Cause: The provided reference class name was not found in the build data.

Action: Provide an existing target value as the reference class name.

OCI-40026: reference class name not found in the weights table

Cause: The provided reference class name did not correspond to any of the entries in the weights table.

Action: Provide consistent specification for reference class name and weights table.

OCI-40027: Target attribute has more than two distinct values

Cause: Generalized Linear Models only support binary classification.

Action: Consolidate target values into two distinct categories.

OCI-40028: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor build data were not properly scaled.

Action: Standardize the predictor build data by enabling auto prep.

OCI-40029: Specified diagnostics table name already exists

Cause: A diagnostics table name matching an existing table was specified.

Action: Choose a table name that does not match any existing user table.

OCI-40030: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the forced-in features.

Action: If there are forced-in features, remove them. If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

OCI-40031: too many forced-in features (maximum allowable 1000)

Cause: Too many forced-in features were specified or the features were high cardinality attributes, or both.

Action: Reduce the number of forced-in attributes.

OCI-40032: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the selected features.

Action: If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

OCI-40033: invalid covariance matrix

Cause: This was caused by one or more of the following: - Data rows were too few in number. - Mining attributes were too many. - Ridge regression was on.

Action: Modify the data or disable ridge regression to get a valid covariance matrix and full diagnostic statistics.

OCI-40034: FORCE_IN incompatible with the setting GLMS_FTR_SELECTION disabled

Cause: The setting GLMS_FTR_SELECTION which was disabled was incompatible with the specified FORCE_IN transformation.

Action: Either enable the setting `GLMS_FTR_SELECTION`, or respecify the `FORCED_IN` transformation to be compatible with the disabled `GLMS_FTR_SELECTION` setting.

OCI-40035: more FORCE_IN features than rows in the data or in a partition

Cause: The number of `FORCE_IN` transformations was larger than the number of rows in the data or in a partition. The model cannot be built as specified and all forced-in transformations will be disabled.

Action: Either revise the `FORCED_IN` transformations to be less than the number of rows in the data or in a partition, or the model will be built with all forced-in transformations disabled.

OCI-40051: too few rows to estimate the specified model

Cause: The time series had fewer rows than the number of parameters in the model.

Action: Choose a simpler model type with fewer parameters.

OCI-40052: series contains large numbers; possible numerical instability

Cause: The time series contained numbers greater than 1 million.

Action: Scale the data.

OCI-40053: inappropriate data for multiplicative model

Cause: The time series was not strictly positive.

Action: Choose a model type that does not contain a multiplicative trend or seasonality.

OCI-40054: time series is constant

Cause: The time series was constant.

Action: Choose a model type that does not contain a multiplicative trend or seasonality.

OCI-40055: too few rows to estimate trend

Cause: The time series had too few rows to obtain an initial trend estimate.

Action: Choose a simple exponential model type.

OCI-40056: must provide a valid EXSM_INTERVAL setting

Cause: A valid value was not specified for the `EXSM_INTERVAL` setting. If the case ID column type is `datetime`, a valid `EXSM_INTERVAL` setting must be provided.

Action: Specify a valid `EXSM_INTERVAL` setting.

OCI-40057: must provide a valid case ID column

Cause: The case ID column was required to provide time labels, but a valid case ID column was not provided.

Action: Specify a valid case ID column name as input.

OCI-40058: seasonal effect not estimable for irregular time series

Cause: There was no consecutive one year period containing all existing seasons.

Action: Choose a model type with no seasonal effect.

OCI-40059: ancillary series must only be specified once in EXSM_SERIES_LIST

Cause: An ancillary series was repeated in `EXSM_SERIES_LIST`.

Action: Remove the duplicate series name from `EXSM_SERIES_LIST`.

OCI-40060: ancillary series *string*, when prefixed, will exceed maximum column length

Cause: The name of ancillary series will be prefixed to denote that the output column is a forecast. The output column would exceed the maximum allowed column length.

Action: Replace the column name with a name of length less than 126.

OCI-40061: number of ancillary series specified exceeds limit

Cause: The number of ancillary series exceeds the limit of 20.

Action: Reduce the specified ancillary series list to 20.

OCI-40062: one or more ancillary series cannot be estimated

Cause: One or more ancillary series had all NULL values.

Action: Provide non-NULL values for each series or remove from `exsm_series_list`.

OCI-40063: specified EXSM_INTERVAL is too small to build model on the data

Cause: The specified EXSM_INTERVAL would generate too many missing values in the interval-accumulated data to build a model.

Action: Specify a larger time interval.

OCI-40081: invalid name for the right bound column of XGBoost AFT model

Cause: The right bound column name for the XGBoost Accelerated Failure Time (AFT) model was invalid.

Action: Choose a valid right bound column name for the XGBoost AFT model.

OCI-40091: JSON values cannot be compared.

Cause: A comparison of two JSON values failed because the types of the values were incompatible for comparison.

Action: Convert the values so that the data types are compatible.

OCI-40098: invalid option for ON EMPTY clause in JSON_TRANSFORM for path *string*

Cause: An invalid option for the ON EMPTY clause is provided for the JSON_TRANSFORM operation.

Action: Specify a different option for ON EMPTY, or omit the ON EMPTY clause and accept the default ON EMPTY option for this operator. Common ON MISMATCH options are ERROR ON EMPTY, IGNORE ON MISMATCH, or NULL ON EMPTY.

OCI-40099: invalid option for ON ERROR clause in JSON_TRANSFORM for path *string*

Cause: An invalid option for the ON ERROR clause is provided for the JSON_TRANSFORM operation.

Action: Specify a different option for ON ERROR, or omit the ON MISMATCH clause and accept the default ON ERROR option for this operator. Common ON ERROR options are ERROR ON ERROR, or IGNORE ON ERROR.

OCI-40100: invalid option for ON MISMATCH clause in JSON_TRANSFORM for path *string*

Cause: An invalid option for the ON MISMATCH clause is provided for the JSON_TRANSFORM operation.

Action: Specify a different option for ON MISMATCH, or omit the ON MISMATCH clause and accept the default ON MISMATCH option for this operator. Common ON MISMATCH options are ERROR ON MISMATCH, IGNORE ON MISMATCH, or NULL ON MISMATCH.

OCI-40101: Data Mining System Error *string-string-string*

Cause: An internal system error occurred during a data mining operation.

Action: Contact Oracle Support Services.

OCI-40102: invalid input *string* for data mining operation *string*

Cause: The input parameter was either not specified or invalid for the given operation.

Action: Provide a valid parameter value. Check the range for the NUMBER parameters or the column name for the PARTITION BY expression.

OCI-40103: invalid case-id column: *string*

Cause: The case-id column was invalid. If a case-id column is specified, it must be present in the input data source. The case-id column cannot be the same as the target column, and the column's data type is restricted to NUMBER, CHAR, and VARCHAR2 when building a GLM model with a diagnostics table.

Action: Change the schema of your input data to supply a case-id column of appropriate data type.

OCI-40104: invalid training data for model build

Cause: The training data provided in the reported table is unsuitable for build, either because it is empty, has unsuitable data, or the schema of the table does not match the input specifications.

Action: Inspect the training data and correct the contents/schema as appropriate.

OCI-40105: input data incompatible with model signature

Cause: The data provided for this post-build operation is in format different from that used for model build.

Action: Provide data whose attribute data types match the build data. Input data attributes must have the same data types as those described in the model signature for the model.

OCI-40106: positive target value not specified for computing Lift

Cause: Positive target value has not been specified for Lift.

Action: Provide a positive target value for the Lift operation.

OCI-40107: operation requires *string* RDBMS option to be installed

Cause: The specified option was not installed with the RDBMS.

Action: Install the required option and retry the operation.

OCI-40108: input data contains too few distinct target (*string*) values

Cause: At least two distinct target values are required for Build.

Action: Provide counter-example target values in the input data.

OCI-40109: inconsistent logical data record

Cause: Repeated instances of a record identifier or repeated attributes found in a nested column.

Action: Remove or relabel repeated instances to resolve inconsistencies.

OCI-40110: Duplicate model tables found for table type *string*

Cause: Operation would result in duplicate model table types which is not supported.

Action: Remove the duplicate entry.

OCI-40111: no mining attributes found in build data

Cause: Could not build a model when only special or empty columns were present. Special columns include target, row weight, and case ID columns.

Action: Provide mining attribute data.

OCI-40112: insufficient number of valid data rows

Cause: Fewer than two valid data rows were found in the build data.

Action: Provide at least two valid build data rows. If the model is either a classification or regression model, then valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

OCI-40113: insufficient number of distinct target values

Cause: Less than two distinct target values were found in the build data.

Action: Provide the classification build data with valid rows containing at least two distinct target values. Valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

OCI-40114: weights table target values mismatched with build data

Cause: The entries in the weights table did not correspond to the target values in the build data.

Action: Verify the entries in the weights table.

OCI-40115: weights table schema is incorrect

Cause: The weights table did not have the required schema.

Action: Provide a weights table with schema: (target_value, weight), where the type of the first column corresponds to the type of the target column (CHAR, VARCHAR2 or NUMBER) and the type of the second column is NUMBER.

OCI-40116: NULL values found in weights table

Cause: The weights table had NULL entries.

Action: Replace or eliminate all NULL entries in the weights table.

OCI-40117: repeated target values found in weights table

Cause: The weights table had repeated target values.

Action: Remove the repeated target values from the weights table.

OCI-40118: insufficient number of target values in weights table

Cause: The weights table had less than 2 target values.

Action: Provide at least two target values in the weights table.

OCI-40119: nested columns incompatible with missing value treatment

Cause: delete_row missing value treatment is not supported for nested columns.

Action: Use 2D (non-nested) data representation or manually delete the rows with NULL values and disable the delete_row missing value treatment.

OCI-40120: invalid weight value in the weights table

Cause: Negative or zero weight values were found in the weights table.

Action: Ensure that weight values in the weights table are positive.

OCI-40121: force option not allowed for drop model in different schema

Cause: The force option was specified, but the model is in a different schema.

Action: If the force option is necessary, run the drop model from the owning schema. If the force option is not necessary, set the force parameter to FALSE.

OCI-40122: Invalid data type attempted for row weights column *string*.

Cause: Row weights column was not assigned one of the allowed data types.

Action: Choose a row weight column of type NUMBER, BINARY_FLOAT, or BINARY_DOUBLE.

OCI-40123: invalid row weights column *string*

Cause: Row weights column was the same as the target column.

Action: Choose a new row weights column.

OCI-40124: partition key column *string* missing from input

Cause: A partitioned model was referenced in the query, but the partition key column was not found in the input.

Action: Provide an input data set containing the partition key column.

OCI-40125: Partition *string* does not exist.

Cause: The specified partition did not exist.

Action: Check the name of the partition and retry.

OCI-40126: model *string* is not partitioned

Cause: The model specified was not a partitioned model.

Action: Specify a model that is partitioned.

OCI-40127: invalid number of partition keys specified

Cause: The number of partition keys specified did not match the model.

Action: Specify key values for each partition.

OCI-40128: partition *string* already exists for specified partition keys

Cause: A partition already existed for the specified partition keys.

Action: Specify unique key values for each partition.

OCI-40129: partition name *string* exists for this model

Cause: The partition name specified was not unique for this model.

Action: Specify a unique partition name.

OCI-40130: invalid partition name *string*

Cause: The partition name specified was not valid.

Action: Check the spelling of the partition name and try again.

OCI-40131: invalid data type for partition column *string*

Cause: The partition column did not have a supported data type.

Action: Choose a partition column of type NUMBER, CHAR, BOOLEAN or VARCHAR2.

OCI-40132: partition not specified

Cause: A model partition was not specified. This function requires the specification of a model partition.

Action: Specify a model partition.

OCI-40133: invalid partition columns

Cause: The partition columns in the operation did not match those in the existing model.

Action: Specify the correct partitioning keys.

OCI-40135: cannot drop the only partition of a partitioned model

Cause: The specified partitioned model contained a single partition. An empty model is not supported.

Action: Drop the model, or add additional partition(s) then drop the desired partition.

OCI-40136: Number of partitioned columns *string* exceeded the maximum of 16 permitted partitioned columns.

Cause: The maximum number partitioned columns exceeded the permitted limit of 16.

Action: Ensure that the number of partitioned columns is less than or equal to 16.

*Params: 1) number_of_columns: The number of specified partitioned columns.

OCI-40137: maximum number of partitions exceeded

Cause: The maximum number of partitions per model was exceeded.

Action: Reduce the number of partitions.

OCI-40139: no partitions found in training data

Cause: There were no partitions found in the training data.

Action: Specify partitioning keys that have one or more distinct values in the training data.

OCI-40140: model could not be built

Cause: The training data did not allow the building of a meaningful model.

Action: Modify the training data to ensure that there are valid data rows, columns, or targets. If there is solver choice, ensure that the selected solver is appropriate for the training data.

OCI-40141: only zero norm rows were provided in the training data

Cause: All training data rows had zero norm.

Action: Modify the training data or enable automatic data preparation.

OCI-40142: partition mismatch for feature comparison

Cause: The partition key column values did not match for one or more scored rows.

Action: Modify the query to ensure that each scored row contains matching partition key column values.

OCI-40150: Model *string* function is not specified.

Cause: The required R function was not specified.

Action: Specify the required R function in the model setting table and build the R model.

OCI-40151: invalid output type from R SCORE, WEIGHT, or DETAILS function

Cause: The R SCORE, WEIGHT, or DETAILS function did not return the result in a data.frame containing either R numeric values for SCORE and WEIGHT function or R numeric or string values for DETAILS function.

Action: Modify the R function to return the result in a data.frame that contains values of valid types.

OCI-40152: Output data.frame mismatches the input for R SCORE or WEIGHT function.

Cause: The R SCORE or WEIGHT function returned a different number of rows than that of the input data.frame.

Action: Modify the R function to output the result for each row of the input data.frame.

OCI-40153: invalid value on attribute *string* for R model

Cause: The specified attribute was not a scalar numeric value or a single string.

Action: Set the specified attribute of the R model with a valid value.

OCI-40154: invalid type or value for R parameter specification

Cause: The R parameter was not a scalar numeric value or a single string.

Action: Modify the parameter specification to use either a scalar numeric value or a single string.

OCI-40155: R script *string* is not found.

Cause: The specified script was not found in the R script repository.

Action: Verify that the script exists in the R script repository or create it using the rqScriptCreate PL/SQL function.

OCI-40156: invalid or mismatched output specification for R model view

Cause: The R DETAILS function output format specification did not use numeric or string value, or did not match the actual output from the R DETAILS function.

Action: Use scalar numeric and string to specify the R DETAILS function output format and match the actual output of the R function.

OCI-40157: R_HOME is not set on *string*.

Cause: The R_HOME was not set to the location where R was installed.

Action: Use `sys.rqConfigSet` to set the `R_HOME` to the correct value.

OCI-40158: invalid values on R memory control settings

Cause: The R memory control settings did not use positive values.

Action: Use `sys.rqConfigSet` to set R memory control with valid values.

OCI-40159: Parameter setting *string* is not specified for R model.

Cause: The expected setting was not on the model setting table.

Action: Set the expected setting on the model setting table.

OCI-40160: Mining function *string* requires attribute *string* on the R model.

Cause: The generated R model did not have the required attribute.

Action: Set the required attribute for the R model in the R BUILD function.

OCI-40161: Either attribute *string* or *string*, but not both, is required.

Cause: Conflict attributes were specified for the R model object.

Action: Set the required attribute only for the return R model object.

OCI-40162: mismatched results from *string* output data.frame

Cause: The R regression model prediction did not return an R data.frame with a single column of numerics for predicted value, or two additional columns containing the standard error of model fit and the degree of freedom were missing from the output when SQL function `prediction_bounds` was invoked.

Action: Modify the specified R function to return the results in the right format.

OCI-40163: some prediction results missing from *string* output

Cause: The R classification, clustering, or feature extraction model SCORE function did not return the prediction for each class, cluster, or feature respectively in the output R data.frame.

Action: Modify the R model SCORE function to return all predicted values in the output data.frame.

OCI-40164: contribution weights of some attributes missing from *string* output

Cause: The R model WEIGHT function did not return the contribution weight for each attribute of the data.

Action: Modify the R model WEIGHT function to return the contribution weights for all attributes.

OCI-40165: mismatched target class name from R model prediction *string*

Cause: The R classification model prediction did not have correct target class names assigned as the column names for the return data.frame.

Action: Modify the R classification model SCORE function to set the correct target class names on the return data.frame.

OCI-40166: invalid R name for input data.frame columns

Cause: The input data.frame column names contained special characters that are not supported by R.

Action: Modify the input data.frame column names and remove the unsupported characters from the column names.

OCI-40167: no valid data in input table

Cause: The specified input table contained no valid data to build R model.

Action: Insert valid data into the input table to build R model.

OCI-40170: Error out in R: *string*

Cause: The R function execution failed.

Action: Verify the specified R model function script.

OCI-40171: The algorithm cannot be dropped because there are models built on it.

Cause: An attempt was made to drop models built on this algorithm.

Action: Drop the model first.

OCI-40172: The algorithm registration does not follow the predefined JSON schema.

Cause: An attempt was made to register an algorithm that did not follow the predefined JavaScript Object Notation (JSON) schema.

Action: Check the predefined JSON schema and revise the algorithm format.

OCI-40173: The same algorithm name, mining function, and algorithm type combination already exists.

Cause: An attempt was made to register an algorithm with the same name, mining function and type combination.

Action: Use a different algorithm name for the same mining function and algorithm type.

OCI-40174: The algorithm that is used is not registered yet.

Cause: The specified algorithm did not exist.

Action: Register the algorithm first.

OCI-40175: Registered algorithm name and R script definition cannot be used simultaneously.

Cause: An attempt was made to use both registered algorithm name and R scripts definition.

Action: Keep either registered algorithm name or R script definition, but not both.

OCI-40176: The current user does not have privilege to register or drop an algorithm.

Cause: The privileges to register or drop an algorithm were not granted.

Action: Obtain the proper privileges before attempting to register or drop an algorithm.

OCI-40177: Expression used for UNNEST clause is not a scalar subquery returning JSON data type through JSON_OBJECT.

Cause: Expression used for the UNNEST clause in JSON_OBJECT was incorrect.

Action: Use the proper expression for the UNNEST clause in JSON_OBJECT.

OCI-40178: Item method *string* cannot be used at the end of the path expression for this operator.

Cause: The trailing function used in the path expression of a JSON operator was invalid for such operator.

Action: Either use a valid trailing function or wrap the result of the JSON operator inside a SQL function that performs the desired operation.

OCI-40179: error in Path Engine execution

Cause: An operation raised an unexpected error in Path Engine execution.

Action: None

OCI-40181: invalid transformation definition for column *string*

Cause: Transformation definition has duplicate or NULL columns.

Action: Provide a valid transformation definition specification.

OCI-40182: invalid column reference

Cause: Transformation expression has no column references or more than one reference or the reference is qualified.

Action: Provide a valid expression.

OCI-40183: invalid stack definition for attribute *string*

Cause: Stack definition expression or reverse expression has syntax errors or it does not match the transformation definition.

Action: Provide a valid expression.

OCI-40184: transformation definition does not match the data

Cause: Transformation definition specifies nested transformation for non-nested data or it removes all of the columns.

Action: Provide a valid data.

OCI-40185: no valid value found for Box-Cox parameter lambda

Cause: Automated procedure for discovering lambda did not find a value within the valid range.

Action: None required. No Box-Cox transformation was performed.

OCI-40201: invalid input parameter *string*

Cause: The input parameter was either null or invalid.

Action: Provide a valid value for the input parameter.

OCI-40202: column *string* does not exist in the input table *string*

Cause: The specified column was not found in the table.

Action: Check the table schema and provide the correct column name.

OCI-40203: model *string* does not exist

Cause: The model did not exist.

Action: Supply a valid model name.

OCI-40204: model *string* already exists

Cause: A model by the same name exists.

Action: Provide a different, unique name for the model.

OCI-40205: invalid setting name *string*

Cause: The input setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting name.

OCI-40206: invalid setting value for setting name *string*

Cause: The input value for the given setting name was invalid.

Action: Consult the documentation about settings and provide a valid setting value.

OCI-40207: duplicate or multiple function settings

Cause: The input settings table contained settings for multiple mining functions.

Action: Provide setting(s) for a single function in the settings table.

OCI-40208: duplicate or multiple algorithm settings for function *string*

Cause: The input settings table had duplicate or multiple algorithm settings for a mining function.

Action: Provide only one appropriate algorithm setting for the mining function.

OCI-40209: setting *string* is invalid for function *string*

Cause: The specified setting was not supported for the mining function supplied.

Action: Verify the combination of function and algorithm settings and try again. *Params: 1) setting_name: The name of the specified setting. 2) mining_function: The specified mining function.

OCI-40210: invalid score criterion type when cost matrix is specified

Cause: The score criterion type may not be 'PROBABILITY' when a cost matrix is specified.

Action: Set score criterion type to 'COST' or don't specify a cost matrix.

OCI-40211: algorithm name *string* is invalid

Cause: Algorithm name for the model was invalid or the operation was not valid for the algorithm.

Action: Check the algorithm name for the model and verify that the operation is valid.

OCI-40212: invalid target data type in input data for *string* function

Cause: Target data type was invalid.

Action: Classification and attribute importance functions accept CHAR, VARCHAR2, and NUMBER data type targets. VARCHAR2 data type targets longer than 4000 bytes are not supported. Regression and time series functions accept NUMBER, BINARY_DOUBLE, and BINARY_FLOAT data type targets only.

OCI-40213: contradictory values for settings: *string*, *string*

Cause: The values entered for the settings were not compatible.

Action: Check the documentation and review the values for the settings.

OCI-40214: duplicate setting: *string*

Cause: Duplicate setting in the settings table or settings list.

Action: Remove the duplicate setting from the settings table or settings list. *Params:
1) setting_name: The name of the setting that appears more than once in the setting table or setting list.

OCI-40215: model *string* is incompatible with current operation

Cause: The current operation was not supported for the mining function the model corresponds to.

Action: Provide the model name suitable for current operation.

OCI-40216: feature not supported

Cause: The feature was not supported in the API.

Action: Modify the code to avoid usage of the feature.

OCI-40217: priors table mismatch with training data

Cause: The entries in the priors table did not correspond to the targets in the training data.

Action: Verify the entries in the priors table.

OCI-40218: Both priors table and weights table are specified

Cause: Both a priors table and a weights table are specified for SVM model build.

Action: Priors table is the old (pre 11g) mechanism for specifying class weights, and class weights table is the new (and correct) way to specify class weights. Remove the priors table entry from the settings table (after transferring class weight settings, if appropriate). Going forward, priors table will be valid only for NB models. Use class weights for SVM.

OCI-40219: apply result table *string* is incompatible with current operation

Cause: The current operation was not allowed for the apply result table supplied.

Action: Ensure that the operation being performed is valid for the mining function used to build the model (using for which the apply result table was created).

OCI-40220: number of attributes is too high

Cause: The data had too many attributes for the available memory.

Action: Reduce the dimensionality of the data and try again.

OCI-40221: Too many distinct target values.

Cause: The number of distinct target values of the training data was too high for the available memory.

Action: Reduce the number of distinct targets and retry.

OCI-40222: data mining model export failed, job name=*string*, error=*string*

Cause: The model export job failed.

Action: Check export job settings as required by DataPump.

OCI-40223: data mining model import failed, job name=*string*, error=*string*

Cause: The model import job failed.

Action: Check import job settings as required by DataPump.

OCI-40224: must specify a valid ID column name when setting *string* is provided

Cause: The training data is transactional. A valid ID column must be specified.

Action: Specify a valid ID column name as input.

OCI-40225: model is currently in use by another process

Cause: The model is currently in use by another process.

Action: Retry if necessary.

OCI-40226: model upgrade/downgrade must be performed by SYS

Cause: Upgrade/Downgrade routines are being invoked by a user with insufficient privileges.

Action: Run the routines as SYS during migration.

OCI-40227: invalid transformation attribute

Cause: Transformation list provided to CREATE_MODEL has duplicate or NULL attributes. Case ID or target attribute has attribute_subname that is not NULL. Attribute provided to ALTER_REVERSE_EXPRESSION does not exist in the model.

Action: Remove NULLs and duplicates and fix case ID and target attributes or provide a valid attribute for a given model.

OCI-40228: scoring cost matrix already exists

Cause: The model already has a scoring cost matrix.

Action: To add a new scoring cost matrix the existing one should be removed first.

OCI-40229: scoring cost matrix not found

Cause: The model does not have a scoring cost matrix.

Action: To remove a scoring cost matrix the model should have one.

OCI-40230: invalid transformation expression

Cause: The expression had syntax or semantic errors.

Action: Provide a valid expression.

OCI-40231: transactional input incompatible with specified algorithm

Cause: Training data in transactional format is not accepted for model creation using the specified mining algorithm.

Action: Pivot the data into 2D tabular format, or provide the transactional input through a nested table column.

OCI-40232: transactional input - incompatible datatype for column *string*

Cause: The data type of the column in the input training data is not supported.

Action: Cast or change the type of the column to one of CHAR, VARCHAR, NUMBER or FLOAT

OCI-40233: transactional input - case id should be provided with id *string*

Cause: The training data is transactional by virtue of presence of a and item id - but does not have a case id specification.

Action: Specify a valid case id column name as input

OCI-40234: reverse expression incompatible with model cost matrix

Cause: A cost matrix existed for this model with actual and predicted values which were inconsistent with the values resulting from the specified reverse transformation.

Action: Either remove the cost matrix table and re-add it with the new actual and predicted values, or respecify the reverse transformation to be consistent with the existing cost matrix.

OCI-40235: invalid setting value for setting ASSO_AGGREGATES: *string*

Cause: The setting ASSO_AGGREGATES was not valid.

Action: Specify valid aggregates column names.

OCI-40236: number of aggregates *string* exceeded the maximum of permitted of 10

Cause: Too many aggregates were specified in the ASSO_AGGREGATES setting.

Action: Reduce the number of aggregates. A maximum of 10 aggregates are allowed.

*Params: 1) number_of_aggregates: The number of aggregates specified in the ASSO_AGGREGATES setting.

OCI-40237: duplicate case IDs in training table

Cause: The same value occurred more than once in the case ID column of the training table.

Action: Eliminate the duplicate case IDs in the training table.

OCI-40238: invalid linear algebra shared library *string*

Cause: The shared library containing platform-optimized linear algebra routines was not loaded.

Action: Verify that the shared library is correctly installed.

OCI-40239: too many different categorical predictor and target values in training data

Cause: The count of row instances associated with every possible unique target and predictor value combination in the training data has become too sparse to produce valid results.

Action: Consider reducing the number of unique categorical predictor and target values in the training data.

OCI-40251: no support vectors were found

Cause: The input data is non-predictive in nature, or one of the input settings is incorrect/incompatible with respect to the input data.

Action: Provide additional data or change model setting value.

OCI-40252: no target values were found

Cause: No target values were identified during load.

Action: Validate that the target is correctly specified.

OCI-40253: no target counter examples were found

Cause: One or more of the target classes have only positive examples.

Action: Provide counter examples or remove that target class.

OCI-40254: Priors or weights cannot be specified for one-class models.

Cause: Priors or weights were specified.

Action: Do not specify priors or weights for one-class models.

OCI-40255: specified priors or weights table has an incorrect schema

Cause: The priors or class weights table whose name was specified in the settings did not have the prescribed schema. A priors table should have the schema (target_value, prior_probability) and a class weights table should have the schema (target_value, class_weight).

Action: Modify the schema of the input priors or class weights table so that it matches with the ones provided here in the Cause section, and also as provided in the documentation.

OCI-40261: input data for model build contains negative values

Cause: The input data contains negative values, which is not acceptable for a Non-negative Matrix Factorization model.

Action: Provide clean data for build without any negative values.

OCI-40262: NMF: number of features not between [1, string]

Cause: The number of requested features must be greater than 1, and less than the smaller of the number of attributes and the number of cases in the dataset.

Action: Specify the desired number of features within the acceptable range.

OCI-40263: no meaningful matrix factorization found

Cause: Input data was not significantly different from 0.

Action: Check your data for problems or add a positive constant to all the numeric attributes.

OCI-40264: number of mining attributes (string) exceeds maximum (string)

Cause: Input data was found to contain a number of mining attributes exceeding the maximum allowed.

Action: Check the input data for categorical fields with high cardinality.

OCI-40271: no statistically significant features were found

Cause: Input data inadequate in volume and/or quality to derive statistically significant predictors for building a data mining model.

Action: Provide a well-prepared training data set.

OCI-40272: apply rules prohibited for this model mode

Cause: Adaptive Bayes Network rules are only generated for SingleFeature ABN models

Action: Rebuild model in SingleFeature mode and then apply with rules.

OCI-40273: invalid model type string for Adaptive Bayes Network algorithm

Cause: The valid values for the abns_model_type settings are: abns_multi_feature, abns_single_feature, abns_naive_bayes.

Action: Use a valid value for the abns_model_type setting.

OCI-40274: the Adaptive Bayes Network algorithm is desupported

Cause: An attempt was made to score an Adaptive Bayes Network model.

Action: Drop the existing model and build a new model using a supported classification algorithm.

OCI-40281: invalid model name

Cause: A model name is invalid or does not exist.

Action: Check spelling. A valid model name must begin with a letter and may contain only alphanumeric characters and the special characters \$, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

OCI-40282: invalid cost matrix

Cause: Cost matrix specification is invalid.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

OCI-40283: missing cost matrix

Cause: Cost matrix specification is missing.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

OCI-40284: model does not exist

Cause: The model entered does not exist.

Action: Check spelling.

OCI-40285: label not in the model

Cause: The user-specified label was not present in the model.

Action: Provide a valid label. The set of valid labels can be retrieved from a classification model by invoking PREDICTION_SET, from a clustering model by invoking CLUSTER_SET, and from a feature extraction model by invoking FEATURE_SET.

OCI-40286: remote operations not permitted on mining models

Cause: An attempt was made to perform queries or DML operations on remote tables using local mining models.

Action: Remove the reference to remote tables in the statement.

OCI-40287: invalid data for model - cosine distance out of bounds

Cause: The norm computed using attribute values from the incoming row for the cosine model is outside the range 0-1.

Action: Remove or correct the data in the offending row.

OCI-40289: duplicate attributes provided for data mining function

Cause: A duplicate, non-nested attribute was provided as input to the data mining function. A duplicate attribute is one which is present in the model signature, occurs more than once in the USING clause after tablename expansion, and is not a collection element in a nested table column.

Action: Eliminate the duplicate attribute(s).

OCI-40290: model incompatible with data mining function

Cause: The supplied model cannot be operated upon by the data mining function because the model is built for a mining function and/ or based on an algorithm that is incompatible with function.

Action: Provide the name of the model suitable for the function.

OCI-40291: model cost not available

Cause: The supplied model was assumed to have been built with a cost matrix specification, when in reality, it was not.

Action: Provide a model name that corresponds to a model that was built with an appropriate cost matrix specification.

OCI-40292: confidence level must be greater than 0 and less than 1

Cause: The specified value for confidence level is out of range.

Action: Specify a value for confidence level in the range $0 < \text{level} < 1$

OCI-40293: input class is invalid for the specified predictive model

Cause: The specified model is either not a classification model, or does not have the input class label as one of its target values.

Action: Provide the correct target value (class label) or provide the appropriate classification model with the target attribute that has the specified class label as one of its values.

OCI-40294: corrupted model

Cause: The model object was in an inconsistent state.

Action: Drop the corrupted model.

OCI-40295: model does not fit in system global area

Cause: The model was too large to fit in shared memory.

Action: No action is needed. The model is automatically loaded to program global area (PGA).

OCI-40301: invalid cost matrix specification

Cause: A valid cost matrix is not specified.

Action: Consult documentation for valid cost matrix specification.

OCI-40302: invalid classname *string* in cost matrix specification

Cause: Actual or predicted classname specified is not present in training data

Action: Provide valid classname(s) in cost matrix specification

OCI-40303: invalid prior probability specification

Cause: Valid prior probabilities not specified. Valid probabilities should be between 0 and 1.

Action: Consult documentation for valid prior probability specification.

OCI-40304: invalid classname *string* in prior probability specification

Cause: Actual or predicted classname specified is not present in training data.

Action: Provide valid classname(s) in prior probability specification.

OCI-40305: invalid impurity metric specified

Cause: Impurity metric specified is not valid. Examples of valid metrics are TREE_IMPURITY_GINI, TREE_IMPURITY_ENTROPY.

Action: Consult documentation for valid impurity metrics and specification.

OCI-40306: dm_nested types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contained one or more columns of DM_NESTED type (DM_NESTED_NUMERICALS or DM_NESTED_CATEGORICALS). These columns are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove columns of these data types from the input data source.

OCI-40307: nested attribute combined name and value too long

Cause: The data that was presented to the decision tree algorithm was too long. The length is computed from the sum of the length of the nested attribute name and the length of the attribute value.

Action: Reduce the length of the attribute name or reduce the length of the categorical value (perhaps by recoding).

OCI-40308: RFOR_MTRY is greater than attribute count or negative or 0

Cause: The setting for RFOR_MTRY was either 0 or \geq number of attributes. The default behavior in this scenario is to use all of the attributes for the model build.

Action: Consider a different value for RFOR_MTRY.

OCI-40309: The Random Forest sample size exceeds available memory.

Cause: The sample did not fit into available memory.

Action: No action needed. The sample size was adjusted automatically to fit into memory.

OCI-40321: invalid bin number, is zero or negative value

Cause: Input bin number has zero or negative values.

Action: Provide positive bin numbers starting from 1.

OCI-40322: bin number too large

Cause: Bin number is too large.

Action: Reprocess build data by choosing smaller bin numbers.

OCI-40323: Attribute *string* has too many distinct values (*string*)

Cause: Exceeded maximum number of distinct values allowed in an attribute.

Action: Bin numerical data with fewer than 1024 bins or recode categorical data with fewer than 1024 unique values.

OCI-40324: All rows contain the same data

Cause: All rows contained the same data and could not be clustered using k-Means with cosine distance metric.

Action: Use Euclidean distance metric.

OCI-40325: maximum number of clusters exceeded

Cause: The maximum number of clusters was exceeded.

Action: Reduce the number of clusters.

OCI-40326: no mining attributes after filtering

Cause: All mining attributes were filtered out.

Action: Disable attribute filtering.

OCI-40341: access violation on model storage object

Cause: An attempt was made to directly access/modify a schema object that stores model metadata and content.

Action: Perform all mining operations (create,drop,alter, and select using data mining functions) against named model objects. Contact your DBA or Oracle Support if you suspect that an orphaned schema object.

OCI-40342: model was not correctly upgraded

Cause: An attempt was made to use a model, but the model was not correctly upgraded to the current release. This is most likely caused by importing a model from an old release without upgrading it, but could also be caused by a failed database upgrade.

Action: Invoke the SYS.DMP_SYS.UPGRADE_MODELS() procedure.

OCI-40343: invalid version specified in UPGRADE_MODELS

Cause: An invalid version was specified when invoking the UPGRADE_MODELS procedure. Valid values for the version are 10.2.0, 11.0.0, 12.0.0, and NULL.

Action: Specify a valid version for UPGRADE_MODELS.

OCI-40350: One or more models exist that cannot be downgraded

Cause: There are data mining models in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop data mining models that cannot be downgraded to the selected release.

OCI-40361: invalid object privilege specified for the mining model

Cause: An attempt was made to grant or revoke an invalid privilege on a mining model.

Action: Only SELECT and ALTER object privileges are valid for mining models. Do not attempt to grant or revoke any other object privileges on mining models.

OCI-40362: invalid object "*string*"."*string*" specified in the GRANT statement

Cause: An attempt was made to grant a privilege on an invalid object.

Action: Ensure that the dependents of the object are valid before attempting to grant a privilege on an object. *Params: 1) owner_name: The owner of the object. 2) object_name: The name of the object.

OCI-40363: An attempt to grant administrative privileges to SYS user failed.

Cause: An attempt was made to grant SYSOPER or SYSDBA privileges to SYS user. These administrative privileges cannot be granted to SYS, since SYS always has SYSOPER and SYSDBA privileges.

Action: Grant administrative privileges to users other than SYS.

OCI-40364: Use of BECOME USER functionality is restricted.

Cause: This is an internal error message.

Action: Contact Oracle Support Services.

OCI-40365: cannot lock SYS user in current password file format

Cause: An attempt was made to lock the SYS user account by executing the DDL statement ALTER USER SYS ACCOUNT LOCK while the password file was created in LEGACY or 12 format.

Action: The password file must be created in 12.2 format to support granting administrative privileges to external users and enable SSL and Kerberos authentication for administrative users.

OCI-40366: Administrative privilege cannot be granted to this user.

Cause: An attempt was made to grant administrative privilege to a user who has been created with NONE as its authentication type. Such grants are not allowed.

Action: Do not grant administrative privilege to user with NONE as its AUTHENTICATION_TYPE in DBA_USERS view.

OCI-40367: An Administrative user cannot be altered to have no authentication type.

Cause: An attempt was made to alter an administrative user to have no authentication type.

Action: Revoke administrative privilege from the user before attempting to alter the user.

OCI-40368: User who can be connected to by another user as a proxy user cannot be marked as dictionary protected.

Cause: An attempt was made to mark a user as dictionary protected. However, this user can be connected to by another user as a proxy user and such a user is not allowed to be marked as dictionary protected.

Action: Revoke connection through proxy from the user and retry the operation.

OCI-40369: Only NO AUTHENTICATION user can be marked as dictionary protected.

Cause: An attempt was made to add dictionary protection to a user with AUTHENTICATION_TYPE set to a value other than NONE. Query SELECT USERNAME,AUTHENTICATION_TYPE FROM DBA_USERS to confirm that the user has an AUTHENTICATION_TYPE other than NONE. Only database users with AUTHENTICATION_TYPE=NONE can be configured with dictionary protection.

Action: Find the correct user with AUTHENTICATION_TYPE=NONE by running SELECT USERNAME,AUTHENTICATION_TYPE FROM DBA_USERS or change the user to have no authentication type. If the user has a database password, run ALTER USER *user name* NO AUTHENTICATION.

OCI-40370: IDENTIFIED clause not allowed for user marked as dictionary protected

Cause: The IDENTIFIED clause was used for a user that has been marked as dictionary protected.

Action: Disable DICTIONARY PROTECTION on the user and retry the operation.

OCI-40371: Cannot connect as a dictionary protected user.

Cause: The connect was done with a user that has been marked as dictionary protected.

Action: Disable DICTIONARY PROTECTION on the user and retry the connection.

OCI-40372: ACCOUNT UNLOCK not allowed for a user marked as dictionary protected.

Cause: ACCOUNT UNLOCK was used for a user who had been marked as dictionary protected.

Action: Disable DICTIONARY PROTECTION and retry ACCOUNT UNLOCK operation.

OCI-40373: only CREATE, CREATE ANY, ALTER, DROP are valid for property graph

Cause: An attempt was made to grant or revoke an invalid privilege on a property graph.

Action: Do not attempt to grant or revoke any privilege besides CREATE, CREATE ANY, ALTER, or DROP on property graphs.

OCI-40374: Dictionary protection feature is supported for only Oracle maintained users.

Cause: A non Oracle maintained user attempted to use the dictionary protection feature.

Action: Use the dictionary protection feature for only Oracle maintained users.

OCI-40375: Dictionary protection feature is not supported for SYS user.

Cause: An attempt was made to mark SYS user as dictionary protected.

Action: SYS user cannot be marked as dictionary protected. Retry the operation specifying a different user.

OCI-40381: Invalid field specification for: *string*

Cause: The derived field was incorrectly defined.

Action: Ensure that the field is correctly defined in the PMML document.

OCI-40382: More than one linear regression equation in the model

Cause: More than one linear regression equation was in the model.

Action: Ensure that there is only one linear regression equation in the model.

OCI-40383: No model found in PMML document

Cause: There was no model found in the PMML document.

Action: Ensure that the PMML document contains a model section.

OCI-40384: Only one model allowed in PMML document

Cause: More than one model existed in the PMML document.

Action: PMML model import only supports one model per PMML document. Ensure that only one model exists in the PMML document.

OCI-40385: Target has more than two categories

Cause: The target contained more than two categories.

Action: PMML model import supports only binary logistic regression. Ensure that the target contains no more than two categories.

OCI-40386: NormContinuous must include at least two LinearNorm elements

Cause: NormContinuous included less than two LinearNorm elements.

Action: NormContinuous must include at least two LinearNorm elements. Ensure that at least two LinearNorm elements are included.

OCI-40387: Invalid interval for Discretize field: *string*

Cause: The intervals were incorrect.

Action: Ensure that that both margins are not missing.

OCI-40388: Unsupported feature in PMML document: *string*

Cause: The feature was not supported by Predictive Model Markup Language (PMML) model import.

Action: Ensure that you use the supported features.

OCI-40389: Unsupported PMML transformation: *string*

Cause: The transformation was not supported.

Action: Ensure that you use the supported transformations.

OCI-40390: PMML DerivedField must have a unique name specified: *string*

Cause: "The Predictive Model Markup Language (PMML) DerivedField did not reference another defined field and did not have a unique name."

Action: "Specify a unique name for each DerivedField."

OCI-40391: PMML DerivedField depends on a undefined field: *string*

Cause: A DerivedField referenced an undefined field.

Action: Ensure that the DerivedField references other defined fields.

OCI-40392: PMML regression equation references an undefined field: *string*

Cause: The Predictive Model Markup Language (PMML) Regression equation did not reference defined fields. PMML Regression equation may only reference defined fields.

Action: Ensure that all fields are defined.

OCI-40401: categorical attributes are not supported by this algorithm

Cause: The build data provided to the CREATE_MODEL routine contained one or more categorical attributes of types CHAR, VARCHAR2, or DM_NESTED_CATEGORICAL. These attributes are currently not supported for the SVD algorithm.

Action: Remove the categorical attributes from the build data.

OCI-40402: Cannot output U matrix without a valid case identifier column.

Cause: A U matrix was requested, but there was no case identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

OCI-40403: model does not have any valid features

Cause: All singular values in the SVD model were equal to zero. This can occur if the build data contains only zeros or all build columns have constant values and automatic data preparation is turned on.

Action: Inspect and modify the build data.

OCI-40404: approximate computation cannot be disabled for the build data

Cause: The build data had a very high number of attributes. An SVD model can be built only by enabling approximate computation.

Action: Enable approximate computation.

OCI-40405: Full SVD solvers cannot be used for the build data.

Cause: The build data had a very high number of attributes. A Singular Value Decomposition (SVD) model cannot be built using full SVD solvers.

Action: Select a truncated SVD solver.

OCI-40421: missing text policy name

Cause: The text policy name was either missing or invalid.

Action: Provide a valid text policy name created using `CTX_DDL.CREATE_POLICY()`.

OCI-40422: TEXT attribute types not supported by this algorithm

Cause: The training input to the `CREATE_MODEL` routine contained one or more attributes of TEXT type. These attributes are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove attributes of these types from the input data source.

OCI-40423: Extraction of tokens from text failed.

Cause: Extraction of tokens from an attribute of TEXT type failed.

Action: Check the text policy, policy owner, other settings for TEXT type, and computer resources.

OCI-40441: JSON syntax error

Cause: The provided JavaScript Object Notation (JSON) data had invalid syntax and could not be parsed.

Action: Provide JSON data with valid syntax.

OCI-40442: JSON path expression syntax error ('string')string

Cause: The specified JavaScript Object Notation (JSON) path expression had invalid syntax and could not be parsed.

Action: Specify a JSON path expression with the correct syntax. *Params: 1) `path_string`: The JSON path string. 2) `error_message`: A detailed error message string.

OCI-40443: unsupported JSON path expression

Cause: The provided JavaScript Object Notation (JSON) path expression contained unsupported features.

Action: Remove unsupported features from JSON path expression.

OCI-40444: JSON processing error

Cause: The requested JavaScript Object Notation (JSON) operation failed.

Action: Ensure that the JSON operation is invoked correctly.

OCI-40445: unsupported JSON operation

Cause: The requested JavaScript Object Notation (JSON) operation was not supported.

Action: None

OCI-40446: expecting keyword STREAM

Cause: The JavaScript Object Notation (JSON) operator expected the keyword STREAM.

Action: Add the keyword STREAM to the JSON operator.

OCI-40447: expecting PASSING clause

Cause: The JavaScript Object Notation (JSON) operator expected a PASSING clause.

Action: Add a PASSING clause to the JSON operator.

OCI-40448: expecting RETURNING clause

Cause: The JavaScript Object Notation (JSON) function expected a RETURNING clause.

Action: Add a RETURNING clause to the JSON function.

OCI-40449: invalid data type for return value

Cause: The provided data type for the return value was invalid or unsupported.

Action: Provide a supported return value.

OCI-40450: invalid or unsupported ON ERROR option

Cause: The specified ON ERROR option is invalid or not supported in this operation.

Action: Provide a valid ON ERROR option. Common options are ERROR ON ERROR, NULL ON ERROR, or DEFAULT *literal* ON ERROR.

OCI-40451: invalid default value provided

Cause: The provided default value was not valid.

Action: Provide a valid default value.

OCI-40452: default value not matching type defined in RETURNING clause

Cause: The specified default value did not match the type defined in the RETURNING clause.

Action: Ensure that the default value and RETURNING clause are of the same type.

OCI-40453: JSON operator syntax error

Cause: The provided JavaScript Object Notation (JSON) operator had invalid syntax.

Action: Provide JSON operator with correct syntax.

OCI-40454: path expression not a literal

Cause: The provided path expression was not a literal (a constant).

Action: Provide a constant path expression.

OCI-40455: value for DEFAULT clause not a constant

Cause: The specified default value for the DEFAULT clause was not a runtime constant.

Action: Specify a SQL literal or a bind variable for the DEFAULT value.

OCI-40456: JSON path '*string*' evaluated to non-scalar value.

Cause: The specified JavaScript Object Notation (JSON) path expression selected an object or array when a scalar value was expected.

Action: Correct the JSON path expression or use JSON_QUERY.

OCI-40457: JSON path expression contained an invalid array index ('*string*')*string*

Cause: The provided JSON path expression contained an invalid array index.

Action: Provide a valid array index. The first element in the array has the index 0. *Params:
1) error_code: The JZN error code. 2) error_position: Line and position of error within path string.

OCI-40458: JSON_EXISTS used outside predicate

Cause: The operator JSON_EXISTS was used outside of a predicate.

Action: Use JSON_EXISTS inside a predicate. For instance, by embedding it inside a CASE expression or WHERE clause.

OCI-40459: output value too large (actual: *string*, maximum: *string*)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeded the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB/BLOB in the RETURNING clause.

OCI-40460: default value too large

Cause: The specified default value exceeded the maximum length specified in the RETURNING clause.

Action: Increase the maximum size of the data type in the RETURNING clause or reduce the length of the default value.

OCI-40461: Unsupported character set

Cause: The provided JavaScript Object Notation (JSON) operator does not supported the current database character set.

Action: Chose a different database character set, for instance AL32UTF8, AL16UTF16, or a single byte character set.

OCI-40462: JSON path '*string*' evaluated to no value.

Cause: The specified JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

OCI-40463: JSON_QUERY only can use min()/max() aggregate trail functions

Cause: The provided trail function cannot be used in JSON_QUERY.

Action: Remove the provided trail function and use min()/max() aggregate trail functions only.

OCI-40464: JSON PASSING clause contained duplicate variable name 'string'.

Cause: The specified JavaScript Object Notation (JSON) PASSING clause contained duplicate variable names.

Action: Rename the duplicate variables and ensure that each variable name is unique within the PASSING clause. *Params: 1) variable_name: The name of the variable.

OCI-40465: Multivalue index processing error.

Cause: The requested multivalue index (MVI) operation failed.

Action: Contact Oracle Support.

OCI-40466: Invalid parameter in IS [NOT] JSON predicate

Cause: The IS [NOT] JSON predicate contains an invalid parameter.

Action: Remove or correct the parameter.

OCI-40467: JSON_TEXTCONTAINS() cannot be evaluated without a JSON-enabled context index

Cause: There was no JavaScript Object Notation (JSON)-enabled context index available.

Action: Create a JSON-enabled context index.

OCI-40468: First input parameter to JSON_TEXTCONTAINS() must be a column.

Cause: The first input parameter to JSON_TEXTCONTAINS() was not a column.

Action: Pass a column to the first input parameter to JSON_TEXTCONTAINS().

OCI-40469: JSON path expression in JSON_TEXTCONTAINS() is invalid

Cause: A predicate or array position was used in JavaScript Object Notation (JSON) path expression, or the length of a JSON field name in the path expression exceeded the JSON search index token length limit.

Action: Neither use a predicate or array position in a JSON path expression nor a step with length longer than the JSON search index token length limit.

OCI-40470: JSON query 'string' evaluated to multiple values.

Cause: The specified JavaScript Object Notation (JSON) path expression selected more than one value.

Action: Correct the JSON path expression or use JSON_QUERY.

OCI-40471: selected value not JSON array or object

Cause: The selected value was not a JavaScript Object Notation (JSON) value. (object or array)

Action: Use CAST AS ARRAY to return this value.

OCI-40472: invalid escape sequence in JSON data

Cause: The provided JavaScript Object Notation (JSON) data had an invalid escape sequence.

Action: Provide JSON data with corrected escape sequence.

OCI-40473: duplicate key names 'string' in JSON object

Cause: The provided JavaScript Object Notation (JSON) data had duplicate key names in one object.

Action: Provide JSON data with unique key names in each JSON object.

OCI-40474: invalid UTF-8 byte sequence in JSON data

Cause: The specified JavaScript Object Notation (JSON) data had an invalid UTF-8 byte sequence.

Action: Specify JSON data with the corrected UTF-8 byte sequence or escape the characters.

OCI-40475: JSON data nested too many levels

Cause: The provided JavaScript Object Notation (JSON) data had too many levels of nesting.

Action: Provide JSON data with fewer levels of nesting.

OCI-40476: JSON key too long

Cause: The JavaScript Object Notation (JSON) data that was provided had a key which exceeded the maximum length.

Action: Provide JSON data with shorter key names.

OCI-40477: internal JSON error

Cause: There was an internal error in the JavaScript Object Notation (JSON) processing layer.

Action: Contact Oracle Support.

OCI-40478: output value too large (maximum: string)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB or BLOB in the RETURNING clause.

OCI-40479: internal JSON serializer error

Cause: There was an internal error in the JavaScript Object Notation (JSON) serializer.

Action: Contact Oracle Support if the error persists.

OCI-40480: JSON array wrapper needed for result of JSON query 'string'

Cause: The JavaScript Object Notation (JSON) path expressions selected a result that can only be returned inside an array.

Action: Add WITH ARRAY WRAPPER to the JSON function.

OCI-40481: ASCII or PRETTY not supported for non-textual return data type.

Cause: Attempted to PRETTY print or escape non-ASCII characters for a non-textual output of a JavaScript Object Notation (JSON) operation.

Action: Change return data type to VARCHAR2 or CLOB or remove the PRETTY or ASCII serialization option.

OCI-40482: JSON_TEXTCONTAINS used outside of the predicate of a WHERE clause.

Cause: JSON_TEXTCONTAINS was used outside of the predicate of a WHERE clause.

Action: Use JSON_TEXTCONTAINS inside of a predicate of a WHERE clause or remove the JSON_TEXTCONTAINS.

OCI-40483: incorrect search string to JSON_TEXTCONTAINS()

Cause: An incorrect search string to JSON_TEXTCONTAINS() was used.

Action: The search string to JSON_TEXTCONTAINS() needs to be a non-zero length compile time constant.

OCI-40484: invalid data type for JSON_TABLE column 'string'

Cause: A column in the provided JSON_TABLE had an unsupported data type.

Action: Provide a supported data type.

OCI-40485: keyword PRETTY not valid for column "string"

Cause: A JSON_TABLE column could not be pretty-printed because it had no JSON_QUERY semantics.

Action: Change the column semantics to JSON_QUERY or remove the keyword PRETTY.

OCI-40486: array wrapper not valid for column string

Cause: A JSON_TABLE column used the ARRAY WRAPPER clause where it was not allowed because the column did not have JSON_QUERY semantics.

Action: Change the column semantics to JSON_QUERY or remove the array wrapper.

OCI-40487: invalid usage of keyword EXISTS

Cause: A JSON_TABLE column with JSON_EXISTS semantics had invalid parameters.

Action: Remove the invalid parameters.

OCI-40488: invalid ON ERROR clause for column "string"

Cause: An ON ERROR clause was provided that was not valid for the selected column semantics.

Action: Change or remove the ON ERROR clause or change the column semantics.

OCI-40489: keyword ASCII not valid for column "string"

Cause: The column did not have JSON_VALUE or JSON_QUERY semantics and did not allow the ASCII printing option.

Action: Change the column semantics to JSON_VALUE or JSON_QUERY or remove the keyword ASCII.

OCI-40490: COLUMNS clause required

Cause: The provided JSON_TABLE row source did not specify a COLUMNS clause.

Action: Provide a COLUMNS clause and then retry the operation.

OCI-40491: invalid input data type for JSON_TABLE

Cause: The provided input to JSON_TABLE has an unsupported datatype.

Action: Provide a (N)VARCHAR2, (N)CLOB, RAW, BLOB, or BFILE datatype input.

OCI-40492: invalid definition in JSON_TABLE for column "string"

Cause: A column definition inside JSON_TABLE was invalid.

Action: Correct the column definition.

OCI-40493: invalid option or parameter in JSON_TABLE for column "string"

Cause: The specified JSON_TABLE definition contained an invalid option or parameter near the column referred to in the error message.

Action: Correct the JSON_TABLE definition.

OCI-40494: error during execution of JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Correct the JSON_TABLE definition.

OCI-40495: internal error in JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated due to an unexpected internal error.

Action: Contact Oracle Support.

OCI-40496: too many keys for JSON_OBJECTAGG

Cause: The number of rows in a JSON_OBJECTAGG aggregation group exceeded the maximum number of keys for a JSON object.

Action: Reduce the number of rows in each group, or remove the WITH UNIQUE KEYS check.

OCI-40497: Only one ordinality column is permitted.

Cause: The provided JSON_TABLE definition contained more than one ordinality column.

Action: Remove the extra ordinality column or columns from the JSON_TABLE definition.

OCI-40498: binary format requested for non-binary data type

Cause: The provided JavaScript Object Notation (JSON) format was binary but the input data type was not binary.

Action: Either change the format clause or use an input of binary data type.

OCI-40499: no format defined for binary data type

Cause: The provided JavaScript Object Notation (JSON) input was of binary type but a format was not defined.

Action: Define a format for binary input.

OCI-40501: cannot open an encrypted log file

Cause: An attempt was made to open a log file that has been encrypted for storage and management by the Oracle Availability Machine. Only the processes involved in shipping such a log to or from the Oracle Availability Machine can open the log.

Action: Allow the Oracle Availability Machine to manage the log file.

OCI-40504: file *string* created before last CREATE CONTROLFILE, could not proceed with recovery

Cause: An attempt at media recovery found that the data file already existed before the last CREATE CONTROLFILE statement was executed. The information needed for doing the media recovery was lost with the control file that existed when the data file was added to the database.

Action: Restore a more recent backup of the data file and retry the recovery.

OCI-40505: tablespace *#string* has been dropped

Cause: An attempt was made on the physical standby database to access the tablespace that was being dropped by Redo Apply. Note that the target tablespace was dropped on the primary database and the physical standby database was applying the redo that was generated at the primary database for the target tablespace drop.

Action: None

OCI-40507: The file header of data file *string* is corrupt. Automatic block repair is trying to fix the file header.

Cause: A corrupt data file header was encountered during a checkpoint.

Action: Run the query after the data file header is fixed by the automatic block repair.

OCI-40509: cursor compilation failed because *string*

Cause: Cursor compilation failed for the given reason.

Action: Fix the condition that caused the failed cursor compilation and run the query again. *Params: 1) reason: Explanation about why the cursor could not be compiled.

OCI-40510: This type of file cannot be renamed.

Cause: An attempt was made to rename a file for which renaming is not supported.

Action: Do not attempt to rename files of this type.

OCI-40511: Data file *string* is not accessible to recovery.

Cause: The data transfer cache was sent and rejected blocks for a file that was not accessible to the recovery. Either the file had not yet been added by the recovery or the file was offline.

Action: No action is required. If the recovery adds the file or the standby media recovery is restarted after bringing the file online, then the data blocks are fetched automatically.

OCI-40512: PDB recovery stopped at SCN %0!s, time %1!s, before reaching target time %2!s on an orphan database incarnation.

Cause: The target time was on an orphan database incarnation and the pluggable database (PDB) recovery could not proceed further.

Action: Examine if the current state of the pluggable database satisfies the requirement. If you indeed need the pluggable database to be recovered to the previously specified time, consider performing flashback or point-in-time recovery of the entire Container Database(CDB) to the target time.

OCI-40513: not supported on standby database

Cause: An attempt was made to reset the pluggable database (PDB) incarnation on the standby database.

Action: This is an informational message only.

OCI-40514: You may need to restore an older backup for recovery to orphan PDB incarnation

Cause: Oracle can not verify that the specified file is a correct file for this database. This may be because Oracle is recovering to an orphan PDB incarnation.

Action: Restore an older backup for this file. See alert log for additional details.

OCI-40515: No source of foreign redo could be found for PDB *string*.

Cause: The named standby pluggable database was waiting for a new source pluggable database to be identified.

Action: Try the action again once the role change to primary of the new source pluggable database has completed.

OCI-40516: Cannot create a pluggable database restore point on standby when the pluggable database has orphaned from the primary.

Cause: An attempt was made to create a pluggable database (PDB) restore point on the standby when the PDB had orphaned from the primary.

Action: Restore and recover the pluggable database to follow the primary and then attempt to create the restore point.

OCI-40517: Insufficient privileges to perform media recovery.

Cause: Media Recovery has been attempted without proper privileges.

Action: Please connect as SYSBACKUP/SYSDG/SYSDBA for performing this operation.

OCI-40541: exceeded maximum size for a JSON schema literal

Cause: The maximum size permitted for a JavaScript Object Notation (JSON) schema literal was exceeded.

Action: Ensure that the JSON schema literal does not exceed the maximum size permitted

OCI-40542: use of EJSON not allowed for this operation

Cause: An extended JavaScript Object Notation (EJSON) document was used as an input to a JSON operation that does not support EJSON documents.

Action: Ensure that the input is not using the EJSON format.

OCI-40543: invalid alias definition

Cause: A column alias was used in an expression that does not allow aliases.

Action: Remove the column alias definition.

OCI-40544: CHECK expression of 'string' constraint not possible to use as PRECHECK condition

Cause: The CHECK constraint expression has no equivalent in the JSON schema definition.

Action: Remove the PRECHECK keyword from the constraint definition. *Params: 1) constraint: The constraint name for constraints named by the user or the constraint expression for constraints where the name is generated by the database.

OCI-40545: The table intended to back the collection already exists.

Cause: The table intended to back the collection already existed.

Action: Ensure that the table intended to back the collection does not exist.

OCI-40546: Error mapping the object as a collection. The mapped object has a column 'string' of length string which is different from the string length specified in the metadata.

Cause: The mapped object had different sized columns than specified in the metadata.

Action: Ensure that the column lengths specified in the collection metadata is equal to those of the object being mapped.

OCI-40547: cannot set the precheck state for a non CHECK constraint

Cause: The specified constraint is not a CHECK constraint. Only CHECK constraints can be set to one of the two precheck states: PRECHECK or NOPRECHECK.

Action: Select another constraint that is a CHECK constraint and retry the statement.

OCI-40548: Type mismatch for column: string, expected type as specified in the metadata or defaulted: string, actual type in the mapped object: string

Cause: The column type of the specified column in the collection metadata or as defaulted did not match the type of the corresponding column in the mapped table or view backing the collection.

Action: Ensure that the column types of the columns specified in the collection metadata or defaulted match their type in the table or view backing the collection.

OCI-40549: Specifying JSON data type for \$orderby requires a collection with content column of type JSON and Oracle Database release 23c or later.

Cause: \$orderby data type is specified as JSON, but the collection did not have content column of type JSON or the Oracle Database release was not 23c or later.

Action: To specify \$orderby data type as JSON, ensure that the collection has a content column of type JSON and the Oracle Database release is 23c or later. Alternatively, specify a different data type for \$orderby.

OCI-40551: internal BSON/JSON conversion error [string]

Cause: BSON/JSON conversion failed with internal error.

Action: Contact Oracle Support Services.

OCI-40552: invalid data type

Cause: The BSON/JSON converter was invoked with an invalid data type.

Action: Ensure that both the input and output is of data type BLOB.

OCI-40553: path expression with predicates not supported in this operation

Cause: A path expression with predicates was specified in a JavaScript Object Notation (JSON) operation that does not support predicates.

Action: Only JSON_EXISTS supports predicates.

OCI-40554: invalid input data type in PASSING clause for variable 'string'

Cause: The specified PASSING clause had an unsupported data type.

Action: Use a supported data type in the PASSING clause. *Params: 1) variable_name: The unsupported SQL data type name.

OCI-40555: bind variable missing in PASSING clause

Cause: The PASSING clause contained an expression that did not specify a bind variable name.

Action: Specify a bind variable name for each value in the PASSING clause.

OCI-40556: unsupported chaining of two JSON_TABLE expressions

Cause: The output of one JSON_TABLE expression was provided as direct input to a second JSON_TABLE expression (possibly from a view definition). Such chaining should be avoided for performance reasons.

Action: First, try to combine multiple JSON_TABLE expressions into one using the JSON_TABLE NESTED PATH clause. If this is not possible, then apply a JSON or JSON_SERIALIZE operator to the input of the second JSON_TABLE to break the chain.

OCI-40557: cannot update a JSON value

Cause: An attempt was made to update a JavaScript Object Notation (JSON) value.

Action: Update the entire JSON object instead.

OCI-40558: Simple Oracle Document Access (SODA) requires that the Oracle Database compatible parameter is set to 12.0.0.0.0 or higher.

Cause: DBMS_SODA_ADMIN package was used when the database was operating at a compatible setting lower than 12.0.0.0.0.

Action: Upgrade the database compatible setting to 12.0.0.0.0 or higher to enable the desired new features.

OCI-40559: one or more JSON objects exist that cannot be downgraded.

Cause: There were JavaScript Object Notation (JSON) objects in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop the JSON objects that cannot be downgraded to the selected release.

OCI-40560: JSON_TABLE nested path expressions not disjunct

Cause: The JSON_TABLE expression contained two or more nested path expressions that (partially or fully) selected the same fields.

Action: Correct or combine the nested path expressions so that they become disjunct.

OCI-40561: invalid path 'string' in JSON_TABLE NESTED PATH clause

Cause: The JSON_TABLE expression contained a NESTED PATH clause with an invalid path expression. For example, '\$' is an invalid path because it selects the current context instead of accessing the nested data.

Action: Correct the NESTED PATH expression or remove the NESTED PATH clause.

OCI-40562: Conversion from JSON to SDO_GEOMETRY failed.

Cause: The selected value could not be converted to a SDO_GEOMETRY object.

Action: Ensure that the path expression selects one valid JSON value.

OCI-40563: default value not allowed for object types

Cause: The error handler specified a default value and the returned data type was an object type. These cannot be combined.

Action: Use a scalar return type for the operator, or choose a different error handler such as 'NULL ON ERROR' or 'ERROR ON ERROR'.

OCI-40564: invalid JSON specification

Cause: The provided JSON specification was invalid.

Action: Correct the specification and then retry the operation.

OCI-40565: JSON path expression did not select a value.

Cause: The JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

OCI-40566: JSON path expression selected a value of different data type.

Cause: The JavaScript Object Notation (JSON) path expression selected a data type value different than the requested data type.

Action: Use another 'get-method' to retrieve the value selected by the JSON path expression.

OCI-40567: JavaScript Object Notation (JSON) patch operation failed.

Cause: The JSON patch operation failed.

Action: Correct the specification and retry.

OCI-40568: cannot modify read-only target

Cause: An attempt to modify a JavaScript Object Notation (JSON) structure failed because the structure cannot be modified.

Action: None

OCI-40569: Unimplemented JSON feature.

Cause: An attempt was made to execute an unimplemented JavaScript Object Notation (JSON) feature.

Action: None

OCI-40570: JSON conversion failed.

Cause: A conversion between a JavaScript Object Notation (JSON) value and another type failed.

Action: Check the type definition or the selected JSON value.

OCI-40571: JSON key name '*string*' not found.

Cause: A key with the specified name was not found in the JavaScript Object Notation (JSON) data.

Action: Correct the key name.

OCI-40572: Invalid JSON array position *string*.

Cause: An attempt was made to access an item inside a JavaScript Object Notation (JSON) array with a position that is either out of bounds or invalid.

Action: Correct the position value.

OCI-40573: invalid use of PL/SQL JSON object type

Cause: An attempt was made to use a PL/SQL JavaScript Object Notation (JSON) object type in an invalid context.

Action: Use PL/SQL JSON object types only inside PL/SQL functions or procedures. PL/SQL JSON object types cannot be used directly in SQL statements.

OCI-40574: JSON operation on redacted column *string* not allowed.

Cause: An attempt was made to use a JavaScript Object Notation (JSON) operation on a column that had an Oracle Data Redaction policy.

Action: Drop the Oracle Data Redaction policy. Re-create the Oracle Data Redaction policy on a new view over the column, if needed. *Params: 1) col_name: The redacted column name on which the operation was attempted.

OCI-40575: JSON operation only supports scalar types.

Cause: An attempt was made to use a JavaScript Object Notation (JSON) operation on a non-scalar value.

Action: Apply the operation on a scalar value.

OCI-40576: Bind variable '*string*' has to be a constant in this operation.

Cause: An attempt was made to bind a variable in a SQL/JSON path to a value that may change during the execution of a SQL statement.

Action: Use either a compile time constant or a run-time constant such as a statement-level bind variable as the SQL/JSON variable value.

OCI-40577: invalid key name '*string*'

Cause: The specified key name was not valid."

Action: Specify a valid key name." *Params: 1) key_name: The invalid key name."

OCI-40578: invalid or nonexistent array position *string*

Cause: The specified array position was invalid or nonexistent.

Action: Specify a valid array position or use the APPEND function to add new items to the array. *Params: 1) array_position: The invalid or nonexistent array position.

OCI-40579: wildcard star expansion '' not allowed**

Cause: The wildcard character '*' was used in a context where a list of column names was expected and the wildcard character was not allowed.

Action: Explicitly specify the column names.

OCI-40580: STRICT or WITH UNIQUE KEYS not allowed for JSON type

Cause: An attempt was made to use IS JSON with the STRICT or UNIQUE KEYS option on a JSON type input. A JSON type instance is always STRICT and has unique keys.

Action: Apply the STRICT and UNIQUE KEYS options on a textual JSON value. Remove these options from the IS JSON operation if the input is a JSON type.

OCI-40581: package functions are unsupported below compatible string

Cause: The package was used with a database that was operating at a compatible setting lower than expected.

Action: Upgrade the database to a compatible setting that is the expected release or higher to enable the desired new features.

OCI-40582: cannot find a data guide-enabled context index

Cause: A data guide-enabled context index for the specified column in the specified table was not found.

Action: Ensure that the table and column exist, the column is a JavaScript Object Notation (JSON) column, and a data guide-enabled context index exists on the JSON column before invoking the procedure or function.

OCI-40583: view name or table name or JSON column name cannot be null

Cause: The view name or table name or JSON column name was null.

Action: Pass in a valid view name or table name or JavaScript Object Notation (JSON) column name to the function or procedure.

OCI-40584: JSON column string does not exist

Cause: The given table did not have a JavaScript Object Notation (JSON) column with the given name.

Action: Ensure that the table name and JSON column name are specified correctly.

OCI-40585: invalid frequency

Cause: The specified frequency was invalid.

Action: The range of frequency must be between 0 to 100.

OCI-40586: error occurred in the execution of string

Cause: An internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

OCI-40587: invalid JSON type

Cause: The specified JavaScript Object Notation (JSON) type was invalid.

Action: Ensure that the JSON type is specified correctly.

OCI-40588: invalid estimate percentage

Cause: The specified estimate percentage was invalid.

Action: The range of estimate percentage has to be 0.000001 to 100.

OCI-40589: Path '*string*' does not exist.

Cause: The specified path was not found.

Action: Ensure that the specified path exists.

OCI-40590: invalid or unsupported FORMAT clause

Cause: The specified FORMAT for JSON is either invalid or not supported in this operation.

Action: Ensure that a valid and supported JSON format is specified. For example, 'JSON' or 'OSON'.

OCI-40591: empty data guide on JSON column

Cause: No data was inserted into the JSON column.

Action: Insert data and commit.

OCI-40592: name conflicts were found during execution of DBMS_JSON.ADD_VIRTUAL_COLUMNS: *string*

Cause: An attempt was made to create virtual columns using an annotated Javascript Object Notation (JSON) data guide with the name of a column that already exists.

Action: Change the preferred name of the virtual column in the annotated Javascript Object Notation (JSON) data guide. An alternative is to set parameter `resolveNameConflicts` in procedure `DBMS_JSON.ADD_VIRTUAL_COLUMNS` to `TRUE` and the procedure will automatically resolve the virtual column name conflicts by appending a sequence number.

OCI-40593: name conflicts were found during execution of DBMS_JSON.CREATE_VIEW: *string*

Cause: An attempt was made to create a view using an annotated Javascript Object Notation (JSON) data guide with the name of a column that already exists.

Action: Change the preferred name of the column in the annotated Javascript Object Notation (JSON) data guide. An alternative is to set parameter `resolveNameConflicts` in procedure `DBMS_JSON.CREATE_VIEW` to `TRUE` and the procedure will automatically resolve the view column name conflicts by appending a sequence number.

OCI-40594: invalid data guide: *string*

Cause: The specified data guide was invalid.

Action: Ensure that the specified data guide follows data guide rules.

OCI-40595: Name input to JSON generation function cannot be null.

Cause: The name input given to the Javascript Object Notation (JSON) generation function was null.

Action: Ensure that the input has a valid value.

OCI-40596: An internal error occurred when evaluating the JSON operation.*string*

Cause: Evaluation of the specified JSON operation is returning an error.

Action: This is an internal error. Contact Oracle Support.

OCI-40597: JSON path expression syntax error ('string')

Cause: The specified JavaScript Object Notation (JSON) path expression had invalid syntax and could not be parsed.

Action: Specify JSON path expression with the correct syntax.

OCI-40598: JSON path expression contained an invalid array index ('string').

Cause: The specified JavaScript Object Notation (JSON) path expression contained an invalid array index.

Action: Specify a valid array index. The first element in the array has the index 0.

*Params: 1) path_string: The path expression with the invalid array index.

OCI-40599: IS JSON check constraint cannot be dropped.

Cause: An IS JSON check constraint could not be dropped because there was a JSON search index present on the column.

Action: Drop the JSON search index first before dropping the IS JSON check constraint. Alternatively, disable the IS JSON check constraint to prevent a JSON syntax check.

OCI-40600: JSON_EQUAL used outside of a predicate

Cause: The JSON_EQUAL operator was used outside of a SQL predicate.

Action: Use the JSON_EQUAL operator inside a SQL predicate such as a WHERE clause, HAVING clause, or a CASE expression.

OCI-40601: missing data for object type conversion

Cause: The input JavaScript Object Notation (JSON) data was missing data to match all of the attributes in the specified object type.

Action: The input JSON data must include the fields that are missing.

OCI-40602: extra data for object type conversion

Cause: The input JavaScript Object Notation (JSON) data had extra fields that did not match any attribute in the specified object type.

Action: The input JSON data should not include fields that do not match an attribute in the specified object type.

OCI-40603: type error mismatch for object type conversion

Cause: The input JavaScript Object Notation (JSON) data had fields that nominally matched an attribute in the specified object type, but had an incompatible data type.

Action: The input JSON data should not have fields that do not match the data type of an attribute with which they nominally match in the specified object type.

OCI-40604: exceeded maximum size for a JSON data type object

Cause: The JSON data type object exceeded the maximum size permitted.

Action: Ensure that the JSON data type object does not exceed the maximum size permitted.

OCI-40605: invalid value for OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute

Cause: An invalid value was specified for OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute.

Action: Use a non-zero value not exceeding MINSWORDMAXVAL for the OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute.

OCI-40606: Cannot create JSON Relational Duality View '*string*': Table '*string*' does not have a primary or unique key.

Cause: The specified table did not have a primary or unique key, which is required to uniquely identify the Duality View object.

Action: Add a primary or unique key to the table and select all columns of the key in the view.

OCI-40607: Cannot create JSON Relational Duality View '*string*': All primary or unique key columns of table '*string*' must be selected.

Cause: Not all columns in the primary or unique key of the specified table were selected, which is required to uniquely identify the Duality View object.

Action: Select all the columns belonging to the primary or unique key.

OCI-40608: Cannot create JSON Relational Duality View '*string*': join query to construct subobject '*string*' must use all columns of a primary or unique key of table '*string*'.

Cause: Not all columns of the primary or unique key, which are required to uniquely identify an object, were used in the join to construct the specified subobject.

Action: Specify all the primary or unique key columns in the join.

OCI-40609: Cannot create JSON Relational Duality View '*string*': foreign key column '*string*' of table '*string*' should be part of the primary or unique key of the same table, or it should not be selected to construct subobject '*string*'.

Cause: The foreign key column could only be selected if it was also part of a primary or unique key of the same table, which is required to uniquely identify the Duality View objects.

Action: Add the foreign key columns to the primary or unique key of the same table, or remove it from the select statement.

OCI-40610: Cannot create JSON Relational Duality View '*string*': All joining columns of table '*string*' must have a foreign key constraint to table '*string*'.

Cause: A table joined with another did not have foreign key constraint on (all) the joining columns, which is required to uniquely identify the Duality View objects.

Action: Define foreign key constraint on the joining columns of the specified table to the primary or unique key of the other.

OCI-40611: Only one table is allowed in the FROM clause for JSON Relational Duality Views.

Cause: More than one table was specified in the FROM clause.

Action: Restructure the SQL statement to specify only one table in the FROM clause.

OCI-40612: Cannot create JSON Relational Duality View '*string*': operator or expression not permitted.

Cause: SQL set operators (union, intersect, minus), SQL expressions, or PL/SQL functions could not be used in Duality Views.

Action: Remove the disallowed operator or expression.

OCI-40613: JSON key name cannot be reserved keyword '*string*' for JSON Relational Duality Views.

Cause: A reserved keyword was used as the JSON key name.

Action: Do not use the reserved names "_row_etag", or "_id" as the JSON key names.

OCI-40614: Key name must be a string literal enclosed by single quotation marks for JSON Relational Duality Views.

Cause: The specified key name was not a string literal.

Action: Specify the key name in single quotation marks.

OCI-40615: Cannot create JSON Relational Duality View '*string*': RETURNING clause must return a JSON type.

Cause: Only a JSON type could be returned when constructing a JSON Relational Duality View.

Action: Change the type of the RETURNING clause to be JSON.

OCI-40616: Cannot create JSON Relational Duality View '*string*': using ABSENT ON NULL in JSON_OBJECT() is not permitted.

Cause: ABSENT ON NULL clause was used as part of the JSON_OBJECT() function.

Action: Remove the ABSENT ON NULL clause from the Duality View declaration, or use NULL ON NULL instead.

OCI-40617: Cannot create JSON Relational Duality View '*string*': using ABSENT ON NULL or NULL ON NULL clauses in JSON_ARRAYAGG() is not permitted.

Cause: ABSENT ON NULL or NULL ON NULL clause was used as part of the JSON_ARRAYAGG() function.

Action: Remove the ABSENT ON NULL or NULL ON NULL clause from the Duality View declaration, or use EMPTY ON NO ROWS instead.

OCI-40618: Invalid ETAG value used in the SQL function.

Cause: An invalid ETAG value was used.

Action: Ensure a valid ETAG value is used.

OCI-40619: missing column '*string*' in CHECK ETAG list

Cause: The mentioned column was not found in the CHECK ETAG list of a JSON relational duality view.

Action: Add the column to the CHECK ETAG list.

OCI-40620: total length of key names in JSON object too long

Cause: The length of all the key names combined exceeded the maximum length permitted for a JavaScript Object Notation (JSON) object.

Action: Use fewer keys or shorter key names.

OCI-40621: Collection create mode *string* is not supported.

Cause: An invalid collection create mode was specified.

Action: Use a valid collection create mode.

OCI-40622: Creating a collection backed by view or package in "NEW" mode is not allowed.

Cause: Creating a collection backed by view or package in NEW mode was not allowed.

Action: Do not specify a view or package when creating the collection in NEW create mode, or specify a create mode that supports view or package-based collections.

OCI-40623: The table intended to back the collection does not exist.

Cause: The table intended to back the collection did not exist.

Action: Ensure that the table intended to back the collection exists.

OCI-40624: Column *string* specified in the collection metadata or defaulted is not present in the mapped table.

Cause: A column specified in the collection metadata or defaulted was not found in the mapped table backing the collection.

Action: Ensure that columns specified in the collection metadata or defaulted exist in the mapped table backing the collection.

OCI-40625: The view intended to back the collection does not exist.

Cause: The view intended to back the collection did not exist.

Action: Ensure that the view intended to back the collection exists.

OCI-40626: The table or view underlying the collection cannot be dropped.

Cause: The table or the view underlying the collection could not be dropped. There could be uncommitted writes to the collection.

Action: Ensure that all writes to the collection are committed.

OCI-40627: Column *string* specified in the collection metadata or defaulted is not present in the mapped view.

Cause: A column specified in the collection metadata or defaulted was not found in the mapped view backing the collection.

Action: Ensure that columns specified in the collection metadata or defaulted exist in the mapped view backing the collection.

OCI-40628: Projection specification is not valid JSON

Cause: Projection specification was not expressed in valid JSON.

Action: Ensure that projection specification is expressed in valid JSON.

OCI-40629: Patch specification is not valid JSON

Cause: Patch specification was not expressed in valid JSON.

Action: Ensure that patch specification is expressed in valid JSON.

OCI-40630: Versioning method '*string*' is not valid.

Cause: The specified versioning method was not valid.

Action: Specify a valid versioning method.

OCI-40631: The last-modified column index can only be set when the last-modified column name is set.

Cause: The last-modified column index was specified without setting the last-modified column name.

Action: Specify the last-modified column name if the last-modified column index is required.

OCI-40632: Key column length value cannot be less than 0.

Cause: The specified key column length value was less than 0.

Action: If the key column length value is specified, then ensure that it is greater than 0.

OCI-40633: When using GUID or UUID to assign character type key values, the key column length must be 32 bytes or greater.

Cause: The specified key column length for a GUID or UUID character type key value was less than 32 bytes.

Action: Ensure that the specified key column length for a GUID or UUID character type key value is 32 bytes or greater.'

OCI-40634: Key assignment method '*string*' is not valid.

Cause: The specified key assignment method was not valid.

Action: Specify a valid key assignment method.

OCI-40635: If the key assignment method is 'SEQUENCE', a key column sequence name must be specified.

Cause: The key assignment method 'SEQUENCE' was specified, but the key column sequence name was not set.

Action: If the key assignment method is 'SEQUENCE', ensure that the key column sequence name is set.

OCI-40636: Content column type '*string*' is not valid.

Cause: The specified content column type was not valid.

Action: Specify a valid content column type.

OCI-40637: Content column maximum length value cannot be less than 0.

Cause: The specified content column maximum length value was less than 0.

Action: Specify a content column maximum length value greater than 0.

OCI-40638: Content column validation mode '*string*' is not valid.

Cause: The specified content column validation mode was not valid.

Action: Specify a valid content column validation mode.

OCI-40639: Content column compress setting '*string*' is not valid.

Cause: The specified content column compress setting was not valid.

Action: Specify a valid content column compress setting.

OCI-40640: Content column LOB cache setting '*string*' is not valid (must be 'true' or 'false').

Cause: The specified content column LOB cache setting was not valid.

Action: 'Specify a valid content column LOB cache setting.

OCI-40641: Content column LOB encrypt setting '*string*' is not valid.

Cause: The specified content column LOB encrypt setting was not valid.

Action: Specify a valid content column LOB encrypt setting.

OCI-40642: The collection cannot have a media type column unless the content column type is BLOB.

Cause: The content column type was set to a type other than Binary Large Object (BLOB), and the media type column was requested.

Action: If the media type column is requested, set the content column type to BLOB.

OCI-40643: INITIAL storage clause parameter value cannot be less than 0.

Cause: The specified INITIAL storage clause parameter value was not valid.

Action: Specify a valid INITIAL storage clause parameter value.

OCI-40644: PCTINCREASE storage clause parameter value cannot be less than 0.

Cause: The specified PCTINCREASE storage clause parameter value was not valid.

Action: Specify a valid PCTINCREASE storage clause parameter value.

OCI-40645: If the key column sequence name was specified, the key column assignment method must be set to 'SEQUENCE'.

Cause: The key column sequence name was specified, but the key column assignment method was not 'SEQUENCE'.

Action: If the key column sequence name is specified, ensure that the key column assignment method is 'SEQUENCE'.

OCI-40646: SecureFile LOB settings cannot be used when the content column type is 'string'.

Cause: SecureFile LOB settings were specified, but the content column was not of LOB type.

Action: If SecureFile LOB settings are specified, ensure that the content column is of LOB type.

OCI-40647: A non-zero content column maximum length cannot be set for LOB content types.

Cause: A non-zero content column maximum length was specified, but the content column was of a LOB type.

Action: If non-zero content column maximum length is specified, ensure that the content column is not of a LOB type.

OCI-40648: Versioning method other than 'NONE' can only be specified if version column name is specified.

Cause: Versioning method other than 'NONE' was specified, but the version column name was not specified.

Action: If a versioning method other than 'NONE' is specified, ensure that the version column name is set.

OCI-40649: Key column maximum length cannot be greater than 255 bytes.

Cause: A key column maximum length value greater than 255 bytes was specified.

Action: Ensure that the key column maximum length value is not greater than 255 bytes.

OCI-40650: The specified key column type cannot be used with a maximum length.

Cause: A key column type that does not support maximum length was specified.

Action: Ensure that if a key column maximum length is set, the key column type supports a maximum length setting.

OCI-40651: Key column type 'string' is not valid.

Cause: The specified key column type was not valid.

Action: Specify a valid key column type.

OCI-40652: Read-only setting is not valid (must be 'true' or 'false').

Cause: The specified read-only setting was not valid.

Action: Specify a valid read-only setting.

OCI-40653: Spatial data type MDSYS.SDO_GEOMETRY not found.

Cause: The spatial data type MDSYS.SDO_GEOMETRY could not be found.

Action: Create data type MDSYS.SDO_GEOMETRY by installing Oracle Spatial and Graph or Oracle Locator, or check package permissions.

OCI-40654: Input to JSON generation function has unsupported data type.

Cause: An input parameter to the JSON generation function had a data type that is not supported.

Action: Use the correct input or a conversion function to convert the input to a supported data type.

OCI-40655: no PASSING clause specified

Cause: The PASSING clause was not specified for the bind variables in the query.

Action: Add a PASSING clause to specify the values for bind variables.

OCI-40656: Variable 'string' in JSON path expression has no value in PASSING clause.

Cause: The JavaScript Object Notation (JSON) path expression contained a variable name that had no corresponding value in the external PASSING clause.

Action: Add a variable to the external PASSING clause and ensure that the names match. *Params: 1) variable name

OCI-40657: Variable in PASSING clause has no name.

Cause: The expression provided in the PASSING clause had no name.

Action: Name the expression in the PASSING clause.

OCI-40658: Collection name cannot be null for this operation.

Cause: An attempt was made to perform the operation without a name.

Action: Specify the collection name for the operation.

OCI-40659: Data type does not match the specification in the collection metadata.

Cause: An attempt was made to use an invalid data type.

Action: Use the data type that is specified in the collection descriptor.

OCI-40660: Content value cannot be null for instantiating a document.

Cause: An attempt was made to instantiate a document with a null content.

Action: Specify non-null content for instantiating the document.

OCI-40661: Key value cannot be null for this operation.

Cause: Attempted to perform an operation with a NULL key.

Action: Specify non-null key for the operation.

OCI-40662: Document cannot be NULL for this operation.

Cause: An attempt was made to perform an operation with a NULL document.

Action: Instantiate the document using the constructor before this operation.

OCI-40663: cannot modify a read-only collection

Cause: An attempt was made to modify a read-only collection.

Action: None

OCI-40664: cannot add additional IS JSON check constraint

Cause: An attempt was made to add an IS JSON check constraint to a column that already had an IS JSON check constraint.

Action: Do not add additional IS JSON check constraints.

OCI-40665: A client-assigned key cannot be used for this operation.

Cause: An attempt was made to use a client-assigned key for this collection.

Action: Remove the client-assigned key from the document.

OCI-40666: Internal error '*string*' received from JSON processor

Cause: An internal error was received during a JSON operation.

Action: This is an internal error. Contact Oracle Support Services.

OCI-40667: Patch operation cannot remove JSON_ELEMENT_T type.

Cause: An patch specification operation attempted to remove the top-most container (object or array) from the JSON_ELEMENT_T type.

Action: Modify the patch specification by either removing the operation that deletes the top-most container or by adding an operation that adds a new top-most container.

OCI-40668: collection metadata too long

Cause: The collection metadata which was passed was too long.

Action: Reduce the size of the collection metadata.

OCI-40669: Collection create failed: collection with same name but different metadata exists.

Cause: Creation of the collection failed because there was an existing collection with same name but different metadata.

Action: None

OCI-40670: Unable to complete collection create due to an interfering collection DDL operation.

Cause: Existing collection with the same name was encountered, but dropped from another process before its metadata could be checked.

Action: Retry creating the collection.

OCI-40671: Collection not found.

Cause: Collection was not found.

Action: None

OCI-40672: Specified key column max length of *string* bytes exceeds maximum allowed 255 bytes.

Cause: Key column max length specified in the supplied metadata exceeded maximum allowed length of 255 bytes.

Action: Ensure key column max length specified in the supplied metadata does not exceed 255 bytes.

OCI-40673: *string* argument cannot be NULL.

Cause: Supplied argument was NULL.

Action: Provide a valid argument.

OCI-40674: Length of *string* metadata value cannot exceed *string* bytes.

Cause: Length of the supplied metadata value exceeded allowed limit.

Action: Provide a valid metadata value.

OCI-40675: Metadata descriptor must be specified using valid JSON.

Cause: JSON supplied for the metadata descriptor was not valid.

Action: Supply valid JSON for the metadata descriptor.

OCI-40676: invalid Query-By-Example (QBE) filter specification\n*string*

Cause: The Query-By-Example (QBE) filter specification was invalid.

Action: Correct the filter specification.

OCI-40677: internal SODA error

Cause: There was an internal error in the Simple Oracle Document Access (SODA) processing layer.

Action: None

OCI-40678: The total number of keys specified using the attributes key, keys, and filter is *string*; exceeds the maximum allowed limit of *string*.

Cause: The number of keys exceeded allowed limit.

Action: Reduce the number of keys to below the maximum allowed limit

OCI-40679: Lob length of *string* bytes exceed maximum supported length of *string* bytes

Cause: The large object (LOB) content that was fetched exceeded the maximum supported length

Action: None

OCI-40680: encountered identifier "string" when expecting a path expression in JSON_TABLE

Cause: An identifier with double quotation characters was used in place of a path expression.

Action: Use single quotation characters to specify the path expression. *Params: 1) identifier_name: The identifier name.

OCI-40681: OCI_SODA_AS_STORED cannot be used if the content column type is CLOB, or VARCHAR2.

Cause: An attempt was made to use OCI_SODA_AS_STORED on a collection whose content column type was CLOB, or VARCHAR2.

Action: Use either the OCI_DEFAULT or OCI_SODA_AS_AL32UTF8 mode of execution.

OCI-40682: invalid combination of flags used

Cause: An attempt was made to use an invalid combination of flags.

Action: Use only one of the flags. (OCI_DEFAULT, OCI_AS_STORED or OCI_SODA_AS_AL32UTF8)

OCI-40683: Value 'string' is not valid for field 'string' (must be 'true' or 'false').

Cause: The specified setting was not valid.

Action: Specify a valid setting ('true' or 'false').

OCI-40684: maximum number of key names exceeded

Cause: An attempt was made to return a list of keys names for a JSON object that had more than 32767 keys.

Action: Reduce the number of keys in the JSON object to 32767 or less.

OCI-40685: UTF-32 encoding is not supported for JSON documents.

Cause: UTF-32 encoded content was specified for a document of type "application/json".

Action: Use a UTF-8 or UTF-16 encoding for JSON documents.

OCI-40686: For a JSON-only collection, media type of the input document must be 'application/json'.

Cause: An attempt was made to write a document with media type other than 'application/json' to a JSON-only collection.

Action: Provide a document with media type 'application/json'.

OCI-40687: CREATE_MODE parameter of CREATE_COLLECTION function is invalid.

Cause: Invalid value was supplied as CREATE_MODE parameter of CREATE_COLLECTION function.

Action: Supply MAP or DDL constant for the CREATE_MODE parameter of CREATE_COLLECTION function.

OCI-40688: The date or time stamp string value does not conform to ISO 8601 format.

Cause: A string value that did not conform to the ISO 8601 format was used as input to an operation that attempted to convert it to a date or timestamp value.

Action: Supply a string value conforming to ISO 8601 format to the date or timestamp conversion operation.

OCI-40689: Skip value cannot be set to null.

Cause: An attempt was made to set a null value for skip.

Action: Specify a non-null value for skip in the operation.

OCI-40690: Limit value cannot be set to null.

Cause: An attempt was made to set a null value for limit.

Action: Specify a non-null value for limit in the operation.

OCI-40691: The cursor for the operation has already been closed.

Cause: An attempt was made to use a cursor that has already been closed.

Action: Do not use the cursor that has already been closed or retry the operation after removing the close.

OCI-40692: Version value cannot be set to null.

Cause: An attempt was made to set a null value for version.

Action: Specify a non-null value for version in the operation.

OCI-40693: Filter value cannot be set to null.

Cause: An attempt was made to set a null value for filter.

Action: Specify a non-null value for filter in the operation.

OCI-40694: Query-by-example (QBE) with clauses other than \$id, \$textContains is not supported on heterogeneous collections.

Cause: An attempt was made use QBE on a heterogeneous collection with clauses other than \$id, \$textContains.

Action: Do not use QBE on heterogeneous collection with clauses other than \$id, \$textContains.

OCI-40695: The collection does not have version column.

Cause: An attempt was made to use version in the operation on a collection with no version column.

Action: Do not use version on a collection with no version column.

OCI-40696: invalid type for index property *string*: expected *string*

Cause: An invalid index property type was specified.

Action: Supply a valid type for the index property.

OCI-40697: invalid value specified for index property 'dataguide'

Cause: An invalid value for the index property 'dataguide' was specified.

Action: Supply a valid value for the 'dataguide' index property. Valid values are 'on' or 'off'.

OCI-40698: invalid value specified for index property 'search_on'

Cause: An invalid value for the index property 'search_on' was specified.

Action: Specify a valid value for the 'search_on' index property. Valid values are 'none', 'text', or 'text_value'.

OCI-40699: invalid value specified for index property 'order'

Cause: An invalid value for the index property 'order' was specified.

Action: Specify a valid value for the 'order' index property. Valid values are 'asc', 'desc', '-1', or '1'.

OCI-40700: missing *string* index property

Cause: A mandatory index property was missing.

Action: Specify the mandatory index property.

OCI-40701: null case ID column - cannot provide row importance

Cause: The row importance was enabled, but without a corresponding case or row identifier column in the build data.

Action: Provide a valid case identifier column in the build data.

OCI-40711: incompatible index field properties *string* and *string*

Cause: Incompatible index field properties were specified.

Action: Specify compatible index field properties.

OCI-40712: Index property *string* cannot be specified without specifying the 'fields'.

Cause: An index property was specified without specifying the 'fields' property.

Action: Specify the properties of index fields.

OCI-40713: Index property 'lax' cannot be specified with 'scalarRequired'.

Cause: Index properties 'lax' and 'scalarRequired' were both specified.

Action: Specify either 'lax' or 'scalarRequired' but not both.

OCI-40714: data type *string* not recognized or acceptable for an index column

Cause: An invalid data type property was used.

Action: Specify a valid data type (for example, STRING, VARCHAR, VARCHAR2, NUMBER, DATE, or TIMESTAMP).

OCI-40715: Index property 'maxLength' cannot be specified with non-string data types.

Cause: Index property 'maxLength' was specified with a non-string data type.

Action: Remove the 'maxLength' index property if a non-string data type must be used.

OCI-40716: Text indexing is not supported on heterogeneous collections.

Cause: An attempt was made to create a text index on a heterogeneous collection.

Action: Do not create a text index on a heterogeneous collection.

OCI-40717: Functional indexing is not supported on heterogeneous collections.

Cause: An attempt was made to create a functional index on a heterogeneous collection.

Action: Do not create a functional index on a heterogeneous collection.

OCI-40718: Geospatial indexing is not supported on heterogeneous collections.

Cause: An attempt was made to create a geospatial index on a heterogeneous collection.

