schema`: Schema of the implementation type. 2) `implementation_type_name`: Name of the implementation type.

ORA-29840: indextype and implementation type are not in the same schema

Cause: An attempt was made to create or alter an indextype whose implementation type was in a different schema.

Action: Put the indextype and implementation type in the same schema.

ORA-29841: invalid option for ALTER INDEXTYPE

Cause: The user specified an invalid option with the ALTER INDEXTYPE statement.

Action: Review the syntax for the ALTER INDEX TYPE statement and provide valid options.

ORA-29842: Version *string* of the indextype interface does not support option *string*.

Cause: An option was specified that was not supported by the version of the indextype interface.

Action: Either do not request this option or provide an implementation for the correct version of the indextype interface. *Params: 1) `interface_version_number`: The version number of the Oracle Data Cartridge Interface implemented by the indextype. 2) `option_name`: The unsupported option on the indextype DDL.

ORA-29843: indextype should support at least one operator

Cause: An attempt was made to alter an indextype which would drop all the operators bound to it.

Action: Modify the ALTER INDEXTYPE statement to retain at least one operator.

ORA-29844: duplicate operator binding specified for operator *string.string*

Cause: An attempt was made to add an operator name to an indextype that was already supported by the indextype.

Action: Remove the duplicate operator and retry the command. *Params: 1) `operator_schema`: The schema of the operator with a duplicate binding. 2) `operator_name`: The name of the operator with a duplicate binding.

ORA-29845: indextype does not support local domain index on *string* partitioned table

Cause: User specified a create local domain index statement using an indextype that does not support local domain indexes on tables partitioned with the given method

Action: Use a different indextype or build a global domain index

ORA-29846: cannot create a local domain index on a *string* partitioned table

Cause: An attempt was made to create a local domain index on a table that was partitioned by a partitioning method, which was not supported by domain indexes.

Action: Build a global domain index on the partitioned table.

ORA-29847: cannot create a local domain index on a partitioned index-organized table

Cause: User specified a create local domain index statement on a partitioned index-organized table

Action: Build a global domain index on the partitioned index-organized table

ORA-29848: Error while processing the ODCIINDEXMERGEPARTITION routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXMERGEPARTITION routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) *index_owner*: The schema name of the index. 2) *index_name*: The name of the index. 3) *error_summary*: A string describing the underlying errors encountered by the ODCIINDEXMERGEPARTITION routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29849: Error while processing the ODCIINDEXSPLITPARTITION routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXSPLITPARTITION routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) *index_owner*: The schema name of the index. 2) *index_name*: The name of the index. 3) *error_summary*: A string describing the underlying errors encountered by the ODCIINDEXSPLITPARTITION routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29850: invalid option for creation of domain indexes

Cause: The user specified an invalid option like ASC, DESC, SORT or a parallel clause, partitioning clause or physical attributes clause.

Action: Choose one of the valid clauses for creation of domain indexes.

ORA-29851: cannot build a domain index on more than one column

Cause: User attempted to build a domain index on more than one column.

Action: Build the domain index only on a single column.

ORA-29852: keyword IS is missing

Cause: IS keyword must be specified with Create Index statement for domain indexes.

Action: Use IS keyword and then specify the indextype name.

ORA-29853: keyword UNIQUE may not be used in creating domain indexes

Cause: An attempt was made to create a domain index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

ORA-29854: keyword BITMAP may not be used in creating domain indexes

Cause: An attempt was made to create a domain index with the BITMAP attribute.

Action: Remove BITMAP from the CREATE INDEX statement.

ORA-29855: Error while processing the ODCIINDEXCREATE routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXCREATE routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXCREATE routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29856: Error while processing ODCIINDEXDROP routine for index *string.string.instring*

Cause: Running the ODCIINDEXDROP routine caused an error. Its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error, and take the appropriate action to resolve it. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXDROP routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29857: domain indexes and/or secondary objects exist in the tablespace

Cause: An attempt was made to drop a tablespace which contains secondary objects and/or domain indexes.

Action: Drop the domain indexes in his tablespace. Also, find the domain indexes which created secondary objects in this tablespace and drop them. Then try dropping the tablespace.

ORA-29858: Error while processing the ODCIINDEXALTER routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXALTER routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXALTER routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29859: Error while processing ODCIINDEXTRUNCATE routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXTRUNCATE routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) `index_owner`: The schema name of the index. 2) `index_name`: The name of the index. 3) `error_summary`: A string describing the underlying errors encountered by the `ODCIINDEXTRUNCATE` routine; either by being raised from the implementation of the routine or by being registered in the `SYS.ODCI_WARNINGS$` table prior to returning the `ODCI_ERROR` return code.

ORA-29860: cannot truncate a table with domain indexes in LOADING status

Cause: An attempt was made to truncate a table while there were domain indexes in LOADING status.

Action: Retry the operation when the operations that impacted the domain indexes have been completed. If the status of the domain index partition still remains in LOADING state, then contact Oracle Support Services.

ORA-29861: Domain index *string.string* is marked *string* and currently not usable.

Cause: An attempt was been made to access a domain index that was being built or was marked failed by an unsuccessful data definition language (DDL) or was marked unusable by a DDL operation.

Action: Wait for the index build to finish if the specified index is marked LOADING. Drop or rebuild the specified index if it is marked FAILED. Drop or rebuild the specified index if it is marked UNUSABLE. *Params: 1) `index_schema`: The schema of the domain index. 2) `index_name`: The name of the domain index. 3) `index_status`: The status of the domain index (that is, LOADING, FAILED or UNUSABLE).

ORA-29862: cannot specify FORCE option for dropping non-domain index

Cause: A `DROP INDEX FORCE` was issued for a non-domain index.

Action: Reissue the command without the `FORCE` option.

ORA-29863: ODCI_WARNING returned by the implementation of the ODCIINDEXCREATE routine for index *string.string.instring*

Cause: The processing of the `ODCIINDEXCREATE` routine returned the `ODCI_WARNING` return code.

Action: Review the errors associated with this warning and take the appropriate action to resolve them. *Params: 1) `index_owner`: The schema name of the index. 2) `index_name`: The name of the index. 3) `error_summary`: A string describing the underlying errors encountered by the `ODCIINDEXCREATE` routine; either by being raised from the implementation of the routine or by being registered in the `SYS.ODCI_WARNINGS$` table prior to returning the `ODCI_WARNING` return code.

ORA-29864: analyzing domain indexes marked LOADING/FAILED not supported

Cause: Tried to analyze a domain index which was marked as LOADING or FAILED.

Action: If the index was marked LOADING, wait till it is marked valid before retrying the analyze. If index was marked FAILED, drop it OR rebuild it and retry the analyze.

ORA-29865: indextype is invalid

Cause: The indextype is invalid.

Action: Drop and recreate the indextype.

ORA-29866: cannot create domain index on a column of index-organized table

Cause: Tried to create a domain index on a column of an index-organized table.

Action: Do not attempt to create a domain index on columns of an index-organized table.

ORA-29867: cannot create a domain index on a LONG column

Cause: The user attempted to create a domain index on a column of LONG datatype.

Action: Do not create a domain index on a LONG column.

ORA-29868: Cannot modify domain index in LOADING status.

Cause: Attempted to execute a data definition language (DDL) statement which affected a domain index in LOADING state.

Action: Retry after the domain index operation completes. Contact Oracle Support Services if the domain index status remains in LOADING state.

ORA-29869: Cannot modify domain index in FAILED status.

Cause: Attempted to execute a DDL statement which affected a domain index in FAILED state.

Action: Rebuild the index or truncate the table to return the index to VALID status.

ORA-29870: specified options are only valid for altering a domain index

Cause: Specified the ONLINE or PARAMETERS clause with a non-domain index.

Action: Reissue the statement with the correct syntax for alter.

ORA-29871: invalid alter option for a domain index

Cause: The user specified an invalid option for altering a domain index.

Action: Reissue the alter statement with a valid option.

ORA-29872: parameters clause cannot be combined with the specified options

Cause: The user combined PARAMETERS clause with other alter index options.

Action: Reissue the statement with the correct syntax for alter.

ORA-29873: ODCI_WARNING returned during the ODCIIndexDrop routine implementation for index *string.string.instring*

Cause: When executing the ODCIIndexDrop routine, the ODCI_WARNING code was returned.

Action: Review the errors associated with this Oracle Data Cartridge Interface (ODCI) warning and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIIndexDrop routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_WARNING return code.

ORA-29874: ODCI_WARNING returned by the implementation of the ODCIINDEXALTER routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXALTER routine returned the ODCI_WARNING return code.

Action: Review the errors associated with this warning and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name:

The name of the index. 3) `error_summary`: A string describing the underlying errors encountered by the `ODCIINDEXALTER` routine; either by being raised from the implementation of the routine or by being registered in the `SYS.ODCI_WARNINGS$` table prior to returning the `ODCI_WARNING` return code.

ORA-29875: Error while processing ODCIINDEXINSERT routine for index *string.string\string*

Cause: The processing of the `ODCIINDEXINSERT` routine caused an error, or its implementation returned the `ODCI_ERROR` return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) `index_owner`: The schema name of the index. 2) `index_name`: The name of the index. 3) `error_summary`: A string describing the underlying errors encountered by the `ODCIINDEXINSERT` routine; either by being raised from the implementation of the routine or by being registered in the `SYS.ODCI_WARNINGS$` table prior to returning the `ODCI_ERROR` return code.

ORA-29876: Error while processing ODCIINDEXDELETE routine for index *string.string\string*

Cause: Running the `ODCIINDEXDELETE` routine caused an error. Its implementation returned the `ODCI_ERROR` return code.

Action: Review the error messages associated with this error, and take the appropriate action to resolve it. *Params: 1) `index_owner`: The schema name of the index. 2) `index_name`: The name of the index. 3) `error_summary`: A string describing the underlying errors encountered by the `ODCIINDEXDELETE` routine; either by being raised from the implementation of the routine or by being registered in the `SYS.ODCI_WARNINGS$` table prior to returning the `ODCI_ERROR` return code.

ORA-29877: Error while processing the ODCIINDEXUPDATE routine *string.string\string*

Cause: Processing the `ODCIINDEXUPDATE` routine caused an error, or its implementation returned the `ODCI_ERROR` return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) `index_owner`: The schema name of the index. 2) `index_name`: The name of the index. 3) `error_summary`: A string describing the underlying errors encountered by the `ODCIINDEXUPDATE` routine; either by being raised from the implementation of the routine or by being registered in the `SYS.ODCI_WARNINGS$` table prior to returning the `ODCI_ERROR` return code.

ORA-29878: ODCI_WARNING returned by the implementation of the ODCIINDEXTRUNCATE routine for index *string.string\string*

Cause: The processing of the `ODCIINDEXTRUNCATE` routine returned the `ODCI_WARNING` return code.

Action: Review the errors associated with this warning and take the appropriate action to resolve them. *Params: 1) `index_owner`: The schema name of the index. 2) `index_name`: The name of the index. 3) `error_summary`: A string describing the underlying errors encountered by the `ODCIINDEXTRUNCATE` routine; either by being raised from the implementation of the routine or by being registered in the `SYS.ODCI_WARNINGS$` table prior to returning the `ODCI_WARNING` return code.

ORA-29879: cannot create multiple domain indexes on a column list using same indextype

Cause: An attempt was made to define multiple domain indexes on the same column list using identical indextypes.

Action: Check to see if a different indextype can be used or if the index can be defined on another column list.

ORA-29880: such column list already indexed using another domain index and indextype

Cause: An attempt was made to create multiple domain indexes on a column list using indextypes which do not have disjoint operators.

Action: Check to see if the operator sets for the indextypes can be made disjoint.

ORA-29881: failed to validate indextype

Cause: An attempt to validate the indextype that was referenced by the domain index failed.

Action: Verify that the indextype that is referenced by the domain index exists in the database, and then compile the indextype.

ORA-29882: insufficient privileges to execute indextype

Cause: User does not have privileges to execute the indextype.

Action: The owner of the indextype must grant appropriate privileges to the user.

ORA-29883: cannot create a domain index on column expressions

Cause: User specified an expression in the column list.

Action: Specify only simple columns in the column list for domain index.

ORA-29884: A domain index is defined on the column to be dropped.

Cause: An ALTER TABLE DROP COLUMN command was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to drop the column.

ORA-29885: domain index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to modify the column.

ORA-29886: feature not supported for domain indexes

Cause: An attempt was made to use a feature that is unsupported by domain indexes.

Action: Drop the domain index or avoid using the unsupported feature.

ORA-29887: cannot support row movement if domain index defined on table

Cause: An ALTER TABLE ENABLE ROW MOVEMENT was issued on a table which has a domain index defined on it.

Action: Drop the domain index if you want to enable row movement and then reissue the command.

ORA-29888: cannot create domain index on a table with row movement enabled

Cause: A create domain index statement was issued on a table that has row movement enabled.

Action: Disable the row movement in the table and then reissue the create domain index statement.

ORA-29890: primary operator *string.string* does not have an index context

Cause: An attempt was made to create an ancillary operator whose primary operator did not have index and scan contexts.

Action: Specify a primary operator that uses index and scan contexts, and computes ancillary data when creating an ancillary operator. *Params: 1) primary operator schema: The schema of the primary operator. 2) primary operator name: The name of the primary operator.

ORA-29892: Indextypes with array DML do not support the specified data type.

Cause: The statement used a REF or a LONG data type which is not supported in a CREATE INDEXTYPE or ALTER INDEXTYPE statement using a WITH ARRAY DML clause.

Action: Retry the statement without the REF or LONG data type.

ORA-29893: INDEXTYPE without column data do not need the specified data type.

Cause: The WITH ARRAY DML statement with explicit data types for a CREATE INDEXTYPE or ALTER INDEXTYPE statement was used with a WITHOUT COLUMN DATA clause.

Action: Remove the WITHOUT COLUMN DATA clause, or remove the explicit data types on the WITH ARRAY DML clause. Retry the statement.

ORA-29894: Base or varray data type *string.string* does not exist.

Cause: One of the base and varray data types specified in the WITH ARRAY DML clause could not be found.

Action: Check to see if the data type exists, is in a valid state, and that the user has EXECUTE privilege on this data type. *Params: 1) type_schema: The schema of the missing type. 2) type_name: The name of the missing type.

ORA-29895: A duplicate base data type was specified.

Cause: An attempt was made to add a base data type to an indextype with an ARRAY DML that is already supported by the indextype.

Action: Remove the duplicate base data type and retry the command.

ORA-29896: Length of PARAMETER string longer than *string* characters

Cause: An attempt was made to specify a parameter value that is longer than the allowed maximum.

Action: Reduce the parameter value length.

ORA-29897: invalid domain index *string.string* found on the same column

Cause: An attempt was made to create a domain index on the same column where an invalid domain index exists.

Action: Drop the invalid index and then reissue the CREATE INDEX statement. *Params: 1) index_schema: The schema of the domain index. 2) index_name: The name of the domain index.

ORA-29900: The invocation of operator *string* does not match operator bindings.

Cause: An attempt was made to invoke an operator that had a set of arguments whose data types did not match any operator binding.

Action: Change the operator arguments to match any of the existing bindings or add a new binding to the operator. *Params: 1) operator_name: The name of the operator.

ORA-29901: Function underlying operator binding does not exist.

Cause: Attempted to invoke an operator binding in a query and the underlying PL/SQL function was invalid or does not exist.

Action: Verify that the function corresponding to the operator invocation exists and is in a valid state.

ORA-29902: Error while processing the ODCIINDEXSTART routine for index *string.string.instring*

Cause: Processing the ODCIINDEXSTART routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXSTART routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29903: Error while processing ODCIINDEXFETCH routine for index *string.string.instring*

Cause: Running the ODCIINDEXFETCH routine caused an error. Its implementation returned the ODCI_ERROR return code.

Action: Review the other error messages associated with this error, and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXFETCH routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29904: Error while processing ODCIINDEXCLOSE routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXCLOSE routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXCLOSE routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29905: method *string* does not exist in type *string.string*

Cause: A required method with the required signature does not exist in the specified type.

Action: Add the required method to the type.

ORA-29906: indextype *string.string* does not exist

Cause: The indextype does not exist.

Action: Create the indextype.

ORA-29907: duplicate labels found in primary operator calls

Cause: There were multiple primary calls to operators with the same number in their label argument.

Action: Specify unique label arguments to the primary operator calls.

ORA-29908: missing primary invocation for ancillary operator

Cause: An ancillary operator was used and either the label argument to the ancillary operator did not match the label argument of any primary invocation, or the primary invocation could not be found in the same query block as the ancillary operator.

Action: Ensure the ancillary operator and the primary invocation have matching labels and are present on the same query block.

ORA-29909: label for the ancillary operator is not a literal number

Cause: The label used for invoking the ancillary operator was not a numeric constant.

Action: Use a constant literal number as the label to the ancillary operator.

ORA-29910: invalid callback operation

Cause: Encountered an invalid callback operation.

Action: Ensure that all the callbacks executed from callouts are valid in the statement context.

ORA-29911: null scan context returned by *string* routine

Cause: The specified routine returned a null scan context.

Action: Ensure that the routine returns a non-null scan context. *Params: 1)
data_cartridge_routine: The name of the Oracle Data Cartridge Interface (ODCI) routine that returned a null scan context.

ORA-29913: error while processing *string* routine

Cause: Either processing the specified data cartridge routine caused an error, or the implementation of the data cartridge routine returned the ODCI_ERROR return code.

Action: Review the other error messages associated with this error and take the appropriate action to resolve them.

ORA-29914: ODCIGETINTERFACES routine does not return required stream version

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the required stream version for external tables.

Action: Ensure that the ODCIGetInterfaces routine returns the required stream version.

ORA-29915: FOR UPDATE clause cannot be used when selecting a collection operand.

Cause: Collection operands cannot be updated.

Action: Remove FOR UPDATE clause.

ORA-29917: cannot lock a table which gets its rows from a collection operand

Cause: Tables which gets its rows from a collection operand cannot be locked

Action: Don't lock the table

ORA-29918: cannot create domain indexes on temporary tables

Cause: An attempt was made to create a domain index on a temporary table

Action: Either create another type of index on the temporary table or change the table from temporary to a permanent table

ORA-29919: Error while processing ODCIINDEXUPDPARTMETADATA routine for index *string.string.instring*

Cause: Processing of the ODCIINDEXUPDPARTMETADATA routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXUPDPARTMETADATA routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29920: Partition maintenance operation failed on secondary table *string.string*.

Cause: Failed to successfully process the partition maintenance operation of a secondary table in a system managed domain index.

Action: Review and solve the errors below this error and retry. If errors cannot be resolved, contact Oracle Support Services. *Params: 1) Secondary table schema: The schema of the domain index secondary table. 2) Secondary table name: The name of the domain index secondary table.

ORA-29921: ancillary operator not supported with set view query block

Cause: The ancillary operator matched to a primary operator was outside a UNION ALL view query block while the primary operator was contained in one of the UNION ALL branches.

Action: Define the UNION ALL view query block to contain both the primary and ancillary operators, so that the operators are contained by the query block in the UNION ALL branch, rather than in the query block outside of the view.

ORA-29922: Scan of domain index "*string*". "*string*" returned an invalid ROWID.

Cause: The scan of the specified domain index returned an incorrectly formatted ROWID.

Action: Ensure the implementation of the data cartridge index maintenance methods are correct. For external implementations, review the documentation of the data cartridge from the external vendor. Otherwise, contact Oracle Support. *Params: 1) index_schema: The schema of the domain index. 2) index_name: The name of the domain index.

ORA-29925: missing or unexpected signature for *string* routine

Cause: An attempt was made to invoke a routine for a data cartridge that did not exist or did not have the appropriate signature.

Action: Implement the missing routine with the appropriate signature. *Params: 1)
data_cartridge_routine_name: The name of the Oracle Database Data Cartridge interface whose signature is missing or does not match the expected signature.

ORA-29926: association already defined for the object

Cause: The object for which the association is being defined, already has a statistics type associated with it.

Action: Disassociate the object and then associate the object.

ORA-29927: error in executing the ODCIStatsCollect / ODCIStatsDelete routine

Cause: The ODCIStatsCollect / ODCIStatsDelete function is causing an error.

Action: Check the ODCIStatsCollect / ODCIStatsDelete function.

ORA-29928: duplicate default selectivity specified

Cause: The keyword DEFAULT SELECTIVITY can only be specified once.

Action: Remove the duplicate keyword.

ORA-29929: missing SCAN keyword

Cause: The CREATE OPERATOR or ALTER OPERATOR statement was expecting the SCAN keyword, but the entry was missing or a different token was used.

Action: Check the syntax for the CREATE OPERATOR or ALTER OPERATOR statement and specify the SCAN keyword where appropriate.

ORA-29930: COMPUTE ANCILLARY DATA specified without the INDEX CONTEXT clause

Cause: The COMPUTE ANCILLARY DATA option was specified without the WITH INDEX CONTEXT clause.

Action: Specify the WITH INDEX CONTEXT clause.

ORA-29931: specified association does not exist

Cause: One or more of the object(s) that have been specified to be disassociated, do not have an association defined for them.

Action: Verify the objects which have an association defined and issue the disassociate command again.

ORA-29932: the type being dropped is a statistics type

Cause: Some objects have defined their statistics methods in the type being dropped.

Action: First drop the relevant associations using the DISASSOCIATE command and then retry the DROP command, or use the FORCE option with DROP TYPE command.

ORA-29933: object being disassociated has some user defined statistics stored

Cause: There are some user defined statistics collected for the object being disassociated.

Action: First delete the user defined statistics and then reissue the DISASSOCIATE command or specify the FORCE option with DISASSOCIATE.

ORA-29934: index specified for association is not a domain index

Cause: The user issued an ASSOCIATE STATISTICS command with an index which is not a domain index.

Action: Issue an ASSOCIATE STATISTICS WITH INDEXES command on a domain index only

ORA-29935: missing FROM keyword

Cause: The keyword FROM is missing.

Action: Specify the FROM keyword or check the SQL statement.

ORA-29936: NULL association is allowed only with a column or an index

Cause: User tried to use the ASSOCIATE command with a schema object other than a column or an index

Action: Specify the NULL clause only with a column or an index

ORA-29937: domain index cannot be system-managed

Cause: An ASSOCIATE STATISTICS command was issued with a domain index which is system-managed.

Action: Check to see if the domain index has been implemented with system-managed storage tables. To associate statistics with a system-managed domain index, issue ASSOCIATE STATISTICS command with the indextype of this domain index.

ORA-29938: both indextype and statistics type should be system-managed

Cause: Either an ASSOCIATE STATISTICS WITH SYSTEM MANAGED STORAGE TABLES command was issued with an indextype which is not system-managed, or an ASSOCIATE STATISTICS command was issued with an indextype which is system-managed.

Action: Check to see if both indextype and statistics type are implemented with system-managed storage tables.

ORA-29939: failed to implicitly transform user-managed domain index *string.string* to system-managed domain index

Cause: An attempt was made to convert a user-managed indextype into a system-managed indextype and the subsequent implicit validation of the domain indexes could not be completed.

Action: Issue an ALTER INDEX COMPILE statement on the domain index. *Params: 1) index_schema: The schema of the domain index. 2) index_name: The name of the domain index.

ORA-29940: User-managed domain indexes are not allowed on interval-partitioned tables.

Cause: An attempt was made to create a local user-managed domain index on an interval-partitioned table.

Action: Convert the underlying index type to system-managed.

ORA-29941: cannot convert a table with user-managed local domain indexes to an interval-partitioned table

Cause: An attempt was made to convert a range-partitioned table with local user-managed domain indexes to an interval-partitioned table.

Action: Either convert the underlying indextype to system-managed or drop the local user-managed domain index before converting the table to an interval-partitioned table.

ORA-29950: ODCI_WARNING returned by the implementation of the ODCIINDEXMERGEPARTITION routine for index *string.string.\nstring*

Cause: The processing of the ODCIINDEXMERGEPARTITION routine returned the ODCI_WARNING return code.

Action: Review the errors associated with this warning and take the appropriate action to resolve them. *Params: 1) *index_owner*: The schema name of the index. 2) *index_name*: The name of the index. 3) *error_summary*: A string describing the underlying errors encountered by the ODCIINDEXMERGEPARTITION routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_WARNING return code.

ORA-29951: ODCI_WARNING returned by the implementation of the ODCIINDEXSPLITPARTITION routine for index *string.string.\nstring*

Cause: The processing of the ODCIINDEXSPLITPARTITION routine returned the ODCI_WARNING return code.

Action: Review the errors associated with this warning and take the appropriate action to resolve them. *Params: 1) *index_owner*: The schema name of the index. 2) *index_name*: The name of the index. 3) *error_summary*: A string describing the underlying errors encountered by the ODCIINDEXSPLITPARTITION routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_WARNING return code.

ORA-29952: Cannot modify domain index partition *string* which is in LOADING status.

Cause: An attempt was made to issue a DDL statement that affected a domain index partition in LOADING status.

Action: Retry the operation when the operation affecting the domain index partition has completed. Contact Oracle Support if the status of the domain index partition remains in the LOADING state.

ORA-29953: Cannot issue a DDL statement on domain index partition *string* which is in FAILED status.

Cause: Attempted to start a partition maintenance operation on a table with the specified domain index partition in a FAILED state or to modify the parameters of that specified domain index partition in a FAILED state.

Action: Rebuild the index partition by using the ALTER INDEX REBUILD PARTITION statement or remove all rows from the partition using the ALTER TABLE TRUNCATE PARTITION statement.

ORA-29954: Domain index partition *string* is marked *string* and currently not usable.

Cause: An attempt was made to access a domain index partition that was either: * being built, or * marked FAILED, or * marked LOADING, or * marked UNUSABLE by an unsuccessful Data Definition Language (DDL) statement.

Action: Wait for the domain index operation on the partition to complete if it is marked LOADING. Rebuild the domain index partition if it is marked FAILED or UNUSABLE. *Params: 1) *partition_name*: The name of the domain index partition. 2)

partition_status: The status of the domain index partition. The statuses: LOADING, FAILED, or UNUSABLE.

ORA-29955: Error while processing ODCIINDEXEXCHANGEPARTITION routine for index *string.string.instring*

Cause: The processing of the ODCIINDEXEXCHANGEPARTITION routine caused an error, or its implementation returned the ODCI_ERROR return code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXEXCHANGEPARTITION routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29956: ODCI_WARNING returned during the ODCIINDEXEXCHANGEPARTITION routine implementation for index *string.string.instring*

Cause: When implementing the ODCIINDEXEXCHANGEPARTITION routine, a nonfatal warning condition occurred.

Action: Review the messages associated with this warning, and take the appropriate action to resolve them. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXEXCHANGEPARTITION routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_ERROR return code.

ORA-29957: cannot create a function-based domain index on a *string* table

Cause: User specified an unsupported create function-based domain index statement.

Action: Issue the create function-based domain index statement only on supported types of tables.

ORA-29958: ODCI_FATAL returned by the implementation of the ODCIINDEXCREATE routine for index *string.string.instring*

Cause: Implementation of the ODCIINDEXCREATE routine of a domain index returned the ODCI_FATAL error code.

Action: Review the error messages associated with this error, take the appropriate action to resolve, and retry. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXCREATE routine; either by being raised from the implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_FATAL return code.

ORA-29959: Error while executing the *string* routine for one or more index partitions of index *string.string.instring*

Cause: Execution of specified data cartridge routine returned an ODCI_ERROR_CONTINUE return code while processing one or more index partitions.

Action: Review the other error messages associated with this error and take the appropriate action to resolve them. Check the dictionary views to see which partitions are marked FAILED. Rebuild or truncate the FAILED index partitions. *Params: 1) routine_name: The name of the Oracle Data Cartridge Interface (ODCI) routine that encountered an error. 2) index_owner: The schema name of the index. 3) index_name: The name of the index. 4) error_summary: A string describing the underlying errors encountered by the routine; either

by being raised from the routine's implementation of the routine or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_FATAL return code.

ORA-29960: line *string*, *string*

Cause: The Oracle Data Cartridge Interface (ODCI) extensible indexing data definition language (DDL) routine had put a warning message into the SYS.ODCI_WARNINGS\$ table.

Action: Review the warning message raised by the ODCI extensible indexing DDL routine. *Params: 1) line_number: The line number identifier provided by the Oracle Data Cartridge implementation to identify the external warning. 2) warning_message: The warning message raised by the Oracle Data Cartridge implementation.

ORA-29961: cannot report all warnings registered from data cartridge DDL routine

Cause: A data cartridge implementation of the extensible indexing interface (ODCIINDEX) registered a large number of exceptions to table SYS.ODCI_WARNINGS\$ during the execution of a DDL statement.

Action: Review all the reported warning messages by querying table SYS.ODCIWARNINGS\$.

ORA-29962: ODCI_FATAL returned by the implementation of the ODCIINDEXALTER routine for index *string.string.instring*

Cause: The implementation of the ODCIINDEXALTER routine of a domain index returned the ODCI_FATAL error code.

Action: Review the error messages associated with this error and take the appropriate action to resolve them. Rebuild the domain index or domain index partitions that are marked as FAILED, and retry the operation. *Params: 1) index_owner: The schema name of the index. 2) index_name: The name of the index. 3) error_summary: A string describing the underlying errors encountered by the ODCIINDEXALTER routine; either by being raised from the routine's implementation or by being registered in the SYS.ODCI_WARNINGS\$ table prior to returning the ODCI_FATAL return code.

ORA-29963: missing BINDING keyword

Cause: The CREATE OPERATOR or ALTER OPERATOR statement expected the BINDING keyword. Instead, it missed the token or used a different one.

Action: Check the syntax for the CREATE OPERATOR or ALTER OPERATOR statement, and specify the BINDING keyword as appropriate.

ORA-29964: missing ADD or DROP keyword

Cause: One of the keywords ADD or DROP is expected.

Action: Specify the ADD or DROP keyword or check the SQL statement.

ORA-29965: specified binding does not match existing bindings

Cause: The binding specified in the DROP BINDING clause did not match any of the existing bindings associated with the operator.

Action: Specify an existing binding for this operator in the DROP BINDING clause of the ALTER OPERATOR statement.

ORA-29966: Cannot drop the operator binding. At least one function binding is required.

Cause: An attempt was made to drop the only or last binding of an operator.

Action: To drop the operator, use the DROP OPERATOR statement instead.

ORA-29967: cannot drop an operator binding with dependent objects

Cause: The operator binding that is being dropped had dependent objects.

Action: Either drop the dependent objects first and then issue the ALTER OPERATOR DROP BINDING statement or specify the FORCE option with the ALTER OPERATOR DROP BINDING statement.

ORA-29968: No primary operator bindings found for ancillary binding #string of operator string.string.

Cause: At least one ancillary binding of the specified operator could not be validated because all of its associated primary operator bindings have been dropped.

Action: Either drop the ancillary binding whose primary operators are missing, or drop the entire operator if this is the only binding. *Params: 1) binding_number: The binding number identifying the argument combination of the operator. 2) operator_schema: The schema of the operator object. 3) operator_name: The name of the operator object.

ORA-29969: failure in updating parameter, invalid value(s) supplied: string

Cause: One of the values for this multi-valued parameter was invalid.

Action: Correct the invalid value and re-run the command.

ORA-29970: Specified registration id does not exist

Cause: An incorrect regid value was passed to dbms_chnf procedure.

Action: pass the correct regid value.

ORA-29971: Specified table name not found or does not have any registrations

Cause: The database could not locate the passed in table name

Action: Check the table name passed in.

ORA-29972: user does not have privilege to change/ create registration

Cause: User passed in an incorrect or someone else's regid/ handle.

Action: Check the passed in regid/ reg handle

ORA-29973: Unsupported query or operation during change notification registration

Cause: The user attempted to register an unsupported query type or an unsupported operation like a DML/DDI for change notification.

Action: Please check the statement being executed and refer to the documentation.

ORA-29974: Internal event for PL/SQL debugging

Cause: None

Action: None

ORA-29975: Cannot register a query in the middle of an active transaction

Cause: User tried to register a query within an uncommitted transaction.

Action: Commit the transaction and retry.

ORA-29976: Unsupported query for registration in guaranteed mode

Cause: An operator or expression in the query was incompatible with query registration in the guaranteed granularity mode.

Action: Check all expressions, clauses and operators in the query and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29977: Unsupported column type for query registration in guaranteed mode

Cause: An attempt was made to register a query with an unsupported column type or too many columns.

Action: Examine all column datatypes in the expression and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29978: Internal event for tracing Inband Notifications

Cause: None

Action: None

ORA-29979: unsupported row size for query result change notification

Cause: An attempt was made to register query result change notification (QRCN) on a table with more than 255 columns.

Action: Use object change notification (OCN) instead.

ORA-29981: Cannot register query: conflicting DDL in progress

Cause: A query registration was attempted while there was a concurrent DDL in progress.

Action: Retry the query registration.

ORA-29982: Table type not supported for query registration in guaranteed mode

Cause: The user attempted to register a query involving an unsupported table type.

Action: Examine all tables in the query registration and refer to the documentation for supported table types. The application can reattempt registration in best effort mode.

ORA-29983: Unsupported query for Continuous Query Notification

Cause: The query cannot be registered for Continuous Query Notification.

Action: The query has some constructs that make it incompatible with Continuous Query Notification like synonyms or views. Please check the documentation for complete list.

ORA-29984: Internal event to force CHNF registrations

Cause: None

Action: None

ORA-29985: Query Registration is only supported for automatic undo management

Cause: User is using manual undo management

Action: Switch to using automatic undo management

ORA-30000: missing either trim specification or char expression in TRIM

Cause: Since FROM is specified in TRIM function, either trim specification (TRAILING, HEADING, BOTH) or trim character or both must be specified.

Action: Add either trim specification (TRAILING, HEADING, BOTH) or trim character or both.

ORA-30001: trim set should have only one character

Cause: Trim set contains more or less than 1 character. This is not allowed in TRIM function.

Action: Change trim set to have only 1 character.

ORA-30002: SYS_CONNECT_BY_PATH function is not allowed here

Cause: SYS_CONNECT_BY_PATH function was called at places other than the SELECT list and ORDER BY clause.

Action: Remove calls to SYS_CONNECT_BY_PATH function at places other than the SELECT list and ORDER BY clause.

ORA-30003: illegal parameter in SYS_CONNECT_BY_PATH function

ORA-30004: when using SYS_CONNECT_BY_PATH function, cannot have separator as part of column value

Cause: A column value contained the string that the SYS_CONNECT_BY_PATH function was to use to separate column values.

Action: Specify another separator for the SYS_CONNECT_BY_PATH function to use which does not occur in any column value, then retry.

ORA-30005: missing or invalid WAIT interval

Cause: A non-zero integer must be specified for wait interval (in seconds) after the WAIT keyword.

Action: Correct the syntax and retry.

ORA-30006: resource busy; acquire with WAIT timeout expired or DTP service is unavailable

Cause: The requested resource was busy or the Distributed Transaction Processing (DTP) service was being relocated.

Action: Retry the operation later.

ORA-30007: CONNECT BY ROOT operator is not supported in the START WITH or in the CONNECT BY condition

Cause: An attempt was made to use CONNECT BY ROOT operator in the START WITH or in the CONNECT BY condition.

Action: Remove CONNECT BY ROOT operator from the START WITH or from the CONNECT BY condition.

ORA-30008: CONNECT BY clause must reference a PRIOR

Cause: A CONNECT BY clause did not include a predicate referencing a PRIOR so there was no condition connecting a parent row to its child row.

Action: Add a reference to a PRIOR in the CONNECT BY clause.

ORA-30009: Not enough memory for *string* operation

Cause: The memory size was not sufficient to process all the levels of the hierarchy specified by the query.

Action: In WORKAREA_SIZE_POLICY=AUTO mode, set PGA_AGGREGATE_TARGET to a reasonably larger value. Or, in WORKAREA_SIZE_POLICY=MANUAL mode, set SORT_AREA_SIZE to a reasonably larger value.

ORA-30010: Not enough I/O buffers for the sort operation

Cause: The sort was unable to allocate enough I/O buffers.

Action: Increase the amount of memory allowed for the sort or increase the maximum number of I/O buffers allowed in the system and retry the query.

ORA-30011: Error simulated: psite=*string*, ptype=*string*

Cause: error generated for testing purposes.

Action: None

ORA-30012: undo tablespace '*string*' does not exist or of wrong type

Cause: the specified undo tablespace does not exist or of the wrong type.

Action: Correct the tablespace name and reissue the statement.

ORA-30013: undo tablespace '*string*' is currently in use

Cause: the specified undo tablespace is currently used by another instance.

Action: Wait for the undo tablespace to become available or change to another name and reissue the statement.

ORA-30014: operation only supported in Automatic Undo Management mode

Cause: the operation is only supported in automatic undo mode.

Action: restart instance in Automatic Undo Management mode before retrying operation.

ORA-30015: previously offlined undo tablespace '*string*' is still pending

Cause: the current operation is not allowed because an undo tablespace containing active transactions is pending from a previous SWITCH UNDO operation. The operation will be allowed again after all transactions in the previous undo tablespace are committed.

Action: Wait for all previous transactions to commit before reissuing the current statement.

ORA-30016: undo tablespace '*string*' is already in use by this instance

Cause: the specified undo tablespace is currently used by this instance. The operation failed.

Action: If the specified undo tablespace name is wrong, reissue the statement with the correct name.

ORA-30017: segment '*string*' is not supported in *string* Undo Management mode

Cause: the type of the specified undo segment is incompatible with the current undo management mode of the instance.

Action: Check the undo segment name and the undo management mode and reissue statement if necessary.

ORA-30018: Create Rollback Segment failed, USN *string* is out of range

Cause: the system runs out of undo segment number. Too many undo segments exist.

Action: drop some of the unused undo segments and retry operation.

ORA-30019: Illegal rollback Segment operation in Automatic Undo mode

Cause: This operation only allowed in Manual Undo mode.

Action: restart instance in Manual Undo_Management mode and retry operation.

ORA-30021: Operation not allowed on undo tablespace

Cause: This operation is not allowed on undo tablespaces

Action: Check the tablespace name and reissue command if necessary

ORA-30022: Cannot create segments in undo tablespace

Cause: Cannot create segments in undo tablespace

Action: Check the tablespace name and reissue command

ORA-30023: Duplicate undo tablespace specification

Cause: Cannot create more than one undo tablespace during database creation

Action: Modify the command to contain only one undo tablespace

ORA-30024: Invalid specification for CREATE UNDO TABLESPACE

Cause: You have specified an clause that should not used with CREATE UNDO TABLESPACE

Action: Drop the clause from the command and reissue it.

ORA-30025: DROP segment '*string*' (in undo tablespace) not allowed

Cause: Explicit DROP operation is not allowed on undo tablespace segments

Action: Check the undo segment name and reissue statement if necessary.

ORA-30026: Undo tablespace '*string*' has unexpired undo with *string*(sec) left, Undo_Retention=*string*(sec)

Cause: Tried to drop a tablespace that contains unexpired undo information

Action: lower setting of UNDO_RETENTION or wait a while before reissue command to drop undo tablespace

ORA-30027: Undo quota violation - failed to get *string* (bytes)

Cause: the amount of undo assigned to the consumer group of this session has been exceeded.

Action: ask DBA to increase undo quota, or wait until other transactions to commit before proceeding.

ORA-30029: no active undo tablespace assigned to instance

Cause: the current instance does not have an active undo tablespace assigned to execute transactions.

Action: ask DBA to create an undo tablespace, online the undo tablespace and then retry operation.

ORA-30030: suppress resumable related error message

Cause: none

Action: This event is to be used if the errors 30031 and 30032 wish to be suppressed.

ORA-30031: the suspended (resumable) statement has been aborted

Cause: DBA or the user aborted the execution of the suspended statement in the resumable session

Action: None

ORA-30032: the suspended (resumable) statement has timed out

Cause: A correctible error was signaled in the resumable session and the error was not cleared within the timeout interval.

Action: Fix the correctible error within the timeout. Default is 2 hours. Or increase the (resumable) timeout.

ORA-30033: Undo tablespace cannot be specified as default user tablespace

Cause: It is incorrect to specify undo tablespace as default user tablespace

Action: Check the tablespace name and reissue the command

ORA-30034: Undo tablespace cannot be specified as the default temporary tablespace.

Cause: An undo tablespace was specified as the default temporary tablespace.

Action: Specify a temporary tablespace as the default temporary tablespace.

ORA-30035: Undo tablespace cannot be specified as default temporary tablespace

Cause: Undo tablespace cannot be specified as default temporary tablespace for the database

Action: Check the tablespace name and reissue the command

ORA-30036: unable to extend segment by *string* in undo tablespace '*string*'

Cause: the specified undo tablespace has no more space available.

Action: Add more space to the undo tablespace before retrying the operation. An alternative is to wait until active transactions to commit.

ORA-30037: Cannot perform parallel DML after a prior DML on the object

Cause: Attempt to perform parallel DML after another DML on the same object in the same transaction.

Action: Use bitmap segments to perform multiple (parallel) DML operations on the same object. Or commit before issuing the DML

ORA-30038: Cannot perform parallel insert on non-partitioned object

Cause: Attempt to perform parallel insert on a non-partitioned object after a previous DML on the object in the same transaction.

Action: Commit before issuing the insert.

ORA-30039: Cannot drop the undo tablespace

Cause: Cannot drop an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to drop

ORA-30040: The undo tablespace is offline.

Cause: Cannot operate on an undo tablespace that is offline.

Action: Bring the undo tablespace back online and rerun the operation.

ORA-30041: Cannot grant quota on the tablespace

Cause: User tried to grant quota on an undo or temporary tablespace

Action: Check the tablespace name and reissue the command

ORA-30042: Cannot offline the undo tablespace

Cause: Cannot offline an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to offline

ORA-30043: Invalid value '*string*' specified for parameter 'Undo_Management'

Cause: the specified undo management mode is invalid

Action: Correct the parameter value in the initialization file and retry the operation.

ORA-30044: RETENTION can only specified for an undo tablespace

Cause: An attempt was made to specify RETENTION for a tablespace that is not an undo tablespace.

Action: Modify the CREATE TABLESPACE statement.

ORA-30045: No undo tablespace name specified

Cause: If Create Database has the datafile clause, then undo tablespace name has to be specified, unless using OMF.

Action: Specify the undo tablespace name.

ORA-30046: Undo tablespace *string* not found in control file.

Cause: The specified undo tablespace is not present in the control file.

Action: Modify the CREATE CONTROLFILE statement that created the current control file to include undo tablespace(s) and reissue the statement.

ORA-30051: VERSIONS clause not allowed here

Cause: A VERSIONS clause was specified when it was not allowed.

Action: Do not use the VERSIONS clause

ORA-30052: invalid lower limit snapshot expression

Cause: The lower limit snapshot expression was below the UNDO_RETENTION limit.

Action: Specify a valid lower limit snapshot expression.

ORA-30053: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is greater than the SQL statement read snapshot.

Action: Specify a valid upper limit snapshot expression.

ORA-30054: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is less than the lower limit snapshot expression.

Action: Specify a valid upper limit snapshot expression.

ORA-30055: NULL snapshot expression not allowed here

Cause: The snapshot expression is NULL.

Action: Specify a non-NULL snapshot expression.

ORA-30063: Internal Event to Test NTP

Cause: none

Action: None

ORA-30067: Internal Event to turn on nested debugging info

Cause: none

Action: None

ORA-30068: Internal Event to turn on nested

Cause: none

Action: None

ORA-30071: conversion between datetime/interval and string fail

Cause: An error occurs during a conversion between datetime/interval and string data type due to one of the following reasons: - The buffer is too short to hold the result. - The format string is bad.

Action: Correct the problem and try again.

ORA-30072: invalid time zone value

Cause: The value specified for the time zone string, which appears in ALTER SESSION statement, environment variable ORA_SDTZ, or a datetime factor, is not valid.

Action: Specify a valid time zone value.

ORA-30073: invalid adjustment value

Cause: The value is none of the followings: 'ADJUST', 'NO_ADJUST', 'ANSI_DATE', 'ADJUST_WITH_ANSI_DATE'. 'NO_ADJUST' is the default value.

Action: set it to one of the three values

ORA-30074: GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE not allowed

Cause: try to GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

Action: Do not GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

ORA-30075: TIME/TIMESTAMP WITH TIME ZONE literal must be specified in CHECK constraint

Cause: User is trying to create a constraint on a time or timestamp with or without time zone column without explicitly specifying the time zone.

Action: Use time or timestamp with time zone literals only.

ORA-30076: invalid extract field for extract source

Cause: The extract source does not contain the specified extract field.

Action: Specify a valid extract field for the extract source.

ORA-30077: illegal casting between specified datatype types

Cause: Cannot cast between the specified datatype types.

Action: No action required.

ORA-30078: partition bound must be TIME/TIMESTAMP WITH TIME ZONE literals

Cause: An attempt was made to use a time/timestamp expression whose format does not explicitly have time zone on a TIME/TIMESTAMP or TIME/TIMESTAMP WITH TIME ZONE column.

Action: Explicitly use TIME/TIMESTAMP WITH TIME ZONE literal.

ORA-30079: cannot alter database time zone when the database contains TIMESTAMP WITH LOCAL TIME ZONE columns

Cause: An attempt was made to alter the database time zone when there were tables containing TIMESTAMP WITH LOCAL TIME ZONE columns in the database.

Action: Do not alter the database time zone when there are tables containing TIMESTAMP WITH LOCAL TIME ZONE columns. Alternatively, export the tables containing TIMESTAMP WITH LOCAL TIME ZONE columns and drop them before altering the database. Finally, re-import the dropped tables.

ORA-30081: invalid data type for datetime/interval arithmetic

Cause: The data types of the operands are not valid for datetime/interval arithmetic.

Action: Specify valid data types for datetime/interval arithmetic.

ORA-30082: datetime/interval column to be modified must be empty to decrease fractional second or leading field precision

Cause: datetime/interval column with existing data is being modified to decrease fractional second or leading field precisions.

Action: Such columns are only allowed to increase the precisions.

ORA-30083: syntax error was found in interval value expression

Cause: A syntax error was found during parsing an interval value value expression.

Action: Correct the syntax.

ORA-30084: invalid data type for datetime primary with time zone modifier

Cause: When a time zone modifier is specified, the data type of datetime primary must be one of the following: TIME, TIME WITH TIME ZONE, TIMESTAMP, TIMESTAMP WITH TIME ZONE.

Action: Specify a valid data type.

ORA-30085: syntax error was found in overlaps predicate

Cause: A syntax error was found during parsing an overlaps predicate.

Action: Correct the syntax.

ORA-30086: interval year-month result not allowed for datetime subtraction

Cause: An attempt was made to specify interval year to month as the result of datetime subtraction.

Action: This is not allowed currently due to unclear specification in SQL Standards for this interval type. Change the interval type to interval day to second and resubmit statement.

ORA-30087: Adding two datetime values is not allowed

Cause: An attempt was made to add two datetime values.

Action: This addition is not allowed.

ORA-30088: datetime/interval precision is out of range

Cause: The specified datetime/interval precision was not between 0 and 9.

Action: Use a value between 0 and 9 for datetime/interval precision.

ORA-30089: missing or invalid *datetime field*

Cause: A *datetime field* (YEAR, MONTH, DAY, HOUR, MINUTE, SECOND) is expected but not found, or a *datetime field* specified the *end field* in an *interval qualifier* is more significant than its *start field*.

Action: n/a

ORA-30091: secondary translation table not loaded

Cause: The secondary translation table for DST patching on TSTZ data was not loaded.

Action: Load the secondary translation table.

ORA-30092: function not allowed at this stage of DST upgrade process

Cause: Query included a function that is not allowed in the current state of DST upgrade process.

Action: This function is not allowed at the current stage of DST upgrade.

ORA-30093: function not allowed until the database is restarted

Cause: Query included a function that is not allowed until the database is restarted.

Action: Shut down and restart the database.

ORA-30094: failed to find the time zone data file for version *string* in \$ORACLE_HOME/oracore/zoneinfo

Cause: There was no corresponding time zone data file in \$ORACLE_HOME/oracore/zoneinfo for the input time zone version.

Action: None

ORA-30095: table created/alterd with TIMESTAMP WITH TIME ZONE not allowed at current DST upgrade stage

Cause: An attempt was made to create or alter a table to have columns of TIMESTAMP WITH TIME ZONE data type or user-defined data types involving TIMESTAMP WITH TIME ZONE data type when DST upgrade is in BEGIN UPGRADE stage.

Action: Re-issue create/alter table DDL after DBMS_DST.BEGIN_UPGRADE is complete.

ORA-30096: imported table "*string*"."*string*" with TIMESTAMP WITH TIME ZONE data is not ready for access

Cause: An attempt was made to read or update an imported table with TIMESTAMP WITH TIME ZONE data, which has not completed the import process through transportable tablespace mode.

Action: Re-issue SQL statement after transportable tablespace import is complete.

ORA-30097: ambiguous TIMESTAMP WITH TIME ZONE data is not allowed at current DST upgrade state

Cause: An attempt was made to insert the ambiguous TIMESTAMP WITH TIME ZONE data into a table that had not completed the Daylight Saving Time upgrade process.

Action: Reissue DML statement after the DST upgrade is complete with the table.

ORA-30098: affected TIMESTAMP WITH TIME ZONE data is not allowed at current DST upgrade state

Cause: An attempt was made to insert the affected TIMESTAMP WITH TIME ZONE data into a table that had not completed the Daylight Saving Time upgrade process.

Action: Reissue DML statement after the DST upgrade is complete with the table.

ORA-30099: delete is not allowed on tables with triggers at current DST upgrade state

Cause: An attempt was made to delete TIMESTAMP WITH TIME ZONE data from a table with triggers that had not completed the Daylight Saving Time upgrade process.

Action: Reissue DML statement after the DST upgrade is complete with the table.

ORA-30100: internal error [*number*]

Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

ORA-30101: unknown parameter name '*string*'

Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

ORA-30102: '*string*' is not in the legal range for '*string*'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

ORA-30103: '*string*' contains an illegal integer radix for '*string*'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

ORA-30104: 'string' is not a legal integer for 'string'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

ORA-30105: 'string' is not a legal boolean for 'string'

Cause: The value is not a valid boolean.

Action: Refer to the manual for allowable boolean values.

ORA-30106: reserved for future use

Cause: None.

Action: None

ORA-30107: parameter name abbreviation 'string' is not unique

Cause: The abbreviation given was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

ORA-30108: invalid positional parameter value 'string'

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

ORA-30109: could not open parameter file 'string'

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

ORA-30110: syntax error at 'string'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30111: no closing quote for value 'string'

Cause: A quoted string was begun but not finished.

Action: Put a closing quote in the proper location.

ORA-30112: multiple values not allowed for parameter 'string'

Cause: You attempted to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

ORA-30113: error when processing file 'string'

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

ORA-30114: error when processing from command line

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

ORA-30115: error when processing an environment variable

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

ORA-30116: syntax error at '*string*' following '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30117: syntax error at '*string*' at the start of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30118: syntax error at '*string*' at the end of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30119: unable to obtain a valid value for '*string*'

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

ORA-30120: '*string*' is not a legal oracle number for '*string*'

Cause: The value is not a valid oracle number.

Action: Refer to the manual for allowable oracle number values.

ORA-30121: '*string*' is not an allowable value for '*string*'

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

ORA-30122: value '*string*' for '*string*' must be between '*number*' and '*number*'

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

ORA-30129: invalid function argument received

Cause: A function received an invalid argument

Action: Check function calls, make sure correct arguments are being passed.

ORA-30130: invalid parameter key type received

Cause: A function received an invalid parameter key type

Action: Check parameter key types in function calls

ORA-30131: number of keys being set exceeds allocation

Cause: Number of parameter keys being set exceeds allocation

Action: Reduce the number of keys being set or increase allocation

ORA-30132: invalid key index supplied

Cause: The key index specified was not within bounds

Action: Change key index to ensure it lies within bounds

ORA-30133: reserved for future use

Cause: None.

Action: None

ORA-30134: reserved for future use

Cause: None.

Action: None

ORA-30135: OCI Thread operation fails

Cause: An OCI Thread function call has failed.

Action: Check the function call to make sure that the correct parameters are being passed and take the appropriate action.

ORA-30136: Drop-in compatibility is not supported for this application

Cause: The current application is statically linked with defopt.o from an older release, which is incompatible with the current client shared library.

Action: 1) Relink the application against the new release of the client library; or 2) Relink the application against the older release of the client library without statically linking defopt.o.

ORA-30150: Invalid argument passed to OCIFile function

Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.

Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.

ORA-30151: File already exists

Cause: Tried to open a file with OCI_FILE_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

ORA-30152: File does not exist

Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

ORA-30153: An invalid File Object is passed to the OCIFile function

Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

ORA-30154: The memory address given as buffer for OCIFileRead/Write is invalid

Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

ORA-30155: An I/O Error occurred during an OCIFile function call

Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depend on the error.

ORA-30156: Out of disk space

Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

ORA-30157: An invalid argument was given to operating system call

Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

ORA-30158: The OCIFileWrite causes the file to exceed the maximum allowed size

Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

ORA-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode

Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

ORA-30160: Unable to access the file

Cause: The function was unable to access the existing the file.

Action: Check if the user has the required permissions on the file.

ORA-30161: A system error occurred during the OCIFile function call

Cause: A system error occurred while executing the OCIFile function.

Action: Depend on the error.

ORA-30162: The OCIFile context is not initialized

Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

ORA-30163: The thread safety initialization failed

Cause: The call to Sglnit failed in OCIFileInit.

Action: Contact support

ORA-30175: invalid type given for an argument

Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

ORA-30176: invalid format code used in the format string

Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

ORA-30177: invalid flag used in a format specification

Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

ORA-30178: duplicate flag used in a format specification

Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

ORA-30179: invalid argument index used in a format code

Cause: Zero or negative argument index or index not following (."

Action: Replace the invalid argument index with a valid one.

ORA-30180: argument index is too large

Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

ORA-30181: integer in argument index is not immediately followed by)

Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

ORA-30182: invalid precision specifier

Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

ORA-30183: invalid field width specifier

Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

ORA-30184: argument type not compatible with a format code

Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

ORA-30185: The output is too large to fit in the buffer.

Cause: The buffer was not large enough to hold the output string.

Action: Increase the buffer size.

ORA-30186: " must be followed by four hexadecimal characters or another "

Cause: In the argument of SQL function UNISTR, a " must be followed by four hexadecimal characters or another "

Action: Fix the string format

ORA-30187: Permission denied for 'string' to access procedure GET_KEY.

Cause: The client was unauthorized to invoke the procedure DBMS_INTERNAL_CLKM.GET_KEY.

Action: DBMS_INTERNAL_CLKM.GET_KEY is an Oracle GoldenGate feature and can only be accessed by Oracle GoldenGate.

ORA-30188: reserved for future use

Cause: None.

Action: None

ORA-30189: reserved for future use

Cause: None.

Action: None

ORA-30190: reserved for future use

Cause: None.

Action: None

ORA-30191: missing argument list

Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

ORA-30192: OGG Service URI: string failed to string process: string name: string - OGG message: string

Cause: Oracle GoldenGate (OGG) AdminService or DistributionService operation failed.

Action: Refer to the Oracle GoldenGate message for required action.

ORA-30193: OGG sharding function called in non-OGG sharding deployment

Cause: Internal error. An Oracle GoldenGate (OGG) specific sharding functionality was called in a non-Oracle GoldenGate sharding deployment.

Action: Contact Oracle Support Services.

ORA-30194: Invalid combination of OGG Sharding deployment parameters specified

Cause: The values specified for Oracle GoldenGate (OGG) sharding deployment parameters (number of shards, number of chunks, replication factor and distribution factor) were not compatible with each other.

Action: Ensure that the following invariants hold for each shardgroup: number of chunks \geq number of shards number of shards \geq replication factor distribution factor \geq replication factor - 1

ORA-30195: OGG command payload contains invalid operation code string

Cause: Internal error. The payload for Oracle GoldenGate (OGG) command sent from the Sharding Catalog to the shard database contained invalid operation code.

Action: Contact Oracle Support Services.

ORA-30196: Sharding configuration parameter 'string' is not set in the shard database.

Cause: Internal error. A database initialization parameter required by the shard database was not set during deployment.

Action: Contact Oracle Support Services.

ORA-30197: reserved for future use

Cause: None.

Action: None

ORA-30198: reserved for future use

Cause: None.

Action: None

ORA-30199: reserved for future use

Cause: None.

Action: None

ORA-30200: Wrong NLS item was passed into OCINlsGetInfo()

Cause: The item is not supported NLS item

Action: Correct the item number passed to OCINlsGetInfo().

ORA-30201: Unable to load NLS data object

Cause: It may be caused by invalid NLS environment setting

Action: Check your NLS environment setting such as ORA_NLS33

ORA-30202: NULL pointer to OCIMsgh was passed to OCIMsg function

Cause: The NULL pointer was passed.

Action: Check your value of OCIMsgh pointer.

ORA-30203: Cannot open message file

Cause: The message may not exist in your system.

Action: Check your message for the given product and facility.

ORA-30204: buffer is not large enough

Cause: The destination buffer is not large enough for storing converted data.

Action: Check the size of the destination buffer.

ORA-30205: invalid Character set

Cause: The specified character set is invalid.

Action: Check if the character set ID is valid.

ORA-30304: Internal error

ORA-30305: Debug mode

ORA-30306: Internal error

ORA-30307: Internal error

ORA-30308: Internal error

ORA-30331: summary does not exist

Cause: A nonexistent summary name was specified.

Action: Check the spelling of the summary name.

ORA-30332: container table already in use by other summary

Cause: Another summary is already using this table as a container table.

Action: Select another table or materialized view as the container table for this summary.

ORA-30333: dimension does not exist

Cause: The dimension named in a dimension DDL statement does not exist.

Action: Check the spelling of the dimension name.

ORA-30334: illegal dimension level name

Cause: A level name in a dimension ddl statement did not conform to SQL identifier rules.

Action: Use a level name that begins with a letter, consists of only letters, digits, and underscores and contains no more than 30 characters.

ORA-30335: JOIN KEY clause references a level not in this hierarchy

Cause: The level name specified with the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not reference a level in the hierarchy that contains the JOIN KEY clause.

Action: Check the spelling of the level name.

ORA-30336: no child for specified JOIN KEY

Cause: The level specified in the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not have a child level.

Action: Check the spelling of the level name referenced in the JOIN KEY clause. If the referenced level is the first level in the hierarchy, you need not and must not specify a JOIN KEY clause.

ORA-30337: multiple JOIN KEY clauses specified for the same parent level

Cause: Multiple JOIN KEY clauses were specified for a given parent level in a dimension hierarchy.

Action: Match up each JOIN KEY clause with the level it references in the hierarchy. Eliminate the redundant JOIN KEY clause.

ORA-30338: illegal dimension hierarchy name

Cause: An illegal dimension hierarchy name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30339: illegal dimension attribute name

Cause: An illegal dimension attribute name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name,

make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30340: illegal dimension name

Cause: An illegal dimension name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30341: dropped level has references

Cause: An attempt was made to drop a level using the default or RESTRICT option in a dimension while references to that level remain in the dimension. References can occur in hierarchies and attributes within the dimension.

Action: First remove any referenes to the level prior to dropping it, or specify the CASCADE option with the DROP LEVEL clause.

ORA-30342: referenced level is not defined in this dimension

Cause: A reference to a level not defined within the dimension was found.

Action: Check the spelling of the level name.

ORA-30343: level name is not unique within this dimension

Cause: Two or more levels were defined with the same name.

Action: Check the spelling of the level names.

ORA-30344: number of child cols different from number of parent level cols

Cause: The number of child columns specified in a JOIN KEY clause is not the same as the number of columns in the specified parent level.

Action: Check the child columns and the columns in the definition of the referenced parent level and correct the discrepancy.

ORA-30345: circular dimension hierarchy

Cause: A circularity was found in a dimension hierarchy.

Action: Check the hierarchy for a level name that occurs more than once.

ORA-30346: hierarchy name must be unique within a dimension

Cause: The same name was used for more than one hierarchy in a dimension.

Action: Check the spelling of the hierarchy name.

ORA-30347: a table name is required to qualify the column specification

Cause: A table name was omitted in a column specification where where the column must be qualified by the table name.

Action: Qualify the column with the table name.

ORA-30348: ADD and DROP cannot both be specified

Cause: One or more ADD clauses were found in the same ALTER DIMENSION statement with one or more DROP clauses.

Action: Separate your ADD operations into one ALTER DIMENSION statement and your DROP operations into another.

ORA-30349: specified dimension hierarchy does not exist

Cause: A hierarchy name was encountered that is not defined within the dimension.

Action: Check the spelling of the hierarchy name.

ORA-30350: specified dimension attribute does not exist

Cause: An attribute name was encountered that is not defined within the dimension.

Action: Check the attribute name spelling.

ORA-30351: query rewrite does not currently support this expression

Cause: A complex expression was specified that is not currently supported by query rewrite.

Action: Reduce the complexity of the expression.

ORA-30352: inconsistent numeric precision or string length

Cause: The SELECT expression was of a different numeric precision or string length than the corresponding container column. Therefore, query rewrite cannot guarantee results that are identical to the results obtained with the un-rewritten query.

Action: Correct the precision or string length difference, specify the WITH REDUCED PRECISION option, or disable the REWRITE option on the materialized view.

ORA-30353: expression not supported for query rewrite

Cause: The SELECT clause referenced UID, USER, ROWNUM, SYSDATE, CURRENT_TIMESTAMP, MAXVALUE, a sequence number, a bind variable, correlation variable, a set result, a trigger return variable, a parallel table queue column, collection iterator, a non-deterministic date format token RR, etc.

Action: Remove the offending expression or disable the REWRITE option on the materialized view.

ORA-30354: Query rewrite not allowed on SYS relations

Cause: A SYS relation was referenced in the select clause for a materialized view with query rewrite enabled.

Action: Remove the reference to the SYS relation from the select clause or disable the REWRITE option on the materialized view.

ORA-30355: materialized view container does not exist

Cause: A DROP TABLE command was issued directly against the materialized view container table.

Action: Use the DROP MATERIALIZED VIEW command to clean up the residual meta data for the materialized view. Then use the CREATE MATERIALIZED VIEW statement to recreate the materialized view. Thereafter, use the DROP MATERIALIZED VIEW command rather than the DROP TABLE command to drop a materialized view.

ORA-30356: the specified refresh method is not supported in this context

Cause: The refresh method that was specified is not currently supported.

Action: Specify a different refresh method or change the context to enable support of the chosen refresh method.

ORA-30357: this PL/SQL function cannot be supported for query rewrite

Cause: The statement referenced a PL/SQL function that is not marked DETERMINISTIC.

Action: Perform one of the following actions: - Remove the use of the PL/SQL function. - Mark the PL/SQL function as DETERMINISTIC. - Disable the REWRITE option on the materialized view. The function should be marked DETERMINISTIC only if it always returns the same result value for any given set of input argument values, regardless of any database state or session state. Do not mark the function as DETERMINISTIC if it has any meaningful side-effects.

ORA-30358: summary and materialized view are not in same schema

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30359: Query rewrite is not supported on SYS materialized views

Cause: An attempt was made to enable the REWRITE option on a materialized view in the SYS schema.

Action: Create the materialized view in a different schema or disable the REWRITE option.

ORA-30360: REF not supported with query rewrite

Cause: The statement contained a REF operator. Repeatable behavior cannot be guaranteed with the REF operator. Therefore, query rewrite cannot support the REF operator.

Action: Remove the reference to the REF operator or disable the REWRITE option on the materialized view.

ORA-30361: unrecognized string type

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30362: dimension column cannot be a sequence

Cause: The dimension statement referenced a column that is a sequence.

Action: Remove the reference to the sequence.

ORA-30363: columns in a dimension column list must be in the same relation

Cause: The dimension statement contained a column list where the columns are not all from the same relation.

Action: Specify the list of columns using only columns from a single relation.

ORA-30364: this level has the same set of columns as another

Cause: The level definition contained the same set of columns as another level.

Action: Eliminate the redundant level definition.

ORA-30365: left relation in the JOIN KEY clause cannot be same as right

Cause: The relation of the child columns on the left side of the JOIN KEY clause was the same as that of the parent level on the right side.

Action: Remove the JOIN KEY clause. It is not required or allowed when the child and the parent are in the same relation.

ORA-30366: child JOIN KEY columns not in same relation as child level

Cause: The relation of the child columns on the left side of the JOIN KEY clause differed from that of that child level.

Action: Specify the correct child columns in the JOIN KEY clause.

ORA-30367: a JOIN KEY clause is required

Cause: A JOIN KEY clause was omitted in a dimension statement. A JOIN KEY clause is required when the child level and the parent level are not in the same relation.

Action: Specify a JOIN KEY clause to indicate how the relation of the child level joins to the relation of the parent level.

ORA-30368: ATTRIBUTE cannot determine column in a different relation

Cause: An ATTRIBUTE clause in a dimension statement specified a determined column on the right that is in a different relation than that of the level on the left.

Action: Specify attributes only for those dimension levels that functionally determine other columns within the same relation.

ORA-30369: maximum number of columns is 32

Cause: A list of columns was specified using more than 32 columns.

Action: Specify the list using no more than 32 columns.

ORA-30370: set operators are not supported in this context

Cause: A set operator such as UNION, UNION ALL, INTERSECT, or MINUS was encountered in an unsupported context, such as in a materialized view definition.

Action: Re-specify the expression to avoid the use of set operators.

ORA-30371: column cannot define a level in more than one dimension

Cause: A column was used in the definition of a level after it had already been used to define a level in a different dimension.

Action: Reorganize dimension levels and hierarchies into a single dimension such that no column is used to define levels in different dimensions. There is no limit on the number of levels or hierarchies you can place in a dimension. A column can be used to define any number of levels provided all such levels are in the same dimension and provided no two levels contain identical sets of columns.

ORA-30372: fine grain access policy conflicts with materialized view

Cause: A fine grain access control procedure has applied a non-null policy to the query for the materialized view.

Action: In order for the materialized view to work correctly, any fine grain access control procedure in effect for the query must return a null policy when the materialized view is being created or refreshed. This may be done by ensuring that the usernames for the creator,

owner, and invoker of refresh procedures for the materialized view all receive a null policy by the user-written fine grain access control procedures.

ORA-30373: object data types are not supported in this context

Cause: An object data type was encountered in an unsupported context.

Action: Re-specify the expression to avoid the use of objects.

ORA-30374: materialized view is already fresh

Cause: If the materialized view is fresh, ORACLE ignores the ALTER MATERIALIZED VIEW *mv* RELY FRESH command, and issues this error message.

Action: None

ORA-30375: materialized view cannot be considered fresh

Cause: If the materialized view is invalid or unusable, it cannot be considered fresh with the ALTER MATERIALIZED VIEW *mv* CONSIDER FRESH command.

Action: None

ORA-30376: prevent sharing of a parsed query of an explain rewrite session

Cause: Explain rewrite generates a shared cursor after parsing the user query. Raising this error will prevent the cursor from being shared.

Action: None

ORA-30377: table *string*.MV_CAPABILITIES_TABLE not found

Cause: You have used the DBMS_MVIEW.EXPLAIN_MVIEW() API before you have defined the MV_CAPABILITIES_TABLE.

Action: Invoke the admin/utlxmv.sql script after connecting to the desired schema.

ORA-30378: MV_CAPABILITIES_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the MV_CAPABILITIES_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE MV_CAPABILITIES_TABLE and recreate it by invoking the admin/utlxmv.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-30379: query txt not specified

Cause: You have attempted use DBMS_MVIEW.EXPLAIN_REWRITE() API using an empty query text argument

Action: Input a valid SQL query

ORA-30380: REWRITE_TABLE does not exist

Cause: You have used the DBMS_MVIEW.EXPLAIN_REWRITE() API before you have created the REWRITE_TABLE.

Action: Create it using the admin/utlxrw.sql script after connecting to the desired schema

ORA-30381: REWRITE_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the REWRITE_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE REWRITE_TABLE and recreate it by invoking the admin/utlxrw.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_REWRITE() API.

ORA-30382: DROP MATERIALIZED VIEW *string.string* operation is not complete

Cause: The drop materialized view operation got an unexpected error while dropping summary object.

Action: Issue the drop materialized view command again

ORA-30383: specified dimension level does not exist in the attribute

Cause: An attribute level was encountered that is not defined within the attribute.

Action: Check the attribute level name spelling.

ORA-30384: specified column name does not exist in the attribute

Cause: A column was encountered that is not defined within the attribute.

Action: Check the attribute column name spelling.

ORA-30385: specified attribute relationship ('string' determines 'string') exists

Cause: The specified attribute relationship has already been declared in one of the attribute clauses

Action: Remove the duplicate attribute relationship

ORA-30386: invalid SQL statement for DECLARE_REWRITE_EQUIVALENCE

Cause: Either the source or destination statement is NULL

Action: Verify both source and destination statement are valid

ORA-30387: invalid rewrite mode for REWRITE_EQUIVALENCE API

Cause: The specified rewrite mode is not supported by REWRITE_EQUIVALENCE API

Action: Verify the rewrite mode is supported by REWRITE_EQUIVALENCE API

ORA-30388: name of the rewrite equivalence is not specified

Cause: The name of the rewrite equivalence is NULL

Action: Input a valid rewrite equivalence name

ORA-30389: the source statement is not compatible with the destination statement

Cause: The SELECT clause of the source statement is not compatible with the SELECT clause of the destination statement

Action: Verify both SELECT clauses are compatible with each other such as numbers of SELECT list items are the same and the datatype for each SELECT list item is compatible

ORA-30390: the source statement is not equivalent to the destination statement

Cause: the set of rows returned by the source SQL text is not the same as the set of rows returned by the destination SQL text

Action: Make sure both source and destination statement return the same number of rows

ORA-30391: the specified rewrite equivalence does not exist

Cause: the specified rewrite equivalence does not exist

Action: Verify the rewrite equivalence has been created

ORA-30392: the checksum analysis for the rewrite equivalence failed

Cause: the given checksum does not match with that generated from the source and destination statements.

Action: Verify the create safe rewrite equivalence statement to see if it has been modified.

ORA-30393: a query block in the statement did not rewrite

Cause: A query block with a REWRITE_OR_ERROR hint did not rewrite

Action: Verify the rewrite equivalence has been created

ORA-30394: source statement identical to the destination statement

Cause: The source statement was identical to the destination statement

Action: Make sure both source and destination statements are not identical

ORA-30397: multiple JOIN KEY clauses specified for the same child level

Cause: Multiple JOIN KEY clauses were specified for a given child level in a dimension hierarchy.

Action: Eliminate the redundant JOIN KEY clauses.

ORA-30398: illegal JOIN KEY clause

Cause: A JOIN KEY clause was specified that did not conform to certain requirements. A JOIN KEY clause connecting a child level with its non-immediate ancestor level is allowed only when that child level and its ancestor level satisfy the following conditions: 1. The immediate parent of the child level must be a skip level. 2. The child level cannot be a skip level. 3. The ancestor level must be a non-skip level. 4. The ancestor level must be the nearest non-skip level to the child level in the hierarchy.

Action: Modify the JOIN KEY clause so that it satisfies the conditions mentioned above.

ORA-30399: a skip level must have at least one column that allows NULL values

Cause: A SKIP clause cannot be specified with a level when all of the columns that make up the level have NOT NULL constraints.

Action: Drop the SKIP clause.

ORA-30400: identical JOIN KEY clauses

Cause: Two JOIN KEY clauses with identical child keys and parent levels were specified.

Action: Eliminate the redundant JOIN KEY clause.

ORA-30401: JOIN KEY columns must be non-null

Cause: The dimension statement failed because the column(s) in the JOIN KEY clause permitted NULL values. The JOIN KEY columns are related to the columns of the dimension's skip levels in one or both of the following ways: 1. A skip level is defined over one or more of the JOIN KEY columns. 2. The attribute clauses of a skip level determine one or more of the JOIN KEY columns.

Action: Modify the JOIN KEY columns so that they do not allow NULL values.

ORA-30403: Daylight Saving Time (DST) upgrade in progress

Cause: Daylight Saving Time upgrade was in progress on a table in the materialized view.

Action: Wait until all tables in the materialized view have gone through DST upgrade.

ORA-30405: hive_table_name missing

Cause: The Hive table name was missing.

Action: Provide the name of the hive table in order to fetch its metadata.

ORA-30406: invalid or missing cluster_id or hive URI

Cause: The cluster ID or the hive URI (Uniform Resource Identifier) or both were missing.

Action: Provide the missing cluster ID or hive URI in order to fetch hive metadata.

ORA-30407: external table not found

Cause: The external table was not found.

Action: Create the specified external table before attempting the operation.

ORA-30408: invalid platform for hive catalog views or DBMS_HADOOP package

Cause: There was an attempt to create hive catalog views or a DBMS_HADOOP package on a platform other than Linux x86-64.

Action: None

ORA-30409: External table partitions are identical to hive table partitions.

Cause: There was an attempt to synchronize an external table with a hive table when external table partitions were identical to the hive table partitions.

Action: None

ORA-30410: External table metadata is incompatible with the source hive table.

Cause: There was an attempt to synchronize an external table with the source hive table with incompatible metadata.

Action: None

ORA-30411: Partition collision occurred because of a data type conversion error.

Cause: There was an attempt to create an Oracle external table partition from a Hive table partition with a partition key value identical to that of an existing partition. The Hive table partition key was of type decimal, but the Oracle table partition key was of type NUMBER(10, 0).

Action: None

ORA-30412: Oracle table to be merged with Hive table is not a Hive external table type.

Cause: An attempt was made to merge external Hive table partitions with a hybrid Oracle table, whose external partitions are not of the Hive type.

Action: None

ORA-30413: Oracle table to be merged with Hive table is already a hybrid partitioned table.

Cause: An attempt was made to merge external Hive table partitions with an already hybrid partitioned Oracle table.

Action: None

ORA-30414: Oracle table to be merged with Hive table must be a list partitioned table.

Cause: An attempt was made to merge external Hive table partitions with an unpartitioned or a non-list partitioned Oracle table.

Action: None

ORA-30415: Oracle table to be merged with Hive table cannot be an external table.

Cause: An attempt was made to merge external Hive table partitions with an Oracle external table.

Action: None

ORA-30416: Hive table to be merged with Oracle table has to be a non-empty partitioned table.

Cause: An attempt was made to merge an external non-partitioned or empty partitioned Hive table with an Oracle table.

Action: None

ORA-30417: The EXTERNAL MODIFY clause cannot be used to modify the location for an ORACLE_BIGDATA external table.

Cause: The EXTERNAL MODIFY clause was used to change the location for an ORACLE_BIGDATA external table.

Action: Create a new external table for the new location.

ORA-30418: cannot lock rows in external partitions of a hybrid partitioned table with SELECT FOR UPDATE

Cause: An attempt was made to lock rows in one or multiple external partitions of a hybrid partitioned table using SELECT FOR UPDATE. Rows in external partitions cannot be locked.

Action: Do not use SELECT FOR UPDATE for external partitions of a hybrid partitioned table. Restrict the SELECT FOR UPDATE to reference only internal partitions of a hybrid partitioned table.

ORA-30420: *string* is not a valid identifier

Cause: All identifiers used in the DBMS_OLAP package must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for DBMS_OLAP identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to the DBMS_OLAP naming rules and try again.

ORA-30430: list does not contain any valid summaries

Cause: List is empty or does not contain the names of existing summaries

Action: Verify that the list of names passed to refresh contains the name of at least one existing summary object

ORA-30431: refresh method must be ANY or INCREMENTAL or FORCE_FULL, not string

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'ANY' or 'INCREMENTAL' or 'FORCE_FULL'

ORA-30432: summary 'string.string' is in INVALID state

Cause: The summary is in INVALID state and cannot be refreshed

Action: n/a

ORA-30433: 'string.string' is not a summary

Cause: There is no such summary, therefore it cannot be refreshed

Action: Verify the correct name of the summary

ORA-30434: refresh method must be one of FC?AN, not 'string'

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'FC?AN'

ORA-30435: job_queue_processes must be non-zero in order to refresh summaries

Cause: The server must be started with parameter 'job_queue_processes' greater than zero

Action: Correct the value of job_queue_processes and restart the server instance

ORA-30436: unable to open named pipe 'string'

Cause: The refresh process was unable to open a named pipe to the job queue process usually because of insufficient system resources

Action: This is an internal error. Notify ORACLE technical support

ORA-30437: all job queue processes have stopped running

Cause: All of the job queue processes used by refresh have stopped for some reason. At least one job queue process must be running in order to refresh summaries.

Action: This is an internal error. Notify ORACLE technical support

ORA-30438: unable to access named pipe 'string'

Cause: The refresh process was unable to access a named pipe to the job queue process after it successfully opened the pipe. This usually indicates an internal or operating system error condition.

Action: This is an internal error. Notify ORACLE technical support

ORA-30439: refresh of 'string.string' failed because of string

Cause: The refresh job queue process encountered an error and is reporting it. The accompanying text of the message indicates cause of the error

Action: Varies, depending upon the reported cause.

ORA-30440: can't fast refresh;refresh complete or set event 30441 for partial refresh

Cause: Both DML and direct-load are performed against detail tables. Fast refresh can only process direct-load inserts.

Action: Refresh complete or set event 30441 to enable partial refresh with only direct-load inserts

ORA-30441: enable partial refresh when both DML and direct load inserts occur

ORA-30442: can not find the definition for filter *string*

Cause: For the specified filterid parameter, there is no corresponding filter definition found in the advisor repository

Action: Use a valid filterid generated by the create_filter function

ORA-30443: definition for filter *string*'s item *string* is invalid

Cause: The specified filter is invalid. It contains at least one invalid filter item. If a filter item has a string list, it becomes illegal when the string list cannot be successfully parsed. If the filter item contains a range definition, and the lower bound of the range is greater than the higher bound, the item also becomes invalid.

Action: Remove the illegal filter with the purge_filter sub-program and redefine a correct filter

ORA-30444: rewrite terminated by the sql analyzer

Cause: The sql analyzer terminates the rewrite process

Action: This is an internal error. Notify ORACLE technical support

ORA-30445: workload queries not found

Cause: No workload queries in the advisor repository can satisfy the specified filter

Action: Redefine a new filter or load additional workload queries that can satisfy the specified filter

ORA-30446: valid workload queries not found

Cause: None of the specified queries can be successfully parsed. The error may come from many sources: SQL syntax error, the owner specified by the load_workload subprograms do not match the real user who generates the SQL statement

Action: Only load valid SQL statements into the advisor repository. Make sure the statements can be parsed with privilege of the owner as specified in the owner parameter of the load_workload() subprogram.

ORA-30447: internal data for run number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_RESULTS subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30448: internal data of the advisor repository is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: This is an internal error. Notify ORACLE technical support

ORA-30449: syntax error in parameter *string*

Cause: The syntax for the specified parameter is incorrect

Action: Check ORACLE documentation for the correct syntax

ORA-30450: refresh_after_errors was TRUE; The following MVs could not be refreshed: *string*

Cause: One or more errors occurred during a refresh of multiple summaries.

Action: The number_of_failures parameter returns the count of how many failures occurred. The trace logs for each refresh operation describe the each individual failure in more detail

ORA-30451: internal error

Cause: An internal error was detected by the summary refresh subsystem, and aborted the refresh operation

Action: Notify ORACLE support.

ORA-30452: cannot compute AVG(X), VARIANCE(X) or STDDEV(X), without COUNT(X) or SUM(X)

Cause: Incremental refresh of summaries requires a COUNT(X) column in order to incrementally refresh AVG(X). It requires both SUM(X) and COUNT(X) columns in order to refresh STDDEV(X) or VARIANCE(X)

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30453: summary contains AVG without corresponding COUNT

Cause: Incremental refresh of summaries with AVG(X) requires a COUNT(X) column to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30454: summary contains STDDEV without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with STDDEV(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30455: summary contains VARIANCE without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with VARIANCE(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30456: '*string.string*' cannot be refreshed because of insufficient privilege

Cause: The user lacks one or more permissions that are required in order to refresh summaries.

Action: Make sure that the user is granted all required privileges.

ORA-30457: '*string.string*' cannot be refreshed because of unmanaged NOT NULL columns in container

Cause: The container object for the summary contains one or more unmanaged columns do not allow nulls, and which do not specify a default value for those columns.

Action: Make sure that default values are specified for all NOT NULL columns that are not part of the summary definition.

ORA-30458: '*string.string*' cannot be refreshed because the refresh mask is *string*

Cause: An attempt was made to incrementally refresh a summary that is not incrementally refreshable.

Action: Do not attempt to incrementally refresh the summary; use full refresh instead.

ORA-30459: '*string.string*' cannot be refreshed because the refresh method is NONE

Cause: An attempt was made to refresh a summary whose refresh method is NONE

Action: Summaries whose refresh method is NONE (NEVER REFRESH) cannot be refreshed. Alter the summary to change the default refresh method from NONE to some other value.

ORA-30460: '*string.string*' cannot be refreshed because it is marked UNUSABLE

Cause: An attempt was made to refresh a summary which is UNUSABLE

Action: Determine why the summary is UNUSABLE, re-enable it, and retry the refresh.

ORA-30461: '*string.string*' cannot be refreshed because it is marked DISABLED

Cause: An attempt was made to refresh a summary which is DISABLED

Action: Determine why the summary is DISABLED, re-enable it, and retry the refresh.

ORA-30462: unsupported operator: *string*

Cause: An attempt was made to refresh a summary containing an unsupported operator

Action: Verify that all columns of the summary contain expressions that are refreshable.

ORA-30463: '*string*' is not a detail table of any summary

Cause: The list of tables passed to refresh_dependent contains at least one invalid table name. That table is not a detail table of any summary and is therefore an invalid input to refresh_dependent

Action: Verify the correct name of all tables in the list

ORA-30464: no summaries exist

Cause: A call was made to refresh_all_mviews, but no summaries exist. At least one summary must exist before calling refresh_all_mviews

Action: Create one or more summaries

ORA-30465: supplied run_id is not valid: *string*

Cause: There are three possible causes: The specified run_id does not exist; the run_id was created by another user other than the current user; the run_id has already been used.

Action: Call DBMS_OLAP.CREATE_ID to create a new id

ORA-30466: can not find the specified workload *string*

Cause: The specified workload_id is not valid

Action: Use a valid workload_id or DBMS_OLAP.WORKLOAD_ALL

ORA-30467: internal data for filter number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_FILTER subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30475: feature not enabled: *string*

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-30476: PLAN_TABLE does not exist in the user's schema

Cause: Estimate_Summary_Size uses Oracle SQL "EXPLAIN PLAN" command to estimate cardinality of the specified select-clause. This requires a table called the PLAN_TABLE in the user's schema. For more information refer to the SQL Reference Manual.

Action: Create the PLAN_TABLE as described for EXPLAIN PLAN. On most systems a script utlxplan.sql will create this table.

ORA-30477: The input select_clause is incorrectly specified

Cause: The input select-clause parameter to Estimate_Summary_Size is incorrectly specified and cannot be compiled.

Action: Check the syntax of the select-clause.

ORA-30478: Specified dimension does not exist

Cause: the specified dimension to be verified does not exist

Action: Check the spelling of the dimension name

ORA-30479: Summary Advisor error\n*string*

Cause: An error has occurred in the Summary Advisor package This message will be followed by a second message giving more details about the nature of the error.

Action: See the Summary Advisor documentation for an explanation of the second error message.

ORA-30480: DISTINCT option not allowed with GROUP BY CUBE or ROLLUP**ORA-30481: GROUPING, GROUPING_ID, and GROUP_ID cannot be used without GROUP BY**

Cause: GROUPING functions were used without specifying the GROUP BY clause.

Action: Grouping functions (GROUPING, GROUPING_ID, and GROUP_ID) are used to identify the exact level of aggregation for a subtotal for a GROUP BY ROLLUP, CUBE or GROUPING SETS query. Specify a GROUP BY clause in the query, and specifically use GROUP BY extensions ROLLUP, CUBE or GROUPING SETS.

ORA-30482: DISTINCT option not allowed for this function

Cause: The aggregation function did not support the DISTINCT option.

Action: If DISTINCT functionality is desired, rewrite the expression. Apply the DISTINCT clause in a nested SELECT statement to produce the desired values, and then apply the aggregation function in an outer SELECT statement.

ORA-30483: window functions are not allowed here

Cause: Window functions are allowed only in the SELECT list of a query. And, window function cannot be an argument to another window or group function.

Action: n/a

ORA-30484: missing OVER clause, or invalid identifier found for window function

Cause: The OVER keyword was expected but not found. It may be due to one of the following reasons. 1. The OVER clause for the window function was missing. 2. There were unexpected identifiers before the OVER keyword. Note that for FIRST_VALUE, LAST_VALUE, NTH_VALUE, LEAD, and LAG, the IGNORE/RESPECT NULLS and FROM FIRST/LAST can only be specified either in the argument or before the OVER keyword. 3. A ranking function was given, and it was intended to be used to aggregate, but the argument of the function was missing.

Action: Fix the syntax by adding the OVER clause for the window function if it was missing, or removing invalid identifiers, or adding an argument for ranking functions.

ORA-30485: missing ORDER BY expression in the window specification

Cause: Either the ORDER BY expression is mandatory for this function, or there is an aggregation group without any ORDER by expression.

Action: n/a

ORA-30486: invalid window aggregation group in the window specification

Cause: If the window specification is specified using RANGE option and there are multiple ORDER BY expressions, then the aggregation group cannot contain any expression (It can only have CURRENT ROW, UNBOUNDED PRECEDING, or UNBOUNDED FOLLOWING). First end point (bound) cannot be UNBOUNDED FOLLOWING and second end point cannot be UNBOUNDED PRECEDING. If the first end point is CURRENT ROW, then second end point can only be CURRENT ROW or *expr* /UNBOUNDED FOLLOWING. If the first end point is *expr* FOLLOWING, then second end point can only be *expr*/UNBOUNDED FOLLOWING.

Action: n/a

ORA-30487: ORDER BY not allowed here

Cause: DISTINCT functions and RATIO_TO_REPORT cannot have an ORDER BY

Action: n/a

ORA-30488: argument should be a function of expressions in PARTITION BY

Cause: The argument of the window function should be a constant for a partition.

Action: n/a

ORA-30489: Cannot have more than one rollup/cube expression list

Cause: GROUP BY clause has more than one rollup/cube expression list.

Action: Modify the query such that only one rollup/cube expressions appear per sub-query.

ORA-30490: Ambiguous expression in GROUP BY ROLLUP or CUBE list

Cause: An expression in the GROUP BY ROLLUP or CUBE list matches an expression in the ordinary GROUP BY expression list

Action: Remove the expression from either ordinary GROUP BY expression list or ROLLUP or CUBE expression list

ORA-30491: missing ORDER BY clause**ORA-30492: One of FIRST or LAST keywords is expected.****ORA-30493: The percentile value specified is out of the range of 0 to 1.**

Cause: The percentile value specified for the PERCENTILE_CONT and PERCENTILE_DISC function was not in the range of 0 to 1.

Action: Specify a value that is in the range of 0 to 1.

ORA-30494: argument [*string*] (*string*) of WIDTH_BUCKET function is NULL or invalid

Cause: An invalid value was specified for the WIDTH_BUCKET function.

Action: Refer to Oracle documentation for a list of valid values for the WIDTH_BUCKET function.

ORA-30495: The argument should be of numeric or date/datetime type.**ORA-30496: argument [*string*] of function *string* should be a constant**

Cause: The specified argument was not a constant.

Action: Change this argument type to be constant.

ORA-30497: argument [*string*] of function *string* should be a constant or a function of expressions in GROUP BY

Cause: The specified argument was neither a constant nor a function of expressions in the GROUP BY clause.

Action: Change the argument type to be a constant or a function of expressions in the GROUP BY clause.

ORA-30498: ALL option not allowed for this function**ORA-30500: database open triggers and server error triggers cannot have BEFORE type**

Cause: An attempt was made to create a trigger that fires before the database is open or before server errors, but these types of triggers are not supported.

Action: Do not attempt to create a trigger that fires before the database is open or before server errors.

ORA-30501: instance shutdown triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after an instance shutdown, but this type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after an instance shutdown.

ORA-30502: system triggers cannot have INSERT, UPDATE, or DELETE as triggering events

Cause: An attempt was made to create a system trigger with INSERT, UPDATE, or DELETE triggering events, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Do not attempt to create a system trigger with INSERT, UPDATE, or DELETE triggering events.

ORA-30503: system triggers cannot have a REFERENCING clause

Cause: An attempt was made to use a REFERENCING clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a REFERENCING clause with a system trigger.

ORA-30504: system triggers cannot have a FOR EACH ROW clause

Cause: An attempt was made to use a FOR EACH ROW clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a FOR EACH ROW clause with a system trigger.

ORA-30505: system triggers should not reference a column in a WHEN clause

Cause: An attempt was made to use a WHEN clause to reference a column with a system trigger, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Change the WHEN clause to an appropriate clause.

ORA-30506: system triggers cannot be based on tables or views

Cause: An attempt was made to base a system trigger on a table or a view.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30507: normal triggers cannot be based on a schema, a database, or a pluggable database

Cause: An attempt was made to base a normal trigger on a schema, a database, or a pluggable database, but normal triggers can be based only on tables or views.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30508: client logon triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before logon. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before logon.

ORA-30509: client logoff triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after logoff. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after logoff.

ORA-30510: system triggers cannot be defined on the schema of SYS user

Cause: An attempt was made to define a system trigger on the schema of SYS user. This type of trigger is not supported currently.

Action: Do not attempt to create a system trigger defined on the schema of SYS user.

ORA-30511: invalid DDL operation in system triggers

Cause: An attempt was made to perform an invalid DDL operation in a system trigger. Most DDL operations currently are not supported in system triggers. The only currently supported DDL operations are table operations, pluggable database operations, ALTER COMPILER operations, and ALTER SESSION operations.

Action: Remove invalid DDL operations in system triggers.

ORA-30512: cannot modify *string.string* more than once in a transaction

Cause: An attempt was made to modify an object more than once in a transaction. This error is usually caused by a Data Definition Language (DDL) statement that generates a system trigger which tries to modify the same object. This error can also happen when an attempt is made to perform more than one DDL operation on a queue table in the same transaction without issuing a commit between operations.

Action: Do not create system triggers that might modify an already modified object. Also, do not specify more than one DDL operation on a queue table in the same transaction.

ORA-30513: cannot create system triggers of INSTEAD OF type

Cause: Only BEFORE or AFTER triggers can be created on system events.

Action: Change the trigger type to BEFORE or AFTER.

ORA-30514: system trigger cannot modify tablespace being made read only

Cause: A before trigger tries to modify a tablespace which is being made READ ONLY as the part of DDL operation

Action: Modify the trigger to avoid modifications to the objects in the same tablespace as the one which is being made read only, or use autonomous transactions to commit modifications

ORA-30515: suspend triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before execution suspended. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before execution suspended.

ORA-30516: database role change triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the role change completed. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before the role change completes.

ORA-30550: index depends on a package/function spec/body which is not valid

Cause: the functional indexes depends on some invalid/non-existent package/function spec/body

Action: verify that all the package/functions which the index depends on exist and are valid

ORA-30551: The index depends on a package/type body which does not exist

Cause: the functional indexes depends on a package/type body which does not exist

Action: create the package/type body

ORA-30552: The package/procedure/function cannot be changed

Cause: The package/procedure/function is deterministic and some object depends on it

Action: Drop the other object which depends on the package/function/procedure you are trying to change

ORA-30553: The function is not deterministic.

Cause: The function on which the index was defined was not deterministic.

Action: If the function is deterministic, mark it DETERMINISTIC. If it is not deterministic (it depends on package state, database state, current time, or anything other than the function inputs), then do not create the index. The values returned by a deterministic function should not change even when the function is rewritten or recompiled.

ORA-30554: Function-based index *string.string* is disabled.

Cause: Attempted to access a function-based index that was marked disabled because the function, on which the index depends, was changed.

Action: Perform one of the following actions: 1) Drop the index using the DROP INDEX command. 2) Rebuild the index using the ALTER INDEX REBUILD command. 3) Enable the index using the ALTER INDEX ENABLE command. 4) Make the index unusable using the ALTER INDEX UNUSABLE command.

ORA-30555: global index partitioning key is an expression

Cause: An attempt was made to use an expression as a partitioning key in an index.

Action: Do not attempt to use an expression as index partitioning key.

ORA-30556: either functional or bitmap join index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which either a functional index or bitmap join index exists.

Action: Drop the functional or bitmap join index before attempting to modify the column.

ORA-30557: function based index could not be properly maintained

Cause: The user updated a column on which a function based index is present which was not successfully updated

Action: Determine the error in updating the index and fix the problem

ORA-30558: internal error [*string*] in function based index

Cause: This is an internal error.

Action: Contact Worldwide support with the exact error text.

ORA-30560: SAMPLE clause not allowed

ORA-30561: SAMPLE option not allowed in statement with multiple table references

Cause: SAMPLE option was used in statement with multiple table references.

Action: Check the SQL statement and rewrite if necessary.

ORA-30562: invalid SAMPLE percentage string

Cause: The SAMPLE percentage specified was invalid.

Action: Specify the SAMPLE percentage in the range [0.000001,100) and retry the operation.

ORA-30563: outer join operator (+) is not allowed here

Cause: An attempt was made to reference (+) in either the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

Action: Do not use the operator in the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

ORA-30564: index maintenance clause not allowed for ADD partition to RANGE partitioned tables

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD partition to a HASH partitioned table or ADD subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-30565: Only one INVALIDATE or UPDATE GLOBAL INDEXES clause may be specified

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES was specified more than once.

Action: Remove all but one of the INVALIDATE or UPDATE GLOBAL INDEXES clause and reissue the statement

ORA-30566: index maintenance clause not allowed for this command

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is not allowed for this command

Action: Remove clause and reissue operation

ORA-30567: name already used by an existing log group

Cause: The specified log group name has to be unique.

Action: Specify a unique name for the log group. The name cannot be the same as any other log group, constraint, or cluster hash expression.

ORA-30568: cannot drop log group - nonexistent log group

Cause: The <log_group_name> specified in alter table drop log group is incorrect or nonexistent.

Action: Reenter the statement using the correct log group name.

ORA-30569: data type of given column is not supported in a log group

Cause: An attempt was made to include a column in a log group with one of these unsupported data types: LONG, VARRAY, nested table, object, or LOB.

Action: Change the column data type or remove the log group. Then, retry the operation.

ORA-30570: SEGMENT SPACE MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the SEGMENT SPACE MANAGEMENT option was specified more than once.

Action: Remove all but one of the SEGMENT SPACE MANAGEMENT specifications.

ORA-30571: invalid SEGMENT SPACE MANAGEMENT clause

Cause: An invalid option appears for SEGMENT SPACE MANAGEMENT clause.

Action: Specify one of the valid options: AUTO, MANUAL.

ORA-30572: AUTO segment space management not valid with DICTIONARY extent management

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used with a DICTIONARY extent management clause.

Action: Either specify LOCAL extent management or remove the AUTO SEGMENT SPACE MANAGEMENT specification.

ORA-30573: AUTO segment space management not valid for this type of tablespace

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used while creating an UNDO or TEMPORARY tablespace.

Action: Remove the AUTO SEGMENT SPACE MANAGEMENT clause.

ORA-30574: Cannot create rollback segment in tablespace with AUTO segment space management

Cause: A rollback segment is being created in a tablespace that was created with AUTO segment space management.

Action: Create the rollback segment in a different tablespace.

ORA-30575: incomplete Oracle Text index

Cause: Oracle Text index was incomplete.

Action: Contact Oracle Support.

ORA-30577: SAMPLE group size must be in the range [1,UB4MAXVAL]

ORA-30600: Oracle Text error\string

Cause: Oracle Text component failed. More information about the specific failure is available in the errors that follow.

Action: Check the actions for the errors that follow.

ORA-30601: Oracle Text encountered an initialization error string.

Cause: The Oracle Text component failed to initialize due to an internal error.

Action: Contact Oracle Support Services.

ORA-30602: timeout waiting for postings lists batches

Cause: Oracle Text component failed to acquire SGA memory for writing batches of postings lists. All available memory was used by other background processes. A predefined timeout elapsed but no memory was freed.

Action: No action is necessary. The process will be retried automatically at a later time.

ORA-30603: Oracle Text index is busy.

Cause: Oracle Text index was in the middle of a data definition language (DDL) operation.

Action: For background processes, this error can be ignored. All background processes working on this index will be automatically retried. For foreground processes, retry the operation at a later time.

ORA-30604: Oracle Text index no longer exists or is altered.

Cause: Oracle Text index was either nonexistent, disabled, unusable, incomplete, or was altered in such a way that the automatic index maintenance was no longer applicable.

Action: Ignore this error for background processes because all background processes working on this index will be removed. For foreground processes, retry the operation after fixing the index.

ORA-30605: invalid combination of SCORE labels for JSON_TEXTCONTAINS

Cause: The same SCORE label operand was specified for multiple JSON_TEXTCONTAINS predicates.

Action: Ensure that queries on different columns have different SCORE labels. Queries on the same column must have either all the same or all distinct labels.

ORA-30606: invalid argument for JSON_TEXTCONTAINS SCORE label

Cause: User specified an invalid input for JSON_TEXTCONTAINS SCORE label.

Action: Ensure that JSON_TEXTCONTAINS SCORE label is a constant number.

ORA-30607: Oracle Text index maintenance was interrupted.

Cause: A user session issued a DDL statement that conflicted with the Oracle Text index background maintenance processes. As a result the background index maintenance was interrupted.

Action: No action is necessary. The process will be retried automatically at a later time.

ORA-30608: Oracle Text index maintenance has failed.

Cause: One or more background maintenance events could not proceed after multiple retries.

Action: Additional information about the failures is available in CTX_BACKGROUND_EVENTS catalog view. Once all the failures are addressed, the index or index partition can be reset by running CTX_DDL.SYNC_INDEX. Alternatively, the events will be retried automatically after current wait time passes. Additional information about waiting events is available in V\$TEXT_WAITING_EVENTS catalog view.

ORA-30625: method dispatch on NULL SELF argument is disallowed

Cause: A member method of a type is being invoked with a NULL SELF argument.

Action: Change the method invocation to pass in a valid self argument.

ORA-30626: function/procedure parameters of remote object types are not supported**ORA-30645: reject limit out of range**

Cause: Reject limit specifies the number of records rejected before terminating a table scan. The range is either a number between 1..100000 or UNLIMITED if no limit is intended.

Action: Change the token representing the reject limit to either a number in the range of 0 and 100000 or the keyword UNLIMITED.

ORA-30646: schema for external table type must be SYS

Cause: A schema other than SYS was specified for the TYPE

Action: For this version of oracle server always use schema name SYS.

ORA-30647: error retrieving access parameters for external table *string.string*

Cause: An error occurred when fetching the access parameters for the specified external or hybrid-partitioned table.

Action: If the access parameter is a query which returns a CLOB, check EXTERNAL_TAB\$ to make sure the query is correct.

ORA-30648: missing LOCATION keyword

ORA-30649: missing DIRECTORY keyword

Cause: DEFAULT DIRECTORY clause missing or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30650: missing PARAMETERS keyword

ORA-30651: missing CLOB keyword

ORA-30652: missing LIMIT keyword

ORA-30653: reject limit reached

Cause: the reject limit has been reached.

Action: Either cleanse the data, or increase the reject limit.

ORA-30654: missing DEFAULT keyword

Cause: DEFAULT DIRECTORY clause not specified or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30655: Cannot lock rows in external tables with SELECT FOR UPDATE.

Cause: Attempted to lock rows of an external table using SELECT FOR UPDATE. Rows in external tables cannot be locked.

Action: Use SELECT without the FOR UPDATE clause with external tables.

ORA-30656: column type not supported on external-organized or hybrid-partitioned table

Cause: An attempt was made to create an external-organized table or hybrid-partitioned table with a column of type LONG, LOB, BFILE, ADT, or VARRAY.

Action: These column types are not supported, change the DDL.

ORA-30657: operation not supported on external organized table

Cause: User attempted on operation on an external table which is not supported.

Action: Don't do that!

ORA-30658: attempt was made to create a temporary table with EXTERNAL organization

Cause: An attempt was made to create an External Organized Temporary table. This is not supported.

Action: Don't do that!

ORA-30659: too many locations specified for external-organized or hybrid-partitioned table

Cause: An attempt was made to create or query an external-organized or hybrid-partitioned table with more than the maximum allowed (32767) locations specified.

Action: Use fewer location clauses. Either consider concatenating the input files or creating two external-organized or hybrid-partitioned tables with the input files split between them.

ORA-30661: NOT NULL constraint violated on fetch from external or hybrid-partitioned table (*string*)

Cause: A NULL entry was detected in the column with a NOT NULL constraint during a fetch from an external or hybrid-partitioned table.

Action: Remove the NOT NULL constraint on that column or update the external or hybrid-partitioned table entry.

ORA-30663: An EXTERNAL MODIFY clause can only be specified for an external or hybrid-partitioned table.

Cause: An EXTERNAL MODIFY clause was specified when querying a table that was not an external or hybrid-partitioned table.

Action: Remove the EXTERNAL MODIFY clause from the query.

ORA-30664: column *string* not found in projected column list for external table

Cause: A requested column was not found in the projected column list.

Action: Remove the column from the query and retry.

ORA-30665: invalid NOT NULL constraint specified on a DEFAULT ON NULL column

Cause: A NOT NULL constraint was not specified correctly on a DEFAULT ON NULL column.

Action: If a NOT NULL constraint is specified on a DEFAULT ON NULL column, it must be enabled and nondeferrable.

ORA-30666: cannot modify NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be modified.

Action: Do not modify the NOT NULL constraint on a DEFAULT ON NULL column.

ORA-30667: cannot drop NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be dropped.

Action: Do not drop the NOT NULL constraint on a DEFAULT ON NULL column. The only way to drop the constraint is to remove the ON NULL property of the column default.

ORA-30668: LATERAL cannot follow CROSS APPLY or OUTER APPLY

Cause: An attempt was made to follow the CROSS APPLY or OUTER APPLY keyword with the LATERAL keyword.

Action: Do not include the LATERAL keyword after CROSS APPLY or OUTER APPLY.

ORA-30669: table can have only one identity column

Cause: An attempt was made to specify more than one identity column on a table.

Action: Specify only one identity column per table.

ORA-30670: invalid NOT NULL constraint specified on an identity column

Cause: A NOT NULL constraint was not specified correctly on an identity column.

Action: If a NOT NULL constraint is specified on an identity column, it must be enabled and nondeferrable.

ORA-30671: cannot modify NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be modified.

Action: Do not modify the NOT NULL constraint on an identity column.

ORA-30672: cannot drop NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be dropped.

Action: Do not drop the NOT NULL constraint on an identity column. The only way to drop the constraint is to remove the identity property of the column with ALTER TABLE MODIFY *column* DROP IDENTITY.

ORA-30673: column to be modified is not an identity column

Cause: An attempt was made to modify the identity properties of that is not an identity column.

Action: Modify the identity properties of an identity column.

ORA-30674: identity column cannot have a default value

Cause: An attempt was made to add a default value to an identity column.

Action: Do not modify an identity column with a default value.

ORA-30675: identity column must be a numeric type

Cause: An attempt was made to create or alter an identity column with a non-numeric data type.

Action: Do not assign a non-numeric data type to an identity column.

ORA-30676: socket read or write failed

Cause: A problem kept a socket from reading or writing the expected amount of data. More specific information is not available.

Action: Try re-establishing a connection. You may need to restart whatever program is at the other end of the socket that failed, or you may need to have some problem on your network fixed.

ORA-30677: session is already connected to a debugger

Cause: An attempt to connect a session to a debugger could not proceed because the session is already connected to some debugger.

Action: Either use the option to force a connection or first disconnect the session from its existing debugger.

ORA-30678: too many open connections

Cause: An attempt to open a connection failed because too many are already open by this session. The number of allowed connections varies as some may be in use through other components which share the same pool of allowed connections.

Action: Retry after closing some other connection. The number of connections supported is currently not adjustable.

ORA-30679: JDWP-based debugging not supported in this configuration

Cause: An attempt to open a debugging connection failed because this server configuration cannot support the required asynchronous socket traffic detection.

Action: This feature will not work under this server configuration. Either the feature is not supported on this platform at all, or is available only through use of a `protocol=tcp` dispatcher in shared-server configurations. Please consult the platform-specific documentation and "readme" material.

ORA-30680: debugger connection handshake failed

Cause: A problem occurred when trying to establish a debugger connection. This might indicate that the port specified as the location of the debugger is actually being used by some other type of application.

Action: Correct the host or port specifications if they are incorrect, and verify that the debugger is properly waiting for a connection.

ORA-30681: improper value for argument EXTENSIONS_CMD_SET

Cause: An improper parameter value was provided in a call to `DBMS_DEBUG_JDWP.CONNECT_TCP`.

Action: Correct the indicated parameter value and try again.

ORA-30682: improper value for argument OPTION_FLAGS

Cause: An improper parameter value was provided in a call to `DBMS_DEBUG_JDWP.CONNECT_TCP`.

Action: Correct the indicated parameter value and try again.

ORA-30683: failure establishing connection to debugger

Cause: An error was indicated when trying to establish a connection to a debugger. Usually a TNS error will display along with this message to further explain the problem, although this TNS error will likely be hidden if you choose to trap the error.

Action: Correct the indicated parameter value and try again.

ORA-30684: request timed out

Cause: The request was not processed within the given time.

Action: Try the request at a later time.

ORA-30685: package version is not compatible with Oracle version

Cause: The installed version of the package from which this error is raised is not compatible with this release of Oracle.

Action: Install a compatible version of the package's spec and body.

ORA-30686: no dispatcher accepted TCP/IP connection request

Cause: A connection had to be routed through a local socket rather than a dispatcher. When this occurs, shared servers are less beneficial because the session that owns the socket cannot relinquish the process until the socket is closed. The most likely cause is that no dispatcher is configured for `protocol=tcp`.

Action: To improve the scalability of your configuration, configure a dispatcher for `protocol=tcp`. To route these particular connections through a particular set of dispatchers, you can specify `presentation=kgas`. However, if you haven't done so, any `protocol=tcp` dispatcher will be used.

ORA-30687: session terminated by debugger

Cause: The execution of the session was stopped by the debugger. This can occur because of an explicit request sent by the debugger, or because the debugger disconnected without requesting the ORACLE server to let the session continue to run after the disconnection. It can also occur if the ORACLE server needs to disconnect the debugger at a time when the person controlling the debugger might not expect, such as upon a reset of the related package state or a change of the login user. To prevent continuing the execution using debugger-introduced modifications that might have been intended to be temporary, the ORACLE server needs to fully terminate the session.

Action: This is in response to a debugger request; it is not an error. No action is required.

ORA-30688: maximum program calling depth exceeded

Cause: Your program contains a set of calls that are too deep to be handled. Only transitions between the different execution engines (SQL, PL/SQL, and Java) count in reaching this limit; calls within the same engine don't count.

Action: Restructure your program so as to not call so deeply. Perhaps some recursion can be replaced with iteration.

ORA-30689: improper value for ORA_DEBUG_JDWP

Cause: An improper value was used for `ORA_DEBUG_JDWP` when trying to establish a connection to a debugger. The value either did not conform to the format of `ORA_DEBUG_JDWP` or was too long.

Action: Correct the value for `ORA_DEBUG_JDWP` and try again.

ORA-30690: timeout occurred while registering a TCP/IP connection for data traffic detection

Cause: A timeout occurred while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30691: failed to allocate system resources while registering a TCP/IP connection for data traffic detection

Cause: System resources ran out while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30695: JDWP message format problem

Cause: A message passed from one software subcomponent to another using the JDWP protocol appears invalidly formatted.

Action: This is an internal error. Contact ORACLE Support Services.

ORA-30696: request aborted by the target session

Cause: The request was aborted by the target session. Possible causes include an unresolved error while the request was processed or the target session had aborted.

Action: Correct the issue in the target session and try again.

ORA-30698: network connection failed: connection refused

Cause: The network connection attempt did not succeed. This form of error typically indicated that the target network port was misspecified, that there was a machine running at the target network host address but the particular program expected to accept the connection was not running, or that a firewall rejected the connection attempt.

Action: Ensure that the network target is correctly specified, that the desired target program is running and is listening on the expected network address and port, and that there isn't a network connectivity or firewall problem, then retry the operation.

ORA-30699: network connection failed: connection timed out

Cause: The network connection attempt did not succeed. This form of error typically indicated that the target network host address was misspecified, that the machine expected to accept the connection was not running, that there was a network connectivity or routing problem, that the request needed to be routed through a proxy, or that a firewall dropped the connection attempt.

Action: Ensure that the network target is correctly specified, that the desired target machine is running and the desired target program is running on it and is listening on the expected network address and port, that there isn't a network connectivity or firewall problem, and that a proxy is being used if required, then retry the operation.

ORA-30700: network connection failed: destination unreachable

Cause: The network connection attempt did not succeed. This form of error typically indicated that the target network host address was misspecified, that there was a network connectivity or routing problem, or that the request needed to be routed through a proxy.

Action: Ensure that the network target is correctly specified, that there isn't a network connectivity or firewall problem, and that a proxy is being used if required, then retry the operation.

ORA-30725: JDWP-based debugging is not yet available

Cause: This feature is not yet available for use.

Action: Please wait for a future release.

ORA-30726: cannot specify referenced column list for referential constraints on REF columns

Cause: An attempt was made to specify a referenced column list for a referential constraint involving a REF column.

Action: Remove the referenced column list specification.

ORA-30727: duplicate referential constraint for REF column *string*

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the duplicate referential constraint and retry the operation. *Params:
1) column: The REF column with duplicate referential constraint.

ORA-30728: maximum number of columns exceeded

Cause: Adding a referential constraint on a REF column requires the the creation of an additional column which results in the Oracle maximum column limit being exceeded.

Action: Drop some columns and retry the operation.

ORA-30729: maximum number of columns exceeded

Cause: The Oracle maximum column limit was exceeded. Adding scope or a referential constraint on a REF column requires the creation of additional columns internally if the object identifier of the target table is primary key based. The result is that the Oracle maximum column limit is exceeded.

Action: Drop some columns and retry the operation.

ORA-30730: referential constraint not allowed on nested table column

Cause: An attempt was made to define a referential constraint on a nested table column.

Action: Do not specify referential constraints on nested table columns.

ORA-30731: scope constraint not allowed on nested table column when the nested table is being created

Cause: An attempt was made to define a scope constraint on a nested table column when the nested table is being created.

Action: Do not specify a scope constraint on a nested table column when creating it. Instead, specify it using the ALTER TABLE statement.

ORA-30732: table contains no user-visible columns

Cause: An attempt was made to query on a system table which has no user-visible columns.

Action: Do not query on a system table that has no user-visible columns.

ORA-30733: cannot specify rowid constraint on scoped ref column

Cause: An attempt was made to specify rowid constraint on a scoped REF column.

Action: Remove the rowid constraint and then retry the operation.

ORA-30734: cannot specify scope constraint on ref column with rowid

Cause: An attempt was made to specify scope constraint on a REF column with the rowid constraint.

Action: Remove the scope constraint and then retry the operation.

ORA-30735: cannot create multiple subtables of the same type under a supertable

Cause: An attempt was made to create a subtable (subview) of the same type as another existing subtable (subview) under a supertable (superview).

Action: Drop the existing subtable (subview) and retry the operation.

ORA-30736: Objects in a table or view hierarchy must be in the same schema.

Cause: An attempt was made to create a subtable (or subview) under a supertable (or superview) located in another schema.

Action: Connect as schema owner of the superobject and retry the operation.

ORA-30737: cannot create subtable of a type which is not a subtype of the type of the super table

Cause: An attempt was made to create a subtable(subview) of a type which is not a subtype of the type of the super object.

Action: Change the type of the subtable to be a subtype of the super object's type and then retry the operation.

ORA-30738: object "*string*" does not exist in schema "*string*"

Cause: The specified object does not exist.

Action: Ensure that the specified object exists and retry the operation.

ORA-30739: cannot drop a table that has subtables

Cause: The user tried to drop a table that has subtables defined under it.

Action: Drop all subtables before trying this operation.

ORA-30740: cannot grant UNDER object privilege on this object

Cause: An attempt was made to grant the UNDER object privilege to an object that was not one of the following object types: non-final type, non-final table, or non-final view.

Action: Ensure that the UNDER object privilege is granted to a valid object type: non-final type, non-final table, or non-final view.

ORA-30741: WITH HIERARCHY OPTION can be specified only for SELECT or READ object privileges

Cause: An attempt was made to specify WITH HIERARCHY OPTION for a privilege other than SELECT or READ.