Action: Do not create a geospatial index on a heterogeneous collection.

OCI-40719: invalid index property *string*

Cause: An invalid index property was specified.

Action: Specify a valid index property.

OCI-40720: Text indexing is not supported on collections with key column of NVARCHAR2 data type.

Cause: An attempt was made to create a text index on a collection with a key column of NVARCHAR2 data type.

Action: Do not create an index on a collection that has a key column of NVARCHAR2 data type.

OCI-40721: Text indexing is not supported on collections with content column of NVARCHAR2 or NCLOB data type.

Cause: An attempt was made to create a text index on a collection with a content column of NVARCHAR2 or NCLOB data type.

Action: Do not create an index on a collection that has a content column of NVARCHAR2 or NCLOB data type.

OCI-40722: Text indexing is not supported on collections with encrypted content column.

Cause: An attempt was made to create a text index on a collection with an encrypted content column.

Action: Do not create an index on a collection with an encrypted content column.

OCI-40723: index specification cannot be null

Cause: An attempt was made to specify a null index specification.

Action: Specify a non-null index specification.

OCI-40724: array steps in the fields path is not supported

Cause: An attempt was made to use array steps in fields path.

Action: Do not use array steps in the fields path.

OCI-40725: path for the field in the index specification cannot be null

Cause: An attempt was made to specify a null value for the field's path in the index specification.

Action: Specify a non-null value for the field's path in the index specification.

OCI-40726: path for the field in the index specification is invalid

Cause: An attempt was made to specify an invalid path in the index specification.

Action: Specify a valid path for the field in the index specification.

OCI-40727: number of paths with string data type exceeds the maximum permissible limit of 16

Cause: Number of paths with string data type exceeds the maximum permissible limit of 16.

Action: Reduce the number of paths with string data type.

OCI-40728: missing dot separator in path *string* at position *string*.

Cause: A dot separator was missing in the path expression.

Action: Specify the missing dot step separator in the path expression.

OCI-40729: unclosed quote at end of path *string*

Cause: A quote that was not closed was detected at the end of the path.

Action: Specify the missing back quote at the end of the path expression.

OCI-40730: an invalid character detected in the escape string in the path *string* at position *string*

Cause: An attempt was made to use a path containing invalid characters in the escape string.

Action: Specify a valid escape string in the path expression.

OCI-40731: invalid quoted step in the path *string* at position *string*

Cause: An attempt was made to use an invalid quoted step in the path.

Action: Specify a valid quoted step in the path expression.

OCI-40732: incomplete escape sequence in the path *string*

Cause: An attempt was made to use an incomplete escape sequence in the path.

Action: Specify an escape sequence that is complete in the path expression.

OCI-40733: An index with the specified name already exists in the schema.

Cause: An attempt was made to create an index with the same name as another index in the schema.

Action: Specify an index name that does not match the name of any indexes already existing in the schema.

OCI-40734: key for the document to replace must be specified using the key attribute

Cause: An attempt was made to replace a document without setting the key attribute.

Action: Set the key attribute for the replace operation.

OCI-40736: Query-By-Example (QBE) filter is not valid JSON*string*

Cause: QBE filter was not expressed in valid JSON.

Action: Ensure that the QBE filter is expressed in valid JSON.

OCI-40737: partitionColumn.path is missing

Cause: partitionColumn.name was specified, but partitionColumn.path was missing.

Action: Specify partitionColumn.path.

OCI-40738: partitionColumn.name is missing

Cause: One or a combination of partitionColumn.path, partitionColumn.maxLength, or partitionColumn.sqlType was specified, but partitionColumn.name was missing.

Action: Specify the partitionColumn.name value.

OCI-40739: Partition column type *string* is not valid.

Cause: The specified partition column type was not valid.

Action: Specify a valid partition column type.

OCI-40740: cannot use JSON format '*string*' with content columns of type '*string*'

Cause: An invalid combination of content column settings was specified.

Action: Specify a valid combination of content column settings.

OCI-40741: cannot use JSON format '*string*' with a heterogeneous collection

Cause: An invalid combination of heterogeneous collection settings was specified.

Action: Specify a valid combination of heterogeneous collection settings.

OCI-40742: Content column JSON format '*string*' is invalid.

Cause: An invalid JSON format was specified for the content column.

Action: Provide a valid JSON format content column setting.

OCI-40743: Partition column length value cannot be less than 0.

Cause: The specified partition column length value was less than 0.

Action: If the partition column length value is specified, then ensure that it is greater than 0.

OCI-40744: Specified partition column max length of *string* bytes exceeds maximum allowed *string* bytes.

Cause: Partition column max length specified in the supplied metadata exceeded the maximum allowed length.

Action: Ensure that the partition column max length specified in the supplied metadata does not exceed the maximum allowed length.

OCI-40745: The specified partition column type cannot be used with a maximum length.

Cause: A partition column type that does not support maximum length was specified.

Action: Ensure that, if a partition column maximum length is set, the partition column type supports a maximum length setting.

OCI-40746: keyColumn.path must be set with '*string*' key assignment method.

Cause: keyColumn.path was not set with the specified EXTRACT or INSERT key assignment method.

Action: Ensure that keyColumn.path is set when the key assignment method is EXTRACT or INSERT.

OCI-40747: The value *string* is not a valid key of type *string*.

Cause: The key value was not of a valid type.

Action: Ensure that the input for key is of a valid type.

OCI-40748: SKIP and LIMIT attributes cannot be used for count operation.

Cause: An attempt was made to use SKIP and LIMIT attributes in a count operation.

Action: Do not use SKIP or LIMIT attributes in a count operation.

OCI-40749: Index property *string* cannot be specified without specifying the fields or spatial properties.

Cause: An index property was specified without specifying the fields or spatial properties.

Action: Specify either the properties of the index fields or spatial.

OCI-40750: Column of Large Object (LOB) type cannot be used for sorting.

Cause: The specified sort condition included a LOB column such as CLOB, BLOB or JSON.

Action: Ensure that the sort column data type is not a large object such as CLOB, BLOB or JSON.

OCI-40751: Document flags are not the same in all the input documents.

Cause: The document flags were not the same in all the input documents supplied to the insert operation.

Action: Ensure that the document flags are the same in all the input documents supplied to the insert operation.

OCI-40752: Input document array length must be greater than 0.

Cause: The supplied input document array length was less than or equal to 0.

Action: Supply the input document array length that is greater than 0.

OCI-40753: The current user is not the owner of the index.

Cause: The current user was not the owner of the index. Only the owner of the index can perform the operation.

Action: Connect as the owner of the index and retry the operation. If you connect as the owner of the base table and get the error, then the owner of the index has to be the owner of the base table in order to perform the operation. Connect as the owner of the base table then create the index.

OCI-40754: Collection name cannot be null for this operation.

Cause: Collection name was null for the operation.

Action: Specify a non-null collection name.

OCI-40755: Index name cannot be null for this operation.

Cause: Index name was null for the operation.

Action: Specify a non-null index name.

OCI-40756: descendant step in the path expression is not supported

Cause: The specified path contained a descendant step.

Action: Do not use descendant step in the path expression.

OCI-40757: A dot (.) cannot appear as the first or last character of a path. To signify a zero-length field name, a pair of backquotes must be used before or after the dot.

Cause: A dot (.) was used as the first or last character of the path.

Action: Do not use a dot (.) as the first or last character of the path. To signify a zero-length field name, a pair of backquotes must be used before or after the dot.

OCI-40758: unquoted special character *string* used as step in the path *string* at position *string*

Cause: Special characters such as \$, @ cannot be used as a path step by itself unless backquoted.

Action: Backquote the special character if used as a path step by itself.

OCI-40759: wildcard step in the path expression is not supported

Cause: The specified path contained a wildcard step.

Action: Do not use a wildcard step in the path expression.

OCI-40760: Index with the specified name did not exist on the collection.

Cause: Index with the specified name did not exist on the collection.

Action: Specify the name of the index that exists on the collection.

OCI-40761: OCI_SODA_AS_STORED cannot be used if the content column JSON format is not textual JSON.

Cause: An attempt was made to use OCI_SODA_AS_STORED on a Binary Large Object (BLOB) collection whose content column format was not textual JavaScript Object Notation (JSON).

Action: Use OCI_DEFAULT or OCI_SODA_AS_AL32UTF8.

OCI-40762: missing value in JSON_TRANSFORM

Cause: An attempt was made to perform a JSON_TRANSFORM operation on a value that was missing in the document that was being transformed. The error occurred because the JSON path expression did not match any key in the input document.

Action: Correct your path expression or change the ON MISSING clause in the JSON_TRANSFORM operation.

OCI-40763: value already exists in JSON_TRANSFORM

Cause: An attempt was made to insert a field that already existed with a JSON_TRANSFORM operation.

Action: Correct your path expression or change the ON EXISTING clause in the JSON_TRANSFORM operation.

OCI-40764: invalid option for ON EXISTING clause in JSON_TRANSFORM for path *string*

Cause: An option for the ON EXISTING clause was provided that was not valid for the specified JSON_TRANSFORM operation.

Action: Specify a different option for ON EXISTING or omit the ON EXISTING clause and use the default option.

OCI-40765: invalid option for ON MISSING clause in JSON_TRANSFORM for path *string*

Cause: An option for the ON MISSING clause was provided that was not valid for the specified JSON_TRANSFORM operation.

Action: Specify a different option for ON MISSING or omit the ON MISSING clause and use the default option.

OCI-40766: error in JSON_TRANSFORM execution

Cause: An operation raised an unexpected internal error.

Action: This is an internal error. Contact Oracle Support.

OCI-40767: field with this name already exists (*string*)

Cause: A RENAME operation was attempted to rename a field to a name that already existed in the same Javascript Object Notation (JSON) object.

Action: Choose another field name, remove the existing field, or choose the REPLACE ON EXISTING clause.

OCI-40768: field with name '*string*' does not exist

Cause: A RENAME operation attempted to rename a field that did not exist.

Action: Check the field name or use the IGNORE ON MISSING clause.

OCI-40769: value not a JSON array

Cause: An attempt was made perform a JSON_TRANSFORM array operation on a value that was not an array.

Action: Ensure that the path expressions of array operations match the JSON arrays in the data.

OCI-40770: removal of root value not allowed

Cause: An attempt was made to remove the topmost object, array or scalar value in the JavaScript Object Notation (JSON) data.

Action: Do not use path expression '\$' in the REMOVE operation.

OCI-40771: JSON array subscript '*last*' not permitted

Cause: An attempt was made to use the JavaScript Object Notation (JSON) array subscript '*last*' with an operator that does not support '*last*'.

Action: Replace '*last*' with the actual subscript or use another operator.

OCI-40772: Truncation is not supported on a collection that is not table based.

Cause: An attempt was made to truncate a collection that was not table based.

Action: Ensure that the collection being truncated is table based.

OCI-40773: Input JSON document contents are not in the same encoding.

Cause: Encoding of JSON content in all input documents was not the same.

Action: Ensure that all JSON documents content are in the same encoding.

OCI-40774: Metadata component *string* has value *string* which differs from expected value *string*.

Cause: An attempt was made to use unsupported collection metadata value.

Action: Provide a supported collection metadata value.

OCI-40775: Only table-backed collections are supported.

Cause: An attempt was made to create a collection not backed by a table.

Action: Specify collection metadata appropriate for a collection backed by a table.

OCI-40776: SCN value for 'as of' operation cannot be set to null.

Cause: An attempt was made to set a null value for system change number (SCN).

Action: Specify a non-null value for the SCN in the operation.

OCI-40777: Timestamp value for 'as of' cannot be set to null.

Cause: An attempt was made to set a null value for the timestamp value.

Action: Specify a non-null value for the timestamp in the operation.

OCI-40778: SCN and timestamp attributes for SELECT and COUNT operations only.

Cause: An attempt was made to use system change number (SCN) and timestamp attributes in an 'as of' operation that was not SELECT or COUNT.

Action: Do not use SCN or timestamp attributes in operations other than SELECT and COUNT.

OCI-40779: Truncation is not supported with data type in RETURNING clause.

Cause: An attempt was made to use the TRUNCATE keyword with a non-textual data type in the RETURNING clause. This is not supported.

Action: Remove the TRUNCATE keyword or change the RETURNING clause to use a textual data type like VARCHAR2 or CLOB.

OCI-40780: JSON syntax error\string

Cause: The provided JSON data had invalid syntax and could not be parsed.

Action: Provide JSON data with the correct syntax.

OCI-40781: A buffer underflow occurred during the execution of OCI JSON function \string.

Cause: An operation on an Oracle Call Interface (OCI) JSON descriptor resulted in an underflow error.

Action: Supply a larger buffer for the operation to prevent underflow.

OCI-40782: Invalid parameter value 'string' was specified for an OCI JSON function call.

Cause: A function call on an Oracle Call Interface (OCI) JSON descriptor could not be processed due to the specified invalid parameter value.

Action: Use valid input for the OCI JSON descriptor function.

OCI-40783: invalid binary JSON data \string

Cause: The specified binary JSON data is invalid.

Action: Supply valid binary JSON data.

OCI-40784: Error occurred while reading from the input stream.

Cause: An error occurred while reading from the input stream due to incorrect initialization.

Action: Ensure that the read input stream is valid and initialized correctly for read operation.

OCI-40785: Error occurred while writing to the output stream.

Cause: An error occurred while writing to the output stream due to incorrect initialization.

Action: Ensure that the write output stream is valid and initialized correctly for write operation.

OCI-40786: JavaScript Object Notation (JSON) path expression evaluated to a non-Boolean value.

Cause: The JSON path expression evaluated to a non-Boolean value.

Action: Correct the JSON path expression or use an operator such as JSON_QUERY or JSON_VALUE to produce a result.

OCI-40787: invalid input data type for JSON_TRANSFORM

Cause: The specified input to the JSON_TRANSFORM function had an unsupported data type.

Action: Specify an input value that is either a JSON data type or a type capable of representing textual JSON data.

OCI-40788: JSON_TRANSFORM function INSERT operation contains invalid path (string)

Cause: An attempt was made to insert a value into a JSON object or array using a JavaScript Object Notation (JSON) path expression that could potentially select multiple positions inside the same array or multiple keys in the same object. This is not allowed.

Action: Do not use the asterisk (*) wildcard or range specification in the JSON path expression of an INSERT operation.

OCI-40789: JSON_TRANSFORM operation invalid or not supported

Cause: An attempt was made to invoke JSON_TRANSFORM with an invalid or unsupported operation or parameter.

Action: Check and correct the syntax of the JSON_TRANSFORM expression.

OCI-40790: invalid null input value for JSON_TRANSFORM

Cause: The specified input to JSON_TRANSFORM had a SQL null value.

Action: Convert the input value to a JSON null.

OCI-40791: invalid option for ON NULL clause in JSON_TRANSFORM for path string

Cause: An invalid option for the ON NULL clause is provided for the JSON_TRANSFORM operation.

Action: Specify a different option for ON NULL, or omit the ON NULL clause and accept the default ON NULL option for this operator. Common ON NULL options are ERROR ON NULL, NULL ON NULL, or IGNORE ON NULL.

OCI-40792: duplicate option for string clause in JSON_TRANSFORM for path string

Cause: The specified JSON_TRANSFORM option is already defined.

Action: Specify only one option for each JSON_TRANSFORM handler.

OCI-40793: invalid JSON descriptor detected: [string]

Cause: An invalid JSON descriptor was detected.

Action: Contact Oracle Support.

OCI-40794: warning: empty input

Cause: The operation succeeded, but processed a NULL or an empty input. The Oracle Call Interface (OCI) error code OCI_SUCCESS_WITH_INFO was returned to indicate this.

Action: Ensure that the input is not empty.

OCI-40795: Cannot perform a write operation on a JSON descriptor in a C callout if the PL/SQL argument type is IN.

Cause: Attempted to perform a write operation on a JSON descriptor passed as an IN argument to a C callout.

Action: Use either IN/OUT or OUT type argument for the JSON type in the C callout.

OCI-40796: invalid comparison operation involving JSON type value

Cause: An attempt was made to perform a comparison against a JSON type value.

Action: Add a JSON trailing type cast function to compare the JSON type value against a scalar value. Use JSON_EQUAL to compare two JSON type values.

OCI-40797: An error occurred during conversion of the Oracle Call Interface (OCI) JSON descriptor to textual JSONInstring.

Cause: The conversion function produced an output result that exceeded the the input buffer size.

Action: Increase the size of the input buffer.

OCI-40798: Boolean conversion is not supported for the specified data type.

Cause: An attempt was made to use the Boolean number conversion with a data type that was not NUMBER.

Action: Change the data type in the RETURNING clause to NUMBER.

OCI-40799: cannot convert Boolean value to number

Cause: An attempt was made to convert a Boolean value to a number with a JSON path that used a number() or numberOnly() function.

Action: Remove the number() or numberOnly() function from the JSON path expression.

OCI-40800: Cannot create a JSON_VALUE functional index with a predicate ending the path expression.

Cause: An attempt was made to create a JSON_VALUE functional index with a predicate as the last step in the path expression.

Action: Do not include a predicate as the last step in the path expression in a JSON_VALUE functional index.

OCI-40801: metadata descriptor cannot be null

Cause: An attempt was made to specify a null metadata descriptor.

Action: Specify a non-null metadata descriptor.

OCI-40802: Collection create mode *string* cannot be used if collection is backed by a view.

Cause: An invalid collection create mode was specified.

Action: Use a valid collection create mode.

OCI-40803: JSON_TRANSFORM operation called with NULL input

Cause: A JSON_TRANSFORM operation was called with a NULL input value and the operation had ERROR ON NULL handling specified.

Action: Ensure that the specified value is not NULL or remove the ERROR ON NULL option.

OCI-40804: operation on an empty JSON descriptor

Cause: The operation succeeded, but the input JSON descriptor was empty. The Oracle Call Interface (OCI) error code OCI_SUCCESS_WITH_INFO was returned to indicate this.

Action: Ensure that the input is not empty.

OCI-40805: cannot add an IS JSON check constraint to a JSON type column

Cause: An attempt was made to add an IS JSON check constraint to a column of JSON type.

Action: None

OCI-40806: warning of replacement characters in the converted textual JSON due to bad character data in the sourceInstring

Cause: Conversion to textual JSON completed successfully but with replacement characters in the output. The Oracle Call Interface (OCI) error code OCI_SUCCESS_WITH_INFO was returned to indicate this.

Action: Check if the source was encoded correctly.

OCI-40807: Validation value 'string' cannot be specified with 'string' content column type.

Cause: Content column type for which validation is not supported was used.

Action: Do not specify validation.

OCI-40808: Content column tablespace cannot be specified with 'string' content column type.

Cause: Content column type for which content column tablespace is not supported was used.

Action: Do not specify content column tablespace.

OCI-40809: memOptimizeRead cannot be set to 'true' with 'string' content column type.

Cause: Content column type for which memOptimizeRead is not supported was used.

Action: Do not specify memOptimizeRead, or set its value to 'false'.

OCI-40810: update of root value not allowed

Cause: An attempt was made to update the top-most object, array or scalar value in the JavaScript Object Notation (JSON) data.

Action: Do not select the entire document (with path expression '\$') in a JSON_TRANSFORM SET operation.

OCI-40811: piecewise write operation failed on a LOB column with persistent binary JSON

Cause: An attempt was made to update a piece of Large Objects (LOB) column with persistent binary Javascript Object Notation (JSON) data.

Action: Do not use DBMS_LOB write operations on a LOB column with persistent binary JSON data.

OCI-40812: cannot specify both WITH ARRAY WRAPPER and OMIT QUOTES

Cause: The clause OMIT QUOTES ON SCALAR STRING conflicted with the clause WITH ARRAY WRAPPER.

Action: Change OMIT to KEEP, or use WITHOUT ARRAY WRAPPER.

OCI-40813: cannot specify ASIS with KEEP QUOTES or OMIT QUOTES

Cause: The ASIS clause could not be used together with the clauses OMIT QUOTES or KEEP QUOTES.

Action: Remove the ASIS clause.

OCI-40814: selected value not a JavaScript Object Notation (JSON) object

Cause: An attempt was made to perform a JSON_TRANSFORM object operation on a value that was not an object.

Action: Correct the path expression.

OCI-40815: cannot create JSON array inside another array

Cause: An attempt was made to create a JavaScript Object Notation (JSON) array using the CREATE ON MISSING clause to add this new array to another existing array. This is not possible because a newly created array using the CREATE ON MISSING clause can only be added to an object.

Action: Correct your path expression to either add the new array to a JSON object or to append it to the existing array.

OCI-40816: invalid JSON key name *string*

Cause: An attempt was made to set or rename a key in a JSON object with a name that was invalid.

Action: Correct the key name. *Params: 1) key_name: The invalid JSON key name.

OCI-40817: Metadata field *string* is either invalid, or missing in the original collection metadata.

Cause: An invalid field, or a field missing in the original collection metadata, was specified in the interim collection metadata.

Action: Ensure that all interim collection metadata fields are valid and, if required, present in the original collection metadata.

OCI-40818: Metadata field *string* has a value *string* unsupported in online redefinition.

Cause: A field with a value unsupported in online redefinition was supplied in the interim collection metadata.

Action: Ensure that all interim collection metadata fields have values supported in online redefinition.

OCI-40819: Metadata field *string* cannot be specified when metadata field *string* has value *string*.

Cause: An invalid combination of fields was specified in the interim metadata.

Action: Ensure that only allowed combinations of fields are specified in the interim metadata.

OCI-40820: Cannot set LOCK attribute on the operation if SKIP or LIMIT attributes are set.

Cause: An invalid combination of operation attributes was specified.

Action: Specify a valid combination of operation attributes.

OCI-40821: LOCK attribute cannot be set for *string* operation.

Cause: An attempt was made to set LOCK attribute in this operation.

Action: Do not set LOCK attribute in this operation.

OCI-40822: SecureFile LOB settings cannot be used when the content column stores binary JSON.

Cause: SecureFile LOB settings were specified for a binary JSON content column.

Action: Do not specify SecureFile LOB settings.

OCI-40823: Validation cannot be specified when the content column stores binary JSON.

Cause: Validation was specified for a binary JSON content column.

Action: Do not specify validation.

OCI-40824: Content column tablespace cannot be specified when the content column stores binary JSON.

Cause: Content column tablespace was specified for a binary JSON content column.

Action: Do not specify content column tablespace.

OCI-40825: memOptimizeRead cannot be set when the content column stores binary JSON.

Cause: memOptimizeRead was specified for a binary JSON content column.

Action: Do not specify memOptimizeRead.

OCI-40826: Collection create mode '*string*' is not supported on this cloud service.

Cause: An unsupported collection create mode was specified.

Action: Specify a supported collection create mode.

OCI-40827: keyColumn.path must not be set with '*string*' key assignment method.

Cause: keyColumn.path was set with a key assignment method that does not require a key path.

Action: Ensure that keyColumn.path is set only with a key assignment method that requires it.

OCI-40828: keyColumn.sqlType must be set to '*string*' for the specified key column assignment method.

Cause: Key column SQL type incompatible with the specified key column assignment method was used.

Action: Ensure that appropriate key column SQL type is used.

OCI-40829: keyColumn.maxLength must be set to 'string' for the specified key column assignment method.

Cause: Key column SQL type length incompatible with the specified key column assignment method was used.

Action: Ensure that appropriate key column SQL type length is used.

OCI-40830: ROWID is not a valid JSON_TABLE column.

Cause: Attempted to select a ROWID column from a JSON_TABLE.

Action: Use an ORDINALITY column instead of a ROWID column.

OCI-40831: CONS_VPD_AUTO is not applicable to online redefinition for SODA collections

Cause: An attempt was made to specify CONS_VPD_AUTO for redefining SODA collections.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL or CONS_VPD_NONE.

OCI-40832: Dependent string on string column is missing from the interim collection.

Cause: A required dependent was not defined on the interim collection.

Action: Define the required dependents or call procedure COPY_COLLECTION_DEPENDENTS to copy all of the dependents from the original collection.

OCI-40833: empty input to JSON operator

Cause: Empty input (for example, an empty CLOB) was provided to a JavaScript Object Notation (JSON) operator that expected non-empty input.

Action: Check and correct the input.

OCI-40834: invalid input to JSON parse or load function

Cause: An invalid value such as a NULL CLOB was provided as input to the JSON parse or load functions.

Action: Check and correct the input.

OCI-40835: invalid path 'string'

Cause: Only a simple JavaScript Object Notation (JSON) path expression was allowed. Predicates, wildcard steps, descendant steps, array steps, or trailing functions were not allowed.

Action: Remove disallowed components from the path expression.

OCI-40836: invalid character in o:preferred_column_name 'string'

Cause: Double quotation was not allowed in a column name.

Action: Check the Oracle identifier naming convention.

OCI-40837: invalid materialized view refresh mode

Cause: The specified materialized view refresh mode was invalid.

Action: Ensure that the refresh mode is specified correctly.

OCI-40838: Metadata specification must be an object.

Cause: The metadata specification root was an array or scalar. A metadata specification must be an object.

Action: Ensure that the metadata specification root is an object node.

OCI-40839: invalid field type in the metadata *string*, expected: *string*

Cause: The metadata specification contained a field with an incorrect type.

Action: Ensure that the metadata field type is correct.

OCI-40840: unsupported field *string* in the metadata

Cause: The metadata specification contained a field that is not supported.

Action: Do not use this field or try upgrading your client library to the supported version.

OCI-40841: invalid scalar type in the metadata field *string*, expected: *string*

Cause: The metadata specification contained a field with an incorrect scalar type.

Action: Ensure that the metadata field has the correct scalar type.

OCI-40842: unsupported value *string* in the metadata for the field *string*

Cause: The metadata specification contained a value that is not supported.

Action: Do not use this value.

OCI-40843: Multiple KEEP operations used in JSON_TRANSFORM.

Cause: A JSON_TRANSFORM expression was used that contained more than one KEEP operation.

Action: Use multiple path expressions in the same KEEP operation instead of multiple KEEP operations.

OCI-40844: invalid array step in JSON multivalue index path expression '*string*'

Cause: An attempt was made to create a multivalue JSON index that had a path expression with a JSON array step that has a position greater than zero.

Action: Correct the path expression. Do not use array steps with positions greater than zero.
*Params: 1) path_expr: The path expression containing an invalid array step.

OCI-40845: failed to create object

Cause: An attempt to create an object failed because there was not enough memory.

Action: None

OCI-40846: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if the original collection's contentColumn.sqlType is JSON.

Cause: An invalid request was made to redefine a collection with contentColumn.sqlType JSON to contentColumn.sqlType BLOB with jsonFormat OSON.

Action: Ensure that the requested redefinition can be supported.

OCI-40847: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if the original collection has user-defined constraints.

Cause: An invalid request was made to redefine a collection with user-defined constraints to contentColumn.sqlType BLOB with jsonFormat OSON.

Action: Ensure that the requested redefinition can be supported.

OCI-40848: Metadata field *string* cannot be specified when metadata field *string* has value *string* and metadata field jsonFormat has value OSON.

Cause: An invalid combination of fields were specified in the interim metadata.

Action: Ensure that only allowed combinations of fields are specified in the interim metadata.

OCI-40849: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if compatibility is 20 or above.

Cause: An invalid combination of fields were specified in the interim metadata.

Action: Redefine to contentColumn.sqlType JSON instead.

OCI-40850: cannot create a composite JSON multivalue index on nested sibling paths '*string*' and '*string*'

Cause: An attempt was made to create a composite JSON multivalue index on nested sibling paths.

Action: Create separate JSON multivalue indexes for nested sibling paths instead of one composite JSON multivalue index. *Params: 1) sibling_path1: The path expression of nested sibling one. 2) sibling_path2: The path expression of nested sibling two.

OCI-40851: Cannot create a composite multivalue index with ordinality column that is not the last column in the index.

Cause: Attempted to create a composite multivalue index with an ordinality column that was not the last column in the index.

Action: Either use the ordinality column as the last column in the index or remove the ordinality column from the index.

OCI-40852: SKIP and LIMIT attributes cannot be used for dataguide getter operation.

Cause: An attempt was made to use SKIP and LIMIT attributes for dataguide getter operation.

Action: Do not use SKIP or LIMIT attributes in dataguide getter operation.

OCI-40853: Multi-Value Index (MVI) must be created with ERROR ON ERROR, NULL ON EMPTY and NULL ON MISMATCH.

Cause: An attempt was made to create a multi-value index without using ERROR ON ERROR, NULL ON EMPTY, and NULL ON MISMATCH.

Action: Add ERROR ON ERROR, NULL ON EMPTY, and NULL ON MISMATCH when creating a multi-value index.

OCI-40854: A multivalue index is defined on table *string*.ln

Cause: A direct load was specified for a table on which a multivalue index was defined.

Action: Take one of the following actions: - Drop the multivalue index that is defined on the table. - Do not use direct load. - Use the SKIP_INDEX_MAINTENANCE option. - Mark the multivalue index as unusable prior to loading.

OCI-40855: operation not allowed on SODA collection table "string"."string"

Cause: An attempt was made to alter or drop a SODA collection table.

Action: No action required.

OCI-40856: Hint for Simple Oracle Document Access (SODA) cannot contain '/' or '*'.

Cause: The SODA hint contained '/' or '*', and this is not supported.

Action: Remove "/" and "*" from the SODA hint.

OCI-40857: JSON_VALUE returned an object type that is not SDO_GEOMETRY.

Cause: The object type that was returned was not of SDO_GEOMETRY type.

Action: If an object is returned in JSON_VALUE, ensure that it is SDO_GEOMETRY type.

OCI-40858: Cannot create a JSON_VALUE functional index with bind variables.

Cause: An attempt was made to create a JSON_VALUE functional index with bind variables in the JSON_VALUE operator.

Action: Do not include bind variables in a JSON_VALUE functional index declaration.

OCI-40859: A JSON path expression was too long.

Cause: A Java Script Object Notation (JSON) path expression exceeded the maximum length allowed.

Action: Take one of the following actions: - Ensure that simple path expressions are 4000 bytes or less. - Ensure that predicate expressions are 32767 bytes or less.

OCI-40860: invalid combination of flags used

Cause: An attempt was made to use an invalid combination of flags in the DBMS_JSON package.

Action: Use the combination of the flags that are defined in the DBMS_JSON package.

OCI-40861: JSON System Error [string]

Cause: An internal system error occurred during a Java Script Object Notation (JSON) operation.

Action: Use the error message to locate the issue and correct the command. If the issue persists, contact Oracle Support Services.

OCI-40862: contentColumn.jsonFormat cannot specified with a contentColumn.sqlType other than BLOB.

Cause: contentColumn.jsonFormat was specified with a contentColumn.sqlType other than BLOB.

Action: Ensure that contentColumn.jsonFormat is only specified with a contentColumn.sqlType of BLOB.

OCI-40863: contentColumn.jsonFormat can only be set to OSON.

Cause: contentColumn.jsonFormat was set to a value other than OSON.

Action: Ensure that contentColumn.jsonFormat is set to OSON.

OCI-40864: contentColumn.jsonFormat cannot be set with a media type column.

Cause: contetColumn.jsonFormat was set in conjunction with a media type column.

Action: Ensure that contentColumn.jsonFormat is not set in conjunction with a media type column.

OCI-40865: JSON DOM operation was attempted on a container of an incorrect type.

Cause: Either an array operation was attempted on an object, or an object operation was attempted on an array.

Action: Ensure that the instance container is of the correct type for the desired operation.

OCI-40866: JSON document operation was attempted on a non-scalar node.

Cause: A scalar DOM operation was attempted on a node that was not a scalar value.

Action: Ensure that the instance value is a scalar.

OCI-40867: Embedded key path cannot contain more than a single step.

Cause: Embedded key path with multiple steps or a descendant step has been encountered.

Action: Ensure the embedded key path contains a single step only.

OCI-40868: Embedded key path cannot contain an empty step.

Cause: Embedded key path contained an empty step, represented by two consecutive backquotes.

Action: Ensure the embedded key path does not contain an empty step.

OCI-40869: SAMPLE percentage attribute value must be in the range .000001 to, but not including, 100.

Cause: An invalid value was specified for the SAMPLE percentage attribute. The percentage can only be in the range .000001 to, but not including, 100.

Action: Use a value greater or equal to 0 and less than 100 for the SAMPLE percentage attribute.

OCI-40870: SAMPLE seed attribute value must be between -1 and 4,294,967,295.

Cause: An invalid value was specified for the SAMPLE seed attribute.

Action: Use a value between -1 and 4,294,967,295 for the SAMPLE seed attribute.

OCI-40871: SAMPLE attribute cannot be used for remove or replace operation.

Cause: An attempt was made to use the SAMPLE attribute for a remove or replace operation.

Action: Do not use the SAMPLE attribute in a remove or replace operation.

OCI-40872: unexpected token in JSON_TABLE (near 'string')

Cause: An unexpected token was found in the JSON_TABLE function.

Action: Correct the JSON_TABLE function and retry the operation.

OCI-40873: invalid JSON_TABLE column name 'string'

Cause: An invalid column name was specified in the JSON_TABLE function.

Action: Correct the column name.

OCI-40874: Bind variable not supported in this operation.

Cause: A PASSING clause was provided for an operation that does not allow bind variables.

Action: Remove the bind variable PASSING clause.

OCI-40875: JSON schema validation error

Cause: The input JSON document instance failed schema validation.

Action: Correct the JSON document. Use DBMS_JSON_SCHEMA.VALIDATE_REPORT() PL/SQL function to find the schema validation error in the JSON document.

OCI-40876: invalid JSON schema document

Cause: An invalid JSON schema document was used.

Action: Correct the JSON schema document. Use DBMS_JSON_SCHEMA.VALIDATE_REPORT() PL/SQL function to find the errors in the JSON schema document.

OCI-40877: cannot use empty policy name on INMEMORY TEXT

Cause: An empty policy name was specified on an Oracle Database In-Memory (Database In-Memory) text column. Database In-Memory text always requires a policy.

Action: Use a valid policy name.

OCI-40878: unsupported data type for JSON schema validation

Cause: The input JSON data to be validated was of an unsupported data type.

Action: Change or convert the input data to use a supported data type.

OCI-40879: invalid IS JSON option for JSON schema validation

Cause: An invalid option was specified for IS JSON with JSON schema validation.

Action: Check and use a valid option for IS JSON with JSON schema.

OCI-40880: JSON schema has unsupported data type

Cause: The provided JSON schema had an unsupported data type.

Action: Correct the JSON Schema to use a supported data type, e.g. VARCHAR2.

OCI-40881: JSON schema not a literal

Cause: The provided JSON schema expression was not a literal.

Action: Provide a constant JSON schema.

OCI-40882: JSON schema not a literal

Cause: The provided JSON schema expression was not a literal.

Action: Provide a constant JSON schema.

OCI-40883: unsupported character in an array step

Cause: An unsupported character was specified in an array step.

Action: Use only digits with optional surrounding whitespace in an array step.

OCI-40884: array step is not closed

Cause: An unclosed array step was specified.

Action: Ensure that the array step is ended with a closing ']' character.

OCI-40885: character following an array step must be either '.' or '['

Cause: A character other than '.' or '[' was specified immediately after the array step.

Action: Ensure that the array step is not followed by a character other than '.' or '['.

OCI-40886: array step cannot follow a '.' step separator character

Cause: An opening character of an array step was encountered following a '.' step separator character.

Action: Ensure that the array step is not following the '.' step separator character.

OCI-40887: Pseudo-column *string* not allowed in UPDATE or INSERT

Cause: An attempt was made to use a pseudo-column in an INSERT or UPDATE statement.

Action: Remove the pseudo-column.

OCI-40888: The predicate specified in the JSON_VALUE functional index is invalid.

Cause: The predicate specified in a JSON_VALUE functional index was invalid. The predicate operator must be &&, ||, >, >=, <, <=, or ==. One side of a comparison predicate must be a relative path expression.

Action: Correct the predicate in the JSON_VALUE functional index.

OCI-40889: 'path' or 'nestedPath' is missing in a 'fields' array element

Cause: 'path' or 'nestedPath' was not found in a 'fields' array element.

Action: Ensure that 'path' or 'nestedPath' is present in a 'fields' array element.

OCI-40890: 'nestedPath' and 'fields' cannot be specified in conjunction with other fields within the same object

Cause: 'nestedPath' and 'fields' were specified in conjunction with another field within the same object.

Action: Ensure that 'nestedPath' and 'fields' are not specified in conjunction with another field within the same object.

OCI-40891: 'string' and 'string' cannot appear within the same object

Cause: Incompatible fields specified within the same object.

Action: Ensure that only compatible fields are specified within the same object

OCI-40892: invalid element under the 'fields' array

Cause: An invalid element was encountered under the 'fields' array.

Action: Ensure that each element of a 'fields' array is an object.

OCI-40893: Unsupported data type used in column 'string' of a JSON Relational Duality View 'string'.

Cause: Unsupported data type was used in a Duality View statement.

Action: Do not use columns of data types LOB, Abstract Data Type, collections, TIMESTAMP WITH LOCAL TIME ZONE or XML to compute the ETAG values.

OCI-40894: Cannot create JSON Relational Duality view '*string*': Invalid or missing expression for ETAG computation.

Cause: ETAG cannot be computed on the specified document because the expression is either incomplete, missing entirely, or does not result in a data type on which the ETAG computation can be performed.

Action: Ensure that the duality view declaration is valid or mark the field as NOCHECK.

OCI-40895: invalid SQL expression in JSON relational duality view (*string*)

Cause: An invalid SQL expression was used in JSON relational duality view.

Action: Ensure that a JSON relational duality view is constructed solely using JSON_OBJECT and JSON_ARRAYAGG with JSON_OBJECT input. Joins must be expressed on key columns with referential integrity

OCI-40896: Cannot *string* JSON Relational Duality View '*string*': Concurrent modification detected to document with ID '*string*'.

Cause: The operation failed because a concurrent modification to the same document or another document with rows overlapping with this document was detected.

Action: Retry the operation. For UPDATE, fetch the latest document with a valid entity tag (ETAG) value and retry the UPDATE.

OCI-40897: Cannot create JSON Relational Duality View '*string*': The primary key or unique key column '*string*' cannot be marked with the UPDATE annotation.

Cause: An attempt was made to create a duality view with an updatable primary key or unique key column, which is not allowed.

Action: Remove the WITH UPDATE annotation for all of the primary key or unique key columns, and retry the operation. *Params: 1) view_name: The duality view name used in the create statement. 2) column_name: The primary or unique key column name annotated with the WITH UPDATE annotation.

OCI-40898: \$SYS_OBJ_ID mismatch for object '*string*'

Cause: A \$SYS_OBJ_ID value did not match the object of the JSON relational duality view.

Action: Correct the \$SYS_OBJ_ID value.

OCI-40899: Primary keys in WITH OBJECT ID clause do not match primary keys of table '*string*'.

Cause: The column names in the WITH OBJECT ID clause did not match the primary key columns of the corresponding table.

Action: Ensure that the column names in the WITH OBJECT ID clause match the primary key columns of the corresponding table.

OCI-40900: filestore name invalid

Cause: The filestore name provided differs from the mount directory name.

Action: Use a filestore name that matches the mount directory name.

OCI-40901: mountpoint not specified

Cause: The mountpoint was not specified.

Action: Provide a valid mountpoint.

OCI-40902: backingfile name invalid\n

Cause: The backingfile name was not specified or already exists.

Action: Provide a valid backingfile name.

OCI-40903: filestore already mounted\n

Cause: A filestore with same name, backing file, or mountpoint was already mounted.

Action: Unmount or drop the filestore before mounting or creating it again, or specify different filestore name, backing file, and mountpoint.

OCI-40904: unable to dismount: filestore not mounted \n

Cause: The provided filestore was not mounted.

Action: Mount the filestore before attempting to dismount.

OCI-40905: filestore not specified\n

Cause: The filestore name was not specified.

Action: Provide a valid filestore name. to do: add integer values to error message

OCI-40906: size or resize value greater than available memory\n

Cause: Specified size or resize value was greater than the available memory size.

Action: Provide a smaller value for the size.

OCI-40907: resize value greater than maximum size provided\n

Cause: The resize value was greater than the maximum size provided during creation.

Action: Provide a value lower than the maximum size.

OCI-40908: unable to resize: filestore not mounted \n

Cause: The provided filestore was not mounted.

Action: Mount the filestore before attempting to resize.

OCI-40909: file handle not valid \n

Cause: The provided file handle did not exist or was stale.

Action: Check the target file and re-acquire file handle.

OCI-40911: filestore name too long

Cause: Filestore name exceeded 64 characters.

Action: Limit filestore name to maximum 64 ASCII characters.

OCI-40912: invalid filestore name

Cause: Filestore name contained invalid sequence of characters.

Action: Filestore name must begin with an alphabetic character. After that, it may be followed by zero or more alphanumeric and underscore characters. Specify a filestore name using acceptable characters.

OCI-40913: invalid blocksize

Cause: Value specified for BLOCKSIZE was incorrect.

Action: Value for BLOCKSIZE must be 512, 2048, 4096, 8192, 16382 or 32768.

OCI-40914: filestore size must not be zero

Cause: Filestore size was specified as zero.

Action: Specify a filestore size other than zero.

OCI-40915: blocksize must not be zero

Cause: BLOCKSIZE was specified as zero.

Action: Specify a valid blocksize.

OCI-40916: invalid backingfile name

Cause: BACKINGFILE name was not valid.

Action: Specify a valid file name.

OCI-40917: invalid mountpoint name

Cause: Specified MOUNTPOINT name was invalid.

Action: Specify a valid file name.

OCI-40920: filestore must be mounted

Cause: This operation required filestore to be mounted.

Action: Mount the filestore and retry the operation.

OCI-40921: resize value must not be zero

Cause: New size was specified as zero.

Action: Use a new size value other than zero.

OCI-40922: insufficient amount of available free space in the filestore

Cause: Used storage space in the filestore exceeded specified target size.

Action: RESIZE to a larger size, or delete existing files in the filestore to free up more space.

OCI-40923: filestore has content

Cause: Filestore was not empty.

Action: Use INCLUDING CONTENTS clause in DROP PMEM FILESTORE command or delete filestore contents first.

OCI-40924: operation is not allowed

Cause: This operation was not allowed because database was still mounted.

Action: Restart the instance in nomount mode and retry the operation.

OCI-40925: You need to restart the instance and reissue the command in order for this operation to succeed

Cause: This operation failed because the required OS resources could not be acquired.

Action: Restart the instance and reissue the command.

OCI-40926: invalid or missing maximum file size in MAXSIZE clause

Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the persistent memory (PMEM) filestore operation. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use the correct syntax.

OCI-40927: invalid file increment size in NEXT clause

Cause: A non-integer value was used for the NEXT clause in the persistent memory(PMEM) filestore operation.

Action: Use the correct syntax.

OCI-40928: File *string* is of invalid file type

Cause: An unsupported file type was created in the persistent memory filestore.

Action: Create only supported file types in PMEM filestore.

OCI-40931: A subquery within a JSON array constructor cannot have a select list with more than one expression.

Cause: A JSON array constructor contains a subquery that has a select list with more than one expression.

Action: Combine the expressions in the select list into a single expression. For example, 'SELECT a, b' would become 'SELECT JSON { 'a' : a, 'b' : b }'.

OCI-40932: A subquery within a JSON array constructor contains a set operation such as UNION or INTERSECT.

Cause: A JSON array constructor directly contained a subquery that used a set operation such as UNION or INTERSECT.

Action: Rewrite the expression using the JSON_ARRAYAGG function.

OCI-40933: missing primary key column '*string*' in CHECK ETAG list

Cause: The mentioned primary key column was not found in the CHECK ETAG list of a JSON relational duality view.

Action: Add the primary key column to the CHECK ETAG list.

OCI-40934: Cannot create JSON Relational Duality View '*string*': Invalid or conflicting annotations for the JSON field.

Cause: Invalid or conflicting annotations specified while creating a Duality View. Note the only valid annotations for individual fields of a Duality View are (NO)CHECK and (NO)UPDATE.

Action: Ensure that valid and non-conflicting annotations are used in the view definition. If using GraphQL based definition, check the directives for the particular field. If using SQL, check the WITH annotations for the particular field.

OCI-40935: Cannot create JSON relational duality view '*string*': '*string*' must be a table or editioning view.

Cause: An invalid object is being used in the FROM clause to construct the duality view; only a table or an editioning view is allowed.

Action: Ensure that the duality view is constructed from a table or an editioning view.

OCI-40936: Internal JSON-relational duality view error.

Cause: An unexpected internal error was encountered in JSON-relational duality view processing.

Action: Refer to the error stack for more details on the error.

OCI-40937: Cannot insert into table '*string*' in JSON Relational Duality View '*string*': Missing INSERT annotation or NOINSERT annotation specified.

Cause: INSERT annotation for the table was not specified or NOINSERT annotation was specified during duality view creation.

Action: Re-create the duality view with INSERT annotation for the table and retry the operation. If it is not possible to add an INSERT annotation for the specified table, insert data into the table directly and retry the operation.

OCI-40938: Cannot delete from table '*string*' in JSON Relational Duality View '*string*': Missing DELETE annotation or NODELETE annotation specified.

Cause: DELETE annotation for the table was not specified or NODELETE annotation was specified during duality view creation.

Action: Re-create the duality view with DELETE annotation for the table and retry the operation.

OCI-40939: Cannot update table '*string*' in JSON Relational Duality View '*string*': Missing UPDATE annotation or NOUPDATE annotation specified.

Cause: UPDATE annotation for the table was not specified or NOUPDATE annotation was specified during duality view creation.

Action: Re-create the duality view with UPDATE annotation for the table and retry the operation.

OCI-40940: Cannot update field '*string*' corresponding to column '*string*' of table '*string*' in JSON Relational Duality View '*string*': Missing UPDATE annotation or NOUPDATE annotation specified.

Cause: UPDATE annotation for the column was not specified or NOUPDATE annotation was specified during duality view creation.

Action: Re-create the duality view with UPDATE annotation for the column or table containing the column and retry the operation.

OCI-40941: cannot specify a column name or subquery alias for JSON relational duality view

Cause: A column name or subquery alias was specified for a JSON relational duality view.

Action: Do not specify a column name or subquery alias for a JSON relational duality view.

OCI-40942: Primary key has a virtual column in JSON relational duality view for table '*string*'.

Cause: A virtual column was found in the primary key columns for a table used in a JSON relational duality view.

Action: Ensure that the table does not have a virtual column in its primary key.

OCI-40943: Cannot *string* JSON Relational Duality View '*string*': Field '*string*' corresponding to column '*string*' in table '*string*' is missing from JSON input.

Cause: The specified field was missing or NULL in the JSON input, which is required because fields with CHECK annotation or fields corresponding to the primary or unique key columns must be specified in the input JSON.

Action: Specify a valid value for the field in the JSON input and retry the operation.

OCI-40944: Cannot *string* JSON Relational Duality View '*string*': The input JSON document is invalid.\n*string*

Cause: Input JavaScript Object Notation (JSON) document is invalid.

Action: Resolve the JSON error and retry the operation.

OCI-40945: Column '*string*' of table '*string*' cannot be selected in JSON relational duality view as it is virtual.

Cause: A virtual column was selected in the JSON relational duality view.

Action: Remove the virtual column.

OCI-40946: JSON relational duality view is not supported on remote table '*string*'.

Cause: A remote table was used in a JSON relational duality view.

Action: Ensure that no remote table is used.

OCI-40947: A JSON relational duality view is created with duplicate tag '*string*'.

Cause: A duplicate tag was specified in JSON relational duality view.

Action: Remove the duplicate tag.

OCI-40948: Cannot insert multiple values to JSON relational duality view '*string*'

Cause: An attempt was made to insert multiple values to JSON relational duality view.

Action: Use single insert values or insert as select.

OCI-40949: JSON relational duality view is not supported on sharded table '*string*'.

Cause: A sharded table was used in a JSON relational duality view.

Action: Ensure that no sharded table is used.

OCI-40950: MERGE is not supported on JSON relational duality view '*string*'.

Cause: The MERGE operation contained a JSON relational duality view which is not supported.

Action: Ensure that no JSON relational duality view is used with MERGE.

OCI-40951: unsupported operation for GRAPH_TABLE: *string*

Cause: This was an unsupported operation.

Action: Contact Oracle Support.

OCI-40952: Total domain columns length exceeds 32K.

Cause: The sum of the sizes in bytes of the columns that were used to specify the join group exceeded the 32K limit.

Action: Remove some of the columns from the join group definition to keep the sum of their size in bytes within the required 32K limit.

OCI-40953: Column type mismatch: *string*.

Cause: Columns from different tables at the same position specified in the join group did not have the same type.

Action: Ensure that columns at the same position have the same type. *Params: 1)
column_name: The column name of the column having a different type.

OCI-40954: unknown label

Cause: The specified label did not exist in the graph.

Action: Specify a label that exists.

OCI-40956: invalid property name format

Cause: A property identifier was used without a vertex or edge variable name qualifier.

Action: The property identifier must always be qualified with a vertex or edge variable name. For example, vertex_variable.property_name.

OCI-40957: missing variable name

Cause: A variable name was not specified for the element pattern expression.

Action: Use an identifier for the variable name in the element pattern expression.

OCI-40958: missing label name

Cause: A label name was not specified for the label expression.

Action: Use an identifier for the label name in the label expression.

OCI-40959: Property graph *string* could not be INMEMORY enabled because its VERTEX table *string* is disconnected.

Cause: The specified property graph used in the ALTER PROPERTY GRAPH command contained at least one VERTEX table which was not referenced by any EDGE tables which prevents it from being INMEMORY enabled.

Action: Change the property graph so that every VERTEX table is referenced by at least one EDGE table.

OCI-40960: invalid SQL data type for property

Cause: An invalid SQL data type was used to define the property.

Action: Use a valid SQL data type to define the property.

OCI-40961: Not enough memory to compile GRAPH_TABLE operator.

Cause: Compilation of GRAPH_TABLE failed due to lack of memory.

Action: Increase your program global area (PGA) memory or contact your system administrator.

OCI-40962: invalid property graph input to GRAPH_TABLE()

Cause: An invalid property graph input was passed to GRAPH_TABLE().

Action: Use valid property graph input to GRAPH_TABLE().

OCI-40963: invalid dot notation for JSON type in the label

Cause: An invalid dot notation for a JSON type was used in the label.

Action: Use a valid dot notation for a JSON type in the label.

OCI-40964: invalid argument specified in an EDGE_ID or EDGE_EQUAL operator

Cause: An invalid argument was specified in an EDGE_ID or EDGE_EQUAL operator.

Action: Use the edge variable name as an argument to EDGE_ID or EDGE_EQUAL operator.

OCI-40966: cannot alter column present in in-memory graph element key

Cause: The alter table operation caused one of the columns to become unsupported for an in-memory property graph.

Action: Alter all the dependent INMEMORY graphs to NO INMEMORY first then retry the operation.

OCI-40967: Property graph not in enforced mode.

Cause: The property graph was not in enforced mode.

Action: Re-create or alter the property graph in enforced mode.

OCI-40968: data manipulation operation not legal on GRAPH_TABLE() operator

Cause: An attempt was made to use an UPDATE, INSERT, or DELETE statement on GRAPH_TABLE() operator.

Action: UPDATE, INSERT, or DELETE rows in the underlying graph element tables instead.

OCI-40969: query graph on a remote database is not supported

Cause: An attempt was made to query a graph on a remote database using dblink.

Action: Do not attempt to access graph on a remote database.

OCI-40971: invalid vertex or edge ID: 'string'

Cause: The specified vertex or edge ID was not valid.

Action: Pass a valid vertex or edge ID.

OCI-40981: invalid argument specified in a VERTEX_ID or VERTEX_EQUAL operator

Cause: An invalid argument was specified in a VERTEX_ID or VERTEX_EQUAL operator.

Action: Use a vertex variable name as an argument to VERTEX_ID or VERTEX_EQUAL operator.

OCI-40983: property "string" is never defined

Cause: A vertex (respectively, edge) property was not defined in any of the vertex (respectively, edge) labels of the graph.

Action: Specify a property that is defined in at least one vertex (respectively, edge) label.

OCI-40984: invalid value specified for bounded quantifier in a GRAPH_TABLE operator

Cause: An invalid value was specified for the bounded quantifier in a GRAPH_TABLE operator.

Action: Choose a valid value and retry the operation. The lower bound value must be non-negative. The upper bound value must be positive and greater than or equal to the lower bound value.

OCI-40985: unsupported quantifier for variable path pattern in a GRAPH_TABLE operator

Cause: The specified quantifier for the variable path pattern was not supported.

Action: Modify the pattern specification and retry the operation.

OCI-40986: unsupported nested quantified path pattern in a GRAPH_TABLE operator

Cause: The specified nested quantified path pattern was not supported.

Action: Modify the pattern specification and retry the operation.

OCI-40987: path pattern is not specified in a GRAPH_TABLE operator

Cause: A path pattern was not specified in a GRAPH_TABLE operator.

Action: Add the path pattern specification and retry the operation.

OCI-40988: Subquery is not allowed in a GRAPH_TABLE operator.

Cause: An attempt was made to use a subquery in a GRAPH_TABLE operator.

Action: Remove the subquery from the GRAPH_TABLE operator and retry the operation.

OCI-40989: no value specified for bounded quantifier in a GRAPH_TABLE operator

Cause: No value was specified for the bounded quantifier in a GRAPH_TABLE operator.

Action: Choose a valid value and retry the operation. The lower bound value must be non-negative. The upper bound value must be positive and greater than or equal to the lower bound value.

OCI-40990: invalid reference of group variable *string* in the COLUMNS clause of a GRAPH_TABLE operator

Cause: A group variable was referenced outside of the quantified path pattern in which it was declared.

Action: Remove the invalid use of the group variable and retry the operation.

OCI-40996: Variable *string* is not declared in the MATCH clause of a GRAPH_TABLE operator.

Cause: A variable used in a predicate or column clause was not declared in the MATCH clause of a GRAPH_TABLE operator.

Action: Remove the undeclared variable and retry the operation.

OCI-40997: invalid path pattern expression is specified in a GRAPH_TABLE operator

Cause: A path pattern expression was specified with a syntax error.

Action: Modify the path pattern specification and retry the operation.

OCI-40998: invalid reference of group variable *string* in the WHERE clause of a GRAPH_TABLE operator

Cause: A group variable was referenced outside of the quantified path pattern in which it was declared.

Action: Remove the invalid use of the group variable and retry the operation.

OCI-40999: Edge pattern missing in a quantified path pattern of the MATCH clause of a GRAPH_TABLE operator.

Cause: A quantified path pattern did not contain an edge pattern.

Action: Modify the path pattern specification and retry the operation.

OCI-41001 to OCI-42921

OCI-41001: session id list not specified

Cause: An attempt to migrate was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

OCI-41002: destination instance not specified

Cause: An attempt to migrate was made, which failed because the destination instance specified was null.

Action: Check the destination instance , and try again with a valid value.

OCI-41003: client id not specified

Cause: An attempt to migrate was made, which failed because the client id specified was null.

Action: Check the client id, and try again with a valid value.

OCI-41004: percentage not specified

Cause: An attempt to migrate was made, which failed because the percentage specified was null.

Action: Check the percentage, and try again with a valid value.

OCI-41005: session id list not specified

Cause: An attempt to cancel migration was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

OCI-41006: session id not specified

Cause: An attempt to get migration status was made, which failed because the session id specified was null.

Action: Check the session id, and try again with a valid value.

OCI-41007: sid field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null sid field.

Action: Check the session id, and try again with a valid value.

OCI-41008: serial# field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null serial# field.

Action: Check the session id, and try again with a valid value.

OCI-41009: Migration failed because session number *string*, serial number *string* does not exist.

Cause: An invalid session number or serial number was specified in the migration operation.

Action: Provide a valid session number and serial number, and retry the migration operation.

OCI-41010: No more memory to hold connection state information

Cause: An attempt to reference more connections than configured

Action: Check the connection information and try again.

OCI-41011: migrate operation for session id *string*, serial number *string* failed

Cause: A migration related operation failed because of contention between sessions.

Action: Check the additional error codes for more information, and retry the operation later.

OCI-41012: session number *string*, serial number *string* cannot be migrated

Cause: The specified session could not be migrated by using the transparent session migration due to its current state.

Action: Verify the session number and serial number, and try again.

OCI-41013: instance name not specified

Cause: An attempt to migrate was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

OCI-41014: session number *string* with serial number *string* is already being migrated

Cause: An attempt was made to migrate a session that was already being migrated.

Action: Check the session number and serial number and try again.

OCI-41015: destination connect string not specified

Cause: A migration attempt was made, which failed because the connect string specified was null.

Action: Check the connect string and try again.

OCI-41016: Session recreation failed

Cause: Session recreation failed at the destination instance.

Action: Check session state and try migration again

OCI-41017: Session prepare failed for session number *string*, serial number *string*

Cause: A migration attempt was made, which failed because session prepare failed.

Action: Retry migration again after checking all arguments.

OCI-41019: Session begin at the destination instance failed.

Cause: Session BEGIN failed at the destination instance because the shadow connection could not be established.

Action: Check the CONNECT string and try starting the session again.

OCI-41020: invalid value "string" specified for parameter "string"

Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

OCI-41021: OCI error during transparent session migration

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

OCI-41022: instance name not specified

Cause: An attempt to recover after instance death was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

OCI-41023: death time not specified

Cause: An attempt to recover after instance death was made, which failed because the death time specified was null.

Action: Check the death time, and try again with a valid value.

OCI-41024: Cursor needs to be parsed again

Cause: An SQL operation failed because the cursor state was lost.

Action: Reissue all operations starting from parse.

OCI-41025: sid field string is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid sid field.

Action: Check the session id, and try again with a valid value.

OCI-41026: serial# field string is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid serial# field.

Action: Check the serial#, and try again with a valid value.

OCI-41027: Error status string during OCI operation at string

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

OCI-41028: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

OCI-41029: Destination session id not specified for sid string serial# string

Cause: An attempt to migrate was made, which failed during migration because the destination session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

OCI-41030: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

OCI-41031: Destination session key not specified for sid *string* serial# *string*

Cause: An attempt to migrate was made, which failed during migration because the destination session key specified by the client was null.

Action: Check the session id, and try again with a valid value.

OCI-41100: Oracle Cluster Registry operation failed with event *string*.

Cause: The Portable Clusterware/Oracle Cluster Registry stack returned an error.

Action: Check if the Portable Clusterware stack is properly brought up.

OCI-41101: The database: *string* has already been designated as Cluster Director.

Cause: An attempt was made to designate multiple databases as the Cluster Director.

Action: Undesignate the existing Cluster Director before Designating a new one.

OCI-41102: No database has currently been designated as Cluster Director.

Cause: An attempt was made to query/undesignate a Cluster Director when no database has been designated as Cluster Director.

Action: n/a

OCI-41103: Only the designated Cluster Director: *string* can undesignate itself.

Cause: An attempt was made to undesignate the current Cluster Director by a database that is not the Cluster Director.

Action: Login to the currently designated Cluster Director to perform the undesignation.

OCI-41104: The database: *string* is the Cluster Director.

Cause: An attempt was made to control the Cluster Director on a database that is not the Cluster Director.

Action: Log in to the currently designated Cluster Director to perform the control operation.

OCI-41105: The Cluster Director is not stopped.

Cause: An attempt was made to control the Cluster Director before the Cluster Director was stopped.

Action: Use `dbms_cluster_director.stop` to stop the Cluster Director and retry the control operation.

OCI-41106: invalid argument *string*: value is null

Cause: An attempt to read the scan hostname or port failed

Action: Verify pcw is running and scan is configured. Run `grdcsan read_config` to verify or `grdcsan set_config host:port` to set scan name and port.

OCI-41107: invalid argument: service *string* cannot be found

Cause: The program attempted to access a nonexistent or deleted service.

Action: Check to make sure the service has been properly created.

OCI-41108: Posting system alert with reason_id *string* failed with code [*string*] [*string*]

Cause: Internal Error: An attempt to post a system alert failed.

Action: If this condition repeats, please contact Oracle Support.

OCI-41109: Updating system alert with reason_id *string* failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI\$_ALERT_OUTSTANDING.

Action: Do not delete from WRI\$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

OCI-41110: The Director has blocked this instance. Cannot start [*string*]

Cause: An attempt to start services on an instance that will be shutdown

Action: Start the services on another available instance

OCI-41201: Session state not capturable due to reason (*string*, *string*)

Cause: Session state capture was initiated when session state could not be captured.

Action: Check session state status and make sure session state can be captured.

OCI-41202: Session state capture or restore failed

Cause: Capture or restore operation failed.

Action: Check session state status and failure reason for details.

OCI-41203: Invalid session state operation

Cause: Invalid session state operation was issued.

Action: Check if session status was valid for the current operation.

OCI-41204: Session capture in progress

Cause: Session state capture was initiated and could not perform the requested operation.

Action: Wait for the current capture to complete or abort it.

OCI-41205: Invalid parameter for session state capture or restore

Cause: Invalid parameter was passed to session state capture or restore interface.

Action: Correct the invalid parameter(s).

OCI-41206: Session capture or restore internal error KPCSFR-*string*

Cause: Internal operation error was encountered.

Action: Turn on related trace for details and report it as a bug.

OCI-41207: Cannot restore session state due to reason (*string*, *string*)

Cause: Session state restore was initiated when session was not ready for state restore.

Action: Restore session state immediately after logging into a session or perform necessary operations to make the session ready for restore; for example, commit current transaction, or close BFiles.

OCI-41208: OCI error during session state capture and restore

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

OCI-41209: OCI operation failed at *string* due to *ORA-string*

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

OCI-41210: Failed to resolve session state directory object

Cause: Session state directory object passed to capture or restore was incorrect.

Action: Verify session state directory object and retry.

OCI-41211: Failed to insert capture or restore record

Cause: An error occurred while capture or restore record was being stored into the database.

Action: Check the error signaled and take corrective action.

OCI-41251: Failed to restore session state from a file (error code *number*)

Cause: Session state file may be corrupted.

Action: Ensure that the file is a session state file.

OCI-41252: Failed to switch to new session in SSCR

Cause: This is the generic internal error number for the SSCR exceptions. This indicates that the SSCR has encountered an exceptional condition.

Action: Report as a bug.

OCI-41253: Failed to access session state file

Cause: An error was encountered while reading from or writing to session state capture file.

Action: Check the error stack for the actual error number and turn on tracing if necessary.

OCI-41254: Invalid session state file: *string*

Cause: An invalid session state file was used in session state restore operation.

Action: Check if the session state file is a valid file created by session capture.

OCI-41255: Package not supported: *string*

Cause: The specified package is not supported.

Action: Do not call the package functions and procedures.

OCI-41300: File driver is not initialized

Cause: An attempt was made to operate on the uninitialized file driver.

Action: Initialize the file driver using the OCIServerAttach function.

OCI-41301: failed to write data to file

Cause: You may not have sufficient privileges or quotas for this action.

Action: Ensure that you have sufficient privileges and quotas for this action.

OCI-41302: failed to read data from file

Cause: The file may not exist or you do not have privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

OCI-41303: Received partial data from file

Cause: This is the generic internal error number for file driver exceptions. This indicated that file driver encountered an exception condition.

Action: Report as a bug.

OCI-41304: Failed to connect to file driver

Cause: The connect string may be incorrect.

Action: Ensure that the connect string is correct.

OCI-41305: Failed to open file

Cause: You may not have sufficient privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

OCI-41400: Bind character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the bind character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to obtain bind data in database character set and do rebind in the current environment.

OCI-41401: Define character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the define character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to do redefine in the current environment.

OCI-41402: SCNs not valid after failover; failover cannot continue

Cause: SCNs for replay are not valid on target database. The system change numbers (SCN) recorded during the original execution were not valid on the new database after failover. This might happen if the new database was opened with RESETLOGS option, or if the new database was set up to allow significant lag in replication. The failover could not continue.

Action: Check the SCNs on target and source, and whether RESETLOGS was used when opening the target database.

OCI-41403: failed over to older server; failover cannot continue (*string, string, string*)

Cause: Target database version is older than source database version. Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Keep standby database current with primary.

OCI-41404: invalid replay context

Cause: Application Continuity protocol was violated.

Action: Contact Oracle Support Services.

OCI-41405: Failed over to older server; failover cannot continue (*string, string*).

Cause: Target database version is older than source database version. Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Keep standby database current with primary.

OCI-41406: driver disabled replay due to an unsupported call

Cause: Application replay encountered a command that was not supported for replay, and so replay was disabled. Client driver has initiated disable.

Action: Check the user call that disabled. TAC will enable when possible.

OCI-41407: SQL command not supported for replay; replay disabled

Cause: Application replay encountered a command that was not supported for replay, and so replay was disabled. Server has initiated disable.

Action: Check the user call that disabled. TAC will enable when possible.

OCI-41408: embedded COMMIT in last call; failover cannot continue

Cause: The Oracle server process failed after committing a transaction but COMMIT was embedded in a stored procedure. Failover cannot continue.

Action: Do not resubmit, your transaction committed.

OCI-41409: cannot replay committed transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. Failover cannot continue.

Action: Do not resubmit, your transaction committed.

OCI-41410: call committed a transaction and started a new transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. Your request has more than one transaction. Failover cannot continue.

Action: Do not resubmit, your transaction committed. Structure your application to have one commit per request. Consider using TAC.

OCI-41411: too many round trips in request; replay disabled

Cause: The Oracle server process failed after executing a single request with more than 65535 round trips from the client to the server.

Action: Do not resubmit. Reduce application calls per request, for example, use an array fetch or set a prefetch size.

OCI-41412: results changed during replay; failover cannot continue

Cause: Replay terminated as results differed from original execution. Failover cannot continue.

Action: User may resubmit request.

OCI-41413: too much data in call capture; replay disabled

Cause: The Oracle server process failed after executing a request with a complex call whose capture had too much data, therefore, replaying of the request was not possible.

Action: Resubmit and reduce application calls per request.

OCI-41414: could not allocate memory for call capture; replay disabled

Cause: The Oracle server process encountered a memory allocation failure while executing the replay of the request, therefore replaying of the request was not possible.

Action: Resubmit and reduce application calls per request.

OCI-41415: duplicate or conflicting KEEP or NOKEEP specifications

Cause: Duplicate KEEP or NOKEEP was specified, or both KEEP and NOKEEP were specified.

Action: Remove the duplicate or conflicting specification.

OCI-41417: invalid use of DBMS_APP_CONT_PRIVT: [string] [string] [mode=string] [string] [string] [string] [string] [string]

Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

OCI-41418: Replay context is corrupt. Reason: [string], [string], [string], [string]

Cause: The replay context was not valid.

Action: Check your network configuration and hardware.

OCI-41420: block size cannot be zero

Cause: The block size sent by remote server was zero.

Action: Specify a valid block size as documented in the Oracle Database Administration Guide when creating data files. If displayed as an error, this represents a DBMS_FILE_TRANSFER protocol violation which should be reported to Oracle Support Services.

OCI-41421: database request ended

Cause: The application ended its database request or released the connection to the connection pool, thereby disabling replay mode.

Action: Review your results to see if your last request completed successfully.

OCI-41422: unsupported use of an incoming database link connection from a background, JOBQ slave or PQ slave

Cause: A background, JOBQ slave or PQ slave attempted to use an incoming database link connection and such usage is not supported.

Action: Contact Oracle Support Services.

OCI-41424: initial session state mismatch during replay

Cause: The initial session state at replay did not match the state at the beginning of the request.

Action: Review this request to see if the request committed, and if not whether it is safe to resubmit.

OCI-41425: replay disabled for a global transaction that uses Two-Phase Commit (2PC) managed by external Transaction Processing Monitor (TPM)

Cause: The request was unable to replay because it was part of a Two-Phase Commit (2PC) transaction managed by the Transaction Processing Monitor (TPM).

Action: To use AC determine if the application can use local or one-phase transactions.

OCI-41426: could not determine session state information

Cause: Unable to obtain session state classification information.

Action: Check alert log for more details.

OCI-41427: client session environment mismatch at replay

Cause: The client session environment could not be restored to the original values.

Action: Check the setting of failover_restore on your service.

OCI-41428: initial session state could not be verified during replay

Cause: The client session environment could not be verified for a failover of the first statement in a series.

Action: Upgrade to a driver with full support for TAC.

OCI-41429: non-replayable side effect on failed connection

Cause: The application executed an operation with side effects, which disabled Application Continuity for this request.

Action: Review this request to see if the request committed, and if not whether it is safe to resubmit with this side effect.

OCI-41430: connection test not found or is predefined

Cause: An attempt was made to enable or disable a connection test that did not exist or to delete a predefined connection test.

Action: Query the view DBA_CONNECTION_TESTS to see which connection tests exist and add the connection test, if needed. Predefined connection tests can be disabled but not deleted.

OCI-41431: Application Continuity does not support ISOLATION_LEVEL=SERIALIZABLE; failover cannot continue.

Cause: Application Continuity does not support ISOLATION_LEVEL=SERIALIZABLE.

Action: Consider using SELECT FOR UPDATE instead of serializable transactions.

OCI-41432: An open transaction is detected when attempting to start a request or at the end of a request.

Cause: It is illegal to have an open transaction when starting a new request or at the end of a request.

Action: Commit or rollback the open transaction in the previous request or in the callback for session setup or failover. It is illegal to have an open transaction at the end of a labeling or failover callback

OCI-41434: transaction replay disabled by unsupported value in call to *string*

Cause: The application passed to an Oracle Call Interface (OCI) function an argument value that was not supported with transactional failover.

Action: Manually recover the pending transaction. / Note: following reserved for special situations to aid diag

OCI-41435: transaction replay disabled by call to *string*

Cause: The application called an Oracle Call Interface (OCI) function that was not supported with transactional failover.

Action: Manually recover the pending transaction.

OCI-41437: session template could not be applied

Cause: The provided session template did not exist or was corrupt.

Action: Create a new session.

OCI-41438: cannot get service parameter (*string*)

Cause: Unable to get the value of the service attribute at session creation

Action: Check session has been created with the service set

OCI-41440: unsupported session template usage

Cause: An application attempted to apply a template produced by a newer server on a server that does not support session templates.

Action: Do not configure a service to use session templates if some of the databases providing the service do not support templates.

OCI-41444: new DRCP session no longer supports Transaction Guard

Cause: The initial session for this connection supported Transaction Guard, but a new session created for the latest request did not. The connection was aborted, to avoid potential misuse of Transaction Guard functionality.

Action: Ensure that Transaction Guard service settings are consistently configured.

OCI-41445: not able to read reset session state value

Cause: Reset Session State parameter has not been included in the service.

Action: Include a valid value for the Reset Session State parameter.

OCI-41446: The driver is not supported for resetting state at request boundaries

Cause: The driver did not support RESET_STATE.

Action: - To use RESET_STATE, upgrade to a driver that supports RESET_STATE. - To continue without RESET_STATE capability (do not use this if applications are depending on the session state being cleared): - Use a different service that does not have RESET_STATE enabled. - Set RESET_STATE = NONE on the current service.

OCI-41448: could not verify commit status due to database mismatch (CDB root or non-CDB)

Cause: The application attempted to obtain the commit status of a transaction on a database logically different from where it was first started.

Action: Check the status of this transaction manually.

OCI-41449: could not verify commit status due to invalid recovery System Change Number (SCN)

Cause: The application attempted to obtain the commit status of a transaction on a database with SCN at which recovery could not be performed.

Action: Check the status of this transaction manually.

OCI-41450: could not verify commit status due to incomplete recovery information

Cause: The application attempted to obtain the commit status of a transaction on a database that was open read-only but with unspecified System Change Number (SCN). The actual SCN may be beyond the current, and recovery may yield erroneous results.

Action: Check the status of this transaction manually.

OCI-41451: Logical Transaction Identifier (LTXID) from too old a version of database

Cause: The application was passing in an old LTXID whose format the current database no longer supported.

Action: No action needed. The connection now has a current LTXID.

OCI-41452: Application Continuity is disabled due to lack of support by the client driver.

Cause: The client driver did not fully support Application Continuity.

Action: Upgrade to a driver with full support for Application Continuity.

OCI-41453: Application Continuity is disabled due to unsupported use of SESSION_STATE_CONSISTENCY by the client driver.

Cause: The client driver did not fully support the service attribute SESSION_STATE_CONSISTENCY.

Action: Set the service attribute SESSION_STATE_CONSISTENCY to DYNAMIC, or upgrade to a driver with full support of the SESSION_STATE_CONSISTENCY service attribute.

OCI-41454: Application Continuity could not be enabled because Transaction Guard was not enabled in the session.

Cause: Application Continuity was disabled by the server because Transaction Guard was disabled in the session.

Action: Upgrade to a client driver with full support for Application Continuity and ensure that all services used in the application are configured to enable Transaction Guard.

OCI-41455: Transparent Application Continuity is disabled due to lack of support by the client driver.

Cause: The client driver did not fully support Transparent Application Continuity.

Action: Use Application Continuity, or upgrade to a driver with full support for Transparent Application Continuity.

OCI-41456: Replay is disabled because the old client driver does not support Transparent Application Continuity.

Cause: The replay was disabled because the old client driver did not support Transparent Application Continuity.

Action: Upgrade your client to a version that fully supports Transparent Application Continuity.

OCI-41457: The client driver disabled replay.

Cause: The client driver encountered a call that it could not replay. Therefore, it disabled replay for that call.

Action: Take the necessary corrective action.

OCI-41458: A SELECT using AS OF could not execute at replay.

Cause: During replay of this SELECT statement, PL/SQL was encountered.

Action: Revise the SELECT statement to exclude PL/SQL in the FETCH.

OCI-41459: The request is committed. It cannot re-enable in the same request when using Application Continuity (FAILOVER_TYPE = TRANSACTION).

Cause: This is an ACCHK message. A commit was completed in this request and there were subsequent user calls after the commit in this same request.

Action: Use one commit per request. Check that the connections are returned to the pool between requests. Consider using Transparent Application Continuity (FAILOVER_TYPE = AUTO).

OCI-41460: Transparent Application Continuity cannot enable replay because unrestorable session state exists.

Cause: This is an ACCHK message. Transparent Application Continuity could not enable replay because the session contained an unrestorable session state. Examples are session-duration temporary tables or LOBs, PL/SQL global variables, or Oracle Java Virtual Machine (OJVM).

Action: Consider using RESET_STATE = LEVEL1 on your service. RESET_STATE cleans session state between requests. You may also consider using Application Continuity (FAILOVER_TYPE = TRANSACTION).

OCI-41461: Transparent Application Continuity (TAC) cannot re-enable at an implicit boundary because cursors have been left open in fetch.

Cause: This is an Application Continuity Protection Check (ACCHK) message. TAC cannot re-enable because the session contains open cursors left in fetch.

Action: Close your cursors when no longer needed. Return cursors to the statement cache, so that TAC can re-enable. Also consider using SESSION_STATE_CONSISTENCY = HYBRID for cursors that need to remain open across transactions.

OCI-41462: Oracle Application Continuity (FAILOVER_TYPE = TRANSACTION) is not enabled on your session.

Cause: This was an ACCHK message. Application Continuity requires request boundaries. An Oracle connection pool was not used by the application.

Action: Use an Oracle connection pool and return the connections to the connection pool between usages. Alternatively, consider using Transparent Application Continuity (FAILOVER_TYPE = AUTO).

OCI-41463: The application has request boundaries. However, replay by Oracle Application Continuity did not enable.

Cause: This is an ACCHK message. Possible causes are: - This a JDBC application and the replay driver or JDBC consolidated data source are not used. - There is an UNRESTORABLE session state in the login trigger or label when using Transparent Application Continuity. - The application is using XA. - A transaction processing monitor is in use with two-phase commit. - The client disabled replay.

Action: For JDBC, either use the replay driver or consolidated data source: - The "consolidated data source" (i.e. oracle.jdbc.datasource.impl.OracleDataSource). - The "replay data source" (i.e. oracle.jdbc.replay.OracleDataSourceImpl). Ensure that there is no UNRESTORABLE state being created by the login trigger when using Transparent Application Continuity. Also, ensure that your application is not attempting to use Oracle Application Continuity with XA or other restricted options.

OCI-41464: Application Continuity could not restore the original session.

Cause: The server process failed and the original session state could not be restored as part of the failover.

Action: Clear the session states before returning connections to the connection pool.

OCI-41465: Client driver does not support implicit request boundaries.

Cause: Application is using a client driver that doesn't fully support implicit request boundaries.

Action: Upgrade to a driver that fully supports implicit request boundaries.

OCI-41467: Application Continuity could not restore tagged session during failover.

Cause: At checkout, client received a previously tagged session. But that session experienced an outage and Application Continuity replay was attempted, but could not confirm restoration of the tagged state.

Action: One or more of the following: (1) use Transparent Application Continuity (2) register a Transparent Application Failover callback (3) do not use tags (4) resubmit failed work.

OCI-41468: execution failed due to unstable dependencies

Cause: Cursor execution could not proceed because a referenced object was modified.

Action: Retry the SQL statement when the referenced objects are not being modified.

OCI-41469: failover was rejected due to incompatible checksum version

Cause: The failover request attempted to use a higher checksum version that the old server does not support.

Action: Ensure that all Oracle RAC instances are patched to the same level.

OCI-41470: fetch tried on dead connection

Cause: A fetch was attempted on a dead connection.

Action: Check for a failed error on previous call. Discard the connection and reconnect. 41471 and 41472 both indicate that client receives unexpected replay context in function kpuxcAppContCtlRecv. The difference is that: 41471 is for standard case which is what we expect since it is raised by unsupported metadata call to

OCIAttrGet and we could ignore it while 41472 is for non-standard case which means client receives unexpected replay context but the reason is not clear.

OCI-41471: transaction replay disabled by unsupported metadata call to OCIAttrGet

Cause: Application Continuity was disabled by an unsupported metadata call in the request.

Action: Manually recover the pending transaction

OCI-41472: transaction replay disabled by unsupported metadata call.

Cause: Application Continuity was disabled by an unsupported metadata call in the request.

Action: Manually recover the pending transaction

OCI-41473: Allocated call should already be processed.

Cause: This call may have missed the enqueueing process.

Action: Contact Oracle Support Services.

OCI-41474: Application Continuity is disabled due to unsupported client driver.

Cause: The client driver did not fully support Application Continuity.

Action: Upgrade to a driver with full support of Application Continuity.

OCI-41475: Application Continuity is disabled due to switching from a non-Application Continuity service.

Cause: The client session environment could not be verified for a failover of the first statement in a series, since the session was started with a service that does not support Application Continuity.

Action: To use Application Continuity with ALTER SESSION SET CONTAINER SERVICE, configure all services with Application Continuity.

OCI-41477: invalid LOB locator.

Cause: This LOB locator was generated on logical primary database during database rolling upgrade. It can't be used on a new database.

Action: Reload this LOB locator from the current database.

OCI-41479: OCI_ATTR_PING_INTERVAL was set via pooled service context obtained by OCISessionGet or OCILogon2.

Cause: After checking out session from session pool, OCI_ATTR_PING_INTERVAL was set via service context handle.

Action: Set OCI_ATTR_PING_INTERVAL via session pool handle.

OCI-41480: Request was not made between request begin and request end.

Cause: OCI Request was not made between OCIRequestBegin and OCIRequestEnd, or OCISessionGet and OCISessionRelease, or OCILogon2 and OCILogoff.

Action: put OCI requests between OCIRequestBegin and OCIRequestEnd, or OCISessionGet and OCISessionRelease, or OCILogon2 and OCILogoff.

OCI-41481: Request begin or request end call was called inappropriately.

Cause: OCIRequestBegin was called when a database request was already active or a pooled service context obtained by OCISessionGet or OCILogon2

Action: Do not call OCIRequestBegin when OCISessionGet or OCIlogon2 in session pool mode or OCIRequestBegin was already called.

OCI-41482: Null attribute address for attribute *string*

Cause: Null attribute address was provided for OCIAttrSet/Get.

Action: Provide valid attribute address

OCI-41483: cannot change session state consistency in client for failover type *string*

Cause: An attempt was made to change session state consistency, but the current failover type does not allow consistency changes.

Action: OCIAttrSet() only supports changing session state consistency for failover type AUTO. Setup a valid failover type and session state consistency combination using the DBMS_SERVICE package.

OCI-41484: cannot change session state consistency in client to value *string*

Cause: An invalid session state consistency value was set for the current failover type.

Action: OCIAttrSet() only supports session state consistency values OCI_SESSSTATECONS_AUTO and OCI_SESSSTATECONS_HYBRID. Setup a valid value for session state consistency.

OCI-41485: Failover is not enabled.

Cause: The connection did not connect to a service with failover enabled.

Action: Connect to a service with failover enabled.

OCI-41486: session template timed out after *string* seconds, exceeding timeout of *string* seconds

Cause: The provided session template could not be applied because it has timed out.

Action: Create a new session. Consider increasing the template timeout attribute value for the Application Continuity service.

OCI-41487: Replay disabled in Pipeline mode.

Cause: Replay was disabled in pipeline mode. Application Continuity (AC), Transparent Application Continuity (TAC) was disabled in pipeline mode.

Action: Do not use AC/TAC/FA features in pipeline mode.

OCI-41488: cannot failover because Application Continuity is not enabled

Cause: The application failed over to a service that does not have Application Continuity

Action: Ensure that Application Continuity is configured on the required services in all databases.

OCI-41489: Application Continuity is disabled because the server encountered an error condition

Cause: The server recognized a condition from which it could not failover safely.

Action: Contact support with the error condition, as a patch may be available for you.

OCI-41490: Unsupported failover release combination.

Cause: Application Continuity could not failover the session, because failover from the source release to the target release is not supported.

Action: Resubmit work to the application.

OCI-41491: Application Continuity failed due to an unexpected error

Cause: Application Continuity could not continue after an unexpected error.

Action: Turn on server side trace and contact support with the trace provided.

OCI-41492: Invalid use of the package DBMS_HA_ALERTS_PRVT [string]

Cause: Invalid arguments were passed to package DBMS_HA_ALERTS_PRVT.

Action: Do not call DBMS_HA_ALERTS_PRVT directly. If this is triggered by an RDBMS or Clusterware background process, contact Oracle Support. *Params: 1) reason_id: The event ID passed to DBMS_HA_ALERTS_PRVT.

OCI-41493: Application Continuity was disabled by object-related call.

Cause: The application called an object-related Oracle Call Interface (OCI) function that was not supported with transactional failover.

Action: Manually recover the pending transaction.

OCI-41494: failed to set network probes interval

Cause: A network error occurred while attempting to set the probe interval.

Action: This is an internal error, contact Oracle Support.

OCI-41495: outage between request boundaries in CMAN-TDM

Cause: An outage occurred, between request boundaries, in the server connection from Oracle Connection Manager in Traffic Director Mode (CMAN-TDM).

Action: Manually recover the pending transaction. If the outage was planned, investigate whether the application can provide explicit request boundaries or support implicit boundaries.

OCI-41496: unsupported original reset_state session value

Cause: Application Continuity could not failover the session, because the target instance does not support the original reset state value.

Action: Resubmit the work needed. Consider deferring using new values for service parameter reset_state until all instances are upgraded.

OCI-41601: invalid property for the rule class

Cause: An invalid property was specified for the rule class.

Action: Correct the rule class properties and try again.

OCI-41602: insufficient privileges

Cause: The user does not have required privileges on the object.

Action: Obtain the required privileges and try again.

OCI-41603: invalid privilege type

Cause: An attempt was made to grant an invalid privilege on a rule class.

Action: Correct the privilege name and try again.

OCI-41604: cannot revoke a privilege that was not granted

Cause: An attempt was made to revoke a privilege that was never granted.

Action: None

OCI-41605: schema extended name not allowed: *string*

Cause: An attempt was made to specify a schema extended name for an event structure, a rule class, or an action call-back procedure.

Action: Specify the object name with out a schema extension.

OCI-41606: rule class name already used by an existing object

Cause: An attempt was made to create a rule class with a name that is already used by an existing object.

Action: Specify a different name for the rule class and try again.

OCI-41607: rule class creation failed with *string*

Cause: rule class creation failed with a recursive error.

Action: Correct the rule class specification and try again.

OCI-41608: rule class does not exist

Cause: An attempt was made to access a rule class that does not exist or is not accessible.

Action: Correct the rule class name and try again.

OCI-41609: invalid name for the rule class

Cause: An invalid name was specified for the rule class.

Action: Correct the rule class name and try again.

OCI-41610: callback procedure name already used for an existing object

Cause: An attempt was made to create a callback procedure with a name that is already used for an existing object.

Action: Choose another name for the callback procedure.

OCI-41611: rule identifier "*string*" not unique in the rule class

Cause: An attempt was made to use a duplicate rule identifier.

Action: Choose a unique identifier for the rule and try again.

OCI-41612: scalar values expected for action preferences

Cause: Incorrect values were specified for the action preferences.

Action: Correct the action preferences values and try again.

OCI-41613: invalid action preference for rule class: *string*

Cause: An attempt was made to use an invalid action preference.

Action: Correct the input and try again.

OCI-41614: missing action preference value

Cause: Values for one or more action preferences were not specified.

Action: Specify values for all relevant action preferences.

OCI-41615: too many values in action preference list

Cause: Too many entries were specified in the action preference values list. The action preference values list should not have more entries than the action preference names list.

Action: Correct the input and try again.

OCI-41616: rule class's action callback procedure may have errors

Cause: The operation failed because the action callback procedure associated with the rule class has compilation errors.

Action: Recompile the action callback procedure and try the operation again.

OCI-41617: action preference name "*string*" collides with an event attribute name

Cause: An attempt was made to create an action preference with the same name as an attribute in the event structure.

Action: Choose a different name for action preference and try again.

OCI-41618: specified rule does not exist

Cause: Invalid rule identifier was used to operate on a rule definition.

Action: Use a valid rule identifier.

OCI-41619: rule manager feature currently not supported

Cause: An attempt was made to use a rule manager feature that is currently not supported.

Action: No action necessary. This is an informational message only.

OCI-41620: invalid ordering property for the rule class

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

OCI-41621: error in ordering property :*string*

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

OCI-41622: invalid primitive event object in rule class properties : *string*

Cause: In the rule class properties, the name used for one or the primitive event objects was not found in the corresponding composite event structure.

Action: Correct the name of the primitive event object in the rule class properties and try again.

OCI-41623: conflicting values for autocommit and duration properties

Cause: An attempt was made to create a rule class with autocommit enabled when the duration of events is set to TRANSACTION.

Action: Turn autocommit off or choose a different duration policy.

OCI-41624: invalid duration policy for primitive object in a composite event

Cause: An attempt was made to specify a SESSION or TRANSACTION duration policy for the primitive objects.

Action: Correct the rule class properties and try again.

OCI-41625: event structure *string* does not exist

Cause: The object type that represents the event structure was not created in the user's schema.

Action: Create the object type with the event structure's name and try again.

OCI-41626: invalid XML element "*string*" in rule class properties

Cause: An invalid XML element was used in the properties specification for the rule class.

Action: Use the correct (case-sensitive) tags in the properties.

OCI-41627: event structure object type in inconsistent state

Cause: The object type specified for the event structure was in an inconsistent state.

Action: Fix the object type and try again.

OCI-41628: invalid usage of "*string*" attribute in "*string*" element

Cause: An invalid or unsupported XML attribute was used in the rule class properties.

Action: Use the correct (case-sensitive) tags in the properties.

OCI-41629: event structure for simple events cannot be reused for composite events

Cause: An attempt was made to reuse an object type (event structure) for composite events when it is already configured for simple events.

Action: Drop the attribute set associated with the object and try again.

OCI-41630: invalid value for "*string*" attribute in the rule class properties

Cause: An invalid value was specified for an attribute in the rule class properties.

Action: Correct the value and try again.

OCI-41631: invalid text node or child element for "*string*" element in properties

Cause: An attempt was made to specify a child element or a text node in invalid position in the rule class properties specification.

Action: Correct the rule class properties and try again.

OCI-41632: invalid value for the "*string*" attribute

Cause: An attempt was made to assign an invalid value for an attribute in the rule class properties.

Action: See the documentation.

OCI-41633: specified rule class configuration not supported: "*string*"

Cause: An attempt was made to use an unsupported configuration for the rule class.

Action: Remove the specified tag in the properties and try again.

OCI-41634: invalid duration specification in rule properties: "string"

Cause: Invalid value was specified for the duration attribute in the rule class properties.

Action: Correct the value and try again.

OCI-41635: invalid unit of time used in duration specification

Cause: An attempt was made to use an invalid unit of time for the rule class's duration specification. Valid units are : minutes, hours, and days.

Action: Correct the duration specification and try again.

OCI-41636: invalid duration specification at the primitive event level

Cause: An attempt was made to specify a duration policy for the primitive events when the composite event was configured with TRANSACTION or SESSION duration policy.

Action: Correct the rule class properties and try again.

OCI-41637: missing primitive event name

Cause: The name attribute of the object element in the rule class properties was not specified. This is a required value.

Action: Specify the name of the primitive event and try again.

OCI-41638: invalid attribute for "string" element in rule condition

Cause: An attempt was made to specify an invalid attribute for an XML element in the rule condition.

Action: Correct the rule condition and try again.

OCI-41639: invalid child node in "string" element

Cause: An attempt was made to specify an invalid child element or text node for an XML element in the rule condition.

Action: Correct the rule condition and try again.

OCI-41640: invalid element "string" in the rule condition

Cause: An attempt was made to use an invalid element or a valid element in invalid position in the rule condition.

Action: Correct the rule condition and try again.

OCI-41641: invalid or empty rule condition

Cause: An attempt was made to specify an invalid or empty rule condition.

Action: Correct the input and try again.

OCI-41642: Missing "string" element in the rule condition

Cause: The rule condition was specified without a required element.

Action: Correct the rule condition and try again.

OCI-41643: invalid attribute for the "string" element in the rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

OCI-41644: invalid use of "string" attribute in rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

OCI-41645: duplicate tag "string" in rule condition

Cause: An attempt was made to specify the same XML tag in more than one positions within a single rule condition.

Action: Remove the duplicate reference to the tag and try again.

OCI-41646: missing "string" attribute for "string" element in the rule condition

Cause: One of the required attributes was not specified in the rule condition.

Action: Correct the rule condition and try again.

OCI-41647: negation not allowed in rule conditions with "any" semantics

Cause: An attempt was made to specify a "not" element within an "any" element in the rule condition.

Action: Correct the rule condition and try again.

OCI-41648: invalid sequence of child elements in "string" element

Cause: An attempt was made to specify an invalid sequence of elements within a parent element.

Action: Correct the rule condition and try again.

OCI-41649: invalid rule condition for a rule class involving composite events

Cause: An attempt was made to add an invalid rule condition to a rule set defined for composite events.

Action: Correct the input and try again.

OCI-41650: invalid composite event structure

Cause: A composite event structure may only have attributes that are either table aliases or of an object type that is defined in the owner's schema.

Action: Ensure that the event structure has no scalar attributes and all the embedded types in it are defined in the owner's schema.

OCI-41651: Event structure object type has one or more dependent objects

Cause: An attempt was made to configure an object type that has one or more dependents as a event structure. The object type cannot be modified due to the dependent objects.

Action: Create a new object type for the event structure and try again.

OCI-41652: invalid value for the equal attribute in the rule condition

Cause: An invalid value is assigned to the equal attribute in the rule condition.

Action: Correct the input and try again.

OCI-41653: inconsistent value for the "count" attribute of the "any" element

Cause: The value specified for the "count" attribute of the "any" element is greater than or equal to the the number of primitive events appearing in the rule condition.

Action: Specify a smaller value for the "any" element's "count" attribute.

OCI-41654: insufficient number of primitive events for the use of "sequence"

Cause: An attempt was made to use "sequence" attribute when there is an insufficient number of primitive events in the rule conditions.

Action: Remove the sequence specification.

OCI-41655: rule condition construct not supported: *string*

Cause: An attempt was made to use a rule condition construct that is not supported in the current release.

Action: Modify the rule condition.

OCI-41656: insufficient number of child elements in "*string*" element.

Cause: An attempt was made to use fewer than two elements within an "and" or "notany" element.

Action: Specify at least two elements within the parent element.

OCI-41657: rule class internal objects cannot be dropped

Cause: An attempt was made to drop an internal object that is required for a rule class.

Action: Drop the rule class associated with this object.

OCI-41658: invalid value for the "count" attribute in the "any" element

Cause: An invalid value is assigned to the count attribute in the rule condition. The values should be a positive integer that is smaller than the number of object elements within the "any" element.

Action: Correct the input and try again.

OCI-41659: invalid primitive event "*string*" for the rule class

Cause: An attempt was made to use an invalid primitive event in a rule condition.

Action: Correct the input and try again.

OCI-41660: ordering property for the rule class is too long

Cause: An attempt was made to configure the rule class with an ordering property that is longer than 240 characters.

Action: Correct the input and try again.

OCI-41661: the system generated rule class package has errors

Cause: An attempt was made to use a rule class configuration that was not supported.

Action: File a bug.

OCI-41662: number of primitive events in the composite event exceeds maximum limit

Cause: An attempt was made to create a composite event structure with more than 32 primitive events.

Action: Use a composite event that consists of fewer primitive events.