Action: Ensure that the WITH HIERARCHY OPTION is specified only with the SELECT or READ privilege.

ORA-30742: Cannot grant SELECT or READ object privilege on a nonfinal object when WITH HIERARCHY OPTION is specified.

Cause: An attempt was made to grant the SELECT or READ object privilege when the WITH HIERARCHY OPTION was specified on an object that was not one of the following: - a table or a view - an object type on which the table had been created was of nonfinal type

Action: Ensure that the SELECT or READ object privilege is granted on a valid object when the WITH HIERARCHY OPTION is specified. Query ALL_OBJECTS to get the type of the object on which the privilege is being granted. Query ALL_TYPES to check if the object type used in the table is of final type.

ORA-30743: "*string*" is not an object view.

Cause: The specified object was not an object view.

Action: Specify an object view and retry the operation. *Params: 1) name: The specified name.

ORA-30744: "string" is not an object table.

Cause: The specified object was not an object table.

Action: Specify an object table and retry the operation. *Params: 1) table_name: The name of the specified table.

ORA-30745: error occurred while trying to add column "string" in table "string"

Cause: The user tried to add a subtype which tried to alter the tables dependent on the supertype.

Action: Ensure that the table will not exceed the columnlimit on adding this subtype.

ORA-30746: error occurred while trying to drop column "string" in table "string"

Cause: The user tried to drop a subtype with VALIDATE option which tried to check for stored instances of the type in the stated table

Action: Delete all instances of this subtype and then drop the type.

ORA-30747: cannot create substitutable tables or columns of non final type string.string

Cause: The user tried to create substitutable table or column of a non final type. This operation is not currently supported.

Action: Change the statement to create a non substitutable table/column.

ORA-30748: column string already enabled to store objects of type string.string

Cause: The user is trying to enable a column to store instances of a type for which it is already enabled.

Action: None

ORA-30749: column string not enabled to store objects of type string.string

Cause: The user is trying to disable a column from storing instances of a type for which it is already enabled.

Action: None

ORA-30750: cannot enable column string to store objects of type string.string

Cause: The user is trying to enable a column to store instances of a subtype. The error is raised due to one of the following :

Action: Fix the cause of the error and retry the operation.

ORA-30751: cannot disable column string from storing objects of type string.string

Cause: The user is trying to drop a type from being stored in a substitutable column or table. This error is raised due to one of the following reasons : - the column is enabled to store instances of some subtype of the type being dropped. - the column is enabled to store instances of only one type

Action: Fix the cause of the error and retry the operation.

ORA-30752: Column or table string is not substitutable.

Cause: An attempt was made to perform an operation that was not allowed on a non-substitutable column or table.

Action: None. *Params: 1) object_name: The name of specified object.

ORA-30753: column or table *string* is substitutable

Cause: The user is performing an operation that is not allowed on substitutable column or table.

Action: None

ORA-30754: column or table *string* stores objects of only one type

Cause: The user is trying to perform an operation that is not allowed on object column or table that is enabled to store instances of a single type.

Action: None

ORA-30755: error during expansion of view hierarchy

Cause: There was an error while trying to expand a view hierarchy. This could be due to invalid subviews (or subviews with errors)

Action: Ensure that all subviews are valid e.g. alter view ... compile and retry the operation.

ORA-30756: cannot create column or table of type that contains a supertype attribute

Cause: The user tried to create a column or table of an object type that contains a supertype attribute. This is not supported because it leads to infinite recursion in our current storage model. Note that creating a column of a type implies that we create columns corresponding to all subtype attributes as well.

Action: Change the type definition to contain a supertype REF attribute instead of the supertype object attribute.

ORA-30757: Type information could not be accessed.

Cause: Either operations were performed on the newly created subtype while the session was in progress, or the type information was not available in the object cache.

Action: Commit changes, end the user session, reconnect, and retry. If the error persists, contact Oracle Support.

ORA-30758: cannot partition nested table if base table is non-partitioned

Cause: Local or global was specified for a nested table storage parameter while the base table was non-partitioned.

Action: Do not try to partition the nested table

ORA-30759: Nested table cannot be partitioned for a composite partitioned base table.

Cause: Local or nested table parameters were specified inside the partition clause for a composite partitioned table.

Action: Issue the DDL without nested table partition clauses for a composite partitioned table.

ORA-30760: cannot drop system-generated hidden object column

Cause: An attempt was made to drop a system-generated hidden object column

Action: None

ORA-30765: cannot modify scope for an unscoped REF column

Cause: An attempt was made to modify the scope for an unscoped REF column.

Action: Use an ALTER TABLE ADD SCOPE FOR command instead.

ORA-30766: cannot modify scope for a REF column with a REFERENCES constraint

Cause: An attempt was made to modify the scope for a REF column with a REFERENCES constraint.

Action: Drop the REFERENCES constraint, and retry the operation.

ORA-30767: OID type mismatch

Cause: An attempt was made to modify the scope for a REF column to a table whose object identifier's type is different from that of the original scoped table.

Action: n/a

ORA-30768: Cannot evaluate pipelined function

Cause: Pipelined functions can only be used in a TABLE expression in the from clause.

Action: Use a non-pipelined function instead.

ORA-30770: cannot specify storage options for fixed size opaque type

Cause: A storage clause was specified during table creation for a fixed size opaque type.

Action: Do not specify a storage option clause.

ORA-30771: cannot add more than one referential constraint on REF column "string"

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the additional referential constraints and retry the operation.

*Params: 1) column: The REF column.

ORA-30772: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30773: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30926: The operation attempted to update the same row (rowid: 'string') twice.

Cause: Two or more source rows matched the same target row causing an attempt to update the same row twice.

Action: Modify join conditions between the target table or view and the source in the operation so that every source row matches exactly one row in the table or view being

updated. *Params: 1) target_rowid: The ROWID of the target row that two source rows matched to in the operation.

ORA-30927: Unable to complete execution due to failure in temporary table transformation

Cause: In memory temporary tables we create are aged out of shared pool before we are able to grab them again.

Action: Reduce activities that use a lot of shared pool space or wait for a while, then retry.

ORA-30928: Connect by filtering phase runs out of temp tablespace

Cause: It is probably caused by the fact that there is a loop in the data.

Action: Please retry the query with the NO_FILTERING hint. If the same error still occurs, then increase temp tablespace.

ORA-30929: ORDER SIBLINGS BY clause not allowed here

Cause: ORDER SIBLINGS BY clause is specified in a query which doesn't have CONNECT BY clause.

Action: Remove ORDER SIBLINGS BY clause or add CONNECT BY clause.

ORA-30930: NOCYCLE keyword is required with CONNECT_BY_ISCYCLE pseudocolumn.

Cause: CONNECT_BY_ISCYCLE was used in a query which does not include the NOCYCLE keyword.

Action: Remove CONNECT_BY_ISCYCLE or add NOCYCLE.

ORA-30931: Element '*string*' cannot contain mixed text.

Cause: An XML element was not declared as mixed and therefore could not contain multiple text nodes.

Action: Declare this element type as mixed in its schema.

ORA-30932: reference node '*string*' not contained in specified parent node '*string*'

Cause: The reference node used did not have the specified parent node.

Action: Use a node in the specified parent as the reference. *Params: 1) reference_node: The reference node in use. 2) parent_node: The parent node for the reference node.

ORA-30933: Element '*string*' may not appear at this point within parent '*string*'.

Cause: The ordering specified by the content model of the parent did not allow for this element to occur at this position.

Action: Reorder the child elements to comply with the content model of the parent element. *Params: 1) element_name: The element name. 2) parent_name: The parent name.

ORA-30934: '*string*' node cannot be inserted in parent node (*string* type) '*string*'

Cause: The schema did not allow the child node to be inserted into the parent node of this type. For example, only element nodes can be inserted into a document.

Action: Insert only child nodes that are allowed for this node type. *Params: 1) node_name: The child node that was trying to insert into the parent node. 2) parent_node: The parent node for this insertion. 3) node_type: The type of the defined parent node.

ORA-30935: XML maxoccurs value (*string*) exceeded

Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

ORA-30936: maximum number (*string*) of the XML node '*string*' exceeded

Cause: An attempt was made to insert more than the allowed number of elements (specified by the MAXOCCURS facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements allowed to an XML document. *Params: 1) maximum_number: The maximum number of elements allowed. 2) xml_node: The name of the XML node.

ORA-30937: no schema definition for the node '*string*' (namespace '*string*') in the parent '*string*'

Cause: The schema definition for the parent node being processed did not allow for the specified child node in its content model. Note that any type casting using xsi:type must occur before the schema definitions before the new type can be used.

Action: Only insert elements and attributes declared in the schema. Ensure that xsi:type (if used) is specified first. *Params: 1) node: The specified child node. 2) namespace: The namespace of the child node. 3) parent: The parent node being processed.

ORA-30938: no prefix defined for namespace '*string*' (particle *string*)

Cause: An XML namespace mapping (xmlns:prefix=namespace URL) was not defined for each particle (element or attribute) stored in a schema constrained XMLType document.

Action: Add an xmlns attribute definition (attribute name="xmlns:prefix" and value="namespace URL") to the current XMLType document. The safest place to add this attribute is in the root node of the document to ensure that the mapping will be in scope. *Params: 1) xml_namespace: The XML namespace. 2) particle_name: The name of the element or attribute.

ORA-30939: order violation: element '*string*' may not follow element '*string*'

Cause: The XML schema specified a content model that was sequential. The order of the nodes in the instance must follow the order specified by the schema and this instance relies on the schema validity to avoid maintaining instance order information.

Action: Insert elements only in the order specified in the schema. *Params: 1) element_name: The element name. 2) element_name: The element name.

ORA-30940: cannot resolve prefix '*string*' for QName node '*string*'

Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used. *Params: 1) prefix: The prefix used. 2) QName_node: The name of the node.

ORA-30941: cannot specify empty URI for non-default namespace '*string*'

Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty Uniform Resource Identifier (URI) string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace. *Params: 1) namespace: The namespace.

ORA-30942: XML schema evolution error for schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column that conforms to the given schema had errors during evolution. For more information, see the more specific error following this one.

Action: Take corrective action based on the schema, table and column information in this error and the more specific error that follows this one.

ORA-30943: XML schema '*string*' is dependent on XML schema '*string*'.

Cause: Not all dependent XML schemas were specified or the XML schemas were not specified in a proper order.

Action: Include the URL of all participant and dependent XML schemas through the procedure argument SCHEMAURLS in a correct order. For example, if XML schema S depends on XML schema T, then T must appear before S.

ORA-30944: failed roll back of the evolution of XML schema '*string*' on table '*string*' column '*string*'

Cause: The specified XMLType table/column conforming to the specified XML schema produced errors during schema evolution. There are errors accompanying this one that detail the causes of the failed evolution and roll back.

Action: See the additional error messages for details. *Params: 1) schema: The XML schema URL. 2) table: The table name. 3) column: The column name.

ORA-30945: failed to create mapping table '*string*'

Cause: A mapping table could not be created during XML schema evolution.

Action: Ensure that the specified table does not exist and that you have the CREATE TABLE privilege, then retry the operation.

ORA-30946: XML Schema Evolution warning: temporary tables not cleaned up

Cause: An error occurred after the schema was evolved while temporary tables were being cleaned up. The schema evolution was successful.

Action: If you must remove the temporary tables, use the mapping table to get the names of the temporary tables and then drop them.

ORA-30947: Dependent table '*string*' of XML schema '*string*' is version-enabled.

Cause: An evolving XML schema had dependent XMLType tables that were version-enabled.

Action: Disable versioning on the XMLType table.

ORA-30948: operation not allowed in in-place XML schema evolution : *string*

Cause: An attempt to change an XML schema was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument of DBMS_XMLSCHEMA.inPlaceEvolve() are permitted. *Params: 1) operation: The schema evolution operation.

ORA-30951: Element or attribute at XPath *string* exceeds maximum length.

Cause: An attempt was made to insert a node exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length into XML documents. *Params: 1) XPath: The XML path.

ORA-30952: invalid configuration of HTTP/HTTPS in XDBCONFIG.XML

Cause: Updating XDBCONFIG.XML when either a value is specified for http2-port but not for http2-protocol (or the other way round), or http-port and http2-port are set to the same value is invalid.

Action: Specify values for both elements http2-port and http2-protocol, and set different values for http-port and http2-port.

ORA-30953: XML minoccurs value (*string*) violated

Cause: An attempt was made to delete more than the required minimum number of elements (specified by the minoccurs facet) from an XML document.

Action: Do not attempt to delete more than the required minimum number of elements that must be present from the XML document.

ORA-30954: Character '*string*' is invalid in '*string*'.

Cause: An invalid XML character was found.

Action: Use only characters allowed by the XML specification. *Params: 1) character: The ASCII code for a character. 2) node: The name or type of the XML node.

ORA-30955: The XML index does not exist or is not asynchronous.

Cause: An attempt was made to synchronize a nonexistent XML index or a synchronous XML index.

Action: Create the XML index in asynchronous mode.

ORA-30956: invalid option for XML index

Cause: The option specified for the XML index was invalid.

Action: Correct or remove the invalid option.

ORA-30957: cannot downgrade because there are XML indexes

Cause: An attempt was made to downgrade a database that has XML indexes.

Action: Drop all XML indexes before attempting the downgrade.

ORA-30958: Operation directly on the pending table is not allowed.

Cause: An attempt was made to directly operate on the pending table of an XML index.

Action: Perform the operation on the XML index instead.

ORA-30959: The column to be indexed is not stored in CLOB.

Cause: An attempt was made to create an XML index on an XMLType column with object relational storage format.

Action: Create the XML Index on an XMLType column stored in CLOB.

ORA-30960: The entity is neither an XPATH nor a NAMESPACE.

Cause: The given string had invalid syntax.

Action: Check the syntax for XPATH and NAMESPACE.

ORA-30963: The indexed column is not of XMLTYPE.

Cause: An attempt was made to create an XML index on a non-XMLTYPE column.

Action: Re-create the XML index on an XMLTYPE column.

ORA-30964: The XML Index was not usable.

Cause: The domain index for XML was not created properly. The Path Table is missing.

Action: Drop and re-create the XML Index.

ORA-30965: fragment does not fit into the VARCHAR2 VALUE column

Cause: The fragment size exceeded the max size.

Action: Re-create the XML Index with values stored in CLOB.

ORA-30966: error detected in the XMLIndex layer

Cause: An unexpected internal error occurred while performing an XMLIndex operation.

Action: Check the Oracle trace files for errors and contact Oracle Support Services.

ORA-30967: Operation directly on the path table of an XML Index is not allowed.

Cause: An attempt was made to directly operate on the path table of an XML index.

Action: Do not directly operate on the path table of an XML index. Perform the operation on the XML index instead.

ORA-30968: invalid XPATH or NAMESPACE option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30969: invalid syntax for PARAMETERS

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30970: unsupported option for XMLIndex

Cause: An attempt was made to specify an invalid option for the XMLIndex.

Action: Check and use valid options for the XMLIndex.

ORA-30971: illegal operation on the Path Table

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate command on the XML Index.

ORA-30972: invalid ALTER INDEX option for XML Index

Cause: An attempt was made to use an invalid or unsupported option.

Action: Correct or remove the invalid option.

ORA-30973: invalid Path Table option for XML Index

Cause: An attempt was made to use an invalid or unsupported option.

Action: Correct or remove the invalid option.

ORA-30974: invalid path ID index option for XML index

Cause: An attempt was made to use an invalid or unsupported option.

Action: Correct or remove the invalid option.

ORA-30975: invalid Order Key Index option for XML Index

Cause: An attempt was made to use an invalid or unsupported option.

Action: Correct or remove the invalid option.

ORA-30976: invalid Parent Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30977: invalid Value Index option for XML Index

Cause: An attempt was made to use an invalid or unsupported option.

Action: Correct or remove the invalid option.

ORA-30978: The XML index is not locally partitioned.

Cause: An attempt was made to create a global partitioned XML Index.

Action: Do not attempt to create global partitioned XML index or to maintain a non-local partitioned XML index.

ORA-30979: Partitioned XML Index is not supported.

Cause: An attempt was made to create a partitioned XML index.

Action: Do not attempt to create partitioned XML index.

ORA-30980: null or invalid value specified for parameter: *string*

Cause: The value specified for the mandatory parameter was null or invalid.

Action: Ensure that all the input parameter values are valid. Consult the Oracle documentation for valid parameter values.

ORA-30982: invalid option for a partition of an XML Index

Cause: An invalid option was specified at the partition level of an XML Index.

Action: Correct or remove the invalid option.

ORA-30984: The XMLTYPE column has to be declared as virtual.

Cause: The XMLTYPE column was not declared as virtual when creating a structured XML Index.

Action: The XMLTYPE column has to be declared as virtual when creating a structured XML Index.

ORA-30985: The virtual XMLTYPE column for chaining is missing.

Cause: The virtual XMLTYPE column for chaining was missing when creating a structured XML index.

Action: A virtual XMLTYPE column for chaining has to be specified when creating a structured XML Index.

ORA-30986: XMLIndex with more than one virtual column is not allowed.

Cause: An attempt was made to create an XMLIndex with more than one virtual column.

Action: Create an XMLIndex with only one virtual column.

ORA-30987: XMLIndex on Oracle XML DB repository does not exist.

Cause: An attempt was made to operate on a nonexistent XMLIndex on Oracle XML DB repository.

Action: First, create the index using DBMS_XDB_ADMIN.CREATE_REPOSITORY_XML_INDEX, and then retry the operation.

ORA-30989: XMLIndex on an Index Organized Table is not yet supported.

Cause: XMLIndex on an Index Organized Table is not supported.

Action: XMLIndex is supported only on Heap Organized Table.

ORA-30990: User *string* has insufficient privileges to change owner of resource *string*.

Cause: An attempt was made to change the *owner* field of an XML database resource without sufficient privileges.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

ORA-30991: cannot use DOM to add special attribute to schema-based parent

Cause: An attempt was made to add or remove an xsi:schemaLocation, xsi:noNamespaceSchemaLocation, xsi:type, or xsi:nil attribute to or from a schema-based XML node using DOM.

Action: Use the UPDATEXML operator instead of DOM.

ORA-30992: error occurred at the XPath *string*

Cause: An error occurred at the XPath.

Action: Check the error in the XPath. *Params: 1) xpath_string: The given XPATH string.

ORA-30993: Complex type *string* is not referred to by any global element.

Cause: An attempt was made to use a complex type that was not referred to by any global element.

Action: Add a dummy global element to the schema that refers to the complex type.

ORA-30994: invalid argument for DOM stream

Cause: Either a NULL or a non-Leaf node was passed.

Action: Use a combination of Document Object Model (DOM) API and DOM streams to produce the desired effect.

ORA-30995: DOM streams operations cannot be performed on a NULL or invalid node.

Cause: The node passed to Document Object Model (DOM) streams operations was NULL or invalid.

Action: Check the input parameters.

ORA-30996: streams operations over non-existent stream

Cause: The stream passed was NULL or invalid.

Action: Check the input parameters.

ORA-30997: XSL processing of XML failed with error LPX-string.

Cause: An LPX routine (XML/XSL processing) returned an error while transforming an XML document.

Action: Look up the LPX error and follow its corrective action. *Params: 1) LPX_error: The LPX error code.

ORA-30998: transformation error: string

Cause: An unexpected error occurred while transforming an XML document with an XSL style sheet.

Action: Contact Oracle Support. *Params: 1) error: The transformation error message.

ORA-30999: XML context creation failed while string.

Cause: An unexpected error occurred while creating XML context.

Action: Contact Oracle Support. *Params: 1) operation: The action while creating XML context.

ORA-31000: Resource 'string' is not an XML schema document.

Cause: The specified schema URL did not refer to a registered XML schema.

Action: Check that schema URL refers to a registered XML schema.

ORA-31001: invalid resource handle or path name "string"

Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resource handle or path name to the XDB hierarchical resolver. *Params: 1) resource_path: The resource path.

ORA-31002: Path name string is not a container.

Cause: The specified path name did not represent a container.

Action: Specify a path name or resource handle that represents a container.

ORA-31003: Parent with name string already contains a child entry with name string.

Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

ORA-31004: Length string of the BLOB in XDB\$H_INDEX is below the minimum (string).

Cause: The calculated size of the BLOB in the CHILDREN column of the XDB\$H_INDEX table was less than the required minimum without being chained.

Action: Set the value of the DB_BLOCK_SIZE initialization parameter to at least 2000. For XDB to run at its fastest, set DB_BLOCK_SIZE to 8000.

ORA-31005: Path name length *string* exceeds maximum length *string*.

Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name and retry the statement.

ORA-31006: Path name segment length *string* exceeds maximum length *string*.

Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment and retry the statement. *Params: 1) segment_length: The length of a segment of the path. 2) max_segment_length: The maximum length of a path segment.

ORA-31007: Attempted to delete non-empty container *string/string*. Use recursive deletion.

Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container. *Params: 1) parent_path: The path of the parent container. 2) container_name: The name of the container.

ORA-31008: LPX context creation failed while *string*.

Cause: An error occurred while creating LPX context because of an unexpected NULL value.

Action: Contact Oracle Support. *Params: 1) operation: The operation begin executed.

ORA-31009: access denied for property *string*

Cause: An attempt was made to access a property that was not accessible.

Action: Check or modify the access control list (ACL) to ensure that you have privileges to access this property.

ORA-31010: XML element index *string* exceeds maximum insertion index *string*.

Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose an index that falls within the allowed range. *Params: 1) index_1: The XML element index. 2) index_2: The maximum index allowed.

ORA-31011: XML parsing failed

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

ORA-31012: unsupported XPATH expression

Cause: The XPATH expression passed to the function was not supported.

Action: Check the XPATH expression and change it to use a supported expression.

ORA-31013: invalid XPATH expression

Cause: The XPATH expression passed to the function was invalid.

Action: Check the XPATH expression for possible syntax errors.

ORA-31014: attempted to delete the root container

Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

ORA-31015: attempted to insert entry without a name

Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

ORA-31016: Attempted to delete entry without name

Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

ORA-31017: Error generating unique OID for XML document

Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: n/a

ORA-31018: error in deleting XML document

Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

ORA-31019: Recursive deletion snapshot too old for *string/string*

Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

ORA-31020: The operation is not allowed, Reason: *string*

Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

ORA-31021: element definition not found

Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

ORA-31022: Specified XML element is not found.

Cause: The XML element was not found.

Action: Ensure that the specified XML element exists.

ORA-31023: Index size error

Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

ORA-31024: Parser initialization failed with LPX-*string* error\nwhile *string*.

Cause: An error occurred while initializing a parser.

Action: Contact Oracle Support. *Params: 1) error: The LPX error code. 2) operation: The operation being executed.

ORA-31025: invalid document element

Cause: An attempt was made to replace the data at an invalid index number in the XML document.

Action: Supply a valid index number and try again.

ORA-31026: unable to allocate additional memory while *lnstring*

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31027: Pathname or handle *string* does not point to a resource.

Cause: An attempt was made to retrieve a resource based on a pathname or resource handle that pointed to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that pathname or resource handle.

ORA-31028: Resource metadata length *string* exceeded maximum length *string*

Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

ORA-31029: Cannot bind to unsaved resource

Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

ORA-31030: Unable to retrieve XML document.

Cause: The resource has an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

ORA-31031: cannot create context to parse an XPath *lnstring*

Cause: Error occurred while parsing an XPath.

Action: Contact Oracle Support Services.

ORA-31032: XML parsing failed with error LPX-*string* while *string*.

Cause: An LPX routine returned an error while transforming an XML document.

Action: Look up the LPX error and follow its corrective action. *Params: 1) error: The LPX error code. 2) operation: The operation being executed.

ORA-31033: Requested number of XML children *string* exceeds maximum *string*.

Cause: An attempt was made to add more than the maximum number of allowed children in an XML element.

Action: Redefine the schema to allow distribution of the children among siblings. *Params: 1) requested_number: The number of XML children requested. 2) maximum_number: The maximum number allowed for an XML element.

ORA-31034: invalid node set encountered while executing *string*

Cause: The specified node set was either NULL or had an invalid type associated with it.

Action: Contact Oracle Support. *Params: 1) operation: The operation being executed.

ORA-31035: Could not bind locked resource to path *string*

Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

ORA-31036: XSL processing context initialization failed

Cause: An error occurred while creating an Extensible Stylesheet Language (XSL) context.

Action: Contact Oracle Support.

ORA-31037: Invalid XML attribute name *string*

Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

ORA-31038: invalid *string* value: "*string*"

Cause: The text in the XML document did not represent a valid value based on the data type and other constraints in the schema.

Action: Ensure that the specified value in the XML document is valid with regard to the data type and other constraints in the schema. *Params: 1) value_name: The expected type or name for the value. 2) data_type: The data type in the XML document.

ORA-31039: XML namespace length *string* exceeds maximum length *string*.

Cause: The length of the disk-formatted XML namespace exceeded the maximum length allowed.

Action: Ensure that the XML namespace declarations do not exceed the maximum length allowed. *Params: 1) length: The XML namespace length. 2) maximum_length: The maximum length for the XML namespace.

ORA-31041: property *string*: memory type (*string*) not compatible with database type (*string*)

Cause: The memory type associated with this property was mapped to an incompatible database type, and a conversion could not be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register the schemas, or contact Oracle Support. *Params: 1) property_name: The property name defined in the schema. 2) memory_type: The memory type defined in the schema. 3) database_type: The database type stored in the schema.

ORA-31042: too many properties in type '*string*'

Cause: Too many properties were specified for the type. The type can only have the same number of properties (elements and attributes) as the number of columns in a table.

Action: Modify the XML schema to move properties into sub-elements that are not inlined.

ORA-31043: element '*string*' not globally defined in schema '*string*'

Cause: The specified element name was not defined globally (at the top level) of the XML schema. Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to ensure that the specified element name has been defined globally (at the top level).

ORA-31044: Top-level prefix length (*string*) exceeds the maximum allowed (*string*).

Cause: An attempt was made to save to a disk of a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length allowed.

*Params: 1) *prefix_length*: The length of the XML namespace prefix. 2) *max_length*: The maximum length allowed for an XML namespace prefix.

ORA-31045: Cannot store more than *string* extras outside the root XML node

Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

ORA-31046: Incorrect argument(s) specified in the operator

Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

ORA-31047: Could not retrieve resource data at path *string*.

Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle Support Services.

ORA-31048: Unsaved resource *string* cannot be updated. Unsaved resources need to be inserted.

Cause: An attempt was made to update a resource that was not saved to the disk.

Action: Perform a resource insertion instead.

ORA-31050: access denied

Cause: The requested access privileges were not granted to the current user. The user must be granted privileges prior to resource access.

Action: Ensure that the set of requested access privileges are included in the set of access privileges granted to the user.

ORA-31051: requested access privileges not supported

Cause: The requested access privileges were not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

ORA-31052: cannot delete ACL *string* while used by other resources

Cause: The access control list (ACL) resource could not be deleted because it was used by other resources.

Action: Remove the resources that reference the ACL. *Params: 1) *ACL_name*: The name of the ACL.

ORA-31053: The value of the DEPTH argument in the UNDER_PATH condition cannot be negative.

Cause: The optional DEPTH argument in the UNDER_PATH condition indicates the number of levels down from the specified path_string that Oracle should search. The documentation might also refer to this parameter as "levels". The value provided was a negative number. Oracle expects any non-negative integer.

Action: Correct the value for the depth or levels argument to a non-negative integer.

ORA-31054: The string operator cannot have an ancillary operator

Cause: An ancillary operator was used with an operator which does not support ancillary operators

Action: Remove the ancillary operator in the query

ORA-31055: cannot insert NULL XMLType element into RESOURCE_VIEW

Cause: The element which was being inserted into RESOURCE_VIEW was NULL.

Action: Specify a XMLType element that is not NULL to insert into RESOURCE_VIEW.

ORA-31056: The XML element or document being inserted does not conform to XML schema string.

Cause: The XML element or document being inserted did not conform to the registered XML schema identified by the URL.

Action: Insert an element or document that conforms to the specified XML schema.

ORA-31057: Display Name of the element being inserted is NULL.

Cause: The Display Name of the element which is being inserted into the RESOURCE_VIEW was NULL.

Action: Specify the Display Name and insert the element into RESOURCE_VIEW.

ORA-31058: Cannot modify read-only XML objects.

Cause: Read-only XML objects could not be modified.

Action: Use only read operations on such an XML object.

ORA-31059: Cannot insert root XML document node if it already exists

Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

ORA-31060: Resource at path string could not be deleted.

Cause: An error occurred when an attempt was made to delete the named resource.

Action: Check the error stack for detailed information on this issue. Examine the next error on the stack, take appropriate action, and then retry the operation.

ORA-31061: XDB error: string

Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

ORA-31062: Cannot delete an unsaved resource

Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

ORA-31063: XPath compilation failed: *string*.\n*string*

Cause: XPath compilation failed for specified reason.

Action: Contact Oracle Support Services.

ORA-31064: Cannot instantiate abstract element or property [*string*]

Cause: An attempt was made to instantiate an abstract element.

Action: Use only read operations on such elements.

ORA-31065: Cannot modify read-only property [*string*]

Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

ORA-31066: Insertion of *string* into *string* creates a cycle.

Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

ORA-31067: wrong XML node type

Cause: An attempt was made to use `updateXML()` to update an XML node with a node of another type.

Action: Ensure that the node that XPATH specifies matches the type of new data that is provided.

ORA-31068: updateXML expected data format [*string*] instead of [*string*]

Cause: An attempt was made to use `updateXML` to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use `CREATEXML` or `getStringVal` to coerce the new data to the proper format.

ORA-31069: Cannot apply typed changes to non-schema-based XMLType nodes.

Cause: Attempted to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Change non-typed nodes only by referencing their tag names.

ORA-31070: invalid database user ID *string*

Cause: An attempt was made to set an invalid user ID in an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

ORA-31071: Invalid database username or GUID *string*

Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

ORA-31072: Too many child nodes in XMLType fragment for updateXML

Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

ORA-31073: resource not retrieved using pathname

Cause: An attempt was made to access the pathname of a resource that was either never saved to disk or was loaded using a method other than with its pathname.

Action: Perform the pathname operations only on resources obtained using a pathname.

ORA-31074: XML comment length *string* exceeds maximum *string*

Cause: The length of the disk-formatted XML comment exceeded the maximum.

Action: Keep outer XML comments declarations below the maximum length.

ORA-31075: invalid *string* declaration in XML Schema

Cause: The XML Schema contained an invalid declaration identified by the message.

Action: Fix the identified error and try again. *Params: 1) decl: The outstanding schema declaration (e.g. complexType).

ORA-31076: required attribute "*string*" not specified

Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

ORA-31077: invalid attribute "*string*" specified

Cause: The XML Schema specified an invalid attribute.

Action: Remove the specification of the invalid attribute. *Params: 1) attr: The outstanding XML attribute.

ORA-31078: error in SQL mapping information

Cause: There was an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

ORA-31079: unable to resolve reference to *string* "*string*"

Cause: The identified type, attribute or element could not be resolved.

Action: Ensure that the specified name corresponds to a valid XML (simple or complex) type, attribute or element and try again. *Params: 1) decl: The outstanding declaration (e.g. xsi:type, element). 2) name: The name of the outstanding declaration.

ORA-31080: type not specified for attribute or element "*string*"

Cause: The identified attribute or element does not have a type.

Action: Make sure that every attribute and element has a valid type specification.

ORA-31081: name not specified for global declaration

Cause: The XML schema did not specify the name for the global declaration of attribute, element, simpleType, or complexType.

Action: Specify names for all the global declarations.

ORA-31082: Invalid attribute "string" specified in declaration of "string".

Cause: The XML schema specified an invalid attribute.

Action: Remove the specification of the invalid attribute. *Params: 1) attr: The outstanding XML attribute. 2) decl: The name of the outstanding declaration.

ORA-31083: An error occurred while creating SQL type "string"."string".

Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.

Action: Correct the error in the SQL type and retry. *Params: 1) owner: The owner of the outstanding SQL type. 2) name: The name of the outstanding SQL type.

ORA-31084: error while creating table "string"."string" for element "string"

Cause: An error occurred while trying to create the table based on the declaration of the identified element.

Action: Fix the identified error and try again. *Params: 1) owner: The owner of the table. 2) table: The name of the table. 3) element: The XML element.

ORA-31085: schema "string" already registered

Cause: An attempt was made to register a schema with the same URL as a previously registered schema.

Action: Register the schema with a different URL.

ORA-31086: insufficient privileges to register schema "string"

Cause: An attempt was made to register a schema without sufficient privileges.

Action: Ensure that the user has sufficient privileges to register the schema. *Params: 1) schema: The URL for the XML schema.

ORA-31087: insufficient privileges to delete schema "string"

Cause: An attempt was made to delete a schema resource without sufficient privileges.

Action: Ensure that you have sufficient privileges to delete the schema. *Params: 1) schema: The XML schema URL.

ORA-31088: Object "string"."string" depends on the XML schema.

Cause: An attempt was made to delete an XML schema that had dependent objects.

Action: Either drop the dependent objects prior to deleting the XML schema or use the CASCADE or FORCE options. *Params: 1) owner_name: The owner of the dependent object. 2) object_name: The name of the dependent object.

ORA-31089: Schema "string" does not target namespace "string".

Cause: The XML schema document contained references (through INCLUDE and IMPORT definitions) to other XML schemas that do not belong to any valid namespaces.

Action: Ensure that all XML schemas included have the same target namespace as the specified XML schema. Also, ensure that all imported XML schemas have namespaces matching the actual target namespace of the specified schema.

*Params: 1) schema: The XML schema URL. 2) namespace: The target XML namespace.

ORA-31090: invalid database schema name "*string*"

Cause: The XML schema document contained an invalid database schema name for attributes such as SQL schema.

Action: Ensure that all the database user or schema names specified in the XML schema document refer to existing database users or schemas. *Params: 1) schema_name: A database schema name.

ORA-31091: An empty string was specified as a SQL name.

Cause: The XML schema document contained a null value for attributes such as SQLName, SQLType, and defaultTable.

Action: Ensure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove these attributes from the schema and then try again.

ORA-31092: invalid SQL name "*string*"

Cause: The XML schema document contained an invalid SQL name. For example, the values of attributes SQLName, SQLType, and defaultTable.

Action: Ensure that all names of SQL schema objects specified in the XML schema documents are valid SQL names. This implies that the database length and other restrictions on names are satisfied. *Params: 1) sql_name: The SQL name.

ORA-31093: null or invalid value specified for parameter *string*

Cause: The argument value passed for the specified parameter was null or invalid.

Action: Ensure that all of the input argument values are valid.

ORA-31094: incompatible SQL type "*string*" for attribute or element "*string*"

Cause: The SQL type information provided in the XML schema was not compatible with the XML schema definition (XSD) type for the specified attribute or element.

Action: Ensure that the specified SQL types are compatible with the declared XSD types. *Params: 1) type: The SQL type. 2) prop: The name of the outstanding XML element or attribute.

ORA-31095: cannot generate *string*: "*string*". "*string*" already exists

Cause: The type or table name specified in the XML schema document was already in use, therefore it could not be generated.

Action: Use different names for types or tables, or use the NOGEN mode so that the schema compiler does not generate new types or tables. *Params: 1)

object_category: The category of the object (e.g. "table" or "type"). 2) owner_name: The owner of the object. 3) object_name: The name of the object.

ORA-31096: validation failed for XML schema "*string*"

Cause: The XML schema could not be validated. For more information, see the more specific error following this one.

Action: Ensure that the SQLType and other data type mapping is valid. Further information can be retrieved from the more specific error that follows this one.

ORA-31097: Hierarchical index must be empty to be rebuilt.

Cause: An attempt was made to rebuild the hierarchical index which was not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

ORA-31099: internal XDB security error

Cause: An unexpected internal XDB security error occurred.

Action: Contact Oracle Support.

ORA-31100: internal XDB locking error

Cause: An internal XDB locking error has occurred.

Action: Contact Oracle Support Services.

ORA-31101: token "*string*" not given while locking resource "*string*"

Cause: An attempt was made to lock a resource when the principal already owned a lock given by the token.

Action: Attempt the lock again with the token.

ORA-31102: cannot acquire lock on resource *string*, already locked in exclusive mode

Cause: A lock could not be acquired because the resource was already locked in exclusive mode.

Action: Wait until the existing lock on the resource has been removed or remove the existing lock and try again.

ORA-31103: cannot obtain an exclusive lock on the resource because it is already locked in shared mode

Cause: An exclusive lock could not be obtained because the resource was already locked in shared mode.

Action: Choose a compatible lock mode such as a shared lock or wait for the shared lock to be released.

ORA-31104: cannot find lock with token "*string*" on "*string*"

Cause: The specified lock could not be located because the token was incorrect, unlocked, or expired.

Action: Ensure the specified token and state are correct for the specified lock. After this, retry the operation.

ORA-31105: User does not own lock with supplied token "*string*".

Cause: The lock corresponding to the supplied token was not owned by the user.

Action: Supply the correct token while being connected as the correct user.

ORA-31106: parent container locked

Cause: The action failed because a parent container was locked.

Action: Supply the lock token on the parent container or unlock it.

ORA-31107: resource "*string*" locked by name lock

Cause: The operation failed because the lock requests caused the whole requested Uniform Resource Identifier (URI) to be locked.

Action: Supply a lock token or unlock the lock.

ORA-31108: The action failed because resource *string* is locked.

Cause: A delete or rename command failed because of an existing lock.

Action: Release the lock and try again.

ORA-31109: Deletion on *string* failed because parent resource *string* is locked.

Cause: A delete operation failed because a parent resource was locked.

Action: Remove the lock.

ORA-31110: action failed as resource *string* is locked

Cause: A delete or rename operation failed because one of the children resources was locked.

Action: Either wait until the child resource is unlocked or remove the lock and try again.

ORA-31111: table *string* cannot be hierarchically enabled

Cause: Trigger *tablename_xdb_pittrigger* already exists

Action: Either the table is already hierarchically enabled or the user trigger *tablename_xdb_pittrigger* needs to be dropped. Delete all rows in the hierarchical index and then rebuild it.

ORA-31112: failed to *string string* port using XDB configuration

Cause: The port number for the specified port type could not be registered or unregistered.

Action: Either the port number is already in use or it is protected. Specify another port number. *Params: 1) operation: Either "register" or "unregister". 2) type: The port type.

ORA-31113: XDB configuration may not be updated with non-schema compliant data.

Cause: An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to ensure that it is schema based and schema compliant.

ORA-31114: XDB configuration has been deleted or is corrupted.

Cause: The XDB configuration resource was deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

ORA-31115: XDB configuration error: *string*

Cause: An error related to XDB configuration occurred.

Action: Ensure the configuration resource contains valid data. *Params: 1) error: An XDB configuration error.

ORA-31116: Tablespace not specified correctly

Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

ORA-31117: Table "*string*"."*string*" is not resource metadata enabled

Cause: This table does not have a RESID column for resource metadata

Action: Use disable/enable_hierarchy to enable resource metadata

ORA-31118: System schema "*string*" is already registered.

Cause: An attempt was made to register an XML schema with the same URL as a system XML schema.

Action: Change the schema URL to avoid conflicts with system XML schemas.

ORA-31119: XDB configuration cannot be updated on all instances.

Cause: An attempt was made to update an XDB configuration.

Action: Ensure that each instance is correctly configured with its listener.

ORA-31120: USEDPORT function cannot be called in a pluggable database.

Cause: An attempt was made to call USEDPORT function in a pluggable database.

Action: Connect to the root container and call the USEDPORT function.

ORA-31121: The value of operator *string* cannot be FALSE.

Cause: The value of the operator that was specified was FALSE.

Action: Specify an operator that evaluates to TRUE.

ORA-31122: The right hand side value for operator *string* did not evaluate to TRUE.

Cause: The value on the right hand side that was specified for the operator did not evaluate to TRUE.

Action: Specify a value on the right hand side that evaluates to TRUE.

ORA-31127: RCList cannot contain noncommitted resource configurations.

Cause: A commit was not executed after adding a resource configuration to an RCList by calling DBMS_RESCONFIG.ADDRESCONFIG().

Action: Ensure that a commit is executed after calling DBMS_RESCONFIG.ADDRESCONFIG().

ORA-31128: The event handler calls cannot exceed the depth of *string*.

Cause: An attempt was made to fire an event with depth exceeding the maximum.

Action: Ensure that the event is not fired recursively (either by calling itself or other functions or procedures). *Params: 1) depth: The maximum depth.

ORA-31129: unable to retrieve repository's resource configuration

Cause: An attempt was made to access a deleted resource configuration from the XDB repository.

Action: Disassociate the resource configuration from the repository.

ORA-31130: specified resource configuration not associated with given resource

Cause: An attempt was made to delete a nonexistent resource configuration from the configuration list of the target resource.

Action: Ensure that the resource and resource configuration names are specified correctly, and the resource configuration belongs to the configuration list of the given resource.

ORA-31131: RCList element contains OID that is not a resource configuration.

Cause: The OID in the RCList element was not a resource configuration OID.

Action: Correct the RCList element.

ORA-31132: could not invoke event handler "*string*".*string*"

Cause: A attempt failed to invoke an invalid event handler. Either the handler did not exist or the handler could not be compiled successfully.

Action: Verify that the named handler exists and recompile it. Ensure that the recompilation is successful.

ORA-31133: invoker's rights not currently allowed for handler "*string*".*string*"

Cause: An attempt was made to invoke an event handler with invoker's rights when the SET-INVOKER attribute in the resource configuration that defines the handler was not set to TRUE.

Action: Either redefine the named handler with definer's rights or change the SET-INVOKER attribute in the resource configuration that defines the named handler to TRUE. *Params: 1) schema_name: The schema of the handler. 2) handler_name: The name of the handler.

ORA-31134: cannot delete a configuration that is referenced by other resources

Cause: An attempt was made to delete a resource configuration that was referenced by other resources.

Action: Remove all references to the target resource configuration by executing DELETERESCONFIG or DELETEREPOSITORYRESCONFIG procedures in DBMS_RESCONFIG package or specify the DELETE_FORCE option in the DELETERESOURCE statement.

ORA-31135: Resource has already been rendered.

Cause: One of the following has occurred: 1) An attempt was made to invoke a setRender* method after the resource was rendered through a setRender* method or after data was written to the output stream. 2) An attempt was made to access the output stream of the resource after a setRender* method was executed on the resource.

Action: Remove the method invocation causing the problem.

ORA-31136: resource configuration *string* already associated with resource *string*

Cause: An attempt was made to add a resource configuration that already existed in the resource configuration list of the resource or the repository.

Action: Ensure that this resource configuration really needs to be added. If it does, remove it from the resource and repository lists before adding it back.

ORA-31137: index out of range

Cause: The specified position was not valid.

Action: Ensure that the positional value is greater than or equal to zero and smaller than the size of the configuration list of the target resource.

ORA-31138: Resource configuration is being referenced by another resource.

Cause: Attempted to add a resource configuration to the repository that was referenced by an existing resource.

Action: Remove the resource configuration from other resource before you retry adding it to the repository.

ORA-31139: invalid resource configuration list

Cause: An attempt was made to create or update a resource that had duplicate resource configurations or a conflict with the repository configurations.

Action: Correct the resource configuration list.

ORA-31140: invalid operation: *string*

Cause: An attempt was made to call an invalid operation.

Action: Do not execute this operation. *Params: 1) parameter: The operation name.

ORA-31141: invalid path

Cause: The path specified for the *defaultChildConfig* or *defaultChildACL* element did not refer to an existing resource.

Action: Correct the path to refer to an existing resource.

ORA-31142: Listener does not have an assigned schema.

Cause: One or more listeners did not have an assigned schema.

Action: Specify a schema for each listener.

ORA-31143: XDB_SET_INVOKER role required

Cause: The SET-INVOKER attribute could not be set to TRUE because the XDB_SET_INVOKER role was not set.

Action: Add the XDB_SET_INVOKER role.

ORA-31144: implementation language for *string* not specified

Cause: The implementation language for the specified listener source was not specified.

Action: Specify an implementation language. *Params: 1) listener_name: The name of the listener.

ORA-31145: duplicate listener *string* in resource configuration

Cause: A duplicate listener source was found in the resource configuration.

Action: Remove the duplicate listener source. *Params: 1) listener_name: The name of the listener.

ORA-31146: invalid listener source *string.string*

Cause: The listener source specified in the resource configuration did not exist or was invalid.

Action: Correct the listener source in the listener element. *Params: 1) schema_name: The schema name of the listener. 2) listener_name: The name of the listener.

ORA-31147: *string* not an ACL resource

Cause: The specified resource did not conform to acl.xsd schema.

Action: Specify a valid path for the defaultChildACL element. *Params: 1)
resource_name: The name of the resource.

ORA-31148: *string* not a valid resource configuration

Cause: The resource specified in the defaultChildConfig element while creating a resource configuration or the resource specified as the rcpth in a call using the DBMS_RESCONFIG package did not conform to XDBResConfig.xsd schema.

Action: Specify a valid path and resubmit the statement. *Params: 1)
parameter_name: The resource name.

ORA-31149: nonexistent schema: *string*

Cause: A nonexistent schema was defined in the resource configuration.

Action: Specify a valid schema in the resource configuration, and retry the operation.
*Params: 1) schema_name: The name of the schema.

ORA-31150: unrecoverable error in handler *string*

Cause: The named handler raised an exception.

Action: This message is followed by a second message giving more details about the error. Check the second error message for more information. *Params: 1)
handler_name: The XDB repository event handler.

ORA-31151: cyclic definition encountered for *string*: "*string*"

Cause: The schema definition for this type had cycles.

Action: Remove cyclic definition and recompile schema.

ORA-31153: cannot create schema URL with reserved prefix "*http://xmlns.oracle.com/xdb/schemas/*"

Cause: This prefix was reserved for XDB extended schema URLs and could not be used in a user specified URL.

Action: Modify the prefix to a different one.

ORA-31154: invalid XML document

Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

ORA-31155: attribute *string* not in XDB namespace

Cause: The specified attribute was not prefixed with the XDB namespace.

Action: Ensure that all XDB specified attributes are prefixed with the XDB namespace, and then try again.

ORA-31157: HTTP Content-Type header has an invalid or unsupported character set.

Cause: The HTTP Content-Type header had an invalid or unsupported character set.

Action: Change the Content-Type header in the HTTP request to a supported character set.

ORA-31158: schema "*string*" currently being referenced

Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released, and then try the operation again.

ORA-31159: Oracle XML DB is in an invalid state.

Cause: Oracle XML DB internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful.

Action: Ensure that the database is upgraded successfully. If the problem persists, then contact Oracle Support.

ORA-31160: max substitution group size *string* exceeded by "*string*" (*string*) for head element "*string*" (*string*)

Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

ORA-31161: Element or attribute "*string*" cannot be stored out of line.

Cause: An element or attribute of a simple type has "SQLInline=FALSE".

Action: Remove "SQLInline=FALSE" for the offending element or attribute.

ORA-31162: Element or attribute "*string*" has no SQLType specified.

Cause: Schema registration was invoked with FALSE GENTYPES without specifying the SQLType attribute for some elements or attributes.

Action: Specify the SQLType attribute for the offending element or attribute and register the schema again. *Params: 1) xml_name: The outstanding XML element or attribute.

ORA-31163: Element or attribute "*string*" has invalid value "*string*" (should be "*string*").

Cause: An element or attribute for a complexType derived by restriction had an attribute whose value was different from that in the base type.

Action: Remove the mismatched attribute values from the offending element or attribute. *Params: 1) xml_name: The outstanding XML element or attribute. 2) value_name_1: The invalid value given. 3) value_name_2: The expected value.

ORA-31164: Cannot load object-relational XML attribute using direct path.

Cause: The table being loaded contained an XML column with object-relational storage. The XMLType column contained a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with a conventional path mode.

ORA-31165: cannot load object-relational XML attribute using direct path

Cause: The table that was loaded contained an XML column with object-relational storage. The XMLType column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of XMLType. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31167: XML nodes over 64K in size cannot be inserted

Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

ORA-31168: Node localname and namespace values should be less than 64K

Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

ORA-31169: Number of children (*string*) defined in '*string*' exceeds maximum (*string*).

Cause: An attempt was made to define more than the allowed number of children in a complexType element of an XML schema document.

Action: Modify the XML schema document to move children of a complexType into sub-elements that are not stored inline.

ORA-31170: cyclic schema registration without using FORCE option

Cause: An attempt was made to register cyclic schemas with FORCE = FALSE.

Action: Use FORCE = TRUE when registering cyclic schemas.

ORA-31171: schema processing error LSX - *string* while *string*

Cause: An LSX routine returned an error.

Action: Look up the LSX error and follow the corrective action. *Params: 1) error: The LSX error number. 2) operation: The operation on the XML schema.

ORA-31172: cannot load ADT column or XMLType column using direct path

Cause: The table being loaded contained an ADT column or XMLType column with object-relational or binary storage and supplemental logging was enabled for the table. Direct path load is not supported for such tables when supplemental logging is enabled.

Action: Perform the load with conventional path mode.

ORA-31176: API not supported in this release

Cause: This API was not supported.

Action: None

ORA-31177: The referenced resource configuration does not exist.

Cause: The referenced resource did not exist.

Action: Ensure the referenced resource configuration exists or contact Oracle Support.

ORA-31180: DOM Type mismatch in invalid PL/SQL DOM handle

Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31181: PL/SQL DOM handle accesses node that is no longer available

Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31182: Too many PL/SQL DOM handles specified

Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

ORA-31183: Node type *string* cannot be converted to desired type

Cause: The given node's type cannot be converted correctly for this operation. For example, a DOM Element cannot be converted to Document Fragment

Action: Pass a valid node type for the conversion.

ORA-31184: A wrong or null XML element is being inserted.

Cause: The XML element being inserted was NULL or was different from the element expected by the insert operation (for example, function INSERTCHILDXML).

Action: Ensure that the XML element being inserted is not NULL and that it matches the element indicated by the insert operation.

ORA-31185: DOM Nodes do not belong to the same DOM Document

Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

ORA-31186: Document contains too many nodes

Cause: Unable to load the document because it has exceeded the maximum allocated number of DOM nodes.

Action: Reduces the size of the document.

ORA-31187: cannot add node '*string*' (type='*string*') to simple type node '*string*'

Cause: An attempt was made to add attribute or element nodes to a simple type against the schema definition. But, a simple type can only have special attributes like namespaces or xsi:nil.

Action: Add a node complying with the simple type. *Params: 1) node_name: The node added to the simple type node. 2) node_type: The node type added to the simple type node. 3) simple_type_node: The node that is the simple type node.

ORA-31188: The specified printing option is invalid.

Cause: The printing option specified in the operation was invalid.

Action: Use a valid printing option for the operation.

ORA-31190: Resource *string* is not a version-controlled resource.

Cause: Either one of the following was the cause: - Checkout was requested for a resource that was not under version control. Only version-controlled resources can be checked out. - Checkout was requested for a row of a non-versioned table.

Action: Put the resource under version-control before checking out. *Params: 1) resource_name: The resource name.

ORA-31191: Resource *string* is already checked out.

Cause: Checkout was requested for a resource that is already checked out of the workspace by the same or a different user.

Action: Check in the resource from the workspace before checking out.

ORA-31192: Resource *string* has not been checked out.

Cause: An attempt was made to check in or uncheck out a resource that was not checked out by a user in a workspace.

Action: Check out the resource from the workspace before checking in.

ORA-31193: Resource *string* cannot be put under WEBDAV version control.

Cause: The VERSIONING feature was specified for a resource type that did not support it.

Action: Remove the VERSIONING feature from the resource, and retry the operation.

ORA-31194: Resource *string* is already deleted

Cause: Access a version-controlled resource that is already deleted.

Action: Recreate the resource. Remove the cyclic definitions in the type and retry compilation.

ORA-31195: XML node '*string*' of type '*string*' does not support this operation.

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

ORA-31196: XML nodes over the limit *string* in size cannot be printed.

Cause: An attempt was made to use either an XML text node with a size greater than 64K or an XML comment node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use getClobVal() or getStringVal() to print the document. *Params: 1) limit_value: The size limit in bytes.

ORA-31197: error in processing file *string*

Cause: An error occurred while operating on the specified file. A possible cause is that the file header is corrupt.

Action: Ensure that the specified file is correct. Examine the next error on the stack and take the appropriate action. *Params: 1) file_name: The file name.

ORA-31198: Mismatch in the number of bytes transferred due to non-binary mode.

Cause: An error occurred while reading the specified file. The error might have occurred due to the transfer that was initiated in ASCII mode.

Action: Ensure that the transfer mode is set to BINARY.

ORA-31199: warning in processing file *string*

Cause: A warning was raised while operating on the specified file. However, the current operation was completed successfully.

Action: This is primarily an informational message. Look at the next error on the stack to obtain further information. *Params: 1) file_name: The file name.

ORA-31200: Invalid ACL Argument

Cause: A System Constraining ACL was passed as one of the arguments to this function.

Action: Please ensure that none of the aclid arguments are for the System Constraining ACL.

ORA-31201: DBMS_LDAP: generic error: *string*

Cause: There has been an error in the DBMS_LDAP package.

Action: Please report the error number and description to Oracle Support.

ORA-31202: DBMS_LDAP: LDAP client/server error: *string*

Cause: There is a problem either on the LDAP server or on the client.

Action: Please report this error to the LDAP server administrator or your Database administrator.

ORA-31203: DBMS_LDAP: PL/SQL - Init Failed.

Cause: There has been an error in the DBMS_LDAP Init operation.

Action: Please check the host name and port number, or report the error number and description to Oracle Support.

ORA-31204: DBMS_LDAP: PL/SQL - Invalid LDAP Session.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the session handler that you use for binding, or report the error number and description to Oracle Support.

ORA-31205: DBMS_LDAP: PL/SQL - Invalid LDAP Auth method.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the authentication credentials that you use for binding, or report the error number and description to Oracle Support.

ORA-31206: DBMS_LDAP: PL/SQL - Invalid LDAP search scope.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search scope that you use for search, or report the error number and description to Oracle Support.

ORA-31207: DBMS_LDAP: PL/SQL - Invalid LDAP search time value.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search time value that you use for search, or report the error number and description to Oracle Support.

ORA-31208: DBMS_LDAP: PL/SQL - Invalid LDAP Message.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP message that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31209: DBMS_LDAP: PL/SQL - LDAP count_entry error.

Cause: There has been an error in the DBMS_LDAP count_entry operation.

Action: Please check the LDAP count_operation, or report the error number and description to Oracle Support.

ORA-31210: DBMS_LDAP: PL/SQL - LDAP get_dn error.

Cause: There has been an error in the DBMS_LDAP get_dn operation.

Action: Please check the LDAP get_dn, or report the error number and description to Oracle Support.

ORA-31211: DBMS_LDAP: PL/SQL - Invalid LDAP entry dn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the entry dn that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31212: DBMS_LDAP: PL/SQL - Invalid LDAP mod_array.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP mod_array that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31213: DBMS_LDAP: PL/SQL - Invalid LDAP mod option.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod option that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31214: DBMS_LDAP: PL/SQL - Invalid LDAP mod type.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod type that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31215: DBMS_LDAP: PL/SQL - Invalid LDAP mod value.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod value that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31216: DBMS_LDAP: PL/SQL - Invalid LDAP rdn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP rdn value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31217: DBMS_LDAP: PL/SQL - Invalid LDAP newparent.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP newparent value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31218: DBMS_LDAP: PL/SQL - Invalid LDAP deleteoldrdn.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP deleteoldrdn value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31219: DBMS_LDAP: PL/SQL - Invalid LDAP notypes.

Cause: There has been an error in the DBMS_LDAP explode_dn or explode_rdn operation.

Action: Please check the LDAP notypes value that you use for LDAP explode_dn or explode_rdn operation, or report the error number and description to Oracle Support.

ORA-31220: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet location.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslwrl value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31221: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet passwd.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslpasswd value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31222: DBMS_LDAP: PL/SQL - Invalid LDAP SSL authentication mode.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslauth value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31223: DBMS_LDAP: cannot open more than *string* LDAP server connections

Cause: An attempt was made to open more than the maximum allowed LDAP server connections.

Action: Free unused connections.

ORA-31224: DBMS_LDAP: invalid LDAP session

Cause: An attempt was made by a PL/SQL module to use an LDAP session which is not valid and might have already been closed.

Action: Check the LDAP session handle in PL/SQL module involving DBMS_LDAP.

ORA-31225: DBMS_LDAP: invalid BER_ELEMENT

Cause: An attempt was made by a PL/SQL module to use a BER_ELEMENT which is not valid and might have already been freed.

Action: Check the BER_ELEMENT in PL/SQL module involving DBMS_LDAP.

ORA-31226: DBMS_LDAP: MOD_ARRAY size limit exceeded

Cause: An attempt was made by a PL/SQL module to add an element beyond the MOD_ARRAY size limit.

Action: Increase the MOD_ARRAY size limit in PL/SQL module involving DBMS_LDAP.

ORA-31227: DBMS_LDAP: invalid LDAP MESSAGE handle

Cause: An attempt was made by a PL/SQL module to use an LDAP MESSAGE handle which is not valid and might have already been freed.

Action: Check the LDAP MESSAGE handle in PL/SQL module involving DBMS_LDAP.

ORA-31228: DBMS_LDAP: invalid MOD_ARRAY

Cause: An attempt was made by a PL/SQL module to use a MOD_ARRAY which is not valid and might have already been freed.

Action: Check the MOD_ARRAY in PL/SQL module involving DBMS_LDAP.

ORA-31229: DBMS_LDAP: invalid input parameter

Cause: An invalid argument has been passed by a PL/SQL module to a DBMS_LDAP subprogram

Action: Check the input argument to the DBMS_LDAP subprogram in PL/SQL module involving DBMS_LDAP.

ORA-31230: DBMS_LDAP: unable to dynamically allocate additional memory

Cause: An error occurred during dynamic memory allocation from session heap.

Action: Verify that adequate memory resources are available.

ORA-31231: DBMS_LDAP: invalid PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a PROPERTY_SET which is not valid and might have already been freed.

Action: Check the PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31232: DBMS_LDAP: invalid MOD_PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a MOD_PROPERTY_SET which is not valid and might have already been freed.

Action: Check the MOD_PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31398: DBMS_LDAP: Shared servers are not supported.

Cause: The session executing functions from the DBMS_LDAP package is being handled by a shared server in the Database.

Action: Use dedicated database sessions to execute functions in the DBMS_LDAP package.

ORA-31399: Cannot contact LDAP server *string* at port *number*

Cause: The LDAP server specified could not be contacted. This can happen if the server is down or inaccessible.

Action: Contact the administrator of the LDAP server

ORA-31400: DBMS_LDAP: missing or invalid scheduler credential

Cause: An attempt was made to perform a simple username and password-based authentication to the directory server using a non-existent or an invalid scheduler credential. This error could also occur if the credential existed as a synonym and there was insufficient privileges on the base credential pointed to by the synonym.

Action: Reissue the command using a scheduler credential object that exists or create a new credential object and then reissue the command. Do not qualify the credential name with a schema name. The credential name should be owned by the current user invoking the DBMS_LDAP method. If the credential is owned by a different user, create a synonym pointing to the credential, request the database administrator to grant EXECUTE privilege on the credential and then reissue the command.

ORA-31401: change source *string* is not an existing change source

Cause: The caller did not use the name of an existing change source. The name given does not match the name of any existing change source.

Action: Check the spelling of the change source name. Choose an existing change source.

ORA-31402: unrecognized parameter *string*

Cause: Unrecognized parameter was detected.

Action: Check for too many parameters in the call.

ORA-31403: change table *string* already contains a column *string*

Cause: Issued ALTER_CHANGE_TABLE with an add operation but a column by this name already exists in the specified table.

Action: Check the names and call the procedure again.

ORA-31404: all input parameters are null

Cause: All input parameters are null. At least one property must be altered.

Action: Call the procedure again, making sure that all the required parameters have been specified. Ensure that at least one parameter is not null. Refer to user documentation for the correct way of calling this procedure.

ORA-31405: cannot make changes while change set *string* is advancing

Cause: The change set is currently advancing. Change sources related to an advancing change set cannot be altered. Change tables related to the advancing change set cannot be created, altered or dropped. Some or all the parameters of the change set cannot be altered while the set is advancing.

Action: Wait until the change set has finished advancing, then reissue the command. If altering the change set, only the advance_enable parameter can be altered during an advance.

ORA-31406: change source *string* is referenced by a change set

Cause: The operation cannot complete because this change source is referenced by one or more change sets.

Action: Drop the change sets first, then re-issue the command. May have to drop some change tables before the change sets are dropped.

ORA-31407: end_date must be greater than the begin_date

Cause: The end data of the change set is earlier than the begin date. The end date must always be later in time than the begin date, so that the duration between the begin and end dates is a positive amount of time.

Action: Change the begin date and/or the end date, so that the end date is later than the begin date.

ORA-31408: invalid value specified for begin_scn or end_scn

Cause: The begin_scn was not greater than zero. The end_scn was less than zero. The end_scn was less than the begin_scn.

Action: Check the values of both begin_scn and end_scn. Correct them to make sure that they form a legal SCN range. An end_scn value of zero indicates an infinite scn range.

ORA-31409: One or more values for input parameters are incorrect.

Cause: One or more of the inputs to the procedure had invalid values.

Action: Identify the bad parameters and supply correct values to the procedure.

ORA-31410: change set *string* is not an existing change set

Cause: Could not find an existing change set by this name.

Action: Check the spelling of the change set name. Call the procedure again, passing the correct change set name.

ORA-31411: change set *string* is referenced by a change table

Cause: The operation cannot be performed because the change set contains one or more change tables.

Action: You will need to drop the change table(s) first, then repeat the operation

ORA-31412: change set *string* is disabled and cannot be advanced

Cause: The specified change set is disabled. The change set needs to be enabled for the operation to succeed.

Action: Determine why the change set is disabled and correct this condition. Alter the change set specifying 'y' for advance_enable then retry the operation.

ORA-31413: change set *string* is currently being advanced

Cause: An advance operation is in progress for this change set and we only allow one at a time.

Action: Since the change set is currently being advanced, the best action is to wait for it to finish advancing. Only one caller at a time can advance the change set. Check for the cause of long running advance operations.

ORA-31414: error(s) occurred during change table advance

Cause: One or more errors occurred during the advance operation.

Action: Check the log file(s) for a more detailed report of the underlying errors.

ORA-31415: change set *string* does not exist

Cause: Specified change set does not exist or the user does not have access to the publications in that change set. The name specified did not match the name of any

existing change set. Certain privileges are required to access the publications within that change set.

Action: Check the name and call the procedure again, with the name of an existing change set. Contact the publisher or database administrator if user privileges are required to access the publications in the change set.

ORA-31416: invalid SOURCE_COLMAP value

Cause: A source_colmap value of 'y' was specified for an asynchronous change table.

Action: Specify a source_colmap parameter value of 'n' and call the procedure again.

ORA-31417: column list contains control column *string*

Cause: Reserved column name was specified in a column list or column type parameter.

Action: Control columns are selected with separate parameters. If you did not want a control column, then change the name of the specified column so that it does not conflict with a reserved column name.

ORA-31418: source schema *string* does not exist

Cause: Trying to create a synchronous change table and the source schema did not match any existing schema names in the database.

Action: Specify the name of an existing schema.

ORA-31419: source table *string* does not exist

Cause: When creating a synchronous change table, the underlying source table must exist when the procedure is called. In this case, the source table did not exist.

Action: Specify the name of an existing table.

ORA-31420: unable to submit the purge job

Cause: When creating the first change table, a purge job is submitted to the job queue. Submission of this purge job failed.

Action: Make sure that job queue processes are enabled and are currently running. If this does not solve the problem, contact Oracle.

ORA-31421: change table does not exist

Cause: Specified change table does not exist.

Action: Recheck the name, and call the procedure again using an existing change table.

ORA-31422: owner schema *string* does not exist

Cause: Value specified for the owner parameter does not contain the name of an existing schema in the database.

Action: Recheck the name, and call the procedure again using an existing schema name.

ORA-31423: change table *string* does not contain column *string*

Cause: Issued ALTER_CHANGE_TABLE with a drop operation and the specified column does not exist in the change table.

Action: Recheck the names, and call the procedure again.

ORA-31424: change table has active subscriptions

Cause: The change table is subscribed to, so it cannot be dropped.

Action: Do not drop a change table while there are active subscribers. If this is an emergency, use the FORCE parameter. This will forcibly drop the change table out from under all subscribers.

ORA-31425: subscription does not exist

Cause: The subscription either did not exist or did not belong to this user.

Action: Call the function again with a valid subscription name.

ORA-31426: cannot modify active subscriptions

Cause: The subscription was already activated so that additional calls to SUBSCRIBE were prohibited.

Action: Subscribe to all the desired tables and columns before activating the subscription. Ensure that the correct subscription name is specified.

ORA-31427: publication *string* already subscribed

Cause: The subscription already contained this publication.

Action: Check the values of subscription_name and publication_id. Check any other subscribe calls to see if they subscribe to columns that are shared among more than one publication on the same source table. Do not attempt to subscribe to the same publication more than once in the same subscription. Use the publication_id variant of the SUBSCRIBE call if needed to specify precise publications.

ORA-31428: no publication contains all the specified columns

Cause: One or more of the specified columns cannot be found in a single publication.

Action: Change the subscription request to select only columns that are in the same publication. Consult the USER_PUBLISHED_COLUMNS view to see current publications.

ORA-31429: subscription has not been activated

Cause: The called procedure required an activated subscription.

Action: Check the subscription name and correct if necessary. Call the ACTIVATE_SUBSCRIPTION procedure for this subscription and then reissue the original command.

ORA-31430: subscriber view exists

Cause: A view that is already in use was specified for the subscriber view.

Action: Call the SUBSCRIBE procedure using a different subscriber view name.

ORA-31431: all source tables must belong to the synchronous change set

Cause: Not all of the source tables belong to the synchronous change set.

Action: Check the spelling of the source tables. Make sure that all of the source tables belong to the synchronous change set.

ORA-31432: invalid source table

Cause: Either the schema_name.source_table did not exist or it did not belong to this subscription.

Action: Check the spelling of the `schema_name` and `source_table`. Verify that the specified table exists in the specified schema and is subscribed to by the subscription.

ORA-31433: subscriber view does not exist

Cause: The subscription did not contain this subscriber view.

Action: Recheck the name, and specify the name of an existing subscriber view.

ORA-31434: purge is currently running

Cause: Called the PURGE procedure while a purge job was currently running.

Action: Wait for purge to complete before reissuing this command.

ORA-31435: an error occurred during the purge operation

Cause: An error occurred during the purge operation

Action: Check the logfile for a more detailed report of the underlying errors.

ORA-31436: duplicate change source *string*

Cause: A change source by the specified name already exists.

Action: Recreate the change source with a unique name.

ORA-31437: duplicate change set *string*

Cause: A change set by the specified name already exists.

Action: Recreate the change set with a unique name.

ORA-31438: duplicate change table *string*

Cause: A change table by the specified name already exists.

Action: Recreate the change table with a unique name.

ORA-31439: subscription is already active

Cause: The subscription is already active.

Action: Check name and retry.

ORA-31440: change set *string* is empty and cannot be advanced

Cause: User attempted to advance a change set which does not contain any change tables. Without change tables, a change set cannot be advanced.

Action: Create change tables in the change set, then retry the advance.

ORA-31441: table is not a change table

Cause: User attempted to execute the DROP_CHANGE_TABLE procedure on a table that is not a CHANGE table. This can also occur when a CHANGE table object has been orphaned. CHANGE tables can become orphaned after a CREATE_CHANGE_TABLE failure or an incomplete DROP_CHANGE_TABLE.

Action: Check spelling. If error was due to an incorrect name, then retry the procedure using the correct name. To drop a table that is not a CHANGE table, or an orphaned CHANGE table, use the DROP TABLE DDL command instead.

ORA-31442: operation timed out while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but the operation timed out.

Action: Retry the operation later.

ORA-31443: deadlock detected while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a deadlock.

Action: Contact Oracle corporation

ORA-31444: parameter error while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a problem passing parameters to the lock manager.

Action: Contact Oracle corporation

ORA-31445: invalid lock handle while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered an invalid lock handle, which did not correspond to any existing handle.

Action: Contact Oracle corporation

ORA-31446: this session does not own the lock handle for *string*

Cause: CDC attempted to acquire a lock on the resource, does not own the the lock associated with the lock. This is an internal error.

Action: Contact Oracle corporation

ORA-31447: cannot create change tables in the SYS schema

Cause: Attempted to create a change table in the SYS schema. This is not allowed.

Action: Use a different existing schema and retry the command.

ORA-31448: invalid value for *change_source*

Cause: The specified value was not a valid name for a Change Source.

Action: Specify a valid name and retry the command.

ORA-31449: invalid value for *change_set_name*

Cause: The specified value was not a valid name for a Change Set.

Action: Specify a valid name and retry the command.

ORA-31450: invalid value for *change_table_name*

Cause: The specified value was not a valid name for a Change Table.

Action: Specify a valid name and retry the command.

ORA-31451: invalid value *string* for *capture_values*, expecting: OLD, NEW, or BOTH

Cause: The specified value was not a valid option for a *capture_values*.

Action: Specify a valid option and retry the command.

ORA-31452: invalid value *string* for parameter, expecting: Y or N

Cause: The specified value was not Y or N.

Action: Specify Y or N for the parameter and retry the command.

ORA-31453: invalid value *string* for parameter, expecting: Y, N, or NULL

Cause: The specified value was not Y, N or NULL.

Action: Specify Y, N or NULL for the parameter and retry the command.

ORA-31454: invalid value *string* for operation parameter, expecting: ADD or DROP

Cause: The specified value was not ADD or DROP.

Action: Specify ADD or DROP and retry the command.

ORA-31455: nothing to ALTER

Cause: The specified column list is NULL and all optional control columns are 'N'.

Action: Specify one or more columns to ALTER.

ORA-31456: error executing a procedure in the DBMS_CDC_UTILITY package

Cause: An internal attempt to invoke a procedure within the DBMS_CDC_UTILITY package failed.

Action: Check the trace logs for more information. Ensure that the package has been installed successfully. Try issuing a DESCRIBE command from SQL on the package. If it fails, then try reinstalling the package. If it succeeds then try invoking one of the procedures from SQL.

ORA-31457: maximum length of description field exceeded

Cause: The maximum number of characters permitted in the description field was exceeded.

Action: The maximum length of the description field is 30 characters. Ensure the length does not exceed this value and retry the command.

ORA-31458: an internal error occurred

Cause: This is an internal error.

Action: Contact Oracle Worldwide Customer Support and report the error.

ORA-31459: system triggers for DBMS_CDC_PUBLISH package are not installed

Cause: One or more required system triggers are not installed. These triggers are required for the proper operation of Change Data Capture. Operations on Change tables cannot continue.

Action: Install or reenble the triggers, or reinstall the package.

ORA-31460: logfile location *string* is not an existing directory

Cause: The directory specification for logfile location for the change source, does not correspond with an existing directory, or the directory was not accessible.

Action: 1. Create the directory if it does not exist. If the directory does exist, change the file system permissions so the directory can be accessed. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31461: logfile location *string* contains no files that match pattern *string*

Cause: The directory specification for logfile location for the change source, does not contain any files whose names pattern-match the logfile_suffix.

Action: 1. Make sure that the logfile location contains logfiles whose names match the logfile_suffix pattern for the change set. OR 2. perform ALTER CHANGE SOURCE and change the logfile_suffix such that it matches the names of existing logfiles in the directory

ORA-31462: internal error while accessing metadata

Cause: An unexpected internal error occurred while CDC was accessing its internal Metadata.

Action: Contact Oracle Corporation

ORA-31463: logfile location *string* is an empty directory

Cause: The directory specification for logfile location for the change source, is an empty directory

Action: 1. Make sure it is the correct location of the logfiles. If it is, make sure the directory contains logfiles. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31464: target table for the change table no longer exists

Cause: User tried to drop a change table but its underlying storage table (that contains the change data) has been dropped.

Action: Contact Oracle Corporation

ORA-31465: cannot obtain a lock on the subscription

Cause: A timeout occurred while trying to place a lock on the subscription. Another session had already acquired the lock on the subscription.

Action: Ensure the subscription name is correct and correct it if necessary. If it is already correct, try the operation again after the session holding the lock has released it.

ORA-31466: no publications found

Cause: Did not find any publications that matched the input parameters or the user does not have the privileges to access the specified publication.

Action: Check the input parameters on the call to SUBSCRIBE. Validate that the proposed source table has been published by checking the USER_PUBLICATIONS view for that source table. Contact the publisher if user privileges are required to access the publication. Retry the command with correct security or publication information.

ORA-31467: no column found in the source table

Cause: The OBJECT_ID flag was set to 'Y' on the call to CREATE_CHANGE_TABLE and change table belongs to the synchronous change set. The corresponding object column was not detected in the source table.

Action: Create the change table with the OBJECT_ID flag set to 'N' or investigate why the object column is not in the source table and add it to the source table.

ORA-31468: cannot process DDL change record

Cause: The change set has stop_on_ddl enabled and was trying to process a DDL change record.

Action: Check the alert log to find out what the DDL record contained. Make any necessary changes to the change tables. Call ALTER_CHANGE_SET with recover_after_error and remove_ddl set to 'Y'.

ORA-31469: cannot enable Change Data Capture for change set *string*

Cause: The change set has reached the specified limit that was set up by the CREATE_CHANGE_SET command.

Action: Check the alert log to find out whether capture, apply or both reached the limit. Once apply reaches its limit, the change set is permanently disabled. Create a new change set with new limits to continue capturing data.

ORA-31470: asynchronous change tables must contain the RSID\$ column

Cause: If creating an asynchronous change table, the RSID was set to 'N'. If altering an asynchronous change table with an operation parameter of 'DROP' RSID was set to 'Y'.

Action: When creating asynchronous change tables, always specify 'Y' for the RSID parameter. When altering asynchronous change tables always specify 'N' for RSID.

ORA-31471: invalid OBJECT_ID value

Cause: An object_id value of 'y' was specified for an asynchronous change table.

Action: Specify an object_id parameter value of 'n' and call the procedure again.

ORA-31472: Importing Change Data Capture version *string.string* is too new

Cause: An attempt was made to Import a file that was exported by a newer version of Oracle than the target instance.

Action: If possible, re-export the file using a version of export that matches the import target. Objects can not be imported into previous versions of Oracle that did not support them.

ORA-31473: date bound out of range

Cause: The upper_bound or lower_bound specified in extend_window or purge_window API is beyond the range of records in the change set.

Action: Either select a bound that is within range or do not select an upper or lower bound at all.

ORA-31474: Invalid change view window

Cause: The specified upper_bound or lower_bound is forcing a condition where the change view window will have nothing in it.

Action: Select a different upper_bound or lower_bound and reissue the API call that produced the error. Alternatively, make the upper_bound or lower_bound parameter NULL and reissue the API call.

ORA-31475: redo log catalog contains no metadata for the source table

Cause: While advancing a change set, an CDC attempted to query the LogMiner dictionary system tables to obtain the columns from the source table. The query returned no rows. This may be because none of the redo logs contains a catalog, or it may be an internal error.

Action: First, verify that the source system contains the source table. execute dbms_logmnr_d.build procedure to populate the redos log with logminer dictionary information. If this has been done and the problem persists, then contact Oracle Corporation

ORA-31476: a change table data column is missing from the source table

Cause: While advancing a change set, an CDC determined that at least one of the data columns in a change table does not match the name of any of the columns in the source table. The source table column list is stored in dictionary table SYSTEM.LOGMNR_OBJ\$

Action: Make sure that all of the data columns of the change table have the same names as the corresponding columns in the source table, and that all the columns exist in the source table.

ORA-31477: could not detach LogMiner session during cleanup

Cause: Failure during detach from a LogMiner session during advance of an asynchronous change set. This is an internal error. This exception is raised when a previous exception occurred during the internal protocol with LogMiner, after which Change Data Capture attempted to detach the LogMiner session as part of recovery. The detach session also failed

Action: Contact Oracle Corporation

ORA-31478: could not detach LogMiner session after change set advance

Cause: Failure during detach from a LogMiner session after successful advance of an asynchronous change set. This is an internal error. This exception is raised when an asynchronous change set has been successfully advanced but CDC was unable to detach from the LogMiner session

Action: Contact Oracle Corporation

ORA-31479: could not create LogMiner session

Cause: Failure during create of a new LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31480: staging database and source database cannot be the same

Cause: A CDC API call specified a source database name that matched the staging database on which the CDC API call is being executed.

Action: Make sure that the CDC API call is being executed from the staging database and that the source database is correctly specified. The source database and staging database need to be different databases.

ORA-31481: change source *string* is not a HotLog change source

Cause: A change source was specified that was not a HotLog change source, but a HotLog change source was required.

Action: Correct the call to supply a HotLog change source.

ORA-31482: invalid option for non-distributed Hotlog change source

Cause: A CDC API call specified `enabled_source = 'Y'` on a non-Distributed HotLog change source.

Action: Specify a Distributed HotLog change source.

ORA-31483: cannot have spaces in the parameter *string*

Cause: The specified parameter contained at least 1 space character.

Action: Check the value of the specified parameter. Remove the spaces and reissue the CDC API call.

ORA-31484: source database version must be at least 9.2.0.6 or greater

Cause: The source database is not at version 9.2.0.6 or higher.

Action: Upgrade the source database to 9.2.0.6 or higher.

ORA-31485: invalid database link

Cause: The database link used to connect from a staging database to a source database was invalid. The database link may not exist, may not be accessible to the current user, or may have been redefined since the distributed HotLog change source was created.

Action: Ensure that there is a database link to the source database for the distributed HotLog change source. Also, ensure that this database link is accessible to the current user.

ORA-31486: cannot support column *string* in this configuration

Cause: The specified column cannot be used in a Distributed HotLog configuration when the source database version is 9.2.0.6 or 10.1.0.0.

Action: Remove the specified column from the CREATE_CHANGE_TABLE or ALTER_CHANGE_TABLE CDC API call.

ORA-31487: cannot support begin dates or end dates in this configuration

Cause: The specified values cannot be used in a Distributed HotLog configuration.

Action: Remove the specified values from the CREATE_CHANGE_SET CDC API call.

ORA-31488: cannot support change set *string* in this configuration

Cause: Change sources with the hot mine option enabled are limited to 1 change set. The system detected an existing change set so a second one can not be created.

Action: Associate the change set with a different change source.

ORA-31489: invalid DDL_MARKERS value

Cause: A DDL_MARKERS value of 'y' was specified for an synchronous change table.

Action: Specify a DDL_MARKERS parameter value of 'n' and call the procedure again.

ORA-31490: could not attach to LogMiner session

Cause: Failure during attach to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31491: could not add logfile to LogMiner session

Cause: Failure during add logfile to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31492: could not set session parameters for LogMiner session

Cause: Failure during set parameters for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31493: could not prepare session for LogMiner session

Cause: Failure during prepare session for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31494: could not activate a LogMiner session

Cause: Failure during activation of a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31495: error in synchronous change table on "*string*". "*string*"

Cause: There was an error originating from this synchronous change table. One possible cause is that schema redefinition has occurred on the source table and one or more columns in the change table are now a different type than corresponding source columns. Another possible cause is that there is a problem accessing the synchronous change table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop and recreate the synchronous change table.

ORA-31496: must use DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE to drop change tables

Cause: An attempt was made to use the SQL command DROP TABLE for change tables, but DROP TABLE is not supported for change tables.

Action: Use the DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE procedure instead of the DROP TABLE command.

ORA-31497: invalid value specified for first_scn

Cause: The first_scn was not greater than zero or was less than the previous value of first_scn.

Action: Check the value of first_scn. Correct it to make sure it is an integer greater than zero and greater than any previous value for this change source.

ORA-31498: description and remove_description cannot both be specified

Cause: The description and remove_description parameters were both specified.

Action: Check the values of description and remove_description. Correct call to only supply one of these values.

ORA-31499: null value specified for required parameter *string*

Cause: A null value was specified for a parameter that requires an explicit value.

Action: Correct call to supply a value for this parameter.

ORA-31500: change source *string* is not a ManualLog change source

Cause: A change source was specified that is not a ManualLog change source, but a ManualLog change source is required.

Action: Correct call to supply a ManualLog change source.

ORA-31501: change source *string* is not an AutoLog change source

Cause: A change source was specified that was not an AutoLog change source, but an AutoLog change source was required.

Action: Correct call to supply an AutoLog change source.

ORA-31502: invalid number supplied for supplemental_processes

Cause: The caller supplied an invalid value for supplemental_processes. The value must be a positive integer.

Action: Correct call to supply a positive integer value for supplemental_processes.

ORA-31503: invalid date supplied for begin_date or end_date

Cause: The caller supplied an invalid value for begin_date or end_date. The value must be a valid date value.

Action: Correct call to supply a valid date value for begin_date and/or end_date.

ORA-31504: cannot alter or drop predefined change source

Cause: The caller attempted to alter or drop one of the predefined change sources HOTLOG_SOURCE or SYNC_SOURCE.

Action: Do not attempt to alter or drop a predefined change source or correct call to supply the name of a user-created change source.

ORA-31505: cannot alter or drop predefined change set

Cause: The caller attempted to alter or drop the predefined change set SYNC_SET.

Action: Do not attempt to alter or drop the predefined change set or correct call to supply the name of a user-created change set.

ORA-31506: duplicate subscription name *string*

Cause: A subscription by the specified name already exists.

Action: Recreate the subscription with a unique name.

ORA-31507: *string* parameter value longer than maximum length *string*

Cause: A value was specified for a parameter that was longer than the maximum permitted length.

Action: Correct the call to supply a shorter value for this parameter that fits within the maximum length. *Params: 1) parameter_name: The parameter with the unacceptable value. 2) max_parameter_len: The maximum length permitted for the parameter.

ORA-31508: invalid parameter value for synchronous change set

Cause: A parameter value was specified that is not supported for synchronous change sets.

Action: Correct the call to supply only valid parameter values for a synchronous change set. Synchronous change sets only support the default values for the following parameters: begin_scn, end_scn, begin_date, end_date, stop_on_ddl, supplemental_processes.

ORA-31509: publication does not exist

Cause: The specified publication did not exist or the specified subscription subscribed to a publication that no longer exists.

Action: Recheck the publication or subscription specified. Either call the procedure again with an existing publication or create a new subscription that only subscribes to existing publications.

ORA-31510: name uses reserved prefix CDC\$

Cause: A name was specified that starts CDC\$. The name prefix CDC\$ is reserved for use by Oracle Corporation.

Action: Change the name so it does not start with characters CDC\$

ORA-31511: name exceeds maximum length of 30 characters

Cause: A name was supplied that exceeds the maximum length of 30 characters.

Action: Change the name so it does not exceed 30 characters

ORA-31512: name cannot contain double quotation marks

Cause: A name containing a double quotation mark was supplied. Subscription names cannot contain the double quotation mark.

Action: Change the name so it has no double quotation marks

ORA-31513: unsupported column type specified in change table

Cause: A source column of an unsupported type was specified for inclusion in a change table. Columns types of LOB or LONG are not currently supported for change capture.

Action: Change the column list so that it does not include columns of LOB or LONG types.

ORA-31514: change set *string* disabled due to capture error

Cause: This change set has encountered a capture error and was disabled.

Action: Contact the change set's publisher to request that the capture error be resolved. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the capture error is resolved.

ORA-31515: CDC change source *string* already exists

Cause: A Change Data Capture change source intended for import already existed.

Action: Either verify that the existing change source has the desired characteristics or drop the existing change source and perform the import again.

ORA-31516: CDC change set *string* already exists

Cause: A Change Data Capture change set intended for import already existed.

Action: Either verify that the existing change set has the desired characteristics or drop the existing change set and perform the import again.

ORA-31517: CDC change table *string.string* already exists

Cause: A Change Data Capture change table intended for import already existed.

Action: Either verify that the existing change table has the desired characteristics or drop the existing change table and perform the import again.

ORA-31518: change column *string* already exists in CDC change table *string.string*

Cause: A column in a Change Data Capture change table intended for import was already present in the change table.

Action: Either verify that the change table contains the desired columns or drop the change table and perform the import again.

ORA-31519: CDC subscription *string* already exists

Cause: A Change Data Capture subscription intended for import already existed.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31520: CDC subscription *string* already subscribes to publication ID *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a publication.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31521: CDC subscription *string* already subscribes to publication ID *string* column *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a published column.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31522: could not find Streams object *string* for CDC change set *string*

Cause: An underlying Streams capture, apply, or queue was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Retry the import, ensuring that STREAMS_CONFIGURATION=y is specified.

ORA-31523: could not find change source *string* for CDC change set *string*

Cause: The change source was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Verify that the schema containing the missing change source was included in the original export. If needed, perform the export again, including the schema of the missing change source.

ORA-31524: could not find change set *string* for CDC change table *string.string*

Cause: The change set was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31525: could not find column *string* in CDC change table *string.string*

Cause: A column was missing for an imported Change Data Capture change table.

Action: It is likely that this table existed before the import operation and import did not overwrite it. Determine whether the imported change table should supercede the original table. If so, drop the original table and retry the import. If not, the change table must have a different name in order to be imported.

ORA-31526: could not find source table *string.string* for CDC change table *string.string*

Cause: The source table was missing or was not set up correctly for an imported Change Data Capture change table. A synchronous change table requires the source table to exist and have the Change Data Capture trigger defined on it. An asynchronous change table requires table rules to be defined for the source table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the source table. If change table is asynchronous, ensure that `STREAMS_CONFIGURATION=y` is specified for the import.

ORA-31527: could not find source column *string* for CDC change table *string.string*

Cause: A source column was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the missing source table.

ORA-31528: could not find change set *string* for CDC subscription *string*

Cause: The change set was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31529: could not find publication for CDC subscriber view *string.string*

Cause: A publication was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing publication was included in the original export. If needed, perform the export again, including the schema of the missing publication.

ORA-31530: could not find published column *string* for CDC subscriber view *string.string*

Cause: A published column was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing published column was included in the original export. If needed, perform the export again, including the schema of the missing published column.

ORA-31531: could not find column *string* in CDC subscriber view *string.string*

Cause: A column was missing in a subscriber view for an imported Change Data Capture subscription.

Action: It is likely that this view existed before the import operation and import did not overwrite it. Determine whether the imported subscriber view should supercede the original view. If so, drop the original view and retry the import. If not, the subscriber view must have a different name in order to be imported.

ORA-31532: cannot enable change source *string*

Cause: The change source cannot be enabled when there is no change table created in any of the change sets associated with the change source.

Action: Add a change table to a change set before enabling the the change source.

ORA-31533: only one change set (*string*) is allowed in change source

Cause: A Distributed HotLog change source can contain at most one change set.

Action: Create a new change source and create the change set in the new change source.

ORA-31534: Change Data Capture *string* publisher *string* is missing DBA role

Cause: The publisher does not have the DBA role, which is required by the Change Data Capture operation.

Action: Grant the DBA role the Change Data Capture publisher.

ORA-31535: cannot support change source *string* in this configuration

Cause: Each database can only have one change source with hot mine option enabled. The system detected an existing hot mine change source in the database, therefore, a second hot mine change source cannot be created.

Action: Remove the existing change source and create this new change source again.

ORA-31536: cannot support encrypted column *string* in the source table

Cause: One of the columns specified in the parameter COLUMN_TYPE_LIST was an encrypted column in the source table

Action: remove the encrypted column in the parameter COLUMN_TYPE_LIST

ORA-31537: specified purge date is invalid

Cause: The purge date specified was an invalid date or was outside of the range of data currently in the change set.

Action: Do not specify purge date or specify a date that is within the range of data in the change set.

ORA-31538: change set *string* disabled

Cause: This change set was disabled.

Action: Contact the change set's publisher to request that the change set be enabled. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the change set is enabled.

ORA-31539: no privilege to create job

Cause: This change table could not be created because the create job privilege is needed to submit the default purge job.

Action: Grant the create job privilege and try again

ORA-31540: *string* is not a valid identifier

Cause: All Change Data Capture (CDC) identifiers must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for CDC identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to CDC naming rules and try again.

ORA-31541: cannot enable supplemental log data in pluggable database when supplemental logging is not enabled in CDB\$ROOT and database is in shared undo mode

Cause: An attempt was made to enable supplemental logging in a pluggable database when database was in shared undo mode and supplemental logging was not already enabled in CDB\$ROOT.

Action: Enable supplemental logging in CDB\$ROOT or switch to local undo mode and then retry the command.

ORA-31542: Either ENABLE LOGICAL REPLICATION or DISABLE LOGICAL REPLICATION can be specified, but not both.

Cause: One of three possible actions caused the error: 1) ENABLE LOGICAL REPLICATION was specified more than once. 2) DISABLE LOGICAL REPLICATION was specified more than once. 3) Both ENABLE LOGICAL REPLICATION and DISABLE LOGICAL REPLICATION were specified.

Action: Remove all but one of the ENABLE LOGICAL REPLICATION or DISABLE LOGICAL REPLICATION clauses; then, reissue the command.

ORA-31543: cannot disable logical replication when there is table-level supplemental log data

Cause: An attempt was made to disable logical replication for a table when there was table-level supplemental log data.

Action: Remove all table-level supplemental log data; then, disable logical replication.

ORA-31544: cannot disable logical replication when trying to add table-level supplemental log data

Cause: An attempt was made to disable logical replication and add table-level supplemental log data at the same time.

Action: Remove all table-level supplemental log data and then disable logical replication. Or, do not disable logical replication, and add supplemental logging.

ORA-31546: cannot drop supplemental logging on table with *string*

Cause: An attempt was made to drop supplemental logging for this table.

Action: Remove the condition that caused this error. Or, do not drop supplemental log data.

ORA-31547: cannot disable logical replication on table with *string*

Cause: An attempt was made to disable logical replication for this table.

Action: Remove the condition that caused this error. Or, do not disable logical replication.

ORA-31600: invalid input value *string* for parameter *string* in function *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-31601: Function *string* cannot be called now that fetch has begun.

Cause: The function was called after the first call to FETCH_XXX.

Action: Correct the program.

ORA-31602: parameter *string* value "*string*" in function *string* inconsistent with *string*

Cause: The parameter value is inconsistent with another value specified by the program. It may be inconsistent with the object type associated with the OPEN context, or it may be of the wrong datatype (a boolean rather than a text string or vice versa).

Action: Correct the program

ORA-31603: object "*string*" of type *string* not found in schema "*string*"

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31604: invalid *string* parameter "*string*" for object type *string* in function *string*

Cause: The specified parameter value is not valid for this object type.

Action: Correct the parameter and try the call again.

**ORA-31605: the following was returned from *string* in routine *string*:
*string***

Cause: An LPX routine (XML/XSL processing) returned an internal error number to its PL/SQL wrapper routine in facility KUX which provides the implementation for package UTL_XML.

Action: Look up the LPX error number and follow its corrective action.

ORA-31606: XML context *number* does not match any previously allocated context

Cause: A method in package UTL_XML was called with an invalid XML context handle. All handles must have previously been allocated by UTL_XML.XMLINIT.

Action: Always call XMLINIT before any other methods in package UTL_XML.

ORA-31607: function *string* is inconsistent with transform.

Cause: Either (1) FETCH_XML was called when the "DDL" transform was specified, or (2) FETCH_DDL was called when the "DDL" transform was omitted.

Action: Correct the program.

ORA-31608: specified object of type *string* not found

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31609: error loading file "*string*" from file system directory "*string*"

Cause: The installation script initmeta.sql failed to load the named file from the file system directory into the database.

Action: Examine the directory and see if the file is present and can be read.

ORA-31610: cannot call this function from a non-master process

Cause: Called a Data Pump process model function from a process which is not a master process.

Action: Create a master process first. Then call the function from the master process. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31612: allocation of process descriptor failed

Cause: During creation of a control process or a worker process, a failure occurred allocating a process descriptor for the process.

Action: Try the operation again. If the error occurs again, contact Oracle Support Services and report the error.

ORA-31613: Master process *string* failed during startup.

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31614: routine *string* received this error from *string*: *lnstring*

Cause: The call to the specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31615: routine *string* received this error: *lnstring*

Cause: The specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31616: unable to write to dump file "*string*"

Cause: The Oracle Data Pump Export utility was unable to write to the export file. This could be the result of a device error. This message is usually followed by a device message from the operating system.

Action: Take the appropriate action to restore the device.

ORA-31617: unable to open dump file "*string*" for write

Cause: The Oracle Data Pump Export utility was unable to open and write to the export file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31618: FILESIZE is outside valid range of *string*KB to *string*TB

Cause: The value specified for the FILESIZE parameter was either too small to hold the header information for the export file, plus any data, or exceeded the allowed maximum size for a dump file.

Action: Retry the operation using a value for FILESIZE that falls within the valid range.

ORA-31619: invalid dump file "*string*"

Cause: Either the file was not generated by the Oracle Data Pump Export utility or the file was corrupt.

Action: If the file was generated by the Oracle Data Pump Export utility, report this as an Oracle Data Pump Import bug and submit the export dump file to Oracle Support.

ORA-31620: file or device "*string*" cannot be specified for *string* operation

Cause: There was an inappropriate use of file or device in the current operation.

Action: Correct operation or job setup.

ORA-31621: error creating master process

Cause: Setup to create a master process failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31622: premature end of file at block *string*

Cause: The end of the dump file input was reached unexpectedly. This is caused either by a corrupted Oracle Data Pump Export dump file or by an Oracle internal error. This message should be preceded by another message identifying the name of the dump file in question.

Action: Retry the Oracle Data Pump Import operation. Contact Oracle Support if the problem persists.

ORA-31623: A job is not attached to this session using the specified handle.

Cause: An attempt was made to reference a job using a handle that was invalid or no longer valid for the current session.

Action: Select a handle corresponding to a valid active job or start a new job.

ORA-31624: A job cannot be modified after it has started.

Cause: The user attempted to change the definition of a Data Pump job through filters, transforms or parameters after it had started. These changes can only be made while defining a job.

Action: Stop the current job and rerun it with the correct definition.

ORA-31625: Schema *string* is needed to import this object, but is inaccessible

Cause: An error occurred when attempting to import objects. The schema specified is needed to import this object, but access to this schema is not available.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31626: job does not exist

Cause: An invalid reference to a job which is no longer executing, is not executing on the instance where the operation was attempted, or that does not have a valid Master Table. Refer to any following error messages for clarification.

Action: Start a new job, or attach to an existing job that has a valid Master Table.

ORA-31627: API call succeeded but more information is available

Cause: The user specified job parameters that yielded informational messages.

Action: Call DBMS_DATAPUMP.GET_STATUS to retrieve additional information.

ORA-31628: error getting worker process exception

Cause: Attempt to get a worker process exception failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31629: unable to allocate additional memory

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31630: a job name is required to attach a job for user *string*

Cause: No job name was supplied for an attach and the user has either no jobs executing or multiple jobs executing.

Action: Provide a job name for attach to use in selecting an executing job, or to use for restarting a stopped job.

ORA-31631: privileges are required

Cause: The necessary privileges were not granted for operations such as: - Restarting a job on behalf of another owner. - Using a device as a member of the dump file set. - Omitting a directory object associated with any of the various output files. Refer to any subsequent error messages for additional information.

Action: Either select a different job to restart, try a different operation, or contact a database administrator to acquire the needed privileges.

ORA-31632: master table "*string.string*" not found, invalid, or inaccessible

Cause: A Master Table is required but no such table exists, or the content is not consistent with that of a valid Master Table, or the table is not accessible. Refer to any following error messages for clarification.

Action: Make sure a valid Master Table exists, and eliminate any problems indicated by the following error messages.

ORA-31633: unable to create master table "*string.string*"

Cause: Job creation failed because a Master Table and its indexes could not be created, most commonly due to the pre-existence of a table with the same name (job name) in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, DROP the existing table, or eliminate any problems indicated by the following error messages.

ORA-31634: job already exists

Cause: Job creation or restart failed because a job having the selected name is currently executing. This also generally indicates that a Master Table with that job name exists in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, or stop the currently executing job and re-try the operation (may require a DROP on the Master Table).

ORA-31635: unable to establish job resource synchronization

Cause: A lock used in synchronizing Data Pump resources during job creation and deletion could not be obtained during job creation. This indicates that a process for some other Data Pump job has not released the lock due to an internal error.

Action: Eliminate the processes for any failed Data Pump job and try to create the new job again. If the error continues to occur, contact Oracle Customer Support and report the error.

ORA-31636: session is already attached to job *string* for user *string*

Cause: The session executing the attach is already attached to the specified job.

Action: Select a different job or create a new session.

ORA-31637: cannot create job *string* for user *string*

Cause: Unable to create or restart a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31638: cannot attach to job *string* for user *string*

Cause: Unable to attach a job to a session. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31639: unexpected data found

Cause: The Master Table or Data Pump file contents appear invalid. The table or file may not have been produced by a Data Pump job, or they may have been corrupted.

Action: Select a different job name (Master Table) or replace the table or file with one produced by Data Pump.

ORA-31640: unable to open dump file "*string*" for read

Cause: Oracle Data Pump Import was unable to open and read the export file. This message is usually followed by device messages from the operating system.

Action: Take the appropriate action to restore the device.

ORA-31641: unable to create dump file "*string*"

Cause: Oracle Data Pump Export was unable to create or write to the specified file.

Action: Check the file name and file system for the source of the error.

ORA-31642: the following SQL statement fails: *lnstring*

Cause: An internal error was generated from package DBMS_METADATA.

Action: Contact Oracle Customer Support and report the error.

ORA-31643: Unable to close dump file "*string*".

Cause: Either Oracle Data Pump Export or Oracle Data Pump Import was unable to close the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31644: unable to position to block number *string* in dump file "*string*"

Cause: Either Oracle Data Pump Export or Oracle Data Pump Import was unable to position the file pointer to a specific block within the dump file. This message is usually followed by device messages from the operating system.

Action: Take the appropriate action based on the device messages.

ORA-31645: unable to read from dump file "*string*"

Cause: Import could not read from the dump file. This could be the result of a device error. This message is usually followed by a device message from the operating system.

Action: Take the appropriate action to restore the device.

ORA-31648: Timeout before master process *string* finished initialization.

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31649: control process *string* violated startup protocol

Cause: The specified control process started but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Support and report the error.

ORA-31650: timeout waiting for master process response

Cause: After creating the job infrastructure and sending the initial message to the master process, it failed to respond in the allotted time and most likely aborted during startup.

Action: Retry the open or attach request. Contact Oracle Customer Support if the problem persists.

ORA-31651: communication error with master process - detaching job

Cause: Unexpected failure trying to communicate with the master process.

Action: Attach again and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31652: command response message was invalid type - detaching job

Cause: Something horribly wrong with the command/response protocol.

Action: Reattach and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31653: unable to determine job operation for privilege check

Cause: Failure trying to determine the operation of the current job in order to test for appropriate privileges.

Action: Retry in case it's an intermittent failure. If it still fails, detach, reattach, and retry the call. Contact Oracle Customer Support if the problem persists.

ORA-31654: unable to convert file or volume size as specified to a number

Cause: File or volume size specification has an error that prevents it from being converted into a numeric value.

Action: Fix the call.

ORA-31655: no data or metadata objects selected for job

Cause: After the job parameters and filters were applied, the job specified by the user did not reference any objects.

Action: Verify that the mode of the job specified objects to be moved. For command line clients, verify that the INCLUDE, EXCLUDE and CONTENT parameters were correctly set. For DBMS_DATAPUMP API users, verify that the metadata filters, data filters, and parameters that were supplied on the job were correctly set.

ORA-31656: cannot use TABLESPACE_EXPR filter with transportable mode

Cause: A TABLESPACE_EXPR metadata filter was supplied for for a transportable mode import job. Transportable mode import does not support the subsetting of tablespaces from a dump file set.

Action: Remove the filter expression.

ORA-31657: data filter name can not be defaulted

Cause: A null data filter name was supplied.

Action: Fix the call to specify a data filter name.

ORA-31658: specifying a schema name requires a table name

Cause: The caller specified a schema name but neglected to specify a corresponding table name.

Action: Fix the call to include a table name.

ORA-31659: status message was invalid type - detaching job

Cause: Message from the master process on the status queue had an invalid message type, indicating a failure in the protocol.

Action: Reattach and retry the operation. Contact Oracle Customer Support if the problem persists.

ORA-31660: metadata filter name can not be defaulted

Cause: A null metadata filter name was supplied.

Action: Fix the call to specify a metadata filter name.

ORA-31661: there are no metadata transform values of type VARCHAR2

Cause: The specified metadata transform value was an invalid type.

Action: Fix the call to specify a valid metadata transform value.

ORA-31662: metadata transform name can not be defaulted

Cause: A null metadata transform name was supplied.

Action: Fix the call to specify a metadata transform name.

ORA-31663: metadata remap name can not be defaulted

Cause: A null metadata remap name was supplied.

Action: Fix the call to specify a metadata remap name.

ORA-31664: unable to construct unique job name when defaulted

Cause: The job name was defaulted, and the name creation algorithm was unable to find a unique job name for this schema where the table name (for the master table) didn't already exist.

Action: Specify a job name to use or delete some of the existing tables causing the name conflicts.

ORA-31665: mode can only be defaulted for IMPORT and SQL_FILE operations

Cause: The job mode can not be null except for IMPORT and SQL_FILE operations.

Action: Fix the call to specify the job mode.

ORA-31666: Master process *string* had an unhandled exception.

Cause: A Data Pump process model master process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31667: parameter name can not be defaulted

Cause: A null was supplied for the parameter name.

Action: Fix the call by providing a valid parameter name.

ORA-31668: Timeout before worker process *string* finished initialization.

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31669: Worker process *string* violated startup protocol.

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31670: Username argument must be specified and non-null.

Cause: Called change user with a NULL username or a null string.

Action: Specify a valid username argument. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31671: Worker process *string* had an unhandled exception.

Cause: A Data Pump process model worker process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31672: Worker process *string* died unexpectedly.

Cause: A Data Pump process model worker process died unexpectedly, so PMON is cleaning up the process.

Action: Check your system for problems. Check the trace file for the process, if one was created, for any additional information. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31673: worker process interrupt for normal exit by master process

Cause: A worker process was requested to clean up and exit because the master process is doing a normal exit.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation exited prematurely. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31674: worker process interrupt for unhandled exception in master process

Cause: A worker process was requested to clean up and exit because an unhandled exception occurred in the master process.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation had an unhandled exception. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31675: worker process interrupt for unexpected death of master process

Cause: A worker process was requested to clean up and exit (signaled by PMON, doing cleanup because the master process died unexpectedly).

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation died unexpectedly. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31676: illegal value for number of workers, *string*

Cause: Called create worker processes with an illegal number of workers specified.

Action: Make sure that the number of workers value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp) and you specified the parallel parameter, try the operation again with a smaller value for the parallel parameter. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31679: Table data object *string* cannot be imported or exported using a network link.

Cause: The table object contained at least one type that requires direct path and at least one type that requires insert as select or external tables to import the data. There is no method available to export or import this data over a database link.

Action: Export this table and data to a file and then import the same table and data from that file.

ORA-31686: error creating worker processes

Cause: Setup to create worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31687: error creating worker process *string* with worker id *string*

Cause: Attempt to create the listed worker process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31688: Worker process *string* failed during startup.

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31689: illegal value for base worker id, *string*

Cause: Called create worker processes with an illegal base worker id value specified.

Action: Make sure that the base worker id value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31690: Process name buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the buffer size argument.

Action: Be sure to specify a buffer size that is big enough to hold the worker process name (e.g. 30 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31691: The worker received message number *string* from the MCP, which is invalid.

Cause: Bad code.

Action: Fix mcp code and reissue export/import command.

ORA-31692: The following SQL statement failed trying to insert a row into the Master table:\n*string*

Cause: Bad code.

Action: Fix code and reissue export/import command.

ORA-31693: Table data object *string* failed to load/unload and is being skipped due to error:\nstring

Cause: Table failed to load or unload due to some error.

Action: Check load/unload error, correct problem and retry command.

ORA-31694: master table *string* failed to load/unload

Cause: Master table failed to load or unload.

Action: Check load/unload error, correct problem and retry command.

ORA-31695: Inconsistent master table on restart. The following SQL statement returned *string* identical objects.\nstring

Cause: Master table on restart has the same object inserted multiple times.

Action: Restart not possible, reissue original export/import.

ORA-31696: unable to export/import *string* using client specified *string* method

Cause: Table attributes prevent client specified method for exporting or importing data.

Action: Use default 'DATA_ACCESS' parameter value.

ORA-31697: aborting operation at process order number *string*

Cause: User asked for it.

Action: Don't ask for it.

ORA-31698: Error stack buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the error stack size argument.

Action: Be sure to specify an error stack buffer size that is big enough to hold the error stack string (e.g. 4096 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31700: An invalid long string is supplied for *string* parameter.

Cause: An invalid long string was supplied for one of the following parameters in the initialization parameter file: - UNIFIED_AUDIT_COMMON_SYSTEMLOG - UNIFIED_AUDIT_SYSTEMLOG - AUDIT_SYSLOG_LEVEL

Action: Retry the operation using a valid <facility_clause.priority_clause> such as "local1.notice". *Params: 1) parameter_name: The name of the initialization parameter.

ORA-31701: Event to enable xmltype table export/import with schema

Cause: Event to enable xmltype table export/import with schema

Action: Disable the event at level 0x100

ORA-31702: This privilege has already been granted.

Cause: The GRANT statement contained a privilege that was already granted to the user.

Action: Remove the privilege from the statement and retry.

ORA-31703: cannot grant *string* privilege

Cause: Granting the privilege was attempted by a user other than SYS, the owner, or a privileged user with the WITH GRANT OPTION or GRANT ANY OBJECT PRIVILEGE system privilege.

Action: Retry granting the privilege as SYS, the owner, or a privileged user with the WITH GRANT OPTION or GRANT ANY OBJECT PRIVILEGE system privilege.

*Params: 1) privilege_name: The name of the privilege being granted.

ORA-31704: cannot revoke *string* privilege on behalf of other users

Cause: Revoking of the privilege was attempted by a user other than SYS or the owner.

Action: Revoking of the privilege can only be done by SYS or the owner.

ORA-31705: An internal error occurred while trying to acquire a resource.

Cause: An error occurred while trying to acquire a resource. This might be due to a resource contention caused by the load on the system.

Action: Retry the operation. If the error persists, contact your system administrator.

ORA-31706: role "*string*" not granted commonly or does not exist

Cause: Either the role was not granted commonly to the user, or the role did not exist.

Action: Create the role or grant the role commonly to the user and retry the operation.

*Params: 1) role_name: The name of the role.

ORA-31707: cannot grant "*string*" privilege on a role or an invalid user

Cause: An attempt was made to grant an ON USER privilege on a role or an invalid user.

Action: Grant the privilege on a valid user. *Params: 1) privilege_name: The name of the privilege.

ORA-31901: The current operation was canceled by the user.

Cause: The user requested to cancel the current operation.

Action: No action is necessary.

ORA-31903: cannot unregister materialized view for Synchronous refresh

Cause: One or more materialized views in the materialized views list were not registered for Synchronous refresh.

Action: Check catalog views for which materialized views are registered.

ORA-31905: Synchronous refresh cannot be used for materialized view "*string*".*string*\n*string*

Cause: The materialized view did not meet the requirements for Synchronous refresh.

Action: The query defining the materialized view must conform to a star or snowflake schema, the fact-table and materialized view must both be partitioned, and the partition-key of the materialized view must be functionally-dependent on the partition-key of the fact-table. Run CAN_SYNCREF_TABLE to obtain more diagnostics and troubleshoot the problem further.

ORA-31906: Staging log of "string"."string" contains rows which do not belong to any of the table's partitions.

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging log for validity. If the data is valid, create additional partitions, including a default partition if needed, with the ALTER TABLE command.

ORA-31907: Synchronous refresh of "string"."string" results in rows which do not belong to any of the materialized view's partitions.

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging logs of the materialized view's base tables for validity. If the data is valid, create additional partitions, including a default partition if needed, with the ALTER MATERIALIZED VIEW command.

ORA-31908: cannot modify the contents of a table with a staging log

Cause: An attempt was made to alter the contents of a table with a staging log.

Action: Do not use the following ALTER TABLE statements on a table with a staging log: * ALTER TABLE EXCHANGE PARTITION * ALTER TABLE DROP PARTITION * ALTER TABLE TRUNCATE PARTITION You must use the REGISTER_PARTITION_OPERATION procedure in the DBMS_SYNC_REFRESH package to perform these operations.

ORA-31909: base table "string"."string" must have primary key or foreign key when creating a staging log

Cause: The base table did not have a primary or foreign key defined.

Action: Define primary key or foreign key on the base table.

ORA-31910: staging log exists on table "string"."string"

Cause: Staging log was already generated on the base table.

Action: Do not attempt to create the staging log.

ORA-31911: MV log on table "string"."string" is not completely consumed.

Cause: Materialized views (MV) referencing the base table were not refreshed.

Action: Refresh all the MVs referencing the base table before altering MV log to staging log.

ORA-31912: Cannot alter MV log. MV log was not created on table "string"."string"

Cause: Materialized view (MV) log was not created on the base table.

Action: Do not alter the MV log.

ORA-31913: Log is already an MV log on table "string"."string".

Cause: An attempt was made to alter a staging log to a materialize view (MV) log when it was already an MV log.

Action: Do not alter the MV log.

ORA-31914: Staging log was created on table "string"."string"

Cause: Staging log was not created on base table.

Action: Do not alter the staging log.

ORA-31915: At least one MV referencing table "*string*".*string*" is REFRESH ON COMMIT.

Cause: At least one materialize view (MV) referencing a table is defined as REFRESH ON COMMIT.

Action: Do not create or alter to the staging log.

ORA-31916: Staging log on table "*string*".*string*" cannot be dropped or altered.

Cause: The current group contained a materialize view (MV) referencing the table.

Action: Do not drop or alter the staging log.

ORA-31917: illegal operation on a table which has been locked by synchronous refresh

Cause: DML or DDL was used on a base table that had a staging log or was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform DML or DDL on such tables. You cannot modify tables locked by PREPARE_REFRESH until you have done the corresponding EXECUTE_REFRESH.

ORA-31918: The materialized view "*string*".*string*" is registered for synchronous refresh and cannot be altered or dropped.

Cause: The materialized view was registered for synchronous refresh.

Action: Do not drop or alter the materialized view.

ORA-31919: Value of DMLTYPE\$\$ column is not one of ('I','D','UO','UN') in staging log "*string*".*string*".

Cause: Value of DMLTYPE\$\$ column was not one of ('I','D','UO','UN').

Action: Update the staging log.

ORA-31920: 'UO' and 'UN' row counts or key values not matched in the staging log "*string*".*string*".

Cause: 'UO' and 'UN' row counts or key values were not matched in the staging log.

Action: Update the staging log.

ORA-31921: Staging log rows to be updated, deleted or inserted were invalid.*lnstring*

Cause: The staging log rows to be updated, deleted or inserted were invalid.

Action: Change the staging log key in the staging log table.

ORA-31922: Foreign key must contain partition key in table "*string*".*string*".

Cause: The foreign key did not contain a partition key. If a table does not have a primary key, the foreign key must contain a partition key.

Action: Change the foreign key or partition key in the table.

ORA-31923: must have primary key or partition key in table "*string*".*string*".

Cause: The table did not have a primary key or a partition key.

Action: Add a primary key or partition key to the table.

ORA-31924: must have either primary key or foreign key in table "*string*".*string*"

Cause: The table did not have a primary key or a foreign key.

Action: Add a primary key or foreign key to the table.

ORA-31925: Every row in staging log "*string*".*string*" should contain non-NULL values for all the columns comprising staging log key.

Cause: The staging log contained NULL values in key columns.

Action: Fill in non-NULL values to the staging log key columns.

ORA-31926: Type "*string*" is not supported for synchronous refresh.

Cause: An attempt was made to create a staging log on a base table containing an unsupported data type.

Action: Do not attempt synchronous refresh on this base table. Refer to the documentation.

ORA-31927: Staging log does not exist on table "*string*".*string*".

Cause: An attempt to prepare a staging log that did not exist.

Action: Create a staging log on the table first.

ORA-31928: Synchronous refresh error\n*string*

Cause: An error occurred in the synchronous refresh package (DBMS_SYNC_REFRESH). This message will be followed by a second message giving more details about the nature of the error.

Action: See the synchronous refresh documentation for an explanation of the second error message.

ORA-31930: The table is locked by synchronous refresh and the requested operation cannot be performed.

Cause: An attempt was made to perform a PMOP (partition maintenance operation) or otherwise modify a table that was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform PMOPs or modify the table between the execution of PREPARE_REFRESH and EXECUTE_REFRESH. You can do these operations before PREPARE_REFRESH or after EXECUTE_REFRESH.