OCI-41663: invalid use of "equal" or "sequence" attribute with a single event

Cause: An attempt was made to use "equal" or "sequence" attribute when the "count" attribute in a rule condition with "any" semantics is set to 1.

Action: Remove the "equal" and "sequence" specifications.

OCI-41664: invalid consumption policy for the primitive event

Cause: An attempt was made to use EXCLUSIVE consumption policy for a primitive event when the composite event is configured for RULE consumption policy.

Action: Correct the rule class properties and try again.

OCI-41665: conflicting values for duration, consumption, and autocommit policies

Cause: An attempt was made to use an EXCLUSIVE consumption policy with no autocommit and a duration other than TRANSACTION or SESSION.

Action: Modify the rule class properties and try again. Autocommit should be set to YES when the consumption policy is EXCLUSIVE.

OCI-41666: XML schema validation failed when validating against *string*

Cause: The user input has undefined element or attribute according to the provided XML schema definition.

Action: Correct the user inputs and try again.

OCI-41667: rule class results view name already used for an existing object

Cause: An attempt was made to use a duplicate name for the rule class results view.

Action: Use a different name for the rule class results view.

OCI-41668: invalid operation for the rule class

Cause: An attempt was made to use an invalid operation for the rule class.

Action: No action necessary. This is an informational message only.

OCI-41669: invalid list of primitive event identifiers

Cause: An attempt was made to pass an empty list of primitive event identifiers to the CONSUME_PRIM_EVENTS API.

Action: Correct the input and try again.

OCI-41670: duplicate or invalid event name in equal specification

Cause: An attempt was made to specify a duplicate or invalid primitive event for the rule class's equal property.

Action: Correct the input and try again.

OCI-41671: duplicate table names in the event structure with table aliases

Cause: The table used for an event structure has the same name as another table or a primitive event type in the event structure.

Action: Use an event structure with distinct table names for table aliases.

OCI-41672: invalid rowid passed in for "string" table

Cause: An attempt was made to pass a NULL or invalid rowid for a table in the event structure.

Action: Correct the input and try again.

OCI-41673: sequence attribute not allowed in rule conditions using table aliases

Cause: An attempt was made to use sequence attribute in a rule condition that is defined using table aliases. Sequence usage is not permitted for the lack of timestamp attribute.

Action: Correct the input and try again.

OCI-41674: dmlevents policy allowed only for event structures with table aliases

Cause: An attempt was made to use the dmlevents policy for an event structure with no table alias constructs.

Action: Correct the rule class properties and try again.

OCI-41675: schema for data tables does not match that of the rule class

Cause: An attempt was made to use the dmlevents policy for a rule class that refers to table residing in different schema. To use the dmlevents policy, the table associated with table aliases in the event structure and the rule class should exist in the same schema.

Action: Remove dmlevents specification from rule class properties.

OCI-41676: invalid use of dmlevents policy for primitive event

Cause: An attempt was made to use the dmlevents policy for a primitive event defined with more than one table alias attribute.

Action: Remove the dmlevents specification from the rule class properties.

OCI-41677: DML event trigger creation failed with *string*

Cause: Triggers could not be created on the data table to track DML events.

Action: Remove the dmlevents specification from the rule class properties.

OCI-41678: conflicting values for the autocommit and dmlevents policies

Cause: An attempt was made to use dmlevents policy in combination with autocommit set to YES. This combination is not allowed.

Action: Set autocommit to NO and try again.

OCI-41679: dmlevents specification only allowed with table alias attributes

Cause: An attempt was made to use the dmlevents policy for an event structure not containing any table alias attributes.

Action: Remove the dmlevents specification from the rule class properties.

OCI-41680: Rules Manager background process *string* does not exist

Cause: An attempt was made to use a Scheduler process that does not exist.

Action: Execute EXFSYS.RLM\$CREATE_SCHEDULER_JOBS procedure as a privileged user.

OCI-41681: clean up of expired events failed

Cause: The background process that cleans up the expired events failed for a rule class.

Action: Invoke EXFSYS.DBMS_RLMGR_UTL.CLEANUP_EVENTS API for the exact nature of the problem.

OCI-41682: invalid rule class package

Cause: An attempt was made to use a rule class package with invalid signature or permissions.

Action: Drop the rule class and recreate it.

OCI-41683: unable to lock a rule in the rule class

Cause: A rule matching the current event is locked by another session.

Action: Reissue the command after committing the other sessions.

OCI-41684: invalid value for the RLM\$ENABLED column

Cause: An attempt was made to insert or update a value other than 'Y' or 'N' into the RLM\$ENABLED column of a rule class table.

Action: Retry the DML statement with a value of 'Y' or 'N' for the RLM\$ENABLED column.

OCI-41685: invalid window specification for the collection element

Cause: An invalid attribute value was specified for the "windowlen" or the "windowsize" attribute. The value specified for the "windowlen" attribute should be a number indicating the number of days or a fraction of a day. The value specified for the "windowsize" attribute should be an integer which indicates number of items in the collection. The maximum value allowed for the window specification is 64000.

Action: Correct the input and try again.

OCI-41686: use of "collection" invalid for the primitive event

Cause: An attempt was made to define a rule condition with "collection" element when the corresponding event was not configured for collections of events.

Action: Correct the rule condition and try again.

OCI-41687: attribute "string" not allowed in the "groupby" specification

Cause: The attributes listed in the "groupby" specification in a rule condition were not a subset of the attributes specified in the rule class properties.

Action: Correct the "groupby" specification for the rule condition and try again.

OCI-41688: invalid value for the "groupby" attribute

Cause: An invalid value was specified for the "groupby" attribute.

Action: Correct the input and try again.

OCI-41689: invalid collection specification in the rule condition

Cause: An attempt was made to insert a rule condition with invalid collection element specification.

Action: Correct the input and try again.

OCI-41690: maximum number of grouping expressions for a rule class exceeded

Cause: An attempt was made to specify more than 32 expressions for the "groupby" clause in rule class properties.

Action: Use fewer than 32 expressions for the "groupby" clause.

OCI-41691: invalid aggregate specification: *string*

Cause: The aggregate operation specified in the rule condition was invalid.

Action: Correct the input and try again.

OCI-41692: unsupported aggregate operator in the having/compute clause: *string*

Cause: An attempt was made to use an unsupported aggregate operator in the having or the compute clause in the rule condition.

Action: Correct the input and try again.

OCI-41693: invalid attribute or data type for an aggregate operator: *string*

Cause: An attempt was made to apply an aggregate operator on an invalid attribute or an attribute with invalid or unsupported data type in the aggregate operator. Only NUMBER and DATE attributes are allowed in the aggregate operators.

Action: Correct the input and try again.

OCI-41694: invalid equal specification around: *string*

Cause: An attempt was made to specify an invalid equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

OCI-41695: equal specification should have a minimum of two elements

Cause: An attempt was made to specify fewer than two elements in the equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

OCI-41696: invalid operator in the having clause: *string*

Cause: An attempt was made to use an invalid relational operator in the having clause of the rule condition.

Action: Correct the input and try again.

OCI-41697: attribute prefix missing in aggregate specification: *string*

Cause: An attempt was made to specify an aggregate predicate across multiple primitive event types with no attribute prefix.

Action: Correct the input and try again.

OCI-41698: invalid use of "*string*" attribute in aggregate predicate

Cause: An attempt was made to use an attribute where a literal is expected in the aggregate predicate in the rule condition.

Action: Correct the input and try again.

OCI-41699: maximum number of aggregate operations per rule condition exceeded

Cause: An attempt was made to specify more than 5 aggregate operations in a rule condition.

Action: Correct the input and try again.

OCI-41700: a conditions table already exists for the event structure

Cause: A table storing the primitive rule conditions was already assigned to the event structure.

Action: No action necessary. This is an informational message only.

OCI-41701: conditions table with a rule class association cannot be truncated or dropped

Cause: An attempt was made to truncate or drop a conditions table when one or more rule classes are associated to it through the event structure.

Action: Drop the rule class before truncating or dropping the conditions table.

OCI-41702: invalid conditions table

Cause: An attempt was made to use an invalid conditions table.

Action: Correct the input and try again.

OCI-41703: invalid child node in "object" element with "ref" attribute

Cause: An attempt was made to use both a condition and a "ref" attribute in the "object" element.

Action: Remove the "ref" attribute.

OCI-41704: invalid condition reference: "string"

Cause: An attempt was made to use a reference to a nonexistent conditions table or a condition.

Action: Ensure that the conditions table exists for the primitive event and the value specified for the "ref" attribute of the "object" element is valid.

OCI-41705: conditions table cannot be dropped with DROP TABLE command

Cause: An attempt was made to drop a conditions table with a DROP TABLE command.

Action: Use DBMS_RLMGR.DROP_CONDITIONS_TABLE instead.

OCI-41706: a condition referenced in rule conditions may not be deleted

Cause: An attempt was made to delete a condition when one or more rule conditions refer to it.

Action: Delete the rules before deleting the conditions.

OCI-41707: unsupported construct with collection events: "string"

Cause: An attempt was made to define a collection rule condition with unsupported constructs.

Action: Correct the input and try again.

OCI-41708: the identifier for the shared condition may not be modified

Cause: An attempt was made to update the identifier of a row stored in the conditions table.

Action: Insert a row with the new identifier instead.

OCI-41710: invalid use of aggregate operator for a noncollection event

Cause: An attempt was made to specify an aggregate operator on an event that is not identified as collection.

Action: Correct the input and try again.

OCI-41711: invalid attribute in the rule condition's having clause

Cause: An invalid attribute is used in the specification for the having clause of the rule condition.

Action: Correct the input and try again.

OCI-41712: missing groupby specification for the collection "string"

Cause: An attempt was made to use a collection element with no groupby specification in the rule condition.

Action: Correct the input and try again.

OCI-41713: invalid use of "windowlen" and "windowsize" attributes

Cause: An attempt was made to use the windowlen and windowsize attributes within the same collection element.

Action: Correct the input and try again.

OCI-41714: invalid use of window specification with SESSION/TRANSACTION duration

Cause: An attempt was made to use the windowlen or windowsize attributes when the events are configured for SESSION or TRANSACTION duration.

Action: Remove the window specification and try again.

OCI-41721: invalid use of DMLEVENTS and CNFEVENTS in rule class properties

Cause: An attempt was made to specify both the DMLEVENTS and CNFEVENTS for the same rule class.

Action: Remove either the DMLEVENTS or the CNFEVENTS specification.

OCI-41722: insufficient privileges for database change notification

Cause: An attempt was made to use CNFEVENTS property with insufficient privileges.

Action: Grant CHANGE NOTIFICATION privilege and EXECUTE privilege on DBMS_CHANGE_NOTIFICATION to the user and try again.

OCI-41723: insufficient privileges for CREATE PROFILE

Cause: An attempt was made to: 1) Create a common profile in root without the CREATE PROFILE privilege. 2) Create a federation profile in federation root without federationally granted CREATE PROFILE privilege. 3) Create a protected profile in pluggable database without commonly granted CREATE PROFILE privilege.

Action: Grant the required privilege and retry the operation.

OCI-41724: insufficient privileges for ALTER PROFILE

Cause: An attempt was made to: 1) Alter a common or default profile in root without the ALTER PROFILE privilege. 2) Alter a federation profile in federation root without the federationally granted ALTER PROFILE privilege. 3) Alter Oracle defined profiles ORA_STIG_PROFILE and ORA_CIS_PROFILE by lesser privileged users with ALTER PROFILE privilege. 4) Alter a protected profile in a pluggable database with profile parameters that are not allowed to be modified.

Action: Grant the required privilege and retry the operation.

OCI-41725: User "*string*" lacks CREATE ANY CONTEXT privilege

Cause: An attempt is made to create or replace context without CREATE ANY CONTEXT privilege.

Action: Grant the CREATE ANY CONTEXT privilege and retry the operation.

*Params: 1) user_name: The name of the user who lacks the privilege

OCI-41726: User "*string*" lacks DROP ANY CONTEXT privilege

Cause: An attempt is made to drop context without DROP ANY CONTEXT privilege.

Action: Grant the DROP ANY CONTEXT privilege and retry the operation. *Params:

1) user_name: The name of the user who lacks the privilege

OCI-41727: insufficient privileges for DROP PROFILE

Cause: An attempt was made to: 1) Drop a common profile in root without the commonly granted DROP PROFILE privilege. 2) Drop a federation profile in federation root without the federationally granted DROP PROFILE privilege. 3) Drop a protected profile in PDB without the commonly granted DROP PROFILE privilege even though profile is local to PDB

Action: Grant the required privilege and retry the operation.

OCI-41728: insufficient privileges to alter schema qualified PASSWORD VERIFICATION FUNCTION

Cause: An attempt was made by the current user to replace or drop non-SYS owned Password Verification Function without possessing the required privileges.

Action: Grant the required privilege and retry the operation.

OCI-41729: insufficient privileges to mark password profile as protected

Cause: An attempt was made to mark the password profile as protected when the profile does not exist as PDB local profile.

Action: Perform the operation on a PDB local profile.

OCI-41730: insufficient privilege. SYSDBA/OPER/ASM/BACKUP/DG/KM/RAC privilege is required.

Cause: An attempt is being made by a regular user to execute a process that requires either the SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, or SYSRAC administrative privileges.

Action: Perform the operation with an administrative user.

OCI-41800: too many notifications with the notification ID "*string*"

Cause: Multiple pluggable databases (PDBs) shared the same notification ID.

Action: Set a secondary ID attribute in NOTIFICATIONID for the procedure.

OCI-41801: invalid PDB "string" for procedure string

Cause: The specified pluggable database (PDB) name was not found in the multitenant container database (CDB).

Action: Set the correct PDB name for the procedure.

OCI-41802: invalid JSON format for NOTIFICATION

Cause: An incorrect JavaScript Object Notation (JSON) string was set as the NOTIFICATION parameter.

Action: Check and correct the JSON format.

OCI-41803: value of NOTIFICATION parameter string is empty

Cause: The value of the required non-null parameter was empty.

Action: Check the value of the specified parameter to guarantee not NULL.

OCI-41804: NOTIFICATION parameter string not set

Cause: The specified parameter was not set.

Action: Set the required parameter with a non-null value.

OCI-41805: NOTIFICATION or NOTIFICATIONID is NULL

Cause: The specified parameter was not set.

Action: Set the required NOTIFICATION or NOTIFICATIONID for DBMS_NOTIFICATIONS.

OCI-41806: exceeded the maximum number of secondary ID parameters for NOTIFICATIONID

Cause: Too many specified secondary ID parameters were set.

Action: Reset the NOTIFICATIONID parameter and set fewer secondary ID parameters.

OCI-41807: primary ID or secondary ID parameter not set for NOTIFICATIONID

Cause: A primary or secondary ID parameter was not set.

Action: Set a valid primary or secondary ID based on DB_NOTIFICATIONS view.

OCI-41808: insufficient privileges for the DBMS_NOTIFICATIONS action

Cause: The user did not have sufficient privileges to execute the procedure.

Action: Grant the DBA privilege or NOTIFICATIONS_ADMIN privilege and try again.

OCI-41900: missing string privilege on "string"."string"

Cause: An attempt was made to operate on an object for which the user did not have the required privilege.

Action: Perform the action after acquiring the required privileges. *Params: 1) privilege: The name of the object privilege. 2) owner_name: The name of the owner. 3) object_name: The name of the object.

OCI-41901: missing "string" privilege which is needed to set the parameter

Cause: Setting this parameter required a privilege that was not granted to the user.

Action: Contact a database administrator or privileged user to set the parameter.
 *Params: 1) privilege_name: The name of the privilege.

OCI-41902: missing *string* or *string* privilege to set the parameter

Cause: Setting this parameter required a privilege that was not granted to the user.

Action: Acquire the privilege and then set the parameter. The user needs to be granted this privilege commonly, which makes the privilege applicable in all containers of the CDB.

OCI-41903: The session is missing the "*string*" administrative privilege.

Cause: The operation was not performed because the current session did not have the necessary administrative privilege. Administrative privileges can only be granted to the database user or schema; not to a role.

Action: Grant the missing administrative privilege to the database user. Retry the operation. *Params: 1) Name: The name of the administrative privilege.

OCI-41904: Missing object privilege on "*string*".*string*" to create a view.

Cause: An attempt was made to create a view on an object for which the current user didn't have any object privilege.

Action: Ensure the user has been granted the necessary privilege on the object and retry creating the view. *Params: 1) owner_name: The name of the owner of the object. 2) object_name: The name of the object.

OCI-41931: Unable to lock the graph underlying object "*string*".*string*".

Cause: The object was locked by another operation.

Action: Wait for the operations holding the conflicting lock to complete and retry.
 *Params: 1) schema_name: The schema name where the object resides. 2) object_name: The name of the underlying object as in all_objects.

OCI-42000: invalid online redefinition column mapping for table "*string*".*string*"

Cause: An attempt was made to change the logical structure of a materialized view log, queue table, or a partition by specifying a non-NULL column mapping during online redefinition.

Action: Pass a NULL column mapping parameter.

OCI-42002: partition "*string*" of table "*string*".*string*" not being redefined

Cause: An attempt was made to redefine a partition which is not involved in this redefinition.

Action: Pass a valid partition name.

OCI-42003: partition must be specified for this redefinition

Cause: A partition was involved in this redefinition but was not specified.

Action: Specify the partition involved in this redefinition.

OCI-42004: redefinition not instantiated

Cause: An attempt was made to complete an instantiation-deferred redefinition without invoking dbms_redefinition.sync_interim_table.

Action: Invoke `dbms_redefinition.sync_interm_table` to instantiate this redefinition.

OCI-42005: invalid type of redefinition method

Cause: An unknown redefinition method was used.

Action: Use one of the supported redefinition methods: `o dbms_redefinition.cons_use_pk` or `dbms_redefinition.cons_use_rowid`

OCI-42006: dependent object registration not supported during a partition redefinition

Cause: An attempt was made to register dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.register_dependent_object` during a partition redefinition.

OCI-42007: dependent object unregistration not supported during a partition redefinition

Cause: An attempt was made to unregister dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.unregister_dependent_object` during a partition redefinition.

OCI-42008: error occurred while instantiating the redefinition

Cause: An error occurred while instantiating the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

OCI-42009: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition.

Action: Correct the error and continue the online redefinition.

OCI-42010: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

OCI-42011: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition.

Action: Correct the error and continue the online redefinition.

OCI-42012: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

OCI-42013: interim table of an AQ IOT table should be an IOT table

Cause: An attempt was made to create a table that is not an index-organized table (IOT) as the interim table of an AQ IOT table (history, time management, or dequeue).

Action: Ensure that the interim table is created as an IOT table.

OCI-42014: online redefinition unable to lock AQ objects

Cause: An online redefinition of an AQ table was unable to lock all related AQ objects.

Action: Abort and retry the redefinition.

OCI-42015: online redefinition unable to log changes made to AQ tables

Cause: An online redefinition of an AQ table was unable to log changes made to AQ tables during the redefinition.

Action: Abort and retry the redefinition.

OCI-42016: shape of interim table does not match specified column mapping

Cause: The number of columns, or the type or the length semantics of a column, in the interim table did not match the specified column mapping.

Action: Ensure that the interim table matches the column mapping by either modifying the column mapping string or altering the interim table's column definition(s).

OCI-42017: interim table of an AQ table should not be an AQ table

Cause: An attempt was made to create an AQ table as an interim table of an online redefined AQ table.

Action: Ensure that the interim table is not created as an AQ table.

OCI-42018: partition cannot be redefined online because of index organization incompatibility

Cause: interim table is incompatible with partition being redefined because one or more of the following apply: - one is index-organized and the other is not - one has IOT overflow segment and the other does not - one has IOT mapping table and the other does not

Action: Ensure that the interim table is compatible with the partition being redefined.

OCI-42019: partition cannot be redefined online because of incompatible partitioning of interim table

Cause: both original and interim tables are partitioned, or original table is composite-partitioned but interim table is non-partitioned.

Action: Ensure that the interim table has compatible partitioning with the original table. For example, if the original table is partitioned, the interim table should be non-partitioned. If the original table is composite-partitioned, the interim table should be partitioned.

OCI-42020: partition cannot be redefined online because of unsupported type of interim table

Cause: An unsupported type of interim table was provided during the partition redefinition. Currently the following types of interim tables are not supported: - a nested table or has nested-table columns - an external table - part of cluster - contains LOB shared segments

Action: Do not use unsupported types of interim tables.

OCI-42021: partition cannot be redefined online because of incompatible row dependencies

Cause: original/interim table was created with row dependency and interim/original table was not.

Action: Ensure that both tables are created with same row dependency properties.

OCI-42022: partition cannot be redefined online because of presence of nested columns

Cause: An attempt was made to online redefine a partition with nested table columns.

Action: Do not attempt to online redefine a partition with nested table columns.

OCI-42023: Compatibility of an AQ table must be Oracle Database release 8.1.x or later.

Cause: An attempt was made to perform online redefinition on an Oracle // Database Advanced Queuing (AQ) table that was created with // compatibility prior to Oracle Database release 8.1.x.

Action: Ensure that the AQ table is created with the COMPATIBLE parameter set to release 8.1.x or later before attempting online redefinition.

OCI-42024: interim table of an AQ table can not be a partitioned table

Cause: An attempt was made to use a partitioned table as an interim table.

Action: Ensure that the interim table is not a partitioned table.

OCI-42025: redefinition of CONS_USE_ROWID method cannot be used to redefine an AQ IOT table

Cause: An attempt was made to use method of DBMS_REDEFINITION.CONST_USE_ROWID to redefine an AQ IOT table.

Action: Ensure that method of DBMS_REDEFINITION.CONST_USE_PK is used to redefine an AQ IOT table.

OCI-42026: duplicated rows detected while instantiating the redefinition

Cause: Duplicated rows are detected during instantiation of the redefinition.

Action: Abort the redefinition, turn off the optimistic ascending SCN optimization, and restart the redefinition.

OCI-42027: cannot redefine an object online that is not a table

Cause: An attempt was made to redefine an object online that is not a table.

Action: Ensure that the object being redefined online is a table.

OCI-42028: materialized view log "*string*"."*string*" does not exist

Cause: An attempt was made to register a nonexistent materialized view log as a dependent object.

Action: Invoke DBMS_REDEFINITION.REGISTER_DEPENDENT_OBJECT on a valid materialized view log.

OCI-42029: cannot online redefine table "*string*"."*string*" at this time

Cause: An attempt was made to redefine a table which is incompatible with another ongoing redefinition.

Action: Do not perform the redefinition operation on this table or wait until the incompatible ongoing redefinition has completed.

OCI-42030: cannot online redefine table "*string*"."*string*" with commit SCN-based MV log

Cause: An attempt was made to redefine a table which had a commit SCN-based materialized view log defined on it.

Action: Do not attempt to online redefine a table that has a commit SCN-based materialized view log defined on it.

OCI-42031: interim table cannot have a commit SCN-based MV log defined on it

Cause: An attempt was made to use an interim table which had a commit SCN-based materialized view log defined on it.

Action: Ensure that the interim table does not have a commit SCN-based materialized view log defined on it.

OCI-42032: cannot online redefine table "*string*"."*string*" with Flashback Data Archive enabled

Cause: An attempt was made to redefine a table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table that has Flashback Data Archive enabled.

OCI-42033: interim table "*string*"."*string*" cannot have Flashback Data Archive enabled

Cause: An attempt was made to redefine a table with an interim table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table with an interim table which has Flashback Data Archive enabled.

OCI-42034: cannot online redefine table "*string*"."*string*" which is a CDC table

Cause: An attempt was made to redefine a table which is a CDC table.

Action: Do not attempt to online redefine a table that is a CDC table.

OCI-42035: cannot online redefine IOT table "*string*"."*string*" with CONS_USE_ROWID

Cause: An attempt was made to redefine an IOT table with CONS_USE_ROWID.

Action: Do not attempt to online redefine an IOT table with CONS_USE_ROWID.

OCI-42036: cannot online redefine temporary table "*string*"."*string*"

Cause: An attempt was made to redefine a temporary table.

Action: Do not attempt to online redefine a temporary table.

OCI-42037: cannot online redefine table "*string*"."*string*" with IOT overflow segment

Cause: An attempt was made to redefine a table with IOT overflow segment.

Action: Do not attempt to online redefine a table with IOT overflow segment.

OCI-42038: cannot online redefine table "*string*"."*string*" with a CDC log defined on it

Cause: An attempt was made to redefine a table with a CDC log defined on it.

Action: Do not attempt to online redefine a table with a CDC log defined on it.

OCI-42039: cannot online redefine table "*string*"."*string*" with FGA enabled

Cause: An attempt was made to redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

Action: Do not attempt to online redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

OCI-42040: cannot online redefine table "*string*"."*string*" with column of binary XML type

Cause: An attempt was made to redefine a table with a column of binary XML type.

Action: Do not attempt to online redefine a table with a column of binary XML type.

OCI-42041: cannot online redefine table "*string*"."*string*" with nested table columns

Cause: An attempt was made to redefine a table with nested table columns.

Action: Do not attempt to online redefine a table with nested table columns.

OCI-42042: time out in acquiring DML lock during online redefinition

Cause: During FINISH_REDEF_TABLE procedure, the elapsed time waiting to acquire a table or partition DML lock on the original table exceeds the timeout the user specified.

Action: Rerun FINISH_REDEF_TABLE procedure to continue the process.

OCI-42043: CONS_VPD_AUTO is only applicable to null column mapping

Cause: An attempt was made to specify CONS_VPD_AUTO for non-null column mapping other than null column mapping. CONS_VPD_AUTO can only be specified for null column mapping.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

OCI-42044: cannot redefine table with non-null VPD policy predicate against the table owner or redefinition invoker

Cause: Virtual Private Database (VPD) policies with non-null predicate against the table owner or redefinition invoker existed on the original table.

Action: Drop the VPD policies with non-null predicate against the table owner or redefinition invoker. Restart online redefinition.

OCI-42045: COPY_VPD_OPT cannot be set to CONS_VPD_NONE with VPD policies on table "*string*"."*string*".

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_NONE. COPY_VPD_OPT cannot be set to CONS_VPD_NONE with Virtual Private Database (VPD) policies on the original table.

Action: Set COPY_VPD_OPT to CONS_VPD_AUTO or CONS_VPD_MANUAL.

OCI-42046: COPY_VPD_OPT cannot be set to *string* with VPD policies on interim table "*string*"."*string*".

Cause: An attempt was made to set the COPY_VPD_OPT value to either CONS_VPD_NONE or CONS_VPD_AUTO. Cannot set the COPY_VPD_OPT value to CONS_VPD_NONE or CONS_VPD_AUTO with Virtual Private Database (VPD) policies on the interim table.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

OCI-42047: The specified value for COPY_VPD_OPT is invalid.

Cause: An unknown COPY_VPD_OPT value was used.

Action: Use one of the supported COPY_VPD_OPT values: o
 DBMS_REDEFINITION.CONST_VPD_NONE o
 DBMS_REDEFINITION.CONST_VPD_AUTO o
 DBMS_REDEFINITION.CONST_VPD_MANUAL

OCI-42048: Automatic copying of VPD policies with application context is not supported in online redefinition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONST_VPD_AUTO for Virtual Private Database (VPD) policies with application context. Automatic copying of VPD policies with application context is not supported in online redefinition.

Action: Drop VPD policies with application context or set the COPY_VPD_OPT value to CONST_VPD_MANUAL.

OCI-42049: cannot online redefine multiple tables and multiple partitions

Cause: An online redefinition procedure was passed multiple original tables and multiple partitions to redefine.

Action: Do not attempt to online redefine multiple tables at the same time as multiple partitions.

OCI-42050: COPY_VPD_OPT cannot be set to CONST_VPD_MANUAL when redefining a partition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONST_VPD_MANUAL. COPY_VPD_OPT cannot be set to CONST_VPD_MANUAL when redefining a partition.

Action: Set COPY_VPD_OPT to CONST_VPD_NONE or CONST_VPD_AUTO.

OCI-42051: duplicate partition names in partition name list

Cause: An online redefinition procedure was passed a partition name list containing duplicates.

Action: Ensure that all names in the partition name list are unique.

OCI-42052: interim table cannot have materialized view or zonemap defined on it

Cause: An attempt was made to redefine a table with an interim table on which a materialized view or zonemap was defined.

Action: Remove all materialized views and zonemaps defined on the interim table and retry online redefinition, or do not attempt online redefinition.

OCI-42053: cannot online redefine table "*string*". "*string*" with OLS/XDS enabled

Cause: An attempt was made to redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

Action: Do not attempt to online redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

OCI-42054: cannot online redefine table "*string*". "*string*" with UXI XML index

Cause: An attempt was made to redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

Action: Do not attempt to online redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

OCI-42056: interim table cannot be a system-partitioned table

Cause: An attempt was made to redefine a table with an interim table that was a system-partitioned table.

Action: Use an interim table whose partition type is supported.

OCI-42057: cannot use lock free finish redef for current redefinition

Cause: An attempt was made to enable lock free finish redef for current redefinition, but lock free was not feasible.

Action: Refer to the documentation for restrictions.

OCI-42058: unsupported UPDATE statement

Cause: The UPDATE statement passed to DBMS_REDEFINITION.EXECUTE_UPDATE was not supported.

Action: Refer to the documentation for restrictions and supported types.

OCI-42059: cannot update a table with a DML trigger on UPDATE

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a trigger on UPDATE, which is not supported.

Action: Drop the DML trigger.

OCI-42060: cannot update a table with a nested table column

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a nested table column, which is not supported.

Action: Refer to the documentation for restrictions.

OCI-42061: cannot update a typed table or a table with an ADT column

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a typed table or a table with an ADT column, which is not supported.

Action: Refer to the documentation for restrictions.

OCI-42062: cannot update a table with a partition extended name

Cause: An attempt was made to pass an UPDATE statement with a partition extended name to the DBMS_REDEFINITION.EXECUTE_UPDATE method, which is not supported.

Action: Refer to the documentation for restrictions.

OCI-42064: invalid UPDATE statement *string*

Cause: An attempt was made to pass an invalid UPDATE statement to the DBMS_REDEFINITION.EXECUTE_UPDATE method.

Action: Pass a valid UPDATE statement to the DBMS_REDEFINITION.EXECUTE_UPDATE method.

OCI-42065: REDEF_TABLE() does not support redefining AQ table

Cause: An attempt was made to redefine an Advanced Queueing (AQ) table with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine an AQ table using REDEF_TABLE().

OCI-42066: illegal redefinition for a clustered table

Cause: An attempt was made to redefine a clustered table to modify the tablespace or compression type with the REDEF_TABLE() procedure.

Action: Do not attempt to specify a new tablespace or compression type.

OCI-42067: invalid column mapping with invisible columns on original or interim table

Cause: There was an invalid column mapping with invisible columns on the original or interim table.

Action: Invisible columns in the column mapping string must be invisible on both the original and interim table.

OCI-42068: rollback unsupported with COPY_VPD_OPT option

Cause: ENABLE_ROLLBACK and COPY_VPD_OPT were both set to TRUE.

Action: Either unset ENABLE_ROLLBACK or COPY_VPD_OPT.

OCI-42069: rollback unsupported

Cause: Tables in the redefinition are either an object, advanced queue or index-organized table.

Action: Currently ROLLBACK is unsupported on such tables.

OCI-42070: wrong usage of DBMS_REDEFINITION.ROLLBACK

Cause: ENABLE_ROLLBACK was not set to TRUE during START_REDEF_TABLE.

Action: Restart START_REDEF_TABLE with ENABLE_ROLLBACK set to TRUE and then use ROLLBACK.

OCI-42071: rollback unsupported with NO-DML lock option

Cause: ENABLE_ROLLBACK was set to TRUE along with DML_LOCK_TIMEOUT set to -1.

Action: Either unset ENABLE_ROLLBACK or DML_LOCK_TIMEOUT.

OCI-42072: REDEF_TABLE() does not support a table with LONG column.

Cause: An attempt was made to redefine a table that has a LONG column with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine a table with LONG column using REDEF_TABLE().

OCI-42073: cannot online redefine external table or fixed table

Cause: An attempt was made to redefine an external table or a fixed table.

Action: Do not attempt to online redefine an external table or a fixed table.

OCI-42074: Cannot update a table with VPD policy

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with Virtual Private Database (VPD) policy.

Action: Refer to the documentation for restrictions.

OCI-42075: wrong usage of parameter, DISABLE_ROLLBACK in FINISH_REDEF_TABLE

Cause: ENABLE_ROLLBACK was not set to TRUE during START_REDEF_TABLE.

Action: Rerun FINISH_REDEF_TABLE with DISABLE_ROLLBACK set to FALSE.

OCI-42076: DBMS_REDEFINITION does not support a table on single table hash clusters.

Cause: An attempt was made to use DBMS_REDEFINITION on a table on single table hash clusters.

Action: Do not attempt to use DBMS_REDEFINITION to operate on a table that is on single table hash clusters.

OCI-42077: The XML column type is unsupported as a VPD sensitive column.

Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy (DBMS_RLS.ADD_POLICY or DBMS_RLS.ADD_GROUPED_POLICY) that specified an XML column for the SEC_RELEVANT_COLS parameter. XML column types are not supported for the SEC_RELEVANT_COLS parameter.

Action: Review your data access security requirements. You can: - Remove the XML column from the SEC_RELEVANT_COLS parameter. - Map the data from the XML column to a supported column type and use the new column as a value for the SEC_RELEVANT_COLS parameter.

OCI-42078: DBMS_REDEFINITION does not support a clustered table without cluster index or with virtual cluster index

Cause: An attempt was made to use the DBMS_REDEFINITION package on a clustered table without a cluster index or with a virtual cluster index.

Action: Create a regular cluster index and rerun the DBMS_REDEFINITION procedure.

OCI-42079: wrong usage of DBMS_REDEFINITION.FINISH_REDEF_TABLE

Cause: Rollback was initiated as part of the previous call to FINISH_REDEF_TABLE.

Action: Use ROLLBACK or ABORT_ROLLBACK to end redefinition.

OCI-42080: wrong usage of DBMS_REDEFINITION.ABORT_ROLLBACK

Cause: ABORT_ROLLBACK was called without starting the rollback operation.

Action: Use ABORT_REDEF_TABLE instead of ABORT_ROLLBACK.

OCI-42081: wrong usage of DBMS_REDEFINITION.ABORT_REDEF_TABLE

Cause: ABORT_REDEF_TABLE was called when ROLLBACK was active.

Action: Use ABORT_ROLLBACK instead of ABORT_REDEF_TABLE.

OCI-42082: cannot update a table with a hidden column

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a hidden column, which is not supported.

Action: Refer to the documentation for restrictions.

OCI-42083: cannot online redefine table "string"."string" with staging log

Cause: An attempt was made to redefine a table that had a staging log.

Action: Do not attempt to online redefine a table that has a staging log.

OCI-42084: cannot online redefine table that has inconsistent sharing with interim table

Cause: An attempt was made to redefine a table that had inconsistent sharing with an interim table.

Action: Do not attempt to online redefine a table that has inconsistent sharing with an interim table, ensure that there is consistent sharing.

OCI-42086: cannot enable ROLLBACK on a table with row movement enabled

Cause: An attempt was made to enable ROLLBACK on a table with row movement enabled in the redefinition.

Action: Currently, ROLLBACK is unsupported on such tables.

OCI-42087: cannot enable ROLLBACK on a nested table

Cause: An attempt was made to enable ROLLBACK on a nested table.

Action: Currently, ROLLBACK is unsupported on such tables.

OCI-42088: cannot enable ROLLBACK on a clustered table

Cause: An attempt was made to enable ROLLBACK on a clustered table.

Action: Currently, ROLLBACK is unsupported on such tables.

OCI-42089: ROLLBACK unsupported with specified column mapping string

Cause: The specified column mapping string included an identity column.

Action: ROLLBACK is unsupported with column mapping string.

OCI-42090: cannot use EXECUTE_UPDATE when the statement contains ROWID

Cause: An attempt was made to use EXECUTE_UPDATE when the update statement contained ROWID.

Action: Execute the update statement directly.

OCI-42091: shape of interim table does not match original table

Cause: An attempt was made to online redef a table when either the original table or the interim table did not have ROW ARCHIVAL.

Action: Remove ROW ARCHIVAL from the tables or add it to both tables.

OCI-42092: cannot add, remove or modify columns of Automatic CDR enabled table "*string*".*string*" with online redefinition

Cause: Cannot add, remove, or modify columns with Automatic Conflict Detection and Resolution (ACDR) enabled using online redefinition.

Action: Do not attempt to add, remove, or modify a column on a table with Automatic Conflict Detection and Resolution (ACDR) enabled using online redefinition. Use ALTER TABLE instead.

OCI-42093: cannot online redefine table "*string*".*string*" which is a delete tombstone table

Cause: An attempt was made to redefine a delete tombstone table.

Action: Do not attempt to online redefine a delete tombstone table.

OCI-42094: interim table of an AQ table can not have deferred segment

Cause: An attempt was made to use a deferred segment table as an interim table.

Action: Ensure that the interim table is not a deferred segment table.

OCI-42095: REDEF_TABLE() does not support a table in the join of a bitmap index

Cause: An attempt was made to redefine a table that was in the join of a bitmap index with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine a table in the join of a bitmap index using REDEF_TABLE().

OCI-42096: cannot update a table with a column that defaults with sequence

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a column that has a sequence as its default value, which is not supported.

Action: Refer to the documentation for restrictions.

OCI-42287: cannot rename user on whose type a table depends

Cause: An attempt was made to rename a user whose schema contained a type on which some table depends. The operation may not proceed as it would render the table invalid causing loss of data.

Action: Drop table(s) dependent on types belonging to the schema of the user being renamed.

OCI-42292: RENAME TO already specified

Cause: The RENAME TO clause was specified twice.

Action: Use only one RENAME TO clause.

OCI-42294: role name conflicts with another user, role, or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different role name.

OCI-42295: schema synonym name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different schema synonym name or use CREATE OR REPLACE SCHEMA SYNONYM.

OCI-42297: cannot drop a schema synonym for the schema of a user who is currently connected

Cause: An attempt was made to drop a schema synonym for a schema of a user who was logged on.

Action: Ensure the user is logged off, then retry command.

OCI-42299: An error occurred while dropping the database user.

Cause: An error occurred while trying to drop a database user.

Action: Contact the database administrator (DBA). To troubleshoot this, the DBA will need to review the alert log for this error.

OCI-42300: an Editioning view is already defined on this table

Cause: An attempt was made to create an Editioning view on a table on which another Editioning view is already defined in the same Edition. This violates a restriction that at most one Editioning view may be associated with any base table in a given Edition.

Action: Create the new view as a regular view or, if the view being created is really intended to be an Editioning view associated with this table, drop the existing Editioning view before creating the new one.

OCI-42301: definition of an Editioning view may not refer to a synonym

Cause: An attempt was made to create an Editioning view referring to a synonym, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a synonym.

OCI-42302: definition of an Editioning view may not refer to remote tables

Cause: An attempt was made to create an Editioning view referring to remote tables, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a remote table.

OCI-42303: duplicate column reference in a definition of an Editioning view

Cause: An attempt was made create an Editioning view referencing the same column of a base table more than once, which is not supported.

Action: Do not create an Editioning view if you have multiple columns referring to the same column of the base table.

OCI-42304: base table and the Editioning view must belong to the same schema

Cause: An attempt was made to create an Editioning view in a schema different from that of the base table.

Action: Create an Editioning view in the same schema as the base table.

OCI-42305: only an Editioning view may replace an Editioning view

Cause: An attempt was made to replace an Editioning view with a view which is not an Editioning view or vice versa.

Action: Ensure that either both or neither of the views involved are Editioning views.

OCI-42306: a CrossEdition trigger may not be created on an Editioning view

Cause: An attempt was made to create a CrossEdition trigger on an Editioning view, which is not supported.

Action: Instead of creating a CrossEdition trigger on an Editioning view, create it on the Editioning view's underlying table.

OCI-42307: columns of an Editioning view may only refer to base table columns

Cause: An attempt was made to define an Editioning view containing a column referring to an entity other than a base table column (for example, a PL/SQL function without a parameter), which is not supported.

Action: Ensure that every column of an Editioning view refers to a column of a base table.

OCI-42308: view *string.string* is already in read-only mode

Cause: An attempt was made to set a read-only table in read-only mode.

Action: This DDL can only be executed on a read/write view.

OCI-42309: view *string.string* is already in read/write mode

Cause: An attempt was made to set a read/write view in read/write mode.

Action: This DDL can only be executed on a read-only view.

OCI-42310: Implementation restriction: this operation is only permitted on Editioning views

Cause: The view being altered was not an Editioning view. In this release, an ALTER VIEW READ ONLY, or ALTER VIEW READ WRITE operation is only permitted on Editioning views.

Action: Ensure that the view is an Editioning view.

OCI-42311: This operation is not permitted on Editioning views with compilation errors

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which have compilation errors.

Action: Resolve the compilation errors.

OCI-42313: This operation is not supported on Editioning views marked invalid

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which are marked invalid.

Action: Recompile the Editioning view to ensure that it is valid.

OCI-42314: editioning view cannot be owned by a non-editioned user

Cause: An attempt was made to create an editioning view in a schema where views were not editionable.

Action: Enable editions for the user for views and then create the editioning view.

OCI-42399: cannot perform a DML operation on a read-only view

Cause: An attempt was made to insert, delete, or update row(s) of a view created with read-only option. DML operations on such views are explicitly prohibited.

Action: Perform the desired DML operation on the view's underlying base table or issue ALTER VIEW ... READ WRITE command to make the view updatable.

OCI-42400: invalid object type used in a vertex or edge table definition

Cause: Vertex or edge tables were not defined from tables or materialized views.

Action: Use a schema object of the correct type to define an edge or vertex table of a property graph.

OCI-42401: invalid table for vertex or edge table definition

Cause: An object table or an XML table was used to define a vertex or edge table of a property graph.

Action: Use tables that are not an object or XML table to define an edge or vertex table of a property graph.

OCI-42402: cannot infer key for graph element table *string*

Cause: Either a primary key or a unique and NOT NULL key constraint was missed.

Action: Create a primary key or unique and NOT NULL key constraint, or explicitly list the primary key columns using the KEY clause.

OCI-42403: ambiguous key for graph element table *string*

Cause: More than one unique and NOT NULL key constraints existed.

Action: Explicitly list key column names.

OCI-42404: graph element table name *string* already defined

Cause: Graph element table name was already defined in the graph.

Action: Specify a different graph element table name using the AS clause in the vertex table or edge table definition.

OCI-42405: Referenced vertex table *string* does not exist.

Cause: The vertex table name used in the SOURCE or DESTINATION clause did not exist.

Action: Use an existing vertex table name from the graph.

OCI-42406: columns used to define edge relationship must be NOT NULL in ENFORCED MODE

Cause: ENFORCED MODE was specified but a column used to define the foreign key of the edge table, or a referenced key to a vertex table allowed NULL values.

Action: Use columns that are NOT NULL for defining a foreign key or referenced key, or specify the TRUSTED MODE instead.

OCI-42407: duplicate property name in label *string* : *string*

Cause: The specified property name was already used to define another property in this label.

Action: Use a different property name.

OCI-42408: default label already defined

Cause: A default label was already defined.

Action: Use the LABEL clause to specify a different name.

OCI-42409: label *string* already defined

Cause: A label with this name was already defined.

Action: Use a different label name or specify the same property names.

OCI-42410: inconsistent property definition: *string*

Cause: A property name was defined differently for the same graph element table.

Action: Change the definition of properties to be consistent.

OCI-42411: A column of data type *string* cannot be a graph element table key.

Cause: The data type of a column was not allowed as a key.

Action: Use a column with a data type that is allowed as a key only.

OCI-42412: Data type mismatch between vertex key column *string* and edge key.

Cause: The data type of an edge foreign key column and vertex referenced column were incompatible.

Action: Use edge and vertex columns with compatible data types.

OCI-42413: cannot infer edge relationship for edge table *string*

Cause: Zero or more than one foreign key constraint existed between the edge table and its vertex tables.

Action: Create a foreign key constraint, or explicitly specify the foreign and referenced keys between the edge table and the vertex table.

OCI-42414: cannot use mixed type for property *string* of label *string*

Cause: The option DISALLOW MIXED PROPERTY TYPES was set but multiple definitions of the same property exposed column expressions that had different data types.

Action: Use the ALLOW MIXED PROPERTY TYPES option, or wrap the exposed column expression in casts so that all definitions of the property have the same data type.

OCI-42415: missing key column in edge reference definition

Cause: A different number of key columns were defined.

Action: Specify the same number of key columns for edge and vertex tables.

OCI-42416: duplicate column name *string* in key definition

Cause: The specified column name was already used in a key definition.

Action: Remove the duplicate column name from the list of columns in the KEY clause.

OCI-42417: option *string* already set

Cause: The same graph option was set multiple times.

Action: Remove the duplicate setting of the option.

OCI-42418: missing property graph option

Cause: An argument was missing in the OPTIONS clause.

Action: Pass a property graph option as an argument.

OCI-42419: At least one property graph option must be declared.

Cause: The OPTIONS clause required at least one option declaration.

Action: Declare at least one property graph option.

OCI-42420: invalid property graph option

Cause: An argument passed to the OPTIONS clause was not a valid property graph option.

Action: Use a valid property graph option.

OCI-42421: property graph does not exist

Cause: The specified property graph did not exist.

Action: Check the property graph name passed as an argument.

OCI-42422: missing definition of properties

Cause: Arguments defining a column expression exposed as properties were missing in the PROPERTIES clause.

Action: Declare at least one column expression exposed as a property.

OCI-42423: invalid property graph label property definition

Cause: The specified property expression for a label property definition was invalid.

Action: Use either a column name or SQL operator to define the property.

OCI-42424: An expression based label property definition must use the AS clause.

Cause: The AS clause was not used to specify a property name for an expression in the vertex or edge table definition.

Action: Use the AS clause to specify a name for the property defined using an expression.

OCI-42425: column expression to define property is too long

Cause: The SQL text of the column expression used to define the property was too long.

Action: Use less SQL text for the column expression to define the property.

OCI-42426: duplicate column name *string* in EXCEPT clause

Cause: The column name was already referenced in an EXCEPT clause.

Action: Remove the duplicate column name from the list of columns in the EXCEPT clause.

OCI-42427: not a property graph

Cause: The specified object was not a property graph.

Action: Use a property graph object.

OCI-42428: no longer a valid graph element table

Cause: The object defining the graph element table was no longer valid.

Action: Use ALTER PROPERTY GRAPH COMPILE to validate the property graph or modify the property graph definition using CREATE or REPLACE PROPERTY GRAPH to replace or remove the invalid graph element table.

OCI-42429: property graph not allowed here

Cause: A property graph was specified incorrectly in a statement.

Action: Ensure that the name is correct or remove it.

OCI-42430: invalid identifier for property graph name or owner

Cause: An invalid identifier was specified as the property graph name or owner.

Action: Provide a valid identifier as the property graph name or owner. A valid property graph or owner identifier must start with a letter, be less than or equal to 128 bytes in length, and contain only alphanumeric characters or the special characters \$, _, and #. It may not be a reserved word.

OCI-42431: ambiguous edge relationship for graph edge table *string*

Cause: More than one foreign key constraint existed between the edge table and a referenced vertex table.

Action: Explicitly declare the edge relationship using the KEY...REFERENCES clause.

OCI-42432: missing ENABLE VALIDATE constraint on graph element table *string* for ENFORCED MODE

Cause: Enforced mode was specified but no primary key or unique key constraint in the enable and validate state was found.

Action: Use the TRUSTED MODE, or define an ENABLE VALIDATE constraint for a primary key or a not null unique key clause.

OCI-42433: Object used for vertex or edge table definition is not in a valid state.

Cause: The object used to define a vertex or edge table was not in a valid state.

Action: Use a schema object in a valid state to define an edge or vertex table of a property graph.

OCI-42434: Columns used to define a graph element table key must be NOT NULL in ENFORCED MODE.

Cause: ENFORCED MODE was specified but a column used to define the key of a graph element table allowed NULL values.

Action: Use columns that are NOT NULL for defining key columns, or specify the TRUSTED MODE instead.

OCI-42435: invalid SQL data type for property

Cause: An invalid SQL data type was used to define the property.

Action: Define the property using a column expression that has a valid SQL data type.

OCI-42436: The join group does not exist.

Cause: There was no join group with the specified name.

Action: Use the name of an existing join group or create a join group with that name in order to alter or drop it.

OCI-42437: remote object cannot be used to define graph element tables

Cause: A remote object was used to define a graph element table.

Action: Change the property graph definition to only use local objects.

OCI-42438: remote property graph cannot be used as a graph argument to DDL commands for creating, altering or dropping property graph

Cause: A remote property graph was used as argument to a DDL statement for creating, altering, or dropping a property graph.

Action: Connect to the remote database to perform the operation locally.

OCI-42439: only pure functions can be specified in a column expression used to define a property

Cause: A column expression used to define a property contained a function with a non-deterministic evaluation.

Action: Rewrite the column expression to reference pure functions only.

OCI-42440: Pseudo-columns cannot be used to define properties of a graph.

Cause: A column expression used to define a property contained a pseudo-columns.

Action: Do not use pseudo-columns to define properties of a graph.

OCI-42501: Operator SYS_PG_IMGID fails during initialization.

Cause: The operator initialization does not find required system generated virtual column.

Action: Create a virtual column for the table via Property Graph DDL.

OCI-42502: Property graph "string"."string" is not INMEMORY enabled.

Cause: The property graph was not INMEMORY enabled.

Action: Enable INMEMORY for the property graph.

OCI-42503: In-Memory (re)population cannot run for "string"."string"

Cause: The property graph underlying object is not INMEMORY enabled or it is empty.

Action: Enable INMEMORY for the property graph or add data in it.

OCI-42504: Blockchain and/or immutable table "string"."string" is in graph definition

Cause: INMEMORY option is not supported for graphs containing blockchain and/or immutable tables.

Action: Remove blockchain and immutable tables from graph definition.

OCI-42600: JSON relational duality view can not be defined as an editioning view.

Cause: An attempt was made to define an editioning JSON relational duality view, which is not supported.

Action: Remove the EDITIONING keyword from the CREATE statement.

OCI-42601: Cannot create JSON Relational Duality View 'string': join query to construct subobject 'string' must use all columns of a foreign key of table 'string'.

Cause: Not all columns of the foreign key, which were required to uniquely identify an object, were used in the join to construct the specified subobject.

Action: Specify all the foreign key columns in the join.

OCI-42602: The Direct Path Load method for loading data into a JSON Relational Duality View is not allowed.

Cause: An attempt was made to load data into a duality view using SQL*Loader's direct path method, which was not supported.

Action: Use SQL*Loader's conventional path method instead to load data into the duality view.

OCI-42603: Cannot update JSON Relational Duality View '*string*': The Primary Key column(s) of the root table '*string*' cannot be updated, omitted, or set to NULL.

Cause: An attempt was made to modify the primary key column(s) of the root table, which is not allowed. Additionally, the input primary key column(s) cannot be missing or NULL because that modifies the primary key column(s) to NULL.

Action: Add or modify the WHERE clause in the UPDATE statement so that the root primary key column(s) of the input duality view object matches the primary key column(s) of the object being modified. Alternatively, modify the primary key column(s) of the new object such that it matches the primary key column(s) of the object being modified.

OCI-42604: Cannot update JSON Relational Duality View '*string*': The '*_id*' field of the input object does not match the '*_id*' field of the object being modified.

Cause: ?? An attempt was made to modify a duality view object where the input '*_id*' field value was different than the '*_id*' field value of the object being modified. ??

Action: ??Add or modify the WHERE clause to update the intended object identified by the input '*_id*' field value. Alternatively, modify the '*_id*' field value in the input JSON object such that it matches the '*_id*' field of the object being modified.

OCI-42605: Cannot update JSON Relational Duality View '*string*': cannot modify the same row of the table '*string*' more than once.

Cause: An attempt was made to modify the same row of the specified table more than once. This could happen if the same row was part of two or more documents being updated by the current statement. Such operations were disallowed because the order in which the documents get updated could impact the final value of the row, leading to non-deterministic results.

Action: Add or modify the where clause so that it targets a single document or a set of documents with no overlapping rows. Alternatively, use a different duality view to perform this operation, such as one with the specified table as the root table.

OCI-42606: cannot use key name '*string*' to capture the primary key column for JSON Relational Duality View

Cause: An invalid key name was used to capture the primary key column for JSON Relational Duality View.

Action: Use reserved keyword '*_id*' to capture the primary key column for JSON Relational Duality View.

OCI-42607: There are more than one foreign key constraints on table '*string*' that makes reference to the primary key of the parent table '*string*'.

Cause: There were more than one foreign key constraints on the table that refers to the primary key of the parent table.

Action: Avoid using more than one foreign key constraint on the table that refers to the primary key of the parent table for JSON Relational Duality View.

OCI-42608: Cannot use table alias in JSONIZE() expression.

Cause: An attempt was made to use table alias in JSONIZE() expression.

Action: Avoid using table alias in JSONIZE() expression.

OCI-42609: Cannot use ID or ID NESTED with columns in JSONIZE() expression.

Cause: An attempt was made to use ID or ID NESTED with columns in JSONIZE() expression.

Action: Avoid using columns when using ID or ID NESTED in JSONIZE()() expression.

OCI-42610: Illegal token is used to separate key value pair in JSONIZE()() expression.

Cause: Not using : or IS to separate key value pair in JSONIZE()() expression.

Action: Use : or IS to separate key value pair in JSONIZE()() expression.

OCI-42611: Illegal token is used after UNNEST in JSONIZE()() expression.

Cause: Not using { after UNNEST in JSONIZE()() expression.

Action: Use { after UNNEST in JSONIZE()() expression.

OCI-42612: Not using comma to separate items in JSONIZE()() expression.

Cause: Missing comma to separate items in JSONIZE()() expression.

Action: Use { after UNNEST in JSONIZE()() expression.

OCI-42613: Not using string literal for key in JSONIZE()() expression.

Cause: Missing comma to separate items in JSONIZE()() expression.

Action: Use string literal for key in JSONIZE()() expression.

OCI-42614: Illegal token is used after NESTED key specification in JSONIZE()() expression.

Cause: Not using { after NESTED key specification in JSONIZE()() expression.

Action: Use { after NESTED key specification in JSONIZE()() expression.

OCI-42615: Incompatible usage of JSONIZE: Expected a JSON Relational Duality View.

Cause: There was an incompatible use of JSONIZE. JSONIZE is only compatible with JSON Relational Duality Views. No other type of view creation supports JSONIZE.

Action: Do not use JSONIZE for creating a view of type other than JSON Relational Duality View.

OCI-42616: Cannot create JSON Relational Duality View '*string*': Root table '*string*' does not have a primary key.

Cause: The root table did not have a primary key, which is required to uniquely identify the Duality View document.

Action: Add a primary key to the root table and select all columns of the key in the view.

OCI-42617: Cannot create JSON-relational duality view '*string*'. Table '*string*' does not have a NOT NULL constraint on unique key.

Cause: The specified table does not have a NOT NULL constraint on unique key, which is required to uniquely identify the duality view object.

Action: Add a NOT NULL constraint unique key to the table.

OCI-42618: Cannot create JSON Relational Duality View '*string*': The Base Table '*string*' has too many primary key columns which exceeds the maximum limit of *number* columns.

Cause: The number of primary key columns of the base table exceeds the maximum number supported.

Action: Reduce the number of primary key columns in the base table specified in the duality view DDL.

OCI-42619: Cannot create JSON Relational Duality View '*string*': The WHERE clause does not satisfy referential constraint.

Cause: The columns specified in the WHERE clause that join two tables violate referential integrity.

Action: Modify the struct of the tables or the DDL such that the WHERE clause joins the tables using the primary key (or unique key if the table is not the root table) of the parent table and the foreign key of the child table, or such that the WHERE clause joins the tables using the foreign key of the parent table and the primary key or unique key of the child table.

OCI-42620: Cannot perform DMLs on views that are created on Duality Views.

Cause: DMLs on views created on duality views are not supported.

Action: Perform DML operations directly on the Duality View or on the underlying base tables of the Duality View.

OCI-42621: Invalid or missing SQL expression in JSON Relational Duality View (*string*)

Cause: An invalid SQL expression was used, or a SQL expression is expected but missing in JSON relational duality view.

Action: Ensure that a JSON relational duality view is constructed solely using JSON_OBJECT and JSON_ARRAYAGG operators, or the inputs to JSON_OBJECT and JSON_ARRAYAGG operators are not missing or invalid.

OCI-42622: Multilevel nesting not allowed in JSON-Relational duality View.

Cause: An attempt is being made to specify multilevel nesting in JSON-Relational duality View.

Action: Ensure that there is no multilevel nesting in the JSON-Relational duality view definition.

OCI-42623: Virtual Private Database (VPD) cannot be applied on JSON Relational Duality Views.

Cause: An attempt is being made to create VPD policy on JSON Relational Duality View, which is not supported.

Action: Avoid creating VPD policies on JSON Relational Duality Views.

OCI-42624: invalid column *string* in the ORDER BY clause on JSON-relational duality views

Cause: An invalid column is used in the ORDER BY clause.

Action: Ensure that ORDER BY is on a valid column or columns on the same level.

OCI-42625: Invalid length input to ETAG_MATCHES operator.

Cause: An invalid length hex number is passed to ETAG_MATCHES operator.

Action: Pass a valid length input to the ETAG_MATCHES operator. The input to ETAG_MATCHES is expected to be a 16 byte hexadecimal or binary number.

OCI-42626: Invalid hexadecimal number passed to ETAG_MATCHES operator.

Cause: An invalid hexadecimal number is passed to ETAG_MATCHES operator. Ensure that a valid hexadecimal number is passed to the operator.

Action: Pass a valid hexadecimal number to the ETAG_MATCHES operator. Hexadecimal numbers are represented by only 16 symbols. These symbols or values are 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E and F.

OCI-42627: Extra column 'string' is defined as flexible column in JSON-Relational duality View.

Cause: Only one flexible column per table is allowed in JSON-Relational duality View.

Action: Remove the extra flexible column in JSON-Relational duality View definition.

OCI-42628: Flexible column 'string' is not JSON data type in JSON-Relational duality View 'string'.

Cause: Only JSON Data Type column is allowed for flexible column in JSON-Relational duality View.

Action: Use JSON Data Type column for flexible column in JSON-Relational duality View definition.

OCI-42629: Cannot create JSON Relational Duality View 'string': Expression used for UNNEST does not return a JSON object.

Cause: The UNNEST keyword or directive was specified on a JSON array or a scalar value or a datatype that is not a JSON object, which is not allowed.

Action: Remove the UNNEST keyword or directive, or modify the expression to return a JSON object.

OCI-42630: Flexible column 'string' cannot be ETAG checked for this conflict option

Cause: Flexible column cannot be part of ETAG list for this conflict option.

Action: Mark the flexible column as NOCHECK for this conflict option.

OCI-42631: Flexible column 'string' has Non-JSON_OBJECT data in JSON-Relational duality View.

Cause: Only JSON_OBJECT Data is allowed for flexible column in JSON-Relational duality View.

Action: Use JSON_OBJECT Data for flexible column or Mark the flexible column as NOCHECK in JSON-Relational duality View.

OCI-42632: Cannot have 'string' as the field name in input data for flexible column of JSON-Relational duality View.

Cause: Invalid field name in the input JSON document for flexible column in JSON-Relational duality View.

Action: Remove the invalid field name in the input JSON document for JSON-Relational duality View.

OCI-42633: Table '*string*' cannot be flexible and unnested in JSON-relational duality view.

Cause: The table has a flexible column and is linked unnested to a parent table.

Action: Ensure that flexible columns are used only with tables that are explicitly nested under parent tables.

OCI-42634: Error during data validation: JSON column not found in table '*string*'.*string*'.

Cause: A JSON column should be present in the table to store the documents.

Action: Create a table with JSON column and insert the documents into the table.

OCI-42635: Error during data validation: No rows were inserted into the table '*string*'.*string*'.

Cause: No rows were inserted into the JSON column of the given table.

Action: Add at least one document to the table and retry the operation.

OCI-42636: Error during data validation: Table '*string*'.*string*' does not exist.

Cause: The table name provided is unknown.

Action: Make sure the schema and table names are correct and exist. Then retry the operation.

OCI-42637: Error during data validation: Could not build JSON data guides for input tables.

Cause: Building JSON data guide for the input tables has failed.

Action: Ensure that the JSON_DATAGUIDE function works on all of the input tables. Then, retry the operation.

OCI-42638: Error during data normalization: Could not identify primary keys for tables.

Cause: There is no scalar field at the root level.

Action: Ensure that the input data conforms to the indicated restrictions.

OCI-42689: Cannot update *string* column '*string*' of table '*string*' in JSON Relational Duality View '*string*': Missing UPDATE annotation or NOUPDATE annotation specified.

Cause: UPDATE annotation for the column is not specified or NOUPDATE annotation was specified during duality view creation.

Action: Re-create the duality view with UPDATE annotation for the column or table containing the column and retry the operation.

OCI-42690: Cannot *string* JSON Relational Duality View '*string*': View is read-only.

Cause: UPDATE, INSERT, or DELETE annotations were not specified for any table or NOUPDATE, NOINSERT, and NODELETE annotations were specified for all tables during duality view creation.

Action: Re-create the duality view with UPDATE, INSERT, and DELETE annotations for relevant tables and retry the operation.

OCI-42691: Cannot update JSON Relational Duality View '*string*': View is not updateable.

Cause: UPDATE annotation was not specified for any table or NOUPDATE annotation was specified for all tables during duality view creation.

Action: Re-create the duality view with INSERT, UPDATE, and DELETE annotations for relevant tables and retry the operation.

OCI-42692: Cannot *string* JSON Relational Duality View '*string*': Error while *string* table '*string*'

Cause: There is an error performing an insert, update, or delete on a table underlying the duality view.

Action: Check the error below this for more details on why the operation failed.

OCI-42693: Dependent table '*string*' can only be marked as Update or Read-Only

Cause: An invalid option in WITH clause specified.

Action: Use a valid option in WITH clause.

OCI-42694: JSON relational duality view is not supported on system-partitioned table '*string*'.

Cause: A system-partitioned table was used in a JSON Relational Duality View.

Action: Ensure that a system-partitioned table is not used.

OCI-42695: The '*_etag*' field is missing or NULL in the JSON input for JSON Relational Duality View '*string*'.

Cause: The '*_etag*' field is a required field in the JSON input.

Action: Add a valid value for '*_etag*' to the JSON input and retry the operation.

OCI-42696: All columns of the root table '*string*' cannot be missing or NULL in the JSON input for JSON Relational Duality View '*string*'.

Cause: The operation failed because all columns of the specified table that were projected in the duality view were missing or NULL in the input JSON document.

Action: Specify valid values for all columns in the input JSON document and retry the operation.

OCI-42697: All primary or unique key columns of table '*string*' cannot be missing or NULL in the JSON input for JSON Relational Duality View '*string*'.

Cause: The operation failed because all identifying columns of the specified table were missing or NULL in the input JSON document.

Action: Specify valid values for identifying columns in the input JSON document and retry the operation.

OCI-42698: Cannot *string* JSON Relational Duality View '*string*': Concurrent modification detected to *string* '*string*' of document with ID '*string*'.

Cause: The operation failed because a concurrent modification to the specified field or table was detected.

Action: Retry the operation. For UPDATE, fetch the latest document with a valid entity tag (ETAG) value and retry the UPDATE. If there is no requirement for detecting concurrent modifications to the specified field or table, redefine the duality view with the field or table annotated as NOCHECK.

OCI-42699: Cannot *string* JSON Relational Duality View '*string*': The ETAG of document with ID '*string*' in the database did not match the ETAG passed in.

Cause: The update failed because a previously cached entity tag (ETAG) value did not match the current ETAG value in the database.

Action: The cached document is no longer valid. Fetch the latest document with a valid ETAG value and retry the update operation.

OCI-42700: jsontype ('string') instance does not match 'string' type modifier

Cause: The jsontype instance passed into TREAT() operator did not match the expected json type modifier.

Action: Fix the input jsontype instance or json type modifier to TREAT() operator so that they match.

OCI-42800: The specified attribute association ("string", "string") is already attached to existing VPD policies with the specified policy function "string"."string".

Cause: An attempt was made to add an attribute association which was already attached to shared context-sensitive policies with the specified Virtual Private Database (VPD) policy function. All shared context-sensitive policies with a common policy function need to have the same set of attribute associations. Attribute associations of an existing shared context-sensitive policy which is using the specified policy function will be automatically added to the new policy.

Action: Review existing VPD policy contexts in the DBA_POLICY_CONTEXTS view and retry the operation without specifying the namespace and attribute values. *Params: 1) namespace: The name of the namespace. 2) attribute: The name of the attribute. 3) owner: The policy function owner name. 4) name: The policy function name.

OCI-42801: The value is not set for the application context attribute ("string", "string") used by the VPD security policy "string".

Cause: A value was not set for every application context attribute for the Virtual Private Database (VPD, Row Level Security, and Fine-grained access control) policy. These attributes are used by VPD policy_type CONTEXT_SENSITIVE or SHARED_CONTEXT_SENSITIVE. A value must be set for every VPD policy of these types.

Action: Update the application procedure or function to set all of the application context attributes needed by the VPD policy and retry the operation. *Params: 1) namespace: The name of the application context namespace. 2) attribute: The name of the application context attribute. 3) policy_name: The name of the row-level security policy.

OCI-42802: Could not read attribute associations from an existing shared context-sensitive policy which is using the specified policy function.

Cause: An existing shared context-sensitive policy using the specified policy function was dropped from another session.

Action: Reissue the command. If the error persists, contact the system administrator.

OCI-42803: cannot use bind variable in VERSIONS clause when the object has a VPD row-level security policy

Cause: The object being accessed had an Oracle Virtual Private Database (VPD) row-level security policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without using a bind variable in the VERSIONS clause.

OCI-42804: The operation can disclose rows protected by row-level security policy.

Cause: The object being accessed had a row-level security policy defined on it and the statement that was executed could disclose rows protected by the row-level security policy.

Action: Rewrite the statement to conform with the security policy to not disclose the rows protected by the policy.

OCI-42805: The number of VPD policies on an object exceed the maximum number that is allowed.

Cause: A maximum of 255 Virtual Private Database (VPD) policies that can be enforced on an object was exceeded.

Action: Drop an existing policy before creating a new policy.

OCI-42806: Cannot delete Virtual Private Database (VPD) policy group "string" as the group contains one or more policies.

Cause: An attempt was made to delete a VPD policy group which contained one or more policies. A policy group can be dropped only if there is no policy in the group.

Action: Query DBA_POLICIES to check if there is a policy associated with the policy group which is getting deleted. If there is any such policy, drop the policy with DBMS_RLS.DROP_GROUPED_POLICY procedure. Retry DBMS_RLS.DELETE_POLICY_GROUP after dropping all policies associated with the policy group. *Params: 1) Policy Group: The name of the policy group.

OCI-42807: A Virtual Private Database (VPD) policy cannot be applied to an object owned by SYS.

Cause: An attempt was made to apply a VPD policy to an object owned by SYS. VPD policies cannot be applied to SYS-owned objects.

Action: Do not apply a VPD policy to any SYS-owned object. You can apply a VPD policy to an object that is not owned by SYS.

OCI-42900: cannot create an OLS policy in an application root

Cause: An Oracle Label Security (OLS) policy creation was attempted in an application root.

Action: Switch to an application pluggable database to create an Oracle Label Security (OLS) policy.

OCI-42901: cannot apply OLS policy on common objects

Cause: An attempt was made to apply an Oracle Label Security (OLS) policy on a multitenant container database (CDB) common or an application common object.

Action: Apply OLS policy on local objects only.

OCI-42902: cannot use virtual column as OLS policy column

Cause: An attempt was made to use the virtual column as an Oracle Label Security (OLS) policy column.

Action: Create OLS policy with a different label column name.

OCI-42903: An OLS privilege for a policy cannot be set for a common user.

Cause: An attempt was made to set an Oracle Label Security (OLS) privilege for a policy to a common user.

Action: The Oracle Database documentation for SA_USER_ADMIN.SET_USER_PRIVS PL/SQL package lists the user types that can be set. Set the OLS policy privilege to a user that is of the appropriate type.

OCI-42904: Full table access is restricted by Oracle Label Security.

Cause: The user did not have permission to bypass reads for Oracle Label Security policies.

Action: Grant the appropriate privileges or change the policy configuration.

OCI-42905: Cannot apply an OLS policy on an external table.

Cause: An attempt was made to apply an Oracle Label Security (OLS) policy on an external table.

Action: Review your security requirements. If the data in the external table needs to be protected with an OLS policy, design a way to move the data from the external table to a regular database table and apply the OLS policy on the new table.

OCI-42906: An undefined OLS data label cannot be used as a row label.

Cause: An attempt was made to assign an undefined Oracle Label Security (OLS) data label as a row label in an OLS-protected table when OLS was integrated with Oracle Internet Directory (OID).

Action: Ensure that the row label is a defined data label. Review the OLS documentation topic on creating data labels and constraints when inserting data when OLS is configured with OID.

OCI-42907: Cannot apply OLS policy with a labeling function when Oracle Database Vault operations control is enabled.

Cause: An attempt was made to apply an Oracle Label Security (OLS) policy with a labeling function when Oracle Database Vault operations control was enabled. This error also occurs when an OLS policy with a function is already applied and then the Oracle Database Vault operations control is enabled.

Action: If Oracle Database Vault operations control is necessary, then an OLS policy cannot be applied with a labeling function.

OCI-42908: cannot be executed by an Oracle Real Application Security user

Cause: An attempt was made to execute Oracle Label Security (OLS) API by an Oracle Real Application Security (RAS) user.

Action: Execute as a database user with necessary privileges and roles.

OCI-42909: cannot be executed outside datapump export

Cause: An attempt was made to execute the function outside datapump export.

Action: Do not execute outside datapump export.

OCI-42910: cannot be processed because user session label is modified

Cause: An attempt was made to alter the user session after the session label changed.

Action: Do not process after modifying the user session label.

OCI-42911: cannot administer Oracle Label Security policy

Cause: An attempt was made to administer Oracle Label Security (OLS) policy by an admin user within cloud database.

Action: Administer OLS policy using a designated OLS administrative user.

OCI-42912: Oracle Label Security cannot be configured.

Cause: Configuration of Oracle Label Security (OLS) failed because the LBAC_TRIGGER schema already exists.

Action: Drop LBAC_TRIGGER schema and retry configuring Oracle Label Security (OLS).

OCI-42913: invalid *string* name *string* while applying or enabling OLS policy

Cause: Applying or enabling Oracle Label Security (OLS) policy on the table or schema failed because of an invalid table, schema or policy name.

Action: Correct the table, schema or policy name. *Params: 1) object_type: One out of table, schema or policy. 2) object_name: Table, schema or policy name.

OCI-42914: An existing data label cannot be changed to a user-only label.

Cause: An existing data label that is available for data and users can not be altered to only be a user label.

Action: Review existing labels in DBA_SA_LABELS. The LABEL_TYPE column defines if the label is used as a data label. Determine your requirements and: - Run the same operation but use NULL for the new_data_label parameter. - Create a new label that will only be a user label.

OCI-42915: A circular reference was detected while trying to alter the existing OLS group *string* with the parent *string*.

Cause: The new Oracle Label Security (OLS) parent group in the operation is already a descendent for the current OLS group. OLS groups can only be configured in a hierarchy and not in a circular reference.

Action: Do not specify one of the descendent groups as the new parent in the OLS SA_COMPONENTS.ALTER_GROUP_PARENT procedure to prevent forming a circular reference. *Params: 1) group_name: The OLS group being altered. 2) parent_group_name: Parent group specified while trying to alter group.

OCI-42916: The OLS policy *string* is already applied to schema *string*.

Cause: The Oracle Label Security (OLS) policy is already protected by this policy.

Action: No action needed if the intent is to apply the same OLS policy to the schema. If you intended to change options, predicate, or the label function, then either run the SA_POLICY_ADMIN.ALTER_SCHEMA statement or remove and apply the policy after making the required changes. *Params: 1) policy_name: Name of the Oracle Label Security policy. 2) schema_name: Name of the schema.

OCI-42917: The user who created the current session does not have any labels assigned for the OLS policy.

Cause: No labels exist for the user who created the current session for the Oracle Label Security (OLS) policy specified in the SA_SESSION.SET_LABELS procedure.

Action: Ask your DBA to assign you OLS labels. Restart the session and then execute SA_SESSION.SET LABELS procedure.

OCI-42918: OLS level already exists in policy *string*.

Cause: This is an attempt to create an Oracle Label Security (OLS) level that already exists for the specified policy.

Action: Query the view ALL_SA_LEVELS to find out all the levels that already exist for any policy. Create a new level if required for that policy with a different level number, short name and long name than the already existing levels. *Params: 1) policy_name: Name of the OLS policy.

OCI-42919: OLS *string string* is already in use by one or more labels.

Cause: This is an attempt to alter an Oracle Label Security (OLS) level, compartment or group that is already in use by one or more labels.

Action: Review your requirements to see if a new OLS level, compartment or group needs to be created. *Params: 1) component_type: One out of level, group or compartment. 2) componet_num: Level, group or compartment number.

OCI-42920: OLS *string* is in use by existing policy *string* labels.

Cause: This is an attempt to drop an Oracle Label Security (OLS) level, compartment or group that is still in use by one or more labels.

Action: Check all the labels for the level, compartment or group that you are trying to drop and verify if they are needed anymore. If none of the labels are needed, drop the labels and then drop the level, compartment or group. *Params: 1) component_type: One out of level, group or compartment. 2) policy_name: Name of the OLS policy.

OCI-42921: Creating new audit policies for OLS can only be done using Unified Auditing.

Cause: This is an attempt to create a new Oracle Label Security (OLS) audit configuration using a desupported API.

Action: Use Unified Auditing to create audit policies and configurations for OLS auditing. Refer to Oracle Database documentation for more information on Unified Auditing for OLS and for more information about Unified Auditing in general.

OCI-43750 to OCI-45930

OCI-43750: invalid or illegal combination of COMMIT WRITE options

Cause: invalid or illegal combination of options provided to COMMIT WRITE SQL statement.

Action: Provide a valid combination of options for COMMIT WRITE statement

OCI-43751: invalid value for parameter *string*

Cause: invalid or illegal value provided for parameter.

Action: Provide a valid value for the parameter

OCI-43807: indexes on ORA_ROWSCN not allowed

Cause: An attempt was made to create an index that refers to the ORA_ROWSCN pseudo-column, either directly or in an expression.

Action: Do not use ORA_ROWSCN to define an index on a table.

OCI-43814: DROP INDEX is invalid for hash cluster index

Cause: An attempt was made to drop an index defined on a hash cluster. Hash cluster indexes cannot be dropped.

Action: Do not attempt to drop an index defined on a hash cluster.

OCI-43817: indexes on ROWID not allowed

Cause: An attempt was made to create an index that refers to the ROWID pseudo-column, either directly or in an expression.

Action: Do not use ROWID to define an index on a table.

OCI-43850: Advanced Compression Option parameter is required to be enabled

Cause: An Advanced Compression Option (ACO) feature was specified without enabling the ACO parameter.

Action: Set or Update the ACO parameter (enable_option_advanced_compression) to TRUE.

OCI-43852: SECUREFILE and BASICFILE cannot be used together

Cause: SECUREFILE and BASICFILE were both specified.

Action: Modify the SQL statement to specify only one of SECUREFILE or BASICFILE.

OCI-43856: Unsupported LOB type for SECUREFILE LOB operation

Cause: A LOB that is not a SECUREFILE was used in a SQL statement or in a call where a SECUREFILE LOB was expected.

Action: Convert the LOB to a SECUREFILE LOB or do not use this keyword or call.

OCI-43857: Parameter Error

Cause: Attempt to modify a LOB with an invalid parameter.

Action: Fix paramters and retry the operation.

OCI-43859: CONTENTTYPE string too long

Cause: Length of CONTENTTYPE string exceeded the defined maximum.

Action: Modify length of CONTENTTYPE string and retry operation.

OCI-43862: CONTENTTYPE buffer length incorrect

Cause: Length of CONTENTTYPE buffer less than defined constant.

Action: Modify length of CONTENTTYPE buffer and retry operation.

OCI-43878: LOB feature unsupported below compatible setting 11.2.0

Cause: An 11.2 LOB feature was specified when the database was operating at a compatible setting lower than "11.2.0".

Action: Upgrade the database compatible setting to "11.2.0" or higher to enable the desired new features.

OCI-43883: Invalid SECUREFILE LOB DELTA UPDATE operation attempted.

Cause: An invalid DELTA UPDATE operation was attempted on a LOB. The operation included a DELTA UPDATE operation beyond the LOB length. Change the operation to use a destination offset inside the move interval.

Action: Specify a valid offset and other parameters and retry.

OCI-43885: SECUREFILE LOB encryption algorithm not supported

Cause: The specified encryption algorithm for LOB data was not supported.

Action: Use one of supported algorithms: AES128, AES192 or AES256.

OCI-43886: 3DES168 algorithm not available in FIPS mode

Cause: 3DES algorithm was not FIPS compliant.

Action: Disable FIPS mode and re encrypt LOB data using one of the followinf FIPS compliant algorithms: AES128, AES192 or AES256. You can re-encrypt LOB column with a different algorithm using ALTER TABLE ... MOVE LOB(LOB-COLUMN) STORE AS SECUREFILE(ENCRYPT USING 'ALGORITHM')

OCI-43907: Argument in DEFAULT ... ON CONVERSION ERROR clause must be a literal or bind variable.

Cause: An attempt was made to provide an argument to the DEFAULT ... ON CONVERSION ERROR clause that was not a literal or bind variable.

Action: Provide an argument that is either a literal or bind variable.

OCI-43908: invalid output data type

Cause: An invalid output data type was provided. The valid output data types for VALIDATE_CONVERSION operator and the operators supporting DEFAULT ON CONVERSION ERROR syntax are: NUMBER, BINARY_FLOAT, BINARY_DOUBLE, DATE, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL DAY TO SECOND, INTERVAL YEAR TO MONTH.

Action: Provide a valid output data type.

OCI-43909: invalid input data type

Cause: An invalid input data type was provided for Validate_Conversion operator. For the NUMBER, BINARY_FLOAT and BINARY_DOUBLE output data types, the input data types can be: - NUMBER - BINARY_FLOAT - BINARY_DOUBLE - CHAR - VARCHAR2 - NCHAR - NVARCHAR2 For the DATE, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL DAY TO SECOND, and INTERVAL YEAR TO MONTH output data types, the input data types can be: - CHAR - VARCHAR2 - NCHAR - NVARCHAR2

Action: Provide a valid input data type.

OCI-43910: precision is not supported for output data type in VALIDATE_CONVERSION operator

Cause: Precision was provided for the following data types: NUMBER, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL YEAR TO MONTH, INTERVAL DAY TO SECOND

Action: Do not specify precision for following data types: NUMBER, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL YEAR TO MONTH, INTERVAL DAY TO SECOND

OCI-43911: cannot specify collation for non-character columns

Cause: COLLATE was specified for a non-character column.

Action: Remove the COLLATE keyword.

OCI-43912: invalid collation specified for a CLOB or NCLOB value

Cause: A character LOB column or expression was declared as having a collation other than USING_NLS_COMP or the determined collation for a collation-sensitive operator or function operating on character LOB values was not USING_NLS_COMP. Character LOB values support only the USING_NLS_COMP collation.

Action: Correct the collation declarations to make sure the USING_NLS_COMP collation is applied to the character LOB values.

OCI-43913: unable to derive collation for the result: conflicting collations

Cause: Arguments to the operator or function (operation) that have the lowest coercibility level and are relevant for derivation of the collation for the result of this operation had conflicting collations.

Action: Check the collation derivation rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to remove the existing conflict.

OCI-43914: unable to determine collation: arguments have undefined collation

Cause: Arguments to the operator, function, or condition (operation) that are relevant for determining the collation to be used by this operation had undefined collations.

Action: Check the collation determination rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to assign a collation explicitly.

OCI-43915: unable to determine collation: arguments have conflicting collations

Cause: Arguments to the operator, function, or condition (operation) that have the lowest coercibility level and are relevant for determining the collation to be used by this operation had different collations.

Action: Check the collation determination rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to remove the existing conflict.

OCI-43916: unable to determine collation for the column

Cause: An attempt was made to create a virtual character column in a table, a character column in a table based on a query (CREATE TABLE AS SELECT), or a character column in the key of a functional index. The expression on which the column definition was based did not have a derived collation to be used for the column, because of a collation conflict in one of its operators. In case of a virtual column, no collation was provided for the column through the data type declaration, either.

Action: Check the collation derivation rules in the Oracle Database documentation and apply the COLLATE operator in the defining expression as appropriate to resolve collation conflicts. If defining a virtual column, alternatively, specify a data type for the column to let the column inherit the collation from the table default, or specify the collation explicitly with the data type.

OCI-43917: invalid collation for a primary key column of the index-organized table

Cause: An attempt was made to specify an invalid collation for the primary key column of an index-organized table.

Action: Use one of the supported collations for the primary key column of the index-organized table: BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, or USING_NLS_SORT_VAR1_CS.

OCI-43918: This argument must be a literal

Cause: An attempt was made to provide an argument that was not a literal.

Action: Provide a literal argument.

OCI-43919: Nested aggregates are not supported for pivot operation.

Cause: Nested aggregates were specified in the pivot operator. This operation is not supported.

Action: Remove the nested aggregates from the pivot operation.

OCI-43920: DEFAULT ON NULL is not supported for object type or REF columns

Cause: DEFAULT ON NULL was specified on a object type or REF column. These types are not supported.

Action: Remove the ON NULL keyword for this column.

OCI-43921: invalid collation for cluster column

Cause: An attempt was made to create an index cluster in which one of the key columns had an unsupported declared collation or an attempt was made to create a hash cluster in which a key column with SORT clause had an unsupported declared collation. Only the collations BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS are supported for character columns in index clusters and for sorted character columns of hash clusters.

Action: Use one of the supported collations for the offending column.

OCI-43922: Collation of the column cannot be modified.

Cause: An attempt was made to modify the declared collation of a column that either: o belonged to a foreign key o belonged to a primary or unique key and that key was

referenced by some foreign key o corresponded to a cluster key column o was referenced by a defining expression of a virtual column o was referenced by a defining expression of a functional index o corresponded to an attribute of a user-defined type or an object table o belonged to the container table of a materialized view o was referenced by a join condition of a bitmap join index The declared collation of such columns cannot be modified.

Action: Use one of the following as appropriate: o Drop the offending constraint, virtual column, or index, modify the collation of the column, and re-create the dropped element. o If possible, modify the type attribute instead of the column. o If possible, modify the derived collation of the corresponding materialized view column (for example, with the COLLATE operator) and re-create the materialized view to re-create its container table with the new column collation. o Save the tables of a cluster, re-create the cluster using the new collation, and restore the saved tables into the cluster.

OCI-43923: The column cannot be modified to the specified collation.

Cause: An attempt was made to modify the declared collation of a column that belonged to a primary or unique key, or a standard index key, or a partitioning key, and the new collation was from a different group than the old collation, where the groups are defined as follows: Group 1: BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS Group 2: BINARY_CI, USING_NLS_SORT_CI, and USING_NLS_SORT_VAR1_CI Group 3: BINARY_AI, USING_NLS_SORT_AI, and USING_NLS_SORT_VAR1_AI

Action: When modifying the column collation, specify a new collation that is in the same group as the current column collation. If there is no current collation, because you changed the column data type at the same time and the old data type is not a character data type, then select a collation from Group 1 as the new collation.

OCI-43924: unable to modify collation of an Oracle-maintained database object

Cause: An attempt was made to modify the collation of an Oracle-maintained database object. Modifications of Oracle-maintained database objects are generally not permitted.

Action: Do not modify Oracle-maintained database objects unless explicitly instructed to do so by Oracle Support Services.

OCI-43925: A character column in the index definition has an unsupported collation.

Cause: An attempt was made to create a bitmap join index or a domain index with a key or join condition that contained a character column with a declared collation other than BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, or USING_NLS_SORT_VAR1_CS. Only these listed collations are supported by this type of the index.

Action: Use one of the supported collations for the key column or join condition.

OCI-43926: Cannot use the specified collation with some of the dependent objects.

Cause: An attempt was made to change the collation of a character column to a collation that is not supported in a key of a bitmap join index, a domain index key to which the column belongs. Only the collations BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS are supported in these keys.

Action: Use one of the supported collations for the key column.

OCI-43927: Cannot specify default collation for object tables.

Cause: An attempt was made to explicitly state the default collation setting for an object table. However, default collations do not apply to object tables because all columns of an object table inherit collations from the attributes of the base type of the table.

Action: The operation is not allowed.

OCI-43928: Conversion error handling is not allowed here.

Cause: An attempt was made to use the default value, in case of a conversion failure, by specifying the *DEFAULT argument* ON CONVERSION ERROR statement to a conversion operator. This feature is not allowed for current operation.

Action: Remove *DEFAULT argument* ON CONVERSION ERROR from the conversion operator and try again.

OCI-43929: Collation cannot be specified if parameter MAX_STRING_SIZE=STANDARD is set.

Cause: The COLLATE or DEFAULT COLLATION clause was specified in a DDL statement or the DEFAULT_COLLATION parameter was specified in an ALTER SESSION statement, but the value of the initialization parameter MAX_STRING_SIZE was STANDARD. The data-bound collation feature is disabled if the value of this parameter is STANDARD.

Action: Set MAX_STRING_SIZE to EXTENDED by following the procedure documented in the Oracle Database Reference.

OCI-43930: A query issued from a pre-12.2 database references a column with an unsupported collation.

Cause: A table or view column with a declared collation other than USING_NLS_COMP was referenced in a distributed query that originated in an Oracle Database with the release number lower than 12.2. Such references are not allowed.

Action: In the remote database that reported this error, create a view corresponding to the subquery that was executed in that database and make sure that all columns of this view have the collation USING_NLS_COMP. Use the COLLATE operator if necessary. In the original query, replace the subquery with a reference to the view.

OCI-43931: DEFAULT COLLATION may not be combined with other operations

Cause: An ALTER TABLE statement attempted to combine DEFAULT COLLATION with some other operation, which is not allowed.

Action: Ensure that DEFAULT COLLATION is the only operation specified in an ALTER TABLE statement.

OCI-43932: DROP IDENTITY cannot be combined with other operations

Cause: An ALTER TABLE statement attempted to combine DROP IDENTITY with some other operation, which is not allowed.

Action: Ensure that DROP IDENTITY is the only operation specified in an ALTER TABLE statement.

OCI-43933: Collation must be specified.

Cause: Collation was not specified in a context where it was required.

Action: Specify the required collation.

OCI-44001: invalid schema

Cause: The schema for the given schema name did not exist.

Action: Provide a valid schema name.

OCI-44002: invalid object name

Cause: The input parameter string was not a qualified SQL identifier of an existing SQL object.

Action: Make sure the string matches an existing SQL object that is accessible by the current schema.

OCI-44003: invalid SQL name

Cause: The input parameter string was not a valid SQL name.

Action: Check the DBMS_ASSERT specification to verify that the parameter string is a valid SQL name.

OCI-44004: invalid qualified SQL name

Cause: The input parameter string was not a valid qualified SQL name.

Action: Check the DBMS_ASSERT specification to verify that the parameter string is a valid qualified SQL name.

OCI-44021: DBMS_SESSION.SET_CURRENT_SCHEMA_DEFERRED failed due to change of PDB.

Cause: Set schema failed because an attempt was made to change the pluggable database (PDB) before the set schema took effect.

Action: Do not change the PDB before the set schema takes effect.

OCI-44101: invalid priority

Cause: The priority level given by the user was invalid.

Action: See UTL_MAIL for valid priority values and change the priority parameter accordingly.

OCI-44102: unknown or unsupported algorithm

Cause: An unknown or unsupported authentication or compression algorithm was encountered.

Action: Use a supported authentication or compression algorithm.

OCI-44103: Materialized view has a circular dependency and cannot be validated.

Cause: A materialized view with a circular dependency was encountered by UTL_RECOMP and could not be validated.

Action: Drop and re-create the materialized view to remove the circular dependency.

OCI-44203: timeout waiting for lock on cursor

Cause: A timeout occurred while waiting for a cursor to be compiled. This is usually caused by the SQL parse requiring access to system resources which are locked by concurrently executing sessions.

Action: Investigate possible causes of resource contention. If necessary, contact support for additional information on how to diagnose this problem.

OCI-44204: library cache object *string.string* found in an in-flux state

Cause: The pseudo-cursor depends on a table which was found to be obsolete due to metadata invalidation of the library cache object.

Action: Contact Oracle Support Services for additional information.

OCI-44206: cursor exceeded parse time limit

Cause: The cursor consumed too much elapsed time during parse and was aborted to avoid blocking other sessions.

Action: Tune the SQL statement or increase the parse time limit.

OCI-44301: NULL service name is not permitted

Cause: The service name argument was found to be NULL.

Action: Provide a non-NULL service name.

OCI-44302: NULL network name is not permitted.

Cause: The network name argument was NULL.

Action: Provide a non-NULL network name.

OCI-44303: service name exists

Cause: This service name was already in existence.

Action: Provide a new unique service name.

OCI-44304: service *string* does not exist

Cause: The specified service was not in existence.

Action: Provide a valid service name.

OCI-44305: service *string* is running

Cause: The specified service was running.

Action: This message is informational only.

OCI-44306: service name exceeds maximum length of *string*

Cause: The service name was too long.

Action: Use a shorter service name.

OCI-44307: network name too long

Cause: The network name, excluding the domain, was too long.

Action: Use a shorter network name.

OCI-44310: maximum number of services exceeded

Cause: The maximum number of services has been reached.

Action: None

OCI-44311: service *string* not running

Cause: The specified service was not running.

Action: This message is informational only.

OCI-44312: database closed

Cause: The database was closed.

Action: Open the database and retry the operation.

OCI-44313: instance name invalid

Cause: The instance name argument was not valid.

Action: Provide a valid instance name.

OCI-44314: network name already exists

Cause: The network name was already in existence.

Action: Use an alternate network name.

OCI-44315: all service attributes null

Cause: All attributes specified were null.

Action: At least one attribute must be non-null.

OCI-44316: invalid argument

Cause: Invalid argument supplied.

Action: Supply a valid argument.

OCI-44317: database open read-only

Cause: The database is open read-only.

Action: Close the database and reopen it read/write before trying again.

OCI-44318: exceeded maximum SERVICE_NAMES length

Cause: The total length of all running service network names exceeded the maximum allowable length.

Action: Stop another service to start this one.

OCI-44319: Cannot delete AQ service

Cause: Specified AQ service belonged to a queue.

Action: Delete the queue.

OCI-44320: cannot modify global service

Cause: Could not modify the global service because of insufficient privileges or you were trying to modify the global service attribute.

Action: Use global service management to modify a global service.

OCI-44321: cannot read command line from trace file *string*

Cause: The trace file could not be read.

Action: Ensure that the trace file exists and contains valid raw trace data.

OCI-44322: invalid file name '*string*'

Cause: A NULL or zero length file name was specified.

Action: Correct the file name to be a nonzero length string.

OCI-44323: negative count *string* to *string* option

Cause: The option was specified with a negative count value. Skip, collect, depth_limit, and time_limit are options to the analyzer that need to be non-negative in value because negative values are undefined. For example, skip count 10 tells the analyzer to skip the first 10 calls to a specified function.

Action: Specify a non-negative count number for the option. *Params: 1) count_number: count number of the option. 2) option: option specified for the plshprof tool or dbms_hprof analyze function.

OCI-44324: no count argument for *string* option

Cause: The specified option was missing a count number.

Action: Specify a count number for the option. *Params: 1) the name of the option missing a count value.

OCI-44325: no entry points found in trace file *string*

Cause: The specified trace file symbol was not found.

Action: None

OCI-44326: no symbol argument for *string* option

Cause: The symbol argument for the -trace or -untrace option was missing.

Action: Specify a symbol argument for the -trace or -untrace option.

OCI-44327: no file name argument to *string* option

Cause: The specified option was missing a file name argument.

Action: Specify a file name argument for the option. *Params: 1) option_name: The name of the option that was missing a file name argument.

OCI-44328: unsupported version number: *string*

Cause: The version number of the trace file indicates that the format is not supported by the DBMS_HPROF analyzer.

Action: Ensure that DBMS_HPROF version generating the trace and the DBMS_HPROF analyzing the trace are the same version. *Params: 1) trace_file_version: The version number of the trace file.

OCI-44329: length of full path name too long

Cause: The full path name specified by the location and the file name parameters in a call to DBMS_HPROF.START_PROFILING or DBMS_HPROF.ANALYZE was too long.

Action: Use a shorter directory path, file name, or both.

OCI-44403: Change user id operation failed due to invalid flag parameter.

Cause: Mutually exclusive values were specified for the flag parameter.

Action: Internal error. Contact Oracle Support Services.

OCI-44404: Oracle client version 10.2 requires Oracle server version 10.2 or higher.

Cause: The user name could not be changed for an Oracle client with version 10.2 or higher when connected to an Oracle server version lower than 10.2.

Action: Use an Oracle server with the same version as the client, and retry the operation.

OCI-44411: START_DATE cannot be later than END_DATE for an ACE.

Cause: The END_DATE was earlier than the START_DATE in one of the access control entries (ACEs) in this access control list (ACL).

Action: Set the END_DATE to be later than or the same as the START_DATE in each of the ACEs in this ACL.

OCI-44412: Cyclic ACL inheritance is not allowed.

Cause: A cycle was formed by the access control list (ACL) inheritance.

Action: Check the ACL inheritance and break the cycle by removing some of the ACL inheritance.

OCI-44413: Security class of parent ACL must be an ancestor of security class of child ACL.

Cause: The security class of the parent access control list (ACL) was not an ancestor of the security class of the child ACL.

Action: Change the security class of the parent ACL to be an ancestor of the security class of the child ACL.

OCI-44414: Invalid ACL: Parent ACL '*string*' does not exist

Cause: The path to the parent ACL was not a valid resource.

Action: Change the parent ACL of this resource or create the parent ACL at the specified location.

OCI-44415: undefined privileges

Cause: An undefined privilege was found in an access control entry (ACE) in the access control list (ACL).

Action: Ensure that the privilege is defined in the security class as specified in the ACL.

OCI-44416: invalid ACL: unresolved principal '*string*'

Cause: An unresolved principal was found in an access control entry (ACE) in the access control list (ACL).

Action: Ensure that the principal is a valid user or role in the system.

OCI-44417: invalid access control list ID (ACLID)

Cause: The specified ACLID did not point to a valid access control list (ACL) document.

Action: Ensure that the ACLID points to a valid ACL document.

OCI-44418: Invalid ACL: *string*

Cause: The specified ACL did not meet the validation requirements of the constraining ACL.

Action: Ensure ACL meets the validation requirements of the constraining ACL.

OCI-44421: Conflicts are encountered in the SCHEMA clause.

Cause: Conflicting settings were found in the SCHEMA clause. If no SCHEMA clause (explicit schema or ANYSCHEMA) was specified, then NONSCHEMA data cannot be disallowed. If DISALLOW ANY was specified, then ALLOW ANY cannot be specified and vice versa. If ALLOW NONSCHEMA was specified, then DISALLOW NONSCHEMA cannot be specified and vice versa.

Action: Identify and address the conflict to yield an expected SCHEMA clause.

OCI-44422: nonschema XML not allowed for this column

Cause: An attempt was made to insert nonschema-based XML documents in a binary XML column that did not allow nonschema data.

Action: Insert only schema-based documents or alter the column to allow nonschema data.

OCI-44423: XML schema registered for BINARY cannot be used for CLOB or object-relational clause.

Cause: An attempt was made to use an XML schema registered for BINARY usage as part of a CLOB or object-relational clause.

Action: Specify a schema registered for CLOB or object-relational use. Otherwise, specify BINARY XML storage for the column.

OCI-44424: BINARY XML storage requires an XML schema registered for BINARY usage.

Cause: An attempt was made to specify BINARY XML storage using an XML schema that was not registered for BINARY.

Action: Specify a schema registered for BINARY usage. Otherwise, specify CLOB or object-relational storage for the column.

OCI-44425: XML DB needs to be installed for creating an XMLType table or column

Cause: An attempt was made to create an XMLType table or column with out XML DB installed.

Action: Install XML DB.

OCI-44501: too much concurrency

Cause: There was too much concurrency and the lock list was temporarily inaccessible.

Action: This is a transient error. Try again.

OCI-44502: lock not found

Cause: The lock was not found.

Action: Check the arguments.

OCI-44503: The lock request was denied.

Cause: The lock request was denied.

Action: Check for conflicting locks and then retry the lock.

OCI-44504: Resource *string* already locked.

Cause: Operation failed because the resource was already locked.

Action: The resource is locked by someone else. Retry later.

OCI-44505: Byte range locks are not supported on resources.

Cause: Attempted a lock but it used an incorrect type.

Action: Retry the attempt to lock the resource.

OCI-44607: Archive logging must be enabled.

Cause: Archive logging was not enabled.

Action: Enable archive logging on the database.

OCI-44608: Supplemental logging settings cannot be modified in Oracle Database Free version.

Cause: An attempt was made to modify supplemental logging settings using Oracle Database Free version.

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) to enable supplemental logging and logical replication.

OCI-44609: CONTINUOUS_MINE is desupported for use with DBMS_LOGMNR.START_LOGMNR.

Cause: An attempt was made to use DBMS_LOGMNR.START_LOGMNR with CONTINUOUS_MINE as an option.

Action: Reissue START_LOGMNR without the CONTINUOUS_MINE option specified.

OCI-44610: DBMS_LOGSTDBY extended data type support is desupported.

Cause: An attempt was made to use one of the DBMS_LOGSTDBY extended data type support procedures.

Action: DBMS_LOGSTDBY extended data type support is desupported and cannot be used.

OCI-44611: Only one LogMiner adhoc session is allowed in Oracle Cloud Autonomous Database.

Cause: A second LogMiner adhoc session is being attempted in Oracle Cloud Autonomous Database.

Action: Try again after the existing LogMiner adhoc session has ended.

OCI-44612: could not attach to LogMiner session because session is disabled

Cause: The LogMiner session was disabled because the metadata information was not available in the metadata tables.

Action: Ensure that the upgrade or downgrade has migrated all of the metadata information to the SYS or SYSTEM schema LogMiner tables and try again.

OCI-44613: LogMiner flat file dictionary is de-supported.

Cause: An attempt was made to use LogMiner with a flat file dictionary, which is no longer supported. A flat file dictionary keyword 'dictionary_filename', 'dictionary_location' or STORE_IN_FLAT_FILE is passed to DBMS_LOGMNR_D.BUILD. The flat file dictionary keyword 'DictFileName' is used or neither DICT_FROM_REDO_LOGS nor DICT_FROM_ONLINE_CATALOG is specified for DBMS_LOGMNR.START_LOGMNR.

Action: LogMiner flat file dictionary is de-supported and cannot be used.

OCI-44700: Language '*string*' is not a valid language for translation.

Cause: An invalid language was specified for translation.

Action: Ensure that the language conforms to the Internet Engineering Task Force (IETF) Request for Comments (RFC) 3066 standard. *Params: 1) language_tag: The language tag that should conform to RFC 3066.

OCI-44701: language not found for translation

Cause: The document had multiple translations and one of them did not have the xml:lang attribute.

Action: All translations must have the xml:lang attribute when multiple translations are present.

OCI-44702: multiple translations found for language '*string*'

Cause: The document had multiple translations for a language instead of one.

Action: The document must contain only one translation per language for every translated element. *Params: 1) language: The language tag conforming to RFC 3066, RFC 4646, or RFC 4647.

OCI-44703: Multiple source language translations found

Cause: The document had multiple source language translations.

Action: The document must contain only one source language translation for every translated element.

OCI-44704: XPath '*string*' does not uniquely identify a translated element

Cause: The given XPath pointed to multiple translated elements.

Action: The given XPath must uniquely identify a translated element.

OCI-44705: Translated elements must have xdb:maxOccurs='1'.

Cause: The value of xdb:maxOccurs was not '1' for a translated element.

Action: Specify '1' as the value of xdb:maxOccurs for a translated element.

OCI-44706: Translated elements must have xsd:maxOccurs='unbounded'.

Cause: The value of xsd:maxOccurs was not 'unbounded' for a translated element.

Action: Use the xsd:maxOccurs value of 'unbounded' for a translated element.

OCI-44707: no source language translation found

Cause: The document had no source language translation for a translated element.

Action: The document must contain exactly one source language translation for each translated element.

OCI-44708: Translations are not supported for object relational storage.

Cause: The storage type of the schema was object relational.

Action: Register the XML schema with storage type as CLOB or binary XML.

OCI-44709: invalid schema definition for the translated element

Cause: The schema definition for a translated element was invalid.

Action: A translated element must be a complex type with simple content which is a restriction or extension of xs:string.

OCI-44710: Malformed XLIFF document: *string*

Cause: The XLIFF document was malformed.

Action: Fix the error and try again.

OCI-44711: XPath refers to an untranslatable element

Cause: XPath pointed to an untranslatable element.

Action: XPath for this operation must refer to a translatable element.

OCI-44712: invalid XPath in XLIFF document used for merging

Cause: The XPath within the trans-unit or ID attribute was invalid.

Action: XPath within trans-unit or ID attribute must point to a set of translations, not to a particular translation.

OCI-44713: XPath does not select all translations.

Cause: XML Path Language (XPath) did not select all translations for a particular element.

Action: XPath must point to a set of translations, not to a particular translation.

OCI-44717: First 7 positions (0-6) in the XDB repository is reserved for fusion security

Cause: An attempt was made to add or add a resource to the XDB repository at a position reserved for fusion security.

Action: Give a position other than 0 to 6.

OCI-44718: port conflict in XDB configuration file

Cause: A port number specified in the XDB configuration file conflicts with a port number used in the XDB configuration file of the same non-consolidated database or of the same pluggable database or of a different pluggable database of the same consolidated database or of the root container of the same consolidated database.

Action: Specify a different port number.

OCI-44731: Path *string* cannot be removed from the repository XML Index.

Cause: The repository XML Index indexed one of the parent folders of the resource identified by the specified path.

Action: Remove the parent folder from the repository XML Index.

OCI-44733: The repository XML Index cannot be dropped directly.

Cause: An attempt was made to drop the repository XML Index using the DROP INDEX statement.

Action: Use DBMS_XDB_ADMIN.DROPREPOSITORYXMLINDEX to drop a repository XML Index.

OCI-44734: Predicate Index on nodes with similar children not allowed

Cause: There was at least one node in the document with multiple similar children which was used in Predicate Indexing.

Action: Try removing Predicate Index on nodes with multiple similar children.

OCI-44735: Too many predicates

Cause: Number of predicates were more than limit.

Action: Try reducing number of predicates.

OCI-44736: Group name already exists.

Cause: The specified group name already existed.

Action: Specify a unique group name.

OCI-44737: Parameter *string* does not exist.

Cause: The parameter name that was specified did not exist.

Action: Ensure that the parameter name exists.

OCI-44738: Group *string* does not exist.

Cause: The group name specified did not exist.

Action: Provide a valid group name.

OCI-44739: cannot drop the last group in XML Index

Cause: An attempt was made to drop the last group in the XML Index. The last group could not be dropped as the index required at least one group.

Action: Use DROP INDEX statement to drop the index.

OCI-44740: Parameter *string* is already registered.

Cause: The parameter name specified was already registered.

Action: Either drop the existing parameter or use a different parameter name, and retry the operation.

OCI-44741: Cannot drop a group whose tables are shared by other group(s).

Cause: An attempt was made to drop a group whose tables were shared by other groups.

Action: First, drop groups with shared tables from this group.

OCI-44742: cannot alter columns of a table that is shared by other groups

Cause: An attempt was made to add, modify, or drop columns of a table that is shared by other groups.

Action: Drop the group or groups with the shared table or tables from this group, and then proceed with this operation.

OCI-44743: Cannot alter columns of a dependent shared table.

Cause: An attempt was made to add, modify, or drop columns from a dependent shared table. You can only add, modify, or drop columns from the original shared table.

Action: Use the group name of the original shared table while executing this operation.

OCI-44744: Cannot have more than one add, modify, or drop operation in an ALTER INDEX statement.

Cause: An attempt was made to have more than one add, modify, or drop column or group operation in the ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

OCI-44745: cannot add or drop columns to or from multiple tables

Cause: An attempt was made to add or drop columns to or from multiple tables in a single ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

OCI-44746: missing XMLTABLE in GROUP clause

Cause: An attempt was made to create or add a group without the XMLTABLE clause.

Action: Add the required XMLTABLE clause to the GROUP clause.

OCI-44747: An XMLIndex with a structured component cannot be specified with ASYNC.

Cause: An attempt was made to specify ASYNC parameter for an XMLIndex with a structured component.

Action: Use valid parameters for XMLIndex with a structured component.

OCI-44748: invalid name for GROUP specification

Cause: An attempt was made to create a GROUP with an invalid name.

Action: Use a valid name for the GROUP specification.

OCI-44749: missing PATH for the COLUMN definition

Cause: An attempt was made to create a COLUMN without specifying the PATH.

Action: Specify PATH in the COLUMN definition.

OCI-44750: Cannot create secondary index on unstructured component of XMLIndex.

Cause: An attempt was made to create a secondary index on the unstructured component of an XMLIndex when the XMLIndex did not have an unstructured component.

Action: Alter the XMLIndex to add an unstructured component.

OCI-44751: XML schema enumeration index is out of range.

Cause: The enumeration item corresponding to the enumeration index could not be found in the XML schema.

Action: If the XML schema has evolved, then try restarting the client that performed the evolution.

OCI-44752: New element '*string*' in complexType '*string*' has the same qualified name as another element.

Cause: The new element that was added to a complexType by in-place XML schema evolution had the same qualified name as another element in the same complexType or in one of its ancestor complexTypes.

Action: Try adding an element with a different qualified name. *Params: 1) element_name: The XML element name. 2) type_name: The complex type name.

OCI-44753: Changing to MINOCCURS attribute of element '*string*' is not allowed.

Cause: The value of attribute MINOCCURS on an element could not be increased by in-place XML schema evolution.

Action: Do not increase the value of attribute MINOCCURS. *Params: 1)
element_name: The XML element name.

OCI-44754: Changing to MAXOCCURS attribute of element '*string*' is not allowed.

Cause: The value of attribute MAXOCCURS on an element could not be decreased by in-place XML schema evolution.

Action: Do not decrease the value of attribute MAXOCCURS. *Params: 1)
element_name: The XML element name.

OCI-44755: Change to complexType property of element '*string*' is not allowed.

Cause: The complexType property on an element could not be changed by in-place XML schema evolution.

Action: Do not change the complexType property. *Params: 1) element_name: The XML element name.

OCI-44756: Change to SQLType attribute of element '*string*' is illegal

Cause: The SQLType property on an element in a binary XML schema could not be changed by in-place XML schema evolution.

Action: Do not change the SQLType property.

OCI-44771: Invalid name for a container database.

Cause: The service operation failed.

Action: Check the name of the container database.

OCI-44772: Cluster Ready Services (CRS) operation failed

Cause: The CRS operation failed.

Action: Check the trace file and the CRS daemon log file for details.

OCI-44773: Cannot perform requested service operation.

Cause: The consolidated database was not open. The operation was not performed.

Action: Open the consolidated database.

OCI-44774: Pluggable database attribute cannot be changed.

Cause: The attempted operation was invalid for a consolidated database.

Action: PDB attribute of a service cannot be changed.

OCI-44775: Pluggable database service cannot be created.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

OCI-44776: Pluggable database service cannot be deleted.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

OCI-44777: Pluggable database service cannot be started.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

OCI-44778: Invalid value for service attribute retention_time.

Cause: The attempted operation failed.

Action: The value for the service attribute 'retention_time' must be greater than the value of the service attribute 'replay_initiation_timeout'.

OCI-44779: Invalid value for service attribute replay_initiation_timeout.

Cause: The attempted operation failed.

Action: The value for the service attribute 'replay_initiation_timeout' must be greater than the value of the service attribute 'failover_delay'.

OCI-44780: Invalid value for service attribute commit_outcome.

Cause: The attempted operation failed.

Action: The value for the service attribute 'commit_outcome' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

OCI-44781: Invalid value for service attribute aq_ha_notifications.

Cause: The attempted operation failed.

Action: The value for the service attribute 'aq_ha_notifications' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

OCI-44782: Cluster Ready Services (CRS) service operation failed - reason: string.

Cause: The attempted CRS service operation failed.

Action: Check the trace file for details.

OCI-44783: The maximum number of runtime load balancing services exceeded.

Cause: The number of runtime load balancing services reached the maximum allowed.

Action: None

OCI-44784: Service cannot be deleted.

Cause: The attempted service operation failed.

Action: Internal services and the database service cannot be deleted.

OCI-44785: Service attribute commit_outcome cannot be specified for the database or Pluggable Database service.

Cause: The attempted service operation failed.

Action: None

OCI-44786: Service operation cannot be completed.

Cause: The service was not imported successfully while plugging in the pluggable database or the service is defined in a different pluggable database.

Action: Connect to the correct pluggable database and re-execute the service operation.

OCI-44787: Service cannot be switched into.

Cause: The service did not exist in the new pluggable database or the service was not started in the pluggable database.

Action: Use a valid service name for the pluggable database or start the service in the pluggable database first.

OCI-44789: Service cannot be switched into.

Cause: One of the verification checks failed.

Action: Check the previous error message.

OCI-44790: exceeded maximum GUID length

Cause: The total length of a globally unique identifier (GUID) exceeded 16 characters.

Action: Specify a GUID with the correct length.

OCI-44791: Drain timeout or stop option cannot be specified for a different database instance.

Cause: Drain timeout and stop option could not be used for remote operations.

Action: Connect to the correct database instance to use drain timeout or stop option.

OCI-44792: cannot initialize Oracle Call Interface (OCI) environment

Cause: There was not enough memory available.

Action: Configure the Oracle database with more memory.

OCI-44793: cannot stop internal services

Cause: The user tried to stop an internal service.

Action: None

OCI-44794: cannot create the specified service

Cause: Oracle Clusterware was configured but not running.

Action: Start Oracle Clusterware and try to create the service.

OCI-44795: service *string* is not a child service or *string* is not its parent service

Cause: The specified service was not a child service or it was not a child service of the specified parent service.

Action: Provide a valid child service.

OCI-44796: invalid goal attribute value for parent service *string*

Cause: An attempt was made to specify a goal attribute of SERVICE_TIME or THROUGHPUT for a parent service.

Action: If a child service is being created, modify the parent service goal attribute and re-create the child service. If a parent service is being modified, only NONE or SMART_CONN are valid goal attribute values.

OCI-44797: invalid operation attempted on child service *string*

Cause: An operation such as start, stop or modify was attempted on a child service.

Action: Some operations cannot be performed directly on a child service. Perform the operation on the parent service instead. *Params: 1) name: The child service name.

OCI-44798: maximum number of child services exceeded for parent service *string*

Cause: The maximum number of child services for a parent service was exceeded.

Action: None

OCI-44799: invalid attribute name "string" or value "string"

Cause: The service attribute name was invalid or its value was not valid. The attribute value could be a valid option but it was inconsistent with another attribute value.

Action: If the attribute name is invalid, please provide a valid attribute name. If the attribute value is not valid, provide the correct value for the attribute.

OCI-44800: Number of classifiers cannot be NULL

Cause: The num_classifiers argument was found to be NULL.

Action: Provide a non-NULL num_classifiers.

OCI-44801: NULL classifier list not permitted

Cause: The wlm_classifiers argument was found to be NULL.

Action: Provide a non-NULL wlm_classifiers.

OCI-44802: No new plan (classifier list) has been submitted

Cause: No new plan was created before submission.

Action: Create a new plan, followed by adding classifier & PC lists.

OCI-44803: Plan is in transition (about to be activated)

Cause: New plan was attempted to be created before activating the current plan.

Action: Completely submit the current plan and activate it.

OCI-44804: Plan is not created yet

Cause: A new plan was not created before submitting the Classifier and Performance Class lists.

Action: Call dbms_wlm.create_plan first to create the plan.

OCI-44805: No classifier is present

Cause: The classifier list contained no classifiers.

Action: Check the syntax of the classifier list.

OCI-44806: Extra classifiers are present in list

Cause: More classifiers were present in the list than specified.

Action: Only include the number of classifiers less than or equal to num_classifiers mentioned in dbms_wlm.create_plan.

OCI-44807: Performance Class name is too large

Cause: The Performance Class name was larger than 32 bytes.

Action: Rename the Performance Class to fit within 32 bytes.

OCI-44808: Work Request Class name is too large

Cause: The Work Request Class name was larger than 32 bytes.

Action: Rename the Work Request Class to fit within 32 bytes.

OCI-44809: No expression is present for classifier

Cause: This classifiers contained no expression. It should contain one more more expressions.

Action: Check syntax in the classifier list.

OCI-44810: No parameter is present for expression

Cause: This expression contained no paramaters or attribute values. It should contain one or more attribute values. Attributes can be SERVICE_NAME, MODULE, ACTION, PROGRAM or USER.

Action: Check syntax in the classifier list.

OCI-44811: Service name is too large

Cause: The service name mentioned in the parameter list was too large.

Action: Check the service name.

OCI-44812: Module name is too large

Cause: The module name mentioned in the parameter list was too large.

Action: Check the module name.

OCI-44813: Action name is too large

Cause: The action name mentioned in the parameter list was too large.

Action: Check the action name.

OCI-44814: Program name is too large

Cause: The program name mentioned in the parameter list was too large.

Action: Check the program name.

OCI-44815: User name is too large

Cause: The user name mentioned in the parameter list was too large.

Action: Check the user name.

OCI-44816: Number of Performance Classes is less than specified

Cause: The number of Performance Classes submitted were less than what was specified.

Action: Submit the full list of Performance Classes.

OCI-44817: Classifier list is too large

Cause: The length of the classifier list was greater than 4000 bytes.

Action: Break the list into two lists before submission.

OCI-44818: General failure

Cause: There was an unknown failure.

Action: Contact Oracle Support Services.

OCI-44819: Execution of this WLM function is denied

Cause: Either a WLM plan was being loaded from another instance, or the strict order of the PL/SQL calls for loading WLM plan was not followed.

Action: Check if another session is also concurrently trying to load a WLM plan. If that is not true, check the order in which you are making these PL/SQL calls to load your WLM plan.

OCI-44820: Number of Work Request Classes is less than specified

Cause: The number of Work Request Classes submitted were less than what was specified.

Action: Submit the full list of Work Request Classes.

OCI-44821: Number of classifiers is too large

Cause: A very large number (> 1024) of classifiers were requested.

Action: Submit a smaller (< 1024) number of classifiers.

OCI-44822: QoS Resource Manager plan does not exist in database "*string*"

Cause: QoS Resource Manager plan did not exist in this database.

Action: Rerun CATPROC.SQL to create the plan.

OCI-44823: The QoS Resource Manager plan is not in use

Cause: The QoS Resource Manager plan was not in use.

Action: Correct the setting of the current Resource Manager plan and try again.

OCI-44824: Resource Manager is disabled

Cause: Resource Manager was turned off.

Action: Reenable the Resource Manager and retry the operation.

OCI-44825: Classifier plan does not match across instances

Cause: Classifier plan was not the same across instances.

Action: Resubmit the classifier plan and try again.

OCI-44826: Number of Performance Classes is more than what was specified.

Cause: The number of Performance Classes submitted were more than what was specified.

Action: Submit only the specified number of Performance Classes.

OCI-44827: Number of Performance Classes is too large

Cause: A large number (>= 50) of Performance Classes were requested.

Action: Submit a smaller (< 50) number of Performance Classes.

OCI-44828: memory allocation failed

Cause: Memory allocation for the attempted operation failed.

Action: Retry the operation. Contact Oracle Support if the problem persists.

OCI-44850: attempt to set a bad status *string* [*string*]

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

OCI-44851: "*string*" is not a valid name for a database

Cause: The specified database name was not valid.

Action: Provide a valid database name.

OCI-44852: maximum number of regions exceeded

Cause: The maximum number of regions was exceeded.

Action: Check the catalog to see if you can remove unused regions.

OCI-44853: maximum number of valid nodes for VNCR exceeded

Cause: The maximum number of nodes for valid node checking for registration (VNCR) was exceeded.

Action: Check the catalog to see if you can remove unused nodes.

OCI-44854: catalog has already been created

Cause: This database already contained the catalog.

Action: Ensure that the specified database name is correct and, if yes, delete and re-create the catalog.

OCI-44855: configuration name is not valid

Cause: The specified configuration name contained invalid characters or was too long.

Action: Provide a valid (or shorter) configuration name.

OCI-44856: catalog service name is not valid

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

OCI-44857: catalog does not exist

Cause: A catalog did not exist in the database.

Action: Validate the connect string and retry the operation.

OCI-44858: cannot remove catalog

Cause: The catalog contained one or more database or Global Service Manager (GSM) objects.

Action: Remove the database and GSM objects from the catalog.

OCI-44859: GSM "*string*" is already defined in the catalog

Cause: The specified Global Service Manager (GSM) was already in existence in the catalog.

Action: Check the specified object name.

OCI-44860: Region "*string*" was not found in the catalog.

Cause: The specified region was not found in the catalog.

Action: Check the specified object name.

OCI-44861: invalid use of REMOVE VNCR command

Cause: A valid node and group name were specified in the same command.

Action: Provide either a valid node or group name.

OCI-44862: region name and buddy region name cannot be the same

Cause: A region was specified as buddy for itself.

Action: Provide a valid buddy region name.

OCI-44863: region "*string*" is the last region and cannot be removed

Cause: The last region could not be removed from the cloud catalog.

Action: No action is required.

OCI-44864: cannot remove region because it is still being used by a GSM

Cause: The region contained databases or Global Service Manager (GSM).

Action: Remove the database and GSM objects from the region first.

OCI-44865: cannot remove GDS pool because it is still being used by a database or service

Cause: The Global Data Services (GDS) pool contained databases or services.

Action: Remove the databases and services from the GDS pool.

OCI-44866: pool "*string*" can only contain databases that belong to a Data Guard broker configuration

Cause: An attempt was made to add a database that does not belong to a Data Guard broker configuration to a Data Guard broker pool.

Action: None

OCI-44867: GDS pool already contains database "*string*"

Cause: The database or service was already in the Global Data Services (GDS) pool.

Action: None

OCI-44868: pool "*string*" is a pool that contains a Data Guard broker configuration; Databases that do not belong to a broker configuration cannot be added to this pool.

Cause: An attempt was made to add a database to a pool that contains a Data Guard broker configuration.

Action: None

OCI-44869: cannot build net service name with "*string*\ because it is too long

Cause: The automatically created network service name was too long.

Action: Use a shorter network domain name.

OCI-44870: The "role" property is only supported for pools that contain a Data Guard broker configuration.

Cause: ROLE was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

OCI-44871: This operation cannot be performed on PREFERRED_ALL service "*string*".

Cause: The service was created with the PREFERRED_ALL option.

Action: Do not perform this operation on a PREFERRED_ALL service.

OCI-44872: The same name "*string*" cannot be used for both source and target databases.

Cause: The source and target parameters of MOVE SERVICE were the same.

Action: Check the parameters and try again.

OCI-44873: database "string" already offers the service

Cause: An attempt was made to add a service to a database that already offered the service.

Action: No action is required.

OCI-44874: service "string" not offered by database "string"

Cause: An attempt was made to start or stop a service on a database that does not offer the service.

Action: None

OCI-44875: database-related service parameters exceed the maximum allowed parameter length (1024 bytes)

Cause: The specified database-related service parameters were not valid.

Action: Check the parameters and try again.

OCI-44876: service string is running

Cause: The specified service was running.

Action: This message is informational only.

OCI-44877: service "string" is not enabled on database "string"

Cause: The service could not be started on the database because it was disabled.

Action: Enable the service.

OCI-44878: The database current lag is too high for the service "string".

Cause: The service could not be started on the standby database because the database current lag exceeds the service lag.

Action: The standby current lag needs to be reduced.

OCI-44879: A region name has not been provided.

Cause: An attempt was made to add a new Global Service Manager (GSM) without providing a region. When there is more than one existing region, a region name must be provided.

Action: Check the syntax and rerun the command.

OCI-44880: catalog has not yet been created

Cause: An attempt was made to modify the catalog, but it does not yet exist.

Action: Create the catalog before trying to modify it.

OCI-44881: GDS pool is not empty

Cause: An attempt was made to add broker configuration to a Global Data Services (GDS) pool that already contained a database. This is not allowed.

Action: Either remove all databases from the Global Data Services (GDS) pool or create a new GDS pool.

OCI-44882: The name "string" is not valid for a GDS pool.

Cause: The name of the specified Global Data Services (GDS) pool was not valid.

Action: Check the name and try again.

OCI-44883: The name "*string*" is not valid for a region.

Cause: The name of the specified region was not valid.

Action: Check the name and try again.

OCI-44884: The name "*string*" is not valid for a service.

Cause: The name of the specified service was not valid.

Action: Check the name and try again.

OCI-44885: invalid VNCR name *string*

Cause: The name specified for the valid node checking for registration (VNCR) was not valid.

Action: Check the name and try again.

OCI-44886: The name "*string*" is not valid for a VNCR group.

Cause: The name specified for the valid node checking for registration (VNCR) group was not valid.

Action: Check the name and try again.

OCI-44887: The name "*string*" is not valid for a GSM.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: n/a

OCI-44888: The name "*string*" is not valid for a GSM user.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: Check the name and try again.

OCI-44889: Region "*string*" is already defined in the catalog.

Cause: The specified region was already in existence in the catalog.

Action: Check the specified region name.

OCI-44890: GDS pool "*string*" is already defined in the catalog.

Cause: The specified Global Data Services (GDS) pool was already in existence in the catalog.

Action: Check the specified pool name.

OCI-44891: GSM "*string*" was not found in the catalog

Cause: The specified region was not found in the catalog.

Action: Check the specified region name.

OCI-44892: GDS pool "*string*" was not found in the catalog.

Cause: The specified Global Data Services (GDS) pool was not found in the catalog.

Action: Check the specified pool name.

OCI-44893: Database "*string*" was not found in pool "*string*".

Cause: The specified database was not found in the pool.

Action: Check the specified database name.

OCI-44894: Service "*string*" was not found in the catalog.

Cause: The specified service was not found in the catalog.

Action: Check the specified service name.

OCI-44895: cannot remove region because it is still being used by a database

Cause: The region contained databases.

Action: Remove the database objects from the region.

OCI-44896: GDS pool already contains service "*string*"

Cause: The service was already in the Global Data Services (GDS) pool.

Action: None

OCI-44897: The "*lag*" property is only supported for pools that contain a Data Guard broker configuration.

Cause: LAG was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

OCI-44898: The "*failover_primary*" property is only supported for pools that contain a Data Guard broker configuration.

Cause: FAILOVER_PRIMARY was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

OCI-44899: VNCR name "*string*" is already defined in the catalog.

Cause: The specified valid node checking for registration (VNCR) name was already in existence in the catalog.

Action: Check the specified VNCR name.

OCI-44900: Identifier "*string*" is too long.

Cause: The specified identifier exceeded the maximum allowed length.

Action: Use a shorter identifier name

OCI-44901: unable to resolve symbolic link "*string*"

Cause: The system was unable to resolve the specified symbolic link.

Action: Check the definition of the symbolic link to ensure that it refers to a valid resource. *Params: 1) link_name: The symbolic link that is not resolved.

OCI-44902: failed to resolve symbolic link "*string*"

Cause: The system was unable to fully resolve a path with symbolic links within a reasonable number of steps. It could be due to cycles in definitions of symbolic links or very long chains of symbolic links to symbolic links.

Action: Remove any cycles in symbolic link definitions. If there are no cycles, reduce the length of chains of symbolic links to symbolic links.

OCI-44903: cannot create hard link to specified resource *string*

Cause: An attempt to create a hard link to the specified resource failed.

Action: Check the configuration parameters to verify the restrictions on creating hard links to folder or non-folder resources.

OCI-44904: Target path *string* in document link exceeds the maximum length of *number*.

Cause: The length of the target path exceeded the maximum length which can be stored on a disk.

Action: Reduce the length of the target path. *Params: 1) path_name: The invalid path name. 2) max_length: The maximum path length permitted.

OCI-44905: extended link type not supported

Cause: XLink type attribute is extended.

Action: Remove extended link, or replace with simple link.

OCI-44906: Unable to resolve target path in document link.

Cause: The target path does not resolve to a valid resource.

Action: Check the target path validity.

OCI-44907: cannot delete resource with incoming hard document links

Cause: An attempt was made to delete a resource that had hard incoming document link targeting the resource.

Action: Query the DOCUMENT_LINKS view to see which resources have hard links to this resource, and change the document link in the source resource accordingly.

OCI-44908: Found a loop in XInclude elements while expanding *string*.

Cause: A loop in XInclude elements was detected in the document.

Action: Remove the loop in XInclude elements.

OCI-44909: HREF attribute is required within an XInclude element.

Cause: The HREF attribute was missing within XInclude element.

Action: Add the HREF attribute.

OCI-44910: XPointer is not supported within an XInclude element.

Cause: An Xpointer attribute was used within an XInclude element, and this is not supported.

Action: Remove the XPointer attribute.

OCI-44911: Nested XInclude expansion exceeds maximum depth of *number*.

Cause: The depth of nested XInclude expansion exceeded the system limit.

Action: Reduce the depth of nested XInclude expansion.

OCI-44912: The XPath expression *string* is invalid or unsupported.

Cause: The specified XPath was either invalid or not supported in this context.

Action: Change or correct the XPath expression.

OCI-44913: error while processing XInclude *string*

Cause: There was an error while processing the specified XInclude.

Action: Ensure that the XInclude attributes are correct.

OCI-44914: Schema XPointer exceeds maximum length.

Cause: The XPointer including the schema URL and element name could not be built because it was too long.

Action: Use a shorter XPointer name.

OCI-44915: cannot rename virtual folders

Cause: An attempt was made to rename a virtual folder.

Action: Create a new virtual folder instead of renaming an existing one.

OCI-44916: Cannot recursively delete virtual folders.

Cause: Attempted to recursively delete virtual folders.

Action: Delete components of the virtual folder first.

OCI-44917: References cannot point to resources.

Cause: Attempted to set a REF to point to the resource table.

Action: Correct the reference to not point to the resource table.

OCI-44918: The source of a copy cannot be an ancestor of the destination.

Cause: The destination of a copy was an ancestor of the source.

Action: Correct the source and destination of the copy.

OCI-44919: cannot overwrite existing resource

Cause: An attempt was made to overwrite an existing resource without permission.

Action: Specify a new destination or allow overwrites.

OCI-44920: The source and destination of a copy or move cannot be the same.

Cause: Attempted a copy or move to the same source and destination.

Action: Use correct and different source and destination locations.

OCI-44921: XPath expression *string* selected zero or multiple nodes.

Cause: The XPath expression did not select a single node.

Action: Specify an XPath expression that maps to a single node.

OCI-44922: XPath expression *string* must evaluate to a scalar type.

Cause: The specified XPath expression does not map to a scalar type.

Action: Correct the XPath expression to select a scalar type.

OCI-44961: cannot specify more than one normal column in JSON_EXPAND_ARRAY

Cause: More than one normal column was specified for JSON_EXPAND_ARRAY.

Action: Specify exactly one normal column.

OCI-44962: cannot expand JSON array without including the expanded result

Cause: Attempted to expand a JSON array without including the expanded result in the COLUMNS clause of JSON_EXPAND_ARRAY.

Action: Include the expanded result in the COLUMNS clause.

OCI-44963: invalid ON ERROR/EMPTY/MISSING/NULL clause for JSON_EXPAND_ARRAY

Cause: Attempted to expand a JSON array with invalid options for the ON ERROR/EMPTY/MISSING/NULL clause of JSON_EXPAND_ARRAY. The allowed options are: ERROR/NULL ON ERROR ABSENT/IGNORE/NULL ON EMPTY ABSENT/IGNORE/NULL ON NULL ABSENT/IGNORE ON MISSING

Action: Use the allowed options for the ON EMPTY/MISSING/NULL clause.

OCI-44964: disallow ON ERROR/EMPTY/MISSING/NULL clause at column level for JSON_EXPAND_ARRAY

Cause: An attempt was made to specify ON ERROR/EMPTY/MISSING/NULL clause at column level for JSON_EXPAND_ARRAY.

Action: Remove the ON ERROR/EMPTY/MISSING/NULL clause at column level.

OCI-44965: invalid data type for the input to JSON_EXPAND_ARRAY

Cause: The input to JSON_EXPAND_ARRAY had a data type other than JSON type.

Action: Provide JSON data type for the input to JSON_EXPAND_ARRAY.

OCI-44966: cannot expand multiple JSON arrays

Cause: The row path expression is selecting multiple arrays as the target of JSON_EXPAND_ARRAY.

Action: Ensure that the row path expression selects only one JSON array.

OCI-44967: cannot specify more than one ordinality column

Cause: Attempted to specify more than one ordinality column for JSON_EXPAND_ARRAY.

Action: Specify at most one ordinality column.

OCI-44968: invalid data type for a normal column in JSON_EXPAND_ARRAY

Cause: A normal column in JSON_EXPAND_ARRAY had a data type other than JSON type.

Action: Provide JSON data type for the column in JSON_EXPAND_ARRAY.

OCI-44969: invalid row path expression for JSON_EXPAND_ARRAY

Cause: An invalid row path expression was provided for JSON_EXPAND_ARRAY that does not have an array step.

Action: Provide a valid row path expression for JSON_EXPAND_ARRAY that has an array step.

OCI-44970: unsupported chaining of JSON_EXPAND_ARRAY

Cause: The specified JSON_EXPAND_ARRAY were chained.

Action: Do not chain JSON_EXPAND_ARRAY.

OCI-44971: JSON relational duality view cannot have duplicate column '*string*'.*string*' specified.

Cause: Duplicate columns were specified for a JSON relational duality view.

Action: Remove duplicate columns.

OCI-44972: Function '*string*' is not supported with JSON relational duality view.

Cause: A function was specified for JSON relational duality view.

Action: Remove function.

OCI-44973: JSON-relational duality view is not supported on external table '*string*'.

Cause: An external table was used in a JSON-relational duality view.

Action: Ensure that no external table is used.

OCI-44974: PRESENT ON EMPTY setting for multi-value index cannot be different at table level and column level.

Cause: An attempt was made to create a multi-value index using PRESENT ON EMPTY at table level but not at column level, and vice versa.

Action: Ensure PRESENT ON EMPTY is either used at both table level and column level, or is not used at all.

OCI-44975: Column '*string*' of table '*string*' cannot be selected in JSON relational duality view as it has an IS JSON check constraint.

Cause: A non-JSON type column was selected in the JSON relational duality view that had an IS JSON check constraint.

Action: Remove the IS JSON check constraint to treat the column value as text or change the data type of the column to JSON.

OCI-44976: item method in JSON_TABLE row path expression '*string*'

Cause: A JSON_TABLE row path expression contained an item method (trailing function).

Action: Remove the item method.

OCI-44977: invalid ON MISSING, ON EXISTING, ON MISMATCH, ON EMPTY, ON ERROR or ON NULL clause in JSON_TRANSFORM

Cause: The provided ON MISSING, ON EXISTING, ON MISMATCH, ON EMPTY, ON ERROR or ON NULL clause was invalid or not allowed for the selected JSON_TRANSFORM operation.

Action: Provide a valid ON MISSING, ON EXISTING, ON MISMATCH, ON EMPTY, ON ERROR or ON NULL clause.

OCI-44978: JSON-relational duality view is not supported with recursive WITH query '*string*'.

Cause: A JSON-relational duality view was used with recursive WITH query.

Action: Do not use JSON-relational duality view with recursive WITH query.

OCI-44979: invalid usage of 'minimal cross product' in JSON_TABLE

Cause: Specifying 'minimal cross product' in JSON_TABLE which is not used to create a multi-value index.

Action: Only use 'minimal cross product' in JSON_TABLE to create multi-value index.

OCI-44980: Parallel arrays are not supported with 'minimal cross product' for multi-value index.

Cause: Parallel arrays are encountered while 'minimal cross product' is used to create a multi-value index.

Action: Make sure there is only one array when using 'minimal cross product' to create a multi-value index.

OCI-44981: Not all composite multi-value index columns are from JSON_TABLE.

Cause: An attempt is being made to create a composite multi-value index using non JSON_TABLE syntax or some composite multi-value index columns are not from JSON_TABLE.

Action: Use JSON_TABLE syntax solely to create composite multi-value index.

OCI-44982: unsupported data type 'string' of input column 'string.string' for multi-value index

Cause: An attempt is being made to create a multi-value index on an input column that is not JSON data type.

Action: Ensure that the input document is of JSON data type. *Params: 1) data_type: The data type of the input column. 2) table_name: The table name of the input column. 3) column_name: The column name of the input column.

OCI-44983: Cannot reorder columns in multi-value index if it has only one column.

Cause: An attempt is being made to reorder a multi-value index which has only one column.

Action: Do not reorder columns in multi-value index.

OCI-44984: Column 'string' does not exist in JSON_TABLE that defines multi-value index columns.

Cause: An attempt is being made to reorder a column for multi-value index which does not exist in the corresponding JSON_TABLE.

Action: Reorder on columns that are defined in JSON_TABLE. *Params: 1) column_name: The column name of the column.

OCI-44985: Ordinality column is not the last one in multi-value index.

Cause: An attempt is being made to reorder a multi-value index so that ordinality column is not the last column in multi-value index anymore.

Action: Put ordinality column as the last column in multi-value index.

OCI-44986: Ordinality column in multi-valued index cannot be re-reordered alone.

Cause: An attempt is being made to reorder a multi-value index so that ordinality column is not right after its associated column in JSON_TABLE.

Action: Reorder ordinality column and its associated column together in multi-value index.

OCI-44987: Table alias for JSON_TABLE must be followed by a reordering column list for multi-value index.

Cause: A table alias is provided to JSON_TABLE but there is no subsequent reordering column list for multi-value index.

Action: Remove the table alias for JSON_TABLE in multi-value index creation.

OCI-44988: Not all the columns in JSON_TABLE are reordered in multi-value index.

Cause: Multi-value index reordering column list does not include all the columns in JSON_TABLE.

Action: Reorder all the columns in JSON_TABLE.

OCI-44989: Table name 'string' does not match the table alias 'string' of JSON_TABLE.

Cause: Table name provided for a reordering column in multi-value index does not match the table alias given for its corresponding JSON_TABLE.

Action: Use the table alias of JSON_TABLE as table name. *Params: 1) table_name: The table name of the reordering column. 2) table_alias: The alias of JSON_TABLE.

OCI-44990: missing table alias 'string' of JSON_TABLE in the column names of reordering column list of multi-value index

Cause: A table alias is provided for JSON_TABLE, but a column in the reordering column list of multi-value index does not have that table alias in its name.

Action: Qualify the column with the table alias of JSON_TABLE in its name. *Params: 1) table_alias: The alias of JSON_TABLE.

OCI-44991: JSON TABLE with minimal cross product does not use 'any ora_rawcompare'.

Cause: Type other than 'any ora_rawcompare' is specified for a column in JSON TABLE with minimal cross product.

Action: Ensure to use only 'any ora_rawcompare' for columns in JSON TABLE with minimal cross product.

OCI-44992: JSON TABLE index with minimal cross product cannot have parallel arrays.

Cause: Parallel arrays are encountered for JSON TABLE with minimal cross product.

Action: Ensure there is only one array in JSON TABLE with minimal cross product.

OCI-44993: JSON multi-value index with minimal cross product cannot have multiple cross products.

Cause: Multiple cross products are encountered for JSON multi-value index with minimal cross product.

Action: Ensure there is only one cross product in JSON multi-value index with minimal cross product.

OCI-44994: JSON TABLE with minimal cross product cannot have ordinality column.

Cause: An attempt is being made to specify minimal cross product for JSON TABLE which has ordinality column.

Action: Remove minimal cross product or remove ordinality column.

OCI-44995: JSON multi-value index with minimal cross product does not support missing paths.

Cause: Missing paths are encountered for a multi-value index with minimal cross product.

Action: Make sure data has no missing path or do not use minimal cross product.

OCI-44996: JSON TABLE with minimal cross product cannot have only one column.

Cause: An attempt is being made to specify minimal cross product for JSON TABLE which has only one column.

Action: Remove minimal cross product.

OCI-44997: unsupported chaining of two JSON_TABLE with minimal cross product

Cause: The output of one JSON_TABLE with minimal cross product is provided

Action: Do not chain them.

OCI-45001: SECUREFILE LOB archive is not cached.

Cause: The archived SECUREFILE LOB was not cached, and the export VERSION parameter was set to a value earlier than 11.2 which prevented automatic retrieval.

Action: Retrieve the SECUREFILE LOB with a GET operation, or set the VERSION parameter to a higher value than 11.2.0.0.0.

OCI-45002: Content ID not found in the DBFS HS

Cause: The content ID was invalid or was already deleted.

Action: No action required.

OCI-45003: DBFS HS: Invalid checksum, potential data corruption

Cause: Potential data corruption.

Action: No action required.

OCI-45004: DBFS HS SBT Error

Cause: Error related to SBT Tape library.

Action: Refer to error log for more details.

OCI-45005: DBFS HS invalid store

Cause: Error related to DBFS HS Store.

Action: Check that the store name and store parameters are valid values.

OCI-45400: operation not permitted on current database

Cause: An operation was not permitted to start because the database role is not supported.

Action: Attempt the operation on the primary database. If the primary database has recently switched to a logical standby database, and an error has occurred, reexecute the DBMS_ROLLING.SWITCHOVER procedure on the former primary database until successful completion of the operation.

OCI-45401: upgrade plan is already active

Cause: An upgrade plan was already active.

Action: The existing plan must first be destroyed by calling DBMS_ROLLING.DESTROY_PLAN.

OCI-45402: LOG_ARCHIVE_CONFIG must contain the DG_CONFIG attribute

Cause: The DG_CONFIG attribute was missing from the LOG_ARCHIVE_CONFIG parameter.

Action: Configure this parameter with the DG_CONFIG attribute before performing DBMS_ROLLING operations.

OCI-45403: database string must be specified in DG_CONFIG

Cause: The specified database was not found in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

Action: Add the specified database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

OCI-45404: target version is incompatible

Cause: The configured target software version was incompatible with a DBMS_ROLLING administered upgrade.

Action: Use alternative upgrade methods.

OCI-45405: A rolling upgrade operation is already in progress.

Cause: A DBMS_ROLLING operation was already in progress. Only one operation is permitted at a time.

Action: Wait for the operation to complete, or query the PID column of DBA_ROLLING_STATUS view to identify the active process.

OCI-45406: operation completed with warnings

Cause: An operation succeeded but warnings were generated.

Action: Consult the DBA_ROLLING_EVENTS view for the list of warnings.

OCI-45407: operation encountered a query error

Cause: An internal database query failed.

Action: Consult the DBA_ROLLING_EVENTS and DBA_ROLLING_PLAN views to identify the error code and instruction that caused the failure.

OCI-45408: parameter name is unknown

Cause: The specified parameter could not be modified because the parameter name was not recognized.

Action: Verify that the parameter is among the available parameters listed in DBA_ROLLING_PARAMETERS view.

OCI-45409: parameter value is invalid or out of bounds

Cause: The specified parameter could not be modified because its value was invalid or out of bounds.

Action: Consult the DBA_ROLLING_PARAMETERS view to obtain the valid range of values for the associated parameter.

OCI-45410: parameter may not be modified

Cause: The specified parameter could not be modified.

Action: Internal parameters may not be modified through the DBMS_ROLLING.SET_PARAMETER procedure. If the parameter is a user parameter, the parameter is no longer meaningful at the current phase of the upgrade.

OCI-45411: operation requires additional arguments

Cause: An operation has failed because one or more arguments were not supplied.

Action: Retry the operation with all required arguments.

OCI-45412: parameter scope argument is unknown

Cause: An operation has failed because the database unique name provided in the scope argument was not known.

Action: Verify that the database unique name exists in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

OCI-45413: parameter has no default value

Cause: The specified parameter could not be reverted back to its default value because the default value did not exist.

Action: The parameter must be set to an explicit value.

OCI-45414: could not connect to a remote database

Cause: Connections to one or more databases failed.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the involved databases and the specific error codes.

OCI-45415: instruction execution failure

Cause: A rolling upgrade operation has halted due to the failure of one or more required upgrade instructions.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the active instructions and their associated error codes.

OCI-45416: operation cannot start until plan rebuild

Cause: An operation was not permitted to start due to recent parameter modifications which required a rebuild of the upgrade plan.

Action: Call the DBMS_ROLLING.BUILD procedure to rebuild the upgrade plan.

OCI-45417: operation not permitted since current phase was not *string*

Cause: An operation was not permitted to start because the upgrade was in a different phase.

Action: Call the DBMS_ROLLING procedure associated with the current phase.

OCI-45418: database is not running the higher version RDBMS

Cause: A rolling upgrade instruction has failed because a database was not running the correct target RDBMS version.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending databases and restart them on the higher version binaries.

OCI-45419: DB_UNIQUE_NAME initialization parameter was not set for a member.

Cause: The DB_UNIQUE_NAME initialization parameter was not set for a member.

Action: Set the DB_UNIQUE_NAME initialization parameter for the member and retry the operation.

OCI-45420: return TNS service was not found

Cause: An instruction failed because a Transparent Network Substrate (TNS) service name for return communication was not found on a remote database.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database or databases.

OCI-45421: database type is not supported by rolling upgrade

Cause: One or more databases specified in the DG_CONFIG attribute was incompatible with a DBMS_ROLLING administered upgrade.

Action: Disable the databases from the upgrade configuration by setting their associated INVOLVEMENT parameters to a value of NONE, and rebuild the upgrade plan.

OCI-45422: operation requires existing plan

Cause: An operation was not permitted to start because it required an active plan.

Action: Configure an upgrade plan by calling the DBMS_ROLLING.INIT_PLAN procedure.

OCI-45423: target database has mismatched DB_UNIQUE_NAME

Cause: A specified DB_UNIQUE_NAME attribute in a LOG_ARCHIVE_DEST_n parameter did not match the DB_UNIQUE_NAME at the target database.

Action: Ensure the DB_UNIQUE_NAME attribute and associated Transparent Network Substrate (TNS) service name or associated connect string has been configured properly.

OCI-45424: initialization parameter file has unexpected value

Cause: An instruction failed due to an initialization parameter file at a remote database that was found to be invalid.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database.

OCI-45425: operation halted due to required user interaction

Cause: A rolling upgrade operation stopped because interaction is required.

Action: Consult the DBA_ROLLING_EVENTS view to identify the actions required.

OCI-45426: managed recovery process was not running

Cause: An operation failed due to the inactive managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the managed recovery process or resolve any errors that would prevent the managed recovery process from remaining active.

OCI-45427: logical standby Redo Apply process was not running

Cause: An operation failed due to the inactive logical standby Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the logical standby Redo Apply process or resolve any errors that would prevent the logical standby Redo Apply process from remaining active.

OCI-45428: database was not in expected database role

Cause: An instruction failed due to a database operating in a database role which was not expected.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the role change is due to a failover, the FAILOVER parameter must be set and the upgrade plan must be rebuilt before resuming the rolling upgrade.

OCI-45429: database was set to an invalid Data Guard protection mode

Cause: An instruction failed due to a database operating at a data protection mode that was not expected.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Set the data protection mode accordingly based on the requirement as described in the instruction.

OCI-45430: flashback database was not enabled

Cause: An instruction failed due to a database that was found to not have Flashback Database enabled.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Configure the database with adequate storage to support guaranteed restore points and enable Flashback Database.

OCI-45431: database was mounted or open in an invalid mode

Cause: An instruction failed due to a database that was mounted or open in an invalid mode.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database and the expected mode. Restart the database in the expected mode.

OCI-45432: future primary database is not a physical standby database

Cause: An operation was not permitted because the future primary database is not a physical standby database.

Action: Specify a physical standby database as the future primary database.

OCI-45433: failover was detected on an unsupported database

Cause: An operation was not permitted because a failover was detected on a database which does not permit continuation of the rolling upgrade.

Action: Consult the DBA_ROLLING_EVENTS view to identify the unsupported database and abort the rolling upgrade.

OCI-45434: multiple failovers of the same type detected

Cause: An operation was not permitted because multiple failovers were detected on standby databases which protect a common target.

Action: Consult the DBA_ROLLING_EVENTS view to identify the offending databases. Remove the unwanted databases from the configuration and rebuild the upgrade plan.

OCI-45435: managed recovery process was running

Cause: An operation failed due to an active managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the managed recovery process.

OCI-45436: logical standby Redo Apply process was running

Cause: An operation failed due to an active Redo Apply process at a remote database.

Action: Consult the `DBA_ROLLING_PLAN` and `DBA_ROLLING_EVENTS` views to identify the offending database and stop the Redo Apply process.

OCI-45437: database upgrade progress is inconsistent

Cause: An operation failed due to the discovery of the catalog upgrade progress on a database that was different from the progress value saved in the plan state.

Action: Consult the `DBA_ROLLING_PLAN` and `DBA_ROLLING_EVENTS` views to identify the offending database and remove the database from the configuration.

OCI-45438: database is not in mounted mode

Cause: An operation failed due to the discovery of a database which was not in mounted mode.

Action: Consult the `DBA_ROLLING_PLAN` and `DBA_ROLLING_EVENTS` views to identify the offending database. If the database was opened, restart the database in mounted mode.

OCI-45439: database is not in open read/write mode

Cause: An operation failed due to the discovery of a database which was not in open read/write mode.

Action: Consult the `DBA_ROLLING_PLAN` and `DBA_ROLLING_EVENTS` views to identify the offending database. Open the database in read/write mode.

OCI-45440: server parameter file has not been configured

Cause: An operation failed due to the discovery of a database which was not configured with a server parameter file that could be modified.

Action: Consult the `DBA_ROLLING_PLAN` and `DBA_ROLLING_EVENTS` views to identify the offending database. Ensure the database has been configured with a server parameter file, and that the parameter file can be modified.

OCI-45441: no databases eligible for rollback

Cause: A rollback operation could not start because the databases have not created the guaranteed restore point needed for rollback.

Action: A rollback is not necessary. The rolling operation can be cancelled by calling `DBMS_ROLLING.DESTROY_PLAN`.

OCI-45442: rollback is not permitted after a role change

Cause: A rollback operation was not permitted due to a prior role change event such as a switchover or failover.

Action: Reconfigure the Data Guard configuration manually.

OCI-45443: cannot quiesce replicated PL/SQL procedures

Cause: An operation failed because there were other processes executing long running replicated PL/SQL procedures.

Action: Increase the value of `DICTIONARY_PLS_WAIT_TIMEOUT` and retry the failed operation.

OCI-45479: rolling upgrade metadata out of date

Cause: A rolling upgrade operation failed because the timestamp corresponding to the last metadata update is behind the current time on the originating database. This can be caused by a different time zone in use at the target database or by a failure to process a remote request to update metadata.

Action: Consult the `DBA_ROLLING_DATABASES` and `DBA_ROLLING_EVENTS` views to identify the offending database. An older `UPDATE_TIME` for an entry in `DBA_ROLLING_DATABASES` indicates which database has been identified as being behind. Ensure that the database has been configured to use the same time zone as the original primary and that the database has been started.

OCI-45486: database update progress is inconsistent

Cause: An operation failed due to the discovery of the update progress on a database that was different from the progress value saved in the plan state.

Action: Consult the `DBA_ROLLING_PLAN` and `DBA_ROLLING_EVENTS` views to identify the offending database and remove the database from the configuration.

OCI-45494: database is not in open read-only mode

Cause: An operation failed due to the discovery of a database which was not in open read-only mode.

Action: Consult the `DBA_ROLLING_PLAN` and `DBA_ROLLING_EVENTS` views to identify the database. Open the database in read-only mode.

OCI-45495: capture is unusable due to not migrating on earlier rolling upgrade

Cause: An operation failed due to the discovery of a capture session that did not migrate across an earlier rolling upgrade before a second rolling upgrade was done.

Action: Re-create the capture.

OCI-45500: Cannot remove a database from a pool that contains a broker configuration.

Cause: An attempt was made to remove a database from a pool that contained a broker configuration.

Action: If the broker configuration has changed, use the `SYNC` command in `gsmctl` to synchronize the pool

OCI-45501: The maximum number of global service managers for this region has been exceeded.

Cause: A new Global Service Manager (GSM) was added to a region that already contained the maximum number of GSMs.

Action: The maximum has been reached. Do not attempt to add anymore GSMs.

OCI-45502: Insufficient privileges to perform this operation.

Cause: A Global Service Manager (GSM) command was executed by a non-privileged user.

Action: Either connect as a privileged user, or ask your GSM administrator to add you as a pool or GSM administrator.

OCI-45503: This database is already in cloud string.

Cause: An attempt was made to add a database to a cloud when it was already in another cloud.

Action: A database can only be in one cloud. Remove it from the other cloud first.

OCI-45504: Cannot relocate a preferred_all service.

Cause: The command 'relocate service' is not supported for preferred_all services.

Action: Do no attempt to relocate a preferred_all service.

OCI-45505: The maximum number of services has been reached.

Cause: The hard limit for the number of global services has been reached.

Action: No more global services can be added without first removing a service.

OCI-45506: The maximum number of GDS pools has been reached.

Cause: The hard limit for the number of Global Data Services (GDS) pools has been reached.

Action: No more Global Data Services (GDS) pools can be added without first removing a pool.

OCI-45507: Region *string* does not have a buddy region.

Cause: The specified region did not have a buddy.

Action: This message is informational only. Consider using 'modify region' to add a buddy for this region.

OCI-45508: Database *string* does not have an assigned region.

Cause: The specified database did not have an assigned region.

Action: Use 'modify database' to assign a region to this database.

OCI-45509: Database *string* has an invalid status "*string*".

Cause: The specified database had an invalid status.

Action: Check that the account "gsmuser" has been enabled by the remote DBA, that you used the correct password for "gsmuser" when running "add database", and that there is an existing valid node check for registration (VNCR) entry for this database host.

OCI-45510: There is an outstanding GSM request for change number *string* created at *string*. GSM has failed to apply this request *string* times.

Cause: A change request originating from a gdsctl command was not applied after several minutes.

Action: Verify that the Global Service Manager (GSM) server is able to connect to all databases in the framework to apply the change.

OCI-45511: Service *string* does not have a preferred database.

Cause: The specified service did not have a preferred database. This can happen if the database was removed from the pool.

Action: Use 'modify service' to provide a preferred database for this service.

OCI-45512: Service *string* is a local only service which has an available database in region *string*, but does not have a preferred database in the same region.

Cause: The specified service did not have a preferred database in a region in which it had an available database.

Action: Use 'modify service' to provide a preferred database in this region for this service, or remove the available database in this region.

OCI-45513: Database *string* has no global services defined for it.

Cause: A database was added to the global data services framework, but no global services have been defined for it, or they have all been removed.

Action: This is an informational message. Consider defining a service for this database, or removing the database from the framework.

OCI-45514: Region *string* does not contain any databases.

Cause: A region was added to the global data services framework, but no databases were added to this region, or they have all been removed.

Action: This is an informational message. Consider adding a database to this region or removing the region.

OCI-45515: Region *string* does not contain any GSMs.

Cause: A region was added to the global data services framework, but no global services manager servers were defined for this region, or they have all been removed.

Action: This is a warning message. You are advised to define a GSM in this region for high availability.

OCI-45516: GDS pool *string* does not contain any databases.

Cause: The specified Global Data Services (GDS) pool did not contain any databases.

Action: This is an informational message. Consider adding databases to this pool or removing the pool from the global data services framework.

OCI-45517: GDS pool *string* does not contain any global services.

Cause: The specified Global Data Services (GDS) pool did not contain any global services.

Action: This is an informational message. Consider adding services to this pool or removing the pool from the global data services framework.

OCI-45518: Service *string* will not be started on logical/snapshot standby.

Cause: The specified service will not be started on a logical/snapshot standby.

Action: This is a warning message. Consider re-defining lag parameter to "any", if the service needs to be started on a logical/snapshot standby.

OCI-45519: Database pool *string* is empty; this operation cannot be performed on an empty pool.

Cause: The database pool does not contain any databases. Therefore this operation will have no effect.

Action: This is a warning message. Do not perform this operation on an empty database pool.

OCI-45520: A service with locality ANYWHERE cannot set region failover.

Cause: Service attributes ANYWHERE and REGION_FAILOVER are incompatible.

Action: Do not attempt to set REGION_FAILOVER on a service with locality ANYWHERE.

OCI-45521: A service with a primary role cannot set FAILOVER_PRIMARY.

Cause: A service with a primary role cannot set FAILOVER_PRIMARY.

Action: Do not attempt to set FAILOVER_PRIMARY on a service that has a primary role.

OCI-45522: LOCAL_ONLY service *string* cannot be relocated to a database in another region.

Cause: The specified service is LOCAL_ONLY and cannot be relocated to a database in a different region.

Action: Do not relocate a LOCAL_ONLY service to a database in another region.

OCI-45523: Warning: service *string* is already stopped.

Cause: The service was stopped already.

Action: None; this is only a warning message.

OCI-45524: must explicitly specify Global Data Services pool name because there could be multiple candidates

Cause: An attempt to have a default Global Data Services pool when multiple pools already coexist in the domain failed.

Action: Do not omit '-gds pool gds pool_name_list' when multiple pools exist

OCI-45525: A value of TRANSACTION was provided for the service parameter '-failovertime', but bad or nonexistent value was specified for service parameter '-retention'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-retention', or provided a value that was less than or equal to the value provided for the parameter '-replay_init_time'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertime', then a value must be provided for the parameter '-retention', and that value must be greater than the value provided for the parameter '-replay_init_time'.

OCI-45526: A value of TRANSACTION was provided for the service parameter '-failovertime', but a bad or nonexistent value was specified for service parameter '-replay_init_time'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-replay_init_time', or provided a value that was less than or equal to the value provided for the parameter '-failoverdelay'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertime', then a value must be provided for the parameter '-replay_init_time', and that value must be greater than the value provided for the parameter '-failoverdelay'.

OCI-45527: Database compatibility level was too low for use with Global Data Services (GDS).

Cause: The major database compatibility level is below 12. The Global Data Services (GDS) feature requires that the database compatibility level of all participating databases be at 12 or above.

Action: In order to use this database for Global Data Services (GDS), an upgrade must be completed so that its major compatibility level is at 12 or above.

OCI-45528: Service *string* has not been globally started.

Cause: An attempt was made to start the service in a specific database without first starting it globally.

Action: Start the service globally by using 'start service' command without specifying the '-database' parameter.

OCI-45529: Database has not been configured to use an SPFILE.

Cause: The database was not configured to use an SPFILE. This is required before it can be used within a Global Data Services (GDS) framework.

Action: Reconfigure the database to use an SPFILE and attempt the action again.

OCI-45530: A local service with the same name already exists.

Cause: An attempt was made to create a global service with the same name as an existing local service.

Action: Use a different service name or delete the existing local service.

OCI-45531: This database is already in another Global Data Services (GDS) framework.

Cause: An attempt was made to create a Global Data Services (GDS) catalog on a database that was already in another GDS framework.

Action: Remove this database from the other framework before using it as a Global Data Services (GDS) catalog.

OCI-45532: This database is already a catalog for another Global Data Services (GDS) framework.

Cause: An attempt was made add a database to a Global Data Services (GDS) framework, but it was already a catalog database for another framework.

Action: Do not attempt to to add a Global Data Services (GDS) catalog to another GDS framework.

OCI-45533: Service *string* is already being modified from another GDSCTL session.

Cause: The specified service was already in the process of being modified.

Action: Wait until any other service modifications have completed. If this problem persists, contact Oracle Support Services.

OCI-45534: There is a running GSM (Global Service Manager) connected to the catalog.

Cause: This command could not be executed while there were running GSM (Global Service Manager) servers connected to the catalog.

Action: Shut down all GSM servers before running this command.

OCI-45535: Catalog version cannot be determined.

Cause: The version of the GDS (Global Data Services) catalog could not be determined.

Action: Contact Oracle Support Services.

OCI-45536: This version of GDSCTL is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GDSCTL being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GDSCTL or the GDS catalog.

OCI-45537: This version of GSM (Global Service Manager) is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GSM being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GSM or the GDS catalog.

OCI-45538: The database version is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of the database being added was not compatible with the GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade the database or the GDS catalog.

OCI-45539: Database *string* has already been added to another pool.

Cause: An attempt was made to add a database to a pool, but this database has already been added to another pool.

Action: Do not attempt to add a database to two different pools.

OCI-45540: Call to SRVCTL failed with status *string*, errors: *string*.

Cause: An attempt to call the SRVCTL command line failed with the specified errors.

Action: Refer to the Oracle Real Application Clusters (Oracle RAC) documentation and resolve the problems reported by SRVCTL.

OCI-45541: Parameters "-serverpool" and "-cardinality" are invalid for administrator-managed Oracle RAC databases.

Cause: The service command stipulated -serverpool or -cardinality but this database was an administrator-managed Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool or -cardinality on administrator-managed Oracle RAC databases.

OCI-45542: Parameters "-serverpool", "-cardinality", and "-instances" are invalid for non-Oracle RAC databases.

Cause: The service command stipulated -serverpool, -cardinality, or -instances but this database was a non-Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool, -cardinality, or -instances on non-Oracle RAC databases.

OCI-45543: Parameter "-instances" is invalid for policy-managed Oracle RAC databases.

Cause: The service command stipulated -instances, but this database was a policy-managed Oracle RAC database, which does not recognize this parameter.

Action: Do not use -instances on policy-managed Oracle RAC databases.

OCI-45544: An invalid weight string was provided for manual override of runtime load balancing.

Cause: The string provided by GDSCTL to override runtime load balancing with manual region weights was badly formed.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

OCI-45545: cannot delete all remaining instances

Cause: This command would delete all remaining instances from the service, leaving the service in an invalid state.

Action: Do not provide an instance list that would delete all instances.

OCI-45546: cannot create process to run SRVCTL with system error *string*

Cause: There was a problem creating a new process to run SRVCTL from the command line.

Action: Check the Oracle alert log on the Oracle database server machine and rectify the problem on the server.

OCI-45547: A call to SRVCTL failed with error *string* because of bad parameters.

Cause: The command-line execution of SRVCTL failed because of bad parameters.

Action: Check the database server traces and contact Oracle Support Services.

OCI-45548: The catalog database can be downgraded, downgrading a catalog database after making changes is not advised.

Cause: This is a warning message only. This command required catalog changes and the 'compatible' database parameter indicated that the database could be downgraded. Downgrading a catalog database after making catalog changes is not advised and may cause data loss in the catalog.

Action: Make your database upgrade permanent by updating the 'compatible' database parameter before using GDSCTL commands that will alter the catalog.

OCI-45549: Catalog changes are not possible without a running GSM at the current version.

Cause: This command required catalog changes, which are not allowed unless there is at least one Global Service Manager (GSM) server running at the current version.

Action: Start a GSM server that is running the current version of the software. If there are none, upgrade at least one existing GSM or add a new one at the current version.

OCI-45550: service does not exist

Cause: An attempt was made to start a service that did not exist on the target database.

Action: None. This error was caught by the Global Service Manager (GSM), and the service was created automatically.

OCI-45551: Instance *string* was not in the instance list for this database.

Cause: An attempt was made to delete an instance from this database but the instance was not in the existing instance list.

Action: None. This is a warning only. No action was taken for the named instance.

OCI-45552: None of the provided instances were in the instance list for this database.

Cause: The provided instance list did not contain any valid instances, or the existing instance list for the catalog was empty.

Action: Check the list of instances and run the command again if necessary.

OCI-45553: Service *string* does not have any instances defined for databasell(s) *string*.

Cause: An attempt was made to start a service on an administrator-managed Oracle RAC database, but there were no instances defined for the service on that database.

Action: Define instances for the service on all of the listed databases before attempting to start the service.

OCI-45554: There are no services that can start on database *string*.

Cause: An attempt was made to start all services for a given database but there were no services that could start.

Action: None. This is a warning message indicating that no action was taken for this command.

OCI-45555: The target database is not in the preferred or available list for this service.

Cause: The new database name provided was not in the list of preferred or available databases for the service.

Action: Either add the new database to the service or relocate the service to another database.

OCI-45556: A database name or service name was not provided.

Cause: A disable service request did not provide either a database name or a service name.

Action: Provide either a service name or a database name on the request.

OCI-45557: The database pool *string* does not contain a broker configuration.

Cause: An attempt was made to remove a broker configuration from a database pool that does not contain one.

Action: Rerun the command using a different database pool.

OCI-45558: There are no database pools in this catalog.

Cause: The catalog did not have any database pools defined.

Action: Create at least one database pool before running any other commands.

OCI-45559: Global service manager (GSM) *string* did not provide a version.

Cause: The GSM did not provide a version when attempting to connect to the catalog.

Action: This version of GSM is too old to connect to the catalog. Upgrade the GSM installation.

OCI-45560: Database *string* must contain at least one preferred instance.

Cause: The MODIFY command did not add any preferred instances or removed all existing preferred instances from this database.

Action: Provide at least one preferred instance, or do not attempt to remove all existing preferred instances.

OCI-45561: region name is required

Cause: A region name was not provided and was required because there were multiple regions in the catalog.

Action: Provide the region name on the command line.

OCI-45562: The Global Data Services catalog must be created in a root container.

Cause: The CREATE CATALOG command could not be executed on a container other than the root container.

Action: Use the root container to create the Global Data Services catalog.

OCI-45563: The pool database cannot be a pluggable database.

Cause: The ADD DATABASE command could not add a pluggable database.

Action: Provide the consolidated database name instead.

OCI-45564: pool "*string*" contains a sharded root configuration; only preferred_all services are allowed

Cause: An attempt was made to add non-uniform service to a pool that contains a sharded root.

Action: None

OCI-45565: pool "*string*" contains a sharded root configuration; databases cannot be added to this pool

Cause: An attempt was made to add a database to a pool that contains a sharded root.

Action: None

OCI-45566: pool "*string*" contains a sharded root configuration

Cause: An attempt was made to work with a generic pool that was not a sharded root.

Action: None

OCI-45567: pool "*string*" is not a shard

Cause: An attempt was made to work with a generic pool that was not a shard.

Action: None

OCI-45568: database link to catalog is invalid

Cause: An attempt to use a database link from a pool database to a catalog failed.

Action: Check the network connectivity and master global service manager (GSM) endpoint.

OCI-45570: The *string* is not empty and cannot be removed.

Cause: The shardspace or shardgroup was not empty and contained at least one shardgroup or shard.

Action: Delete all shards or shardgroups before calling the procedure again.

OCI-45572: Remote shard conversion job *string* failed with error: *string*

Cause: The remote scheduler job to convert a shard from seed has failed.

Action: Read the error and resolve the problem described, then restart the job using the "deploy" command in GDSCTL.

OCI-45573: shard open mode is *string*, it should be READ WRITE

Cause: The shard was opened in the incorrect mode for Oracle Data Guard broker setup.

Action: If the open mode was "MOUNTED", then check that the shard has been correctly converted from a shard seed. If the shard was already a converted primary shard, then open it in the correct mode and rerun "deploy" from GDSCTL.

OCI-45574: shard has role *string*, it should be PRIMARY

Cause: The shard did not have the correct role for Oracle Data Guard broker setup.

Action: Ensure the shard is placed in a shardgroup that will automatically assign the correct role to it.

OCI-45575: Deployment has terminated due to previous errors.

Cause: Due to previous errors deployment could not continue.

Action: Resolve the issues described in all of the displayed errors and rerun "deploy" from GDSCTL.

OCI-45576: Shard *string* requires conversion from seed, but the remote scheduler is not configured.

Cause: The remote scheduler agent is required to convert the shard from a seed, but it has not been configured.

Action: Configure the remote scheduler and rerun "\deploy" from GDSCTL.

OCI-45577: cannot convert standby shards to primary shard *string* because the DBID is unknown

Cause: A primary shard was added to the catalog but the DBID was not discovered, and none of the standby shards could be converted.

Action: Remove the primary shard from the catalog and re-add it so that the database identifier (DBID) can be discovered.

OCI-45578: No credential for scheduler jobs.

Cause: Credential could not be created or retrieved.

Action: Specify -osaccount and -ospassword in "add shard", or use "add credential" command to add credential.

OCI-45579: There are converted physical standby shards for intended primary seed shard *string*.

Cause: The primary shard was still an unconverted seed, but it had converted standby shards. Standby shards cannot be converted before their primary shard.

Action: Either remove the converted standby shards or remove the primary shard, convert it manually, and re-add it.

OCI-45580: invalid value specified for input parameter *string*

Cause: The specified parameter was set to an invalid value.

Action: Verify the parameter value and retry operation.

OCI-45581: cannot mix sharded and non-sharded pools in the same catalog

Cause: An attempt was made to create a sharded and a non-sharded database pool in the same catalog.

Action: Create a separate catalog for each database pool type.

OCI-45582: The chunk *string* was not found or has been moved to another shard.

Cause: The client application specified a chunk name associated with the current user call that was not found on the current shard.

Action: Invalidate the connection pool routing table for this shard.

OCI-45583: chunk *string* does not contain the specified key

Cause: The chunk, specified by the client application, was split or never contained the specified key.

Action: Invalidate the pool routing table for the given chunk. The client should ask the listener to route to the specified key.

OCI-45584: The shard object to be removed does not exist.

Cause: The shardspace or shardgroup that you intended to remove did not exist in catalog.

Action: Do not attempt to remove the shard object again.

OCI-45585: Chunk move failure: target shard is unavailable: "*string*"

Cause: The chunk move failed. The source shard could not connect to the target.

Action: Check the availability of the target shard and network configuration.

OCI-45586: Chunk move failure: target shard is in invalid state: "*string*".

Cause: The chunk move failed. The target shard was improperly configured.

Action: Call the GDSCCTL VALIDATE command for more details.

OCI-45587: Chunk move failure: target standby is unavailable; connection string: "*string*"

Cause: The chunk move failed. The source shard could not connect to the target standby shard.

Action: Check the availability of the target standby shard and broker configuration.

OCI-45588: Chunk move failure: unable to read tablespace information "*string*"

Cause: Shard metadata inconsistency was detected.

Action: Call the GDSCCTL VALIDATE SHARD command for more details.

OCI-45589: Chunk move failure: DB_FILE_CREATE_DEST value is not valid

Cause: Shard configuration inconsistency was detected.

Action: Set the DB_FILE_CREATE_DEST initialization parameter to a valid existing folder.

OCI-45590: Chunk move failure: backup cannot be created for tablespace "*string*"

Cause: Shard configuration inconsistency was detected.

Action: Set the DB_FILE_CREATE_DEST initialization parameter to a valid existing folder.

OCI-45591: Chunk move failure: data file copy error. Destination: "string"

Cause: There was a database management system (DBMS) file transfer error.

Action: Check the alert log for details.

OCI-45592: Chunk move failure: RPC error on: "string"

Cause: There was a database management system (DBMS) file transfer error.

Action: Check the alert log for details.

OCI-45593: Chunk move failure: file delete error on source shard

Cause: The backup file could not be deleted from the file system.

Action: Check the operating system log for details.

OCI-45594: Chunk move failure: cannot put chunk into read-only state

Cause: There was an internal error which prevented a chunk state change.

Action: Check the alert log for details.

OCI-45595: Chunk move failure: export metadata error

Cause: There was an internal error which prevented the metadata export.

Action: Check the alert log for details.

OCI-45596: cannot remove region because it contains a shardgroup

Cause: The region was not empty because it contained at least one shardgroup.

Action: Remove all shardgroups from the region and retry the operation.

OCI-45598: Shard *string* is in converted state *string*, it should be either "PRIMARY" or "PHYSICAL STANDBY".

Cause: The shard was in an invalid or unsupported state for use with sharding.

Action: Rebuild the shard using Oracle Database Configuration Assistant (DBCA) or reapply an RMAN backup to bring the shard to a supported state.

OCI-45599: Shard *string* is in converted state *string*, but does not have a valid DBID.

Cause: The discovered database identifier (DBID) for the shard was invalid, but the shard was already converted from a shard seed.

Action: Check the DBID for the shard and report this issue to Oracle Support Services.

OCI-45600: Transparent Sensitive Data Protection (TSDP) feature internal error.

Cause: There was an unexpected error during the TSDP operation.

Action: Retry the operation. If this error persists, contact Oracle Support.

OCI-45601: Invalid data has been found and discarded. Valid data has been imported.

Cause: The names of invalid or nonexistent database objects were found during import of discovery result in XML format.

Action: Check the trace files for the names of the invalid objects found during import of discovery result in XML format.

OCI-45602: Schema *string* does not exist.

Cause: The schema specified using the procedure
DBMS_TSDP_MANAGE.ADD_SENSITIVE_COLUMN did not exist.

Action: Specify a valid schema in the procedure
DBMS_TSDP_MANAGE.ADD_SENSITIVE_COLUMN.

OCI-45603: Table *string.string* does not exist.

Cause: The table specified using the DBMS_TSDP_MANAGE.ADD_SENSITIVE_COLUMN procedure did not exist.

Action: Specify a valid table in the DBMS_TSDP_MANAGE.ADD_SENSITIVE_COLUMN procedure.

OCI-45604: Column *string.string* does not exist in schema *string*.

Cause: The column specified using the
DBMS_TSDP_MANAGE.ADD_SENSITIVE_COLUMN PL/SQL procedure did not exist.

Action: Specify a valid column in the DBMS_TSDP_MANAGE.ADD_SENSITIVE_COLUMN PL/SQL procedure.

OCI-45605: An invalid sensitive type *string* was provided.

Cause: The sensitive type specified did not exist.

Action: Ensure that a valid sensitive type is specified.

OCI-45606: There was no sensitive column matching the given criteria.

Cause: There was no sensitive column matching the schema, table or column name provided in the DBMS_TSDP_PROTECT.ENABLE_PROTECTION_COLUMN procedure.

Action: Ensure that the schema, table or column name in the
DBMS_TSDP_PROTECT.ENABLE_PROTECTION_COLUMN procedure is valid.

OCI-45607: Column *string.string* in schema *string* has already been identified as sensitive.

Cause: The column was already identified as sensitive.

Action: Drop the sensitive column using the
DBMS_TSDP_MANAGE.DROP_SENSITIVE_COLUMN procedure and retry the operation.

OCI-45608: There are no sensitive columns associated with source *string*.

Cause: No sensitive columns were associated with the specified source.

Action: Specify a valid source.

OCI-45609: Sensitive type *string* already exists.

Cause: The sensitive type specified using the
DBMS_TSDP_MANAGE.ADD_SENSITIVE_TYPE PL/SQL procedure already existed in the database.

Action: Specify a different name for the sensitive type in the
DBMS_TSDP_MANAGE.ADD_SENSITIVE_TYPE PL/SQL procedure and retry the operation.

OCI-45610: Sensitive type *string* does not exist.

Cause: The specified sensitive type did not exist in the database.

Action: Specify a valid sensitive type.

OCI-45611: cannot drop sensitive type *string*

Cause: The sensitive type that was associated with one or more columns could not be dropped.

Action: Ensure the sensitive type is not associated with any column before dropping it.

OCI-45612: A Transparent Sensitive Data Protection (TSDP) policy with the name *string* already exists.

Cause: A TSDP policy with the same name was found in the database.

Action: Specify a different name for the TSDP policy.

OCI-45613: Invalid Transparent Sensitive Data Protection (TSDP) security feature

Cause: The security feature specified was not supported by TSDP.

Action: Specify a valid TSDP security feature.

OCI-45614: invalid Transparent Sensitive Data Protection (TSDP) policy *string*

Cause: The specified TSDP policy did not exist.

Action: Specify a valid TSDP policy.

OCI-45615: One or more sensitive column types already exist in the database.

Cause: Importing the list of sensitive columns using DBMS_TSDP_MANAGE succeeded. However, one or more sensitive column types already exists in the database. That column was not imported again.

Action: Check the trace files for more details regarding which sensitive column types were not imported. Ignore if the sensitive column types are already present in the DBA_SENSITIVE_COLUMN_TYPES data dictionary view.

OCI-45616: Column *string.string* in schema *string* is not identified as sensitive.

Cause: An attempt was made to alter a column that was not identified as sensitive using the DBMS_TSDP.ALTER_SENSITIVE_COLUMN PL/SQL procedure.

Action: Specify a valid sensitive column when executing the DBMS_TSDP.ALTER_SENSITIVE_COLUMN procedure to alter the sensitive column type and/or its comment.

OCI-45617: Policy *string* is not associated with sensitive column type *string*.

Cause: The given policy was not associated with the given sensitive column type while executing the DBMS_TSDP_PROTECT procedures.

Action: Specify the valid combination of policy and sensitive column type.

OCI-45618: Failed to enable a policy on one or more columns.

Cause: Failed attempt to enable policy on one or more columns during DBMS_TSDP_PROTECT.ENABLE_PROTECTION procedures.

Action: Check the alert log or trace files for more details.

OCI-45619: Policy *string* is not enabled on column *string*.

Cause: The given policy was not enabled on the column.

Action: Specify a valid policy.

OCI-45620: Policy *string* is already associated with sensitive column type *string*.

Cause: The given policy was associated with the given sensitive column type.

Action: Specify the valid combination of policy and sensitive column type.

OCI-45621: Disabling of a policy on one or more columns failed.

Cause: Errors were encountered while disabling policy on one or more columns during the execution of the DBMS_TSDP_PROTECT.DISABLE_PROTECTION procedure.

Action: Check the alert log or trace files for more details.

OCI-45622: Warnings have been generated during the policy enforcement.

Cause: The cause of this error could be one or more of the following: - The policy that was associated with the sensitive column type of a sensitive column was not enabled on the column because no sub-policy matched the column properties. - There was no policy associated with the sensitive column type of a sensitive column. - A conflicting redaction policy was enabled on the table.

Action: Check the alert log or trace files for more details.

OCI-45623: Disabling protection failed during import of sensitive columns.

Cause: Importing the list of sensitive columns failed because there was a problem in disabling protection on the columns.

Action: Check the alert log or trace files for more details.

OCI-45624: reenabling protection failed before import

Cause: Importing the list of sensitive columns failed because there was a problem in disabling protection on the columns. A subsequent attempt to reenabling protection on the columns also failed.

Action: Check the alert log for more details.

OCI-45625: reenabling protection failed after import

Cause: Importing the list of sensitive columns succeeded. A subsequent attempt to reenabling protection on the columns failed.

Action: Check the alert log for more details.

OCI-45626: Dropping of one or more columns from the sensitive column list failed.

Cause: Disabling protection on the column failed.

Action: Check the trace files for more details.

OCI-45627: There is no associated sensitive column(s) of sensitive column type *string*.

Cause: DBMS_TSDP_PROTECT.ENABLE_PROTECTION PL/SQL API executed prior to associating sensitive columns to the sensitive column type.

Action: Specify a valid sensitive column for the sensitive column type using DBMS_TSDP_PROTECT.ASSOCIATE_POLICY PL/SQL API.

OCI-45628: No policy is associated with sensitive column type *string*.

Cause: There was no policy that was associated with the sensitive column type.

Action: Associate policy with a valid sensitive column type using DBMS_TSDP_PROTECT.ASSOCIATE_POLICY procedure.

OCI-45629: Policy *string* is enabled on one or more columns.

Cause: A transparent sensitive data protection (TSDP) policy that was enabled on a column could not be altered or dropped.

Action: Disable the TSDP policy and retry the operation.

OCI-45630: Policy *string* is associated with one or more sensitive types.

Cause: A transparent sensitive data protection policy that was associated with a sensitive column type could not be dropped.

Action: Disassociate the policy from the sensitive column type and retry the operation.

OCI-45631: Policy *string* does not have the given condition.

Cause: The given condition was not defined for the transparent sensitive data protection (TSDP) policy.

Action: Specify the valid condition for the TSDP policy.

OCI-45632: The default policy *string* cannot be altered.

Cause: The default policy for Transparent Sensitive Data Protection could not be altered.

Action: Specify the valid policy to be altered.

OCI-45633: The default policy *string* cannot be dropped.

Cause: The default policy for Transparent Sensitive Data Protection could not be dropped.

Action: Specify the valid policy to be dropped.

OCI-45634: The security feature does not contain parameter *string*.

Cause: An invalid parameter was found for the given security feature.

Action: Enter valid parameters for the security feature.

OCI-45635: An invalid parameter *string* has been found.

Cause: An invalid parameter was found for the given security feature.

Action: Enter valid parameters for the security feature. *Params: 1) parameter_name: An invalid parameter name was supplied during policy creation.

OCI-45636: Input parameter for '*string*' is not valid.

Cause: Invalid input was given for the parameter.

Action: Enter valid input for the parameter.

OCI-45637: An invalid condition was given for the policy condition.

Cause: The given condition was invalid.

Action: Enter a valid value for the condition.

OCI-45638: Policy *string* is enabled on one or more columns of sensitive type *string*.

Cause: A Transparent Sensitive Data Protection policy that was enabled on one or more columns of a particular sensitive type could not be disassociated from the sensitive type.

Action: Ensure the policy is not enabled on a column of the given sensitive type.

OCI-45639: The discovery result cannot be imported.

Cause: One or more columns from the XML input were already identified as sensitive by a different source.

Action: Check the trace file for a list of sensitive columns that were already identified as sensitive.

OCI-45640: Columns on SYS-owned table cannot be marked as sensitive.

Cause: A column in a SYS owned table was being marked as sensitive using DBMS_TSDP_MANAGE procedure.

Action: Ensure the column being marked as sensitive does not belong to a SYS-owned table.

OCI-45641: The SEC_RELEVANT_COLS parameter cannot be specified in TSDP policy.

Cause: The SEC_RELEVANT_COLS parameter was specified while configuring a Transparent Sensitive Data Protection (TSDP) policy. SEC_RELEVANT_COLS_OPT parameter can be specified to indicate that TSDP should input the sensitive column as input to the SEC_RELEVANT_COLS parameter when enabling protection.

Action: Use the SEC_RELEVANT_COLS_OPT parameter to configure the security relevant column.

OCI-45642: transparent sensitive data protection (TSDP) operation not supported

Cause: An attempt was made to perform the TSDP operation from inside the application install or patch begin-end block.

Action: Perform the TSDP operation outside the application install or patch begin-end block.

OCI-45643: The specified column "*string*" cannot be marked as sensitive.

Cause: An attempt was made to mark the virtual or hidden column as sensitive using the DBMS_TSDP_MANAGE procedure.

Action: Remove the virtual or hidden column and then retry the operation. *Params: 1) column_name: The column name being marked as sensitive.

OCI-45900: data file number *string* already included as *string*

Cause: RMAN attempted to use the specified data file number, but this data file number was already in use by a different container database.

Action: Resolve the conflict and retry the command.

OCI-45901: File *string* is from different container identifier *string*; current *string*

Cause: This backup piece contained a data file that did not belong to the current container. Cataloging such a backup piece is not allowed.

Action: Connect to root or to the correct Pluggable Database and retry the command.

OCI-45902: cannot rename data file '*string*' - file was instantly restored.

Cause: During ALTER DATABASE RENAME or RMAN command SWITCH, the rename was specified for an instantly restored file.

Action: Rename the file that was not instantly restored or wait until the repopulation work is complete and the retry the command.

OCI-45903: catalog instantly restored data file copy *string* is not supported

Cause: This data file copy was instantly restored. Cataloging such a file is not supported.

Action: Do not request to catalog an instantly restored data file copy. *Params: 1) data_file: The target data file instantly restored.

OCI-45904: instant restore of data file copy *string* is not supported

Cause: An attempt was made to restore a data file copy in instant restore mode. This is not supported.

Action: Do not restore a data file copy in instant restore mode. *Params: 1) data_file: The target data file name.

OCI-45905: deleting or restoring instantly restored data file *string* is not supported

Cause: This data file was instantly restored with the full option. A background process was repopulating the data file. An attempt to take the data file out of the process failed. Deleting or restoring such files is not supported.

Action: Retry the command later. *Params: 1) data_file: The data file restored instantly.

OCI-45906: moving instantly restored data file *string* is not supported

Cause: This data file was instantly restored. Moving such file is not supported.

Action: Do not request to move instantly restored data file.

OCI-45907: instant restore of data file *string* failed

Cause: During an instant restore, it was not possible to initialize the destination data file. A possible cause for this message is that the instant restore feature is disabled in this database.

Action: Check the other messages in the error stack, alert log, or trace file to see if there is a specific reason for this failure. If the situation cannot be resolved, then request a regular (not instant) restore.

OCI-45908: cannot create a control file record for data file number *string*

Cause: This data file was instantly restored. An attempt was made to create a record in the control file for the data file. Unless the database is mounted, this command cannot be completed.

Action: Mount the database and retry the command.

OCI-45909: Restore, recover or block media recovery may be in progress.

Cause: A backup or copy was attempted while restore, recover or block media recovery was in progress. This error should be preceded by another error indicating a file access enqueue problem for a file specified in a backup, copy or restore operation.

Action: Restore, recover or block media recovery should not be in progress during backup or copy operation.

OCI-45910: cannot look up the rewrapped key for tablespace *string*

Cause: During transport, an encrypted tablespace could not find its rewrapped key as part of a Recovery Manager (RMAN) cross-platform command.

Action: Connect to the respective pluggable database and check if the master table is created.

OCI-45911: cannot restore as encrypted/decrypted on database with compatibility below 12.2

Cause: Restore with encryption and decryption is only supported on 12.2 compatible databases and above.

Action: Upgrade database or restore without encryption/decryption.

OCI-45912: cannot restore as encrypted or decrypted from backup piece with pre-12.2 compatibility

Cause: An attempt to restore with encryption or decryption failed because backups must be Oracle Database 12c Release 2 compatible.

Action: Create a backup of the Oracle Database 12c Release 2 database or restore without encryption or decryption.

OCI-45913: cannot backup data file *string* because it belongs to a dropped pluggable database

Cause: The indicated file was not included in the backup because it belonged to a pluggable database (PDB) that was dropped.

Action: Do not backup files in PDBs that are dropped. *Params: 1) data_file: The full path name of the data file.

OCI-45914: cannot backup a mounted control file of type backup

Cause: An attempt was made to backup a control file when the mounted control file at that time was a backup control file. This is not allowed.

Action: Mount a current control file and retry the operation.

OCI-45915: physical block size *string* does not match logical block size *string*

Cause: The physical block size and logical block size of the backup piece did not match.

Action: Ensure that the physical block size size and logical block size match before copying the backup piece.

OCI-45916: must use backup control file that has dropped PDB with GUID *string*

Cause: Some restored files belonged to the dropped pluggable database (PDB) with respect to the current control file.

Action: Restore and mount a backup control file that has the dropped PDB.

OCI-45917: nonexistent backup piece or data file "*string*" in the current container

Cause: An attempt was made to access a backup piece or data file. This attempt failed because the specified file is not known to the current container.

Action: Specify the name of an existing file that can be accessed by the current container. Check the relevant V\$ table for a list of possible files.

OCI-45918: data file *string* is offline: incremental start SCN is too recent

Cause: The incremental start system change number (SCN) which was specified when starting an incremental data file backup was greater than the data file checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental start SCN.

OCI-45919: no key present in wallet

Cause: An attempt was made to restore a backup as encrypted. This attempt failed because the current wallet did not contain an encryption key with which to encrypt the data.

Action: Create an encryption key in the wallet and retry the command.

OCI-45920: multiple keys present in wallet

Cause: An attempt was made to restore a backup as encrypted. This attempt failed because the current wallet contained more than one encryption key.

Action: Specify with which key to encrypt by using the USING KEY clause of RESTORE AS ENCRYPT.

OCI-45922: backup operation interrupted by restoration or recovery of file *string*

Cause: A restoration, recovery, or block media recovery interrupted a backup or copy in progress. This error indicates that restoration or recovery of file is given preference over the backup operation.

Action: Let restoration, recovery, or block media recovery finish before starting a backup or copy operation.

OCI-45923: Archived log thread *string* sequence *string* does not exist.

Cause: An attempt was made to access the indicated archived log. This attempt failed because the specified file is not known to the backup step.

Action: Specify the name of an existing file that can be accessed by the database.

OCI-45924: Multi-section archived log backup requires COMPATIBLE *string* or higher.

Cause: An attempt was made to perform a multi-section archived log backup with a database compatibility that was not high enough.

Action: Raise the compatibility level and retry the operation.

OCI-45925: cannot obtain *string* enqueue for archived log thread *string* sequence *string*

Cause: The file access enqueue could not be obtained for a file specified in a backup, copy or restore operation.

Action: Wait until the conflicting operation is complete, then retry the copy or backup.

OCI-45926: failed to generate RMAN backup encryption key: *string*

Cause: RMAN failed to generate a typed key for backup encryption. Error code definitions as follows: 2 : key buffer is too small 5 : invalid owner type 7 : cannot find specified encryption key 9 : master key revoked or disabled

Action: Resolve the error or contact Oracle Support Services.

OCI-45927: PDB *number* with GUID *string* now has ID *number* and GUID *string*. RMAN cannot backup file *string* due to PDB change.

Cause: The indicated pluggable database (PDB) has changed since the start of the backup operation. RMAN can no longer back up the files associated with the PDB.

Action: Restart the backup.

OCI-45928: SBT library callback invalid function value *string*

Cause: An unrecognized function code is being supplied from the System Backup Tape (SBT) library.

Action: The SBT library determines whether this is a fatal error. If this is a fatal error, the SBT reports the error with more detail.

OCI-45929: SBT library callback invalid function version *string*

Cause: An unrecognized function version is being supplied from the System Backup Tape (SBT) library.

Action: The SBT library determines whether this is a fatal error. If this is a fatal error, the SBT reports the error with more detail.

OCI-45930: SBT library generic callback invalid function value *string*

Cause: An unrecognized function code is being supplied from the System Backup Tape (SBT) library.

Action: The SBT library determines whether this is a fatal error. If this is a fatal error, the SBT reports the error with more detail.