ORA-31932: cannot allocate memory of *string* bytes for query expression**ORA-31933: error occurred during refresh statistics processing at *string*\n*string***

Cause: An error was detected by the refresh statistics subsystem at the position indicated by the first argument in the error message. The secondary error is indicated by the second argument in the error message. This error message is recorded in the trace file and alert log but is not thrown and the refresh operation is not aborted because of this error.

Action: Fix the problems indicated in the secondary error.

ORA-31934: error occurred while shrinking the materialized view log at *string*\n*string*

Cause: An error was detected while shrinking the materialized view (MV) log during refresh at the position indicated by the first argument in the error message. The secondary error is indicated by the second argument in the error message. This error message is recorded in

the trace file and alert log but is not thrown and the refresh operation is not aborted because of this error.

Action: Fix the problems indicated in the secondary error, or disable MV log shrink during refresh by setting the parameter `_mv_refresh_shrink_log` to FALSE.

ORA-31935: REFRESH FAST of "string"."string" unsupported with SKIP_EXT_DATA = FALSE

Cause: The REFRESH command specified the value of the parameter `SKIP_EXT_DATA` as FALSE. This materialized view does not support fast refresh when `SKIP_EXT_DATA = FALSE` is specified.

Action: Use REFRESH COMPLETE with `SKIP_EXT_DATA = FALSE` to refresh with data from external partitions. If you do not want to use data from external partitions, you can use fast refresh with `SKIP_EXT_DATA = TRUE`.

ORA-31946: cannot read from an automatically created materialized view

Cause: An attempt was made to query an automatically created materialized view.

Action: Do not directly query an automatically created materialized view.

ORA-31947: cannot alter or drop automatically created materialized view

Cause: An attempt was made to alter or drop an automatically created materialized view.

Action: Do not perform the action on automatically created materialized view.

ORA-31948: cannot alter or drop materialized view log used by automatically created materialized view

Cause: An attempt was made to alter or drop a materialized view log used by automatically created materialized view.

Action: Do not perform the action on materialized view log used by automatically created materialized view.

ORA-31951: invalid SCALE value

Cause: The value was not within the allowable range.

Action: Correct the value and try again.

ORA-31952: invalid second argument

Cause: The second argument was not an integer, bind variable, or the keyword PARTITION.

Action: Specify either the keyword PARTITION or an integer or a bind variable.

ORA-31953: expected MIN or MAX aggregate not found

Cause: Either a matching pair of MIN and MAX aggregates were missing or an aggregate other than MIN or MAX was found.

Action: Specify only matching pairs of MIN and MAX aggregates.

ORA-31954: duplicate MIN or MAX aggregate found

Cause: The same MIN or MAX aggregate was found more than once.

Action: Specify a MIN or MAX aggregate only once.

ORA-31955: incorrect join found

Cause: A join other than equality left outer join was found.

Action: Specify only simple equality left outer joins with the fact table on the left side.

ORA-31956: construct or object '*string*' not allowed for zonemap

Cause: A construct or object not allowed in the zonemap definition was found.

Action: Remove the construct or object that is not allowed in the zonemap definition.

ORA-31957: table *string* not joined

Cause: A table without a join to the fact table was found.

Action: Specify a left outer join between this table and the fact table.

ORA-31958: fact table *string* already has a zonemap *string* on it

Cause: The fact table already had a zonemap.

Action: Drop the existing zonemap and repeat the command.

ORA-31959: internal error during the refresh of zonemap "*string*"."*string*"

Cause: An internal error was detected by the zonemap refresh subsystem and the refresh operation was aborted.

Action: Call Oracle Support Services.

ORA-31960: must use DROP MATERIALIZED ZONEMAP to drop "*string*"."*string*"

Cause: An attempt was made to drop a zonemap using a command other than DROP MATERIALIZED ZONEMAP.

Action: Use the DROP MATERIALIZED ZONEMAP command.

ORA-31961: must use ALTER MATERIALIZED ZONEMAP to alter "*string*"."*string*"

Cause: An attempt was made to alter a zonemap using a command other than ALTER MATERIALIZED ZONEMAP.

Action: Use the ALTER MATERIALIZED ZONEMAP command.

ORA-31962: cannot fast refresh zonemap "*string*"."*string*"

Cause: The fast refresh operation was not possible because DML had occurred to one or more dimension tables of the zonemap.

Action: Specify the force ('?') or complete ('C') option.

ORA-31964: matching GROUP BY expression required

Cause: A matching GROUP BY expression was not found in the SELECT list.

Action: Specify an expression in the SELECT list that matches with the GROUP BY expression.

ORA-31965: incorrect predicate found

Cause: A predicate other than simple equality left outer join predicate was found.

Action: Specify only simple equality left outer join predicates with the fact table on the left side.

ORA-31966: invalid option specified to alter "string"."string"

Cause: An invalid option was used to alter a zonemap table.

Action: Choose a valid option with the ALTER TABLE command.

ORA-31967: built-in aggregate function must be named ZONE_ID\$

Cause: The name for built-in aggregate function was not ZONE_ID\$.

Action: Specify zone_id\$ or "ZONE_ID\$" as the name for aggregate built-in function.

ORA-31968: internal error during the staleness tracking of zonemap "string"."string"

Cause: An internal error was detected by the zonemap staleness tracking subsystem and the DML operation on the zonemap fact table was aborted.

Action: Call Oracle Support Services.

ORA-31969: ZONEMAP not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define ZONEMAP on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage and then define a ZONEMAP on it.

ORA-31970: cannot comment on the materialized zonemap

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized zonemap.

Action: Issue a COMMENT ON MATERIALIZED ZONEMAP statement instead.

ORA-31972: cannot drop or alter the internal index on a materialized zone map

Cause: An attempt was made to drop or alter the internal index used by a materialized zone map.

Action: Do not drop or alter the internal index on a materialized zone map. Operate on the materialized zone map instead.

ORA-31973: invalid option specified to alter "string"."string"

Cause: An invalid option was used to alter a materialized view log table.

Action: Choose a valid option with the ALTER TABLE command.

ORA-31974: missing GROUP BY clause in CREATE MATERIALIZED ZONEMAP statement

Cause: A CREATE MATERIALIZED ZONEMAP statement did not have a GROUP BY clause in the AS subquery.

Action: Add a GROUP BY clause to the AS subquery of the CREATE MATERIALIZED ZONEMAP statement. The GROUP BY clause must use the same SYS_OP_ZONE_ID function expression specified for the first column of the SELECT list of the subquery.

ORA-31975: too many GROUP BY expressions in CREATE MATERIALIZED ZONEMAP statement

Cause: The GROUP BY clause of the AS subquery of a CREATE MATERIALIZED ZONEMAP statement contained more than one expression.

Action: Update the GROUP BY clause of the AS subquery of the CREATE MATERIALIZED ZONEMAP statement to have one expression, which must be the same SYS_OP_ZONE_ID function expression specified for the first column of the SELECT list of the subquery.

ORA-31976: invalid expression in the GROUP BY clause of a CREATE MATERIALIZED ZONEMAP statement

Cause: The GROUP BY clause of the AS subquery of a CREATE MATERIALIZED ZONEMAP statement contained an expression that was not the SYS_OP_ZONE_ID function expression.

Action: Update the GROUP BY clause of the AS subquery of the CREATE MATERIALIZED ZONEMAP statement to have one expression, which must be the same SYS_OP_ZONE_ID function expression specified for the first column of the SELECT list of the subquery.

ORA-31990: failed to process parameter "*string*" from SPFILE

Cause: An error was encountered while processing parameters from the SPFILE.

Action: Update the parameter value using the ALTER SYSTEM SET statement with scope set to SPFILE, and try opening the pluggable database again.

ORA-31991: error occurred processing parameter '*string*'

Cause: The parameter could not be specified for a pluggable database.

Action: Remove the parameter and try again.

ORA-31992: error while processing parameter '*string*'

Cause: An error was encountered while processing a comment for the parameter.

Action: Update or remove the comment and try again.

ORA-31993: cannot overwrite parameter file '*string*'

Cause: The specified parameter file or server parameter file was already in existence.

Action: Delete the parameter file or server parameter file and try again.

ORA-31994: APPEND option is not applicable to single value parameters

Cause: An attempt was made to use the APPEND option with ALTER SYSTEM SET or ALTER SESSION SET for a single value parameter.

Action: Drop the APPEND option while setting a single value parameter with ALTER SYSTEM SET or ALTER SESSION SET.

ORA-31995: error occurred processing parameter '*string*'

Cause: The combined length of all the parameter values was more than the allowed maximum.

Action: Reduce the parameter value length and retry the command.

ORA-31996: empty string not permitted as part of multiple values for the parameter *string*

Cause: An empty string is only allowed as a string parameter value when it is the parameter's only value. i.e. the value for a single valued parameter, or the only value for a multivalued parameter. Any of the following is sufficient to trigger this error: ALTER SYSTEM SET "param_name"=list of values w/ an empty string ALTER SESSION SET "param_name"=list of values w/ an empty string Furthermore, when a multivalued string parameter has an empty string as a singular value, ALTER SYSTEM SET ... APPEND will

always trigger this error as it would be equivalent to the above ALTER SYSTEM SET example.

Action: If running ALTER SYSTEM SET with or without the APPEND flag or ALTER SESSION SET, remove all empty string values from the list of values passed to the command. Furthermore, if running ALTER SYSTEM SET ... APPEND, make sure that the current parameter value is not an empty string.

ORA-31997: APPEND option is not applicable with scope=both

Cause: The ALTER SYSTEM SET command was issued with an invalid combination of options.

Action: If the parameter needs to be set in both spfile and memory, then reissue ALTER SYSTEM SET ... APPEND with scope=spfile and scope=memory specified separately. For example: ALTER SYSTEM SET '_fix_control'='33423456:1' APPEND scope=memory;

ORA-31998: cannot have more than *string* values for the list parameter *string*, *string* values supplied

Cause: An attempt was made to set a list parameter with more values than it supported.

Action: Reduce the number of values in the list parameter. When using APPEND flag, ensure that the number of existing values plus the new values fit within the above limit.

ORA-31999: This parameter is not directly user modifiable, update '_fix_control' instead

Cause: An attempt was made to modify parameter which can not be modified directly by user.

Action: Modify _fix_control parameter instead.

ORA-32000: write to SPFILE requested but SPFILE is not modifiable

Cause: An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but the SPFILE was not modifiable.

Action: Perform an in-memory parameter update only.

ORA-32001: server parameter file (SPFILE) not found

Cause: An ALTER SYSTEM SET statement was attempted with SCOPE=SPFILE but the instance was started without a server parameter file.

Action: Restart the instance using a server parameter file, or provide a path to an existing SPFILE by setting the parameter SPFILE.

ORA-32002: SPFILE creation failed as the specified file is already in use.

Cause: A CREATE SPFILE statement was trying to write to an SPFILE that was used to startup the instance.

Action: To overwrite the existing SPFILE, shutdown the instance and reissue the CREATE SPFILE statement. To create a new SPFILE, specify an alternate SPFILE name.

ORA-32003: error occurred processing parameter '*string*'

Cause: An error occurred while parsing the parameter file.

Action: See additional errors to determine the root cause.

ORA-32004: obsolete or deprecated parameter(s) specified for *string* instance

Cause: Obsolete or deprecated parameters for this instance type were specified in the SPFILE or the PFILE on the server side.

Action: See alert log for a list of parameters that are obsolete or deprecated. Remove them from the SPFILE or the server side PFILE.

ORA-32005: error while processing value [*string*] for big integer parameter

Cause: The specified value for a big integer parameter was not valid.

Action: Retry the operation with a valid value. Check for syntax errors. Big integer parameter value supports 'K' - Kilobyte, 'M' - Megabyte, and 'G' = Gigabyte suffixes. Check the parameter documentation for valid values for the big integer parameter. *Params: 1) big_integer : The user-supplied value.

ORA-32006: *string* initialization parameter has been deprecated

Cause: A deprecated parameter was specified at startup

Action: Consult Oracle documentation to find new parameters to use instead.

ORA-32007: internal

Cause: A parameter error occurred.

Action: Call Oracle support.

ORA-32008: error while processing parameter update at instance *string*

Cause: An error occurred while processing a parameter on a remote instance.

Action: See accompanying error messages.

ORA-32009: cannot reset the memory value for instance *string* from instance *string*

Cause: Memory resets of local parameters are only allowed.

Action: Retry the query for the local instance if needed.

ORA-32010: cannot find entry to delete in SPFILE

Cause: The SPFILE did not contain the sid.parameter entry.

Action: Change the sid and/or the parameter.

ORA-32011: Failed to restore SPFILE because it is being used by the instance.

Cause: A restore operation attempted to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name.

ORA-32012: cannot reset the memory value of initialization parameter

Cause: An attempt was made to reset the memory value of a parameter that has not been modified.

Action: None

ORA-32013: failure in verifying parameters from the restored SPFILE

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32014: error processing parameter "*string*" from the restored SPFILE image

Cause: Failure during processing of parameters from restored SPFILE. File corruption could be a potential cause.

Action: Additional diagnostic information is made available on . the error stack.

ORA-32015: unable to restore SPFILE

Cause: Failure during SPFILE restore. It could be that the restore destination is not valid.

Action: Further diagnostic information should be in the error stack.

ORA-32016: parameter "*string*" cannot be updated in SPFILE

Cause: Database is mounted.

Action: Unmount the database to update the parameter in the SPFILE

ORA-32017: failure in updating SPFILE

Cause: A failure occurred while updating the SPFILE.

Action: See associated errors.

ORA-32018: parameter cannot be modified in memory on another instance

Cause: Parameter adjustment can take a very long time

Action: Modify the parameter individually on each instance using the SID clause of the alter system command

ORA-32019: The parameter SPFILE cannot be updated in the server parameter file.

Cause: An attempt was made to update the parameter SPFILE in the server parameter file.

Action: Convert the server parameter file into a parameter file and then add the parameters needed and recreate the server parameter file.

ORA-32020: SID='*' clause needed to modify this parameter

Cause: The parameter did not have the same value on all RAC instances.

Action: Retry the command by specifying SID='*'

ORA-32021: parameter value longer than *string* characters

Cause: An attempt was made to alter a parameter value but the number of characters in the parameter value was longer than the allowed maximum. For a list parameter, one of the values in the list was longer than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32022: parameter *string* value longer than *string* characters

Cause: The combined length of all the parameter values was more than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32024: Directory specified for AUDIT_FILE_DEST initialization parameter does not exist or is not writable.

Cause: Either the directory did not exist, it was not writable, or the path contained a reference to the parent directory.

Action: Retry the command by specifying a valid directory or by granting appropriate directory operating system permissions.

ORA-32025: *string.string* is not a table or view object.

Cause: An attempt was made to set the audit table to a non-table object or a non-view object.

Action: Specify a valid table or view object for the audit table option.

ORA-32026: *string.string* has fewer columns compared to *string* table.

Cause: An attempt was made to set the audit table to a table or view object that has fewer columns compared to the base audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32027: There is no *string* column with the matching type in *string.string*.

Cause: An attempt was made to set the audit table to a table or view object that does not have a column with the same name and type as the one in the audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32028: The SYSLOG facility or level is not recognized.

Cause: The SYSLOG facility or level did not conform to the standard facility or level provided in the syslog.h file.

Action: Specify a facility or level such as "LOCAL1.NOTICE" that conforms to the syslog.h file.

ORA-32029: resetting with SCOPE=MEMORY or SCOPE=BOTH is currently not supported

Cause: An attempt was made to reset an in-memory parameter value

Action: Specify SCOPE=SPFILE if applicable, or explicitly set the parameter to the desired value

ORA-32030: an SPFILE is already associated with the instance

Cause: An attempt was made to update the parameter SPFILE on an instance that was already associated with an spfile.

Action: Restart the instance with a parameter file.

ORA-32031: illegal reference of a query name in WITH clause

Cause: forward or recursive reference of a query name in WITH clause is not allowed.

Action: Correct query statement, then retry.

ORA-32032: free temporary object number not available

Cause: Too many queries using temp table transformation are currently being run to use up all temporary object numbers.

Action: Turn off temporary table transformation or wait, then retry

ORA-32033: unsupported column aliasing

Cause: column aliasing in WITH clause is not supported yet

Action: specify aliasing in definition subquery and retry

ORA-32034: unsupported use of WITH clause

Cause: Improper use of WITH clause because one of the following two reasons: 1. nesting of WITH clause within WITH clause not supported yet 2. For a set query, WITH clause can't be specified for a branch. 3. WITH clause cannot be specified within parenthesis.

Action: correct query and retry

ORA-32035: unreferenced query name defined in WITH clause

Cause: There is at least one WITH clause query name that is not referenced in any place.

Action: remove the unreferenced query name and retry

ORA-32036: unsupported case for inlining of query name in WITH clause

Cause: There is at least one query name which is inlined more than once because its definition query is too simple and references another query name. This is currently unsupported yet.

Action: remove such query name and retry

ORA-32037: unsupported use of LEVEL in membership condition

Cause: An attempt was made to use LEVEL in membership condition with subquery that is not supported.

Action: Rewrite query to avoid using LEVEL in membership condition

ORA-32038: number of WITH clause column names does not match number of elements in select list

Cause: A list of column aliases or names was specified for a WITH clause query name but the number of elements in the list did not match the number of elements in the select list of the definition query.

Action: Update the column alias list or the select list to ensure they have the same number of elements.

ORA-32039: missing column alias list in recursive WITH clause element *string*

Cause: The specified WITH clause element referred to itself (recursive) but did not specify a column alias list.

Action: Add a column alias list for the WITH clause element. That is, add a list of aliases for the select list items following the WITH clause element name. *Params: 1) WITH_clause_name: name of the WITH clause element

ORA-32040: missing UNION ALL in recursive WITH clause element *string*

Cause: The specified WITH clause element referred to itself (recursive) but did not use a UNION ALL operation.

Action: Rewrite the recursive WITH clause element to use a UNION ALL operation. *Params: 1) WITH_clause_name: name of the WITH clause element

ORA-32041: UNION ALL operation in recursive WITH clause element *string* must have only two branches.

Cause: The specified WITH clause element referred to itself (recursive) but used a UNION ALL operation with more than two branches, which is not supported.

Action: Rewrite the recursive WITH clause element to use only two branches in the UNION ALL operation. *Params: 1) WITH_clause_name: name of the WITH clause element

ORA-32042: recursive WITH clause element *string* must reference itself directly in one of the UNION ALL branches

Cause: The specified recursive WITH clause element referred to itself indirectly, for example through a subquery or view, which is not supported.

Action: Rewrite the recursive WITH clause element to refer to itself directly in the FROM clause of one of the UNION ALL branches. *Params: 1) WITH_clause_name: name of the WITH clause element

ORA-32043: missing initialization branch in recursive WITH clause element *string*

Cause: The specified recursive WITH clause element did not have a branch in the UNION ALL with no references to itself. That is, it was missing the initialization branch or anchor member.

Action: Rewrite the recursive WITH clause to have a branch in the UNION ALL operation without references to itself. *Params: 1) WITH_clause_name: name of the WITH clause element

ORA-32044: cycle detected while executing recursive WITH query

Cause: A recursive WITH clause query produced a cycle and was stopped in order to avoid an infinite loop.

Action: Rewrite the recursive WITH query to stop the recursion or use the CYCLE clause.

ORA-32045: maximum level of recursion reached while executing recursive WITH query

Cause: A recursive WITH query reached the maximum level of recursion specified and was stopped.

Action: Increase the maximum level of recursion or use the CYCLE clause.

ORA-32046: sequence column name for SEARCH clause must not be part of the column alias list

Cause: The SEARCH clause for a recursive WITH query specified a sequence column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the sequence column for the SEARCH clause or remove the name from the column alias list.

ORA-32047: cycle mark value and non-cycle mark value must be one byte character string values or boolean constants

Cause: The cycle mark or the non-cycle mark values specified in the CYCLE clause of a recursive WITH query were not one byte character string values or not boolean constants as required.

Action: Specify a one byte character string or a boolean constant for the cycle mark and non-cycle mark values of the CYCLE clause for the recursive WITH query.

ORA-32048: cycle mark column name for CYCLE clause must not be part of the column alias list

Cause: The CYCLE clause for a recursive WITH query specified a cycle mark column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the cycle mark column for the CYCLE clause or remove the name from the column alias list.

ORA-32049: duplicate name found in column alias list for WITH clause

Cause: The column alias list for a WITH clause element contained a name which appeared more than once in the list.

Action: Remove the duplicate name from the column alias list.

ORA-32050: string operation failed

Cause: A mapping operation failed.

Action: Check FMON trace files for errors.

ORA-32051: mapping service not available

Cause: The mapping service was never started or previously failed to start properly.

Action: Set FILE_MAPPING to TRUE if it is not currently set. Otherwise, check FMON trace files for an ORA-32052 error.

ORA-32052: failed to start mapping service

Cause: The mapping service failed to start properly.

Action: Check FMON trace files for errors.

ORA-32053: operation not supported

Cause: Mapping libraries do not support operation.

Action: Check whether mapping libraries are available and whether operation is supported by the libraries.

ORA-32054: lost communication with FMPUTL process

Cause: Lost communication with mapping utility.

Action: Check FMON and FMPUTL trace files for errors.

ORA-32055: unknown file type

Cause: An unknown file type was encountered when mapping files.

Action: Use files of an expected file type.

ORA-32056: invalid number of extents

Cause: Invalid number of extents used for map operation.

Action: Specify a non-negative number of extents.

ORA-32057: invalid lock mode

Cause: An invalid mode was used for a lock operation.

Action: Specify one of expected lock modes.

ORA-32058: operation restricted to SYSDBA users

Cause: Required SYSDBA privileges are not specified for this operation.

Action: Connect to the database as SYSDBA before attempting the operation.

ORA-32059: deadlock detected on mapping structures

Cause: Mapping structures already locked by the same session.

Action: Unlock mapping structures before proceeding with current operation.

ORA-32060: channel failure

Cause: Channel failure between foreground and background process.

Action: Check foreground trace files for errors.

ORA-32100: operation invalid on transient object

Cause: Trying to perform an operation on transient object which is valid only on persistent objects

Action: Make sure object is persistent

ORA-32101: cannot create OCI Environment

Cause: An OCI Environment could not be created for OCCI

Action: Insure that the parameters to the creatEnvironment method are valid

ORA-32102: invalid OCI handle

Cause: An invalid OCI handle is passed to an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32103: error from OCI call

Cause: An error code other than OCI_ERROR is returned from an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32104: cannot retrieve OCI error message

Cause: Error message after an OCI call could not be retrieved.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32106: array fetch not allowed without setBuffer on all columns

Cause: The setBuffer method was not called for all column positions and the next method was called to fetch more than one row.

Action: Call the setBuffer method for all column positions if next is to be called to fetch more than one row.

ORA-32107: internal OCI memory allocation failure

Cause: Memory could not be allocated from an OCI heap.

Action: Increase the process memory size.

ORA-32108: max column or parameter size not specified

Cause: The max column or parameter size is not specified.

Action: Specify the max size by `setMaxColumnSize` or `setMaxParamSize`.

ORA-32109: invalid column or parameter position

Cause: An invalid column or parameter position is specified.

Action: Specify a valid column or position number.

ORA-32110: Connection not specified

Cause: A null connection was passed.

Action: Pass a valid, non-null connection.

ORA-32113: null object passed

Cause: Null object was passed.

Action: Pass a non-null object.

ORA-32114: Cannot perform operation on a null LOB

Cause: The LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null LOB instance to perform this operation.

ORA-32116: Buffer size is less than amount specified

Cause: The buffer size specified for the LOB read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than than the amount to be read from or written to the LOB.

ORA-32117: Source LOB is null

Cause: The source LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null source LOB instance for this operation.

ORA-32118: Cannot perform operation on a null FILE

Cause: The FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null FILE instance to perform this operation.

ORA-32120: Buffer size is less than amount specified

Cause: The buffer size specified for the FILE read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than than the amount to be read from or written to the FILE.

ORA-32121: Source FILE is null

Cause: The source FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null source FILE instance for this operation.

ORA-32123: Attribute number is out of range

Cause: The attribute number passed is greater than the total number of attributes of the described object.

Action: Pass the attribute number within the allowable range.

ORA-32124: Illegal attribute passed

Cause: The attribute passed is not applicable for the described object.

Action: Pass a valid attribute.

ORA-32125: Attribute type is not appropriate

Cause: The return type of the get method does not match the type of the attribute being passed.

Action: Call the appropriate get method.

ORA-32126: cannot perform operations on a REF that is NULL

Cause: The REF instance on which the operation was attempted was NULL.

Action: Ensure that the REF instance is valid and not NULL.

ORA-32127: REFs do not belong to any connection

Cause: Neither of the REFs being compared had associated connection information.

Action: At least one of the REFs being compared must be associated with a valid connection.

ORA-32128: setDataBuffer called after fetch has started

Cause: Fetch from result set has already started and the setDataBuffer call was made.

Action: Call the setDataBuffer method before calling the next() method.

ORA-32129: cannot get information about this column

Cause: The setDataBuffer method was called to get information about this column. Therefore, the current method cannot be called.

Action: Use the information from the buffers specified in the setDataBuffer call.

ORA-32131: bind data type cannot be changed

Cause: The setXXX method is called again with a different data type than originally specified, or the setXXX method is called for a subsequent iteration without being called before the first iteration.

Action: Call the setXXX method with the same data type as done before the first iteration. If no setXXX method was called for this parameter position the first iteration, then make sure that a setXXX method is called before the first addIteration method is called.

ORA-32132: maximum iterations cannot be changed

Cause: The setMaxIterations is called after a setXXX method has been called.

Action: Call the setMaxIterations method before calling any setXXX methods.

ORA-32133: Cannot get stream from LOB/FILE

Cause: An open stream exists on the the LOB/FILE on which the operation was attempted.

Action: Close the stream before getting another.

ORA-32134: Cannot assign LOBs

Cause: An open stream exists on the target LOB.

Action: Close the stream on the target LOB before assigning the LOBs.

ORA-32135: Cannot assign FILEs

Cause: An open stream exists on the target FILE.

Action: Close the stream on the target FILE before assigning the FILEs.

ORA-32136: Cannot perform operation on an invalid stream

Cause: The LOB/FILE from which the stream was obtained had been nullified or destroyed.

Action: Use a valid stream.

ORA-32139: Cannot write to the stream

Cause: A write was performed after the last buffer was written.

Action: Close this stream and get a new stream to perform the write.

ORA-32140: cannot perform this operation on stream

Cause: Either a read is attempted from a stream in write mode, or a write is attempted on a stream in read mode.

Action: Check the status of the stream to find out the valid operations that can be performed.

ORA-32141: get method does not match the type of the parameter

Cause: The getXXX method called on the Statement object does not match the type of the bind parameter.

Action: Call the getXXX method that is the same as the type of the parameter.

ORA-32142: maximum number of iterations exceeded

Cause: The addIteration exceeds the maximum number of iterations set by the the setMaxIterations method.

Action: Increase the maximum number of allowed iterations.

ORA-32143: Environment not specified

Cause: A null environment was passed.

Action: Pass a valid, non-null environment.

ORA-32144: Cannot perform operation on a null interval

Cause: The interval involved in this operation is null.

Action: Use valid, non-null interval instance to perform this operation.

ORA-32145: Environment not specified

Cause: The interval on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32146: Cannot perform operation on a null date

Cause: The date involved in this operation is null.

Action: Use valid, non-null date instance to perform this operation.

ORA-32147: Environment not specified

Cause: The date on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32150: Cannot perform operation on a null timestamp

Cause: The timestamp involved in this operation is null.

Action: Use valid, non-null timestamp instance to perform this operation.

ORA-32151: Environment not specified

Cause: The timestamp on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32152: Cannot perform operation on a null number

Cause: The number involved in this operation is null.

Action: Use valid, non-null number instance to perform this operation.

ORA-32153: Environment not specified

Cause: The number on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32154: Anydata context not specified

Cause: A null anydata context was passed.

Action: Pass a valid, non-null anydata context.

ORA-32155: Anydata not specified

Cause: A null anydata was passed.

Action: Pass a valid, non-null anydata.

ORA-32156: Cannot perform operation on stream

Cause: This operation is not applicable to streams obtained from LOBs.

Action: n/a

ORA-32157: Infinity not supported**ORA-32158: Invalid type passed**

Cause: An inapplicable type was passed to this call.

Action: Pass an applicable type.

ORA-32159: Cannot set prefetch options for a null Type

Cause: A null Type name was passed.

Action: Pass a non-null Type name.

ORA-32161: Cannot perform piecewise fetch

Cause: Zero amount was passed and buffer size was less than LOB size

Action: Specify a larger buffer or use Stream

ORA-32162: Read/Write SQL method not registered

Cause: readSQL/writeSQL method was NULL or was not registered

Action: Register readSQL/writeSQL by calling put method in Map

ORA-32163: Method called on Invalid Environment type

Cause: A non-XA call made on an XA Environment or XA call made on non-XA Environment

Action: Make sure Environment type is OK

ORA-32164: Method called on Invalid Connection type

Cause: A non-XA call made on an XA Connection or XA call made on non-XA Connection

Action: Make sure Connection type is OK

ORA-32165: Cannot get XA environment

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32166: Cannot get XA connection

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32167: No payload set on the Message

Cause: An attempt was made to enqueue a message without setting a payload on it.

Action: Set a payload on the message before calling the send method.

ORA-32168: Cannot perform operation on a null AnyData

Cause: The AnyData instance on which the operation was attempted was null.

Action: Use a valid, non-null AnyData instance to perform this operation.

ORA-32169: Execution completed successfully but the number of rows affected is more than the maximum value of the unsigned integer.

Cause: The row count was larger than the maximum value of the unsigned integer. OCI clients using 'executeUpdate()' cannot retrieve row counts larger than the maximum value of the unsigned integer.

Action: Use 'getUb8RowCount()' to get the correct row count. Use 'execute()' and 'getUb8RowCount()' for large updates.

ORA-32300: cannot drop a secondary materialized view "*string*".*string*"

Cause: An attempt was made to drop a materialized view of a nested table column's storage table.

Action: Drop the materialized view that contains the nested table column. This will implicitly drop all secondary materialized views.

ORA-32301: object-relational materialized views must be primary key based

Cause: An attempt was made to create an object-relational materialized view that is not primary key based.

Action: Create the materialized view with the PRIMARY KEY keyword.

ORA-32302: object materialized views must be object ID based

Cause: An attempt was made to create an object materialized view that is not object ID based.

Action: Create the materialized view using the OF clause but omit any ROWID or PRIMARY KEY clauses.

ORA-32303: mviews with user-defined types cannot reference multiple master sites

Cause: For materialized views with user-defined types, the definition query cannot reference tables from different master sites.

Action: Do not create materialized views with user-defined types referencing multiple master sites.

ORA-32304: materialized views with user-defined types cannot use prebuilt table

Cause: An attempt was made to create a materialized view with the ON PREBUILT TABLE option.

Action: Do not create the materialized view with the ON PREBUILT TABLE option.

ORA-32305: RepAPI materialized views with user-defined types are not supported

Cause: An attempt was made to create a RepAPI materialized view with user-defined types.

Action: Do not create a RepAPI materialized view with user-defined types.

ORA-32306: updatable materialized views with user-defined types must use SELECT *

Cause: An attempt was made to create an updatable materialized view with user-defined types where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32307: must use FROM ONLY clause when referencing an object table

Cause: An attempt was made to create a materialized view whose definition query references object tables without the FROM ONLY clause.

Action: Rewrite the definition query to use the FROM ONLY clause for all the object tables in the query.

ORA-32308: object materialized views must use SELECT *

Cause: An attempt was made to create an object materialized view where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32309: object mview type "string"."string" does not match the master table type

Cause: An attempt was made to create an object materialized view whose type does not match the type of the master object table.

Action: Redefine the type so that it matches the type of the master object table.

ORA-32310: object materialized views must select from an object table

Cause: An attempt was made to create an object materialized view whose definition query did not select from an object table.

Action: Rewrite the definition query to select from an object table.

ORA-32311: materialized view definition query selects an unsupported user-defined type

Cause: An attempt was made in the definition query to select an embedded user-defined type, function returning a user-defined type, or a function whose arguments are user-defined types.

Action: Rewrite the definition query to exclude these unsupported user-defined types.

ORA-32312: cannot refresh a secondary materialized view "*string*"."*string*"

Cause: An attempt was made to refresh a materialized view of a nested table column's storage table.

Action: Refresh the materialized view that contains the nested table column. This will implicitly refresh all secondary materialized views.

ORA-32313: REFRESH FAST of "*string*"."*string*" unsupported after PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on a detail table, and the specified materialized view does not support fast refresh after PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32314: REFRESH FAST of "*string*"."*string*" unsupported after deletes/updates

Cause: One or more deletes or updates has been performed on one or more of the detail tables referenced by the specified materialized view. This materialized view does not support fast refresh after deletes or updates.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after deletes or updates using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32315: REFRESH FAST of "*string*"."*string*" unsupported after mixed DML and Direct Load

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates and direct path insert.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32316: REFRESH FAST of "*string*"."*string*" unsupported after mixed DML

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates have been performed on multiple detail tables.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32317: cannot run a job from a job

Cause: An attempt was made to execute a job from within another job.

Action: Do not submit jobs that run other jobs.

ORA-32318: cannot rename a materialized view

Cause: Renaming a materialized view or its base table is not supported.

Action: Do not rename the base table of a materialized view.

ORA-32319: Cannot use direct loader log to FAST REFRESH materialized view "string"."string"

Cause: The direct loader log might have been dropped

Action: Need to do complete refresh

ORA-32320: REFRESH FAST of "string"."string" unsupported after container table PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on the materialized view, and no materialized view supports fast refresh after container table PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32321: REFRESH FAST of "string"."string" unsupported after detail table TRUNCATE or MOVE

Cause: A detail table was truncated or moved. A materialized view did not support fast refresh after a detail table was truncated or moved.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after TRUNCATE or MOVE using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32322: PCT refresh of "string"."string" not allowed the sequence of DMLs/ PMOPs

Cause: A table join dependent on another table on which PCT refresh is enabled has changed

Action: Use REFRESH FORCE which will pick the best possible refresh method on the materialized view

ORA-32330: invalid operation on online redefinition interim table "string"."string"

Cause: An invalid operation was performed on an interim table which was being used for online redefinition of a table.

Action: Do not perform any unsupported operation on the interim table.

ORA-32331: type "string"."string" is incompatible with the master site

Cause: A type used by the materialized view was found to be incompatible with its corresponding type on the master site. This could be because the type does not exist on the master site or has been evolved to a different version from that on the materialized view site.

Action: Make sure that the types used by the materialized view are the same on both the materialized view and master sites.

ORA-32332: cannot refresh materialized view "*string*"."*string*" as type evolution has occurred

Cause: The types used by the materialized view or its master tables have been evolved.

Action: Ensure that the types used by the materialized view have been evolved to the same version at both the master and materialized sites. Then, before refreshing the materialized view, evolve the materialized view using ALTER MATERIALIZED VIEW.

ORA-32333: disable table scn update for Materialized view

Cause: an event is set for disabling table scn update to prevent deadlock situation. (bug 1376209)

Action: disable null refresh and/or base table scn update for Materialized view

ORA-32334: cannot create prebuilt materialized view on a table already referenced by a MV

Cause: the table on which the materialized view is created as prebuilt is already referenced by a materialized view

Action: create the materialized view on a different table

ORA-32335: dimension must have at least one level

Cause: An level-less dimension is not allowed.

Action: Do not drop the only level of a dimension.

ORA-32336: cannot use USING NO INDEX to create materialized view "*string*"."*string*"

Cause: The USING NO INDEX option was specified to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

Action: Do not use the USING NO INDEX option to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

ORA-32337: cannot alter materialized view or zonemap to refresh on commit with pending changes

Cause: There were some pending changes in the detail tables.

Action: Perform on-demand refresh of the materialized view or zonemap to synchronize the data between the materialized view and the detail tables and then issue the ALTER MATERIALIZED VIEW or ALTER MATERIALIZED ZONEMAP statement.

ORA-32338: on commit refresh grab all the detailed tables

Cause: an event is set to let on-commit MV refresh to grab all the detailed tables, no matter whether they have modified or not.

Action: n/a

ORA-32339: cannot alter materialized view with the PMOP

Cause: the materialized view is not allowed to have destructive PMOPS such as DROP, TRUNCATE and EXCHANGE (sub)partition. The UGA flag of `i_am_a_refresh` should be set first.

Action: execute `set_i_am_a_refresh` first before alter materialized view with the PMOP.

ORA-32340: cannot tune the materialized view definition

Cause: Due to constructs in the materialized view definition, it could not be tuned to be fast-refreshable or rewriteable.

Action: Execute `DBMS_MVIEW.EXPLAIN_MVIEW` to determine the cause.

ORA-32341: The EXPLAIN_MVIEW facility failed to explain the materialized view "string"."string"

Cause: The dependent object(s) of the materialized view may have changed. The materialized view may no longer be valid.

Action: Execute `ALTER MATERIALIZED VIEW COMPILE` and to determine the status of the materialized view in catalog views.

ORA-32342: The EXPLAIN_MVIEW facility failed to explain the materialized view statement

Cause: An error exists in the materialized view definition. As a result, the materialized view statement could not be explained.

Action: Check the syntax of the statement. If it is a `CREATE MATERIALIZED VIEW` statement, then also check the `PARAMETERS` specified for the materialized view.

ORA-32344: cannot create a secondary materialized view with synonym as base table

Cause: It is not supported to create a secondary materialized view with synonym in the `FROM` clause.

Action: Removed the synonym(s) from the statement.

ORA-32345: fail to refresh the materialized view *string.string* due to the changed synonym

Cause: The definition of one or more synonyms in the from clause have changed. The structure of the materialized view has become invalid.

Action: Restore the synonym(s) or drop the materialized view and recreate it again.

ORA-32346: ON COMMIT materialized view refresh caused changes to the master table/materialized view

Cause: `ON COMMIT` refresh of a read-only materialized view changed the master table/materialized view. A trigger on the refreshed materialized view may be the cause.

Action: Do not create triggers on materialized view which update the master table/materialized view.

ORA-32347: NULL capabilities during explain mview

Cause: The supplied defining query did not generate any capabilities information.

Action: Replace the query since it is not suitable for creating a materialized view.

ORA-32348: revalidate summary object based on user input

Cause: An event was set to specify the number of attempts that the system needed to make in order to validate an invalidated summary object.

Action: Revalidate an invalidated summary object based on user input.

ORA-32349: cannot reference prebuilt table in definition query for materialized view

Cause: The prebuilt container table of the materialized view was referenced in the definition query.

Action: Change the definition query to reference a non-prebuilt table.

ORA-32350: ON COMMIT refresh obtain shared lock for all the detailed tables

Cause: An event was set to let ON COMMIT refresh to obtain a shared lock for all the detailed tables, whether they have been modified or not.

Action: No action necessary.

ORA-32351: database link name cannot start with a number while creating materialized view

Cause: This event was disabled by default. If enabled, the fix for bug 6074902 will be disabled and you will be unable to create database links starting with a number when creating a materialized view on remote tables.

Action: No action necessary.

ORA-32352: cannot refresh materialized view *string.string* using out-of-place fast refresh

Cause: Out-of-place fast refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32353: cannot refresh materialized view *string.string* using out-of-place PCT refresh

Cause: Out-of-place Partition Change Tracking (PCT) refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32354: cannot refresh materialized view *string.string* using out-of-place complete refresh

Cause: The materialized view did not qualify for out-of-place complete refresh.

Action: Set the 'out_of_place' parameter to 'false'.

ORA-32355: out-of-place refresh cannot be used in atomic mode

Cause: Both 'atomic_refresh' and 'out_of_place' parameters were set to 'true' in the refresh interface.

Action: Either set the 'atomic_refresh' parameter to 'false' or set the 'out_of_place' parameter to 'false'.

ORA-32357: failed to refresh on-commit materialized view *string.string*

Cause: There was an error in the refresh path of the on-commit materialized view.

Action: Examine the other messages on the error stack in the alert log and take corrective action.

ORA-32358: cannot perform on-query computation for materialized view *string.string*

Cause: The ENABLE ON QUERY COMPUTATION option was specified for the materialized view [owner].[mv_name] but on-query computation was not feasible for the change scenario.

Action: Alter the materialized view [owner].[mv_name] to disable on-query computation, or refresh the materialized view [owner].[mv_name] before issuing the query again.

ORA-32359: cannot specify the FRESH_MV hint for this query

Cause: The query included a construct that was not supported by the on-query computation, and so the FRESH_MV hint could not be specified. The on-query computation does not support the CONNECT BY clause, the MATERIALIZED hint, or spreadsheet queries.

Action: Remove the FRESH_MV hint from the query.

ORA-32360: cannot ENABLE ON QUERY COMPUTATION for a refresh-on-commit materialized view

Cause: The ENABLE ON QUERY COMPUTATION option was specified when the ON COMMIT REFRESH option was also specified.

Action: Remove the ENABLE ON QUERY COMPUTATION option or specify refresh options other than ON COMMIT REFRESH.

ORA-32361: cannot ENABLE ON QUERY COMPUTATION for the materialized view

Cause: On-query computation was not feasible for the materialized view being created or altered.

Action: Remove the ENABLE ON QUERY COMPUTATION option or make the materialized view capable of on-query computation.

ORA-32362: cannot create system-partitioned materialized view

Cause: An attempt to create a system-partitioned materialized view failed.

Action: Remove the PARTITION BY SYSTEM clause from the materialized view definition query.

ORA-32363: prebuilt table managed column cannot be a virtual column

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column which is a virtual column.

Action: Do not include the column in the materialized view definition.

ORA-32364: cannot perform on-query computation for this query

Cause: The FRESH_MV hint was specified for the query but on-query computation was not feasible due to conflicting system settings or processes.

Action: Remove the FRESH_MV hint from the query to run the query without on-query computation. To run the query with on-query computation, verify that the system settings are compatible with this feature.

ORA-32365: refresh abort initiated on auto materialized view

Cause: An attempt was made to abort fast refresh on an auto materialized view.

Action: None

ORA-32366: mview definition query cannot include an inline external table clause

Cause: An attempt was made to include an inline external table clause in the materialized view definition query.

Action: Remove the inline external table clause from the materialized view definition query. Alternatively, you can replace the inline external table clause with a reference to an external table having the same properties.

ORA-32367: unsupported fast refreshable JSON materialized view

Cause: An attempt was made to create an unsupported fast refreshable JavaScript Object Notation (JSON) materialized view.

Action: Create a supported fast refreshable JSON materialized view. Currently, only a replication JSON materialized view with no joins or aggregates is supported to refresh fast.

ORA-32368: cannot create JSON materialized view without relational table

Cause: An attempt was made to create a JavaScript Object Notation (JSON) materialized view without a relational table.

Action: Create a supported JSON materialized view including the relational table in the FROM list.

ORA-32369: cannot refresh materialized view *string.string* using LPT fast refresh

Cause: LPT (Logical Partition Tracking) fast refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option instead of LPT fast refresh.

ORA-32370: cannot create logical partition tracking on a table that already has logical partition tracking enabled

Cause: An attempt was made to create logical partition tracking on a table that already had logical partition tracking enabled.

Action: Do not create logical partition tracking on a table that already has logical partition tracking enabled, or try creating logical partition tracking after dropping the existing logical partition tracking.

ORA-32371: no logical partition tracking defined on table *string.string*

Cause: An attempt was made to drop logical partition tracking that was not defined.

Action: Do not drop logical partition tracking that is not defined.

ORA-32372: invalid options specified when creating logical partition tracking

Cause: An attempt was made to create logical partition tracking with invalid options specified.

Action: Do not create logical partition tracking with invalid options specified. Refer documentation for details.

ORA-32373: MAXVALUE must be specified for all columns

Cause: In the VALUES LESS THAN clause for the last logical partition of logical partition tracking, MAXVALUE must be specified for all columns.

Action: Ensure that VALUES LESS THAN clause for the last logical partition of logical partition tracking has MAXVALUE specified for all columns.

ORA-32374: non-existent partitioning column in CREATE LOGICAL PARTITION TRACKING statement

Cause: The partitioning column specified in the CREATE LOGICAL PARTITION TRACKING statement was not one of the columns of the specified table.

Action: Ensure that all columns in the partitioning column list are columns of the table being specified.

ORA-32375: data type or length of a logical partition tracking column on a table cannot be changed

Cause: The ALTER TABLE statement was issued in an attempt to modify the data type or the length of a logical partition tracking column on the table specified in the ALTER TABLE statement.

Action: Do not modify the data type or length of the logical partition tracking columns on a table.

ORA-32376: cannot CREATE LOGICAL PARTITION TRACKING on a partitioning column that already has logical or physical partitions defined

Cause: The partitioning column specified in the CREATE LOGICAL PARTITION TRACKING statement already had valid logical or physical partitions defined.

Action: Ensure that the logical partitioning column specified does not have any valid logical or physical partitions defined.

ORA-32377: cannot refresh on-commit materialized views in a distributed transaction

Cause: An attempt was made to refresh on-commit materialized views in a distributed transaction

Action: Do not run Data Manipulation Language(DML) on tables that have on-commit materialized views in a distributed transaction. If this error occurs, run on-demand fast refresh or complete refresh to the on-commit materialized views.

ORA-32378: cannot have a partitioning column that already has a logical partition tracking defined

Cause: The partitioning column specified in the ALTER TABLE statement already had logical partition tracking defined.

Action: Ensure that the partitioning column specified does not have any valid logical partition tracking defined.

ORA-32379: unsupported table type for logical partition tracking

Cause: An unsupported table type was passed to CREATE LOGICAL PARTITION TRACKING statement.

Action: Ensure table is not a global temporary or a private temporary table or an materialized view log. Refer documentation for details.

ORA-32380: MAXVALUE partition cannot be specified for INTERVAL logical partition tracking

Cause: An attempt was made to create an INTERVAL logical partition with a MAXVALUE highbound.

Action: Do not create a logical partition with a MAXVALUE highbound.

ORA-32381: LPT FAST REFRESH cannot be used for materialized view "string"."string"

Cause: Logical partition tracking (LPT) refresh was either not enabled on this materialized view or not possible after set of the base table changes since last refresh.

Action: Specify other fast refresh method, or FORCE or COMPLETE option instead of LPT fast refresh.

ORA-32382: Cannot drop a logical partition tracking column on a table

Cause: The ALTER TABLE statement was issued in an attempt to drop a logical partition tracking column on the table specified in the ALTER TABLE statement.

Action: Do not drop the logical partition tracking columns on a table.

ORA-32383: unsupported materialized view for concurrent refresh

Cause: Concurrent refresh is supported only when materialized view is fast refresh on-commit.

Action: Ensure materialized view is defined as refresh fast on-commit or do not use concurrent refresh clause.

ORA-32384: unsupported on-commit materialized view shape for concurrent refresh

Cause: Concurrent refresh is not supported by the shape of an on-commit materialized view.

Action: Do not enable concurrent refresh or change the shape of the on-commit materialized view.

ORA-32400: cannot use object id columns from materialized view log on "string"."string"

Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

ORA-32401: materialized view log on "string"."string" does not have new values

Cause: Materialized view log on the indicated table does not have new values information.

Action: Add new values to materialized view log using the ALTER MATERIALIZED VIEW LOG command.

ORA-32403: cannot use new values from mv log on "string"."string"

Cause: The materialized view log either does not have new values logged, or the timestamp associated with the new values columns is more recent than the last refresh time.

Action: Perform a complete refresh is required before the next fast refresh.

ORA-32404: snapshot log uses Change Data Capture which is not enabled for this database

Cause: A snapshot log that utilizes Change Data Capture is being imported to a database where Change Data Capture has not been enabled.

Action: First enable Change Data Capture on the database then retry the import.

ORA-32405: cannot alter tablespace for existing materialized view log

Cause: The tablespace specification for the existing materialized view log cannot be altered or changed.

Action: remove the tablespace clause from the statement.

ORA-32406: cannot alter partitioning for existing materialized view log

Cause: The partitioning specification for the existing materialized view log cannot be altered or changed.

Action: remove the partitioning clause from the statement.

ORA-32407: cannot exclude new values when materialized view log includes new values

Cause: The excluding new values specification for the existing materialized view log cannot be accepted when including new values is the current option.

Action: change excluding new values clause.

ORA-32408: materialized view log on "*string*"."*string*" already has new values

Cause: The materialized view log on the indicated table already has new values.

Action: No action required.

ORA-32409: materialized view log on "*string*"."*string*" already excludes new values

Cause: The materialized view log on the indicated table already excludes new values.

Action: No action required.

ORA-32411: materialized view definition query exceeds the maximum length

Cause: The materialized view definition query exceeds the 64K limit.

Action: Change the materialized view definition query so that it does not exceed the maximum length of 64K.

ORA-32412: encrypted column "*string*" not allowed in the materialized view log

Cause: The materialized view log being created/alterd is to capture an encrypted column of the base table.

Action: Do not capture the encrypted column.

ORA-32413: allow concurrent refresh of materialized view and truncate

Cause: This event is set to allow concurrent refresh of materialized view and truncate of base table; it prevents a deadlock situation. (bug 6710019)

Action: Set this event to allow concurrent refresh of materialized view and truncate of the base table.

ORA-32414: materialized view logs are not compatible with each other for fast refresh

Cause: An attempt was made to create a fast refreshable materialized view on tables which have commit SCN-based materialized view logs and tables which have timestamp-based materialized view logs.

Action: Use COMPLETE REFRESH or change underlying materialized view logs to make them compatible with each other for fast refresh.

ORA-32415: fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log is not supported

Cause: The materialized view creation failed because fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log was not supported.

Action: None

ORA-32416: one or more commit SCN-based materialized view logs are not in consistent state for fast refresh

Cause: Dictionary table "SYS"."SNAP_XCMT\$" is not in consistent state.

Action: No action required.

ORA-32417: must use DROP MATERIALIZED VIEW LOG to drop "string"."string"

Cause: An attempt was made to drop materialized view log using a command other than DROP MATERIALIZED VIEW LOG.

Action: No action required.

ORA-32418: COMMIT SCN keyword only appears in CREATE MATERIALIZED VIEW LOG statement

Cause: An attempt was made to alter an existing materialized view log to have commit SCN.

Action: No action required.

ORA-32419: on commit materialized view is not supported on detail tables with commit SCN-based materialized view logs

Cause: An attempt was made to create an on commit materialized view on detail tables with commit SCN-based materialized view logs.

Action: No action required.

ORA-32420: unsupported fast refreshable materialized view defined on detail tables which have commit SCN-based materialized view logs

Cause: An attempt was made to create an unsupported fast refreshable materialized view on detail tables with commit SCN based materialized view logs.

Action: No action required.

ORA-32421: commit SCN-based materialized view log is not supported on a table with LOB column(s)

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which has LOB column(s).

Action: No action required.

ORA-32422: commit SCN-based materialized view log cannot be created on table "string"."string" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before creating commit SCN-based materialized view log on the table.

ORA-32423: commit SCN-based materialized view log cannot be dropped on table "*string*". "*string*" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to drop a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before dropping commit SCN-based materialized view log on the table.

ORA-32424: materialized view log on "*string*". "*string*" already has this purge option

Cause: Materialized view log on the indicated table already has the purge option specified.

Action: Specify a different purge option or omit the purge option.

ORA-32425: asynchronous and scheduled purge option is not allowed on commit SCN-based materialized view log

Cause: An attempt was made to create or alter a commit SCN-based materialized log with asynchronous and scheduled purge option.

Action: Specify a different purge option or omit the purge option.

ORA-32426: materialized view log on "*string*". "*string*" in DST upgrade

Cause: The materialized view log was created or altered on a table that had a Daylight Saving Time upgrade in progress.

Action: Wait until DST upgrade finishes on the master table.

ORA-32427: materialized view contains unsupported NLS transformation

Cause: An attempt was made to create or alter materialized view under NLS settings which transformed the materialized view's defining query in ways not by supported by Oracle.

Action: Contact Oracle support or workaround problem by removing NLS settings or modifying the materialized view's defining query.

ORA-32428: on-statement materialized join view error: *string*

Cause: An error related to on-statement materialized join view was received.

Action: Refer to the error message for more information.

ORA-32429: commit SCN-based materialized view log cannot be created on AQ table

Cause: An attempt was made to create a commit SCN-based materialized view log on an Oracle Database Advanced Queuing (AQ) table.

Action: Do not create a commit SCN-based materialized view log on AQ tables.

ORA-32430: materialized view log cannot be created on read-only database

Cause: An attempt was made to create a materialized view log on a read-only database.

Action: Do not create a materialized view log on a read-only database.

ORA-32431: materialized view cannot be created on tables having inconsistent sharing

Cause: An attempt was made to create a materialized view on tables having inconsistent sharing.

Action: Do not create a materialized view on tables having inconsistent sharing, or ensure that tables have consistent sharing.

ORA-32432: materialized view log on a duplicated table cannot be altered when shard DDL is enabled

Cause: An attempt was made to alter the materialized view log on a duplicated table when the shard DDL was enabled.

Action: Disable shard DDL to alter the materialized view log on a duplicated table.

ORA-32433: cannot rename a materialized view log

Cause: Renaming a materialized view log was not supported.

Action: Do not rename a materialized view log.

ORA-32434: cannot alter materialized view log with the PMOP

Cause: The materialized view log was not allowed to have destructive partition maintenance operations (PMOPS) such as DROP, TRUNCATE and EXCHANGE partition or subpartition.

Action: Do not DROP, TRUNCATE and EXCHANGE partition or subpartition of a materialized view log.

ORA-32435: failed to refresh materialized view due to mismatched column datatype

Cause: The materialized view refresh failed because one or more columns in the materialized view was a different data type compared to the corresponding column(s) in the master table.

Action: Check further error messages in the stack for more detail about the cause. If the master table column has been altered or redefined, drop the materialized view and re-create it.

ORA-32436: failed to qualify for join specific materialized view: *string*

Cause: An error related to join specific materialized join view was received.

Action: Refer to the error message for more information.

ORA-32437: must use ALTER MATERIALIZED VIEW LOG to alter "*string*". "*string*"

Cause: An attempt was made to alter a materialized view log using a command other than ALTER MATERIALIZED VIEW LOG.

Action: Use the ALTER MATERIALIZED VIEW LOG command.

ORA-32460: maximum number of private temporary tables per session exceeded

Cause: An attempt was made to create a private temporary table that exceeded the maximum allowable private temporary tables per session.

Action: Drop some of the private temporary tables.

ORA-32461: unable to complete creation of in-memory private temporary table

Cause: An attempt was made to create an in-memory private temporary table that was no longer in the shared pool.

Action: Reduce the activities that use shared pool space, then retry creating the in-memory private temporary table.

ORA-32462: cannot use an object modified in current transaction

Cause: An object modified in the current transaction was found during the creation of in-memory private temporary table using CREATE TABLE AS SELECT (CTAS).

Action: Split the CTAS statement into CREATE TABLE followed by INSERT SELECT.

ORA-32463: cannot create an object with a name matching private temporary table prefix

Cause: An attempt was made to create an object with a name matching private temporary table prefix (either ORA\$PTT_ or value in parameter, private_temp_table_prefix).

Action: Choose a different name.

ORA-32464: private temporary table feature is disabled

Cause: An attempt was made to create a private temporary table but the feature was disabled.

Action: Enable the feature by setting the parameter, private_temp_table_prefix, to a unique value starting with ORA\$.

ORA-32465: value specified for the parameter is incorrect

Cause: An attempt was made to modify the PRIVATE_TEMP_TABLE_PREFIX parameter to a value that does not comply as specified in the documentation.

Action: The prefix value should be of the form ORA\$*3uniqueCharacters*.

ORA-32466: Cannot associate a private temporary table with a domain.

Cause: An attempt was made to associate a private temporary table with a domain, which was not allowed.

Action: Do not associate a private temporary table with a domain.

ORA-32480: SEARCH and CYCLE clauses can only be specified for recursive WITH clause elements

Cause: A SEARCH or a CYCLE clause was specified for a WITH clause element that was not recursive.

Action: Remove the SEARCH or CYCLE clause, or add recursion to the WITH clause element.

ORA-32481: cycle value for CYCLE clause must be different from the non-cycle value

Cause: A CYCLE clause was specified for a recursive WITH query but the cycle value was the same as the non-cycle or DEFAULT value.

Action: Change either the cycle or the non-cycle values so that they no longer match.

ORA-32482: sequence column for SEARCH clause must be different from the cycle mark column for CYCLE clause

Cause: A SEARCH clause and a CYCLE clause was specified for a recursive WITH query, but the sequence column of the SEARCH clause matched the cycle mark column of the CYCLE clause.

Action: Change either the sequence column or the cycle mark column so that they no longer match.

ORA-32483: duplicate name found in sort specification list for SEARCH clause of WITH clause

Cause: A SEARCH clause was specified for a recursive query with a sort specification list which contained duplicate names.

Action: Remove the duplicate names from the sort specification list of the SEARCH clause.

ORA-32484: duplicate name found in cycle column list for CYCLE clause of WITH clause

Cause: A CYCLE clause was specified for a recursive query with a cycle column list which contained duplicate names.

Action: Remove the duplicate names from the cycle column list of the CYCLE clause.

ORA-32485: element in cycle column list of CYCLE clause must appear in the column alias list of the WITH clause element

Cause: An element in the cycle column list of a CYCLE clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the cycle column list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32486: unsupported operation in recursive branch of recursive WITH clause

Cause: The recursive component of the UNION ALL in a recursive WITH clause element used an operation that was currently not supported. The following should not be used in the recursive branch of the UNION ALL operation: GROUP BY, DISTINCT, MODEL, grouping sets, CONNECT BY, window functions, HAVING, aggregate functions.

Action: Rewrite the query without the unsupported operation.

ORA-32487: unsupported join in recursive WITH query

Cause: The recursive component of a recursive WITH clause element contained one of the following: - A LEFT OUTER join where the right side was the recursive query name. - A RIGHT OUTER join where the left side was the recursive query name. - A FULL OUTER join involving the recursive query name.

Action: Rewrite the query without the unsupported join operation.

ORA-32488: missing column alias list in WITH clause element *string*

Cause: The specified WITH clause element used the SEARCH clause or the CYCLE clause or both but did not specify a column alias list.

Action: Add a column alias list for the WITH clause element. That is, add a list of aliases for the select list items following the WITH clause element name.

ORA-32489: element in sort specification list of SEARCH clause did not appear in the column alias list of the WITH clause element

Cause: An element in the sort specification list of a SEARCH clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the sort specification list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32490: recursive query name referenced more than once in recursive branch of recursive WITH clause element *string*

Cause: The recursive component of the UNION ALL in the specified recursive WITH clause element referenced the recursive query name more than once. Only one reference to the recursive query name is allowed in the recursive branch of a recursive WITH clause element.

Action: Rewrite the recursive WITH clause element using only one reference to the recursive query name in the recursive branch of the recursive WITH clause element. *Params: 1)
WITH_clause_name: name of the WITH clause element

ORA-32491: cycle mark value and non-cycle mark value for CYCLE clause must be either all character values or boolean values

Cause: A CYCLE clause was specified for a recursive WITH query but the cycle mark value and the non-cycle value or DEFAULT value were not all character values or boolean values.

Action: Change either the cycle mark or the non-cycle mark values so that they are the same data type.

ORA-32499: Operation is not supported on older version of CONNECT BY clause.

Cause: The statement attempted to combine an older version of the CONNECT BY clause with an operation that the older version does not support.

Action: Replace the use of the older version of the CONNECT BY clause with one for the current version and retry.

ORA-32500: Dirname '*string*' cannot exceed '*string*' characters

Cause: Path name too long

Action: Use shorter pathname than maximum specified for dirname.

ORA-32501: Writing SGA to file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. slercerrno contains errno.

ORA-32502: Cannot execute command. Flash Freeze is not in effect.

Cause: This command can only be issued after a flash freeze.

Action: Refer to the instructions for flash freeze and Oracle diagnostics.

ORA-32503: Mapping SGA from file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. slercerrno contains errno.

ORA-32504: expecting one of *string*, *string*, *string*, or *string* but found *string*

Cause: illegal value specified for create watchpoint mode

Action: specify one of the expected modes

ORA-32505: too many watchpoints

Cause: too many watchpoints created

Action: increase appropriate initialization parameters

ORA-32506: expecting one of *string*, *string*, or *string* but found *string*

Cause: invalid arguments provided

Action: provide one of the expected arguments

ORA-32507: expecting *string* but found *string*

Cause: invalid arguments to command

Action: provide one of the expected arguments

ORA-32508: no such watchpoint id

Cause: invalid watchpoint id

Action: use oradebug show to list valid watchpoint ids

ORA-32512: Type '*string*' is unknown.

Cause: An attempt was made to dump an invalid type name.

Action: Specify a known type. *Params: 1) type_name: The type name to be dumped.

ORA-32514: cannot dump multiple '*string*' types: structure size is unknown

Cause: trying to dump an invalid address

Action: provide a different valid address

ORA-32515: cannot issue ORADEBUG command '*string*' to process '*string*'; prior command execution time exceeds *string* ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command for a time greater than the timeout value specified.

Action: Increase the timeout value.

ORA-32516: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*'; wait time exceeds *string* ms

Cause: The execution of the ORADEBUG command took longer than the the timeout value specified.

Action: Increase the timeout value.

ORA-32517: cannot issue ORADEBUG command '*string*' to process '*string*' (prior command execution time exceeds *string* ms); total wait time exceeds *string* ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command. But, because the total wait time for all targeted processes exceeded the maximum wait time, the ORADEBUG command was not issued to the target process.

Action: Increase the timeout value.

ORA-32518: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*' (waited *string* ms); total wait time exceeds *string* ms

Cause: The total wait time for all targeted processes exceeded the maximum wait time, therefore the wait for the targeted process to finish executing the ORADEBUG command was aborted.

Action: Increase the timeout value.

ORA-32519: insufficient privileges to execute ORADEBUG command: *string*

Cause: Sufficient privileges were not granted.

Action: Perform the operation using a database session that has the required privileges. See the Oracle ORADEBUG documentation for more details.

ORA-32520: error authenticating credentials

Cause: An error was encountered while authenticating credentials.

Action: Check the other error messages for additional information or contact Oracle Support Services.

ORA-32521: error parsing ORADEBUG command: *string*

Cause: An invalid ORADEBUG command was specified.

Action: Specify the correct ORADEBUG command and arguments.

ORA-32522: restricted heap violation while executing ORADEBUG command: [*string*] [*string*] [*string*]

Cause: An invalid memory heap was used in an ORADEBUG command.

Action: Try executing the ORADEBUG command in the current process or contact Oracle Support Services.

ORA-32524: operation cannot be performed at interrupted location: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An operation could not be performed because it conflicts with an operation that was in progress when the process was interrupted.

Action: None, this is an internal condition.

ORA-32550: Replacement occurred despite hint to the contrary

Cause: This should never be signalled; it's internal.

Action: Report to Oracle support.

ORA-32575: Explicit column default is not supported for modifying views

Cause: Default keyword was used to modify views.

Action: Use implicit default - omitting column-value pair.

ORA-32577: username must be SYS or SYSTEM

Cause: A user name of SYS or SYSTEM was not specified when providing a password in the CREATE DATABASE statement.

Action: Only passwords for the SYS and SYSTEM users can be provided in the CREATE DATABASE statement. Re-issue the statement with passwords for users SYS or SYSTEM.

ORA-32578: password for SYS already specified

Cause: A password for the SYS user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYS user.

ORA-32579: password for SYSTEM already specified

Cause: A password for the SYSTEM user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYSTEM user.

ORA-32580: both SYS and SYSTEM passwords must be provided

Cause: Passwords for both the SYS and SYSTEM users were not provided in the CREATE DATABASE statement. If one of the passwords was provided, then both should be provided.

Action: Re-issue the CREATE DATABASE statement with a password for both the SYS and SYSTEM users.

ORA-32581: missing or invalid password

Cause: An incorrect password was provided for the SYS or SYSTEM user in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with a valid password.

ORA-32582: table function with left correlation to a table cannot also be left outer-joined to the table

Cause: A table function T2 contains a reference to a table T1. T2 is also left outer-joined to T1. This is not allowed.

Action: Remove the reference to T1 from T2 or remove the left outer-join specification (+).

ORA-32583: Input CURSOR to table function must project PARTITION BY columns.

Cause: An attempt was made to pass a CURSOR argument to a pipelined table function whose projected columns did not include all the columns specified in the PARTITION BY, ORDER BY, or CLUSTER BY clauses of the pipelined table function.

Action: Ensure that the columns projected from the CURSOR argument of a pipelined table function includes the PARTITION BY, ORDER BY, and CLUSTER BY columns of the pipelined table function.

ORA-32584: missing LOG keyword

Cause: keyword LOG is missing.

Action: Use LOG keyword.

ORA-32585: duplicate specification of a supplemental log attribute

Cause: In a create/alter DDL a supplemental log attribute is specified more than once.

Action: Rewrite the Create/Alter DDL such that it has a single occurrence of any supplemental log attribute.

ORA-32586: multiple specification of a supplemental logging attribute

Cause: The primary key, unique index, foreign key or all column supplemental logging attribute can be specified at most once in a create/alter ddl.

Action: Rewrite the Create/Alter DDL with single occurrence of the offending supplemental logging attribute.

ORA-32587: Cannot drop nonexistent *string* supplemental logging

Cause: specified supplemental log attribute does not exist.

Action: None

ORA-32588: supplemental logging attribute *string* exists

Cause: specified supplemental logging attribute exists.

Action: retry the alter/create ddl after removing this supplemental logging attribute.

ORA-32589: unable to drop minimal supplemental logging

Cause: Minimal supplemental logging could not be dropped as one of primary key, foreign key, unique or all column supplemental logging is enabled at the database level.

Action: Use V\$DATABASE to determine the databasewide supplemental logging directives. Minimal supplemental logging could be dropped if and only if no other databasewide supplemental logging directives are enabled.

ORA-32590: log group specification not allowed here

Cause: Supplemental log specification is not allowed in the statement.

Action: Remove the supplemental log specification from the statement.

ORA-32591: connect string too long

Cause: The connect string specified for the database link was more than 2000 characters.

Action: Specify a connect string less than 2000 characters.

ORA-32592: all columns in log group can not be no log columns

Cause: A supplemental log group must have at least one column of scalar type that is not marked as no log.

Action: Redefine the supplemental log group with at least one column of scalar type that is not marked as no log.

ORA-32593: database supplemental logging attributes in flux

Cause: there is another process actively modifying the database wide supplemental logging attributes.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32594: invalid object category for COMMENT command

Cause: The object category specified is not a valid object for which to use the COMMENT command.

Action: Retry the COMMENT command by specifying an accepted object category. (ie, Table, Operator, Indextype, etc.)

ORA-32595: DDL statement cannot be audited with BY SESSION specified

Cause: An attempt was made to audit a DDL statement with BY SESSION clause specified. DDL statements can be audited BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION to audit the DDL statement.

ORA-32596: duplicate ALTER USER or CREATE USER option

Cause: An ALTER USER option was duplicated.

Action: Remove the duplicate option.

ORA-32597: database supplemental logging attributes inconsistent

Cause: failed to propagate supplemental logging attributes to all RAC instances. Most likely caused by an instance leaving the RAC while this DDL was in progress.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32598: user names cannot be changed in ALTER DATABASE LINK command

Cause: An attempt was made to change the fixed user name of the database link.

Action: To change the fixed username of the database link, drop the existing database link and recreate it with the correct username.

ORA-32599: cannot create a view in SYS schema with V\$ or GV\$ name prefix

Cause: An attempt was made to create a view in SYS schema with V\$ or GV\$ name prefix, which is reserved for fixed views.

Action: Provide a different name for the view or use a different schema.

ORA-32600: RETENTION and PCTVERSION cannot be used together

Cause: cannot use both RETENTION and PCTVERSION together.

Action: Use either RETENTION or PCTVERSION.

ORA-32601: value for retention cannot be provided

Cause: cannot give a value for Retention Period.

Action: do not provide the value for parameter.

ORA-32602: FREEPools and FREELIST GROUPS cannot be used together.

Cause: FREEPools and FREELIST GROUPS cannot be used together.

Action: Use either FREEPools or FREELIST GROUPS.

ORA-32603: invalid FREEPools LOB storage option value

Cause: The specified FREEPools LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-32604: invalid REBUILD option

Cause: Keyword FREEPools expected after the REBUILD keyword.

Action: User must specify FREEPools keyword.

ORA-32605: invalid REBUILD option

Cause: cannot rebuild freepools while creating table with lob column.

Action: User must not specify REBUILD... in this context.

ORA-32606: missing NAV keyword in MODEL clause

Cause: The NAV keyword was not specified where it was expected.

Action: Specify the NAV keyword or check the SQL statement.

ORA-32607: invalid ITERATE value in MODEL clause

Cause: The specified ITERATE value must be a 4 byte positive integer.

Action: Choose an appropriate value and retry the operation.

ORA-32608: missing INCREMENT or DECREMENT keyword in FOR loop

Cause: INCREMENT or DECREMENT keyword was not specified where it is expected.

Action: Specify the INCREMENT or DECREMENT keyword or check the SQL statement.

ORA-32609: missing REFERENCE keyword in MODEL clause

Cause: The REFERENCE keyword was not specified where it is expected.

Action: Specify the REFERENCE keyword or check the SQL statement.

ORA-32610: missing SINGLE REFERENCE or DIMENSION keyword in MODEL clause

Cause: SINGLE REFERENCE or DIMENSION keyword was not specified where it is expected.

Action: Specify the applicable keywords or check the SQL statement.

ORA-32611: incorrect use of MODEL CV operator

Cause: CV function was used outside a dimension expression, in UNTIL condition, or with non-dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32612: invalid use of FOR loop

Cause: The MODEL FOR loop was used where it is not allowed. FOR loops are not allowed in complex dimensional predicates, on the right hand side of rules, or in the until condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32613: not a MODEL cell

Cause: The operator requires a MODEL cell as operand.

Action: Specify MODEL cell as operand, check SQL statement.

ORA-32614: illegal MODEL SELECT expression

Cause: An expression other than MODEL aliases, constants, or expressions of the two is specified in the MODEL SELECT clause.

Action: Reformulate the query, perhaps nesting inside another SELECT.

ORA-32615: incorrect use of MODEL IS ANY predicate

Cause: IS ANY predicate is used outside dimension expression or with non-dimensional or different dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32616: missing DIMENSION BY keyword in MODEL clause

Cause: The DIMENSION keyword was not specified where it is expected.

Action: Specify the DIMENSION keyword or check the SQL statement.

ORA-32617: missing MEASURES keyword in MODEL clause

Cause: The MEASURES keyword was not specified where it is expected.

Action: Specify the MEASURES keyword or check the SQL statement.

ORA-32618: incorrect use of MODEL PREVIOUS function

Cause: The MODEL PREVIOUS function was used outside of MODEL "ITERATE UNTIL" clause, or was nested.

Action: Check the SQL statement and rewrite if necessary.

ORA-32619: incorrect use of MODEL ITERATION_NUMBER

Cause: ITERATION_NUMBER was used outside of an iterated MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32620: illegal subquery within MODEL rules

Cause: A subquery was used illegally within the MODEL rule.

Action: Check the SQL statement and rewrite if necessary.

ORA-32621: illegal aggregation in UNTIL iteration condition

Cause: An aggregate function was used in UNTIL condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32622: illegal multi-cell reference

Cause: Multi-cell reference was specified on a measure expression without an aggregate function.

Action: Use an aggregate function on the measure expression or qualify the cell reference.

ORA-32623: incorrect use of MODEL PRESENT* functions

Cause: A PRESENT* function (IS PRESENT, PRESENTV, PRESENTNNV) was used in a measure expression.

Action: Check the SQL statement and rewrite if necessary.

ORA-32624: illegal reordering of MODEL dimensions

Cause: The expressions to qualify dimensions were specified in an incorrect order within a cell reference.

Action: Reorder dimension expressions in the cell reference.

ORA-32625: illegal dimension in cell reference predicate

Cause: A non-positional dimension was referenced in the predicate.

Action: Check the SQL statement and rewrite if necessary.

ORA-32626: illegal bounds or increment in MODEL FOR loop

Cause: FOR loop allows only numeric and datetime without timezone type for bounds. Only constants of interval and numeric types are allowed as increment/decrement expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32627: illegal pattern in MODEL FOR LIKE loop

Cause: The FOR LIKE pattern had zero or more than one wild characters.

Action: Simplify the pattern to have a single wildcard character.

ORA-32628: invalid nesting of MODEL cell reference

Cause: MODEL cell reference was nested too deeply.

Action: Avoid deep nesting of cell references and rewrite if necessary.

ORA-32629: measure used for referencing cannot be updated

Cause: A measure used in nested referencing is updated by a MODEL rule in the automatic order MODEL.

Action: Modify the SQL statement or use sequential order MODEL.

ORA-32630: multiple assignment in automatic order MODEL

Cause: A MODEL cell was updated on the same measure in multiple MODEL rules. Multiple assignment is not allowed in automatic order MODELS as it causes in ambiguity and nondeterminism.

Action: Use sequential order MODEL or rewrite the rule to avoid this.

ORA-32631: the use of objects in MODEL is not allowed

Cause: An object column was used as a MODEL column. Object types are not allowed as partition by, dimension by, or measure expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32632: incorrect subquery in MODEL FOR cell index

Cause: An illegal subquery was specified in MODEL FOR cell index. A subquery used in a MODEL FOR cell index can not have subqueries, correlation, binds and references to WITH tables.

Action: Check the SQL statement and rewrite if necessary.

ORA-32633: MODEL subquery FOR cell index returns too many rows

Cause: Subquery in MODEL FOR cell index returned more than the allowed maximum.

Action: Split the rule into multiple ones.

ORA-32634: automatic order MODEL evaluation does not converge

Cause: Evaluation using automatic rule ordering did not reach a convergence point.

Action: Modify the rules or use sequential order instead.

ORA-32635: not a single cell reference predicate

Cause: A predicate that is not a single cell reference predicate was specified where a single cell reference predicate was expected. A single cell reference predicate is either a constant expression or a predicate of the form <dimension_key = constant_expr>

Action: Make sure that the predicate is a proper single cell reference. In some cases, you might have to put explicit type conversion operators (or casts) on the constant expression.

ORA-32636: Too many rules in MODEL

Cause: The number of rules (possibly after rule unfolding) exceeded the maximum number of rules allowed.

Action: Reduce the number of rules.

ORA-32637: Self cyclic rule in sequential order MODEL

Cause: A self-cyclic rule was detected in the sequential order MODEL. Sequential order MODELS cannot have self cyclic rules to guarantee that the results do not depend on the order of evaluation of the cells that are updated or inserted.

Action: Use ordered rule evaluation for this rule.

ORA-32638: Non unique addressing in MODEL dimensions

Cause: The address space defined for the MODEL (partition by and dimension by expressions) do not uniquely identify each cell.

Action: Rewrite the MODEL clause. Using UNIQUE SINGLE REFERENCE option might help.

ORA-32639: Aggregate functions on reference MODELS are not allowed

Cause: An aggregate function was specified on the cells of a reference MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32640: FOR LIKE loops are not allowed for multi-byte character types

Cause: FOR LIKE loops was specified for a multi-byte character type.

Action: Check the SQL statement and rewrite if necessary.

ORA-32641: invalid expression in MODEL rule ORDER BY clause

Cause: An invalid expression was specified in the MODEL rule ORDER BY clause where only expressions of dimension and measure columns and reference MODEL cell references are allowed

Action: Modify the order by clause in the MODEL rule.

ORA-32642: non-unique cell values from the ORDER BY clause

Cause: The MODEL rule ORDER BY clause did not generate unique values for all cells that satisfy the predicates in the left side of the rule.

Action: Modify the rule ORDER BY clause in the MODEL rule.

ORA-32643: invalid use of window function in MODEL rule

Cause: The window functions can not be used in SQL Model rules that have FOR-loops on the left side or aggregates on the right side.

Action: Modify the MODEL rule.

ORA-32644: this function is not allowed outside of MODEL clause

Cause: A function allowed only within the MODEL clause is used outside of MODEL clause.

Action: Rewrite the SQL statement.

ORA-32645: GROUPS based window aggregation group not allowed in MODEL rule

Cause: An attempt was made to specify SQL Model rules with window functions defined with the GROUP-based window aggregation group.

Action: Modify the MODEL rule.

ORA-32646: window aggregation group exclusion not allowed in MODEL rule

Cause: The window functions specified with the EXCLUDE clause for the window aggregation group could not be used in SQL Model rules.

Action: Modify the MODEL rule.

ORA-32647: *string*: invalid measure expression in left hand side of MODEL rule

Cause: The left hand side of a MODEL rule was expected to be a MEASURE expression.

Action: Modify the MODEL rule.

ORA-32648: *string*: invalid argument for MODEL CV operator

Cause: The argument for the CV operator of the MODEL clause was expected to be either a dimension by or a partition by expression.

Action: Modify the argument of the MODEL CV operator to be a dimension by of a partition by expression.

ORA-32649: *string*: invalid argument for MODEL IS ANY predicate

Cause: The argument for the IS ANY predicate of the MODEL clause was expected to be a dimension by expression.

Action: Modify the argument of the MODEL IS ANY predicate to be a dimension by expression.

ORA-32650: *string*: invalid measure expression

Cause: An expression that was not a measure expression was provided when a measure expression was expected.

Action: Modify the query to use a measure expression.

ORA-32690: Hash Table Infrastructure ran out of memory

Cause: Not enough memory.

Action: Increase memory.

ORA-32695: HTI: Not enough memory

Cause: Memory is not enough.

Action: Increase memory.

ORA-32696: HTI: No free slot

Cause: There is not enough memory.

Action: Increase memory.

ORA-32700: error occurred in DIAG Group Service

Cause: An unexpected error occurred while performing a DIAG Group Service operation.

Action: Verify that the DIAG process is still active. Also, check the Oracle DIAG trace files for errors.

ORA-32701: Blocker Resolver detected resolvable blocking scenarios up to Hang ID=*string*.

Cause: Blocker Resolver detected one or more blocking scenarios. These could be valid blocking scenarios that require action or the system could be overloaded causing very slow

progress. If blocker resolution is enabled, Blocker Resolver will attempt to address the situation by terminating the final blocker or the instance on which the final blocker resides.

Action: Check the incident logs associated with this message for diagnostic information. *Params: 1) hang_id: The numeric identifier for a particular blocking scenario.

ORA-32702: Rolling migration is going on

Cause: DIAG detected rolling migration in IPC.

Action: No action needed. DIAG is shutting down for rolling migration. This error number is solely used for internal purposes.

ORA-32703: deadlock detected: *string*

Cause: Oracle sessions waiting for resources were deadlocked.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32704: Oracle RAC deadlock detected: *string*

Cause: Oracle sessions or processes using Global Enqueue Service were deadlocked waiting for resources.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32706: invalid parameter name or value for Blocker Resolver

Cause: An invalid parameter name or value was passed to the DBMS_BLOCKER_RESOLVER package when setting an Blocker Resolver parameter.

Action: Choose a documented parameter name and value.

ORA-32707: internal error of Blocker Resolver parameter management

Cause: An internal error was encountered while processing the Blocker Resolver parameter management request.

Action: Check the alert log file for error details.

ORA-32708: DBMS_BLOCKER_RESOLVER package not supported for this instance type

Cause: Blocker Resolver parameter management was not supported for this instance type.

Action: No action required.

ORA-32717: Blocker Resolver has reset session infrastructure

Cause: Dynamic sessions forced a session increment.

Action: No action required.

ORA-32730: Command cannot be executed on remote instance

Cause: DIAG is not registered with DIAG Group Service

Action: Issue the command without the cluster database syntax

ORA-32731: Another Parallel Oradebug session is in progress

Cause: Another session for Parallel Oradebug is in progress with the database

Action: Issue the command later when the current session finishes

ORA-32732: Parallel Oradebug session is aborted

Cause: Group reconfiguration is occurring among DIAGs

Action: Issue the command later when group reconfiguration completes

ORA-32733: Error occurred when executing Parallel Oradebug

Cause: Error is encountered during executing command at local node

Action: Check alert log and DIAG trace file for error detail

ORA-32734: Error occurred when sending Oradebug command to remote DIAGs

Cause: IPC communication problem encountered

Action: Check IPC communication between DIAGs and issue the command again

ORA-32735: The command failed to execute since the DIAG process has not started.

Cause: The DIAG process is not running in the instance.

Action: Check the error in the DIAG trace file and issue the command again when DIAG process is restarted.

ORA-32736: Hang analysis aborted due to wrong message type

Cause: DIAG received wrong message.

Action: Check DIAG trace files for errors.

ORA-32737: Hang analysis aborted due to failed memory allocation

Cause: DIAG couldn't allocate buffer for remote copy.

Action: Check DIAG trace files for errors.

ORA-32738: Hang analysis aborted due to failed memory copy

Cause: DIAG couldn't copy buffer to remote node.

Action: Check DIAG trace files for errors.

ORA-32739: Hang analysis aborted due to failed heap re-grow

Cause: DIAG couldn't re-grow the heap for wait-for-graphs.

Action: Check DIAG trace files for errors.

ORA-32740: The requested operation cannot be proceeded

Cause: Operation was aborted because instance termination was in progress.

Action: Retry later after restarting the instance.

ORA-32741: Hang analysis already going on

Cause: Hang analysis was already in process globally or for the instance.

Action: Wait for the current operation to complete and re-run the command.

ORA-32742: Hang analysis initialize failed

Cause: Hang analyzer was not able to allocate memory to initialize.

Action: Check the trace files.

ORA-32743: command cannot be executed on remote instance

Cause: The database was not mounted in SHARED mode.

Action: Mount the database in SHARED mode.

ORA-32766: instr with negative offset: use varchar semantics on LOBs

Cause: The current varchar behavior is different. e.g. `instr('abcd', 'cd', -2, 1)` returns 3, whereas `instr(to_clob('abcd'), 'cd', -2, 1)` returns 0, (i.e. no match), because the reverse search starts from offset -2, which points to 'c' and moving backward, i.e. 'd' is ignored. This is symmetric to `instr('dcba', 'dc', 2, 1)`, which returns 0.

Action: ORACLE uses the same varchar semantics on LOBs (`instr`). Using the same example, `instr(to_clob('abcd'), 'cd', -2, 1)` will return 3 as in the varchar case.

ORA-32767: A database connection is not available for this operation.

Cause: The client-side SQL or PL/SQL operation required a connection to the database that did not exist.

Action: Establish a database connection.

ORA-32771: cannot add file to bigfile tablespace

Cause: An attempt was made to add the second file to a bigfile tablespace.

Action: Do not use this command with bigfile tablespace.

ORA-32772: BIGFILE is invalid option for this type of tablespace

Cause: An attempt was made to create a bigfile tablespace that is dictionary managed or locally managed with manual segment-space management.

Action: Either change the tablespace type to locally managed with automatic segment-space management, or create a SMALLFILE tablespace instead.

ORA-32773: operation not supported for smallfile tablespace *string*

Cause: An attempt was made to perform an operation which is supported only for bigfile tablespaces, e.g. `resize tablespace`.

Action: Use the appropriate clause of the `ALTER DATABASE DATAFILE` command instead.

ORA-32774: more than one file was specified for bigfile tablespace *string*

Cause: More than one datafile or tempfile was specified in `CREATE TABLESPACE` command for a bigfile tablespace.

Action: Change command to contain only one file or create a smallfile tablespace instead.

ORA-32775: cannot change size attributes of read only tablespace *string*

Cause: An attempt was made to change size attributes of a tablespace that is read only.

Action: Change the tablespace to read/write and retry the operation.

ORA-32776: Local temporary tablespaces are not allowed in a tablespace group.

Cause: Attempted to create or alter a tablespace group to contain a tablespace that is a local temporary tablespace.

Action: Use a temporary tablespace that is not local, or do not include the tablespace in a tablespace group.

ORA-32777: DDL operations are disabled on local temporary tablespaces FOR RIM.

Cause: A DDL operation on a local temporary tablespace FOR RIM was attempted in a system without any read-only running instances.

Action: Add at least one read-only instance to the cluster.

ORA-32778: DDL operations are disabled on local temporary tablespaces FOR LEAF.

Cause: A DDL operation on a local temporary tablespace FOR LEAF was attempted in a system without any read-only running instances.

Action: Add at least one read-only instance to the cluster.

ORA-32779: Operation is not allowed for the local temporary tablespace created FOR RIM or FOR LEAF.

Cause: Local temporary tablespace that was created using FOR RIM or FOR LEAF could not be used as the default local temporary tablespace.

Action: Use the local temporary tablespace that is created FOR ALL.

ORA-32782: duplicate window name specified

Cause: A duplicate window name was specified in the WINDOW clause.

Action: Specify different window names for each window in the WINDOW clause.

ORA-32783: Window specification referencing a window name cannot have PARTITION BY clause.

Cause: An attempt was made to define a PARTITION BY clause in the window specification that referenced a window name.

Action: When referencing a window name in the window specification, define the PARTITION BY clause in the definition of the window name.

ORA-32784: The window name referenced did not exist.

Cause: The window specification referenced a window name that was not defined.

Action: Reference a window name that is already defined in the WINDOW clause.

ORA-32785: cannot define a new window specification in which another defined window specification with WINDOWING clause is referenced

Cause: An attempt was made to define a new window specification in which another defined window specification with the WINDOWING clause was referenced.

Action: When referencing a defined window specification, directly reference the name after the OVER keyword instead of adding parenthesis which would be interpreted as defining a new window specification.

ORA-32786: referenced window name with ORDER BY clause specified already

Cause: An attempt was made to specify an ORDER BY clause with a window specification that already referenced a window name that was defined with the ORDER BY clause.

Action: Do not specify the ORDER BY clause with a window specification that already references a window name that was defined with the ORDER BY clause.

ORA-32787: invalid window specification

Cause: A syntax error was found during parsing of the window specification.

Action: Correct the syntax and try again.

ORA-32788: Operation is not allowed due to invalid or mismatched tablespace type.

Cause: Local temporary tablespace could not be used as the default temporary tablespace; Temporary tablespace could not be used as the default local temporary tablespace.

Action: Change the tablespace type and use the valid tablespace.

ORA-32790: Element '*string*' cannot share the default table '*string*' with element '*string*'.

Cause: An element, in the restriction, shared a default table with the corresponding element in its supertype.

Action: Change the name of the default table for the element in the restriction.

*Params: 1) element_name_1: The XML element name. 2) table_name: The default table name. 3) element_name_2: The XML element name.

ORA-32791: prebuilt table managed column cannot have a default on null

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column with a default on null expression.

Action: Either remove the default on null property, or do not include the column in the materialized view definition.

ORA-32792: prebuilt table managed column cannot be an identity column

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column that is an identity column.

Action: Either remove the identity property, or do not include the column in the materialized view definition.

ORA-32793: Cannot alter a system-generated sequence.

Cause: Attempted to alter a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be altered.

ORA-32794: cannot drop a system-generated sequence

Cause: An attempt was made to drop a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be dropped.

ORA-32795: cannot insert into a generated always identity column

Cause: An attempt was made to insert a value into an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly inserted. Instead, the associated sequence generator must provide the value.

ORA-32796: cannot update a generated always identity column

Cause: An attempt was made to update an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly updated.

ORA-32797: identity column sequence mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have identity columns with sequences that are neither both increasing nor decreasing.

Action: Ensure that the identity columns have sequences with INCREMENT BY having the same sign.

ORA-32798: cannot use ANSI RIGHT or FULL outer join with a left correlation

Cause: An attempt was made to use a lateral view with a left correlation to the first operand of an ANSI RIGHT or FULL outer join.

Action: Rewrite the query without the left correlation.

ORA-32799: cannot rename a system-generated sequence

Cause: An attempt was made to rename a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be renamed.

ORA-32800 to ORA-32857

ORA-32800: internal error *string*

Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ORA-32801: invalid value *string* for *string*

Cause: An invalid value was specified for a parameter.

Action: Specify a valid value for the parameter.

ORA-32802: value for *string* must be *string*

Cause: An invalid value was specified for a parameter.

Action: Specify the value as indicated by the message.

ORA-32803: value for *string* cannot be altered

Cause: An attempt was made to alter a value that cannot be altered.

Action: Retry the operation without altering the indicated value.

ORA-32804: invalid value *string*, *string* should have form *string*

Cause: A value specified for a parameter has the incorrect form.

Action: Specify a string of the correct form.

ORA-32805: identifier for *string* too long, maximum length is *string* characters

Cause: An identifier string exceeded the maximum allowed length.

Action: Specify a string whose length is less than the maximum allowed length.

ORA-32806: value for *string* is too long, maximum length is *string*

Cause: A value exceeded its maximum allowed length.

Action: Specify a value whose length is less than the maximum allowed length.

ORA-32807: message system link *string* already exists

Cause: A message system link of the specified name already exists.

Action: Specify a different name.

ORA-32808: message system link *string* does not exist

Cause: A message system link of the specified name does not exist.

Action: Specify a message system link name that already exists.

ORA-32809: foreign queue *string* is already registered

Cause: The foreign queue has already been registered for this message system link (NAME@MSGLINK).

Action: Specify a different name that is not being used for this message system link.

ORA-32810: foreign queue *string* is not registered

Cause: The foreign queue (NAME@MSGLINK) has not been registered for this message system link.

Action: Specify the name of a registered foreign queue.

ORA-32811: subscriber *string* already exists

Cause: The specified subscriber identifier already exists.

Action: Specify a different identifier.

ORA-32812: subscriber *string* does not exist

Cause: The specified subscriber identifier does not exist.

Action: Specify an existing subscriber identifier.

ORA-32813: propagation schedule *string* already exists

Cause: The specified propagation schedule identifier already exists.

Action: Specify a different identifier.

ORA-32814: propagation schedule *string* does not exist

Cause: The specified propagation schedule identifier does not exist.

Action: Specify a schedule identifier that already exists.

ORA-32815: message system link *string* is referenced by a foreign queue

Cause: An attempt was made to remove a message system link currently referenced by one or more registered foreign queues.

Action: Unregister all foreign queues using this message system link and retry the operation.

ORA-32816: foreign queue *string* is referenced by a subscriber or schedule

Cause: An attempt was made to unregister a foreign queue currently referenced by one or more subscribers or propagation schedules.

Action: Remove all subscribers and propagation schedules using this foreign queue and retry the operation.

ORA-32817: message system link *string* is not configured with a log queue for *string*

Cause: An attempt was made to add a propagation subscriber but the message system link was not configured with a log queue for the indicated propagation type.

Action: Alter the message system link to configure the link with a log queue for this propagation type.

ORA-32818: AQ queue *string* does not exist

Cause: An operation was attempted where the specified AQ queue does not exist.

Action: Specify the name of an existing AQ queue.

ORA-32819: AQ queue *string* must be a normal queue

Cause: An operation was attempted where the specified AQ queue exists but is not a normal queue.

Action: Specify the name of an AQ queue which was created as a normal queue (NORMAL_QUEUE).

ORA-32820: subscriber queue and exception queue must use same message system link

Cause: An operation was attempted for INBOUND propagation where the specified subscriber queue and exception queue reference different message system links.

Action: Specify an exception queue that is a registered foreign queue of the same message system link as the subscriber queue.

ORA-32821: subscriber queue and exception queue must have same payload type

Cause: An operation was attempted for OUTBOUND propagation where the AQ queues used for the subscriber queue and exception queue have different payload types.

Action: Specify an exception queue that has the same payload type as the subscriber queue.

ORA-32822: subscriber *string* is marked for removal

Cause: An administration operation was attempted for a subscriber which is marked for removal. If attempting to remove a subscriber, the Messaging Gateway agent is not running or is running but unable to remove the subscriber at this time.

Action: Do not issue propagation administration commands for a subscriber for which removal is pending. Wait for the subscriber to be removed by the agent or issue REMOVE_SUBSCRIBER with the FORCE option to force the subscriber to be removed.

ORA-32823: subscriber exists for queue *string* and destination *string*

Cause: An attempt was made to create a propagation subscriber when one already exists for the specified queue and destination pair.

Action: Specify a different queue and destination pair, or remove the subscriber using that pair and retry the operation.

ORA-32824: schedule exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation schedule when one already exists for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the schedule using that pair and retry the operation.

ORA-32825: Messaging Gateway agent has not been started

Cause: An attempt was made to shut down the Messaging Gateway agent when it is not started.

Action: No action required.

ORA-32826: Messaging Gateway agent has already been started

Cause: An attempt was made to start the Messaging Gateway agent when it is already started.

Action: No action required.

ORA-32827: Messaging Gateway agent must be shut down

Cause: An operation was attempted that requires the Messaging Gateway agent to be shut down.

Action: Issue SHUTDOWN, wait for MGW_GATEWAY view to show a NOT_STARTED status, and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to shut down after a reasonable time period.

ORA-32828: Messaging Gateway agent must be running

Cause: An operation was attempted that requires the Messaging Gateway agent to be started and responsive.

Action: Issue STARTUP, wait for MGW_GATEWAY view to show a RUNNING status, and retry the operation.

ORA-32829: Messaging Gateway agent cannot be shut down while it is starting

Cause: An attempt was made to shut down the Messaging Gateway agent when it is in the process of starting and initializing.

Action: Wait for MGW_GATEWAY view to show a RUNNING status and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to start after a reasonable time period.

ORA-32830: result code *string* returned by Messaging Gateway agent

Cause: The Messaging Gateway agent terminated abnormally due to an unexpected error.

Action: Review the Messaging Gateway log file for further information regarding the problem. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32831: timed out trying to acquire administration lock

Cause: A timeout occurred when attempting an administration operation. Either an administration operation was attempted while the Messaging Gateway agent was starting and initializing, or two administration operations were attempted at the same time.

Action: Retry the operation. If the Messaging Gateway agent is starting, wait for MGW_GATEWAY view to show a RUNNING status and retry the operation.

ORA-32832: failure *string* trying to acquire administration lock

Cause: An unexpected error occurred trying to acquire administration lock.

Action: Retry the operation. Contact Oracle Support Services if the error persists.

ORA-32833: failure *string* trying to release administration lock

Cause: An unexpected error occurred trying to release administration lock.

Action: Contact Oracle Support Services if the error persists.

ORA-32834: Messaging Gateway agent user has not been set

Cause: A Messaging Gateway agent user has not been configured.

Action: Create a database user having role MGW_AGENT_ROLE and issue DB_CONNECT_INFO to configure an agent user.

ORA-32835: database user *string* does not exist

Cause: The specified database user does not currently exist.

Action: Create the user and grant all necessary privileges and roles.

ORA-32836: database user *string* must be granted role *string*

Cause: The specified database user does not have a required role.

Action: Grant the user the indicated role.

ORA-32837: invalid configuration state *string*

Cause: The specified configuration state is invalid.

Action: Remove and re-create the configured entities. Contact Oracle Support Services if the problem cannot be identified or resolved.

ORA-32838: exceeded maximum number of properties

Cause: An attempt was made to alter a property list where the number of properties in the resulting list exceeds the maximum allowed.

Action: Order the elements of the alter list differently so the number of elements in the resulting list is less than the maximum.

ORA-32839: property *string* is reserved, names with MGWPROP\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a property name.

Action: Use a non-reserved name.

ORA-32840: property name cannot be NULL

Cause: An attempt was made to use NULL for a property name.

Action: Specify a non-NULL name.

ORA-32841: invalid value for property *string*

Cause: An attempt was made to specify an invalid value for a property.

Action: Specify a valid property value.

ORA-32842: value for property *string* cannot be altered

Cause: An attempt was made to alter a property that cannot be altered.

Action: Retry the operation without altering the indicated property.

ORA-32843: value for *string* is outside the valid range of *string* to *string*

Cause: A value was specified that is not in the valid range.

Action: Specify a value within the indicated range.

ORA-32844: exceeded maximum number of *string* values

Cause: An attempt was made to add a value of the specified type but the maximum number of such values has been reached.

Action: No action required.

ORA-32845: Messaging Gateway agent is already running

Cause: An attempt was made to start the Messaging Gateway agent when an agent instance is already running.

Action: Shut down the Messaging Gateway agent currently running, verify the agent process has been terminated, and start the Messaging Gateway agent.

ORA-32846: Messaging Gateway agent cannot be started; status is *string*

Cause: An attempt to start the Messaging Gateway agent failed due to the indicated agent status. A BROKEN status indicates a problem that requires user intervention before the agent can be started.

Action: Review the MGW_GATEWAY view and the Messaging Gateway log file for further information. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32847: operation is not supported on this platform

Cause: An attempt was made to perform an operation that is not supported on this platform.

Action: Switch to a platform on which the operation is supported.

ORA-32848: foreign queue DOMAIN required for JMS unified connections

Cause: A DOMAIN was not specified when registering a foreign queue for a messaging system link that is configured to use the JMS unified messaging model.

Action: Specify a non-NULL value for the DOMAIN parameter.

ORA-32849: *string* cannot be set unless *string* is set

Cause: An attempt was made to specify a value for a parameter that cannot be set unless an associated parameter is also set.

Action: Specify a valid value for both parameters, or, do not specify a value for either parameter.

ORA-32850: agent *string* does not exist

Cause: The specified Messaging Gateway agent name did not exist.

Action: Specify an existing agent name.

ORA-32851: agent *string* already exists

Cause: The specified Messaging Gateway agent name already existed.

Action: Specify a different agent name.

ORA-32852: agent *string* is referenced by a message system link

Cause: An attempt was made to remove a Messaging Gateway agent currently referenced by one or more message system links.

Action: Remove all message system links associated with this agent and retry the operation.

ORA-32853: propagation job *string* does not exist

Cause: The specified propagation job identifier did not exist.

Action: Specify an existing identifier.

ORA-32854: propagation job *string* already exists

Cause: The specified propagation job identifier already existed.

Action: Specify a different identifier.

ORA-32855: propagation job *string* is marked for removal

Cause: An administration operation was attempted for a propagation job which is marked for removal. If attempting to remove a job, the Messaging Gateway agent is not running or is running but unable to remove the job at this time.

Action: Do not issue propagation administration commands for a job for which removal is pending. Wait for the job to be removed by the agent, or, issue REMOVE_JOB with the FORCE option to force the job to be removed.

ORA-32856: operation not supported for propagation job

Cause: An attempt was made to perform an operation that was not supported for a propagation job.

Action: Perform the operation using a propagation job procedure.

ORA-32857: propagation job exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation job, subscriber, or schedule when a propagation job already existed for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the propagation job using that pair and retry the operation.

ORA-33000 to ORA-37999

ORA-33000: (AGOPEN00) AGGMAP *workspace object* cannot be accessed because it was compiled by a more recent version of *string*.

Cause: The AGGMAP was already compiled by a more recent version of the product than was being used to execute this command.

Action: Recompile the AGGMAP in the current version.

ORA-33002: (XSAGDNGL00) In AGGMAP *workspace object*, the FLOOR argument of *number* must be less than the CEILING argument of *number*.

Cause: The user specified a floor argument greater than the ceiling argument.

Action: Adjust the floor and ceiling arguments so that the floor is less than the ceiling.
OBSOLETE, please remove this

ORA-33003: (XSAGDIMDROP) *workspace object*, to be transformed during data load, must be a base dimension and not otherwise referenced in the AGGMAP.

Cause: The user tried to specify a dimension in a dataflow-related clause in an aggmap which is already in another RELATION statement, DIMENSION statement, or possibly dimensioning the AGGMAP, or they specified a composite or conjoint dimension, or an object which is not a dimension

Action: Remove the conflicting reference or specify a valid object

ORA-33004: (XSAGDNGL01) *workspace object* is not a relationship array.

Cause: A RELATION clause in the AGGMAP named a workspace object that is not a relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33005: (XSAGDIMBREAK) invalid breakout for dimension *workspace object*

Cause: An invalid dimension or relation in a BREAKOUT DIMENSION statement in an AGGMAP command was specified. Either the object was not a valid relation, was not over the specified dimension, or was multidimensional.

Action: Specify a valid relation.

ORA-33006: (XSAGDNGL02) The relation *workspace object* is not related to itself.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a self-relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33007: (XSAGPVAR) *workspace object* may only be used as one of: an OPERATOR, ARGS, or FROMVAR variable.

ORA-33008: (XSAGDNGL03) The relation *workspace object* is not a relation over a base dimension of AGGMAP *workspace object*.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a relation for a base dimension of the AGGMAP.

Action: Name a valid self-relation in the RELATION statement, that is, one that has a dimension that dimensions the AGGMAP.

ORA-33009: (XSAGDNGLPREC) In AGGMAP *workspace object*, PRECOMPUTE can only be specified either for the entire AGGMAP or for individual RELATION statements.

Cause: PRECOMPUTE was either specified both as a line in the AGGMAP and on at least one of the RELATION lines, or it was specified more than once as a line of the AGGMAP.

Action: Remove either the PRECOMPUTE line, or the PRECOMPUTE specification for all of the RELATION lines.

ORA-33010: (XSAGDNGL04) Relation *workspace object* is duplicated in the AGGMAP *workspace object*.

Cause: Two RELATION statements in the AGGMAP reference the same relation object.

Action: Remove the duplicate RELATION statement.

ORA-33012: (XSAGDNGL05) AGGMAP *workspace object* contains invalid syntax.

Cause: A line in the AGGMAP contains invalid syntax.

Action: Change the line to have valid syntax.

ORA-33014: (XSAGDNGL06) In AGGMAP *workspace object*, variable operator *workspace object* cannot be dimensioned by rollup dimension *workspace object*.

Cause: Operator variables cannot have the rollup dimension as one of their base dimensions.

Action: Modify the definition of the operator variable so that the current rollup dimension is not one of its bases.

ORA-33016: (XSAGDNGL07) In AGGMAP *workspace object*, *workspace object* is not a valid operator or variable name.

Cause: An invalid argument was supplied to the OPERATOR clause in the relation statement.

Action: Fix the OPERATOR clause so that it specifies either a valid variable name or a valid operator.

ORA-33018: (XSAGDNGL08) In AGGMAP *workspace object*, the data type of *workspace object* must be TEXT, not *string*.

Cause: An operator variable was supplied whose data type is not TEXT.

Action: Change the operator clause to reference a TEXT variable.

ORA-33022: (XSAGDNGL10) The measure dimension *workspace object* must be a TEXT or ID base dimension that does not dimension AGGMAP *workspace object*, but is in the same analytic workspace.

Cause: A MEASUREDIM was supplied in the AGGMAP that was not acceptable.

Action: Modify the MEASUREDIM clause to specify a valid dimension.

ORA-33024: (XSAGDNGL11) AGGMAP workspace object contains duplicate information.

Cause: The aggmap contains multiple instances of a clause that can only be specified once.

Action: Remove the extra clause.

ORA-33026: (XSAGDNGL12) In AGGMAP workspace object, workspace object is not a valid valueset.

Cause: A line in the AGGMAP contains an invalid element where a valid valueset is required.

Action: Change the line to have a valid valueset.

ORA-33028: (XSAGDNGL13) In AGGMAP workspace object, workspace object should be scalar, not a dimensioned valueset.

Cause: A line in the AGGMAP contains a dimensioned valueset where a scalared valueset is required.

Action: Change the line to have a scalar valueset.

ORA-33030: (XSAGDNGL14) In AGGMAP workspace object, you can have either a single independent PROTECT statement or PROTECT statements in your RELATION statements.

Cause: The AGGMAP either specified multiple PROTECT statements not on a RELATION line, or specified PROTECT statements both independently and on RELATION lines.

Action: Correct the AGGMAP to have valid syntax.

ORA-33032: (XSAGDNGL15) In AGGMAP workspace object, VALUESET workspace object must be in extra dimensions of the relation.

Cause: The RELATION phrase contains a VALUESET which is not over the extra dimension of the RELATION.

Action: Correct the RELATION phrase to contain a valueset over the extra dimension or not to contain any valueset.

ORA-33034: (XSAGDNGL16) In AGGMAP workspace object, VALUESET workspace object in PRECOMPUTE phrase must be in the self dimension of the relation.

Cause: The precompute phrase contains a valueset which is not over the self dimension of the relation.

Action: Correct the relation phrase to contain a valueset over the self dimension or not to contain any valueset.

ORA-33036: (XSAGDNGL17) ARGS option workspace object must be a TEXT variable.

Cause: An ARGS value had a non-text data type.

Action: Use a text variable for ARGS.

ORA-33038: (XSAGDNGL18) In AGGMAP workspace object, RELATION workspace object contains hierarchy dimensions that are also dimensions of the AGGMAP.

Cause: Hierarchy dimensions(extra dimensions) of a RELATION in the AGGMAP are base dimensions of the AGGMAP.

Action: Correct the RELATION not to have hierarchy dimensions(extra dimensions) which are also base dimensions of the AGGMAP.

ORA-33040: (XSAGDNGL19) In AGGMAP workspace object, VALUESETS workspace object and workspace object are both over the same hierarchy dimension.

Cause: Two or more different VALUESETs over the same hierarchy dimension are used in the AGGMAP.

Action: Use the same VALUESET for two RELATION phrases or use two different VALUESETs over two different hierarchy dimensions.

ORA-33042: (XSAGDNGL20) In AGGMAP workspace object, VALUESET workspace object must qualify all relations dimensioned by workspace object.

Cause: A VALUESET over a hierarchy dimension qualifies some RELATIONs but not all RELATIONs dimensioned by the same hierarchy dimension.

Action: Use the same VALUESET to qualify all the RELATIONs dimensioned by the same hierarchy dimension.

ORA-33044: (XSAGDNGL21) AGGREGATE operator string requires a WEIGHTBY clause, but the ARGS clause in AGGMAP workspace object did not specify one.

Cause: The user used an operator which needs weight values but not provided the weight values.

Action: Provide weight values using a WEIGHTBY clause.

ORA-33045: (XSAGDNGL51) The AGGREGATE operator string does not require a weight, but ARGS clause in AGGMAP workspace object specified workspace object as a weight.

Cause: The ARGS variable specified a weight even though one is not needed.

Action: Modify the ARGS variable so that it does not specify a weight for that operation.

ORA-33046: (XSAGDNGL22) In AGGMAP workspace object, you can specify only one SCREENBY clause.

Cause: The AGGMAP contained multiple SCREENBY clauses.

Action: Remove one of the SCREENBY clauses from the AGGMAP.

ORA-33048: (XSAGDNGL23) In AGGMAP workspace object, the relation workspace object and the relation workspace object are both over the same base dimension.

Cause: The AGGMAP contains incompatible RELATION statements.

Action: Remove one of the RELATION statements from the AGGMAP.

ORA-33050: (XSAGDNGL24) AGGMAP workspace object cannot be used to aggregate workspace object, because it is defined in a different analytic workspace.

Cause: The user attempted to aggregate a variable in another analytic workspace.

Action: Create an AGGMAP in the other analytic workspace to aggregate that variable.

ORA-33052: (XSAGDNGL25) AGGMAP workspace object is a dimensioned AGGMAP; it can only be used to aggregate like-dimensioned variables.

Cause: The user attempted to aggregate a variable with different dimensions than the AGGMAP. This is only possible with undimensioned AGGMAPs.

Action: Create a new undimensioned AGGMAP.

ORA-33058: (XSAGDNGL28) In AGGMAP workspace object, error code string is greater than the maximum error code of number.

Cause: The user specified an invalid ERRORMASK value.

Action: Remove the invalid value from the ERRORMASK list.

ORA-33060: (XSAGDNGL29) In AGGMAP workspace object, the value for the ERRORLOG MAX option must be greater than 0.

Cause: The user specified an ERRORLOG MAX of 0 or a negative number.

Action: Adjust the AGGMAP so that it uses a positive number.

ORA-33062: (XSAGDNGL30) In ALLOCMAP workspace object, WEIGHTBY option workspace object must be a numerical VARIABLE or FORMULA.

Cause: The WEIGHTBY clause requires numerical VARIABLE or FORMULA but the user used invalid objects.

Action: Correct the WEIGHTBY clause to use a valid numerical VARIABLE or FORMULA.

ORA-33064: (XSAGDNGL31) In AGGMAP workspace object, the hierarchy dimension QDR workspace object cannot refer to the related dimension of the relation.

Cause: The user specified an invalid hierarchy dimension qualified data reference.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33066: (XSAGDNGL32) In AGGMAP workspace object, the hierarchy dimension QDR workspace object must be a hierarchy dimension of the relation.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33068: (XSAGDNGL33) In AGGMAP workspace object, the hierarchy dimension QDR over dimension workspace object must specify a positive dimension offset.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33070: (XSAGDNGL34) In AGGMAP workspace object, all QDRs of dimension workspace object must map to the same dimension position.

Cause: The user specified two conflicting hierarchy dimension qualified data references.

Action: Adjust the AGGMAP so that it uses a consistent qualified data reference.

ORA-33072: (XSAGDNGL35) In AGGMAP workspace object, the hierarchy dimension QDR over dimension workspace object must be specified for every relation dimensioned by that hierarchy dimension.

Cause: Multiple dimensions share the same hierarchy dimension, but it is only qualified within a subset of the AGGMAP relations.

Action: Adjust the AGGMAP so that it uses consistent qualified data references.

ORA-33074: (XSAGDNGL36) In AGGMAP workspace object, the offset number is not a valid offset into dimension workspace object.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33076: (XSAGDNGL37) In AGGMAP workspace object, the value 'number' is not a valid value of dimension workspace object.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33078: (XSAGDNGL39) In AGGMAP workspace object, the hierarchy dimension QDR workspace object must refer to a dimension.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33080: (XSAGDNGL40) In AGGMAP workspace object, you cannot reference dimension workspace object with both a RELATION statement and a DIMENSION statement.

Cause: The user included both RELATION and DIMENSION statements in the AGGMAP referring to the same AGGMAP.

Action: Remove one of the conflicting clauses.

ORA-33082: (XSAGDNGL41) In AGGMAP workspace object, the non-dimensioned valueset workspace object must have a parent QDR in its VALUESET statement over the VALUESET's base dimension.

Cause: The VALUESET statement specified a scalar valueset but did not include a qualified data reference to specify the parent.

Action: Add a qualified data reference specifying the parent to the VALUESET statement.

ORA-33084: (XSAGDNGL42) In AGGMAP workspace object, you cannot qualify the dimensioned valueset workspace object.

Cause: The VALUESET line referred to a dimensioned valueset.

Action: Use a non-dimensioned valueset to limit the status of the dimensioned one.

ORA-33086: (XSAGINIT01) AGGMAP workspace object cannot be dimensioned by a conjoint dimension.

Cause: The specified AGGMAP was dimensioned by a conjoint dimension.

Action: Use the CHGDFN command to change the conjoint to a composite dimension.

ORA-33088: (XSAGINIT03) You do not have read permission for AGGMAP object workspace object.

ORA-33090: (XSAGINIT05) AGGMAP workspace object requires read permission on workspace object

Cause: The AGGMAP referenced an object to which the user did not have read permission.

Action: Grant read permission on the specified object.

ORA-33092: (XSAGCOMP04) number is not the name of a MODEL in any attached analytic workspace.

Cause: An invalid model name was attached to an AGGMAP.

Action: Remove the model from the AGGMAP or create a model with that name.

ORA-33094: (XSAGGMAPLIST01) Your expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

Cause: formulas likely refer to each other recursively or with a great deal of depth.

Action: eliminate recursion and flatten formula trees.

ORA-33098: (APABBR01) A value of '%V' is not valid for the *workspace object* option.

Cause: An invalid value was specified for the named option.

Action: Set a valid value for the option.

ORA-33100: (APABBR02) A value of '*number*' is not valid for the *workspace object* option.

Cause: An invalid value was specified for the named option.

Action: Set a valid value for the option.

ORA-33106: (APESCBAS01) '*string*' is not a valid value for the ESCAPEBASE option. Valid values are 'd' and 'x'.

Cause: An invalid value was specified for the ESCAPEBASE option.

Action: Specify one of the valid values 'd' or 'x'.

ORA-33108: (APFTMAX01) MAXFETCH must be in the range of 1,000 to 2,147,483,647.

Cause: The value specified for the MAXFETCH option was out of range.

Action: Supply a MAXFETCH value in the range of 1,000 to 2,147,483,647.

ORA-33112: (APFTBUFF01) FETCHBUFFER must be between 1,000 and 64,512.

Cause: A value was specified for the FETCHBUFFER option that was out of range.

Action: Specify a FETCHBUFFER value between 1,000 and 64,512.

ORA-33114: (APLIKESC01) *string* is not a valid value for the LIKEESCAPE option because it is more than one character long.

Cause: An invalid value was specified for the LIKEESCAPE option.

Action: Specify a LIKEESCAPE value that is only one character long.

ORA-33116: (APMSTYPE00) MODSIMULTYPE must be either AITKENS or GAUSS.

Cause: An invalid value was specified for the MODSIMULTYPE option.

Action: Specify one of the valid MODSIMULTYPE values, AITKENS, or GAUSS.

ORA-33118: (APMTOLER00) Value *number* is out of range for MODTOLERANCE.

Cause: A value was specified for the MODTOLERANCE option that was out of range.

Action: Specify a MODTOLERANCE value between -308 and 308.

ORA-33120: (APMOVFLO00) Value *number* is out of range for MODOVERFLOW.

Cause: A value was specified for the MODOVERFLOW option that was out of range.

Action: Specify a MODOVERFLOW value between -308 and 308.

ORA-33122: (APMGAMMA00) MODGAMMA must be a whole number greater than or equal to zero.

Cause: An invalid value was specified for the MODGAMMA option.

Action: Specify a MODGAMMA value greater than or equal to zero.

ORA-33124: (APMITERS00) MODMAXITERS must be a whole number greater than zero.

Cause: An invalid value was specified for the MODMAXITERS option.

Action: Specify a MODMAXITERS value greater than zero.

ORA-33126: (APMDAMPF00) MODDAMP must be greater than or equal to zero and less than one.

Cause: An invalid value was specified for the MODDAMP option.

Action: Specify a MODDAMP value that is greater than or equal to zero and less // than one.

ORA-33128: (APMERROR00) MODERROR must be either STOP, CONTINUE, or DEBUG.

Cause: An invalid value was specified for the MODERROR option.

Action: Specify a MODERROR option that is one of the valid values STOP, CONTINUE, or DEBUG.

ORA-33130: (APMERROR01) The current connection type does not support interactive debugging.

Cause: A value of DEBUG was supplied for the MODERROR option in an environment that does not support interactive debugging.

Action: Specify one of the other valid MODERROR values, STOP or CONTINUE.

ORA-33132: (APPGMGR00) The *workspace object* option value must be between 0 and *number*.

Cause: The option value specified was outside the range of valid values.

Action: Specify an option value within the valid range.

ORA-33134: (APSORTBUFSZ01) The value of SORTBUFFERSIZE must be a number between 0 and *number*. You supplied *number*.

Cause: An invalid value was specified for the SORTBUFFERSIZE option.

Action: Supply a value in the range indicated by the error message.

ORA-33136: (APSPARSX01) The value of SPARSEINDEX cannot be a multi-line string.

Cause: The value specified for the SPARSEINDEX option consisted of more than one line of text.

Action: Specify a SPARSEINDEX value containing only a single line of text.

ORA-33138: (APSPARSX02) The value '*number*' is not valid for SPARSEINDEX.

Cause: An invalid value was specified for the SPARSEINDEX option.

Action: Specify a value for SPARSEINDEX that is one of BTREE, BTREE64, or HASH.

ORA-33140: (AUTOCOMP1) *workspace object* is being compiled automatically.

Cause: The named OLAP object needed to be recompiled because of a change in one or more of the objects to which it referred.

Action: No action is required.

ORA-33141: (XSAWFREEZE1) The analytic workspace *string* is already frozen.

Cause: An attempt was made to freeze an analytic workspace that was already frozen.

Action: Thaw the analytic workspace before trying to freeze it again.

ORA-33142: (BADSYN00) The format of the *string* command is incorrect.

Cause: There was an error in the syntax of the indicated command.

Action: Consult Oracle documentation for the correct command syntax.

ORA-33143: (XSAWFREEZE2) The analytic workspace *string* must be attached RW or RX.

Cause: The analytic workspace must be writable to change the freeze state.

Action: The analytic workspace must be detached and attached either RW or RX before freezing or thawing it again.

ORA-33145: (XSAWFREEZE3) Cannot rollback analytic workspace *string*; generations are in use.

Cause: One or more generations due to be destroyed as part of a rollback to freeze command were currently in use.

Action: Get sessions using those generations to detach the analytic workspace.

ORA-33146: (BINENG00) The width argument for binary conversion can only be specified for INTEGER and BOOLEAN data.

Cause: Only INTEGER and BOOLEAN data types have a fixed width.

Action: Omit the width argument.

ORA-33147: (XSAWFREEZE4) The analytic workspace *string* is not frozen.

Cause: An attempt was made to "rollback to freeze" an analytic workspace that is not frozen.

Action: Only execute this command on a frozen analytic workspace.

ORA-33148: (BINENG01) The width argument for binary conversion must be 1, 2, or 4.

Cause: Widths 1, 2, or 4 can be specified for integer or boolean data. Widths are not allowed for other data types.

Action: Omit the width argument.

ORA-33150: (BOOLTOK01) *string* is not a Boolean.

Cause: Valid Boolean values are yes, no, y, n, on, off, true, or false.

Action: Use a valid Boolean value.

ORA-33152: (CDELETE03) The *workspace object* dimension does not have a value at position *number*.

Cause: This physical position cannot be deleted because it does not exist.

Action: This is an internal error. Contact Oracle Support.

ORA-33154: (CFINDVAL01) The *workspace object* dimension does not have identifiers.

Cause: Attempted using CFINDVAL for the wrong type of dimension.

Action: This is an internal error. Contact Oracle Support.

ORA-33156: (CFINDVAL02) exceeds 263.**

Cause: This dimension is too large.

Action: Convert this application to use partitions.

ORA-33158: (CGETPOS02) The *workspace object* dimension does not have a value numbered *number*.

Cause: The value requested is either less than one or greater than the logical length of the dimension.

Action: Use a valid logical position.

ORA-33160: (CGETSEQ02) The *workspace object* dimension does not have a value at position *number*.

Cause: This physical position does not exist.

Action: This may be an internal error. Contact Oracle Support.

ORA-33166: (CGFIN02) The number of periods of the *string* function cannot be dimensioned by time.

Cause: The number of periods must remain constant while looping over time.

Action: Remove the time dimension from the period argument.

ORA-33168: (CGFIN03) The salvage value argument of the *string* function must be dimensioned by the time dimension.

Cause: The salvage value argument is not dimensioned by time.

Action: Add the time dimension to the salvage value argument.

ORA-33170: (CGFIN04) The decline factor argument of the *string* function cannot be dimensioned by the time dimension.

Cause: The decline factor argument was dimensioned by the TIME dimension.

Action: Use a scalar decline factor argument.

ORA-33172: (CGFIN05) The portion argument of the *string* function cannot be dimensioned by time.

Cause: The portion argument must remain constant while looping over time.

Action: Remove the time dimension from the portion argument.

ORA-33174: (CGFIN06) The switch period argument of the DEPRDECLSW function cannot be dimensioned by time.

Cause: The switch period argument must remain constant while looping over time.

Action: Remove the time dimension from the switch period argument.

ORA-33176: (CGM CALC01) The member list expression in aggregation phrase *number* is multidimensional.

Cause: The M CALC function requires a member list with one dimension.

Action: Use a list with one dimension.

ORA-33184: (CGMCALC05) A valueset argument to MCALC must have one dimension and be a valueset of the same dimension.

Cause: The VALUESET argument to MCALC must be a self relation of a single dimension.

Action: Use a VALUESET that has one dimension that is the same as its VALUESET // dimension.

ORA-33186: (CGMODSET01) The ACROSS option is not supported in model equations.

Cause: Assignment statements in models did not support the ACROSS keyword.

Action: Do not use the ACROSS keyword with models.

ORA-33188: (CGMODSET02) The left-hand side of an equation involves the *workspace object* dimension, whereas the '*number*' term on the right-hand side involves *workspace object*.

Cause: A dimension mismatch was detected in a model equation.

Action: Ensure that the target and source expressions of the equation refer to the same model dimension.

ORA-33190: (CGMODSET03) MODEL assignment triggered in unexpected context.

Cause: An internal error caused Oracle OLAP to attempt to compile a MODEL assignment when no MODEL was being compiled.

Action: If the problem persists, contact Oracle Support Services.

ORA-33192: (CGTCVT00) TCONVERT requires an argument dimensioned by time.

ORA-33194: (CGTCVT01) The argument to TCONVERT cannot be dimensioned by more than a single time dimension.

ORA-33196: (CGTCVT03) Invalid conversion method for TCONVERT.

ORA-33198: (CGTCVT04) The two conversion methods requested of TCONVERT are incompatible.

Cause: This is a syntax error using the TCONVERT dimension.

Action: Check Oracle documentation on Compatible Aggregation and Allocation Methods and retry.

ORA-33200: (CGTCVT05) You cannot convert by both DAY and PERIOD. You must use one or the other.

ORA-33202: (CGTCVT06) The breakout dimension *workspace object* is not a time dimension.

ORA-33204: (CGTCVT07) In converting data from time dimension *workspace object* to *workspace object* using TCONVERT, a conversion direction must be given.

ORA-33206: (CGTCVT08) It is not possible to convert data dimensioned by *workspace object* to be dimensioned by *workspace object*.

ORA-33208: (CGTDF00) You can only find the start or end of a time period.

Cause: The argument to STARTOF or ENDOF was not a DAY, WEEK, MONTH, QUARTER, or YEAR dimension.

Action: Use a DAY, WEEK, MONTH, QUARTER, or YEAR dimension argument.

ORA-33210: (CGTDF01) The argument of the BEGINDATE or ENDDATE function must be dimensioned by exactly one time dimension.

Cause: The argument must have exactly one dimension that has a type of DAY, WEEK, MONTH, QUARTER, or YEAR.

Action: Correct the argument.

ORA-33213: (CINSERT06) The target position for MAINTAIN ADD or MAINTAIN MOVE cannot fall in the range of session-only values.

Cause: The user specified either a BEFORE or AFTER clause specifying a position in the range of SESSION dimension values.

Action: Do not use a position clause, or specify a position before the first SESSION value.

ORA-33214: (CINSERT02) The *workspace object* dimension is too large.

Cause: The dimension has too many values.

Action: Deleted values can still take up space in the dimension and cause this error. Try removing the deleted values by exporting the dimension to an EIF file, and then re-importing it with the REPLACE DELETE option.

ORA-33215: (CINSERT07) You cannot add session-only values to the *workspace object* dimension.

Cause: The user tried to add a SESSION dimension value while a spreadsheet cursor was open.

Action: Try adding the SESSION value while the cursor is not active.

ORA-33216: (CINSERT03) The *workspace object* dimension does not have a value numbered *number*.

Cause: The dimension was not long enough to have this logical position.

Action: Use OBJ(NUMVALS <dimension_name>) function to find the length of the dimension.

ORA-33217: (CINSERT20) Custom member values cannot be added to concat dimension *workspace object*, or to any of its bases, because it is not defined as UNIQUE.

Cause: A non-UNIQUE CONCAT dimension was specified for the custom member values.

Action: Use the CHGDFN command to change the CONCAT dimension to UNIQUE and retry.

ORA-33218: (CINSERT04) %K is not a valid value for the *workspace object* dimension. Values for this dimension can have at most *number* significant digits after rounding to *number* decimal places.

Cause: The user attempted to insert a value that had too many digits for a NUMBER dimension. For example, the user might have tried to insert the value 99999 (5 digits) into a dimension of data type NUMBER(4).

Action: Use a smaller number for the dimension value, or define a new dimension with a larger precision and replace the old dimension with the new one.

ORA-33219: (CINSERT05) %K cannot be added to *workspace object* because it is already a value of the dependent UNIQUE CONCAT DIMENSION *workspace object*, from leaf DIMENSION *workspace object*.

Cause: The specified value could not be added to a DIMENSION because it conflicted with an existing value in a UNIQUE CONCAT DIMENSION that contained this DIMENSION.

Action: The concats causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be renamed to make them UNIQUE.

ORA-33223: (CMOVE03) cannot move a session-only dimension value

Cause: An attempt was made to move a SESSION dimension value in the MAINTAIN MOVE command.

Action: Do not movesession-only dimension values with the MAINTAIN MOVE command.

ORA-33224: (CMOVE02) The *workspace object* dimension does not have a value at position *number*.

Cause: An attempt was made to move a dimension value before or after a logical position that did not exist.

Action: Choose a position between 1 and the number of values in the dimension.

ORA-33226: (COLDEL01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start removing at column *number*.

Cause: There was an invalid starting column number.

Action: Choose a valid starting column number from the range provided in the error message.

ORA-33228: (COLDEL02) The columns to be removed must be between 1 and the maximum width of a text value (*number*). You cannot remove column *number*.

Cause: The column number is invalid.

Action: Choose a valid column number.

ORA-33230: (COLDEL03) The number of columns to be removed must be greater than zero. *number* columns cannot be removed.

Cause: The number of columns was not a positive number.

Action: Correct the number of columns.

ORA-33232: (COLEXTR01) The starting column must be between 1 and the maximum width of a text value (*number*). *number* is out of range.

Cause: The start argument was an invalid column number.

Action: Use a positive integer with a maximum value specified in the error.

ORA-33234: (COLEXTR02) The columns to be extracted must be between 1 and the maximum width of a text value (*number*). You cannot extract column *number*.

Cause: The sum of start column and the number of columns exceeded the maximum width of a text value plus one.

Action: Choose arguments that do not access columns greater than the maximum width of a text value.

ORA-33236: (COLEXTR03) The number of columns to be extracted must be greater than or equal to zero. You cannot extract *number* columns.

Cause: The optional NUMCOLS argument to the EXTCOLS function was not a positive integer.

Action: Either omit the optional argument or use a positive integer.

ORA-33238: (COLINS01) The starting column must be between 0 and the maximum width of a text value (*number*). You cannot start inserting at column *number*.

Cause: The starting argument was an invalid column number.

Action: Use a positive integer with a maximum value specified in the error.

ORA-33240: (COLREP01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start replacing at column *number*.

Cause: An invalid starting column number was specified.

Action: Choose a valid starting column number from the range provided in the error message.

ORA-33242: (COMPOSITE01) *workspace object* is a dimension composite and does not have position numbers that can be used in this context.

Cause: This error is shared by commands and functions that require logical position numbers.

Action: Do not use the name of a composite with this function or command.

ORA-33243: (XSDPART51) *workspace object* is a PARTITION TEMPLATE and does not have position numbers that can be used in this context.

Cause: An attempt was made to discover or supply the position number associated with a member of a PARTITION TEMPLATE.

Action: Avoid referring to PARTITION TEMPLATE values by their position numbers.

ORA-33244: (CRENAME01) The *workspace object* dimension does not have a value at position *number*.

Cause: The logical position did not have a value between 1 and the number of values in the dimension.

Action: Choose a valid logical position.

ORA-33246: (CRENAME02) The *workspace object* dimension does not have identifiers that can be renamed.

Cause: The values of this dimension could not be renamed.

Action: None

ORA-33247: (CRENAME03) %K is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.

Cause: An attempt to rename a value in a dimension failed because the new value conflicted with an existing value in a unique concat dimension containing this dimension.

Action: The concats causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be changed to make them UNIQUE.

ORA-33248: (CTDDEL04) Deletions from time dimension *workspace object* must occur at either end. *number* values were not deleted.

Cause: A request to delete values in the middle of a time dimension was rejected.

Action: Delete a range of values ending with the last value or starting with the first value.

ORA-33250: (CTDINSRT00) You attempted to add a value that was outside the allowable range of dates for time dimension *workspace object*.

ORA-33252: (CTXENG00) The CONTEXT name cannot be NA.

ORA-33254: (CTXENG01) CONTEXT '*number*' already exists.

ORA-33256: (CTXENG02) CONTEXT '*number*' does not exist.

ORA-33258: (CTXENG03) *workspace object* has not been saved in CONTEXT '*number*'.

Cause: The object was not in the context.

Action: Show CONTEXT('context-name') to see what is in the context.

ORA-33260: (DIMSHOW01) Partition *number* does not exist.

Cause: The DIMSHOW command specified a nonexistent partition.

Action: Specify the name of an existing partition, or remove the PARTITION qualification from the DIMSHOW command.

ORA-33261: (DIMSHOW02) A partition name may be specified only for a partitioned variable.

Cause: A PARTITION qualification was provided for an object other than a partitioned variable.

Action: Remove the PARTITION qualification.

ORA-33262: (DBERR01) Analytic workspace *string* does not exist, or you do not have sufficient privileges to access it.

Cause: The analytic workspace requested was not in the current database.

Action: Check that you are in the correct schema and have access to the requested analytic workspace.

ORA-33263: Could not create analytic workspace *string*

Cause: A serious error was encountered while trying to set up the tables for the named analytic workspace. Possible causes for this error include: - A tablespace that cannot be written to. - Corrupt metadata about which analytic workspace exist. - Table names that the code cannot use. - There are remains of a partially removed analytic workspace.

Action: There should be another error on the error stack. Consult this error to determine what is causing the problem and remove that table.

ORA-33264: (DBERR02) Analytic workspace *string* cannot be accessed because it has been damaged or belongs to an incompatible version of *string*.

Cause: The attempt to attach the analytic workspace failed because the internal structures could not be interpreted. This could be because the analytic workspace was created by an incompatible version of the online analytical processing (OLAP) option.

Action: Re-create the analytic workspace.

ORA-33265: (DBERRBSZ) Analytic workspace *string* cannot be opened. Tablespace blocksize *number* does not match database cache size *number*.

Cause: The blocksize of the containing tablespace did not match the database cache size.

Action: Change either the size to make them consistent, or set the OLAP_PAGE_POOL_SIZE parameter to 0 to allow automatic OLAP pool management when the compatibility is later than Oracle Database release 10g version 10.2.

ORA-33266: (DBERR03) Analytic workspace (AW) *string* cannot be accessed because it was last modified by an incompatible version of *string*.

Cause: The online analytical processing (OLAP) code was unable to process the internal metadata for the specified AW when attaching the AW.

Action: This is most commonly encountered when the AW was previously used on a different platform (for example, Windows 32-bit and Windows 64 bit). The AW must be re-created on the current platform.

ORA-33267: (DBERRRLS) Analytic workspace *string* cannot be accessed because it has row-level access control applied to it.

Cause: Attempted to access the specified analytic workspace's LOB table. The OLAP option detected the table has row-level security applied, and the option requires full access to this table to operate correctly.

Action: Remove the row-level security and use the analytic workspace access control instead.

ORA-33268: (DBERRTHW) Analytic workspace *string* cannot be attached with the THAW option because it was frozen with the NOTHAW option.

Cause: An attempt was made to attach the analytic workspace using the THAW // option. The analytic workspace was frozen using the NOTHAW option.

Action: Attempt the command again without the THAW option.

ORA-33269: error while operating on '*string*'

Cause: Creation of an analytic workspace for the specified object failed.

Action: This error is always signaled with another error to provide more context. Resolve the error for the named object in order for the analytic workspace creation to succeed.

ORA-33270: (DBERR05) Analytic workspace *string* already exists.

Cause: The AW CREATE command was passed the name of an analytic workspace that already exists

Action: Specify a different name.

ORA-33272: (DBERR06) Analytic workspace *string* cannot be opened. The analytic workspace index could not be found.

Cause: An attempt to open the specified analytic workspace failed.

Action: This error should not occur. Report this to Oracle Support. *Params: 1) analytic_workspace_name: The name of the analytic workspace.

ORA-33273: (XSCHKRLS01) Analytic workspace *string* has open cursors and cannot be detached.

Cause: A session attempted to detach an analytic workspace while there are cursors open against it.

Action: Close the open cursor before attempting to close the analytic workspace.

ORA-33274: (DBERR07) Timed out while trying to lock analytic workspace *string* for *string*.

Cause: A lock operation that was supposed to happen very quickly was taking too long. It can be due to another session being stopped while holding that lock, another session crashing while holding that lock, or an internal error.

Action: If another session is stopped, resume that session to let it release the lock. If another session has crashed, wait for a few minutes while a background process recovers the lock. Contact Support if none of the situations above apply.

ORA-33275: Autonomous transaction query of an UPDATED analytic workspace is not supported.

Cause: Attempts to reference an analytic workspace that has uncommitted changes within an autonomous query.

Action: Either COMMIT or ROLLBACK your changes, or don't use an autonomous transaction.

ORA-33276: (DBERR08) Another user has analytic workspace *string* attached.

Cause: Attempted to rename, drop, or truncate an analytic workspace while it is in use by another user.

Action: Repeat the command when the analytic workspace is not in use.

ORA-33277: Analytic Workspace *string.string* could not be upgraded.

Cause: A serious error was encountered while trying to alter the tables for the named analytic workspace. Possible causes for this error include: - A tablespace could not be written to. - The metadata for this analytic workspace may be corrupt. * Table names that the code cannot use. * There are remains of a partially removed analytic workspace.

Action: There should be another error on the error stack. Consult this error to determine what is causing the problem and remove that table.

ORA-33278: (DBERR09) Analytic workspace *string* cannot be attached in RW or EXCLUSIVE mode until the changes made and updated in MULTI mode are committed or rolled back.

Cause: There are changes to this analytic workspace that were updated and not committed when the workspace was attached in MULTI mode.

Action: Either try attaching the workspace in RO or MULTI mode, or commit or roll back the transaction before trying to attach the workspace in RW or EXCLUSIVE mode.

ORA-33279: (DBERRDDP) Analytic workspace *string* cannot be accessed because the AWLOB column has deduplication enabled.

Cause: An attempt was made to access the specific LOB table of the analytic workspace. The OLAP option detected that the LOB column has deduplication enabled. The OLAP option does not support deduplication.

Action: Alter the table to disable LOB deduplication.

ORA-33280: (DBERR10) Analytic workspace *string* cannot be attached in MULTI mode until the changes made and updated in RW or EXCLUSIVE mode are committed or rolled back.

Cause: There were still changes to this analytic workspace that were updated and not committed when the workspace was attached in RW or EXCLUSIVE mode.

Action: Either try attaching the workspace in RO, RW, or EXCLUSIVE mode or commit or roll back the transaction before trying to attach the workspace in MULTI mode.

ORA-33281: Analytic workspace *string* cannot be modified during a Data Guard rolling upgrade.

Cause: Attempted to attach the specified analytic workspace for write while the instance was in the middle of a Data Guard rolling upgrade. This is unsupported by the OLAP option.

Action: Delay the modifications until after the rolling upgrade completes.

ORA-33282: (DBERR11) cannot wait for analytic workspace *string* to become available since doing so would cause a deadlock.

Cause: The attempt to attach the analytic workspace using the WAIT keyword caused a deadlock situation. The WAIT keyword is not allowed. This was an error in the application.

Action: Attach the multiple analytic workspaces in the same order that they were locked to avoid deadlock if these analytic workspaces were locked at the same time.

ORA-33283: (DBERR013) Analytic workspace *string* cannot be opened. The temporary analytic workspace flag is set.

Cause: An attempt to open the specified analytic workspace failed.

Action: This error should not occur. Please report this to Oracle support.

ORA-33284: (DBERR12) Analytic workspace *string* cannot be opened in MULTI mode before converting it by the latest version of *string*.

Cause: The analytic workspace is stored in a format that is not compatible with multi mode.

Action: Convert the analytic workspace to a later format using the DBMS_AW.CONVERT procedure.

ORA-33285: This operation is not permitted on analytic workspaces.

Cause: An attempt was made to directly modify the contents of a table containing an analytic workspace.

Action: Do not modify the table directly; let the OLAP option modify it.

ORA-33286: (DBERR14) The specified access mode for analytic workspace *string* is invalid.

Cause: An attempt was made to change the access status for the specified analytic workspace to an invalid value.

Action: The only access modes accepted by the AW PROMOTE command are RW and RO, possibly with a WAIT or NOWAIT added.

ORA-33287: This DDL operation is not allowed on table "*string*". "*string*".

Cause: A DDL operation was attempted on an analytic workspace table.

Action: No action required. Many DDL operations on analytic workspace tables are restricted to Oracle only.

ORA-33288: (DBERR15) Another user has incompatible access to analytic workspace *string*, and the wait timeout has expired.

Cause: Attempt to access an analytic workspace conflicted with another user's access, and the timeout specified has elapsed.

Action: Wait until the conflicting user is done.

ORA-33289: The Flashback Table operation is not supported on OLAP analytic workspace tables.

Cause: An attempt was made to perform the Flashback Table operation on a table containing an analytic workspace, which is not allowed.

Action: Do not perform a Flashback Table operation on analytic workspace tables.

ORA-33290: (DBERR17) Analytic workspace *string* cannot be attached in the mode you requested because another user has it attached in an incompatible mode.

Cause: The attempt to access an analytic workspace conflicted with another user's access, and no timeout was specified

Action: Wait until the conflicting user is finished.

ORA-33291: (DBERRSYNC) Analytic workspace *string* cannot be attached RW until a RESYNC command has brought it up to the current generation.

Cause: Another session has updated the analytic workspace since it was attached in the current session.

Action: Use a RESYNC AW command to bring the analytic workspace up to the most recent version.

ORA-33292: An attached analytic workspace is blocking this command.

Cause: An attempt was made to drop a tablespace containing an analytic workspace that is currently attached.

Action: Detach the analytic workspace before dropping the tablespace.

ORA-33293: There are OLAP cubes and dimensions referencing an analytic workspace in the tablespace.

Cause: An attempt was made to drop a tablespace containing an analytic workspace that is referenced by OLAP cube and dimension objects.

Action: Drop the OLAP cube and dimension objects before dropping the tablespace.

ORA-33294: (DBERR19) Analytic workspace *string* cannot be created, deleted, or renamed while flashback mode is in effect.

Cause: The session was operating under a flashback environment.

Action: In order to create, rename, or delete an analytic workspace, the session must not be running in flashback.

ORA-33295: (DBERR20) Analytic workspace *string* cannot be opened. The analytic workspace is already open.

Cause: An attempt to open the specified analytic workspace failed.

Action: This error should not occur. Please report this to Oracle support.

ORA-33296: (DBERR21) Analytic workspace *string* can only be attached read-only (RO) while tablespace *string* is READONLY.

Cause: The underlying tablespace of the analytic workspace is in READONLY status.

Action: Attach the analytic workspace in RO mode or alter the tablespace.

ORA-33297: (DBERR22) Analytic workspace *string* cannot be opened because it was last modified by an incompatible version of *string*.

Cause: The user attempted to attach an old OLAP Services analytic workspace that cannot be converted by this version of OLAP Services.

Action: Either create a new analytic workspace or try using a version of OLAP Services compatible with the one that created this analytic workspace.

ORA-33298: (AWUPG01) Analytic workspace *string* is already in the newest format allowed by the current compatibility setting.

Cause: You ran the DBMS_AW.CONVERT procedure on an analytic workspace that was created in or previously upgraded to the current compatibility mode.

Action: If upgrading the analytic workspace is necessary, upgrade the database instance and then re-run DBMS_AW.CONVERT. If the new features offered by upgrading the analytic workspace are not required, then no action is needed.

ORA-33299: (DBERR023) Analytic workspace *string* cannot be opened. An unexpected error occurred.

Cause: An attempt to open the specified analytic workspace failed.

Action: This error should not occur. Please report this to Oracle support.

ORA-33300: (DBERRPLAT) Analytic workspace *string* encountered an error that may indicate that it was created on a different platform.

Cause: An attempt to transport an analytic workspace from a different platform failed.

Action: Transport the analytic workspace using a supported method, either by using export/import or by rebuilding it using an XML template.

ORA-33301: An unsupported ALTER TABLE operation was attempted on analytic workspace table "*string*".*string*".

Cause: An attempt was made to modify an analytic workspace table using the ALTER TABLE statement. This statement is not supported.

Action: The OLAP option manages the table.

ORA-33303: Creation of VPD, OLS, or FGA security policy is disallowed on OLAP analytic workspace table "*string*".*string*".

Cause: An attempt was made to create a Virtual Private Database (VPD), Oracle Label Security (OLS), or Fine-Grained Auditing (FGA) security policy on an analytic workspace table. These policies are not allowed to be applied to an analytic workspace table.

Action: Do not apply a VPD, OLS, or FGA security policy on an analytic workspace table. Review using analytic workspace security features instead. *Params: 1) owner_name: The name of the owner of the analytic workspace table. 2) table_name: The name of the analytic workspace table.

ORA-33307: Oracle OLAP analytic workspace table was renamed to an invalid name

Cause: An attempt was made to rename an Oracle OLAP analytic workspace (AW) table to a name that did not start with \"AW\$\" or that contained characters that may occur only in quoted identifiers which are not supported by Oracle OLAP DML.

Action: Do not rename the Oracle OLAP AW table to an invalid name.

ORA-33310: (DECIMAL) The number of decimal places must be between *number* and *number*, or *number*. It cannot be *number*.

Cause: A value was specified for the DECIMALS option that was out of range.

Action: Supply a value for DECIMALS that is within the range specified by the error message text.

ORA-33311: The schema cannot be specified when renaming an analytic workspace.

Cause: An attempt was made to rename an analytic workspace that was not in the user's schema. This is not allowed.

Action: Connect as the owner of the analytic workspace to rename it or use DBMS_AW.AW_COPY to move it.

ORA-33312: (DELDENT01) *workspace object* cannot be deleted while there are objects dimensioned by it, or formulas, programs, valuesets, or relations that use it.

Cause: The dimension could not be deleted because the user did not construct a list of all the objects that depend on the dimension.

Action: Delete this list of objects first.

ORA-33313: (DELDENT05) *workspace object* cannot be deleted because it is the target of an external partition of a partitioned variable.

Cause: User attempted to delete a variable, but some partitioned variable was defined to use that variable as the target of one of its external partitions.

Action: DELETE the partitioned variable or CHGDFN DROP PARTITION the the external partition from the partitioned variable, then delete the target variable.

ORA-33314: (DELDENT02) *workspace object* cannot be deleted while it is running.

Cause: The object is either a PROGRAM or a FORMULA and could not be deleted.

Action: Find out where the object is getting deleted, and edit the object to ensure that the deletion does not occur.

ORA-33315: (XSDELDENTANON) You cannot delete *workspace object* while looping over unnamed composite *workspace object*.

Cause: While looping over the named anonymous composite, an attempt was made to delete an object which is dimensioned by it.

Action: Delete the object outside of a loop over the dimension.

ORA-33316: (DELDENT03) You cannot delete *workspace object* because you do not have PERMIT permission for it or it is READONLY.

Cause: READONLY is from Oracle, the PERMIT command may be controlled by someone within your company.

Action: You are allowed to delete this object.

ORA-33318: (DELDENT04) The variable *workspace object* cannot be deleted while the NA trigger is executing.

Cause: The NA trigger was trying delete the variable.

Action: Set the PRGTRACE = YES option to see how this happened.

ORA-33320: (DNAMELEN00) The object name *string* has more than *number* characters.

Cause: For analytic workspaces created prior to version 12.2 the maximum object name length is 64 characters.

Action: If possible, update to version 12.2 or later. Object names maximum length, in version 12.2 and later, is 256 bytes.

ORA-33324: (DOSCMD01) The current directory is *string*.

Cause: The user entered a CDA command with no arguments.

Action: This is an informational message. No user action is required.

ORA-33325: (DOSCMD02) Current directory alias is not set.

Cause: A file name was specified without a directory component, and there was no current directory alias set to supply the missing directory name.

Action: Use the CDA command to establish a current directory alias, or provide a file name with an explicit directory component.

ORA-33332: (DSSEXIST01) Use the AW command to establish a current analytic workspace. Then start your current activity again.

Cause: There is no currently active analytic workspace. The command that generated the error requires an active analytic workspace to operate on.

Action: Run an AW ATTACH or AW CREATE command to establish an active workspace.

ORA-33334: (DSSEXIST04) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace was currently not attached to the session, or the name was misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name.

ORA-33336: (DSSEXIST04A) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33338: (DSSEXIST05) You cannot specify the EXPTEMP analytic workspace.

Cause: The command requires a permanent analytic workspace to operate on.

Action: Specify an analytic workspace other than EXPTEMP.

ORA-33339: You cannot detach analytic workspace (AW) string. It is in use by an API branch.

Cause: The OLAP API is in a branch, and you are not allowed to detach the AW while the branch is active.

Action: End the branch before detaching the AW.

ORA-33340: (DTINFRMT00) A format cannot be an empty string.

ORA-33342: (DTINFRMT01) 'number' is not a valid format for a string value because it has a single angle bracket > that is not part of a field specification.

ORA-33344: (DTINFRMT02) 'number' is not a valid format for a string value because an angle bracket (<) cannot be the last character.

Cause: The command was truncated or an angle bracket was specified as the last character which is an invalid format.

Action: Remove the last character or restore the truncated text.

ORA-33346: (DTINFRMT03) 'number' is not a valid format for a string value because 'string' is an unrecognized specification.

ORA-33348: (DTINFRMT04) number is not a valid format because the B specifier cannot be used with a date.

ORA-33350: (DTINFRMT05) 'number' is not a valid format because the 'string' specification cannot be used with a date.

Cause: The format specified in the error only applies to dimensions.

Action: Choose a format that is valid for date data.

ORA-33352: (DTINFRMT06) 'number' is not a valid format for a string value because the B specifier cannot be used with a period field.

ORA-33354: (DTINFRMT07) 'number' is not a valid format because the NAME specification can only be used once.

ORA-33356: (DTINFRMT08) 'number' is not a valid VNF format because it contains an ordinal specification.

ORA-33358: (DTINFRMT09) 'number' is an ambiguous VNF format. The 'string' specification must be followed by a space or separation character.

Cause: Space or separation character was missing.

Action: Add a space or separation character.

ORA-33360: (DTINFRMT10) 'number' is not a valid VNF format because at least two of the specifications are of the same type.

ORA-33362: (DTINFRMT11) 'number' is not a valid VNF format because it does not contain enough fields to match one of the defined VNF templates.

ORA-33364: (DTINFRMT12) 'number' is not a valid VNF format because it contains more information than is allowed.

ORA-33366: (DTINFRMT13) 'number' is not a valid format for a string value because the 'string' specification has no closing angle bracket >.

ORA-33368: (DTINFRMT14) 'number' is not a valid format for a *string* value because it contains more than one line of text.

ORA-33370: (DTTOVC01) Unable to print dates longer than *number* characters.
Cause: The date value exceeded 128 bytes.

Action: Contact Oracle Support to request a larger buffer size in a patch or a future release.

ORA-33372: (DUPCLCHK01) *workspace object* appears more than once in the dimension list.

Cause: There was a duplicate entry of a dimension name at the top level of the dimension list.

Action: Remove the duplicate entry.

ORA-33374: (DUPCLCHK02) *workspace object* appears more than once in the dimension list. (It is also a base dimension of *workspace object*.)

Cause: The dimension appeared once at the top level of the dimension list and also appeared somewhere further down in a conjoint or a composite.

Action: Remove either the dimension itself or the conjoint that contains it from the dimension list.

ORA-33376: (DUPCLCHK03) *workspace object* and *workspace object* cannot both appear in a dimension list because they share at least one base dimension (*workspace object*).

Cause: Duplicate base dimensions were specified. This is not allowed.

Action: This is a complex problem that can only be resolved by the application developer.

ORA-33381: (EIFEXPRT20) You cannot EXCLUDE bases from *workspace object*, because it is not a concat dimension.

ORA-33382: (EIFEXPRT01) You cannot export two objects with the same name (*string*).

ORA-33383: (EIFEXPRT21) You cannot EXCLUDE *workspace object* because it is not a base of *workspace object*.

ORA-33384: (EIFEXPRT02) You cannot rename a dimension (*workspace object*) when you export it.

ORA-33385: (EIFEXPRT22) You cannot EXCLUDE *workspace object*, because it is not a dimension.

ORA-33386: (EIFEXPRT03) The expression beginning with *string* has no data type.

ORA-33387: (EIFEXPRT23) EXCLUDE or EXCLUDING can only be used following the name of a concat dimension.

ORA-33388: (EIFEXPRT04) The expression beginning with *string* cannot have more than *number* dimensions.

Cause: The maximum number of dimensions was exceeded. If the maximum is 32 dimensions, then this is a limit enforced by AGGREGATE. Otherwise, the maximum should be 256 dimensions.

Action: Use no more than the maximum number of dimensions.

ORA-33389: (EIFEXPRT24) Concat dimension *workspace object* has *number* bases. You cannot EXCLUDE more than *number* of them.

ORA-33390: (EIFEXPRT05) There are no objects to export.

ORA-33391: (EIFEXPRT25) concat dimension *workspace object* has only 1 base, which cannot be EXCLUDED.

ORA-33392: (EIFEXPRT07) SCATTER name *workspace object* must be a text variable of one dimension shared with the expression.

ORA-33393: (EIFIMPRT01) Object *string* exists in both the EIF file and the current analytic workspace.

Cause: An object with the given name was found in both the EIF file and the current analytic workspace.

Action: Rename the object in the analytic workspace that is causing the name conflict. If the object named in the error message belongs to a cube or a cube dimension, rename that cube or cube dimension.

ORA-33394: (EIFEXPRT08) SCATTER type *workspace object* must be a text variable with the same dimension as the name.

ORA-33396: (EIFEXPRT09) The SCATTER expression must have at least two dimensions and be numeric if TYPE is given.

ORA-33398: (EIFEXPRT10) The SCATTER type value must be INTEGER, SHORTINTEGER, SHORT, or DECIMAL, not *number*.

Cause: An attempt was made to specify a non-numeric SCATTER type value.

Action: Ensure that the SCATTER value is of type INTEGER, SHORTINTEGER, SHORT, or DECIMAL.

ORA-33400: (EIFEXPRT11) The scatter name value *number* is not a valid EIF object name.

ORA-33402: (EIFEXPRT12) You cannot export an unnamed dimension composite by itself, but only with an object dimensioned by it.

ORA-33404: (EIFEXPRT13) The format for exporting an expression is:\n EXPORT expression AS name

ORA-33406: (EIFEXPRT14) *workspace object* is not a legal name for an EIF file object.

ORA-33408: (EIFEXPRT15) You cannot use the SCATTER AS syntax because EIFVERSION is set to *number*, and that version cannot import scattered objects.

ORA-33409: (EIFEXPRT16) You cannot use the FULLMAPID or RELATIVEMAPID syntax because NOAPI has been specified.

Cause: An attempt was made to specify FULLMAPID or RELATIVEMAPID syntax with the NOAPI option.

Action: Either specify the API option instead of NOAPI, or remove the FULLMAPID or RELATIVEMAPID option.

ORA-33416: (EIFPATHLIST) You tried to set EIFEXTENSIONPATH to one or more illegal path names.

ORA-33420: (EIFMAKEF03) The EXPORT command has terminated because of insufficient disk space. One or more files could not be created.

ORA-33422: (EIFMAKEF04) Due to insufficient disk space, the extension count of the EIF files(s) could not be recorded. To avoid any potential errors when the file is imported, DO NOT move, delete, or rename any of the EIF extension files. These are files of the form *string.string*, where %3p is the extension number. There are *number* such files.

ORA-33424: (EIFMAKEF05) *workspace object* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33425: (EIFMAKEF15) CAUTION: Exporting NTEXT objects using *string* for the EIF file character set can cause loss of data. To preserve all NTEXT data, export using the UTF8 character set for the EIF file.

Cause: The user exported an object with data type NTEXT, but the EIF file that will result from the EXPORT command is not written in Unicode. Because no non-Unicode file can represent all possible Unicode data, it is possible that some data will be lost when converting from the Unicode NTEXT object to the EIF file. The EIF file will be written in the character set indicated by the "nls_charset" argument of the EXPORT command, or, if no such argument is present, in the database character set.

Action: If the user is certain that the contents of the NTEXT object can be represented in the specified character set, then no action is necessary. Otherwise, the user can add "nls_charset 'UTF8'" to the EXPORT command string. This will result in the EIF file being written in UTF8 Unicode, which can represent all the data contained in NTEXT objects.

ORA-33426: (EIFMAKEF06) The expression named *string* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33427: (EIFMAKEF16) CAUTION: NTEXT object *workspace object* will be exported with type TEXT.

Cause: User attempted to export an object whose data type is NTEXT, but but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The object will be exported as a TEXT object instead.

Action: No action needed.

ORA-33428: (EIFMAKEF07) One or more SCATTER AS expressions cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33429: (EIFMAKEF17) CAUTION: NTEXT expression will be exported with type TEXT.

Cause: User attempted to export an expression whose data type is NTEXT, but but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The expression will be exported as a TEXT object instead.

Action: No action needed.

ORA-33430: (EIFMAKEF08) *workspace object* cannot be exported because EIFVERSION is set to *number*, and that version does not use *string* objects.

ORA-33432: (EIFMAKEF09) You cannot use the name *string*, because EIFVERSION is set to *number*. That version does not allow object names longer than *number* bytes.
Cause: The object name was too long for the analytic workspace format represented by the current setting of the EIFVERSION option.

Action: Change the value of the EIFVERSION option, or remove the object from the list of objects to be exported.

ORA-33433: (EIFMAKEF09A) You cannot use the name *string*, because EIFVERSION is set to *number*. That version does not allow object names longer than *number* characters.

Cause: The object name was too long for the analytic workspace format represented by the current setting of the EIFVERSION option.

Action: Change the value of the EIFVERSION option, or remove the object from the list of objects to be exported.

ORA-33434: (EIFMAKEF10) You cannot export the AGGMAP object *workspace object* from this version of *string* to version 6.3. The internal format of an AGGMAP has changed too much.

ORA-33436: (EIFMAKEF11) You cannot write an EIF file using the *string* character set, because EIFVERSION is set to *number*. That version does not support that character set.

ORA-33438: (EIFSPARS00) *number* values of *workspace object* will be exported as NA, because they are not in the current status of its base dimensions.

ORA-33440: (EQUPDATE01) The expression for formula *workspace object* contains invalid syntax.

Cause: The formula had a syntax error.

Action: Consult the Oracle OLAP Expression syntax documentation to correct your expression syntax.

ORA-33448: (ESDREAD04) Discarding compiled code for *workspace object* because *number* now has *string* data, whereas it had *string* data when the code was compiled.

Cause: The data type of the specified variable has changed.

Action: None

ORA-33449: (ESDREAD17) Discarding compiled code for *workspace object* because the partition method or partition dimension of *number* has changed since it was compiled.

Cause: The partitioning method (LIST, RANGE, or CONCAT) or the partition dimension of the partition template was different from what it was when the code was compiled. This required recompilation of the code.

Action: None needed.

ORA-33458: (ESDREAD09) Discarding compiled code for *workspace object* because *number* is now type *string*, whereas it was type *string* when the code was compiled.

Cause: The type of the specified object has changed.

Action: None

ORA-33472: (EXPCHECK1) The *workspace object* formula cannot be edited or compiled while it is executing.

Cause: The evaluation of the formula may be calling a program that was trying to compile or change the formula.

Action: Move the formula altering code to where it will not be called while the formula is executing.

ORA-33475: (EXPCOMP02) Invalid expression '*number*'.

Cause: The expression had a syntax error.

Action: Consult the Oracle OLAP Expression syntax documentation to correct your expression syntax.

ORA-33476: (EXPORT00) Target file (*string*) already exists. No data is being exported.

ORA-33478: (FCFINI02) too many NA values in the input data to FORECAST

Cause: The input data provided for the FORECAST command contained too many NA values, preventing FORECAST from generating interpolated values.

Action: Reduce the number of NA values in the input data, or choose a different forecasting method.

ORA-33480: (FCFINI04) An error occurred while filling in the NA values in the input data.

Cause: A mathematical error occurred while FORECAST was attempting to fill in NA values in the input data. This may have been caused by an attempt to raise a number to a negative exponent or to take the square root of a negative number.

Action: Set the DIVIDEBYZERO and ROOTOFNEGATIVE options to TRUE and reexecute the FORECAST.

ORA-33482: (FCFINI05) Calculation of starting values and handling of NA values in the input data require at least two cycles of input data.

Cause: There were not enough values in the input data to allow for the calculation of starting values or for the filling in of NA values.

Action: Provide at least two cycles of input data.

ORA-33484: (FCFINI06) An error occurred while calculating starting values for the smooth, trend, and seasonal series.

ORA-33486: (FCFINI07) *string* cannot calculate starting values from this input data.

ORA-33488: (FCFINI08) The forecast input has resulted in a divide-by-zero error in the calculation of the smoothed data series.

ORA-33490: (FCFINI09) The forecast input has resulted in a divide-by-zero error in the calculation of the seasonal index series.

ORA-33492: (FCINFO00) There is no saved forecast calculation for the INFO function to retrieve.

Cause: No FORECAST was run before the INFO function was called.

Action: Run a FORECAST command before retrying the command.

ORA-33494: (FCREATE01) File *string* is already open on file unit number *number*.

ORA-33508: (FILEREAD01) Fileunit *number* is invalid. FILEREAD and FILEVIEW can only access input files opened with the FILEOPEN function.

Cause: The specified fileunit number did not refer to a file opened for input by FILEOPEN.

Action: Use the LISTFILES command to list available files, or the FILEOPEN function to open a new input file.

ORA-33510: (FILEREAD04) Unexpected EOF encountered in string while importing data.

ORA-33512: (FILESET01A) The value of the PAGESIZE option must be greater than the combined values of TMARGIN and BMARGIN.

Cause: You must leave at least one line on the page for content.

Action: Increase PAGESIZE or decrease the margins.

ORA-33514: (FILESET02) The value of the TABEXPAND option must be between 0 and 100 inclusive. You specified *number*.

ORA-33516: (FILESET04) You can set the *string* attribute only if the fileunit is used exclusively for output.

ORA-33520: (FINENG01) The number of periods specified in the *string* function must be greater than 0 and less than or equal to *number*.

ORA-33522: (FINENG02) The second argument of the *string* function cannot be NA while the corresponding first argument is not NA.

ORA-33524: (FINENG03) Both the first and second arguments of the *string* function must be nonnegative.

ORA-33526: (FINENG04) An asset value cannot be NA when the corresponding salvage value is not NA.

ORA-33528: (FINENG05) The asset value must be greater than the salvage value.

Cause: The asset value was less than or equal to the salvage value.

Action: Correct your data to ensure that the asset value is greater than or equal to the salvage value.

ORA-33530: (FINENG06) The first period depreciation strategy argument of the *string* function cannot be NA.

ORA-33532: (FINENG07) The first period depreciation strategy argument of the *string* function must evaluate to the word FULL or HALF.

ORA-33534: (FINENG08) The rate argument of payment or interest function cannot be NA while the corresponding principal argument is not NA.

ORA-33536: (FINENG09) Both the principal and rate arguments of the payment and interest functions must be nonnegative.

ORA-33538: (FINENG10) An internal error (*number*) has occurred while evaluating an interest or payment function.

ORA-33540: (FINENG11) The decline-factor argument must be greater than 0.

ORA-33542: (FISOPEN01) A file identifier cannot exceed *number* characters.

Cause: The specified file identifier was longer than the maximum supported path length.

Action: Shorten the file name so that it does not exceed the maximum length.

ORA-33546: (FNAMEQRY01) You must specify a file unit number for the *string* option of FILEQUERY.**ORA-33554: (FORCHECK01) The status or contents of *workspace object* cannot be changed while looping over it.**

Cause: A program has attempted to change or limit a dimension while inside a loop over that dimension.

Action: To handle this error in your program, use the TRAP command to catch the 'FORCHECK01' error.

ORA-33555: (FORCHECK03) While looping over alias dimension *workspace object*, you cannot change the contents of its base *workspace object*.**ORA-33556: (FORCHECK51) While looping over concat dimension *workspace object*, you cannot change the contents of its leaves.****ORA-33557: (MAINTCHK01) You cannot *string* values of dimension *workspace object* during a loop over it.**

Cause: An attempt was made to insert or delete a value of the specified dimension while some loop over that dimension was active. - The loop could be an explicit FOR or ACROSS loop, or a natural expression evaluation or OLAP_TABLE loop. - The loop could be over the dimension itself or over a derived dimension (like a composite or partition template) or dimension alias that included it. * The insert or delete could be explicitly caused by the MAINTAIN command. * An attempt to assign a value to a variable or partition dimensioned by a composite during a loop over that composite using a qualified data reference (QDR), and that the exception was generated by the engine's attempt to insert a new position in the composite to hold the new value.

Action: Move the dimension maintenance or QDR-based variable assignment outside the dimension loop.

ORA-33558: (LOCKCHECK01) The status or contents of the *workspace object* dimension cannot be changed while the LOCK_LANGUAGE_DIMS option is set to *value*.

Cause: A LIMIT or MAINTAIN was attempted on the named language dimension while the boolean option LOCK_LANGUAGE_DIMS was set to YES.

Action: SET LOCK_LANGUAGE_DIMS to NO and retry the MAINTAIN or LIMIT.

ORA-33560: (FORECAST00) The time dimension (*workspace object*) has no values in status. The forecast cannot be calculated.**ORA-33562: (FORECAST01) The forecast LENGTH must be a non-NA value that is greater than or equal to zero.****ORA-33564: (FORECAST02) Sum of forecast LENGTH and number of time dimension values in status equals *number*. The maximum is *number*.****ORA-33566: (FORECAST03) The values of ALPHA, BETA, and GAMMA must be greater than zero and less than or equal to one.**

ORA-33568: (FORECAST04) The forecast PERIODICITY must be greater than or equal to 2.

ORA-33570: (FORECAST05) The forecast PERIODICITY must be less than or equal to the number of historical observations in the input data.

ORA-33572: (FORECAST07) In a forecast calculation, the time dimension (*number*) must have consecutive values in status.

ORA-33574: (FORECAST09) The forecast length extends beyond the end of the time dimension (*number*). Only *number* values will be calculated.

ORA-33576: (FORECAST10) The number of non-NA observations must be greater than 1 to calculate a TREND forecast.

ORA-33578: (FORECAST11) The number of positive observations must be greater than 1 to calculate an EXPONENTIAL forecast.

ORA-33580: (FORECAST12) The number of historical periods (*number*) exceeds the number of values in the current status of *workspace object (number)*.

ORA-33582: (FORECAST13) The number of historical periods must be a non-NA value greater than zero.

ORA-33596: (FORECAST106) No forecast values can be shown since no FCNAME variable was specified to hold the results of the forecast.

ORA-33610: (FORSTEP01) Program control transferred into a FOR loop from outside the loop. This transfer is not allowed.

ORA-33612: (FPUTENG01) The file unit operand of the FILEPUT command does not have a value.

ORA-33614: (FPUTENG02) File *string* was opened for input only.

Cause: An attempt was made to write to a file that was opened for READ access.

Action: Close the file and then open it for WRITE or APPEND access.

ORA-33616: (FPUTENG04) The FROM file unit operand of the FILEPUT command does not have a value.

ORA-33618: (FPUTENG05) There is not sufficient room on the page to write data. Check your PAGESIZE, TMARGIN, BMARGIN and header values.

Cause: The PAGESIZE was too small.

Action: Increase the PAGESIZE or reduce the number of lines used by TMARGIN, BMARGIN and header values.

ORA-33620: (FRACRPOS01) *string* is not a valid field option for a record in *string* format.

ORA-33622: (FRAPPEND01) You cannot specify a position when appending to an INTEGER dimension.

ORA-33624: (FRASSIGN01) *workspace object* is a WORKSHEET. You cannot use the Data Reader to assign values to it.

ORA-33625: (FRASSIGN02) You cannot use the APPEND keyword with concat dimension *workspace object*.

Cause: User used the APPEND keyword on a CONCAT target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: APPENDING a value to one of the CONCATs leaves automatically appends to the CONCAT.

ORA-33626: (FRATPUSH01) *string* is not a valid field option for a record in *string* format.

ORA-33628: (FRATPUSH02) Dimension maintenance attributes can only be specified on the left side of the equal sign.

ORA-33630: (FRCBCHEK01) Invalid file unit *number*. Files read by FILEREAD or FILEVIEW must be input files opened via the FILEOPEN function.

ORA-33632: (FRCBCHEK02) No current record is available for file unit *number*.

ORA-33634: (FRCBSET01) *string* is not a valid value for the ORIGIN option of FILESET. Valid values are: *string*.

ORA-33636: (FRERROR01) *number* is not a valid value for *string*. Values for this attribute cannot be less than 1.

ORA-33638: (FRERROR02) *number* is not a valid value for SPACE because it results in a *string* value of *number*.

ORA-33640: (FRERROR03) There is no field of width *number* at column *number*. The current record is only *number* bytes long.

ORA-33642: (FRERROR04) *number* is not a valid width for *string string* data.

ORA-33644: (FRERROR05) NA is not a valid width for *string string* data. There is no default width for this data type.

ORA-33646: (FRERROR06) The string '*string*' is not a valid *string* value.

ORA-33648: (FRERROR07) The current packed field contains the invalid hexadecimal digit "*character*".

ORA-33650: (FRERROR08) The current packed field contains the invalid sign digit "*character*".

ORA-33652: (FRERROR09) *value* is not a valid *workspace object*.

ORA-33654: (FRERROR10) The *workspace object* dimension does not have a value numbered *number*.

ORA-33656: (FRERROR11) The time dimension *workspace object* is empty. You cannot append integer positions to it unless it has at least one value.

ORA-33658: (FRFILPUT01) File *string* is invalid. Source files for FILEPUT must be input files opened via the FILEOPEN function.

ORA-33660: (FRFILPUT02) You cannot write from file *string* to file *string*, because the output file was not opened with the BINARY option.

ORA-33662: (FRFILPUT03) You cannot write from file *string* to file *string*, because the output file was opened with the BINARY option.

ORA-33664: (FRSPARSE01) You cannot specify a dimension list for *workspace object* because it is not a conjoint dimension.

ORA-33666: (FRSTRDLM01) The *string* expression cannot have more than one line.

ORA-33668: (FRSTRDLM02) *number* is not a valid value for the *string* expression.

ORA-33670: (FRSTRDLM03) The *string* and DELIMITER expressions cannot have the same value.

ORA-33672: (FRSTRDLM04) A CSV DELIMITER cannot be set to a double quote or NULL.

ORA-33674: (FTCODE00) Data block size *number* exceeds the maximum size of *number*.

ORA-33678: (GETSCAL00) The text expression specifying a DIMENSION data type cannot evaluate to NA.

ORA-33682: (GETTIMER01) The *number* parameter to *string* is dimensioned by more than one time dimension.

ORA-33684: (GETTIMER02) The *number* parameter to *string* must be dimensioned by a time dimension, or an explicit time dimension must be given.

Cause: If you use a DAY, WEEK, MONTH, or QUARTER dimension, the time dimension will be chosen by this command or function.

Action: If you do not use one of these dimensions, this command or function requires that you supply a time dimension.

ORA-33686: (GETTIMER03) The *number* parameter to *string* is not dimensioned by *workspace object*.

ORA-33688: (GETTIMER04) The dimension composite *workspace object* cannot be used as a time dimension.

ORA-33690: (GETXVAL01) The formula *workspace object* cannot be recursively evaluated because the RECURSIVE option is set to NO.

Cause: The specified formula could not be recursively evaluated by default.

Action: Specify RECURSIVE = YES to allow recursive evaluations.

ORA-33692: (GROWENG01) GROWRATE requires a time dimension with at least two values in status.

Cause: The formula for GROWRATE returned a divide-by-zero error with a status length of zero or one.

Action: Change the time dimension status to include the first and last values for GROWRATE.

ORA-33694: (GROWENG02) The expression in the GROWRATE function must have non-NA values at the beginning and end of the given time interval.

ORA-33696: (GROWENG03) The beginning and ending values of the expression in GROWRATE must both be positive or both be negative.

ORA-33698: (GROWENG04) Cannot calculate the growrate for the values given

ORA-33700: (GROWENG05) The first value of the expression in the GROWRATE function must not be zero.

Cause: The first value provided in the GROWRATE function was invalid.

Action: The first value in the GROWRATE function must not be zero.

ORA-33704: (ILPCHECK01) *workspace object* is not a program.

ORA-33706: (ILPCHECK12) The *workspace object* program cannot be compiled because it contains structural errors.

ORA-33708: (ILPCHECK13) The *workspace object* program cannot be compiled while it is executing.

ORA-33712: (ILPCHECK22) The *workspace object* program cannot be executed because it contains structural errors.

ORA-33720: (ILPCHECK43) The *workspace object* program cannot be hidden or unhidden while it is executing.

ORA-33722: (ILPCOMP05) All *string* statements must precede the first non-declarative statement.

ORA-33724: (ILPCOMP07) The *workspace object* program could not be compiled because of an unrecoverable error.

Cause: The previous errors prevent the program from compiling.

Action: Fix the program and retry.

ORA-33726: (ILPENG02) *workspace object* cannot be used more than once in simultaneous or nested FOR statements or ACROSS commands.

ORA-33728: (ILPINIT01) You cannot initialize *workspace object* because it is currently running.

ORA-33730: (ILPLNK01) Discarding compiled code for *workspace object* because it was compiled with code version *number*. The current code version is *number*.

ORA-33732: (ILPONLY) The *string* function can only be used in a program.

ORA-33734: (ILPPUT01) Label *string* conflicts with at least one other label in *workspace object*. Labels must be unique for the first 8 characters.

Cause: There was a compiler error.

Action: Find the duplicate label and give it a unique name.

ORA-33736: (ILPPUT02) The *workspace object* program contains unmatched DO or DOEND statements.

Cause: The program has a compiler error.

Action: Fix the unmatched DO or DOEND statements.

ORA-33738: (ILPPUT03) Program *workspace object* either contains unmatched IF, WHILE, TEMPSTAT, FOR, or IF THEN ELSE statement, or contains duplicate labels.

Cause: There was a compiler error.

Action: Find the structural error and fix it.

ORA-33740: (ILPPUT04) On the line defining label *string* in the *workspace object* program, the text following the label is ignored.

Cause: Extra text following the label was ignored.

Action: Remove the extraneous text.

ORA-33742: (ILPPUT06) The *workspace object* program contains too many source lines. The limit is *number* lines. The program has been truncated.

Cause: A program was automatically truncated because there were too many source lines.

Action: Change the code that generates programs to handle a large number of commands with multiple programs.

ORA-33744: (ILPPUT07) Program *workspace object* contains text on the same line as a DO or DOEND statement.

Cause: There was a program compiler error.

Action: Remove the extraneous text.

ORA-33746: (ILPPUT08) *number* must be preceded by an IF clause.

Cause: There was a compiler error.

Action: Add the missing IF clause.

ORA-33748: (ILPPUT09) *number* must be preceded by a THEN clause.

Cause: There was a compiler error.

Action: Add the missing THEN clause.

ORA-33750: (ILPXEQ01) A referenced object can no longer be located. Execution will continue in interpreted mode.

Cause: This is a warning message that is only printed when COMPILEWARN is on.

Action: Turn off COMPILEWARN if you do not want to see this message.

ORA-33756: (ILTRK01) No data has been recorded by the TRACKPRG command.

ORA-33758: (IMPQUAF0) The EIF file *string* does not have any objects in it.

ORA-33760: (IMPQUAF02) \nThere are *number* objects in the EIF file:

ORA-33762: (XSCHGDIM01) Invalid LIMIT argument starting at *string*.

ORA-33766: (INFOFC00) Invalid second argument to INFO(FORECAST *string*).

ORA-33768: (INFOMOD00) Invalid second argument to INFO(MODEL *string*).

ORA-33770: (INFOPARS01) Invalid second argument to INFO(PARSE *string*).

ORA-33772: (INFOFG00) Invalid second argument to INFO(REGRESS *string*).

ORA-33774: (INTERP1) *string* is not a command.

ORA-33776: (INTERP1A) *workspace object* is not a command.

ORA-33780: (INTERP3) The *string* command can only be used in a program.

ORA-33782: (INTERP4) The *string* command cannot be executed by ampersand substitution.

ORA-33784: (INTERP5) Ampersand substitution is not permitted in a *string* statement.

Cause: An ampersand substitution was attempted. This is not allowed in ARGUMENT or VARIABLE commands.

Action: Rewrite the program to work around this limitation.

ORA-33788: (INTTOK01) *string* is not composed solely of digits.

Cause: A simple integer is expected in this context.

Action: Correct the input to remove any extra characters.

ORA-33790: (IOERROR01) I/O error on file *string*: *string*.

ORA-33792: (IOERROR02) I/O error on file *string*: Error text not available.

ORA-33796: (IOEXECUT00) The file identifier argument of *string* does not have a value.

ORA-33798: (IOEXECUT01) File *string* is the current OUTFILE or LOG unit, and cannot be closed with the FILECLOSE command.

ORA-33800: (IOEXECUT02A) The LENGTH argument to the FILEGET function (*number*) is negative.

ORA-33802: (IOEXECUT02B) File *string* was opened for writing.

ORA-33804: (IOEXECUT02C) File *string* was opened for binary input. You must use FILEREAD or FILENEXT to read data from this file.

ORA-33806: (IOEXECUT03A) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-33808: (IOEXECUT03B) You have requested a FILEQUERY option that is not supported in this version of *string*.

ORA-33810: (IOEXECUT04A) The *string* option of FILESET is not supported in this version of *string*.

ORA-33812: (IOEXECUT04B) The *string* option of a file cannot be changed by the FILESET command.

ORA-33814: (IOEXECUT04C) The value to be set for the *string* option cannot be NA.

ORA-33816: (IOEXECUT04D) You have requested a FILESET option that is not supported in this version of *string*.

ORA-33818: (IOEXECUT05) File unit *number* is invalid. *string* can access only input files opened via the FILEOPEN function.

ORA-33820: (IOEXECUT06) The file name argument to *string* cannot be null or blank.

ORA-33822: (IRR01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed by the IRR function is *number* periods.

ORA-33824: (ISDBUILD01) A local scalar named *string* already exists.

Cause: All of the ARGUMENTs and VARIABLEs in a PROGRAM must have unique names.

Action: Choose unique names.

ORA-33826: (LINEDEL01) The number of the first line to remove must be between 1 and the total number of lines of the expression. *number* is out of range.

Cause: The line number of the expression to be removed was larger than the number of lines in the expression.

Action: Change the line number to be removed to be between 1 and the total number of lines in the expression.

ORA-33828: (LINEDEL02) You must remove at least one line. You cannot remove *number* lines.

ORA-33830: (LINEINS01) The line number after which inserting begins (*number*) is negative.

ORA-33832: (LINEREP01) The number of the first line to replace must be between 1 and the expression's total number of lines. *number* is out of range.

Cause: There was an invalid line number.

Action: Fix the line number.

ORA-33834: (LINEXTR01) The line number of the first line to extract must be greater than 0. You cannot start extracting at line *number*.

Cause: An attempt was made to extract an invalid line number.

Action: Use a number greater than 0.

ORA-33836: (LINEXTR02) You must extract at least one line. You cannot extract *number* lines.

Cause: An attempt was made to extract an invalid number of lines.

Action: Use a number greater than 0.

ORA-33838: (LLPINIT05) You attempted to loop over the time dimension *workspace object* beyond the allowable range of dates.

ORA-33840: (LOOPCODE01) Multiple relations exist between *workspace object* and the dimensions of the expression to be aggregated. One is *workspace object*, and another is *workspace object*.

ORA-33842: (LOOPCODE02) *workspace object* cannot be used for aggregation. It is unrelated to the data's dimensions, or it is less aggregate than one of them.

ORA-33844: (LOOPCODE03) Time dimensions *workspace object* and *workspace object* are both dimensions of the data. Breaking out the aggregation by time is ambiguous.

ORA-33846: (LXNXTREC00) The input line was terminated by an end-of-file that occurred sooner than expected. The line might be incomplete.

ORA-33848: (LXNXTREC01) The input line was truncated to the maximum allowable size of *number* characters.

ORA-33852: (LXPARSE01) You provided extra input starting at '*string*'.

ORA-33854: (LXTOKEN01) The statement cannot be parsed because it is too long or too complex.

ORA-33856: (LXSUBST01) *string* is not a valid ampersand-substitution expression.

ORA-33858: (LXSUBST02) The value of the ampersand-substitution expression is NA.

ORA-33860: (MAKEDCL01) You have no current analytic workspace. You must attach or create an analytic workspace before defining a new object.

ORA-33862: (MAKEDCL02) You must specify a data type when you define a *string*.

Cause: VARIABLE and FORMULA did not have a data type.

Action: Specify a data type. *Params: 1) object_type: The object type.

ORA-33864: (MAKEDCL03) You cannot use the data type attribute when you define a *string*.

Cause: This object type does not accept a user specified data type.

Action: Omit the data type.

ORA-33866: (MAKEDCL04) Your current analytic workspace does not contain an object named *workspace object*.

ORA-33868: (MAKEDCL05) You must specify two or more dimensions when you supply a dimension list for a WORKSHEET.

ORA-33870: (MAKEDCL06) You cannot use the *string* attribute when you define a *string*.

Cause: The attribute was not valid for this object type.

Action: Remove the attribute. *Params: 1) attribute: The attribute name. *Params: 2) object_type: The object type.

ORA-33872: (MAKEDCL07) The *string* DIMENSION must have a data type (ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-33874: (MAKEDCL08) *string* is not the name of a valid OPTION.

Cause: This OPTION was not defined in Oracle source code.

Action: Implement this OPTION in Oracle source code first. *Params: 1) option name: The name of the option.

ORA-33876: (MAKEDCL09) *string* must be an INTEGER dimension.

ORA-33878: (MAKEDCL10) Nested composites are not supported when compatibility is Oracle Database 11g or later.

Cause: This feature was removed to support new Oracle Database 11g features.

Action: Contact Oracle Support.

ORA-33880: (MAKEDCL11) Dimensions specified for a WORKSHEET must be INTEGER dimensions.

Cause: A WORKSHEET requires two integer dimensions.

Action: Accept the default WORKSHEET dimensions WKSCOL and WKSROW, or define your own integer dimension.

ORA-33882: (MAKEDCL12) You cannot use the *string* attribute when you define a *string* of type *string*.

ORA-33883: (MAKEDCL36) You cannot use the *string* attribute when you define an EXTERNAL partition with an existing target.

Cause: The TEMPORARY keyword was specified in the definition of an external partition whose target variable was previously defined.

Action: Any storage characteristics of the external partition are determined by the target variable. These attributes should be set when the target is defined, not when the external partition is defined.

ORA-33884: (MAKEDCL13) You can specify the TEMPORARY attribute only for a variable, dimension, relation, valueset, or worksheet.

ORA-33886: (MAKEDCL14) You cannot define an object dimensioned by NAME, because it is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-33888: (MAKEDCL15) You cannot use the *string* attribute when you define a fixed-width TEXT *string*.

Cause: OWNSPACE and SHAREDSPACE attributes were not supported in a version 9 analytic workspace.

Action: Upgrade to a more recent version.

ORA-33890: (MAKEDCL16) You cannot use the dimension list attribute when you define a *string*.

ORA-33892: (MAKEDCL17) You cannot use the *string* attribute when you define a scalar *string*.

ORA-33893: (MAKEDCL18) The TEMPORARY attribute cannot be specified for this type of dimension

ORA-33894: (MAKEDCL20) The WIDTH attribute can only be used with non-scalar TEXT and INTEGER variables, or with TEXT dimensions.

ORA-33895: (MAKEDCL19) You can specify the SHAREMAP attribute only for a multiply dimensioned variable, relation, valueset, or worksheet.

ORA-33896: (MAKEDCL21) The WIDTH attribute for TEXT data must be a number between 1 and 4000.

ORA-33898: (MAKEDCL22) The WIDTH attribute for INTEGER data must be 1.

ORA-33900: (MAKEDCL23) The NOHASH attribute is only valid for conjoint dimensions.

ORA-33902: (MAKEDCL24) The *string* attribute is only valid for conjoint dimensions and dimension composites.

ORA-33904: (MAKEDCL25) *workspace object* is a dimension composite or is dimensioned by a dimension composite. You cannot use it as the type of a *string*.

ORA-33908: (MAKEDCL27) You cannot use the *string* attribute when you define a DIMENSION ALIAS, CONCAT, or PARTITION TEMPLATE.

Cause: The specified attribute could not be applied to a DIMENSION ALIAS, CONCAT, or PARTITION TEMPLATE.

Action: Remove the attribute from the DIMENSION ALIAS, CONCAT, or PARTITION TEMPLATE definition and retry the operation.

ORA-33910: (MAKEDCL28) You cannot specify a data type when you define a DIMENSION ALIAS, CONCAT, or PARTITION TEMPLATE.

ORA-33911: (MAKEDCL29) Cannot define a *string* in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: An attempt was made to define an object that required a certain compatibility setting in an analytic workspace that had not been upgraded to that compatibility level.

Action: Ensure that the database is running in the appropriate compatibility mode and upgrade the analytic workspace.

ORA-33912: (MAKEDCL30) An AGGMAP cannot be dimensioned by a conjoint dimension.

ORA-33914: (MAKEDCL31) You cannot define a dimension alias of another dimension alias.

ORA-33916: (MAKEDCL32) The dimension alias target *workspace object* is not a simple dimension.

Cause: The simple dimension was not a CONCAT or conjoint dimension, composite, or surrogate.

Action: These more complex dimensions cannot have aliases.

ORA-33918: (MAKEDCL33) You cannot define a surrogate of dimension *workspace object* because it is a *string*.

Cause: Not all kinds of dimensions could have surrogates. The user attempted to define a surrogate of a prohibited kind of dimension.

Action: Do not attempt to define a surrogate on this dimension. *Params: 1) dimension_name: The dimension name.

ORA-33920: (MAKEDCL34) The *string* SURROGATE must have one of the following data types: ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER.

Cause: The user attempted to define a surrogate dimension without specifying a valid data type.

Action: Specify the data type (ID, NTEXT, TEXT, NUMBER, or INTEGER) in the definition of the surrogate dimension.

ORA-33922: (MAKEDCL35) You cannot define a surrogate of dimension *workspace object* because it is a time dimension.

Cause: The user attempted to define a surrogate on a dimension that has type DAY, WEEK, MONTH, or YEAR.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33942: (MODCALL01) Model *workspace object* cannot be run because another model is already active.

ORA-33944: (MODCALL02) Model *workspace object* needs a solution variable; one was not provided.

ORA-33946: (MODCALL03) Model *workspace object* does not take a solution variable, because it has no model dimensions.

ORA-33948: (MODCALL04) A solution variable must be provided for model *workspace object*; however, *workspace object* is not a variable.

ORA-33950: (MODCALL05) The solution variable specified for the model *workspace object* must be numeric. Variable *workspace object* is type *string*.

ORA-33952: (MODCALL08) A solution variable must be specified for model *workspace object*; however, *workspace object* has no dimensions.

ORA-33954: (MODCALL09) Solution variable *workspace object* is not dimensioned by *workspace object*, which is a dimension of model *workspace object*.

ORA-33956: (MODCALL10) The execution of model *workspace object* cannot be completed due to an internal error (TYPE = *number*).

ORA-33958: (MODCALL11) The syntax for invoking a model is:\n model-name [solution-variable] [NOWARN]

ORA-33960: (MODCALL14) Model *workspace object* contains simultaneous equations.

ORA-33962: (MODCALL15) Model *workspace object* failed to converge after *number* iterations in block *number*.

ORA-33964: (MODCALL16) Model *workspace object* diverged during iteration *number* in block *number* while executing statement *number* of model *workspace object*.

ORA-33966: (MODCALL17) The solution variable *workspace object* is referenced as a variable in model *workspace object*.

ORA-33968: (MODCALL18) Solution variable *workspace object* is dimensioned by *workspace object*, which is not a dimension of model *workspace object* but is a dimension of a model execution block.

ORA-33970: (MODCALL19) Solution variable *workspace object* is not dimensioned by *workspace object*, but model *workspace object* contains dimension-based equations that reference its values.

ORA-33972: (MODCHECK01) *workspace object* is not a model.

ORA-33973: (MODCHECK02) The *workspace object* model cannot be compiled while it is executing.

ORA-33974: (MODCHECK12) The *workspace object* model cannot be compiled because it contains structural errors.

ORA-33975: (MODCHECK13) The *workspace object* model cannot be hidden or unhidden while it is executing.

ORA-33976: (MODCHECK22) The *workspace object* model cannot be executed because it contains structural errors.

ORA-33978: (MODCOMP01) *workspace object* has already been named in a DIMENSION statement in this model.

ORA-33980: (MODCOMP02) DIMENSION statements are not allowed after an equation has appeared.

ORA-33982: (MODCOMP03) DIMENSION statements are not allowed after an INCLUDE statement has appeared.

ORA-33983: (MODCOMP15) The DIMENSION statement must list the dimensions of any included models.

ORA-33984: (MODCOMP04) INCLUDE statements are not allowed after an equation has appeared.

ORA-33986: (MODCOMP05) Only one INCLUDE statement is allowed in a model.

ORA-33988: (MODCOMP06) An INCLUDE statement must refer to another model; *workspace object* is not a model.

ORA-33990: (MODCOMP08) Models cannot be included recursively; *workspace object* has already been included.

ORA-33992: (MODCOMP09) The format of the DIMENSION command is:\n DIMENSION dimension1 [dimension2...]

ORA-33994: (MODCOMP10) The format of the INCLUDE command is:\n INCLUDE model

ORA-33996: (MODCOMP11) *workspace object* is not named in a DIMENSION statement in this model.

ORA-33998: (MODCOMP12) You cannot use both *workspace object* and *workspace object* as model dimensions, because *workspace object* is a surrogate of *workspace object*.

Cause: The user attempted to include both a dimension and its surrogate in the DIMENSION statement of a model.

Action: Use either the dimension or the surrogate in the DIMENSION statement of the model, but not both.

ORA-34000: (MODCOMP13) You cannot use both *workspace object* and *workspace object* as model dimensions, because they are both surrogates of dimension *workspace object*.

Cause: The user attempted to include two dimension surrogates of the same dimension in the DIMENSION statement of a model.

Action: Use either of the two surrogates in the DIMENSION statement of the model, but not both.

ORA-34001: (MODCOMP14) Concat leaf dimension *workspace object* already is used in a DIMENSION statement, either explicitly or as a leaf of another concat dimension.

Cause: Either two concat dimensions which share a common leaf dimension, or a concat and one of its leaves where both specified in the DIMENSION statement(s).

Action: Do not specify overlapping concat dimensions, or any leaves of specified concat dimensions.

ORA-34004: (MODGRAPH01) The model *workspace object* cannot be compiled due to internal error *number*. Contact Oracle OLAP Technical support.

ORA-34006: (MODINFO00) There is no saved model information for the INFO function to retrieve.

ORA-34008: (MODINFO01) Model *workspace object* has not been compiled; the information requested is available only after compilation.

ORA-34010: (MODINFO02) Model *workspace object* has not been executed; the information requested is available only after execution.

ORA-34012: (MODPUT06) The *workspace object* model contains too many source lines. The limit is *number* lines. The model has been truncated.

ORA-34014: (MONITOR01) No data has been recorded by the MONITOR command.

ORA-34016: (MONITOR02) No program name has been supplied for the MONITOR command.

ORA-34018: (MSCGADD01) *workspace object* is an INTEGER dimension. Specify only the number of values to be added, not the specific values themselves.

ORA-34019: (MSCGADD03) *workspace object* is not a LIST PARTITION TEMPLATE.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a RANGE or CONCAT partition template.

Action: Partitioning in a RANGE or CONCAT partition template cannot be changed using the MAINTAIN command.

ORA-34020: (MSCGADD02) *workspace object* is not a time dimension. You cannot add time periods to it.

Cause: The PERIOD clause was not followed by the name of a WEEK, MONTH, QUARTER, or YEAR dimension.

Action: Do not use PERIOD for this dimension.

ORA-34021: (MSCGADD04) You must specify a partition when maintaining PARTITION TEMPLATE *workspace object*.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a LIST partition template, but didn't specify which partition to add to or delete from.

Action: Specify the partition: maintain (template) add to partition (partitionname) (values) or maintain (template) delete from partition (partitionname) (values)

ORA-34022: (MSCGDEL02) You can only delete time periods from a time dimension.

Cause: The PERIOD clause was not followed by the name of a WEEK, MONTH, QUARTER, or YEAR dimension.

Action: Do not use PERIOD for this dimension.

ORA-34024: (MSCGMRG01) The RELATE keyword cannot be specified when the MERGE expression has no dimensions.

Cause: The MERGE expression did not contain dimensions.

Action: Specify a valid MERGE expression or refer to Oracle Database documentation for the correct syntax. Dimensions are required in the MERGE expression when using the RELATE keyword.

ORA-34026: (MSCGMRG02) *workspace object* is not a relationship between *workspace object* and the dimensions of the source expression.

ORA-34028: (MSCGMRG03) *workspace object*, the value of the RELATE relation, is not one of the dimensions of the source expression.

ORA-34030: (MSCGPOS00) *workspace object* is a time dimension. You can add values to it only FIRST or LAST.

Cause: There are no gaps in time dimensions. New periods must be added to the beginning or the end.

Action: The only acceptable syntax is n PERIODS FIRST or n PERIODS LAST.

ORA-34031: (MSCGPOS02) Position keywords may not be specified when adding values to DATETIME dimension *workspace object*.

Cause: The position of DATETIME dimension values is automatically maintained. Dimension values are automatically maintained in a sorted order.

Action: Do not specify BEFORE, AFTER, FIRST, or LAST for DATETIME dimension values.

ORA-34032: (MSCGPOS01) Position keywords may not be specified when adding values to dimension composite *workspace object*.

Cause: You cannot specify a position when adding values to it. You cannot specify a position for new composite dimension values.

Action: Do not use FIRST, LAST, BEFORE, or AFTER.

ORA-34034: (MSEXECUT00B) *value* is already a value of *workspace object*.

Cause: Maintain add failed because the value had already been added.

Action: Use ISVALUE(dimension value) to avoid the error.

ORA-34036: (MSEXECUT00C) *number* is already a value of *workspace object*.

ORA-34038: (MSEXECUT01) The expression for the position to add, merge, or delete is NA.

Cause: The position argument was NA.

Action: Use a correct position argument.

ORA-34039: (TRGPRG02) *workspace object* cannot be deleted while its trigger is executing.

ORA-34040: (TRGSET01) The TRIGGERASSIGN command can only be used in an ASSIGN TRIGGER.

ORA-34041: (TRGPRG01) A TRIGGER cannot be called recursively for the same object and event.

ORA-34042: (MSEXECUT03A) The expression for the position to be renamed is NA.

ORA-34044: (MSEXECUT03B) The expression for the new dimension value is NA.

ORA-34046: (MSEXECUT03C) *value* is already a value of *workspace object*.

Cause: An attempt to rename a dimension value failed because the new value already exists.

Action: Rename the dimension member to a unique value.

ORA-34048: (MSEXECUT04) Time dimension *workspace object* is empty. You must give it a value before you can add periods to its beginning or end.

ORA-34050: (MSEXECUT05) The expression for the argument to BEFORE or AFTER is NA.

ORA-34052: (MSEXECUT06) All dimension values must be single line values.

ORA-34054: (MSEXECUT07) *number* is already a value of *workspace object*.

ORA-34056: (MSEXECUT08) The number of periods to add cannot be negative, zero, or NA.

Cause: An attempt was made to add an invalid number of periods.

Action: Use a number greater than 0.

ORA-34058: (MSEXECUT09) The number of periods to delete cannot be negative, zero, or NA.

Cause: The number of periods was not valid.

Action: Use a positive integer for the number of periods.

ORA-34059: (MSEXECUT12) You cannot delete non session-only dimension values from unique concat dimension *workspace object*.

Cause: The user tried to apply MAINTAIN DELETE to a non-SESSION value.

Action: Only use MAINTAIN DELETE to remove SESSION values from a concat dimension.

ORA-34060: (MSEXECUT10) You do not have permission to maintain *workspace object*.

ORA-34061: (MSEXECUT11) Session-only values cannot be added to non-unique concat dimension *workspace object*, or any of its base dimensions.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34062: (MXARGS01) = Args:

ORA-34066: (MXARGS03) values of

ORA-34068: (MXBREAK01) The BREAK statement can only be used within a FOR or WHILE loop or within a SWITCH statement.

ORA-34070: (MXBREAK02) The CONTINUE statement can only be used within a FOR or WHILE loop.

ORA-34072: (MXCALL01) *workspace object* is not a PROGRAM.

Cause: The first argument to the CALL command was not a program.

Action: Specify the name of a program.

ORA-34074: (MXCGAF01) The *string* function cannot be used with *string* data.

ORA-34076: (MXCGAF02) *workspace object* is neither a dimension nor the name of a relationship array.

ORA-34078: (MXCGAF03) The dimension *workspace object* appears more than once as an argument to *string*.

ORA-34082: (MXCGAF05) Specify the STATUS keyword only if at least one of the breakout dimensions is not a dimension of the expression argument.

ORA-34084: (MXCGAF06) You cannot specify *workspace object* as a breakout dimension because it is a dimension composite.

ORA-34086: (MXCGAF07) You can only specify a qualified data reference to a breakout relation object. *workspace object* is not a relation.

ORA-34088: (MXCGCE04) The THEN and ELSE expressions must evaluate to values of the same dimension.

ORA-34090: (MXCGCHRL01) The expression argument to *string* is not dimensioned by *workspace object*.

ORA-34092: (MXCGCON01) The use of a hexadecimal value (*string*) is not supported.

ORA-34094: (MXCGCUM00) In the CUMSUM function, the relation (*workspace object*) must refer to the accumulation dimension (*workspace object*).

ORA-34096: (MXCGCUM01) The reset parameter '*workspace object*' is neither a RELATION nor a DIMENSION.

Cause: The reset parameter was not valid.

Action: Find or define a valid reset parameter.

ORA-34098: (MXCGCUM02) The STATUS keyword has no effect unless the first argument has more than one dimension.

ORA-34100: (MXCGCVT01) Values of type *string* are expected.

ORA-34102: (MXCGFIOF01) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-34104: (MXCGGET01) *workspace object* is not a type of object that contains data values.

Cause: This object was used in a context where data values were expected.

Action: Remove this command or fix it to use the correct object name.

ORA-34106: (MXCGGET03) FILEREAD attributes can be specified only in the context of a FILEREAD or FILEVIEW command.

Cause: FILEREAD attributes could not be used in this context.

Action: Remove the FILEREAD attributes.

ORA-34108: (MXCGGET04) FILEREAD attributes cannot be specified for the NAME dimension.

Cause: An attempt was made to use the GET function to read NAME dimension values in a FILEREAD or FILEVIEW command.

Action: If you need this list of names read them into a text variable.

ORA-34110: (MXCGGET05) FILEREAD attributes cannot be specified for a constant.

Cause: There was a misuse of FILEREAD attributes.

Action: Remove the FILEREAD attributes.

ORA-34112: (MXCGGT01) Values of type *string* cannot be read with the MANY option.

ORA-34114: (MXCGGT02) The RAW attribute applies only to TEXT.

ORA-34116: (MXCGHCVT00) To convert TEXT to date use:\n CONVERT(expression DATE [dateorder])

ORA-34118: (MXCGHCVT01) To convert date to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [dateformat])

Cause: Extra arguments were specified while converting a DATETIME expression to TEXT.

Action: Remove the extra arguments.

ORA-34120: (MXCGHCVT02) To convert time dimension periods to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [vnf-format])

ORA-34124: (MXCGHCVT04) CONVERT(expression *string*\nTo [format])

ORA-34126: (MXCGKEY01) The first argument to the KEY function must be an expression yielding a dimension value.

Cause: The First argument is not a dimension value.

Action: Specify the name of a dimension or a relation.

ORA-34128: (MXCGKEY02) You cannot apply the KEY function to *workspace object* because it is not a conjoint dimension or composite.

Cause: The first argument must be a conjoint or composite dimension.

Action: The KEY function cannot be used with this dimension.

ORA-34130: (MXCGKEY03) *workspace object* is not a component of conjoint dimension *workspace object*.

Cause: The second argument must be a base dimension of the first.

Action: Choose a valid base dimension.

ORA-34132: (MXCGKEY04) *workspace object* is not a component of composite *workspace object*.

Cause: The second argument must be a base dimension of the first.

Action: Choose a valid base dimension.

ORA-34134: (MXCGLA01) You are trying to perform an invalid operation. Dates cannot be exponentiated.

ORA-34136: (MXCGMOVE00) The first argument to the *string* function is not dimensioned by *workspace object*.

Cause: The expression argument was not dimensioned by the dimension argument.

Action: Specify one of the expression's dimensions.

ORA-34138: (MXCGNPV03) The interest rate expression in the NPV function cannot be dimensioned by *workspace object*.

ORA-34140: (MXCGPFC01) Argument number *number* in the call to *workspace object* is not a simple expression.

ORA-34141: (MXCGPUT00) You cannot use the ASSIGN keyword with DIMENSION *workspace object*.

Cause: User used the ASSIGN keyword on a DIMENSION target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To create a new dimension value in a FILEREAD, SQL FETCH or SQL SELECT command, use the APPEND keyword.

ORA-34142: (MXCGPUT01) You cannot assign values to a *string*.

ORA-34143: (MXCGPUT02) You cannot assign values to SURROGATE *workspace object* because it is type INTEGER.

Cause: The user attempted to assign a value to a dimension surrogate whose data type is INTEGER. INTEGER surrogates, like INTEGER dimensions, cannot have values assigned to them. They can only be referenced by position.

Action: Do not attempt to assign values to an INTEGER surrogate. Values will automatically appear and disappear from the INTEGER surrogate as positions are added to or removed from the underlying dimension.

ORA-34144: (MXCGPUT04) A model cannot assign values to a *string*.

ORA-34145: (MXCGPUT03) You cannot use the APPEND keyword with SURROGATE *workspace object*.

Cause: User used the APPEND keyword on a SURROGATE target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To assign a value to a SURROGATE in a FILEREAD, SQL FETCH or SQL SELECT command, use the ASSIGN keyword.

ORA-34146: (MXCGQDR01) A qualified data reference (QDR) has this format:ln name(dimension1 dimvalue1 [dimension2 dimvalue2...])

ORA-34148: (MXCGQDR02) *workspace object* cannot be used as a qualifier because it is a COMPOSITE or PARTITION TEMPLATE. You can use its component dimensions instead.

ORA-34150: (MXCGQDR05) A dimension can be named only once in a qualified data reference. *workspace object* has been named more than once.

ORA-34152: (MXCGQDR06) The dimensions named in a qualified data reference must be dimensions of the qualified object. *workspace object* is not dimensioned by *workspace object*.

Cause: There is an invalid qualifier.

Action: Use DESCRIBE to find valid qualifiers.

ORA-34154: (MXCGQDR10) *workspace object* has no dimensions, so it cannot have a qualified data reference.

Cause: There was an invalid qualified data reference.

Action: Remove the qualified data reference.

ORA-34156: (MXCGRA00) You cannot compare time periods of different lengths or phases.

ORA-34158: (MXCGRA01) cannot subtract time periods of different lengths or phases

Cause: The expression contained two incompatible time periods.

Action: Specify time periods with the same length and phase.

ORA-34160: (MXCGRA02) The format of the IN operator is *!n date IN time dimension value*.**ORA-34162: (MXCGRAVL01) The expression to be unraveled is not dimensioned by *workspace object*.****ORA-34164: (MXCGVAR01) A dimension used to define a local *string* variable cannot be located. Execution cannot continue.**

Cause: A local relation or valueset has become invalid, most probably because an object used by the currently executing program has been deleted.

Action: This is an internal error that should be referred to Oracle technical support.

ORA-34168: (MXCGVFC01) Invalid context for the VALUE function.**ORA-34170: (MXCGVFC02) Data Reader attributes apply to the VALUE function only when it is used in a FILEREAD or FILEVIEW command.****ORA-34172: (MXCGWKDT01) The argument to the WKSDATA function must be the name of a WORKSHEET.****ORA-34176: (MXCHGDCL01) *workspace object* is not the kind of object whose index type can be changed.**

Cause: An attempt was made to change the index type of an object that could not be changed. The object must be a conjoint, composite or text dimension.

Action: Remove this command or supply a proper argument.

ORA-34177: (MXCHGDCL19) *number* cannot be deleted because one or more partitioned variables instantiate it.

Cause: An attempt was made to CHGDFN DELETE a partition template, but some partitioned variable had data in the partition specified for deletion.

Action: Drop the partitions that are causing the problem and then retry.

ORA-34178: (MXCHGDCL02) *workspace object* cannot be changed to NOHASH. Only an object that was originally defined as NOHASH can be changed back to NOHASH.

Cause: NOHASH in the original definition created structures required to convert back to NOHASH later on.

Action: This is a rarely used feature. Performance should be thoroughly tested before the application is released for regular use.

ORA-34179: (MXCHGDCL20) *workspace object* is not a PARTITION TEMPLATE.

Cause: User specified an object that is not a partition template where a partition template is required.

Action: Supply the name of a partition template.

ORA-34180: (MXCHGDCL03) *workspace object* is not a conjoint dimension and cannot be changed in this manner.

ORA-34181: (MXCHGDCL21) *workspace object* is not a partitioned VARIABLE.

Cause: User specified an object that is not a partitioned variable in a place where a partitioned variable is required.

Action: Supply the name of a partitioned variable.

ORA-34182: (MXCHGDCL04) SEGWIDTH not changed from "*string\nwrong*"

Cause: SEGWIDTH requires one value for each dimension.

Action: Include values for each dimension of the specified object.

ORA-34183: (MXCHGDCL22) Partition *number* already exists.

Cause: User attempted to ADD a partition that already existed to a partitioned variable.

Action: None required - the partition already exists.

ORA-34184: (MXCHGDCL05) *string* is not a valid segment width.**ORA-34185: (MXCHGDCL23) Only dimension composites can have optional inversions. *workspace object* is not a dimension composite.**

Cause: CHGDFN INVERTED required a composite argument.

Action: Remove this command or correct the argument.

ORA-34186: (MXCHGDCL06) You cannot change *workspace object* to a dimension composite, because it is used as the type of a PROGRAM, RELATION or VALUESET.

Cause: This restriction makes composites faster and more flexible than conjoint dimensions.

Action: Do not use composites where you need VALUESETs or RELATIONs.

ORA-34188: (MXCHGDCL07) Only conjoint dimensions can be redefined as composites. *workspace object* is not a conjoint dimension.

Cause: The most likely cause is that you chose the wrong dimension name.

Action: Use LIMIT NAME and DESCRIBE to find the right DIMENSION.

ORA-34190: (MXCHGDCL08) You cannot convert the conjoint dimension *workspace object* to a composite because it has the NOHASH attribute.**ORA-34192: (MXCHGDCL09) *workspace object* is a dimension composite and its definition cannot be changed to NOHASH.****ORA-34194: (MXCHGDCL10) You cannot change *workspace object* to a composite while there are permissions applied to it.**

Cause: Permissions for composites must be applied through its base dimensions.

Action: Remove the permissions, change the dimension to a composite, and then apply permissions to the base dimensions.

ORA-34196: (MXCHGDCL11) Only dimension composites can be redefined as DIMENSIONs. *workspace object* is not a dimension composite.**ORA-34198: (MXCHGDCL12) You cannot change *workspace object* to a composite because its dimension list has one or more duplications.**

Cause: The conjoint dimension had duplicate base dimensions.

Action: The application needs to be rewritten to upgrade to composites.

ORA-34200: (MXCHGDCL13) You cannot change *workspace object* to a dimension composite because there are one or more formulas dimensioned by it.

ORA-34202: (MXCHGDCL14) *workspace object* is not a time dimension.

ORA-34204: (MXCHGDCL15) *workspace object* is not the kind of object to which SEGWIDTH can be applied.

ORA-34206: (MXCHGDCL16) You cannot change *workspace object* to a dimension composite because there are one or more relations dimensioned by it.

Cause: Relations can be dimensioned by conjoint dimensions, but not by composite dimensions.

Action: Do not change the dimension.

ORA-34208: (MXCHGDCL17) You cannot change *workspace object* to a dimension composite because it is used in one or more concat dimensions.

Cause: The specified dimension was used as a base in a concat dimension.

Action: Delete the concat dimension.

ORA-34210: (MXCHGDCL18) You cannot change *workspace object* to a dimension composite because one or more surrogates has been defined for it.

Cause: The user attempted to redefine a conjoint dimension as a composite, but the conjoint has one or more surrogates defined. A dimension that has surrogates cannot be redefined as a composite.

Action: Either delete all surrogates for the dimension, or do not attempt to redefine the dimension as a composite.

ORA-34212: (MXCLASS01) An expression was specified where a DIMENSION or a VALUESET was expected.

ORA-34214: (MXCLASS02) *workspace object* is not a dimension.

Cause: A dimension name was expected.

Action: Use a dimension name.

ORA-34216: (MXCOMP001) *workspace object* cannot be compiled because it is not a PROGRAM, MODEL, AGGMAP, or FORMULA.

ORA-34218: (MXCTX01) *workspace object* cannot be in a CONTEXT because it is not a scalar variable.

ORA-34220: (MXCTX02) *workspace object* cannot be in a CONTEXT because it is not data.

ORA-34222: (MXCTX03) *workspace object* cannot be in a CONTEXT because it is a dimension composite.

Cause: Dimension composites do not have status lists. Status is based on the status of their base dimensions.

Action: Save the status of the base dimensions instead.

ORA-34224: (MXDCL01) Analytic workspace *string* is not attached.

ORA-34226: (MXDCL02) REUSE can only be specified for SIMPLE, COMPOSITE, and CONJOINT dimensions.

ORA-34228: (MXDCL03) Only dimensions can have time periods.

Cause: 'day week month quarter year' syntax is only for dimensions.

Action: Use the dimension keyword before this syntax.

ORA-34230: (MXDCL04) You provided an invalid time period.

ORA-34232: (MXDCL05) A DAY dimension cannot be phased with a BEGINNING or ENDING phrase.

ORA-34234: (MXDCL06) The beginning date translates to an invalid end date.

Cause: The end date may not exceed year 9999.

Action: Fix the begin date.

ORA-34236: (MXDCL07) REUSE cannot be specified in AWs that have not been upgraded to version 12.

ORA-34238: (MXDCL08) A dimension cannot have a data type of DATE.

ORA-34240: (MXDCL09) You cannot specify EXPTEMP as an analytic workspace.

ORA-34242: (MXDCL10) You cannot specify an analytic workspace in this command.

ORA-34243: (MXDCL11) You can only use the *string* keyword when defining a COMPOSITE.

Cause: User supplied the COMPRESSED keyword when defining an object that was not a COMPOSITE.

Action: If the intent is to create a compressed composite, make sure that the object type is COMPOSITE. Otherwise, remove the COMPRESSED keyword from the command string and rerun.

ORA-34246: (MXDCL18) You cannot define an object with a recursive SPARSE dimension list.

Cause: A SPARSE dimension was specified that included a SPARSE dimension as one of its base dimensions.

Action: Define the sparse dimension using the base dimensions of the nested SPARSE dimensions rather than using the existing SPARSE dimension.

ORA-34248: (MXDCL19) You cannot specify a dimension list for the *workspace object* dimension.

Cause: This type of dimension did not have base dimensions.

Action: Do not specify a dimension list for this dimension.

ORA-34250: (MXDCL20) The *workspace object* dimension is in the wrong analytic workspace to be used in this DEFINE command.

ORA-34252: (MXDCL21) You have specified the wrong number of dimensions for *workspace object*.

ORA-34254: (MXDCL22) workspace object does not belong in the dimension list for composite workspace object, or it is in the wrong position.

ORA-34256: (MXDCL23) You must specify a dimension list for string workspace object when using it in a definition.

ORA-34258: (MXDCL24) Dimension composite number does not exist.

ORA-34260: (MXDCL25) You cannot use number to dimension a string because it is, or involves, a dimension composite. Use the composite's bases instead.

Cause: The user attempted to use a COMPOSITE in the dimension list of an object that does not allow for such dimensions.

Action: Use the base dimensions of the COMPOSITE in the dimension list.

ORA-34262: (MXDCL26) The object name string!string can only be defined in analytic workspace string, not in the EXPRESS analytic workspace.

ORA-34264: (MXDCL27) The object name string!string can only be defined in analytic workspace string, not in analytic workspace string.

ORA-34268: (MXDCL29) string objects must be type DIMENSION.

ORA-34270: (MXDCL30) You cannot specify a data type when defining a dimension alias.

ORA-34272: (MXDCL31) You cannot specify a dimension list when defining a dimension string.

Cause: An attempt was made to specify a dimension list when defining a dimension. A dimension alias has very few attributes other than those that are derived directly from the ALIASOF dimension.

Action: The only additional syntax allowed is [TEMP] [AW workspace] [SESSION]. *Params: 1) dimension_name: The name of the ALIASOF dimension.

ORA-34274: (MXDCL32) You cannot specify a width when defining a dimension alias.

ORA-34276: (MXDCL33) (Precision, Scale) arguments can only be used with a NUMBER variable or dimension.

Cause: The user attempted to use NUMBER(Precision) or NUMBER(Precision, Scale) as the datatype in a definition for some object other than a DIMENSION or VARIABLE, such as a FORMULA or PROGRAM. This error can also be produced in cases where a NUMBER data type is not allowed at all.

Action: Use the NUMBER type without specifying a precision or scale. If a NUMBER data type is not allowed at all, this fix will only change the exception message to something more specific.

ORA-34279: (MXDCL37) CONCAT can only be used when defining a DIMENSION.

Cause: The CONCAT keyword was used incorrectly.

Action: Retry the command without the CONCAT keyword.

ORA-34280: (MXDCL38) PARTITION BY can only be used when defining a PARTITION TEMPLATE.

ORA-34281: (MXDCL39) A precision code argument can only be used with DATETIME or TIMESTAMP dimensions.

Cause: A precision code argument was used for the wrong kind of object.

Action: Remove the precision code argument.

ORA-34284: (MXDCL52) A SPARSE dimension cannot be specified in this context.

ORA-34286: (MXDCL53) *workspace object* cannot be used in this context because it is a *string*.

Cause: User specified a dimension composite, conjoint, or partition template in a place where that kind of dimension is not allowed. For instance, a relation cannot be dimensioned by a composite, and only a variable can be dimensioned by a partition template.

Action: Usually, the offending dimension can be replaced with its bases. For instance, a relation cannot be dimensioned by a composite of PRODUCT and GEOG, but it can be dimensioned by both PRODUCT and GEOG instead.

ORA-34298: (MXDCLEQ01) *workspace object* was not defined as a formula, so you cannot use the EQ command to give it a value.

ORA-34300: (MXDCLEQ02) *workspace object* is not a time dimension, so you cannot define a VNF formatting string for it.

ORA-34302: (MXDCLEQ03) *workspace object* is not a DATETIME or TIMESTAMP dimension, formula, program, or variable, so you cannot define a DATE_FORMAT formatting string for it.

Cause: This was the wrong type of object to have a DATE_FORMAT.

Action: Omit DATE_FORMAT.

ORA-34304: (MXDCLILP01) There is no current program definition. Define a program or use the CONSIDER command before using the PROGRAM command.

ORA-34306: (MXDCLILP02) *workspace object* was not defined as a program.

Cause: An attempt was made to use the PROGRAM command on an object that was not defined as a program. The PROGRAM command only works for objects defined as programs.

Action: Specify the name of a valid program with the PROGRAM command.

ORA-34308: (MXDCLILP03) Since you have no current program definition, your PROGRAM entries will be discarded. Type END to return to command level.

ORA-34310: (MXDCLILP04) The *workspace object* program cannot be redefined while it is executing.

ORA-34312: (MXDCLMOD01) There is no current model definition. Define a model or use the CONSIDER command before using the MODEL command.

ORA-34314: (MXDCLMOD02) *workspace object* was not defined as a model.

ORA-34316: (MXDCLMOD03) Since there is no current model definition, the MODEL statements will be discarded. Type END to return to the command line.

Cause: The current object, which is set by the CONSIDER command, is either NULL or not a MODEL.

Action: Because there is no current model definition, the MODEL statements will be discarded. Type END to return to the command line. CONSIDER model name will allow you to enter a MODEL.

ORA-34318: (MXDCLAGR01) There is no current aggmap definition. Define an aggmap or use the CONSIDER command before using the AGGMAP command.

ORA-34320: (MXDELETE00) The object *workspace object* is not in the *string* analytic workspace.

Cause: The object was not defined or it was in another analytic workspace.

Action: Describe the object to determine where it is defined.

ORA-34324: (MXFETCH01) The ACROSS and DOWN keywords cannot be set to NONE at the same time.

ORA-34336: (MXGO00) The *string* keyword can only be used for a model.

Cause: The GO command for a program did not accept the keywords BLOCKS or ITERATIONS.

Action: Omit the keyword argument to the GO command.

ORA-34338: (MXDIMEN01) An object cannot have more than *number* dimensions.

Cause: The object had too many dimensions. If the maximum is 32, this is a limit enforced by AGGREGATE. Otherwise, the maximum should be 256.

Action: Use no more than the maximum number of dimensions.

ORA-34340: (MXDINSRT01) An object named *number* already exists in analytic workspace *string*.

Cause: The object was already defined.

Action: Choose another name for the object. *Params: 1) OBJ_name: The object name.
*Params: 2) AW_name: The analytic workspace name.

ORA-34342: (MXDSS01) IMPORTANT: Analytic workspace *string* is read-only. Cannot use the UPDATE command to save changes to it.

Cause: An attempt was made to save changes to the specified analytic workspace. This is an informational message that changes cannot be saved to the specified analytic workspace.

Action: None, unless it was desired to save the changes to the analytic workspace. In that case, detach the analytic workspace, attach the analytic workspace as read/write, make the changes again, and UPDATE the analytic workspace. *Params: 1) analytic_workspace_name: The name of the analytic workspace.

ORA-34344: (MXDSS03) Analytic workspace *string* is not attached.

Cause: The command attempted to operate on an analytic workspace that is not currently attached, or the name of the analytic workspace is misspelled.

Action: Attach the analytic workspace or correct the spelling.

ORA-34346: (MXDSS04) The *string* analytic workspace cannot be detached.

Cause: The specified analytic workspace is an internal workspace and may not be detached by the user.

Action: Specify a different analytic workspace to detach.

ORA-34348: (MXDSS05) *string* is used only for internal purposes and cannot be accessed as an analytic workspace.

Cause: The command attempted to operate on an internal analytic workspace used by the system.

Action: Specify a different analytic workspace.

ORA-34350: (MXDSS06) *string* is an open analytic workspace.

Cause: The specified analytic workspace was in use.

Action: The AW DELETE, AW RENAME, AW TRUNCATE, and AW CREATE commands require an analytic workspace that is not currently in use.

ORA-34356: (MXDSS09) Analytic workspace *string* is attached in read-only mode, therefore you cannot change its *string*.

Cause: The analytic workspace was attached in read-only mode because of which it could not be changed.

Action: Detach the analytic workspace and then re-attach it to enable the read/write mode.

ORA-34357: (MXDSS10) *string* is not an alias of analytic workspace *string*.

Cause: User attempted to use AW UNALIAS on a nonexistent alias.

Action: Ensure that the command specified the correct analytic workspace and alias. The alias must have been assigned (using AW ALIAS) during the current session and must not have been removed by a previous AW UNALIAS or AW DETACH command.

ORA-34359: (MXDSS11) *string* appears twice in the alias list.

Cause: The user included the same name twice in the alias list of an AW ALIAS or AW UNALIAS command.

Action: Remove the duplicate name, and retry the operation.

ORA-34362: (MXDSS16) Program *number* does not exist.

Cause: The specified program name could not be found.

Action: Change the name to a program that exists.

ORA-34364: (MXDSS17) The read/write status of analytic workspace *string* has not been changed.

Cause: Attempts to change the read/write status of the specified analytic without detaching it first.

Action: In order to change the read/write status of the analytic workspace, it must first be detached.

ORA-34370: (MXDSS21) Permission to attach analytic workspace *string* denied by a PERMIT program.

Cause: Access to the analytic workspace was denied by the Analytic Workplace's (AW) PERMIT_READ program (when the AW was attaching for read) or PERMIT_WRITE program (when the AW was attaching for write).

Action: The owner of the analytic workspace must adjust the appropriate PERMIT program to allow access.

ORA-34371: (MXDSS22) Schema name "string" contains characters that are not allowed in an analytic workspace name.

Cause: The specified or default schema name contained characters that can occur only in quoted identifiers, which are not supported in OLAP DML.

Action: Specify a schema name containing only characters that can appear in a nonquoted identifier.

ORA-34372: (MXDSS26) An analytic workspace named *string* is already attached.

Cause: The attempt to attach the named analytic workspace failed because there was already an analytic workspace with that name attached.

Action: Only one analytic workspace of a given name may be attached at a time. The currently attached analytic workspace must be detached before you can attach the new analytic workspace.

ORA-34373: schema name contains unsupported characters

Cause: The specified or default schema name, contained characters that can occur only in quoted identifiers, which are not supported in OLAP DML.

Action: Specify a schema name containing only characters that can appear in a nonquoted identifier.

ORA-34376: (MXDSS28) *string* is not a valid analytic workspace name. Analytic workspace names must be *number* characters or less, can contain only letters, digits, underscores, and dollar signs, and cannot begin with a digit or dollar sign.

Cause: The specified analytic workspace or ALIAS name was too long or contained invalid characters.

Action: Ensure that the analytic workspace name meets the specified criteria.

ORA-34378: (MXDSS29) *string* is a reserved word and cannot be used as an analytic workspace name.

Cause: An attempt was made to create an analytic workspace using a reserved word.

Action: Choose a different name for the analytic workspace.

ORA-34380: (MXEXPORT00) You can only export one worksheet to a spreadsheet file.

ORA-34382: (MXEXPORT01) Worksheets are the only objects you can export to spreadsheet files. *workspace object* is not a worksheet.

ORA-34384: (MXFILEIO01) The *string* option of FILESET is not supported.

ORA-34386: (MXFILEIO02) No more than 9 arguments can be supplied to FILESET.

ORA-34388: (MXFILERD01) The format of the FILEREAD command is:\n FILEREAD unit [STOPAFTER n] [STRUCTURED | CSV | RULED] [fieldlist]

ORA-34390: (MXFILERD02) The format of the FILEVIEW command is:\n FILEVIEW unit [STRUCTURED | RULED] [fieldlist]

ORA-34392: (MXFORCAS00) You cannot calculate a forecast for an expression with no dimensions.

ORA-34394: (MXFORCAS01) You cannot calculate a forecast with an STSEASONAL expression with no dimensions.

ORA-34396: (MXFORCAS02) The expression to be forecast is not dimensioned by *workspace object*.

ORA-34398: (MXFORCAS03) The STSEASONAL expression must be dimensioned by only one dimension.

ORA-34400: (MXFORCAS04) time-series

ORA-34402: (MXFORCAS05) When you specify the forecast LENGTH, you must also specify an FCNAME.

ORA-34404: (MXFORCAS06) When you specify METHOD WINTERS, you must also specify the PERIODICITY.

ORA-34406: (MXFORCAS07) When STSMOOTHED, STTREND, or STSEASONAL is specified, they must all be specified.

ORA-34408: (MXFORCAS08) You specified a forecast phrase that is valid only when METHOD WINTERS is specified.

ORA-34410: (MXFORCAS09) The arguments to FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL must be numeric. *workspace object* is not numeric.

ORA-34412: (MXFORCAS10) FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL variables must be dimensioned by time dimension *workspace object*. *workspace object* is not.

ORA-34414: (MXGETFLD01) Your FILEREAD or FILEVIEW statement specifies no width for a *string string* field. There is no default width for this data type.

ORA-34416: (MXGETFLD02) *string* data cannot be read as a *string* value.

ORA-34418: (MXGETFLD03) A STRUCTURED or CSV record cannot contain *string* data.

ORA-34420: (MXGETFLD04) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string* data.

ORA-34422: (MXGETFLD05) The SCALE option of FILEREAD or FILEVIEW cannot be specified for BINARY data other than INTEGER.

ORA-34424: (MXGETFLD06) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string string* data.

ORA-34426: (MXGETFLD07) Values read into the relation *workspace object* must be INTEGER position numbers of its conjoint value dimension.

ORA-34428: (MXGETFLD08) Values read into conjoint dimension *workspace object* must be either INTEGER position numbers or a bracketed list of base dimension values.

ORA-34430: (MXGETFLD09) No data type was specified for one or more of the base dimensions of conjoint dimension *workspace object*.

ORA-34432: (MXGETFLD10) *workspace object* cannot be assigned time dimension data.

ORA-34434: (MXGETFLD11) You cannot read values of a dimension composite directly. You can specify a bracketed list of base dimension values.

ORA-34436: (MXGETFLD12) No data type was specified for one or more of the base dimensions of a dimension composite.

ORA-34438: (MXGETSVN01) A value of the *workspace object* dimension must be a single expression without surrounding angle brackets .

ORA-34440: (MXGETSVN02) A value of the *workspace object* dimension must be a combination of *number* base dimension values surrounded by angle brackets .

ORA-34442: (MXGETSVN03) You cannot use a Qualified Object Name as a value of the NAME dimension.

ORA-34444: (MXGETSVN04) Dimension *workspace object* is not a concatenated dimension.

ORA-34446: (MXGETSVN05) Dimension *workspace object* is not a base of concatenated dimension *workspace object*.

ORA-34448: (MXGOTO01) *string* is not defined as a label.

ORA-34450: (MXIFERR) The IF keyword must be followed by a BOOLEAN expression. The expression starting with *string* is *string*.

ORA-34452: (MXIMPORT01) *string* is a reserved keyword that cannot be used in this context.

ORA-34454: (MXIMPORT02) When importing a spreadsheet, CSV file, or PRN file, the target must be a WORKSHEET. *workspace object* is not a worksheet.
Cause: An invalid WORKSHEET argument was specified.

Action: Define a WORKSHEET or use an existing WORKSHEET.

ORA-34456: (MXIMPORT03) The STOPAFTER specification cannot be NA.

ORA-34458: (MXIMPORT04) The RULER expression cannot be missing or NA.
Cause: The RULER expression was missing.

Action: Add a RULER expression.

ORA-34460: (MXIMPORT05) The expression identifying the file cannot be NA.
Cause: In the IMPORT command, the file name was specified as NA.

Action: Fix the file name argument.

ORA-34462: (MXIMPORT06) The STOPAFTER specification cannot be less than one. The value was *number*.

ORA-34464: (MXIMPORT07) TEXTSTART and TEXTEND are supported only for STRUCTURED PRN files. DELIMITER is supported for STRUCTURED PRN and CSV files.

ORA-34466: (MXIMPORT08) Target *workspace object* is not in analytic workspace *string*.

ORA-34468: (MXIMPORT09) *workspace object* is not a valid target name. You cannot use a Qualified Object Name to specify a target in an EIF import.

ORA-34476: (MXINFO01) The first argument to the *string* function must be FORECAST, PARSE, REGRESS, SEASADJ, or MODEL.

ORA-34478: (MXLOG01) Disk file *string* cannot be opened; it is in use.

ORA-34480: (MXMAINT01) You cannot *string* values of conjoint dimension *workspace object*.

Cause: RENAME, ADD SESSION or BULKRENAME are not allowed.

Action: ADD, MOVE, DELETE or MERGE are supported.

ORA-34481: (MXMAINT07) You cannot *string* values of PARTITION TEMPLATE *workspace object*.

Cause: User attempted to use the MAINTAIN command with some keyword other than ADD, MOVE or DELETE on a partition template.

Action: It is not possible to MAINTAIN a partition template, except to add, move or delete values of a partition list.

ORA-34482: (MXMAINT02) You cannot *string* values of time dimension *workspace object*.

Cause: RENAME, MOVE or BULKRENAME were not allowed.

Action: ADD, DELETE, MERGE, or ADD SESSION are supported. *Params: 1) maintain_action: The type of maintain requested. *Params: 2) dimension_name: The dimension to maintain.

ORA-34484: (MXMAINT03) You cannot *string* values of dimension composite *workspace object*.

Cause: MOVE, RENAME, ADD_SESSION or BULRENAME are not allowed.

Action: ADD, DELETE or MERGE are supported.

ORA-34486: (MXMAINT04) You cannot maintain dimension alias *workspace object*.

Cause: Dimension aliases cannot be maintained.

Action: Maintain the base dimension.

ORA-34487: (MXMAINT08) You cannot *string* values of non-unique CONCAT dimension *workspace object*.

Cause: The specified MAINTAIN operation can only be applied to a UNIQUE CONCAT.

Action: Use the CHGDFN command to change the CONCAT dimension to UNIQUE and retry.

ORA-34488: (MXMAINT05) You cannot *string* values of concat dimension *workspace object*.

Cause: ADD, RENAME, MERGE or BULKRENAME are not allowed.

Action: MOVE, DELETE or ADD SESSION are supported.

ORA-34489: (MXMAINT06) You cannot maintain *workspace object* because it is a SURROGATE.

Cause: Attempted to use the MAINTAIN command on a dimension surrogate. The MAINTAIN command can only be used with real dimensions, not surrogates.

Action: Use the MAINTAIN command to modify the underlying dimension of the surrogate instead.

ORA-34490: (MXMOVE00) You cannot use qualified object names in the MOVE command except as part of an expression.

Cause: Only simple names are allowed.

Action: Use the AW keyword to specify the analytic workspace.

ORA-34492: (MXMSERR00) Analytic workspace object *workspace object* does not exist.