OCI-46000 to OCI-46988

OCI-46000: invalid option to apply XS Data Security

Cause: The input value was not a valid option to apply XS Data Security.

Action: Use a valid option to apply XS Data Security.

OCI-46001: The object type for "string" is not valid for RAS policies.

Cause: A Real Application Security (RAS) policy can only be applied to tables and views. The specified object type was not a table or view.

Action: Specify an object whose type is either a table or view. *Params: 1) subject_name: The name of the subject.

OCI-46003: An invalid column "string" was specified as part of RAS policy for "string" object.

Cause: An invalid column was specified as part of the Real Application Security (RAS) policy for this object. The column name must be a valid column name for the object.

Action: Review the definition of the object and use the correct column name in the policy. *Params: 1) column_name: The name of the invalid column. 2) object_name: The name of the database object for which the invalid column was specified.

OCI-46004: A RAS policy is not enabled on string.string.

Cause: An attempt was made to disable the Real Application Security (RAS) policy on an object (table or view) that did not have an enabled RAS policy.

Action: Review your requirement to see if a RAS policy must be disabled on a different object instead. *Params: 1) schema_name: The name of the schema that owns the object. 2) object_name: The name of the object (table or view) where an XS Data Security policy is enabled.

OCI-46005: Cannot disable RAS policy since there are multiple policies enabled on string.string.

Cause: An attempt was made to disable an Oracle Real Application Security (RAS) policy associated with an object while the object had more than one policy enabled. When more than one RAS policy is enabled on an object, the specific policy name must be included when disabling a policy on the object.

Action: Specify a policy name associated with the object to disable the policy. *Params: 1) schema_name: The name of the schema that owns the object. 2) object_name: The name of the object where the policies are enabled.

OCI-46006: cannot mix VPD column policy and Oracle RAS column constraint policy

Cause: The object was protected by both Virtual Private Database (VPD) column security policy and Oracle Database Real Application Security (Oracle RAS) column constraint policy which is not allowed.

Action: Disable or drop either the VPD column security policy or the Oracle RAS column policy.

OCI-46007: No RAS security policy is associated with database object *string.string*.

Cause: The specified table was not associated with any Oracle Database Real Application Security (RAS) security policy.

Action: Review the RAS dictionary view DBA_XS_POLICIES to find existing associations of RAS policies and database objects. Then, rerun the command with a valid database object with a RAS policy. *Params: 1) schema_name: The schema name of the table. 2) table_name: The name of the table.

OCI-46008: There are multiple RAS policies associated with *string.string*.

Cause: An attempt was made to drop a Real Application Security (RAS) policy on an object while the object had more than one enabled RAS policy.

Action: Ensure that you are dropping the RAS policy on the correct object. If you have the correct object, you need to specify the RAS policy name that you want to drop. *Params: 1) schema_name: The name of the schema that owns the object. 2) object_name: The name of the object where security policies are associated.

OCI-46019: User-built Static ACL Materialized View does not exist

Cause: A non-existing user-built Static ACL Materialized View was specified

Action: Create a user-built Static ACL Materialized View with the specified name or use system-built Static ACL views

OCI-46020: User-built Static ACL Materialized View has invalid schema

Cause: A user-built Static ACL Materialized View was specified but with an incorrect schema

Action: Create a user-built Static ACL Materialized View with at least the required columns with correct names and types

OCI-46021: Invalid refresh mode specified for Static ACL Materialized View

Cause: The refresh mode specified for the Materialized View supporting static ACLs is invalid.

Action: Specify either "ON DEMAND" or "ON COMMIT" for parameter refresh_mode

OCI-46022: An invalid name was specified for the static access control list (ACL) materialized view.

Cause: The name specified for the static ACL Materialized View (ACLMV) was reserved for system-provided ACLMVs.

Action: Rename the static ACL Materialized View to use a non-reserved name.

OCI-46023: The RAS security context changed since the cursor was parsed.

Cause: The Oracle Database Real Application Security (RAS) security context was changed after the cursor was parsed due to application roles being enabled or disabled, or the RAS user being dropped.

Action: Ensure that RAS security context remains unchanged after the cursor is parsed. Do not drop the application user, and do not enable or disable application roles in the current RAS session after the cursor is parsed.

OCI-46024: The policy schema differs from the object schema for Static ACL Materialized View based XDS policy.

Cause: The specified object schema was different from the policy schema.

Action: Make sure the object and the policy have the same schema.

OCI-46025: no static rule specified in applied policy

Cause: The policy applied on the table did not contain any static rules.

Action: Ensure the applied policy has at least one static rule.

OCI-46026: A static RAS ACL materialized view creation failed.

Cause: Creation of the Real Application Security (RAS) static access control list (ACL) materialized view failed.

Action: Review the RAS documentation for more information about using materialized views. Check the trace file for detailed error information.

OCI-46050: Oracle Database Real Application Security internal error

Cause: There was an Oracle Database Real Application Security internal error.

Action: This is an internal error and should not be generally visible to the applications. Contact Oracle Support with the relevant trace files.

OCI-46051: The RAS application user name was invalid or missing.

Cause: The Oracle Database Real Application Security (RAS) user name was missing or invalid. This indicates that the RAS user name was not in the RAS dictionary.

Action: Check for the correct spelling of the RAS user name and call the function or procedure again with the corrected application user name.

OCI-46052: An invalid RAS session ID was specified.

Cause: An invalid Real Application Security (RAS) session ID was specified.

Action: Check the RAS session ID and call the function or procedure again with a valid session ID.

OCI-46053: A valid RAS cookie was not specified.

Cause: The function or procedure must use a valid Real Application Security (RAS) cookie name.

Action: Call the function or execute the procedure with a valid cookie name.

OCI-46054: An invalid RAS namespace was specified.

Cause: An invalid Real Application Security (RAS) application namespace or predefined namespace was specified. Valid RAS namespaces can be found in the DBA_XS_NS_TEMPLATES database view. User operations are not allowed on the predefined namespace. Predefined namespaces are in the RAS documentation.

Action: Check the database view for valid namespaces and call the function or procedure again with a valid namespace. Ensure that the specified namespace is not a predefined namespace.

OCI-46055: An invalid RAS application role name was specified.

Cause: An invalid application role was specified in the Oracle Database Real Application Security (RAS) function or procedure.

Action: Check the role name and call the function or procedure again with a valid application role. Valid application role names can be found in the DBA_XS_ROLES and DBA_XS_DYNAMIC_ROLES views.

OCI-46056: invalid namespace or attribute specified

Cause: An invalid XS Security application namespace or attribute was specified.

Action: Check the namespace and attribute, and call the function or procedure again.

OCI-46057: The RAS namespace already exists.

Cause: Real Application Security (RAS) namespaces must be unique. An attempt was made to create a RAS namespace using the same name as an existing RAS namespace.

Action: Create the RAS namespace with a unique name.

OCI-46058: An invalid RAS namespace attribute *string* was specified.

Cause: An invalid Real Application Security (RAS) namespace attribute was specified. The list of valid namespace attributes can be found in the DBA_XS_NS_TEMPLATE_ATTRIBUTES database view.

Action: Check the attribute and call the function or procedure again with a valid RAS namespace attribute. *Params: 1) attribute_name: The name of the invalid attribute in the namespace.

OCI-46059: Invalid ACL identifier specified

Cause: The specified ACL identifier is invalid.

Action: Check the ACL identifier, and execute the function or procedure again with a valid ACL ID.

OCI-46060: A valid RAS application user name was not specified.

Cause: A valid Real Application Security (RAS) application user was not specified for this operation. Review the DBA_XS_USERS database view for valid RAS application users.

Action: Call the function or execute the procedure with a valid RAS application user name.

OCI-46061: The RAS session ID was not specified in the procedure.

Cause: The Oracle Real Application Security (RAS) XS session ID was not specified when the procedure was called.

Action: Review the RAS documentation in the topic for session management. Review the procedures to manage sessions and update the procedure with a valid RAS session ID.

OCI-46062: A valid RAS namespace was not specified in the procedure.

Cause: A valid Oracle Real Application Security (RAS) XS application namespace was not specified when the procedure was called.

Action: Review the RAS documentation in the topic for session management. Review the procedures to manage namespaces and attributes. Update the procedure with a valid application namespace and call the procedure again.

OCI-46063: A RAS session was not attached to the database session.

Cause: A procedure or function was called when Oracle Real Application Security (RAS) XS session was not attached to the database session.

Action: Review the RAS documentation on attaching and detaching a RAS session. Update the code to attach to a RAS session before you call the function or execute the procedure.

OCI-46064: RAS attribute name was not specified in the procedure.

Cause: The Oracle Real Application Security (RAS) XS Security application namespace attribute name was not specified when the procedure was called.

Action: Review the RAS documentation in the topic for session management. Review the procedure to get, set, or delete an attribute.

OCI-46065: attribute value not specified

Cause: XS Security application namespace attribute value was not specified.

Action: Execute the function or procedure with an attribute value.

OCI-46066: inactivity timeout not specified

Cause: XS Security session inactivity timeout was not specified.

Action: Call the function or procedure with an inactivity timeout value.

OCI-46067: A valid RAS cookie was not specified.

Cause: The function or procedure did not use a valid Real Application Security (RAS) cookie name.

Action: Call the function or execute the procedure with a valid cookie name.

OCI-46068: The RAS application role was not specified.

Cause: The Oracle Database Real Application Security (RAS or XS) application role name was not specified with the middle-tier application or procedure that tried to enable or disable it.

Action: Supply a valid application role name with the middle-tier application or procedure to enable or disable it. RAS application roles can be queried from the `DBA_XS_ROLES` and `DBA_XS_DYNAMIC_ROLES` data dictionary views.

OCI-46069: operation disallowed in an application session

Cause: Operations were blocked while an application was attached. The following are the common cases: - An attempt was made to enable or disable database roles (through the 'set role' statement) in an application session. - An attempt was made to destroy a direct logon Oracle Real Application Security (RAS) session while the session was active. - An attempt was made to destroy a regular RAS session while the session was attached. - An attempt was made to perform certain session operations (for example, `ATTACH_SESSION`, `DETACH_SESSION`, `DESTROY_SESSION`, `ASSIGN_USER`, `SWITCH_USER`, `ENABLE_ROLE`, `DISABLE_ROLE`) in the 'parse as user' statement while currently attached to a RAS session. - An attempt was made to change the password for an external RAS user.

Action: Do not attempt to execute the `SET ROLE` statement while attached to an application session. Do not attempt to change the password for an external RAS user. Try using the `FORCE` option when attempting to destroy an application session. Or, detach the application session first, then try the operation again.

OCI-46070: insufficient privileges

Cause: An attempt was made to execute an XS Security session, function, or procedure without the appropriate privileges.

Action: Ask the administrator to perform the operation or to grant the appropriate privileges.

OCI-46071: An error was returned by the RAS event handler *string*.

Cause: An error or exception was returned by the Oracle Real Application Security (RAS) error handling function during the current operation.

Action: Check the trace files to identify and resolve the error. Since changes made in this session may not have been recorded correctly, detach the session and roll back any changes made in the session using DETACH_SESSION (TRUE). Attempt the operation again after the error has been resolved. *Params: 1) event_name: The name of the event handler function.

OCI-46072: The variable *string* size *string* is smaller than the required variable size *string*.

Cause: The size of the output variable of this function or procedure was too small. The variable must meet the minimum variable size.

Action: Increase the variable size and retry the operation. *Params: 1) variable_name: The name of an output variable. 2) variable_size: The size of the output variable. 3) required_size: The required size of the output variable.

OCI-46073: cookie already in use by another session

Cause: The specified session cookie name was in use by another Oracle Real Application Security (RAS) session.

Action: Choose a unique name when creating an application session with a cookie or when setting a cookie for the specified application session.

OCI-46074: session ID mismatch

Cause: The specified session ID does not match the attached session ID.

Action: Execute the function or procedure without a session ID or with a matching attached session.

OCI-46075: already attached to an application user session

Cause: The current database session is already attached to an application user session.

Action: Detach from the current application user session before attaching to the new application user session.

OCI-46076: The specified name length is not within the valid range.

Cause: The length of the name was shorter or longer than the allowed limits.

Action: Try again with a new name that has a length within the allowed limits.

OCI-46077: argument value too long

Cause: The specified argument value was too long.

Action: Process the function or procedure with a shorter argument value.

OCI-46078: An invalid RAS event type was specified.

Cause: The event type specified was not valid for Oracle Real Application Security (RAS). The list of valid event types can be found in the description for relevant procedures (for example, DBMS_XS_SESSIONS subprogram ADD_GLOBAL_CALLBACK) in the RAS documentation.

Action: Review the RAS documentation for valid values for the event_type parameter and select a valid event_type value. Retry the operation with a valid event_type value.

OCI-46079: unable to complete the operation with the specified external principal name "string"

Cause: The specified external principal name was either the same as an existing Oracle Real Application Security (RAS) principal, or the principal name was still cached in the database shared pool.

Action: To use this external principal name, drop the RAS principal with the same name and try again. If the same error occurs again, you must flush the database shared pool using the ALTER SYSTEM FLUSH SHARED_POOL statement. Another option is to specify another external principal and retry the operation.

OCI-46080: User status is currently inactive.

Cause: The user was marked inactive.

Action: Change the status of the user in the enterprise directory to active and retry.

OCI-46081: User's password has expired

Cause: User password was expired.

Action: Change the user's password and update status to active.

OCI-46082: User's account was locked

Cause: The user's account is locked.

Action: Update user's status to Active in Enterprise Directory and try again.

OCI-46083: Cannot update the GUID of the principal

Cause: The GUID of the principal existed or the external source was not set.

Action: None

OCI-46084: You cannot update or delete Oracle reserved RAS or XS objects.

Cause: An attempt was made to update or delete reserved Oracle Real Application Security (RAS or XS) objects.

Action: Do not attempt to update or delete reserved Oracle Real Application Security (XS) objects.

OCI-46085: Cannot add a proxy user when there was no proxy roles.

Cause: An attempt was made to add a proxy user to a target user when proxy roles did not exist.

Action: Verify the proxy roles and try again.

OCI-46086: cannot detach from a direct-login XS session

Cause: An attempt was made to detach from an XS session created by a direct password login.

Action: Log out of the database session to detach and destroy the XS session.

OCI-46087: switching users not allowed for a proxy session

Cause: An attempt was made to switch users within a proxy session.

Action: Switch back to the original user and try again.

OCI-46088: operation disallowed in application session

Cause: The specified operation was not allowed in an application session.

Action: Do not attempt disallowed operations, such as: - Create a session in trusted mode with a regular Oracle Database Real Application Security (RAS) user. - Create a regular RAS user session with external roles. - Switch user when the session was created with an external principal. - Enable or disable roles when the session is created with an external principal.

OCI-46089: unsupported verifier type

Cause: An unsupported verifier type was provided.

Action: Call the function or procedure again with a different verifier type.

OCI-46090: The requested RAS event handler is not registered for the event.

Cause: An attempt was made to update or delete an Oracle Real Application Security (RAS) event handler that was not registered for the event.

Action: Review the associated packages to identify the correct RAS event handler name and retry.

OCI-46091: requested event handler already registered for the event

Cause: An attempt was made to re-register an event handler.

Action: Verify the event handler name and retry the operation.

OCI-46092: The requested RAS event handler does not exist.

Cause: An attempt was made to register a nonexistent Oracle Real Application Security (RAS) event handler.

Action: Verify the correct spelling of the RAS event handler name or create the event handler first and retry.

OCI-46093: cannot destroy a direct login XS session

Cause: An attempt was made to destroy an XS session that was created by a direct login user.

Action: Logout of the database session to destroy the XS session.

OCI-46094: The RAS user is not within the effective start and end dates.

Cause: An attempt was made to create an Oracle Database Real Application Security (RAS or XS) session before the effective start date or after the effective end date for the RAS user.

Action: Contact the database administrator to check and possibly adjust the effective start or end dates for the RAS user. If the dates are correct and cannot be changed, then the RAS user is not authorized to connect to the database.

OCI-46095: invalid error code supplied

Cause: An error code with an invalid value was supplied.

Action: Use an error code from the range of valid values.

OCI-46096: An attribute in a namespace cannot have both a default value and the first read event set.

Cause: Both a default value and the first read event were specified in the namespace template.

Action: Specify either a default value or the first read event for the attribute in the namespace, but not both.

OCI-46097: The *string* did not exist in the *string*.

Cause: An attempt was made to delete an XS artifact which was not in existence within the scope.

Action: Check if the XS artifact was created or referenced within the scope.

OCI-46098: The *string* already exists in the *string*.

Cause: An attempt was made to create or refer to an XS artifact which was already in existence within the scope.

Action: Check if the XS artifact name is unique within the scope.

OCI-46099: feature unsupported or not implemented

Cause: This feature was not supported or not implemented.

Action: This error is informational only. No action is needed.

OCI-46100: XS session operations are disallowed during the execution of a definer's rights program unit.

Cause: An attempt was made to perform an XS session operation that could modify the current security context inside a definer's rights program unit.

Action: Change the program unit to invoker's rights.

OCI-46101: Circular definition for aggregate privilege *string* in security class *string*

Cause: Definition of an aggregate privilege contained itself.

Action: Fix the aggregate privilege definition.

OCI-46102: privilege *string* aggregated in security class *string* not found

Cause: The definition of an aggregate privilege contained a privilege that was not defined in this or in the parent security classes.

Action: Fix the aggregate privilege definition. *Params: 1) privilege_name: The expected privilege name. 2) security_class_name: The security class name.

OCI-46103: Circular definition for security class *string*

Cause: Security class definition inherited from itself through circular definition.

Action: Fix the security class definition.

OCI-46104: Security class *string* cannot inherit from base security classes.

Cause: The definition of a security class specified an internal base security class as a parent security class.

Action: Remove the internal base security class from the "inherits-from" list. *Params: 1) security_class_name: The name of the security class.

OCI-46105: unable to load security class *string*

Cause: The specified security class did not exist.

Action: Specify an existing security class or create the missing security class.

*Params: 1) security_class_name: The name of the security class.

OCI-46106: missing parent security class for security class *string*

Cause: The specified security class did not have a parent security class.

Action: Add a parent security class using the inherits-from tag, and retry the operation.

*Params: 1) security_class_name: The name of the security class.

OCI-46107: Privilege *string* is not found in the associated security classes.

Cause: The specified privilege did not exist in the security classes that were associated with the ACLs.

Action: Use a security class that contains the specified privilege.

OCI-46108: Either the RAS security class name or RAS target namespace was invalid.

Cause: The Real Application Security (RAS) security class target namespace attribute was either null or was longer than 4000 characters. Or, the RAS security class name attribute was either null or was longer than 1024 characters.

Action: Provide valid values for the security class name and target namespace.

OCI-46109: Duplicate definition for privilege *string* in security class *string*.

Cause: The privilege name in the security class was previously defined in another security class.

Action: Provide a unique name for the privilege.

OCI-46111: Security Class *string* specified in the ACL *string* does not exist.

Cause: An invalid security class was specified in the ACL.

Action: Specify a valid security class.

OCI-46112: A duplicate RAS security class name *string* already exists in the target namespace *string*.

Cause: Real Application Security (RAS) security class names must be unique within the target namespace. An existing security class with the same name already existed in the target namespace.

Action: Provide a unique name for the security class. *Params: 1) security_class_name: The security class name. 2) namespace_name: The namespace.

OCI-46113: An invalid identity value used for the RAS operator parameter at position '*string*'.

Cause: A Real Application Security (RAS) operator was used with an invalid identity value for one of its parameters.

Action: Change the value to a valid identity value and try again. *Params: 1) position: The position of the invalid parameter.

OCI-46114: A valid RAS ACL name *string* not found.

Cause: An invalid Real Application Security (RAS) access control list (ACL) name was used as one of the operator parameters.

Action: Review the names of ACLs in DBA_XS_ACLS view and try again using a valid ACL name. *Params: 1) acl_name: The name of the invalid ACL provided.

OCI-46115: An error was raised during the evaluation of a RAS data realm.

Cause: The evaluation of a Real Application Security (RAS) data realm failed during SQL execution.

Action: Enable tracing to find the cause of the error from the error stack, correct the error, and call the SQL again.

OCI-46116: The ACL *string* is referenced by a namespace template.

Cause: An attempt was made to delete an access control list (ACL) which was referenced by a namespace template.

Action: Delete the namespace template first if the ACL needs to be deleted.

OCI-46117: The ACL *string* is set on a user or dynamic role.

Cause: An attempt was made to delete an access control list (ACL) that was set on a user or dynamic role.

Action: Set the ACL on the user or dynamic role to NULL, or delete the user or dynamic role if the ACL needs to be deleted.

OCI-46118: ACL *string* schema must be SYS.

Cause: An attempt was made to use an access control list (ACL) whose schema was not SYS.

Action: Check and use an ACL whose schema is SYS.

OCI-46119: ACL must not be NULL.

Cause: An attempt was made to specify a NULL value for an access control list (ACL).

Action: Remove the NULL parameter, or specify an existing ACL.

OCI-46200: The attribute defined in namespace template cannot be deleted.

Cause: An attempt was made to delete an attribute that was seeded from the template from which this namespace was created.

Action: Delete only custom attributes.

OCI-46201: The attribute *string* already exists in RAS namespace *string*.

Cause: An attempt was made to create an attribute that already existed within the given Real Application Security (RAS) namespace.

Action: Ensure that the attribute name is unique within the RAS namespace. *Params: 1) attribute_name: The name of an attribute. 2) namespace_name: The name of a namespace.

OCI-46202: handler specified in the namespace template does not exist

Cause: An attempt was made to create a namespace template with an invalid handler function.

Action: Specify a valid handler function in the template.

OCI-46203: Handler is not specified in the namespace template.

Cause: An attempt was made to create a template or a custom attribute with the events specified. However, a handler function was not specified in the template.

Action: Specify a valid handler function in the template.

OCI-46204: Multiple UID or GUID specified for the resource.

Cause: An attempt was made to create a resource with multiple UIDs or GUIDs specified in the document.

Action: Provide, at most, one UID or GUID for the resource in the document.

OCI-46205: User with empty GUID cannot create session.

Cause: An attempt was made by a user with an empty GUID to create a session.

Action: Update the GUID for the user.

OCI-46206: Negative inactivity timeout value is not allowed.

Cause: An attempt was made to set the inactivity timeout value to be negative.

Action: Specify a non-negative inactivity timeout value.

OCI-46207: Session operation *string* is not allowed during global callback execution.

Cause: An attempt was made to invoke another session operation while executing an Oracle Real Application Security (RAS) global callback function registered for a session operation event.

Action: Remove the session operation from the callback function because it is not allowed. *Params: 1) session_operation: The name of XS session operation.

OCI-46208: circular callback call caused by *string*

Cause: A circular Oracle Real Application Security (RAS) callback call caused an infinite chain of callback function executions.

Action: Check the event handling functions to identify the source of the circular callback call. Attempt the operation again after the error has been resolved. *Params: 1) XS_parameter_value: The value of an XS parameter.

OCI-46209: User switch is disallowed for administrative operation.

Cause: An attempt was made to switch user with administrative operation.

Action: Attach the application session to a database session first.

OCI-46210: Source user is not anonymous in user assignment operation.

Cause: An attempt was made to assign a user to a named user.

Action: Change the source user to the anonymous user, then retry the operation.

OCI-46211: The RAS entity name length is either too short or too long.

Cause: An attempt was made to create an Oracle Database Real Application Security (RAS) entity with a name length of less than 1 byte (the minimum) or more than 128 bytes (the maximum).

Action: Ensure that the name length is in the valid range between 1 and 128 bytes.

OCI-46212: RAS entity with this name already exists.

Cause: An attempt was made to create a Real Application Security (RAS) entity with a name that already belongs to another entity.

Action: Use a different name and try again.

OCI-46213: An unexpected constraint violation occurred during creation of an XS entity.

Cause: An attempt was made to create an XS entity resulting in an unexpected constraint violation.

Action: Check with the DBA or security administrator for resolution.

OCI-46214: Deletion of the RAS entity is not allowed while dependencies exist.

Cause: An attempt was made to delete an Oracle Real Application Security (RAS) entity with dependent entities in the system. The common cases include: - Attempting to delete a RAS user that had RAS roles granted. - Attempting to delete a RAS role that had been granted to another RAS principal. - Attempting to delete a RAS security class that had effective policies applied to tables or views. - Attempting to delete an ACL that was used in policies applied to tables or views, or was a parent of other ACLs. - Attempting to remove a privilege from a security class while the privilege had been granted to a RAS principal.

Action: Remove the dependencies. For example, revoke the roles granted to the RAS user, or use the XS_ADMIN_UTIL.CASCADE_OPTION in the deletion procedure, and then try again.

OCI-46215: The Real Application Security (RAS or XS) object by the name *string* does not exist.

Cause: The statement makes a reference to an Oracle Real Application Security (RAS or XA) object that did not exist.

Action: Run `SELECT * FROM DBA_XS_OBJECTS` to get a list of valid RAS objects to use instead. *Params: 1) entity_name: The name of the entity.

OCI-46216: Real Application Security entities are not related.

Cause: An attempt was made to remove a relation that did not exist.

Action: Review the entity reference and try again.

OCI-46217: Operation is not allowed.

Cause: An unexpected operation was performed.

Action: Check with the DBA or security administrator for resolution.

OCI-46218: unauthorized proxy user

Cause: The current user was not an authorized proxy user of the client user during a switching user operation.

Action: Add the current user as a proxy user of the client user.

OCI-46219: Role version numbers mismatch in server and middle-tier.

Cause: There was another middle-tier attached to the server session with a different set of roles.

Action: Reattach the session supplying the current set of roles.

OCI-46220: Database is in readable standby mode. Changes are not saved.

Cause: An attempt was made to change an application session when the database was in readable standby mode.

Action: None

OCI-46221: cannot modify an application user that is currently connected

Cause: An attempt was made to modify an application user that was currently logged on.

Action: Ensure that the application user is logged off, then repeat the command.

OCI-46222: The RAS principal name *string* conflicts with another user or role name.

Cause: There was already an Oracle Real Application Security (RAS) user or role with that name.

Action: Specify a different user or role name. Review existing RAS users and roles by querying DBA_XS_USERS, DBA_XS_ROLES, and DBA_XS_DYNAMIC_ROLES.

*Params: 1) principal_name: The name of the user or role.

OCI-46230: XS administrative operation failed.

Cause: An unexpected error occurred during the requested XS administrative operation.

Action: None

OCI-46231: Granted role is not a regular role.

Cause: A nonregular role was granted to a principal.

Action: Grant a regular role to a principal.

OCI-46232: Circular grant for role

Cause: The role was granted from itself through circular operation.

Action: Fix the role grant operation.

OCI-46233: Circular definition for ACL *string*

Cause: The ACL was inherited from itself through circular definition.

Action: Fix the ACL definition.

OCI-46235: Policy parameter *string* did not exist.

Cause: The policy parameter did not exist.

Action: Review the parameter definition and try again.

OCI-46236: Invalid policy parameter type

Cause: Invalid parameter type was specified.

Action: Use the correct parameter type.

OCI-46237: Mid-tier cache synchronization failed

Cause: An unexpected error occurred during mid-tier cache synchronization.

Action: None

OCI-46238: Database user or role '*string*' does not exist

Cause: An invalid database user or role was specified as the principal name.

Action: Make sure the database principal is a valid database user or role.

OCI-46240: Application proxy user is already configured with a schema.

Cause: An attempt was made to add a schema to an application proxy user that already was configured with a schema.

Action: Remove the schema configuration of the application proxy user and try again.

OCI-46241: Application proxy user is not configured with the schema.

Cause: An attempt was made to remove a schema from an application proxy user that was not configured.

Action: None

OCI-46242: Granting a role to XSGUEST is not allowed.

Cause: An attempt was made to grant a role to the XSGUEST seeded user.

Action: None

OCI-46243: The RAS dispatcher session has timed out and does not exist anymore.

Cause: The Oracle Database Real Application Security (RAS or XS) dispatcher session timed out due to inactivity. The dispatcher session is a connection between the Java application and the database used to attach and detach RAS sessions to the connection pool.

Action: Increase the inactivity timeout for the dispatcher session by modifying the timeout on the XSSessionManager class with the setInactivityTimeout method.

OCI-46244: The request is not signed by the dispatcher.

Cause: A request was made without the signature of the dispatcher. The server is configured to only accept requests signed by the dispatcher.

Action: Ask the administrator to configure the middle-tier to allow the dispatcher signature. Or, ask the administrator to configure the server to not be in dispatcher-only mode.

OCI-46245: invalid session or namespace request

Cause: The request message was corrupt, possibly due to network attack activities.

Action: Check with the DBA or security administrator for a resolution.

OCI-46246: session operation failed

Cause: An attempt was made to either update a Real Application Security (RAS) application session that did not exist, or to create a RAS application session that already existed, or attach a direct-logon RAS application session.

Action: Verify the namespace of the application session and try again.

OCI-46247: XS application session is detached but session changes are not saved

Cause: The Real Application Security session detached successfully, but session changes were not saved due to an attempt to update an application session that did not exist.

Action: None

OCI-46248: This type of database link is not supported.

Cause: An attempt was made to use an unsupported database link type in an XS Data Security session.

Action: Use a supported database link type.

OCI-46249: Diffie-Hellman key exchange failed with the supported key size *string*.

Cause: The Diffie-Hellman key exchange during an Oracle Real Application =Security session initialization failed.

Action: Check the Diffie-Hellman public key size from middle tier. The failure is expected if the middle tier public key size does not match the supported key size at server side. *Params: 1) key_size: The supported key size.

OCI-46250: invalid value for argument '*string*' during *string* execution.

Cause: An invalid input argument value was mentioned for the procedure.

Action: Use a valid argument value. *Params: 1) input_argument: The input argument value for the procedure. 2) procedure_name: The procedure being executed.

OCI-46251: value for argument '*string*' out of range

Cause: Input value was out of range.

Action: Use a value within allowed range.

OCI-46252: Cannot complete the operation, overlapping job already exists

Cause: Cleanup job already existed which spanned the given audit trail type.

Action: Drop the existing job.

OCI-46253: Cannot complete the operation, overlapping property already exists

Cause: The property already exists which spans the given audit trail type.

Action: Clear the existing property.

OCI-46254: '*string*' already exists

Cause: The value being set already existed.

Action: Delete the existing entry.

OCI-46255: Incorrect job name specified

Cause: The job did not exist or was not created by DBMS_AUDIT_MGMT package.

Action: Create the job using DBMS_AUDIT_MGMT package.

OCI-46257: Property '*string*' cannot be cleared

Cause: The property could not be cleared.

Action: None. The property can only be set or reset.

OCI-46258: Cleanup not initialized for the audit trail

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was not called for the erroring audit trail.

Action: Invoke the procedure, DBMS_AUDIT_MGMT.INIT_CLEANUP.

OCI-46259: 'string' procedure is not applicable for UNIFIED_AUDIT_TRAIL.

Cause: Procedures - INIT_CLEANUP, DEINIT_CLEANUP and IS_CLEANUP_INITIALIZED were not applicable for UNIFIED_AUDIT_TRAIL.

Action: There is no need to call INIT_CLEANUP, DEINIT_CLEANUP or IS_CLEANUP_INITIALIZED for UNIFIED_AUDIT_TRAIL.

OCI-46260: failed to determine the last modified timestamp of the audit spillover file

Cause: The audit trail cleanup operation failed because the last modified timestamp of the audit spillover file could not be determined.

Action: Check for the underlying operating system error. If there is no error, contact Oracle Support.

OCI-46261: Internal error occurred during a DBMS_AUDIT_MGMT.CLEAN_AUDIT_TRAIL procedure execution.

Cause: The audit trail cleanup could not be completed because there was an internal error.

Action: Contact Oracle Support.

OCI-46262: Audit table(s) cannot be moved to 'string' tablespace

Cause: The tablespace was either unavailable or did not have enough space to accommodate the audit table being moved.

Action: Make sure that the tablespace is online and has enough space for the audit tables being moved.

OCI-46263: The audit trail is already initialized for cleanup

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was already invoked for the audit trail type.

Action: None

OCI-46264: Error during DBMS_AUDIT_MGMT operation

Cause: Could not complete the DBMS_AUDIT_MGMT operation.

Action: Check the PL/SQL error stack and trace files for a possible error. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

OCI-46265: Subset of audit trail is already initialized

Cause: Audit Trail was initialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.DEINIT_CLEANUP to deinitialize conflicting audit trail types.

OCI-46266: Missing value for argument 'string' in Oracle RAC enabled database

Cause: The DBMS_AUDIT_MGMT API was executed in an Oracle RAC enabled database and AUDIT_TRAIL_TYPE was one of AUDIT_TRAIL_OS or AUDIT_TRAIL_XML. But, Oracle RAC instance number for which DBMS_AUDIT_MGMT API was run, was not supplied.

Action: Input a valid Oracle RAC instance number for which the configuration must be done.

OCI-46267: Insufficient space in 'string' tablespace, cannot complete operation

Cause: Could not complete the operation because the DBMS_AUDIT_MGMT API involved movement of one or more audit tables and there was not enough space in the destination tablespace.

Action: Turn on tracing using DBMS_AUDIT_MGMT.SET_DEBUG_LEVEL to find the amount of space required. Then, allocate that space in the destination tablespace, even if destination tablespace datafile has AUTOEXTEND option turned on. And then, retry the operation.

OCI-46268: Conflicting operation on audit table(s)

Cause: Audit tables were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: INIT_CLEANUP, DEINIT_CLEANUP, SET_AUDIT_TRAIL_LOCATION and MOVE_DBAUDIT_TABLES.

Action: Wait until the execution of one of the API's completes and try executing the API again.

OCI-46269: Conflicting operation on audit files

Cause: Audit files were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the CLEAN_AUDIT_TRAIL API with itself can cause the conflict.

Action: Wait until the execution of one of the API's complete and try executing the API again.

OCI-46271: Error during DBMS_AUDIT_MGMT operation; database I/O suspended.

Cause: An I/O attempt occurred during DBMS_AUDIT_MGMT operation and the database I/O was suspended.

Action: Retry the operation after resuming database I/O suspension. If database I/O is not suspended, contact Oracle Support Services.

OCI-46272: Subset of audit trail is already deinitialized

Cause: Audit trail was deinitialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.INIT_CLEANUP to initialize conflicting audit trail types.

OCI-46273: DBMS_AUDIT_MGMT operation failed in one of the pluggable databases (PDBs). Check trace file *string* for more information.

Cause: The executed DBMS_AUDIT_MGMT operation failed in one of the PDBs.

Action: Check the trace file for the PDB information where the operation failed. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

OCI-46274: Error during DBMS_AUDIT_MGMT operation; tablespace 'string' not available

Cause: The tablespace associated with Unified Audit Trail is either invalid or is offline.

Action: Check if the tablespace is valid and make sure the tablespace is online and writable.

OCI-46276: DBMS_AUDIT_MGMT operation on unified audit trail failed.

Cause: Audit records were not generated in the unified audit trail.

Action: Generate audit records in the unified audit trail and retry the operation.

OCI-46277: Conflicting operation on unified audit trail

Cause: Unified audit trail is being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: FLUSH_UNIFIED_AUDIT_TRAIL, LOAD_UNIFIED_AUDIT_FILES, CLEAN_AUDIT_TRAIL, and SET_AUDIT_TRAIL_LOCATION.

Action: Wait until the execution of one of the API's complete and try executing the API again.

OCI-46278: Conflicting concurrent operations using DBMS_AUDIT_MGMT procedures.

Cause: One of the following DBMS_AUDIT_MGMT procedures was concurrently executed with itself or with another procedure in separate sessions, which caused a conflict. For instance, the following two procedure executions conflict with each other: - SET_LAST_ARCHIVE_TIMESTAMP - CLEAR_LAST_ARCHIVE_TIMESTAMP - CLEAN_AUDIT_TRAIL - SET_AUDIT_TRAIL_PROPERTY - CLEAR_AUDIT_TRAIL_PROPERTY

Action: Wait until the execution of one of the DBMS_AUDIT_MGMT procedures completes and retry executing the procedure.

OCI-46279: Input value for argument 'string' exceeds the maximum length.

Cause: The identifier name generated after concatenating with 'AMGT\$DP\$' exceeded 30 or 128 bytes.

Action: Specify a value which does not exceed the maximum length after concatenation.

OCI-46280: Failure while processing the audit option for string

Cause: An attempt was made to create or alter an audit policy with more than one object from the following list: (BOOTSTRAP\$, CDEF\$, COL\$, CON\$, FET\$, FILE\$, FIXED_OBJ\$, HISTGRM\$, HIST_HEAD\$, ICOL\$, IND\$, IND_STAT\$, OBJ\$, OBJECT_USAGE\$, OBJ_AUTH\$, PARTOBJ\$, PROXY_ROLE_DATA\$, SEG\$, TAB\$, TAB_STAT\$, TS\$, UET\$, UNDO\$, USER\$)

Action: Ensure the audit policy does not contain more than one object from the above list.
*Params: 1) object_name: Name of the object causing failure. 46340 - 46500 Use for Auditing

OCI-46340: Command cannot have both BY user-list and IN SESSION session-information clauses together

Cause: BY *user-list* clause was supplied with IN SESSION *session-information* clause in the command.

Action: Use either BY *user-list* or IN SESSION *session-information* clause.

OCI-46341: ALL STATEMENTS option cannot be supplied with BY SESSION clause

Cause: An attempt was made to use ALL STATEMENTS audit option with BY SESSION clause. ALL STATEMENTS audit option can be configured with BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION.

OCI-46342: NOAUDIT command cannot be executed with the IN SESSION clause

Cause: An attempt was made to use the IN SESSION *session-information* clause in a NOAUDIT command.

Action: Do not specify IN SESSION clause for NOAUDIT command.

OCI-46343: Cannot drop AUDSYS user

Cause: An attempt was made to drop the AUDSYS user that hosts the audit trail.

Action: None

OCI-46350: The unified audit policy *string* is already applied with the BY clause.

Cause: Attempted to apply the unified audit policy with the EXCEPT clause which was already applied with the BY clause.

Action: Remove the unified audit policy using the NOAUDIT statement, before reapplying with the EXCEPT clause.

OCI-46351: Unified Audit policy *string* already applied with the EXCEPT clause.

Cause: Attempted to apply an unified audit policy with the BY clause that was already applied with the EXCEPT clause.

Action: Remove the unified audit policy by using the NOAUDIT statement.

OCI-46352: NOAUDIT statement with the EXCEPT clause is not allowed.

Cause: An attempt was made to remove audit policy using NOAUDIT statement with the EXCEPT clause.

Action: Remove audit policy selectively using NOAUDIT statement with the BY clause.

OCI-46353: The unified audit policy name is either missing or invalid.

Cause: A valid unified audit policy name was expected.

Action: Specify a valid unified audit policy name.

OCI-46354: The audit context or attribute name is either missing or invalid.

Cause: A valid context or attribute name was expected.

Action: Specify a valid context or attribute name.

OCI-46355: The system privilege audit option mentioned is invalid.

Cause: Creating or altering the unified audit policy was attempted with an invalid system privilege audit option.

Action: Use a valid system privilege audit option. For a list of valid system privilege audit options, refer to Oracle Database documentation.

OCI-46356: missing or invalid action audit option

Cause: Creating or altering the unified audit policy was attempted with an invalid action audit option.

Action: Use a valid action audit option while creating or altering the unified audit policy.

OCI-46357: Unified Audit policy *string* was not found.

Cause: The specified unified audit policy object does not exist in the database.

Action: Use the correct unified audit policy name and try again.

OCI-46358: Audit policy *string* already exists.

Cause: The name of the audit policy already existed in the database.

Action: Use a different audit policy name and try again.

OCI-46359: invalid auditing option for *string* type.

Cause: Creating or altering the audit policy was attempted with an invalid audit option for the object type.

Action: Use a valid audit option for the object type. *Params: 1) type_name: The data type for which an audit option is mentioned.

OCI-46360: The same auditing option cannot be both added and dropped while altering the unified audit policy.

Cause: An attempt to add and drop the same auditing option was made while altering the unified audit policy.

Action: Choose either to add or drop the audit option.

OCI-46361: The unified audit policy cannot be dropped because it is currently enabled.

Cause: Attempted to drop the unified audit policy which is currently enabled.

Action: Disable the unified audit policy before dropping it.

OCI-46362: Environment variable ORACLE_BASE is not defined.

Cause: An attempt to obtain the value for operating system environment variable ORACLE_BASE failed.

Action: Ensure that the environment variable ORACLE_BASE is set.

OCI-46363: Audit directory '*string*' not found.

Cause: Could not find the specified audit directory.

Action: Make sure the audit directory is created.

OCI-46364: Audit directory '*string*' could not be created.

Cause: The specified audit directory could not be created.

Action: Ensure that the Oracle process has permissions to create the audit directory.
*Params: 1) audit_dir_name: The directory where the audit .bin files are stored.

OCI-46365: Audit file '*string*' could not be created.

Cause: The specified audit file was not created.

Action: Ensure the Oracle process has the necessary permissions to create the audit files in the audit directory.

OCI-46366: File '*string*' is not a recognized Oracle unified audit file.

Cause: The file in the Oracle audit directory was not a valid Oracle unified audit file.

Action: Remove the file from the audit directory, and retry the operation.

OCI-46367: Database is not opened for write; cannot complete operation.

Cause: An operation requiring the database to be open in read/write mode was attempted.

Action: Open the database in read/write mode.

OCI-46368: The unified audit policy does not have a simple rule condition.

Cause: Attempted to create or alter the unified audit policy with a complex rule condition.

Action: Use a simple rule expression as an unified audit policy condition.

OCI-46369: An error occurred while evaluating unified audit policy condition.

Cause: Check the error stack for detailed error information.

Action: Fix the errors in the error stack and retry the operation.

OCI-46370: cannot connect as AUDSYS user

Cause: An attempt was made to connect to the database as an AUDSYS user.

Action: Do not connect to the database as an AUDSYS user.

OCI-46372: audit file '*string*' not found

Cause: An operation was attempted on an audit file that was not available in the audit directory.

Action: Ensure that the audit file exists in the designated audit directories:

- \$ORACLE_BASE/audit/\$ORACLE_SID in the case of multitenant container database (CDB) root. - \$ORACLE_BASE/audit/\$ORACLE_SID/<PDB_GUID> in the case of a pluggable database (PDB). *Params: 1) audit_file_name: The name of the audit file on which the operation is being attempted.

OCI-46373: Unified audit policy '*string*' must have at least one audit option.

Cause: An attempt was made to create, alter, or enable an empty unified audit policy.

Action: Use at least one audit option in the unified audit policy. *Params: 1) policy_name: The name of the unified audit policy.

OCI-46374: error during AUDIT or NOAUDIT of audit policy in an Oracle Real Application Clusters (Oracle RAC) enabled database

Cause: The operation could not be completed on one or more Oracle RAC instances.

Action: Check the trace file for more information. Ensure that every instance in Oracle RAC is operational and then retry the operation.

OCI-46376: Fine-grained auditing (FGA) policy owner '*string*' is not available.

Cause: An attempt to import the fine-grained audit (FGA) policy failed because the specified FGA policy owner has not been imported.

Action: Import the specified user schema and retry the operation. *Params: 1) policy_name: The fine grained audit policy name

OCI-46377: Unified audit policy cannot be configured on the specified system privilege.

Cause: An attempt was made to configure unified auditing on the system privilege which was not supported.

Action: For a list of the supported system privilege audit options, refer to Oracle Database documentation.

OCI-46378: Cannot use bind variable in VERSIONS clause when the object has FGA policy defined on it.

Cause: The object being accessed had a fine-grained audit (FGA) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of a bind variable in the VERSIONS clause.

OCI-46379: Generation of audit session ID failed with *number*.

Cause: An error was encountered while generating the audit session ID.

Action: Retry the operation. If the error persists, contact Oracle Support.

OCI-46380: invalid usage of EXCEPT clause

Cause: Use of the EXCEPT clause and the USERS WITH GRANTED ROLES clause in the same AUDIT and NOAUDIT statements was not a valid combination

Action: Do not use the EXCEPT clause here.

OCI-46381: Audit configuration using global roles is not supported.

Cause: A global role was found in the BY USERS WITH GRANTED ROLES list.

Action: Remove the global role from the list and retry the operation.

OCI-46382: cannot alter the role to a global role

Cause: The role being altered to IDENTIFIED GLOBALLY had unified audit policy enabled on users to whom it was directly granted. Audit configuration using global role is not supported.

Action: Use the NOAUDIT POLICY command to disable the unified audit policy on users to whom this role is directly granted.

OCI-46383: incorrect order of unified audit policy options

Cause: The order in which unified audit policy options were mentioned was incorrect.

Action: While defining unified audit policy, specify PRIVILEGES, ACTIONS and ROLES in that order.

OCI-46384: incorrect order of unified audit policy clause

Cause: The order in which the ADD, DROP or CONDITION clauses were mentioned was incorrect.

Action: Ensure that sure the ADD clause is followed by the DROP clause which in turn should be followed by the CONDITION clause.

OCI-46385: DML and DDL operations are not allowed on table "*string*"."*string*".

Cause: A DML or DDL operation was attempted on a unified auditing internal table.

Action: No action required. Only Oracle is allowed to perform such operations on a unified auditing internal table.

OCI-46386: error during DBMS_AUDIT_MGMT.TRANSFER_UNIFIED_AUDIT_RECORDS procedure execution

Cause: Either the database was not open in READ WRITE mode, or the transfer of the unified audit records was already in progress.

Action: Open the database in READ WRITE mode and rerun the DBMS_AUDIT_MGMT.TRANSFER_UNIFIED_AUDIT_RECORDS procedure after the ongoing transfer process finishes.

OCI-46387: Cannot perform this operation on unified audit internal table

Cause: An attempt was made to perform an operation that is not allowed on a non-partitioned unified audit internal table.

Action: No action required. This operation can only be performed on partitioned unified audit internal table.

OCI-46388: unified audit files space usage in container is too high

Cause: Space usage by unified audit files in the current container has exceeded the value of MAX_AUDIT_STORAGE for the container.

Action: Create some space by deleting the old audit records using DBMS_AUDIT_MGMT.CLEAN_AUDIT_TRAIL or open the container in the read/write mode and execute DBMS_AUDIT_MGMT.LOAD_UNIFIED_AUDIT_FILES.

OCI-46389: cannot alter, drop, enable, or disable Oracle predefined policies

Cause: An attempt was made either to alter, drop, enable, or disable an Oracle predefined audit policy.

Action: Query the AUDIT_UNIFIED_POLICIES dictionary view: - If trying to alter or drop the policies marked ORACLE_SUPPLIED = YES, then retry the operation after the database is opened in migrate mode and after acquiring the necessary privileges. - If trying to enable or disable policies marked PROTECTED = YES in an Oracle Cloud environment, then this operation will fail.

OCI-46390: invalid tablespace type used

Cause: An attempt was made to use a tablespace that was of type TEMPORARY, UNDO or LOST WRITE PROTECTION during execution of the DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_LOCATION procedure.

Action: Check the tablespace type and retry.

OCI-46391: disk group to store audit files is not configured

Cause: An attempt was made to move the audit files to a disk group without configuring one for auditing.

Action: Execute DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_LOCATION to provide a disk group for storing audit files.

OCI-46393: cannot change configurations of a mandatory audit policy

Cause: An audit configuration change was attempted on a unified audit policy that was marked as a mandatory audit policy.

Action: Retry the operation on a non-mandatory audit policy.

OCI-46394: column *string* does not belong to object *string.string*

Cause: An attempt was made to specify a column that does not belong to the object in the unified audit policy.

Action: Specify a valid column name.

OCI-46395: invalid column audit option

Cause: An attempt was made to specify an invalid column audit option in the unified audit policy.

Action: Specify a valid column audit option.

OCI-46396: invalid column list specified

Cause: An attempt was made to specify an invalid list of columns in the unified audit policy.

Action: Specify a comma separated column list.

OCI-46397: cannot create or alter an audit policy on dictionary tables

Cause: An attempt was made to create or alter an audit policy on dictionary tables that hold audit configuration data.

Action: Do not create an audit policy with SYS.AUD_OBJECT_OPT\$ or SYS.AUD_OBJCOL_OPT\$ dictionary tables as objects.

OCI-46398: Cannot alter or drop the ORA\$DICTIONARY_SENS_COL_ACCESS policy.

Cause: An attempt was made to either alter or drop the ORA\$DICTIONARY_SENS_COL_ACCESS policy.

Action: Only the ENABLE or DISABLE operation is allowed on this policy.

OCI-46399: A fine-grained audit (FGA) policy cannot be applied to an object owned by SYS.

Cause: An attempt was made to apply an FGA policy to an object owned by SYS. FGA policies cannot be applied to SYS-owned objects.

Action: Do not apply an FGA policy to any SYS-owned object. You can apply an FGA policy to an object that is not owned by SYS.

OCI-46400: Unable to alter the audit policy.

Cause: An attempt was made to alter the audit policy which either did not exist or was dropped recently.

Action: Recheck the audit policy details in AUDIT_UNIFIED_POLICIES dictionary view.

OCI-46401: No new traditional AUDIT configuration is allowed. Traditional auditing is desupported, and you should use unified auditing in its place.

Cause: An attempt was made to enable traditional auditing option.

Action: Create an equivalent unified audit policy and enable the policy. Refer to the Database Security Guide for more information on unified auditing.

OCI-46402: _ALLOW_TRADITIONAL_AUDIT_CONFIGURATION initialization parameter cannot be set for this database.

Cause: An attempt is made to set _ALLOW_TRADITIONAL_AUDIT_CONFIGURATION initialization parameter.

Action: Traditional Audit has been desupported. Traditional Audit configuration cannot be enabled for this database.

OCI-46500: User is not a common user. Common unified audit policies can be enforced only on common users.

Cause: An attempt was made to apply the common audit configuration to a local user. The common audit configuration can be applied only to common users.

Action: Specify a common user.

OCI-46501: A non-common object was specified in an AUDIT POLICY statement.

Cause: Object audit option for the common audit policy was specified on a local object. A common audit policy can have object audit options on common objects only.

Action: Specify a common object.

OCI-46503: Local traditional audit configuration cannot be created in CDB root and application root.

Cause: An attempt was made to create a local audit configuration in the CDB\$ROOT or the application root. Local audit configuration can be created only when connected to a pluggable database.

Action: Connect or switch the session to a pluggable database to create a local audit configuration.

OCI-46504: AUDIT or NOAUDIT command cannot specify ON object and CONTAINER clauses together.

Cause: An attempt was made to specify the CONTAINER clause with the AUDIT or NOAUDIT command while configuring object auditing. The CONTAINER clause is not supported for object auditing using the SQL AUDIT or NOAUDIT command.

Action: Do not specify the CONTAINER clause while configuring object auditing using the SQL AUDIT or NOAUDIT command.

OCI-46505: The role is not a common role.

Cause: An attempt was made to apply the common audit configuration to a local role. Common audit configuration can be applied to common roles only.

Action: Specify a common role.

OCI-46506: FGA handler schema is not a common user.

Cause: An attempt was made to create a fine-grained Audit (FGA) policy on a common object, but the associated handler schema was not a common user.

Action: Specify a common user for the FGA handler schema.

OCI-46507: Fine-grained audit (FGA) object name is not a common object.

Cause: An attempt was made to create a common fine-grained audit (FGA) policy on a local object. A common FGA policy can only be configured on common object.

Action: Specify a common object for the FGA policy.

OCI-46508: not connected to root container

Cause: An attempt was made to create a fine-grained audit (FGA) policy on an object-linked common object from within a pluggable database.

Action: Connect to the root and create the FGA policy on object-linked common objects.

OCI-46509: invalid combination of values for desupported AUDIT_TRAIL initialization parameter. Traditional auditing is desupported, and you should use unified auditing in its place.

Cause: An attempt is being made to set the value of the desupported AUDIT_TRAIL initialization parameter to a wrong combination of the allowed values.

Action: Reconsider the need to specify the desupported parameter. Only if needed, specify one among the following valid values: { none | os | db [, extended] | xml [, extended] }

OCI-46600: invalid ADMINISTER KEY MANAGEMENT command

OCI-46601: missing KEYSTORE, ENCRYPTION, KEY, or TAG keyword

Cause: An internal error for debugging was raised.

Action: Contact Oracle Support.

OCI-46602: missing OPEN or CLOSE keyword

Cause: An internal error for debugging was raised.

Action: Contact Oracle Support.

OCI-46603: invalid ADMINISTER KEY MANAGEMENT CREATE command

Cause: An invalid clause was specified with the ADMINISTER KEY MANAGEMENT CREATE statement. Valid clauses include KEYSTORE, LOCAL, AUTO_LOGIN, ENCRYPTION, and KEY.

Action: Specify a valid clause with the ADMINISTER KEY MANAGEMENT CREATE statement.

OCI-46604: invalid or missing keystore file name

Cause: The required keystore file name was invalid or missing.

Action: Specify a valid keystore file name.

OCI-46605: Master key identifier is invalid or missing.

Cause: Either a value for Master key identifier was not specified, or the length of the Master key identifier value is invalid.

Action: Provide a valid value for the Master key identifier.

OCI-46606: tag is invalid or missing

Cause: Either the value of the tag was not specified or the length of the tag value was invalid.

Action: Provide a valid value for the tag.

OCI-46607: client secret is invalid or missing

Cause: None.

Action: None

OCI-46608: client identifier is invalid or missing

Cause: None

Action: None

OCI-46609: export or import secret is invalid or missing

Cause: None.

Action: None

OCI-46610: expecting SELECT query that returns the master key identifiers

Cause: An internal error for debugging was raised.

Action: Contact Oracle Support.

OCI-46612: import file name is invalid or missing

Cause: An internal error for debugging was raised.

Action: Contact Oracle Support.

OCI-46614: Export file name is invalid or missing.

Cause: Either a value for export file name was not used, or the length of the export file name is invalid.

Action: Provide a valid value for the export file name.

OCI-46615: missing WITH or CONTAINER keyword

OCI-46616: master key is invalid or missing

OCI-46617: Master key identifier is invalid or missing.

Cause: Either a value for the master key identifier was not specified, or the length of the master key identifier value is invalid.

Action: Provide a valid value for the master key identifier.

OCI-46620: Keystore backup cannot be completed.

Cause: Either the backup location was not an Oracle Automatic Storage Management (Oracle ASM) path name when the configured keystore location was an Oracle ASM path, or the backup location was an Oracle ASM path name when the configured keystore location was not an Oracle ASM path.

Action: Either specify an Oracle ASM path name for the backup location if the keystore location is an Oracle ASM path or specify a non-Oracle ASM path name for the backup location if the keystore location is not an Oracle ASM path.

OCI-46621: no backup identifier specified

Cause: Backup identifier was not specified.

Action: Provide a valid backup identifier.

OCI-46622: Backup keystore location is incorrect.

Cause: Keystore location where the backup was to be created was incorrect.

Action: Provide a valid location to backup the keystore.

OCI-46623: cannot create the keystore file name

Cause: The keystore name could not be formed. This could be the result of an incorrectly specified keystore location.

Action: Specify a valid keystore location

OCI-46624: cannot find the source keystore

Cause: The source keystore for which the backup was requested was not found.

Action: Verify that the source keystore exists and try again.

OCI-46625: backup keystore already exists

Cause: A backup of the keystore of the same name already existed in the given location.

Action: Change the location of the backup keystore or the backup identifier of the backup keystore and try again.

OCI-46626: cannot create a backup of the keystore

Cause: The backup of the keystore could not be created.

Action: Check the trace file for more information and try again.

OCI-46627: keystore password mismatch

Cause: The specified keystore password did not match the password of the keystore that was open.

Action: Specify the correct keystore password. If a keystore migration was done and primary and secondary keystores are used, then provide the password for the primary keystore.

OCI-46628: Cannot alter the software keystore password.

Cause: Attempted to alter the software keystore password.

Action: Check the viability of the keystore and replace the keystore from the backup if required. Retry altering the keystore password.

OCI-46629: Keystore was not open after the ALTER KEYSTORE operation.

Cause: The keystore password was changed. However, the keystore was closed during this change, and the change could not be preserved.

Action: Reopen the keystore with the new password.

OCI-46630: Keystore cannot be created at location *string*.

Cause: The keystore could not be created at the specified location because a keystore of the same type exists in that location.

Action: Specify a different location to create the keystore. If no keystore exists and the operation is failing, check the trace file and retry.

OCI-46631: The keystore must be backed up.

Cause: The keystore was not backed up. For this operation to proceed, the keystore must be backed up.

Action: Try again using the WITH BACKUP clause, or first backup the wallet using the ADMINISTER KEY MANAGEMENT BACKUP KEYSTORE command and then retry.

OCI-46632: Password-based keystore does not exist.

Cause: Password-based keystore was missing for this operation. An auto login keystore can only be created from a password-based keystore.

Action: Specify a location where the password-based keystore exists and retry.

OCI-46633: creation of a password-based keystore failed

Cause: Password-based keystore could not be created at the specified location due to either incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, create permissions on the specified location, or specify a different location and try again.

OCI-46634: Cannot create a local auto login keystore at location *string*.

Cause: The local auto login keystore could not be created at the specified location due to incorrect password specified for the password-based keystore, due to incorrect file permissions for Oracle on the specified location, or the specified location does not exist.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and retry.

OCI-46635: Auto login keystore creation failed at location *string*.

Cause: The auto login keystore could not be created at the specified location due to the incorrect password used for the password-based keystore, incorrect file permissions for Oracle on the specified location, or nonexistence of the specified location.

Action: Check the trace file for more information, use the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and retry.

OCI-46636: cannot add second keystore to the target keystore

Cause: The second keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

OCI-46637: cannot add first keystore to the target keystore

Cause: The first keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

OCI-46638: Merging keystores failed.

Cause: The keystores could not be merged.

Action: Check trace files for more information. If the target keystore is corrupted, replace it from the backup and retry.

OCI-46639: backup of keystore failed during migration

Cause: The keystore location was not correctly configured.

Action: Either the keystore location is missing or it is not correct. Specify the correct keystore location using `WALLET_ROOT` or in the `sqlnet.ora` file.

OCI-46640: incorrect file name for exporting keys

Cause: The file name of the file to which keys from the keystore will be written was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

OCI-46641: incorrect file name for importing keys

Cause: The file name of the file from which the keys will be read and saved in the keystore was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

OCI-46642: The key export destination file already exists.

Cause: The file name that was specified as the export destination for the keys being exported from the keystore was already in existence.

Action: Specify a different file name that does not exist.

OCI-46643: The file *string*, containing the keys to import into the keystore, does not exist.

Cause: The specified file, containing the keys to import into the keystore does not exist.

Action: Specify the name of an existing file that contains keys exported from the keystore.

OCI-46644: The creation or open of file to store the exported keys failed.

Cause: The creation or opening of the file specified as the key export destination, where the keys exported from the keystore were to be written, failed.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to create, open, and write to the file.

OCI-46645: open of file from which keys are to be imported failed

Cause: The file specified as the key import source, from which the keys were to be imported into the keystore, could not be opened.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to read the file.

OCI-46646: file from which keys are to be imported is invalid or lacks needed file permission

Cause: The file specified as the key import source from which the keys were to be imported was not a valid file or did not have the needed file access permission.

Action: Specify a valid file containing keys which were previously exported from the keystore. Also, ensure that the file has the read and write access permission.

OCI-46647: The specified protection differs from what is specified in the file.

Cause: The file specified as the key import source, from which the keys are to be imported, had different protection from what was specified in the SQL command.

Action: Provide a valid protection option, ensuring that it is the same protection option that is in the file from which the keys are to be imported.

OCI-46648: Cannot commit the keys to the keystore.

Cause: Writing the keys to the keystore failed.

Action: Verify that the keystore is not corrupt. Copy the keystore from the backup if it is corrupt and retry.

OCI-46649: The master encryption key with the specified identifier does not exist.

Cause: The master encryption key with the specified identifier does not exist in the keystore.

Action: Specify a valid master encryption key identifier for the SQL command and then retry the command.

OCI-46650: cannot retrieve information for a master encryption key identifier

Cause: The master encryption key or the master encryption key information that is associated with a specified master encryption key identifier did not exist.

Action: Check the contents of the trace file to identify the faulty master key identifier. Either fix or drop the faulty master encryption key, and then retry the command.

OCI-46651: cannot create a master key

Cause: Master key creation failed.

Action: Check the trace file for errors and retry the command.

OCI-46652: cannot create tag for the master key

Cause: Creation of the tag for the specified master key failed.

Action: Check the contents of the trace file for errors and retry the command.

OCI-46653: cannot retrieve master encryption key information

Cause: Retrieval of the master encryption key information for the specified master encryption key identifier failed.

Action: Check the contents of the trace file for errors and then retry the command.

OCI-46654: cannot add the imported keys to the keystore

Cause: The operation of writing the imported keys to the keystore failed.

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

OCI-46655: no valid keys in the file from which keys are to be imported

Cause: The specified keystore, from which keys are to be imported, did not contain any valid keys.

Action: None

OCI-46656: operation not valid for container database

Cause: The specified operation was not supported for the container database.

Action: None

OCI-46657: The source keystores are the same.

Cause: The source keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source keystores, if necessary.

OCI-46658: keystore not open in the container

Cause: The keystore was not open in the container.

Action: Open the keystore in the container.

OCI-46659: master encryption keys for the given PDB not found

Cause: The master encryption keys for the specified pluggable database (PDB) could not be retrieved.

Action: Check if the master encryption keys were generated for the specified PDB and retry the command.

OCI-46660: the source and target keystores are the same

Cause: The specified source and target keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source and target keystores, if necessary.

OCI-46661: keystore not open in root container

Cause: The root container keystore was not open.

Action: Open the root container keystore.

OCI-46662: master keys not created for all PDBs

Cause: Creation of the master key failed for one or more pluggable databases (PDBs).

Action: Check the trace files for errors. Create the keys in PDBs where the operation failed or retry the command.

OCI-46663: master encryption keys not created for all PDBs for REKEY

Cause: Creation of the master encryption key failed for one or more pluggable databases (PDBs), therefore REKEY failed for these PDBs.

Action: Check the trace files for errors. REKEY the keys in PDBs where the master keys could not be created or retry the command.

OCI-46664: master keys not created for any PDBs during REKEY

Cause: Creation of the master key failed for all pluggable databases (PDBs).

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

OCI-46665: master keys not activated for all PDBs during REKEY

Cause: Activation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

OCI-46666: master keys not created or activated for all PDBs during REKEY

Cause: Creation of the master key failed for one or more pluggable databases (PDBs). Further, activation of one or more created master keys also failed for some PDBs and as such REKEY failed on these PDBs.

Action: Check the trace files for errors. REKEY the PDBs where the master keys could not be created. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

OCI-46667: client not found in the keystore

Cause: An entry with the given client name was not found in the keystore.

Action: Add the secret for the given client to the keystore, if required.

OCI-46668: This client already exists in the keystore.

Cause: An entry with the given client name was already in existence in the keystore.

Action: Delete or update the entry with the client name.

OCI-46669: the target keystore does not exist

Cause: The location specified for the target keystore did not contain a valid keystore, or target keystore did not have valid file permissions.

Action: Specify a different location for the target keystore where it exists. Also, check the file permissions of the target keystore.

OCI-46670: Client secret keystore operation failed.

Cause: The client secret keystore add, update or delete operation failed.

Action: Open the keystore and retry. If the operation fails, check the trace files for more details.

OCI-46671: master key not set in root container

Cause: Master key was not set in the root container.

Action: Set the Master key in the root container.

OCI-46672: backup keystore file name could not be stored

Cause: The file name of the keystore backup could not be recorded in props\$.

Action: Open the keystore and retry the backup operation.

OCI-46673: The write operation to the export file failed.

Cause: Oracle was unable to write an entry to the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support.

OCI-46674: The read operation from the export file failed.

Cause: Oracle was unable to read an entry from the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support.

OCI-46675: The write operation of keys for the export failed.

Cause: Oracle was unable to write an entry for export.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support.

OCI-46676: read of keys for import failed

Cause: Oracle was unable to read an entry for import.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

OCI-46677: specified backup identifier exceeds maximum length

Cause: The backup identifier within the Oracle Automatic Storage Management // (Oracle ASM) file name of the keystore exceeded the maximum length of // 12 characters.

Action: Specify a backup identifier that does not exceed the limit.

OCI-46678: cannot encrypt an identity column created with GENERATED BY DEFAULT or GENERATED ALWAYS

Cause: An attempt was made to encrypt an identity column created with GENERATED BY DEFAULT or GENERATED ALWAYS keywords.

Action: An identity column created with the GENERATED BY DEFAULT or GENERATED ALWAYS keywords cannot be encrypted.

OCI-46679: Missing or invalid master key encryption algorithm - *string*

Cause: The specified encryption algorithm for the master key was missing or invalid in the command.

Action: Specify a valid algorithm: 'AES256' or 'ARIA256'. *Params: 1) algorithm_name: The name of the algorithm.

OCI-46680: Pluggable database (PDB) master keys must be exported.

Cause: The master keys of the PDB were not exported.

Action: Export the master keys of the pluggable database before unplugging the database from its container database or use the one-step unplug-plug using 'encrypt using' clause.

OCI-46681: reverse migration failed for PDB

Cause: Reverse migration failed for one or more pluggable databases (PDBs).

Action: Check the trace files for errors. Retry the command.

OCI-46683: Addition of master key string not supported with CONTAINER=ALL.

Cause: Attempted to add a master key with the same identifier to more than one container database (CDB). A user specified master key string with a master key identifier can only be used once in a CDB.

Action: Remove the CONTAINER=ALL clause and retry.

OCI-46684: master key identifier exists in the keystore

Cause: An attempt was made to add a master key with a master key identifier that was already present in the keystore.

Action: Specify a different value for the master key identifier in the master key string.

OCI-46685: invalid master key identifier or master key value

Cause: The master key identifier or master key value was invalid. To be valid, the values supplied for both the master key identifier and the master key value must be hex-encoded and must have the following properties: - For a master key value to be valid, its length must be a valid key length for the specified encryption algorithm. - For a master key identifier to be valid, it must have a length of 16 bytes. - For a master key identifier to be valid, it must have a non-zero value.

Action: Specify a correct value for the master key identifier or master key in the master key string.

OCI-46686: missing or invalid master key string

Cause: The master key string was missing or invalid.

Action: Specify the correct master key string.

OCI-46687: operation not supported for HSM

Cause: The specified operation is not supported with Hardware Security Module (HSM).

Action: Check the trace file for more details.

OCI-46688: cannot move a master key

Cause: The master key could not be moved out of the keystore.

Action: Check whether the specified master key identifiers are valid, and if they are in the V\$ENCRYPTION_KEYS view. Container keys can be moved from the CDB\$ROOT only when the container is unplugged and dropped from the multitenant container database (CDB). Check the trace file for additional errors, if needed. Retry the command. If an attempt is made to move keys of a database that has only one key, the current and the only key cannot be moved.

OCI-46689: specified master key identifier does not exist in the keystore

Cause: An attempt was made to move a master key that did not exist in the keystore.

Action: Check if the master key identifier exists in the keystore by querying the V\$ENCRYPTION_KEYS view.

OCI-46690: could not create wallet

Cause: The new wallet that was used to store the keys to be moved could not be created. The cause could be the lack of permissions to write to the directory for the Oracle user, or the directory did not exist.

Action: Either check the permissions for the Oracle user on the directory or check if the directory exists.

OCI-46691: The value of the KEYSTORE_CONFIGURATION attribute is invalid.

Cause: An attempt was made to set or use an invalid value for the KEYSTORE_CONFIGURATION attribute of the TDE_CONFIGURATION instance initialization parameter.

Action: Use a valid value for the KEYSTORE_CONFIGURATION attribute of the TDE_CONFIGURATION instance initialization parameter. When using WALLET_ROOT, set the TDE_CONFIGURATION instance initialization parameter correctly in both the root and in the pluggable database. A value must be provided for the TDE_CONFIGURATION instance initialization parameter if a value is provided for the WALLET_ROOT instance initialization parameter, in order to fully specify the keystore configuration of the CDB\$ROOT and of the pluggable database (either both parameters must be present, or both must be absent). For an ADMINISTER KEY MANAGEMENT ISOLATE KEYSTORE operation, the KEYSTORE_CONFIGURATION attribute of the CDB\$ROOT must have the value FILE. For an ADMINISTER KEY MANAGEMENT ISOLATE KEYSTORE operation, if a value for the KEYSTORE_CONFIGURATION attribute is set in the pluggable database, it must have the value FILE. If the TDE_CONFIGURATION instance initialization parameter is not set in the pluggable database, the isolation operation automatically sets its KEYSTORE_CONFIGURATION attribute to FILE.

OCI-46692: Cannot close wallet while in use.

Cause: Attempted to close the wallet when it was in use.

Action: Close the wallet in every pluggable database (PDB) that is configured with an isolated wallet. Alternatively, use the FORCE KEYSTORE CLOSE clause of the ADMINISTER KEY MANAGEMENT command.

OCI-46693: The WALLET_ROOT location is missing or invalid.

Cause: An attempt was made to perform a keystore operation when the instance initialization parameter WALLET_ROOT was missing or invalid. Starting Oracle Database version 23c, the location for Transparent Data Encryption's (TDE) keystore can be configured using the WALLET_ROOT parameter only.

Action: Start the database after setting the WALLET_ROOT instance initialization parameter to the directory where all of the wallets are stored.

OCI-46694: The keys are already in the root keystore.

Cause: An attempt was made to unite an isolated keystore with the root keystore, but the keys of the isolated keystore were already present in the root keystore.

Action: No action is required. Check the value of the TDE_CONFIGURATION instance initialization parameter of your system and ensure that you are issuing the ADMINISTER KEY MANAGEMENT UNITE KEYSTORE command in the correct pluggable database.

OCI-46695: The value of the TDE_CONFIGURATION instance initialization parameter is invalid.

Cause: An attempt was made to set or use an invalid value for the TDE_CONFIGURATION instance initialization parameter.

Action: Use a valid value for the TDE_CONFIGURATION instance initialization parameter. The KEYSTORE_CONFIGURATION attribute must be specified and must have a valid value. During recovery, the CONTAINER attribute can also be specified and the value must be a valid container name. The CONTAINER attribute can only be specified when the TDE_CONFIGURATION instance initialization parameter is modified in CDB\$ROOT, not when it is modified in a pluggable database.

OCI-46696: A master key is required by another pluggable database.

Cause: An attempt was made to isolate a master key or move a master key out of the keystore when it was still required by another pluggable database. Another pluggable database still required the master key if the pluggable databases were clones of each other.

Action: Before attempting to isolate or move the keys of a pluggable database, perform an ADMINISTER KEY MANAGEMENT SET KEY command on each pluggable database that requires the master key, in order to remove any dependency on the master key being isolated or moved. If necessary, include the FORCE clause and issue the ADMINISTER KEY MANAGEMENT FORCE ISOLATE KEYSTORE command, which causes the master keys of the pluggable database to be copied to the isolated keystore rather than moved to it, so that the keys remain available to any pluggable database that requires them. The ADMINISTER KEY MANAGEMENT MOVE command has no FORCE option.

OCI-46697: Keystore password required.

Cause: The keystore password clause was not provided for this SQL command.

Action: Retry the command with a keystore password clause.

OCI-46698: CDB\$ROOT is not open.

Cause: CDB\$ROOT was not open.

Action: Open the CDB\$ROOT and then retry the command.

OCI-46699: cannot create a keystore

Cause: A keystore could not be created. A combination of the following conditions prevented the operation: 1. The pluggable database (PDB) was not open in read/write mode. Note that the PDB must be open in read/write mode for the KEYSTORE_MODE configuration of the PDB to be automatically changed to isolated mode during the ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command. 2. The KEYSTORE_MODE configuration of the PDB was in united mode (rather than isolated mode).

Action: Open the PDB in read/write mode or configure the PDB to be in isolated mode, and then retry the ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command.

OCI-46700: failed to copy or move wallet

Cause: An attempt was made to either copy or move the isolated wallet of the pluggable database (PDB) that was plugged.

Action: Ensure that the source wallet location and the file specified in XML exist on disk and are accessible from this database. Also, ensure that WALLET_ROOT is set and the directory specified in WALLET_ROOT exists on the disk.

OCI-46701: failed to delete source wallet

Cause: An attempt was made to delete the source wallet file during the pluggable database (PDB) plug with a MOVE clause.

Action: Ensure that the source wallet file and the directory allow deletion of the wallet.

OCI-46702: failed to switch over the PKCS#11 library

Cause: An attempt was made to switch over the PKCS#11 library and there was a problem finding or loading the new library.

Action: Ensure that the: - PKCS11_LIBRARY_LOCATION parameter is set when the database is started. - Value of the PKCS11_LIBRARY_LOCATION parameter begins with /opt/oracle/extapi/64/pkcs11/. - Path in the fully qualified library name of the PKCS11_LIBRARY_LOCATION parameter does not contain any component which is a symbolic link. - Each directory component of the path is owned by the root user and is writable by only the root user (for example, drwxr-xr-x root root).

OCI-46703: Switching over the PKCS#11 library is not supported.

Cause: The switchover command was executed on a system with an unsupported configuration of the Oracle Advanced Security Transparent Data Encryption (TDE) keystore.

Action: Configure the TDE keystore to use Oracle Key Vault (OKV) and rerun the command.

OCI-46704: Cannot create keystore for pluggable database (PDB) when the PDB's keystore status is OPEN.

Cause: Password-based keystore could not be created for the PDB, because the PDB's current keystore status is 'OPEN'.

Action: Close the PDB's keystore and retry.

OCI-46705: Key is set for the pluggable database (PDB). Cannot create the password-based keystore.

Cause: The password-based keystore could not be created for the PDB, because the PDB was using a key from the current keystore of the PDB.

Action: Use the ADMINISTER KEY MANAGEMENT ISOLATE KEYSTORE statement to create a password-based keystore; so that, the keys for the PDB are automatically moved to the new keystore.

OCI-46706: PKCS#11 library was loaded from legacy location

Cause: When the database instance was started, the Public Key Cryptography Standard (PKCS) #11 library was discovered at the legacy location, which is /opt/oracle/extapi/64/hsm/. The switchover command was not supported because the PKCS#11 library was loaded from the legacy location.

Action: Configure the PKCS11_LIBRARY_LOCATION and specify the library in this location /opt/oracle/extapi/64/pkcs11/ and then restart the database.

OCI-46707: PKCS#11 library location was invalid

Cause: The switchover command was executed with an invalid or insecure Public Key Cryptography Standard (PKCS) #11 library location.

Action: Ensure that: - The PKCS#11 library is provisioned under the location that was provided in the command. - The fully qualified filename of the library begins with /opt/oracle/extapi/64/pkcs11/. - The fully qualified filename of the library does not exceed 255 characters. - The fully qualified filename of the library does not contain any component which is a symbolic link. - Each directory component of the path is owned by the root user and is writable by only the root user (for example, drwxr-xr-x root root).

OCI-46708: PKCS#11 library was already loaded with this version

Cause: The switchover command was executed on a system that is currently using the library to which the command is trying to switch over.

Action: Check if the fully qualified file name of the library to switch over to needs to be corrected and rerun the command.

OCI-46709: The autologin wallet already exists on disk.

Cause: An attempt was made to isolate the keystore but it failed due to an existing autologin (cwallet.sso) wallet under {WALLET_ROOT}/PDBGUID/tde/ directory. cwallet.sso was not overwritten because it could contain client secrets that may have been added manually when the keystore was previously isolated.

Action: Rename the cwallet.sso file under {WALLET_ROOT}/{PDBGUID}/tde/ directory (to move it out of the way) and then retry the command.

OCI-46710: keystore is already in isolated mode

Cause: An attempt to isolate the keystore failed because the keystore of the pluggable database was already configured in isolated mode.

Action: No action required. This operation can only be performed when the keystore of the pluggable database is configured in united mode.

OCI-46711: keystore is already in united mode

Cause: An attempt to unite the keystore failed because the keystore of the pluggable database was already configured in united mode.

Action: No action required. This operation can only be performed when the keystore of the pluggable database is configured in isolated mode.

OCI-46713: The password-based keystore was not open in root container.

Cause: The password-based keystore was not open in the root container.

Action: Open the password-based keystore in the root container.

OCI-46715: The keystore of the PDB is not in a closed state on all instances.

Cause: The TDE_CONFIGURATION for the pluggable database (PDB) cannot be modified because the keystore of the PDB is not in a closed state on all instances.

Action: Close the keystore of the PDB on all instances. If the PDB was configured to use an autologin keystore, then before attempting to update the configuration of the PDB, change the configuration of the PDB to use a password-based keystore, and close the keystore of the PDB.

OCI-46900: unsupported proxy authentication

Cause: A proxy authentication was attempted using an administrative privilege.

Action: Try proxy authentication without any administrative privilege.

OCI-46951: unsupported format for password file '*string*'

Cause: An attempt was made to use an Oracle password file that was not in legacy, 12, or higher format. The password file was either not present or became corrupt.

Action: Re-create the password file and grant the necessary administrative privileges to users. *Params: 1) password_filename: The name of the password file

OCI-46952: format mismatch for password file '*string*' in the standby database

Cause: An attempt was made to apply password file changes made on the primary database to the password file of the standby database, but there was a password file format mismatch which prevented the operation.

Action: Re-create the password file on the standby database with the same format as that of the primary database. *Params: 1) password_filename: The password file name on the Standby Database

OCI-46953: The password file is not in the 12.2 format.

Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the password file is in LEGACY or in release 12.1 format. - Attempting to grant an administrative privilege to an external user (a user created as IDENTIFIED EXTERNALLY). - Attempting to change the authentication type of an administrative-privileged user from PASSWORD to EXTERNAL. - When a common user has an administrative privilege granted in a pluggable database (PDB) but no longer exists in the CDB\$ROOT container, attempting to create this common user again in the root as IDENTIFIED EXTERNALLY.

Action: Create the password file in 12.2 format or migrate the existing password file to 12.2 format, then retry the operation.

OCI-46981: Access to service *string* from *string* was denied.

Cause: Access to this service from this location was not allowed.

Action: Contact Oracle Support Services.

OCI-46987: Access control propagation failed (error=*number*).

Cause: The executed DBMS_SFW_ACL_ADMIN operation failed.

Action: Retry the operation.

OCI-46988: Access control propagation timed out.

Cause: The executed DBMS_SFW_ACL_ADMIN operation timed out.

Action: Retry the operation.

OCI-47000 to OCI-48000

OCI-47000: Factor type *string* is already defined.

Cause: The object with this name was already defined.

Action: Choose a different object name and retry the operation.

OCI-47001: Factor type *string* is not found.

Cause: The requested object did not exist.

Action: Choose an existing object and retry the operation.

OCI-47002: error creating Factor Type *string, string*

Cause: An unexpected error occurred creating the factor type

Action: Please review the definition and retry the operation

OCI-47003: error deleting Factor Type *string, string*

Cause: An unexpected error occurred deleting the factor type

Action: Please review the definition and retry the operation

OCI-47004: error updating Factor Type *string, string*

Cause: An unexpected error occurred updating the factor type

Action: Please review the definition and retry the operation

OCI-47005: error renaming Factor Type *string, string*

Cause: An unexpected error occurred renaming the factor type

Action: Please review the definition and retry the operation

OCI-47020: Factor *string* is already defined.

Cause: The specified object name was already defined.

Action: Choose a different object name and retry the operation.

OCI-47021: Factor *string* is not found.

Cause: The requested object did not exist.

Action: Choose an existing object and retry the operation.

OCI-47022: Cannot create factor *string* due to *string*.

Cause: An error occurred while attempting to create the factor.

Action: Review the definition for accuracy and retry.

OCI-47023: cannot delete factor *string* due to *string*

Cause: An unexpected error occurred while deleting the factor.

Action: Review the definition for accuracy, and retry the operation.

OCI-47024: cannot update factor *string* due to *string*

Cause: An unexpected error occurred while updating the factor.

Action: Review the definition of the factor for accuracy, and retry the operation.

OCI-47025: Factor link already exists for *string* and *string*.

Cause: The object with this name was already defined.

Action: Choose a unique object name and retry.

OCI-47026: error creating Factor Link for *string* and *string*, *string*

Cause: An unexpected error occurred creating the factor link

Action: Please review the definition for accuracy and retry the operation

OCI-47027: Factor link does not exist for *string* and *string*.

Cause: The specified factor link does not exist.

Action: Review the definition for accuracy and retry.

OCI-47028: error deleting Factor Link for *string* and *string*, *string*

Cause: An unexpected error occurred deleting the factor link

Action: Please review the definition for accuracy and retry the operation

OCI-47029: Factor type *string* is used by one or more factors.

Cause: The specified factor type was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

OCI-47030: Factor *string* is referred by one or more factor links.

Cause: The specified factor was referred by existing factor link(s).

Action: Remove the dependent factor links and retry the operation.

OCI-47031: Factor *string* is used by one or more policy factors.

Cause: The specified factor was used by existing policy factor(s).

Action: Remove the dependent policy factors and retry the operation.

OCI-47032: Factor *string* is referred by one or more identities.

Cause: The specified factor was referred by existing identities.

Action: Remove the dependent identities and retry the operation.

OCI-47033: Factor link for *string* and *string* is referred by one or more identity maps.

Cause: The specified factor link was referred by existing identity maps.

Action: Remove the dependent identity maps and retry the operation.

OCI-47034: Cannot rename default factor *string*.

Cause: An attempt to rename a default factor failed.

Action: Default factors cannot be renamed. No action required.

OCI-47040: Identity *string* for factor *string* is already defined.

Cause: The object with this name was already defined.

Action: Choose a different object name and retry the operation.

OCI-47041: Identity *string* for factor *string* is not found.

Cause: The requested object did not exist.

Action: Choose an existing object and retry the operation.

OCI-47042: error creating Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred creating the identity

Action: Please review the definition for accuracy and retry the operation

OCI-47043: error deleting Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred deleting the identity

Action: Please review the definition for accuracy and retry the operation

OCI-47044: error updating Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred updating the identity

Action: Please review the definition for accuracy and retry the operation

OCI-47045: Identity *string* for Factor *string* is used by one or more identity maps.

Cause: The specified identity was used by existing identity map(s).

Action: Remove the dependent identity maps and retry.

OCI-47046: Identity *string* for Factor *string* is referred by one or more policy labels.

Cause: The specified identity was used by existing policy label(s).

Action: Remove the dependent policy labels and retry.

OCI-47060: Identity map for identity *string.string*, factor link *string*, *string* is already defined for operation *string* on *string*.

Cause: The object with this name was already defined.

Action: Choose a unique object name and retry the operation.

OCI-47061: Identity map for Identity *string.string*, Factor Link *string*, *string* not found for operation *string* on *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

OCI-47062: error creating Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

OCI-47063: error deleting Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

OCI-47080: code *string* already defined in group *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

OCI-47081: Code *string* is not found in group *string*.

Cause: The requested object did not exist.

Action: Choose an existing object and retry the operation.

OCI-47100: Command rule *string* is already defined for *string.string*.

Cause: The command rule for the specified object was already defined.

Action: Choose a different object or command and retry the operation.

OCI-47101: Command rule *string* is not found for *string.string*.

Cause: The specified command rule did not exist.

Action: Choose an existing command rule and retry the operation.

OCI-47102: Failed to create command rule *string* for *string.string*, *string*.

Cause: Attempted to create the specified command rule for the specific object in the database, but the object does not exist.

Action: Check the Oracle Documentation for Oracle Database Vault to configure command rules. Review the specified command rule, the specific object and retry.

OCI-47103: error deleting command rule *string* for *string.string*, *string*

Cause: An unexpected error occurred deleting the command rule

Action: Please review the definition for accuracy and retry the operation

OCI-47104: Error updating command rule *string* for *string.string*, *string*.

Cause: The specified object does not exist.

Action: Review the object name and retry the command.

OCI-47105: Object owner *string* is invalid for command *string*.

Cause: The specified object owner was invalid for this command.

Action: Choose a valid object owner for this command and retry the operation.

OCI-47106: Command rule *string* already defined for clause *string* with clause parameter *string*.

Cause: A command rule exists.

Action: You cannot have two command rules on the same clause and clause parameter. Update the statement and retry.

OCI-47107: Command rule *string* not found for clause *string* with clause parameter *string*.

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

OCI-47108: Command rule *string* does not support clause level protection.

Cause: Oracle Database Vault does not support clause level protection for this command rule.

Action: Choose a valid command rule that supports clause level protection.

OCI-47109: Command rule *string* for clause *string* with parameter *string* does not support event level protection.

Cause: Oracle Database Vault does not support event level protection for this command rule.

Action: Choose a valid command rule that supports clause level protection.

OCI-47110: Cannot create command rule for *string.string* due to invalid scope.

Cause: When ALLOW COMMON OPERATION was set to TRUE, a smaller scope user is not allowed to create command rules on a larger scope user's object.

Action: When ALLOW COMMON OPERATION is TRUE, do not create command rules on a larger scope user's object from the smaller scope user.

OCI-47120: Document *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

OCI-47121: Document *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

OCI-47140: Factor expression *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

OCI-47141: Factor expression *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

OCI-47160: Factor link *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

OCI-47161: Factor link *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

OCI-47180: Integration policy for Oracle Label Security (OLS) Policy *string* is already defined.

Cause: The specified object is already defined.

Action: Use a different object and retry.

OCI-47181: Integration policy for Oracle Label Security (OLS) policy *string* is missing.

Cause: The object being requested does not exist.

Action: Choose an existing object and retry.

OCI-47182: Label algorithm *string* is not found.

Cause: The specified object does not exist.

Action: Use an existing object and retry.

OCI-47183: error creating Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred creating the integration policy

Action: Please review the definition for accuracy and retry the operation

OCI-47184: error updating Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred updating the integration policy

Action: Please review the definition for accuracy and retry the operation

OCI-47185: error deleting Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred deleting the integration policy

Action: Please review the definition for accuracy and retry the operation

OCI-47200: Integration policy factor is already defined for factor *string* and policy *string*.

Cause: The specified integration policy factor is already defined.

Action: Use a different factor or policy and retry.

OCI-47201: Integration policy factor is not found for factor *string* and policy *string*.

Cause: The specified integration policy factor did not exist.

Action: Choose an existing integration policy factor and retry the operation.

OCI-47202: error creating Integration Policy Factor for factor *string* and policy *string*, *string*

Cause: An unexpected error occurred creating the integration policy factor

Action: Please review the definition for accuracy and retry the operation

OCI-47203: error deleting Integration Policy Factor for factor *string* and policy *string*, *string*

Cause: An unexpected error occurred deleting the integration policy factor

Action: Please review the definition for accuracy and retry the operation

OCI-47220: Label *string* for identity *string.string* under Oracle Label Security (OLS) policy *string* is already defined.

Cause: The specified object is already defined.

Action: Use a different object and retry.

OCI-47221: Label *string* for Identity *string.string* under OLS Policy *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

OCI-47222: error creating Label *string* for Identity *string.string* under OLS Policy *string, string*

Cause: An unexpected error occurred creating the identity label

Action: Please review the definition for accuracy and retry the operation

OCI-47223: error deleting Label *string* for Identity *string.string* under OLS Policy *string, string*

Cause: An unexpected error occurred deleting the identity label

Action: Please review the definition for accuracy and retry the operation

OCI-47240: Realm *string* is already defined.

Cause: The realm with this name was already defined.

Action: Choose a different realm name and retry the operation.

OCI-47241: Realm *string* is not found.

Cause: The requested realm did not exist.

Action: Choose a different realm and retry the operation.

OCI-47242: error creating Realm *string, string*

Cause: An unexpected error occurred creating the realm

Action: Please review the definition for accuracy and retry the operation

OCI-47243: error deleting Realm *string, string*

Cause: An unexpected error occurred deleting the realm

Action: Please review the definition for accuracy and retry the operation

OCI-47244: error updating Realm *string, string*

Cause: An unexpected error occurred updating the realm

Action: Please review the definition for accuracy and retry the operation

OCI-47245: error renaming Realm *string, string*

Cause: An unexpected error occurred renaming the realm

Action: Please review the definition for accuracy and retry the operation

OCI-47246: Cannot change default realm *string* to mandatory realm.

Cause: Attempted to change the realm type of the specified realm to a mandatory realm.

Action: No action necessary.

OCI-47247: Cannot rename default realm *string*.

Cause: An attempt to rename a default realm failed.

Action: Default realms cannot be renamed. No action required.

OCI-47260: Realm authorization to *string* for realm *string* is already defined.

Cause: The requested realm authorization was already defined.

Action: Choose a different realm and retry the operation.

OCI-47261: Realm authorization to *string* with *string* scope for realm *string* is not found.

Cause: The specified realm authorization did not exist.

Action: Choose an existing realm authorization and retry the operation.

OCI-47262: error creating realm authorization to *string* for realm *string*, *string*

Cause: An unexpected error occurred creating the realm authorization.

Action: Review the definition for accuracy and retry the operation.

OCI-47263: error deleting realm authorization to *string* for realm *string*, *string*

Cause: An unexpected error occurred deleting the realm authorization.

Action: Review the definition for accuracy and retry the operation.

OCI-47264: error updating realm authorization to *string* for realm *string*, *string*

Cause: An unexpected error occurred updating the realm authorization.

Action: Review the definition for accuracy and retry the operation.

OCI-47265: The *string* scope realm authorization is not allowed in realm *string*.

Cause: The realm authorization scope was greater than the realm scope allows.

Action: Modify the realm authorization scope, or add the realm authorization to a realm with required scope.

OCI-47280: Realm object *string*, *string.string* exists already in realm *string*.

Cause: The specified object was already defined in the realm.

Action: Choose a different object and retry the operation.

OCI-47281: Realm Object *string*,*string.string* not found in Realm *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

OCI-47282: cannot add realm object *string*, *string.string* to realm *string*

Cause: The specified object could not be added to the realm because it did not exist.

Action: Choose an existing object, and retry the operation.

OCI-47283: cannot delete realm object *string*, *string.string* from realm *string* as it is not a realm object

Cause: The specified object could not be deleted from the realm because it is not a realm object.

Action: Choose a valid realm object, and retry the operation.

OCI-47284: cannot add realm object *string.string* as *string* is not a valid object type

Cause: The specified object type is not valid.

Action: Enter a valid object type for the specified object name, or enter "%". All objects with the specified name and the specified owner will be added to the realm.

OCI-47285: Object *string* is not a common object.

Cause: The specified object was not a common object.

Action: Use a common object to include all objects in the schema. *Params: 1) object_name: The name of the object specified in the command.

OCI-47286: Cannot add *string string.string* to the realm because of an invalid scope.

Cause: The Oracle Database Vault ALLOW COMMON OPERATION status is set to TRUE. This prevents a smaller scope user from adding a larger scope user's object or a larger scope role to the realm.

Action: Requested action is blocked by security settings. No action needed.

OCI-47290: error creating VPD policy for Realm *string, string*

Cause: An unexpected error occurred creating the VPD policy

Action: Please review the definition for accuracy and retry the operation

OCI-47300: Secure application role *string* exists.

Cause: The specified secure application role exists.

Action: Use a different role name and retry.

OCI-47301: Secure application role *string* is not found.

Cause: The specified secure application role does not exist.

Action: Use an existing secure application role and retry.

OCI-47302: error creating Role *string, string*

Cause: An unexpected error occurred creating the role

Action: Please review the definition for accuracy and retry the operation

OCI-47303: error deleting Role *string, string*

Cause: An unexpected error occurred deleting the role

Action: Please review the definition for accuracy and retry the operation

OCI-47304: error updating Role *string, string*

Cause: An unexpected error occurred updating the role

Action: Please review the definition for accuracy and retry the operation

OCI-47305: Rule Set violation on *string (string)*

Cause: An operation that was attempted failed due to a rule set violation

Action: Ensure you have sufficient privileges for this operation retry the operation

OCI-47320: Rule *string* is defined.

Cause: The specified rule is defined.

Action: Use a different rule name and retry.

OCI-47321: Rule *string* is not found.

Cause: The specified rule did not exist.

Action: Choose an existing rule and retry the operation.

OCI-47322: cannot create rules *string*, *string*

Cause: An unexpected error occurred while creating the rule.

Action: Review the rule definition for accuracy and retry the operation.

OCI-47323: Cannot delete Oracle Database Vault rule *string* due to *string*.

Cause: An unexpected error occurred when deleting the Oracle Database Vault rule.

Action: Review the definition for accuracy, and retry the operation. *Params: 1) rule_name: The name of rule to be deleted. 2) error: The error that occurred.

OCI-47324: Cannot update Oracle Database Vault rule *string*, *string*

Cause: An error occurred while updating the Oracle Database Vault rule.

Action: Review the definition for accuracy, and retry the operation. *Params: 1) rule_name: The name of the rule to be updated. 2) error: The error that occurred during update.

OCI-47325: Rule *string* is used by one or more rule sets.

Cause: The specified rule was used by existing rule set(s).

Action: Remove the dependent rule sets and retry the operation.

OCI-47326: The common rule expression contains local object(s).

Cause: Local object(s) were used in the common rule expression.

Action: Common rule expression require common object(s) when creating or updating the expression.

OCI-47327: The scope of the rule and the rule set are different.