Cause: The referenced object did not exist in an attached analytic workspace.

Action: Specify an object name from one of the attached analytic workspaces.

ORA-34494: (MXMSERR01) Analytic Workspace *string* does not contain an object named *workspace object*.

Cause: The object name was not in the specified Analytic Workspace (AW).

Action: Use the DESCRIBE command to find out whether the object is in another Analytic Workspace (AW).

ORA-34496: (MXNAME01) The NAME dimension is available only when you have an active analytic workspace.

ORA-34498: (MXNAME02) You cannot use the NAME dimension in this context.

Cause: An attempt was made to use the NAME dimension. Many commands and functions that handle dimension arguments will not accept the NAME dimension.

Action: None

ORA-34500: (MXNAME03) *string* is a reserved keyword that cannot be used in this context.

Cause: An attempt was made to reserve keywords that cannot be used as object names.

Action: Choose another name.

ORA-34502: (MXNAME03A) *number* is a reserved keyword that cannot be used in this context.

Cause: A reserved keyword was specified as the name of the object or analytic workspace. Reserved keywords cannot be used as the names for objects or analytic workspaces.

Action: Specify another name other than a reserved keyword for the object or analytic workspace.

ORA-34504: (MXNAME04) You have no current analytic workspace.

ORA-34506: (MXNAME05) *string* is a local variable that cannot be used in this context.

Cause: This context required the name of a defined object.

Action: You may need to define an object with this name or rename your local variable if has the same name as a defined object.

ORA-34508: (MXNAME06) You cannot qualify references to the NAME dimension.

ORA-34512: (MXNEGERR) The NOT operator can only be used with BOOLEAN expressions. The expression at *string* is *string*.

ORA-34514: (MXOPERR) You cannot *string string* data in the expression that begins with '*string*'.

Cause: The user attempted an invalid operation.

Action: n/a

ORA-34516: (MXPROPER01) A property name cannot be NA.

ORA-34518: (MXPROPER02) A property named *string* does not exist.

ORA-34520: (MXPROPER03) A property name cannot be a multi-line text.

ORA-34522: (MXPROPER04) A property name must be between *number* and *number* bytes long. You supplied a name of *number* bytes.

ORA-34524: (MXPROPER05) The object properties in this analytic workspace cannot be read, because they were created by an incompatible version of *string*.

ORA-34526: (MXPSHPOP01) You cannot *string workspace object* because it is not a scalar variable.

ORA-34528: (MXPSHPOP02) You cannot *string workspace object* because it is not data.

ORA-34530: (MXPSHPOP03) You cannot *string workspace object* because it is a *string*.

ORA-34534: (MXPUTQDR01) A `FILEREAD` attribute list is not valid in this context.

ORA-34538: (MXRECAP01) The format of the `RECAP` command is:\n `RECAP [ALL|n] [string] [FILE pathname]`

Cause: The syntax of the `RECAP` command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax of this command.

ORA-34540: (MXRECAP02) `RECAP` does not support multi-line strings.

Cause: The command expression specified a multi-line string.

Action: Supply a command expression that has only a single line of text.

ORA-34542: (MXRECAP03) There are no entries in the command log.

Cause: There were no saved commands to recap.

Action: No action is necessary.

ORA-34544: (MXRECAP04) No matching commands were found.

Cause: None of the saved commands in the current session matched the command string passed to `RECAP`.

Action: No action is necessary.

ORA-34546: (MXRECAP05) The format of the `REDO` command is:\n `REDO [n] [oldtext newtext [option]]`

Cause: The syntax of the `REDO` command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax of this command.

ORA-34548: (MXRECAP06) There is no occurrence *number* of '*number*' in the command.

Cause: The text to be replaced was not found in the command.

Action: Check the command to be modified to be sure that it contains at least as many occurrences of the specified search string as required by the REDO or REEDIT command.

ORA-34550: (MXRECAP07) Command number *number* is not available.

Cause: The RECAP or REEDIT command specified a stored command offset that could not be found.

Action: Make sure that the specified command offset matches the offset reported by the RECAP command.

ORA-34552: (MXRECAP08) Multi-line strings cannot be used in editing the command.

Cause: A text expression representing a multi-line text value was specified.

Action: Specify only single-line text expressions as arguments to REDO and REEDIT.

ORA-34554: (MXRECAP09) The string '*number*' does not occur in the command.

Cause: A search string was specified in the REDO or REEDIT command that could not be found in the command to be modified.

Action: Check the command string to make sure that it contains at least one occurrence of the search string.

ORA-34556: (MXRECAP10) Substituting *number* for *number* would cause the command to exceed the maximum command length (*number*).

Cause: The maximum command length exceeded when performing the requested modification on the command.

Action: Adjust the arguments to REEDIT or REDO so that they do not result in an excessively long command.

ORA-34558: (MXRECAP11) The format of the REEDIT command is:\n REEDIT [n] oldtext newtext [option]

Cause: The REEDIT command contained a syntax error.

Action: Check the error message text or Oracle documentation for the correct syntax of this command.

ORA-34560: (MXRECAP12) The *string* command cannot be saved in the command log by REDO or REEDIT or executed by REDO.

Cause: The command was one of a small set of commands that could not be logged, including RECAP, REEDIT, REDO, and empty strings.

Action: Do not attempt REDO or REEDIT on this command.

ORA-34562: (MXRENAME02) An object named *number* already exists in analytic workspace *string*.**ORA-34564: (MXRENAME03) The SPARSE keyword changes a named composite to unnamed. You cannot apply it to an unnamed composite.**

Cause: The object argument was already an unnamed composite.

Action: Remove this command.

ORA-34566: (MXRENAME04) Only integer dimensions can be named *string*.

ORA-34568: (MXRENAME05) You cannot rename *workspace object* because you do not have PERMIT rights to do it or it is readonly.

ORA-34570: (MXRENAME06) The dimension composite *workspace object* is not in analytic workspace *string*.

ORA-34572: (MXRENAME07) cannot change *workspace object* to an unnamed composite because it is not a composite

Cause: The specified object could not be renamed to SPARSE because it was not a composite.

Action: None

ORA-34574: (MXRENAME08) You cannot change *workspace object* to an unnamed composite because it has permissions attached.

ORA-34576: (MXRENAME09) You cannot change *workspace object* to an unnamed composite because there are pushed statuses associated with it.

ORA-34578: (MXRENAME10) You cannot change *workspace object* to an unnamed composite because there are no objects dimensioned by it.

ORA-34580: (MXRENAME11) You cannot change *workspace object* to an unnamed composite because there are properties associated with it.

ORA-34582: (MXRENAME12) You cannot change *workspace object* to an unnamed composite, because there is already an unnamed composite with the same base dimensions.

ORA-34584: (MXRENAME13) You cannot change *workspace object* to an unnamed composite, because it appears in the dimension list of unnamed composite *workspace object*.

ORA-34586: (MXRENAME14) You cannot change *workspace object* to an unnamed composite, because unnamed composite *workspace object* appears in its dimension list.

ORA-34588: (MXRENAME15) The object *workspace object* is not in analytic workspace *string*.

ORA-34592: (MXRENAME17) You cannot change *workspace object* to an unnamed composite, because it would cause the dependent object *workspace object* to exceed the limit for the number of named dimensions.

ORA-34594: (MXROLLUP01) *workspace object* is not a data variable.

ORA-34596: (MXROLLUP02) The data type (*string*) of *workspace object* is not INTEGER, DECIMAL, or SHORTDECIMAL.

ORA-34598: (MXROLLUP03) *workspace object* is not related to itself.

ORA-34600: (MXROLLUP04) *workspace object* is not dimensioned by *workspace object*.

Cause: The ROLLUP variable was not dimensioned by the ROLLUP dimension.

Action: Specify a correct base dimension to ROLLUP.

ORA-34602: (MXROLLUP05) You must specify which dimension to roll up, since *workspace object* has more than one dimension.

ORA-34604: (MXROLLUP06) *workspace object* is not a relationship array.

ORA-34606: (MXROLLUP07) *workspace object* does not yield values of *workspace object*.

ORA-34608: (MXROLLUP08) *workspace object* is not dimensioned by *workspace object*.

ORA-34610: (MXROLLUP09) The relationship array *workspace object* shares the *workspace object* dimension with *workspace object*. It can only share the rollup dimension itself.

Cause: Two of the relationship arrays specified in the rollup command shared a dimension. Only the rollup dimension can be shared by the specified relationship arrays.

Action: Either use the shared dimension as the rollup dimension, or remove one of the relationship arrays.

ORA-34612: (MXSHELL01) Your program or expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

ORA-34614: (MXSHOWCD00) No command was given. There is nothing to show.

ORA-34616: (MXSHOWCD01) No code is generated for the *string* command.

ORA-34618: (MXSHOWCD02) The compiled code for *workspace object* cannot be displayed because the program has been hidden.

ORA-34620: (MXSHOWCD03) No compiled code exists for *string workspace object*.

ORA-34622: (MXSHOWCD04) No text exists for *string workspace object*.

ORA-34624: (MXSORT01) Sort criterion *number* is not dimensioned by *workspace object*.

ORA-34626: (MXSORT02) You must convert WORKSHEET values to a simple data type before using them as a sort criterion.

Cause: The data type used for the sort criterion was not one data type.

Action: Use the CONVERT function to cast the sort criterion to a single data type.

ORA-34628: (MXSQL99) The SQL "*string*" command can only be used in a program, and it must be compiled before it can be executed.

ORA-34630: (MXSQL00) The format of the SQL DECLARE command is:\n SQL DECLARE cursor-name CURSOR FOR select-command

ORA-34632: (MXSQL01) The format of the SQL OPEN command is:\n SQL OPEN cursor-name

ORA-34634: (MXSQL02) The format of the SQL CLOSE command is:\n SQL CLOSE cursor-name

ORA-34636: (MXSQL03) The format of the SQL FETCH command is:\n SQL FETCH cursor-name [LOOP [count]] INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34637: (MXSQL11) The format of the SQL IMPORT command is:\n SQL IMPORT cursor-name INTO :host-var [:host-var ...]\n [THEN filereadactions]

ORA-34638: (MXSQL04) The format of the SQL CLEANUP command is:\n SQL CLEANUP

ORA-34639: (MXSQL05) The format of the SQL SELECT command is:\n SQL SELECT rest of select statement INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34642: (MXSQL08) The format of the SQL PREPARE command is:\n SQL PREPARE statement-name FROM non-select-command

ORA-34644: (MXSQL09) The format of the SQL EXECUTE command is:\n SQL EXECUTE statement-name

ORA-34646: (MXSQL10) The format of the SQL PROCEDURE command is:\n SQL PROCEDURE procedure-name [(parameter {, parameter})]

ORA-34647: (MXSQL18) The text expression in a CURSOR FOR TEXT declaration cannot be NA.

Cause: The text for the SELECT expression in a CURSOR FOR TEXT declaration was evaluated at compile time as NA.

Action: Specify a text expression that is not NA at the time the program containing the SQL DECLARE is compiled.

ORA-34648: (MXSQL19) The SQL command is incomplete.

ORA-34650: (MXSQL20) The SELECT command is not supported by *string*. You must declare a cursor to retrieve SQL data.

ORA-34652: (MXSQL21) The SQL command contains a syntax error.

ORA-34654: (MXSQL23) Host variable expected; use :: to escape a colon.

ORA-34656: (MXSQL24) Additional WHERE clause conditions with CURRENT OF *cursor name* syntax

Cause: A SQL UPDATE or DELETE statement tried to use the CURRENT OF *cursor name* syntax with a WHERE clause containing multiple conditions.

Action: When using the CURRENT OF *cursor name* syntax make sure it is the only condition in the WHERE clause.

ORA-34658: (MXSQL25) The words CURSOR FOR TEXT must be followed by a compile-time text expression specifying a SELECT command.

Cause: A SQL DECLARE *csr* CURSOR FOR TEXT command lacked a text expression, or the expression was otherwise invalid.

Action: Specify a single text expression that can be evaluated at compile time to yield a SELECT statement

ORA-34660: (MXSQL26) SQL cursor *string* has already been declared in this compilation.

ORA-34662: (MXSQL27) SQL statement *string* has already been prepared in this compilation.

ORA-34665: (MXSQL30) Concat dimension *workspace object* cannot be used as a target host variable. You must specify one of its leaves, and then set the concat's status from that leaf.

ORA-34666: (MXSWITCH01) Only one DEFAULT label is allowed in a SWITCH.

ORA-34668: (MXSWITCH02) The format of a DEFAULT label statement is:\n DEFAULT:

ORA-34670: (MXSWITCH03) Invalid syntax in case label expression

ORA-34672: (MXSWITCH04) The format of a CASE label statement is:\n CASE case-expression:

ORA-34674: (MXTRACE01) There is no trace in effect.

ORA-34676: (MXTRAP01) *string* is not defined as a label.

ORA-34680: (MXUPDATE03) Analytic workspace *string* is read-only. Therefore, the UPDATE command will not save changes.

Cause: The specified analytic workspace was attached read-only when the OLAP UPDATE command was issued. Any unsaved changes will be lost.

Action: The analytic workspace will need to be attached read-write and the changes made again before they can be saved.

ORA-34682: (MXUPDATE04) You have no attached analytic workspaces.

Cause: The OLAP AW UPDATE command was executed without any analytic workspaces attached for write operations.

Action: Attach an analytic workspace for write, redo the changes, and retry the AW UPDATE command.

ORA-34684: (MXUPDATE05) All of your attached analytic workspaces are read-only. Therefore, the UPDATE command will not save changes.

Cause: The AW UPDATE command did not find an analytic workspace that is attached for write.

Action: Attach the analytic workspace that needs changes for write make the desired changes, and issue the AW UPDATE command again.

ORA-34686: (MXVAR02) *string* is not a valid data type for a declarative statement.

ORA-34688: (MXVAR03) *workspace object* cannot be used as a variable or argument type because it is the name of a dimension composite.

ORA-34690: (MXWATCH01) There are no watchpoints set.

ORA-34691: (MXXEQ00A) The value *value* is greater than the specified precision (*number, number*) for *workspace object*.

Cause: A numeric value was entered that exceeded the precision defined for this object. For example, for an object defined to be NUMBER(3,2), the precision or the maximum number of significant decimal digits is 3. The scale or the number of digits from the decimal point to the least significant digit is 2. In this case, a value of 123.89 will cause the error because the precision allows a maximum of 3 digits and 2 of them must be to the right of the decimal point. A value of 3.89 will not cause the error.

Action: Enter a value that complies with the precision defined for the object.

ORA-34692: (MXXEQ01) A division by zero was attempted. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of division by zero.

ORA-34693: (MXXEQ00B) The value *value* is greater than the specified precision (*number*, *number*).

Cause: A numeric value was entered that exceeded the specified precision for this operation. For example, for a specified precision of NUMBER(3,2), the precision or the maximum number of significant decimal digits is 3. The scale or the number of digits from the decimal point to the least significant digit is 2. In this case, a value of 123.89 will cause the error because the precision allows a maximum of 3 digits and 2 of them must be to the right of the decimal point. A value of 3.89 will not cause the error.

Action: Enter a value that complies with the specified precision limit.

ORA-34694: (MXXEQ02) Unsupported conversion of RELATION data was attempted.

ORA-34696: (MXXEQ03A) "*number*" is not a number.

ORA-34698: (MXXEQ03B) "*number*" is not a Boolean.

ORA-34700: (MXXEQ05) Function calls are too deeply nested to be evaluated.

ORA-34702: (MXXEQ13) "*number*" is not a valid number format.

ORA-34704: (MXXEQ14) "*number*" does not match number format "*number*".

ORA-34706: (MXXEQ35) *value* is not a valid *workspace object*.

ORA-34708: (MXXEQ36) *value* does not exist.

ORA-34710: (MXXEQ37) Positions in the product of breakout dimensions of an aggregation function cannot exceed 263.**

ORA-34712: (NAFILENAME) The expression identifying the file cannot be NA or blank.

ORA-34718: (NLSCHARSET02) *number* is not a valid, installed NLS character set.

ORA-34719: (NLSCHARSET03) Character data loss in NTEXT/TEXT conversion

Cause: When character set conversion happens between TEXT and NTEXT either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.

Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE. Note: This message is the OLAP equivalent of ORA-12713.

ORA-34720: (NLSCHARSET04) An unknown character set conversion error occurred.

ORA-34722: (NLSCHARSET05) CAUTION: Character data loss in character set conversion from *string* to *string*

Cause: Some operation required a string to be converted into a different character set, but the string contained characters that didn't exist in the new character set.

Action: Choose different character sets.

ORA-34726: (NLSCHARSET06) CAUTION: String truncated during character set conversion from *string* to *string*.

Cause: Some operation required a string to be converted into a different character set. The string required more bytes in the new encoding, and exceeded the byte limit on its allowable length, causing some characters to be removed from the end of the string.

Action: If the byte limit is due to using the ID data type, then consider using the CHAR data type instead. If the byte limit is due to the limit of 4000 bytes per line of CHAR data, then break the long line into multiple lines. *Params: 1) input_charset (%1p): The name of the input character set. 2) output_charset (%2p): The name of the output character set.

ORA-34730: (NLSCHARSET08) CAUTION: During character set conversion, some of hidden program *workspace object* was truncated or could not be converted.**ORA-34731: (NLSSORT01) '*number*' is not a valid NLS_SORT specification.**

Cause: An unrecognized NLS_SORT value was specified in the SORT command or the SORT, SORTLINES or UNIQUELINES function.

Action: Specify a supported NLS_SORT value.

ORA-34732: (NOCONSIDER) You have no current definition. Define an object or use the CONSIDER command before using the *string* command.**ORA-34738: (NOUPDATE) A severe problem has been detected. Analytic workspace operations have been disabled.**

Cause: A previous severe error marked the session so that it could not perform any updates.

Action: Use the EXPORT command to save your work, then start a new session.

ORA-34740: (NOUPDATEDB) Changes made to the *string* analytic workspace are not saved.

Cause: A previous, severe error marked the session so that it could not perform any UPDATES.

Action: Use the EXPORT command to save your work, then start a new session.

ORA-34744: (NPV01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed for the NPV function is *number* periods.**ORA-34746: (NPV02) The interest rate in the NPV function is *number*. The value must be greater than -1.****ORA-34748: (NUMARGS1) You supplied *number* argument(s) to the *string* function. You must supply at least *number*.****ORA-34750: (NUMARGS2) The *string* function cannot have any arguments.****ORA-34752: (NUMARGS3) You supplied *number* arguments to the *string* function. It can have no more than *number* arguments.****ORA-34754: (NUMARGS4) You supplied *number* argument(s) to a function that requires at least *number*.****ORA-34756: (NUMARGS5) You supplied arguments to a function that does not take arguments.****ORA-34758: (NUMARGS6) You supplied *number* arguments to a function that can have no more than *number* arguments.**

ORA-34760: (NXHANDLE01) Decimal overflow in context that is unprotected by the DECIMALOVERFLOW option. Contact Oracle OLAP technical support.

ORA-34761: (NXHANDLEALLO) A decimal overflow occurred during an ALLOCATE operation.

Cause: While performing an ALLOCATE operation, a decimal overflow occurred. This created unreliable results.

Action: Correct the data or use a higher precision data type.

ORA-34762: (NXHANDLE02) A decimal overflow has occurred. Set DECIMALOVERFLOW to YES if you want NA to be returned as the result of a decimal overflow.

ORA-34764: (NXHANDLE03) A decimal overflow occurred during a ROLLUP operation. The results are not reliable.

ORA-34766: (NXHANDLE04) A decimal overflow occurred during an AGGREGATE operation. The results are not reliable.

ORA-34768: (NXHANDLE05) A decimal overflow occurred while parsing the AGGMAP.

ORA-34770: (OBJENG02) The object name argument to the OBJ function cannot be NA.

Cause: The object name argument to the OBJ function was NA.

Action: Fix the object name argument.

ORA-34772: (OBJENG03) *number* contains more than one name.

Cause: The name argument of the OBJ function had more than one name.

Action: Fix the object name argument.

ORA-34774: (OBJENG04) '*number*' is not the name of a dimension or composite.

Cause: This value did not have the proper syntax for a name.

Action: Use a valid name.

ORA-34776: (OBJENG05) Analytic workspace object *number* does not exist.

Cause: The object name did not exist.

Action: Define the object or determine why it is not defined.

ORA-34778: (OBJENG06) You cannot use the OBJ function on objects in analytic workspace *string*.

Cause: The OBJ function was used against the EXPTEMP analytic workspace.

Action: Use the OBJ function on any analytic workspace other than EXPTEMP.

ORA-34780: (OBJLIST01) Analytic workspace '*string*' is not attached.

Cause: The OBJLIST function signaled an error because one of the requested analytic workspaces was not attached.

Action: Correct the argument to the OBJLIST function. *Params: 1)
analytic_workspace_name: The analytic workspace name.

ORA-34782: (OBJSAVE2) Analytic Workspace *string* already has the maximum number of objects (*number*).

Cause: The Analytic Workspace has too many objects.

Action: Redesign the Analytic Workspace to not exceed the maximum number of objects.

ORA-34786: (OCI02) The total length of all output variables cannot be more than *number* bytes.

ORA-34796: (OCI08) SQL host variable *number* cannot be bound.

Cause: The data type of the host variable is not supported.

Action: Specify only variables of supported types as host variable names.

ORA-34798: (OCI09) OLAP OCI operation canceled.

ORA-34800: (OCI10) OLAP OCI operation returned '*string*'.

ORA-34802: (OCI11) OLAP OCI operation caused ROLLBACK past an UPDATE of an attached analytic workspace. Current operation canceled.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. The current operation is aborted, and the Analytic Workspace detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-34804: (OCI12) The value of SQL host variable *number* is too long. Use the WIDE keyword for columns that may exceed *number* bytes.

Cause: The host variable had a text value longer than the maximum SQL VARCHAR length

Action: Use the WIDE keyword in the host variable specification, e.g. :WIDE
OLAP_object_name

ORA-34805: (OCI13) Statement *number* must have at least one host variable.

Cause: Statements prepared with DIRECT=YES must have at least one host variable.

Action: Add a host variable to the prepared statements declaration.

ORA-34806: (OCI14) Statement *number* can only be executed within an ACROSS command.

Cause: Statements prepared with DIRECT=YES must be executed in an ACROSS command.

Action: Execute the statement within an ACROSS command.

ORA-34830: (OFCENG02) The *string* function cannot be applied to the dimension composite *workspace object*.

Cause: The specified function could not be applied to the dimension composite. Dimension composites do not have status lists. Status is based on the status of the base dimensions.

Action: Do not apply status directly to a dimension composite.

ORA-34832: (OFCENG03) *number* is not the name of a dimension or VALUESET.

Cause: You have called a function that requires a status list.

Action: Specify the name of a dimension or a VA:LUESET, or one of the functions that returns a status list (LIMIT, RANK, or SORT).

ORA-34833: (OFCENG04) The *string* function cannot be applied to the PARTITION TEMPLATE *workspace object*.

Cause: An attempt was made to use the specified function to query the status of the partition template. Partition templates do not have status lists.

Action: Do not try to apply status to a partition template.

ORA-34834: (OKUNDSS01) Analytic workspace *string* must remain current because the *workspace object* program is still executing in it.

ORA-34836: (OKUNDSS03) Analytic workspace *string* cannot be detached because a currently executing command depends upon an object (*workspace object*) it contains.

Cause: Analytic workspaces can only be detached when they are not being referenced by currently executing code. This error might occur when multiple queries are executed by the user code and one of those processes tries to detach the Analytic Workspace.

Action: Restructure the application so this condition does not occur.

ORA-34840: (OPCREATE01) The *string* option must be declared with datatype *string*.

Cause: An attempt was made to declare the option with the wrong datatype.

Action: Declare the option with the correct datatype.

ORA-34841: (OPCREATE02) The *string* option must be declared with the READONLY attribute.

Cause: An attempt was made to declare the option without the READONLY attribute.

Action: Declare the option READONLY.

ORA-34842: (OPTWIDTH) *workspace object* must be between *number* and *number*. It cannot be *number*. Its previous value was retained.

ORA-34844: (OPUTNA00) You cannot set an option to NA. The previous value of *workspace object* was retained.

ORA-34846: (OVERRIDE01) *number*

ORA-34848: (PARSE01) The text to be parsed is NA.

ORA-34852: (PHASTOVC00) Unsupported type

ORA-34854: (PMTSETUP00) Permission expression for *workspace object* is invalid and will be treated as FALSE.

ORA-34856: (PMTSETUP01) Permission for *workspace object* does not have proper dimensionality of the BY expression.

ORA-34858: (PMTUPDAT01) Permission expression for *workspace object* is invalid and will not be stored.

ORA-34859: (PMTUPDAT07) Permission condition for *workspace object* contains an expression longer than *number* bytes and cannot be stored.

Cause: One of the components of the PERMIT condition was too long.

Action: Rewrite the condition to shorten it.

ORA-34860: (PMTUPDAT02) You do not have PERMIT rights for *workspace object*.

ORA-34862: (PMTUPDAT03) *workspace object* is not a dimension, so you cannot give it MAINTAIN permission.

ORA-34864: (PMTUPDAT04) A BY clause cannot be given with *string* permission for *workspace object*.

ORA-34866: (PMTUPDAT05) You cannot apply permissions to dimension composite *workspace object*. Instead, you can apply permissions to its base dimensions.

ORA-34868: (PMTUPDAT06) You cannot apply permissions to dimension alias *workspace object*. Instead, you can apply permissions to the aliased dimension.

ORA-34870: (PERMIT01) You do not have permission to read this value of *workspace object*.

ORA-34871: (PERMIT06) Session-only value '*value*' of *workspace object* has been deleted because a PERMIT change has revealed a duplicate value.

Cause: Execution of a PERMIT command revealed a permanent dimension or surrogate value having the same name as the SESSION value.

Action: If the SESSION value is still needed, add it with a different name.

ORA-34872: (PERMIT02) You do not have permission to write this value of *workspace object*.

ORA-34873: (PERMIT07) You cannot write this value of *workspace object* since it is readonly.

ORA-34874: (PERMIT03) You do not have permission to run *workspace object*.

ORA-34876: (PERMIT04) You do not have permission to read AGGMAP *workspace object*.

ORA-34877: (PERMIT05) You cannot apply permissions to concat dimension *workspace object*. Instead, you may apply permissions to its leaf dimension(s).

ORA-34880: (PPDTORDR00) DATEORDER must be YMD, YDM, MYD, MDY, DYM, or DMY.

ORA-34882: (PPENG00) The level name for *string* cannot be NA.

Cause: PUSHLEVEL and POPLEVEL required a non-NA level name.

Action: Fix the level name. *Params: 1) command_name: Either PUSHLEVEL or POPLEVEL.

ORA-34884: (PPENG01) *number* does not match a PUSHLEVEL command.

Cause: The POPLEVEL command failed because the level name did not match an active PUSHLEVEL command.

Action: Look for redundant POP commands since this level may have already been popped.

ORA-34886: (PPENG02) The option *workspace object* is read only. Since its value cannot be popped, it cannot be pushed.

Cause: Some options contained data that could not be changed.

Action: Remove the PUSH command.

ORA-34888: (PPENG03) The status list for *workspace object* is protected by the TEMPSTAT command.

Cause: An attempt was made to use PUSH and POP for a status list that was used by the TEMPSTAT command.

Action: For more information on TEMPSTAT, consult Oracle documentation.

ORA-34892: (PPESCCH01) The ESCAPECHAR option requires a single character.

ORA-34894: (PPESCCH02) The '*string*' character is an invalid choice for the ESCAPECHAR option.

ORA-34896: (PPMONTHS00) At least 12 month names must be given. Only *number* were provided.

Cause: There must be at least one name for each month. Not enough names were provided.

Action: Provide at least 12 names.

ORA-34897: (PPMONTHS01) Blank lines are not allowed in the MONTHNAMES option.

Cause: There is at least one blank line in the string populating the MONTHNAMES option. We do not allow blank month names.

Action: Remove the blank line(s) from the string.

ORA-34900: (PPWKDAYS00) At least 7 day names must be given. Only *number* were provided.

Cause: There must be at least one name for each day. Not enough names were provided.

Action: Make sure there are at least 7 names in the string.

ORA-34901: (PPWKDAYS01) Blank lines are not allowed in the DAYNAMES option.

Cause: There is at least one blank line in the string populating the DAYNAMES option. We do not allow blank day names.

Action: Remove the blank line(s) from the string.

ORA-34902: (PPWKDNY01) The value of WEEKDAYSNEWYEAR must be a number between 1 and 7.

ORA-34904: (VCFMT001) must be multi-line

ORA-34908: (VCFMT003) missing arg

ORA-34910: (VCFMT004) duplicate

ORA-34912: (VCFMT005) error during %%p permutation

ORA-34914: (VCFMT006) non-numeric

ORA-34990: (PRNIMPRT01) CAUTION: *number* line(s) in a TEXT PRN file were too long. Each line was truncated to *number* bytes.

ORA-34992: (PRNIMPRT02) CAUTION: *number* field(s) in a STRUCTURED PRN or CSV file were too long. Each field was truncated to *number* bytes.

ORA-34994: (PRNIMPRT03) Unexpected EOF encountered in string while importing data.

ORA-34996: (PRNIMPRT04) Unexpected character '*character*' at end of string.

ORA-35000: (PRNRULER01) The RULER specification does not have any valid field descriptions.

ORA-35002: (PRNRULER02) Zero is not a valid repeat count.

ORA-35004: (PRNRULER03) The repeat count *number* was not followed by a field type.

ORA-35006: (PRNRULER04) The character '*character*' is not a valid field type. The valid types are A, S and T.

ORA-35008: (PRNRULER05) A field description (type *character*) does not include a field width.

Cause: The field width was missing.

Action: Add a field width.

ORA-35010: (PRNRULER06) The width (*number*) for an A or T field was too large. The limit is *number*.

ORA-35012: (PRNRULER07) Zero is not a valid width for an S field.

ORA-35014: (PRNRULER08) A repeat count or field width (*string*) was too large. The limit is *number*.

ORA-35016: (QFCHECK00) The analytic workspace and EIF file definitions of *workspace object* have a mismatched type.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35017: (QFCHECK06) The analytic workspace and EIF file definitions of *workspace object* have different partitioning methods.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35018: (QFCHECK01) The analytic workspace and EIF file definitions of *workspace object* have a mismatched data type.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35019: (QFCHECK07) The analytic workspace and EIF file definitions of *workspace object* have different partition dimensions.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35020: (QFCHECK02) The analytic workspace and EIF file definitions of *workspace object* have mismatched dimensioning.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35021: (QFCHECK08) The EIF file definition of *workspace object* has some partitions that are not present in the existing analytic workspace object.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35022: (QFCHECK03) The analytic workspace and EIF file definitions of *workspace object* have a mismatched relation.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35023: (QFCHECK09) The analytic workspace and EIF file definitions of *workspace object* have incompatible partition definitions.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35024: (QFCHECK04) The analytic workspace and EIF file definitions of *workspace object* have mismatched time dimension attributes.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35026: (QFCHECK05) The analytic workspace and EIF file definitions of workspace object have a mismatched ALIASOF dimension.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35028: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35029: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, then contact Oracle Support.

ORA-35030: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35031: (QFSVNS00) The IMPORT command has terminated because of a defect in the EIF file.

Cause: The EIF file contains a compressed composite with defective aggregation data.

Action: Re-create the EIF file using the NOAGGR keyword.

ORA-35032: The IMPORT command terminated because of a defect in the EIF file.

Cause: This was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35036: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35038: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35040: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35042: The IMPORT command has terminated because of a defect in the EIF file.

Cause: There was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35044: The IMPORT command terminated because of a defect in the EIF file.

Cause: An unexpected error occurred because of a defect in the EIF file which caused the IMPORT command to terminate.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35046: The IMPORT command terminated because of a defect in the EIF file.

Cause: There was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35048: The IMPORT command terminated because of a defect in the EIF file.

Cause: There was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35050: The IMPORT command terminated because of a defect in the EIF file.

Cause: There was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35052: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35054: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35056: The IMPORT command terminated because of a defect in the EIF file.

Cause: This an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35058: The IMPORT command has terminated because of a defect in the Express Interchange File (EIF).

Cause: There is a defect in the EIF.

Action: Re-create the EIF or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35060: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35062: (QFGET01) Duplicate files found for extension number *number* of EIF file *string*.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and found two EIF extension files with the same name (differing at most by the case used in the final name component).

Action: Delete, rename or move any files that are not to be read by IMPORT.

ORA-35066: (QFGET03) Extension number *number* is missing for EIF file *string*.

Cause: IMPORT searched the directories specified in the EIFEXTENSIONPATH option and could not find the appropriately numbered extension file.

Action: Move the missing file into one of the searched directories.

ORA-35070: (QFHEAD00) File *string* is not in EIF format.

Cause: This was not an EIF file. It could not be imported with the EIF specification.

Action: Unless this file has been damaged in some way and can be restored from backup, it is likely that this was never an EIF file.

ORA-35071: (QFHEAD06) EIF file *string* cannot be imported because analytic workspace *string* has not been upgraded to version *string*.

Cause: An attempt was made to import from an EIF file that was created by a newer version of the product into an analytic workspace that was created by an older version of the product.

Action: Ensure that the compatibility mode parameter in the initialization parameter file of the importing instance specifies a version that is at least as high as the parameter was in the exporting instance. Then, convert the analytic workspace to the latest storage format and reexecute the import command. Alternatively, change the EIFVERSION option of the exporting instance to a lower number, re- create the EIF file, and import the new file.

ORA-35074: (QFHEAD02) EIF file *string* cannot be read by this version of *string*.

Cause: The EIF file was created with an internal version number indicating that it may contain objects that are not compatible with the current Oracle Online Analytical Processing (Oracle OLAP) version, or the EIF file was in an obsolete format.

Action: If possible, set EIFVERSION in the exporting instance to a lower number, re-create the EIF file, and import the new file.

ORA-35076: (QFHEAD04) CAUTION: The textual data in EIF file *string* is encoded in a character set that is not recognized by this version of *string*.

Cause: IMPORT did not recognize the character set specification in the EIF file.

Action: Check the imported text data. If it was not imported correctly, re-create the EIF file with a character set supported by the current Oracle Database version.

ORA-35078: (QFHEAD05) An EIF extension file header for *string* is not in the correct format.

Cause: An EIF extension file in a multi-file IMPORT did not contain the correct header information.

Action: Ensure that EIFEXTENSIONPATH is set correctly and that all of the extension files for the current IMPORT were created by the same EXPORT command as the main EIF file.

ORA-35080: (QFOBJECT01) You cannot rename dimensions when you import them. The *string* dimension cannot be imported as *string*.

Cause: An attempt was made to rename a dimension during IMPORT. Renaming of dimension during IMPORT is not allowed.

Action: Do not attempt to rename the dimension during import.

ORA-35082: (QFOBJECT02) You cannot import changes to the *workspace object* program now, because it is currently running.

Cause: An attempt to change a program while it was running failed.

Action: Find out where this import is called from and move it somewhere else.

ORA-35084: (QFOBJECT06) CAUTION: *string* is being imported. However, this is a reserved word, so the new object must be renamed before it can used.

Cause: An attempt was made to import a reserved word. New reserved words are rarely added to this product but, when they are, this conflict is encountered.

Action: Rename the object.

ORA-35087: (QFOBJECT09) *number*\nInvalid

Cause: There was an unexpected error.

Action: Contact Oracle Support.

ORA-35090: (QFPARSE00) The object *string* cannot be imported because it does not exist in the EIF file.

Cause: The requested object was not in the EIF file.

Action: To see the contents of the EIF file, run the IMPORT command with the LIST ONLY parameter.

ORA-35092: (QFPARSE01) You cannot import the object *string* into both *string* and *string* at the same time. To import an object into two different analytic workspaces, use two separate IMPORT commands with different INTO arguments.

Cause: An attempt was made to import an object into two or more analytic workspaces at the same time.

Action: Use two IMPORT commands with different INTO arguments.

ORA-35095: (QFSVNS01) One or more imported values of fixed-width dimension *workspace object* have been truncated.

Cause: The data in the EIF file was exported from a dimension with wider values than the target dimension can accommodate.

Action: Change the definition of the target dimension, or ensure that multiple values from the target dimension have not become identical during the import process. This could cause data loss because data from later dimension values overwrite data imported earlier.

ORA-35096: (QUAFEOF) An unexpected end-of-file occurred in the EIF file. Check to ensure that you have all the imported data that you expected.

Cause: There was a serious failure.

Action: Re-create the EIF file and start over.

ORA-35098: (RDPOW01) You cannot raise zero to a negative power.

Cause: An attempt was made to raise zero to a negative power. This implies division by zero.

Action: None

ORA-35100: (RDPOW02) You cannot raise a negative number to a non-integer power.

Cause: An attempt was made to raise a negative number to a non-integer power. The result of this calculation is undefined.

Action: None

ORA-35102: (READONLY00) The option *workspace object* is read-only. Its previous value was retained.

ORA-35104: (REALDTOK01) "string" is not a number.

Cause: The value in the error message was not a number.

Action: Correct the value so that it can be converted to a number.

ORA-35106: (REGRESS00) The regression was not calculated because of a linear relationship between your independent variables.

Cause: The values of the specified independent variables were not independent. For example, one may have been a multiple of the other.

Action: Chose independent variables whose values are truly independent of one another.

ORA-35108: (REGRESS01) The number of non-NA observations with weights greater than zero (*number*) is too small to calculate a regression.

Cause: The number of observations did not exceed the number of independent variables.

Action: Add more non-NA data with weights greater than zero.

ORA-35110: (REGRESS02) The number of independent variables cannot exceed *number*.

Cause: The limit to the number of independent variables was exceeded.

Action: Do not exceed the limit.

ORA-35134: (RGACCUM01) A weighted regression cannot be calculated if any of the weights specified are less than zero.

Cause: Negative WEIGHTBY values prevent the REGRESS command from calculating a result.

Action: Fix the WEIGHTBY argument.

ORA-35136: (RGINFO00) There is no saved regression information for the INFO function to retrieve.

Cause: The REGRESS command was not used in this session.

Action: Use the REGRESS command first.

ORA-35138: (RPACROSS01) You must specify dimension values if you use *string* in an ACROSS phrase.

ORA-35140: (RPACROSS02) ACROSS must be followed by the name of a dimension or an expression with one dimension.

ORA-35142: (RPCOLUMN01) Multiple ACROSS phrases specifying the same dimension (*workspace object*) cannot be given for the same column.

ORA-35144: (RPFORMAT01) The value of the *string* attribute in column *number* is NA.

ORA-35146: (RPFORMAT02) The value of the *string* attribute in column *number* is negative.

ORA-35148: (RPFORMAT03) The value of the *string* attribute in column *number* is zero.

ORA-35150: (RPFORMAT04) The INDENT value for column *number* equals or exceeds the WIDTH.

ORA-35152: (RPFORMAT05) Column *number* extends past the maximum length (*number*) of a report line.

ORA-35154: (RSEXECUT01) The *string* function can only be used in a ROW or REPORT command.

Cause: The COLVAL, RUNTOTAL, or SUBTOTAL functions were used outside of a ROW or REPORT command.

Action: Use the COLVAL, RUNTOTAL, and SUBTOTAL functions only in a ROW or REPORT command.

ORA-35158: (RSEXECUT03) Column index *number* in *string* is before the first or after the last report column.

Cause: COLVAL referenced a column that did not exist.

Action: Use a valid column number or use a negative index to go back from the current column.

ORA-35162: (RSEXECUT05) The column number (*number*) in *string* must be greater than zero.

Cause: The specified column number was less than or equal to zero.

Action: Specify column numbers that are greater than zero.

ORA-35164: (RSEXECUT06) An argument (*number*) to *string* must be zero or greater.

Cause: The value of a row command attribute was less than zero.

Action: Omit this attribute if you want the default value.

ORA-35166: (SIGENG01) *string*

ORA-35168: (SIGENG02) (*number*) Contact the administrator of your *string* application.

ORA-35170: (SIGENG03) The "errorname" argument to the SIGNAL command is NA.

ORA-35172: (SNCHILD01) Either there is duplicate information beginning at *string*, or this information conflicts with a keyword.

Cause: The syntax of the current command was invalid.

Action: Check Oracle OLAP documentation for the correct syntax, and retry.

ORA-35174: (SNSYN100) The word *string* must be followed by a name.

Cause: The name of an Online Analytical Processing (OLAP) object was expected after the specified word in the command.

Action: Supply the name of an OLAP object and retry.

ORA-35176: (SNSYN101) The format of the AGGMAPINFO function is:\n \n AGGMAPINFO(aggmap-name { RELATIONS | NUMRELS | AGGINDEX | STORE | SHARE | FCACHE | MAPTYPE | { RELATION | PRECOMPUTE | STATUS } expression})

Cause: The syntax of the AGGMAPINFO function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35178: (SNSYN102) The format of the INFILE command is:\n \n INFILE {EOF | filename} [NOW] [NLS_CHARSET name] [TABEXPAND expression]

Cause: The syntax of the INFILE function was invalid.

Action: Check the error message or Oracle documentation for the correct syntax.

ORA-35180: (SNSYN103) The format of the OUTFILE command is:\n \n OUTFILE [APPEND] {EOF | TRACEFILE | filename [NOCACHE] [NLS_CHARSET name]}

Cause: The syntax of the OUTFILE command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35182: (SNSYN104) The format of the WKSDATA function is:\n \n WKSDATA(worksheetname)

Cause: The syntax of the specified WKSDATA function was invalid.

Action: Check Oracle documentation for the correct syntax.

ORA-35184: (SNSYN105) The dimension name (*string*) must be followed by one of these keywords: TO, KEEP, ADD, REMOVE, COMPLEMENT, SORT, or INSERT.

Cause: The syntax of the LIMIT command or function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35186: (SNSYN106) The word *string* must be followed by an argument such as a dimension value.

Cause: A required dimension value, or a keyword such as ALL or COMPLEMENT, was missing at the location indicated by the message.

Action: Check the Oracle documentation for the correct syntax.

ORA-35188: (SNSYN107) The word *string* must be followed by an expression.

Cause: A required expression was missing at the specified location.

Action: Check Oracle documentation for the correct syntax and retry.

ORA-35190: (SNSYN108) The TOP or BOTTOM value (*string*) must be followed by the keyword BASEDON or PERCENTOF and an expression.

Cause: A BASEDON or PERCENTOF specification, required when generating a list of TOP or BOTTOM dimension values, was missing from the command.

Action: Supply a BASEDON or PERCENTOF specification. For the correct syntax, see the Oracle documentation.

ORA-35192: (SNSYN109) The dimension name must be followed by a sort order (A or D) and a sort criterion expression.

Cause: The syntax of the SORT command or function was invalid.

Action: Check the error message text. Check the Oracle documentation for the correct syntax.

ORA-35194: (SNSYN110) The format of the INFO function is:\n \n INFO({FORECAST|PARSE|REGRESS|MODEL} choice [index1 [index2 ...]])

Cause: The syntax of the INFO function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35196: (SNSYN111) The format of the CHARLIST function is:\n \n CHARLIST(expression [dimension1 [dimension2 ...]])

Cause: The syntax of the CHARLIST function was invalid.

Action: Check the error message text or Oracle Documentation for the correct syntax.

ORA-35198: (SNSYN112) The dimension name (*string*) must be followed by one of these keywords: ADD, BULKRENAME, DELETE, MERGE, MOVE, or RENAME.

Cause: The syntax of the MAINTAIN command was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35200: (SNSYN113) An angle bracket (>) is missing after *string*.

Cause: The final angle bracket was missing from a list of dimensions or dimension values.

Action: Supply the missing angle bracket. For more information, consult the Oracle documentation.

ORA-35202: (SNSYN114) A right parenthesis or an operator is expected after *string*.

Cause: The expression could not be interpreted because a closing parenthesis or further expression operator was missing.

Action: For the correct expression syntax, consult the Oracle OLAP documentation.

ORA-35204: (SNSYN115) A label is missing after *string*.

Cause: The name of PROGRAM label was not found at the indicated location.

Action: Provide the missing label name. For more information, see Oracle OLAP documentation.

ORA-35206: (SNSYN116) The word UNION must be followed by a parenthetical list of LIST clauses.

Cause: The syntax of the limit map was invalid.

Action: Check the error message text or Oracle Database documentation for the correct syntax.

ORA-35208: (SNSYN117) An expression, SKIP, <, or ACROSS must follow 'string', or this expression conflicts with a keyword.

Cause: The syntax was invalid at the indicated location.

Action: Check the error message text or Oracle documentation for the correct syntax of the command or function where the error occurred.

ORA-35210: (SNSYN118) A colon is required after an ACROSS phrase.

Cause: The colon (:) that was required between the ACROSS specification and the rest of the command was missing.

Action: Provide the missing colon. Refer to Oracle Database documentation for more information about ACROSS.

ORA-35212: (SNSYN119) The format of the UNRAVEL function is:\n \n UNRAVEL(expression [dimension1 [dimension2 ...]])

Cause: The syntax of the UNRAVEL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35214: (SNSYN120) The format of the COMPILE command is:\n \n COMPILE name [NOWARN]

Cause: The syntax of the COMPILE command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35216: (SNSYN121) The file unit number (string) must be followed by an attribute (such as DATE) and a new value for the attribute.

Cause: The syntax of the FILESET command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35218: (SNSYN122) The format of LEAD and the LAG functions is:\n \n function(time-series nperiods time-dimension [STATUS|NOSTATUS])

Cause: The syntax of the LAG or LEAD function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35220: (SNSYN123) The format of the EXISTS function is:\n \n EXISTS(text-expression)

Cause: The syntax of the EXISTS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35222: (SNSYN135) The format of the EXTCHARS function is:\n \n EXTCHARS(text-expression [start [length]])

Cause: The syntax of the EXTCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35224: (SNSYN136) The format of the EXTLINES function is:\n \n EXTLINES(text-expression [start [length]])

Cause: The syntax of the EXTLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35226: (SNSYN137) The format of the FINDCHARS function is:\n \n FINDCHARS(search-text find-text [start [LINENUM]])

Cause: The syntax of the FINDCHARS function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35228: (SNSYN138) The format of the FINDLINES function is:\n \n FINDLINES(search-text find-text)

Cause: The syntax of the FINDLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35230: (SNSYN139) The format of the JOINCHARS function is:\n \n JOINCHARS(text-expression1 text-expression2 ...)

Cause: The syntax of the JOINLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35232: (SNSYN140) The format of the JOINLINES function is:\n \n JOINLINES(text-expression1 text-expression2 ...)

Cause: The syntax of the JOINLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35234: (SNSYN141) The format of the NUMCHARS function is:\n \n NUMCHARS(text-expression)

Cause: The syntax of the NUMCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35236: (SNSYN142) The format of the NUMLINES function is:\n \n NUMLINES(text-expression)

Cause: The syntax of the NUMLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35238: (SNSYN143) The format of the UPCASE function is:\n \n UPCASE(text-expression)

Cause: The syntax of the UPCASE function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35240: (SNSYN144) The format of the TEXTFILL function is:\n \n TEXTFILL(text-expression width)

Cause: The syntax of the TEXTFILL function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35242: (SNSYN145) The format of the INSCHARS function is:\n \n INSCHARS(text-expression characters [after-position])

Cause: The syntax of the INSCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35244: (SNSYN146) The format of the INSLINES function is:\n \n INSLINES(text-expression newtext [after-expression])

Cause: The syntax of the INSLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35246: (SNSYN147) The format of the REMCHARS function is:\n \n REMCHARS(text-expression start [length])

Cause: The syntax of the REMCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35248: (SNSYN148) The format of the REMLINES function is:\n \n REMLINES(text-expression start [length])

Cause: The syntax of the REMLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35250: (SNSYN149) The format of the REPLCHARS function is:\n \n REPLCHARS(text-expression characters [start-position])

Cause: The syntax of the REPLCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35252: (SNSYN150) The format of the REPLLINES function is:\n \n REPLLINES(text-expression newtext [start-line]).

Cause: The syntax of the REPLLINES function was invalid.

Action: Check the error message text. Use the Oracle documentation for the correct syntax.

ORA-35254: (SNSYN151) The format of the SORTLINES function is:\n \n SORTLINES(text-expression [A|D] [nls_sort [sort-exp]])

Cause: The syntax of the SORTLINES function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35256: (SNSYN152) The format of the INLIST function is:\n \n INLIST(text-master text-sublist)

Cause: The syntax of the INLIST function was invalid.

Action: Check the error message text or refer to Oracle Documentation for the correct syntax.

ORA-35258: (SNSYN153) The format of the BLANKSTRIP function is:\n \n BLANKSTRIP(text-expression [LEADING|TRAILING|BOTH])

Cause: The syntax of the BLANKSTRIP function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35260: (SNSYN154) The format of the ARG function is:\n \n ARG(n)\nwhere "n" specifies the number of the argument to be returned.

Cause: The syntax of the ARG function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35262: (SNSYN155) The format of the QUAL function is:\n \n QUAL(expression dimension1 dimvalue [dimension2 dimvalue ...])

Cause: The syntax of the QUAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35264: (SNSYN156) The format of the ARGFR function is:\n \n ARGFR(start-arg-no)

Cause: The syntax of the ARGFR function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35266: (SNSYN157) The format of the CONVERT function is:\n \n CONVERT(expression data-type [options])

Cause: The syntax of the CONVERT function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35268: (SNSYN158) The format of the OBJ function is:\n \n OBJ(choice ['name']) or OBJ(choice [text-expression])

Cause: The syntax of the specified OBJ function was invalid.

Action: Consult the Oracle documentation for syntax and available arguments for the OBJ function.

ORA-35270: (SNSYN159) The format for this type of aggregation function is:\n \n function(expression [[STATUS] dimensions])

Cause: The syntax of the aggregation function was invalid.

Action: Check the Oracle documentation for the correct syntax of the function.

ORA-35272: (SNSYN161) The ROWTOTALS attribute must immediately precede an ACROSS keyword.

ORA-35274: (SNSYN162) The first argument to GET must be a data type or the name of a dimension optionally preceded by the word NEW or VALID.

ORA-35276: (SNSYN163) The format of the ALLOCATE command is:\n \n ALLOCATE varname [SOURCE svarname] [BASIS bvarname [ACROSS dimname]] [TARGET tvarname [TARGETLOG logvarname]] [USING aggmap]

Cause: The syntax of the ALLOCATE command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax and retry.

ORA-35278: (SNSYN164) A right parenthesis (]) is missing after "string".

ORA-35280: (SNSYN165) The format of the AGGREGATE command is:\n \n AGGREGATE varname1 [varname2 varname3 ...] [USING aggmap-name] [COUNTVAR intvar-name1 [intvar-name2 intvar-name3 ...]] [FUNCDATA] [FORCEORDER] [PARALLEL #] [{FROM|FROMVAR} fromname [, fromname2 ...]]

Cause: The syntax of the AGGREGATE command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35282: (SNSYN166) The format of the AGGREGATE function is:\n \n AGGREGATE(varname [USING aggmap-name] [COUNTVAR intvar-name]

[FORCECALC] [FORCEORDER] [{FROM|FROMVAR} fromname [, fromname2 ...]]

Cause: The syntax of the AGGREGATE function was invalid.

Action: Check the error message text or Oracle Documentation for the correct syntax.

ORA-35284: (SNSYN167) The format of the IRR function is:\n \n IRR(cashflows time-dimension)

Cause: The syntax of the IRR function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35286: (SNSYN168) The format of the NPV function is:\n \n NPV(cashflows discount-rate time-dimension)

Cause: The syntax of the NPV function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35288: (SNSYN169) The format of a moving function is:\n \n function(expression, start, stop, stepsize, dimension)

Cause: The syntax of the MOVINGAVERAGE, MOVINGTOTAL, MOVINGMIN, or MOVINGMAX function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35290: (SNSYN170) The format of the CUMSUM function is:\n \n CUMSUM(expression [STATUS] dimension [resetdimension])

Cause: The syntax of the CUMSUM function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35292: (SNSYN171) The format of the ISVALUE function is:\n \n ISVALUE(dimension expression)

Cause: The syntax of the ISVALUE function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35294: (SNSYN173) The format of the STATLEN function is:\n \n STATLEN(dimension)

Cause: The syntax of the STATLEN function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35296: (SNSYN174) The format of the STATLIST function is:\n \n STATLIST(dimension [INTEGER] [width])

Cause: The syntax of the STATLIST function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35298: (SNSYN175) The format of the STATFIRST function is:\n \n STATFIRST(dimension)

Cause: The syntax of the STATFIRST function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35300: (SNSYN176) The format of the STATLAST function is:\n \n STATLAST(dimension)

Cause: The syntax of the STATLAST function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35302: (SNSYN177) The format of the STATMIN function is:\n \n STATMIN(dimension)

Cause: The syntax of the STATMIN function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35304: (SNSYN178) The format of the STATMAX function is:\n \n STATMAX(dimension)

Cause: The syntax of the STATMAX function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35306: (SNSYN179) The format of the STATVAL function is:\n \n STATVAL(dimension nth-value-to-find [INTEGER])

Cause: The syntax of the STATVAL function was invalid.

Action: Check the error message text or Oracle Documentation for the correct syntax.

ORA-35308: (SNSYN180) The format of the STATRANK function is:\n \n STATRANK(dimension [dimension-value])

Cause: The syntax of the STATRANK function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35310: (SNSYN181) The format of the INSTAT function is:\n \n INSTAT(dimension dimension-value)

Cause: The syntax of the INSTAT function was invalid.

Action: Check the error message text and correct the format of the INSTAT function or refer to Oracle documentation for the correct syntax.

ORA-35312: (SNSYN182) The format of the COLVAL function is:\n \n COLVAL(column-number)

Cause: The syntax of the COLVAL function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35314: (SNSYN183) The format of the RUNTOTAL function is:\n \n RUNTOTAL(subtotal-number)

Cause: The syntax of the RUNTOTAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35316: (SNSYN184) The format of the SUBTOTAL function is:\n \n SUBTOTAL(subtotal-number)

Cause: The syntax of the SUBTOTAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35318: (SNSYN185) The format of the INTPART function is:\n \n INTPART(expression)

Cause: The syntax of the INTPART function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35320: (SNSYN186) The format of the SQRT function is:\n \n SQRT(expression).
Cause: The syntax of the SQRT function was invalid.

Action: Check the error message text. Use the Oracle documentation for the correct syntax.

ORA-35322: (SNSYN187) The format of the LOG function is:\n \n LOG(expression)
Cause: The syntax of the LOG function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35324: (SNSYN188) The format of the LOG10 function is:\n \n LOG10(expression)
Cause: The syntax of the LOG10 function was invalid.

Action: Check the error message text or refer to Oracle Documentation for the correct syntax.

ORA-35326: (SNSYN189) The format of the ABS function is:\n \n ABS(expression)
Cause: The syntax of the ABS function was invalid.

Action: Check the error message text and correct the syntax, or refer to Oracle documentation for the correct syntax.

ORA-35328: (SNSYN190) The format of the REM function is:\n \n REM(expression1 expression2)
Cause: The syntax of the REM function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35330: (SNSYN191) The format of the MIN function is \n \n MIN(expression1 expression2)
Cause: The syntax of the MIN function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35332: (SNSYN192) The format of the MAX function is:\n \n MAX(expression1 expression2)
Cause: The syntax of the MAX function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35336: (SNSYN195) The format of the FILEOPEN function is:\n \n FILEOPEN(filename-expression {READ | WRITE | APPEND} [BINARY] [NLS_CHARSET name])
Cause: The syntax of the FILEOPEN function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35338: (SNSYN196) The format of the FILEGET function is:\n \n FILEGET(fileunit [LENGTH n])
Cause: The syntax of the FILEGET function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35340: (SNSYN197) The format of the FILEQUERY function is:\n \n FILEQUERY({fileunit-number | filename-expression} attribute)
Cause: The syntax of the FILEQUERY function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35342: (SNSYN198) The format of the SYSVAR function is:\n \n SYSVAR(system-variable-name)

Cause: The syntax of the SYSVAR function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35344: (SNSYN199) The format of the VALUES function is:\n \n VALUES(dimension [STATUS|NOSTATUS] [INTEGER])

Cause: The syntax of the VALUES function was invalid.

Action: Check the error message text, or refer to Oracle documentation for the correct syntax.

ORA-35346: (SNSYN201) The format of the LOWCASE function is:\n \n LOWCASE(text-expression)

Cause: The syntax of the LOWCASE function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35348: (SNSYN202) Invalid format for the FORECAST command.

ORA-35349: (SNSYN203) The format of the BASEVAL function is:\n \n BASEVAL(concat-dimension)

Cause: The syntax of the BASEVAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35350: (SNSYN206) The format of the KEY function is:\n \n KEY(conjoint-dimension, base-dimension)

Cause: The syntax of the KEY function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35351: (SNSYN204) The format of the BASEDIM function is:\n \n BASEDIM(concat-dimension [LEAF])

Cause: The syntax of the BASEDIM function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35353: (SNSYN205) The format of the MDQUERY function is:\n \n MDQUERY(object-type, schema-name, object-name [, refresh|norefresh])

Cause: The syntax of the MDQUERY function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35355: (SNSYN209) Invalid format for the AW command.

ORA-35356: (SNSYN210) The format of the NUMTODSINTERVAL function is:\n \n \n NUMTODSINTERVAL(number, day|hour|minute|second)

ORA-35357: (SNSYN211) The format of the NUMTOYMINTERVAL function is:\n \n \n NUMTOYMINTERVAL(number, year|month)

Cause: The syntax of the NUMTOYMINTERVAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35358: (SNSYN214) The format of the NAFILL function is:\n \n NAFILL(source-exp, fill-exp)

Cause: The syntax of the NAFILL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35360: (SNSYN215) The format of the FILENEXT function is:\n \n FILENEXT(fileunit)

Cause: The syntax of the FILENEXT function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35362: (SNSYN216) The format of the RECNO function is:\n \n RECNO(fileunit)

Cause: The syntax of the RECNO function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35364: (SNSYN217) The format of the ROUND function is:\n \n ROUND(expression1 [, expression2])

Cause: The syntax of the ROUND function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35366: (SNSYN218) The format for exporting an expression is "expression AS name" or "SCATTER AS namevar [TYPE typevar]".

ORA-35368: (SNSYN219) The format of the ROW function is:\n \n ROW(list-of-column-descriptions)

Cause: The syntax of the ROW function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35370: (SNSYN220) The format of the AW function is:\n \n AW(subfunction [, analytic workspace-name-expression])

Cause: The syntax of the analytic workspace (AW) function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35372: (SNSYN221) The format of the OBJLIST function is:\n \n OBJLIST[(analytic workspace-list-expression)]

Cause: The syntax of the OBJLIST function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35374: (SNSYN222) Invalid UNIQUELINES function syntax.

Cause: The format of the UNIQUELINES function was invalid.

Action: Correct the syntax and try again. The format of the UNIQUELINES function is 'UNIQUELINES(text-expression [nls_sort [sort-exp]])'. For more information, consult Oracle documentation.

ORA-35376: (SNSYN223) invalid JOINCOLS function syntax

Cause: The syntax of the JOINCOLS function was invalid.

Action: Correct the syntax and try again. The format of the JOINCOLS function is 'JOINCOLS(text-expression1 [, text-expression2 ...])'. For more information, consult Oracle documentation.

ORA-35378: (SNSYN224) The format of the EXTCOLS function is:\n \n EXTCOLS(text-expression [start [length]])

ORA-35380: (SNSYN225) The format of the REMCOLS function is:\n \n REMCOLS(text-expression, start [, length])

ORA-35382: (SNSYN226) Invalid REPLCOLS function syntax.

Cause: The format of the REPLCOLS function was incorrect.

Action: Correct the syntax and try again. The format of the REPLCOLS function is REPLCOLS(text-expression, overlay-expression [, start-position]). For more information, consult Oracle documentation.

ORA-35384: (SNSYN227) The format of the INSCOLS function is:\n \n INSCOLS(text-expression, insert-expression [, after-position])

ORA-35386: (SNSYN228) The format of MCALC is:\n \n MCALC(expression [ALWAYS] [SCREENBY expr] \n [method [OF] member-expr [WEIGHTBY expr]] ...)

ORA-35388: (SNSYN229) Invalid DDOF function syntax.

Cause: The format of the DDOF function was incorrect.

Action: Correct the syntax and try again. The format of the DDOF function is DDOF(expression). For more information, consult Oracle documentation.

ORA-35390: (SNSYN230) Invalid MMOF function syntax.

Cause: The format of the MMOF function was incorrect.

Action: Correct the syntax and try again. The format of the MMOF function is MMOF(expression). For more information, consult Oracle documentation.

ORA-35392: (SNSYN231) Invalid YYOF function syntax.

Cause: The format of the YYOF function was incorrect.

Action: Correct the syntax and try again. The format of the YYOF function is YYOF(expression). For more information, consult Oracle documentation.

ORA-35394: (SNSYN232) The DAYOF function syntax is invalid.

Cause: The format of the DAYOF function was invalid.

Action: Correct the syntax and try again. The format of the DAYOF function is DAYOF(expression). For more information, consult Oracle Database documentation.

ORA-35396: (SNSYN233) Invalid SIN function syntax.

Cause: The format of the SIN function was incorrect.

Action: Correct the syntax and try again. The format of the SIN function is SIN(expression). For more information, consult Oracle documentation.

ORA-35398: (SNSYN234) Invalid COS function syntax.

Cause: The format of the COS function was invalid.

Action: Correct the syntax and try again. The format of the COS function is COS(expression). For more information, consult Oracle documentation.

ORA-35400: (SNSYN235) Invalid MAKEDATE function syntax.

Cause: The format of the MAKEDATE function was invalid.

Action: Correct the syntax and try again. The format of the MAKEDATE function is MAKEDATE(year month day). For more information, consult Oracle documentation.

ORA-35402: (SNSYN236) Invalid ANTILOG function syntax.

Cause: The format of the ANTILOG function was invalid.

Action: Correct the syntax and try again. The format of the ANTILOG function is ANTILOG(expression). For more information, consult Oracle documentation.

ORA-35404: (SNSYN237) Invalid ANTILOG10 function syntax.

Cause: The format of the ANTILOG10 function was invalid.

Action: Correct the syntax and try again. The format of the ANTILOG10 function is ANTILOG10(expression). For more information, consult Oracle documentation.

ORA-35406: (SNSYN238) Invalid ROLLUP command syntax.

Cause: The format of the ROLLUP command was invalid.

Action: Correct the syntax and try again. The format of the ROLLUP command is ROLLUP variable [OVER dimension] [USING relationship]. For more information, consult Oracle documentation.

ORA-35408: (SNSYN239) Invalid STARTOF function syntax.

Cause: The format of the STARTOF function was invalid.

Action: Correct the syntax and try again. The format of the STARTOF function is STARTOF(expression). For more information, consult Oracle documentation.

ORA-35410: (SNSYN240) Invalid END OF function syntax.

Cause: The format of the END OF function was invalid.

Action: Correct the syntax and try again. The format of the END OF function is END OF(expression). For more information, consult Oracle documentation.

ORA-35412: (SNSYN241) Invalid BEGIN DATE function syntax.

Cause: The format of the BEGIN DATE function was incorrect.

Action: Correct the syntax and try again. The format of the BEGIN DATE function is BEGIN DATE(time-dimension-value). For more information, consult Oracle documentation.

ORA-35414: (SNSYN242) Invalid ENDDATE function syntax.

Cause: The format of the ENDDATE function was invalid.

Action: Correct the syntax and try again. The format of the ENDDATE function is ENDDATE(time-dimension-value). For more information, consult Oracle documentation.

ORA-35416: (SNSYN243) Invalid TCONVERT function syntax.

Cause: The format of the TCONVERT function was invalid.

Action: Correct the syntax and try again. The format of the TCONVERT function is TCONVERT(expression time-dimension method [method]). For more information, consult Oracle documentation.

ORA-35418: (SNSYN244) Invalid FILEERROR function syntax.

Cause: The format of the FILEERROR function was incorrect.

Action: Correct the syntax and try again. The format of the FILEERROR function is FILEERROR(TYPE | POSITION | WIDTH | VALUE | DIMENSION | RESET). For more information, consult Oracle documentation.

ORA-35420: (SNSYN245) Invalid payment or interest function syntax.

Cause: The format of an Oracle OLAP payment or interest function was invalid.

Action: Correct the syntax and try again. The format of a payment or interest function is FUNCTION-NAME(principal, rate, num-payments [time-dimension]). For more information, consult Oracle documentation.

ORA-35422: (SNSYN246) Invalid DEPRSL function syntax.

Cause: The format of the DEPRSL function was invalid.

Action: Correct the syntax and try again. The format of the DEPRSL function is DEPRSL(beg-val, end-val, num-pds, [FULL | HALF | exp, [time-dim]]). For more information, consult Oracle documentation.

ORA-35424: (SNSYN247) Invalid DEPRDECL function syntax.

Cause: The format of the DEPRDECL function was invalid.

Action: Correct the syntax and try again. The format of the DEPRDECL function is DEPRDECL(beg, end, n-pds, [decl-factor, [FULL | HALF | exp, [time dim]]]). For more information, consult Oracle documentation.

ORA-35426: (SNSYN248) Invalid DEPRSOYD function syntax.

Cause: The format of the DEPRSOYD function was invalid.

Action: Correct the syntax and try again. The format of the DEPRSOYD function is DEPRSOYD(beg-val, end-val, num-pds, [FULL | HALF | exp, [time- dim]]). For more information, consult Oracle documentation.

ORA-35428: (SNSYN249) Invalid GROWRATE function syntax.

Cause: The format of the GROWRATE function was invalid.

Action: 4688 // *Action: Correct the syntax and try again. The format of the GROWRATE function is GROWRATE(expression [time dim]). For more information, consult Oracle documentation.

ORA-35430: (SNSYN250) Invalid NORMAL function syntax.

Cause: The format of the NORMAL function was invalid.

Action: Correct the syntax and try again. The format of the NORMAL function is NORMAL(mean, standard-deviation). For more information, consult Oracle documentation.

ORA-35432: (SNSYN251) Invalid DEPRDECLSW function syntax.

Cause: The format of the DEPRDECLSW function was invalid.

Action: Correct the syntax and try again. The format of DEPRDECLSW is DEPRDECLSW(beg-val, end-val, num-pds, [decl-factor, FULL|HALF|exp, [sw-pd, [time dim]]]). For more information, consult Oracle documentation.

ORA-35434: (SNSYN265) Invalid format for CHGDFN command.**ORA-35436: (SNSYN267) Invalid WEEKOF function syntax.**

Cause: The format of the WEEKOF function was invalid.

Action: Correct the syntax and try again. The format of the WEEKOF function is WEEKOF(expression). For more information, consult Oracle documentation.

ORA-35438: (SNSYN268) Invalid PERMIT command syntax.

Cause: The format of the PERMIT command was invalid.

Action: Correct the syntax and try again. The format of the PERMIT command is PERMIT READ|WRITE|MAINTAIN|PERMIT WHEN bool-exp [BY bool-exp]]. For more information, consult Oracle documentation.

ORA-35442: (SNSYN270) invalid PROPERTY command syntax

Cause: The format of the PROPERTY command was incorrect.

Action: Correct the syntax and try again. The format of the PROPERTY command is: PROPERTY {prop-name [,] value} | {DELETE {ALL | prop-name}} For more information, consult Oracle documentation.

ORA-35444: (SNSYN271) invalid TRANSLATEBYTES function syntax

Cause: The format of the TRANSLATEBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the TRANSLATEBYTES function is: TRANSLATEBYTES(text 256-char-table). For more information, consult Oracle documentation.

ORA-35446: (SNSYN274) invalid LIMIT function syntax

Cause: The format of the LIMIT function was invalid.

Action: Correct the syntax and try again. The format of the LIMIT function is: LIMIT(limit arguments) For more information, consult Oracle documentation.

ORA-35448: (SNSYN276) The keyword USING must be followed by a dimension list in angle brackets .**ORA-35450: (SNSYN277) invalid CHANGECHARS function syntax**

Cause: The format of the CHANGECHARS function was invalid.

Action: Correct the syntax and try again. The format of the CHANGECHARS function is: CHANGECHARS(text-expr old-text new-text [num-to-change] [UPCASE]) For more information, consult Oracle documentation.

ORA-35456: (SNSYN281) The word *string* must be followed by an unsigned number.**ORA-35458: (SNSYN282) invalid ARCSIN function syntax**

Cause: The format of the ARCSIN function was incorrect.

Action: Correct the syntax and try again. The format of the ARCSIN function is: ARCSIN(expression). For more information, consult the Oracle documentation.

ORA-35460: (SNSYN283) invalid ARCTAN function syntax

Cause: The format of the ARCTAN function was incorrect.

Action: Correct the syntax and try again. The format of the ARCTAN function is: ARCTAN(expression). For more information, consult Oracle documentation.

ORA-35462: (SNSYN284) invalid COSH function syntax

Cause: The format of the COSH function was incorrect.

Action: Correct the syntax and try again. The format of the COSH function is: COSH(expression). For more information, consult Oracle documentation.

ORA-35464: (SNSYN285) Invalid SINH function syntax.

Cause: The format of the SINH function was incorrect.

Action: Correct the syntax and try again. The format of the SINH function is SINH(expression). For more information, consult Oracle documentation.

ORA-35466: (SNSYN286) Invalid TANH function syntax.

Cause: The format of the TANH function was incorrect.

Action: Correct the syntax and try again. The format of the TANH function is: TANH(expression). For more information, consult the Oracle documentation.

ORA-35468: (SNSYN287) Invalid TAN function syntax.

Cause: The format of the TAN function was incorrect.

Action: Correct the syntax and try again. The format of the TAN function is TAN(expression). For more information, consult Oracle documentation.

ORA-35470: (SNSYN288) Invalid ARCCOS function syntax.

Cause: The format of the ARCCOS function was incorrect.

Action: The format of the ARCCOS function is: ARCCOS(expression). Correct the syntax and retry.

ORA-35472: (SNSYN301) invalid MAXCHARS function syntax

Cause: The format of the MAXCHARS function was incorrect.

Action: Correct the syntax and try again. The format of the MAXCHARS function is MAXCHARS(text-expression). Refer to Oracle Database documentation for additional information.

ORA-35474: (SNSYN305) Invalid STATALL function syntax.

Cause: The format of the STATALL function was incorrect.

Action: Correct the syntax and try again. The format of the STATALL function is: STATALL(dimension). For more information, consult the Oracle documentation.

ORA-35476: (SNSYN306) invalid EXTBYTES function syntax

Cause: The format of the EXTBYTES function was invalid.

Action: Correct the syntax and try again. The format of the EXTBYTES function is: EXTBYTES(text-expression [start [length]]). For more information, consult Oracle documentation.

ORA-35478: (SSYN307) invalid FINDBYTES function syntax

Cause: The format of the FINDBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the FINDBYTES function is: FINDBYTES(search-text find-text [start [LINENUM]]). For more information, consult the Oracle documentation.

ORA-35480: (SNSYN308) Invalid JOINBYTES function syntax.

Cause: The format of the JOINBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the JOINBYTES function is: JOINBYTES(text-expression1 text-expression2 ...). For more information, consult the Oracle documentation.

ORA-35482: (SNSYN309) invalid NUMBYTES function syntax

Cause: The format of the NUMBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the NUMBYTES function is: NUMBYTES(text-expression). For more information, consult the Oracle documentation.

ORA-35484: (SNSYN310) invalid INSBYTES function syntax

Cause: The format of the INSBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the INSBYTES function is: INSBYTES(text-expression bytes [after-position]). For more information, consult the Oracle documentation.

ORA-35486: (SNSYN311) invalid REMBYTES function syntax

Cause: The format of the REMBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the REMBYTES function is: REMBYTES(text-expression start [length]). For more information, consult the Oracle documentation.

ORA-35488: (SNSYN312) invalid REPLBYTES function syntax

Cause: The format of the REPLBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the REPLBYTES function is: REPLBYTES(text-expression bytes [start-position]). For more information, consult the Oracle documentation.

ORA-35490: (SNSYN313) invalid CHANGEBYTES function syntax

Cause: The format of the CHANGEBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the CHANGEBYTES function is: CHANGEBYTES(text-expression old-text new-text [number-to-change]). For more information, consult the Oracle documentation.

ORA-35492: (SNSYN314) invalid MAXBYTES function syntax

Cause: The format of the MAXBYTES function was invalid.

Action: Correct the syntax and try again. The format of the MAXBYTES function is: MAXBYTES(text-expression). For more information, consult the Oracle documentation.

ORA-35494: (SNSYN315) The word ACROSS must be followed by a dimension name.

ORA-35496: (SNSYN316) invalid FILTERLINES function syntax

Cause: The format of the FILTERLINES function was incorrect.

Action: Correct the syntax and try again. The format of the FILTERLINES function is: FILTERLINES(source-exp, filter-exp). For more information, consult the Oracle documentation.

ORA-35498: (SNSYN318) invalid DBGOUTFILE command syntax

Cause: The format of the DBGOUTFILE command was incorrect.

Action: Correct the syntax and try again. The format of the DBGOUTFILE command is: DBGOUTFILE [APPEND] {EOF | file-name [NOCACHE]}. For more information, consult the Oracle documentation.

ORA-35500: (SNSYN319) invalid OBSCURE function syntax

Cause: The format of the OBSCURE function was incorrect.

Action: Correct the syntax and try again. The format of the OBSCURE function is: \n \n OBSCURE ({HASH | HIDE | UNHIDE | ENCRYPT} [, TEXT], \n seed-text, input-text). For more information, consult the Oracle documentation.

ORA-35502: (SNSYN324) INSERT must be followed by FIRST, LAST, BEFORE dimension-value, or AFTER dimension-value.

ORA-35504: (SNSYN325) Invalid IMPORT command syntax.

Cause: There was an error in the syntax of the IMPORT command.

Action: Check Oracle documentation for command syntax and retry.

ORA-35508: (SNSYN329) invalid SYSINFO function syntax

Cause: The syntax of the SYSINFO function was incorrect.

Action: Correct the syntax and try again. The format of the SYSINFO function is 'SYSINFO(user|uid|roles|profiles|hostname|termname|pid| progname|osuser| chostname|cosuser|instname)'

ORA-35510: (SNSYN330) invalid CATEGORIZE function syntax

Cause: The format of the CATEGORIZE function was incorrect.

Action: Correct the syntax and try again. The format of the CATEGORIZE function is: CATEGORIZE(expression {group literal list | group expression}). For more information, consult the Oracle documentation.

ORA-35512: (SNSYN331) invalid CORRELATION function syntax

Cause: The format of the CORRELATION function was incorrect.

Action: Correct the syntax and try again. The format of the CORRELATION function is: CORRELATION(expression1, expression2, method, [BASEDON dimension1 [dimension2 ...]]). For more information, consult the Oracle documentation.

ORA-35514: (SNSYN332) Invalid MODE function syntax.

Cause: The format of the MODE function was incorrect.

Action: Correct the syntax and try again. The format of the MODE function is: MODE(expression, BASEDON dimension). For more information, consult the Oracle documentation.

ORA-35516: (SNSYN333) invalid PERCENTAGE function syntax

Cause: The format of the PERCENTAGE function was invalid.

Action: Correct the syntax and try again. The format of the PERCENTAGE function is: PERCENTAGE (expression [BASEDON dimension1 [dimension2 ...]]). For more information, consult Oracle Database documentation.

ORA-35518: (SNSYN334) invalid UNIQUELINES function syntax

Cause: The format of the RANK function was incorrect.

Action: Correct the syntax and try again. The format of the RANK function is: RANK(expression, method, BASEDON dimension). For more information, consult the Oracle documentation.

ORA-35520: (SNSYN335) invalid SMOOTH function syntax

Cause: The format of the SMOOTH function was invalid.

Action: Correct the syntax and try again. The format of the SMOOTH function is: SMOOTH (expression, method, parameters [BASEDON dimension1 [dimension2 ...]]). For more information, consult Oracle Database documentation.

ORA-35522: (SNSYN336) invalid NLSITEMS function syntax

Cause: The format of the NLSITEMS function was invalid.

Action: Correct the syntax and try again. The format of the NLSITEMS function is: NLSITEMS ({LANGUAGE | TERRITORY}). For more information, consult Oracle Database documentation.

ORA-35524: (SNSYN337) invalid NLSAVAIL function syntax

Cause: The format of the NLSAVAIL function was incorrect.

Action: Correct the syntax and try again. The format of the NLSAVAIL function is: NLSAVAIL({LANGUAGE | TERRITORY} item-name). For more information, consult the Oracle documentation.

ORA-35526: (SORTENG10A) The expression for TOP or BOTTOM has a value of NA.

Cause: The expression must be a number greater than or equal to zero.

Action: Use the NAFILL function to supply a default value.

ORA-35528: (SORTENG10B) negative number of dimension values (*number*) requested in the TOP or BOTTOM phrase

Cause: There was a negative number of dimension values requested in the TOP or BOTTOM phrase. The TOP or BOTTOM phrase only support positive dimension values.

Action: Change your TOP or BOTTOM phrase to only use positive dimension values.

ORA-35529: (SORTENG10D) You cannot sort more than $2^{31} - 1$ values.

Cause: The product of the status lengths of the base dimensions exceeded the maximum integer value.

Action: Use fewer base dimensions or reduce the status lengths of the base dimensions.

ORA-35530: (SORTENG10C) Cannot specify a percentage greater than 100 or less than 0. Percentage *number* requested.

Cause: A percentage greater than 100 or less than 0 was specified.

Action: Percent must be a number between 0 and 100.

ORA-35532: (SPSFILE1) The file you specified is not in *string* format.

ORA-35534: (SPSFILE2) *string* files require worksheets with only two dimensions.

ORA-35536: (SPSFILE3) PRN files require worksheets with only two dimensions.

ORA-35538: (SPSIDIF01) A record (*string*) that was not in DIF format was read while importing file *string*.

ORA-35540: (SPSIWKS1) An unexpected end-of-file occurred in spreadsheet file *string*. Check your data to make sure you imported all you expected.

ORA-35542: (SPSRREC01) An unexpected end-of-file occurred while importing file *string*. Check your data to make sure you imported all you expected.

ORA-35544: (SQA03) The SQL data in column *number* of your fetch statement cannot be converted to type *string*.

ORA-35548: (SQCGEXE01) SQL statement-name '*string*' has not been prepared in the current program.

ORA-35550: (SQCGOPN01) SQL cursor '*string*' has not been declared in the current program.

ORA-35554: (SQCSRNAM00) SQL cursor name '*number*' has an invalid length of *number*. A cursor name must have a length of 1 to 18 bytes, inclusive.

ORA-35556: (SQCSRNAM01) SQL cursor name '*number*' has an invalid first character. Use a-z, @, # or \$.

ORA-35558: (SQCSRNAM02) SQL cursor name '*number*' contains an invalid character. Use a-z, 0-9, @, #, \$ and _.

ORA-35559: (SQCSRNAM03) SQL cursor name cannot be INTO.

ORA-35560: (SQGETCD01) Conjoint dimension *workspace object* cannot be an input host variable. You can use the current values of its bases via the KEY function.

ORA-35561: (XSRWLD01) Object *workspace object* is not a valid target.
Cause: An invalid object was specified as a target.

Action: Choose a valid object as a target.

ORA-35562: (SQLIMP01) The SQL IMPORT command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.

Cause: The expression in the source query do not match the targets in the INTO clause.

Action: Make sure the the expressions in the source query match the targets in the INTO clause.

ORA-35563: (XSRWLD17) Multiple values exist for an attribute of this dimension member.

Cause: Multiple source table rows containing different values for a dimension attribute were found. Only the first of the multiple rows has been loaded.

Action: Fix the mapping or remove the rows with conflicting attribute values.

ORA-35564: (XSRWLD02) Cannot convert from the *string* type to the *string* type.

Cause: Conversion from source to target is not allowed

Action: Choose a different target datatype

ORA-35565: (XSRWLD03) For object *workspace object* only APPEND, MATCH or ASSIGN may be used.

Cause: An incorrect setting was applied to the target

Action: For DIMENSIONS use APPEND or MATCH, for SURROGATEs use ASSIGN.

ORA-35566: (XSRWLD04) Object *workspace object* cannot be used with QDRs

Cause: A QDR was placed on a target dimension

Action: Remove the QDR on the target dimension

ORA-35568: (SQLIMP03) The datatype of variable *number* should be INTEGER, LONGINTEGER or SHORTINTEGER.

Cause: The target variable was not INTEGER, LONGINTEGER or SHORTINTEGER.

Action: The target variable must be INTEGER, LONGINTEGER or SHORTINTEGER.

ORA-35569: (XSRWLD05) An error was encountered in converting data *string* to *string* in column *number*.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35570: (XSRWLD06) A column value is not a valid member of its target dimension.

Cause: The source value for a dimension is not an existing member of the dimension.

Action: Ensure the column value is an existing member of its target dimension.

ORA-35571: (XSRWLD07) The maximum number of load errors has occurred. No changes from this step were committed to the database.

Cause: The number of load errors exceeded the specified maximum.

Action: Fix the load errors, or increase the maximum number allowed and rerun the load.

ORA-35572: (XSRWLD08) A column value is not a valid member of its related dimension.

Cause: The source data for a relation is not a member of the related dimension.

Action: Ensure the source data is a valid member of the related dimension.

ORA-35573: (XSRWLD09) An incoming dimension value is null.

Cause: A source value for a dimension is null.

Action: Ensure the source data for the dimension is not null.

ORA-35574: (SQLOUT02) SQL cursor '*number*' is not known in the current logical unit of work.**ORA-35575: (SQLOUT04) The *string* command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.****ORA-35576: (SQLOUT09) SQL cursor '*number*' is not open.**

ORA-35577: (SQLOUT10) SQL cursor '*number*' has already been declared with a different SELECT statement.

ORA-35578: (SQLOUT11) SQL cursor '*number*' cannot be used with CURRENT OF *cursor name* syntax

Cause: The CURRENT OF *cursor* syntax in the WHERE clause tried to use a cursor that was not declared with the FOR UPDATE [of *column name*] SQL syntax.

Action: Add the FOR UPDATE [OF *column name*] SQL syntax to the cursor specified.

ORA-35579: (SQLOUT12) SQL cursor '*number*' has already been opened.

ORA-35580: (XSRWLD10) An incoming column contains a data type mismatch.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35581: (XSRWLD11) You do not have permission to write this value of the target.

Cause: You do not have sufficient permissions to write to the specified target.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions.

ORA-35582: (XSRWLD12) Cannot change the level of dimension member "*number*" from "*number*" to "*number*" within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35583: (XSRWLD13) Cannot change the level of a dimension member within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35584: (SQLOUT17) The *string* procedure requires *number* parameters.

ORA-35585: (XSRWLD14) This SQL query generated rejected records.

Cause: Rejected records were generated by this query.

Action: Locate the records that were rejected and resolve the rejection (for example, data, mapping, and so on).

ORA-35586: (SQLOUT19) The parameter list passed to the procedure is syntactically incorrect.

ORA-35587: (SQLOUT20) The nesting of table functions and SQL commands has exceeded the maximum of *number* levels.

Cause: The nesting of table functions with the PREDMLCMD token populated with an OLAP DML expression that use the embedded SQL support to access another table function which contains a table functions with the PREDMLCMD token filled in with an OLAP DML expression that uses the embedded SQL support.

Action: Reduce the level of nesting between table functions and OLAP DML embedded SQL support.

ORA-35588: (XSRWLD15) Cannot change the parent of existing dimension member "number" from "number" to "number" in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35589: (XSRWLD16) Cannot change the parent of an existing dimension member in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35590: (SQPHRASE01) The host variable expression has invalid syntax.

ORA-35592: (SQRT00) The argument to SQRT is negative. Set ROOTOFNEGATIVE to YES if you want NA to be returned for the root of a negative number.

ORA-35594: (SSCGEXP01) The LIMIT criterion expression must be dimensioned by workspace object.

Cause: The LIMIT criterion did not have the dimension that LIMIT requires.

Action: If the target is a VALUESET, check its VALUESET attribute.

ORA-35596: (SSCGEXP02) The LIMIT criterion expression must be dimensioned by workspace object, which is a component of workspace object.

Cause: The LIMIT criterion expression was not a dimension of all the base dimensions of the composite.

Action: Use a LIMIT criterion that is dimensioned by all the base dimensions of the composite.

ORA-35600: (SSCGLIMT01) The IFNONE label is not allowed when you specify NULL status.

Cause: The LIMIT to NULL IFNONE label was specified which is not allowed.

Action: Use GOTO, if that is the desired behavior.

ORA-35602: (SSCGLIMT02) You cannot limit dimension composite workspace object.

Cause: The LIMIT of composite dimensions was specified which is not allowed.

Action: If a limit is required, then specify the limit in the base dimensions // of the composite dimension.

ORA-35603: (SSCGLIMT03) cannot limit partition template workspace object

Cause: An attempt was made to limit a partition template, which is not allowed.

Action: Limiting partition templates is not allowed.

ORA-35604: (SSCGNULL01) The phrase "IFNONE label" can only be used when the LIMIT command executes in a program.

Cause: This specified command was not used in a program.

Action: Use this command in a program to intercept NULL status.

ORA-35606: (SSCGNULL02) *string* is not defined as a label.

Cause: The IFNONE label did not exist.

Action: Change the program to add the label or correct its spelling.

ORA-35610: (SSCGREL01) *workspace object* and *workspace object* are not related.

Cause: The target and source dimensions were not related.

Action: Choose a related dimension.

ORA-35612: (SSCGREL02) Related dimension values are not allowed when you specify a scalar or multi-dimensional relationship array.

Cause: The name of the related dimension is unknown.

Action: Enclose the values in a limit function on the related dimension that they represent.

ORA-35614: (SSCGREL03) *workspace object* is not a relationship involving *workspace object*.

Cause: In an attempt to limit a dimension to the values of a relation or a related dimension, an object was specified that was not a relation or a dimension, or that was not related to the dimension being limited.

Action: Specify a related dimension, or a relation that involves both the target dimension and the dimension to be used as a filter.

ORA-35622: (SSCGREL07) *workspace object* is not a relation of *workspace object*.

Cause: The RELATION argument to LIMIT was not valid.

Action: Find a relation with the correct RELATION attribute.

ORA-35623: (XSSCLLEV07) *workspace object* is not a VALUESET of *workspace object*.

Cause: LEVELREL expected a VALUESET of the dimension argument.

Action: Use a VALUESET of the target dimension.

ORA-35624: (SSCGREL08) *workspace object* is not dimensioned by *workspace object*.

Cause: This relation was not a valid self relation for the target dimension.

Action: Find or create a valid self relation.

ORA-35625: (XSSCLLEV08) *workspace object* is not dimensioned by *workspace object*.

Cause: The relation was not a valid LEVELREL for target dimension.

Action: Use a valid LEVELREL.

ORA-35626: (SSCGREL09) *workspace object* is not related to itself.

Cause: LIMIT did not find a relation that was both a relation of and dimensioned by this dimension.

Action: Define this relation and assign values to it.

ORA-35627: (XSSCLEV09) workspace object is not a relationship array.

Cause: LIMIT or SORT expected a RELATION name.

Action: Fix the RELATION argument to LIMIT or SORT.

ORA-35628: (SSCGREL10) workspace object is not a dimension of relation workspace object.

Cause: A dimension of the relation or its relation dimension was expected.

Action: Describe the relation and choose the one of its dimensions.

ORA-35629: (XSBASLIM00) workspace object does not have base dimensions.**ORA-35630: (SSCGREL11) While limiting dimension workspace object, it was used to qualify relation workspace object.**

Cause: The target dimension was used to qualify a relation while it was being limited.

Action: Remove this clause from the LIMIT command.

ORA-35632: (SSCGREL12) While limiting an alias of workspace object, it was used to qualify relation workspace object.

Cause: The target dimension was used to qualify a relation.

Action: Remove this clause from the LIMIT command.

ORA-35633: (STATEQ01) Both arguments to STATEQUAL must be status lists of the same dimension.

Cause: The arguments are status lists of different dimensions.

Action: Use two status lists of the same dimension.

ORA-35634: (SSCGVALS01) The format of a related dimension list is:\n related-dimension [valuelist] | relationship-array-name

Cause: Incorrect syntax was used to specify a relate-dimension list.

Action: Consult Oracle Documentation for correct syntax of related- dimension lists.

ORA-35636: (SSCGVALS02) workspace object is a dimension composite and its position numbers cannot be used in LIMIT NOCONVERT.

Cause: The specified dimension composites did not have position numbers.

Action: None

ORA-35640: (SSEXECUT03) cannot MAINTAIN ADD workspace object while it is being limited

Cause: The MAINTAIN ADD command has been called by the LIMIT command or function. The LIMIT call must invoke the MAINTAIN ADD statement from a PROGRAM.

Action: 'PRGTRACE = ON' will show each line of the programs as they are executed. Use this to find and remove the MAINTAIN ADD commands.

ORA-35642: (SSEXECUT07A) The expression for the beginning of the dimension range has a value of NA.

Cause: The values for the beginning and ending of a dimensions range need to be non-NA values.

Action: Fix the caller to check for NA values.

ORA-35644: (SSEXECUT07B) The expression for the end of the dimension range has a value of NA.

Cause: The values for the beginning and ending of a dimensions range must be non-NA values.

Action: Fix the caller to check for NA values.

ORA-35646: (SSEXECUT08) The expression for BEFORE or AFTER has a value of NA.

Cause: The BEFORE or AFTER value is NA.

Action: Fix the caller to supply a correct value.

ORA-35648: (SSEXECUT09) The expression for FIRST or LAST has a value of NA.

Cause: LIMIT did not allow NA values for FIRST or LAST.

Action: Either test the value before using LIMIT or fix the expression to exclude NA values.

ORA-35650: (SSEXECUT15) The expression for BEFORE or AFTER is not in current status.

Cause: BEFORE and AFTER must be followed by a value in current status.

Action: Fix the BEFORE or AFTER expression.

ORA-35652: (SSFRLST01) In the FIRST or LAST phrase, you requested a negative number of dimension values (*number*).

Cause: A negative number has no meaning in this context.

Action: If you want zero to be used instead of a negative number, then write an expression that converts the negative number to zero.

ORA-35654: (SSNULL) The status of the *workspace object* dimension cannot be set to null.

Cause: If OKNULLLSTUS is FALSE the LIMIT command will not set status to NULL.

Action: Set OKNULLSTATUS to TRUE or use the IFNONE option.

ORA-35656: (STATCHK00) *workspace object* has no values in status.

ORA-35658: (STATLIST01) The data width argument to the STATLIST function must be greater than zero.

ORA-35660: (STATVAL03) The *workspace object* dimension does not have a status value numbered *number*.

ORA-35662: (STKTOINF01) The width argument to the CONVERT(... INFILE) function was *number*. The limit is *number*.

ORA-35664: (STKTOINF02) Conversion to INFILE would produce a value *number* bytes wide, exceeding the maximum input line length *number*.

ORA-35666: (STRBYT01) NTEXT arguments to the BYTE functions must be converted to TEXT. Use CONVERT(value TEXT NOTRANSLATE) to avoid translation.

ORA-35668: (STRCHG01) The oldtext and newtext arguments must be single-line text values.

ORA-35670: (STRCHG02) The oldtext argument must contain at least one character.

ORA-35672: (STRCHG03) The number-to-change argument must be greater than 0.

ORA-35674: (STRDEL01) The position of the first character to remove must be at least 1.

ORA-35676: (STRDEL02) You must remove at least one character. You cannot remove *number* characters.

ORA-35678: (STREXTR01) The position of the first character to extract must be greater than zero. You cannot start extracting at position *number*.

ORA-35680: (STREXTR02) You must extract at least one character. You cannot extract *number* characters.

ORA-35682: (STRFIND01) The start argument must be at least 1.

ORA-35684: (STRINS01) Insertion must begin after a character position of zero or greater.

ORA-35686: (STRINS02) The length of one line of a text value cannot exceed *number* characters. You attempted to create a line with *number* characters.

ORA-35688: (STRREP01) The position of the first character to replace must be at least 1.

ORA-35690: (SUBGONE00) You have requested a feature or used a command that is not supported in this release.

ORA-35692: (TDENDPT00) Dimension *workspace object* is empty.

ORA-35694: (TDINCNUM00) You attempted to work with a date outside of the allowable range.

ORA-35696: (TEXTFENG01) The data width argument to the TEXTFILL function must be greater than zero.

ORA-35698: (TFGROUP01) Dimension *workspace object* appears in more than one GROUP phrase, either directly or via a dimension composite or conjoint dimension.

ORA-35700: (TFGROUP02) An expression used in a GROUP phrase must have exactly one dimension.

ORA-35702: (TFPARSE01) Dimension *workspace object* appears in both the DOWN phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35704: (TFPARSE02) Dimension *workspace object* appears in both the DOWN phrase and an ACROSS phrase, either directly or via a conjoint dimension or composite.

ORA-35706: (TFPARSE03) Dimension *workspace object* appears both inside and outside an ACROSS loop.

ORA-35708: (TFPARSE04) The expressions used in the DOWN phrase must all have the same single dimension.

ORA-35710: (TFPARSE05) The DOWN phrase must be a single expression or a list of expressions enclosed in angle brackets .

ORA-35712: (TFPARSE07) Dimension *workspace object* appears in both an ACROSS phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35716: (TRIGGER00) NA trigger calls exceed the maximum allowable depth of *number*.

ORA-35718: (TRIGGER01) The NA trigger expression for variable *workspace object* contains invalid syntax.

Cause: The NA trigger expression had a syntax error.

Action: Consult Oracle Database documentation to correct your expression syntax.

ORA-35720: (TRIGGER02) The NA trigger for *workspace object* could not be executed recursively because the RECURSIVE option is set to NO.

Cause: An attempt was made to call the NA trigger recursively.

Action: Set the option RECURSIVE on. For example, RECURSIVE = YES.

ORA-35726: (TSFENG01) The starting point (*number*) for a moving function must be less than or equal to the stopping point (*number*).

ORA-35728: (TSFENG02) The step value (*number*) for a moving function must be greater than zero.

ORA-35730: (TSFENG03) The starting point, stopping point, and step value for a moving function cannot be NA.

ORA-35732: (UNITCHEK01) *number* is an invalid file unit number.

Cause: The specified file unit number did not identify an open file unit.

Action: Open a new file using FILEOPEN to obtain a new file unit number, or use the LISTFILES command to obtain the unit number of an open file.

ORA-35734: (UNITCHEK02) File unit *number* is not open.

ORA-35736: (VALNAME01) You cannot define NAME. NAME is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-35738: (VCLEX01) "*number*" is not a valid dimension value because it contains invalid characters or blanks, but it is not enclosed in single quotes.

ORA-35740: (VCLEX02) *string* is too large to be an integer.

ORA-35742: (VCLEX06) *number* already exists in the *string* analytic workspace.

ORA-35744: (VCLEX07) "*number*" is not a valid name because it contains invalid characters or blanks.

ORA-35746: (VCLEX08) *string* is too large to be a short integer.

ORA-35748: (VCOVRFLW01) A text value cannot be more than *number* characters long. Your value is *number* characters long.

ORA-35749: (VCHEX01) '*character*' is not a valid hexadecimal digit.

Cause: The text being converted contains an invalid hexadecimal digit.

Action: Replace the character with a digit in the range 0-9 or A-F.

ORA-35750: (VCTOBOOL01) A multiline text value cannot be converted to a BOOLEAN.

Cause: A multiline string must be converted one line at a time.

Action: Use the EXTLINES function to extract a single line to convert.

ORA-35752: (VCTODT00) 'string' is not a valid date order. Valid orders are YMD, YDM, MYD, MDY, DMY, and DYM.

ORA-35754: (VCTODT01) 'number' is not a valid date because *number* is out of range for a month.

ORA-35756: (VCTODT02) 'number' is not a valid date because *number* is out of range for a year.

Cause: n'%1p'

Action: n/a

ORA-35758: (VCTODT03) 'number' is not a valid date because *number* is out of range for a day of the month.

Cause: The numeric value of day was invalid for this year and month.

Action: Specify a valid numeric value in day for the specified year and month. Then, retry the operation.

ORA-35760: (VCTODT04) 'number' is not a valid date because it is ambiguous.

ORA-35762: (VCTODT05) 'number' is not a valid packed numeric date.

ORA-35764: (VCTODT06) 'number' is not a valid date.

ORA-35766: (VCTODT07) 'number' is not a valid date or name for the *workspace object* dimension.

ORA-35768: (VCTODT08) 'number' is not a valid name for *workspace object*, because the period *number* is out of range.

Cause: The wrong number days, weeks or months in a year was specified.

Action: Correct the first word in this error to be a valid date.

ORA-35770: (VCTODT15) 'number' is not a valid date. The numeric field 'string' cannot be interpreted.

ORA-35772: (VCTODT16) 'number' is not a valid date. 'string' is the second year field encountered.

Cause: Two year fields were entered.

Action: Remove the second year field.

ORA-35774: (VCTODT17) 'number' is not a valid date. A second alphabetic field, 'string', is not allowed.

Cause: The date contains two values for month.

Action: Enter a single valid date.

ORA-35776: (VCTODT18) 'number' is not a valid date. A date cannot end with a separation character.

ORA-35778: (VCTODT19) 'number' is not a valid date. Input after 'string' is extra.

ORA-35780: (VCTODT20) A date cannot be an empty string.

ORA-35782: (VCTODT21) '*number*' is not a valid date because it is incomplete.

ORA-35784: (VCTODT22) '*number*' is not a valid date. Packed numeric notation must be 6 or 8 digits long.

ORA-35786: (VCTODT23) '*number*' is not a valid date. '*string*' cannot be recognized as a month name.

Cause: An invalid month name was specified.

Action: Specify a valid month name.

ORA-35788: (VCTODT24) '*number*' is not a valid date. There are too many leading zeros beginning at '*string*'.

ORA-35790: (VCTODT25) '*number*' is not a valid date. A date cannot begin with '*string*'.

Cause: The date was invalid. Valid dates cannot begin with the specified characters.

Action: Use a correct date value.

ORA-35792: (VCTODT27) '*number*' is not a valid date. '*string*' is not a valid character.

ORA-35794: (VCTORD01) A multiline text value cannot be converted to a number.

Cause: A multiline string must be converted one line at a time.

Action: Use the EXTLINES function to extract a single line to convert.

ORA-35796: (VERFAIL01) Your response does not meet the requirements for this item.

ORA-35798: (VERFAIL02) *string*

ORA-35800: (VSDOKAY01) Discarding compiled code for *workspace object*, because *number* now resolves to a value of *workspace object*. Previously, it resolved to a value of *workspace object*.

ORA-35802: (VSDOKAY02) Discarding compiled code for *workspace object*, because *number* is no longer a value of *workspace object*.

ORA-35804: (WATCHXEQ01) Watch point *number*: *number* is true in *workspace object* at statement:

ORA-35810: (XSINPUTERR) The command has requested more input than was supplied in the command string.

Cause: The command required input that was not supplied in the string.

Action: Reexecute the command with the required input.

ORA-35812: (XSACROSS01) The *string* command cannot be executed by ACROSS.

ORA-35818: (XSCAT01) Group definition values cannot be NA.

ORA-35820: (XSCAT02) Each group definition value must be greater than its predecessor.

ORA-35822: (XSCGCAT01) The source expression must be numeric.

ORA-35824: (XSCGCAT02) The group expression must be numeric.

ORA-35826: (XSCGCAT03) The group expression must be one-dimensional.

ORA-35828: (XSCGCORR01) Data expressions must be numeric.

Cause: The data expressions were not numeric.

Action: Correct the data expressions to be numeric.

ORA-35830: (XSCGCORR02) BASEDON names must be dimensions.

Cause: The BASEDON expression was not followed by the name of a dimension.

Action: Use a dimension name with the BASEDON expression.

ORA-35832: (XSCGCORR03) BASEDON names must be dimensions of both data expressions.

Cause: The BASEDON dimension was not a dimension of both data expressions.

Action: Either omit the BASEDON clause or choose a dimension of both data expressions.

ORA-35834: (XSCGCORR04) Duplicate BASEDON dimensions were named.

Cause: The same BASEDON dimension was specified twice.

Action: Remove the duplicate BASEDON clause.

ORA-35836: (XSCGCORR05) The two expressions must have at least one common dimension.

Cause: The two expression parameters to the CORRELATION function must have at least one dimension in common.

Action: Correct the expression parameters to CORRELATION function.

ORA-35838: (XSCGMODE01) The data expression must be numeric.

Cause: The data expression was not numeric.

Action: Correct the data expression to be numeric.

ORA-35840: (XSCGMODE02) BASEDON names must be dimensions.

Cause: BASEDON was not followed by the name of a dimension.

Action: Use a dimension name.

ORA-35842: (XSCGMODE03) BASEDON names must be dimensions of the data expression.

Cause: The BASEDON dimension was not one of the dimensions of the data expression.

Action: Either omit the BASEDON clause or choose one of the dimensions of the data expression.

ORA-35844: (XSCGMODE04) Duplicate BASEDON dimensions are named.

Cause: The same BASEDON dimension was specified twice.

Action: Remove the duplicate BASEDON clause.

ORA-35846: (XSCGPCTAGE01) The data expression must be numeric.

Cause: The data expression was not numeric.

Action: Correct the data expression to be numeric.

ORA-35848: (XSCGPCTAGE02) BASEDON names must be dimensions.

Cause: BASEDON was not followed by the name of a dimension.

Action: Use a dimension name.

ORA-35850: (XSCGPCTAGE03) BASEDON names must be dimensions of the data expression.

Cause: The BASEDON dimension was not one of the dimensions of the data expression.

Action: Either omit the BASEDON clause or choose one of the dimensions of the data expression.

ORA-35852: (XSCGPCTAGE04) Duplicate BASEDON dimensions are named.

Cause: The same BASEDON dimension was specified twice.

Action: Remove the duplicate BASEDON dimension.

ORA-35854: (XSCGRANK01) The data expression must be numeric.

Cause: The data expression was not numeric.

Action: Correct the data expression to be numeric.

ORA-35856: (XSCGRANK02) BASEDON names must be dimensions.

Cause: BASEDON was not followed by the name of a dimension.

Action: Use a dimension name.

ORA-35858: (XSCGRANK03) BASEDON names must be dimensions of the data expression.

Cause: The BASEDON dimension was not one of the dimensions of the data expression.

Action: Either omit the BASEDON clause or choose one of the dimensions of the data expression.

ORA-35860: (XSCGRANK04) Duplicate BASEDON dimensions are named.

Cause: The same BASEDON dimension was specified twice.

Action: Remove the duplicate BASEDON dimension.

ORA-35862: (XSCGSMOOTH01) The data expression must be numeric.

Cause: The data expression was not numeric.

Action: Change the data expression to be numeric.

ORA-35864: (XSCGSMOOTH02) You have not supplied enough smoothing parameters.

Cause: Not enough smoothing parameters were supplied. SINGLE smoothing requires one parameter and double smoothing requires three parameters.

Action: Supply the alpha parameter for SINGLE and the alpha, beta, and m parameters for DOUBLE.

ORA-35866: (XSCGSMOOTH03) The smoothing parameters must be numeric.

Cause: One or more of the smoothing parameters was not numeric.

Action: Correct the smoothing parameters to be numeric.

ORA-35868: (XSCGSMOOTH04) BASEDON names must be dimensions.

Cause: BASEDON must be followed by the name of a dimension.

Action: Use a dimension name.

ORA-35870: (XSCGSMOOTH05) BASEDON names must be dimensions of the data expression.

Cause: The BASEDON dimension was not one of the dimensions of the data expression.

Action: Either omit the BASEDON clause or choose one of the dimensions of the data expression.

ORA-35872: (XSCGSMOOTH06) Duplicate BASEDON dimensions are named.

Cause: The same BASEDON dimension was specified twice.

Action: Remove the duplicate BASEDON clause.

ORA-35874: (XSFCAST01) The *string* forecasting option cannot be set.

ORA-35876: (XSFCAST02) You must use an INTO phrase to specify an output location for the forecast results.

ORA-35878: (XSFCAST03) The *string* forecasting option cannot be queried.

ORA-35880: (XSFCAST04) You cannot specify a trial number when querying the *string* forecasting option.

ORA-35882: (XSFCAST05) You must specify a trial number when querying the *string* forecasting option.

ORA-35884: (XSFCAST06) The forecasting context handle cannot be NA.

ORA-35886: (XSFCAST07) The time dimension *workspace object* has *number* values in status. The limit is *number*.

ORA-35888: (XSFCAST08) The time dimension *workspace object* has no values in status.

ORA-35890: (XSFCAST09) The time dimension *workspace object* has only *number* values in status. You cannot specify *number* historical periods.

ORA-35892: (XSFCAST10) The *string* target variable must also be dimensioned by *string*.

ORA-35894: (XSFCAST11) *string* must be less than or equal to *string*. The current values are *number* and *number*, respectively.

ORA-35896: (XSFCAST12) The value of *string* must evenly divide the difference between MIN and MAX values. The current values are *number*, *number*, and *number*.

ORA-35898: (XSFCAST13) The trial number for querying *string* cannot be NA.

ORA-35900: (XSFCAST14) *number* is not the handle of an open forecasting context.

ORA-35902: (XSFCAST15) You cannot specify an NA value for *string*.

ORA-35904: (XSFCAST16) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35906: (XSFCAST17) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35908: (XSFCAST18) '*number*' is not a recognized value of *string*.

ORA-35910: (XSFCAST19) The forecasting context *number* has been invalidated because one or more of the extra dimensions of the time-series expression is no longer available.

ORA-35912: (XSFCAST20) A forecasting context identified by the text '*string*' already exists. Its handle is *number*.

ORA-35914: (XSFCAST21) Values of the TRADINGDAYS expression cannot be less than or equal to zero.

ORA-35916: (XSHIDE01) *workspace object* is not a program or model.

Cause: An attempt was made to HIDE an object that was a type other than PROGRAM or MODEL.

Action: Apply the HIDE command only to PROGRAM or MODEL objects.

ORA-35917: (XSHIDE05) Cannot HIDE model *workspace object* because the analytic workspace in which it is defined has not been upgraded to version *string*.

Cause: An attempt was made to apply the HIDE command to a model in an analytic workspace that was not upgraded to the necessary compatibility level.

Action: Ensure that the database is running in the appropriate compatibility mode, and upgrade the analytic workspace.

ORA-35918: (XSHIDE02) You do not have access to *workspace object*.

Cause: Permission to read the text of the named object was not granted.

Action: Acquire the necessary READ permission on the object and retry the command.

ORA-35919: (XSHIDE06) The encryption seed text for *string* must be at least *number* characters in length.

Cause: Seed text shorter than the minimum required length was specified.

Action: Specify seed text that is at least as long as the length specified.

ORA-35920: (XSHIDE03) The encryption seed for HIDE and UNHIDE must be a non-empty, one-line TEXT value.

Cause: An invalid encryption seed text was specified.

Action: Ensure that the seed expression yields a single-line value.

ORA-35922: (XSHIDE04) *workspace object* is already hidden

Cause: The user tried to HIDE a program or model that was already hidden.

Action: Either take no action, or UNHIDE the object before trying to HIDE it.

ORA-35924: (XSMOOTH01) Smoothing parameters cannot be NA.

ORA-35926: (XSMOOTH02) Smoothing constants must be between 0 and 1.

ORA-35928: (XSMOOTH03) Cannot compute valuespace offset

ORA-35930: (XSPCTAGE01) Cannot compute valuespace offset

ORA-35950: (OBSCURE01) The seed expression argument to OBSCURE cannot be NA.

Cause: The OBSCURE seed expression evaluated to NA.

Action: Ensure that the OBSCURE seed expression evaluates to a single-line text value.

ORA-35951: (OBSCURE02) The ENCRYPT option of OBSCURE is not supported at the current compatibility level.

Cause: An attempt was made to use the ENCRYPT option of the OBSCURE function, which is not supported for a compatibility level earlier than 12.2.0.2.

Action: Raise the compatibility level or choose a different OBSCURE option.

ORA-35952: (XSSPFC01) The *string dimension workspace object* and the *string dimension workspace object* must have the same number of values in status for SPFCEXEC method *number*.

Cause: This method requires the named dimensions to have the same number of values in status, but the user provided statuses of different lengths.

Action: Relimit the dimensions so that their status lengths are the same.

ORA-35958: (XSPGREPORT01) Of *number* allocated pages *number* are currently in use, *number* are available for use, *number* are hard-locked, and *number* are soft-locked.

ORA-35964: (COPYDFN01) You must have a current analytic workspace to perform a COPYDFN.

ORA-35966: (COPYDFN02) Invalid COPYDFN command syntax.

Cause: The format of the COPYDFN command was incorrect.

Action: Correct the syntax and try again. The format of the COPYDFN command is: COPYDFN newname oldname. For more information, consult the Oracle documentation.

ORA-35968: (COPYDFN03) Analytic workspace object %1 does not exist.

ORA-35970: (COPYDFN05) You cannot copy the definition of an OPTION.

ORA-35972: (COPYDFN06) %1 is an invalid name for an analytic workspace object.

ORA-35974: (DBDESC00) There are no objects in this analytic workspace.

Cause: There was nothing in the analytic workspace to report.

Action: Use the DBDESCRIBE program on non-empty analytic workspaces.

ORA-36017: (XSHIERCK10) The definition of hierarchy *workspace object* over *number* in level *number* is not star consistent. The collision parents include *number*.

Cause: The definition of the hierarchy was not star consistent.

Action: Change the definition of the hierarchy.

ORA-36018: (XSHIERCK02) The format of the HIERCHECK command is:\n\n HIERCHECK relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation] \nOr\n HIERCHECK aggmap [MULTIPATH] [CONSISTENT]

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36019: (XSHIERCK11) The format of the HIERSHAPE function is:\n\n HIERSHAPE(relation[(qdr)] {level|ragged|skiplevel|regular} USING levelrel [INHIERARCHY inhvs] LEVELORDER levels)

Cause: The wrong object type or the wrong object definition was specified.

Action: Change the object type or use the correct object definition.

ORA-36020: (XSHIERCK03) The definition of hierarchy *workspace object* over *number* is inconsistent.

Cause: The definition of the hierarchy was inconsistent.

Action: Change the definition of the hierarchy.

ORA-36021: (XSHIERCK12) The format of the HIERCHECK function is:\n\n HIERCHECK(relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation]) \nOr\n HIERCHECK(aggmap [MULTIPATH] [CONSISTENT])

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36022: (XSHIERCK04) Valuesets specified in the HIERCHECK command must be scalar. *workspace object* is dimensioned.

Cause: The HIERCHECK command specified a dimensioned valueset.

Action: Specify a scalar valueset in its place.

ORA-36024: (XSHIERCK05) Valueset *workspace object* must contain values of one of the extra dimensions of relation *workspace object*.

Cause: The HIERCHECK command specified a valueset over an invalid dimension.

Action: Specify a valueset containing values of one of the self-relation's extra dimensions (the dimensions in the relation's dimension list, minus the self-related dimension itself).

ORA-36025: (XSHIERCK06) The level dimension of the level relation *workspace object* is the same as the relation dimension *workspace object*.

Cause: The level dimension was the same as the relation dimension.

Action: Change the definition of the level relation.

ORA-36026: (XSHIERCK07) Level relation *workspace object* is not dimensioned by relation dimension *workspace object*.

Cause: The level relation was not dimensioned by the relation dimension.

Action: Change the definition of the level relation.

ORA-36027: (XSHIERCK08) Hierarchy workspace object is not balanced.

Cause: The current hierarchy was not balanced.

Action: Change the hierarchy to balanced.

ORA-36028: (XSHIERCK09) Hierarchy workspace object has multiple paths from *number* to *number*.

Cause: The current hierarchy had multiple paths.

Action: Remove multiple paths from the hierarchy.

ORA-36034: (XSMHIERCK00) One or more loops have been detected in relationship workspace object over workspace object. The last *number* of the items are *number*.

Cause: A relation was used that contained loops. There were more items involved than could be reported.

Action: Correct the relation so that it does not contain loops.

ORA-36035: (XSMHIERCKREL) One or more loops have been detected in workspace object. *number* items involved are *number*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36036: (XSMHIERCK01) One or more loops have been detected in relationship workspace object over workspace object. The *number* items involved are *number*.

Cause: A relation was used that contained loops.

Action: Correct the relation so that it does not contain loops.

ORA-36038: (INTL00) No application code specified

ORA-36040: (INTL01) IMPORTANT: The length of the following phrase(s) exceeds %1. They will be truncated.

ORA-36042: (INTL02A) The %1 language analytic workspace for %2 could not be attached, and there is no English-language analytic workspace for this application.

ORA-36044: (INTL02B) Neither the %1 language analytic workspace nor the %2 language analytic workspace could be attached for %3, and there is no English-language analytic workspace for this application.

ORA-36050: (INTL06) Invalid option specified. Option must be either OSM, CA, or blank.

ORA-36052: (LISTBY00) LISTBY cannot be called as a function returning a value.

ORA-36054: (LISTBY01) You must have a current analytic workspace to use the LISTBY command.

ORA-36056: (LISTBY02) The syntax of the LISTBY command is:\n LISTBY dimension [dimension ...]\nDimension composites can also be named.

ORA-36058: (LISTBY03) %1 does not exist in any attached analytic workspace.

ORA-36060: (LISTBY04) %1 is not a dimension or composite.

ORA-36062: (LISTBY05) %1 is in a different analytic workspace from previously specified object(s) "%2".

ORA-36064: (LISTBY06) The syntax for specifying an unnamed composite is:
SPARSE*dimension-list* where 'dimension-list' is a list of simple or conjoint dimensions or named composites.

ORA-36066: (LISTBY07) %1 objects dimensioned by or related to %2 in analytic workspace %3

ORA-36068: (LISTNAMES00) Analytic workspace %1 is not attached.

ORA-36070: (LISTNAMES01) There are no objects in the analytic workspace of the following types:
%1

ORA-36072: (LISTNAMES02) There are no objects in the analytic workspace.

ORA-36074: (LISTNAMES03) There are no objects in the analytic workspace that match '%1'.

ORA-36076: (LISTNAMES04) %1 is not a valid keyword for LISTNAMES.
Invalid keywords are: ALL, SORT or UNSORT, AW workspace-name
%2

ORA-36078: (MODEL00) Specify the name of a model for the report.

ORA-36080: (MODEL01) %1 does not exist.

ORA-36082: (MODEL02) %1 is not a model.

ORA-36084: (MODEL03) Model %1 has not been compiled.

ORA-36086: (MODEL04) Information is not available for model %1.
Cause: There was no current model object under consideration.

Action: Use the CONSIDER command to specify a model object to which the INFO function can be applied.

ORA-36088: (MODEL05) Model %1 is not the most-recently executed model.

ORA-36104: (STATUS00) You must have a current analytic workspace to use the STATUS command.

ORA-36106: (STATUS01) There are no dimensions in your current analytic workspace.

ORA-36108: (STATUS02) There are no dimensions in analytic workspace %1.

ORA-36110: (STATUS03) %1 has no dimensions.

ORA-36126: (XLIST01) %1 already exists.

ORA-36128: (XLIST03) The exception criterion must be a single expression.

ORA-36130: (XLIST04) The exception criterion must be a BOOLEAN expression.

ORA-36132: (XLIST05) The exception criterion must be dimensioned.

ORA-36134: (XLIST06) %1 is not an exception list.

ORA-36136: (XLIST07) There is no current exception list. You can use the NAMEXL command to specify one.

ORA-36138: (XLIST08) %1 has been deleted.

ORA-36145: (SETPROP01) The property "%1" cannot be set for measure "%2".
Cause: A property name was given that is not one of the allowed properties to be set.

Action: Specify one of the legal property names.

ORA-36146: (READSIZE01) The *string* expression cannot be missing or NA.
Cause: FILESIZE and SEGMENTSIZ must be followed by a positive number.

Action: Use a positive number or omit the option.

ORA-36148: (READSIZE02) The minimum value for *string* is *number*. You specified a value of *number*.

Cause: The size argument was too small.

Action: Use a value greater than or equal to the minimum.

ORA-36152: (READSIZE04) The maximum value for *string* is *number*. You specified a value of *number*.

Cause: The size argument was too large.

Action: Use a value less than or equal to the maximum.

ORA-36154: (XSMXAGGR01) *workspace object* is not a data variable.

Cause: An object was specified on the Aggregate command line that was not a variable

Action: Specify a variable instead

ORA-36155: (XSMXAGGRFROM) *workspace object* must be a variable or formula of a similar data type to *workspace object* to be used with FROM, or a TEXT variable or formula to be used with FROMVAR.

Cause: The user specified an illegal variable for use with FROM or FROMVAR on the AGGREGATE command line

Action: Specify a legal variable instead

ORA-36156: (XSMXAGGR02) When using the BOOLEAN or FORMULA WEIGHT *workspace object*, WNAFILL is the only valid option.

ORA-36158: (XSMXAGGR03) *workspace object* must be an AGGMAP object.

ORA-36160: (XSMXAGGR04) You cannot use *string* on scalar VARIABLE *workspace object*.

Cause: The user tried to run the AGGREGATE or AGGCOUNT command or function on a scalar variable.

Action: Specify a dimensioned variable instead

ORA-36161: (XSAGGRUVCV) Aggregation variable *workspace object* cannot have itself as a COUNTVAR.

Cause: The user specified the same variable as both an aggregation variable and a COUNTVAR

Action: Specify a different COUNTVAR

ORA-36162: (XSMXAGGR05) COUNTVAR variable *workspace object* must be of type INTEGER, not *string*.

Cause: The user specified a non-INTEGER variable as a COUNTVAR for aggregation

Action: Redefine the COUNTVAR to be an INTEGER

ORA-36164: (XSMXAGGR07) When using the COUNTVAR clause, the number of variables to be aggregated (*number*) must match the number of COUNTVAR variables (*number*).

Cause: The user specified a COUNTVAR clause to the AGGREGATE command, but the number of COUNTVAR variables specified did not match the number of variables to be aggregated

Action: Specify a separate COUNTVAR for each variable

ORA-36165: (XSAGGCNTPROP) Variable *workspace object* cannot have both an AGGCOUNT and the \$COUNTVAR property.

Cause: An attempt was made to add the \$COUNTVAR property to a variable which already had an AGGCOUNT, or vice versa.

Action: Delete the already existing \$COUNTVAR property or AGGCOUNT first.

ORA-36166: (XSMXAGGR08) *workspace object* is not a VARIABLE.

Cause: An attempt was made to perform an AGGREGATE or other action on an object which is not a variable.

Action: Specify a variable instead.

ORA-36167: (XSAGGRFORM) *workspace object* is not a valid AGGMAP for aggregating a FORMULA.

Cause: The user attempted to aggregate a FORMULA using an AGGMAP that is not valid for aggregating FORMULAs. The AGGMAP must specify PRECOMPUTE(NA) for all relation lines and must not specify any caching.

Action: Correct the AGGMAP so that it is valid for aggregating a FORMULA.

ORA-36168: (XSMXAGGR10) COUNTVAR variable *workspace object* must have the same dimensionality as *workspace object*

Cause: The user specified a COUNTVAR variable which is missing at least one dimension of the aggregation variable

Action: Specify a COUNTVAR variable which has at least as many base dimensions as the aggregation variable

ORA-36170: (XSMXAGGR12) The data type of the WEIGHT *workspace object* must be numeric or BOOLEAN, not *string*.

Cause: The user specified a WEIGHT variable or formula which wasn't numeric or boolean

Action: Specify a numerical or boolean weight instead

ORA-36172: (XSMXAGGR18) WEIGHT option WNOAGG cannot be used with the WSTORE, WVARPRIORITY, or WAGGPRIORITY options on WEIGHT *workspace object*.

ORA-36174: (XSMXAGGR23) *workspace object* must be either a VARIABLE, a RELATION or a FORMULA.

Cause: The user specified something that was not a variable, a relation or a formula as a weight for AGGREGATE

Action: Specify a valid variable, relation or formula instead

ORA-36176: (XSMXAGGR25) Relation *workspace object* must be a one-dimensional self-relation to be used as a weight for AGGREGATE.

Cause: The user specified an illegal relation as a weight. The relation might have been multidimensional, not a self-relation, or not a relation over one of the bases of the aggregation variable.

Action: Specify a valid self relation over one of the bases of the aggregation variable.

ORA-36178: (XSAGGR01) To be used with AGGREGATE, AGGMAP *workspace object* must be declared with the AGGMAP command.

Cause: The user used the ALLOCMAP command to define the AGGMAP, so the AGGMAP can only be used with the ALLOCATE command, or the AGGMAP has no contents attached to it.

Action: Use the AGGMAP command to define the AGGMAP.

ORA-36179: (XSNOAGM) No AGGMAP was specified for VARIABLE *workspace object*.

Cause: The user used the AGGREGATE command without specifying an AGGMAP on the command line, with a variable which had no \$AGGMAP property.

Action: Specify an AGGMAP on the AGGREGATE command line, or add the \$AGGMAP property to the variable in question.

ORA-36180: (XSAGGR08) AGGREGATE cannot function because there is a permission clause associated with variable *workspace object*.

Cause: When using AGGREGATE, only simple permissions and permissions on base dimensions are valid.

Action: Remove the permissions clause from the variable causing problems.

ORA-36181: A VARIABLE cannot have both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties applied to it.

Cause: The user attempted to add both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties to a single variable.

Action: Remove the existing property before applying the new one.

ORA-36182: (XSAGGR09) Could not locate a value for variable *number* in measure dimension *workspace object*.

Cause: A measure dimension was supplied in the AGGMAP, but a position for the variable was not found in it.

Action: Add a position for the variable in the measure dimension.

ORA-36184: (XSAGGR10) You do not have sufficient permissions for the variable *workspace object*.

Cause: The user lacked the permissions necessary for the aggregation variable.

Action: Remove the restricting permissions from the variable or base dimension.

ORA-36185: (XSAGGR11) *workspace object* does not have any AGGCOUNT information.

Cause: User attempted an operation (such as the AVERAGE aggregation operator or the AGGCOUNT function) that requires a variable to have AGGCOUNT information on a variable that does not.

Action: Define the variable using the WITH AGGCOUNT clause, or use the CHGDFN ADD AGGCOUNT command to enable AGGCOUNT for the variable.

ORA-36186: (XSAGGR12) You must use a COUNTVAR when aggregating with AVERAGE.

ORA-36188: (XSAGGR16) AGGREGATE read a value less than 1 out of COUNTVAR variable *workspace object*. Either the values of the COUNTVAR variable are stored improperly, or there is problem in AGGREGATE. If no one has modified the values in this COUNTVAR, contact Oracle customer support.

Cause: Either someone improperly changed the COUNTVAR variable, or AGGREGATE has an error.

Action: Set the COUNTVAR variable to NA before starting AGGREGATE. If you previously set the COUNTVAR variable to NA, then contact Oracle OLAP technical support.

ORA-36190: (XSAGGR26) *workspace object* is of type *string*. The numerical calculation *string* requires INTEGER, DECIMAL or SHORTDECIMAL data.

ORA-36192: (XSAGGR27) *workspace object* is of type *string*. The boolean calculation *string* requires BOOLEAN data.

ORA-36194: (XSAGGR28) *workspace object* is of type *string*. The requested operation requires INTEGER, DECIMAL, SHORTDECIMAL or BOOLEAN data.

ORA-36196: (XSAGGR32) '*number*' is an invalid argument specifier for AGGREGATE.

ORA-36198: (XSAGGR33) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the operator variable with more than 1 line dimensions is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation the operator variable with more than 1 line dimensions that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-36200: (XSAGGR34) AGGREGATE operator *string* requires a WEIGHTBY clause, but ARGS variable *workspace object* did not specify one.

Cause: The given operator requires a WEIGHT specification, but the ARGS variable did not supply one.

Action: Modify the ARGS variable to specify a weight for the operation.

ORA-36201: (XSAGGR35) Cannot aggregate *workspace object*(partition *workspace object*) because the subpartition is itself partitioned.

Cause: Attempted to aggregate an intermediate partition of a variable with nested partitioning.

Action: rerun the aggregate command separately for each ultimate partition or just for the variable as a whole

ORA-36202: (XSAGOP01) '*number*' is not a valid aggregation operator.

Cause: An invalid string was provided for an aggregation operator.

Action: Check the spelling of the operator to make sure you are specifying a valid one.

ORA-36204: (XSAGOP04N) In AGGMAP workspace object, the NAOOPERATOR string must be HFIRST, HLAST or HEVEN.

Cause: An invalid NAOOPERATOR was specified.

Action: Specify HFIRST, HLAST or HEVEN.

ORA-36206: (XSAGOP04R) In AGGMAP workspace object, REMOPERATOR string must be MIN, MAX, FIRST, LAST, HFIRST or HLAST.

Cause: An invalid REMOPERATOR was specified.

Action: Specify one of the legal operators.

ORA-36208: (XSAGOP05N) In AGGMAP workspace object, you can only specify NAOOPERATOR string with the PROPORTIONAL or EVEN operators, not string.

Cause: The user specified an NAOOPERATOR when you were not using PROPORTIONAL or EVEN.

Action: Remove the NAOOPERATOR clause from the RELATION line.

ORA-36210: (XSAGOP05R) In AGGMAP workspace object, you can only specify the REMOPERATOR string with the PROPORTIONAL, EVEN, or HEVEN operators, not string.

Cause: The user specified a REMOPERATOR without using PROPORTIONAL, EVEN, or HEVEN.

Action: Remove the REMOPERATOR clause from the RELATION line.

ORA-36212: (XSAGOP06) In AGGMAP workspace object, you can only specify the MIN, MAX, FLOOR, and CEILING arguments while using the PROPORTIONAL operator, not string.

Cause: The user specified MIN, MAX, FLOOR, or CEILING when using an operator other than PROPORTIONAL.

Action: Remove the incorrect argument from the RELATION line.

ORA-36216: (XSOPARM01) A DIMENSION must have a data type (ID, TEXT, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-36220: (XSLPDSC01) All dimensions in LIST number are also in the IGNORE clause.

Cause: One of the dimension lists in the dimension loop descriptor had no base dimensions except those in the IGNORE list. This leaves no dimensions for looping over.

Action: Fix the dimension loop descriptor.

ORA-36221: (XSLPDSC02) LIST number and LIST number have different base dimensions.

Cause: The base dimensions of the dimension lists given in the loop descriptor do not match.

Action: Ensure that each dimension list has the same set of looping base dimensions. If necessary, use IGNORE within a lists to discard base dimensions that should not be looped.

ORA-36222: (XSLPDSC03) duplicate IGNORE or DENSE information for dimension workspace object

Cause: An IGNORE or DENSE list in a dimension loop descriptor included the dimension twice, included two different valuesets of the dimension, or includes the dimension and a valueset of the dimension.

Action: Only use the dimension or a valueset of the dimension once in an IGNORE or DENSE list.

ORA-36223: (XSLPDSC04) object *workspace object* in IGNORE or DENSE list has illegal type

Cause: An IGNORE or DENSE list in a dimension loop descriptor included an object that was not a dimension or a valueset, was a conjoint dimension, or was a dimensioned valueset.

Action: Only use simple dimensions and undimensioned valuesets in the IGNORE or DENSE list.

ORA-36224: (XSLPDSC05) *workspace object* is not a loop dimension

Cause: An IGNORE or DENSE list in a dimension loop descriptor referenced a dimension (or a valueset of a dimension) that was not a base dimension of the loop dimension list.

Action: Remove the dimension or valueset from the IGNORE or DENSE list.

ORA-36225: (XSLPDSC06) A LOOP AGGMAP list must contain an aggmap object, followed by one or more variables and/or dimensions.

Cause: An invalid AGGMAP list was specified. Either too few objects were specified, or an incorrect type of object was used.

Action: Specify a valid AGGMAP list consisting of an aggmap object, followed by one or more variables and/or dimensions.

ORA-36226: (XSLPDSC07) The syntax of the \$LOOP property on formula *workspace object* is incorrect.

Cause: Unrecognized contents in the \$LOOP property of a formula in the table function measure list.

Action: Restrict the contents of the \$LOOP property to valid elements (other than OPTIMIZED and MEASURES) of the table function LOOP directive.

ORA-36230: (XSANALYZ00) object *workspace object* cannot be used in the ANALYZE command

Cause: An object that cannot be analyzed was used in the ANALYZE command.

Action: Analyze VARIABLES, RELATIONS, DIMENSIONS, or SURROGATES.

ORA-36231: (XSANALYZ01) object *workspace object* cannot be used in the INHIERARCHY clause

Cause: An invalid INHIERARCHY object was referenced.

Action: Use either a VALUESET or boolean VARIABLE.

ORA-36232: (XSANALYZ02) a level list was specified when a language dimension was present

Cause: A level list dimension was specified when a language dimension was present.

Action: Remove the USING clause.

ORA-36233: (XSANALYZ03) the dimensionality of object *workspace object* does not match the ANALYZE command

Cause: The dimensionality of the object did not match the ANALYZE command syntax used.

Action: Match the ANALYZE syntax to the dimensionality of the specified object.

ORA-36234: (XSANALYZ04) all objects in the current status of the NAME dimension must have the same dimensionality when used with the ANALYZE command

Cause: The dimensionality of at least one of the objects listed in the NAME dimension does not match the rest of the objects.

Action: Make sure all objects listed in the NAME dimension have the same dimensionality.

ORA-36236: (XSANALYZ06) the AW format must be 11.0.0.0 or higher to use the ANALYZE command

Cause: The AW version is less than 11.0.0.0

Action: Make sure the compatible mode is 11.0.0.0 or higher and upgrade the AW

ORA-36237: (XSANALYZ07) analytic workspace *string.string* must be attached RW or EXCLUSIVE mode

Cause: The analytic workspace was already attached RO or MULTI mode.

Action: Detach the analytic workspace.

ORA-36238: (XSANALYZ08) object *string.string* does not exist

Cause: The object name does not exist

Action: Check the spelling and case of the object name

ORA-36258: (XSAGINFO00) When the AGGMAPINFO function is called, *workspace object* must be an AGGMAP.

Cause: The AGGMAPINFO function was called with an object that is not an AGGMAP.

Action: Modify the call to AGGMAPINFO to specify an AGGMAP object.

ORA-36260: (XSAGHIERPART00) Aggregating from partition %J to partition %J over hierarchy *workspace object* creates an increase in sparsity.

Cause: In the partition creation / aggmap creation a situation developed such that when aggregating over a particular dimension of the aggmap a partition boundary was crossed such that the sparsity of the target partition included dimensions that were not in the sparsity of the source partition. Since the process of aggregation always densifies rather than sparsifying this is an extremely suboptimal design and it is not supported by the aggregate system.

Action: Set up your partitioning such that for any partition boundary the source and target partitions of the aggregation will always move towards denser partitions. For any child (c) and any parent (p) where (c) and (p) are in different partitions it must be the case that the parent partition contains no dimension in the composite that the child partition does not contain in its composite.

ORA-36261: (XSAGPARTDEP00) Can not Aggregate PARTITION TEMPLATE %J because the path of aggregation would recursively enter partition %J.

Cause: The partitioning scheme was such that while aggregating there exists a cell (m) such that both one of its descendants and one of its ancestors are both in the referenced partition, while (m) is in a different partition.

Action: Change the partitioning scheme.

ORA-36262: (XSAGREMOD00) MODEL *workspace object* was not attached to the AGGMAP.

ORA-36264: (XSAGREMOD01) Removed MODEL: *number***ORA-36266: (XSCGMDLAGG00) Invalid context for the AGGREGATION function**

Cause: The AGGREGATION function was used outside of the MODEL context.

Action: Use AGGREGATION only in a model.

ORA-36267: (XSCGMDLAGG09) *workspace object* has no dimensions, so it cannot have a qualified data reference.

Cause: A dimension qualification was specified for a valueset with no dimensions.

Action: Remove the qualification.

ORA-36268: (XSCGMDLAGG01) '*string*' is not a valid dimension value.

Cause: The AGGREGATION parameter list included a value that does not exist in the MODEL dimension that contains the target of the AGGREGATION

Action: Specify only values from the appropriate MODEL dimension

ORA-36269: (XSCGMDLAGG10) '*workspace object*' does not exist or is not a dimension.

Cause: A nonexistent or invalid object was specified as a QDR dimension.

Action: Specify existing dimensions only.

ORA-36270: (XSCGMDLAGG03) The parameter list for the AGGREGATION function includes duplicate values.

Cause: One or more duplicate values appeared in the AGGREGATION parameter list.

Action: Remove the duplication.

ORA-36271: (XSCGMDLAGG11) *workspace object* is not in the dimension list of valueset *workspace object*.

Cause: A QDR dimension was specified that does not appear in the valueset's dimension list.

Action: Specify only dimensions in the valueset's dimension list.

ORA-36272: (XSCGMDLAGG04) '*workspace object*' is not a valid operator for the AGGREGATION function.

Cause: An invalid AGGREGATION operator was specified.

Action: Correct the invalid operator.

ORA-36273: (XSCGMDLAGG12) Dimension *workspace object* appears more than once in the QDR.

Cause: A dimension was specified more than once in the QDR.

Action: Remove the duplication.

ORA-36274: (XSCGMDLAGG05) The operator used in this equation needs a weight variable.

Cause: An invalid weight variable was specified.

Action: Correct the invalid weight variable.

ORA-36275: (XSCGMDLAGG13) *string* is not a valid *workspace object*.

Cause: A value was specified that does not exist in the QDR dimension.

Action: Specify an existing value.

ORA-36276: (XSCGMDLAGG06) The current operator does not need a weight variable.

Cause: A weight variable was specified in a context that does not support it.

Action: Remove the weight variable.

ORA-36278: (XSCGMDLAGG07) workspace object does not exist or is not valueset.

Cause: A nonexistent or invalid object was specified where a valueset is required.

Action: Specify an existing valueset only.

ORA-36280: (XSCGMDLAGG08) Valueset workspace object does not contain values of any dimension of the current model.

Cause: AGGREGATION specified a valueset of a dimension not listed in a DIMENSION statement for the current model.

Action: Add the valueset's dimension to the model's DIMENSION list, or choose a different valueset.

ORA-36282: (DNAMELEN01) Object name string is longer than number bytes.

Cause: The object name exceeded the maximum number of bytes.

Action: Reduce the length of the object name so that it does not exceed the specified maximum number of bytes.

ORA-36286: (EIFMAKEF12) The EXPORT command terminated because there is not enough disk space in path string to contain a complete extension file.

Cause: There was insufficient disk space at the specified location.

Action: Free some disk space or change the target location of your export file.

ORA-36290: (EIFMAKEF14) You cannot export object workspace object, because EIFVERSION is set to number. That version does not support string strings.

Cause: Attempted to export a NUMBER dimension to an EIF file with the EIFVERSION option set to a number less than 80000. Versions before 80000 do not support NUMBER dimensions.

Action: NUMBER dimension are unsupported in an older version. Either update to a new version, or remove the NUMBER dimension.

ORA-36300: (XSCGTERM01) The command is too long or complex to compile.

Cause: In a PROGRAM or a MODEL, expressions exceeded the limit of 32765 bytes of stack memory.

Action: This may work if the long expression is in a formula. Otherwise eliminate or simplify the expressions, or remove or shorten the text constants.

ORA-36302: (MXCLASS03) You cannot reference an analytic workspace NAME dimension using a QON. You can only access the NAME dimension of the current analytic workspace.

Cause: An attempt was made to access the NAME dimension of a non-current analytic workspace by using a qualified object name (QON).

Action: Only use the NAME dimension without a QON.

ORA-36304: (MXDCLAGR02) workspace object was not defined as an AGGMAP.

ORA-36306: (MXDCLAGR03) Since there is no current aggmap definition, the AGGMAP statements will be discarded. Type END to return to the command line.

ORA-36308: (MXDCLAGR04) The object *workspace object* has been defined as an AGGMAP, and it cannot be redefined as an ALLOCMAP.

ORA-36310: (MXDCLAGR05) The object *workspace object* has been defined an ALLOCMAP, and it cannot be redefined as an AGGMAP.

ORA-36312: (PHYS00) *workspace object* must be a dimension, dimensioned variable, or relation.

Cause: An invalid Oracle OLAP object was specified while attempting to use the PHYSICAL function.

Action: Specify a valid dimension, dimensioned variable, or relation object.

ORA-36313: (PHYS03) The VALUE option of the PHYSICAL clause cannot be applied to a variable.

Cause: A VALUE option of the PHYSICAL clause was specified for a variable.

Action: Remove the VALUE option or specify a relation or dimension.

ORA-36314: (PHYS01) *workspace object* must be a dimension, relation or variable.

Cause: An invalid OLAP object was specified while attempting to use the PHYSICAL command.

Action: Specify a valid object.

ORA-36315: (PHYS04) Specify a VALUE option for scalar relation *workspace object*.

Cause: The VALUE argument to PHYSICAL was omitted for the scalar relation.

Action: Specify a VALUE or choose a dimensioned relation.

ORA-36316: (PHYS02) Relation *workspace object* must be a single-dimensional relation that relates one INTEGER dimension to another.

Cause: An invalid relation was specified while attempting to use the PHYSICAL command.

Action: Specify a valid relation.

ORA-36320: (PPENG05) No more than *number* push levels are allowed.

Cause: An attempt was made to use the PUSH command more times than allowed.

Action: This error is frequently caused by programs and procedures that start with a PUSH command and recursively call themselves.

ORA-36322: (PPENG06) *workspace object* cannot be pushed more than *number* times.

Cause: The specified PUSH command did not have a matching POP command.

Action: Use 'OBJ(PUSHCOUNT ..)' to find the missing POP command.

ORA-36324: (PPNLSOPT00) 'number' is not a valid value for the *string* option. The previous value was retained.

Cause: The value specified was not a valid value of the National Language Support (NLS) option.

Action: Refer to Oracle Database documentation to see the acceptable values for the NLS option.

ORA-36330: (SNSYN124) The format of the PHYSICAL command is:\n \n PHYSICAL [dimension]relation]

ORA-36332: (SNSYN125) The format of the PHYSICAL function is:\n \n PHYSICAL(dimension|variable|{relation [VALUE]})

ORA-36334: (SNSYN126) The format of the TO_DATE function is:\n \n TO_DATE(value [format] [{option optionvalue}...])

ORA-36336: (SNSYN127) The format of the TO_CHAR function is:\n \n TO_CHAR(value [format] [{option optionvalue}...])

ORA-36338: (SNSYN128) invalid TO_NUMBER function syntax

Cause: The format of the TO_NUMBER function was incorrect.

Action: Correct the syntax and try again. The format of the TO_NUMBER function is TO_NUMBER(value [format] [{option optionvalue}...]). For more information, consult Oracle documentation.

ORA-36339: (SNSYN129) The format of the TO_NCHAR function is:\n \n TO_NCHAR(value [format] [{option optionvalue}...])

ORA-36340: (SNSYN130) The format of the PARTITIONCHECK function is:\n \n PARTITIONCHECK(aggmap, partition_template)

Cause: Bad syntax

Action: Correct syntax

ORA-36341: (SNSYN131) The format of the TO_TIMESTAMP function is:\n \n TO_TIMESTAMP(value [format] [{option optionvalue}...])

ORA-36342: (SNSYN200) Invalid CLEAR command syntax.

Cause: The format of the CLEAR command was incorrect.

Action: Correct the syntax and try again. The format of the CLEAR command is: CLEAR [ALL | STATUS] [AGGREGATES | CHANGES | PRECOMPUTES | NONPRECOMPUTES | CACHE] FROM var1 [var2, var3...] [USING aggmap]. For more information, consult Oracle documentation.

ORA-36344: (SNSYN272) invalid AGGREGATION function syntax

Cause: The format of the AGGREGATION function syntax was invalid.

Action: Correct the syntax and try again. The format of the AGGREGATION function syntax is AGGREGATION(dimension-value [dimension-value ...]) [OPERATOR operator-name [WEIGHT | WEIGHTBY weight-var]]. For more information, consult Oracle documentation.

ORA-36346: (SNSYN338) invalid TRUNC function syntax

Cause: The format of the TRUNC function syntax was invalid.

Action: Correct the syntax and try again. The format of the TRUNC function syntax is TRUNC(expression1 [, expression2]). For more information, consult Oracle documentation.

ORA-36348: (SNSYN339) invalid CEIL function syntax

Cause: The format of the CEIL function was invalid.

Action: Correct the syntax and try again. The format of the CEIL function is: CEIL(number) For more information, consult Oracle documentation.

ORA-36350: (SNSYN340) invalid FLOOR function syntax

Cause: The format of the FLOOR function syntax was invalid.

Action: Correct the syntax and try again. The syntax for the FLOOR function is FLOOR(number). For more information, consult Oracle documentation.

ORA-36352: (SNSYN341) Invalid ADD_MONTHS function syntax.

Cause: The format of the ADD_MONTHS function was incorrect.

Action: Correct the syntax and try again. The format of the ADD_MONTHS function is ADD_MONTHS (date, number of months). For more information, consult Oracle documentation.

ORA-36354: (SNSYN342) Invalid LAST_DAY function syntax.

Cause: The format of the LAST_DAY function was incorrect.

Action: Correct the syntax and try again. The format of the LAST_DAY function is: LAST_DAY(date). For more information, consult Oracle documentation.

ORA-36356: (SNSYN343) Invalid MONTHS_BETWEEN function syntax.

Cause: The format of the MONTHS_BETWEEN function was incorrect.

Action: Correct the format and try again. The format of the MONTHS_BETWEEN function is: MONTHS_BETWEEN(date, date). For more information, consult Oracle documentation.

ORA-36358: (SNSYN344) invalid NEW_TIME function syntax

Cause: The format of the NEW_TIME function was invalid.

Action: Correct the syntax and try again. The format of the NEW_TIME function is: NEW_TIME(date, zone, new zone). For more information, consult Oracle documentation.

ORA-36360: (SNSYN345) The format of the NEXT_DAY function is:\n \n NEXT_DAY(date, day name)

ORA-36376: (XSAGZERO) AGGREGATE attempted to divide by zero. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of a division by zero.

Cause: A calculation in the current AGGREGATE command attempted to divide by zero as a result of an AVERAGE, WAVERAGE, HAVERAGE or HWAVERAGE operation.

Action: Either fix the data, or set DIVIDEBYZERO to YES to return NA instead of signaling an error.

ORA-36387: (XSPARTCHECK00) Object *workspace object* must be an AGGMAP.

ORA-36388: (XSPARTCHECK01) Object *workspace object* must be a PARTITION TEMPLATE.

Cause: The second argument to PARTITIONCHECK was not the name of a partition template.

Action: Specify a partition template name.

ORA-36389: (XSAGPARTDEP01) Can not aggregate from PARTITION *number* into PARTITION *number* due to increasing sparsity along DIMENSION %J.

Cause: The user is attempting to use partitions as a means of sparsity control, however they have set up their partitions in a manner that simply makes no sense. It is a simple fact that during aggregation data becomes more dense, not less dense, and yet their partitions indicate the opposite.

Action: Modify the partition template add the specified dimension into the source composite, or removing it from the target composite.

ORA-36392: (XSMXCLEA02) When using CLEAR with the PRECOMPUTES or NONPRECOMPUTES options, you must specify an AGGMAP.

Cause: The user did not specify the name of an AGGMAP with the CLEAR command.

Action: Specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.

ORA-36393: (XSMXCLEA03) When using the AGGREGATES, CHANGES or CACHE options, specify the ALL keyword.

Cause: The ALL keyword was not specified when using the AGGREGATES, CHANGES or CACHE options.

Action: Specify the ALL keyword.

ORA-36394: (XSMXCLEA04) When using CLEAR on the AGGMAP *workspace object*, CACHE is the only valid directive.

Cause: An attempted was made to CLEAR an AGGMAP using a directive other than CACHE.

Action: Change the CLEAR command so that only the CACHE keyword is used for AGGMAP.

ORA-36395: (XSMXCLEA05) To CLEAR ALL AGGREGATES from *workspace object*, specify an AGGMAP.

Cause: The CLEAR command could not determine how the variable was aggregated because the variable was not dimensioned by a compressed composite.

Action: Specify an AGGMAP by adding a USING clause to the CLEAR command, or attach a \$AGGMAP property to the variable.

ORA-36397: (XSSPROPNA) The value of property *string* cannot be NA.

Cause: The user tried to set a system-reserved property on an OLAP object to NA

Action: Set the property to a non-NA value

ORA-36398: (XSSPROP01) Property name '*number*' is invalid because only system-reserved property names can begin with '\$'.

Cause: The user attempted to add a property which starts with \$ but is not a reserved property name

Action: Remove the \$ from the property name

ORA-36399: (XSSPROPDTYPE) The data type of property *string* must be *string*.

Cause: The user tried to set a system-reserved property on an OLAP object to a value with an illegal datatype

Action: Set the property with the proper datatype

ORA-36400: (XSSPROP02) *workspace object* is not a valid variable name.

Cause: Not a valid variable name

Action: Change to a valid variable name

ORA-36401: (XSSPROPOTYPE) Property *string* may only be applied to objects of type *string*.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36402: (XSSPROP03) The property '*\$string*' requires a leading "\$" because it is a system-reserved property name.

Cause: The user tried to specify a property name which is reserved, but did not use a leading \$

Action: Either add a leading \$ or choose another property name

ORA-36403: (XSBADSPROP) *number* is an illegal value for system-reserved property *string* on *workspace object*.

Cause: The user tried to specify an illegal value for a special property

Action: Specify a legal value.

ORA-36404: (XSSPROP04) Property *string* cannot be applied to an undimensioned (scalar) TEMPORARY variable.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36405: (XSSPROP05) Property ignored for object *workspace object*:

Cause: A property was ignored during import.

Action: Refer to the message that follows this one and correct the error it describes.

ORA-36406: (VCACHE00) '*number*' is an invalid value for the VRCACHE option. The only permissible values are 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the VRCACHE option

Action: Assign one of the valid values

ORA-36410: (VCACHE03) '*number*' is an invalid value for the \$VRCACHE property. The only permissible values are 'DEFAULT', 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the \$VRCACHE property on a variable

Action: Assign one of the valid values

ORA-36608: (XSAGHOVERFLOW) The depth of the hierarchies encountered while processing a composite dimension in AGGREGATE caused a counter overflow.

Cause: The depth of the hierarchies that are part of a composite exceeded 4 billion levels during the merge.

Action: Reduce the number of levels in the hierarchies, reduce the number of dimensions in the composite, or do not aggregate over all dimensions at once.

ORA-36610: (XSLMS00) Unable to locate a message file for Online Analytical Processing (OLAP) message *value*.

Cause: An internal OLAP program in the EXPRESS Analytic Workspace failed to retrieve a user message.

Action: Contact Oracle Support.

ORA-36612: (XSLMS01) invalid OLAP message number: *value*

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace attempted to retrieve a nonexistent message.

Action: Contact Oracle Support.

ORA-36616: (XSAGMODHIER01) There is a cycle formed by MODEL *workspace object* and other embedded or containing models with the same dimension, *workspace object*.

Cause: Inclusion of a dynamic model formed a cycle in the named dimension.

Action: Edit the models involving this dimension to remove the cycle.

ORA-36617: (XSAGMODHIER02) There is a self-cycle equation in MODEL *workspace object*.

Cause: The model for relation modification included a self-cycle equation.

Action: Remove the self-cycle equation from the model.

ORA-36618: (XSAGMODDIM00) *workspace object* is not a valid dynamic model for AGGMAP.

Cause: The model failed one of the following tests: 1) only one dimension (aside from LAG/ LEAD dimensions); 2) assignment to dimension values only; 3) a single simple solution block; 4) no time-series functions with variable step values.

Action: Edit the model so that it conforms to the above requirements.

ORA-36620: (XSAGMODDIM01) MODEL *workspace object* cannot find the matching embedded model.

Cause: AGGMAP ADD model could not find the matching embedded model.

Action: Add the matching embedded model to the AGGMAP.

ORA-36621: (XSAGMODDIM02) You cannot AGGREGATE the individual partition using static model *workspace object* because a partition dimension or its derivier *workspace object* appears in the equation of the step or simultaneous block.

Cause: An attempt was made to AGGREGATE the individual partition using the static model with the partition dimension in the equation of the step or simultaneous block.

Action: AGGREGATE the variable instead of the individual partition.

ORA-36622: (XSAGMODLIST00) workspace object cannot be added to the AGGMAP workspace object because it is not a valid MODEL.

Cause: An object specified in AGGMAP ADD was not a model.

Action: Specify the name of a model.

ORA-36626: (XSAGMODLIST02) MODEL workspace object was skipped because there is already a MODEL by that name attached to AGGMAP workspace object.

Cause: An attempt was made to add the same model to the AGGMAP twice.

Action: None required.

ORA-36628: (XSAGMODLIST03) MODEL workspace object could not be added to AGGMAP workspace object.

Cause: The dimension of the model did not match a hierarchy of the aggmap.

Action: Add a RELATION statement to the AGGMAP for that dimension.

ORA-36630: (XSDUNION00) An empty base dimension list was specified in the concat dimension definition.

Cause: An empty concat dimension list was specified.

Action: Specify a valid list of dimensions when defining a concat dimension.

ORA-36632: (XSDUNION01) The concat dimension workspace object is not currently defined as UNIQUE.

Cause: An attempt was made to CHGDFN a concat dimension, which was already non-unique, to NOT UNIQUE.

Action: Since the concat dimension is already non-unique, this command is unnecessary.

ORA-36634: (XSDUNION02) INTEGER dimension workspace object cannot be used as a concat dimension base.

Cause: The user cannot specify INTEGER base dimensions when defining a concat dimension.

Action: Change the datatype of the INTEGER base dimension, or omit it from the concat.

ORA-36635: (XSDUNION03) The base dimension workspace object has an invalid data type for use in a UNIQUE concat definition.

Cause: Base dimensions of a unique concat must have TEXT or ID data types.

Action: Specify a valid list of dimensions when defining a unique concat dimension.

ORA-36636: (XSDUNION04) The unique concat dimension workspace object cannot be changed to NOT UNIQUE, because it is a base of at least one other unique concat dimension.

Cause: A non-unique concat dimension could not be used as a base of a dependent unique concat.

Action: Run the CHGDFN command to change the definition of any dependent unique concat dimensions to NOT UNIQUE and retry.

ORA-36637: (XSDUNION05) The concat dimension cannot be defined as UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension could not be used as a base for a dependent unique concat.

Action: Using the CHGDFN command, change any non-unique concat base dimensions to be UNIQUE and retry.

ORA-36638: (XSDUNION17) Concat dimension *workspace object* cannot be changed to UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension was used as a base for a dependent unique concat.

Action: Change any non-unique concat base dimensions to UNIQUE using the CHGDFN command and retry.

ORA-36639: (XSDUNION18) UNIQUE cannot be applied to this concat dimension because LEAVES *workspace object* and *workspace object* share the value *number*.

Cause: The UNIQUE concat base dimensions contained duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36640: (XSDUNION19) Concat dimension *workspace object* cannot be changed to UNIQUE because base dimension *workspace object* does not have a TEXT or ID data type.

Cause: The CHGDFN command could not complete because one or more of the base dimensions of the concat dimension had a data type other than TEXT or ID.

Action: Do not attempt to make the concat dimension UNIQUE.

ORA-36641: (XSDUNION20) The concat dimension must be defined as UNIQUE because base dimension *workspace object* contains custom member values.

Cause: The UNIQUE keyword was not specified in the concat dimension definition and is required if any of the base dimensions contain custom member values.

Action: Define the concat dimension as UNIQUE or remove all base custom member values.

ORA-36642: (XSDUNION06) Concat dimension list contains duplicate leaf dimension *workspace object*.

Cause: Duplicate concat leaf dimensions were found.

Action: Remove the duplicate concat leaf dimensions and retry.

ORA-36643: (XSDUNION21) Concat dimension *workspace object* cannot be changed to NOT UNIQUE because it contains custom member values.

Cause: Custom members were present in the concat dimension, preventing it from being redefined as NOT UNIQUE.

Action: Remove all custom member values from the concat and all of its bases, and retry.

ORA-36646: (XSDUNION08) Only concat dimensions can be redefined as UNIQUE. *workspace object* is not a concat dimension.

Cause: The UNIQUE keyword was used with an invalid object.

Action: Retry without the UNIQUE keyword.

ORA-36648: (XSDUNION09) Concat dimension *workspace object* is already defined as UNIQUE.

Cause: The concat dimension could not be changed to UNIQUE because it was already UNIQUE.

Action: No action is necessary.

ORA-36650: (XSDUNION10) Concat dimension *workspace object* cannot be changed to UNIQUE. Leaves *workspace object* and *workspace object* share the value *number*.

Cause: The concat dimension could not be changed to UNIQUE because of one or more duplicate values among its bases.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36652: (XSDUNION11) *workspace object* is not a *string* type dimension.

Cause: The CHGDFN BASE ADD command was applied to an object that is not a concat dimensions.

Action: Do not use CHGDFN to add bases to this object. Consult the Oracle documentation.

ORA-36654: (XSDUNION12) *workspace object* cannot be added to *workspace object* because it conflicts with the dimensions of object *workspace object*.

Cause: The dimension could not be added using CHGDFN because it was already one the bases of the concat dimension.

Action: None

ORA-36656: (XSDUNION13) *workspace object* is already a member of *workspace object* and cannot be added.

Cause: The dimension could not be added via CHGDFN because it was already one of the bases of the concat dimension.

Action: No action is necessary.

ORA-36660: (XSDUENG00) The first argument to the *string* function must be an expression yielding a dimension value.

Cause: The user supplied an expression to BASEVAL or BASEDIM that did not yield a valid dimension value.

Action: Supply a valid dimension value expression to BASEVAL or BASEDIM.

ORA-36662: (XSDUENG01) You cannot apply the *string* function to *workspace object* because it is not a concat dimension.

Cause: You tried to use the BASEVAL or BASEDIM function with an object that is not a concat dimension.

Action: Specify the name of a concat dimension when using BASEVAL or BASEDIM.

ORA-36663: (XSDPART01) specify a dimension list when defining a PARTITION TEMPLATE

Cause: The PARTITION TEMPLATE specification did not contain a dimension list.

Action: Provide a list between angle brackets () of the dimensions of the variable being partitioned.

ORA-36664: (XSDPART02) defined a PARTITION TEMPLATE without a PARTITION BY clause

Cause: An attempt was made to define a PARTITION TEMPLATE without a PARTITION BY clause.

Action: Specify a partitioning method and one or more partition dimensions when defining a PARTITION TEMPLATE. Add a PARTITION BY clause.

ORA-36665: (XSDPART03) workspace object is not in the dimension list of the partition template.

Cause: While defining a partition template, an attempt was made to specify a partition dimension that was not a dimension of the partition template itself.

Action: Choose a partition dimension from among the dimensions of the partition template.

ORA-36666: (XSDPART04) workspace object is not a concat dimension.

Cause: An attempt was made to define a partition template with PARTITION BY CONCAT(... dim ...) command where dim is not a concat dimension.

Action: Only concat dimensions can serve as partition dimensions with CONCAT partitioning. Choose a different partition dimension.

ORA-36667: (XSDPART05) string is not a valid CONCAT partition.

Cause: An attempt was made to use RANGE or LIST syntax in defining a CONCAT partition template.

Action: Use valid CONCAT partition syntax.

ORA-36668: (XSDPART06) string is not a valid RANGE partition.

Cause: Attempted to use CONCAT or LIST syntax to define a RANGE partition template.

Action: Use the correct RANGE partition syntax and retry.

ORA-36669: (XSDPART07) string is not a valid LIST partition.

Cause: Attempted to use RANGE or CONCAT syntax in defining a LIST partition template.

Action: Use the correct LIST partition syntax and retry.

ORA-36670: (XSDPART08) workspace object is an INTEGER or NTEXT dimension, or contains an INTEGER or NTEXT dimension. INTEGER and NTEXT dimensions cannot be used as partition dimensions.

Cause: User attempted to define a partition template partitioned by an INTEGER or NTEXT dimension or a concat containing an NTEXT leaf.

Action: Either pick a different partition dimension, or redefine the dimension to use a different data type.

ORA-36671: (XSDPART09) Leaves of workspace object have different data types.

Cause: Attempted to define a range partition template with a CONCAT partition dimension, and the CONCAT had two leaf dimensions with different data types. A partition dimension cannot have more than one data type when RANGE partitioning is used.

Action: Pick a different partition dimension.

ORA-36672: (XSDPART10) A RANGE or LIST partition template can only have a single partition dimension.

Cause: Attempted to define a RANGE or LIST partition template with more than one partition dimension.

Action: Remove all but one of the dimensions from the PARTITION BY RANGE(...) or PARTITION BY LIST(...) clause of the partition template definition.

ORA-36673: (XSDPART11) Use simple leaf values to identify concat dimension values in a VALUES LESS THAN clause, rather than the <LEAF: VALUE> format.

Cause: While defining a RANGE partition template with a concat dimension for the partition dimension, an attempt was made to define a range using the <LEAF: VALUE> format of a concat dimension value.

Action: Use the leaf value only. Instead of using VALUES LESS THAN <leaf: value>, specify VALUES LESS THAN value.

ORA-36674: (XSDPART12) Invalid dimension value starting at *string*.

Cause: When defining a RANGE or LIST partition template, attempted to specify an invalid value in a VALUES LESS THAN or VALUES clause. An invalid value can be one of two things: 1) A value whose data type does not match the partition dimension's data type 2) A non-constant value.

Action: Modify the value of the VALUES LESS THAN or VALUES phrase and retry.

ORA-36675: (XSDPART13) A RANGE or LIST partition template cannot have a conjoint for its partition dimension.

Cause: Attempted to specify a conjoint dimension as the partition dimension of a partition template partitioned by RANGE or LIST.

Action: Use the name of a simple non-INTEGGER dimension or a CONCAT dimension as the partition dimension and retry.

ORA-36676: (XSDPART14) Missing dimension list for *string*.

Cause: User attempted to define a CONCAT partition template, and didn't supply a list of dimensions for one of the partition definitions.

Action: Give a dimension list for each partition.

ORA-36677: (XSDPART15) Duplicate value in value lists of *number* and *number*.

Cause: In a LIST PARTITION TEMPLATE definition, a value appeared in more than one value list, or more than once within a single value list.

Action: List each value only once.

ORA-36678: (XSDPART16) *workspace object* is missing from one or more partition dimension lists.

Cause: In the partition template definition, one of the partitions has a dimension list that does not contain all the dimensions of the partition template.

Action: Add the missing dimension to the partition's dimension list, or delete it from the partition template's dimension list. If using CONCAT partitioning and the missing dimension is a partition dimension, add any leaf of the partition dimension or any CONCAT of leaves of the partition dimension to the partition dimension list.

ORA-36679: (XSDPART17) workspace object contains a leaf (workspace object) that is not part of the partition dimension workspace object.

Cause: In the definition of a CONCAT partition template, one of the partitions was dimensioned by a dimension that was concat-related to a partition dimension. For example, it shared some leaves with the partition dimension, but it also contained some leaves that were not in the partition dimension.

Action: Either modify the dimensionality of the partition template to include a concat dimension that contains all of the desired leaves, or pick a different dimension for the partition.

ORA-36680: (XSDPART18) workspace object is not a dimension of the partition template.

Cause: In the partition template definition, one of the partitions was attempted to be dimensioned by a dimension that was not specified in the dimension list of the partition template.

Action: Remove the unlisted dimension from the partition's dimension list, or add it to the partition template's dimension list.

ORA-36681: (XSDPART19) Partitions *string* and *string* are out of order.

Cause: In the definition of a range partition template, a partition with a lower range boundary was listed after a partition with a higher range boundary.

Action: Alter the order of the partition definition list.

ORA-36682: (XSDPART20) Partition name *string* appears more than once.

Cause: A list of analytic workspace partitions was specified in which the partition name appeared more than once.

Action: Remove all but the first instance of the partition name from the list.

ORA-36683: (XSDPART21) Partition *string* dimensioned by more than one composite.

Cause: Attempted to define a partition template where one of the partitions was dimensioned by two or more composites.

Action: Check the partition template being defined has at most one composite per partition.

ORA-36684: (XSDPART22) cannot rename values of DIMENSION workspace object because it is the partition dimension of RANGE PARTITION TEMPLATE workspace object

Cause: An attempt was made to rename the value of a dimension that serves as the partition dimension of some RANGE or LIST partition template.

Action: It is not possible to rename values in a dimension that serves as the partition dimension without deleting all RANGE and LIST partition templates that are partitioned by it.

ORA-36685: (XSDPART23) Only CONCAT partition templates can be subpartitioned.

Cause: User attempted to define a RANGE or LIST partition template with one or more partitions dimensioned by another partition template.

Action: Use only regular dimensions and composites to dimension each partition of the RANGE or LIST template.

ORA-36686: (XSDPART24) Value *number* is not in partition *number*.

Cause: User attempted to reorganize a list partition template by removing a value from the list associated with one of the partitions, but the value was not in that list.

Action: Ensure that the given values match the given partition.

ORA-36687: (XSDPART25) You cannot use compressed composite *workspace object* to dimension multiple partitions of the partition template, because its dimension list includes the PARTITION BY dimension *workspace object*.

Cause: The specified PARTITION BY dimension also occurred in the dimension list of a compressed composite used to dimension multiple partitions.

Action: Ensure that no PARTITION BY dimension occurs among the bases of the compressed composite used to dimension multiple partitions.

ORA-36688: (NTEXTCNV00) Error during conversion from TEXT to NTEXT.

Cause: An unknown character set conversion error occurred when converting a TEXT value to an NTEXT value.

Action: Unknown.

ORA-36691: (NTEXTCNV02) invalid escape sequence in argument to UNISTR function: *string*

Cause: The UNISTR function was called on a string that had an invalid escape sequence. The only valid escape sequences in UNISTR are - An escape-escape sequence. - An escape, followed by exactly four hexadecimal digits.

Action: Ensure that all escape sequences in UNISTR arguments are exactly four hexadecimal digits. To represent code points whose value is less than 0x1000, use preceding zeros. For example: - Invalid: 0x10 - Valid: 0x0010

ORA-36692: (XSRELGID24) A level relation must be specified for the GROUPSET and ROLLUP options of GROUPINGID.

Cause: No level relation was specified.

Action: Specify a level relation.

ORA-36693: (XSRELGID25) INHIERARCHY cannot be specified with the GROUPSET and ROLLUP options of GROUPINGID.

Cause: The INHIERARCHY option was specified.

Action: Remove the INHIERARCHY option.

ORA-36694: (XSRELTBL01) The value cannot be added to dimension *workspace object*.

Cause: A value could not be added to a dimension of type INTEGER.

Action: Check the context and permission for dimension maintenance.

ORA-36695: (XSRELGID26) The length of GID dimension status is *number*. The length of LEVEL dimension status is *number*.

Cause: The GID dimension status did not match the LEVEL dimension status.

Action: Change either the GID dimension status or the LEVEL dimension status.

ORA-36696: (XSRELTBL02) QDR dimension *workspace object* should not be the related dimension of the relation.

Cause: An ineligible dimension was specified in the Qualified Data Reference.

Action: Do not attempt to qualify this dimension.

ORA-36698: (XSRELTBL03) QDR dimension *workspace object* is not in the dimension list that dimensions the relation.

Cause: The specified qualified data reference (QDR) dimension was not in the dimension list of the relation.

Action: Select only dimensions that are in the dimension list of the relation.

ORA-36700: (XSRELTBL04) Dimension *workspace object* cannot be qualified more than once.

Cause: The same dimension was specified more than once in the qualified data reference.

Action: Specify each qualified data reference dimension only once.

ORA-36702: (XSRELTBL05) The format of the HIERHEIGHT function is: \n HIERHEIGHT(relation [,] level)\n level >= 1.

Cause: The HIERHEIGHT function was specified incorrectly.

Action: Ensure that the format of the HIERHEIGHT function is correct.

ORA-36704: (XSRELTBL06) *workspace object* should be dimensioned by *workspace object*.

Cause: The level relation was not dimensioned by the source relation dimension.

Action: Make sure the level relation has the correct definition.

ORA-36706: (XSRELTBL07) *workspace object* should be dimensioned by *workspace object* and one level dimension.

Cause: The destination relation had the wrong definition.

Action: Make sure the destination relation has the correct dimensions.

ORA-36708: (XSMXALLOC00) Variable *workspace object* must be dimensioned to be used by the ALLOCATE command.

Cause: The user supplied an undimensioned (scalar) variable to the ALLOCATE command.

Action: Use a dimensioned variable.

ORA-36710: (XSMXALLOC01) TARGETLOG variable *workspace object* must be dimensioned identically to TARGET variable *workspace object*.

Cause: The user attempted to execute ALLOCATE with mismatched TARGET and TARGETLOG variables

Action: Use TARGET and TARGETLOG variables with matching dimensionality.

ORA-36712: (XSMXALLOC02) Relation *workspace object* must be a one-dimensional self-relation to be used as a SOURCE or BASIS with ALLOCATE.

Cause: The user specified an invalid source or basis relation on the ALLOCATE command line.

Action: Modify the relation to be a one-dimensional self-relation.

ORA-36714: (XSMXALLOC03) TARGETLOG variable *workspace object* must have the same data type as TARGET variable *workspace object*.

Cause: The user specified a TARGETLOG variable that had a different data type from the TARGET variable.

Action: Use TARGETLOG and TARGET variables with an identical data type.

ORA-36718: (XSALLOC00) You do not have the necessary permissions to use AGGMAP workspace object.

Cause: The user did not have sufficient permissions to run the ALLOCATE command

Action: Change to a user ID with the appropriate permissions, or use objects that you have permission to use.

ORA-36720: (XSALLOC01) To be used with ALLOCATE, your AGGMAP workspace object must be defined with the ALLOCMAP command.

Cause: The user used the AGGMAP command to define the AGGMAP, so either the AGGMAP can only be used with the AGGREGATE command, or the AGGMAP has no contents attached to it.

Action: Use the ALLOCMAP command to define the AGGMAP.

ORA-36722: (XSALLOC02) In AGGMAP workspace object, you specified an NA or ZERO sourceval but supplied formula workspace object as your source for ALLOCATE.

Cause: The user requested that source values be modified during the allocation, but that is not possible when using a formula source.

Action: Either use a VARIABLE source or remove the SOURCEVAL specification for your ALLOCMAP.

ORA-36724: (XSALLOC03) workspace object cannot include more dimensions than the source variable.

ORA-36726: (XSALERR00) The character 'character' is not a valid format specifier for the ALLOCATE error log.

Cause: The user specified an invalid formatter in the ALLOCERRLOGHEADER or ALLOCERRLOGFORMAT options.

Action: Correct the option to have a valid format.

ORA-36728: (XSALERR01) While performing the ALLOCATE command with AGGMAP workspace object, the error logging limit of number was exceeded.

Cause: The user specified an ERRORLOG MAX value in the ALLOCMAP, but more errors were encountered while performing the allocation.

Action: Either set ERRORLOG NOSTOP, reduce the allocation errors, or increase the ERRORLOG MAX setting

ORA-36730: A deadlock occurred allocating data.

ORA-36731: An NA basis parent cell was encountered.

ORA-36732: A value was less than the FLOOR specification.

ORA-36733: A value exceeded the CEILING specification.

ORA-36734: A value was less than the MIN specification.

ORA-36735: A value exceeded the MAX specification

Cause: .

Action: n/a

ORA-36736: Renormalizing data

ORA-36737: The logging limit was exceeded.

ORA-36738: Falling back to NAOPERATOR after deadlock.

ORA-36739: Redistributing remainder with REMOPERATOR.

ORA-36740: A CHILDLCK was detected in your valueset

Cause: .

Action: n/a

ORA-36741: A source was OVER ALLOCATED to its children

ORA-36761: (XSLANGDM01) Analytic workspace *string* already contains a dimension (%J) with the *string* property.

Cause: An attempt was made to apply this property to more than one dimension in the analytic workspace.

Action: Remove the property from the named dimension and try the command again.

ORA-36762: (XSLANGDM02) Cannot modify the *string* property of %J because analytic workspace *string* is attached in multiwriter mode.

Cause: An attempt was made to add or delete a \$DEFAULT_LANGUAGE property in an analytic workspace (AW) attached in multiwriter mode.

Action: Attach the AW in a different mode.

ORA-36763: (XSAGGCNTMOVE01) Aggregation variable *workspace object* cannot have itself as an AGGCOUNT.

Cause: An attempt was made to turn a variable into its own AGGCOUNT.

Action: Select a different AGGCOUNT variable.

ORA-36764: (XSAGGCNTMOVE02) AGGCOUNT variable *workspace object* must be of type INTEGER, not *string*.

Cause: An attempt was made to create an AGGCOUNT variable that was not an INTEGER type.

Action: Select an INTEGER AGGCOUNT variable.

ORA-36765: (XSAGGCNTMOVE03) A *string* aggregation variable cannot have a *string* AGGCOUNT.

Cause: The specified AGGCOUNT variable did not have the same TEMPORARY or PERMANENT attribute as the aggregation variable.

Action: Select an AGGCOUNT variable with the same TEMPORARY or PERMANENT attribute as the aggregation variable.

ORA-36766: (XSAGGCNTMOVE04) *workspace object* cannot be used as an AGGCOUNT because it has an AGGCOUNT.

Cause: The specified AGGCOUNT variable had its own AGGCOUNT.

Action: Select a different variable, or remove the AGGCOUNT using CHGDFN.

ORA-36767: (XSAGGCNTMOVE05) *workspace object* cannot be used as an AGGCOUNT while there are permissions applied to it.

Cause: The specified AGGCOUNT variable permissions were distinct from those on the aggregation variable.

Action: Select a different AGGCOUNT variable or remove the permissions. This may require an UPDATE before the command can succeed.

ORA-36768: (XSAGGCNTMOVE06) An aggregation variable and its AGGCOUNT must have the same base dimensions.

Cause: An AGGCOUNT variable was specified with different base dimensions than the aggregation variable.

Action: Select an AGGCOUNT variable with exactly the same base dimensions as the aggregation variable.

ORA-36777: Unable to allocate *string* bytes for the OLAP page pool.

Cause: Insufficient memory was available to allocate the needed memory for the online analytical processing (OLAP) page pool. One cause is the value of the OLAP_PAGE_POOL_SIZE initialization parameter.

Action: Check the value of the OLAP_PAGE_POOL_SIZE initialization parameter. It cannot be larger than 90% of the value of the PGA_AGGREGATE_LIMIT initialization parameter.

ORA-36778: (XSPGTRLOW) The amount of available temporary storage is still low. Free some temporary storage immediately. You can do so, for example, by UPDATING or DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-36779: invalid parameter value specified for OLAP_PAGE_POOL_SIZE

Cause: The specified value for the OLAP_PAGE_POOL_SIZE initialization parameter was out of range. The OLAP_PAGE_POOL_SIZE initialization parameter must be between 2,097,152 (2MB) and 2,147,483,647, and it must be less than 90% of the PGA_AGGREGATE_LIMIT initialization parameter. Furthermore, you cannot set a fixed-size OLAP page pool with multiple tablespace block sizes. The OLAP_PAGE_POOL_SIZE initialization parameter remains unmodified.

Action: Specify a value for the OLAP_PAGE_POOL_SIZE initialization parameter that is between 2,097,152 (2MB) and 2,147,483,647, and does not exceed 90% of the PGA_AGGREGATE_LIMIT initialization parameter. Do not try to set this parameter if you are using tablespaces with multiple block sizes in your database.

ORA-36780: (IOSEC01) Current Directory Alias is not set. Cannot complete *string*.

Cause: A file name was specified without a directory component, and there was no Current Directory Alias (CDA) to complete the file name.

Action: Use the CDA command to set the current directory alias, or include a directory component in the file name.

ORA-36782: (IOSEC02) Directory Alias used in *string* does not exist, or you do not have sufficient privileges to access it.

Cause: The specified directory alias was not recognized.

Action: Use CREATE DIRECTORY *name* AS 'path'. Then grant privileges to that // directory alias.

ORA-36783: Directory alias used in *string* does not exist, or there are insufficient access privileges.

Cause: The directory alias did not exist, or there were insufficient access privileges.

Action: Process the CREATE DIRECTORY *name* AS 'path' statement. Then, grant privileges to that directory alias.

ORA-36784: (IOSEC03) *string* is an invalid directory or file name.

Cause: The supplied value could not be interpreted as a directory or a file name.

Action: Supply a valid directory or file name.

ORA-36785: Invalid directory or file name *string*.

Cause: The supplied value could not be interpreted as a directory or file name.

Action: Supply a valid directory or file name.

ORA-36786: (IOSEC04) File *string* does not exist or cannot be accessed.

Cause: The specified file could not be found, or the user did not have sufficient privileges to access it.

Action: Check the file name for correctness. If the file name is correct, it may be necessary to use RDBMS or file system commands to grant the // user access.

ORA-36792: (IOSEC07) Error accessing file *string*.

Cause: A file system error occurred.

Action: Make sure that the file exists and is accessible.

ORA-36793: Error accessing file *string*.

Cause: A file system error occurred.

Action: Make sure that the file exists and is accessible.

ORA-36802: (XSTBLFUNC01) The OLAP_TABLE function must contain a DATAMAP that executes a FETCH command or a LIMITMAP.

Cause: There is no limitmap on the table function and either the datamap does not contain a fetch, or it errored before the fetch was called.

Action: Check the datamap for errors, make sure that it executes a fetch statement, if it is not intended to execute the fetch then make sure that the table function has a valid limitmap.

ORA-36804: (XSTBLFUNC02) The OLAP_TABLE function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax, or the name resolution failure of an ANALYTIC WORKSPACE OBJECT.

Action: Check the syntax of the limit map, check that the OLAP_TABLE function refers to a valid analytic workspace, check that all analytic workspace objects within the limitmap actually exist within the analytic workspace

ORA-36806: (XSTBLFUNC03) The OLAP_TABLE function refers to an invalid ADT attribute: *string*.

Cause: The limitmap refers to a matching of ADT attribute to AW object, but the ADT attribute is not an element of the specified ADT table. Most commonly this is a typo.

Action: Add the attribute to the ADT, correct the LIMITMAP, or remove the reference from the LIMITMAP.

ORA-36808: (XSTBLFUNC04) The OLAP_TABLE function LEVELREL clause cannot declare *number* ADT fields from *number* AW fields.

Cause: The limitmap has a levelrel clause which has a different number of values in the list to the right of the FROM than it has to the left.

Action: Change the limitmap so that there is a 1:1 mapping of adt and aw elements.

ORA-36810: (XSTBLFUNC05) Analytic workspace object *number* does not exist.

Cause: The limitmap refers to a non-existent aw object.

Action: Change the limitmap or define the object

ORA-36814: (XSTBLFUNC07) The datatype of the column used in the ROW2CELL clause of a LIMITMAP must be RAW(16).

Cause: Datatype of column used in ROW2CELL clause of a LIMITMAP is not RAW(16).

Action: Change datatype to RAW(16).

ORA-36815: (XSTBLFUNC08) The OLAP_TABLE has attempted to use an AW single row function with the aw_attach parameter set to DURATION QUERY.

Cause: The OLAP_TABLE aw_attach parameter was set to DURATION QUERY.

Action: Change the OLAP_TABLE aw_attach parameter to DURATION SESSION.

ORA-36816: (XSTBLFUNC09) The *workspace object* dimension is of datatype *string* which does not support custom member upserts.

Cause: Custom members were attempted to be added via an upsert to a dimension that does not support them

Action: Disable the AW Hash optimization for this query

ORA-36817: (XSTBLFUNC10) The LIMITMAP LOOP clause specifies an invalid type of object. *workspace object* must be a DIMENSION or COMPOSITE.

Cause: An invalid type of object was specified in the LOOP clause.

Action: Correct the LOOP clause.

ORA-36818: (XSTBLFUNC11) A LIMITMAP DIMENSION clause specifies an invalid type of object. *workspace object* must be a DIMENSION.

Cause: An invalid type of object was specified in the DIMENSION clause.

Action: Correct the DIMENSION clause.

ORA-36819: (XSTBLFUNC12) *workspace object* cannot be used in a LIMITMAP *string* clause.

Cause: An invalid type of object was specified in a LIMITMAP clause.

Action: Correct the LIMITMAP clause.

ORA-36820: (XSLMINFO00) The LIMITMAPINFO function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax.

Action: Correct the syntax of the limit map.

ORA-36825: (XSTBLFUNC13) An error occurred expanding the cube_name argument in the OLAP table function

Cause: Incorrect metadata or invalid cube name

Action: Correct the metadata.

ORA-36826: (XSTBLFUNC14) OLAP C Looper is disabled by event 37395

Cause: init.ora event 37395 includes level 8 which disables the OLAP C looper

Action: Remove event level 8 and use explicit FETCH function for OLAP_TABLE

ORA-36831: (XSLMGEN01) View token cannot be NA

Cause: A NA was passed as the view token

Action: Pass in a valid view token

ORA-36832: (XSLMGEN02) View token cannot be greater than 4000 bytes

Cause: A view token was greater than 4000 bytes

Action: Pass in a view token less than 4000 bytes

ORA-36833: (XSLMGEN03) View token cannot be blank

Cause: A blank was passed as the view token

Action: Pass in a valid view token

ORA-36834: (XSLMGEN04) Column tag is greater than 30 bytes

Cause: A value greater than 30 bytes was passed as the column tag

Action: Pass in a column tag of 30 bytes or less

ORA-36835: (XSLMGEN05) Dimension string.string hierarchy string level string is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36836: (XSLMGEN06) The dimensionality of object string.string is different than the view token

Cause: The dimensionality of the cube does not match the view token

Action: Check view token for unrelated hierarchies clauses

ORA-36837: (XSLMGEN07) Object owner string is different than string

Cause: The object owners are different

Action: Make the object owners match

ORA-36838: (XSLMGEN08) Dimension string.string attribute string is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36839: (XSLMGEN09) Cube string.string measure string is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36840: (XSLMGEN10) Cube *string.string* has no measures

Cause: The cube has no measures

Action: Add a measure to the cube

ORA-36841: (XSLMGEN11) Dimension *string.string* was not found

Cause: The view token referenced a dimension that does not exist

Action: Pass in a dimension that does exist

ORA-36842: (XSLMGEN12) Hierarchy *string.string.string* was not found

Cause: The view token referenced a hierarchy that does not exist

Action: Pass in a hierarchy that does exist

ORA-36843: (XSLMGEN13) Dimension *string.string* hierarchy *string* is missing a PHYSICALNAME property value

Cause: The property PHYSICALNAME has no value

Action: Populate the property PHYSICALNAME with a value

ORA-36844: (XSLMGEN14) Dimension *string.string* is missing a *string* property value

Cause: The dimension is missing a required property

Action: Check dimension property values

ORA-36845: (XSLMGEN15) Owner is greater than 30 bytes

Cause: The owner passed is greater than 30 bytes

Action: Pass in an owner that is 30 bytes or less

ORA-36846: (XSLMGEN16) AW name is greater than 30 bytes

Cause: The AW name passed is greater than 30 bytes

Action: Pass in an AW name that is 30 bytes or less

ORA-36847: (XSLMGEN17) AW name is blank

Cause: The AW name passed is blank

Action: Pass in an AW name that has a value

ORA-36848: (XSLMGEN18) Object name *string* is different than *string*

Cause: The object names are different

Action: Make the object names match

ORA-36849: (XSLMGEN19) AW owner does not match View token owner

Cause: The AW owner does not match the View token owner

Action: Match AW owner to View token object owner

ORA-36850: (XSLMGEN20) View token *string* is not correct

Cause: The view token is not correct

Action: Check view token syntax for errors

ORA-36861: (XSTFRC01) SQL Cache ID parameter is invalid or missing.

Cause: SQL Cache ID parameter is required to identify SQL cache to query

Action: Supply a valid SQL Cache ID. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36862: (XSTFRC02) Column number for this SQL Cache must be between 1 and *number*. Specified column number *number* is invalid.

Cause: Column Map references a column number that is greater than the maximum column number in SQL Cache

Action: Reference a correct column number. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36871: (XSFTDSC01) Object *string* cannot be used to define a column in a LIMITMAP.

Cause: The object cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36872: (XSTFDSC02) Column type specifier cannot be used when the table function data type is specified.

Cause: Column type can only be used with implicitly-specified table functions

Action: Remove column type from reference from the LIMITMAP or remove the explicit table function data type specification.

ORA-36874: (XSTFDSC04) Expression *string* cannot be used to define a column in a LIMITMAP.

Cause: The expression cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36875: (XSTFDSC05) LIMITMAP is missing or is not a string literal.

Cause: Table functions that have an automatic ADT require LIMITMAP to be a string literal.

Action: Either specify ADT for the table function or specify LIMITMAP as a string literal.

ORA-36876: (XSTFDSC06) The column datatype *string* is not supported in OLAP table functions.

Cause: The object type layer does not support column datatype.

Action: Use a supported column datatype.

ORA-36881: (XSSRF00) The OLAP DML ROW2CELL function can only be used in a LIMITMAP.

Cause: Using the ROW2CELL function outside of the LIMITMAP.

Action: Remove use of the ROW2CELL function.

ORA-36882: (XSSRF01) The second parameter of an AW single row function cannot be NULL.

Cause: The second parameter of the AW single row function was NULL

Action: Pass a valid OLAP DML expression as the second parameter of the AW single row function

ORA-36883: (XSSRF02) The first parameter of an AW single row function cannot be NULL.

Cause: The first parameter of the AW single row function was NULL

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36884: (XSSRF03) The value of the first parameter of the AW single row function is incorrect.

Cause: The column specified in the LIMITMAP ROW2CELL clause was not the first parameter of the AW single row function.

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36885: (XSSRF04) Error rewriting OLAP DML expression. Column name too big

Cause: The column name specified in the OLAP DML expression was larger than 30 bytes.

Action: Make sure the column name specified in the OLAP DML expression is less than or equal to 30 bytes.

ORA-36886: (XSSRF05) Error rewriting OLAP DML expression. Rewritten expression is greater than *number* bytes

Cause: The rewritten OLAP DML expression was larger than the output buffer.

Action: Create a smaller OLAP DML expression.

ORA-36887: (XSSRF06) Error rewriting OLAP DML expression. Column name *string* is not a valid ADT column.

Cause: The column name passes does not exist.

Action: Only reference columns that exist.

ORA-36902: (XSAGDNGL43) In AGGMAP *workspace object*, the MODEL *workspace object* is not a model over a base dimension of the AGGMAP.

Cause: Model may include equations others than dimension values, or blocks other than simple blocks.

Action: Make sure model only includes the simple blocks with dimension values.

ORA-36904: (XSAGDNGL44) In AGGMAP *workspace object*, RELATION *workspace object* occurs after a dynamic model. The dynamic model must be the last calculation within the AGGMAP.

Cause: Before the current relation, dynamic model exists.

Action: Make sure the dynamic model is the last statement.

ORA-36910: (XSAGDNGL47) In AGGMAP *workspace object*, DYNAMIC MODEL *workspace object* can only edit the top level of its matching relation hierarchy.

Cause: The model attempted to edit a child node in the relation hierarchy.

Action: Remove this attempt from the model definition.

ORA-36912: (XSAGDNGL48) In AGGMAP workspace object, MODEL workspace object cannot be simultaneous.

Cause: The aggmap contained a simultaneous model.

Action: Change the model definition so that it is no longer simultaneous.

ORA-36913: (XSAGDNGL49) In AGGMAP workspace object, LOAD_STATUS object workspace object must be an undimensioned VALUESET over the relation dimension.

Cause: The object referred to by the LOAD_STATUS clause of the aggmap wasn't an undimensioned valueset over the related dimension

Action: Change the aggmap definition so that it doesn't refer to an invalid object

ORA-36914: (XSAGDNGL50) In AGGMAP workspace object, LOAD_STATUS valueset workspace object contains both a child and its ancestor.

Cause: The LOAD_STATUS valueset is not allowed to contain both a dimension value and an ancestor of that value.

Action: Perform a limit remove ancestors on the valueset and confirm that the result matches the intended load.

ORA-36930: Cannot start a recursive call to Oracle Online Analytical Processing (OLAP) because a ROLLBACK past an UPDATE to an attached analytic workspace was performed.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. A recursive OLAP call cannot be made until control returns to initial OLAP call and the affected Analytic Workspaces detaches.

Action: Change the called SQL procedure to avoid the ROLLBACK.

ORA-36940: (XSDPENG00) The PARTITION function cannot be applied to workspace object because it is not a partition template.

Cause: An attempt was made to apply the PARTITION function to an object that was not a partition template.

Action: Supply the name of a partition template.

ORA-36950: (XSFCAST22) The list of string values cannot have more than number members. number were supplied.

Cause: More than the maximum number of OFFSET or PERIODICITY values were specified.

Action: Remove some of the OFFSET or PERIODICITY values.

ORA-36951: (XSFCAST28) The ALLOCLAST parameter cannot be set to YES unless PERIODICITY specifies more than one cycle.

Cause: The ALLOCLAST parameter was set to YES when the PERIODICITY parameter specified a single value rather than a list of nested cycles.

Action: Set the ALLOCLAST parameter to FALSE (the default), or specify more than one value for the PERIODICITY parameter (in the form of a parenthesized list).

ORA-36952: (XSFCAST23) cannot specify a cycle number when querying the string forecasting option

Cause: A cycle number was specified in a call to the FCQUERY function to retrieve forecast data not related to a cycle.

Action: Remove the cycle specification from the call to the FCQUERY function.

ORA-36954: (XSFCAST24) The cycle number must be between 1 and *number*. You specified *number*.

Cause: A cycle number less than 1 or greater than the maximum value was specified in a call to FCQUERY.

Action: Specify a number in the indicated range.

ORA-36956: (XSFCAST25) There are only *number* PERIODICITY values. You cannot specify more OFFSET values.

Cause: More OFFSET values were specified than PERIODICITY values.

Action: Specify only as many OFFSET values as there are PERIODICITY values.

ORA-36958: (XSFCAST26) The OFFSET value for cycle *number* cannot be greater than the cycle's PERIODICITY, which is *number*. You specified *number*.

Cause: The OFFSET for a cycle exceeded the PERIODICITY for that cycle.

Action: Supply an OFFSET less than or equal to the PERIODICITY for the corresponding cycle.

ORA-36960: (XSFCAST27) The value of the *string* expression must be an odd number. You specified *number*.

Cause: An even number was given for an option that requires an odd number.

Action: Supply an odd number or let the option default.

ORA-36961: Oracle OLAP is not available.

Cause: An attempt was made to utilize functionality found only in Oracle OLAP, but Oracle OLAP was not enabled in the executable.

Action: Install the Oracle OLAP option.

ORA-36962: (XSRELTBL08) *string* is not a valid workspace object.

Cause: The specified value did not exist in the dimension.

Action: Specify an existing value of the dimension.

ORA-36963: (XSRELTBL16) INHIERARCHY object *workspace object* should be a valid valueset or boolean variable.

Cause: Invalid valueset or variable was specified.

Action: Specify a valid valueset or variable.

ORA-36964: (XSRELTBL09) *workspace object* is not a valid level relation.

Cause: The specified level relation was not consistent with the parentage hierarchy.

Action: Fix one or both of the relations involved so that all parents are at a higher level than their children.

ORA-36965: (XSRELTBL17) Invalid LEVELORDER valueset *workspace object*.

Cause: Invalid LEVELORDER valueset was specified.

Action: Specify a valid valueset.

ORA-36966: (XSRELTBL10) workspace object must be a dimension.

Cause: An attempt was made to qualify an object other than a dimension.

Action: Remove the named object from the QDR.

ORA-36967: (XSRELTBL18) invalid INHIERARCHY valueset workspace object

Cause: An invalid valueset was specified for the INHIERARCHY parameter.

Action: Specify a valid valueset for the INHIERARCHY parameter.

ORA-36968: (XSRELTBL11) invalid relation workspace object

Cause: A value other than a RELATION object was specified as the source or destination.

Action: Specify RELATION objects as the source or destination.

ORA-36969: (XSRELTBL19) A merged family relation cannot take the INHIERARCHY option.

Cause: INHIERARCHY option was specified for a merged family relation.

Action: Remove the INHIERARCHY option.

ORA-36970: (XSRELTBL12) workspace object must be a self-relation.

Cause: The specified source relation was not a self-relation.

Action: Specify a self-relation as the source.

ORA-36971: (XSRELTBL19) A merged family relation cannot take the LEVELORDER option.

Cause: The LEVELORDER option was specified for a merged family relation.

Action: Remove the LEVELORDER option.

ORA-36972: (XSRELTBL13) relation workspace object must be dimensioned by workspace object

Cause: The destination relation was not dimensioned by the source relation dimension.

Action: Provide a valid destination relation.

ORA-36974: (XSRELTBL14) workspace object is not a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

Cause: The named variable had either the wrong data type or the wrong dimensions.

Action: Specify a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

ORA-36975: (XSRELTBL15) The USING clause did not name a relation with the same level dimension as LEVELORDER valueset workspace object.

Cause: Either the USING clause was omitted from the HIERHEIGHT command, or specified a relation that contained values of a different dimension other than the LEVELORDER valueset.

Action: Specify a USING clause naming a relation containing values from the correct level dimension.

ORA-36976: (XSRELGID00) invalid GROUPINGID destination relation or variable workspace object

Cause: An invalid relation or variable was specified as the GROUPINGID destination.

Action: Specify a valid relation or variable.

ORA-36977: (XSRELGID17) The GROUPINGID command does not support hierarchies with more than 126 levels.

Cause: A hierarchy was specified with more than 126 levels.

Action: Decrease the number of levels in the hierarchy.

ORA-36978: (XSRELGID01) workspace object must be a self-relation

Cause: The source relation specified for GROUPINGID was not a self-relation.

Action: Specify a self-relation as the source relation.

ORA-36979: (XSRELGID18) Property *number* can only be set by the GROUPINGID command.

Cause: You tried to set the \$GID_DEPTH property.

Action: Do not try to set \$GID_DEPTH property.

ORA-36980: (XSRELGID02) Variable *workspace object* must have a numeric data type.

Cause: The destination variable did not have a numeric data type.

Action: Ensure the variable is numeric.

ORA-36981: (XSRELGID19) The format of the GROUPINGID function is:\n \n GROUPINGID(gidrel1 [gidrel2]...)

Cause: The GROUPINGID function could not be executed because of invalid syntax.

Action: Check the error message or refer to Oracle Database documentation for the correct syntax.

ORA-36982: (XSRELGID03) The destination variable or relation *workspace object* must be dimensioned by all dimensions of the source relation *workspace object* that have more than one value in status.

Cause: The destination variable or relation did not have enough dimensions to contain the result from the multi-dimensional source relation.

Action: Either limit the status of hierarchy dimensions or redefine the destination object with the correct dimensions.

ORA-36983: (XSRELGID20) The GROUPLINGID relation *workspace object* appears more than once.

Cause: The relation appeared more than once in the GROUPINGID argument list.

Action: Remove the duplicated relation.

ORA-36984: (XSRELGID04) A value cannot be inserted into dimension *workspace object*.

Cause: An error occurred that prevented a value from being added to the named dimension.

Action: Check to make sure that you have permission to add values to the dimension.

ORA-36985: (XSRELGID21) The source relation can be omitted only when using both surrogate GID and level order valueset.

Cause: The required source relation was not specified.

Action: Specify the source relation or both surrogate Group ID (GID) and level order valueset.

ORA-36986: (XSRELGID05) Relation *workspace object* must be dimensioned by *workspace object*.

Cause: The destination relation was not dimensioned by the dimension of the source relation.

Action: Redefine the destination relation or choose another relation with the correct dimensionality.

ORA-36988: (XSRELGID06) The related dimension of relation *workspace object* must be of type NUMBER.

Cause: The related dimension of the destination relation had the wrong data type.

Action: Redefine the destination relation or choose another relation with related dimension of type NUMBER.

ORA-36989: (XSRELGID23) GROUPSET and ROLLUP options in GROUPINGID require a destination relation.

Cause: Either a variable or a surrogate dimension was specified as the GROUPINGID destination.

Action: Specify a relation as the destination.

ORA-36990: (XSRELGID07) The level relation *workspace object* should be dimensioned by a level dimension.

Cause: The level relation was not dimensioned by a level dimension.

Action: Redefine the level relation or choose another relation with the correct dimensionality.

ORA-36991: (XSRELGID08) The level relation and level order valueset provide inconsistent level mappings.

Cause: There was a conflict between the hierarchy or level relation and the level order valueset.

Action: Modify the relation, specify new limits for the valueset, or choose other objects that do not conflict.

ORA-36992: (XSRELGID09) A level relation is needed to produce a surrogate dimension Group ID (GID).

Cause: A level relation was not specified in the GROUPINGID command.

Action: Specify a level relation.

ORA-36993: (XSRELGID10) OBJECT *workspace object* must be a SURROGATE DIMENSION based on the level dimension *workspace object*.

Cause: The object specified was not a surrogate dimension based on the level dimension.

Action: Select a surrogate of the level dimension.

ORA-36994: (XSRELGID11) The SURROGATE DIMENSION *workspace object* must be numeric.

Cause: A non-numeric surrogate dimension was specified.

Action: Provide the name of a numeric surrogate dimension.

ORA-36995: (XSRELGID12) There are duplicate values in the surrogate dimension GID. Use the INHIERARCHY option to resolve the ambiguity.

Cause: There were multiple hierarchies in the current computing scope.

Action: Modify the level relation to remove the duplication, or supply an INHIERARCHY valueset.

ORA-36996: (XSRELGID13) Valueset *workspace object* should be defined over dimension *workspace object*.

Cause: The specified INHIERARCHY valueset did not contain values of the hierarchy dimension.

Action: Supply an INHIERARCHY valueset containing values of the hierarchy dimension.

ORA-36997: (XSRELGID14) For variable or relation grouping IDs, a level relation is needed when a LEVELORDER valueset is specified.

Cause: The GROUPINGID could not derive level information from the arguments provided, and there was no USING clause to provide this information.

Action: Specify a level relation.

ORA-36998: (XSRELGID15) LEVELORDER valueset *workspace object* and level relation *workspace object* do not have the same level dimension.

Cause: A mismatch was detected between the level dimension of the LEVELORDER valueset and that of the level relation specified in the USING clause.

Action: Specify objects with the same level dimension.

ORA-36999: (XSRELGID16) OBJECT *workspace object* is not a surrogate dimension. A source relation must be specified when creating any non-surrogate grouping id.

Cause: A variable or relation groupingid was specified without providing the source relation.

Action: Use s surrogate, or provide the source relation.

ORA-37000: (NOTALIAS00) *workspace object* is not an ALIAS DIMENSION of *workspace object*.

Cause: The user specified an object which was not an alias dimension of the first dimension.

Action: Specify an alias dimension of the first dimension.

ORA-37001: You have one or more attached but unupdated analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Either issue the update command to update the AWs, or pass TRUE as the force parameter to `dbms_aw.shutdown()`

ORA-37003: (AWLISTALL01) *number* readers

Cause: Used in `AW(LISTALL)` output formatting when %d is 0.

Action: No action needed.

ORA-37010: (XSACQUIRE_DIFFAW) When using the CONSISTENT WITH clause, all objects must come from the same analytic workspace.

Cause: The ACQUIRE command cannot keep objects from several workspaces consistent with each other

Action: Omit the CONSISTENT WITH clause or make sure all objects being acquired belong to the same analytic workspace.

ORA-37011: (XSACQUIRE_LOCKED) Object *workspace object* is locked by another user.

Cause: Could not acquire (or acquire consistent) the object, since it is locked by another user

Action: Try to acquire this object later

ORA-37012: (XSACQUIRE_TIMEOUT) Object *workspace object* is locked by another user and the WAIT timed out.

Cause: Could not acquire (or acquire consistent) the object for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37013: (XSACQUIRE_DEADLOCK) Cannot wait to acquire object *workspace object*, since doing so would cause a deadlock.

Cause: Waiting to acquire the object would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37014: (XSACQUIRE_ACQUIRED) Object *workspace object* is already acquired.

Cause: The object is already acquired

Action: Do not try to acquire this object again

ORA-37015: (XSACQUIRE_YNRESYNC) Object *workspace object* is ambiguously listed to be acquired both with and without RESYNC.

Cause: The object is listed in with resync list and no resync list. Such usage is ambiguous as to the user's intent on preserving or not preserving private changes.

Action: Do not list the object both with and without RESYNC

ORA-37016: (XSACQUIRE01) You must specify objects to acquire for the ACQUIRE command.

Cause: A list of objects to acquire with or without resync is missing

Action: Specify the list of objects to acquire

ORA-37018: (XSACQUIRE03) Multiwriter operations are not supported for object *workspace object*.

Cause: Multiwriter presently does not work for this object type

Action: Attach the AW in RW or EXCLUSIVE modes to modify this object.

ORA-37020: (XSMULTI01) Analytic workspace *string* is not in MULTI mode.

Cause: The workspace for an object is not in multiwriter mode. Hence, no multiwriter operations are allowed on the objects in the workspace

Action: Attach the workspace in the multiwriter mode or do not use multiwriter commands with it.

ORA-37021: (XSMULTI02) Object *workspace object* is not acquired.

Cause: The object must be acquired for this multiwriter operation

Action: Do not use this multiwriter operation on an object that is not acquired

ORA-37023: (XSMLTUPD01) Object *workspace object* cannot be updated without dimension *workspace object*.

Cause: One cannot update an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37026: (XSMLTRESYNC01) Object *workspace object* cannot be resynchronized without dimension *workspace object*.

Cause: An attempt was made to resync an object dimensioned by a maintained dimension without updating that dimension or if the object was a relation and the dimension was the target.

Action: Include the maintained dimension in the update list.

ORA-37027: (XSMLTRESYNC02) Object *workspace object* cannot be resynchronized without modified object *workspace object* because they share a modified composite dimension.

Cause: An attempt was made to resynchronize an object dimensioned by a composite dimension causing the composite dimension to be resynced automatically, dropping all new tuples. This cannot be done, however, if the automatic resync of the composite dimension might cause data in an object that shares the composite dimension to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the composite dimension is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37028: (XSMLTRESYNC03) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified dimension map.

Cause: An attempt was made to resynchronize an object dimensioned by a dimension map causing the dimension map to be resynced automatically, dropping all changes. This cannot be done, however, if the automatic resync of the dimension map might cause data in an object that shares the dimension map to become NA.

Action: Resynchronize both objects together. Alternatively, you can try to acquire the other object (that will ensure that the dimension map is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37030: (XSMLTMAINT01) cannot maintain *workspace object* because it is not acquired

Cause: An attempt was made to maintain a dimension in a multiwriter analytic workspace that was not acquired.

Action: Acquire the dimension first.

ORA-37031: (XSMLTMAINT02) cannot DELETE values of dimension *workspace object* in MULTI mode

Cause: An attempt was made to DELETE values of a dimension in MULTI mode. DELETE is allowed in multiwriter mode only for SESSION dimension members.

Action: Attach the analytic workspace in a read/write mode and perform the DELETE operation.

ORA-37032: (XSMLTMAINT03) cannot MAINTAIN partition template *workspace object* in MULTI mode

Cause: An attempt was made to add or remove values from LIST partition template lists while the analytic workspace containing the partition template was attached in multiwriter mode.

Action: Do the maintenance in read-only or read/write mode.

ORA-37035: (XSMLTDCL01) can only DEFINE SESSION objects in analytic workspace *string* because it is attached in MULTI mode

Cause: Persistent object definition in multiwriter mode was not allowed.

Action: Specify all persistent object definitions in read/write mode.

ORA-37036: (XSMLTDCL02) Cannot DELETE objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: An attempt was made to delete objects in an analytic workspace attached in MULTI mode.

Action: Delete objects in read-only or read/write mode.

ORA-37037: (XSMLTDCL03) cannot RENAME objects in analytic workspace *string* because it is attached in MULTI mode

Cause: An attempt was made to rename objects in an analytic workspace attached in MULTI mode.

Action: Specify all persistent object maintenance in read/write mode.

ORA-37038: (XSMLTDCL04) cannot change definitions of objects in analytic workspace *string* because they are attached in MULTI mode

Cause: An attempt was made to use the CHGDFN command on objects in an analytic workspace attached in MULTI mode.

Action: Specify all persistent object maintenance in read/write mode.

ORA-37039: (XSMLTDCL05) cannot maintain triggers in analytic workspace *string* because they are attached in MULTI mode

Cause: An attempt was made to use the TRIGGER command on objects in an analytic workspace attached in MULTI mode.

Action: Specify all persistent object maintenance in read/write mode.

ORA-37040: (XSACQUIRE_DEP_LOCKED) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which is locked by another user

Action: Try to acquire this object later

ORA-37041: (XSACQUIRE_DEP_TIMEOUT) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user and the WAIT timed out.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which could not be locked for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37042: (XSACQUIRE_DEP_DEADLOCK) Cannot wait to acquire composite, concat, dimension map, or internal partition *workspace object*, since doing so would cause a deadlock.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37043: (XSACQUIRE_DEP_OLDGEN) Composite, concat, dimension map, or internal partition *workspace object* cannot be locked, since another user has committed a new one already.

Cause: Some object required locking a composite, concat, dimension map, or internal partition in the present generation, which is not possible, since a newer generation already exists.

Action: Try to acquire the main object with resync

ORA-37044: (XSACQUIRE_OLDGEN) Cannot acquire object *workspace object* without resync.

Cause: Could not acquire the object without resync because another user has committed a newer version of it already.

Action: Try to acquire this object with resync parameter

ORA-37050: (XSMLTDCL06) cannot use the RELATION command with *workspace object* because analytic workspace *string* is attached in MULTI mode

Cause: An attempt was made to use the RELATION command on objects in an analytic workspace attached in MULTI mode.

Action: Change the default relation when the analytic workspace is attached in read/write or Exclusive mode.

ORA-37051: (XSAWRESREV01) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been defined in it during this session.

ORA-37052: (XSAWRESREV02) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been deleted from it during this session.

ORA-37053: (XSAWRESREV03) You cannot RESYNC or REVERT analytic workspace *string* because one or more of its objects have had their definitions changed during this session.

ORA-37054: (XSAWRESREV04) You cannot RESYNC or REVERT analytic workspace *string* because it contains one or more unnamed composites renamed during this session.

ORA-37055: (XSAWRESREV05) You cannot RESYNC analytic workspace *string* because another session has changed the definitions of one or more objects it contains.

ORA-37056: (XSAWRESREV06) You cannot RESYNC or REVERT analytic workspace *string* because one or more SESSION dimensions or composites are based on *workspace object*.

ORA-37072: (XSMCSESS00) Object *workspace object* has the wrong type.

Cause: The object was not of the object type specified in the APPLY clause.

Action: Specify the correct object type.

ORA-37073: (XSMCSESS01) Applied relation *workspace object* must be dimensioned by dimension *workspace object*.

Cause: Applied relation had a different dimension from the dimension currently being maintained.

Action: Find or create a new relation.

ORA-37074: (XSMCSESS02) Variable *workspace object* has no default aggmap.

Cause: The applied variable has no default aggmap.

Action: Use variable with the default aggmap or aggmap directly.

ORA-37075: (XSMCSESS03) A session-only dimension value cannot be renamed.

Cause: An attempt was made to apply MAINTAIN RENAME to a SESSION value.

Action: Delete the old value and add a new one with the desired name.

ORA-37076: (XSMCSESS04) *workspace object* is not the type of dimension that can have session-only values. Valid types are TEXT, NTEXT, ID, NUMBER, and CONCAT with the UNIQUE attribute.

Cause: An attempt was made to add a SESSION value to a dimension type that did not support SESSION values.

Action: Use a dimension of one of the listed types.

ORA-37077: (XSMCSESS05) Object *workspace object* is specified more than once.

Cause: The same object name was specified more than once in the apply clause or in the step dimension list.

Action: Remove the repetitions.

ORA-37078: (XSMCSESS06) The dimension being maintained (*workspace object*) cannot also be used as a step dimension.

Cause: The dimension being maintained was named as a step dimension.

Action: Remove this dimension from the list of step dimensions.

ORA-37079: (XSMCSESS07) The specified aggmap *workspace object* cannot be used for AGGREGATE.

Cause: Aggmap was specified for AGGREGATE. The current aggmap can be specified only for ALLOCATE.

Action: Choose the correct aggmap for AGGREGATE only.

ORA-37080: Advice requested for hierarchy with too many levels

Cause: A request was made for advice on a hierarchy with more levels than are supported.

Action: Only request advice for hierarchies with less than 32 levels.

ORA-37082: invalid percent specified for pre-computation

Cause: Advice was requested for an invalid percent value for pre-computation.

Action: Request between 0 and 100 percent for pre-computation.

ORA-37083: advice requested for invalid object *string*

Cause: Advice was requested for an invalid object name.

Action: Specify a valid object name.

ORA-37084: Output valueset *string* must match *string*'s dimensionality

Cause: A request was made for advice for a relation with different dimensionality from the output valueset.

Action: Request using objects that have the same dimensionality.

ORA-37086: *string* is not a valueset

Cause: An operation was attempted that supports only valuesets as precompute expressions in an aggmap, yet a different kind of precompute expression was used.

Action: Replace this limit expression with an equivalent valueset and retry the operation. General precompute expressions are deprecated.

ORA-37093: (XSOBJORG_BAD_CUBE) invalid property "*string*" specified for cube "*string.string*"

Cause: Either the specified cube did not have an analytic workspace (AW) organization or the specified property did not apply to cubes.

Action: Specify a property that applies to cubes or specify a cube with an AW organization.

ORA-37094: (XSOBJORG_BAD_DIM) invalid property "*string*" specified for dimension "*string.string*"

Cause: Either the specified dimension did not have an analytic workspace (AW) organization, or the specified property did not apply to dimensions.

Action: Specify a property that applies to dimensions with an AW organization.

ORA-37095: (XSOBJORG_BAD_MEAS) invalid property "*string*" specified for measure "*string.string.string*"

Cause: Either the specified measure did not have an analytic workspace organization, or the specified property did not apply to measures.

Action: Specify a property that applies to measures and a measure with an analytic workspace organization.

ORA-37096: (XSOBJORG_BAD_ATTR) invalid property "*string*" specified for base attribute "*string.string.string*"

Cause: Either the specified base attribute did not have an analytic workspace (AW) organization, or the specified property did not apply to the base attribute.

Action: Specify a property that applies to the base attributes or specify a base attribute with an AW organization.

ORA-37097: (XSOBJORG_BAD_DIM_LEVEL) invalid property "string" specified for dimension level "string.string.string"

Cause: Either the specified dimension level did not have an analytic workspace (AW) organization or the specified property did not apply to dimension levels.

Action: Specify a property that applies to dimension levels or specify a dimension level with an AW organization.

ORA-37098: (XSOBJORG_BAD_MODEL) invalid property "string" specified for dimension calculation model "string.string.string"

Cause: Either the specified dimension calculation model did not have an analytic workspace (AW) organization, or the specified property did not apply to the dimension calculation models.

Action: Specify a property that applies to the dimension calculation models and a dimension calculation model with an AW organization.

ORA-37099: (XSOBJORG_BAD_DIMALITY) invalid property "string" specified for dimensionality "string.string.string"

Cause: Either the specified dimensionality did not have an analytic workspace organization, or the specified property did not apply to dimensionalities.

Action: Specify a property that applies to dimensionalities and to a dimensionality with an analytic workspace organization.

ORA-37100: (XSUNCOMMITTED) You have one or more updated but uncommitted analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Issue the commit command. ---- 37101 - 37110 are reserved for partitioned variables ----

ORA-37101: (XSVPART01) Partitioning information can only be given for variables dimensioned by a PARTITION TEMPLATE.

Cause: An attempt was made to define or reference an object with the phrase "all internal" or an internal or external partition list, but the object was either not a variable, was not dimensioned by a partition template, or was already an existing target of an external partition.

Action: Eliminate phrases from the definition string that are specific to partitioned variables, or dimension the variable by a partition template.

ORA-37102: (XSVPART02) Invalid partition name string.

Cause: An invalid partition name was used. When defining a partitioned variable, this message indicates that the partition name does not exist in the partition template. In any other context, it indicates that the partitioned variable or partition template does not have a partition with the given name.

Action: Supply a valid partition name.

ORA-37103: (XSVPART03) The dimensionality or data type of *workspace object* does not match the dimensionality or data type of the partition.

Cause: An attempt was made to define a partitioned variable with an external partition, but the target of the external partition had either incorrect dimensionality or data type.

Action: Pick a different target variable. The target variable must be dimensioned by exactly the same dimensions, composites, and partition templates, in the same order, as are specified in the partition template, and must have the exact same data type (including width, precision, and scale) as the partitioned variable itself.

ORA-37104: (XSVPART04) A partitioned variable must be dimensioned by a single partition template only.

Cause: An attempt was made to define a partitioned variable with more than one partition template, or a partition template and one or more other dimensions in the dimension list.

Action: Use only a partition template in the dimension list of the variable. All dimensions of the variable must be included in the definition of the partition template.

ORA-37105: (XSVPART05) Only variables dimensioned by a CONCAT PARTITION TEMPLATE can have *string* partitions.

Cause: Attempted to create an external partition on a partitioned variable, but variable was dimensioned by a RANGE or LIST partition template.

Action: Declare the partition INTERNAL instead of EXTERNAL, or use a CONCAT partition template in place of the RANGE or LIST partition template.

ORA-37106: (XSVPART06) invalid partition name *number*

Cause: The user gave an invalid partition name.

Action: Supply a valid partition name.

ORA-37107: (XSVPART07) Attempted to write to non-existent partition of *workspace object*.

Cause: An action attempted to write data to a partitioned variable, but the variable did not have a partition for that data. This can result from a partition template that does not assign all possible dimension values to a subcube, or from a partitioned variable that does not have a partition for one of the partitions defined by the partition template.

Action: Ensure that the cell being written is assigned to a partition by the partition template, and that the variable has an actual partition associated with the partition of the template. Use the CHGDFN template DEFINE command to define new partitions within the template, and the CHGDFN variable ADD command to add new partitions to the variable. Alternatively, the PARTWRITEERR can be set to false, in which case data being written to a non-existent partition is silently discarded.

ORA-37108: (XSVPART08) *workspace object* has an AGGCOUNT, but *workspace object* does not.

Cause: An attempt was made to add a partition to a partitioned variable. Either the partition was defined WITH AGGCOUNT and the partitioned variable was not, or the partitioned variable was defined WITH AGGCOUNT and the partition was not.

Action: Use CHGDFN ADD AGGCOUNT or CHGDFN DROP AGGCOUNT to either add or remove an AGGCOUNT from either the partition or the partitioned variable.

ORA-37109: (XSVPART09) Partition workspace object and its parent variable workspace object cannot both be specified.

Cause: Partition and its parent partition were operated upon together.

Action: Remove the partition from the object list.

ORA-37111: unable to load the OLAP API sharable library: (string)

Cause: This could happen if: - The online analytical processing (OLAP) API sharable library was missing. - The sharable library upon which the OLAP API sharable library depends was missing. - The OLAP API sharable library was the wrong version.

Action: Ensure that Oracle is properly installed with the OLAP option. If RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support.

ORA-37113: OLAP API initialization error: (string)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the RDBMS has been patched, then review the patch log for errors. If the problem persists, contact Oracle Support.

ORA-37114: Online Analytical Processing (OLAP) API bootstrap error: (string)

Cause: OLAP API bootstrapping failed.

Action: Verify that Oracle is properly installed with the OLAP option. If the DB has been patched, review the patch log for errors. If the problem persists, contact Oracle Support.

ORA-37115: New OLAP API history is not allowed.

Cause: An attempt was made to start a new OLAP API history when there were active OLAP API sessions.

Action: Wait until all active OLAP API sessions terminate before attempting to start a new OLAP API history.

ORA-37116: OLAP API table function error: (string)

Cause: The Oracle Online Analytical Processing (Oracle OLAP) API table function failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, then review the patch log for errors. If the problem persists, report it to Oracle Support.

ORA-37117: Oracle Online Analytical Processing (OLAP) API (OLAPI) history retention has been disabled.

Cause: Under certain circumstances, for example, when the database is read-only, OLAPI history retention is not possible because it requires updating persistent tables from time to time. If OLAPI history retention has been disabled, setting `_olapi_history_retention` parameter to true has no effect.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37118: The Online Analytical Processing (OLAP) application programming library (API) was not preloaded.

Cause: In shared-server mode, the OLAP API must be loaded during process initialization to ensure that the C++ virtual table addresses are identical in all shared server processes. The OLAP API session was executing in a process where the library had not been loaded.

Action: Contact Oracle Support.

ORA-37119: Incompatible Online Analytical Processing (OLAP) application programming interface (API) library load address.

Cause: The OLAP API session was executing in a process in which the OLAP API sharable library was loaded which was at a different address than the process in which the OLAP API session originated.

Action: If instance cannot be restarted successfully, contact Oracle Support.

ORA-37120: expression string is null

Cause: The expression parser received a null string for syntax analysis.

Action: Prepare a non-null and well-formed MDX query string and retry the operation.

ORA-37121: AW Spreadsheet invalidated

Cause: While this cursor was open, a command was issued that changed the underlying data to become inconsistent.

Action: Perform the query again, avoid performing dimension maintenance and cache clears during spreadsheet processing.

ORA-37122: AW Session cache disabled

Cause: A SQL Spreadsheet was attempted while the AW Session cache was disabled.

Action: Enable the session cache and perform the query again.

ORA-37123: (XSCCOMP17) Cannot AGGREGATE *workspace object(partition number)* because it depends on unaggregated compressed partition *number*.

Cause: Attempted to use a feature that was not supported by compressed composites in the current analytic workspace format.

Action: Remove the unsupported feature from the aggmap, or upgrade the analytic workspace.

ORA-37124: (XSCCOMP16) COMPRESSED COMPOSITES with *string* are not supported in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: Attempted to use a feature that was not supported by compressed // composites in the current analytic workspace format.

Action: Remove the unsupported feature from the aggmap, or upgrade the analytic workspace.

ORA-37126: (XSCCOMP01) The COMPRESSED COMPOSITE *workspace object* can only be used as the base of a single variable.

Cause: An attempt was made to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but that COMPRESSED COMPOSITE was already being used by another VARIABLE.

Action: Create a second COMPRESSED COMPOSITE for the second VARIABLE or add a measure dimension to the first variable.

ORA-37127: (XSCCOMP02) The compressed composite *workspace object* must be last in the dimension list.

Cause: An attempt was made to DEFINE a variable dimensioned by a compressed composite, but a slower varying dimension was specified in the dimension list.

Action: Specify the compressed composite last in the dimension list when defining the VARIABLE.

ORA-37128: (XSCCOMP20) The partition template *workspace object* has already used the COMPRESSED COMPOSITE *workspace object*.

Cause: The COMPRESSED COMPOSITE specified for either a variable or partition template was already in use in another partition template.

Action: Define a different COMPRESSED COMPOSITE.

ORA-37129: (XSCCOMP04) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object*. All static MODEL statements must precede all RELATION statements over the bases of the COMPRESSED COMPOSITE.

Cause: The AGGMAP was defined with a MODEL statement after a RELATION statement over a base of the COMPRESSED COMPOSITE.

Action: Change the AGGMAP so that the MODEL statements appear before the RELATION statements.

ORA-37130: (XSCCOMP05) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because you must specify AGGINDEX OFF when there is a PRECOMPUTE clause on a RELATION over base *workspace object*.

Cause: A PRECOMPUTE clause was specified in the AGGMAP for a RELATION over a base of a COMPRESSED COMPOSITE, but AGGINDEX was ON.

Action: Remove the PRECOMPUTE clause from the AGGMAP, or add AGGINDEX OFF.

ORA-37132: (XSCCOMP07) Incremental aggregation over the dense DIMENSION *workspace object* is not supported when aggregating a VARIABLE dimensioned by a COMPRESSED COMPOSITE.

Cause: The status of the specified dimension did not include all detail cells.

Action: Add all detail cells to the status of the dimension and reissue the AGGREGATE command.

ORA-37133: (XSCCOMP08) cannot write into an aggregated VARIABLE dimensioned by a COMPRESSED COMPOSITE

Cause: An attempt was made to store a value into to an aggregated variable dimensioned by a COMPRESSED COMPOSITE. Once the AGGREGATE command is run on a variable dimensioned by a COMPRESSED COMPOSITE, it becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. The CLEAR AGGREGATES command removes all of the data computed during the last AGGREGATE command on this variable.

ORA-37134: (XSCCOMP09) cannot add new values to *workspace object* because it includes positions for precomputed aggregate values

Cause: An attempt was made to create a new position in a compressed composite, either directly (using MAINTAIN MERGE or MAINTAIN ADD) or by storing a value in the variable dimensioned by the compressed composite. This is not allowed when the variable has been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, the compressed composite becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that the CLEAR AGGREGATES command removes all the data computed during the last AGGREGATE command on this variable.

ORA-37135: (XSCCOMP19) The compressed composite *workspace object* in the current defined partition template should be unique or global.

Cause: The compressed composite was neither unique nor global. Unique subpartitions should have different compressed composites. Global subpartitions should use the same compressed composite if they use any compressed composite at all.

Action: Redefine the partition template.

ORA-37136: (XSCCOMP11) Cannot ROLLUP dimension *workspace object* which is a base of COMPRESSED COMPOSITE *workspace object*. Use AGGREGATE instead.

Cause: An attempt was made to run ROLLUP on a variable dimensioned by a COMPRESSED COMPOSITE.

Action: Instead of using ROLLUP, generate an aggmap object and use the AGGREGATE function.

ORA-37137: (XSCCOMP12) cannot CHGDFN *workspace object* because it is a compressed composite

Cause: An attempt was made to process the CHGDFN function on a compressed composite.

Action: If the change is required, then delete the old composite and create // a new one.

ORA-37138: (XSCCOMP13) You cannot delete values from *workspace object* because it is an aggregated compressed composite.

Cause: The MAINTAIN DELETE statement was specified for an aggregated compressed composite.

Action: In order to perform this maintenance, the composite must first be cleared. This can be done by running the CLEAR AGGREGATES command on the variable dimensioning the composite. This removes all data computed during the last AGGREGATE command.

ORA-37139: (XSCCOMP14) Cannot AGGREGATE *workspace object* using aggmap *workspace object* because you cannot AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE using an aggmap with a PROTECT clause.

Cause: An attempt was made to AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE with an aggmap that included a PROTECT clause.

Action: Modify the aggmap or create a new aggmap that does not include a PROTECT clause and retry the command.

ORA-37140: (XSCCOMP15) Cannot AGGREGATE partitioned variable *workspace object* using AGGMAP *workspace object* because you cannot use the base of a COMPRESSED COMPOSITE as a partition dimension.

Cause: The user tried to run aggregate on a partitioned variable with a partition dimension that is a base of a COMPRESSED COMPOSITE.

Action: Repartition the data, drop the partition dimension from the aggmap, or don't use COMPRESSED COMPOSITES.

ORA-37141: (XSQLMDQ01) Invalid host variable syntax for MDQUERY procedure.

Cause: The schema and analytic workspace name for the MDQUERY cursor declaration were incorrectly specified.

Action: Specify the schema and aworkspace name preceded by a colon, or as a text literal string of the form 'SCHEMA.AWNAME' or '*.*' (quotes optional).

ORA-37142: (XSQLMDQ02) Invalid host variable data type for MDQUERY procedure: *string* expected.

Cause: The user specified a host variable that was not of the correct type.

Action: Choose a different host variable.

ORA-37143: (XSQLMDQ03) *string* is not a valid analytic workspace name.

Cause: The user specified an analytic workspace name not qualified by a schema name, or one or both components of the name exceed the maximum length

Action: Specify a schema-qualified analytic workspace name with components no longer than 30 characters long.

ORA-37144: (MDQUERY01) *string* is not a valid metadata object type for MDQUERY.

Cause: The first argument to MDQUERY was not recognized.

Action: Specify a recognized object type (CUBE or DIMENSION).

ORA-37145: (XSTTS_PLAT) cannot transport analytic workspace across platforms

Cause: An attempt was made to transport a tablespace containing an analytic workspace from one platform to another.

Action: Use the EXPORT or IMPORT command to move an analytic workspace across platforms.

ORA-37146: (XSCCOMP18) The variable *workspace object* is already dimensioned by the compressed composite *workspace object*.

Cause: An attempt was made to define the partition template dimensioned by the compressed composite that had dimensioned the variable.

Action: Define the second compressed composite.

ORA-37147: (XSCCOMP21) The variable *workspace object* must be in the current operation group of the COMPRESSED COMPOSITE *workspace object*.

Cause: The variable dimensioned by the compressed composite was not in the object list of the current operation group. For the AGGREGATE function, all variables dimensioned by the same compressed composite must also use the same aggmap object.

Action: Add the variable into the object list of the current operation group.

ORA-37149: (XSCCOMP23) Individual partitions of the variable dimensioned by *workspace object* cannot be aggregated separately.

Cause: An attempt was made to aggregate partitions of a variable dimensioned by a global COMPRESSED COMPOSITE partition template.

Action: Aggregate the partitioned variable dimensioned by the global COMPRESSED COMPOSITE.

ORA-37150: line *string*, column *string*, *string*

Cause: A syntax error was found in the expression query string.

Action: Check the error message details and make the necessary corrections.

ORA-37151: expression parser initialization error

Cause: MDX Expression parser initialization failed.

Action: Contact Oracle Support.

ORA-37152: MDX query error: (*string*)

Cause: An exception occurred while the Multidimensional Expressions (MDX) query was being processed.

Action: Check the error message details and try again.

ORA-37154: OLAP API initialization error: (case *string*)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the database has been patched, then review the patch log for errors. If the problem persists, then contact Oracle Support.

ORA-37155: OLAP API bootstrap error: (case *string*)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the database has been patched, then review the patch log for errors. If the problem persists, then contact Oracle Support.

ORA-37156: (*string*)

Cause: An unexpected error occurred while the Oracle Online Analytical Processing (Oracle OLAP) Java API (OLAPI) command was being processed.

Action: Check the error message for details.

ORA-37157: Error text is missing for the expression syntax error.

Cause: A syntax error occurred in the expression, but the message file containing the error text could not be found.

Action: Ensure that the message file, xsous.msb, is located in \$ORACLE_HOME/olap/mesg and retry.

ORA-37158: bad clob or varray IN-args: (case *string*)

Cause: When in CLOB or VARRAY mode, the PL/SQL mappings in the IDL interface methods of OLAP API were run with NULL or invalid CLOB or VARRAY data.

Action: Ensure that the data is correct.

ORA-37159: OLAPI operations cannot be performed because OLAPI C++ virtual table addresses have become invalid.

Cause: Session migration in shared server mode caused Oracle Online Analytical Processing (Oracle OLAP) Java API (OLAPI) C++ virtual table addresses to become invalid. This was most likely due to the use of Exec Shield.

Action: Contact Oracle Support.

ORA-37161: invalid privilege specified for Oracle OLAP object

Cause: An attempt was made to grant or revoke an invalid privilege on an Oracle OLAP object.

Action: Refer to the GRANT statement in the Oracle Database documentation for privileges that can be granted or revoked on Oracle OLAP objects.

ORA-37162: OLAP error

Cause: An exception was raised by OLAP code.

Action: Check error messages and correct any reported problems.

ORA-37163: An analytic workspace with dependent CUBES or CUBE DIMENSIONS cannot be deleted or truncated.

Cause: An attempt was made to delete or truncate an analytic workspace that currently had a CUBE or CUBE DIMENSION defined over it.

Action: Drop the corresponding CUBE or CUBE DIMENSION before deleting the analytic workspace.

ORA-37164: The current SQL statement does not support this OLAP object

Cause: The OLAP object is not supported in the current SQL statement.

Action: Use a valid SQL command on the OLAP object.

ORA-37166: (XSOQ_BAD_OBJ) OLAP object "*string.string*" does not exist

Cause: A nonexistent OLAP object was specified.

Action: Use an existing OLAP object instead.

ORA-37167: (XSOQ_BAD_SUBOBJ) OLAP object "*string.string.string*" does not exist

Cause: A nonexistent OLAP object was specified.

Action: Use an existing OLAP object instead.

ORA-37168: (XSOBJORG_UNSUPP_OBJ) unsupported OLAP object "*string.string*" for OBJORG function

Cause: The specified OLAP object was a type that is not supported by the OBJORG function.

Action: Specify an OLAP object type that the OBJORG function supports.

ORA-37169: (XSOBJORG_UNSUPP_SUBOBJ) unsupported OLAP object "*string.string.string*" for OBJORG function

Cause: The specified OLAP object was of a type not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37170: (XSOBJORG_NA) The top-level object name argument to the OBJORG function cannot be NA.

Cause: An attempt was made to pass NA as the second argument to the OBJORG function.

Action: Pass the name of the top-level object to the OBJORG function.

ORA-37171: dimension sources not specified

Cause: The user passed an empty or null collection to DBMS_AW.ADVISE_SPARSITY

Action: Specify a valid set of dimension sources

ORA-37172: invalid dimension type

Cause: An invalid number was specified for the DIMTYPE field in the dimension sources argument.

Action: Specify a valid value for the DBMS_AW PL/SQL package.