Cause: The scope of the rule and the rule set are different.

Action: Check and modify the rule and rule set to use the same scope.

OCI-47328: Cannot rename default rule *string*.

Cause: An attempt to rename a default rule failed.

Action: Default rules cannot be renamed. No action required.

OCI-47340: Rule set *string* is already defined.

Cause: The specified rule set was already defined.

Action: Choose a different rule set name and retry the operation.

OCI-47341: Rule set *string* does not exist.

Cause: The specified rule set does not exist.

Action: Use an existing rule set name and retry.

OCI-47342: Cannot create rule set *string* due to *string*.

Cause: An error occurred creating the rule set.

Action: Review the rule set for accuracy and retry the operation.

OCI-47343: Cannot delete rule set *string* due to *string*.

Cause: An error occurred deleting the rule set.

Action: Review the rule set for accuracy and retry the operation.

OCI-47344: Cannot update rule set *string* due to *string*.

Cause: An error occurred updating the rule set.

Action: Review the rule set for accuracy and retry the operation.

OCI-47345: Rule set *string* is used by one or more realm authorizations.

Cause: The specified rule set was used by existing realm authorization(s).

Action: Review the AUTH_RULE_SET_NAME column in DBA_DV_REALM_AUTH view, remove the dependent realm authorizations and retry.

OCI-47346: Rule set *string* is used by one or more command rules.

Cause: The specified rule set was used by existing command rule(s).

Action: Remove the dependent command rules and retry the operation.

OCI-47347: Rule set *string* is used by one or more secure application roles.

Cause: The specified rule set was used by existing secure application role(s).

Action: Remove the dependent secure application roles and retry the operation.

OCI-47348: Rule set *string* is used by one or more factors.

Cause: The specified rule set was used by existing factor(s).

Action: Review the ASSIGN_RULE_SET_NAME column in DBA_DV_FACTOR view, remove the dependent factors and retry the operation.

OCI-47349: An error occurred when running the rule set handler.

Cause: Either there was a syntax error on the rule set handler, or DVSYS does not have sufficient privilege to run the rule set handler.

Action: Fix the syntax error on the rule set handler, or grant required privileges on the rule set handler to DVSYS.

OCI-47350: Cannot rename default rule set *string*.

Cause: An attempt to rename a default rule set failed.

Action: Default rule sets cannot be renamed. No action required.

OCI-47360: Rule *string* is already added to rule set *string*.

Cause: The requested rule was already added to the specified rule set.

Action: Choose a different rule and retry the operation.

OCI-47361: Rule *string* is not associated with rule set *string*.

Cause: The specified rule is not associated with the specified rule set.

Action: Review the definition for accuracy and retry.

OCI-47362: cannot add rule *string* to rule set *string*

Cause: An unexpected error occurred while adding the rule to the rule set.

Action: Review the definition of the rule for accuracy and retry the operation. *Params: 1) rule_name: The name of rule to add. 2) rule_set_name: The name of rule set to be added.

OCI-47363: Cannot delete rule *string* from rule set *string*.

Cause: Error occurred while attempting to delete the rule from the rule set.

Action: Review the definition for accuracy and retry.

OCI-47381: OLS policy *string* is not found.

Cause: The specified Oracle Label Security (OLS) policy did not exist.

Action: Choose an existing policy and retry the operation.

OCI-47382: OLS policy label *string* is not found for policy *string*.

Cause: The specified Oracle Label Security (OLS) policy label did not exist.

Action: Choose an existing OLS policy label and retry the operation.

OCI-47383: error capturing the session state information

Cause: An internal error occurred capture the session state

Action: Please retry the operation if possible

OCI-47390: failed to audit event, *string*

Cause: An internal error auditing the operation

Action: Please retry the operation if possible

OCI-47391: An attempt to set factor *string* violates rule set *string*.

Cause: An attempt to set the factor violated the associated rule set.

Action: Ensure that you have sufficient authorization to set the factor.

OCI-47392: factor *string* cannot be set

Cause: An attempt to set the factor failed because it was not allowed.

Action: Choose a different factor and retry the operation.

OCI-47393: Factor *string* value not allowed

Cause: The value being assigned to the factor is not allowed

Action: This factor cannot be set to this value so there is no corrective action

OCI-47394: factor assignment rule set is not defined

Cause: The rule set being associated to the factor did not exist.

Action: Review the definition for accuracy and retry the operation.

OCI-47395: error occurred from factor *string* evaluation expression *string*

Cause: The factor retrieval method resulted in an error.

Action: Review the retrieval method definition for accuracy and correct it as required.

OCI-47396: Error occurred from factor *string* validation expression *string*.

Cause: The factor retrieval method resulted in an invalid value based on its validation method.

Action: Review the factor definition and correct it as required.

OCI-47397: incorrect identified by value for Factor *string*

Cause: The factor identified by value is incorrect

Action: Please review the factor definition and correct it as required

OCI-47398: multiple identities defined for Factor *string*

Cause: The factor has duplicate identities defined

Action: Please review the factor definition and correct it as required

OCI-47399: incorrect labeled by value for Factor *string*

Cause: The factor labeled by value is incorrect

Action: Please review the factor definition and correct it as required

OCI-47400: command rule violation for *string* on *string*

Cause: The attempted operation failed due to a command rule violation.

Action: Ensure that you have sufficient authorization and retry the operation.

OCI-47401: realm violation for *string* on *string.string*

Cause: The attempted operation failed due to insufficient realm authorization.

Action: Ensure you have sufficient authorization and retry the operation.

OCI-47402: incorrect evaluation options value for Factor *string*

Cause: The factor evaluations options value is incorrect

Action: Please review the factor definition and correct it as required

OCI-47403: NULL value returned by factor *string* evaluation expression *string*

Cause: The factor evaluated to a NULL value.

Action: Review the factor definition and correct it as required.

OCI-47404: NULL value for trust level of factor *string*

Cause: The factor had a NULL trust level.

Action: Review the factor definition and correct it as required.

OCI-47405: negative trust level for factor *string*

Cause: The factor had a negative trust level.

Action: Review the factor definition and correct it as required.

OCI-47406: ALWAYS AUDIT option set for factor *string*

Cause: The factor audit option was set to always audit.

Action: No action required.

OCI-47407: ALWAYS AUDIT option set for rule set *string*

Cause: The rule set audit option was set to always audit.

Action: No action required.

OCI-47408: Realm violation for the EXECUTE command

Cause: A realm violation has occurred for a realm-protected stored procedure.

Action: In order to invoke the realm-protected procedure, you must have GRANT privileges to execute the procedure, or you must be authorized to operate in the procedure's realm.

OCI-47409: Command Rule violation for the EXECUTE command

Cause: A command rule violation occurred when trying to perform the EXECUTE command for a stored procedure protected by a command rule.

Action: Ask the Database Vault administrator to perform the operation or remove the command rule for the protected stored procedure.

OCI-47410: Insufficient realm privileges to *string* on *string*.

Cause: An operation failed due to insufficient privileges. This is due to an attempt to violate an Oracle Database Vault realm security policy currently enabled and enforced.

Action: Check and obtain sufficient privileges for this operation and retry.

OCI-47411: Cannot use *string* due to Oracle Database Vault policy.

Cause: The attempted operation failed because Oracle Database Vault policy currently prevents the related feature from being used.

Action: Ask the Oracle Database Vault administrator to allow the feature to be used.
*Params: 1) feature_name: The name of restricted feature.

OCI-47412: The DVSYS and DVF users are not allowed to switch containers.

Cause: An attempt was made to switch containers while connecting as DVSYS or DVF, which is not allowed.

Action: Connect as a different user and try again.

OCI-47413: Cannot connect to database due to Oracle Database Vault configuration.

Cause: An attempt to connect to DVSYS or DVF accounts failed because the account is disable on Oracle Database Vault.

Action: Ask the Oracle Database Vault administrator to enable the account, or use an account already enabled.

OCI-47414: Database Vault violation

Cause: The attempted operation failed due to a realm or command rule violation.

Action: Ensure that you have sufficient authorization and retry the operation.

OCI-47415: Insufficient Oracle Database Vault authorization for *string*.

Cause: The attempted operation was denied because it required the specified Oracle Database Vault authorization that you did not have.

Action: Ensure that you have sufficient authorization, and retry the operation.
*Params: 1) authorization_name: The name of the required authorization.

OCI-47416: Database Vault restricted operation

Cause: The attempted operation was denied as Oracle Database Vault was enabled and the operation was not allowed.

Action: No action is required.

OCI-47417: Oracle Database Vault administrative operations require database vault administrative roles.

Cause: The current operation was denied because you did not have appropriate Oracle Database Vault administrative roles.

Action: Contact the Oracle Database Vault administrators to perform the appropriate action.

OCI-47418: Oracle Database Vault Operations Control violation.

Cause: The operation was denied because when Oracle Database Vault Operations Control is enabled, common users are not allowed access local objects in a pluggable database (PDB).

Action: Contact the Oracle Database Vault administrators and inform them your operation was denied.

OCI-47419: Failed to evaluate Oracle Database Vault rules due to invoker's rights PL/SQL program unit used in the rule.

Cause: The Oracle Database Vault rule set evaluation failed because an invoker's rights PL/SQL program unit was used in one of the rules. This is not allowed.

Action: Review and update the relevant rules and use only definer's rights PL/SQL program units.

OCI-47420: Policy *string* for Oracle Database Vault exists.

Cause: A policy with this name already exists.

Action: Choose a unique policy name and retry the operation, or skip the command because it is not needed.

OCI-47421: Oracle Database Vault policy *string* was not found.

Cause: The policy being requested does not exist.

Action: Choose a policy name that exists and retry the operation.

OCI-47422: The object already belongs to an Oracle Database Vault policy.

Cause: An attempt to add a realm or command rule to more than one Oracle Database Vault policy failed.

Action: Make sure the realm or command rule does not belong to any Oracle Database Vault policy and retry the operation, or skip the operation because it is not needed.

OCI-47423: The object does not belong to Database Vault policy *string*.

Cause: An attempt to delete a realm or command rule from an Oracle Database Vault policy that did not contain it failed.

Action: Choose the Database Vault policy that contains the realm or command rule and retry the operation.

OCI-47424: User *string* owns Database Vault policy *string*.

Cause: An attempt to add a user as policy owner to a Oracle Database Vault policy already owned by the user.

Action: Choose a different user and retry the operation, or skip the operation because it is not needed.

OCI-47425: User *string* does not own Oracle Database Vault policy *string*.

Cause: An attempt to delete a user as policy owner from an Oracle Database Vault policy that the specified user does not own.

Action: Choose a user who owns the policy and retry the operation.

OCI-47426: The object or its parent object belongs to an Oracle Database Vault policy.

Cause: An attempt to modify an object that either belongs to an Oracle Database Vault policy or has a parent object that belongs to an Oracle Database Vault policy failed.

Action: Choose a different object or change the related policy state to PARTIAL mode. Retry the statement.

OCI-47427: The *string* scope realm *string* cannot be added to policy *string*.

Cause: The realm scope did not match the policy scope.

Action: Add the realm to a policy with the same scope.

OCI-47428: The *string* scope command rule cannot be added to policy *string*.

Cause: The command rule scope did not match the policy scope.

Action: Add the command rule to a policy with the same scope.

OCI-47429: A common scope command rule cannot be created with local scope objects.

Cause: An attempt to create a common scope command rule using a local object failed.

Action: Use common scope objects for creating or updating a common scope command rule.

OCI-47430: Nested tables cannot be added to Oracle Database Vault realms and command rules.

Cause: An attempt to add a nested table to a realm or command rule failed.

Action: Apply the Oracle Database Vault realm or command rule to the base table. Nested tables are automatically protected when the base table is protected.

OCI-47431: Cannot rename default policy *string*.

Cause: An attempt to rename a default policy failed.

Action: A default policy cannot be renamed. No action required.

OCI-47500: Oracle Database Vault cannot be configured due to missing objects.

Cause: The Oracle Database Vault configuration failed because some objects are missing.

Action: Run the dvremov.sql script to remove Oracle Database Vault. After successful removal, reinstall Oracle Database Vault.

OCI-47501: Database Vault has already been configured.

Cause: An attempt was made to run this procedure more than once. This procedure can be run successfully only once.

Action: If you are attempting to grant the DV_OWNER or DV_ACCTMGR roles, do so manually.

OCI-47502: Oracle Database Vault is not configured.

Cause: Oracle Database Vault could not be enabled unless it was configured with the CONFIGURE_DV procedure.

Action: Connect as SYSDBA and run the CONFIGURE_DV procedure to configure Oracle Database Vault before enabling it.

OCI-47503: Oracle Database Vault is not enabled in CDB\$ROOT or application root.

Cause: Oracle Database Vault was not enabled in CDB\$ROOT or application root for this operation.

Action: Enable Oracle Database Vault in CDB\$ROOT or application root and retry the operation.

OCI-47504: Common audit policies for Oracle Database Vault component are not supported.

Cause: An attempt was made to use common audit policies for Oracle Database Vault realms, factors, and rule sets.

Action: If creating audit policies for Oracle Database Vault objects in CDB\$ROOT, then include the clause CONTAINER=CURRENT to create a root local audit policy.

OCI-47505: Strict mode of Oracle Database Vault cannot be enabled in a pluggable database.

Cause: An attempt to enable Oracle Database Vault strict mode in a pluggable database (PDB) failed.

Action: Enable Oracle Database Vault strict mode in CDB\$ROOT or application root.

OCI-47506: Oracle Database Vault or Oracle Database Vault application protection is not enabled in CDB\$ROOT.

Cause: Oracle Database Vault or Oracle Database Vault application protection was not enabled in CDB\$ROOT for this operation.

Action: Enable Oracle Database Vault or Oracle Database Vault application protection in CDB\$ROOT and retry the operation.

OCI-47507: Oracle Database Vault cannot be enabled inside an application action.

Cause: An attempt was made to enable Oracle Database Vault inside an application action.

Action: Enable Oracle Database Vault independently of the application action.

OCI-47508: Oracle Label Security cannot be enabled inside an application action of the application container.

Cause: An attempt was made to enable Oracle Label Security (OLS) inside an application action for an application container.

Action: Enable Oracle Label Security in each of the application pluggable databases that require OLS enforcement.

OCI-47600: The SQL firewall is not enabled.

Cause: The SQL firewall was not enabled.

Action: Enable the SQL firewall and retry the operation.

OCI-47605: SQL Firewall violation

Cause: Operation blocked by the SQL Firewall due to enforcement of the firewall policy.

Action: Review the SQL Firewall policy. If it is not intended to block the operation, review and modify the SQL Firewall policy.

OCI-47620: invalid input value for parameter *string*

Cause: The value specified for this parameter was invalid.

Action: Review and modify the parameter and retry the operation.

OCI-47621: The SQL Firewall operation is not allowed on user *string*.

Cause: SQL Firewall cannot be used on certain users such as SYS. For the complete list of the restricted users, refer to Oracle Database documentation.

Action: Choose a different user and retry the operation. *Params: 1) user_name: The specified user name.

OCI-47623: Flush log propagation timed out in SQL firewall.

Cause: The flush log operation across Oracle Real Application Clusters (Oracle RAC) instances timed out.

Action: Ensure that all Oracle RAC instances are available and retry the operation.

OCI-47624: SQL Firewall capture for user *string* already exists.

Cause: The SQL Firewall capture for this user was already defined.

Action: Choose another user and retry the SQL Firewall operation. *Params: 1) user_name: The name of the user for SQL Firewall capture.

OCI-47625: SQL Firewall capture for user *string* does not exist.

Cause: The SQL Firewall capture for this user did not exist. The user cannot generate the allow list, or drop, start, or stop the capture.

Action: Choose an existing capture and retry the SQL Firewall operation. *Params: 1) user_name: The name of the user for SQL Firewall capture.

OCI-47626: SQL Firewall capture for user *string* has been started.

Cause: The SQL Firewall capture for this user was already started.

Action: Stop the capture and retry the SQL Firewall operation. *Params: 1) user_name: The name of the user for SQL Firewall capture.

OCI-47627: SQL Firewall capture for user *string* is not started.

Cause: The SQL Firewall capture for this user was not started.

Action: No action required. *Params: 1) user_name: The name of the user for SQL Firewall capture.

OCI-47628: SQL Firewall allow list for user *string* already exists.

Cause: The SQL Firewall allow list for this user already existed.

Action: Choose another user and retry the SQL Firewall operation. *Params: 1) user_name: The name of the user for SQL Firewall allow list.

OCI-47629: SQL Firewall capture log for user *string* is not found.

Cause: An attempt to generate a SQL Firewall allow list failed because there are no SQL Firewall capture logs found for this user.

Action: Choose another user and retry the SQL Firewall operation. *Params: 1) user_name: The name of the user for SQL Firewall event log.

OCI-47630: SQL Firewall allow list for user *string* does not exist.

Cause: The SQL Firewall allow list for this user did not exist.

Action: Choose another user and retry the SQL Firewall operation. *Params: 1) user_name: The name of the user for SQL Firewall allow list.

OCI-47631: SQL Firewall allow list for user *string* is enabled.

Cause: When the SQL Firewall allow list for this user was already enabled, it could not start the capture, or enable or drop the allow list for this user.

Action: Disable the allow list and retry the SQL Firewall operation. *Params: 1) user_name: The name of the user for SQL Firewall allow list.

OCI-47632: SQL Firewall allow list for user *string* is not enabled.

Cause: The SQL Firewall allow list for this user was not enabled.

Action: No action required. *Params: 1) user_name: The name of the user for SQL Firewall allow list.

OCI-47633: SQL Firewall allowed context *string* with type *string* for user *string* already exists.

Cause: The specified SQL Firewall allowed context for this user already existed.

Action: Choose another context and retry the SQL Firewall operation. *Params: 1) context_value: The value of SQL Firewall allowed context. 2) context_type: The type of SQL Firewall allowed context. 3) user_name: The name of the user for SQL Firewall allowed context.

OCI-47634: SQL Firewall allowed context *string* with type *string* for user *string* does not exist.

Cause: The specified SQL Firewall allowed context for this user did not exist.

Action: Choose another context and retry the SQL Firewall operation. *Params: 1) context_value: The value of the SQL Firewall allowed context. 2) context_type: The type of the SQL Firewall allowed context. 3) user_name: The name of the user for SQL Firewall allowed context.

OCI-47635: SQL Firewall cannot be enabled.

Cause: SQL Firewall could not be enabled because the database was in upgrade mode.

Action: No action required.

OCI-47636: Concurrent change on SQL Firewall allow list is not allowed.

Cause: The operation failed because there was an ongoing SQL Firewall operation such as generation or dropping of SQL Firewall allow list or SQL Firewall log purging action.

Action: Wait until the current change on SQL Firewall allow list is complete and retry the SQL Firewall operation.

OCI-47637: Truncate operation not allowed on Firewall log tables.

Cause: Truncating on Firewall log tables was not allowed because the Firewall was enabled.

Action: Retry the operation when the Firewall is disabled, or use the DELETE command.

OCI-47638: SQL Firewall allowed SQL ID *string* for user *string* does not exist.

Cause: The specified SQL Firewall allowed SQL ID for this user did not exist.

Action: Choose another allowed SQL ID and retry the SQL Firewall operation.

*Params: 1) allowed_sql_ID: The ID of the SQL Firewall allowed SQL for the specified user. 2) user_name: The specified user name.

OCI-47639: As SQL Firewall allow list for user *string* already exists, the capture must be created with the same top_level_only setting.

Cause: The input value for top_level_only was not consistent with the existing allow list for this user.

Action: Specify the same top_level_only value as the existing SQL Firewall allow list and retry the SQL Firewall operation. *Params: 1) user_name: The specified user name.

OCI-47640: SQL Firewall allow list cannot be imported due to: *string*.

Cause: The specified SQL Firewall allow list could not be imported because of missing fields or invalid values.

Action: Choose an allow list in valid format and retry the SQL Firewall operation.

*Params: 1) cause: The cause of the failure of the import.

OCI-47641: The requested operation cannot be done when SQL Firewall is enabled.

Cause: SQL Firewall was enabled.

Action: Disable SQL Firewall and retry the operation.

OCI-47642: The SQL Firewall tables cannot be moved to '*string*' tablespace

Cause: The tablespace was either unavailable or did not have enough space to accommodate the SQL Firewall tables being moved.

Action: Make sure that the tablespace is online and has enough space for the SQL Firewall tables being moved.

OCI-47800: Oracle Data Pump authorization for Oracle Database Vault to user *string* to perform action *string* exists.

Cause: Oracle Data Pump authorization for Oracle Database Vault to perform the specified action was already granted to the specified user.

Action: Choose a different user or action and retry the operation, or skip the authorization because it is not needed.

OCI-47801: Oracle Data Pump authorization for Oracle Database Vault to user *string* on schema *string* to perform action *string* exists.

Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified schema to perform the specified action was already granted to the specified user.

Action: Choose a different user, schema, action, or any combination of those and retry the operation, or skip the operation because it is not needed.

OCI-47802: Oracle Data Pump authorization for Oracle Database Vault to user *string* to perform action *string* not found.

Cause: Oracle Data Pump authorization for Oracle Database Vault to perform the specified action was not granted to the specified user.

Action: Choose a different user or action. Retry the operation.

OCI-47803: Oracle Data Pump authorization for Oracle Database Vault to user *string* on schema *string* to perform action *string* not found.

Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified schema to perform the specified action was not granted to the specified user.

Action: Choose a different user, schema, action, or any combination of those and retry the operation.

OCI-47804: Oracle Database Vault application protection exception for user *string* exists.

Cause: Oracle Database Vault application protection exception was already granted to the specified user.

Action: Choose a different user and retry the operation, or skip the operation because it is not needed.

OCI-47805: Oracle Database Vault application protection exception for user *string* does not exist.

Cause: Oracle Database Vault application protection exception does not exist for the specified user.

Action: Choose a different user and retry the operation.

OCI-47806: Oracle Database Vault application protection exception for *string.string* exists.

Cause: Oracle Database Vault application protection exception was already granted to the specified package.

Action: Choose a different package and retry the operation, or skip the operation because it is not needed.

OCI-47807: Oracle Database Vault application protection exception for *string.string* does not exist.

Cause: Oracle Database Vault application protection exception does not exist for the specified package.

Action: Choose a different package and retry the operation.

OCI-47808: Oracle Database Vault application protection exception cannot be added to package *string.string*.

Cause: Oracle Database Vault application protection exception was not added to the definer rights package.

Action: Choose a different package and retry the operation.

OCI-47809: User *string* is not an existing Oracle Database Real Application Security (RAS) user.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was not granted to the specified RAS user.

Action: Choose an existing RAS user with the authorization and retry the operation, or grant the specified RAS user the required authorization.

OCI-47810: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault to user *string* on RAS user *string* exists.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault for the specified user on the specified RAS user was already granted.

Action: Choose a different grantee or RAS user and retry the operation, or skip the operation because it is not needed.

OCI-47811: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault to user *string* on RAS user *string* was not found.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was not granted to the specified user on the specified RAS user.

Action: Choose a different user or RAS user and retry the operation, or grant the user authorization to the specified RAS user.

OCI-47812: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault to user *string* exists.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was already granted to the specified user.

Action: Choose a different user or RAS user and retry the operation, or skip the operation because it is not needed.

OCI-47813: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault to user *string* not found.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a different user with the authorization and retry, or grant the specified user the necessary authorization.

OCI-47814: Oracle Database Vault application protection cannot be *string*.

Cause: One or more of the pluggable databases were in read-only mode.

Action: Reopen the pluggable databases in read/write mode and retry the operation.

OCI-47815: Oracle Database Vault application protection cannot be *string* for the pluggable database.

Cause: The pluggable database is in read-only mode.

Action: Choose a pluggable database that is opened in read/write mode, or change the mode of the specified database.

OCI-47895: SQL Firewall authorization for Oracle Database Vault to *string* already exists.

Cause: SQL Firewall authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation. *Params: 1) user_name: The specified user name.

OCI-47896: SQL Firewall authorization for Oracle Database Vault to *string* is not found.

Cause: SQL Firewall authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has SQL Firewall authorization for Oracle Database Vault and retry. *Params: 1) user_name: The specified user name.

OCI-47897: AUDIT_ADMIN authorization for Oracle Database Vault to *string* already exists.

Cause: AUDIT_ADMIN authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

OCI-47898: AUDIT_ADMIN authorization for Oracle Database Vault to *string* is not found.

Cause: AUDIT_ADMIN authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has AUDIT_ADMIN authorization for Oracle Database Vault and retry.

OCI-47899: AUDIT_VIEWER authorization for Oracle Database Vault to *string* already exists.

Cause: AUDIT_VIEWER authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry.

OCI-47900: AUDIT_VIEWER authorization for Oracle Database Vault to user *string* is not found.

Cause: AUDIT_VIEWER authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has AUDIT_VIEWER authorization for Oracle Database Vault or grant the specified user the authorization and retry.

OCI-47901: OLS policy not specified

Cause: An OLS policy name is required for this operation

Action: Specify a policy name and retry the operation

OCI-47902: OLS policy label not specified

Cause: An OLS policy label is required for this operation

Action: Specify a policy label and retry the operation

OCI-47903: OLS policy label *string* not found for policy *string*

Cause: The policy label being requested does not exist

Action: Choose an object name that exists and retry the operation

OCI-47904: OLS session label does not exist

Cause: The policy label specified does not exist

Action: Choose a valid policy label and retry the operation

OCI-47905: OLS policy label *string* is not allowed for policy *string*

Cause: The policy label specified is not valid for this policy

Action: Choose a valid policy label for this policy and retry the operation

OCI-47906: OLS policy label not specified for identity *string.string* under policy *string*

Cause: The policy label is required for this operation

Action: Choose a valid policy label for this policy and retry the operation

OCI-47907: Database Vault associated OLS policy *string* not fully configured

Cause: The Oracle Label Security (OLS) policy was associated with Database Vault. But either the policy was not configured with a factor or the current factor identity was not assigned a label.

Action: Based on the cause, either configure a factor with the OLS policy using DVSYS.DBMS_MACADM.ADD_POLICY_FACTOR procedure and assign labels to factor identities using DVSYS.DBMS_MACADM.CREATE_POLICY_LABEL procedure or remove Database Vault association using DVSYS.DBMS_MACADM.DELETE_MAC_POLICY_CASCADE procedure.

OCI-47910: Failed to add language *string* to Oracle Database Vault.

Cause: An error occurred while attempting to add a language to Oracle Database Vault.

Action: Review the trace file and identify the cause. Contact Oracle Support.

OCI-47920: Authorization failed for user *string* to perform this operation

Cause: The operation attempted is not allowed for this user

Action: Please ensure you have privileges to perform this operation

OCI-47921: error adding host *string* to domain *string, string*

Cause: An error occurred adding the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

OCI-47922: error removing host *string* to domain *string, string*

Cause: An error occurred removing the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

OCI-47930: Privilege capture *string* already exists.

Cause: A privilege capture with the specified name was already in existence.

Action: Choose another capture name or drop the existing privilege capture.

OCI-47931: Privilege capture *string* does not exist.

Cause: The given privilege capture did not exist.

Action: Choose another privilege capture.

OCI-47932: Privilege capture *string* is still enabled.

Cause: The given privilege capture was still enabled.

Action: Choose another capture or disable the given privilege capture.

OCI-47933: Privilege capture *string* is already enabled.

Cause: The specified privilege capture was already enabled.

Action: Disable the current capture or use a different capture.

OCI-47934: Two privilege captures are already enabled.

Cause: A maximum number of two privilege captures can be enabled.

Action: Check the ENABLED column of the DBA_PRIV_CAPTURES view, disable one of the enabled privilege captures, and retry.

OCI-47935: Another privilege capture is enabled.

Cause: Another capture of the same type or another nondatabase-wide capture was enabled.

Action: Disable the enabled privilege capture.

OCI-47936: Privilege capture *string* is already disabled.

Cause: The specified privilege capture was already disabled.

Action: Choose another capture.

OCI-47937: Input *string* does not match the given privilege capture type.

Cause: The given input did not match the given privilege capture type.

Action: Change the input or the privilege capture type.

OCI-47938: GENERATE_RESULT is already running for privilege capture *string*.

Cause: DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT was already running for the given privilege capture.

Action: Wait and retry later or choose another privilege capture.

OCI-47939: Capture context namespace or attribute does not exist or is invalid.

Cause: Context namespace or attribute used in the capture condition did not exist or was invalid.

Action: Create the namespace or set the attribute or re-create a privilege capture with a valid namespace and attribute.

OCI-47940: Cannot create a capture condition for SYS user.

Cause: Attempted to create a capture with the condition set as SYS user, and this is not allowed.

Action: Create the capture condition for non-SYS user.

OCI-47941: Privilege capture *string* has not been enabled with run name *string*.

Cause: The given privilege capture has not been run with the given run name.

Action: Enable the given privilege capture with the given run name.

OCI-47942: A privilege capture *string* with the run name *string* already exists.

Cause: The specified privilege capture with the specified run name already exists.

Action: Enable the specified privilege capture with a new run name.

OCI-47943: Privilege capture *string* is enabled with run name *string*.

Cause: The specified privilege capture is running with the specified run name.

Action: Disable the given privilege capture.

OCI-47944: Privilege capture *string* has not been enabled.

Cause: The specified privilege capture has not been enabled.

Action: Enable the specified privilege capture.

OCI-47945: duplicate roles *string* in capture condition

Cause: An attempt was made to specify duplicate roles in a capture condition.

Action: Specify only unique roles and retry the operation.

OCI-47946: invalid System Privilege - '*string*'

Cause: An invalid system privilege was passed as a parameter.

Action: Specify valid system privilege and retry the operation.

OCI-47950: required value not defined for parameter *string*

Cause: A value was not defined for the specified parameter.

Action: Specify the missing parameter value and retry the operation.

OCI-47951: invalid input value or length for parameter *string*

Cause: The value specified for this parameter was invalid or too large.

Action: Specify a valid parameter value and retry the operation.

OCI-47952: Oracle Data Pump authorization for Oracle Database Vault to user *string* exists

Cause: Oracle Data Pump authorization for Oracle Database Vault was already granted to the specified user.

Action: Choose a different user and retry the operation, or skip the operation because it is not needed.

OCI-47953: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified schema was already granted to the specified user.

Action: Choose a different user, schema, or both and retry the operation, or skip the authorization because it is not needed.

OCI-47954: Oracle Data Pump authorization for Oracle Database Vault to user *string* on object *string.string* exists.

Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified object was already granted to the specified user.

Action: Choose a different grantee, object, or both and retry the operation, or skip the authorization because it is not needed.

OCI-47955: Oracle Data Pump authorization for Oracle Database Vault to user *string* was not found.

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has Oracle Data Pump authorization for Oracle Database Vault, or obtain the authorization for your user. Retry after you have the authorization.

OCI-47956: Oracle Data Pump authorization for Oracle Database Vault to user *string* on schema *string* not found.

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Verify the user, schema or table are authorized with DBMS_MACADM.AUTHORIZE_DATAPUMP_USER and retry.

OCI-47957: Oracle Data Pump authorization for Oracle Database Vault to user *string* on object *string.string* was not found.

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the specified user on the specified object.

Action: Choose a different user, object, or both and retry the operation.

OCI-47958: Running EXP with direct path option is not allowed when Oracle Database Vault is enabled.

Cause: While Oracle Database Vault was enabled, an attempt was made to run EXP with the 'direct=y' option.

Action: Change the option to 'direct=n' or disable Oracle Database Vault and then retry the operation.

OCI-47959: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* already exists.

Cause: The Oracle transportable tablespace authorisation for Oracle Database Vault on the given tablespace was already granted to the given grantee.

Action: Choose a different grantee or tablespace and then retry the operation.

OCI-47960: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* is not found.

Cause: The Oracle transportable tablespace authorization for Oracle Database Vault was not granted to the given user on the given tablespace.

Action: Choose a different user or tablespace, and then retry the operation.

OCI-47961: Oracle Scheduler Job authorization for Oracle Database Vault to user *string* already exists.

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was already granted.

Action: Choose a different user and retry the operation, or skip the operation because it is not needed.

OCI-47962: Oracle Scheduler Job authorization for Oracle Database Vault to *string* on schema *string* already exists.

Cause: Oracle Scheduler Job authorization for Oracle Database Vault on the given schema was already granted.

Action: Choose a different user or schema and retry the operation.

OCI-47963: Oracle Scheduler Job authorization for Oracle Database Vault to user *string* not found.

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has Oracle Scheduler Job authorization for Oracle Database Vault and retry the operation, or grant the authorization to the specified user.

OCI-47964: Oracle Scheduler job authorization for Oracle Database Vault to user *string* on schema *string* was not found.

Cause: Oracle Scheduler job authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Choose a different user, schema, or both and retry the operation.

OCI-47965: DEBUG_CONNECT authorization for Oracle Database Vault to user *string* on schema *string* exists.

Cause: DEBUG_CONNECT authorization for Oracle Database Vault on the specified schema was already granted to the specified user.

Action: Choose a different user, schema, or both and retry the operation.

OCI-47966: DEBUG_CONNECT authorization for Oracle Database Vault to user *string* on schema *string* not found.

Cause: DEBUG_CONNECT authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Choose a different user, schema, or both and retry the operation.

OCI-47967: DBCAPTURE authorization for Oracle Database Vault to user *string* exists.

Cause: DBCAPTURE authorization for Oracle Database Vault was already granted to the specified user.

Action: Choose a different user and retry the operation, or skip the authorization because it is not needed.

OCI-47968: DBCAPTURE authorization for Oracle Database Vault to user *string* not found.

Cause: DBCAPTURE authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has DBCAPTURE authorization for Oracle Database Vault and retry the operation, or get the authorization for the specified user.

OCI-47969: DBREPLAY authorization for Oracle Database Vault to *string* already exists.

Cause: DBREPLAY authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

OCI-47970: DBREPLAY authorization for Oracle Database Vault to user *string* was not found.

Cause: DBREPLAY authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has the DBREPLAY authorization, or use the DBMS_MACADM.AUTHORIZE_DBCAPTURE procedure to authorize the user.

OCI-47971: Oracle proxy authorization for Oracle Database Vault to *string* on schema *string* already exists.

Cause: Oracle proxy authorization for Oracle Database Vault on the given schema was already granted.

Action: Choose a different user or schema and retry the operation.

OCI-47972: Oracle proxy authorization for Oracle Database Vault to user *string* on schema *string* not found.

Cause: Oracle proxy authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Choose a different user, schema, or both and retry the operation.

OCI-47973: Oracle DDL authorization for Oracle Database Vault to user *string* on schema *string* exists.

Cause: Oracle DDL authorization for Oracle Database Vault on the specified schema was already granted to the specified user.

Action: Choose a different user, schema, or both and retry the operation.

OCI-47974: Oracle DDL authorization for Oracle Database Vault to user *string* on schema *string* not found.

Cause: Oracle DDL authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Choose a different user, schema, or both and retry the operation.

OCI-47975: PREPROCESSOR authorization for Oracle Database Vault to user *string* exists.

Cause: PREPROCESSOR authorization for Oracle Database Vault was already granted to the specified user.

Action: Use the DBMS_MACADM.AUTHORIZE_DATAPUMP_USER procedure to authorize the user to perform Oracle Data Pump operations.

OCI-47976: PREPROCESSOR authorization for Oracle Database Vault to user *string* not found.

Cause: PREPROCESSOR authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has PREPROCESSOR authorization for the Oracle Database Vault and retry the operation, or grant the authorization to the specified user.

OCI-47977: Maintenance authorization *string* for Oracle Database Vault to *stringstring* exists.

Cause: Maintenance authorization for Oracle Database Vault was already granted to the specified user on the specified object.

Action: Choose a different user, object, or both and retry the operation, or skip the authorization because it is not needed. *Params: 1) *auth_type*: The type of maintenance authorization. 2) *grantee_name*: The name of the grantee. 3) *object_type*: The type of object (optional).

OCI-47978: Maintenance authorization for Oracle Database Vault to user *string* on schema *string* exists.

Cause: Maintenance authorization for Oracle Database Vault on the specified schema was already granted to the specified user.

Action: Choose a different user, schema, or both and retry the operation, or skip the authorization because it is not needed.

OCI-47979: Maintenance authorization for Oracle Database Vault to user *string* on object *string.string* exists.

Cause: Maintenance authorization for Oracle Database Vault on the specified schema was already granted to the specified user.

Action: Use the DBMS_MACADM.AUTHORIZE_MAINTENANCE_USER procedure to grant the user authorization to perform Information Lifecycle Management (ILM) operations.

OCI-47980: Maintenance authorization *string* for Oracle Database Vault to *stringstring* not found.

Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user on the specified object.

Action: Choose a different user, object, or both and retry the operation. *Params: 1) *auth_type*: The type of maintenance authorization. 2) *grantee_name*: The name of the grantee. 3) *object_type*: The type of object (optional).

OCI-47981: Maintenance authorization *string* for Oracle Database Vault to *stringstring* on schema *string* not found.

Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Choose a different user, schema, or both and retry the operation. *Params: 1) *auth_type*: The type of maintenance authorization. 2) *grantee_name*: The name of the grantee. 3) *object_type*: The type of target object. 4) *schema_name*: The name of the target schema name.

OCI-47982: Maintenance authorization *string* for Oracle Database Vault to user *string* on object *string.string* was not found.

Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user on the specified object.

Action: Choose a different user or object and retry the operation. *Params: 1) *auth_type*: The type of maintenance authorization. 2) *grantee_name*: The name of the grantee. 3) *object_owner*: The name of target object owner. 4) *object_name*: The name of target object name.

OCI-47983: Diagnostic authorization for Oracle Database Vault to user *string* exists.

Cause: Diagnostic authorization for Oracle Database Vault was already granted to the specified user.

Action: Choose a different grantee and retry the operation, or skip the authorization because it is not needed.

OCI-47984: Diagnostic authorization for Oracle Database Vault to user *string* not found.

Cause: Diagnostic authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has diagnostic authorization for Oracle Database Vault and retry the operation, or obtain the authorization for the specified user.

OCI-47985: password same as or similar to user

Cause: The password specified similar to the user account name and therefore insecure

Action: Please specify the more complex password and retry the operation

OCI-47986: password length must be 8 characters or more

Cause: The password specified is too short and therefore insecure

Action: Please specify a password with more characters and retry the operation

OCI-47987: password is too simple

Cause: The password specified can be guessed based on dictionary terms and therefore insecure

Action: Please specify a password that is not based on dictionary terms and retry the operation

OCI-47988: password should contain at least one numeric and one alphabetic character

Cause: The password does not contain at least one numeric and one alphabetic character

Action: Please specify a password with at least one numeric and one alphabetic character and retry the operation

OCI-47989: password should differ by at least 3 characters

Cause: The password specified does not differ from the previous one by more than 3 characters

Action: Please specify a password that differs from the previous one by more than 3 characters and retry the operation

OCI-47990: Function *string* has already been added to Oracle Database Vault index functions list.

Cause: The function specified had already been added to Oracle Database Vault index functions list.

Action: Choose a different function and retry the operation, or skip the operation because it is not needed.

OCI-47991: Function *string* is not found in Oracle Database Vault index functions list.

Cause: The function specified was not found in the Oracle Database Vault index functions list.

Action: Choose a different function and retry the operation.

OCI-47992: Function *string* is not an Oracle built-in operator.

Cause: The function specified was not provided as a built-in operator.

Action: Choose a different function and retry the operation.

OCI-47993: Cannot run *dvremov.sql* from CDB root when DV is installed in one or more PDBs.

Cause: The Database Vault (DV) removal script was not allowed to be run from the multitenant container database (CDB) root when DV is installed in one or more of the underlying pluggable databases (PDBs).

Action: Run *dvremov.sql* on all PDBs before running it from CDB root.

OCI-47994: Database Vault removal script must be run as SYS

Cause: The Database Vault removal script was not run as SYS.

Action: Run the Database Vault removal script as SYS.

OCI-47995: Database Vault must be linked off and disabled before removal

Cause: Database Vault was not linked off and disabled.

Action: Link Database Vault off and execute `DBMS_MACADM.DISABLE_DV_CHECK` as `DV_OWNER`.

OCI-47996: The RECYCLEBIN is turned on

Cause: The RECYCLEBIN was turned on.

Action: Turn off the RECYCLEBIN and then execute Database Vault Removal script.

OCI-47997: Database Vault protected schema does not exist

Cause: The Database Vault DVSYS protected schema did not exist.

Action: Contact Oracle Support Services for instructions.

OCI-47999: internal Oracle Database Vault error: *string*\n Error: *string*

Cause: An internal Oracle Database Vault error occurred.

Action: Contact Oracle Support Services.

OCI-48000: Cannot run *dvremov.sql* from CDB root when one or more PDBs are closed.

Cause: The Database Vault (DV) removal script was not allowed to be run from the multitenant container database (CDB) root when one or more pluggable databases (PDBs) are closed.

Action: Open all PDBs before running *dvremov.sql* from CDB root.

OCI-48001 to OCI-51705

OCI-48001: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: This is the generic internal error number for program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

OCI-48002: thread terminated by fatal error

Cause: The thread was in an unrecoverable state.

Action: Examine the thread trace file for more information.

OCI-48003: out of process memory

Cause: Operating system memory was exhausted or a per-process limit on private memory usage was reached. The database has an internal limit of 32 GB per Oracle process.

Action: Check the use of memory by other Oracle instances and other applications. Exceeding 32 GB in a single process may indicate a memory leak. Consider reducing the size of shared memory to allow more room for private memory.

OCI-48004: out of shared memory in string

Cause: More shared memory was needed than was available.

Action: If using one of the initialization parameters SGA_TARGET, MEMORY_SIZE, or MEMORY_TARGET, increase the value of that parameter. If it is not feasible to increase the parameter, then reduce the value of DB_CACHE_SIZE (if set). If you are not using SGA_TARGET, MEMORY_SIZE, or MEMORY_TARGET, increase the size of the pool that is out of memory. For example, increase SHARED_POOL_SIZE for the shared pool or INMEMORY_SIZE for an IMC heap. *Params: 1) heap_name: The top heap name.

OCI-48006: user requested cancel of current operation

OCI-48007: name is already used by an existing product type

Cause: An attempt was made to define a product type with the same name as an already defined product type.

Action: Use the already existing product type with the specified name, or use a different name for the product type.

OCI-48008: id is already used by an existing product type

Cause: An attempt was made to define a product type with the same id as an already defined product type.

Action: Choose a different name for the product type.

OCI-48100: error encountered when attempting to open a file

Cause: There was an error encountered when attempting to open a file with the ADR file interface.

Action: Check that the specified directory name, file name, and open options are valid.

OCI-48101: error encountered when attempting to read a file [string] [string] [string]

Cause: There was an error encountered when attempting to read a file with the ADR file interface.

Action: Check the specified arguments to the read interface.

OCI-48102: encountered the end-of-file when reading the file

Cause: The ADR file interface encountered the end-of-file when reading the file.

Action: Handle the end of file condition.

OCI-48103: error encountered when attempting to write a file [string] [string] [string]

Cause: There was an error encountered when attempting to write a file with the ADR file interface.

Action: Check the specified arguments to the write interface.

OCI-48104: read mismatch on blocks requested and returned, [string], [string]

Cause: There was a mismatch between the number of blocks requested for reading and the number of blocks actually returned.

Action: Check the file to make sure there are no partial blocks.

OCI-48105: write mismatch on blocks requested and returned, [string], [string]

Cause: There was a mismatch between the number of blocks requested for writing and the number of blocks actually written.

Action: Check that there is enough space left on the device to write the requested number of blocks.

OCI-48106: error initializing the ADR string object

Cause: There was an error encountered during the initialization of one of the ADR file objects.

Action: Check the validity of the specified directory name and file name.

OCI-48107: invalid Bfile input, [string]

Cause: An invalid Bfile was passed into the routine to convert the bfile into a file handle.

Action: Verify the contents of the specified Bfile.

OCI-48108: invalid value given for the diagnostic_dest init.ora parameter

Cause: The value given for the diagnostic_dest directory is not a valid directory. Either the directory does not exist or the process does not have read/write privileges on the directory.

Action: Use a value for diagnostic_dest that is a valid directory with the proper read and write privileges.

OCI-48109: invalid lock mode for file descriptor, [string]

Cause: The lock mode associated with the file descriptor was invalid in the context of the routine.

Action: Verify that a file is not trying to obtain multiple locks and that the file is holding a lock when attempting to release the lock.

OCI-48110: error encountered while attempting to get a file lock [string] [string]

Cause: There was an error encountered while trying to get a file lock.

Action: Check the state of the file and operating system.

OCI-48111: error encountered while attempting to release a file lock [string]

Cause: There was an error encountered while trying to release a file lock.

Action: Check the state of the file and operating system.

OCI-48112: invalid flags for open file, string

Cause: Invalid flags were passed in to the open file routine.

Action: Check to see if the flags are a valid combination.

OCI-48113: unable to write to stream file because of out of space condition

Cause: The system is unable to write the requested number of bytes to a stream file. This is due to an out of space condition. The additional information shows how many bytes were not written.

Action: Check that there is enough space left on the device to write the requested number of bytes.

OCI-48114: error encountered when attempting to close a file

Cause: There was an error encountered when attempting to close a file with the ADR file interface.

Action: Check the validity of the file descriptor.

OCI-48115: error encountered while seeking a file position

Cause: There was an error encountered while seeking a position in a file.

Action: Check that the requested file position falls within the file boundaries.

OCI-48116: error encountered when attempting to create a directory [string]

Cause: There was an error encountered when attempting to create a directory.

Action: Check the directory name.

OCI-48117: error encountered when attempting to remove a directory [string]

Cause: There was an error encountered when attempting to remove a directory.

Action: Check the directory name.

OCI-48118: error encountered with list directory [string]

Cause: There was an error with listing the elements of a directory.

Action: Check the state of the operating system.

OCI-48119: error encountered when attempting to remove a file [string] [string]

Cause: There was an error encountered when attempting to remove a file with the ADR file interface.

Action: Check the directory name and file name.

OCI-48120: error encountered when attempting to retrieve the file size [string] [string]

Cause: There was an error encountered when attempting to retrieve the file size with the ADR file interface.

Action: Check the directory name and file name.

OCI-48121: error with opening the ADR stream file [string] [string]

Cause: An error was encountered when attempting to open an ADR stream file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

OCI-48122: error with opening the ADR block file [string] [string]

Cause: An error was encountered when attempting to open an ADR block file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

OCI-48123: error encountered when attempting to flush a file

Cause: There was an error encountered when attempting to flush a file with the ADR file interface.

Action: Check the state of the file.

OCI-48124: device full encountered during write to a file

Cause: The device full error was encountered during the write to a file.

Action: Check the amount of free space on the device.

OCI-48125: illegal identifier length, argn:string, len:string, lim:string

Cause: An input identifier was passed in that has a length that is greater than the max length.

Action: Make sure the input identifier has a length that is less than the max length.

OCI-48126: attempting to create a file that already exists

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or check if it is okay if the file already exists.

OCI-48127: attempting to open a file that does not exist

Cause: An attempt was made to open a file that does not exist.

Action: Either create the file or check why the file does not exist.

OCI-48128: opening of a symbolic link is disallowed

Cause: An error was encountered when attempting to open a file that is a symbolic link. Users are not allowed to open symbolic links.

Action: Check the specified file name.

OCI-48129: invalid input for the full path specification

Cause: Input was incorrectly specified for the full path specification, or the default extension may have been incorrectly specified. Or an empty string was passed in for the full path.

Action: Check that the full path string is non-NULL. If you want to specify a relative path from ADR Home for the full path specification, then use '<ADR_HOME>' instead of the actual path to ADR Home. For ADR Base, use '<ADR_BASE>'.

OCI-48130: invalid lock parameters for get file lock [string]

Cause: Invalid lock parameters passed in for the get file lock routine. The user must pass in file as the lock type. Or, there is a lock mode mismatch. Exclusive locks are not allowed in read-only mode, and shared locks are not allowed in write-only mode.

Action: Check that correct lock type is specified and that the correct lock mode is requested for the file given its open flags.

OCI-48131: error encountered when attempting to tell the file position

Cause: An error was encountered when attempting to tell the file position using the ADR file interface.

Action: Check the directory and file name of the file along with the open state.

OCI-48132: requested file lock is busy, [string] [string]

Cause: The requested file lock is busy because another process is holding the file lock.

Action: Try to get the file lock again at a later time.

OCI-48133: file descriptor has already been opened [string] [string]

Cause: The specified file descriptor has already been opened.

Action: Do not open a file that has previously been opened, or check your code to make sure you are cleaning up a file descriptor that is being reused correctly.

OCI-48134: invalid file descriptor state for operation, string, string, string

Cause: The state of the file descriptor was invalid for the requested operation. An example is that a file was opened for read, but a write operation to the file was requested.

Action: Check the state of the file descriptor and make sure it matches the operation.

OCI-48135: uninitialized file descriptor

Cause: The specified file descriptor is uninitialized.

Action: Make sure the file descriptor is initialized before passing it into the routine.

OCI-48136: directory already exists [string]

Cause: Operation failed because the specified directory already exists.

Action: Remove the directory or ignore this error.

OCI-48137: uninitialized file handle

Cause: The specified file handle is uninitialized.

Action: Make sure the file handle is initialized before passing it into the routine.

OCI-48138: invalid directory name input for client address

Cause: An invalid directory name was specified as part of the address path specification.

Action: Check that the directory name is non-NULL and that the directory name length does not exceed the maximum length.

OCI-48139: invalid input to ADR initialization routine

Cause: There was an invalid input to the ADR initialization routine.

Action: Check the length of the ADR base, product ID, and instance ID input arguments.

OCI-48140: the specified ADR Base directory does not exist [string]

Cause: The specified ADR Base Directory does not exist.

Action: Check that the specified ADR Base Directory is a valid path name and that the directory exists.

OCI-48141: error creating directory during ADR initialization [string]

Cause: Error encountered when creating a directory during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system.

OCI-48142: invalid permissions input for change permissions

Cause: Invalid permissions passed into change permissions routine.

Action: Check the value of the permissions input.

OCI-48143: error changing permissions for a file

Cause: Error encountered while changing the permissions for a file

Action: Check the specified directory and file and the state of the operating system.

OCI-48144: error encountered while performing standard file I/O

Cause: Error encountered while performing standard file I/O

Action: Check the validity of standard in, out, and error.

OCI-48145: invalid seek location, [string], [string]

Cause: Invalid seek location specified for routine.

Action: Check the validity of specified seek location.

OCI-48146: missing read, write, or exec permission on directory during ADR initialization [string] [string]

Cause: Error encountered when checking if the process has read, write, and exec privileges on directories needed by the ADR subsystem. This error occurs during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system. Ensure that the user has the proper permissions on the ADR directories.

OCI-48147: invalid home location specification for ADR, [string], [string], [string]

Cause: Invalid read or write home location specification for ADR.

Action: An invalid home was specified for the ADR Read or Write Home location.

OCI-48148: error encountered when attempting to move a file

Cause: There was an error encountered when attempting to move a file with the ADR file interface.

Action: Check the directory name and file name.

OCI-48149: error encountered when attempting to copy a file

Cause: There was an error encountered when attempting to copy a file with the ADR file interface.

Action: Check the directory name and file name.

OCI-48150: error encountered with set current working directory

Cause: There was an error with setting the current working directory.

Action: Check the path used, or the state of the operating system.

OCI-48151: error getting operating system time for a file

Cause: Error encountered while getting the operating system time for a file.

Action: Check the specified directory and file and the state of the operating system.

OCI-48152: lock table is full

Cause: Lock table is full - too many locks granted

Action: Try again later

OCI-48153: error encountered when getting ADR base directory default

Cause: There was an error encountered when attempting to get the ADR base directory default value.

Action: Check your environment to see if the \$ORACLE_BASE and \$ORACLE_HOME environment variables are set.

OCI-48154: reached end of file for alert log

Cause: The end of file was reached for reading the Alert Log. There are no more messages to read in the Alert Log.

Action: Do not read from the Alert Log

OCI-48155: error encountered when read alert log [*string*]

Cause: There was an error encountered when attempting to read a message from the Alert Log.

Action: Check the error message and the contents of the alert message.

OCI-48156: Alert log purge has occurred - retry operation

Cause: The purge of the alert log has occurred.

Action: Retry the operation.

OCI-48157: null input to ADR initialization

Cause: There was a null input to the ADR initialization routine.

Action: Check the ADR base, product ID, and instance ID input arguments.

OCI-48158: invalid input for ADR base directory

Cause: An invalid input was passed in for the ADR base directory name. The ADR base directory name is either NULL or too long of a string.

Action: Check the ADR base directory input argument.

OCI-48159: invalid input for ADR product type

Cause: An invalid input was passed in for the ADR product type. The ADR product type is out of bounds.

Action: Check the ADR product type input argument.

OCI-48160: invalid input for ADR product id

Cause: An invalid input was passed in for the ADR product id. The ADR product id is either NULL or too long of a string.

Action: Check the ADR product id input argument.

OCI-48161: invalid input for ADR instance id

Cause: An invalid input was passed in for the ADR instance id. The ADR instance id is either NULL or too long of a string.

Action: Check the ADR instance id input argument.

OCI-48162: string buffer too small to hold input, [string], [string], [string]

Cause: The string buffer is too small to copy an input string into.

Action: Check the size of the string buffer and the input string. Look in the argument for the location in the code where the error occurs.

OCI-48163: error concatenating directory onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

OCI-48164: error concatenating file onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

OCI-48165: user missing read, write, or exec permission on specified ADR Base directory [string]

Cause: The specified ADR Base Directory does not have the correct permissions.

Action: Check the read, write, and exec permissions on the specified ADR Base Directory

OCI-48166: error with opening ADR block file because file does not exist [string] [string]

Cause: An error was encountered with opening an ADR block file because the file does not exist.

Action: Check the existence of the ADR Block File.

OCI-48167: invalid argument for checking ADR initialization

Cause: Invalid arguments were specified for the routine to check ADR initialization.

Action: Check the inputs to the ADR initialization routine.

OCI-48168: the ADR sub-system is not initialized

Cause: The ADR subsystem has not been initialized. The requested operation cannot be performed.

Action: Check the usage of the call to the ADR services. The ADR sub-system must be initialized for the call to work.

OCI-48169: incorrect arguments to ADR deferred initialization

Cause: There are incorrect arguments to the ADR deferred initialization.

Action: Check the input arguments. It could be possible that the product is not set up for deferred initialization.

OCI-48170: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by another process

Action: determine which process legitimately owns this file.

OCI-48171: unable to get share lock - file not readable

Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

OCI-48172: unable to find a valid ADR base

Cause: Unable to find a valid ADR base. We tried the ORACLE_BASE, ORACLE_HOME, home, and tmp directories, but none of the directories exist for read/write access.

Action: Check the validity of the ORACLE_BASE, ORACLE_HOME, home, and tmp directories.

OCI-48173: error checking directory existence during ADR initialization [string]

Cause: Error encountered when checking directory existence during the initialization of the ADR subsystem. Either the diag or product type directory does not exist underneath the ADR base.

Action: The directory in the error message must exist in order for ADR initialization to succeed. Make sure the directories exist.

OCI-48174: error encountered with get current working directory

Cause: There was an error with getting the current working directory.

Action: Check the state of the operating system or the size of the path buffer.

OCI-48175: the path name must not contain the string '..'.

Cause: The specified path name contains '..'.

Action: Correct the path name and retry the operation.

OCI-48176: error translating a path name into its full path name

Cause: An error was encountered when translating a path name into its full path name.

Action: Check the inputted path name to make sure it is a valid relative path.

OCI-48177: file name with full path information [*string*] not allowed

Cause: Input was incorrectly specified for the file name. The inputted file name is greater than the maximum length, or the file name has path information. In this case, the file name should not have any path information. The path information should be specified in a separate argument.

Action: Check that the string for the file name is not too long and does not have path information.

OCI-48178: error encountered while reading an ADR block file during ADR initialization [*string*]

Cause: An error was encountered while reading an ADR block file during the initialization of the ADR subsystem.

Action: Check the state of the file system.

OCI-48179: OS file synchronization failure

Cause: OS command to synchronize the changes to a file with the operating system failed.

Action: Check the state of the file system and the amount of free space left on your device.

OCI-48180: OS open system call failure

Cause: OS open system call failed. The system failed to open or create a file in the requested mode.

Action: Check the OS error code

OCI-48181: OS write system call failure

Cause: OS write system call failed. The system failed to write to a file.

Action: Check the OS error code

OCI-48182: OS read system call failure

Cause: OS read system call failed. The system failed to read to a file.

Action: Check the OS error code

OCI-48183: OS close system call failure

Cause: OS close system call failed. The system failed to close a file.

Action: Check the OS error code

OCI-48184: OS seek system call failure

Cause: OS seek system call failed. The system failed to seek to a position in a file.

Action: Check the OS error code

OCI-48185: OS file size system call failure

Cause: OS file size call failed. The system failed to retrieve the file size for a file.

Action: Check the OS error code

OCI-48186: OS check file exists system call failure

Cause: OS check file exists system call failed. The system failed to perform the check file exists command for a file.

Action: Check the OS error code

OCI-48187: specified directory does not exist

Cause: The specified directory does not exist.

Action: Check the directory name.

OCI-48188: user missing read, write, or exec permission on specified directory

Cause: The user does not have valid permissions on the specified directory. The user is missing either the read, write, or execute permission.

Action: Check the permissions of the specified directory.

OCI-48189: OS command to create directory failed

Cause: The OS command to create a directory failed.

Action: Check the error number associated with the create directory failure.

OCI-48190: OS unlink system call failure

Cause: OS unlink system call failed. The system failed to perform unlink on the specified file.

Action: Check the OS error code

OCI-48191: user missing read or write permission on specified file

Cause: The user does not have valid permissions on the specified file. The user is missing either the read or write permission.

Action: Check the permissions of the specified file.

OCI-48192: OS command to move a file failed

Cause: The OS command to move a file failed.

Action: Check the error number associated with the move file.

OCI-48193: OS command to open a directory failed

Cause: The OS command to open a directory failed.

Action: Check the OS error associated with the open directory failure.

OCI-48194: OS command to close a directory failed

Cause: The OS command to close a directory failed.

Action: Check the OS error associated with the close directory failure.

OCI-48195: OS command to remove a directory failed

Cause: The OS command to remove a directory failed.

Action: Check the OS error associated with the remove directory failure.

OCI-48196: OS command to release advisory lock failed

Cause: The OS command to release the advisory lock failed

Action: Check the OS error associated with the release advisory lock failure.

OCI-48197: OS command to get the file status failed

Cause: The OS command to get the file status failed. This could be because the file is not open or file descriptor is invalid.

Action: Check the OS error associated with the get file status failure.

OCI-48198: OS command to change the file permissions failed

Cause: The OS command to change the file permissions failed.

Action: Check the OS error associated with the failure.

OCI-48199: OS command to copy a file failed

Cause: The OS command to copy a file failed.

Action: Check the error number associated with the copy file.

OCI-48200: Illegal Input Argument [string]

Cause: An illegal argument was passed in.

Action: Fix the call.

OCI-48201: Field Length Exceeds Maximum [string] [string] [string]

Cause: An illegal field length was used.

Action: Fix the call.

OCI-48202: Illegal Identifier [string] [string]

Cause: Illegal identifier specified.

Action: Use a valid identifier.

OCI-48203: Illegal Data Type [string]

Cause: Illegal data type specified.

Action: Use a valid data type.

OCI-48204: Illegal Identifier Length [string] [string] [string]

Cause: The input identifier is too long.

Action: Specify a shorter identifier.

OCI-48205: Record Length too Big [string] [string] [string]

Cause: The sum of the maximum lengths of all fields exceeds the maximum record length that is supported.

Action: Remove or shorten some of the fields.

OCI-48206: Illegal Number of Fields [string] [string] [string]

Cause: The number of fields specified exceeds the supported maximum.

Action: Remove some of the fields in the relation.

OCI-48207: Illegal Field Name [string]

Cause: The field name is invalid.

Action: Specify a valid field name.

OCI-48208: Duplicate Field Names [string]

Cause: The list of fields specified contains a duplicate field.

Action: Remove the duplicate field.

OCI-48209: Relation Already Exists

Cause: The relation already exists.

Action: Remove the relation.

OCI-48210: Relation Not Found

Cause: The relation was not found.

Action: Either specify a valid relation name or create one with that name.

OCI-48211: Illegal Access Mode [string] [string]

Cause: The supplied access mode is not recognized.

Action: Supply a valid mode.

OCI-48212: Open Record Access Not Done

Cause: The open record access call was not performed.

Action: The open record access call is required before attempting this call.

OCI-48213: Incorrect Access Mode for Operation [string] [string]

Cause: The relation was opened in a mode not compatible with the attempted operation being done.

Action: Reopen the relation in the correct mode.

OCI-48214: Sequence Overflow [string] [string] [string]

Cause: The sequence number will exceed the system maximum.

Action: Reset the sequence number.

OCI-48215: Sequence Invalid Operation [string] [string]

Cause: The specified sequence operation is not valid.

Action: Specify a valid operation.

OCI-48216: Field Len Exceeds Max Field Length [string] [string] [string] [string]

Cause: The field length specified exceeds the defined maximum for the field.

Action: Supply a smaller field length.

OCI-48217: Out of Space on Device

Cause: The storage subsystem is out of space.

Action: Add more space to the storage subsystem.

OCI-48218: Duplicate Key Name [string] [string]

Cause: The key name already exists.

Action: Specify a different key name.

OCI-48219: Key Name Doesn't Match Any Existing Key

Cause: The key name provided doesn't match an existing key.

Action: Specify a key name that exists.

OCI-48220: Too Many Keys Defined [string] [string]

Cause: A key is trying to be created that exceeds the maximum number of keys supported.

Action: Drop another key.

OCI-48221: Key Exceeds Maximum Allowed Length [string] [string] [string]

Cause: The sum of the lengths of the fields in the key exceeds the maximum length supported.

Action: Remove one or more fields from the key.

OCI-48222: Predicates/Order By Not Allowed

Cause: A predicate or order by can not be added after fetch has started.

Action: Put the predicate or order by call before the first fetch.

OCI-48223: Interrupt Requested - Fetch Aborted - Return Code [string] [string]

Cause: User interrupt has occurred.

Action: None

OCI-48224: DDL has occurred since parse - reparse [string] [string] [string]

Cause: Another session has performed a DDL (i.e. add field, create key, drop key) that prevents this session from being to continue.

Action: Call open record access again.

OCI-48225: No More Space in Order By Buffer

Cause: The order by buffer size is not sufficient for the number of rows.

Action: Increase the order by buffer size specified.

OCI-48226: No Fetch in Progress

Cause: An attempt to perform update or delete has occurred without a fetch.

Action: You must first perform a fetch.

OCI-48227: Invalid Relation File - [string] [string] [string] [string]

Cause: The AMS file is invalid or corrupt.

Action: Do a repair relation

OCI-48228: Missing Define Call [string]

Cause: A call to define was not performed before doing a fetch.

Action: Call the define service before fetch.

OCI-48229: Invalid Relation Handle Provided [string] [string]

Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

OCI-48230: Expression arguments must match types

Cause: Incorrect type semantics for fields in the predicate.

Action: Correct the predicate.

OCI-48231: Predicate syntax error

Cause: A syntax error exists in the predicate string.

Action: Correct the predicate.

OCI-48232: Debug command syntax error [string]

Cause: An invalid debug command has been specified.

Action: Correct the debug command.

OCI-48233: Invalid Field Handle [string] [string] [string]

Cause: The field handle is invalid.

Action: Possible memory corruption.

OCI-48238: Invalid Surrogate Length Specified [string] [string]

Cause: An invalid length during create field was specified

Action: Specify a correct length

OCI-48239: Invalid Predicate Handle Provided [string] [string]

Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

OCI-48240: Field is NOT NULL but NULL value supplied

Cause: A field [%s] declared to not allow nulls contains a null value.

Action: Specify a correct value

OCI-48242: Fields that are NOT NULL can not use surrogates

Cause: NOT NULL fields can not have surrogates specified.

Action: Either remove the constraint or the surrogate.

OCI-48243: Additional Fields must be declared nulls allowed

Cause: A field can not be added to a relation that is defined NOT NULL

Action: Do not specify NOT NULL

OCI-48244: Purge for Retention can't be called while in an Query

Cause: A query is already running - purge for retention can't be invoked

Action: Fix call sequence

OCI-48245: Attempt to Update/Delete when at EOF

Cause: The fetch operation is positioned at EOF - can not update/delete

Action: Do not call update/delete after fetch has returned EOF

OCI-48246: Illegal Operation on External Relation

Cause: An illegal call was made using an external relation

Action: Do not perform the API Call

OCI-48247: Predicate Conversion Error *string*

Cause: A time conversion failed

Action: Fix the input

OCI-48248: Function *string* type check error; ityp = *string* typ = *string* arg = *string*

Cause: Invalid inputs to the specified function

Action: Change the inputs

OCI-48251: Failed to open relation due to following error

Cause: See error below in the error stack

Action: See error below in the error stack

OCI-48252: Relation does not require migration

Cause: Relation on disk is compatible with the current code

Action: Don't run the migration services

OCI-48258: AMS Corrupt Page Found - Rebuild Relation

Cause: A corrupted page has been found.

Action: Do a rebuild of the relation

OCI-48259: AMS Relation not Created Correctly

Cause: Create relation failed

Action: Recreate the relation

OCI-48260: Function *string* not found

Cause: A reference to a function that is not valid was found

Action: Fix the function name

OCI-48262: Sequence references not allowed in predicates

Cause: References to currval or nextval not allowed

Action: Remove these references

OCI-48263: Currval not set yet - use nextval

Cause: References to currval can't occur until a nextval is done

Action: Remove the reference

OCI-48265: Incorrect number of arguments (*string*) provided - expected (*string*)

Cause: Number of arguments to function is incorrect

Action: Specify the correct number of arguments

OCI-48291: Field name *string* can't be unique resolved

Cause: Field name appears in more than one relation

Action: Prefix the field name with the relation name

OCI-48292: Can't use outer join syntax mixed with inner join syntax

Cause: The join condition was specified using both inner and outer join elements"

Action: Specify the join condition correctly

OCI-48293: Outer join syntax not allowed without a join

Cause: Using outer join syntax in the predicate without doing a join

Action: Fix the predicate

OCI-48300: Incident Record Already Exists

Cause: trying to create an incident that already exists

Action: retry operation with new incident ID

OCI-48301: An Invalid Incident ID was specified

Cause: the specified incident ID was invalid

Action: retry operation with correct incident ID

OCI-48302: Incident Directory does not exist

Cause: the incident directory was not found

Action: retry operation with a different incident ID

OCI-48303: Exceeded max Incident Sequence Value

Cause: the maximum supported incident sequence value was exceeded

Action: reset incident sequence and retry operation

OCI-48304: incident staging file not found

Cause: the incident staging file is missing

Action: retry with a different incident ID

OCI-48305: incident ID range is too large

Cause: the maximum incident sequence value was exceeded

Action: retry operation with a smaller range

OCI-48309: illegal incident state transition, [*string*] to [*string*]

Cause: the incident cannot be moved to the new state

Action: retry operation with a valid incident status

OCI-48310: Incident *string* staging file not found

Cause: the incident staging file does not exist

Action: retry operation with a valid incident ID

OCI-48311: Invalid field name [*string*]

Cause: the specified field name is invalid

Action: retry operation with a valid field name

OCI-48312: Sweep incident *string* staging file failed

Cause: the sweep action of incident staging file failed

Action: check the incident ID and retry

OCI-48313: Updates not allowed on ADR relation [string] of Version=string

Cause: Update operations not supported on this version of ADR relation

Action: check ADR version and retry

OCI-48314: Invalid ADR Control parameter [string]

Cause: the specified control parameter is invalid

Action: check parameter and reissue command

OCI-48315: ADR unavailable

Cause: the ADR directory is not available

Action: enable ADR and retry operation

OCI-48316: relation [string] unavailable or cannot be created

Cause: the ADR relation is not available

Action: check ADR directory and retry operation

OCI-48317: ADR Relation [string] of version=string is obsolete

Cause: the version of ADR relation is too old and not supported

Action: check the ADR version and retry

OCI-48318: ADR Relation [string] of version=string cannot be supported

Cause: the version of ADR relation is too new and cannot be supported

Action: need to use a newer release to access the ADR

OCI-48319: Update operation on ADR relation [string] not allowed

Cause: updates to foreign ADR relation cannot be supported

Action: verify ADR location and reissue command

OCI-48320: Too many incidents to report

Cause: the result set of incidents is too large to handle

Action: use a predicate to reduce the number of incidents and retry

OCI-48321: ADR Relation [string] not found

Cause: the required ADR relation is missing, ADR may be corrupted

Action: check ADR directory and retry

OCI-48322: Relation [string] of ADR V[string] incompatible with V[string] tool

Cause: the tool version is incompatible with the ADR version

Action: use another version of tool and retry

OCI-48323: Specified pathname [string] must be inside current ADR home

Cause: A file outside of ADR home was not allowed for this type of file.

Action: Check the file name and retry.

OCI-48324: Incompatible staging file encountered

Cause: sweep incident failed because staging file is incompatible

Action: check the incident ID and version of ADR and retry

OCI-48339: view [string] does not exist

Cause: view has not been created

Action: verify view name and reissue command

OCI-48340: operation not supported on view [string]

Cause: unsupported (dml) operation on views

Action: verify relation name and reissue command

OCI-48341: Field [string] not a grouping field

Cause: the field name specified is not a grouping field

Action: verify field names and groupby clause and reissue command

OCI-48342: Field [string] cannot be mixed with string fields

Cause: the specified field is incompatible with other grouping fields

Action: verify this and other field names and reissue command

OCI-48343: invalid field [string] reference in string clause

Cause: the specified field in the specified clause is invalid

Action: verify this field name and reissue command

OCI-48344: Invalid Name [string] specified

Cause: Either the name refers to an existing object or violates the reserved namespace rules.

Action: Pick another name

OCI-48345: Timeout encountered during operation

Cause: The attempted operation conflicted with another operation that was already being executed.

Action: Retry operation at a later time.

OCI-48400: ADRCI initialization failed

Cause: The ADR Base directory does not exist

Action: Either create an ADR Base directory or point to an existing one

OCI-48401: SET command requires arguments

Cause: No arguments are input for the SET command

Action: Input the arguments

OCI-48402: Variable is not defined

Cause: No substitution value is input.

Action: Input the substitution value following after the variable name.

OCI-48403: DEFINE or UNDEFINE command has no arguments

Cause: DEFINE and UNDEFINE command need users to input the substitution variable name.

Action: Input the variable name after the keyword DEFINE or UNDEFINE

OCI-48404: RUN or @ command has no arguments

Cause: RUN and @ commands need users to input script filename

Action: Input script filename after RUN and @ commands

OCI-48405: The option in the command is invalid

Cause: The option is not allowed in the command

Action: Check the command syntax

OCI-48406: ECHO or TERMOUT status must be set to ON or OFF

Cause: the status of ECHO and TERMOUT commands must be ON or OFF

Action: input ON or OFF

OCI-48407: DESCRIBE and QUERY commands need at least relation name argument

Cause: This is no relation name is input as argument

Action: Need users to input at least the relation name

OCI-48408: The incident number exceeds the maximum number [string]

Cause: The input incident number exceeds the maximum number

Action: Input fewer incidents

OCI-48409: The ADR homes exceed the maximum number [string]

Cause: The input ADR homes number exceeds the maximum number

Action: Input shorter ADR home string

OCI-48410: The trace path exceeds the maximum number [string]

Cause: The input trace path exceeds the maximum number

Action: Input less trace path

OCI-48411: The trace files exceed the maximum number [string]

Cause: The input trace file path number exceeds the maximum number

Action: Input less trace file path

OCI-48412: The parameters exceed the maximum number [string]

Cause: The input parameter number exceeds the maximum number

Action: Input fewer parameters

OCI-48413: The number of orderby fields exceeds maximum number [string]

Cause: The orderby field number exceeds the maximum number

Action: Input fewer fields

OCI-48414: The string in the execution option exceeds maximum length [string]

Cause: The string length is too long

Action: Divide the commands into two sets or use adrci scripts.

OCI-48415: Syntax error found in string [string] at column [string]

Cause: Parsing error found in the user input string

Action: Validate the input string

OCI-48419: Illegal arguments

Cause: The input argument is illegal

Action: Check the input arguments and make sure it is not null

OCI-48421: Predicate string in the command must be single or double quoted

Cause: The predicate string is not single or double quoted

Action: Put single or double quotes around the predicate string

OCI-48422: Invalid relation field type [string]**OCI-48423: IMPORT command must have a filename**

Cause: File name is missing from the command

Action: Input the import file name after the IMPORT keyword

OCI-48424: SHOW TRACE command needs argument

Cause: SHOW TRACE command needs arguments

Action: Input arguments

OCI-48426: The initialization filename is too long

Cause: The initialization filename length exceeds the maximum length

Action: This is really an internal setting parameter of the ADRCI, report it as a bug. Alternatively move the initialization file to the current working directory

OCI-48427: Unknown command**OCI-48428: Input command string exceeds max length [string]**

Cause: The current command string is too long and exceeds the limit

Action: Input less characters

OCI-48429: Variable name [string] is an invalid identifier

Cause: The substitution variable name is not a valid identifier

Action: Input the valid identifier defined by ADRCI

OCI-48430: Cannot read the parameter**OCI-48431: Must specify at least one ADR home path**

Cause: The command syntax requires at least one ADR home path to be input

Action: Check the command syntax and input the home path

OCI-48432: The ADR home path *[string]* is not valid

Cause: The adr home user inputs is not valid, which may due to the path does not exist.

Action: Check if the input home path exists

OCI-48433: Unknown help topic

Cause: The input topic is unknown

Action: Check if the topic is valid

OCI-48434: No DDE commands are input

Cause: No DDE commands are input

Action: Input a DDE command

OCI-48435: Input a trace file

Cause: Show trace expects a trace file

Action: Input a trace file

OCI-48436: File *[string]* does not exist

Cause: the file does not exist

Action: Validate the trace file name

OCI-48437: No IPS commands are input

Cause: No IPS commands are input

Action: Input a IPS command

OCI-48438: *[string]* is not a valid number

Cause: The input number is not valid

Action: Check the input number

OCI-48439: The input path name exceeds the maximum length *[string]*

Cause: The input path name is too long

Action: Report as a bug to change the limit

OCI-48440: Variable *[string]* is already defined

Cause: The variable name is defined previously

Action: Use another variable name

OCI-48441: The function parameter number exceeds the maximum number *[string]*

Cause: The function parameter number exceeds the maximum number

Action: Report it as bug to change the maximum number

OCI-48442: The number of control parameters exceeds the maximum allowed *[string]*.

Cause: The control parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

OCI-48443: Trace Record type appears in the middle of the path

Cause: The trace record cannot be in the middle of the path

Action: Validate the input

OCI-48444: The single "." and "*" cannot appear in the middle of the path

Cause: The single "." and "*" appears in the middle of the path

Action: Validate the input

OCI-48445: Path expression only supports one bucket dump type

Cause: The path expression only supports one bucket dump"

Action: Change the path expression syntax

OCI-48446: The command needs path input

Cause: No path is input as a parameter

Action: Input the path

OCI-48447: The input path [*string*] does not contain any ADR homes

Cause: The input path does not contain ADR homes

Action: Validate the path

OCI-48448: This command does not support multiple ADR homes

Cause: There are multiple homes in the current adr setting.

Action: Use command SET HOMEPATH to set a single home

OCI-48449: Tail alert can only apply to single ADR home

Cause: There are multiple homes in the current setting

Action: Use command SET HOMEPATH to set a single home

OCI-48457: ADRCI core dumped

Cause: It is adrci internal error.

Action: Report to Oracle

OCI-48458: "show incident" failed due to the following errors

Cause: There could be a bug or users do not have the access permission

Action: Report to Oracle if the errors are not due to ADR permission settings

OCI-48459: "describe" command only supports one ADR home path

Cause: Multiple ADR home paths in the command

Action: put one ADR home path

OCI-48460: The home path [*string*] is not valid

Cause: The input home path is not valid home path

Action: Verify the homopath

OCI-48461: "describe" failed due to the following errors

Cause: Underlying code failed

Action: If it is not due to permission issue, report to Oracle

OCI-48462: Fatal error encountered in [*string*]

Cause: Fatal error encountered

Action: Report to Oracle

OCI-48463: The value buffer reached the maximum length [*string*]

Cause: The value buffer is full

Action: Report to Oracle

OCI-48464: The predicate buffer reached the maximum length [*string*]

Cause: The predicate buffer is too small

Action: Report to Oracle

OCI-48465: The specified type [*string*] is undefined

Cause: The purge type specified is undefined

Action: Check the type name

OCI-48466: Internal failure, the report context is not initialized

Cause: Internal problem failure.

Action: Report to Oracle

OCI-48467: "*string*" for the keyword "*string*" is not a valid number

Cause: The keyword value is not a valid number

Action: Check the value

OCI-48468: "*string*" is not a valid keyword

Cause: The keyword is not defined for the command

Action: Check the available keywords

OCI-48469: Keyword "*string*" cannot be duplicated

Cause: The command can only allow one key with the name

Action: Remove one keyword name from the command

OCI-48470: Unknown "*string*" command

Cause: The command is not valid

Action: Use help manual to check the command syntax

OCI-48472: Invalid product name

Cause: The product name provided does not exist

Action: Specify a product name, see HELP SHOW BASE

OCI-48473: Internal failure, unknown return code [*string*]

Cause: Internal program failure

Action: Report to Oracle

OCI-48474: Syntax error specifying product, must not be NULL

Cause: The product clause is being used, but no product name is provided

Action: Supply the product name

OCI-48475: [string] is not a valid timestamp

Cause: The input timestamp string is not in valid format

Action: None

OCI-48476: Cannot write the results out to a file, please check if the environment variable TMPDIR is set or the current directory is not writable

Cause: The current path may not be writable

Action: If the current path is writable, report to Oracle

OCI-48477: The input path does not contain any valid ADR homes

Cause: The input path does not contain any valid ADR homes

Action: Check the path if it is valid

OCI-48478: No alert messages are created

Cause: No alert messages are created

Action: No action

OCI-48479: No HM runs are created

Cause: There is no hm runs

Action: No action

OCI-48480: No incidents are created

Cause: There is no incident

Action: No action

OCI-48481: Report is not available

Cause: The requested report does not exist"

Action: Check the report ID

OCI-48482: Report is not generated

Cause: The requested report is not ready to be generated

Action: Check the report ID

OCI-48483: Spooling failed, it may be because the spool file cannot be created due to a permission issue

Cause: The spooling filename may not be valid or the file cannot be created

Action: Check the permissions of the target directory and verify the filename

OCI-48484: Run script failed, it may be because the script file does not exist

Cause: The script file may not exist

Action: Check if the script file exist

OCI-48485: The file exceeds the maximum length [string]

Cause: The filename is too long

Action: Report to Oracle

OCI-48486: The file [string] exceeds the maximum length [string]

Cause: The filename is too long

Action: Report to Oracle

OCI-48487: The internal predicate string exceeds the maximum length [string]

Cause: The predicate string exceeds the maximum length

Action: Report to Oracle

OCI-48488: The predicate string exceeds the maximum length [string]

Cause: The input predicate string exceeds the maximum length

Action: Report to Oracle

OCI-48489: The input exceeds the maximum length [string]

Cause: The input exceeds the maximum length

Action: Report to Oracle

OCI-48490: The field number exceeds the maximum number [string]

Cause: The input field number exceeds the maximum number

Action: Input less field names

OCI-48491: The program name is too long, exceeds the maximum length [string]

Cause: the program name length exceeds the maximum length setting

Action: Report to Oracle

OCI-48492: The report component name is not defined

Cause: the report component name does not exist

Action: Check the component name to ensure it is registered

OCI-48493: Sweep command needs parameters

Cause: sweep command needs parameter

Action: Check the syntax of the command

OCI-48494: ADR home is not set, the corresponding operation cannot be done

Cause: The adr home is not set in the current adrci session

Action: Set the adr home using the adrci command "set base" and "set homopath"

OCI-48495: Interrupt requested

Cause: User requested to interrupt the current action

Action: No action is needed

OCI-48496: "string" is a mandatory keyword for the command

Cause: The keyword is not specified for the command

Action: Input the keyword

OCI-48497: "string" is an invalid product type

Cause: The product type is not registered

Action: Check the product type

OCI-48499: The value of the keyword "string" exceeds the maximum length string

Cause: The keyword value is too long

Action: Check the limit and input again

OCI-48500: File Write Error [string] [string]

Cause: Number of bytes written differs from number requested. Possibly due to out of disk space.

Action: Ensure sufficient disk space.

OCI-48501: File Read Error [string] [string]

Cause: Number of bytes read differs from number requested. Possibly due due to corrupted file.

Action: Recreate the file.

OCI-48502: Invalid Command Line - Missing Required Elements

Cause: Missing required command line arguments.

Action: Review the help message and supply the required arguments.

OCI-48503: Invalid Parameter Specified

Cause: Invalid input parameter supplied.

Action: Review the help message and correct the invalid input parameter.

OCI-48504: Relation Parameter Must be Specified

Cause: Relation parameter must be specified during ADR export.

Action: Supply the relation parameter.

OCI-48505: File Parameter Must be Specified

Cause: File parameter must be specified during ADR import.

Action: Supply the file parameter.

OCI-48506: Existing Relation at different version than export [string] [string]

Cause: Attempting to import into an existing relation and the schema version of that relation differs from the schema of the relation that was exported.

Action: Drop the existing relation if you still wish to import the relation.

OCI-48507: Predicate Not Allowed during Import

Cause: The predicate option is not allowed during ADR import.

Action: Remove the predicate argument.

OCI-48508: Export File Version [string] Can Not be Used by Import [string]

Cause: The version of the export file is not able to be read by this version of ADR import.

Action: Rerun the export using the current version of ADR export.

OCI-48509: Error occurred during operation. See the following errors

Cause: An underlying error has occurred.

Action: Review and correct the underlying error.

OCI-48510: Can not export an in memory relation

Cause: In memory relations can not be exported.

Action: Pick a different relation.

OCI-48600: HM run with name [string] already exists

Cause: The specified run name already existed.

Action: Specify different run name and re-run the check

OCI-48615: Parameter [string] value not specified

Cause: Run was invoked without specifying the parameter and its value

Action: Specify the needed parameter and its value

OCI-48617: Parameter [string] value [string] length exceeds the maximum limit [string]**OCI-48618: Invalid HM run name specified**

Cause: An invalid Health Monitor (HM) run name was specified.

Action: Specify a HM run name using only alphanumeric and underscore characters.

OCI-48800: "string" for the keyword "string" is not in the right format of timestamp

Cause: The value format is not right

Action: Check the format ADRCI supports

OCI-48801: The option "string" is duplicated

Cause: The option has been specified more than once

Action: Check the input

OCI-48802: The options "%0!s" and "%1!s" are mutually exclusive.

Cause: An attempt was made to specify the two options together.

Action: Specify only one of the options.

OCI-48803: The keyword "string" is not defined for this command

Cause: The keyword is invalid

Action: Check the valid keywords for the command

OCI-48804: The command needs at least one file input

Cause: No files are specified to view

Action: Input the files

OCI-48805: BEGIN BACKUP issued already - must do an END BACKUP first

Cause: A begin backup was already issued.

Action: Issue END BACKUP

OCI-48806: Unknown Function Reference (*string*)

Cause: The function reference is not a valid function

Action: Change the reference

OCI-48807: The SET subcommand requires at least one additional parameter

Cause: An argument was not specified for the SET subcommand.

Action: Specify additional arguments or precede the command with help.

OCI-48808: malformed SET CONTROL command - see "HELP SET CONTROL"

Cause: Improper syntax was specified for the SET CONTROL command.

Action: Specify additional arguments or use the HELP SET CONTROL command for more information.

OCI-48809: The number of estimate parameters exceeds the maximum allowed [*string*].

Cause: The estimate parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

OCI-48810: malformed ESTIMATE command - see "HELP ESTIMATE"

Cause: Improper syntax was specified for the ESTIMATE command.

Action: Specify additional arguments or use the HELP ESTIMATE command for more information.

OCI-48900: Illegal Input Argument [*string*]

Cause: The input argument is invalid

Action: Check the input parameter

OCI-48902: Empty component specification

OCI-48903: String [*string*] is not a valid library name

OCI-48904: String [*string*] is not a valid component name

OCI-48905: String [*string*] is not a valid operation name

OCI-48906: Parser context is not valid

Cause: The parser context is not initialized

Action: Call the initialization routine first before using the context

OCI-48907: The end of file is reached

Cause: The end of file is reached

Action: Handle the end of file

OCI-48908: No trace files are found

Cause: This is no file in the navigator context, either it is done with parsing, or no file is pushed

Action: Check if the file is added to the context

OCI-48909: Scan context is not initialized

Cause: The scan context is not initialized

Action: call the initialization routine of the scan context

OCI-48912: The specified trace filename is too long

Cause: The resulting trace filename length exceeds the maximum length

Action: Use a smaller trace filename suffix or move ADR higher in the directory hierarchy

OCI-48913: Writing into trace file failed, file size limit [*string*] reached

Cause: An attempt was made to write into a trace file that exceeds the trace's file size limit

Action: increase the trace's file size limit.

OCI-48914: File position is not in right format

Cause: The file position format is not right

Action: Check if the file format string is the right one

OCI-48928: The predicate exceeds the max limit *string*

Cause: The predicate is too long, exceeds the max limit

Action: Use a shorter predicate

OCI-48929: The trace record size exceeded the max size that can be read [*string*]

Cause: A trace record is too large to be read by the ADR viewer

Action: Report to Oracle

OCI-48930: Cannot allocate memory for processing traces

Cause: A memory allocation request failed

Action: Report to Oracle

OCI-48934: invalid input for the file name identifier

Cause: An invalid input was given for the file name identifier. The file name is not allowed to have slashes ('/', '\') and is not allowed to refer to the parent directory using the '..' characters.

Action: Check the file name and provide a valid input.

OCI-48936: The number of relations exceeds maximum number [*string*]

Cause: Too many relations listed

Action: Reduce the number

OCI-48937: Feature (*string*) currently not allowed for SELECT

Cause: Feature is not allowed

Action: Remove feature

OCI-48938: View select column count differs from select alias list

Cause: The view alias list has a different number of fields than the select list"

Action: Change the alias list or view select statement

OCI-48939: Select * not allowed in a CREATE VIEW

Cause: * is currently not allowed for a create view select list

Action: List the fields explicitly

OCI-49000: A vertex variable has the same name as an edge variable.

Cause: A vertex variable was specified with the same name as an edge variable.

Action: Use a different name for the vertex and edge variables.

OCI-49001: A singleton variable has the same name as a group variable.

Cause: A singleton variable was specified with the same name as a group variable.

Action: Use a different name for the singleton and group variables.

OCI-49002: Group variables contained in different quantified path patterns have the same name.

Cause: Two group variables contained in different quantified path patterns had the same name.

Action: Use a different name for group variables in different quantified path patterns.

OCI-49003: Using a question mark in path pattern is not supported.

Cause: A question mark was specified in the path pattern expression in the MATCH clause of a GRAPH_TABLE operator.

Action: Modify the path pattern specification and retry the operation.

OCI-49004: Two consecutive vertex patterns are specified in the path pattern.

Cause: Two consecutive vertex patterns were specified in the path pattern expression in the MATCH clause of a GRAPH_TABLE operator.

Action: Modify the path pattern specification and retry the operation.

OCI-49010: Group function is not allowed inside a quantified path pattern.

Cause: One of the group functions, such as AVG, COUNT, MAX, MIN, or SUM, was used in an element patten WHERE clause or a parenthesized path pattern WHERE clause inside a quantified path pattern.

Action: Specify the group function outside of the quantified path pattern.

OCI-49011: A group function inside GRAPH_TABLE() must have a group reference.

Cause: A group function inside GRAPH_TABLE() has no group reference.

Action: Modify the group function specification and retry the operation.

OCI-49012: A group function inside GRAPH_TABLE() must reference the same group variable.

Cause: A group function inside GRAPH_TABLE() references multiple group variables.

Action: Modify the group function specification and retry the operation.

OCI-49315: Invalid incident type specified [string]

Cause: The specified incident type is not defined in this ADR.

Action: Specify an available incident type.

OCI-49316: required environment variable not set [string]

Cause: The required environment variable was not set.

Action: Set the required environment variable.

OCI-49317: Action cannot be run in read-only database instance.

Cause: The database was not opened in read/write mode.

Action: Open the database in read/write mode.

OCI-49318: action cannot be run, database not available

Cause: The action could not connect to the database.

Action: Open the database.

OCI-49320: database error when executing action [string]

Cause: A database error occurred while executing the action.

Action: Review the database error.

OCI-49404: No such package [string]

Cause: The specified package does not exist.

Action: Specify an existing package.

OCI-49405: Cannot change package name [string] [string]

Cause: Attempted to change package name after package generation.

Action: Use current name, or create a new package with the desired name.

OCI-49406: Undefined configuration parameter specified [string]

Cause: The specified configuration parameter was not found in ADR.

Action: Specify an existing parameter. Re-populate parameters if necessary.

OCI-49407: No unpacking history in this home

Cause: No packages were unpacked into this home.

Action: Verify the current home. Unpack a package if necessary.

OCI-49408: Invalid home specified [string]

Cause: An invalid ADR_HOME was specified.

Action: Verify that the directory exists, and has the correct structure.

OCI-49409: Incremental package provided when complete expected

Cause: No packages were unpacked into this home.

Action: Provide a complete package, or use FORCE option.

OCI-49410: Not an IPS package

Cause: The specified file was not an IPS package.

Action: Verify that the file is a valid zip file with expected contents.

OCI-49412: Package ID does not match existing ID [string] [string]

Cause: The package ID in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

OCI-49413: Package name does not match existing name [string] [string]

Cause: The package name in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

OCI-49414: Package sequence later than expected [string] [string]

Cause: The package sequence in package file was later than expected.

Action: Apply packages in correct order, or use FORCE option.

OCI-49415: Package sequence earlier than expected [string] [string]

Cause: The package sequence in package file was earlier than expected.

Action: Apply packages in correct order, or use FORCE option.

OCI-49416: Earlier package sequence applied with FORCE option [string] [string]

Cause: An earlier package sequence was applied using the FORCE option.

Action: Apply a complete sequence which is later than any already applied, or use FORCE option to apply an incremental package.

OCI-49417: Cannot modify already generated package

Cause: Attempted to change package attributes after package generation.

Action: Create a new package with the desired name.

OCI-49418: Invalid package name specified

Cause: An invalid Incident Packaging Service (IPS) package name was specified.

Action: Specify a package name using only alphanumeric and underscore characters.

OCI-49420: Package too large [string] [string]

Cause: The package is too large.

Action: Remove some files or incidents from the package, or try using incremental mode.

OCI-49421: Maximum number of package files generated [string]

Cause: The command generated the maximum number of package files.

Action: Remove some files or incidents from the package, or use incremental mode to generate additional files.

OCI-49423: File outside ADR not allowed

Cause: The specified file is not within the ADR directory structure.

Action: Specify a file inside ADR.

OCI-49424: Directory outside ADR not allowed

Cause: The specified directory is not within the ADR directory structure.

Action: Specify a directory inside ADR.

OCI-49425: File inside ADR not allowed

Cause: The specified file is within the ADR directory structure.

Action: Specify a file outside ADR.

OCI-49426: Directory inside ADR not allowed

Cause: The specified directory is within the ADR directory structure.

Action: Specify a directory outside ADR.

OCI-49427: No such file or file not accessible [string]

Cause: The specified file does not exist or cannot be accessed.

Action: Create the file or verify file permissions.

OCI-49428: No such directory or directory not accessible [string]

Cause: The specified directory does not exist or cannot be accessed.

Action: Create the directory or verify directory permissions.

OCI-49429: File already exists and OVERWRITE option not specified [string]

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or use the OVERWRITE option.

OCI-49430: No such problem [string]

Cause: The specified problem does not exist.

Action: Specify a problem that exists in this repository.

OCI-49431: No such incident [string]

Cause: The specified incident does not exist.

Action: Specify an incident that exists in this repository.

OCI-49432: Problem not part of package [string]

Cause: The specified problem is not included in the package.

Action: Specify a problem that is included in the package.

OCI-49433: Incident not part of package [string]

Cause: The specified incident is not included in the package.

Action: Specify an incident that is included in the package.

OCI-49434: Invalid date format

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

OCI-49435: Flood-controlled incident not allowed here [string]

Cause: A flood-controlled incident cannot be included in a package

Action: Specify an incident that is not flood-controlled

OCI-49436: Date conversion error [string]

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

OCI-49440: Warnings while unpacking package, details in file string

Cause: There were some non-fatal errors when unpacking a package

Action: Review the specified unpacking log file

OCI-49441: Warnings while finalizing package, details in file string

Cause: There were some non-fatal errors when finalizing a package

Action: Review the specified finalize log file

OCI-49450: Non-zero return code from archiving utility [string] [string]

Cause: The archiving utility (zip/unzip) returned a warning or error.