ORA-37173: null dimension source data

Cause: The user specified NULL for one of the members of the dimension sources argument

Action: Specify a value

ORA-37174: source SQL must be a SELECT statement

Cause: The user specified an INSERT, UPDATE, DELETE or other type of SQL statement

Action: Specify a SQL SELECT statement instead

ORA-37175: column *string* is not a column of source data

Cause: A dimension column was specified which did not exist in the input data

Action: Specify one of the columns of the input data

ORA-37176: argument *string* is not valid for the sparsity advisor

Cause: An invalid argument was passed to the advisor

Action: Specify a TABLE, VIEW or SELECT statement instead

ORA-37177: column *string* does not have any leaf values

Cause: The specified dimension column or fact table did not contain any leaf values

Action: Populate the source data

ORA-37178: column *string* has no values

Cause: The specified dimension column did not contain any values

Action: Populate the source data

ORA-37179: expected at least one column for dimension *string*, got *string*

Cause: Not enough columns were specified for the dimension

Action: Specify more source columns, or change the dimension to another type

ORA-37180: expected exactly one column for dimension *string*, got *string*

Cause: Expected a single source column for the dimension. Either none or more than one was specified.

Action: Specify exactly one column, or change the dimension to another type

ORA-37181: expected exactly *string* columns for dimension *string*, got *string*

Cause: Expected a certain number of source columns for the dimension. Either none or the wrong number of columns was specified.

Action: Specify the right number of columns, or change the dimension to another type

ORA-37182: you may only specify one dimension to partition

Cause: The user passed a DIMENSION_SOURCE_T to ADVISE_SPARSITY which specified partitioning on more than one dimension

Action: Remove all but one of the partitioning requests

ORA-37183: invalid value *string* for PARTBY

Cause: A value other than PARTBY_DEFAULT, PARTBY_NONE or PARTBY_FORCE was passed to the DBMS_AW.ADVISE_SPARSITY PL/SQL package.

Action: Specify a valid value for the DBMS_AW.ADVISE_SPARSITY PL/SQL package.

ORA-37184: invalid value *string* for ADVMODE

Cause: A value other than ADVICE_DEFAULT, ADVICE_FAST or ADVICE_FULL was passed to the DBMS_AW.ADVISE_SPARSITY PL/SQL package.

Action: Specify a valid value for the DBMS_AW.ADVISE_SPARSITY PL/SQL package.

ORA-37185: length of *string* (*string*) exceeds maximum (*string*)

Cause: The specified value exceeded the maximum length allowed.

Action: Specify a shorter value.

ORA-37186: null child value for parent (*string*) found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a NULL child value was found for a non-NULL parent

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37187: null parent and child pair found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a row was retrieved which had both null child and parent values.

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37188: unexpected null result while querying *string*

Cause: While querying the input fact table, the sparsity advisor unexpectedly got no results, possibly due to changes being made during operation.

Action: Retry the operation ensuring that the data is not changed while the sparsity advisor is running / Errors from 37200 - 37399 are reserved for events

ORA-37400: analytic workspace does not exist

Cause: The user attempted to create an OLAP MV or Table on an AW that does not exist.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37401: you may not perform this operation on a system analytic workspace

Cause: The user attempted to create a CUBE MV or Table on a system-created AW.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37402: analytic workspace object does not exist

Cause: The user attempted to create a CUBE MV or Table mapping to an object that does not exist in the AW.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37403: invalid analytic workspace object type

Cause: The user attempted to create a CUBE MV or Table mapping to an object that is not the correct type.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37404: Create table as select disallowed for CUBE ORGANIZED tables

Cause: User attempted to create a CUBE ORGANIZED table by doing a create table as select.

Action: Do a create table followed by an insert as select

ORA-37405: unknown ORGANIZATION CUBE keyword

Cause: An unknown keyword was encountered while parsing the ORGANIZATION CUBE clause

Action: Correct the ORGANIZATION CUBE syntax

ORA-37406: invalid option for a CUBE ORGANIZED table

Cause: An attempt to specify one or more options for a CUBE ORGANIZED table such as: [NO]CACHE, NO LOGGING, CLUSTER, (NO)COMPRESS

Action: Remove the illegal option(s)

ORA-37407: invalid column type for a CUBE ORGANIZED table

Cause: A illegal column type is specified in a CUBE ORGANIZED table.

Action: Do not use column types such as LONG, LOB

ORA-37409: Cannot delete or truncate analytic workspace used by CUBE ORGANIZED table.

Cause: User attempted to delete or truncate an analytic workspace (AW) which had a CUBE ORGANIZED table or materialized view defined over it.

Action: Drop the corresponding table or materialized view, and then delete the analytic workspace.

ORA-37410: cannot delete or modify AW object referenced by CUBE ORGANIZED table

Cause: User attempted to delete, chgdfn, or otherwise modify an object referenced by a CUBE ORGANIZED table or MV

Action: Drop the corresponding table or MV before manipulating the object

ORA-37411: invalid object type

Cause: User referenced an invalid object type

Action: Use an appropriate object

ORA-37412: column not mapped by ORGANIZATION CUBE clause

Cause: Not all columns in the table or MV definition were mapped in the ORGANIZATION CUBE clause

Action: Make sure that all columns are mapped

ORA-37413: column referenced multiple times in ORGANIZATION CUBE clause

Cause: The same column name was referenced multiple times inside of the ORGANIZATION CUBE clause

Action: Supply unique mappings for each column

ORA-37414: dimension without mapping or hierarchy in ORGANIZATION CUBE clause

Cause: A dimension was listed in the ORGANIZATION CUBE clause but no mapping information was supplied

Action: Provide either a column mapping or hierarchy for the dimension

ORA-37415: AW schema must match TABLE or MATERIALIZED VIEW schema

Cause: An ORGANIZATION CUBE table or MV on top of an existing AW must be created in the same schema as the AW

Action: Create the new object in the same schema as the AW

ORA-37416: multiple GROUPING IDs found for ORGANIZATION CUBE

Cause: Multiple GROUPING IDs for the ORGANIZATION CUBE TABLE or MATERIALIZED VIEW

Action: Remove the duplicates

ORA-37417: variable does not have an AGG COUNT

Cause: A COUNT clause was specified in the ORGANIZATION CUBE description for a variable that does not have an AGG COUNT

Action: chgdfn the variable to include an AGG COUNT

ORA-37418: detail query cannot be derived

Cause: If an ORGANIZATION CUBE MV is to automatically derive its loading clause, then its definition query cannot contain set operators (eg UNION ALL), a HAVING clause, START WITH or a SQL MODEL clause. The definition query contains these or other unsupported syntax.

Action: Use an explicit ORGANIZATION CUBE clause, or simplify the defining query.

ORA-37419: ORGANIZATION CUBE clause not allowed in explain mvview

Cause: User tries to explain mvview on a CREATE MATERIALIZED VIEW statement that contains a ORGANIZATION CUBE clause.

Action: Remove the ORGANIZATION CUBE clause from the CREATE MATERIALIZED MATERIALIZED VIEW statement.

ORA-37420: unsupported feature with CUBE ORGANIZED materialized view

Cause: User attempts operations such as creating a mv log on an CUBE ORGANIZED MATERIALIZED VIEW.

Action: Do not do that.

ORA-37421: specified pseudocolumn is not supported by CUBE ORGANIZED tables

Cause: An unsupported pseudocolumn was referenced with a CUBE ORGANIZED table.

Action: Remove the unsupported pseudocolumn.

ORA-37422: illegal attempt to write to a calculated column

Cause: An attempt was made to write to a calculated column which could not be written to.

Action: List only the non-calculated columns in your DML command.

ORA-37423: operation not supported on CUBE ORGANIZED tables

Cause: The attempted operation was not supported with CUBE ORGANIZED tables.

Action: Do not attempt this operation on CUBE ORGANIZED tables.

ORA-37424: alter materialized view (MV) on a primary cube organized MV failed to find secondary cube MV table

Cause: The operation failed due to the missing secondary cube materialized view (MV) table in alter MV.

Action: Recreate the primary CUBE MV and make sure the secondary cube MV table is correctly created.

ORA-37521: (HASHSCAN00) Dimension *string* contains duplicate values. Contact Oracle OLAP Technical Support.

Cause: Duplicate values were detected in the named dimension.

Action: Contact Technical Support for instructions.

ORA-37522: (HASHSCAN01) You must specify the name of an existing TEXT or NTEXT dimension.

Cause: The _HASHSCAN program was invoked with an invalid argument.

Action: Provide a text expression yielding the name of an existing TEXT or NTEXT dimension.

ORA-37527: (XSCHGDFN01) SESSION values of dimension *string* are being automatically deleted.

Cause: SESSION values were detected and deleted while CHGDFN was rebuilding the hash index of a TEXT or NTEXT dimension.

Action: Re-create the SESSION values after the CHGDFN command completes. Information about the deleted values has been written to the trace file.

ORA-37528: (XSOBJORG_BAD_HIER) invalid property "*string*" specified for hierarchy "*string.string.string*"

Cause: Either the specified hierarchy did not have an analytic workspace organization, or the specified property did not apply to hierarchies.

Action: Specify a property that applies to a hierarchy or a dimension with an analytic workspace organization.

ORA-37530: (XSCCLOAD01) When aggregating between compressed partitions the base dimensions of *workspace object* did not match the base dimensions of *workspace object*.

Cause: An attempt was made to aggregate a partitioned variable having compressed partitions with different base dimensions.

Action: Delete the upper partition and redefine it with a composite that matches the lower partition. If it is dependent on multiple partitions with varying sparsity, you must first unify the the sparsity of the source partitions.

ORA-37531: (XSCCLOAD02) When aggregating between compressed partitions the source partitions were aggregated with a different AGGMAP, or the RELATIONS have changed since the source partitions were aggregated.

Cause: An attempt was made to aggregation a compressed variable across partition boundaries, but the individual partitions were not all aggregated using a similar aggmap over the same unaltered relations.

Action: Modify the aggmap for the upper partition to more exactly match the aggmap of the source partitions, or if the aggmap is already similar, re-aggregate the source partitions to pick up any changes to the relations.

ORA-37541: Hierarchy element DIMENSION_MEMBER can aggregate into element MEMBER_ANCESTOR through multiple paths.

Cause: Multiple aggregation paths were detected for one or more low-level hierarchy elements. This could cause such elements to be counted // more than once in the elements to which they aggregate.

Action: Eliminate multiple paths from the hierarchy.

ORA-37542: DIMENSION_MEMBER makes hierarchy HIERARCHY1 unbalanced.

Cause: An unbalanced hierarchy was detected, either because not all members of a level were at the same depth from the hierarchy root, // or one or more members of different levels were at the same depth // from the root, or both.

Action: Fix the hierarchy so that it is balanced. Ensure you check for nulls in the middle levels of the hierarchy.

ORA-37543: Hierarchy member DIMENSION_MEMBER is inconsistent across HIERARCHY1 and HIERARCHY2.

Cause: An inconsistency was detected between hierarchies because one or more members appearing in both hierarchies had different ultimate leaves.

Action: Eliminate the inconsistency by defining a new dimension member for the secondary hierarchy, or by fixing the hierarchy table so that // the definitions of the member match across hierarchies.

ORA-37544: Dimension members DIMENSION_MEMBER and MEMBER_ANCESTOR make this dimension star inconsistent.

Cause: The specified dimension was not "star consistent" (could not be represented in a star schema table).

Action: Ensure that each hierarchy maps to a single underlying column, and that levels shared across multiple hierarchies have the same set // of members in each hierarchy.

Creating a different level for the secondary hierarchy will provide a separate level column for each hierarchy.

ORA-37545: DIMENSION_MEMBER is part of a hierarchy loop.

Cause: A hierarchy has loops when the ancestor of a dimension member uses that member as its parent. Note that some loops are created across hierarchies. For example, in hierarchy 1, dimension member A is the parent of B, B is the parent of C and in hierarchy 2, C is that parent of A forms a hierarchy loop.

Action: Change the hierarchies so that the loop is eliminated or move the problem hierarchy to a different dimension.

ORA-37546: (XSHIERSP00) Levelorder valueset is empty.

Cause: An empty levelorder valueset was specified for the HIERSHAPE // function.

Action: Specify a levelorder valueset that is not empty.

ORA-37547: (XSHIERSP01) DIMENSION_MEMBER has no level associated with it.

Cause: DIMENSION_MEMBER did not have an associated level. Level based hierarchies must have a level for every dimension member.

Action: Add level assignments for all dimension members in the hierarchy.

ORA-37548: (XSHIERSP02) DIMENSION_MEMBER is not specified as a member of HIERARCHY1.

Cause: When a dimension member is part of a hierarchy, it appeared in the INHIER valueset associated with the hierarchy. This dimension // member was missing from this value set and thus should not be part // of this hierarchy.

Action: Alter the hierarchy's membership to include the specified dimension member.

ORA-37549: (XSHIERSP03) The level of DIMENSION_MEMBER is not lower than the level of MEMBER_ANCESTOR.

Cause: A dimension member had a parent that was lower or on the same level as this member according to the levelorder valueset.

Action: Fix the child or parent levels so that every dimension member has a parent whose level is higher than the level of this member.

ORA-37550: (XSHIERSP04) The level of MEMBER_ANCESTOR is not one level above DIMENSION_MEMBER.

Cause: A dimension member had a parent that was not one level above the level of this member according to the LEVELORDER valueset.

Action: Fix the child or parent or both levels so that every dimension member has a parent whose level is one level above the level of this member according to the LEVELORDER valueset.

ORA-37551: (XSHIERSP05) Leaf value DIMENSION_MEMBER is not on the same level as the rest of leaf dimension values.

Cause: The detail or leaf values of this hierarchy must all have the same level. This member was on a different level than most of the leaf values.

Action: Fix DIMENSION_MEMBER's level so that all leaves are on the same level.

ORA-37552: (XSHIERSP06) One or more dimension members are associated with a level not found in the LEVELORDER valueset.

Cause: The dimension members in a hierarchy were not associated with a level that appears in the LEVELORDER valueset. Therefore, the level depth of each member could not be determined.

Action: Ensure that all dimension members in the hierarchy are associated with a level that appears in the LEVELORDER valueset.

ORA-37553: A cycle between *number* and *number* has been detected in relation *workspace object* over *workspace object*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37554: A cycle between *number* and *number* has been detected in relation *workspace object*.

Cause: A relation was used that contained loops.

Action: Correct the relation so that it does not contain loops.

ORA-37560: lob locator invalid for specified log target

Cause: A lob locator was passed as a target to DBMS_CUBE_LOG.ENABLE, but the log_target was not DBMS_CUBE_LOG.TARGET_LOB

Action: Specify LOG_TARGET_LOB as the log_target, or specify a valid location instead

ORA-37561: unknown logging type

Cause: An invalid log_type was specified

Action: Specify a valid logging type from the DBMS_CUBE_LOG package

ORA-37562: unknown logging target

Cause: An invalid log_target was specified

Action: Specify a valid logging target from the DBMS_CUBE_LOG package

ORA-37563: invalid log verbosity

Cause: An invalid log_verbosity was specified

Action: Specify a valid logging verbosity from the DBMS_CUBE_LOG package

ORA-37564: unknown log table version

Cause: Could not determine the version of the specified logging table

Action: Specify a valid target table, or use DBMS_CUBE_LOG.TABLE_CREATE to create one

ORA-37565: invalid parameter for specified log type

Cause: The log_type specified does not support the specified parameter, for instance, DBMS_CUBE_LOG.MAX_ERRORS is not valid for

Action: Specify a valid log_type / log_param combination

ORA-37566: invalid log location

Cause: The specified log location is in an invalid format. For file targets it must be of the form 'directory_alias/filename'

Action: Specify a valid log location

ORA-37567: log location not specified

Cause: The log location was not specified for a log target which requires one

Action: Specify a valid log location

ORA-37568: invalid log parameter

Cause: An invalid log_param was passed to dbms_cube_log.set_parameter or get_parameter

Action: Specify a valid parameter

ORA-37569: invalid log parameter value

Cause: An invalid value was passed to dbms_cube_log.set_parameter

Action: Specify a valid value

ORA-37570: invalid log specification

Cause: An invalid logging specification was supplied to DBMS_CUBE_LOG.SET_LOG_SPEC

Action: Correct the syntax being supplied

ORA-37571: invalid SQL ID

Cause: Either the SQL ID supplied was invalid or no associated logging information was captured.

Action: Specify a valid SQL ID.

ORA-37572: invalid ID

Cause: An invalid ID was supplied for the given SQL ID.

Action: Specify a valid ID for that SQL ID.

ORA-37573: no limits logged

Cause: There were no corresponding OLAP filters to the supplied information.

Action: Specify predicates on the original query or specify a new SQL ID or ID.

ORA-37574: error logging to table "*string.string*"

Cause: An error occurred attempting to write log records to the named table.

Action: Make sure the user has permissions to write to the table.

ORA-37575: Invalid cube operations log component, "*string*".

Cause: Invalid cube operations log component value.

Action: Provide a valid cube operations log component or accept the default value by leaving the parameter unspecified.

ORA-37576: Invalid cube operations log handle id.

Cause: An invalid cube operations log handle id was specified. No oplog handle found for oplogHandleId parameter.

Action: Provide a valid cube operations log handle id for oplogHandleId. Use DBMS_CUBE_LOG.START_OPLOG to get a valid handle id.

ORA-37577: Invalid cube operations log message name.

Cause: Cube operations log message name value is NULL.

Action: Provide a valid non-null cube operations log message name.

ORA-37578: Invalid cube operations log operation value.

Cause: Cube operation log operations value is NULL.

Action: Provide a valid non-null cube operations log operation value.

ORA-37580: The EXPRESS AW does not exist.

Cause: The EXPRESS AW does not exist.

Action: Ensure that Oracle is properly installed with the OLAP option. If the database was patched, review the patch log for errors. If the problem persists, contact Oracle Support Services.

ORA-37581: The EXPRESS AW has not been properly installed.

Cause: The EXPRESS AW has not been properly installed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37582: The EXPRESS AW version *string* is different than the Oracle version *string*.

Cause: The EXPRESS AW version does not match the current Oracle version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37600: (XSPGERRPERMDETACH) ran out of tablespace storage while updating analytic workspace *string*

Cause: There was not enough space in the large object (LOB) segment to complete the UPDATE operation.

Action: Increase the tablespace storage, and detach the analytic workspace if necessary.

ORA-37601: (XSPGERRTEMP) Ran out of temporary storage while writing to analytic workspace with ID=*number*.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage by DETACHING an analytic workspace.

ORA-37602: (XSPGERRTEMPUSER) Ran out of temporary storage while writing to analytic workspace *string*. Free some temporary storage by detaching an analytic workspace.

Cause: There was insufficient temporary tablespace storage for the analytic workspace.

Action: Increase the amount of temporary tablespace storage.

ORA-37603: (XSPGERRTEMPSYSTEM) Ran out of temporary storage while writing to a system temporary analytic workspace. Free some temporary storage immediately by DETACHING an analytic workspace.

Cause: The amount of temporary tablespace storage was insufficient.

Action: Increase the amount of temporary tablespace storage.

ORA-37604: (XSPGERRPQUPD) Parallel updating analytic workspace *string* failed.

Cause: An unexpected error occurred to the parallel update servers.

Action: Check the other errors that are associated with this error and act accordingly. Analytic workspace may need to be detached.

ORA-37605: error during OLAP AW UPDATE

Cause: An error occurred during the OLAP AW UPDATE process.

Action: Refer to the next error in the error stack.

ORA-37606: Oracle OLAP failed to initialize at *string*.

Cause: A severe error occurred while initializing Oracle OLAP.

Action: Contact Oracle Support Services.

ORA-37999: Serious Oracle OLAP error: *string*.

Cause: Something unexpected occurred in the Oracle Online Analytical Processing (Oracle OLAP) system.

Action: Contact Oracle Support.

ORA-38001 to ORA-39977

ORA-38001: RBO Disable constant predicate elimination optimization

ORA-38002: CBO enable restriction on type of join (NL only) for a query block with pushed predicate

ORA-38003: CBO Disable column stats for the dictionary objects in recursive SQL

ORA-38004: CBO (9.0.1 ONLY) Enable column stats for the dictionary objects in recursive SQL

ORA-38005: CBO disable fix for bug 2251373

ORA-38006: DBMS_STATS override commit threshold for (sub)partition level stats

ORA-38008: CBO disable costing overhead of inlist iteration

ORA-38009: CBO disable fix for bug 2109825

ORA-38010: CBO disable push predicate, driven by functional index into PV

ORA-38011: CBO disable truncation of bind when dealing with fixed char descend index expression

ORA-38012: CBO disable normalization of b-tree index selectivity

ORA-38016: CBO disable full functional index scan

ORA-38017: CBO disable push of join predicate for a table with RLS

ORA-38018: CBO disable full statistics load for evaluation of average row length

ORA-38020: CBO disable fix for bug 2324795

ORA-38021: CBO disable view merge with multi-referenced non-deterministic function

ORA-38023: CBO disable fix for bug 2853398

ORA-38025: CBO enable generation of excessive semijoin subqueries

ORA-38026: CBO enable bitmap plan based on domain index, with no domain index driver

ORA-38027: CBO disable evaluation column gnd using inlist gnd

ORA-38028: DBMS_STATS disable small object optimization

ORA-38029: object statistics are locked

Cause: An attempt was made to modify optimizer statistics of the object.

Action: Unlock statistics with the DBMS_STATS.UNLOCK_TABLE_STATS procedure on base table(s). Retry the operation if it is okay to update statistics.

- ORA-38030: CBO enable strongly connected preds for intersect to join**

ORA-38090: CBO dump virtual columns in EXPLAIN PLAN

ORA-38091: CBO forces native full outer join

ORA-38094: dbms_stats enable fix of bug 6934892

ORA-38098: CBO reject various transformation even if chosen

ORA-38100: enable tracing of DML frequency tracking

ORA-38101: Invalid column in the INSERT VALUES Clause: *string*
Cause: INSERT VALUES clause refers to the destination table columns

Action: n/a

ORA-38102: Invalid column in the INSERT WHERE Clause: *string*
Cause: INSERT WHERE clause refers to the destination table columns

Action: n/a

ORA-38103: Invalid column in the UPDATE SET Clause: *string*
Cause: UPDATE SET clause refers to the source table columns in the LHS

Action: n/a

ORA-38104: Columns referenced in the ON Clause cannot be updated: *string*
Cause: LHS of UPDATE SET contains the columns referenced in the ON Clause

Action: n/a

ORA-38105: Delete not yet supported when Update row-migration is possible
Cause: When Update Row-Migration is possible, Delete in MERGE is not yet supported

Action: n/a

ORA-38106: MERGE not supported on join view or view with INSTEAD OF trigger.
Cause: The MERGE operation contained a join view or view with INSTEAD of trigger which is not supported.

Action: When using MERGE to modify a view, you must only specify a single table in the view, and the view cannot have an INSTEAD OF trigger.

ORA-38107: Invalid syntax with MERGE without USING clause.

Cause: When USING clause was not specified, then the table or view name should be followed by ON.

Action: Correct the syntax and retry.

ORA-38131: specified SQL handle *string* does not exist

Cause: The specified SQL handle did not exist in the repository.

Action: Specify correct SQL handle.

ORA-38132: specified SQL ID *string* does not exist

Cause: The SQL statement for SQL ID did not exist in the cursor cache, SQL Tuning Set, or Automatic Workload Repository.

Action: Specify correct SQL ID.

ORA-38133: invalid parameter name *string* specified

Cause: An invalid parameter name was specified.

Action: Verify the name of the parameter.

ORA-38134: invalid parameter value *string* specified

Cause: An invalid parameter value was specified.

Action: Verify the parameter value.

ORA-38135: invalid fixed status value specified

Cause: Specified fixed status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38136: invalid attribute name *string* specified

Cause: An invalid attribute name was specified.

Action: Verify the name of the attribute.

ORA-38137: invalid attribute value *string* specified

Cause: An invalid attribute value was specified.

Action: Verify the attribute value.

ORA-38138: plan name is missing or NULL

Cause: A valid plan name was not specified.

Action: Specify a valid plan name.

ORA-38139: concurrent DDL Error in load plans operation

Cause: A concurrent DDL operation was performed during a load plans operation.

Action: Try operation again.

ORA-38140: no SQL plan baselines were found

Cause: No SQL plan baselines were found during pack or unpack operation.

Action: Specify correct selection criterion.

ORA-38141: SQL plan baseline *string* does not exist

Cause: A SQL plan baseline name was specified that did not exist.

Action: Verify the name of the SQL plan baseline.

ORA-38142: SQL plan baseline named *string* already exists

Cause: A SQL plan baseline already exists with the name specified.

Action: Specify a different name or drop the existing SQL plan baseline.

ORA-38143: invalid enabled status value specified

Cause: Specified enabled status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38144: specified plan name *string* does not exist

Cause: The specified plan name did not exist in the repository.

Action: Specify correct plan name.

ORA-38145: neither SQL handle nor plan name specified

Cause: The SQL handle or plan name was not specified. The SQL handle or plan name is required.

Action: Specify either SQL handle or plan name or both.

ORA-38146: invalid verify value specified

Cause: Specified verify value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38147: invalid commit value specified

Cause: Specified commit value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38148: invalid time limit specified

Cause: Specified time limit value was not a positive integer.

Action: Specify a positive integer value.

ORA-38149: There is no recommended action for object *string* in task *string*.

Cause: The advisor did not generate a recommended action for the given object and task.

Action: Choose a different object and retry the operation.

ORA-38150: not enough room for filter length *string*; *string* characters remaining

Cause: An auto-capture filter was too large to fit in the remaining space. Each filter requires a number of characters equal to the size of its value plus one.

Action: Remove other filters to make room for the new filter.

ORA-38151: module name is too long

Cause: The provided module name was too long.

Action: Provide a valid module name.

ORA-38152: action name is too long

Cause: The provided action name was too long.

Action: Provide a valid action name.

ORA-38153: Software edition is incompatible with SQL plan management.

Cause: SQL plan management could be used only with Oracle Database Enterprise Edition.

Action: Ensure that Oracle is linked with the Enterprise Edition options.

ORA-38171: Insufficient privileges for SQL management object operation

Cause: A DDL operation was attempted on a SQL management object by a session without the proper privileges.

Action: Grant the appropriate privilege.

ORA-38172: No SQL management object satisfies specified filters

Cause: An attempt was made to perform an operation by specifying filters that did not target any SQL management objects.

Action: Try different filters.

ORA-38173: Invalid value *string* specified for SQL management object attribute *string*

Cause: An invalid attribute value was specified.

Action: Specify a valid attribute value.

ORA-38301: can not perform DDL/DML over objects in Recycle Bin

Cause: Tried to perform DDL or DML operation on Recycle Bin object.

Action: DDL or DML operations are not permitted on Recycle Bin objects.

ORA-38302: invalid PURGE option

Cause: Invalid purge option specified.

Action: Specify a valid purge option.

ORA-38303: invalid option for PURGE TABLESPACE

Cause: Either a token other than USER was found following the tablespace name or some text was found following USER *user name*.

Action: Place nothing or only USER *user name* after the tablespace name

ORA-38304: Missing or invalid user name.

Cause: The user name was either not specified or was invalid.

Action: Specify a valid, non-null user name.

ORA-38305: object not in RECYCLE BIN

Cause: Trying to Flashback Drop an object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be Flashback Dropped.

ORA-38306: this object is not recoverable standalone

Cause: Trying to flashback drop an object other than of type TABLE.

Action: Only tables are recoverable.

ORA-38307: object not in RECYCLE BIN

Cause: Trying to Purge the object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be PURGEDED.

ORA-38308: invalid FLASHBACK DROP option

Cause: Invalid Flashback Drop option specified.

Action: Specify a valid Flashback Drop option.

ORA-38309: object not purgable

Cause: An attempt was made to purge an object that is either not purgable or else dependent upon some other object.

Action: Cannot purge this object.

ORA-38310: cannot purge tablespace for other users

Cause: An attempt was made to purge the tablespace for a different user by a user who does not have system DBA privileges.

Action: Cannot purge the tablespace for some other user.

ORA-38311: cannot purge objects owned by other users

Cause: An attempt was made to purge an object which is owned by some other user.

Action: Cannot purge this object.

ORA-38312: original name is used by an existing object

Cause: An attempt was made to recover an object preserving the original name, but that name is taken up by some other object.

Action: use the RENAME clause to recover the object with a different name.

ORA-38313: cannot truncate sys.recyclebin\$ while it has rows

Cause: An attempt was made to truncate the sys.recyclebin\$ table while it had rows.

Action: Truncating the sys.recyclebin\$ table while it has rows can result in a dictionary inconsistency and lead to space for dropped segments in the recycle bin not being reclaimed correctly. If space from the dropped segments in the recycle bin needs to be reclaimed, perform a purge of the recycle bin instead using the "purge dba_recyclebin" command.

ORA-38320: policy does not exist

Cause: An attempt was made to delete a nonexistent policy.

Action: Correct the policy name.

ORA-38321: duplicate policy name specified

Cause: A policy name was specified that already existed under this schema.

Action: Correct the policy name.

ORA-38322: scope of policy not specified

Cause: An attempt was made to add a policy without the scope.

Action: Specify a scope when creating a policy.

ORA-38323: policy conflicts with policy string

Cause: An attempt was made to create a policy with the same action type and based on the same statistic as another policy on the object.

Action: Use a different action and/or statistic for the new policy, or delete the old policy.

ORA-38324: policy conflicts with policy string

Cause: An attempt was made to create a policy with the same action, scope and compression level as another policy on the object.

Action: Use a different action, scope and/or level for the new policy, or delete the old policy.

ORA-38325: policy conflicts with policy string

Cause: An attempt was made to create a compression policy that conflicts with another policy on the object.

Action: Change the policy so that policies with a higher compression level take effect after policies with a lower compression level, or delete the old policy.

ORA-38326: schema level policies are not supported

Cause: Attempt was made to create a schema level policy.

Action: Do not create a schema level policy.

ORA-38327: invalid argument value

Cause: The specified API argument values were of the wrong value range.

Action: Supply valid values for the API.

ORA-38328: inconsistent internal state

Cause: An inconsistency was detected in ILM related data in the dictionary.

Action: Contact Oracle Support Services.

ORA-38329: internal ILM error

Cause: An internal error occurred during execution of ILM related activity. Further information can be found in the alert log.

Action: Fix the problem and retry the operation.

ORA-38330: insufficient privilege for ILM operation

Cause: Sufficient privileges were not granted for the ILM operation.

Action: Retry operation with sufficient privileges granted. Consult documentation for privileges required to perform the ILM operation.

ORA-38331: row-level write activity tracking not enabled on the table

Cause: An attempt was made to create a modification time-based policy when row-level write tracking was not enabled on the object.

Action: Ensure that row-level write tracking is enabled on the table.

ORA-38332: valid time periods were not present on the table

Cause: An attempt was made to create a valid time-based policy when valid time periods were not present on the table.

Action: Add valid time periods to the table.

ORA-38333: row-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when row-level access tracking was not enabled on the object.

Action: Ensure that row-level access tracking is enabled on the table.

ORA-38334: segment-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when segment-level access tracking was not enabled on the object.

Action: Ensure that segment-level access tracking is enabled on the table.

ORA-38335: sysdba privilege is required

Cause: SYSDBA privilege is required for applying ILM policies on a tablespace.

Action: Grant user SYSDBA role before applying tablespace level ILM policies.

ORA-38336: invalid policy

Cause: A row level policy was used with a compression level other than OLTP.

Action: Use the OLTP compression level with row level compression policies.

ORA-38337: invalid policy

Cause: A custom policy is only allowed at the segment level.

Action: Change the scope of the policy to be of type segment.

ORA-38338: incorrect ILM policy scope

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy with incompatible scope.

Action: Ensure that the scope of the ILM policy is compatible.

ORA-38339: invalid action specified

Cause: An invalid action was specified in the policy definition.

Action: Specify a valid action in the policy definition.

ORA-38340: invalid policy

Cause: An attempt was made to create a custom policy at the tablespace level.

Action: Specify the policy directly on the desired objects.

ORA-38341: policy conflicts with policy *string*

Cause: An attempt was made to create more than one storage tiering policy directly on an object.

Action: Delete the conflicting policy before creating a new policy.

ORA-38342: heat map not enabled

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy when heat map was not enabled.

Action: Enable heat map before creating a new ILM policy.

ORA-38343: ADO online mode not supported with supplemental logging enabled

Cause: An attempt was made to perform an automatic data optimization (ADO) operation with supplemental logging enabled.

Action: Disable supplemental logging or switch to ADO offline mode and retry.

ORA-38345: object not enabled for in-memory column store

Cause: An attempt was made to create a policy on an object that was not enabled for in-memory column store.

Action: Enable the object for in-memory column store and specify the policy.

ORA-38346: ILM operation not supported

Cause: An attempt was made to use an Information Lifecycle Management (ILM) operation that is not supported for the current SQL statement.

Action: Use the operation with a supported SQL statement.

ORA-38347: join group (*string*) cannot be created

Cause: The join group could not be created on the specified tables.

Action: Check to see that the database is not in standby mode and has read/write privileges, and that the specified tables for creating join group are ready for processing. Then, retry the operation.

ORA-38348: join group (*string*) cannot be dropped

Cause: The specified join group could not be dropped.

Action: Ensure that the database is not in standby mode and has read-write privileges. Then, retry the operation.

ORA-38349: join group (*string*) cannot be altered

Cause: The specified join group could not be altered.

Action: Ensure that the database is not in standby mode, has read-write privileges, and the specified tables used in altering the join group are ready for processing. Then, retry the operation.

ORA-38350: join group not supported on given columns

Cause: One of the columns used for the join group was not supported because the column property field was non-zero.

Action: Retry the operation on the join group without including the unsupported column.

ORA-38351: join group (*string*) not supported on abstract data type columns

Cause: One of the columns used for the join group was of the abstract data type.

Action: Retry the operation on the join group without including columns of the abstract data type.

ORA-38352: cannot alter column present in a join group

Cause: The alter table operation caused one of the columns to become unsupported for a join group.

Action: Drop the column from the join group and retry the operation.

ORA-38353: This table type is not supported by the ROW ARCHIVAL clause.

Cause: An attempt was made to create or alter table to enable ROW ARCHIVAL, but ROW ARCHIVAL is not supported for these table types.

Action: None

ORA-38354: syntax error; operation on join group cannot be done

Cause: There was a syntax error found for either the create, alter, or drop in-memory join group.

Action: Use the correct syntax.

ORA-38355: Operation not supported with Database Vault or Operations Control.

Cause: An attempt is being made to use DBMS_ILM operation with Database Vault or Operations Control enabled.

Action: Disable Database Vault or Operations Control and retry.

ORA-38388: cannot add ILM policy to a bitmap index

Cause: An attempt was made to add an Information Lifecycle Management (ILM) policy to a bitmap index, which was not supported.

Action: No action required.

ORA-38389: cannot add ILM policy to an index-organized table

Cause: An attempt was made to add an Information Lifecycle Management (ILM) policy to an index-organized table, which was not supported.

Action: No action required.

ORA-38390: ILM policy operations not supported for cluster tables

Cause: An attempt was made to add an Information Lifecycle Management (ILM) policy for a cluster table, which was not supported.

Action: No action required.

ORA-38391: disabling ILM filtering

ORA-38393: ILM internal out-of-space error

Cause: Information Lifecycle Management (ILM) internal operation encountered out-of-space error.

Action: None

ORA-38394: test event for table ILM operations

Cause: Internal testing event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38395: debug event for table ILM operations

Cause: There was an internal debugging event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38396: table is already enabled for the ILM feature

Cause: The table was already enabled for the specified Information Lifecycle Management (ILM) feature.

Action: No action required.

ORA-38397: table is not enabled for the ILM feature

Cause: An attempt was made to perform an Information Lifecycle Management (ILM) operation on a table on which the specified ILM feature is not enabled.

Action: No action required.

ORA-38398: DDL not allowed on the system ILM column

Cause: An attempt was made to drop, rename, or modify a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38399: cannot update the system ILM column

Cause: An attempt was made to update a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38400: cannot combine ILM operation with other operations

Cause: An attempt was made to combine Information Lifecycle Management (ILM) operation with other ALTER TABLE operations.

Action: Ensure that ILM is the sole operation specified in ALTER TABLE.

ORA-38401: synonym *string* not allowed

Cause: An attempt was made to use a synonym for a data type of an attribute or a table alias.

Action: Use the object name instead of the synonym.

ORA-38402: invalid name: empty string or spaces in the name

Cause: There were spaces in the name.

Action: Remove spaces in the name or use quotes around the name.

ORA-38403: attribute set name may not be longer than 22 characters

Cause: The attribute set name was longer than 22 characters.

Action: Choose a name that has 22 or fewer characters.

ORA-38404: schema extension not allowed for the attribute set name

Cause: There was a schema extension for the attribute set name. Attribute sets are always created in the current schema and thus schema extended names are not allowed.

Action: Create the attribute set from the appropriate schema.

ORA-38405: quotes not allowed in the attribute set name

Cause: The attribute set name contained quotes.

Action: Remove quotes in the attribute set name.

ORA-38406: attribute set *string* already exists

Cause: An attribute set with a matching name already exists in the current schema.

Action: Drop the existing attribute set or choose a different name.

ORA-38407: The ADT associated with the attribute set already exists.

Cause: The Abstract type (ADT) with the same name as the attribute set already exists in the current schema.

Action: Create the attribute set for the existing ADT or drop the ADT.

ORA-38408: The ADT "*string*" does not exist in the current schema.

Cause: An attempt was made to create the attribute set from a nonexistent ADT.

Action: Make sure that the ADT with the same name as the attribute set exists in the current schema.

ORA-38409: invalid name or option for the attribute set: *string*

Cause: An invalid name or option was used for the attribute set.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38410: schema extension not allowed for the table name

Cause: An attempt was made to use a schema extended name for the table storing expressions.

Action: The table storing expressions and the corresponding attribute set should be created in the same schema.

ORA-38411: invalid datatype for the column storing expressions

Cause: An attempt was made to create an expression column from a column of invalid datatype.

Action: Create a VARCHAR2 or CHAR column to store expressions in a table.

ORA-38412: Expression set column *string* does not exist.

Cause: The column storing expressions does not exist.

Action: Pass a valid name for the column storing expressions.

ORA-38413: elementary attribute name may not be longer than 32 characters

Cause: An attempt was made to create an elementary attribute with a name longer than 32 characters.

Action: Use a shorter name for the elementary attribute.

ORA-38414: invalid datatype for the attribute *string*

Cause: The datatype specified for the attribute was invalid.

Action: If the datatype is an ADT, make sure that the ADT exists and the current user has execute permissions to it.

ORA-38415: invalid name or datatype for the attribute: *string*

Cause: An invalid name or datatype was used for the attribute.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38416: A stored attribute may not be longer than 300 characters.

Cause: An attempt was made to create a stored or indexed attribute longer than 300 characters.

Action: A predicate with such attribute may not be indexed. It will be evaluated as sparse predicate.

ORA-38417: attribute set *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set or choose an existing attribute set.

ORA-38418: ADT associated with the attribute set *string* does not exist

Cause: The ADT with the same name as the attribute set was not found in the current schema.

Action: Drop the attribute set and recreate it.

ORA-38419: invalid identifier in attribute : *string*

Cause: An identifier used in the stored/indexed attribute sub-expression was not defined or was invalid.

Action: Create all the required elementary attributes and user-defined functions and try again.

ORA-38420: invalid stored attribute sub-expression: *string*

Cause: The sub-expression used for the stored expression was invalid.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38421: attribute *string* already exists

Cause: An attribute with a matching name (or form) already exists in the attribute set.

Action: Drop the existing attribute or choose a different name for the new attribute.

ORA-38422: invalid datatype for the attribute: *string*

Cause: An attempt was made to create an attribute with invalid datatype.

Action: If the data type of the attribute is an ADT, make sure that the type exists.

ORA-38423: Attribute set created from an ADT may not be extended.

Cause: An attempt was made to add an elementary attribute to an attribute set created from an ADT.

Action: Create a new attribute set and add all the required elementary attributes one at a time.

ORA-38424: no attribute set currently assigned to the expression set

Cause: An attempt was made to un-assign an attribute set from an expression set when there is no attribute set assigned to it.

Action: No action is required.

ORA-38425: attribute set used for an index object may not be unassigned

Cause: An attempt was made to un-assign an attribute set from an expression set when there is an Expression Filter index defined on the column.

Action: Drop the index before un-assigning the attribute set.

ORA-38426: attribute set assigned to an expression set may not be dropped

Cause: An attempt was made to drop an attribute set when it is still associated with an expression set.

Action: Un-assign the attribute set from the expression set before dropping it.

ORA-38427: attribute *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set.

ORA-38428: too many attributes selected for indexing

Cause: An attempt was made to create an expression filter index with more than 490 indexed attributes.

Action: Remove some of the indexed attributes. Make sure that the default indexed attributes associated with the attribute set combined with the indexed attributes specified in the Create Index Parameters clause are less than or equal to 490.

ORA-38429: invalid datatype for a stored attribute: *string*

Cause: The (resulting) datatype for the attribute was not appropriate for storing.

Action: Choose a stored attribute that has a resulting datatype of NUMBER, VARCHAR2, CHAR or DATE.

ORA-38430: Operation "*string*" is not supported in the current release.

Cause: An attempt was made to perform an unsupported operation.

Action: Do not use the operation.

ORA-38431: could not evaluate subexpression "*string*" for rowid "*string*"

Cause: Either the expression was not a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38432: EVALUATE operator only allowed on an expression column

Cause: An attempt was made to use the EVALUATE operator on a column not configured as a column storing expressions.

Action: Assign an attribute set to the column.

ORA-38433: index "*string*" could not be maintained due to "*string*"

Cause: The error was caused by the recursive operation.

Action: Fix the error and retry.

ORA-38434: could not evaluate expression "*string*"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects or there is a missing attribute value.

Action: Set serveroutput ON for more details.

ORA-38435: missing elementary attribute value or invalid name-value pairs

Cause: The second argument to the EVALUATE operator had either a missing attribute or an invalid value for an attribute.

Action: Try again after fixing the error.

ORA-38436: attribute set used for an Expression set may not be modified.

Cause: An attempt was made to add an elementary attribute to an attribute set assigned to an expression set.

Action: Un-assign the attribute set and try again.

ORA-38437: The ADT "*string*" may not contain any user methods.

Cause: An attempt was made to create an attribute set from an ADT that has one or more user methods.

Action: Drop the ADT and recreate it with no user methods.

ORA-38438: getVarchar not possible due to "*string*" datatype in the attribute set

Cause: An attempt was made to use the getVarchar API when the attribute set has one or more non-scalar types.

Action: Use AnyData conversion to encode the data item.

ORA-38439: invalid operation "*string*"

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP

ORA-38440: attribute set *string* does not exist

Cause: An attempt was made to copy an attribute set that is not accessible from the current schema.

Action: Grant execute permissions on the corresponding ADT to the current user and try again.

ORA-38441: System could not derive the list of STORED and INDEXED attributes.

Cause: The attribute set was created without default index parameters.

Action: Specify the default index parameters for the attribute set or include a valid PARAMETERS clause for the CREATE INDEX command.

ORA-38442: The ADT "*string*" is not in a valid state.

Cause: An attempt was made to use an ADT that is not in a valid state.

Action: Check the INCOMPLETE field in the user_types catalog view to make sure that the ADT is in a valid state. Drop the invalid ADT and recreate the corresponding attribute set.

ORA-38443: An attribute set should be assigned to the expression set for statistics collection.

Cause: An attempt was made to collect statistics for an expression set with no attribute set assigned to it.

Action: Assign an attribute set to the expression set before collecting the statistics.

ORA-38444: statistics do not exist for the expression set

Cause: An attempt was made to clear the statistics that do not exist.

Action: No action was required.

ORA-38445: TOP clause not allowed with no statistics

Cause: An attempt was made to use the TOP parameters clause with no statistics available for the expression set.

Action: Collect statistics for the expression set and try again.

ORA-38446: Error with embedded ADT "string" in the attribute set.

Cause: The embedded ADT has errors.

Action: Set serveroutput ON for additional information.

ORA-38447: Type required for the embedded ADT attribute "string" is missing

Cause: Object type required for the embedded ADT was missing.

Action: Set serveroutput ON for additional information.

ORA-38448: Indexing predicates with "string" operator is not supported.

Cause: An unsupported operator was used in the `expr$indexoper` array.

Action: Choose the operators from this list : =, <, >, <=, >=, !=, is null, is not null, nvl, and between.

ORA-38449: table "string" does not exist or is not accessible

Cause: An attempt was made to create a table alias for a table that does not exist or is not accessible.

Action: Grant select privileges on the table to the current user.

ORA-38450: error computing a stored attribute for the expression set.

Cause: Either values for one of the attributes was incorrect or a stored attribute was invalid due to broken dependencies.

Action: Correct the input.

ORA-38451: index is in an inconsistent state

Cause: One or more secondary objects used to maintain the index did not exist

Action: Drop the index and recreate it.

ORA-38452: Expression Filter index name may not be longer than 25 characters

Cause: An attempt was made to use a name longer than 25 characters for the Expression Filter index.

Action: Choose a name that has 25 or fewer characters

ORA-38453: ExpFilter index should be created in the same schema as the base table.

Cause: An attempt was made to create the Expression Filter index in a schema other than that of the base table.

Action: Create the index in the same schema as the base table.

ORA-38454: attribute set not defined for the column being indexed

Cause: An attempt was made to create an Expression Filter index on a column with no attribute set association.

Action: Assign an attribute set to the expression set column being indexed.

ORA-38455: Expression Filter index should be created by the owner.

Cause: An attempt was made to create the Expression Filter index by a user who is not the owner of the index.

Action: Create the index using owner's privileges.

ORA-38456: The attribute set "string" is in an inconsistent state.

Cause: The attribute set was in an inconsistent state due to broken dependencies.

Action: Set serveroutput ON for more details. The attribute set may not be reused after this error.

ORA-38457: The attribute "string" is not a valid XMLType attribute.

Cause: An attempt was made to use a non-XMLType attribute to configure XPath filtering.

Action: Use an attribute of sys.XMLType datatype to configure XPath filtering.

ORA-38458: invalid operation "string" for XPATH_FILTER_PARAMETERS

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP.

ORA-38459: XML Tag "string" not found for the XMLType attribute "string"

Cause: An Attempt was made to use a non-existent XML Tag.

Action: Correct the name of the XML Tag or the XMLType attribute.

ORA-38460: filtering based on datatype "string" not supported for XML Tags

Cause: An attempt was made to configure XPath filtering with an XML Tag of unsupported datatype.

Action: Leave the XML Tag out of filter parameters. It will be processed as sparse predicate

ORA-38461: XML Tag "string" already exists for the XMLType attribute "string"

Cause: An attempt was made to create a duplicate XML Tag.

Action: Choose a different XML Tag.

ORA-38462: invalid attribute list

Cause: The input was missing an attribute list or had null values for the attribute names.

Action: Correct the input.

ORA-38463: invalid XML Tag list

Cause: The input was missing a tag list or had null values for the tag names.

Action: Correct the input.

ORA-38464: expression set is not empty.

Cause: An attempt was made to assign an attribute set to a non-empty expression set.

Action: Use FORCE = 'TRUE' to validate all the existing expressions.

ORA-38465: failed to create the privilege checking trigger due to: *string*

Cause: Creation of the trigger failed due to the error listed in the message.

Action: Set serveroutput ON for more information.

ORA-38466: user does not have privileges to CREATE/MODIFY expressions

Cause: An attempt was made to INSERT or UPDATE a column storing expression without appropriate permissions.

Action: Appropriate privileges on the expression set should be granted by the owner of the expression set.

ORA-38467: user cannot GRANT/REVOKE privileges to/from himself

Cause: An attempt was made to GRANT or REVOKE privileges to or from the current user.

Action: The the to_user or from_user field should be different from the user performing the operation.

ORA-38468: column "*string*" is not identified as a column storing expressions.

Cause: An attempt was made to grant permission on a nonexistent expression set.

Action: Make sure that the table and the column exist and an attribute set is associated with the column.

ORA-38469: invalid privilege for an expression set: *string*

Cause: An attempt was made to use an invalid privilege.

Action: See documentation for a valid privilege.

ORA-38470: A proxy connection cannot be revoked if it was not granted first.

Cause: An attempt was made to revoke a proxy connection for a user. The proxy connection must first be granted for the revoke to succeed.

Action: Check the DBA_PROXIES views to see if the user was granted the proxy connection.

ORA-38471: ROWIDs for table aliases cannot be null

Cause: An attempt was made to pass a null value for the table alias attribute in the data item, which is not permitted.

Action: Pass a valid rowid value for the table alias.

ORA-38472: VARCHAR representation of the data item is too long.

Cause: The VARCHAR representation of data item was too long.

Action: Use the EVALUATE operator with AnyData argument instead.

ORA-38473: cannot drop a type used for Expression Filter attribute set

Cause: An attempt was made to drop an ADT that was used to maintain an attribute set for the Expression Filter.

Action: Query USER_EXPFIL_ATTRIBUTE_SETS view to see the dependency.

ORA-38474: attribute set may not have attributes of TABLE COLLECTION type.

Cause: An attempt was made to create an attribute with a TABLE COLLECTION type.

Action: Use VARRAYs instead of table collection, if possible.

ORA-38475: The attribute set and the associated ADT are out of sync.

Cause: The ADT was directly modified by CREATE or ALTER operations.

Action: Drop the attribute set and recreate it from scratch.

ORA-38476: abstract type used for an Attribute set may not be modified.

Cause: An attempt was made to alter a type (ADT) that is used to maintain an attribute set of an Expression set.

Action: Do not modify the ADT directly. Use DBMS_EXPFIL APIs instead.

ORA-38477: attribute set cannot be derived from an evolved type or a subtype.

Cause: An attempt was made to create an attribute set from an evolved ADT or a subtype.

Action: The ADT used for the attribute set cannot be an evolved type or a subtype.

ORA-38478: creation of system trigger EXPFIL_DROPOBJ_MAINT failed

Cause: The creation of the system trigger EXPFIL_DROPOBJ_MAINT failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the Expression Filter dictionary could have some stale entries.

ORA-38479: creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed

Cause: The creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the user will be able to evolve ADTs associated with the attribute set, thus causing spurious errors.

ORA-38480: creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed.

Cause: The creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed due to errors in SYS.EXF\$DBMS_EXPFIL_SYSPACK package.

Action: Try a clean installation again. If this error is ignored, a RENAME of the expression table may cause the EVALUATE queries to fail.

ORA-38481: ADT "*string*" is used for a dependent object.

Cause: An attempt was made to create an attribute set from an ADT which is used by one or more dependent objects.

Action: Use a new ADT instead.

ORA-38482: no elementary attributes defined in the attribute set

Cause: An attempt was made to use an empty attribute set.

Action: Create one or more elementary attributes for the attribute set.

ORA-38483: invalid FUNCTION/PACKAGE/TYPE name: "string"

Cause: An attempt was made to use an invalid name format.

Action: The function/package/type name should be specified in the following format
[owner.]object_name

ORA-38484: FUNCTION/PACKAGE/TYPE string does not exist

Cause: Attempt was made to use a object that does not exist.

Action: Query ALL_OBJECT view to ensure that the object exists.

ORA-38485: invalid object type for the user-defined function

Cause: An attempt was made to use an invalid object as a function.

Action: Valid object types are FUNCTION / PACKAGE / TYPE

ORA-38486: FUNCTION/PACKAGE/TYPE already exists for the attribute set

Cause: An attempt was made to add a duplicate function to the list.

Action: Use a different object name.

ORA-38487: FUNCTION/PACKAGE/TYPE "string" not allowed in the expression

Cause: An attempt was made to use an un-approved function in the expression.

Action: Add the function to the corresponding attribute set

ORA-38488: attribute set already assigned to the column storing expressions

Cause: An attempt was made to reassign an attribute set to an expression column.

Action: Query USER_EXPFIL_EXPRESSION_SETS view to find the attribute set assigned the expression set

ORA-38489: predicate table creation failed due to: ORAstring

Cause: Predicate table creation failed due to the reported error.

Action: Set serveroutput ON for additional information

ORA-38490: invalid name: quotes do not match

Cause: The quotes in the name did not match.

Action: Correct the name to match the quotes.

ORA-38491: could not evaluate subexpression for rowid "string"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38492: invalid ALTER INDEX parameters clause "string"

Cause: An invalid parameters clause was specified with the ALTER INDEX command.

Action: See documentation for a valid list of parameters.

ORA-38493: feature not enabled : Expression Filter index

Cause: An attempt was made to create an Expression Filter index in Standard Edition.

Action: Do not attempt to use this feature.

ORA-38494: column in the table alias and an attribute have matching names

Cause: One of the attributes in the set has the same name as the name of one of the columns in the table configured for table alias.

Action: If possible, use a different name for the attribute.

ORA-38495: data type for the stored attribute *string* is inconsistent.

Cause: The actual data type for the stored attribute configured for the Expression Filter index object did not match the data type recorded in the Expression Filter dictionary.

Action: Delete the attribute from the default index attributes and recreate it.

ORA-38496: Expression Filter index is not in a valid state

Cause: An attempt was made to REBUILD an Expression Filter index that was not valid.

Action: Use DEFAULT keyword in the parameters clause to rebuild the index from defaults or drop and recreate the index.

ORA-38497: Expression Filter index does not exist

Cause: Index with a matching name does not exist or the index was not created using ExpFilter indextype.

Action: Identify the correct index using the Expression Filter catalog views

ORA-38498: invalid stored attribute for the index object : *string*

Cause: The expression filter index object has a stored or indexed attribute that had broken dependencies.

Action: Make sure that all the identifiers used in the attribute are valid.

ORA-38499: expression set already configured for stored/indexed attributes

Cause: The expression set already had a list of stored and indexed attributes. Additional attributes cannot be specified in the CREATE INDEX parameters clause.

Action: Remove TOP, STOREATTRS and INDEXATTRS clauses from the parameters clause or clear the expression set statistics using DBMS_EXPFIL.INDEX_PARAMETERS API.

ORA-38500: *string*

Cause: There was a generic error

Action: See documentation for further information.

ORA-38501: sub-query not allowed in the expression

Cause: An attempt was made to use a sub-query in the expression.

Action: Do not use sub-queries in the expressions.

ORA-38502: invalid XML tag: *string*

Cause: An attempt was made to use an invalid XML tag for the index.

Action: Correct the XML tag and retry.

ORA-38503: index already defined using the parameters

Cause: An attempt was made to modify the index parameters after the index creation.

Action: Drop the index and retry.

ORA-38504: this operator not allowed with the configured attribute set

Cause: An attempt was made to use the operator binding with an attribute set containing more than one (table alias) attribute. This is not permitted.

Action: Use a different operator binding.

ORA-38505: invalid default value for the attribute

Cause: An attempt was made to use an invalid default value or a default that is larger than 100 characters.

Action: Specify a correct default value.

ORA-38506: invalid attribute type for text predicates

Cause: An attempt was made to use an invalid type for an attribute configured for text predicates.

Action: Use either a VARCHAR or a CLOB attribute instead.

ORA-38507: attributes of *string* data type should be indexed

Cause: An attempt was made to configure an attribute of spatial or text data type as stored predicate group.

Action: Configure them as indexed predicate groups instead.

ORA-38601: Not enough memory for frequent itemset counting: *string*

Cause: The memory size did not satisfy the minimum memory requirement.

Action: Consider setting `workarea_size_policy='auto'`. Or with `workarea_size_policy='manual'` mode, consider revising the data, increasing the `support_threshold` setting, and decreasing `itemset_length_max` setting.

ORA-38602: FI invalid input cursor

Cause: The input cursor did not return exactly two columns for transactional input format or the input cursor didn't have consistent data types for horizontal input format

Action: For transactional input format, specify that the input cursor returns exactly two columns: one for transaction-id, one for item-id. For horizontal input format, make sure the input cursor's columns have the same data types.

ORA-38603: FI including & excluding cursor can only return one column

Cause: The including & excluding cursor did not return exactly one column.

Action: Specify that the cursor return only one column: item-id.

ORA-38604: FI including & excluding cursor item-id type must match input cursor item-id type

Cause: The including & excluding cursor item-id type did not match input cursor item-id type

Action: Specify that the item-id type of the cursors match each other.

ORA-38605: Not enough memory for candidate generation

Cause: There was insufficient available memory for candidate generation.

Action: Consider revising the data, increasing the support_threshold setting, and decreasing itemset_length_max setting. And, in workarea_size_policy='auto' mode, set pga_aggregate_target to a reasonably larger value.

ORA-38606: FI support threshold not between [0, 1]

Cause: The user inputed a support threshold not in the range of [0, 1].

Action: The user should adjust the input value in the range of [0, 1].

ORA-38607: FI minimum and maximum itemset length not between [1, string]

Cause: The inputed minimum or maximum itemset length exceed the internal maximum itemset length or less than 1.

Action: The user should adjust the input value not larger than the internal maximum itemset length and not less than 1.

ORA-38608: FI itemset minimum-length(string) should not be greater than maximum length(string)

Cause: The user inputed minimum length is more than maximum length.

Action: The user should adjust the input values to make the minimum length less than or equal to the maximum length.

ORA-38609: Not enough memory for tree counting, requires at least stringKB

Cause: The memory size did not satisfy the minimum memory requirement for tree counting.

Action: Consider setting workarea_size_policy='auto'. Or with workarea_size_policy='manual' mode, consider revising the data, increasing the support_threshold setting, and decreasing itemset_length_max setting.

ORA-38610: FI "string" name prefix is reserved for frequent itemset counting

Cause: An error occurred because DBMS_FREQUENT_ITEMSET and prefix ORA_FI are reserved for the DBMS_FREQUENT_ITEMSET package's internal use.

Action: Do not re-define functions with names starting with DBMS_FREQUENT_ITEMSET package or ORA_FI.

ORA-38611: FI input cursor's item type is not supported

Cause: The input cursor's item type is not number or character type

Action: Redefine the input cursor so that item type is number or character type.

ORA-38612: FI item length cannot exceed half of one database block.

Cause: The item's length was more than half of one database block.

Action: Redefine the data type of the item column so that its maximum length is less than half of one database block.

ORA-38613: FI Cursor is returning less than 2 columns.

Cause: Cursor parameter is returning less than 2 columns.

Action: Modify the Cursor argument to return 2 columns.

ORA-38620: DT expressions in input cursor do not have an alias name

Cause: Expressions in input cursor do not have an alias name.

Action: Add an alias name for the expression.

ORA-38621: Decision Tree maximum depth setting not between [2, 20]

Cause: The user specified a max tree depth not in the range of [2, 20].

Action: The user should adjust the input value to be in the range of [2, 20].

ORA-38622: Decision Tree not enough memory, requires at least *string*KB

Cause: The memory size did not satisfy the minimum memory requirement for decision tree building.

Action: In `workarea_size_policy='manual'` mode, set `_dtree_area_size` to a reasonably larger value. Or, In `workarea_size_policy='auto'` mode, please raise `pga_aggregate_target` to a reasonably larger value.

ORA-38700: Limit of *string* flashback database logs has been exceeded.

Cause: The maximum number of flashback database log files was exceeded.

Action: `DB_FLASHBACK_RETENTION_TARGET` may be set to high. Modify it to a smaller value.

ORA-38701: Flashback database log *string* seq *string* thread *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38702: Cannot update flashback database log file header.

Cause: Could not write to the flashback database log file.

Action: Restore access to the file.

ORA-38703: Type *string* in header is not a flashback database log file.

Cause: A corrupt flashback database log file header was read.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38704: Checksum error in flashback database log file header.

Cause: The flashback database log file header contained a checksum that does not match the value calculated from the file header as read from disk. This means the file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38705: Expected block size *string* does not match *string* in log header.

Cause: When the flashback log file header was read, the block size in the control file did not match the block size contained in the header.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38706: Cannot turn on FLASHBACK DATABASE logging.

Cause: An ALTER DATABASE FLASHBACK ON command failed. Other messages in the alert log describe the problem.

Action: Fix the problem and retry.

ORA-38707: Media recovery is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because media recovery was not enabled.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG command and then retry the command.

ORA-38708: not enough space for first flashback database log file

Cause: An ALTER DATABASE FLASHBACK ON command failed because there was not enough space in the Recovery Area for the first flashback database log file.

Action: Make more space in the Recovery Area. For example, this can be done by increasing the value of DB_RECOVERY_FILE_DEST_SIZE.

ORA-38709: Recovery Area is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the Recovery Area was not enabled.

Action: Set DB_RECOVERY_FILE_DEST to a location and retry.

ORA-38710: Flashback log version *string* is incompatible with ORACLE version *string*.

Cause: The flashback database log file was rejected because it appeared to be written by an incompatible version of Oracle.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38711: Corrupt flashback log block header: block *string*

Cause: A corrupt Flashback Database log file block header was read. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38712: Corrupt flashback log record header: block *string*, offset *string*.

Cause: A corrupt flashback database log record header was read. Either the record type or length were incorrect. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38713: Flashback Database logging is already turned on.

Cause: An ALTER DATABASE FLASHBACK ON command had no effect because flashback database logging was already on.

Action: No action required.

ORA-38714: Instance recovery required.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the database either crashed or was shutdown with the ABORT option.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-38715: Invalid log number specified in the DUMP FLASHBACK command.

Cause: An invalid log number was used when dumping a flashback database log file.

Action: Specify a valid flashback database log number.

ORA-38716: Must supply an integer for the TYPE option.

Cause: An invalid value was specified for TYPE in the DUMP FLASHBACK command.

Action: Specify an integer value.

ORA-38717: Invalid DUMP FLASHBACK option.

Cause: An invalid option was specified in the DUMP FLASHBACK command. Currently the only options allowed are: DBA, TYPE, and LOGICAL.

Action: Retry the command with the correct options.

ORA-38718: Invalid thread number specified in the DUMP FLASHBACK command.

Cause: An invalid thread number was used in dumping the flashback database log files for a thread.

Action: Specify a valid thread number.

ORA-38719: Invalid DUMP FLASHBACK object.

Cause: An invalid object was specified in a DUMP FLASHBACK command. Currently the only objects allowed are: LOGFILE or THREAD.

Action: Retry the command with the correct options.

ORA-38720: Missing log file name or number.

Cause: A log file name or number was missing in a DUMP FLASHBACK LOGFILE command.

Action: Supply a valid log file name or number.

ORA-38721: Invalid file number.

Cause: An invalid file number was specified in the DBA clause of a DUMP FLASHBACK command.

Action: Supply a valid file number.

ORA-38722: ON or OFF expected.

Cause: The ALTER DATABASE FLASHBACK command was specified without the ON or OFF keyword.

Action: Retry the command with the ON or OFF keyword.

ORA-38723: Invalid SCN expression.

Cause: The SCN keyword was specified in a FLASHBACK DATABASE command but the SCN expression was invalid.

Action: Retry the command using a valid SCN number.

ORA-38724: Invalid option to the FLASHBACK DATABASE command.

Cause: An invalid option was specified to the FLASHBACK DATABASE command. Valid options are: SCN or TIMESTAMP.

Action: Correct the syntax and retry the command.

ORA-38725: specified name "*string*" does not match actual "*string*"

Cause: The database name specified in a FLASHBACK DATABASE command did not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database and mount the correct database.

ORA-38726: Flashback database logging is not on.

Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38727: FLASHBACK DATABASE requires a current control file.

Cause: The control file being used is a backup control file.

Action: FLASHBACK DATABASE cannot be used with a backup control file. If the database must be taken back in time then a restore and an incomplete recovery must be performed.

ORA-38728: Cannot FLASHBACK DATABASE to the future.

Cause: An SCN or time stamp provided in a FLASHBACK DATABASE command was in the future.

Action: Supply a proper SCN or time stamp and retry the command.

ORA-38729: Not enough flashback database log data to do FLASHBACK.

Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38730: Invalid SCN/TIMESTAMP expression.

Cause: The expression supplied in a FLASHBACK DATABASE command was invalid.

Action: Retry the command using a valid number or time stamp expression.

ORA-38731: Expected version *string* does not match *string* in log header.

Cause: The version of the flashback database log file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38732: Expected file size *string* does not match *string*.

Cause: The file size indicated in the control file did not match the file size contained in the flashback log file header. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38733: Physical size *string* less than needed *string*.

Cause: A flashback database log file shrank in size. This was likely to have been caused by operator or operating system error.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38734: Flashback log is inconsistent; belongs to another database.

Cause: The database ID in the flashback database log file did not match the database ID in the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38735: Wrong log number *string* in flashback log file header.

Cause: The log file number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38736: Wrong thread number *string* in flashback log file header.

Cause: The thread number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38737: Expected sequence number *string* doesn't match *string*

Cause: The flashback database log is corrupted or is an old version.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38738: Flashback log file is not current copy.

Cause: A check of flashback database log file header at database open found that the flashback database log appeared to be an incorrectly restored backup. Flashback database log files cannot be backed up and restored.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38739: Flashback log file is more recent than control file.

Cause: The control file change sequence number in the flashback database log file was greater than the number in the control file. This implies that the wrong control file was being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: FLASHBACK DATABASE can only be used with the current control file. If it is not available, then a restore and an incomplete recovery must be performed instead.

ORA-38740: Usable blocks value *string* is not valid.

Cause: A flashback database log file header contained a usable blocks value greater than the file size. The flashback database log file file is corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38741: Formatted blocks value *string* is not valid.

Cause: The formatted blocks value in the flashback database log file was greater than the file size. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38742: Flashback log file has incorrect log reset status.

Cause: The flashback database log file header had log reset data that was different than the control file. The log was probably an incorrectly restored backup. Flashback database logs cannot be backed up.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38743: Time/SCN is in the future of the database.

Cause: The Time/SCN provided in a FLASHBACK DATABASE command was in the future of the database.

Action: Retry the command with a correct Time/SCN or RECOVER the database.

ORA-38744: file *string* is not the same file seen at start of flashback

Cause: A different copy of the file was accessed the last time FLASHBACK DATABASE looked at the file header. A backup of the file was restored or the meaning of the file name changed during FLASHBACK DATABASE.

Action: Ensure the correct file is available, then retry FLASHBACK DATABASE.

ORA-38746: error occurred while restoring data block (file# *string*, block# *string*)

Cause: An error occurred during a FLASHBACK DATABASE command. See other errors on error stack.

Action: Investigate why the error occurred. It may be that the flashback database log data is corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38747: corrupt before image (file# *string*, block# *string*)

Cause: A corrupt data block before image was encountered during a FLASHBACK DATABASE command.

Action: The flashback log data is probably corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38748: cannot flashback data file *string* - file is in use or recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was not available for recovery. Either it was online and the database was open in some instance, or another process was currently doing media recovery or flashback on the file.

Action: Do not do FLASHBACK DATABASE.

ORA-38749: A media recovery has been started.

Cause: An attempt was made to start a FLASHBACK DATABASE in the same session as a media recovery.

Action: Complete or cancel the first media recovery session.

ORA-38750: FLASHBACK DATABASE may not be performed using a dispatcher.

Cause: An attempt was made to use a dispatcher process for FLASHBACK DATABASE. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform FLASHBACK DATABASE.

ORA-38751: Flashback database log: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38752: file *string* does not exist

Cause: During an RMAN FLASHBACK DATABASE conversation, a file was listed which was not part of the database. The RMAN conversation was aborted.

Action: Retry the conversation with the appropriate file numbers.

ORA-38753: Cannot flashback data file *string*; no flashback log data.

Cause: An attempt to perform a FLASHBACK DATABASE failed because the file does not have enough flashback log data to cover the time to flash back. Either the file did not have flashback generation enabled for it, or had flashback generation turned off for it some time during the time span of the flashback.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38754: FLASHBACK DATABASE not started; required redo log is not available

Cause: A FLASHBACK DATABASE command did not start. A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38755: Flashback is already turned on for this tablespace.

Cause: An attempt was made to turn on flashback database logging for a tablespace that already has flashback turned on.

Action: No action required.

ORA-38756: Flashback is already turned off for this tablespace.

Cause: An attempt was made to turn off flashback database logging for a tablespace that already has flashback off.

Action: No action required.

ORA-38757: Database must be mounted and not open to FLASHBACK.

Cause: An attempt to Flashback a database was made when the database was not mounted or was already open.

Action: Mount the database and retry the FLASHBACK command.

ORA-38758: cannot flashback data file *string*; restored since last recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was restored since the last standby recovery. The file cannot be flashed back.

Action: The file must be taken offline before continuing with the FLASHBACK DATABASE command.

ORA-38759: Database must be mounted by only one instance and not open.

Cause: An attempt to turn on or off Flashback Database logging was made when the database was open or mounted by more than one instance.

Action: Mount the database in only one instance and retry the command.

ORA-38760: This database instance failed to turn on flashback database

Cause: Database flashback is on but this instance failed to start generating flashback data. Look in alert log for more specific errors.

Action: Correct the error or turn off database flashback.

ORA-38761: redo log sequence *string* in thread *string*, incarnation *string* could not be accessed

Cause: A redo log needed for the recovery portion of FLASHBACK could not be read or opened. The FLASHBACK operation failed.

Action: Restore the log and retry the FLASHBACK command.

ORA-38762: redo logs needed for SCN *string* to SCN *string*

Cause: The FLASHBACK DATABASE operation failed. The recovery portion of FLASHBACK DATABASE needed redo from the first SCN to the second, but one or more of the redo logs in the range could not be read or opened.

Action: Check the FLASHBACK DATABASE command trace file for a description of the inaccessible redo logs, restore access to them, and retry the FLASHBACK DATABASE command.

ORA-38763: flashback not started; enabled threads have changed

Cause: A FLASHBACK DATABASE command did not start. The set of enabled threads changed during the time to flash back.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38764: flashback not started; datafile *string* enabled threads are different

Cause: A FLASHBACK DATABASE command did not start. The datafile was restored from a backup taken when the enabled threads were different than at the time of the flashback.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38765: Flashed back database cannot be opened read-only.

Cause: A complete recovery was performed after a database flashback but the database was not opened for read-write access, or a FLASHBACK DATABASE command failed.

Action: If a complete recovery was performed after a database flashback, open the database for read-write access. If a FLASHBACK DATABASE command failed, fix what caused the command to fail and retry the command, or recover and open the database for read-write access.

ORA-38766: cannot flashback data file *string*; file resized smaller

Cause: An attempt to do FLASHBACK DATABASE found that the file was shrunk during the time to flash back.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38767: flashback retention target parameter mismatch

Cause: The value of parameters DB_FLASHBACK_RETENTION_TARGET must be same in all instances. All databases must have same flashback retention target parameters.

Action: Check DB_FLASHBACK_RETENTION_TARGET values in all instances.

ORA-38768: resizing datafile *string* failed

Cause: An operating system error occurred when Flashback Database tried to shrink (resize) a datafile. Flashback shrinks a file in order to undo the effects of a file expand, for example, an autoextension of the file.

Action: Recover the database to return it to its previous state, or fix the cause of the operating system error and retry the Flashback. If that is not possible, then the file can be taken offline and the Flashback command retried. The file will have to be restored from a backup and rolled forward.

ORA-38769: FLASHBACK DATABASE failed after modifying data.

Cause: A FLASHBACK DATABASE command failed after modifying the the database. Look in the alert log for more information about the failure.

Action: Recover the database to return it to its previous state, or fix the cause of the error and retry the Flashback.

ORA-38770: FLASHBACK DATABASE failed during recovery.

Cause: A FLASHBACK DATABASE command successfully restored the database but failed during the recovery step. Look in the alert log for more information about the failure.

Action: Fix the error and then recover the database to the same SCN or timestamp used in the FLASHBACK DATABASE command.

ORA-38771: unnamed datafile(s) added to control file by flashback recovery

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile that could not be added to the control file. An entry has been added to the control file for the new datafile, but with the file name UNNAMEDnnnn, where nnnn is the file number. Related error messages provide the file names that were originally used to create the files.

Action: Rename the file in the control file, or use the ALTER DATABASE CREATE DATAFILE command to create a file suitable for recovery. If the file is not going to be recovered, then take it offline with the FOR DROP option. The recovery step of Flashback can be resumed by entering a RECOVERY command with the same SCN or timestamp as used in the FLASHBACK DATABASE command. For example, RECOVER AUTOMATIC DATABASE UNTIL CHANGE *flashback-scn*.

ORA-38772: cannot add datafile 'string' - file could not be created

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile and could not recreate the file. The error from the creation attempt is displayed in another message. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file.

ORA-38773: cannot add data file 'string' - file already part of database

Cause: The recovery step of FLASHBACK database encountered the creation of a datafile and could not create the file because the file name is already in use in the database. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file with a different name.

ORA-38774: cannot disable media recovery - flashback database is enabled

Cause: An attempt was made to disable media recovery while flashback database was enabled.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable media recovery.

ORA-38775: cannot disable recovery area - flashback database is enabled

Cause: An attempt was made to set DB_RECOVERY_FILE_DEST to null while flashback database was enabled. Flashback database requires DB_RECOVERY_FILE_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the recovery area.

ORA-38776: cannot begin flashback generation - recovery area is disabled

Cause: During a database mount, the RVWR process discovered that the recovery area was disabled. DB_RECOVERY_FILE_DEST must have been set null or removed from the INIT.ORA file while the database was unmounted.

Action: Flashback database requires the recovery area to be enabled. Either enable the recovery area by setting the DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE initialization parameters, or turn off flashback database with the ALTER DATABASE FLASHBACK OFF command.

ORA-38777: database must not be started in any other instance

Cause: A command was attempted that required the database to be mounted in this instance and not started in any other instance. ALTER DATABASE OPEN RESETLOGS requires that the database be started in only one instance if flashback database logging is enabled.

Action: Ensure that the no other instances are started. Then retry the command.

ORA-38778: Restore point '*string*' already exists.

Cause: The restore point name of the CREATE RESTORE POINT command already exists. A restore point name must be unique.

Action: Either use a different name or delete the existing restore point with the same name.

ORA-38779: cannot create restore point - too many restore points.

Cause: The maximum number of restore points already have been created.

Action: Delete some existing restore point and retry the operation.

ORA-38780: Restore point '*string*' does not exist.

Cause: The restore point name specified in the command did not exist.

Action: Look up restore points by query restore point tables.

ORA-38781: cannot disable media recovery - have guaranteed restore points

Cause: An attempt was made to disable media recovery while there is at least one guaranteed restore point.

Action: Drop all guaranteed restore points and then disable media recovery.

ORA-38782: cannot flashback database to non-guaranteed restore point '*string*'

Cause: An attempt was made to flashback database to a non-guaranteed restore point while flashback database is off. You can only flashback a database to guaranteed restore point when flashback database is not on.

Action: Consider picking a guaranteed restore point to flashback the database to, if there is one.

ORA-38783: Instance recovery required.

Cause: An attempt was made to create a restore point when the database is in mount mode but it was not shutdown cleanly before it was mounted. In order to create a restore point when the database is mounted, the database must be shutdown cleanly before it is mounted.

Action: Consider one of the following: 1. Create the restore point after opening the database. 2. Open the database, shut it down cleanly, mount the database, and retry creating the restore point.

ORA-38784: Cannot create restore point '*string*'.

Cause: An attempt to create a restore point failed. See other errors on the error stack and in the alert log for the specific reason.

Action: Fix the problem and retry.

ORA-38785: Media recovery must be enabled for guaranteed restore point.

Cause: Media recovery is not enabled. Media recovery must be enabled in order to create a guaranteed restore point.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG statement and then retry the command.

ORA-38786: Recovery area is not enabled.

Cause: An attempt was made to perform a command that requires Flash recovery area to be enabled.

Action: Set DB_RECOVERY_FILE_DEST to an appropriate location and retry.

ORA-38787: Creating the first guaranteed restore point requires mount mode when flashback database is off.

Cause: While flashback database is not on, an attempt was made to create the first guaranteed restore point while the database is open.

Action: Mount the database and retry.

ORA-38788: More standby database recovery is needed

Cause: An attempt was made to create a restore point or a guaranteed while a physical standby database is not cleanly checkpointed.

Action: Perform more standby database recovery via managed standby database recovery. Cancel managed recovery and retry the command.

ORA-38789: File name is too long.

Cause: The file name provided in the command was longer than the maximum allowed.

Action: Use a shorter file name.

ORA-38790: BEFORE must be specified with RESETLOGS

Cause: The FLASHBACK DATABASE command included the RESETLOGS parameter but not the BEFORE parameter.

Action: Retry the command with TO BEFORE RESETLOGS.

ORA-38791: flashback did not start because file *string* was not in a valid incarnation

Cause: Flashback could not be started because a file was checkpointed or fuzzy at a point where the file can neither be restored nor recovered to our restore target. In order for a file to be brought to the restore target, the file has to be in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

Action: Manually restore or recover the file to a point where it is in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

ORA-38792: encountered unknown flashback record from release *string*

Cause: A Flashback Database logfile contains a record written by a future Oracle release and is unknown by this release.

Action: The given release of Oracle must be installed in order to use these flashback database log files.

ORA-38793: cannot FLASHBACK the database or pluggable database to a future SCN or time

Cause: The Flashback Pluggable Database target SCN or timestamp is greater than the current database or pluggable database SCN/timestamp and the database or pluggable database incarnation is not the last opened incarnation.

Action: If the target SCN or timestamp is in the current incarnation or a child incarnation whose branch point is after the current database or pluggable database SCN then RECOVER DATABASE or RECOVER PLUGGABLE DATABASE to the target SCN or time. If the target SCN or timestamp is in a child incarnation whose branch point is prior to the current database or pluggable database SCN then FLASHBACK DATABASE to before the branch point. Next, use RMAN to reset the database or pluggable database to the child incarnation. Finally, RECOVER DATABASE OR PLUGGABLE DATABASE to the target SCN time.

ORA-38794: Flashback target time not in current incarnation

Cause: The Flashback Database target timestamp is not in the database's current incarnation or any of its ancestors.

Action: Use a different target timestamp or use RMAN to reset the database to the appropriate incarnation.

ORA-38795: WARNING: FLASHBACK DATABASE succeeded but OPEN RESETLOGS would fail

Cause: FLASHBACK DATABASE succeeded. However, if ALTER DATABASE OPEN RESETLOGS command was attempted now, it would fail with the specified error.

Action: Fix the error before trying ALTER DATABASE OPEN RESETLOGS.

ORA-38796: Not enough flashback database log data to undo FLASHBACK.

Cause: There was not enough flashback log data to undo the flashback so a flashback was not started.

Action: It is still possible to get to the restore target by doing a flashback until the resetlogs branch point of the restore target is reached. This can be done by executing multiple "flashback to before resetlogs" commands, or by doing a flashback to the exact time or SCN of the desired resetlogs branch point. Note that this flashback cannot be undone should an error occur. The only option is to complete the flashback.

ORA-38797: Full database recovery required after a database has been flashed back

Cause: An attempt was made to recover some datafiles or tablespaces of a database after the database had been flashed back. In order to recover control file and all datafiles correctly, full database recovery is required after a database has been flashed back.

Action: Recover the whole database instead.

ORA-38798: Cannot perform partial database recovery

Cause: See other other messages on error stack for the cause.

Action: See other other messages on error stack for the action.

ORA-38799: Cannot drop guaranteed restore point internally created for snapshot standby

Cause: An attempt is made to drop the guaranteed restore point Oracle created internally for a snapshot standby.

Action: Use the "alter database convert to physical standby" command to convert the snapshot standby to a normal physical standby. This will automatically flashback the database and drop this guaranteed restore point.

ORA-38800: Cannot start Redo Apply on the open physical standby database

Cause: An attempt was made to start Redo Apply on an open physical standby database instance.

Action: Make sure the primary database is at compatibility 11.0.0 or higher. The redo logs to be recovered on an open physical standby database must be generated at compatibility 11.0.0 or higher. If you have any redo below 11.0.0 to be applied on the standby, you must apply them on a mounted standby before restarting recovery on an open standby when the log format advances to 11.0.0 or higher. If this is a RAC standby database, make sure the ACTIVE_INSTANCE_COUNT parameter is not set.

ORA-38801: improper value for ORA_EDITION

Cause: An improper value was used for ORA_EDITION when trying to specify an edition to use at login time. The value is not understandable as an identifier, or is too long.

Action: Correct the value for ORA_EDITION and try again.

ORA-38802: edition does not exist

Cause: A reference was made to an edition that did not exist or for which the current user did not have privileges.

Action: Check the edition name and verify that the current user has the appropriate privileges on the edition.

ORA-38803: edition is unusable

Cause: This error occurred because a reference was made to an unusable edition.

Action: Use another edition.

ORA-38804: not a legal edition name

Cause: This error occurred because an attempt was made to create an edition called ORA\$BASE, DATABASE_DEFAULT, or USER_DEFAULT. These are not legal edition names. Or a value provided as an edition name is not understandable as an identifier, or is too long.

Action: Choose a different name for the edition.

ORA-38805: edition is in use

Cause: An attempt was made to ALTER or DROP an edition that was being used in another session or was the database default edition.

Action: Retry when the edition is not in use and is not the database default edition.

ORA-38806: edition is being altered or dropped

Cause: An attempt was made to use an edition that was in the process of being altered or dropped.

Action: Use a different edition.

ORA-38807: Implementation restriction: an edition can have only one child

Cause: This error occurred because an attempt was made to create more than one child edition for a parent edition.

Action: Create the edition as a child of the leaf edition.

ORA-38808: edition has a usable parent and a usable child

Cause: An attempt was made to make an edition with a usable parent and a usable child edition unusable.

Action: An edition with a usable parent and a usable child edition cannot be made unusable. Retry after either parent or child has been made unusable.

ORA-38809: edition must be unusable

Cause: This error occurred because an attempt was made to drop a usable edition.

Action: Retry after the altering the edition to be unusable.

ORA-38810: Implementation restriction: cannot drop edition that has a parent and a child

Cause: This error occurred because an attempt was made to drop an edition that has a parent and a child edition.

Action: Retry after dropping the parent or child edition.

ORA-38811: need CASCADE option to drop edition that has actual objects

Cause: This error occurred because an attempt was made to drop an edition that has actual objects.

Action: Specify CASCADE option in drop command.

ORA-38812: maximum number of editions reached

Cause: The number of editions has reached the limit.

Action: Drop some editions before creating new ones.

ORA-38813: editions not supported for schema *string*

Cause: The Oracle-supplied schema did not support editions.

Action: Do not attempt to enable editions for the specified Oracle-supplied schema.

ORA-38814: ALTER SESSION SET EDITION must be first statement of transaction

Cause: An attempt was made to execute an edition switch within an open transaction.

Action: Commit or rollback the transaction and reexecute the statement, or use DBMS_SESSION.SET_EDITION_DEFERRED if its deferred effect is appropriate.

ORA-38815: ALTER SESSION SET EDITION must be a top-level SQL statement

Cause: An edition switch failed because it was executed from a PL/SQL block or using recursive SQL.

Action: Execute the statement from a top-level OCI call, or use dbms_session.set_edition if its deferred effect is appropriate.

ORA-38816: edition has a child that inherits objects from the edition

Cause: This error occurred because an attempt was made to drop an edition that a child that inherits objects from the edition.

Action: Retry after the child edition has no inherited objects.

ORA-38817: Insufficient privileges

Cause: You did not have sufficient privileges to execute the subprogram package DBMS_EDITIONS_UTIL.

Action: Obtain the necessary privileges. Please see the package specification for details.

ORA-38818: illegal reference to editioned object *string.string*

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

ORA-38819: user *string* owns one or more objects whose type is editionable and that have noneditioned dependent objects

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make sure that those objects owned by this user whose type is editionable have no noneditioned dependent objects; or use the FORCE option.

ORA-38820: user has evolved object type

Cause: User could not be edition enabled if it has evolved object type.

Action: Reset the evolved object type first.

ORA-38821: unsupported DBMS_SQL edition operation

Cause: Could not bind or define ADT, VARRAY, nested table, or REF data type when the specified edition was different from the current edition.

Action: Use the current edition of DBMS_SQL operation.

ORA-38822: referential integrity constraints not allowed on editioned views

Cause: An attempt was made to create a referential integrity constraint to or from an editioned view or enable editions for a user that has views with referential integrity constraints.

Action: Do not attempt to create editioned views with referential integrity constraints.

ORA-38823: Crossedition triggers are not allowed to exist when dropping the root edition

Cause: An attempt was made to drop the root edition when enabled crossedition trigger exists.

Action: Drop or disable all the crossedition triggers before dropping the root edition.

ORA-38824: A CREATE OR REPLACE command cannot change the EDITIONABLE property of the following object: '*string*'.

Cause: An attempt was made to replace an existing object with a different value for the EDITIONABLE property.

Action: Run this query to check the EDITIONABLE property for the object: SELECT editionable FROM all_objects WHERE object_name = '<object_name>' AND owner = '<object_owner>'; If this returns Y, then change the REPLACE statement to EDITIONABLE, for example: CREATE OR REPLACE EDITIONABLE ... If the query

returns N, then use NONEDITIONABLE, for example: CREATE OR REPLACE NONEDITIONABLE ... Use ALTER to change the EDITIONABLE property for the object. The syntax to do this is: ALTER <object_type> [<object_owner>.]<object_name> (NONEDITIONABLE | EDITIONABLE); *Params: 1) object_name: The name of the object.

ORA-38825: The EDITIONABLE property of an editioned object cannot be altered.

Cause: An attempt was made to alter the EDITIONABLE property of an object whose type has been enabled for editioning in the owner's schema.

Action: Drop the object and re-create it with the desired EDITIONABLE state.

ORA-38826: The EDITIONABLE property of a TYPE or PACKAGE specification and its body must match.

Cause: An attempt was made to create a TYPE or PACKAGE specification or body whose EDITIONABLE property did not match its counterpart.

Action: Switch the EDITIONABLE property in the CREATE statement, or alter the EDITIONABLE property of the existing object to match the EDITIONABLE property in the CREATE statement.

ORA-38827: DBMS_SESSION.SET_EDITION_DEFERRED failed due to change of PDB.

Cause: An edition switch failed because an attempt was made to change pluggable database (PDB) before the edition switch took effect.

Action: Do not change PDB before the edition switch takes effect.

ORA-38828: DBMS_SESSION.USE_DEFAULT_EDITION_ALWAYS mode is on.

Cause: A change of the session-level edition failed because the overriding USE_DEFAULT_EDITION_ALWAYS mode was on.

Action: Do not change the session-level edition, or first turn off USE_DEFAULT_EDITION_ALWAYS mode.

ORA-38829: FLASHBACK DATABASE failed before modifying any data.

Cause: The FLASHBACK DATABASE command failed before modifying the the database. Look in the alert log for more information about the failure.

Action: Fix the cause of the error and retry the FLASHBACK DATABASE command.

ORA-38850: an enabled thread missing from control file

Cause: A CREATE CONTROLFILE statement was given that did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-38851: cannot mark the current instance (redo thread) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark the current instance (redo thread) as disabled.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38852: cannot mark the current instance (redo thread) as disabled

Cause: The open resetlogs or standby activation operation failed because it must use a different instance (redo thread) than the current instance (redo thread) to open the database.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38853: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38854: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38855: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38856: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38857: cannot mark redo thread *string* as enabled

Cause: The standby switchover or failover operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38858: cannot mark redo thread *string* as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38859: instance *string* (thread *string*) is not ready to be disabled

Cause: The command attempted to switch the instance (thread) into a new log before disabling it. The switch attempt failed because all eligible online logs were either being cleared or not completely archived yet.

Action: Wait a few minutes and retry.

ORA-38860: cannot FLASHBACK DATABASE during instantiation of a logical standby

Cause: The command was not permitted because the controlfile indicates the database was in the process of becoming a logical standby database but the controlfile conversion had not completed.

Action: If in the process of creating a logical standby database, perform the remaining instantiation procedures to completion. If this flashback operation followed a Data Guard failure, permit the errant Data Guard operation to successfully complete. Once the instantiation is complete, reissue the flashback operation.

ORA-38861: flashback recovery stopped before reaching recovery target

Cause: Flashback recovery on the standby ended early because the user attempted to flashback to an SCN or time for which there were no redo logs. Most likely, the user is trying to flashback to a future time in the database that the database has never recovered through. Check the alert log to find out which SCN the database recovered to.

Action: Flashback to an older SCN or acquire the necessary redo logs.

ORA-38862: Flashback database logs are in use.

Cause: The command could not be performed because the flashback database logs were locked by another operation, such as FLASHBACK DATABASE or a query of V\$FLASHBACK_DATABASE_LOG.

Action: Wait for the other operation to complete.

ORA-38863: datafile *string* has been restored from an optimized RMAN backup.

Cause: Flashback Database could not flash back the file because it was restored from an RMAN optimized backup with deallocated objects. Flashback cannot revert the file to a time before the last deallocation in the datafile backup.

Action: Restore the file from a backup prior to the Flashback target SCN or time and then retry the command.

ORA-38864: cannot create a guaranteed restore point with user specified SCN or time.

Cause: An SCN or timestamp was specified when creating a guaranteed restore point. This is not supported. You can only create a guaranteed restore point as of the current time.

Action: Avoid this combination of options for creating a restore point.

ORA-38865: cannot create restore point for a future SCN or time.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is in the future.

Action: Revise the SCN or timestamp specified so that it is an SCN or timestamp in the past.

ORA-38866: cannot create restore point for an SCN or time before current database incarnation.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is before the beginning of the current database incarnation.

Action: Revise the SCN or timestamp specified so that it is within current database incarnation.

ORA-38867: database not open: cannot create restore point with the specified timestamp

Cause: An attempt was made to create a restore point with the specified timestamp while the database was not open. The database must be open in order to map the timestamp to an SCN.

Action: Open the database first or pick another way to create the restore point.

ORA-38868: warning: the control file may have incorrect data file structure

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database and all pluggable databases read-only to synchronize the control file with the database dictionary. You can also force recovery to proceed by invoking recovery again.

ORA-38869: datafile *string* has been restored from an RMAN backup with undo block compression.

Cause: Flashback Database could not flash back the database because a file was restored from an RMAN backup with undo block compression, and the Flashback target was to a time when the missing undo may be needed to open the database.

Action: Restore an earlier backup of the file and retry the command or Flashback to a later time.

ORA-38870: cannot backup a control file that may have incorrect data file structure.

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database read-only to synchronize the control file with the database dictionary to fix the control file.

ORA-38871: cannot enable flashback before open resetlogs after incomplete recovery.

Cause: To enable flashback on a primary database, the database must be clean without requiring open resetlogs.

Action: Open resetlogs first and then enable flashback database.

ORA-38872: Cannot perform backup control file recovery if Flashback Database is enabled.

Cause: RECOVER DATABASE with the BACKUP CONTROLFILE option, or a database recovery that required the control file be made a backup failed because Flashback Database was enabled or there was a guaranteed restore point.

Action: Disable Flashback Database or remove the guaranteed restore point and retry the command.

ORA-38873: missing incarnation information

Cause: Flashback Database failed because incarnation information was not found in the control file. The Flashback target incarnation was not in the control file or had a missing parent incarnation.

Action: Register logs from the missing incarnations and retry the command.

ORA-38874: cannot flashback data file *string* - missing incarnation information

Cause: Flashback Database failed because incarnation information for the start of the offline range for a file was not found in the control file. Flashback could not update the file's header with the missing incarnation's resetlogs information.

Action: Check the trace log for the offline range of the data file. If redo logs from the missing incarnation can be found, register the logs in the control file and retry the command.

ORA-38875: FLASHBACK DATABASE not started; in test mode

Cause: The FLASHBACK DATABASE command was not performed because it was started in test mode.

Action: No action required.

ORA-38876: redo logs not required

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs were required to perform the tested FLASHBACK DATABASE command.

Action: No action required.

ORA-38877: required redo logs are available

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs required to perform the tested FLASHBACK DATABASE command were missing.

Action: No action required.

ORA-38878: required redo log is not available

Cause: A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38879: Cannot flashback data file *string*; may not be able to undo all changes.

Cause: A data file was plugged in when there was a guaranteed restore point, but Flashback Database was not enabled. It is possible that some changes to the data file, after it was converted, were not logged to the Flashback Database logs.

Action: If the FLASHBACK DATABASE command was meant to rewind the database to a time before the file was plugged in, take the data file offline and retry the command. If the FLASHBACK DATABASE command was meant to rewind the database to a time after the file was plugged in, restore the original version of the plugged in file and retry the command.

ORA-38880: Cannot advance compatibility from *string* to *string* due to guaranteed restore points

Cause: Flashback database cannot undo the advance of database compatibility. Therefore, one cannot advance the compatibility of the database while there are guaranteed restore points in the database.

Action: Drop all guaranteed restore points first and retry, or delay the advance of database compatibility to a later time.

ORA-38881: Cannot drop tablespace *string* on primary database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points first and retry, or delay dropping the tablespace until all guaranteed restore points are removed.

ORA-38882: Cannot drop tablespace *string* on standby database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38883: Cannot shrink data file *string* by *string* blocks on primary database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points first and retry, or delay the data file resize until all guaranteed restore points are removed.

ORA-38884: Cannot shrink data file *string* by *string* blocks on standby database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38885: WARNING: Flashback database has been disabled while fast-start failover is enabled.

Cause: Flashback database was disabled while fast-start failover was enabled.

Action: Enable flashback database if fast-start failover is enabled.

ORA-38886: WARNING: Flashback database was disabled due to error when writing flashback database logs.

Cause: Recovery writer (RVWR) encountered an error when writing flashback database logs.

Action: See the error stack in the alert log.

ORA-38887: WARNING: Recovery writer (RVWR) hang due to error when writing flashback database logs.

Cause: An error occurred while writing to the flashback database logs.

Action: Shutdown the instance or turn off flashback database.

ORA-38888: invalid redo thread number

Cause: The provided thread number was invalid.

Action: Specify a valid redo thread number.

ORA-38889: Cannot shrink data file *string* as server process could not allocate memory to generate before images.

Cause: An error occurred while trying to allocate PGA memory to store before images to write into flashback database log.

Action: Retry the operation after making sure system has sufficient free memory available.

ORA-38890: RESETLOGS option may need to be used to open this PDB

Cause: Pluggable database (PDB) flashback or point-in-time recovery was performed on this PDB.

Action: Either issue the ALTER PLUGGABLE DATABASE OPEN RESETLOGS statement, open the PDB in read only mode, or perform recovery on the PDB and open the PDB.

ORA-38891: cannot use DB_FLASHBACK_LOG_DEST without DB_FLASHBACK_LOG_DEST_SIZE

Cause: There are two possible cause for this error: 1) The DB_FLASHBACK_LOG_DEST parameter was in use when no DB_FLASHBACK_LOG_DEST_SIZE parameter was encountered while fetching initialization parameter. 2) An attempt was made to set DB_FLASHBACK_LOG_DEST with the ALTER SYSTEM command when no DB_FLASHBACK_LOG_DEST_SIZE was in use.

Action: Correct the dependency parameter definitions and retry the command.

ORA-38892: cannot disable flashback log dest - flashback database is enabled

Cause: An attempt was made to set DB_FLASHBACK_LOG_DEST to null while flashback database was enabled. Flashback database requires DB_FLASHBACK_LOG_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the flashback log dest.

ORA-38893: Parameter DB_FLASHBACK_LOG_DEST_SIZE is out of range (1 - *string*)

Cause: Parameter DB_FLASHBACK_LOG_DEST_SIZE specified was not valid.

Action: Specify a valid number within the range.

ORA-38894: flashback log destination parameter mismatch

Cause: The value of parameters DB_FLASHBACK_LOG_DEST and DB_FLASHBACK_LOG_DEST_SIZE must be same in all instances. All databases must have same flashback destination parameters.

Action: Check DB_FLASHBACK_LOG_DEST and DB_FLASHBACK_LOG_DEST_SIZE values in all instances.

ORA-38895: can not set DB_FLASHBACK_LOG_DEST dynamically after flashback database is on

Cause: There are two possible cause for this error: 1) The flashback log can only be either in DB_RECOVERY_FILE_DEST or DB_FLASHBACK_LOG_DEST but not both. As flashback database is already on without a DB_FLASHBACK_LOG_DEST, there will already be flashback logs inside DB_RECOVERY_FILE_DEST. Can not set DB_FLASHBACK_LOG_DEST dynamically now because flashback logs will be in both places after the operation. 2) An attempt was made to change DB_FLASHBACK_LOG_DEST with the ALTER SYSTEM command when flashback database is on

Action: Set DB_FLASHBACK_LOG_DEST dynamically before turning on flashback database.

ORA-38896: can not specify DB_FLASHBACK_LOG_DEST in INIT.ORA file after flashback database has been enabled without it

Cause: Flashback logs can only be in either DB_RECOVERY_FILE_DEST or DB_FLASHBACK_LOG_DEST but not both. Because flashback database is already enabled with flashback logs in DB_RECOVERY_FILE_DEST, one cannot specify DB_FLASHBACK_LOG_DEST in the INIT.ORA file.

Action: Remove ADB_FLASHBACK_LOG_DEST in INIT.ORA file or add it before turning on flashback database.

ORA-38897: cannot remove DB_FLASHBACK_LOG_DEST in INIT.ORA file after flashback database has been enabled with it

Cause: Flashback logs can only be in either DB_RECOVERY_FILE_DEST or DB_FLASHBACK_LOG_DEST but not both. Because flashback database is already enabled with flashback logs in DB_FLASHBACK_LOG_DEST, one cannot remove DB_FLASHBACK_LOG_DEST in the INIT.ORA file.

Action: Add back DB_FLASHBACK_LOG_DEST in the INIT.ORA file or remove it before turning on flashback database.

ORA-38898: cannot set DB_FLASHBACK_LOG_DEST_SIZE to *string*, minimum quota required is *string*

Cause: DB_FLASHBACK_LOG_DEST_SIZE cannot be set to new value as it is lower than the minimum quota required.

Action: Set DB_FLASHBACK_LOG_DEST_SIZE to a higher value.

ORA-38899: compatible initialization parameter must be at least release 23.0.0.0.0 in order to use DB_FLASHBACK_LOG_DEST

Cause: The use of DB_FLASHBACK_LOG_DEST requires Oracle Database 23c compatibility but currently the compatible initialization parameter was not set to release 23.0.0.0.0 or later version.

Action: Set the compatible parameter in initialization parameter file to release 23.0.0.0.0 or later version.

ORA-38900: missing mandatory column "*string*" of error log table "*string*"

Cause: Mandatory column of error logging table is not present

Action: Add the named column to the error logging table. Consult ORACLE documentation for the correct data type.

ORA-38901: column "*string*" of table "*string*" must be one of the first "*string*" columns

Cause: Mandatory information column of error logging table is present, but must be at the beginning of the row.

Action: Create the error logging table correctly. Consult ORACLE documentation for the correct format of an error logging table.

ORA-38902: errors in array DML exceed *string*

Cause: The operation failed because the array DML had more errors than can be stored internally for BATCH ERRORS.

Action: Do not use BATCH ERROR mode when array DML has more error rows than the number specified in the error.

ORA-38903: DML error logging is not supported for abstract column "string"

Cause: A DML Error Logging operation was attempted on a table which has an ADT, REF, VARRAY, or nested table column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not abstract column types.

ORA-38904: DML error logging is not supported for LOB column "string"

Cause: A DML Error Logging operation was attempted on a table which has a CLOB, NCLOB, or BLOB column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not LOB column types.

ORA-38905: DML error logging is not supported for LONG column "string"

Cause: A DML Error Logging operation was attempted on a table which has a LONG, or LONG RAW column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not long column types.

ORA-38906: insert into DML Error Logging table "string" failed

Cause: An error occurred when attempting to log a DML Error on behalf of the DML Error logging clause. This may be intended if a trigger is defined on the error table (which in turn errors out in certain cases).

Action: Determine root cause of error (in error stack).

ORA-38907: DML error logging is not supported for FILE column "string"

Cause: A DML Error Logging operation was attempted on a table which has a BFILE column and the Error Logging table referred to the specified column.

Action: Either don't use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not BFILE column types.

ORA-38908: internal error occurred during DML Error Logging

Cause: An unexpected error occurred while executing recursive SQL to insert a row into the DML Error Logging table.

Action: Report this error to Oracle Support.

ORA-38909: DML Error logging is not supported with BATCH ERROR mode

Cause: A DML Error Logging operation was attempted on a table which has BATCH ERROR mode also specified.

Action: Refrain from using both DML Error Logging and BATCH ERROR mode on the same table.

ORA-38910: BATCH ERROR mode is not supported for this operation

Cause: BATCH ERROR mode specified for this operation.

Action: Refrain from using BATCH ERROR mode with this operation.

ORA-38911: unique constraint (*string.string*) violated

Cause: An INSERT statement with a CHANGE_DUPKEY_ERROR_INDEX hint tried to insert a duplicate key into a table.

Action: Either remove the unique restriction or do not insert the key.

ORA-38912: An index must be specified in the index hint

Cause: Index specification was missing in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: In the hint, specify a unique index that exists on the table.

ORA-38913: Index specified in the index hint is invalid

Cause: The index specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint could not be found.

Action: Specify a unique index that exists on the table. The index cannot be a non-unique index or a bitmap index.

ORA-38914: Either mutate the error or ignore row on unique violation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX and CHANGE_DUPKEY_ERROR_INDEX were both specified in the same statement.

Action: You cannot specify both hints in the same statement. Remove one of these two hints, or both, from the statement.

ORA-38915: Multiple indexes in change or ignore duplicate key hint

Cause: Multiple indexes were specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: Only one index must be specified in the hint.

ORA-38916: CHANGE_DUPKEY_ERROR_INDEX hint disallowed for this operation

Cause: CHANGE_DUPKEY_ERROR_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38917: IGNORE_ROW_ON_DUPKEY_INDEX hint disallowed for this operation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38918: RETRY_ON_ROW_CHANGE hint disallowed for this operation

Cause: RETRY_ON_ROW_CHANGE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38919: remote table not supported for DML error logging

Cause: A remote table was specified in the DML error logging clause.

Action: You cannot specify a remote table to which errors will be logged. Specify a local table only.

ORA-38950: Source platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38951: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38952: Source database not 10.0.0.0 compatible

Cause: Cross platform transport is not supported unless database compatibility is advanced to 10.0.0.0 or higher

Action: Use the compatible parameter to advance source database compatibility and redo the transport

ORA-38953: Cross platform transport is not supported between source platform *string* and target platform *string*

ORA-38954: Cross platform transport is not supported between source platform identifier *string* and target platform identifier *string*

Cause: The platform identifier in the transported file indicated that the datafile format was different than the target database datafile format.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM. If both platforms are present, Contact Oracle support

ORA-38955: Source platform *string* not cross platform compliant

Cause: The platform identifier in the transported file indicated that this platform is not supported for a cross platform transport.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38956: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38958: Source platform *string* is in different byte order than target platform *string*

Cause: Probably a conversion was not done before the import phase of the transport.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38959: Failed to update block 0 to new version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: check additional error messages and contact Oracle Support Services.

ORA-38960: File *string* from platform *string* is not compatible with current platform *string*

Cause: The file was directly copied to this platform from a platform with a different endian ordering.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38961: data file: *string*

Cause: Reporting file name for details of another error.

Action: See associated error message.

ORA-39000: bad dump file specification

Cause: The user specified a dump file that could not be used in the current job.

Subsequent error messages describe the inadequacies of the dump file.

Action: Specify a dump file that is usable for the job.

ORA-39001: invalid argument value

Cause: The user specified API parameters were of the wrong type or value range.

Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Correct the bad argument and retry the API.

ORA-39002: invalid operation

Cause: The current API could not be processed because of inconsistencies between the API and the current definition of the job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS further describe the error.

Action: Modify the API call to be consistent with the current job or redefine the job so that it supports the specified API.

ORA-39003: unable to get count of total workers alive

Cause: Attempt to get count of total worker processes alive failed.

Action: Check the additional error messages to see what caused the failure. Correct the error, if possible, and try the operation again. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39004: invalid state

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39005: inconsistent arguments

Cause: The current API cannot be executed because of inconsistencies between arguments of the API call. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with itself.

ORA-39006: internal error

Cause: An unexpected error occurred while processing a Data Pump job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Contact Oracle Customer Support.

ORA-39012: Client detached before the job started.

Cause: The client detached or ended their session before the Data Pump job was started.

Action: Create new job and remain attached to the job until it is started.

ORA-39013: Remapping the SYSTEM schema is not supported.

Cause: A remap_schema transform with the SYSTEM schema was specified.

Action: Retry the import command without remapping the SYSTEM schema.

ORA-39014: One or more workers have prematurely exited.

Cause: One or more of the worker processes exited before the job was completed. With no workers, the master process will terminate the job.

Action: Rerun the job. If problem persists, contact Oracle Customer Support.

ORA-39015: job is not running

Cause: An API was executed that required the job to be running, but the job was not active.

Action: Retry the API. If problem persists, contact Oracle Customer Support.

ORA-39016: Operation not supported when job is in *string* state.

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39017: Worker request not supported when job is in *string* state.

Cause: The state of the job precludes the execution of a worker request. This is an internal error.

Action: Contact Oracle Customer Support.

ORA-39018: master process received invalid message number *string*

Cause: Internal Error

Action: Contact Oracle Customer Support.

ORA-39019: invalid operation type *string*

Cause: User specified an invalid operation name on an DBMS_DATAPUMP.OPEN API or an invalid operation name was specified in the master table for a restart API.

Action: Correct the operation name and recreate the job.

ORA-39020: invalid mode type *string*

Cause: User specified an invalid mode on an DBMS_DATAPUMP.OPEN API or an invalid mode was specified in the master table for a restart API.

Action: Correct the mode and recreate the job.

ORA-39021: Database compatibility version *string* is not supported.

Cause: User selected COMPATIBLE as the version on an DBMS_DATAPUMP.OPEN API, but the current database compatibility version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39022: Database version *string* is not supported.

Cause: User selected LATEST as the version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39023: Version *string* is not supported.

Cause: User specified an explicit version for an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by Oracle Data Pump.

Action: Specify a supported version and retry the job. *Params: 1) database_version: The current database version number.

ORA-39024: wrong schema specified for job

Cause: Internal error caused by the master process finding inconsistencies between the schemas specified for the job.

Action: Contact Oracle Customer Support.

ORA-39025: jobs of type *string* are not restartable

Cause: Attempt to restart a job which was not restartable.

Action: Recreate the job via the open API.

ORA-39026: master table is inconsistent on validation *string*

Cause: Job cannot be restarted because it failed a validation check. Validation checks are of the form -xx.y where -xx is the value of the PROCESS_ORDER column in the master table where the error was detected and y is the actual validity check for the row.

Action: Recreate the job. If master table has not been modified, but problem persists, contact Oracle Customer Support.

ORA-39027: wrong version of master table

Cause: Job cannot be restarted because the version of the database upon which the job started is different than the current version of the database and the format of the master table has changed between the versions.

Action: Recreate the job.

ORA-39028: cannot restart job from *string* state

Cause: The job was not in a suitable state for restart. Jobs must begin executing before they can be restarted.

Action: Recreate the job.

ORA-39029: worker *string* with process name "*string*" prematurely terminated

Cause: The specified worker process terminated unexpectedly. Subsequent messages describe the reason for the termination.

Action: In many cases, the Data Pump will attempt to automatically restart the worker. If problem persists, contact Oracle Customer Support.

ORA-39030: invalid file type *string*

Cause: An invalid filetype was specified for an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the filetype parameter and reissue the API request.

ORA-39031: invalid filter name *string*

Cause: An invalid filter name was specified on a DBMS_DATAPUMP.DATA_FILTER API call.

Action: Correct the filter name parameter and reissue the API request.

ORA-39032: Parameter *string* is not supported in *string* jobs.

Cause: The specified parameter was not supported for the specified class of jobs.

Action: Re-create the job with the appropriate mode or operation type.

ORA-39033: Data cannot be filtered under the direct path access method.

Cause: The user specified that the data access method for the job was direct which precludes the use of certain data filters.

Action: Use the SUBQUERY or the SAMPLE data filter with the automatic data access method.

ORA-39034: Table *string* does not exist.

Cause: The user referenced a table in an API that did not exist.

Action: Correct table name and retry API.

ORA-39035: Data filter *string* has already been specified.

Cause: The user has already specified a data filter that matches on the filter name, schema name, and table.

Action: Specify a different data filter.

ORA-39036: invalid metadata filter name *string*

Cause: An invalid metadata filter name was specified on a DBMS_DATAPUMP.METADATA_FILTER API call.

Action: Correct the metadata filter name parameter and reissue the API request.

ORA-39037: Object type path not supported for *string* metadata filter.

Cause: An object type path was specified for the filter, but the filter does not support the object type path parameter.

Action: Remove the object type path parameter.

ORA-39038: Object path "*string*" is not supported for *string* jobs.

Cause: The specified object type path is invalid for the job mode.

Action: Correct the object type path.

ORA-39039: Schema expression "*string*" contains no valid schemas.

Cause: The specified SCHEMA_EXPR filter resulted in no schemas being selected.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39040: Schema expression "*string*" must identify exactly one schema.

Cause: For TABLE mode jobs, the SCHEMA_EXPR filter must identify exactly one schema.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39041: Filter "*string*" either identifies all object types or no object types.

Cause: A Metadata filter specifying path names either returned all objects or no objects in the job.

Action: Correct the the metadata filter specification.

ORA-39042: invalid transform name *string*

Cause: An invalid transform name was specified on a DBMS_DATAPUMP.METADATA_TRANSFORM API call.

Action: Correct the transform name parameter and reissue the API request.

ORA-39043: Object type *string* is not supported for *string*.

Cause: The specified object type is invalid for the specified transform or remap.

Action: Correct the object type.

ORA-39044: Metadata transform *string* has already been specified.

Cause: The user has already specified the metadata transform for the same class of object types.

Action: Specify a different object_type for the transform.

ORA-39045: invalid metadata remap name *string*

Cause: An invalid metadata remap name was specified on a DBMS_DATAPUMP.METADATA_REMAP API call.

Action: Correct the metadata remap name parameter and reissue the API request.

ORA-39046: Metadata remap *string* has already been specified.

Cause: The user has already specified a metadata remap that matches on the remap name and original value.

Action: Specify a different original value.

ORA-39047: Jobs of type *string* cannot use multiple execution streams.

Cause: The user specified a value of parallelism that is precluded by the operation type or mode of the job.

Action: Specify only a parallelism of 1 for this type of job.

ORA-39048: Unable to start all workers; only *string* worker(s) available.

Cause: The full degree of parallelism could not be honored due process limits, resource limits, or other internal errors.

Action: Increase process/resource limits for the job.

ORA-39049: invalid parameter name *string*

Cause: An invalid parameter name was specified on a DBMS_DATAPUMP.SET_PARAMETER API call.

Action: Correct the parameter name and reissue the API request.

ORA-39050: parameter *string* is incompatible with parameter *string*

Cause: Two parameters were set that were incompatible with each other. Only the first parameter setting will be used.

Action: Decide which parameter is to be used and stick to it.

ORA-39051: parameter *string* specified multiple times

Cause: The user has already specified a parameter that matches on the name and the specific parameter doesn't support duplicate definitions.

Action: Specify non-repeatable parameters only once.

ORA-39052: cannot specify SKIP_CURRENT on initial start of a job.

Cause: The user has already specified SKIP_CURRENT for a job that has never executed.

Action: Only specify SKIP_CURRENT when restarting a job.

ORA-39053: parameter or attribute *string* must be defined for a *string* job

Cause: The job being defined cannot be started because it is missing the specified definition.

Action: Specify the omitted parameter or attribute before starting the job.

ORA-39054: missing or invalid definition of the SQL output file.

Cause: The job being defined could not be started because it was missing the file to receive the SQL output of the job, the SQL output file name conflicted with the output LOG file, or the definition was unusable.

Action: Specify a valid directory name and file name for the SQL file.

ORA-39055: The *string* feature is not supported in version *string*.

Cause: An attempt was made to use a feature that was not enabled in the database version specified for the current job. Typically, this error occurs if the compatibility level of the database was below the current version of the database or if the version for a Data Pump job was specified explicitly. specifies a .

Action: Specify the current database version as a version parameter for the job.

ORA-39056: invalid or duplicate log file specification

Cause: The log file for the job was incorrectly specified.

Action: Specify a valid directory name and file name for the log file.

ORA-39057: invalid worker request *string* for *string* jobs.

Cause: The worker process sent a message that wasn't supported for the current job.

Action: Internal error -- contact Oracle Customer Support and report the error.

ORA-39058: current object skipped: *string* of type *string*

Cause: The user specified SKIP_CURRENT when restarting a job. This message is a confirmation that the object will not be imported.

Action: User must manually define the object in the target database.

ORA-39059: dump file set is incomplete

Cause: An IMPORT or SQL_FILE operation was being performed but not all of the files from the EXPORT dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39060: table(s) dropped because of conflict with master table

Cause: A table specified by a job was not included because its definition would collide with the master table definition for the current job.