Action: Verify that the file and directory exist and are readable, and that the file is a valid zip file.

OCI-49451: Archive file structure error [string] [string]

Cause: The archiving utility (zip/unzip) returned an error indicating that the archive file structure is incorrect.

Action: Verify that the file was transferred correctly and that the file is a valid zip file.

OCI-49452: Archiving utility out of memory [string] [string]

Cause: The archiving utility (zip/unzip) returned an error indicating that it was unable to allocate enough memory.

Action: Check for operating system limitations on process memory usage.

OCI-49453: Invalid command invoking archiving utility [string] [string]

Cause: The archiving utility (zip/unzip) was invoked with an invalid command line, or with invalid options.

Action: Verify that there are no operating system settings affecting the behavior of the archiving utility..

OCI-49454: Archive is missing or empty [string] [string]

Cause: The specified archive does not exist, or is empty.

Action: Check if the specified archive exists.

OCI-49455: Archive I/O failed [string] [string]

Cause: An attempt to create, write to or read from an archive failed.

Action: Verify that operating system I/O operations are working correctly.

OCI-49456: Operation failed due to insufficient disk space [string] [string]

Cause: An operation on an archive failed due to insufficient disk space.

Action: Verify that there is sufficient disk space. Check for operating system quotas or other restrictions.

OCI-49601: syntax error: found "string": expecting one of: "string" etc..

Cause: Syntax error discovered when processing event specification

Action: Enter correct event specification

OCI-49701: Parameter string is NULL.

Cause: NULL was passed to a function that requires a non-NULL parameter.

Action: Pass a valid non-NULL parameter.

OCI-49702: unable to allocate 'string' bytes of external procedure call memory

Cause: An attempt to allocate memory in a C external procedure failed due to insufficient memory.

Action: Try the operation again.

OCI-49703: invalid ADR service name

Cause: A NULL or undefined Automatic Diagnostic Repository (ADR) service name was specified.

Action: Specify a valid ADR service name.

OCI-49704: invalid incident ID

Cause: A NULL or nonpositive incident ID was specified.

Action: Specify a valid ADR incident ID.

OCI-49800: ADR block file [string] could not be opened using direct I/O

Cause: An error was encountered when attempting to open an Automatic Diagnostic Repository (ADR) block file using O_DIRECT. The system automatically retries the open without using O_DIRECT.

Action: No action is required.

OCI-49802: missing read, write, or execute permission on specified ADR home directory [string]

Cause: The specified Automatic Diagnostic Repository (ADR) home directory did not have the correct permissions.

Action: Check the read, write, and execute permissions on the specified ADR home directory.

OCI-49803: Purge not possible due to incompatible schema version.

Cause: The Automatic Diagnostic Repository (ADR) found on disk was different from the version in the library.

Action: Start the product to migrate automatically or use the ADRCI utility command MIGRATE SCHEMA.

OCI-49804: cannot modify ADR PDB parameter *string*

Cause: An attempt was made to alter the Automatic Diagnostic Repository (ADR) pluggable database (PDB) - only parameters from a non-consolidated database or root container of a consolidated database.

Action: ADR PDB parameters cannot be altered from non-consolidated database or root container of a consolidated database. Switch to a PDB to perform the operation.

OCI-49900: cannot modify parameter *string*

Cause: An attempt was made to alter the parameter from a non-consolidated database or pluggable database.

Action: The parameter can only be altered in the root container of a consolidated database.

OCI-51001: check [*string*] not found in HM catalog

Cause: checker name might have been misspelled

Action: retry running check with proper checker name

OCI-51003: run parameters not formatted correctly

Cause: Run parameters were given in a wrong format

Action: Correct the run params text and try again

OCI-51004: Check doesn't take any input params

Cause: run params were passed to the check, which doesn't take any inputs

Action: don't pass any run params and try again

OCI-51006: unexpected delimiter ';' in the run params text

Cause: run params were not properly formatted.

Action: correct the run params format and try again

OCI-51007: parameter [*string*] not registered with this check

Cause: Wrong inputs were given to this check.

Action: correct the run params and try the check again

OCI-51008: parameter [*string*] value is not a proper number

Cause: the given parameter value is a not a proper number

Action: correct the run params and try again

OCI-51025: check name should be non NULL value

Cause: NULL value was passed for check name

Action: give a proper check name and retry again

OCI-51035: invalid timeout value

Cause: User specified an invalid timeout value

Action: n/a

OCI-51036: check [*string*] can only be executed in database instance

Cause: An attempt was made to run database-specific check in ASM environment

Action: Don't run the check in ASM environment

OCI-51037: check [string] can only be executed in ASM instance

Cause: An attempt was made to run ASM-specific check in a database environment

Action: Don't run the check in database environment

OCI-51102: cannot change priority of a critical failure string

Cause: An attempt was made to change priority of a failure with CRITICAL priority.

Action: No action is required.

OCI-51103: cannot change priority of a closed failure string

Cause: An attempt was made to change priority of a closed failure.

Action: No action is required.

OCI-51105: cannot change priority of a failure to CRITICAL

Cause: An attempt was made to change priority of a failure to CRITICAL.

Action: No action is required.

OCI-51106: check failed to complete due to an error. See error below

Cause: While executing the check, an unexpected error occurred.

Action: Check the errors below and try rerunning the check.

OCI-51107: failures are changing too rapidly - retry command

Cause: Failures were added or closed during a Data Recovery Advisor command.

Action: Retry the command.

OCI-51108: unable to access diagnostic repository - retry command

Cause: A lock or timeout error occurred when trying to read failure or repair data from the Automatic Diagnostic Repository.

Action: Retry the command.

OCI-51109: repair script file is too large

Cause: Data Recovery Advisor generated a repair script file that was too large.

Action: Retry the command with fewer failures selected.

OCI-51110: buffer size [string] is too small - [string] is needed

Cause: An internal buffer was too small.

Action: This is an internal error. Contact Oracle Support Services.

OCI-51111: failure revalidation timed out

Cause: Data Recovery Manager was unable to revalidate all failures before timing out.

Action: Increase timeout and retry the command.

OCI-51190: Internal error [string], [string] from DBMS_IR

Cause: An unexpected error occurred while executing a routine in the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

OCI-51191: Too many files opened

Cause: Data Recovery Advisor attempted to open too many files using the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

OCI-51192: File not open

Cause: Data Recovery Advisor attempted to read or write from a file that was not open.

Action: This is an internal error. Contact Oracle Support Services.

OCI-51193: invalid parameter value

Cause: An invalid parameter value was supplied in a call to the DBMS_IR package.

Action: Fix the parameter value and retry the call.

OCI-51303: illegal check mask value specified

Cause: An illegal check mask value was specified.

Action: Specify one of the following legal values: COLUMN_CHECKS, ROW_CHECKS, REFERENTIAL_CHECKS, or ALL.

OCI-51316: No check meta-data found on specified table *string*

Cause: No check meta-data was found for the object

Action: Table may not exist or no checks currently defined for the table

OCI-51700: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or through an XML IMPORT or INCLUDE.

Action: Check the URL.

OCI-51701: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL.

OCI-51702: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

OCI-51703: Missing *body* tag from HTML

Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

OCI-51704: Error *string* received from XPath engine

Cause: An error was received from the XPath library during an XPath operation.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

OCI-51705: XML *string* error: *string* "*string*"

Cause: An error was received from an underlying XDK API and is being resigalled.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

OCI-54000 to OCI-54058

OCI-54000: Virtual column feature not yet implemented

Cause: Feature has not been implemented.

Action: Feature is being implemented.

OCI-54001: *string*: invalid identifier specified for virtual column expression

Cause: Column expression referenced a column that does not exist in the table.

Action: Rewrite column expression to reference only scalar columns in the table.

OCI-54002: only pure functions can be specified in a virtual column expression

Cause: Column expression contained a function whose evaluation is non-deterministic.

Action: Rewrite column expression to reference only pure functions.

OCI-54003: specified data type is not supported for a virtual column

Cause: Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression column with a supported scalar data type.

OCI-54004: resultant data type of virtual column is not supported

Cause: The data type of the underlying expression is not supported. Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression of virtual column to return a supported scalar data type.

OCI-54005: keyword VIRTUAL cannot be specified here

Cause: The keyword VIRTUAL was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

OCI-54006: keyword VISIBLE cannot be specified here

Cause: The keyword VISIBLE was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

OCI-54007: keyword HIDDEN cannot be specified here

Cause: The keyword HIDDEN was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

OCI-54008: expression column is not supported for an index organized table

Cause: Attempt to create/alter an index organized table with an expression column

Action: These columns are not supported, change the DDL.

OCI-54009: expression column is not supported for an external table

Cause: Attempt to create/alter an external table with an expression column

Action: These columns are not supported, change the DDL.

OCI-54010: expression column is not supported for a temporary table

Cause: Attempt to create/alter a temporary table with an expression column

Action: These columns are not supported, change the DDL.

OCI-54011: expression column is not supported for a clustered table

Cause: Attempt to create/alter a clustered table with an expression column

Action: These columns are not supported, change the DDL.

OCI-54012: virtual column is referenced in a column expression

Cause: This virtual column was referenced in an expression of another virtual column

Action: Ensure the column expression definition for any virtual column does not refer to any virtual column

OCI-54013: INSERT operation disallowed on virtual columns

Cause: Attempted to insert values into a virtual column

Action: Re-issue the statement without providing values for a virtual column

OCI-54014: Resulting table from a CTAS operation contains virtual column(s)

Cause: Table being created by a CTAS operation contains a virtual column definition

Action: Remove the virtual column definition from the table being created

OCI-54015: Duplicate column expression was specified.

Cause: Expression of the virtual column being added or created conflicted with an existing or previously specified functional index expression or virtual column expression.

Action: Change the expression of the virtual column so that there are no duplicate expressions.

OCI-54016: Invalid column expression was specified

Cause: Virtual column expression is not a valid arithmetic expression. it probably refers to another column in the table

Action: Change the expression of the virtual column

OCI-54017: UPDATE operation disallowed on virtual columns

Cause: Attempted to update values of a virtual column

Action: Re-issue the statement without setting values for the virtual column

OCI-54018: A virtual column exists for this expression

Cause: Specified index expression matches an existing virtual column"

Action: Re-issue the statement by replacing the index expression with the matching virtual column

OCI-54019: Virtual column expression cannot be changed because it is a partitioning column

Cause: Attempted to modify the expression of a virtual column that was also a partitioning column.

Action: This is not supported.

OCI-54020: Virtual column expression cannot be changed because it is a subpartitioning column

Cause: Attempted to modify the expression of a virtual column that was also a subpartitioning column.

Action: This is not supported.

OCI-54021: Cannot use PL/SQL expressions in partitioning or subpartitioning columns

Cause: Attempted to partition a table on a virtual column that contained PL/SQL expressions.

Action: This is not supported.

OCI-54022: Virtual column expression cannot be changed because an index is defined on column

Cause: Attempted to change the expression of a virtual column that was indexed.

Action: Drop the index and then change the expression.

OCI-54023: Virtual column expression cannot be changed because a constraint is defined on column

Cause: Attempted to change the expression of a virtual column that had a constraint defined on it.

Action: Drop constraint and then change expression.

OCI-54024: expression column is not supported for an organization cube table

Cause: Attempted to create or alter an organization cube table with an expression column

Action: These columns are not supported, change the DDL.

OCI-54025: Virtual column cannot have a default value

Cause: Attempted to alter a virtual column to have a default value.

Action: This is not valid, change the DDL.

OCI-54026: Real column cannot have an expression

Cause: Attempted to alter a real column to have an expression.

Action: This is not valid, change the DDL.

OCI-54027: cannot modify data-type of virtual column

Cause: Attempted to change the data-type of virtual column without modifying the underlying expression

Action: change the underlying expression to be compatible with the data-type change

OCI-54028: cannot change the HIDDEN/VISIBLE property of a virtual column

Cause: Attempted to change the HIDDEN/VIRTUAL property of a virtual column

Action: re-issue the DDL without the virtual column property change

OCI-54029: Virtual column cannot be updated in trigger body

Cause: Attempted to change the value of virtual column in a trigger body"

Action: This is not valid, change the trigger definition.

OCI-54030: datatype mismatch between virtual column and expression

Cause: virtual column expression was changed after column was created"

Action: change the underlying expression to return datatype that conforms to the virtual column

OCI-54031: column to be dropped or modified is used in a virtual column expression

Cause: Attempted to drop or modify a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be dropped.

OCI-54032: column to be renamed is used in a virtual column expression

Cause: Attempted to rename a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be renamed.

OCI-54033: column to be modified is used in a virtual column expression

Cause: Attempted to modify the data type of a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be modified.

OCI-54034: virtual columns not allowed in functional index expressions

Cause: An attempt was made to create a functional index with an expression defined on one or more virtual columns.

Action: Specify the index expression using only regular columns.

OCI-54035: keyword HIDDEN cannot be specified here

Cause: Attempted to specify HIDDEN key word for a virtual column

Action: This is not supported.

OCI-54036: cannot define referential constraint with ON DELETE SET NULL clause on virtual column

Cause: Attempted to specify ON DELETE SET NULL clause for a referential integrity constraint on a virtual column.

Action: Reissue the statement without specifying ON DELETE SET NULL clause.

OCI-54037: table must have at least 1 column that is not virtual

Cause: An attempt was made to create a table with only virtual columns.

Action: Include at least 1 column that is not virtual in the table being created.

OCI-54038: Virtual column cannot be encrypted

Cause: An attempt was made to create or alter a virtual column to have encryption.

Action: Encryption is unnecessary for a virtual column as the data is not stored on disk.

OCI-54039: table must have at least one column that is not invisible

Cause: An attempt was made to create or alter a table to have only invisible columns.

Action: Include at least one column that is not invisible in the table being created or altered.

OCI-54040: Visibility of a system-generated column cannot be changed.

Cause: An attempt was made to alter the visibility of a system-generated column.

Action: This is not supported.

OCI-54041: Visibility of an abstract data type column cannot be changed.

Cause: An attempt was made to alter the visibility of an abstract data type column.

Action: Specify the column visibility change with a supported data type.

OCI-54042: Invisible column is not supported on this type of table.

Cause: An attempt was made to create or alter the visibility of a column on an unsupported table type. Invisible columns are only supported for heap and index-organized tables (IOT).

Action: These columns are not supported, change the DDL.

OCI-54043: Including column of an IOT cannot be an invisible column.

Cause: An attempt was made to alter the visibility of the included column of an index-organized table (IOT).

Action: This is not supported.

OCI-54044: Visibility of a column having a column-level object privilege cannot be changed.

Cause: An attempt was made to alter the visibility of a column with a column-level object privilege.

Action: Revoke the column-level object privilege before making the column invisible.

OCI-54045: Column level object privilege cannot be granted on an invisible column.

Cause: An attempt was made to grant a column level object privilege on an invisible column.

Action: Modify the column to make it visible and then grant the column level object privilege.

OCI-54046: Column visibility modifications cannot be combined with any other modified column DDL option.

Cause: An attempt was made to combine the modification of the visibility of a column with other modified column property changes.

Action: Separate column visibility modifications into a standalone DDL.

OCI-54047: virtual columns not allowed for XMLType tables with object-relational storage

Cause: An attempt was made to create an object-relational XMLType table with virtual columns.

Action: Do not create virtual columns for XMLType tables with object-relational storage . This feature is not available.

OCI-54048: Column expression modifications cannot be combined with any other column DDL operation.

Cause: An attempt was made to combine the modification of the expression of a column with other column operations.

Action: Separate column expression modifications into a standalone DDL.

OCI-54049: expression edition column is not supported for an external table

Cause: An attempt was made to create or alter an external table with an edition expression column.

Action: These columns are not supported; change the DDL.

OCI-54050: Unsupported type or attribute on redacted column.

Cause: An attempt was made to alter a column with a redaction policy, so as to give that column an unsupported type or attribute. Virtual columns are not supported by data redaction. Columns with the INVISIBLE attribute are not supported by data redaction (this applies to both user-specified hidden columns and system-generated hidden columns). Vector encoded columns are not supported by data redaction.

Action: Specify the name of a non-redacted column, or use the DROP_POLICY PL/SQL procedure in the DBMS_REDACT package to remove the redaction policy from the column before altering it. Look in the REDACTION_POLICIES and REDACTION_COLUMNS catalog views for a list of all redaction policies and redacted columns.

OCI-54051: System-generated virtual column cannot be a primary key.

Cause: An attempt was made to specify a system-generated virtual column * as a primary key.

Action: None

OCI-54052: System-generated functional index virtual column cannot be renamed.

Cause: An attempt was made to rename a system-generated functional index virtual column.

Action: None

OCI-54053: The visibility of a column from a table owned by a SYS user cannot be changed.

Cause: An attempt was made to alter the visibility of a column from a table owned by SYS user.

Action: Execute the DDL on a table not owned by a SYS user.

OCI-54054: System-generated virtual column or guard column cannot be in a constraint.

Cause: An attempt was made to add a constraint containing the system generated virtual column or guard column.

Action: None

OCI-54055: In-Memory virtual column expression cannot refer to a system-generated or hidden column.

Cause: An attempt was made to create a virtual column expression on a system-generated or hidden column.

Action: Avoid creating a virtual column expression on a system-generated or hidden column.

OCI-54056: There is an unsupported operation on a sensitive column "string".

Cause: An attempt was made to either alter the visibility of a sensitive column or change the sensitive column to vector encode.

Action: Specify the name of a non-sensitive column, or use DBMS_TSDP_MANAGE.DROP_SENSITIVE_COLUMN PL/SQL procedure to remove the sensitivity of the column before altering it. *Params: 1) column_name: The column name being protected with an incorrect security policy.

OCI-54057: A column which is a audit column of a Fine Grained Auditing policy cannot be modified to an invisible column.

Cause: An attempt was made to modify a column which was a audit column of a FGA policy to an invisible column.

Action: Drop the FGA policy containing the column as audit column before modifying the column.

OCI-54058: '*' not allowed in SELECT expressions without FROM clause

Cause: An attempt was made to use '*' in select expression list without a FROM clause.

Action: Specify explicit columns or expressions in select list that does not include a '*'

OCI-54500 to OCI-56978

OCI-54500: invalid combination of elements

Cause: The geometry did not start from the correct level in the hierarchy.

Action: Correct the hierarchy in the geometry.

OCI-54501: no holes expected

Cause: The geometry contained one or more unexpected holes.

Action: Remove any holes in the geometry.

OCI-54502: solid not closed

Cause: The solid geometry was not closed i.e., faces of solid are not 2-manifold due to incorrectly defined, oriented, or traversed line segment because each edge of a solid must be traversed exactly twice, once in one direction and once in the reverse direction.

Action: Correct the orientation of the edges of the neighboring polygons.

OCI-54503: incorrect solid orientation

Cause: The orientation of the solid was not correct.

Action: Correct the orientation or specification of the outer or inner solid geometry according to the geometry rules for such a solid.

OCI-54504: multiple outer geometries

Cause: The geometry contained more than one outer geometry.

Action: Remove all but one of the outer geometries.

OCI-54505: ring does not lie on a plane

Cause: The ring was not flat.

Action: Make sure all of the vertices of the ring are on the same plane.

OCI-54506: compound curve not supported for 3-D geometries

Cause: The 3-D geometry contained one or more compound curves, which are not supported for 3-D geometries.

Action: Remove all compound curves from the geometry.

OCI-54507: duplicate points in multipoint geometry

Cause: The multipoint geometry had two points that either had identical coordinates or were the same point considering the geometry tolerance.

Action: Make sure all points are different, considering the tolerance.

OCI-54508: overlapping surfaces in a multisolid geometry

Cause: The multisolid geometry contained one or more fully or partially overlapping surfaces.

Action: Ensure that the multisolid geometry contains no overlapping areas.

OCI-54509: solid not attached to composite solid

Cause: To connect solids in a composite solid geometry, at least one of the faces of a solid must be shared (fully or partially) with only another solid. However, at least one of the faces in this composite solid was not shared by exactly two solids only.

Action: Ensure that at least one face in a composite solid is shared by exactly two solids.

OCI-54510: no outer geometry expected

Cause: An outer geometry was found when only inner geometries were expected.

Action: Remove all outer geometries.

OCI-54511: edges of inner and outer solids intersect

Cause: An inner solid had a common edge with outer solid.

Action: Ensure that edges of inner and outer solids do not intersect.

OCI-54512: a vertex of an inner solid is outside corresponding outer solid

Cause: A solid geometry contained an inner solid with at least one vertex outside its corresponding outer solid.

Action: Ensure that all vertices of inner solids are not outside their corresponding outer solid.

OCI-54513: inner solid surface overlaps outer solid surface

Cause: One or more faces of an inner solid surface either fully or partially overlapped an outer solid surface.

Action: Ensure that inner and outer surfaces have no shared (fully or partially overlapping) faces.

OCI-54514: overlapping areas in multipolygon

Cause: A multipolygon geometry contained one or more common (shared, fully or partially overlapped) polygons.

Action: Ensure that no polygons in a multipolygon overlap.

OCI-54515: outer rings in a composite surface intersect

Cause: Outer rings, either on the same plane or different planes, in a composite surface intersected.

Action: Ensure that outer rings do not intersect. They can share edges.

OCI-54516: adjacent outer rings of composite surface cannot be on same plane

Cause: The conditional flag was set, and a composite surface had at least two outer rings sharing a common edge on the same plane.

Action: Change those outer rings into one larger outer ring.

OCI-54517: outer ring is on the same plane and overlaps another outer ring

Cause: An outer ring in a composite surface shared a common area with another outer ring.

Action: Ensure that no outer rings fully or partially overlap.

OCI-54518: shared edge of composite surface not oriented correctly

Cause: A shared edge (one shared by two polygons) in a composite surface was not correctly oriented. Each shared edge must be oriented in one direction with respect to its first polygon and then in the reverse direction with respect to its second polygon.

Action: Reverse one of the directions of the shared edge with respect to its polygons.

OCI-54519: polygon (surface) not attached to composite surface

Cause: Not all polygons of a surface had a common (fully or partially shared) edge.

Action: Ensure that each polygon is attached to the composite surface by one of its edges.

OCI-54520: inner ring not on the same plane as its outer ring

Cause: An inner ring was not on the same plane as its outer ring.

Action: Ensure that each inner ring is on the same plane as its outer ring.

OCI-54521: inner ring is not inside or is touching outer ring more than once

Cause: An inner ring either was not inside its outer ring or touched its outer ring more than once.

Action: Ensure that the inner ring is inside its outer ring and does not touch the outer ring more than once. If an inner ring touches its outer ring more than once, then the outer ring is no longer a topologically simple or singly connected polygon (ring).

OCI-54522: inner rings of same outer ring cannot intersect or share boundary

Cause: Two inner rings of the same outer ring intersected or shared a boundary.

Action: Ensure that line segments of an inner ring do not intersect or fully or partially coincide with line segments of another inner ring sharing the same outer ring.

OCI-54523: inner rings of same outer ring cannot touch more than once

Cause: Two inner rings of the same outer ring touched more than once.

Action: Ensure that inner rings of the same outer ring touch at no more than one point.

OCI-54524: inner ring cannot be inside another inner ring of same outer ring

Cause: An inner ring was inside another ring of the same outer ring.

Action: Ensure that no inner ring is inside another inner ring of the same outer ring.

OCI-54525: incorrect box volume due to wrong ordinates

Cause: The rectangular box in shortcut format did not have its first x,y,z coordinates either all greater or less than its second x,y,z coordinates.

Action: Make sure that the first x,y,z coordinates are either all greater or all less than the second x,y,z coordinates.

OCI-54526: multi or composite geometry must be decomposed before extraction

Cause: The extraction could not be performed because the multi or composite geometry must first be decomposed into simple geometries (with or without inner geometries). The multi or composite geometry had a gtype of GTYPE_MULTISOLID, GTYPE_MULTISURFACE, GTYPE_MULTICURVE, GTYPE_MULTIPOINT, or GTYPE_COLLECTION, or the geometry was a line string.

Action: Use the MULTICOMP_TOSIMPLE parameter to element extractor to decompose the multi or composite geometry to a simple geometry.

OCI-54527: operation not permitted on a simple geometry

Cause: A MULTICOMP_TOSIMPLE parameter to element extractor was attempted on a geometry that is already simple.

Action: Do not use the MULTICOMP_TOSIMPLE parameter to element extractor on simple geometries.

OCI-54528: inner composite surfaces or surfaces with inner ring(s) expected

Cause: An INNER_OUTER parameter to element extractor was attempted on a surface that was not simple or composite.

Action: Ensure that the etype of the geometry for the INNER_OUTER parameter to element extractor is ETYPE_SURFACE or ETYPE_COMPOSITESURFACE.

OCI-54529: geometry should have multi-level hierarchy (like triangle)

Cause: The geometry did not have the multi-level hierarchy required for this operation. For example, if the parameter to element extractor (hierarchy level) is not LOWER_LEVEL, but the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, an extract operation is not allowed, because a simple solid can only be decomposed into lower level geometries, such as composite surfaces.

Action: Ensure that the geometry has the appropriate hierarchy. For example, if the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, the parameter to element extractor (hierarchy level) should be LOWER_LEVEL.

OCI-54530: invalid etype for element at element offset

Cause: An invalid etype was encountered.

Action: Correct the etype of the geometry.

OCI-54531: invalid orientation for element at element offset

Cause: The orientation of the current geometry was not valid.

Action: Reverse the orientation of the geometry.

OCI-54532: incomplete composite surface

Cause: The end of composite surface was reached before all necessary surfaces were defined.

Action: Add more surfaces to match the geometry definition, or reduce the specified number of surfaces.

OCI-54533: invalid etype in composite surface of solid

Cause: The etype of the composite surface of a solid was not valid.

Action: Ensure that the etype is orient*1000+ETYPE_SOLID, where orient is 1 for outer solid and 2 for inner solid.

OCI-54534: incorrect box surface due to wrong specification

Cause: The elemInfo definition was not correct for the surface of the axis aligned box.

Action: Change the interpretation to 3 in the elemInfo definition.

OCI-54535: incorrect box surface because it is on arbitrary plane

Cause: The axis aligned box surface was not on the yz, xz, or xy plane.

Action: Ensure that the first and fourth coordinates, or the second and fifth coordinates, or the third and sixth coordinates are the same. This means that the surface is on the yz, xz or xy plane, respectively.

OCI-54536: axis aligned box surface not defined properly

Cause: The inner geometry etype did not start with 2, or the outer geometry etype did not start with 1, or both occurred.

Action: Use the correct etype for the inner and outer geometries.

OCI-54537: incorrect box surface due to wrong orientation

Cause: The rectangular surface in shortcut format did not have its first x,y,z coordinates all greater than or equal to or all less than or equal to its second x,y,z coordinates.

Action: Ensure that the first x,y,z coordinates are either all greater than or equal to or all less than or equal to the second x,y,z coordinates.

OCI-54538: unexpected gtype

Cause: The gtype of the geometry was not GTYPE_SOLID, GTYPE_SURFACE, GTYPE_CURVE or GTYPE_POINT.

Action: Correct the elemInfo array to fix any invalid gtype and etypes that violate the geometry hierarchy.

OCI-54539: cannot process the geometry(s) for this operation

Cause: The geometry had errors in it.

Action: Validate the geometry or geometries to ensure that each is valid.

OCI-54540: at least one element must be a surface or solid

Cause: One of the geometries had holes, and the geometries were neither (A) simple, composite, or multisurfaces, or (B) simple, composite, or multisolids. (Surfaces and solids are the only geometries that can have holes. Points and curves cannot have holes.)

Action: Ensure that each geometry having holes is a surface or solid (simple, composite, or multi).

OCI-54545: holes incorrectly defined

Cause: The holes were defined with incorrect etype.

Action: Ensure that the etype is correct in the definition of the inner geometry.

OCI-54546: volume of solid cannot be 0 or less

Cause: The solid geometry having one outer and multiple inner geometries had a negative or zero volume.

Action: Correct the orientation or specification of the outer solid geometry to obey outer geometry rules so that the outer geometry has a positive volume. Additionally, correct the orientation or specification of inner solid geometries to obey inner geometry rules so that each inner geometry has a negative volume.

OCI-54547: wrong input for COUNT_SHARED_EDGES

Cause: The COUNT_SHARED_EDGES parameter value was not 1 or 2.

Action: Ensure that the COUNT_SHARED_EDGES parameter value is either 1 or 2.

OCI-54548: input geometry gtype must be GTYPE_POLYGON for extrusion

Cause: The input geometry gtype was not GTYPE_POLYGON.

Action: Ensure that the gtype of the input polygon is GTYPE_POLYGON.

OCI-54549: input geometry has incorrect elemInfo

Cause: The input 2-D polygon did not have only one outer ring.

Action: Ensure that the input 2-D polygon has only one outer ring.

OCI-54550: input 2-D polygon not valid

Cause: The 2-D polygon violated the rules for polygons and rings.

Action: Correct the polygon definition.

OCI-54551: grdHeight and/or Height array sizes incorrect

Cause: The sizes of grdHeight and Height arrays were not equal to half the size of input 2-D polygon's ordinates array. As a result, each point in the 2-D polygon could not be extruded from the grdHeight entry to the Height entry.

Action: Ensure that the sizes of the grdHeight and Height arrays are half that of input 2-D polygon ordinates array.

OCI-54552: height entries must be >= to ground height entries

Cause: In the definition of a solid, the height values were less than the ground height.

Action: Ensure that that height values are greater than or equal to ground height values.

OCI-54553: incorrect geometry for appending

Cause: The geometry could not be appended to a homogeneous collection (for example, multi-geometry) or to a heterogeneous geometry (for example, collection). In other words, the gtype of the geometry to be appended was neither GTYPE_COLLECTION or GTYPE_MULTI-X (where X is point, curve, surface, or solid).

Action: Ensure that the geometries involved in the append operation have appropriate gtypes.

OCI-54554: arcs are not supported as defined

Cause: An arc was defined in a geometry type in which arcs are not supported. Arcs are supported for 2-D (circle) polygons, 2-D compound polygons, 2-D single arc, and 2-D compound (composite) curves only.

Action: Remove or simplify the arcs.

OCI-54555: invalid geometry dimension

Cause: The geometry did not have three dimensions.

Action: Ensure that geometry has three dimensions.

OCI-54556: operation is not supported for 3-D geometry

Cause: A 3-D geometry was passed into an operation that supports only 2-D geometries.

Action: Check the Spatial documentation for operations that are supported and not supported on 3-D geometries.

OCI-54557: incomplete composite solid

Cause: The end of composite solid was reached before all necessary solids were defined.

Action: Add more solids to match the geometry definition, or reduce the specified number of solids.

OCI-54558: 3D SRID is not found for the corresponding 2D SRID

Cause: In extruding a 2D polygon into a 3D geometry, the SRID conversion function did not find an equivalent 3D SRID of the 2D SRID.

Action: Specify a 2D SRID that has a 3D equivalent

OCI-54559: query element and source geometry cannot be the same

Cause: A query element geometry and a source geometry were the same, which prevented a label pointing query element in the source geometry from being output.

Action: Redefine the query element or the source geometry so that a label can be output.

OCI-54560: query element cannot be a collection or multitype geometry

Cause: A query element was a collection geometry or a multitype geometry. Such geometries are not permitted in a query element because they are at the top of the geometry hierarchy. A query element must be part of the source geometry.

Action: Redefine the query element or the source geometry so that a label can be output.

OCI-54601: CREATE_PC: invalid parameters for creation of Point Cloud

Cause: An invalid or unknown parameter was specified in the creation of Point Cloud.

Action: Check for valid set of parameters.

OCI-54602: CREATE_PC: input points table *string* does not exist

Cause: The specified table for loading points into a Point Cloud did not exist.

Action: Create the points table with appropriate columns, and then create the Point Cloud.

OCI-54603: CREATE_PC: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the Point Cloud exceeded the maximum limit of 8.

Action: Create the Point Cloud with fewer dimensions. You can store the rest in the output points table.

OCI-54604: CREATE_PC: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table and then create the Point Cloud.

OCI-54605: CREATE_PC: scratch-tables/views (*string*) exist and need to be dropped

Cause: Transient tables/views from a previous CREATE_PC operation were still in existence.

Action: Delete the invalid Point Cloud from the base table (for cleanup of scratch tables), and initialize and create the Point Cloud again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as the parameter.

OCI-54607: CREATE_PC: error fetching data from input points table

Cause: An internal read error occurred during Point Cloud creation.

Action: Contact Oracle Support Services with the error number reported.

OCI-54608: CREATE_PC: error writing Point Cloud LOB

Cause: An internal LOB write error occurred during Point Cloud creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

OCI-54609: CREATE_PC: input extent cannot be null

Cause: The extent of the Point Cloud was null.

Action: Specify an extent for the Point Cloud that is not null.

OCI-54610: CREATE_PC: input extent cannot be more than 2-D for geodetic data

Cause: The extent of the Point Cloud was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

OCI-54611: INIT: either invalid basetable/schema or they do not exist

Cause: The base table or schema, or both, were invalid strings; or the base table and schema combination did not exist.

Action: Ensure that the specified base table exists in the specified schema before performing the initialization operation.

OCI-54613: INIT: internal error creating DML trigger

Cause: The necessary privileges to create the trigger were not granted.

Action: Grant the necessary privileges to create the trigger. If necessary, contact Oracle Support Services for help with privileges for trigger creation.

OCI-54614: INIT: block table name has to be unique

Cause: The specified block table name was not unique. For example, it might have been used for another block table.

Action: Specify a different block table name.

OCI-54616: INIT: internal error [*number*, *string*]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54617: CLIP_PC: invalid Point Cloud; extent is empty

Cause: The input Point Cloud for the CLIP_PC operation was invalid.

Action: Specify a point cloud that was created using the CREATE_PC procedure.

OCI-54618: CLIP_PC: SRIDs of query and Point Cloud are incompatible

Cause: The Point Cloud and the query geometry had incompatible SRID values.

Action: Change the query SRID to be compatible with that of the Point Cloud.

OCI-54619: CLIP_PC: query and BLKID parameters cannot both be null

Cause: Both the query and BLKID parameters were null in the call to the CLIP_PC operation.

Action: Either specify a query geometry that is not null, or specify a BLKID for use as a query.

OCI-54620: CLIP_PC: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54621: TO_GEOMETRY: TOTAL_DIMENSIONALITY not same as in INIT operation

Cause: The specified TOTAL_DIMENSIONALITY was invalid.

Action: Ensure that the TOTAL_DIMENSIONALITY matches that specified in the call to the initialization operation.

OCI-54622: TO_GEOMETRY: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54623: CREATE_PC: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54640: PARTITION_TABLE utility: invalid input parameters [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54641: PARTITION_TABLE utility: scratch tables exist with oidstr = string

Cause: Scratch tables/views could not be created because they already existed.

Action: Use SDO_UTIL.DROP_WORK_TABLES with the specified oidstr parameter to clean up the scratch tables.

OCI-54642: PARTITION_TABLE utility: invalid SORT_DIMENSION specified

Cause: An invalid string was specified for the SORT_DIMENSION.

Action: Specify the SORT_DIMENSION as 'BEST_DIM', 'DIMENSION_1', 'DIMENSION_2', or 'DIMENSION_3'.

OCI-54643: PARTITION_TABLE utility: invalid WORKTABLESPACE parameter

Cause: An invalid string was specified for the WORKTABLESPACE parameter.

Action: Specify an existing valid tablespace for WORKTABLESPACE (to hold the scratch tables).

OCI-54644: PARTITION_TABLE utility: error in reading input, output tables

Cause: The names for the input/output tables were invalid, or the tables did not exist or did not have the right structure.

Action: Check the Spatial documentation for PARTITION_TABLE.

OCI-54651: CREATE_TIN: invalid parameters specified in creation of TIN

Cause: An invalid or unknown parameter was specified in the creation of the TIN.

Action: Check the Spatial documentation for CREATE_TIN.

OCI-54652: CREATE_TIN: input points table *string* does not exist

Cause: The specified table for loading points into a TIN did not exist.

Action: Create the points table with appropriate columns, and then create the TIN.

OCI-54653: CREATE_TIN: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the TIN exceeded the maximum limit of 8.

Action: Create the TIN with fewer dimensions. You can store the rest in the output points table.

OCI-54654: CREATE_TIN: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table, and then create the TIN.

OCI-54655: CREATE_TIN: scratch tables/views(*string*) exist and need to be dropped

Cause: Transient tables from previous CREATE_TIN operation still existed.

Action: Delete the invalid TIN from the base table (for cleanup of scratch tables), and initialize and create the TIN again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as its parameter.

OCI-54656: CREATE_TIN: error fetching data from input points table

Cause: An internal read error occurred during TIN creation.

Action: Contact Oracle Support Services with the error number reported.

OCI-54657: CREATE_TIN: error writing TIN LOB

Cause: An internal LOB write error occurred during TIN creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

OCI-54658: CREATE_TIN: input extent cannot be null

Cause: The extent of the TIN was null.

Action: Specify an extent for the TIN that is not null.

OCI-54659: CREATE_TIN: input extent has to be 2-D for geodetic data

Cause: The extent of the TIN was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

OCI-54660: CLIP_TIN: invalid Point Cloud; extent is empty

Cause: The input TIN for the CLIP_TIN operation was invalid.

Action: Specify a TIN that was created using the CREATE_TIN operation.

OCI-54661: CLIP_TIN: SRIDs of query and TIN are incompatible

Cause: The TIN and the query geometry had incompatible SRID values.

Action: Change the query geometry SRID to be compatible with that of TIN.

OCI-54662: CLIP_TIN: query and blkid parameters cannot both be null

Cause: Both the query and blkid parameters were null in the call to the CLIP_TIN operation.

Action: Either specify a query geometry that is not null, or specify a blkid for use as a query.

OCI-54663: CLIP_TIN: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54664: TO_GEOMETRY: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54665: CREATE_TIN: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

OCI-54666: query gtype is a superset of the source geometry

Cause: A query element geometry was at a higher level in the geometry hierarchy than the source geometry.

Action: Try replacing the source geometry with the query geometry.

OCI-54667: query element cannot be matched to an element in source geometry (string)

Cause: A query element geometry was not a part of the source geometry.

Action: Redefine the query element or the source geometry.

OCI-54668: a 2D SRID cannot be used with a 3D geometry

Cause: A 2D SRID was used with a 3D geometry.

Action: Replace the 2D SRID with an appropriate 3D SRID.

OCI-55150: Spatial Web Services operation failed: string

Cause: There was an error in the Spatial Web Services operation or the parameters.

Action: Check the error message and take the appropriate action or contact Oracle Support Services.

OCI-55151: WCS is not enabled.

Cause: Web Coverage Service (WCS) metadata tables were not found.

Action: Ensure that WCS is enabled in the proper schema.

OCI-55152: WCS temporary tables do not exist.

Cause: The Web Coverage Service (WCS) operation required temporary tables, but these tables did not exist.

Action: Ensure that the WCS temporary tables exist in the schema of the coverage, and that the WCS schema has privileges to create, update, and delete rows in the WCS temporary tables.

OCI-55153: WCS publish coverage failed: *string*

Cause: Web Coverage Service (WCS) parameter values were invalid, the user had insufficient privileges, or the coverage was already published.

Action: Ensure that all parameter values are not null, the WCS schema has privileges to access the coverage, and the coverage is not already published. The schema of the coverage must grant access privileges to the WCS schema.

OCI-55154: Request to grant or revoke privileges failed: *string*

Cause: Parameters were invalid or privileges were insufficient.

Action: Check the error message to ensure that the parameters are valid and the user has sufficient privileges.

OCI-55160: MDSYS.SDO_XSD_TABLE does not exist or the specified XSD ID is incorrect.

Cause: The XML schema could not be found.

Action: Ensure that Oracle Spatial is installed properly, and check the XSD_ID column of the SDO_XSD_TABLE table and the USER_SDO_CSW_SERVICE_INFO view.

OCI-55161: CSW user table: *string*

Cause: Either the Catalog Services for the Web (CSW) user table, the SRID parameter, the metadata ID, or the XML schema definition (XSD) type was incorrect.

Action: Check the error message and take the appropriate action on the CSW user table name, SRID, metadata ID, XSD, or XML column.

OCI-55162: The XQFT index cannot be dropped or created for the CSW user table.

Cause: The XQuery Full Text (XQFT) index could not be dropped or created for the Catalog Services for the Web (CSW) user table.

Action: Ensure that the user table is ready for dropping or building an XQFT index.

OCI-55163: CSW server-side error: *string*

Cause: A Catalog Services for the Web (CSW) server-side error occurred.

Action: Ensure that the CSW metadata is correct and the CSW user table is properly defined.

OCI-55164: CSW client-side error: *string*

Cause: A Catalog Services for the Web (CSW) client-side error occurred.

Action: Ensure that the CSW record types are properly published, and that the sdots.ear file and WebLogic Server (WLS) are properly configured.

OCI-55200: Java exception from tag data translation java stack

Cause: Java exceptions.

Action: Turn on java output by calling `dbms_java.set_output(OUTPUT_SIZE)`; Set java logging level by calling `MGD_ID_UTL.setJavaLoggingLevel('INFO')`; Analyze java logging messages.

OCI-55201: Tag data translation category not found

Cause: No matching category ID could be found.

Action: Make sure the input category name, category version or category ID is correct.

OCI-55202: Tag data translation scheme not found

Cause: No matching scheme could be found for the input data format.

Action: Make sure the input data format is supported and correct.

OCI-55203: Tag data translation level not found

Cause: No matching level could be found for the input data format.

Action: Make sure the input data format is supported and correct.

OCI-55204: Tag data translation option not found

Cause: No matching option could be found for the input data format.

Action: Make sure the input data format is supported and correct.

OCI-55205: Tag data translation field validation failed

Cause: Invalid field value.

Action: Make sure the field value of the input data is within the range specified in the tag data translation XML.

OCI-55206: Tag data translation field not found

Cause: Invalid input field.

Action: Make sure the spellings of the input fields are correct.

OCI-55207: Tag data translation rule evaluation failure

Cause: Error occurred when idcode translator tried to evaluate the rule specified in the tag data translation XML.

Action: Java proxy must be set in order to evaluate manager look up rules. Call `MGD_ID_UTL.setProxy(PROXY_HOST, PROXY_PORT)` to enable java proxy.

OCI-55208: Too many matching levels were found for the input data

Cause: Necessary field values were missing.

Action: Add additional field value pairs that are necessary to determine a unique matching level.

OCI-55300: model *string* does not exist

Cause: The specified model could not be found.

Action: Make sure that the model has been created.

OCI-55301: rulebase *string* does not exist

Cause: The specified rulebase could not be found.

Action: Make sure that the rulebase has been created.

OCI-55302: insufficient privileges *string*

Cause: Sufficient privileges were not granted.

Action: Ask the database administrator to grant the appropriate privileges.

OCI-55303: SDO_RDF_TRIPLE_S constructor failed: *string*

Cause: SDO_RDF_TRIPLE_S constructor failed.

Action: Check the stack trace for additional information.

OCI-55304: specified reuse-bNode model-id *string* != target model-id *string*

Cause: The reuse-bNode model-id specified for the SDO_RDF_TRIPLE_S constructor was neither 0 nor the model-id of the target model.

Action: Make sure that the reuse-bNode model is either 0 or the model-id of the target model.

OCI-55305: reification constructor functions not supported

Cause: Unsupported reification constructor functions were used.

Action: Insert each triple in the reification quad individually. See documentation for more information.

OCI-55306: internal error: invalid *string*: value_name=*string* value_type=*string*

Cause: The value type of this component of the RDF triple was invalid.

Action: This is an internal error. Contact Oracle Support Services.

OCI-55307: invalid value type for lexical value: *string*

Cause: The value type of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table, then this may be an internal error. Contact Oracle Support Services.

OCI-55308: invalid time zone *string* for lexical value *string*

Cause: The time zone of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table then this may be an internal error. Contact Oracle Support Services.

OCI-55309: hash collision resolution failed for lexical value *string*

Cause: Attempts to resolve hash collision exceeded the maximum retry count.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55310: parse failed for the *string* lexical value: *string*

Cause: Attempts to insert the specified lexical value failed.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55311: invalid value type *string* for long lexical value *string*

Cause: The value type of this long (length > 4000) lexical value was invalid.

Action: Make sure that the long value has a valid value type.

OCI-55312: parse failed for triple: id-form: *string string string*

Cause: Attempts to insert triple failed.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55313: SDO_RDF_TRIPLE_S constructor failed to process triple containing bNode

Cause: The SDO_RDF_TRIPLE_S constructor without bNode reuse option was invalid for triple containing bNode.

Action: Use SDO_RDF_TRIPLE_S constructor that allows bNode reuse.

OCI-55314: invalid temporary table name (*string*) for use with batch load

Cause: Specified temporary table name was not valid.

Action: See documentation for rules for temporary table name validity.

OCI-55315: batch load attempt failed: *string*

Cause: The batch load operation failed.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55316: model *string* does not match model *string* for table and column

Cause: This column of the table was not associated with the specified model.

Action: Make sure to use the correct target model.

OCI-55317: model *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different model name, or delete the existing model and create a new model with the specified name.

OCI-55318: column *string* in table *string* already contains data

Cause: At model creation time, the table column contained data.

Action: Ensure that the table column does not contain data before model creation.

OCI-55319: model *string* create attempt failed: *string*

Cause: The attempt to create the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55320: model *string* drop attempt failed: *string*

Cause: The attempt to drop the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55321: network already exists

Cause: Attempt to create the network failed because the network already existed.

Action: If necessary, drop the network before trying to recreate the network.

OCI-55322: model(s) exist

Cause: An attempt was made to drop a network that contained one or more models.

Action: Drop all the model(s) and then retry the operation.

OCI-55323: rulebase(s) exist

Cause: An attempt was made to drop a network that contained one or more rulebases.

Action: Drop all the rulebase(s) and then retry the operation.

OCI-55324: no rulebases specified

Cause: Rulebases for the operation were not specified.

Action: Specify at least one rulebase.

OCI-55325: rulebase or rules index *string* already exists *string*

Cause: A rulebase or rules index with the specified name already existed.

Action: Choose a different name, or delete the existing rulebase or rules index.

OCI-55326: rules index (*string*) create attempt failed: *string*

Cause: The attempt to create the specified rules index did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55327: rule *string* yields a triple with a literal subject or predicate

Cause: The specified rule created an invalid triple containing a literal in the subject or predicate position.

Action: Check and modify the rule to avoid creation of invalid triple.

OCI-55328: literal value *string* insert attempt failed

Cause: The attempt to create the specified literal value failed.

Action: This may be an internal error. Contact Oracle Support Services.

OCI-55329: same model *string* specified more than once in the list of models

Cause: The specified model occurred more than once in the list of models.

Action: Eliminate duplicate occurrences of the model in the list of models.

OCI-55330: rulebase or rules index *string* is busy

Cause: The specified rulebase or rules index was busy and could not be used.

Action: Retry your operation later.

OCI-55331: user owns RDF objects

Cause: The user could not be dropped because it owns RDF objects.

Action: Drop the RDF objects and then retry.

OCI-55332: virtual model cannot be used in this context

Cause: A virtual model was used as input instead of a model.

Action: Use a model as input.

OCI-55333: virtual model *string* does not exist

Cause: The specified virtual model could not be found.

Action: Make sure that the virtual model has been created.

OCI-55334: virtual model name *string* is invalid

Cause: The specified virtual model name was not valid.

Action: Check Oracle documentation for valid virtual model names.

OCI-55335: at least one model must be specified

Cause: An empty list of models was specified as the set of models for a virtual model.

Action: Make sure at least one model appears in the set of models used to create a virtual model.

OCI-55336: insufficient privileges for using one or more of the models and rules indexes

Cause: An attempt was made to create a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or to grant the required privileges.

OCI-55337: a virtual model or rules index with the name *string* already exists

Cause: A virtual model or rules index with the specified name was already present.

Action: Choose a different virtual model name.

OCI-55338: a model with the name *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different virtual model name.

OCI-55339: a virtual model already exists for the specified model-rulebase combination

Cause: A virtual model with identical components was already present.

Action: Choose a different set of components for the new virtual model.

OCI-55340: rules index does not exist for the specified model-rulebase combination

Cause: A rules index did not exist for the specified sets of models and rulebases.

Action: Make sure a rules index is created for the specified sets of models and rulebases.

OCI-55341: label index out-of-range

Cause: An attempt was made to use an out-of-range index for retrieving the label.

Action: Correct the input and try again.

OCI-55342: not a defined label in the policy

Cause: An attempt was made to use an undefined label.

Action: Correct the input and try again.

OCI-55343: invalid dependent component for custom label generator

Cause: An attempt was made to specify an invalid dependent component for the label generator.

Action: Correct the input and try again.

OCI-55344: invalid label generator implementation or use

Cause: An attempt was made to use an invalid label generator to generate labels for inferred data.

Action: Correct the input and try again.

OCI-55345: invalid use of label generator with no OLS policy

Cause: An attempt was made to use a label generator when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

OCI-55346: invalid label generation option with user rules

Cause: An attempt was made to specify an invalid label generation option for entailment involving user rules.

Action: Correct the input and try again.

OCI-55347: missing proof for the specified label generation option

Cause: The chosen label generation option required proof, which was missing for the entailment.

Action: Correct the input and try again.

OCI-55348: label generator error: RDF data not enabled for *string*

Cause: An invalid label generator option was chosen for entailment.

Action: Correct the input and try again.

OCI-55349: OLS not installed or in an invalid state

Cause: Oracle Label Security (OLS) support for Resource Definition Framework (RDF) was not installed.

Action: Consult Oracle documentation to install the Oracle Label Security (OLS) support.

OCI-55350: RDF-OLS table option *string* not supported

Cause: An attempt was made to use an unsupported Oracle Label Security (OLS) option for Resource Definition Framework (RDF) data.

Action: Correct the input and try again.

OCI-55351: RDF secure access option not supported or is invalid

Cause: An attempt was made to use an unsupported secure access option for Resource Definition Framework (RDF).

Action: Correct the input and try again.

OCI-55352: insufficient privileges for policy administration

Cause: The necessary privileges needed to administer Oracle Label Security (OLS) or Oracle Virtual Private Database (VPD) policies for Resource Definition Framework (RDF) data were not specified.

Action: None

OCI-55353: invalid column name for label column *string*

Cause: An attempt was made to use an invalid column to maintain labels for Resource Definition Framework (RDF) data.

Action: Use CTXT2 as the label column.

OCI-55354: Policy *string* does not exist or is inaccessible

Cause: An attempt was made to use a nonexistent policy.

Action: Correct the input and try again.

OCI-55355: RDF network does not exist

Cause: An attempt was made to perform an operation that required Resource Definition Framework (RDF) network to be present.

Action: Create the Resource Definition Framework (RDF) network.

OCI-55356: OLS not enabled for RDF data

Cause: An attempt was made to perform an RDF-OLS-specific operation when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

OCI-55357: insufficient privileges for the current operation

Cause: An attempt was made to perform a Resource Definition Framework (RDF) secure access operation with restricted privileges.

Action: See Oracle documentation.

OCI-55358: model "*string*" is not empty

Cause: An attempt was made to reset Oracle Label Security (OLS) labels for a model with some data.

Action: None

OCI-55359: unauthorized operation with policy *string* - *string*

Cause: An attempt was made to perform an unauthorized DML operation on OLS-enabled Resource Definition Framework (RDF) repository.

Action: None

OCI-55360: invalid value for resource position - *string*

Cause: An invalid value was specified for the resource position while setting labels.

Action: Correct the input and try again.

OCI-55361: duplicate specification for the namespace

Cause: An attempt was made to use a namespace map that contained duplicate specifications.

Action: Remove the duplicate specification of the namespace.

OCI-55362: RDF VPD policy may not be created in the SYS schema

Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy in the SYS schema.

Action: None

OCI-55363: context *string* does not exist

Cause: An attempt was made to specify a nonexistent context for the Oracle Virtual Private Database (VPD) policy.

Action: Create the context using CREATE CONTEXT command.

OCI-55364: invalid operation type *string* for VPD policy

Cause: An attempt was made to specify an invalid operation for the application of Oracle Virtual Private Database (VPD) policy.

Action: Specify ALL, QUERY, or DML for operation type.

OCI-55365: invalid metadata for VPD policy

Cause: An attempt was made to define invalid metadata elements for the Oracle Virtual Private Database (VPD) policy.

Action: See Oracle documentation for valid set of metadata elements.

OCI-55366: unknown namespace prefix "*string*"

Cause: An attempt was made to make use of an undefined namespace prefix in Oracle Virtual Private Database (VPD) metadata.

Action: Correct the input and try again.

OCI-55367: invalid maintenance operation for VPD metadata

Cause: An attempt was made to perform an invalid maintenance operation on Oracle Virtual Private Database (VPD) metadata.

Action: Specify ADD or DELETE for VPD metadata maintenance.

OCI-55368: empty match or apply pattern not allowed in a VPD constraint

Cause: An attempt was made to specify an empty match or apply pattern for a Oracle Virtual Private Database (VPD) constraint.

Action: Correct the input and try again.

OCI-55369: invalid identifier specified for the constraint group

Cause: An invalid SQL identifier was specified for the constraint group.

Action: Correct the input and try again.

OCI-55370: input parameter not a zero or positive integer

Cause: The input parameter was not zero or a positive integer.

Action: Change the input parameter to zero or a positive integer.

OCI-55371: RDF rules index '*string*' exists for different model-rulebase combination

Cause: A rules index with the specified name has already been built for a different model-rulebase combination.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

OCI-55372: entailment (rules index) 'string' already exists

Cause: The entailed graph (rules index) already exists.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

OCI-55373: inference internal error: string

Cause: An unexpected internal error condition occurred.

Action: Check the error message and the stack trace.

OCI-55374: query constants not in the database; no rows selected

Cause: URIs or literals used in the query did not exist in the database.

Action: Check the query, and ensure that the URIs or literals do exist.

OCI-55375: cannot drop table 'string' because this table owns RDF objects

Cause: A table containing RDF data could not be dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then drop the table.

OCI-55376: cannot alter or drop column 'string' because this column owns RDF objects

Cause: A table column containing RDF data could not be altered or dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then alter or drop the column.

OCI-55377: number of triples less than 1 or null error indication marker

Cause: An internal error occurred during validation. The number of triples was less than 1 or the error indication marker was null.

Action: Check the input parameters, and ensure that the number of triples is 1 or greater and that the error indication marker is not null; or contact Oracle Support Services.

OCI-55378: invalid error code

Cause: An invalid error code was passed in during validation.

Action: Specify a valid error code.

OCI-55379: too many triples

Cause: An internal error occurred during validation. Too many triples were passed in.

Action: Specify a valid number of triples for the operation, or contact Oracle Support Services.

OCI-55430: query pattern is null

Cause: The query pattern specified in the SEM_MATCH query was null.

Action: Modify the query pattern to be non-null.

OCI-55441: insufficient privileges to drop virtual model string

Cause: An attempt was made to drop a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or grant the required privileges.

OCI-55442: a virtual model cannot be used with other models in a SEM_MATCH query

Cause: The set of models used as input to a SEM_MATCH query contained a virtual model.

Action: Create a new virtual model with contents that are equivalent to the specified SEM_MATCH model set and query the new virtual model.

OCI-55443: a virtual model cannot be used with a rulebase in a SEM_MATCH query

Cause: A rulebase was specified in conjunction with a virtual model as input to a SEM_MATCH query.

Action: Create a new virtual model that expands the specified virtual model to include the specified rulebase and query the new virtual model.

OCI-55450: continually refreshed workspaces not supported with RDF

Cause: An attempt was made to use continually refreshed workspaces with Resource Definition Framework (RDF) data.

Action: None

OCI-55451: multi-parent workspaces not supported with RDF

Cause: An attempt was made to use multi-parent workspaces with Resource Definition Framework (RDF) data.

Action: None

OCI-55452: batch mode not allowed with version-enabled models

Cause: An attempt was made to batch load data into a version-enabled Resource Definition Framework (RDF) model. This is not supported.

Action: None

OCI-55453: OLS/VPD-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for OLS/VPD-enabled models using unsupported API.

Action: Correct the input and try again.

OCI-55454: version-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for version-enabled models using unsupported API.

Action: Correct the input and try again.

OCI-55455: rules index status not recognized (*string*)

Cause: The specified rules index status was not recognized.

Action: Ensure that the rules index status is VALID, INCOMPLETE, or INVALID, and retry the operation.

OCI-55456: no valid rules index for this model-rulebase combination

Cause: A valid rules index did not exist for specified combination of models and rulebases.

Action: Create a rules index for the specified models and rulebases combination, or use a combination of models and rulebases for which a rules index exists, and retry the operation. Also ensure that the rules index status matches the status for the rules index specified in the query.

OCI-55457: predicate not found in model

Cause: The predicate value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use a predicate value that exists in the model and retry the operation.

OCI-55458: object not found in model

Cause: The object value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use an object value that exists in the model and retry the operation.

OCI-55459: invalid parameter string

Cause: The parameter string used in the creation of an index of type SEM_INDEXTYPE had invalid or malformed parameters.

Action: See the documentation for information on how to write a valid parameter string.

OCI-55460: incorrect usage of semantic operators

Cause: There was a syntax error in the call to the SEM_RELATED operator

Action: See the documentation for information on how to use the SEM_RELATED operator. Check that the value returned by SEM_RELATED is compared to 1 or 0.

OCI-55461: no distance information available

Cause: Distance information was not generated during rules index creation.

Action: Retry query without the SEM_DISTANCE operator and/or without specifying bounds in the SEM_RELATED operator. See the documentation for information on when distance information is generated.

OCI-55462: internal error

Cause: An internal error occurred during a semantic operator query or during the creation of an index of type SEM_INDEXTYPE.

Action: Contact Oracle Support Services.

OCI-55463: missing privileges for MDSYS schema for OLS-enabled entailment

Cause: An attempt was made to run entailment with insufficient privileges for MDSYS schema.

Action: Grant EXEMPT ACCESS POLICY to MDSYS.

OCI-55464: model "*string*" does not exist

Cause: An attempt was made to use a nonexistent Resource Definition Framework (RDF) model.

Action: Correct the input and try again.

OCI-55465: resource position *string* not secured with OLS policy

Cause: An attempt was made to associate labels with resource positions that were not secured with Oracle Label Security (OLS).

Action: Correct the input and try again.

OCI-55466: one or more triples have incompatible sensitivity label

Cause: An attempt was made to reset a label for a resource that participated in triples with incompatible label.

Action: Correct the input and try again.

OCI-55467: model-specific label for the resource is incompatible

Cause: An attempt was made to set a global label for a resource when an incompatible model-specific label already existed.

Action: Correct the input and try again.

OCI-55468: rule base "*string*" does not exist or is not accessible

Cause: An attempt was made to specify a rule base that did not exist.

Action: Correct the input and try again.

OCI-55469: rule "*string*" does not exist or is not accessible

Cause: An attempt was made to set a label for a rule that did not exist.

Action: Correct the input and try again.

OCI-55470: OLS may not be applied with one or more models VPD-enabled

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is VPD-enabled.

Action: Oracle Label Security (OLS) and Oracle Virtual Private Database (VPD) may not be used simultaneously.

OCI-55471: OLS may not be applied to version-enabled RDF repository

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is version-enabled.

Action: Oracle Label Security (OLS) may not be enabled when one or more models is version-enabled.

OCI-55472: Secure access policy already assigned to RDF data

Cause: An attempt was made to assign an Oracle Label Security (OLS) policy to Resource Definition Framework (RDF) data when some other policy was already in effect.

Action: None

OCI-55473: RDF model participating in a virtual model may not be version-enabled

Cause: An attempt was made to version-enable a Resource Definition Framework (RDF) model which participated in a virtual model.

Action: None

OCI-55474: internal error: [string],[string],[string]

Cause: There was an internal error with Resource Definition Framework (RDF) OLS/VPS support.

Action: Contact Oracle Support Services.

OCI-55475: policy with a matching name already exists

Cause: An attempt was made to specify a duplicate Oracle Virtual Private Database (VPD) policy name.

Action: Correct the input and try again.

OCI-55476: policy "string" does not exist

Cause: An attempt was made to use a nonexistent Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

OCI-55477: policy with dependent models may not be dropped

Cause: An attempt was made to drop an Oracle Virtual Private Database (VPD) policy with dependent models.

Action: Remove the VPD policy from the models and try again.

OCI-55478: application table with multiple RDF models not suitable for VPD

Cause: An attempt was made to VPD-enable a model which shared the application table with another model.

Action: None

OCI-55479: a policy already assigned to the RDF model

Cause: An attempt was made to assign Oracle Virtual Private Database (VPD) policy to a model with a VPD policy already in effect.

Action: None

OCI-55480: model participating in a virtual model may not be VPD-enabled

Cause: An attempt was made to VPD-enable a model that participated in a virtual model.

Action: None

OCI-55481: VPD policy may not be applied for OLS-enabled RDF repository

Cause: An attempt was made to VPD-enable a model with an Oracle Label Security (OLS) policy already in effect.

Action: OLS and VPD may not be used simultaneously.

OCI-55482: VPD may not be applied to version-enabled RDF repository

Cause: An attempt was made to VPD-enable a version-enabled Resource Definition Framework (RDF) repository. This is not supported.

Action: None

OCI-55483: policy "string" not assigned to the model

Cause: An attempt was made to remove an Oracle Virtual Private Database (VPD) policy that was never assigned to the model.

Action: None

OCI-55484: circular dependency not allowed in RDF metadata

Cause: An attempt was made to define metadata elements that had a circular dependency for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

OCI-55485: metadata may not be directly assigned to an equivalent property

Cause: An attempt was made to assign metadata directly to a property that was declared to be an equivalent of another.

Action: None

OCI-55486: metadata exists for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some metadata already existed for this property.

Action: None

OCI-55487: VPD constraints exist for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some Oracle Virtual Private Database (VPD) constraints already existed for this property.

Action: Correct the input and try again.

OCI-55488: metadata definition already exists for the policy

Cause: An attempt was made to add a duplicate metadata definition for an Oracle Virtual Private Database (VPD) policy.

Action: None

OCI-55489: conflicting metadata definition exists for the policy

Cause: An attempt was made to define conflicting metadata definitions for an Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

OCI-55490: VPD constraint may not be assigned to an equivalent property

Cause: An attempt was made to assign an Oracle Virtual Private Database (VPD) constraint to a property declared to be an equivalent of another.

Action: Assign the VPD constraint to the property that is the target of the equivalent property.

OCI-55491: VPD policy constraint with matching name already exists

Cause: An attempt was made to specify a duplicate name for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

OCI-55492: error creating VPD policy constraint: *string*

Cause: The Oracle Virtual Private Database (VPD) constraint had errors.

Action: See Oracle documentation.

OCI-55493: specified VPD policy constraint does not exist

Cause: An attempt was made to operate on an Oracle Virtual Private Database (VPD) constraint that did not exist.

Action: None

OCI-55494: input model set may only have a unique VPD policy

Cause: An attempt was made to execute a multi-model query where the models, as a set, did not have a unique Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

OCI-55495: application table with multiple models may not be version-enabled

Cause: An attempt was made to version-enable an application table associated with multiple Resource Definition Framework (RDF) models.

Action: Correct the input and try again.

OCI-55496: unsupported versioning configuration (History/Valid time) for RDF data

Cause: An attempt was made to use an unsupported configuration for Resource Definition Framework (RDF) versioning.

Action: Correct the input and try again.

OCI-55497: RDF repository with an OLS policy may not be version-enabled

Cause: An attempt was made to version-enable a model with Oracle Label Security (OLS) policy.

Action: Versioning is not supported for OLS-enabled Resource Definition Framework (RDF) repository.

OCI-55498: VPD-enabled RDF model may not be version-enabled

Cause: An attempt was made to version-enable a model with an Oracle Virtual Private Database (VPD) policy in effect.

Action: Versioning of VPD-enabled Resource Definition Framework (RDF) models is not supported.

OCI-55500: Event to be used for different trace levels

Cause: None.

Action: Change level for desired tracing in Flashback Transaction Backout.

OCI-55501: Backing out live transaction

Cause: Flashback Transaction Backout was requested on a transaction that has not committed yet.

Action: Commit the transaction before using this feature.

OCI-55502: Specified input transaction by name has no SCN hint

Cause: The specified transaction names for Flashback Transaction Backout was missing an SCN hint.

Action: Provide an SCN hint, and guarantee that the named transactions start before the given SCN.

OCI-55503: Mining finished without seeing specified transactions

Cause: The SCN hit passed was not good. The SCN hit may have come after the start of any of the input transactions.

Action: Give a lesser and more conservative SCN hint, with greater probability of having seen the start of a transaction.

OCI-55504: Transaction conflicts in NOCASCADE mode

Cause: Transactions other than the ones specified conflicts with the specified transactions.

Action: Try using other options like NONCONFLICT_ONLY or CASCADE or NOCASCADE_FORCE.

OCI-55505: DDL done on an interesting object after mining start SCN

Cause: The Flashback Transaction Backout process encountered an interesting object which had its last DDL operation done on it after the mining start time. An interesting object is one that has been modified by either the specified transactions or any of their dependents.

Action: Specify transactions that have committed after the last DDL done on all the objects they touched.

OCI-55506: Transaction performed unsupported change

Cause: A transaction in the dependency DAG performed some action that cannot be backed out. You can back out a transaction, only if undo has been logged for all of its operations. Note some operations do not log undo, such as Insert Direct Load and LOB changes. If you encounter a transaction that has performed any of these operations, you cannot back it out.

Action: The specified transaction cannot be backed out.

**OCI-55507: Encountered mining error during Flashback Transaction Backout.
function: *string***

Cause: Mining error.

Action: None

OCI-55508: Invalid input to Flashback Transaction Backout

Cause: Null varrays passed or invalid input specified

Action: Specify properly formed varrays and valid options

OCI-55509: Creation of dependencies could not finish

Cause: One or more input transaction or any of its dependents are not committed or have been aborted after more than 1 minute of calling the backout function.

Action: Commit all the active transactions associated with this table and try again.

OCI-55510: Mining could not start

Cause: Mining could not start for the following reasons. 1. A logminer session was processing 2. The database was not mounted or not opened for read and write 3. Minimum supplemental logging was not enabled 4. Archiving was not enabled

Action: Fix the mentioned problems and try again. Note that if you enable supplemental logging now, you will not be able to remove a transaction that has committed without supplemental logging.

OCI-55511: Flashback Transaction experienced error in executing undo SQL

Cause: There was a constraint violation exception when executing in NOCASCADE_FORCE mode. Users could also get this error if appropriate supplemental logging is not enabled causing constraint dependencies to go unnoticed.

Action: Either use CASCADE or NONCONFLICT_ONLY options or add appropriate level for supplemental logging.

OCI-55512: Backing out PDML or XA-RAC transaction

Cause: One of the transactions in the dependency graph was a PDML transaction or a local transaction which is a branch of a global XA transaction, spanning multiple RAC instances. Currently flashback transaction does not support this type of transaction.

Action: None

OCI-55513: Backing out an AQ transaction

Cause: One of the transactions in the dependency graph touched an AQ table. As AQ externalizes database information, these transactions are not backed out, as the entire effects of the transaction cannot be seen from inside the database.

Action: None

OCI-55514: Backing out a DDL transaction

Cause: One of the transactions in the dependency graph is a DDL transaction and could not be backed out.

Action: None

OCI-55515: Mining sees input transaction changes without seeing transaction start

Cause: The start SCN provided was higher than the transaction start but below the transaction commit. The result was only partial changes for the given transaction.

Action: Please provide a lower scn hint to flashback transaction.

OCI-55516: Event to dump the LCR's seen by flashback transaction backout to trace file

Cause: None.

Action: Set it to 0 for real flashback transaction. If this is set, flashback transaction will not proceed.

OCI-55517: Internal use

Cause: None.

Action: None

OCI-55518: Mining across reset logs

Cause: Flashback Transaction Backout cannot work with missing changes. This error is thrown if we walk across a reset-logs branch, where we might have missed changes.

Action: If the user knows that the transaction happened in the current reset logs branch, then the SCN-hint is possibly incorrect. Provide an SCN in the current reset log branch.

OCI-55519: Supplemental logging not available for mining SCN range

Cause: Flashback Transaction cannot work if there are regions in the mining range where supplemental logging is not enabled.

Action: If you have provided a SCN/time hint which is approximate and far beyond the specified transaction start time, then readjust the SCN hint and try again. If the system has figured out the transaction start time or you are sure of the range, then the specified transaction cannot be backed out.

OCI-55520: Log record in compatibility lower than 11.0

Cause: The logical change record shows that the compatibility of the mined redo is lower than version 11.0. Flashback transaction works only on redo versions 11.0 and above.

Action: Advance the compatibility and try to back out transactions that have occurred after the compatibility increase.

OCI-55521: Transaction layer temp undo- miscellaneous debug event**OCI-55522: failed to extend temporary undo segment number *string***

Cause: A failure occurred when trying to extend the temporary undo segment.

Action: This is normally followed by another error message that caused the failure. Check the size of default the temporary tablespace.

OCI-55523: Transaction layer parallel transaction- miscellaneous debug event**OCI-55524: Too many recursive autonomous transactions for temporary undo**

Cause: An attempt was made to issue too many recursive autonomous transactions causing the temporary undo segment to be out of slots.

Action: Reconnect to establish a new session and do not use deep nesting of autonomous transactions.

OCI-55525: cannot generate temporary undo in a distributed transaction

Cause: An attempt was made to generate temporary undo in a distributed transaction.

Action: Do not change temporary objects in a distributed transaction.

OCI-55526: temporary tablespace to store temporary undo not available

Cause: An attempt was made to generate temporary undo without adding temporary tablespace in the database.

Action: Add temporary tablespace prior to enabling temporary undo.

OCI-55527: Diagnostic event for external SCN-comparing errors**OCI-55528: maximum number of RECO sessions reached**

Cause: To mitigate a potential denial-of-service (DoS) situation by the recoverer process (RECO), the creation of a new RECO session was prevented because the maximum number of RECO sessions had reached.

Action: Adjust the values of the RECO parameters to allow more RECO sessions.

OCI-55529: value *string* of *string* is outside the valid range of 2 to 32765

Cause: An attempt was made to set the parameter to an invalid value.

Action: Specify a value between 2 and 32765, inclusive.

OCI-55550: Event to be used for testing ktubu extensions

Cause: None.

Action: None

OCI-55551: Trigger 4136 corruption

OCI-55552: Trigger 4137 corruption

OCI-55553: Trigger 4139 corruption

OCI-55554: Trigger 4140 corruption

OCI-55555: Trigger 4152 corruption

OCI-55556: Trigger 4143 corruption

OCI-55557: Trigger 4144 corruption

Cause: Above events used for testing corruption path

Action: None

OCI-55558: *string* is not a corrupted transaction

Cause: the given transaction is not in the corrupt list v\$corrupt_xid_list

Action: check v\$corrupt_xid_list

OCI-55559: Test proactive txn health check

OCI-55560: Test reactive txn health check

OCI-55561: Test 25027 corruption

OCI-55562: Not able to get TX enqueue, cannot force commit *string*

OCI-55563: *number* is not a valid undo segment number

Cause: the given usn is not a valid one

Action: check undo\$

OCI-55564: *string* is not a valid transaction id

Cause: the given txn is not a valid one

Action: check txn id

OCI-55565: *string* is not a valid undo segment number

Cause: the given usn is not a valid one

Action: check undo\$

OCI-55566: SQL statement issued when the database was not open for queries

Cause: Tried to access SMON time zone information when database was not open for queries.

Action: Reissue the SQL statement after the database is open for queries.

OCI-55567: The `_highthreshold_undoretention` value should be at least *string* based on the current undo retention settings.

Cause: The `_highthreshold_undoretention` value was not greater than or equal to the `UNDO_RETENTION` setting and the low threshold value used for tuning undo retention.

Action: Reissue the SQL statement with a higher value.

OCI-55568: The maximum query length (mql) value should be at most *string* based on the current `_highthreshold_undoretention` setting.

Cause: The maximum query length (mql in minutes) was not less than or equal to half the `_highthreshold_undoretention` parameter setting.

Action: Reissue the SQL statement with a lower value for mql or increase the value of `_highthreshold_undoretention` parameter.

OCI-55569: The `UNDO_RETENTION` parameter value should be at most *string*, the `_highthreshold_undoretention` setting.

Cause: The `UNDO_RETENTION` parameter value was not less than or equal to the `_highthreshold_undoretention` parameter setting.

Action: Reissue the SQL statement with a lower value for `UNDO_RETENTION` parameter or increase the value of `_highthreshold_undoretention` parameter.

OCI-55570: transaction layer debug trace event**OCI-55571: Oracle Flashback Transaction Query is not supported in a consolidated Oracle database running in shared undo mode.**

Cause: The consolidated database was in shared undo mode and Oracle Flashback Transaction Query could not mine undo records across pluggable databases.

Action: The consolidated database must be switched to local undo mode.

OCI-55600: The table "*string*".*string*" is already enabled for Flashback Archive

Cause: The specified table is already enabled for Flashback Archive.

Action: No action required.

OCI-55601: The table "*string*".*string*" cannot be enabled for Flashback Archive

Cause: An attempt is made to enable Flashback Archive for a table which should never be enabled for Flashback Archive.

Action: Check the table name.

OCI-55602: The table "*string*".*string*" is not enabled for Flashback Archive

Cause: An attempt was made to perform Flashback Archive operation on a table on which Flashback Archive is not enabled.

Action: Check the table name.

OCI-55603: invalid flashback archive or valid time period command

Cause: An invalid flashback archive or valid time period command was specified.

Action: Check the SQL statement.

OCI-55604: Incorrect tablespace is specified

Cause: An incorrect tablespace is specified for the Flashback Archive.

Action: Check the SQL statement and verify the possible causes, 1, the tablespace that was already used by the Flashback Archive. 2, the tablespace was not used by the Flashback Archive. 3, the tablespace block size is less than 8K. 4, the tablespace is a lost write tablespace

OCI-55605: Incorrect Flashback Archive is specified

Cause: An attempt was made to operate on a Flashback Archive that does not exist, or to create a Flashback Archive that already exists.

Action: Check the SQL statement.

OCI-55606: Event to modify archiver sleep time in seconds

Cause: 30 seconds is recommended as the archiver sleep time for tests.

Action: The default archiver sleep time is 300 seconds

OCI-55607: Event to enable debugging of archiver

Cause: The purpose of this event is for debugging.

Action: Attach to process specified.

OCI-55608: Default Flashback Archive does not exist

Cause: The default Flashback Archive did not exist.

Action: Create the default Flashback Archive first.

OCI-55609: Attempt to create duplicate default Flashback Archive

Cause: An attempt was made to create a default Flashback Archive while one already exists.

Action: No action required.

OCI-55610: Invalid DDL statement on history-tracked table

Cause: An attempt was made to perform certain DDL statement that is disallowed on tables that are enabled for Flashback Archive.

Action: No action required.

OCI-55611: No privilege to manage default Flashback Archive

Cause: An attempt was made to create, alter, or drop the default Flashback Archive.

Action: No action required.

OCI-55612: No privilege to manage Flashback Archive

Cause: An attempt was made to create, alter, or drop a Flashback Archive.

Action: No action required.

OCI-55613: Invalid Flashback Archive quota size

Cause: An attempt was made to specify invalid Flashback Archive quota size.

Action: Specify size in MB, GB, TB, PB, or EB.

OCI-55614: AUM needed for transactions on tracked tables

Cause: An attempt was made to execute DML on a tracked table without enabling Auto Undo Management.

Action: Disable tracking on the table or enable Auto Undo Management.

OCI-55615: Event to test archiver scheduled internal tasks

Cause: The purpose of this event is for testing.

Action: No action required.

OCI-55616: Transaction table needs Flashback Archiver processing

Cause: Too many transaction table slots were being taken by transactions on tracked tables.

Action: Wait for some amount of time before doing tracked transactions.

OCI-55617: Flashback Archive "*string*" runs out of space and tracking on "*string*" is suspended

Cause: Flashback archive tablespace quota is running out.

Action: Add tablespace or increase tablespace quota for the flashback archive.

OCI-55618: Insufficient privilege to grant Flashback Archive privilege

Cause: An attempt was made to grant Flashback Archive privilege.

Action: No action required.

OCI-55619: Invalid privilege to grant on Flashback Archive

Cause: An attempt was made to grant invalid privilege on a Flashback Archive object.

Action: Specify valid privilege.

OCI-55620: No privilege to use Flashback Archive

Cause: An attempt was made to enable Flashback Archive on a table without such privileges.

Action: No action required.

OCI-55621: User quota on tablespace "*string*" is not enough for Flashback Archive

Cause: An attempt was made to create or alter a Flashback Archive quota which is larger than the user's quota.

Action: No action required.

OCI-55622: DML, ALTER and CREATE UNIQUE INDEX operations are not allowed on table "*string*". "*string*"

Cause: An attempt was made to write to or alter or create unique index on a Flashback Archive internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Flashback Archive internal tables.

OCI-55623: Flashback Archive "*string*" is blocking and tracking on all tables is suspended

Cause: Flashback archive tablespace has run out of space.

Action: Add tablespace or increase tablespace quota for the flashback archive.

OCI-55624: The table "string"."string" cannot be enabled for Flashback Archive at this point

Cause: An attempt was made to enable Flashback Archive again on a table which was just disabled.

Action: Try again later.

OCI-55625: Cannot grant Flashback Archive privilege to a role

Cause: An attempt was made to grant or revoke Flashback Archive privilege to a role.

Action: No action required.

OCI-55626: Cannot remove the Flashback Archive's primary tablespace

Cause: An attempt was made to remove the primary tablespace of the Flashback Archive.

Action: No action required.

OCI-55627: flashback archive tablespace must be automatic segment space management tablespace

Cause: An attempt was made to add a tablespace that was not an automatic segment space management tablespace.

Action: Add tablespace that is created with automatic segment space management.

OCI-55628: Flashback Archive supports Oracle 11g or higher

Cause: An attempt was made to create a Flashback Archive with incorrect compatible mode or without auto undo management.

Action: Use compatible mode equal to 11.0 or higher, and use auto undo management.

OCI-55629: Event to test Flashback Archiver internal management tasks

Cause: The purpose of this event is for testing.

Action: No action required.

OCI-55630: Flashback data archive cannot be enabled on a nested table, temporary table, external table, hybrid-partitioned table, materialized view, advanced queuing table, clustered table, analytic workspace table, or non-table object.

Cause: An attempt was made to enable flashback data archive on an object which is not supported by flashback data archive.

Action: Do not use the FLASHBACK ARCHIVE clause for this object.

OCI-55631: Table has columns with data types that are not supported by Flashback Data Archive

Cause: An attempt was made to add a column of data type that is not supported by Flashback Data Archive. Or, the table on which Flashback Data Archive is being enabled contains column(s) with data types not supported by Flashback Data Archive.

Action: Do not use FLASHBACK ARCHIVE clause for this object. If adding column, do not use LONG or Nested Table column data type.

OCI-55632: Tablespace has Flashback Archive tables

Cause: An attempt was made to remove a tablespace that has Flashback Archive tables.

Action: No action required.

OCI-55633: Cannot do DDL on Flashback Data Archive enabled table

Cause: An attempt was made to do DDL on tracked tables while one DDL is running.

Action: Retry the DDL at a later time.

OCI-55634: Unable to disassociate or re-associate Flashback Data Archive table "*string*". "*string*"

Cause: Either an incorrect table name was used or an exclusive lock on the table could not be acquired.

Action: Check the table name and release locks on the table.

OCI-55635: Flashback Data Archive enabled table "*string*". "*string*" is disassociated

Cause: An attempt was made to perform operation on a Flashback Data Archive enabled table that is currently disassociated for DDL.

Action: Retry the operation at a later time.

OCI-55636: Flashback Data Archive enabled table "*string*". "*string*" has different definition from its history table

Cause: The Flashback Data Archive enabled table has different table definition from its history table.

Action: Fix the table definition.

OCI-55637: Flashback Data Archive enabled table "*string*". "*string*" is not in the correct compliance mode for this operation

Cause: An attempt was made to perform disassociation operation on a Flashback Data Archive enabled table that is in compliance mode. Or, DDL are not supported on tables in noncompliance mode.

Action: Disable compliance mode before retrying the disassociation operation.

OCI-55638: DDL operations on Flashback Data Archive-enabled table are not allowed at this point

Cause: Flashback Data Archive could not acquire resources to complete the operation on Oracle RAC.

Action: Retry the DDL at a later time.

OCI-55639: Flashback Data Archive internal SQL error

Cause: Flashback Data Archive encountered internal SQL error.

Action: No action required.

OCI-55640: Insufficient privilege to perform the Flashback Data Archive operation

Cause: An attempt was made to disassociate tables enabled for Flashback Data Archive without the required privilege.

Action: No action required.

OCI-55641: Cannot drop tablespace used by Flashback Data Archive

Cause: An attempt was made to drop a Flashback Data Archive tablespace.

Action: Remove the tablespace from Flashback Data Archive before retrying the operation.

OCI-55642: Table has column names that are reserved by Flashback Data Archive

Cause: The table on which Flashback Data Archive is being enabled contains column(s) with names that are reserved by Flashback Data Archive.

Action: Rename column name before retry.

OCI-55643: cannot combine Flashback Data Archive operation with other operations

Cause: An attempt was made to combine the Flashback Data Archive operation with other ALTER TABLE operations.

Action: Ensure that Flashback Data Archive is the sole operation specified in ALTER TABLE statement.

OCI-55644: event to enable system column ORA_XID testing

Cause: The purpose of this event was for testing.

Action: No action required.

OCI-55645: Valid time period cannot be enabled on a nested table, temporary table, external table, materialized view, AQ table, clustered table, or non-table object.

Cause: An attempt was made to enable a valid time period on an object which is not supported by valid time period.

Action: Do not use a valid time period for this object.

OCI-55646: application already enabled for flashback archive

Cause: An attempt was made to enable flashback archive on an application for a second time.

Action: No need to enable flashback archive on this application.

OCI-55647: application not previously enabled for flashback archive

Cause: An attempt was made to disable flashback archive on an application that has not been enabled for flashback archive.

Action: No need to disable flashback archive on this application.

OCI-55648: table already added to application

Cause: An attempt was made to add a table to an application for a second time.

Action: Do not add a table to an application more than once.

OCI-55649: table not previously added to application

Cause: An attempt was made to remove a table that has not been added to an application.

Action: No need to remove table from application.

OCI-55650: application not registered for flashback archive

Cause: An attempt was made to access an application that has not been registered for flashback archive.

Action: Register the application before accessing it.

OCI-55651: application already registered for flashback archive

Cause: An attempt was made to register an application for flashback archive for a second time.

Action: No need to register this application for flashback archive.

OCI-55652: application already locked down

Cause: An attempt was made to lock down an application for a second time.

Action: No need to lock down this application.

OCI-55653: application not previously locked down

Cause: An attempt was made to unlock an application that was not previously locked down.

Action: No need to unlock this application.

OCI-55654: too many columns in the base table

Cause: An attempt was made to enable flashback archive on a base table with so many columns that the history table has no room for metadata columns.

Action: Have fewer columns in the base table.

OCI-55655: Flashback archive is being used by an application.

Cause: An attempt was made to drop the flashback archive, however, it was still being used by an application.

Action: Check the SYS_FBA_APP table to see which application is using the flashback archive. Drop the application before dropping the flashback archive.

OCI-55657: event to enable bscn lag testing

Cause: The purpose of this event is for testing.

Action: No action required.

OCI-55658: disassociate or re-associate not supported on Blockchain Flashback Data Archive table "*string*". "*string*"

Cause: An attempt was made to disassociate or re-associate Blockchain Flashback Data Archive table.

Action: No Action required.

OCI-55710: Unable to alter system parameter GLOBAL_TXN_PROCESSES at this time

Cause: The system was in the process of adjusting the number of global transaction background processes.

Action: Retry the operation at a later time.

OCI-55711: Unable to bind clusterwide global transactions to compatible undo

Cause: Undo tablespace was not onlined for automatic undo management.

Action: Create undo tablespace if it has not been created.

OCI-55712: XA transactions on RAC are not supported with GLOBAL_TXN_PROCESSES set to 0

Cause: The initialization parameter GLOBAL_TXN_PROCESSES was set to 0.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to a value greater than 0.

OCI-55713: GLOBAL_TXN_PROCESSES cannot be set to 0 at runtime

Cause: An attempt was made to set initialization parameter GLOBAL_TXN_PROCESSES to 0 at runtime.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to 0 before starting RAC instance to disable GTX background processes. Note that XA transactions are not supported on RAC database when GTX background processes are disabled.

OCI-55714: savepoint '*string*' disabled with interleaved changes across Oracle RAC instances

Cause: After the savepoints were established, interleaved changes were made across Oracle RAC instances within the clusterwide global transaction.

Action: Do not make interleaved changes across Oracle RAC instances after savepoints are established.

OCI-55715: The current transaction cannot become distributed.

Cause: The current local transaction was already bound to an undo segment that was not compatible with clusterwide global transactions.

Action: Ensure that you set UNDO_MANAGEMENT to AUTO and that an undo tablespace is created and configured for the instance.

OCI-55726: Reservable column can be added or modified only through a CREATE TABLE or ALTER TABLE statement.

Cause: An invalid use of RESERVABLE keyword is specified in the SQL statement.

Action: Check the SQL statement.

OCI-55727: DML, ALTER, RENAME, and CREATE UNIQUE INDEX operations are not allowed on the reservation journal table "*string*". "*string*".

Cause: An attempt is being made to write to, or alter, or rename, or create unique index on a reservation journal table.

Action: No action required. Only Oracle is allowed to perform such operations on a reservation journal table.

OCI-55728: Reservable column property can only be specified for a column on a table that has a primary key.

Cause: The referenced table does not have a primary key.

Action: Add a primary key to the table in order to add a reservable column.

OCI-55731: Reservable column update is not supported in a distributed transaction.

Cause: A reservable column update is being issued as part of a distributed transaction or is part of a transaction that is being promoted to a distributed transaction.

Action: Do not perform reservable column updates in a distributed transaction or in a transaction that may be promoted to a distributed transaction. Update the reservable columns in a local transaction or alter the column to a non-reservable column.

OCI-55732: Reservable column update should specify all the primary key columns in the WHERE clause.

Cause: The reservable column update statement does not have a WHERE clause with all the primary keys.

Action: Add a WHERE clause with all the primary keys to the reservable column update statement.

OCI-55734: The SET clause of a reservable column update statement requires a single expression value to be added or subtracted from the same reservable column.

Cause: The amount to be added or subtracted from a reservable column is not provided as a single expression.

Action: Change the update statement by adding parenthesis to specify a single expression that should be added or subtracted from the reservable column. The SET clause should be of the form `reservable_col1 = reservable_col1 + (expression)` or `reservable_col1 = reservable_col1 - (expression)`.

OCI-55735: Reservable and non-reservable columns cannot be updated in the same statement.

Cause: An attempt is being made to update both reservable and non-reservable columns in the same update statement.

Action: Update the reservable columns in one update statement and the non-reservable columns in another update statement.

OCI-55736: Lock-free reservation in "string" failed for the update statement.

Cause: An unknown error occurs when attempting to make the reservation for the reservable column update statement.

Action: Contact Oracle Support with error information and the incident traces for ORA-55736 error.

OCI-55737: Reservable column update statement does not support hints.

Cause: An attempt is being made to specify hints in a reservable column update statement.

Action: Remove hints from the update statement.

OCI-55738: Reservable column update statement supports only SET clauses.

Cause: Clauses other than SET are specified in a reservable column update statement.

Action: Remove the clauses other than the SET clause from the reservable column update statement.

OCI-55739: Reservable column update statement does not support PL/SQL row variables.

Cause: An attempt is being made to specify a PL/SQL row variable in a reservable column update statement.

Action: Remove the PL/SQL row variable from the reservable column update statement.

OCI-55740: Reservable column update statement does not support a list of reservable columns in a single SET clause of the update statement.

Cause: An attempt is being made to specify a list of columns to be updated within a SET clause of the reservable column update statement.

Action: Remove the list of columns from the SET clause. Instead use a single reservable column in the SET clause.

OCI-55741: Reservable column "string" cannot be made a primary key of the table.

Cause: An attempt is being made to specify a reservable column as a primary key.

Action: Use a non-reservable column as a primary key for the table.

OCI-55742: Reservable column update statement does not support DEFAULT clause.

Cause: An attempt is being made to specify a DEFAULT clause in a reservable column update statement.

Action: Remove the DEFAULT keyword from the reservable column update statement.

OCI-55743: Reservable column update statement does not support the RETURNING or RETURN clause.

Cause: An attempt is being made to specify a RETURNING or RETURN clause in an reservable column update statement.

Action: Remove the RETURNING or RETURN clause from the update statement.

OCI-55744: Reservable column update statement does not support ERROR LOGGING clause.

Cause: An attempt is being made to specify an ERROR LOGGING clause in a reservable column update statement.

Action: Remove the ERROR LOGGING clause from the update statement.

OCI-55745: Reservable column update statement does not support INDEX MAINTENANCE clause.

Cause: An attempt is being made to specify an INDEX MAINTENANCE clause in a reservable column update statement.

Action: Remove the INDEX MAINTENANCE clause from the update statement.

OCI-55746: Reservable column update statement only supports + or - operations on a reservable column.

Cause: An attempt is being made to update a reservable column with something other than a + or -. An amount should be added or subtracted from the reservable column. Direct assignments to reservable columns are not supported.

Action: Change the update statement to add or subtract from the same reservable column. The set clause should be of the form `reservable_col1 = reservable_col1 + (expression)` or `reservable_col1 = reservable_col1 - (expression)`." where the expression in parenthesis evaluates to the amount to be added or subtracted from the same reservable column, `reservable_col1`.

OCI-55747: The SET clause of a reservable update statement requires the amount to be added or subtracted from the same reservable column, "string".

Cause: An amount is being not added or subtracted from the same reservable column.

Action: Change the update statement to add or subtract from the same reservable column. The set clause should be of the form `reservable_col1 = reservable_col1 + (expression)` or `reservable_col1 = reservable_col1 - (expression)`, where the expression in parenthesis evaluates to the amount to be added or subtracted from the same reservable column, `reservable_col1`.

OCI-55748: Reservable column property specified on column "string" is supported only on columns of data types Oracle NUMBER, INTEGER, and FLOAT.

Cause: An attempt is being made to specify a reservable column with a data type other than Oracle NUMBER, INTEGER, or FLOAT.

Action: Use Oracle NUMBER, INTEGER, or FLOAT data types for reservable columns.

OCI-55749: Reservable column supports only NOT NULL and CHECK constraints.

Cause: An attempt is being made to specify a constraint on a reservable column that is not a NOT NULL or CHECK constraint.

Action: Use only NOT NULL and CHECK constraints for reservable columns.

OCI-55750: cannot specify INVISIBLE or VISIBLE keywords for a reservable column "string"

Cause: INVISIBLE or VISIBLE keyword was specified for a reservable column.

Action: Remove the INVISIBLE or VISIBLE keyword.

OCI-55751: The number of reservable columns exceeds the limit of 'string' allowed per table.

Cause: The statement issued caused the number of reservable columns to exceed the limit allowed per table.

Action: Remove the RESERVABLE keyword.

OCI-55752: cannot drop the PRIMARY KEY constraint as the table has one or more reservable columns

Cause: An attempt is being made to drop the primary key constraint of an table with a reservable column. Lock-free reservation requires a primary key constraint on the table.

Action: None

OCI-55754: Resource busy error is detected for the reservable column update statement. A delete or a DDL operation is conflicting with this update statement.

Cause: The reservable column update operation is conflicting with a delete or a DDL transaction on the same rows.

Action: Retry the operation after some time. It will succeed when the transaction issuing the conflicting delete or DDL has completed.

OCI-55755: Reservable column property is not supported for columns of a non-user table.

Cause: Reservable column property is specified for a column of a non-user table.

Action: None

OCI-55756: Reservable column property is not supported for columns of a system table.

Cause: Reservable column property is specified for a column of a system table.

Action: None

OCI-55757: Reservable column property is not supported for columns of a system partitioned or a reference partitioned table.

Cause: Reservable column property is specified for a column of a system partitioned or a reference partitioned table.

Action: None

OCI-55758: Reservable column property is not supported for columns of a remote table.

Cause: Reservable column property is specified for a column of a remote table.

Action: None

OCI-55759: Reservable column property is not supported for columns of a fixed table, external table, or a hybrid partitioned table.

Cause: Reservable column property is specified for a column of a fixed table, external table, or a hybrid partitioned table.

Action: None

OCI-55760: Reservable column property is not supported for columns of a temporary table.

Cause: Reservable column property is specified for a column of a temporary table.

Action: None

OCI-55761: Reservable column property is not supported for columns of a materialized view or a snapshot log.

Cause: Reservable column property is specified for a column of a materialized view or a snapshot log.

Action: None

OCI-55762: Reservable column property is not supported for columns of a view.

Cause: Reservable column property is specified for a column of a view.

Action: None

OCI-55763: Reservable column property is not supported for columns of an advanced queue table.

Cause: Reservable column property is specified for a column of an Advanced Queue table.