Action: After the job completes. Import the conflicting tables using a unique job name to avoid conflicts with normal user tables.

ORA-39061: import mode *string* conflicts with export mode *string*

Cause: The mode used for import cannot be used with a dump file set of specified mode. Transportable jobs are not compatible with other modes.

Action: Perform the import using a mode compatible with the export.

ORA-39062: error creating master process *string*

Cause: An attempt to create the listed master process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39064: unable to write to the log file

Cause: Errors were detecting while writing to the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39065: unexpected master process exception in *string*

Cause: An unhandled exception was detected internally within the master control process for the Data Pump job. This is an internal error. messages will detail the problems.

Action: If problem persists, contact Oracle Customer Support.

ORA-39067: Unable to close the log file.

Cause: Errors were detecting while closing the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39068: invalid master table data in row with PROCESS_ORDER=*string*

Cause: A corruption was detected in the master table in the specified row(s). Either the row wasn't found, it was missing columns or had illegal values in its columns.

Action: Rerun the job with an uncorrupted master table.

ORA-39070: Unable to open the log file.

Cause: Errors were detecting while opening the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39071: Value for *string* is badly formed.

Cause: The value of the user specified filter did not contain a legitimate SQL clause. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39076: cannot delete job *string* for user *string*

Cause: Unable to delete a job. Refer to the any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39077: unable to subscribe agent *string* to queue "*string*"

Cause: The Data Pump's communication layer was unable to attach one of its processes to the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39078: unable to dequeue message for agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to retrieve a message from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39079: unable to enqueue message *string*

Cause: The Data Pump's communication layer was unable to send the specified message on the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39080: failed to create queues "*string*" and "*string*" for Data Pump job

Cause: The Data Pump's communication layer was unable to create the status and control queues required for interprocess communication. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Support.

ORA-39081: failed to unsubscribe agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to unsubscribe a process from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39082: Object type *string* created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

ORA-39083: Object type *string* failed to create with error:\nstring\nFailing sql is:\nstring

Cause: Examine original error code to determine actual cause

Action: Original error code will contain more information

ORA-39084: cannot detach job *string* for user *string*

Cause: Unable to detach a job from the session. Refer to any following error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39085: cannot update job *string* for user *string*

Cause: Unable to update the fixed table information for a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39086: cannot retrieve job information

Cause: Unable to retrieve fixed table information for a job. Refer to the secondary error messages that follow this one for clarification.

Action: Eliminate the problems indicated by the secondary errors.

ORA-39087: Directory name *string* is invalid.

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command. *Params: 1) dir_obj_name: The name of the invalid directory object.

ORA-39088: File name cannot contain a path specification.

Cause: The name of a dump file, log file, or SQL file contained a path specification."

Action: Use the name of a directory object to indicate where the file should be stored and remove the path specification from the DUMPFILE, LOGFILE or SQLFILE parameter.

ORA-39090: Cannot add devices to file oriented job.

Cause: Attempt to add a device to a job that already contains more than one disk file.

Action: Only specify one file for jobs that contain sequential devices.

ORA-39091: unable to determine logical standby and streams status

Cause: An error occurred when determining if the Data Pump job needed to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39092: unable to set SCN metadata for object "*string.string*" of type *string*

Cause: An error occurred when applying a SCN to the specified object to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39093: FLASHBACK automatically enabled to preserve database integrity.

Cause: A Data Pump job was required to enable flashback support to specific SCNs in order to preserve the consistency of a logical standby or streams instantiation.

Action: None

ORA-39094: Parallel execution not supported in this database edition.

Cause: Parallel execution of Data Pump jobs is not supported for this database edition.

Action: Specify a parallelism of 1 for jobs not running on Enterprise Edition databases.

ORA-39095: Dump file space has been exhausted: Unable to allocate *string* bytes

Cause: The Export job ran out of dump file space before the job was completed.

Action: Reattach to the job and add additional dump files to the job restarting the job.

ORA-39096: invalid input value *string* for parameter *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-39097: Data Pump job encountered unexpected error *string*

Cause: An unexpected, potentially non-fatal error occurred while processing a Data Pump job.

Action: Contact Oracle Customer Support.

ORA-39098: Worker process received data objects while loading metadata. Invalid process order range is *string*..*string*

Cause: This is an internal error. Messages will detail the problem.

Action: If problem persists, contact Oracle Customer Support.

ORA-39099: cannot create index for "*string*" on master table *string*

Cause: One or more indexes couldn't be created on the master table. subsequent error messages describe the failure.

Action: Correct the condition that is preventing the indexes from being created.

ORA-39102: Timeout before master process *string* finished initialization. Master error:

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39103: Timeout before worker process *string* finished initialization. Worker error:

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about

the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39104: cannot call this function from a SQL parallel query slave process

Cause: Called a Data Pump process model function from a process which is a SQL parallel query slave process

Action: A SQL parallel query slave process cannot create a Data Pump master process. This is not supported. If this error occurs from a Data Pump client (for example, expdp or impdp), contact Oracle Customer Support and report the error.

ORA-39105: Master process *string* failed during startup. Master error:

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39106: Worker process *string* failed during startup. Worker error:

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39107: Master process *string* violated startup protocol. Master error:

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39108: Worker process *string* violated startup protocol. Worker error:

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39109: Unprivileged users may not operate upon other users' schemas

Cause: An unprivileged user attempted to reference another user's schema during a Data Pump operation. Because of this, no schemas were selected for the job.

Action: Retry the operation under a username owning the schema.

ORA-39110: error deleting worker processes

Cause: An attempt to delete the worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39111: Dependent object type *string* skipped, base object type *string* already exists

Cause: During a Data Pump import job, a dependent object is being skipped because its base object already existed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters.

ORA-39112: Dependent object type *string* skipped, base object type *string* creation failed

Cause: During a Data Pump import job, a dependent object is being skipped because its base object creation failed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters

ORA-39113: Unable to determine database version

Cause: The Data Pump was unable to determine the compatibility level and version of the current database using SYS.DBMS_UTILITY.DB_VERSION.

Action: Make sure access to the DBMS_UTILITY package is granted to you. If this is a network job, be sure that access to the DBMS_UTILITY package is granted to you on the remote instance.

ORA-39114: Dump files are not supported for network jobs.

Cause: An attempt was made to add a dumpfile to an Import job that is using a network link to the source database.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39115: *string* is not supported over a network link

Cause: An attempt was made to use an option that is not supported over network links such as the PARTITION_LIST filter.

Action: Do not attempt to use Data Pump features on network jobs if they are not compatible with jobs over the network.

ORA-39116: invalid trigger operation on mutating table *string.string*

Cause: A Data Pump load operation failed because a trigger attempted to fire on the table while it was mutating.

Action: Disable trigger(s) on the specified table. Also see ORA-004091.

ORA-39117: Type needed to create table is not included in this operation. Failing sql is:*nstring*

Cause: A create table was attempted and a dependent type does not exist in the dumpfile or on the target database. Either the export or the import Data Pump job was a table mode job and types are not included in table mode jobs.

Action: Determine which type(s) are missing and create them on the target system and run the Data Pump import job again.

ORA-39119: worker process interrupt for delete worker processes call by master process

Cause: The master process that created this worker process called delete worker processes to abort the current operation.

Action: No action is necessary. This is an informational error message.

ORA-39120: Table *string* can't be truncated, data will be skipped. Failing error is:\nstring

Cause: Table data was about to be loaded into a table that already existed and the `table_exists_action` parameter is `truncate`, but the table could not be truncated.

Action: Determine actual cause by looking at base error.

ORA-39121: Table *string* can't be replaced, data will be skipped. Failing error is:\nstring

Cause: Table data was about to be loaded into a table that already existed and the `table_exists_action` parameter is `replace`, but the table could not be dropped.

Action: Determine actual cause by looking at base error.

ORA-39122: Unprivileged users may not perform *string* remappings.

Cause: A user attempted to remap objects during an import but lacked the `IMPORT_FULL_DATABASE` privilege.

Action: Retry the job from a schema that owns the `IMPORT_FULL_DATABASE` privilege.

ORA-39123: Data Pump transportable tablespace job aborted\nstring

Cause: A `DBMS_PLUGTS` procedure failed and the Data Pump operation could not continue so it was aborted. The `DBMS_PLUGTS` failure listed describes the original error.

Action: Look at the `DBMS_PLUGTS` error to determine actual cause.

ORA-39124: dump file name "*string*" contains an invalid substitution variable

Cause: The substitution variable '%' must be followed by '%', 'u', or 'U'.

Action: Correct the substitution variable in the dump file name and re-enter the command.

ORA-39125: Worker unexpected fatal error in *string* while calling *string* [*string*]

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job while calling the specified external routine. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39126: Worker unexpected fatal error in *string* [*string*] \nstring

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39127: unexpected error from call to *string* \nstring

Cause: The exception was raised by the function invocation, a procedural action extension of export.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39128: unexpected DbmsJava error *number* from statement *string*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39129: Object type *string* not imported. Name conflicts with the master table

Cause: The table being imported from the remote instance has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39130: Object type *string* not imported. Base object name conflicts with the master table

Cause: The object being imported from the remote instance is dependent on an object that has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39132: object type "*string*"."*string*" already exists with different hashcode

Cause: An object type could not be created because there was already a type with the same name but a different hashcode on the target system. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39133: object type "*string*"."*string*" already exists with different typeid

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type is used by an existing table. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39134: Cannot include "*string*" tablespace as a Transportable Tablespace

Cause: The user attempt to specify the SYSAUX or SYSTEM tablespace as a member of the transportable tablespace list in the current job. These tablespaces may not be transported between databases.

Action: Specify different tablespaces to be transported.

ORA-39135: File "*string*" is already a member of this dump set

Cause: An attempt was made to add a new file to an export job but a file with the same name already exists in the dump set for the job.

Action: Reenter the new file information using a different file name.

ORA-39136: cannot specify an SCN on a transportable job

Cause: A target SCN was specified for a table in a transportable job by the streams or logical standby components which was not the defaulted SCN for the table.

Action: This is an internal error. Please report it to Oracle support.

ORA-39137: cannot specify a TABLE_EXISTS_ACTION of *string* for a job with no metadata

Cause: A job was defined with the TABLE_EXISTS_ACTION parameter set to REPLACE or SKIP, but without metadata. Without metadata, data could not be loaded for the requested table actions.

Action: Change the setting of the TABLE_EXISTS_ACTION parameter to APPEND or TRUNCATE or supply Metadata with the data.

ORA-39138: Insufficient privileges to load data not in your schema

Cause: An unprivileged user attempted to load data into a different schema.

Action: Use a privileged account if you must load data not in your schema

ORA-39139: Data Pump does not support XMLType objects in version *string*. *string* will be skipped.

Cause: Object had an XMLType column using either an object relational or binary storage format, which is unsupported by Data Pump in the target version.

Action: Use the original export and import utilities to move this object.

ORA-39140: Dump file "*string*" belongs to job *string*.

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation and produced by the same export job. The specified file does not belong to the original dump file set. For example, it was created by a different export job than the other files.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

*Params: 1) dump_file_name: The name of the dump file. 2) job_name: The name of the job which owns the dump file.

ORA-39141: dump file "*string*" is a duplicate of dump file "*string*"

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation. One of the files provided to import was found to be a duplicate of another dump file in the set. This can occur if the files in the dump set were copied or renamed using operating system utilities and the same dump file was inadvertently copied more than once with different destination names.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39142: incompatible version number *string* in dump file "*string*"

Cause: The version number of the dump file that was specified for an import operation was incompatible with the dump file version of the Oracle Data Pump product that was currently running on the system. This message usually indicates that the dump file was produced by a newer version of the Oracle Data Pump Export utility.

Action: Import this dump file using the Oracle Data Pump Import utility with the same version that was used in Export to create the file. *Params: 1) dump_file_version: The version number of the dump file. 2) dump_file: The name of the dump file.

ORA-39143: The file may be an original export dump file.

Cause: A dump file was specified for an import operation which appears to have been created using the original Export utility. These dump files cannot be processed by the Data Pump Import utility.

Action: Use the original Import utility to process this dump file.

ORA-39144: The file name parameter must be specified and non-null.

Cause: A file name was not provided in the DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the file name parameter and reissue the API request.

ORA-39145: directory object parameter must be specified and non-null

Cause: No directory object was provided in either an DBMS_DATAPUMP.ADD_FILE API call or to the directory parameter used by the Data Pump command line clients.

Action: Correct the directory object parameter and retry the operation.

ORA-39146: schema "*string*" does not exist

Cause: The specified schema was referenced as the source of a REMAP_SCHEMA parameter, but did not exist in the dump file (for file-based import) or in the source database (for network import).

Action: Specify the correct name of the schema to be remapped.

ORA-39147: cannot migrate Data Pump queue table ownership to this instance

Cause: There are active Data Pump jobs running on another instance in a RAC. All concurrent, active Data Pump jobs must be run on the same instance.

Action: Start this job on the same instance where other active Data Pump jobs are running, or wait until they finish.

**ORA-39148: unable to import data into pre-existing queue table *string*.
Table_exists_action of *string* being ignored for this table**

Cause: A Data Pump import detected that a queue table that was to be imported already exists. Importing data into pre-existing queue tables is not supported.

Action: If the data from the dump file is desired, then drop the queue table and perform the import again, or use the import parameter table_exists_action=replace.

ORA-39149: cannot link privileged user to non-privileged user

Cause: A Data Pump job initiated by a user with DATAPUMP_EXP_FULL_DATABASE or DATAPUMP_IMP_FULL_DATABASE roles specified a network link that did not correspond to a user with equivalent roles on the remote database.

Action: Specify a network link that maps users to identically privileged users in the remote database.

ORA-39150: bad flashback time

Cause: A flashback time was specified for the Data Pump job which either could not be parsed or else could not be translated into a system change number (SCN). This typically occurs when specifying a time far in the past.

Action: Specify an explicit SCN for the desired flashback rather than a time.

ORA-39154: Objects from foreign schemas have been removed from import

Cause: An non-privileged user attempted to import objects into a schema other than their own.

Action: Either perform the import from a privileged schema or else remap all schemas that were exported into the username running the import.

ORA-39155: error expanding dump file name "*string*"

Cause: Export was unable to expand the directory object and dump file name into a full file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39156: error parsing dump file name "*string*"

Cause: Export was unable to parse the dump file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39157: unable to append extension to file "*string*"

Cause: Oracle Data Pump Export or Import utility was unable to append the default extension to create the file name. The specified file name could be too long or contained disallowed characters. Secondary messages provide details on the problem.

Action: Fix the problems outlined in the secondary messages. *Params: 1) file_name: The name of the file in error.

ORA-39159: Cannot call this function from a non-Oracle Data Pump process

Cause: Called an Oracle Data Pump process model function from a process which is not an Oracle Data Pump process.

Action: Refer to error message for additional information. If this error occurs from an Oracle Data Pump Export client or Import client. Try the operation again. If the error persists, contact Oracle Support Services.

ORA-39160: error on what's my name call

Cause: Attempt to get the Data Pump process name failed.

Action: Refer to any following error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39161: Full database jobs require privileges

Cause: Either an attempt to perform a full database export without the EXP_FULL_DATABASE role or an attempt to perform a full database import over a network link without the IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39162: Transportable tablespace job require privileges

Cause: User attempted to perform a transportable tablespace job without being having the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39163: A sample size of *string* is invalid.

Cause: An attempt was made to do data sampling on a table with a value outside of the range of 0 - 100.

Action: Retry the filtering using a sampling number greater than 0 and less than 100.

ORA-39164: Partition *string* was not found.

Cause: If exporting or importing over the network, the user specified a partition name that was not found in the source database. For importing from files, the user specified a partition name not found in the dump file set.

Action: Retry the operation using the correct partition name.

ORA-39165: Schema *string* was not found.

Cause: If exporting or importing over the network, either the user specified a schema name that was not found in the source database or else the user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow them to access another schema. For importing from files, the user specified a schema name not found in the dump file set.

Action: Retry the operation using the correct schema name.

ORA-39166: Object *string* was not found or could not be exported or imported.

Cause: If exporting to files or importing over the network, one of the following occurred: - The object specified did not exist in the source database. - The user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow access to the object. - The VIEWS_AS_TABLES object contained a type that is not supported with the VIEWS_AS_TABLES parameter. If importing from files, the user specified an object name that was not found in the dump file set.

Action: Retry the operation using the correct object name, correct set of privileges, or a view that has only supported types.

ORA-39168: Object path *string* was not found.

Cause: If exporting or importing over the network, the user specified an object type path name that was not found in the source database. For importing from files, the user specified an object type path name not found in the dump file set.

Action: Retry the operation using the correct object type path name.

ORA-39169: Local version of *string* cannot work with remote version of *string*.

Cause: A Data Pump job specified a network link, but the version on the remote database cannot interoperate with the version on the local database.

Action: Do not specify network links between instance running different versions of the database.

ORA-39170: Schema expression *string* does not correspond to any schemas.

Cause: A schema expression or schema list was supplied for a Data Pump job that did not identify any schemas in the source database.

Action: Correct the schema specifications and retry the job.

ORA-39171: Job is experiencing a resumable wait.*lnstring*

Cause: The Data Pump job is stalled with one or more of its sessions having a resumable wait. Resumable waits are typically caused by a non-expandable tablespace running out of space. The follow-on message describes the nature of the wait.

Action: Correct the condition causing the wait. This will typically involve adding datafiles to the tablespace that is full.

ORA-39172: Cannot remap transportable tablespace names with compatibility of *string*.

Cause: The user attempted to remap a tablespace name in a transportable tablespace job when the compatibility level was set below 10.1.

Action: Reset the compatibility level of the database to a more recent version.

ORA-39173: Encrypted data has been stored unencrypted in dump file set.

Cause: No encryption password was specified for an export job that involved data that was encrypted in the database.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39174: Encryption password must be supplied.

Cause: An encryption password was not supplied to import a dump file set that was created using an encryption password. Alternatively, no encryption password was supplied to a transportable export job in which one or more tablespaces in the transportable set contained data for tables with encrypted columns.

Action: Specify the encryption password for the dump file set and retry.

ORA-39175: Encryption password is not needed.

Cause: An encryption password was supplied to import a dump file set that was not created using an encryption password.

Action: No user action is required. This is merely a warning message.

ORA-39176: Encryption password is incorrect.

Cause: Wrong encryption password was supplied to import a dump file set.

Action: Resubmit the job using the correct encryption password for the dump file set.

ORA-39177: invalid compression value *string*

Cause: An invalid value was specified for compression.

Action: Correct the value and recreate the job.

ORA-39178: cannot perform estimate on metadata only jobs

Cause: An estimate was requested for a job by specifying the ESTIMATE or ESTIMATE_ONLY parameter. However, the job was also defined to have no data. These specifications conflict with each other.

Action: Remove one of the conflicting specifications for the job.

ORA-39179: unable to load table "*string*". "*string*" because of OID transform

Cause: The OID transform for the job was set to false and the identified table contained either VARRAYs with non-final types or unscoped REF columns. Both of these column types have embedded OIDs so they cannot be imported correctly when OIDs are not preserved.

Action: You must manually move the data with the specified tables when OIDs are not preserved.

ORA-39180: unable to encrypt ENCRYPTION_PASSWORD

Cause: The specified encryption password was unable to be encrypted for placement within the master table or decrypted when it was to be restored from the master table. Subsequent messages will describe the actual error that caused the encryption to fail.

Action: Fix the problems referenced by the subsequent messages. The most common reason for the encryption to fail is the lack of a security wallet.

ORA-39181: Only partial table data may be exported due to fine grain access control on *string*

Cause: An unprivileged user has tried to export a table that has fine grain access control. The table owner is subjected to access control and may not be able to export all rows in the table. Only the rows that can be seen by that user will be exported. In order to preserve integrity of the table, the user importing the table should have enough privilege to recreate the table with the security policies at import time.

Action: It is strongly recommended that the database administrator handle exporting of this table.

ORA-39182: Internal error *string* occurred during compression phase *string*\n.

Cause: An unexpected error occurred while compressing data buffers.

Action: Contact Oracle Support Services and upload log and parameter files. *Params: 1) error_code : A numeric value identifying the internal error. 2) phase : A numeric value identifying the compression phase.

ORA-39183: internal error *string* occurred during decompression phase *string*\n

Cause: An unexpected error occurred while decompressing data buffers.

Action: Contact Oracle Support and upload the log and parameter files. *Params: 1) error_code: A numeric value identifying the internal error. 2) phase: A numeric value identifying the decompression phase.

ORA-39184: Transportable Data Pump jobs cannot exclude PLUGTS objects

Cause: A Transportable Data Pump job requires all PLUGTS% objects, but the user-supplied exclude filters were excluding these objects.

Action: Reenter command without excluding PLUGTS% objects.

ORA-39185: The transportable tablespace failure list is

Cause: Some of the tablespaces specified for this job could not be exported.

Action: See specific errors for each tablespace, correct the problem, and try again.

ORA-39186: No tablespaces in the specified list exist.

Cause: The tablespaces specified on the EXPORT command did not exist.

Action: Check the list of tablespaces and reenter command with correct set of tablespaces.

ORA-39187: The transportable set is not self-contained, violation list is

Cause: The tablespaces specified for this job did not satisfy the closure checking. The list of violations specified each closure violation.

Action: See specific errors for violation and correct the problem or change the tablespaces on the command line and try again.

ORA-39188: unable to encrypt dump file set

Cause: Data Pump could not create an encrypted dump file set. This message will be accompanied by other messages that give more details about why the encrypted dump file set could not be created. The most common reason for this message is that you are trying to create a dump file set that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted dump file set that you can create is a password-based dump file set.

ORA-39189: unable to decrypt dump file set

Cause: The dump file set could not be decrypted. The reason could be that either an invalid password was entered, or, when using transparent decryption, the database wallet or external security device was not open.

Action: If password-based import was enabled for this dump file set, then supply the correct password. If transparent import was enabled for this dump file set, then ensure that the database wallet or external security device is open.

ORA-39192: table mode jobs with transportable=always and partition filters only allow objects from one table

Cause: Multiple tables are not supported when specifying partitions while using transportable table mode.

Action: Retry the job specifying only one table.

ORA-39193: Table mode jobs do not allow the schema to be wild carded.

Cause: The table filter included a schema expression with the % wild card.

Action: Retry the job specifying actual schemas.

ORA-39194: Table mode jobs require the tables to be comma separated.

Cause: The string describing tables in a table mode job was not comma separated.

Action: Retry the job specifying the tables separated by commas.

ORA-39195: At least one schema in the TABLE_FILTER does not exist.

Cause: The TABLE_FILTER specified contains a schema that does not exist.

Action: Retry the job specifying only schemas that exist.

ORA-39200: Link name "*string*" is invalid.

Cause: The name of the network link supplied for a Data Pump job was not usable. Secondary messages identify the problem.

Action: Rerun the job using a valid network link.

ORA-39201: Dump files are not supported for estimate only jobs.

Cause: An attempt was made to add a dumpfile to an Export job that only requested file estimates.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39202: Data cannot be filtered or selected in *string* jobs.

Cause: A data filter was supplied for the specified type of job, but is not supported in the specified job type. From the command line, data filters can be specified by the CONTENT, TABLES (partition specifications), SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39203: Partition selection is not supported over a network link.

Cause: Specific partitions were selected for a job operating over a network link.

Action: Remove the partition specifications and rerun the job.

ORA-39204: No subsetting of tablespaces is allowed for transportable import.

Cause: A tablespace filter was applied to a transportable import job that was not performed over a network link. In this case, the tablespace may not be changed from its specification at export time.

Action: Rerun the job without specifying a tablespace filter.

ORA-39205: Transforms are not supported in transportable jobs.

Cause: A metadata transformation such as STORAGE or SEGMENT_ATTRIBUTES has been specified for a transportable Data Pump job.

Action: Rerun the job without specifying a transform.

ORA-39206: A parallel degree of *string* is invalid.

Cause: A bad numeric was supplied for specifying the parallelism to be used within a Data Pump job. The degree of parallelism must be an integer greater than 0.

Action: The the degree specifying and retry the parallelism setting.

ORA-39207: Value *string* is invalid for parameter *string*.

Cause: A parameter for a Data Pump job was set with a NULL or invalid value.

Action: Refer to the documentation to identify the legal values for each parameter. Retry the operation with a valid value.

ORA-39208: Parameter *string* is invalid for *string* jobs.

Cause: The a parameter has been specified that is not supported for the specified type of Data Pump.

Action: Remove the parameter specification and retry the operation.

ORA-39209: Parameter *string* requires privileges.

Cause: Use of the specified privileges requires the user to have the IMP_FULL_DATABASE role for import jobs or the EXP_FULL_DATABASE role for export jobs.

Action: Remove the parameter specification and retry the operation.

ORA-39210: A PCTSPACE adjustment of *string* is invalid.

Cause: User specified a storage space transformation that was out of range. Values for PCTSPACE must be greater than zero.

Action: Retry the operation with a valid PCTSPACE value.

ORA-39211: unable to retrieve dumpfile information as specified

Cause: User specified an invalid or inaccessible file with the specified filename and directory object.

Action: Retry the operation with a valid directory object and filename.

ORA-39212: installation error: XSL stylesheets not loaded correctly

Cause: The XSL stylesheets used by the Data Pump Metadata API were not loaded correctly into the Oracle dictionary table "sys.metastylesheet." Either the stylesheets were not loaded at all, or they were not converted to the database character set.

Action: Connect AS SYSDBA and execute `dbms_metadata_util.load_stylesheets` to reload the stylesheets.

ORA-39213: Metadata processing is not available

Cause: The Data Pump could not use the Metadata API. Typically, this is caused by the XSL stylesheets not being set up properly.

Action: Connect AS SYSDBA and execute `dbms_metadata_util.load_stylesheets` to reload the stylesheets.

ORA-39214: Data Pump does not support external tables with encrypted columns. *string* will not be exported

Cause: The object is an external table with encrypted columns and this is unsupported with Data Pump.

Action: External table must be manually recreated on the target system.

ORA-39216: object type "*string*"."*string*" hashcode or version number mismatch

Cause: An object type in a transportable tablespace set could not be used because there was a type with the same name but a different hashcode (and type definition) or the same hashcode but different version numbers for the type on the target system. Tables in the transportable tablespace set that use this object type cannot be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39217: object type "*string*"."*string*" typeid mismatch

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type or a dependent type is used by an existing table. Tables in the transportable tablespace set that use this object be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39218: type check on object type "*string*"."*string*" failed

Cause: The type check on a type failed. Therefore, the table create for the table which uses the type also fails.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39219: The directory object name is too long.

Cause: The directory object name provided to the Data Pump job was invalid because its length was greater than 30 characters.

Action: Retry the operation with a valid directory object name length.

ORA-39220: file name is too long

Cause: The file name provided to the Data Pump Job was invalid because its length was greater than 4000 characters.

Action: Retry the operation with a valid file name.

ORA-39221: Specifying data filters is invalid when dumpfiles do not contain table data.

Cause: A data filter was supplied for an import job, but the dumpfile does not contain any table data. The export command created a dumpfile with metadata only. No table data was included. From the command line, data filters can be specified by the CONTENT, SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39222: Unable to create global temporary master table *string*

Cause: Data Pump tried to create a global temporary master table but could not. The errors that follow describe why the table could not be created.

Action: Examine and fix the problems described in the additional errors.

ORA-39223: Internal Data Pump error. Master table information for version *string* not found.

Cause: An unexpected error occurred while processing the job. The data in an internal table could not be found.

Action: Contact Oracle Support Services.

ORA-39224: *string* row(s) were rejected with the following error:\n*string*

Cause: These rows were not loaded due to constraint or index violations.

Action: Retry the operation when row data is fixed.

ORA-39228: Unable to construct a unique departitioned object name for *string string.string:string* when defaulted.

Cause: All (sub)partitions in the job were to be created as individual objects and the renaming was defaulted. The job will attempt to create unique object names, but the name creation algorithm was unable to find a unique object name for the specified (sub)partition.

Action: Specify a rename_table transform to use or delete some of the existing objects causing the name conflicts.

ORA-39230: Service name *string* is not available

Cause: The specified resource service name for the Data Pump job was not available.

Action: Pick a service name that the user is authorized to use.

ORA-39231: invalid data remap name: *string*

Cause: The specified type of data remapping was not supported.

Action: Only COLUMN_FUNCTION data remaps are supported. Retry the operation using a supported data remap name.

ORA-39232: invalid remap function: *string*

Cause: The specified package function for performing data remapping was not found.

Action: Either create the specified package function or else grant the user access to the function.

ORA-39233: invalid remap column name: *string*

Cause: The column name specified for the data remapping either does not exist in the specified table, is not a scalar column, or is not supported.

Action: Specify a scalar column name within the table to be remapped.

ORA-39234: Data cannot be remapped under the direct path access method.

Cause: Data remapping was requested on a job that requires the direct path access method. Data remapping can only be performed using the external table access method.

Action: Retry the job without specifying any access method.

ORA-39235: data remap *string* has already been specified

Cause: A data remap has already been specified for the indicated column. Only one data remap may be defined for a column.

Action: Remove one of the data remap specifications for the job.

ORA-39237: Failed to load XML document *string*. Compare process aborted.

Cause: An error occurred while performing XML difference parse.

Action: Resubmit XML compare request with valid document.

ORA-39238: XML node attribute differences are not supported.

Cause: MDAPI XML difference parsing did not support node attributes.

Action: Resubmit XML compare request with valid document.

ORA-39239: No differences found.

Cause: XML documents compared were identical.

Action: No action required.

ORA-39240: Error while processing difference document.

Cause: Error occurred in the MDAPI difference writer.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39242: Unable to export/import *string* due to table attributes.

Cause: See the Data Pump documentation for an explanation of what table attributes prevent an export or import from succeeding.

Action: Resolve conflicting table attributes.

ORA-39243: Import job requires 'TRANSPORT_DATAFILES' parameter.

Cause: The export job used 'TRANSPORTABLE=ALWAYS' and the import job requires TRANSPORT_DATAFILES to be specified.

Action: Specify the transport datafiles associated with this job.

ORA-39245: import job requires export dump file "*string*"

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job. The import log file also lists the export names of the missing files.

ORA-39246: cannot locate master table within provided dump files

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included. In particular, the dump file containing the export job's master table was not provided.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39251: Importing a SecureFile LOB with metadata into a scalar, column *string*, is not allowed.

Cause: An import of a SecureFile LOB with metadata into a scalar column was attempted.

Action: Change the scalar column to a SecureFile LOB.

ORA-39252: Importing a SECUREFILE LOB with metadata or archived SECUREFILE LOB into a BASICFILE LOB is not valid.

Cause: Attempted to import a SECUREFILE LOB that contained metadata or was archived at the time of export into a BASICFILE LOB.

Action: Perform the following actions. 1) Import the SECUREFILE LOB into a different table. 2) Use DBMS_LOB.ARCHIVE_GET on any archived SECUREFILE LOBs. 3) Use INSERT AS SELECT to migrate the SECUREFILE LOB data to the BASICFILE LOB.

ORA-39253: Specified tables do not exist.

Cause: The tables specified for this export job did not exist.

Action: Check the specified table list and make sure the tables listed exist.

ORA-39254: Direct path load not possible into preexisting table with column that has a default value and is not being loaded or is default on null; table *string*, column *string*

Cause: The direct path access method could not be used to load into a preexisting table that has a column with a default value and that column is not being loaded into, or the column is default on null.

Action: Remove the ACCESS_METHOD parameter from the import command line.

ORA-39255: Failed to fetch PLUGTS_BLKs.

Cause: The Data Pump expected a PLUGTS_BLK object to be exported but none were.

Action: Contact Oracle Support Services.

ORA-39256: Transportable tablespace Data Pump jobs from read-only databases not supported.

Cause: The remote database was read-only and Data Pump export jobs using transportable tablespace over a network link require the remote database to be read/write.

Action: Use Data Pump without transportable tablespace or make the remote database read/write.

ORA-39258: Cannot rename cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different names. There is no SQL ALTER statement to rename a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39259: Cannot add column to cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to add a column to a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39260: Cannot delete column from cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to delete a column from a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39261: Cannot modify column in cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to modify a column in a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39262: Cannot alter size for hash cluster.

Cause: DBMS_METADATA_DIFF was comparing two hash clusters with different sizes. There is no SQL ALTER statement to modify the size of a hash cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39263: Cannot alter PARALLEL INSTANCES.

Cause: DBMS_METADATA_DIFF was comparing two objects, both with PARALLEL but with different INSTANCES values. There is no SQL ALTER statement to modify PARALLEL INSTANCES.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39264: Cannot alter type of table: *string*

Cause: DBMS_METADATA_DIFF was comparing tables of different types: relational table, object table or XMLType table. There is no SQL ALTER statement to change a table's type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39265: Cannot alter object_type of object table: *string*

Cause: DBMS_METADATA_DIFF was comparing object tables based on different object types. There is no SQL ALTER statement to change an object table's object type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39266: Cannot add, remove, or modify partitioning attributes.

Cause: DBMS_METADATA_DIFF was comparing two tables with different partitioning attributes. There is no SQL ALTER statement to resolve these differences.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39267: Cannot remove default from table column.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one with a default value, one without. There is no SQL ALTER syntax to remove a column default.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39268: Cannot alter a real column to make it virtual or vice versa.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one virtual, one real. There is no SQL ALTER statement to make a virtual column real or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39269: Cannot alter a column of type LONG to anything other than LOB.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type LONG, the second of a data type other than LOB. There is no SQL ALTER statement to modify a long data type to anything other than a CLOB or NCLOB.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39270: Cannot alter a column to or from a LOB data type.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one of type CLOB, NCLOB or BLOB, the second of some other data type. There is no SQL ALTER statement to change the data type to or from a LOB column.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39271: Cannot alter substitutability of column: *string*

Cause: DBMS_METADATA_DIFF was comparing two table columns. This error may occur because the first column is substitutable and the second column is not, or because the first column is OF TYPE and the second column is substitutable.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39272: Cannot alter organization of nested table column: *string*

Cause: DBMS_METADATA_DIFF was comparing two nested table columns. One was a heap table, the other an index-organized table. There is no SQL ALTER statement to change the organization of a nested table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39273: Cannot alter storage type of XMLType column: *string*

Cause: DBMS_METADATA_DIFF was comparing two XMLType columns with different storage types (CLOB, BINARY, OBJECT RELATIONAL). There is no SQL ALTER statement to change the storage type of an XMLType column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39274: Cannot alter physical organization of table.

Cause: DBMS_METADATA_DIFF was comparing two tables with different physical organizations (heap, index organized, external, or cluster). There is no SQL ALTER statement to change the physical organization of a table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39275: Cannot alter INITIAL storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's INITIAL storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39276: Cannot alter MINEXTENTS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different MINEXTENTS storage options. There is no SQL ALTER statement to change a table's MINEXTENTS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39277: Cannot alter FREELIST GROUPS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's FREELIST GROUPS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39278: Cannot alter table with segments to segment creation deferred.

Cause: DBMS_METADATA_DIFF was comparing two tables, the first with allocated segments, the second with deferred segments. There is no SQL ALTER statement to change a table which already has segments to segment creation deferred.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39279: Cannot alter tablespace of overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables whose overflow segments have different tablespaces. There is no SQL ALTER statement to change an overflow segment's tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39280: Cannot drop overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables, the first with an overflow segment, the second without. There is no SQL ALTER statement to drop an overflow segment.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39281: Cannot alter COMPRESS in index-organized materialized view.

Cause: DBMS_METADATA_DIFF was comparing two index organized materialized views with different key compression values. There is no SQL ALTER statement to modify the key compression of an index organized materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39282: Cannot alter default tablespace of partitions in partitioned table.

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables with different default tablespaces. There is no SQL ALTER statement to change the default tablespace of a partitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39283: Cannot drop, split or merge hash partition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables or indexes partitioned or subpartitioned by hash, and a (sub)partition in the first object was not present in the second object. Partition maintenance operations such as drop, split or merge can only be performed on list or range (sub)partitioned objects.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39284: Cannot alter the list values of a list subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables subpartitioned by list, one of which has a subpartition with the same name but a different values list as a subpartition in the other. There is no SQL ALTER statement to change the list values of a list subpartition.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39285: Cannot alter index key compression.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values of key compression. There is no SQL ALTER statement to change index key compression.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39286: Cannot convert between types of index.

Cause: DBMS_METADATA_DIFF was comparing two indexes of different types, for example, a table index, a domain index, a cluster index, a bitmap index or a bitmap join index. There is no SQL ALTER statement to change the type of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39287: Cannot alter index column list.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different column lists. There is no SQL ALTER statement to change the columns of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39288: Cannot alter index base table.

Cause: DBMS_METADATA_DIFF was comparing two table indexes defined on different tables. There is no SQL ALTER statement to change the base table of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39289: Cannot add or drop local index partition or subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two locally partitioned indexes with different partitions or subpartitions. There is no SQL ALTER statement to add or drop a partition or subpartition of a locally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39290: Cannot drop a partition of a globally partitioned index.

Cause: DBMS_METADATA_DIFF was comparing two globally partitioned indexes and a partition in the first index does not exist in the second index. There is no SQL ALTER statement to drop a partition of a globally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39291: Cannot alter index storage option: *string*

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values for the specified storage option. There is no SQL ALTER statement to change this storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39292: Cannot alter join table of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join tables. There is no SQL ALTER statement to alter the join tables of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39293: Cannot alter join condition of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join conditions. There is no SQL ALTER statement to alter the join condition of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39294: Cannot alter indextype of domain index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap domain indexes with different indextypes. There is no SQL ALTER statement to alter the indextype of a domain index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39295: Cannot alter index base cluster.

Cause: DBMS_METADATA_DIFF was comparing two cluster indexes defined on different clusters. There is no SQL ALTER statement to change the base cluster of a cluster index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39296: Cannot alter index partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two indexes with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way an index is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39297: Cannot alter materialized view attribute: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible attributes. There is no SQL ALTER statement to change this attribute of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39298: Cannot alter materialized view partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39299: Cannot alter materialized view physical organization.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with different physical organizations: heap, index organized, etc. There is no SQL ALTER statement to change the index organization of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39300: Cannot alter materialized view log partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view log is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39301: Cannot alter values recorded in materialized view log: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs that are recording different values, and the set of values in the first materialized view log cannot be changed to that in the second materialized view log. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39302: Cannot alter tablespace of materialized view log.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs which have different tablespaces. There is no SQL ALTER statement to change the tablespace of a materialized view log.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39303: Cannot alter attribute of queue: *string*

Cause: DBMS_METADATA_DIFF was comparing two advanced queues with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39304: Cannot alter attribute of queue table: *string*

Cause: DBMS_METADATA_DIFF was comparing two AQ queue tables with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39305: Cannot alter attribute of sequence: *string*

Cause: DBMS_METADATA_DIFF was comparing two sequences with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39306: Cannot alter attribute of trigger: *string*

Cause: DBMS_METADATA_DIFF was comparing two triggers with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39307: Cannot alter attribute of type: *string*

Cause: DBMS_METADATA_DIFF was comparing two types with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39308: Cannot alter attribute of view: *string*

Cause: DBMS_METADATA_DIFF was comparing two views with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39309: Cannot alter tablespace between bigfile and smallfile.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one bigfile, one smallfile. There is no SQL ALTER statement to change a tablespace from smallfile to bigfile or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39310: Cannot alter tablespace type.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces of different types: permanent, temporary or undo. There is no SQL ALTER statement to change the type of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39311: Cannot alter tablespace blocksize.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different blocksizes. There is no SQL ALTER statement to change the blocksize of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39312: Cannot alter tablespace encryption.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one encrypted, one not. There is no SQL ALTER statement to change the encryption property of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39313: Cannot alter tablespace flashback mode.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one in flashback mode, one not. There is no SQL ALTER statement to alter the flashback mode of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39314: Cannot alter tablespace extent_management.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different extent management properties. There is no SQL ALTER statement to alter the extent management properties of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39315: Cannot drop the first data file from a permanent or undo tablespace.

Cause: DBMS_METADATA_DIFF was comparing two permanent or undo tablespaces. The first data file in the first tablespace is missing from the second tablespace. There is no SQL ALTER statement to drop the first data file from a permanent or undo tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39316: Cannot resize a data file in a smallfile tablespace.

Cause: DBMS_METADATA_DIFF was comparing two smallfile tablespaces. A data file in the first tablespace is of a different size from the corresponding data file in the second tablespace. There is no SQL ALTER statement to resize a data file in a smallfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39317: Cannot change the segment space management of a tablespace.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different segment space management. There is no SQL ALTER statement to change the segment space management of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39318: Cannot alter user name.

Cause: DBMS_METADATA_DIFF was comparing two users with different names. There is no SQL ALTER statement to change the name of a user.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39319: Cannot undo password expiration.

Cause: DBMS_METADATA_DIFF was comparing two users and the first user had an expired password. There is no SQL ALTER statement to undo the expiration of a user password.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39320: Column names do not match between export and import databases.

Cause: The column names of the table being imported did not match the column names of the preexisting table.

Action: Ensure the column names match between export and import database.

ORA-39321: cannot alter functional index or virtual or materialized expression column: *string*

Cause: An altered column was referenced in a virtual column or functional index expression or materialized expression column. There is no SQL ALTER statement to change a column which is referenced in one of these types of expressions.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39322: Cannot use transportable tablespace with TIMESTAMP WITH TIME ZONE columns and different time zone version.

Cause: The source database was at a different time zone version than the target database and there were tables in the dumpfile with TIMESTAMP WITH TIME ZONE columns.

Action: Convert the target database to the same timezone version as the source database or use Data Pump without transportable tablespace.

ORA-39323: cannot load data from external table dump file "*string*"

Cause: A dump file was specified for an import operation that had been created with external tables using the ORACLE_DATAPUMP access driver. This type of dump file could not be processed using the Data Pump import utility.

Action: Access the data in this dump file with external tables using the ORACLE_DATAPUMP access driver.

ORA-39324: cannot load data from Data Pump dump file "*string*"

Cause: A dump file was specified for a load operation that had been created using the Data Pump Export (expdp) utility. This type of dump file could not be processed as external table using the ORACLE_DATAPUMP access driver.

Action: Access the data in this dump file using the Data Pump Import (impdp) utility.

ORA-39325: TABLE_EXISTS_ACTION cannot be applied to *string*.

Cause: An object was already in existence that uses a name in common with this table. The name collision could be the table name, a constraint, a LOB storage table, or something else in the table definition.

Action: Drop the existing object before running Data Pump.

ORA-39326: cannot load data into table, *string*, due to an unusable index

Cause: An unusable index existed on the table. This index prevented data from being loaded into the table associated with this index.

Action: Either drop the unusable index or make it valid before attempting the import operation.

ORA-39327: Oracle Database Vault data is being stored unencrypted in dump file set.

Cause: No encryption was specified for an export job that involved data from an Oracle Database Vault realm.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39328: encryption password is too long

Cause: The encryption password provided to the Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 1000 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39329: Tablespace *string* needs to be locally managed.

Cause: An attempt was made to run an Oracle Data Pump job with the TRANSPORTABLE=ALWAYS parameter. Tablespaces that contain data for EARLY_OPTIONS in an Oracle Data Pump job run with FULL=Y and TRANSPORTABLE=ALWAYS parameter need to be locally managed.

Action: Run the Oracle Data Pump job without the TRANSPORTABLE parameter set to ALWAYS.

ORA-39331: Wallet is not open on remote node.

Cause: The security module wallet was not open on the remote node.

Action: Open the wallet on the remote node.

ORA-39339: Table *string* was skipped due to transportable import and TSTZ issues resulting from time zone version mismatch.

Cause: The source database is at a different time zone version than the target database and this table contains TIMESTAMP WITH TIME ZONE data.

Action: Convert the target database to the same time zone version as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39340: unsupported object, *string* will be skipped.

Cause: Oracle Data Pump encountered an object type that it currently does not support.

Action: Manually move the object to the target database.

ORA-39341: Cannot convert an existing column into an identity column.

Cause: An attempt was made to convert an existing column into an identity column. There is no SQL ALTER statement that will convert an existing column into an identity column.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39342: Data Pump did not import dependent objects for *string* due to the previous error *string*.

Cause: Oracle Data Pump did not import dependent objects because the parent object failed to import properly.

Action: Contact Oracle Support Services.

ORA-39343: Object type *string* failed to create returning error:\nstring\n

Cause: The object type could not be created. Examine the original error code to determine the actual cause.

Action: The original error code will contain more information.

ORA-39345: Warning: possible data loss in character set conversions

Cause: Oracle Data Pump displayed this message at the start of the import operation because it determined that the character set or the NCHAR character set used by the export database was different from that of the target database and also that the target database character set was not a superset of the export database character set.

Action: No specific user action is required.

ORA-39346: data loss in character set conversion for object *string*

Cause: Oracle Data Pump import converted a metadata object from the export database character set into the target database character set prior to processing the object. Some characters could not be converted to the target database character set and so the default replacement character was used.

Action: No specific user action is required. This type of data loss can occur if the target database character set is not a superset of the export database character set.

ORA-39347: Character data loss was detected during conversion, the row was rejected.

Cause: The row contained characters that did not exist in the destination character set.

Action: No specific user action is required. The destination character set must be a superset of the source character set to avoid data loss.

ORA-39352: Wrong number of TRANSPORT_DATAFILES specified: expected *string*, received *string*

Cause: The number of TRANSPORT_DATAFILES specified on the impdp command was not correct.

Action: Specify the correct TRANSPORT_DATAFILES for this transportable job.

ORA-39353: Data was not imported for *string*. Cannot locate the time zone version *string* file.

Cause: This table contains TIMESTAMP WITH TIME ZONE data and Oracle Data Pump needed to load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39357: InWarning: Oracle Data Pump operations are not typically needed when connected to the root or seed of a container database.

Cause: The Oracle Data Pump client was attached to the root or seed container database.

Action: Continue if this is the desired connection string or attach to a pluggable database within the container database.

ORA-39358: Export dump file version *string* not compatible with target version *string*

Cause: The Oracle Data Pump export job version was newer than the target compatibility version.

Action: Upgrade the target database to a compatibility level of at least the export job version, or rerun the export job with a job version that is lower than or equal to the compatibility version of the target database.

ORA-39359: Source time zone version is *string* and target time zone version is *string*.

Cause: The time zone version of the source database is not the same as the time zone version of the target database.

Action: Tables containing TIMESTAMP WITH TIME ZONE data cannot be imported with transportable tablespace technology when time zone versions are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone version as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39360: Table *string* was skipped due to transportable import and TSLTZ issues resulting from time zone mismatch.

Cause: The time zone of the source database is different than the time zone of the target database and this table contains TIMESTAMP WITH LOCAL TIME ZONE data.

Action: Convert the target database to the same time zone as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39361: Source time zone is *string* and target time zone is *string*.

Cause: The time zone of the source database is different than the time zone of the target database.

Action: Tables containing TIMESTAMP WITH LOCAL TIME ZONE data cannot be imported with transportable tablespace technology when time zones are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39363: Type evolution could not be preserved for *string*

Cause: Trying to apply each version of the type during import resulted in compilation warnings. The type was successfully recreated to the latest version only.

Action: Export dump files as well as transportable tablespaces that contain earlier versions of this type cannot be imported on top of this type definition.

ORA-39364: encryption password is too long

Cause: The encryption password provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 128 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39366: disable table lock on *string.string* failed with:\nstring\n

Cause: Examine the original error code to determine the actual cause.

Action: The original error code contains more information.

ORA-39367: Statistics are being skipped. Cannot locate the time zone version *string* file.

Cause: Importing statistics requires that the Oracle Data Pump load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39368: cannot alter partition varray column properties

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables. There is no SQL ALTER statement to change varray column properties.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39369: some rows may not be exported for *string* due to block corruption

Cause: The corrupted data blocks were ignored when Oracle Data Pump was exporting the table.

Action: No action is required.

ORA-39370: remap value *string* is too long

Cause: The remap value provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed.

Action: Retry the operation with a valid remap value.

ORA-39371: cannot specify partition in remap_table without departitioning

Cause: The 'remap_table' value specified a partition but the tables were not being departitioned.

Action: Either remove the partition name in the 'remap_table' parameter or add the 'partition_options=departition' parameter.

ORA-39372: InWarning: Oracle Data Pump is exporting from a database that supports long identifiers to a version that does not support long identifiers.

Cause: The Oracle Data Pump job was exporting from a database version that has support for long identifiers and may have objects with long identifiers but the target version does not support long identifiers.

Action: Continue if this is the desired action but be aware that some objects may not be exported and some that are exported will not be able to be imported to the target database.

ORA-39373: cannot export *string* to version *string* due to long identifiers

Cause: This object had long identifiers and could not be exported to the target version specified in the Oracle Data Pump command.

Action: If this is the desired action, then continue, but be aware that this object will not be included in the dump file. If this is not the desired action then change the version parameter to a value greater than or equal to 12.2.0.0.0.

ORA-39374: Statistics failed to export. Failing error is *lnstring*

Cause: The statistics failed to export.

Action: Examine the original error code to determine the actual cause.

ORA-39375: Statistics failed to import. Failing error is *lnstring*

Cause: The statistics failed to import.

Action: Examine the original error code to determine the actual cause.

ORA-39376: invalid data encountered (*string*)

Cause: Optional data validation detected invalid data while accessing external table data.

Action: See trace files for details of the problem.

ORA-39377: altering table read-only *string.string* failed with:\nstring\n

Cause: Altering the table to read-only failed.

Action: Examine the original error code to determine the actual cause.

ORA-39378: Data Pump *string* import job conflicts with underscore parameter *string*

Cause: The mode used for import cannot be used with the underscore parameter.

Action: Unset the underscore parameter and retry the import.

ORA-39379: Logging for table *string* may not be restored.

Cause: The table was created with NO LOGGING specified and the restore to the original value failed.

Action: Verify the logging attributes on the table.

ORA-39380: Cannot alter tablespace with lost write protection.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces. There is no SQL ALTER statement to change tablespace lost write protection.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39381: Cannot add datafile to bigfile tablespace.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces. Datafile can not be added to a bigfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39382: There are *string* cursors left open in the *string* package.

Cause: This is an internal error. The identified package left some cursors opened.

Action: Contact Oracle Support Services.

ORA-39383: There is more data loss than reported for object type *string*.

Cause: The maximum number of replacement characters for each read operation prevented all objects within this object type that lost data from being found. There should be one or more messages preceding this one that indicate data loss for specific objects within the named object type. However, this message indicates that there may be more objects within the named object type that lost

Action: No specific user action is required.

ORA-39384: Warning: User *string* has been locked and the password expired.

Cause: Oracle Data Pump displayed this message while importing users because it determined that a user was created with a password version that is no longer supported. See the documentation for PASSWORD_VERSIONS in the system view DBA_USERS for more information.

Action: Connect AS SYSDBA and unlock the account and set a password for the user. This can be done by issuing an "ALTER USER *username* ACCOUNT UNLOCK;" command followed by an "ALTER USER *username* IDENTIFIED BY *password*;" command. See the documentation for the SQLNET.ORA parameter SQLNET.ALLOWED_LOGON_VERSION_SERVER which explains how to control which password versions will be created when the password for the user is reset.

ORA-39385: Data was not imported for *string*.

Cause: The Data Pump export job had an unreported problem while exporting the data for this table, partition, or subpartition.

Action: Retry the export command including the data for this table, partition, or subpartition.

ORA-39386: cannot load data into sharded table from sharded catalog for table *string*

Cause: Data pump import operation was trying to load table data into a sharded table from the sharded catalog database. Table data for sharded tables must be loaded into the sharded databases.

Action: Use the data pump to load the table data into the sharded database.

ORA-39387: cannot load metadata into a sharded database

Cause: Data pump import operation was trying to load metadata into a sharded database.

Action: Metadata is propagated to the sharded database from the sharded catalog.

ORA-39388: cannot use transportable tablespace to export from a sharded database

Cause: An attempt was made to export from a sharded database using transportable tablespace.

Action: Perform this operation without transportable tablespace.

ORA-39389: no form of transportable export is allowed from a sharded catalog

Cause: An attempt was made to export from a sharded catalog using a form of transportable Data Pump.

Action: Perform this operation without transportable data movement.

ORA-39390: cannot use Oracle Data Pump with a network link in a sharded environment

Cause: An attempt was made to perform an Oracle Data Pump operation over a network link with either the source or target database being sharded.

Action: Perform this operation without a `network_link` parameter.

ORA-39391: maximum number of Data Pump jobs (*string*) exceeded

Cause: The value of the `MAX_DATAPUMP_JOBS_PER_PDB` initialization parameter exceeded the allowed value.

Action: Retry the operation or increase the maximum allowed value of the `MAX_DATAPUMP_JOBS_PER_PDB` initialization parameter.

ORA-39392: Data Pump filter object *string* invalid length

Cause: The Data Pump filter contained an object name that was larger than 128 characters.

Action: Fix the object name in the filter and retry the Data Pump command.

ORA-39393: direct path operation in shard catalog not allowed on sharded table *string*

Cause: Direct path operations could not be performed on a sharded table from inside of the catalog database for a sharded table. The data for sharded tables lives in other shard databases.

Action: Use direct path operations directly on the shard databases.

ORA-39394: Cannot alter vector encoded attributes on a table column.

Cause: An attempt was made to change a column that was vector encoded with a SQL ALTER statement.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39395: Warning: object *string* requires password reset after import

Cause: During Data Pump Export or Import, fixed user or shared database link objects were exported and the enforcement of dictionary credentials was set to ENABLED.

Action: After running Data Pump Import, execute the ALTER DATABASE LINK statement for each link mentioned in the error message and reset the password for the link. Failure to reset the password for the link results in an ORA-28449 error when attempting to use the link.

ORA-39396: Warning: exporting encrypted data using transportable option without password

Cause: The encryption password was not specified for an export job that used the transportable option and included one or more encrypted tablespaces.

Action: No specific user action is required. However, note that the wallet on the source and target databases must be identical in order to import the dump file. Continue if this is the desired operation or add an encryption password to the DataPump export command.

ORA-39398: cannot load data, Oracle Data Pump dump file "*string*" was created in TEST_MODE

Cause: The Oracle Data Pump dump file was created using a value of TEST_MODE for the export TTS_CLOSURE_CHECK parameter. The Oracle Data Pump dump file was in an inconsistent state and could not be loaded.

Action: Re-create the Oracle Data Pump dump file and specify a value of FULL or ON or OFF for the export TTS_CLOSURE_CHECK parameter.

ORA-39399: Dump file set is unusable. TEST_MODE requested.

Cause: This is an informational message to indicate that the Data Pump dump file was created using a value of TEST_MODE for the export TTS_CLOSURE_CHECK parameter. The Data Pump dump file was in an inconsistent state and could not be processed by the Data Pump import utility.

Action: None

ORA-39400: invalid value *string* for parameter *string*

Cause: The string supplied for the parameter MAX_DATAPUMP_JOBS_PER_PDB or MAX_DATAPUMP_PARALLEL_PER_JOB was neither an integer nor was it the special value AUTO.

Action: Provide a proper value for this parameter.

ORA-39402: The log or SQL file cannot overwrite dump file "*string*".

Cause: The name and location of the Data Pump log or SQL file matched the name of an existing Data Pump, external table, or legacy dump file. This message may be seen before the Data Pump job has started or after the job has started, if wildcard dump files are being used.

Action: If this message is seen before the job has started, then retry the operation using a different name or directory object for the log or SQL file. Otherwise, the message is informational and no further action is required.

ORA-39403: object *string* "*string*" type identifier mismatch

Cause: An object type in a transportable tablespace set already existed on the target system but with a different type identifier. The object type or dependent type was used by an existing table and could not be changed. Tables in the transportable tablespace set that use this object type could not be created. The alert log contains additional information.

Action: If possible, drop the object type and the dependent objects from the target system and retry the operation.

ORA-39405: Oracle Data Pump does not support importing from a source database with TSTZ version *string* into a target database with TSTZ version *string*.

Cause: The source database was at a different time zone version than the target database and there were tables that contained TIMESTAMP WITH TIME ZONE (TSTZ) data.

Action: Convert the target database to the same or later time zone version as the source database or use Oracle Data Pump with conventional data movement to export and then import this data.

ORA-39406: Job mode *string* is not permitted when running as SYSBACKUP.

Cause: A mode other than transportable, table, or tablespace was specified for the job. When running a Data Pump export or import operation as SYSBACKUP, the mode is limited to transportable, table, and tablespace.

Action: No action is required.

ORA-39407: Warning: Incompatible usage of parameters *string* and *string*.ln

Cause: When using the DEPARTITION transform, REMAP_TABLE should reference a specific table partition. Otherwise the REMAP_TABLE is ignored.

Action: No action is required.

ORA-39408: unable to generate checksum for dump file "*string*"

Cause: The Oracle Data Pump Export utility was unable to generate a checksum for the specified dump file. This message is followed by one or more secondary messages.

Action: Take the appropriate action based on the secondary messages.

ORA-39409: unable to verify checksum for dump file "*string*"

Cause: Data Pump Import was unable to verify the checksum for the specified dump file. This message is followed by one or more secondary messages.

Action: Take appropriate action based on the secondary messages.

ORA-39411: header checksum error in dump file "*string*"

Cause: The header block for the Oracle Data Pump dump file contained a header checksum that did not match the value calculated from the header block as read from disk. This indicated that the header was tampered with or otherwise corrupted due to transmission or media failure.

Action: Make sure the filesystem where the dump files are stored does not report any issues and has enough capacity. Re-create the Data Pump export and retry the import. If the problem persists, contact Oracle Support Services.

ORA-39412: file checksum error in dump file "*string*"

Cause: The header block for the Oracle Data Pump dump file contained a file checksum that did not match the value calculated from the header block as read from disk. This indicates that the file was tampered with or otherwise corrupted due to transmission or media failure.

Action: Transfer the dump file again from its source location. If this does not fix the issue, then contact Oracle Support. *Params: 1) dump_file_name: The name of the dump file.

ORA-39416: Warning: dump file checksum verification is disabled

Cause: The Data Pump VERIFY_CHECKSUM parameter was either implicitly or explicitly set to NO and the import dump file set included files that contain checksums.

Action: Continue if the desired behavior is to not perform checksum verification. Otherwise, restart the import operation and include VERIFY_CHECKSUM=YES.

ORA-39417: cannot alter external tables to remove default directory

Cause: DBMS_METADATA_DIFF was comparing two external tables. There is no SQL ALTER statement to remove the default directory.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39418: cannot alter external tables to remove access parameters

Cause: DBMS_METADATA_DIFF was comparing two external tables. There is no SQL ALTER statement to remove the access parameters.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39419: Error *string* during import when reordering POs in Master table *string* for object type with sequence number *string*.

Cause: This is an internal error. Data Pump encountered a potentially non-fatal error during import when reordering process orders. Refer to the error codes and subsequent messages for details.

Action: Rerun the impdp command with a version earlier than release 12.2 or, if the problem persists, contact Oracle Support Services.

ORA-39420: transportable tablespace '*string*' clean offline SCN mismatch [*string*] [*string*]

Cause: The tablespace clean offline SCN changed during a transportable Data Pump export operation. Tablespaces in the transportable export tablespace set are required to be and to remain in READ ONLY mode for the duration of the operation. During the transportable export operation, a tablespace within the transportable tablespace set was taken out of READ ONLY mode. This resulted in the tablespace clean offline SCN being altered. As a result, the tablespace is incompatible with the current transportable export operation.

Action: ALTER the tablespace to be READ ONLY and then retry the operation.

ORA-39421: cannot modify JSON storage attributes

Cause: DBMS_METADATA_DIFF compared attributes of two JavaScript Object Notation (JSON) columns. JSON storage attributes could not be modified.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39422: invalid definition of the TRANSPORT_DATAFILES_LOG output file

Cause: The job being defined could not be started because either the TRANSPORT_DATAFILES_LOG output file name conflicted with the output LOG file, or the definition was unusable.

Action: Specify a valid directory name and file name for the TRANSPORT_DATAFILES_LOG file.

ORA-39423: The dump file set and data files must be copied to the target database area.

Cause: Information message written to the TRANSPORT_DATAFILES_LOG output file.

Action: None required.

ORA-39424: The data file paths must be updated accordingly before initiating the Import.

Cause: Information message written to the TRANSPORT_DATAFILES_LOG output file.

Action: None required.

ORA-39425: <target_database_area_path>string.string

Cause: Information message written to the TRANSPORT_DATAFILES_LOG output file.

Action: None required.

ORA-39426: Domain indexes of partitioned tables will not be imported.

Cause: The domain indexes were not imported because the PARTITION_OPTIONS parameter was set to MERGE.

Action: Manually create the domain indexes on the target database.

ORA-39427: Dependent objects of partitioned tables will not be imported.

Cause: The dependent objects were not imported because the PARTITION_OPTIONS parameter was set to DEPARTITION.

Action: Manually create the dependent objects on the target database.

ORA-39428: Warning: Statistics not gathered while loading data for table "string"

Cause: An attempt was made to automatically collect statistics in an Autonomous Data Warehouse (ADW) or Autonomous Transaction Processing (ATP) environment. If the ACCESS_METHOD parameter is specified as something other than EXTERNAL_TABLE or if properties of the table prevent using EXTERNAL_TABLE, then this warning is displayed.

Action: Gather statistics manually once data loading is complete.

ORA-39429: REMAP_SCHEMA for SYSTEM does not exist, string

Cause: The Data Pump REMAP_SCHEMA parameter for import was specified for schema SYSTEM, but the target schema did not exist in the database.

Action: Create the schema in the database and then retry the import operation.

ORA-39430: Warning: Optimized column string.string.string length exceeds index key limit

Cause: An attempt was made to optimize the byte column length with the BYTE_OPTIMIZED transform parameter value to avoid index creation failure during import.

Action: None

ORA-39432: Warning: Grant string failed due to timeout while waiting to lock oracle object. Failing sql is: string

Cause: A lock timeout error occurred while executing an Oracle object grant DDL because it recompiled the target object which requires a lock on this object. If a lock is not acquired, then a timeout error occurs.

Action: None

ORA-39433: cannot alter domain index parameters

Cause: The DBMS_METADATA_DIFF package was comparing two domain indexes with different parameters. There is no SQL ALTER statement to alter the index type of a domain index.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39435: Warning: string cannot be applied to blockchain table string. No rows processed.

Cause: Oracle Data Pump options SAMPLE, QUERY, REMAP_DATA, and TABLE_EXISTS_ACTION were specified for blockchain tables.

Action: None

ORA-39436: transportable table "string"."string" metadata mismatch

Cause: The metadata of the plugged-in transportable table did not match with the metadata located in the Oracle Data Pump Export dump file.

Action: See trace files for details of the problem. If possible, correct the metadata and re-try the operation.

ORA-39437: Warning: DEPARTITIONING cannot be applied to blockchain tables.

Cause: Departitioning options cannot be applied to blockchain tables.

Action: None

ORA-39438: Cannot alter the data type of column string

Cause: An attempt was made to change the data type of this column. There is no SQL ALTER statement to change this column to the new data type.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39439: Warning: cannot process blockchain tables in transportable jobs or over a network link

Cause: Oracle Data Pump using a network link or transportable jobs encountered blockchain tables, which was not supported.

Action: Oracle Data Pump with blockchain tables can only use CONVENTIONAL access method. It requires the following: * VERSION set to 21.0.0.0.0 or the latest version, and * Database COMPATIBLE initialization parameter set to 21.0.0.0 and higher.

ORA-39440: failed to verify blockchain rows in table *string*

Cause: Oracle Data Pump import failed to verify blockchain rows loaded.

Action: None

ORA-39442: Data Pump software update in progress

Cause: DPLOAD.SQL was holding the exclusive lock. Data Pump software update was in progress.

Action: Try again after the software update is complete.

ORA-39444: failed to retrieve the current session address

Cause: Oracle Data Pump was unable to retrieve the current session address.

Action: None

ORA-39445: REMAP_TABLESPACE with wildcard is not mapped to *string*

Cause: Remapping tablespaces using a wildcard during import was not allowed. Tablespace was either temporary or did not exist.

Action: Use a permanent tablespace with wildcard remapping.

ORA-39446: VIEWS_AS_TABLES error: *string* does not exist.

Cause: The specified element in the VIEWS_AS_TABLES parameter did not exist.

Action: Retry the operation with an existing and valid view or template table.

ORA-39447: VIEWS_AS_TABLES error: *string* has invalid properties *string*.

Cause: The specified element in the VIEWS_AS_TABLES parameter had invalid properties.

Action: Retry the operation with a valid view or template table.

**ORA-39448: VIEWS_AS_TABLES error: Cannot create template table *string*.
SQLCODE is *string*.\nFailing sql is: \n*string***

Cause: The specified internal template table could not be created.

Action: None

ORA-39449: cannot disable editioning attributes

Cause: Editioning was not reversible once it had been enabled.

Action: None

ORA-39450: Database release *string*.*string* is unable to read the dump file created by release *string*.

Cause: A dump file was specified for an Oracle Data Pump Import operation. The version number for that file is incompatible with the dump file version of the Oracle Data Pump product currently running. Usually this message indicates that the dump file was produced by a newer version of the Oracle Data Pump Export utility.

Action: Import the dump file using Oracle Data Pump Import utility with the same version as the Oracle Data Pump Export which created the file, or repeat the export using the VERSION parameter set to the release into which you want to import. *Params: 1) database_version: The version number of the database in use. 2) database_release: The release number of the database in use. 3) data_pump_version: The version number of the dump file.

ORA-39451: PARALLEL value *string* exceeds dump file set count

Cause: The value specified by the PARALLEL parameter for the Data Pump Export job is greater than the number of dump files indicated.

Action: No specific user action is required. This is an informational message to indicate that the value specified by the PARALLEL parameter exceeds the number of dump files indicated for the Data Pump Export job.

ORA-39452: FILESIZE is outside valid range of *string*KB to *string*MB

Cause: The value specified for the FILESIZE parameter was either too small to hold the header information for the export file, plus any data, or exceeded the allowed maximum size for a Uniform Resource Identifier (URI) dump file.

Action: Retry the operation using a value for FILESIZE that falls within the valid range.

ORA-39453: Warning: The ENABLE_SECURE_ROLE parameter has been desupported.

Cause: The desupported ENABLE_SECURE_ROLES parameter was specified using either the Data Pump command-line clients, expdp and impdp, or the Data Pump PL/SQL API.

Action: Consult the Oracle Utilities documentation to find a workaround for running a Data Pump operation with secure roles enabled.

ORA-39454: Warning: Ignoring *string* transform parameter with older dump files.

Cause: OMIT_ACDR_METADATA transform parameter was not supported with dump files older than Oracle Database release 23c, version 23.1.

Action: None

ORA-39455: trailer checksum error in dump file "*string*"

Cause: The trailer block for the Data Pump dump file contained a trailer checksum that did not match the value calculated from the trailer block as read from disk. This indicates that the trailer was tampered with or otherwise corrupted due to transmission or media failure.

Action: Contact Oracle Support Services.

ORA-39456: Warning: Incompatible usage of the CHECKSUM parameter and object-store URI dump files.

Cause: The incompatible combination of enabling Data Pump checksums and using object-store URI dump files was specified for an export operation.

Action: No action is required. The export is performed but checksums are not calculated for the output object-store dump files.

ORA-39458: Transportable tablespaces prevented from being set read/write.

Cause: The tablespaces in the transportable import tablespace set could not be set to read/write access. This may be due to the file system or tablespace data file protection being read only. As a result timezone fixup and bitmap rebuild operations did not occur for tablespaces in the transportable import tablespace set.

Action: Verify the data file protection settings before retrying the operation.

ORA-39459: *string* was called with a NULL dump file specification.

Cause: The Oracle Data Pump process model function was called with a NULL dump file specification.

Action: Specify a dump file that is valid for the job.

ORA-39460: cannot create password verification function *string* due to lockdown

Cause: COMMON_SCHEMA_ACCESS lockdown was enabled for the pluggable database (PDB) but there was no PASSWORD_VERIFY_FUNCTION owner identified and the ALLOWED_PVF_OWNERS system parameter was not configured to allow schema-qualified password verification function.

Action: Set the PASSWORD_VERIFY_FUNCTION owner system parameter and retry the import again. - If the ALLOWED_PVF_OWNERS system parameter is set to NULL (default value), contact your database administrator to have it set to an appropriate value (comma-separated list of database users) to allow schema-qualified password verification function.

ORA-39461: Error *string* in *string*, *string*. Additional information *string*.

Cause: This is an internal error. Data Pump and/or metadata API encountered an error. Refer to the error codes and subsequent messages for details.

Action: Contact Oracle Support Services.

ORA-39462: remap value *string* must be a valid simple SQL name

Cause: The remap table value provided to the Oracle Data Pump job is invalid because the new value must be a valid simple SQL name.

Action: Retry the operation with a valid simple SQL name.

ORA-39463: header block format is not supported for object-store URI dump file.

Cause: User specified an explicit version for a DBMS_DATAPUMP.OPEN API which is incompatible with an object-store Uniform Resource Identifier (URI) dump file. The explicit version specified produces a dump file containing header blocks. Header block format is incompatible with an object-store Uniform Resource Identifier (URI) dump file.

Action: Specify a version or file specification which is compatible.

ORA-39464: readable only by Data Pump Servers that support trailer block format

Cause: This is an informational message part of an export operation summary to indicate that the generated dump file set contains trailer blocks. Importing this dump file set requires a version of the Data Pump Server that supports trailer block format dump file sets.

Action: None required if this format is correct. Otherwise, re-run the export and specify a VERSION parameter value less than 23, to produce a header block format dump file set.

ORA-39465: Can not alter a staging table to non staging

Cause: Altering a staging table to a non staging was attempted. This operation is not supported.

Action: None

ORA-39500: failed to notify CRS of a startup or shutdown event for database "string", instance "string" (ignored)

Cause: The instance was unable to obtain the context or information required to notify the Cluster Ready Services (CRS) framework.

Action: None. The error is ignored. *Params: 1) dbname: The database unique name. 2) instname: The instance name.

ORA-39501: failed to notify CRS of a startup or shutdown event [string] (ignored)

Cause: The instance was unable to communicate with the Cluster Ready Services (CRS) framework.

Action: None. *Params: 1) error_code: The error code returned from CRS.

ORA-39502: failed to notify Cluster Ready Services (CRS) of a startup or shutdown event [string] (ignored)

Cause: The instance was unable to create an environment context.

Action: None. The error is ignored. *Params: 1) error_code: The error code from clscrs_env_create().

ORA-39503: failed to notify Cluster Ready Services (CRS) of a startup or shutdown event [string] (ignored)

Cause: The instance was unable to populate the environment context.

Action: None. The error is ignored. *Params: 1) error_code: The error code from clscrs_env_set().

ORA-39504: failed to notify CRS of a Startup/Shutdown event [string] (ignored)

Cause: The instance was unable to find the location of the alert file.

Action: None Required. The error is ignored.

ORA-39510: A CRS error occurred performing action 'string' on string 'string' of database 'string'\nstring.

Cause: The indicated action could not be performed on the associated Cluster Ready Services (CRS) resource.

Action: See the enclosed error messages for additional information. Fix the errors and retry the action. *Params: 1) action: The action during which the error occurred. 2) type: The type of the CRS resource. 3) name1: The service name or instance name. 4) name2: The database unique name or pluggable database (PDB) name. 5) message: The additional error message.

ORA-39511: Start of CRS resource for instance '%0!s' failed with error:[%1!s]\n%2!s

Cause: The Cluster Ready Services (CRS) detected an error during an attempt to start the indicated resource. The instance start operation was terminated. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, correct the indicated problems, and then retry the operation.

ORA-39512: Stop of CRS resource for instance '%0!s' failed with error:[%1!s] ln%2!s

Cause: The Cluster Ready Services (CRS) detected an error during an attempt to stop the indicated resource. The instance stop operation was terminated. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, correct the indicated problems, and then retry the operation.

ORA-39600: Queue keys needs to be a suffix of cluster key.

Cause: Attempt to specify queue key columns that don't form a suffix of the cluster key.

Action: Only specify queue key columns as a suffix of cluster key.

ORA-39601: Hash key is required.

Cause: Missing hash key in the cluster key specification.

Action: Specify one or more hash key columns.

ORA-39700: database must be opened with UPGRADE option

Cause: A normal database open was attempted, but the database has not been upgraded to the current server version.

Action: Use the UPGRADE option when opening the database to run catupgrd.sql (for database upgrade), or to run catalog.sql and catproc.sql (after initial database creation).

ORA-39701: database must be mounted EXCLUSIVE for UPGRADE or DOWNGRADE

Cause: The database was mounted for SHARED cluster access.

Action: Set the CLUSTER_DATABASE initialization parameter to FALSE and restart the server with the UPGRADE or DOWNGRADE option.

ORA-39702: database not open for UPGRADE or DOWNGRADE

Cause: An upgrade, downgrade, reload, or patch script was invoked when the database was not open for UPGRADE or DOWNGRADE.

Action: Use STARTUP UPGRADE to open the database for upgrade or to apply a patch set. Use STARTUP DOWNGRADE for running a downgrade script or the reload script.

ORA-39703: server version and script version do not match

Cause: An upgrade, downgrade, reload, or patch script was invoked, but the database instance version was not the version for which the script was intended.

Action: Check that the correct ORACLE_HOME and ORACLE_SID environment variables are set. Also check that the SQL script is being invoked from the correct ORACLE_HOME.

ORA-39704: permission to modify component registry entry denied

Cause: An attempt was made to modify an entry in the component registry, but the session user was not authorized; only the CONTROL or SCHEMA user for the component are authorized to modify the component registry entry.

Action: Connect as either the CONTROL or SCHEMA user for the component.

ORA-39705: component '*string*' not found in registry

Cause: No entry in the component registry was found for the specified component.

Action: Check the spelling of the component ID and use the DBA_REGISTRY view to list the existing components.

ORA-39706: Schema '*string*' is not found.

Cause: The schema name specified was not found in the database.

Action: Create the schema, or request privileges to the schema.

ORA-39707: compatible parameter *string* too high for downgrade to *string*

Cause: A downgrade was attempted, but the compatible initialization parameter value was greater than the downgrade release version.

Action: Once the compatible value has been raised, downgrade to earlier releases is not supported.

ORA-39708: component '*string*' not a *string* component

Cause: The component was not a component for the specified namespace.

Action: Either enter a valid component identifier for the namespace or set the session namespace to the correct component namespace.

ORA-39709: incomplete component downgrade; *string* downgrade aborted

Cause: One or more components did not have a status of DOWNGRADED.

Action: Correct the component problem and re-run the downgrade script.

ORA-39710: database in upgrade or downgrade mode, only SYSDBA and SYSOPER connections are allowed

Cause: An attempt was made to connect to the database with a non-administrative connection type while the database was open for an upgrade or a downgrade operation.

Action: Only the SYSDBA and SYSOPER types of administrative connections are allowed during the database upgrade or downgrade mode. For non-administrative users, wait for the upgrade or downgrade operation to complete and try connecting again later.

ORA-39711: critical patch number less than last installed CPU number

Cause: A Critical Patch Update (CPU) script was invoked that had a number that was less than the last CPU installed in the database.

Action: Check the DBA_REGISTRY_HISTORY view to identify the last CPU for the database, and install the most recent CPU.

ORA-39712: database cannot be opened by an Oracle Database Free server

Cause: An attempt was made to open a Standard Edition or Enterprise Edition database with an Oracle Database Free server.

Action: Use the Oracle Database Free server only with Oracle Database Free databases.

ORA-39714: upgrade script utlmmig.sql failed

Cause: A normal database open was attempted, but the upgrade script utlmmig.sql failed to complete.

Action: Use the UPGRADE option when opening the database and then run utlmmig.sql.

ORA-39715: Downgrade script UTLMMIGDOWN.SQL failed.

Cause: A normal database open was attempted, but the downgrade script UTLMMIGDOWN.SQL failed to complete.

Action: Use the DOWNGRADE option when opening the database and then run UTLMMIGDOWN.SQL.

ORA-39716: Downgrade for Oracle Label Security failed.

Cause: Downgrading Oracle Label Security module failed since OLS triggers were found in LBAC_TRIGGER schema.

Action: Disable all the OLS policies and delete all the triggers within LBAC_TRIGGER schema.

ORA-39726: unsupported add/drop column operation on compressed tables

Cause: An unsupported add/drop column operation for compressed table was attempted.

Action: When adding a column, do not specify a default value. DROP column is only supported in the form of SET UNUSED column (meta-data drop column).

ORA-39727: COMPATIBLE must be set to 10.0.0.0 or higher

Cause: An add/drop column operation for compressed table has been performed on the database. This requires COMPATIBLE to be set to 10.0.0.0 or higher during upgrade from 9.2 to a 10i or higher release.

Action: Set COMPATIBLE to 10.0.0.0 and retry the upgrade.

ORA-39728: compressed table cannot have column with LONG data type

Cause: One of the following was attempted: - Created a basic or advanced row-compressed table with a LONG data type. - Altered an existing table with a LONG data type to be basic or advanced row compressed. - Added a LONG data type column to a basic or advanced row-compressed table.

Action: LONG data types are not supported with basic or advanced row-compressed tables. Create the table without a LONG column or change the table to not use basic or advanced row compression. If adding a column, do not use the LONG data type. If modifying attributes of a column to change the data type to LONG the table cannot be basic or advanced row compressed.

ORA-39751: partitioned table on both sides of PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to partition both sides of PARTITIONED OUTER JOIN.

Action: Specify partitioned table on one side of PARTITIONED OUTER JOIN only.

ORA-39752: redundant column in partitioning and join columns is not allowed

Cause: An attempt was made to specify redundant columns in partitioning and join columns for NATURAL or named column PARTITIONED OUTER JOIN.

Action: Do not specify redundant column in partitioning and join columns.

ORA-39753: unsupported use of subquery in PARTITIONED OUTER JOIN condition

Cause: An attempt was made to use subquery in PARTITIONED OUTER JOIN condition.

Action: Remove subquery from the join condition.

ORA-39754: FULL PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to use FULL PARTITIONED OUTER JOIN.

Action: Specify FULL PARTITIONED OUTER JOIN through UNION of LEFT and RIGHT PARTITION OUTER JOIN.

ORA-39755: cannot use PARTITIONED OUTER JOIN with a left correlation

Cause: An attempt was made to use a PARTITIONED OUTER JOIN where the right side is a lateral view with a left correlation to the left side and is partitioned.

Action: Rewrite the query without the left correlation.

ORA-39761: stream reset required before loading this stream again

Cause: An attempt was made to load a stream that was previously loaded but has not been reset yet.

Action: Reset the specified stream and convert column array data to it before attempting to load it again.

ORA-39762: streams must be loaded in conversion order

Cause: An attempt was made to load a stream out of conversion order.

Action: Load streams in the same order they were converted.

ORA-39763: stream must be completely loaded before it is reset

Cause: An attempt was made to reset a stream that contains converted column array data and hasn't been completely loaded yet.

Action: Before resetting a stream, load it until a status of OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA is returned.

ORA-39764: specified stream is not in the specified direct path context

Cause: A direct path operation was attempted using a stream that was not created in the specified direct path context.

Action: Only use streams created in the specified direct path context.

ORA-39765: stream must be reset before used in a column array conversion

Cause: The stream was completely loaded, but has not been reset yet.

Action: Reset loaded streams after load returns OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA. The stream can then be used in a column array to stream conversion.

ORA-39766: invalid stream specified for column array conversion

Cause: A stream must be loaded and reset before used again in a column-array-to-stream conversion. This error is issued if another stream has subsequently been converted before the specified stream has been loaded, or if the latest load of this stream returned OCI_ERROR.

Action: Don't convert into a previous stream before it is loaded. Also, when load stream returns OCI_ERROR, the stream must be loaded again to insure any remaining information

in the stream is loaded. The stream must be loaded even if the last or only row was in error. There may be error information in the stream that needs to be sent to the server.

ORA-39767: finish is not allowed when unloaded stream data exists

Cause: A direct path finish was attempted when at least one stream buffer has not been completely loaded.

Action: All streams must be loaded after a column array to stream conversion until load stream returns a status of OCI_SUCCESS or OCI_NO_DATA. The load can then be finished.

ORA-39768: only one direct path context top level column array is allowed

Cause: Attempt to create multiple top level column arrays in a direct path context, when only one is allowed.

Action: Create another direct path context if additional top level column arrays are required.

ORA-39769: finish is not allowed with an incompletely loaded last row

Cause: Part of a row has been loaded, but it is not complete.

Action: Finish loading the current row when load stream returns OCI_ERROR or OCI_NEED_DATA.

ORA-39771: stream must be loaded before its handle is freed

Cause: An attempt was made to free a stream handle after conversion but before the stream was loaded.

Action: Load the stream until OCI_SUCCESS, OCI_NEED_DATA or OCI_NO_DATA is returned before attempting to free the stream handle. If OCI_NEED_DATA is returned, another stream must be loaded to complete last row.

ORA-39772: column array reset disallowed after OCI_CONTINUE or OCI_NEED_DATA

Cause: An attempt was made to reset a column array when a row conversion is still in progress.

Action: Complete the current row before resetting the column array. To ignore the current row when conversion returned OCI_NEED_DATA, set the current column flag to OCI_DIRPATH_COL_ERROR. This should be followed by a conversion, which will undo and ignore the row. The column array(s) can then be reset.

ORA-39773: parse of metadata stream failed

Cause: An unexpected error occurred while attempting to parse the metadata // stream for a table being loaded.

Action: Call Oracle support.

ORA-39774: parse of metadata stream failed with the following error:\n string

Cause: An unexpected error occurred while parsing the metadata stream.

Action: See the secondary error for more information.

ORA-39775: direct path API commit not allowed due to previous fatal error

Cause: An attempt was made to commit a Direct Path context after a fatal error.

Action: Correct the error and retry.

ORA-39776: fatal Direct Path API error loading table *string*

Cause: A fatal error was detected loading the specified or previous table.

Action: Correct the error and retry.

ORA-39777: data saves are not allowed when loading LOB columns

Cause: An attempt was made to save data when loading LOB columns or columns stored as LOBs (such as long varchars, varrays and XMLtypes).

Action: Do not attempt to do a data save or partial save when loading LOB columns. A finish save is allowed.

ORA-39778: the parallel load option is not allowed when loading lob columns

Cause: An attempt was made to load lob columns using the attribute OCI_ATTR_DIRPATH_PARALLEL. This error will also be issued when loading any columns that are stored as lobs (such as varrays and xml types).

Action: Do not use the parallel attribute when loading lob columns.

ORA-39779: type "*string*". "*string*" not found or conversion to latest version is not possible

Cause: Unable to import table data using the specified type. The type was nonexistent in the database or the input type could not be converted to the existing type. The reasons why a conversion was not possible are: 1. The version of the type in the database was greater than the version of the type at export time because 1 or more attributes have been added or dropped from the type. 2. If the type existed in the database prior to the import operation, then its internal identifier may not match the internal identifier of the type from the export database. The identifiers must match for an import to succeed.

Action: Ensure the types in the database match those at export time.

ORA-39780: Direct path context operations are not allowed after the context is aborted or finished

Cause: The specified direct path context was aborted or finished.

Action: Do not pass a direct path context that has ended to any direct path functions.

ORA-39781: Direct path stream loads are not allowed after another context loading the same table has ended

Cause: Attempt to load a stream in one context after another loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39782: Direct path prepare is not allowed after another context loading the same table has ended

Cause: Direct path prepare called after a context loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39783: Invalid direct path transaction active

Cause: Direct path operations were not performed in the transaction started by the first OCIDirPathPrepare call.

Action: Ensure the correct transaction is active prior to calling Direct Path API operations.

ORA-39784: This direct path operation is not allowed while another is in progress

Cause: Another direct path operation was active.

Action: Complete any direct path operations in progress before attempting this operation.

ORA-39785: SQL expressions returning ADT objects are not allowed in direct path

Cause: The passed SQL expression returned a user-defined ADT which was not supported.

Action: Remove the SQL expression.

ORA-39786: Number of columns does not match between export and import databases

Cause: External tables could not import into a table with mismatched columns.

Action: Ensure the number of columns matches between export and import database.

ORA-39787: Column *string* subtype "*string*".*string* is not instantiable.

Cause: Subtype specified was not instantiable.

Action: Ensure all subtypes specified are instantiable.

ORA-39788: Subtype "*string*".*string* is specified multiple times for column *string*.

Cause: Subtype specified was not unique.

Action: Ensure all subtypes specified are unique.

ORA-39789: "*string*".*string* is not a valid type for column *string*.

Cause: Subtype specified was not a valid type for the column being loaded.

Action: Ensure all subtypes specified are valid types for the column being loaded.

ORA-39790: Attribute "*string*" specified multiple times for column *string*.

Cause: Attribute specified multiple times.

Action: Ensure all attributes specified are unique.

ORA-39791: Attribute "*string*" for column *string* is not in subtype "*string*".*string*.

Cause: Attribute was not included in the subtype indicated.

Action: Ensure the attribute is included in the subtype indicated by the specified subtype index.

ORA-39792: Attribute "*string*" is not valid for subtype(s) loaded into column *string*.

Cause: Attribute specified was not included in any subtypes specified for the column or the declared subtype of the column.

Action: Ensure the attribute is included in at least one of the subtypes loaded into the column.

ORA-39793: Attribute "*string*" is not unique within the hierarchy being loaded.

Cause: The attribute was defined in multiple lines of descent in the hierarchy being loaded.

Action: When describing the attribute, a subtype index must be specified to uniquely identify the attribute being loaded.

ORA-39794: No attributes loaded for subtype "*string*".*string*".

Cause: None of the attributes loaded were included in the type shown.

Action: At least one attribute must be loaded for each subtype specified.

ORA-39795: Subtype index is not first attribute for object table or column, *string*.

Cause: The subtype index was not the first attribute when describing the attributes of an object column or object table with multiple subtypes.

Action: Describe the subtype index as the first attribute for this object column or object table.

ORA-39796: column array entry for *string* is not valid for the current subtype

Cause: This column was not part of the current subtype being loaded for this object column or table. Therefore, its entry must be null in the column array.

Action: Set the column array entry to null.

ORA-39797: The subtype index value is not valid.

Cause: The subtype index value in the column array was not valid for the object column or object table.

Action: Set a valid subtype index value in the column array for this table or column.

ORA-39798: The column array row offset *number* is out of range (max: *number*).

Cause: The specified row offset was too large for the column array.

Action: Ensure the row offset is in range.

ORA-39799: The column index *number* is out of range (max: *number*).

Cause: The specified column index was too large for the column array.

Action: Ensure the column index is in range.

ORA-39800: Database version *number* does not support the load of multiple subtypes.

Cause: Direct Path API support for loading multiple subtypes of an object table or column was only present in the Oracle 11 release and higher.

Action: Upgrade database to Oracle 11 or higher.

ORA-39801: Subtype "*string*".*string*" is not a valid subtype for column *string*.

Cause: Subtype specified was not the declared type nor was it derived from the declared type.

Action: Ensure all subtypes specified are either the declared type or derived from the declared type.

ORA-39802: ADT object column *string* specified a SQL expression which is not allowed in direct path mode.

Cause: The ADT column reported in the error specified a SQL expression which returned the ADT. This is not supported.

Action: Remove the SQL expression.

ORA-39803: Data saves are not allowed on tables with partitioning referential constraints.

Cause: Data saves (and the `sqlldr ROWS` parameter) are not allowed when loading both the parent and child tables of a partitioning referential constraint.

Action: Do not attempt data saves when loading both the parent and child tables of a partitioning referential constraint.

ORA-39804: The load was aborted due to an error loading parent *string* while also loading child *string*.

Cause: An error occurred while loading the child and parent table of a partitioning referential constraint. The load was aborted to ensure the partitioning referential constraint was not violated.

Action: Fix the error that caused the load to abort and retry.

ORA-39805: Parallel loads are not allowed when loading child and parent.

Cause: A parallel load was requested when loading the child and parent of a partitioning referential constraint. This is not allowed.

Action: Remove the parallel option.

ORA-39806: The attempt to lock *string* parent table *string string string* failed.

Cause: While loading the child table of a partitioning referential constraint, the parent table must be locked in SHARE mode.

Action: Determine why the parent table could not be locked and retry.

ORA-39807: Partial data save on child *string* was ignored.

Cause: An attempt was made to partially save data when loading both the child and parent of a partitioning referential constraint or when loading a table with a domain index.

Action: Fix the error that caused the partial load and retry.

ORA-39808: The `SINGLEROW` option must be specified for parent table *string*.

Cause: The `SINGLEROW` option was not specified when loading both the parent and child table of a partitioning referential constraint.

Action: Ensure the `SINGLEROW` option is specified for the parent when loading the parent and child of a partitioning referential constraint.

ORA-39809: Data saves are not allowed on tables with domain indexes.

Cause: Data saves (and the `sqlldr ROWS` parameter) could not be allowed when loading a table with domain indexes.

Action: Do not attempt data saves when loading a table with domain indexes.

ORA-39810: Data saves are not allowed when NO_INDEX_ERRORS is specified.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading with the NO_INDEX_ERRORS option.

Action: Do not attempt data saves when loading a table with the NO_INDEX_ERRORS option.

ORA-39811: index *string.string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39812: index *string.string* partition *string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39813: index *string.string* had *string* partition errors:

Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: Fix the error(s) and retry.

ORA-39814: The SKIP_INDEX_MAINTENANCE option is not allowed with NO_INDEX_ERRORS.

Cause: The SKIP_INDEX_MAINTENANCE option was used with the NO_INDEX_ERRORS option.

Action: Do not use SKIP_INDEX_MAINTENANCE with NO_INDEX_ERRORS.

ORA-39815: Direct Path Unload of an external table is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload an external table.

Action: Do not use Direct Path Unload to unload an external table.

ORA-39816: Direct Path Unload of tables with encrypted column(*string.string*) is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload a table with encrypted columns.

Action: Do not use Direct Path Unload to unload a table with encrypted columns.

ORA-39817: index *string.string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39818: index *string.string* partition *string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39819: The OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute cannot be set to TRUE in direct path parallel loads.

Cause: An attempt was made to set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute to TRUE in a direct path parallel load.

Action: Do not set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS to TRUE for direct path parallel loads.

ORA-39820: Zero length LONG piece detected for column *string* row *string*.

Cause: A zero length piece was detected for a LONG column.

Action: Do not use a length of zero when loading LONG columns.

ORA-39821: domain index on columnar data made unusable

Cause: An attempt was made to load a columnar table with a domain index using SQL*Loader direct part load

Action: n/a

ORA-39822: A new direct path operation is not allowed in the current transaction.

Cause: All previous direct path contexts ended and the current transaction was ready for a commit or abort of those changes.

Action: Commit or abort the current transaction, and start a new transaction for the next direct path context.

ORA-39823: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS is only allowed for load operations.

Cause: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS was set for a nonload operation.

Action: Use OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS for load operations only.

ORA-39824: The OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS attribute was set when no transaction was active.

Cause: There was no active transaction to use.

Action: Start a transaction or do not set the attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS to TRUE.

ORA-39825: Direct path load of view or synonym (*string.string*) with multiple dependencies not permitted.

Cause: An attempt was made to load a view or synonym which has more than a single dependency.

Action: A view or synonym being loaded by the direct path API must resolve to a single object.

ORA-39826: Direct path load of view or synonym (*string.string*) could not be resolved.

Cause: A synonym or view could not be translated.

Action: Verify that the view or synonym is valid.

ORA-39827: Direct path load of PL/SQL function not permitted.

Cause: An attempt was made to load a PL/SQL function with the direct path API.

Action: Remove PL/SQL function the direct path load.

ORA-39828: Constraint *string* was disabled because of index *string.string* error.

Cause: The index used for the constraint was set as unusable.

Action: Fix the error that caused the index to be set unusable.

ORA-39829: function-based index on columnar data made unusable

Cause: An attempt was made to load a columnar table with a function-based index using SQL*Loader direct path load.

Action: Rebuild the function-based index after the load completes.

ORA-39830: XML parsing failed in *string*

Cause: XML parser returned an error while trying to parse the document.

Action: Fix the error that caused the document to be invalid.

ORA-39831: Direct path load failed, (*string.string*) is not a table.

Cause: Object being loaded did not resolve to a table.

Action: Verify that the view or table name is correct.

ORA-39832: Direct path unload was not allowed due to columns with default values.

Cause: Direct path unload was attempted on a table with columns that have default values.

Action: Do not attempt a direct path unload of a table with columns that have default values.

ORA-39833: Direct path parallel load was not allowed on a temporary table.

Cause: A direct path parallel load was attempted on a temporary table.

Action: Do not attempt a direct path parallel load on a temporary table.

ORA-39834: Direct path load or unload was not allowed on a remote table.

Cause: An attempt was made to specify a remote table in a direct path API load or unload.

Action: Do not specify a remote table in a direct path API load or unload.

ORA-39835: Direct path load partition memory exceeded. PGA use is *string*kb, PGA limit is: *string*kb

Cause: A direct path load ran out of process memory when loading multiple partitions.

Action: Use the PARTITION_MEMORY parameter to limit memory used when loading many partitions. Once this limit is reached, loading of some partition rows will be delayed until memory use falls below the limit. Use a value (kb) lower than the current program global area (PGA) limit included in this message and try the load again.

ORA-39836: Invalid direct path API server context detected

Cause: The data cartridge encountered an unexpected condition.

Action: Contact Oracle Support Services.

ORA-39837: Direct path loading does not support the DEFAULT value clause for column *string*.

Cause: Direct path loading could not support loading the default value for the data type of the indicated column.

Action: Use conventional path loading. Otherwise, use DEFAULTS=IGNORE, DEFAULTS=IGNORE_UNUNSUPPORTED_EVALUATE_ONCE or DEFAULTS=IGNORE_UNUNSUPPORTED_EVALUATE EVERY_ROW.

ORA-39838: Direct path load of a specific partition with interval subpartitioning is not allowed.

Cause: An attempt was made to load a specific partition of a table that was interval subpartitioned. This is not supported by the Direct Path API.

Action: Load the entire table when the table is interval subpartitioned.

ORA-39839: Direct path default expression cache size (*string*) is too large.

Cause: An attempt was made to allocate a default expression cache that was too large.

Action: Use a smaller value for the default expression cache and retry.

ORA-39840: A data load operation has detected data stream format error *string*.

Cause: A dump file data stream format error was detected during a load operation.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39841: A data load operation detected a data stream format error (see next error), attempting to continue.

Cause: A dump file data stream format error was detected during a load operation. An attempt was made to continue the load from a point beyond the corruption.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support.

ORA-39842: Data load operation was discontinued due to the previous data stream format error.

Cause: A dump file data stream format error was detected during a load operation. The operation was aborted.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39843: Invalid direct path API server context detected

Cause: The data cartridge encountered an unexpected condition.

Action: Contact Oracle Support Services.

ORA-39844: Bad stream format detected: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: A dump file data stream format or initialization error was detected during a load or import operation.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39845: A data load operation detected a data stream format error, attempting to continue.

Cause: A dump file data stream format error was detected during a load operation. An attempt was made to continue the load from a point beyond the corruption.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39846: The specified number format for column *string* was invalid.

Cause: The specified number format for the column was not valid.

Action: Specify a valid numeric format and try again.

ORA-39847: Value too large for column *string* (maximum: *string*)

Cause: An attempt was made to load a column with a value which is too large, possibly after conversion. The maximum value is in characters for character length semantics and bytes for byte length semantics.

Action: Ensure that the destination column is large enough to hold the maximum possibly converted result.

ORA-39849: corrupt metadata stream detected for table *string*

Cause: The metadata stream for the table was corrupt. Because of the corruption, the table data could not be loaded.

Action: Verify that the file has not been modified since it was created. If it has, use a copy of the original file. If not, contact Oracle Support Services.

ORA-39850: Sequence expressions are not supported for SQLLDR direct path loads on server versions prior to Oracle Database 23c.

Cause: An attempt was made to use a SQLLDR SEQUENCE expression on a server version that did not support it.

Action: Do not attempt to use a SQLLDR SEQUENCE expression on server releases prior to Oracle Database 23c.

ORA-39851: Subtype instances are not supported by this function.

Cause: An attempt was made to use a subtype of a hierarchy as an attribute to a function that does not support subtypes.

Action: Ensure that the argument is not an instance of a subtype of a hierarchy.

ORA-39852: Use of non-primary key based OID table is not allowed by this function.

Cause: An attempt was made to use a non-primary key based object identifier (OID) table as input to a function that did not support it.

Action: Ensure that the table is a primary key based OID table.

ORA-39853: type "*string*".*string*" version *number* type unique identifier (TOID) "*string*" not found

Cause: Unable to import table data using the specified type. The type was nonexistent in the database.

Action: Ensure the types in the database match those at export time.

ORA-39854: Unable to fetch all partition statistics due to lock contention.

Cause: Attempt to get the partition load statistics failed.

Action: Try the load again if partition load statistics needed.

ORA-39855: unable to fetch unload method: (*string*)

Cause: An attempt to fetch unload method failed.

Action: Contact Oracle Support.

ORA-39861: auxiliary data file copy file for Pluggable Database *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-39862: RESETLOGS option only valid after a Pluggable Database incomplete recovery

Cause: The ALTER PLUGGABLE DATABASE OPEN RESETLOGS command was issued, but the Pluggable Database was not flashed back or point-in-time recovered.

Action: Retry the ALTER PLUGGABLE DATABASE OPEN command without specifying RESETLOGS.

ORA-39863: An earlier Pluggable Database incomplete recovery failed.

Cause: An earlier Pluggable Database flashback or point-in-time recovery failed.

Action: Retry the Pluggable Database flashback or incomplete recovery.

ORA-39864: Data file *string* on standby database must be restored and renamed, and standby database recovery must be restarted.

Cause: A missing data file was added on a standby database in response to a Pluggable Database (PDB) OPEN RESETLOGS command on the primary database. This data file must be restored and renamed on the standby database before standby database recovery can be restarted.

Action: Restore the missing data file and rename it on the standby database, then restart standby database recovery.

ORA-39865: cannot FLASHBACK beyond Pluggable Database resetlogs operation

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database resetlogs system change number (SCN).

Action: Choose a FLASHBACK SCN that is more recent than the Pluggable Database resetlogs SCN.

ORA-39866: Data files for Pluggable Database *string* must be offline to flashback across special 12.1 PDB resetlogs.

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database (PDB) resetlogs performed at 12.1 compatibility. Furthermore, the PDB resetlogs was performed after a flashback or point-in-time recovery (PITR) of the PDB to its parent database incarnation. This is not supported unless all data files in the PDB are offline.

Action: Take the data files for the Pluggable Database (PDB) offline before performing the FLASHBACK DATABASE command. To bring the PDB to the same past point in

time as the container database (CDB), those data files can be restored from backups and recovered to that same past point in time. This can be done in one of two ways: * Flashback the CDB and open the CDB with resetlogs. Restore the PDB later, and perform a complete PDB recovery. * Flashback the CDB first. Restore and recover the PDB to the same system change number (SCN). Open CDB with resetlogs.

ORA-39867: PDB restore point '*string*' is on an orphan incarnation of the pluggable database.

Cause: The specified PDB restore point was on an orphan incarnation of the pluggable database. One cannot flashback a pluggable database to an orphan incarnation.

Action: Check the restore point and make sure the feature is enabled.

ORA-39868: The specified PDB target incarnation is not on the current database ancestor path.

Cause: The specified recover target incarnation for the pluggable database (PDB) was not on the current database ancestor path.

Action: Specify a recovery target incarnation that is on the current database ancestor path.

ORA-39869: cannot flashback/PITR to a point on orphan PDB incarnation

Cause: An attempt was made to flashback/PITR the Pluggable Database(PDB) to a point on the orphan PDB incarnation. PDB flashback/PITR to a point on orphan PDB incarnation is not supported on standby database or when the database is in shared undo mode.

Action: If flashback/PITR not on standby database, then flashback/PITR the pluggable database to a point after the undo mode was changed to local undo.

ORA-39870: container database is not open in read/write mode

Cause: A command was attempted that requires the container database (CDB) to be open in read/write mode.

Action: Open the container database in read/write mode and try the command again.

ORA-39871: An earlier Pluggable Database resetlogs operation failed after making changes.

Cause: An earlier ALTER PLUGGABLE DATABASE OPEN RESETLOGS command failed after it made some changes.

Action: Perform another Pluggable Database point-in-time recovery before attempting to open the Pluggable Database with RESETLOGS.

ORA-39872: Data file *number* is in the middle of Pluggable Database resetlogs operation.

Cause: The data file was in the middle of a Pluggable Database resetlogs operation.

Action: Find the right file version or perform more media recovery. For additional information, see other errors.

ORA-39873: Restore all data files to a checkpoint SCN lower than *string*.

Cause: This error provides additional information for error 39874.

Action: Restore the data files as suggested and restart the recovery process.

ORA-39874: Pluggable Database *string* recovery halted

Cause: The Pluggable Database was recovered into an orphan branch.

Action: Restore all data files to a checkpoint system change number (SCN) lower than the branch point and restart the recovery process. Check the alert log for additional information.

ORA-39875: Data file *string* is in the middle of Pluggable Database resetlogs operation.

Cause: The data file is in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: If possible, recover the data file further so that it is not in the middle of a PDB resetlogs operation. Another alternative is to perform PDB point-in-time recovery.

ORA-39876: cannot perform CDB OPEN RESETLOGS because data file *string* is in the middle of a PDB resetlogs operation

Cause: The data file mentioned was in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: Recover the container database (CDB) to a different system change number (SCN) at which the data files are not in the middle of a PDB resetlogs operation. Alternatively, you can offline the problematic data file and let CDB OPEN RESETLOGS succeed. You may need to perform PDB point-in-time recovery later in order to open the PDB of the offlined data file.

ORA-39877: keyword ONLINE or OFFLINE expected

Cause: The ONLINE or OFFLINE keyword was not specified after the ALL keyword.

Action: Use the correct syntax.

ORA-39878: Only one Pluggable Database name can be specified.

Cause: Multiple Pluggable Database names were specified for the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify only one Pluggable Database name.

ORA-39879: Pluggable Database *string* is in the middle of a Pluggable Database RESETLOGS operation

Cause: There was already an on-going Pluggable Database OPEN RESETLOGS operation for this Pluggable Database.

Action: If needed, retry after the Pluggable Database OPEN RESETLOGS operation completes.

ORA-39880: One or more pluggable databases were in the middle of a point-in-time recovery at this incomplete database recovery SCN.

Cause: In the past, one or more pluggable databases had an active pluggable database RESETLOGS operation as of this incomplete recovery SCN.

Action: Additional messages are logged in the alert log indicating all of the pluggable databases affected by this container database OPEN RESETLOGS operation. Recover the container database to a different system change number (SCN) at which none of the pluggable databases had an active RESETLOGS operation. To continue the container database OPEN RESETLOGS operation at the same SCN, offline all of the data files of the affected pluggable databases first and reissue the command. However, a new point-in-time recovery of the affected pluggable databases would be required before these databases can be opened again.

ORA-39881: Pluggable database *string* must be closed while recovering the physical standby across PDB RESETLOGS

Cause: The pluggable database (PDB) is open while the physical standby is recovering across a PDB RESETLOGS operation for the PDB.

Action: Close the PDB and restart physical standby recovery.

ORA-39882: cannot create clean pluggable database restore point for the specified pluggable database (con_id:string)

Cause: There were still outstanding transactions in the closed pluggable database.

Action: Retry the command after opening the pluggable database and closing all outstanding transactions. Alternatively, create a normal pluggable database restore point.

ORA-39883: Restore point *string* for pluggable database *string* is not a clean pluggable database restore point.

Cause: For a pluggable database using shared undo, there was an attempt to flashback pluggable database in SQL without a clean pluggable database restore point. The specified restore point was not a clean pluggable database restore point.

Action: Do one of the following: - Issue flashback pluggable database in RMAN. - Issue the SQL flashback pluggable database command to flashback to a clean pluggable database restore point. - Turn on local undo mode for the pluggable database. The SQL flashback pluggable database command can always be used to flashback a pluggable database using local undo.

ORA-39884: Flashback of PDB (con_id:string) cannot restore data file *string* which is currently used by PDB (con_id:string).

Cause: The data file required to flashback the specified pluggable database to the specified point in time could not be restored. The file number of the pluggable database data file was used by a different pluggable database.

Action: Flashback the pluggable database to a different point-in-time. Alternatively, drop the conflicting data file from the database first before you flashback the pluggable database. If neither option can be used, you can also flashback the entire consolidated database or restore and recover a copy of the consolidated database to the specified point-in-time. You can then extract the recovered data.

ORA-39885: flashback/PITR of a pluggable database before its creation is not allowed

Cause: The flashback/PITR System Change Number (SCN) or timestamp specified was less than the pluggable database creation SCN or timestamp. Flashback/PITR SCN or timestamp cannot be less than the pluggable database creation SCN or timestamp.

Action: Check the flashback/PITR SCN or timestamp and retry the command.

ORA-39886: With shared undo, one can only use an SQL command to flashback a pluggable database (PDB) to a clean PDB restore point.

Cause: The command issued did not specify a clean pluggable database restore point. For a pluggable database using shared undo, one can only use the SQL Flashback pluggable database command to flashback to a clean pluggable database restore point.

Action: Do one of the following: - Issue flashback pluggable database in RMAN. - Issue the SQL flashback pluggable database command to flashback to a clean pluggable database restore point. - Turn on local undo mode for the pluggable database. The SQL flashback pluggable database command can always be used to flashback a pluggable database using local undo.

ORA-39887: Cannot create restore points for SEED PDB

Cause: There was an attempt to create a restore point for SEED PDB.

Action: Create restore points in ROOT or for a different pluggable database.

ORA-39888: Guaranteed restore points exist for pluggable database *string*.

Cause: There was an attempt to drop or unplug a pluggable database when there were still guaranteed restore points for this pluggable database.

Action: Drop all the guaranteed restore points for the pluggable database before dropping the pluggable database.

ORA-39889: Specified System Change Number (SCN) or timestamp is in the middle of a previous PDB RESETLOGS operation.

Cause: The specified System Change Number (SCN) or timestamp was in the middle of a previous PDB RESETLOGS operation. More specifically, each PDB RESETLOGS operation may create a PDB incarnation as shown in v\$pdb_incarnation. Any SCN between INCARNATION_SCN and END_RESETLOGS_SCN or any timestamp between INCARNATION_TIME and END_RESETLOGS_TIME as shown in v\$pdb_incarnation is considered in the middle of the PDB RESETLOGS operation.

Action: Flashback the PDB to an SCN or timestamp that is not in the middle of a previous PDB RESETLOGS operation. If flashback to a SCN on the orphan PDB incarnation is required, then use "RESET PLUGGABLE DATABASE TO INCARNATION" RMAN command to specify the pluggable database incarnation along which flashback to the specified SCN must be performed. Also, ensure that the feature is enabled.

ORA-39890: Flashback or PITR of a pluggable database to a System Change Number (SCN) or timestamp before latest undo mode switch is not allowed.

Cause: An attempt was made to flashback/PITR a pluggable database (PDB) to a System Change Number (SCN) or timestamp that precedes the latest switch between shared and local undo.

Action: Flashback/PITR a pluggable database (PDB) to an SCN or timestamp that comes after the latest switch between shared and local undo.

ORA-39891: Clean PDB restore point cannot be created when CDB is in local undo mode.

Cause: There was an attempt to create a clean restore point when the CDB was in local undo mode. This is not supported. Clean PDB restore points are designed for CDB in shared undo mode. They are not useful for CDB in local undo mode.

Action: Do not use "clean" option when creating the restore point.

ORA-39892: PDB PITR/Flashback to a point in time on an orphan database incarnation is not allowed.

Cause: An attempt was made to flashback or point-in-time recovery (PITR) of a pluggable database (PDB) to a point in time that falls on an orphaned database incarnation.

Action: Flashback or PITR a pluggable database (PDB) to an earlier point in time that falls somewhere along the database direct ancestor path from the current database incarnation.

ORA-39893: PDB restore point could not be created

Cause: There was an attempt to create a restore point for a pdb that was still in the process of being created or was never opened before.

Action: Retry the operation after pdb creation is complete and opened once.

ORA-39894: PDB restore point could not be created

Cause: There was an attempt to create a restore point for a pdb when an application install or upgrade was going on.

Action: Retry the operation after application install or upgrade is complete.

ORA-39895: unable to flashback or PITR a pluggable database

Cause: The flashback or point-in-time recovery (PITR) system change number (SCN) or timestamp specified was less than the SCN or timestamp at which the pluggable database was first opened in read/write mode.

Action: Check the flashback or PITR SCN or timestamp and retry the command.

ORA-39896: INSTANCES clause and RESETLOGS keyword cannot be used together in ALTER PLUGGABLE DATABASE command

Cause: The INSTANCES clause was specified in the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify either the INSTANCES clause or the RESETLOGS keyword in the command, but not both.

ORA-39897: A required flashback log has been reused during flashback of a pluggable database.

Cause: At least one required flashback log has been reused during flashback of a pluggable database.

Action: You can no longer flashback this pluggable database to the same point-in-time as specified because a required flashback log file has been reused. You may still be able to flashback this pluggable database to a more recent point-in-time. You can also recover the pluggable database to undo the effect of the failed flashback pluggable database operation.

ORA-39898: unable to locate the specified timestamp along any of the pluggable database incarnations

Cause: The specified timestamp could not be located on any of the Pluggable Database (PDB) incarnations. This could be because the system timestamp went backwards at some point in the past.

Action: Pick a different timestamp, or try using flashback to SCN.

ORA-39899: User specified recovery target incarnation %0!s does not belong to pluggable database %1!s (%2!s)

Cause: The recovery target incarnation did not belong to the pluggable database.

Action: Specify a valid pluggable database recovery target incarnation that belongs to the pluggable database.

ORA-39900: specified SCN is beyond the PDB recovery target incarnation

Cause: The specified System Change Number (SCN) was beyond the specified Pluggable Database (PDB) recovery target incarnation.

Action: Use a valid SCN that lies on the PDB recovery target incarnation or set a valid PDB recovery target incarnation corresponding to the specified SCN.

ORA-39901: Partitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_TAB_PARTITIONS.

ORA-39902: Subpartitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table subpartitions by querying SYS.DBA_TAB_SUBPARTITIONS.

ORA-39903: IOT Partition *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_IND_PARTITIONS.

ORA-39904: Partitioned object *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check partitions and overflow segments by querying SYS.DBA_IND_PARTITIONS and SYS.DBA_TAB_PARTITIONS.

ORA-39905: Table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39906: Constraint *string* between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39907: Index *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39908: Index *string.string* in tablespace *string* enforces primary constraints *string* of table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39909: Index *string.string* in tablespace *string* points to table/cluster *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39910: Partitioned Global index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39911: Index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39912: Partitioned index *string.string* in tablespace *string* points to table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39913: *string string.string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39914: Index *string.string* in tablespace *string* points to subpartition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39915: Partition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39916: Subpartition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39917: SYS owned object *string* in tablespace *string* not allowed in pluggable set

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39918: PLSQL Functional Index *string.string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39919: Object *string.string* in tablespace *string* not contained within transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check SYS.DBA_OBJECTS.

ORA-39920: Rollback segment *string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39921: Default Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39922: Default Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39923: Default Composite Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39924: Default Composite Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39925: LOB segment *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39926: Join index between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39927: Scoped REF constraint between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39928: *string string.string* in tablespace *string* contains evolved type data that have not been upgraded.

Cause: Transportable tablespace operation could not be performed because some tables depending on evolved types were not upgraded.

Action: Transportable tablespace operation can only be performed when all tables depending on evolved types have been upgraded. Perform ALTER TABLE <tab_name> UPGRADE for the table name listed in the message above

ORA-39929: Table *string.string* in tablespace *string* has encrypted columns which are not supported.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39930: Violation *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Contact Oracle Support Services.

ORA-39931: XML Schema *string* Owner: *string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated elements and resolve self containment.

ORA-39932: Extensible Index *string.string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated table and list of secondary objects and resolve self containment.

ORA-39933: Parent table *string.string* and its nested table columns are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the nested tables using view DBA_NESTED_TABLES and resolve self containment.

ORA-39934: Materialized view log *string.string* in tablespace *string* and master table *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39935: Updatable materialized view log *string.string* in tablespace *string* and materialized view *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39936: Token manager for the CSX tablespace *string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Include the specified tablespace into the transportable set.

ORA-39937: Unsupported operation, default token tables used for binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Copy default token tables into a new token table set using DBMS_CSX_ADMIN package.

ORA-39938: Operation not supported, tablespace *string* contains binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39939: More than one set of token tables are used in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Remap tables in the specified tablespace to use same token tables.

ORA-39940: Child reference partitioned table *string.string* in tablespace *string* or parent table *string.string* in tablespace *string* is included but not both.