Action: None

OCI-55764: Cannot DROP or MOVE tables with reservable columns. First run "ALTER TABLE <table_name> MODIFY (<reservable_column_name> NOT RESERVABLE)" and then DROP or MOVE the table.

Cause: An attempt is being made to DROP or MOVE a table with reservable columns.

Action: Run ALTER TABLE <table_name> MODIFY (<reservable_column_name> NOT RESERVABLE) before issuing a DROP or MOVE of the table.

OCI-55765: Reservable column property is not supported for columns of a nested table or object table.

Cause: Reservable column property is specified for a column of a nested table or an object table.

Action: None

OCI-55766: Reservable column property is not supported for columns of a sharded or duplicated table.

Cause: Reservable column property is specified for a column of a sharded or duplicated table.

Action: None

OCI-55767: Reservable column property is not supported for columns of an Oracle OLAP table.

Cause: Reservable column property is specified for a column of an OLAP table.

Action: None

OCI-55768: Reservable column property is not supported for columns of a blockchain or immutable table.

Cause: Reservable column property is specified for a column of a Blockchain or Immutable table.

Action: None

OCI-55769: Reservable column property is not supported for columns of an editioning view.

Cause: Reservable column property is specified for a column of an Editioning View.

Action: None

OCI-55770: Reservable column property is specified on a column, "string", that is already a reservable column.

Cause: An attempt is made to specify the reservable column property on a column that was already a reservable column.

Action: None

OCI-55771: Column to be made NOT RESERVABLE, "string", is not a reservable column.

Cause: An attempt is being made to remove the reservable column property on a column that was not a reservable column.

Action: None

OCI-55772: Reservable column property is not supported on a virtual column, "string".

Cause: Reservable column property is specified on a virtual column.

Action: None

OCI-55773: Table has reservable columns or primary key columns with a data type not supported by lock-free reservation.

Cause: An attempt is being made to add a reservable column to a table that has a column with a data type not supported by lock-free reservation.

Action: Do not use the RESERVABLE keyword for this column.

OCI-55774: Rename of a reservable column, "string", is not supported.

Cause: An attempt is being made to rename a reservable column.

Action: To rename a reservable column perform the following steps: 1. Specify ALTER TABLE <table_name> MODIFY (<reservable_column_name> NOT RESERVABLE). 2. Rename the column. 3. Specify ALTER TABLE <table_name> MODIFY (<renamed_column_name> RESERVABLE).

OCI-55775: Reservable column update cannot have a non-primary key column in the where clause.

Cause: Reservable column is being updated with a where clause that includes a non-primary key column.

Action: Remove the columns other than the primary key column from the where clause of the update statement.

OCI-55776: Index is not supported on a reservable column or a column being made a reservable column, "string".

Cause: Reservable column is specified in an index creation statement, or an attempt is being made to enable the reservable column property on a column that has an index on it.

Action: None. Indexes are not supported on reservable columns.

OCI-55777: The reserved name, 'SYS_RESERVJRNL_', cannot be used as a prefix for the name of a user table.

Cause: An attempt is being made to create a user table with a name starting with 'SYS_RESERVJRNL_'

Action: Create the table with a different name. Names starting with SYS_RESERVJRNL_ are reserved names.

OCI-55778: A reservable column cannot be made a partition key column.

Cause: A reservable column is specified as a partition key column.

Action: Choose a non-reservable column as the partition key column.

OCI-55779: To alter a reservable column into a non-reservable column, use keywords NOT RESERVABLE instead of NO RESERVABLE.

Cause: An attempt is being made to modify a reservable column with keywords NO RESERVABLE.

Action: To alter a reservable column to a non-reservable column use keywords NOT RESERVABLE.

OCI-55783: Reservable column property is not supported for columns of an index-organized table.

Cause: An attempt is being made to specify the reservable column property for a column of an index-organized table.

Action: Remove the reservable keyword from the CREATE TABLE or ALTER TABLE DDL statement.

OCI-55784: Triggers are not allowed on a reservation journal.

Cause: An attempt is being made to create a trigger on a reservation journal.

Action: None

OCI-55800: NLS errors while processing Oracle number

Cause: Error occurred when trying to convert Oracle number to an integer.

Action: Check the input parameters.

OCI-55801: Event to control CR activity

Cause: The bit values that we consider. 0x1: Remove fix for bug 3514835 which could potentially throw more 8177 errors We have conservatively blocked some serializability errors, where there could potentially be a dependency between a service transaction in an index and forward going transaction.

Action: Set event 55801 to 1 to disable the bug fix, thereby reducing 8177 error, although it might cause some internal errors instead.

OCI-55804: Savepoint encountered internal error, abort transaction

Cause: Internal I/O error. The transaction is in unsafe state. any attempt to commit the transaction will abort the transaction.

Action: Moving forward in transaction is unsafe. Abort or rollback the transaction

OCI-55805: The transaction has been forcefully aborted

Cause: Either error ORA-55804 or ORA-55806 caused this transaction to abort.

Action: None, redo the transaction.

OCI-55806: SecureFile LOBs direct write internal error, abort transaction

Cause: This was an internal asynchronous I/O error. The transaction was in an unsafe state. An attempt to commit the transaction aborted the transaction.

Action: Moving forward with this transaction is unsafe. Abort or rollback the transaction. Contact Oracle Support Services.

OCI-55903: Secure file log feature unimplemented: *string*

Cause: This feature has not been implemented yet.

Action: None

OCI-55904: Secure file log name too big

Cause: The specified log name was bigger than the maximum identifier supported in Oracle.

Action: Use a smaller log name.

OCI-55905: Secure file log *string* exists with the same name.

Cause: Create operation was attempted on an existing secure file log.

Action: Destroy the log with the specified name and retry the create operation.

OCI-55906: Secure file log [id: *string* name: *string*] does not exist.

Cause: An open operation for read or write was attempted on a nonexistent log.

Action: Create the log and retry the operation.

OCI-55907: Tablespace *string* does not exist for secure file log

Cause: The specified tablespace to keep the swap space for the secure file log does not exist.

Action: Retry with a different tablespace or create one with the specified name.

OCI-55908: Tablespace *string* does not support secure files

Cause: Specified tablespace to keep secure file logs did not support secure files.

Action: Provide a tablespace that supports secure files, or remove secure file options in the create statement.

OCI-55909: Create mode invalid: *string*

Cause: The mode to create the log was not supported, or there was a discrepancy between the in-memory log creation and the persistent definition already present.

Action: Retry by correcting the problem.

OCI-55910: Swap table *string* does not exist

Cause: The dictionary-provided swap name did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent part of the log was lost.

Action: Destroy the specified log and recreate from start.

OCI-55911: log with ID: *string* is being destroyed

Cause: A write, read, or open operation was being tried on a log that was in the process of being destroyed.

Action: None

OCI-55912: Invalid thread Id provided to write to a threaded log

Cause: A valid thread Id was not provided in order to write to a threaded log. Thread Ids are used to partially order messages to the log from different writing processes.

Action: Provide a logical thread Id or use a nonthreaded log.

OCI-55913: Valid thread Id provided to a nonthreaded log

Cause: A valid logical thread Id was provided for a nonthreaded log. A partial order will not be maintained in a nonthreaded log and messages could be output in random order.

Action: Provide a null thread-id for a non-threaded log, or create a threaded log to do what is required.

OCI-55914: an invalid descriptor was passed to a log operation because of: *string*

Cause: An invalid or uninitialized descriptor was found when doing a secure file log read or write.

Action: Provide a properly initialized descriptor created by log open.

OCI-55915: Invalid option: *string*

Cause: An invalid option was passed for a log operation.

Action: Check the cause and retry.

OCI-55916: Message too long

Cause: The log is opened with split messages across buffers set to false. However, the message size is bigger than what can be fit in one buffer.

Action: Write the message in smaller segments or allow split messages while creating the log.

OCI-55917: Table flush I/O failed for log ID: *string* bucket ID: *string*.

Cause: Table flush I/O failed. The most common cause for this could be out-of-space errors in the tablespace.

Action: Resolve the underlying problem and retry the table flush.

OCI-55918: Required buffer size too big

Cause: The buffer size was greater than 16K. Secure file logging supports buffer sizes of 4K, 8K and 16K. The only reason a large buffer size is required is if split message is set to false, and the potential message is large.

Action: Request a smaller buffer size, or try to use smaller message segments.

OCI-55919: destroying, purging or partitioning log while writers or readers have open descriptors

Cause: The method to destroy, purge or partition log was called and requested to wait for open descriptors. After waiting for 5 minutes, an error is returned if writers or readers still exist.

Action: Close all open descriptors or call destroylog, purgelog or createpartition with the option of not waiting for open descriptors.

OCI-55920: Buffer sequence is too low

Cause: The buffer sequence was too low or rows were removed from the swap table.

Action: Try to read from a higher sequence. Note, that the data in buffer with this sequence has been lost.

OCI-55921: Start point provided is incorrect.

Cause: The provided start point, from which to begin reading, was incorrect.

Action: Provide a minimum SCN, timestamp or sequence or specify that reading should begin with the oldest data available.

OCI-55922: PL/SQL API error: *string*

Cause: PL/SQL callbacks had a problem

Action: Consider the problem string and act appropriately

OCI-55923: PL/SQL maximum number of array elements exceeded

Cause: Number of elements in an array write exceeded the maximum limit 100 message segments in one write.

Action: Try a write buffered with multi-segment write or reduce the element count in the array write.

OCI-55924: PL/SQL encountered a NULL element in the array

Cause: A null element was encountered during an array write.

Action: Provide non-null VARCHAR2 or RAW elements as an array element.

OCI-55925: write end called without proper write start

Cause: An attempt was made to end write without a corresponding start write.

Action: Write starts and ends must be called in the right order for writing piecewise or use a write whole option which does not need an explicit start or end.

OCI-55926: Closing log descriptor before calling write end

Cause: An attempt was made to close the log descriptor before the corresponding write end.

Action: Write end should be called before closing the log write descriptor

OCI-55927: No tablespace found for the log

Cause: No suitable tablespace was found for the log.

Action: Provide a tablespace and retry log creation.

OCI-55928: Duplicate tablespace being added

Cause: The tablespace being added for the named log already existed in the list of tablespaces available for this log.

Action: The user should provide a different tablespace for addition to the list of available tablespaces for the named log.

OCI-55929: Creating new partition when current partition is empty

Cause: An attempt was made to create a new partition for the named log when the current partition is empty.

Action: Do not attempt to create a new partition when the current partition is still empty.

OCI-55930: Version of log, identified by (logname, instanceid), does not exist

Cause: Version of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

OCI-55931: The highest partition of log, identified by (logname, instanceid), does not exist

Cause: The highest partition of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

OCI-55932: No SGA memory available for buffers

Cause: An attempt was made to create a secure file log with no available memory for buffers.

Action: Set SECUREFILE_LOG_SHARED_POOL_SIZE to allocate adequate memory.

OCI-55933: invalid log owner provided

Cause: The user provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

OCI-55934: invalid user ID provided

Cause: The specified user ID did not exist in the database.

Action: Provide a valid database user ID.

OCI-55935: invalid user name provided

Cause: The specified user name did not exist in the database.

Action: Provide a valid database user name.

OCI-55936: user ID mismatch

Cause: The user ID provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

OCI-55937: storage already associated with the secure file log

Cause: An attempt was made to associate storage with a secure file log which already has storage.

Action: Do not attempt to associate storage with a secure file log which already has associated storage.

OCI-55938: no flush callback associated with the secure file log

Cause: Flush callback was not associated with the secure file log under consideration.

Action: The secure file log needs to be re-created with valid flush callback.

OCI-55939: database is not open for attempted operation

Cause: The attempted operation failed because the database is not yet open.

Action: Resubmit the operation when the database opens.

OCI-55940: An error occurred during execution of ktlIngestExternData.

Cause: An error occurred during execution of ktlIngestExternData.

Action: See the message associated with the error for remedial action.

OCI-55941: DML and DDL operations are not allowed on table "*string*". "*string*"

Cause: A DML or DDL operation was attempted on a Common Logging Infrastructure internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Common Logging Infrastructure internal tables.

OCI-55942: read not started for read descriptor of the secure file log

Cause: An attempt was made to get a readsavpoint before ktlRead successfully returned a message, using the secure file log descriptor under consideration.

Action: Execute a ktlRead, which returns a message using the secure file log descriptor, before attempting to get a readsavpoint.

OCI-55943: unsupported verison in readsavpoint of the secure file log

Cause: An attempt was made to open a secure file log with a readsavpoint which had unsupported version.

Action: Contact Oracle Support Services.

OCI-55944: External flush I/O failed for log ID: *string* bucket ID: *string*

Cause: External flush I/O failed.

Action: Resolve the underlying problem and retry.

OCI-55945: tablespace name not specified

Cause: The tablespace needed to keep the swap space for the secure file log has not been provided by the user.

Action: Retry the operation with the appropriate tablespace name.

OCI-55946: operation failed due to CrossInstanceCall failure - *string string*

Cause: The operation failed due to a CrossInstanceCall failure. Check the trace files on remote instances for the underlying problem.

Action: Resolve the underlying problem and retry.

OCI-55947: message too long

Cause: The message length was greater than what the Secure file log supports.

Action: Provide the message with a length that the Secure file log supports and retry the operation.

OCI-55948: flush threshold is invalid

Cause: The flush threshold specified for the secure file log is invalid.

Action: The flush threshold for secure file log must be an integer greater than or equal to 1 and less than or equal to 100.

OCI-55949: swap table of secure file log (*string, string*) does not exist

Cause: The swap table of secure file log did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent parts of the log were lost.

Action: Destroy the specified log and re-create it from the start.

OCI-55950: storage not associated with the secure file log [name: *string*]

Cause: An attempt was made to import data from an external source into a secure file log which is not associated with tablespace storage.

Action: Associate tablespace storage with a secure file log before importing data from an external source.

OCI-55951: previous async I/O on this LOB had an error

Cause: A previous buffered operation had an I/O error.

Action: The following error in the stack describes the problem.

OCI-56381: shard session cache size (*string*) cannot be more than or equal to the maximum session count for dynamic sessions (*string*)

Cause: An invalid value was specified for the session cache size. The value was more than, or equal to, the maximum session count for dynamic sessions.

Action: Ensure that the session cache size is less than the maximum session count for dynamic sessions. *Params: 1) shard_cached_sessions: The value specified for the shard cached sessions. 2) max_dynamic_sessions: The maximum sessions count for dynamic sessions.

OCI-56500: DRCP: Pool not found

Cause: The pool name passed was either null or an invalid pool name.

Action: Input a valid pool name.

OCI-56501: DRCP: Pool startup failed

Cause: The connection pool failed to start up.

Action: Check logs for details.

OCI-56502: DRCP: Pool is inactive

Cause: The operation is only supported on an active pool.

Action: Start the pool.

OCI-56503: DRCP: Pool is active

Cause: The operation is only supported on an inactive pool.

Action: Shutdown the pool.

OCI-56504: DRCP: Invalid pool configuration parameter name

Cause: The configuration parameter name is null or invalid input.

Action: Input a valid configuration parameter name.

OCI-56505: DRCP: Invalid pool configuration parameter value

Cause: The configuration parameter value is null or invalid input.

Action: Input a valid configuration parameter value.

OCI-56506: DRCP: Pool shutdown failed

Cause: Connection pool failed to shutdown.

Action: Check logs for details.

OCI-56507: DRCP: Pool alter configuration failed

Cause: Connection pool failed to configure pool.

Action: Check logs for details.

OCI-56508: DRCP: Pool startup failed

Cause: Connection Broker failed to startup the pool.

Action: Check logs for details.

OCI-56509: DRCP: Pool shutdown failed

Cause: Connection Broker failed to shutdown the pool.

Action: Check logs for details.

OCI-56510: DRCP: Pool alter configuration failed

Cause: Connection Broker failed to configure the pool.

Action: Check logs for details. For the NUM_CBROK and MAXCONN_CBROK values, if the initialization parameter CONNECTION_BROKERS contains a (TYPE=POOLED) entry, then use the parameter instead to update these values.

OCI-56511: DRCP: Cross instance synchronization failed

Cause: Publish message to all RAC instances failed.

Action: Check logs for details.

OCI-56512: DRCP: Failed to synchronize RAC instances [*string*]

Cause: Some of the RAC instances were not synchronized.

Action: Perform the same operations on all the failed instances.

OCI-56513: DRCP: Cannot perform requested operation using pooled connection

Cause: This operation was not supported using connections from a pool.

Action: Use a regular connection to perform this operation.

OCI-56514: DRCP: invalid value for maximum number of connections to Connection broker

Cause: The value passed exceeded the maximum allowed.

Action: No action required. The maximum number of connections was automatically set to the maximum allowed value.

OCI-56515: DRCP: Operation not allowed from a Pluggable Database

Cause: The operation was not allowed in Database Resident Connection Pooling when connected to a Pluggable Database.

Action: Connect to the root database and retry the same operation.

OCI-56516: invalid combination specified for authentication pool minimum and maximum

Cause: An invalid minimum or maximum was specified for the authentication pool.

Action: Ensure that the authentication pool maximum is greater than or equal to the minimum and attempt again.

OCI-56600: DRCP: Illegal call [*string*]

Cause: An illegal OCI function call was issued.

Action: Check the documentation for Database Resident Connection Pool (DRCP) usage.

OCI-56601: DRCP: Illegal connection class

Cause: Wrong value for connection class was given.

Action: Check the documentation for Database Resident connection pool usage.

OCI-56602: DRCP: Illegal purity

Cause: Wrong value for purity was provided.

Action: Check the documentation for Database Resident connection pool usage.

OCI-56603: DRCP: Internal error

Cause: Malformed input values.

Action: Input well-formed values.

OCI-56604: DRCP: Length[*string*] for *string* exceeded the MAX allowed

Cause: Length exceeded MAX for the value.

Action: Use a value within the MAX allowed.

OCI-56605: DRCP: Session switching and migration not allowed

Cause: Application tried to switch or migrate session across connections.

Action: This usage is irrelevant in the Database Resident connection pooling context and is not supported. Release existing session.

OCI-56606: DRCP: Client version does not support the feature

Cause: The client version is lower than 11g.

Action: Upgrade to a higher client version or turn off (SERVER=POOLED) in the connect string.

OCI-56607: DRCP: Connection is already authenticated

Cause: Attempt to reauthenticate the connection which is authenticated.

Action: Logoff the connection before reauthenticating.

OCI-56608: DRCP: Server Group feature is not supported.

Cause: The Server Group attribute was set on the server handle while connected to a Database Resident Connection Pool (DRCP).

Action: Do not set the Server Group attribute on a server handle while it is connected to a DRCP.

OCI-56609: usage not supported with DRCP

Cause: This usage was not supported on a Database Resident Connection Pooling (DRCP) connection.

Action: Use a dedicated connection to perform this task.

OCI-56610: Multi-property fix up callback error

Cause: The multi-property fix up callback encountered an error or was not able to fix up all the properties.

Action: Correct the multi-property fix up callback.

OCI-56611: DRCP: Timeout while waiting for a server

Cause: The value of SERVER_WAIT_TIMEOUT was reached while waiting for a server.

Action: Check the Database Resident Connection Pool (DRCP) to see why servers are not being freed in a timely manner.

OCI-56612: PL/SQL fix up callback only supported with multi-property tagging

Cause: PL/SQL fix up callback was specified without multi-property tagging.

Action: Either remove the PL/SQL fix up callback or use multi-property tagging.

OCI-56613: DRCP: invalid length of attribute passed

Cause: The length of one or more of the following attributes passed was not correct when using Database Resident Connection Pooling (DRCP): user name, proxy user name, connection class, edition, and tag.

Action: Check the length of each of the attributes.

OCI-56614: DRCP: connection limit reached

Cause: The Database Resident Connection Pool (DRCP) connection limit was reached. The limit is set by parameter DRCP_CONNECTION_LIMIT.

Action: Disconnect some of the other DRCP connections or increase the connection limit.

OCI-56615: DRCP: Operation not allowed from the ROOT

Cause: The operation was not allowed in Database Resident Connection Pooling when connected to the ROOT and per PDB DRCP feature enabled.

Action: Connect to a Pluggable Database and retry the same operation.

OCI-56616: DRCP: Invalid combination specified for authentication pool minimum and processes

Cause: Authentication pool minimum can not be greater than the processes

Action: Ensure that the authentication pool minimum is less than or equal to the processes and attempt again.

OCI-56617: Database Resident Connection Pool (DRCP) alter configuration failed.

Cause: The operation was not allowed in DRCP when per PDB DRCP feature was enabled.

Action: Use the initialization parameter CONNECTION_BROKERS to alter the values of NUM_CBROK and MAXCONN_CBROK.

OCI-56618: DRCP: PRELIM mode logon not allowed

Cause: PRELIM mode logon was attempted when using Database Resident Connection Pooling (DRCP) in a multitenant container database (CDB) environment.

Action: Do not try to perform PRELIM mode logon or use a dedicated connection to connect to the database in PRELIM mode.

OCI-56619: DRCP: Adding new pool *string* failed because *string*

Cause: Connection pool creation failed due to following reasons: 1. Pool name already exists. 2. The database was read-only. 3. Pool name is invalid

Action: Check the logs for details.

OCI-56620: DRCP: removing the pool *string* failed because *string*

Cause: Connection pool destroy failed due to one of the following reasons: 1. Connection pool did not exist. 2. Connection pool was ACTIVE, stop it first. 3. The database was read-only.

Action: Check the logs for details.

OCI-56621: DRCP: Connection AS *string* is not supported

Cause: The Database Resident Connection Pool (DRCP) does not support AS SYSBACKUP, AS SYSDG and AS SYSKM logons.

Action: Do not attempt AS SYSBACKUP, AS SYSDG, AS SYSKM logons for pooled connect.

OCI-56700: plan *string* is a subplan and SUB_PLAN attribute cannot be modified

Cause: An attempt was made to modify the SUB_PLAN attribute of the specified plan.

Action: Do not attempt to modify the SUB_PLAN attribute.

OCI-56701: INTERNAL_USE attribute of consumer group *string* cannot be modified

Cause: An attempt was made to modify the INTERNAL_USE attribute of the specified consumer group.

Action: Do not attempt to modify the INTERNAL_USE attribute.

OCI-56702: consumer group *string* is for internal use only and cannot be a switch target

Cause: An attempt was made to specify an INTERNAL_USE consumer group as a switch target.

Action: Do not attempt to switch to INTERNAL_USE consumer groups.

OCI-56703: VKTM process died unexpectedly

Cause: An explicit kill or internal error caused the death of VKTM background process.

Action: Restart the instance.

OCI-56704: EXPLICIT consumer group mapping priority must be set to 1

Cause: An attempt was made to set the EXPLICIT mapping priority to a value other than 1.

Action: Set the mapping priorities to unique integers within the documented range with the EXPLICIT priority set to 1.

OCI-56705: I/O calibration already in progress

Cause: An attempt was made to run a second instance of I/O Calibration

Action: Wait until the first I/O calibration run is complete; then, retry the operation.

OCI-56706: The specified Resource Manager plan is a subplan and cannot be set as a top-level plan

Cause: An attempt was made to set a subplan as a top-level plan.

Action: Do not attempt to set subplans as top-level plans.

OCI-56707: INTERNAL_QUIESCE plan cannot be specified as a top-level Resource Manager plan

Cause: An attempt was made to specify INTERNAL_QUIESCE as a top-level Resource Manager plan.

Action: Do not attempt to set INTERNAL_QUIESCE as a Resource Manager plan.

OCI-56708: Could not find any datafiles with asynchronous i/o capability

Cause: There are no datafiles which are asynchronous I/O capable.

Action: Make sure asynchronous i/o is permitted to datafiles.

OCI-56709: timed_statistics set to FALSE

Cause: timed_statistics parameter in database is set to FALSE. Needs to be enabled for calibration.

Action: set timed_statistics=TRUE in init.ora or "alter system set timed_statistics=TRUE"

OCI-56710: DBRM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DBRM background process.

Action: Restart the instance.

OCI-56711: *string* is an invalid *string* argument

Cause: The named argument is invalid.

Action: Specify a valid argument for this procedure.

OCI-56713: insufficient Resource Manager privileges

Cause: An attempt was made to execute administration procedures from the DBMS_RESOURCE_MANAGER package without the appropriate privilege. The procedure requires the Resource Manager system privilege.

Action: Ask the database administrator to grant the Resource Manager system privilege to the user.

OCI-56714: Plan name *string* exceeds the maximum length allowed

Cause: Plan name is greater than 30 characters long.

Action: Do not exceed 30 characters when naming a resource plan.

OCI-56715: *string* resource plan contains a reserved word

Cause: The specified plan name is prefixed with a reserved prefix such as FORCE or SCHED.

Action: Do not prefix resource plan name with FORCE or SCHED.

OCI-56716: Category *string* does not exist

Cause: A non-existent category was specified as an argument to a procedure in the package, DBMS_RESOURCE_MANAGER.

Action: Specify an existing category name or create a new category with this name.

OCI-56717: switch directives are set without a corresponding SWITCH_GROUP

Cause: The plan directive contained a switch directive (SWITCH_TIME, SWITCH_IO_REQS, or SWITCH_IO_MEGABYTES) without a SWITCH_GROUP.

Action: Specify a SWITCH_GROUP parameter in the plan directive.

OCI-56718: Timeout occurred while setting resource plan

Cause: A timeout occurred while waiting for one or more RAC instances to set the resource plan.

Action: Since the resource plan may have actually been set successfully, first check the current resource plan for each instance by querying gv\$src_plan. If the resource plan was not successfully set on all instances, then retry the operation.

OCI-56719: Error spawning or communicating with calibration slave

Cause: An error occurred in calibration slave process - Calibration process aborted.

Action: Review trace files for errors.

OCI-56720: I/O data limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56721: I/O data limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56722: I/O request limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56723: I/O request limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56724: ksfd calibration tracing

OCI-56725: Could not spawn additional calibration slaves

Cause: An error occurred when spawning calibration slave process - Calibration process aborted.

Action: Check OS resources required for spawning processes

OCI-56726: Category *string* is referred to by a consumer group and cannot be deleted

Cause: An attempt was made to delete a category that is referred to by a consumer group.

Action: Modify or remove all consumer groups that use this category and then retry.

OCI-56727: Orion (*string*) must be invoked using its full, absolute path

Cause: Orion is spawning a child process and cannot determine the location of the executable.

Action: Use the full, absolute path for Orion.

OCI-56728: SQL blocks cannot be nested

Cause: An attempt was made to start an SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() while already inside an SQL block.

Action: Close the existing SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() or remove this call.

OCI-56729: Failed to bind the database instance to processor group *string*

Cause: Binding the database instance to the processor group specified by the PROCESSOR_GROUP_NAME parameter failed.

Action: Set the PROCESSOR_GROUP_NAME to a valid, configured processor group and restart the database instance.

OCI-56730: pluggable database plan *string* may not specify parameter *string*

Cause: Resource plans inside a pluggable database attempted to use the following parameters: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8

Action: Remove these parameters and try again.

OCI-56731: pluggable database plan *string* may not use subplans

Cause: An attempt was made to set a resource plan that contains subplans. Subplans are not supported in pluggable databases (PDBs).

Action: Specify a valid PDB resource plan or modify the specified plan to remove the subplan directives.

OCI-56732: value *string* for *string* is outside valid range of 0 to 4294967295

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 4294967295, inclusive.

OCI-56733: logical I/O limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56734: logical I/O limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56735: elapsed time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56736: elapsed time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

OCI-56737: SWITCH_GROUP is set without a corresponding switch directive

Cause: The plan directive specified a value for SWITCH_GROUP without specifying one of the following switch directives: - SWITCH_TIME - SWITCH_IO_REQS - SWITCH_IO_MEGABYTES - SWITCH_ELAPSED_TIME - SWITCH_IO_LOGICAL

Action: Specify a switch directive or remove SWITCH_GROUP directive.

OCI-56738: CDB resource plan *string* has more than *string* profile directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of profile directives.

Action: Remove the directives for profiles that are not active on this database.

OCI-56739: cannot modify max_iops or max_mbps parameter

Cause: An attempt was made to alter the Resource Manager max_iops or max_mbps parameter in a non-consolidated database.

Action: max_iops and max_mbps are pluggable database (PDB) only parameters and cannot be altered in non-consolidated databases. The max_iops and max_mbps parameters can only be altered from a PDB.

OCI-56740: Resource plan *string* does not contain mandatory group *string*.

Cause: An attempt was made to create or set a resource manager plan that does not contain a consumer group mandated by the administrator. The specified plan has too many plan directives for the system to automatically add the mandatory consumer group.

Action: Modify the plan to contain the mandatory consumer group, or reduce the number of plan directives so that the system can automatically add the mandatory consumer group.

OCI-56741: The specified plan uses multilevel management directives and cannot be set in a pluggable database.

Cause: An attempt was made to set a resource plan that contains multilevel management directives: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_5, MGMT_P6, MGMT_P7, or MGMT_P8. Multilevel management directives are not supported in pluggable databases (PDBs).

Action: Specify a valid PDB resource plan or modify the specified plan to be a single level plan, using only the MGMT_P1 or SHARES directives.

OCI-56742: cannot modify max_iops or max_mbps parameter on Oracle Exadata

Cause: An attempt was made to alter the Resource Manager max_iops or max_mbps parameter on an Oracle Exadata system.

Action: The max_iops and max_mbps parameters cannot be altered on Oracle Exadata systems. Use Oracle Exadata I/O Resource Manager to manage I/Os on Oracle Exadata.

OCI-56743: memory_min (*string*) cannot exceed memory_limit (*string*) in the CDB plan '*string*' for the pluggable database '*string*'

Cause: An attempt was made to create a multitenant container database (CDB) plan directive where memory_min was greater than memory_limit.

Action: Change the CDB plan directive so that memory_min is less than memory_limit.

OCI-56744: memory_min (*string*) cannot exceed memory_limit (*string*) in the CDB plan '*string*' for the profile '*string*'

Cause: An attempt was made to create a multitenant container database (CDB) plan directive where memory_min was greater than memory_limit.

Action: Change the CDB plan directive so that memory_min is less than memory_limit.

OCI-56745: invalid value *string* for parameter *string*; must be smaller than parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

OCI-56746: invalid value *string* for parameter *string*; must be smaller than *string*%% of parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

OCI-56747: invalid value *string* for parameter *string*; must be smaller than parameter *string* of the root container

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

OCI-56748: invalid value *string* for parameter *string*; must be smaller than *string*%% of parameter *string* of the root container

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

OCI-56749: invalid value *string* for parameter *string*; must be larger than parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

OCI-56750: invalid value *string* for parameter *string*; must be larger than *string*%% of parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

OCI-56751: PQ_TIMEOUT_ACTION is set without a corresponding PARALLEL_QUEUE_TIMEOUT directive

Cause: The plan directive specified a value for PQ_TIMEOUT_ACTION without specifying a PARALLEL_QUEUE_TIMEOUT directive.

Action: Specify a PARALLEL_QUEUE_TIMEOUT directive or remove the PQ_TIMEOUT_ACTION directive.

OCI-56752: Oracle Database Free version (FREE) memory parameter invalid or not specified

Cause: An invalid parameter or a value more than the maximum memory allowed was specified

Action: Use the allowed parameter or reduce the memory size, upgrade to the Standard or Enterprise edition.

OCI-56753: Calibration failed because Exadata files are not sufficiently populated.

Cause: On Oracle Exadata, the calibration run was terminated because the data files did not have a sufficient percentage of populated blocks.

Action: Re-run calibration after data is loaded in the data files.

OCI-56754: invalid value %0!s for parameter %1!s; must be larger than the current resource usage %2!s

Cause: This parameter cannot be set to a value that is lower than the current resource usage.

Action: Choose a value as indicated by the message.

OCI-56800: DSKM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DSKM background process.

Action: Restart the instance.

OCI-56840: LIBCELL API error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

OCI-56841: Master Diskmon cannot connect to a CELL

Cause: A LIBCELL operation from Master Diskmon failed to create a network connection to the target CELL.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

OCI-56842: LIBCELL operation network error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed because of a network error.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

OCI-56843: LIBCELL SKGXP error in Master Diskmon

Cause: A LIBCELL operation from Master Diskmon failed because of an SKGXP network layer error.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

OCI-56864: Master Diskmon "*stringstring*" operation cannot complete because of a LIBCELL network error

Cause: A LIBCELL operation between Master Diskmon and a CELL failed because of a network error.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

OCI-56865: Invalid IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA is not valid.

Action: Check that all IP addresses in CELLINIT.ORA are valid.

OCI-56866: No IP parameter

Cause: No IP address is set in CELLINIT.ORA.

Action: Check that one or more valid IP addresses are set in CELLINIT.ORA.

OCI-56867: Cannot connect to Master Diskmon on pipe "*string*"

Cause: Master Diskmon was not running or the listening pipe was deleted.

Action: Look at the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log`, `$ORA_CRS_HOME/log/hostname/hasmsgs.log`

and \$ORA_CRS_HOME/log/hostname/alerthostname.log for additional error information.

OCI-56868: Duplicate IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA was repeated.

Action: Check that all IP addresses in CELLINIT.ORA are unique.

OCI-56870: Attempt to register dead cell with Master Diskmon

Cause: An attempt was made by a process to register a cell that is known to be down.

Action: None

OCI-56900: The bind variable is not supported inside a pivot or unpivot operation.

Cause: An attempt was made to use bind variables inside a pivot or unpivot operation.

Action: Replace the bind variable with a constant and retry the query.

OCI-56901: non-constant expression in pivot or unpivot values clause

Cause: An attempt was made to use a non-constant expression for a pivot or unpivot values clause.

Action: Use constants for the pivot or unpivot values.

OCI-56902: non-aggregate expressions inside the PIVOT clause

Cause: Non-aggregate expressions were used in the PIVOT clause of the SELECT statement, which is not allowed.

Action: Only aggregate functions are allowed in the PIVOT clause. Rewrite the SELECT statement and remove all non-aggregate functions and resubmit. Refer to Oracle Database documentation for the syntax of the PIVOT clause.

OCI-56905: Pivot or unpivot operations are not supported on lateral views.

Cause: An attempt was made to do a pivot or unpivot operation on a lateral view.

Action: Remove the pivot or unpivot operation or the lateral view and then retry the query.

OCI-56906: pivot column or pivot value is too large

Cause: Either the combined column size for multicolumn pivot was too large or a multicolumn pivot value was too large.

Action: This is not supported.

OCI-56920: a prepare or upgrade window or an on-demand or datapump-job loading of a secondary time zone data file is in an active state

Cause: A prepare or upgrade window was started or an on-demand or datapump-job loading of a secondary time zone data file was done.

Action: Make sure there is no active prepare or upgrade window and no active on-demand or datapump-job loading of a secondary time zone data file.

OCI-56921: invalid time zone version

Cause: Invalid time zone version passed.

Action: Check and correct the time zone version.

OCI-56922: Starting a prepare window failed

Cause: Error(s) occurred when starting a prepare window.

Action: Check alert or trace file for error(s).

OCI-56923: database properties related to time zone version are not set up properly

Cause: There were no database properties related to time zone version in dictionary table sys.props\$.

Action: Contact Oracle Support Services.

OCI-56924: prepare window does not exist

Cause: There was no active prepare window.

Action: None

OCI-56925: Ending a prepare window failed

Cause: Error(s) occurred when ending a prepare window.

Action: Check alert or trace file for error(s).

OCI-56926: database must be in UPGRADE mode in order to start an upgrade window

Cause: Database was not in UPGRADE mode.

Action: Restart database in UPGRADE mode.

OCI-56927: Starting an upgrade window failed

Cause: Error(s) occurred when starting an upgrade window.

Action: Check alert or trace file for error(s).

OCI-56928: upgrade window does not exist

Cause: There was no active upgrade window.

Action: None

OCI-56929: Ending an upgrade window failed

Cause: Ending an upgrade window failed or there were tables containing TSTZ data which have not been upgraded.

Action: Check alert or trace file for error(s) or complete upgrading of tables containing TSTZ data.

OCI-56930: database must be restarted before performing upgrade of user tables

Cause: Database was not restarted after starting an upgrade window.

Action: Restart database.

OCI-56931: inconsistent DST patching state found

Cause: DST patching was in an inconsistent state.

Action: Contact Oracle Support Services.

OCI-56932: "string"."string" does not exist

Cause: Specified table name was invalid.

Action: Check the existence of the specified table name.

OCI-56933: Table creation failed

Cause: Error(s) occurred when creating the table.

Action: Check the error.

OCI-56934: database property DST_UPGRADE_STATE for datapump job is in an inconsistent state

Cause: Database property DST_UPGRADE_STATE was not recorded correctly.

Action: Check the alert file.

OCI-56935: existing datapump jobs are using a different version of time zone data file

Cause: An attempt was made from a datapump job to request a different version of time zone data file from the one used by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

OCI-56936: datapump jobs are utilizing secondary time zone data file

Cause: An on-demand loading of secondary time zone data file was requested when there was a secondary time zone data file already loaded in the database utilized by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

OCI-56937: failed to load the secondary time zone data file

Cause: Attempt to load the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

OCI-56938: no secondary time zone data file being loaded by on-demand or a datapump job

Cause: There was no secondary timezone data file being loaded by on-demand or a datapump job.

Action: None

OCI-56939: failed to unload the secondary time zone data file

Cause: Attempt to unload the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

OCI-56940: database must be restarted before ending DST upgrade window

Cause: Attempt to end DST upgrade window before database is restarted.

Action: Restart database.

OCI-56941: DST upgrade of dictionary tables failed

Cause: Attempt to perform DST upgrade of dictionary tables failed

Action: Contact Oracle Support Services.

OCI-56942: Read-only tables or tablespaces prevented Daylight Saving Time upgrade

Cause: An attempt was made to start a DST upgrade window when there were tables with TIMESTAMP WITH TIME ZONE data that were in read-only mode or stored in read-only tablespaces.

Action: Alter read-only tables with `TIMESTAMP WITH TIME ZONE` data to allow write operations or alter read-only tablespaces to allow write operations.

OCI-56943: Table with `TIMESTAMP WITH TIME ZONE` data has invalid dependent triggers.

Cause: An attempt was made to start a Daylight Saving Time (DST) upgrade window when table with `TIMESTAMP WITH TIME ZONE` data had invalid dependent triggers.

Action: Remove invalid dependent triggers for the table.

OCI-56944: Unable to cancel a DST upgrade window at current stage

Cause: An attempt was made to cancel a DST upgrade window at a stage which does not allow cancellation.

Action: Please complete DST upgrade.

OCI-56945: Failed to cancel a DST upgrade window

Cause: An attempt to cancel a DST upgrade window failed

Action: Please retry or complete DST upgrade.

OCI-56950: Invalid value for incident identifier

Cause: Invalid incident identifier argument passed.

Action: Check and correct the identifier

OCI-56951: value of *string* is null in *string* constructor

Cause: The attribute value was null.

Action: Specify a non-null value.

OCI-56952: reference plan resolves to *string* plans

Cause: The reference plan resolved to multiple plans.

Action: Specify a unique reference plan.

OCI-56953: *statement_id* and *plan_id* cannot both be null in `PLAN_TABLE_OBJECT`

Cause: Both *statement_id* and *plan_id* attributes were null in `PLAN_TABLE_OBJECT`.

Action: Specify a non-null value for *statement_id* or *plan_id* or both.

OCI-56955: quarantined plan used

Cause: A quarantined plan was used for this statement.

Action: Increase the Oracle Database Resource Manager limits or use a new plan.

OCI-56971: Invalid set of export options

Cause: The options specified are inconsistent

Action: Check and a consistent set of option parameters

OCI-56972: referenced file not found

Cause: One of the file specified in the test case package is missing

Action: rebuild the SQL test case or make sure that all the referenced files are readable and located in the same directory as the SQL test case manifest.

OCI-56973: import options do not match export options

Cause: The import options specified do not match the export options

Action: Check that import is being invoked with the same values for options like export environment, export data and export metadata

OCI-56974: Invalid set of import options

Cause: The import options specified are inconsistent

Action: Check that import options are consistent and have valid values

OCI-56975: invalid SQL_ID

Cause: The SQL_ID specified was incorrect.

Action: Cross check SYS.V\$SQL for the existence of SQL_ID.

OCI-56976: invalid export options: *string*

Cause: One or more export options were inconsistent.

Action: Check that export options are consistent and have valid values.

OCI-56977: invalid import options: *string*

Cause: One or more import options were inconsistent.

Action: Check that import options are consistent and have valid values.

OCI-56978: TCB root directory does not exist

Cause: The root directory for Test Case Builder (TCB) does not exist.

Action: Create the TCB root directory or specify any other directory during export of SQL Test Case.

OCI-57000 to OCI-59850

OCI-57000: TimesTen IMDB error: *string*

Cause: An error occurred during a TimesTen operation.

Action: Look up the error code in the TimesTen error documentation to diagnose.

OCI-57001: invalid number has been found during a TimesTen fetch

Cause: An invalid number was found during TimesTen fetch.

Action: Specify a valid number in TimesTen.

OCI-57005: TimesTen Grid transient transaction failure: *string*

Cause: A transaction failed because a TimesTen Grid element was temporarily unreachable.

Action: Roll back the transaction and immediately retry.

OCI-57006: TimesTen Grid transaction failure: *string*

Cause: A transaction failed because a TimesTen Grid element was temporarily unreachable.

Action: Roll back the transaction, wait for the element to recover, and retry the transaction. Element recovery may require administrator action.

OCI-57007: TimesTen Grid transient statement failure: *string*

Cause: A statement failed because a TimesTen Grid element was temporarily unreachable.

Action: Immediately retry the current statement.

OCI-57008: TimesTen Grid statement failure: *string*

Cause: A TimesTen Grid element is temporarily unavailable.

Action: Wait for the element to recover and retry the current statement. Element recovery may require administrator action.

OCI-58001: *string*

Cause: The operation had an error in the Oracle Exadata storage server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action. *Params: 1) message: A message from Oracle Exascale file layer.

OCI-58002: *string*

Cause: The operation had an error in the Oracle Exadata storage server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action. *Params: 1) message: A message from Exascale storage pool layer.

OCI-58003: *string*

Cause: The operation had an error in the Oracle Exadata storage server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action. *Params: 1) message: Message from Oracle Exadata storage, a lower-level facility.

OCI-58004: cannot get logical block size for file '*string*'. Location=*string*.

Cause: There were problems in trying to get logical block size of named file.

Action: Consult the other reported errors to best proceed with the required action.

OCI-58005: cannot create file '*string*'

Cause: There were problems in trying to create the named file.

Action: Consult the other reported errors to best proceed with the required action.

OCI-58006: cannot open file '*string*'

Cause: There were problems in trying to open the named file.

Action: Consult the other reported errors to best proceed with the required action.

OCI-58007: cannot resize file '*string*'

Cause: There were problems resizing the named file.

Action: Consult the other reported errors and proceed with the required action.

*Params: 1) file_name: The name of the file that cannot be resized.

OCI-58008: cannot resize file '*string*'

Cause: There were problems in trying to resize the named file.

Action: There is difficulty in writing the header block. Consult the other reported errors and proceed with the required action.

OCI-58009: cannot share file '*string*'

Cause: There were problems in trying to share the named file.

Action: There is difficulty in opening the file to be shared. Consult the other reported errors and proceed with the required action.

OCI-58010: cannot get attributes for file '*string*'

Cause: There were problems in trying to get attributes of the named file.

Action: Consult the other reported errors and proceed with the required action.

OCI-58011: cannot commit the creation of file '*string*'

Cause: There were problems in trying commit the creation of the named file.

Action: Consult the other reported errors and proceed with the required action.

OCI-58012: cannot delete file '*string*'

Cause: There were problems in trying delete the named file.

Action: Consult the other reported errors and proceed with the required action.

OCI-58013: cannot close file '*string*'

Cause: There were problems in trying close the named file.

Action: Consult the other reported errors and proceed with the required action.

OCI-58015: The EDSB process terminated unexpectedly.

Cause: The Exascale Data Service Background (EDSB) process terminated unexpectedly due to an internal error or some outside action that was taken to terminate the process.

Action: Restart the instance.

OCI-58016: The EGSB process terminated unexpectedly.

Cause: The Exascale Global Service Background (EGSB) process unexpectedly terminated due to an internal error or some external action taken to terminate the process.

Action: Restart the instance.

OCI-58017: File name '*string*' contains unexpected character '*string*' in vault name.

Cause: A file name was specified that contained an unexpected character in the vault name. The vault name should consist of up to 30 characters that are alphabetic, numeric, or the characters `_`, `.`, `-`, and `#`.

Action: Correct the file name specification. *Params: 1) `file_name`: The file name with the unexpected character. 2) `unexpected_character`: The unexpected character in the vault name.

OCI-58018: file name '*string*' contains empty vault name

Cause: A file name was specified that did not contain a vault name. A vault name must follow the initial `@` character and consist of one or more characters that are alphabetic, numeric, or the characters `_`, `.`, `-`, and `#`.

Action: Correct the file name specification. *Params: 1) `file_name`: The name of the file with the missing vault name.

OCI-58019: file name '*string*' contains vault name greater than 30 characters: '*string*'

Cause: A file name was specified that contained a vault name longer than 30 characters.

Action: Correct the file name specification. *Params: 1) `file_name`: The file name with the long vault name. 2) `vault_name`: The vault name that exceeds 30 characters.

OCI-58020: file name '*string*' contains unexpected character '*string*' in template name

Cause: A file name was specified that contained an unexpected character in the template name. The template name should consist of up to 30 characters that are alphabetic, numeric, or the characters `_`, `.`, `-`, and `#`.

Action: Correct the file name specification. *Params: 1) `file_name`: The name of the file containing the expected character. 2) `unexpected_character`: The unexpected character in the template name.

OCI-58021: file name '*string*' contains empty template name

Cause: A file name was specified that did not contain a template name. Once a template name is indicated with an opening parentheses (character, one or more characters that are alphabetic, numeric, or the characters `_`, `.`, `-`, and `#` must follow.

Action: Correct the file name specification. *Params: 1) `file_name`: The name of the file with the empty template name.

OCI-58022: File name '*string*' starts a template name but does not finish the template name.

Cause: A file name was specified that started a template with the open parentheses (character, but no corresponding closing parentheses) character was found.

Action: Correct the file name specification. *Params: 1) file_name: The file name that contains an unfinished template name.

OCI-58023: File name '*string*' does not follow a template name with an expected character: '*string*'

Cause: A file name was specified that followed a template specification with an unexpected character. After the closing parentheses) is found, the file name must immediately end or continue with a file name starting with the slash character /.

Action: Correct the file name specification. *Params: 1) file_name: Name of the file with the unexpected character. 2) unexpected_character: An unexpected character that was not a slash character /.

OCI-58024: File name '*string*' contains an unexpected character - '*string*'.

Cause: A file name was specified that contained an unexpected character. Permitted characters are alphabetic, numeric, or the characters underscore (_), period (.), hyphen (-) and number sign (#).

Action: Correct the file name specification. *Params: 1) file_name: The name of the file containing the unexpected character. 2) unexpected_character: The unexpected character.

OCI-58025: File name '*string*' contains a template name greater than 30 characters: '*string*'.

Cause: A file name was specified that contained a template name longer than 30 characters.

Action: Correct the file name specification. *Params: 1) file_name: The name of the file with a template name longer than 30 characters. 2) template_name: The template name that is longer than 30 characters.

OCI-58026: file name '*string*' with vault name '*string*' not equal to default '*string*'

Cause: A file name was specified that contained a vault name that was not equal to the default vault name provided.

Action: Correct the file name specification. *Params: 1) file_name: The file name with an unexpected vault name. 2) vault_name: The name of the unexpected vault in file name. 3) default_name: The expected vault name.

OCI-58027: Cannot access ASM disk groups (path='*string*') when Exascale is in use.

Cause: Oracle Automatic Storage Management (Oracle ASM) disk group was accessed in a database instance that was using Exascale storage.

Action: Correct the path specification to Exascale storage and retry.

OCI-58028: Cannot access ASM disk groups when Exascale is in use.

Cause: Oracle Automatic Storage Management (Oracle ASM) disk group was accessed in a database instance that was using Exascale storage.

Action: Correct the path specification to Exascale storage and retry.

OCI-58029: Cannot access Exascale (path='*string*') when ASM disk groups are in use.

Cause: Oracle Exascale was accessed in a database instance that was using Oracle Automatic Storage Management (Oracle ASM) disk groups.

Action: Correct the path specification to Oracle ASM storage and retry.

OCI-58030: Cannot access Exascale when ASM disk groups are in use.

Cause: Oracle Exascale was accessed in a database instance that was using Oracle Automatic Storage Management (Oracle ASM) disk groups.

Action: Correct the path specification to Oracle ASM storage and retry.

OCI-58031: *string*

Cause: The operation had an error in the Oracle Exadata storage server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action. *Params: 1) message: Message indicating the origin (for example, the IP address) of the other errors contained in the error stack.

OCI-58032: process terminated due to fenced I/O

Cause: A process was terminated because it was fenced from doing anymore I/Os.

Action: Reconnect to the database. If the process termination resulted in instance termination, restart the instance.

OCI-59000: not all rebalance phases were run

Cause: The previous rebalance for the group did not run all of the phases.

Action: See GV\$ASM_OPERATION for more details. Run all rebalance phases using the ALTER DISKGROUP REBALANCE command.

OCI-59001: Disk '*string*' must be online before disk '*string*'.

Cause: An attempt was made to online a disk that contains old copies of the data present in another offline disk.

Action: Online the disks in the correct order. FORCE option may be used to override this check.

OCI-59002: Disk revalidation failed for ASM disk group '*string*' on instance *string* due to ORA-*string*.

Cause: The disk revalidation failure could be due to various reasons. Signaling ORA-15020 during discovery was a probable one. See the alert log for more details.

Action: Ensure that the disks in operation are visible to all the nodes in the cluster before issuing a retry.

OCI-59003: database is not prepared for split.

Cause: Split was issued on a database which is either not prepared or did not complete the last time.

Action: Prepare the database before issuing split on it or drop the existing mirror copy and then retry the split mirror operations.

OCI-59004: No rebalance is running for group *string*.

Cause: An attempt was made to modify the property of a rebalance that was not running.

Action: Issue the ALTER DISKGROUP REBALANCE command without the MODIFY keyword to schedule another rebalance.

OCI-59005: Oracle ASM IO Server functionality is not supported on this platform.

Cause: This platform did not support ASM IO Server functionality.

Action: Refer to the documentation for the list of platforms that support Oracle ASM IO Server functionality and consider moving to one of those platforms.

OCI-59006: connection request from stale database instance is rejected.

Cause: The database instance was attempting to fail over from a stale IO Server cluster.

Action: Restart the database instance to initiate a new connection.

OCI-59007: cannot find a usable network from the client

Cause: The database instance was not using any of the configured ASM networks.

Action: Check the ASM network configuration in the database instance.

OCI-59008: All configured ASM networks are unusable.

Cause: All configured ASM networks encountered an error. ASM IO Server was unable to proceed.

Action: Check the status of the configured ASM network interfaces. Restart the ASM IO Server instance after the interfaces become operational.

OCI-59009: ASM IO Server instance is not ready to accept clients.

Cause: ASM IO Server instance was not ready to accept clients.

Action: Execute 'alter system enable client access' for ASM IO Server instance to accept clients.

OCI-59010: cannot SHUTDOWN ASM IO Server instance with connected client *string*.

Cause: A SHUTDOWN command was issued to an ASM IO Server instance that had one or more connected clients.

Action: Stop all clients that are using this ASM IO Server instance and retry the SHUTDOWN command. Alternatively, use the SHUTDOWN ABORT command to force disconnection with all the clients.

OCI-59011: operation failure for group *string* because too many disks are offline

Cause: Too many disks were offline in the disk group.

Action: Ensure that the disks are online and retry the operation.

OCI-59012: Disk %0!s uses an invalid physical sector size (%1!s).

Cause: The disk used a physical sector size value that is not standard or is not currently supported.

Action: The disk cannot be used for an ASM disk group.

OCI-59013: Disk %0!s uses an invalid logical sector size (%1!s).

Cause: The disk used a logical sector size value that is not standard or is not currently supported.

Action: The disk cannot be used for an ASM disk group.

OCI-59014: file %0!s in disk group %1!s was not prepared for split

Cause: The specified file was not prepared for split.

Action: Check the accompanying error messages for information on the reason for this failure.

OCI-59015: Oracle ASM scrubbing is disabled.

Cause: An attempt was made to perform Oracle ASM scrubbing but it was disabled.

Action: Enable Oracle ASM scrubbing.

OCI-59016: Disk group *string* cannot be mounted due to invalid symbols

Cause: A mount operation was attempted for a disk group that contains invalid characters in its name. Starting in version 12.2.0.2.0, disk group names should only contain alphanumeric characters and the underscore character.

Action: Use the 'renamedg' tool to change the disk group name to a valid name. Afterwards, change the names of the disks by mounting the disk group in restricted mode and using the ASM SQL command 'ALTER DISKGROUP name RENAME DISKS ALL'.

OCI-59017: Oracle ASM scrubbing is stopping a previous operation.

Cause: The system cannot accept new scrubbing operations if a previous one is being stopped.

Action: Wait until the previous Oracle ASM scrubbing operation stops completely before initiating a new one.

OCI-59018: Oracle ASM scrubbing requires an Allocation Unit size of at least 1 MB.

Cause: The operation was not executed because the Allocation Unit was less than 1 MB.

Action: Run the operation on a disk group with an Allocation Unit of at least 1 MB.

OCI-59019: cannot start SCRB process

Cause: The ASM Scrubbing Master (SCRB) process failed during startup.

Action: Review the alert log to find out the reason behind the process startup failure.

OCI-59020: Dropping mirror copy '%0!s' in disk group '%1!s' already in progress.

Cause: The drop mirror copy was already issued on the specified file group.

Action: Wait for the previous drop mirror copy to complete. Check the Oracle Automatic Storage Management (Oracle ASM) alert log or check that the corresponding file group is deleted using the V\$ASM_FILEGROUP view.

OCI-59021: Dropping child file '%0!s' in disk group '%1!s' is not allowed.

Cause: The operation failed because child file deletion was attempted.

Action: Child files can be deleted only as part of a DROP MIRROR COPY operation.

OCI-59022: dropping mirror copy '%0!s' in disk group '%1!s' failed as prepare is not complete

Cause: Prepare of mirror copy has not completed

Action: Wait for the prepare mirror copy to complete. Check the ASM alert log or check that the split status of the file group using the V\$ASM_FILEGROUP view.

OCI-59023: command requires attribute '%0!s' to be set to '%1!s'

Cause: The disk group was still running the necessary background operations preventing the attribute *name* from setting to value *value*, which is a prerequisite for the command.

Action: Confirm that all disks in the disk group are online, and wait until the attribute is set to the proper value. The attribute may not get set to the proper value if any of the disks in the disk group are offline. This may take a while.

OCI-59024: dropping mirror copy '%0!s' in disk group '%1!s' failed

Cause: The drop of the mirror copy failed because the split of the mirror copy had already been completed.

Action: Dropping the mirror copy can only be done before the database is split. This clause cannot be used to drop a database that has already been split.

OCI-59025: creation of mirror copy for database '%0!s' failed

Cause: Another mirror copy for the database existed when the operation was attempted or failure occurred when communicating with ASM instance.

Action: If a mirror copy exists with PREPARED state, then either create another database using the existing mirror copy or drop the existing mirror copy. If a mirror copy exists in FAILED state, then drop the mirror copy. Thereafter, retry the operation.

OCI-59026: Dropping file group '%0!s' in disk group '%1!s' failed as the file group has prepared mirror copies.

Cause: An attempt was made to drop a file group that had prepared mirror copies. This is not allowed.

Action: Drop all prepared mirror copies and retry the drop file group operation.

OCI-59027: A file group redundancy cannot be modified when mirror copy exists.

Cause: A mirror copy of the database existed or the disk group was still running the necessary split background operations, preventing the file group redundancy change.

Action: Check the split status by querying the DBCLONE_STATUS column in the V\$ASM_FILEGROUP_PROPERTY dynamic view. If another database is still using the existing mirror copy, drop the database or the existing mirror copy, which will trigger a rebalance for the disk group. After you complete this action, retry the operation.

OCI-59028: rebalance did not complete after the last mirror split operation on database '%0!s'

Cause: Rebalance after the last mirror split operation was either still running or not scheduled yet.

Action: If a rebalance is already running allow it to complete, otherwise issue a new one.

OCI-59029: All ASM disks in %0!s are already online or being brought online.

Cause: An attempt was made to bring disks online that were either already online or were being brought online.

Action: Check the status of the disks before changing the ONLINE statement to exclude the disks in the failure group or disk group.

OCI-59030: disk group '%0!s' containing file group '%1!s' has too many offline disks

Cause: A mirror split operation failed because the disk group containing the files had insufficient number of online disks. This could prevent some files in the target database from being opened. The operation failed early to give the administrator a chance to fix the errors.

Action: Ensure that the disk group has the required number of disks online and then retry the command.

OCI-59031: operation cannot be run concurrently with other mirror split operations on mirror copy '%0!s' in disk group '%1!s'

Cause: Another conflicting Mirror Split operation was already running.

Action: Retry after the conflicting Mirror Split operation has finished.

OCI-59032: rebalance did not complete after the last mirror split or change redundancy operation

Cause: The rebalance operation after the last mirror split operation or change redundancy was either still running or not scheduled yet.

Action: If a rebalance is already running, then allow it to complete; otherwise, issue the rebalance operation.

OCI-59033: failed to start Oracle ASM instance because it was unable to open SPFILE '%0!s'

Cause: An attempt to start the Oracle ASM instance failed because the ASM server parameter file (SPFILE) could not be opened. The SPFILE was configured in the indicated disk group. One or more of the disks in the disk group were inaccessible. This was likely due to the remote node or nodes being inactive.

Action: Issue the 'olsnodes' command to retrieve the list of nodes in the cluster. Start up all the remote nodes in the cluster that were previously inactive. Issue the 'crsctl start cluster' command on this node and verify that the Oracle ASM instance is active.

OCI-59035: HARDCHECK error during I/O

Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by ASM Rebalance (ARB) process during I/O operations; Oracle ASM cannot disable HARD check automatically due to offline disks.

Action: Look for the corresponding ORA-59051 error in the alert log that shows the file number that has HARD check error. Evaluate if those files were unused or abandoned. If unused or abandoned, delete them. Bring all disks in the disk group online to allow Oracle ASM to disable HARD check automatically so that ARB process will not be interrupted.

OCI-59036: Offline disks prevent data reconstruction from parity redundancy.

Cause: An attempt to reconstruct data from parity redundancy failed because some disks in the disk group were offline.

Action: Bring all disks in the disk group online to make data reconstruction from parity redundancy feasible.

OCI-59037: Dropping mirror copy '%0!s' in disk group '%1!s' failed.

Cause: An attempt was made to drop a mirror copy that did not exist.

Action: Check the dynamic performance view V\$ASM_DBCLONE_INFO for a list of valid mirrors. Ensure that the specified mirror copy exists and retry the operation.

OCI-59038: Too many mirror copies found

Cause: An attempt was made to create a mirror copy of the database that already has the maximum number of mirror copies.

Action: Drop or split an existing mirror copy and retry operation.

OCI-59039: Oracle ASM scrubbing is already running.

Cause: An attempt was made to issue an ASM scrubbing operation when there was another scrubbing operation still running.

Action: Wait for the running operation to finish and try again. Or, stop the running operation with ALTER DISKGROUP DG SCRUB STOP.

OCI-59040: ASM file property has changed.

Cause: An attempt was made to issue an ASM scrubbing operation and there was a file that changed one property.

Action: Wait for the ASM scrubbing operation to retry the operation automatically.

OCI-59041: database '%0!s' has data files in multiple disk groups

Cause: A mirror split operation was issued on a database whose data files were located in multiple disk groups.

Action: Ensure that all the data files are located on the same disk group either by moving all the data files to a single disk group or by dropping the data files of other disk groups. And, then retry the operation.

OCI-59042: creation of database from '%0!s' using mirror copy '%1!s' in disk group '%2!s' failed

Cause: An attempt was made to create a database from a mirror copy that did not exist.

Action: Connect to the database and check V\$ASM_DBCLONE_INFO for list of valid mirrors. Ensure that the specified mirror copy is created and then retry the operation.

OCI-59044: Single parity redundancy files in group '%0!s' could not be relocated.

Cause: An attempt was made to relocate single parity redundancy files for balance or to restore redundancy in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

OCI-59045: Double parity redundancy files in group '%0!s' could not be relocated.

Cause: An attempt was made to relocate double parity redundancy files for balance or to restore redundancy in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

OCI-59046: Allocation or relocation of a parity redundancy file in group '%0!s' failed.

Cause: An attempt was made to allocate or relocate a parity redundancy file in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

OCI-59047: Allocation or relocation of a mirrored file in group '%0!s' failed.

Cause: An attempt was made to allocate or relocate a mirrored file in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

OCI-59048: Insufficient failure groups to restore redundancy in disk group '%0!s'.

Cause: An attempt to restore redundancy during rebalance is failing for some user data due to the presence of dropping or forcing disks.

Action: Add back all of the disks in DROPPING or FORCING state. If this is an Oracle appliance, also add back all of the missing disks.

OCI-59049: Copy of OCR backup file *string* failed.

Cause: The specified method for copying the Oracle Cluster Registry (OCR) backup file failed. The specified method for copying is supported only from disk group to file system.

Action: Use the ocrconfig -copy command to copy from file system to disk group, disk group to file system or disk group to disk group.

OCI-59050: ASM disk expel failed during rebalance of group '%0!s'.

Cause: Some or all ASM disks in the DROPPING or FORCING state were not expelled from the disk group during rebalance.

Action: Rebalance has restarted to address this issue, so no immediate action is needed. See the alert log for more information on the reason for the failure. If rebalance keeps hitting this error, check the status of the configured ASM network interfaces. Add back all the disks in the DROPPING or FORCING state and retry the rebalance operation.

OCI-59051: HARD check error in file '+%0!s.%1!s.%2!s' in disk group '%3!s'

Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by an Oracle ASM Rebalance (ARB) process during I/O operations.

Action: The error points to a file that has encountered HARD check errors. Check the alert log and evaluate if these files were unused or abandoned. If unused or abandoned, delete them. Otherwise, use Oracle ASM scrubbing to repair them.

OCI-59052: Memory allocation failed because maximum designated memory slots are used up.

Cause: An attempt to allocate memory was denied because the designated memory slots were used up.

Action: Increasing the size of the memory will not prevent this error. There is a fixed number of designated memory slots for certain operations. If the error occurs in the Oracle Automatic Storage (Oracle ASM) instance, then decrease the number of disk and disk group operations. Otherwise, if the error happens in the Oracle Database instance, then decrease the number of RMAN operations. Retry the operation.

OCI-59053: synchronous I/O operation failed to %0!s file block %1!s of file number %2!s located at allocation unit %3!s of disk %4!s in disk group %5!s

Cause: A synchronous I/O operation invoked on a disk has failed.

Action: Ensure that all of the disks are operational.

OCI-59054: Modifying the block size *string* of a password file from an expected size of *string* to size *string* in ASM is not supported.

Cause: An attempt to create a password file in an Oracle ASM disk group found an existing file with the same name and different block size.

Action: Specify the correct logical block size to reuse the existing file. Alternatively, delete the existing file and retry.

OCI-59055: failed to read attribute directory for entry number %0!s

Cause: An error occurred while reading the attribute directory.

Action: Check the alert log for accompanying errors.

OCI-59056: Insufficient number of Oracle Automatic Storage Management (Oracle ASM) instances. Required '%0!s'

Cause: An attempt to run Oracle ASM scrubbing was denied because there were too few Oracle ASM instances running.

Action: Start more Oracle ASM instances and retry the 'alter diskgroup *dg* scrub' command, or run 'alter diskgroup *dg* scrub stop' to stop it and finish the current operation.

OCI-59057: Oracle Automatic Storage Management (Oracle ASM) scrubbing is paused.

Cause: An attempt to run Oracle ASM scrubbing was denied because it was in a paused state.

Action: Run the 'alter diskgroup *dg* scrub' command to resume scrubbing, or run 'alter diskgroup *dg* scrub stop' to stop it and finish the current operation.

OCI-59058: Uninitialized or abandoned file '*string*' encountered during I/O operation.

Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by the Oracle ASM Rebalance (ARB) process during I/O operations because of the extent sets in uninitialized or abandoned files.

Action: Check the reported file. If it is no longer in use, remove the file. If it is uninitialized or being initialized, wait until the file is fully initialized. Otherwise, use DBVerify to check the integrity of the file.

OCI-59059: Both TO version and FROM version are needed.

Cause: Either the TO version or the FROM version or both were missing in the command.

Action: Specify both the TO version and the FROM version.

OCI-59060: TO version or FROM version are not needed.

Cause: Either the TO version or the FROM version or both were specified in the command.

Action: Remove both the TO version and the FROM version from the command.

OCI-59061: Rolling migration from version '%0!s' to '%1!s' started before finishing the disk group mount operation.

Cause: An attempt to mount a disk group failed because rolling migration started before finishing the mount operation.

Action: Retry the diskgroup mount operation

OCI-59062: Oracle Automatic Storage Management (Oracle ASM) discovered an insufficient number of sites in disk group "%0!s".

Cause: Oracle ASM could not find a sufficient number of sites belonging to the disk group to continue the operation.

Action: Do the following: - Check that the sites in the disk group attributes have been specified. - Ensure the disk groups in the sites are present and functioning. - Ensure that the owner of the ORACLE binary has read/write permission for the disks. - Ensure that the ASM_DISKSTRING initialization parameter has been set correctly. - Query the V\$ASM_DISK dynamic view to verify that Oracle ASM can discover the appropriate disks in the Oracle ASM instance.

OCI-59063: Copy of XML file *string* failed.

Cause: The specified XML file to be copied into the Oracle Automatic Storage Management (Oracle ASM) disk group was not correctly validated.

Action: Verify the sanity of the XML file and retry the operation, or use a different XML file.

OCI-59064: Oracle ASM disk %0!s in disk group %1!s is being offlined.

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk was marked to be taken offline or was being offlined and therefore it could not be accessed.

Action: Retry the operation after the disk is dropped or brought online.

OCI-59065: Oracle ASM disk is still onlining.

Cause: A write request failed because all redundant copies of a block were either unavailable or on an Oracle Automatic Storage Management (Oracle ASM) disk that was being onlined.

Action: Wait for the disk online to complete. Then, retry the operation.

OCI-59066: Multiple disk paths (%0!s) are discovering disk with identical disk header contents.

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk discovery string had multiple paths configured for disks with an identical disk header. Oracle ASM could not distinguish whether these were separate disks with an identical disk header content or the same disk with different paths. The wrong Oracle ASM disk discovery string configuration may be responsible.

Action: Remove all except one of the valid paths to the disk from the disk discovery string and retry the disk operation.

OCI-59067: invalid label name

Cause: Oracle ASM label name was invalid or exceeded the maximum length.

Action: Specify a label name that is a valid SQL identifier and is no more than 23 bytes after any wild cards are processed.

OCI-59068: Insufficient failure groups to restore redundancy in disk group '%0!s'.

Cause: An attempt to restore redundancy during rebalance is failing for some Oracle Automatic Storage Management (Oracle ASM) metadata due to the presence of dropping or forcing disks.

Action: Add back all of the disks in DROPPING or FORCING state. If this is an Oracle appliance, also add back all of the missing disks.

OCI-59069: Oracle ASM file operation failed.

Cause: Oracle Automatic Storage Management (Oracle ASM) file operation failed.

Action: See the alert log for additional errors.

OCI-59071: Database %0!s can not open file already opened by database %1!s.

Cause: This file can only be open in one database at a time.

Action: Check the `db_unique_name` and `db_name` parameters of the connected database instances. Shut down the other database and retry the operation or specify a different file to open.

OCI-59072: invalid disk group or failure group name '%0!s' specified for `asm_preferred_read_failure_groups` parameter

Cause: A disk group or failure group name does not start with a letter and does not contain letters, numbers, and underscores.

Action: Ensure that the disk group and failure group name start with a letter and only contain letters, numbers, and underscores.

OCI-59073: invalid value '%0!s' for `asm_preferred_read_failure_groups` parameter

Cause: The single value contains spaces rather than multiple string values separated by a comma.

Action: Quote each string value individually when specifying multiple values. For example, 's1','s2','s3' rather than 's1 s2 s3'.

OCI-59074: invalid preferred read failure group name '%0!s' for `asm_preferred_read_failure_groups` parameter

Cause: The specified value for the `ASM_PREFERRED_READ_FAILURE_GROUPS` parameter is invalid.

Action: Specify a preferred read failure group with the format *diskgroup name.failure group name*

OCI-59075: cannot create an Oracle ADVM volume with Oracle Exadata cluster membership.

Cause: An Oracle ASM Dynamic Volume Manager (Oracle ADVM) volume creation was attempted when an Oracle Exadata volume cluster membership was active. Only Oracle ADVM cluster membership or Oracle Exadata volume cluster membership can be active at a given time.

Action: Stop Oracle Exadata cluster membership using 'srvctl stop acfsapps' to allow Oracle ADVM volume creation to succeed.

OCI-59076: Redundancy could not be restored in disk group '%0!s'.

Cause: An attempt to restore redundancy during rebalance is failing.

Action: Check the expel process trace file for additional details. Rerun rebalance on the group. If the issue persists, add back all the disks in DROPPING or FORCING state. If this is an Oracle appliance, also add back all of the missing disks.

OCI-59077: unable to connect to the metadata service

Cause: An attempt to create or locate a file failed because the metadata service in the Oracle Automatic Storage Management (Oracle ASM) instance is unavailable.

Action: Check the alert log of the Oracle ASM instance and the ARB9 process trace file in the Oracle ASM instance for more information. Ensure that the platform supports the metadata service. If the platform supports the metadata service, verify that the Oracle ASM instance is active and that the metadata service configuration is valid.

OCI-59078: insufficient failure groups to restore Oracle ASM metadata due to offline quorum disks in disk group '%0!s'

Cause: An attempt to restore Oracle Automatic Storage Management (Oracle ASM) metadata redundancy during rebalance failed due to the presence of dropping or forcing quorum disks.

Action: 1. Add back all the quorum disks in DROPPING or FORCING state. 2. Online all quorum disks if they are OFFLINE.

OCI-59101: Cluster is not homogeneous.

Cause: Either when ALTER SYSTEM ENABLE RAC TWO_STAGE ROLLING UPDATES ALL was done, or during startup, it was detected that some instances in the cluster had a different set of RAC Two-Stage Rolling Updates as compared to other nodes. If RAC Two-Stage Rolling Updates are enabled, all cluster nodes need to have the same set of RAC Two-Stage Rolling Updates; otherwise, unexpected behavior could happen. This could also happen if local spfile or pfile are in use and they are not same across cluster.

Action: Ensure that all nodes in the cluster have the same set of RAC Two-Stage Rolling Updates. Run the 'ORACLE_HOME/bin/rrputil -l' command on all nodes and confirm that all nodes have the same set of RAC Two-Stage Rolling Updates. Optionally, query V\$RAC_TWO_STAGE_ROLLING_UPDATES to see what updates are enabled on a node and what updates could be enabled. Updates with ENABLED='Y' are enabled and updates with ENABLED='N' could be enabled in the Oracle binary. All nodes in the cluster should have the same set of rows with the same value for the BUG_NUMBER and the ENABLED column in V\$RAC_TWO_STAGE_ROLLING_UPDATES. If error was due to local spfile or pfile usage, make sure they have same content across cluster.

OCI-59102: operation requires server parameter file (SPFILE) to be in use

Cause: The server parameter file (SPFILE) was not in use. ENABLE RAC TWO_STAGE ROLLING UPDATES ALL requires an SPFILE.

Action: Create a server parameter file for the database, restart all instances of the database to use the server parameter file, and then retry the command.

OCI-59103: Either *string* RAC Two-Stage Rolling Updates are enabled but not present in Oracle binary, or *string* RAC Two-Stage Rolling Updates are present in Oracle binary but not enabled.

Cause: This error could occur if a RAC Two-Stage Rolling Update was being rolled back while another RAC Two-Stage Rolling Update was being applied in the same session without restarting the cluster. Another reason for this error was that a completely unrelated node was trying to join the cluster but was incompatible with the enabled RAC Two-Stage Rolling Updates in this cluster.

Action: Check if there are RAC Two-Stage Rolling Updates that are enabled and present in the Oracle binary and are being rolled back and if there are RAC Two-Stage Rolling Updates present in the Oracle binary but are not enabled. If yes, rollback the RAC Two-Stage Rolling Updates that are present in the Oracle binary but not enabled and restart the cluster. Once the rollback completes after restarting the cluster, the new RAC Two-Stage Rolling Updates can be applied. If a completely unrelated node is trying to join the cluster, find out why that node was started in this cluster.

OCI-59104: RAC Two-Stage Rolling Updates in inconsistent state

Cause: The RAC Two-Stage Rolling Updates are not in a consistent state. This could happen if last run of ALTER SYSTEM ENABLE RAC TWO_STAGE ROLLING UPDATES ALL failed due to some reason and that failure was not addressed.

Action: Mount the database in exclusive mode and start the instance. After starting the instance, run ALTER SYSTEM ENABLE RAC TWO_STAGE ROLLING UPDATES ALL and ensure that it is processed successfully.

OCI-59105: expecting keyword ABORT

Cause: After running the ALTER SYSTEM ROLLBACK TWO_STAGE ROLLING UPDATES statement, the only keyword allowed is ABORT.

Action: If you did not intend to rollback the RAC Two-Stage Rolling Update and if you have already processed the ALTER SYSTEM ROLLBACK TWO_STAGE ROLLING UPDATES statement, then process the ALTER SYSTEM ROLLBACK TWO_STAGE ROLLING UPDATES ABORT statement to stop the rollback."

OCI-59106: prepare of RAC Two-Stage Rolling Update failed

Cause: Internal error occurred while preparing RAC Two-Stage Rolling Updates for enable.

Action: Retry the ALTER SYSTEM ENABLE RAC TWO_STAGE ROLLING UPDATES ALL command. If error persist, contact Oracle Support.

OCI-59107: some instance in cluster not ready to enable RAC Two-Stage Rolling Updates

Cause: A new instance might have joined cluster while ALTER SYSTEM ENABLE RAC TWO_STAGE ROLLING UPDATES ALL command was in progress. Another reason for this error could be temporary network outage.

Action: Retry the ALTER SYSTEM ENABLE RAC TWO_STAGE ROLLING UPDATES ALL command.

OCI-59109: Enabling of RAC Two-Stage Rolling Updates failed due to *string* number of RAC Two-Stage Rolling one-offs in environment is higher than maximum *string* allowed.

Cause: The total number of one-off RAC Two-Stage Rolling Updates in environment was higher than the maximum allowed.

Action: Apply the release update that contains these one-offs.

OCI-59110: Enabling of RAC Two-Stage Rolling Updates failed due to *string* number of RAC Two-Stage Rolling Updates in environment is higher than maximum *string* allowed.

Cause: The total number of RAC Two-Stage Rolling Updates in environment was higher than the maximum allowed.

Action: Contact Oracle Support.

OCI-59111: instance id(s) *string* have different set of Two-Stage Rolling Update than current instance or joined cluster while enable was in progress

Cause: The set of Two-Stage rolling updates were different on instances that were part of this cluster. Another reason for this error could be that instance id mentioned in error joined the cluster while enable was in progress. This could also happen if local spfile or pfile are in use and they are not same across cluster.

Action: Ensure that all nodes in the cluster have the same set of RAC Two-Stage Rolling Updates. Run the 'ORACLE_HOME/bin/rrputil -l' command on all nodes and confirm that all nodes have the same set of RAC Two-Stage Rolling Updates. Optionally, query V\$RAC_TWO_STAGE_ROLLING_UPDATES to see what updates are enabled on a node and what updates could be enabled. Updates with ENABLED='Y' are enabled and updates with ENABLED='N' could be enabled in the Oracle binary. All nodes in the cluster should have the same set of rows with the same value for the BUG_NUMBER and the ENABLED column in V\$RAC_TWO_STAGE_ROLLING_UPDATES. If error was due to new instance joining the cluster while enable was in progress, retry enable command. If error was due to local spfile or pfile usage, make sure they have same content across cluster. Check alert log for more detail about error.

OCI-59112: current instance started with pfile and *string*Two-Stage rolling update(s) rolled back in binary

Cause: Current instance was started with pfile, and some Two-Stage rolling updates were rolled back in binary before start. This is not allowed with pfile in use.

Action: If Two-Stage updates were rolled back, reapply those in binary. If rollback of Two-Stage updates is required, start instance using shared spfile.

OCI-59113: shared spfile not in use

Cause: The command was rejected because the Oracle RAC database is not using shared SPFILE.

Action: Ensure all instances in cluster use a single shared SPFILE from a shared location.

OCI-59114: Instance not in exclusive mode

Cause: This command can only be run when instance has started in exclusive mode.

Action: Set cluster_database parameter to false, shutdown all instances, bring up only one instance using startup exclusive and retry.

OCI-59115: Two stage updates could not be restored to last level

Cause: Either two stage updates were already restored to the last level in the past, or binary rollback of the two stage updates were done in the past. Another possibility is, two stage updates were never enabled, so we can't go back to last level.

Action: We are already as last two stage updates level. No further action is needed.

OCI-59300: missing or invalid site name

Cause: The command did not specify a valid site name.

Action: Specify a valid site name.

OCI-59301: incorrect SITE token usage

Cause: Site names were provided for some disks in the SQL statement and missing for others.

Action: Either specify site names for all of the disks or none in the SQL statement and retry the operation.

OCI-59302: The attribute *string* must be *string* or higher.

Cause: An attempt was made to set an attribute to a version that was lower than the minimum supported.

Action: Set the attribute to at least the minimum supported version. Alternatively lower the minimum supported version and try again.

OCI-59303: The attribute *string* (*string*) of the disk group being mounted should be *string* or higher.

Cause: An attempt was made to mount a disk group whose compatibility was lower than the minimum supported.

Action: Advance the disk group compatibility by mounting it in restricted mode or lower the minimum supported compatibility, and then try again.

OCI-59304: external and global users are not supported for ASM

Cause: A user type not supported by ASM was supplied.

Action: Check the Oracle ASM documentation that external and global users are not supported for ASM.

OCI-59305: The disk group being mounted is incompatible with this software version.

Cause: An attempt was made to mount a disk group using a software version that is incompatible with the disk group.

Action: Contact Oracle Support Services.

OCI-59306: The parameter '*string*' is invalid.

Cause: The value of the parameter was invalid.

Action: Provide a valid value of the parameter.

OCI-59307: The disk group redundancy is not external.

Cause: An attempt was made to rename the disk fail group in a disk group whose redundancy type was not external.

Action: Specify a disk group whose redundancy type is external.

OCI-59308: The disk '*string*' cannot be assigned to a site because the disk group '*string*' contains Cluster Synchronization Services voting files.

Cause: An attempt to assign a site to a disk failed because the disk group contained Cluster Synchronization Services (CSS) voting files.

Action: Move the CSS voting files to a different disk group using the command 'crsctl replace votedisk' and retry the operation.

OCI-59309: Failure group name '*string*' is already used by an existing ASM disk.

Cause: The specified failure group name was already used in this diskgroup.

Action: Specify a different failure group name.

OCI-59311: Cannot connect to the Oracle ASM instance '*string*'.

Cause: The instance failed to relocate to the specified Oracle Automatic Storage Management (ASM) instance because it could not connect to it.

Action: Check that the specified Oracle ASM instance SID is valid, that the Oracle ASM instance is up and running, and that the network configuration is valid.

OCI-59312: Disk '*string*' cannot be assigned to a site because it is an Oracle Exadata disk.

Cause: An attempt to assign an Oracle Exadata disk to a site failed because the operation is not allowed in Oracle Exadata.

Action: Run the following command to update the cell site information: `cellcli -e alter cell siteName`

OCI-59313: All mirrors of the block are lost, likely due to multiple storage failures.

Cause: There were multiple failures in the storage subsystem. All redundant copies of the block were lost and Oracle wrote the hexadecimal value BADFDA7A into the block location of the lost block to signify that the block data could not be recovered from a redundant copy.

Action: Check the system logs and storage logs to identify the failure that led to the lost block.

OCI-59314: file type not supported for the operation

Cause: The operation did not support files of the given type.

Action: Retry the operation with a file of supported type.

OCI-59315: Parity is not supported for file '*%0!s*' with type '*%1!s*'.

Cause: The given file type did not support the creation of parity files.

Action: Retry creating the parity files with a supported file type.

OCI-59316: ASM software is incompatible with disk group *string* due to missing patch *string*

Cause: The ASM software was not compatible with the disk group.

Action: Action: Apply the missing patch and retry the operation.

OCI-59317: client *%0!s* software is incompatible with disk group *%1!s* due to missing patch *%2!s*

Cause: The client software was not compatible with the disk group.

Action: Apply the missing patch on corresponding client software and retry the operation.

OCI-59318: ASM software is incompatible with disk group *string* COMPATIBLE.ASM *string*

Cause: The ASM software did not support the attribute value for COMPATIBLE.ASM.

Action: Check alert log to identify the missing patches, apply the patches, and retry the operation. Or, advance COMPATIBLE.ASM to a version that is supported by this software.

OCI-59319: database software is incompatible with disk group *string* COMPATIBLE.RDBMS *string*

Cause: The specified value for COMPATIBLE.RDBMS was not compatible with one or more clients.

Action: Check the ASM alert log for information about the clients and missing patches, apply the patches on the corresponding database software, and retry the operation.

OCI-59320: client %0!s software is incompatible with disk group %1!s patch %2!s

Cause: The client software was not compatible with the specified patch.

Action: Apply the missing patch on corresponding client software and retry the operation.

OCI-59321: ASM software is incompatible with disk group *string* patch *string*

Cause: The ASM software did not support enabling the specified patch.

Action: Apply the missing patch and retry the operation.

OCI-59322: database software is incompatible with disk group *string* patch *string*

Cause: The specified patch was not compatible with one or more clients.

Action: Check the ASM alert log for information about the clients and missing patches, apply the patches on corresponding database software, and retry the operation.

OCI-59323: cannot alter exclusive instance mode with more than once instance running

Cause: There was at least one other running ASM instance.

Action: Ensure that there is only one ASM instance when running the command.

OCI-59324: cannot alter exclusive instance mode outside of rolling migration or rolling patch

Cause: ASM cluster was not in rolling migration or rolling patch.

Action: ASM cluster needs to be in rolling migration or rolling patch.

OCI-59325: cannot start multiple ASM instances under exclusive mode

Cause: There was at least one other running ASM instance, and the ASM cluster was in exclusive mode.

Action: Ensure that the ASM cluster is not in exclusive mode when trying to bring up another ASM instance.

OCI-59326: Rolling mode exit prevented by *string*.

Cause: One or more instances were blocking the rolling mode exit.

Action: Terminate the operation or wait until the reported operation is complete before attempting to take the cluster out of rolling mode.

OCI-59327: Dropping more failure groups is not allowed with the current disk group redundancy.

Cause: There was an attempt to drop at least one failure group, resulting in a failure group count below the recommended number.

Action: Use the FORCE option when trying to drop failure groups below the minimum required count. Check the trace files of the Oracle Automatic Storage Management (Oracle ASM) instance for more information.

OCI-59328: Taking more failure groups offline is not allowed with disk group redundancy.

Cause: An attempt was made to take more failure groups offline than the minimum number required to maintain the quorum consensus.

Action: Before taking any failure groups offline, increase the number of online failure groups by switching offline failure groups online or by adding additional (quorum or regular) failure groups.

OCI-59329: parity requires at least %0!s failure groups; found only %1!s

Cause: An attempt to set the redundancy specification of a file group to a parity protection scheme failed because of insufficient failure groups.

Action: Add enough failure groups to the disk group and then retry setting the file group redundancy.

OCI-59330: Disk zones are deprecated for disk groups that use virtually allocated allocation metadata.

Cause: Disk zones are no longer supported for disk groups that use virtually allocated allocation metadata.

Action: Do not attempt to create or modify a file with file attributes that are related to disk zones.

OCI-59331: slow or hung relocations during rebalance of group *number*

Cause: The I/O devices were slow or were not responsive.

Action: Rebalance has restarted to address this issue, so no immediate action is needed. If the rebalance process keeps reporting this error, then check the conditions of storage devices.

OCI-59332: Number of disks that can be added to a disk group is limited to %0!s disks if disk group is nearly full.

Cause: Disk group did not have enough space for the metadata needed to accommodate the number of disks being added at once.

Action: Reduce the number of disks that is being added with the initial ADD DISK or ADD FAILGROUP command. After the initial ADD DISK or ADD FAILGROUP command successfully executes, more disks may be added once the disk group has the space to do so with the new space it has acquired.

OCI-59333: EXTENT and BLOCK clauses are mutually exclusive in single files

Cause: EXTENT and BLOCK clauses were mixed in the same file to scrub.

Action: Ensure that all scrub file clauses are of the same type; either all EXTENT or all BLOCK. EXTENT and BLOCK clauses must not be mixed within the same file in a scrub command.

OCI-59334: maximum EXTENT or BLOCK ranges exceeded

Cause: The number of EXTENT or BLOCK ranges (10) were exceeded.

Action: Use 10 or less EXTENT or BLOCK ranges within a scrubbing command. If more than 10 ranges want to be scrubbed, either consider scrubbing the complete file or submit multiple scrubbing commands.

OCI-59335: the value specified for COUNT must not be zero

Cause: A value of zero was specified in COUNT clause.

Action: Provide a value for COUNT greater than zero.

OCI-59336: Cannot update XML file types of Oracle ASM disk group %0!s with current compatibility %1!s, which needs to be equal to or higher than Oracle Database 21c (21.0).

Cause: An attempt was made to update Oracle Automatic Storage Management (Oracle ASM) file types with a compatible.asm value earlier than Oracle Database 21c (21.0).

Action: Upgrade the compatible.asm attribute to a value equal to or later than Oracle Database 21c (21.0) and retry the operation.

OCI-59337: XML file types of Oracle ASM disk group %0!s are already updated from OSFILE to XMLFILE.

Cause: An attempt was made to update Oracle Automatic Storage Management (Oracle ASM) XML files from operating system file type to XML file type when the XML files in the Oracle ASM disk group were already updated.

Action: None

OCI-59338: 'string' is an invalid alias name for the file.

Cause: The alias name provided is used as a system alias by ASM instance in the creation of the file.

Action: Provide a different alias name to create the file.

OCI-59339: Disk group is nearly full. Disk resize is limited to %0!s bytes until there is more free space in the disk group.

Cause: The disk group does not have enough space for the metadata needed to accommodate the number of allocation units being added at once.

Action: First, resize the disk to the specified value. Then, retry the original resize command once the disk group has the space to do so with the new space it has acquired.

OCI-59500: unable to create member cluster 'string' in the absence of at least one disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE

Cause: An attempt was made to configure a member cluster when there was no mounted disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE.

Action: Set the ACCESS_CONTROL.ENABLED attribute to TRUE on an existing mounted disk group, mount a disk group that already has the ACCESS_CONTROL.ENABLED attribute set to TRUE, or create a disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE. Retry the operation.

OCI-59501: failed to register database with IO Server instance

Cause: The database instance failed to register with a valid IO Server instance.

Action: Check the alert log to identify the underlying reason for the failure and take the suggested corrective action.

OCI-59502: RELOCATE CLIENT to string is already in progress.

Cause: Another RELOCATE CLIENT command was already in progress.

Action: Retry the command after on-going RELOCATE CLIENT command completes. Check the client alert log for its progress and status.

OCI-59503: Client '*string*' not allowed to reconnect.

Cause: The client in Oracle Flex Automatic Storage Management (ASM) mode tried to reconnect to an Oracle ASM instance that did not support the Flex ASM mode.

Action: Check that the remote mode configured on the Oracle ASM instance matches the one in the client instance. Oracle Flex ASM must be enabled in the Oracle ASM cluster. Check the Oracle Flex ASM status using the ASMCMD SHOWCLUSTER command.

OCI-59504: rejecting a request originating from site '*string*' to OFFLINE a disk '*string*' configured in site '*string*'

Cause: The request to OFFLINE a disk was rejected by the ASM instance because the request was issued from a site that was different from the site in which the disk was configured.

Action: Retry the request from the site in which the disk is configured.

OCI-59505: instance '*string*' shutting down on site '*string*' due to rejected OFFLINE request

Cause: The instance terminated because the storage was inaccessible from the site that sent the disk OFFLINE request.

Action: Run the command 'crsctl query cluster sites <site_name>' to retrieve the status of the indicated site. Address the storage accessibility issues if the indicated site is in a QUARANTINED state. Run the command 'crsctl modify cluster site <site_name> -s rejuvenate' to set the status to ONLINE after the storage access has been restored.

OCI-59506: database process interrupted due to SQL*Net read timeout

Cause: A process on the client instance connected to an Oracle ASM instance was in an SQL*Net read for too long. Possible reasons include failure of the node on which the Oracle ASM instance was running or a communication channel disruption. The interrupt was detected by the Fence Monitor (FENC) process or the ASM Background (ASMB) process, and the call was interrupted.

Action: Usually none, as the client instance fails over to another available Oracle ASM instance. If the problem keeps recurring, contact Oracle Support Services.

OCI-59507: mismatch of parameter '*%0!s*' between database and ASM instance '*%1!s*'

Cause: The value for the parameter was different in the database instance and in the ASM instance to which it was connected.

Action: Set the parameter to the same value in both the instances.

OCI-59508: invalid GUID '*string*' specified

Cause: The operation was rejected because the supplied Globally Unique Identifier (GUID) was syntactically invalid.

Action: Retry the command specifying the Globally Unique Identifier (GUID) as a text string of 32 hexadecimal digits (0-f) without a hyphen (-) character or the hexadecimal literal prefix (0x). Refer to the command inline help or product documentation for more information.

OCI-59509: failed to create member cluster '%0!s' because the specified GUID '%1!s' is already configured

Cause: An attempt to add the indicated member cluster with the indicated Globally Unique Identifier (GUID) was rejected because a member cluster with that GUID was already defined.

Action: Execute the command 'asmcmd lsccl' to list the existing member clusters and cluster GUIDs. Retry the original command with a cluster GUID that has not already been configured.

OCI-59510: unable to modify member cluster '*string*'

Cause: An attempt to modify the member cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information about the reason for the failure, as well as check the accompanying error messages.

OCI-59511: member cluster '%0!s' already configured with disk access mode '%1!s'

Cause: An attempt to modify the member cluster failed because it was already configured with the specified disk access mode.

Action: No action is required.

OCI-59512: The specified Oracle IO Server instance '%0!s' does not exist.

Cause: The specified Oracle IO Server instance did not exist or was terminated.

Action: Issue the 'srvctl status ioserver' command to list the active Oracle IO Server instances. Specify a valid Oracle IO Server instance name and retry the command.

OCI-59513: Rejected a request to relocate the client to Oracle Automatic Storage Management (ASM) instance *string*.

Cause: The request to relocate the client was rejected because either the client or the ASM instance with the client connection was not running in Flex Mode.

Action: Check the configuration of both instances.

OCI-59514: The command is not supported on a storage server.

Cause: An attempt was made to run a command that was not supported on a storage server.

Action: Rerun the command on a member cluster.

OCI-59515: The service name was missing from the command for relocation.

Cause: The command for relocation was specified without the service name which is an invalid format.

Action: Specify a valid Oracle service name and instance name and retry the command: ALTER SYSTEM RELOCATE CLIENT TO <service_name/target_id>

OCI-59516: Could not connect to an IOS instance.

Cause: The instance failed to perform the specified operation because it could not locate a required IOS instance.

Action: Start the required IOS instance before starting the database instance.

OCI-59517: The command is not supported on an ACC.

Cause: An attempt was made to run a command that was not supported on ACC (ASM Client Cluster).

Action: No action is required.

OCI-59518: Client instance %0!s is already connected to this Oracle Automatic Storage Management (Oracle ASM) instance.

Cause: A connection already existed from an ASM Background (ASMB) process to this Oracle ASM instance and was still active.

Action: No action is needed unless the problem keeps recurring. The connection information may not yet be shared between ASMB processes attempting to connect to this Oracle ASM instance. The connection information is automatically shared. If the issue persists, contact Oracle Support.

OCI-59519: Deletion of the last set of credentials is not allowed.

Cause: An attempt was made to delete the last set of credentials.

Action: Add new credentials and then retry the operation.

OCI-59521: Existing client instance %0!s is connected to this Oracle ASM instance.

Cause: A connection already existed from the same client instance to this Oracle Automatic Storage Management (Oracle ASM) instance, but with a different version.

Action: Ensure that no other client instances with the same instance, database, and cluster name exist in the cluster.

OCI-59522: cannot open control file %0!s in disk group %1!s

Cause: The control file was already opened by another client in the cluster and the CLUSTER_DATABASE parameter was set to FALSE in either instance, or the old client resources were being cleaned.

Action: Ensure that the control file is not shared between two instances or, in case of Oracle Real Application Clusters, have all instances set the CLUSTER_DATABASE to TRUE. Once the configuration has been checked, and fixed if appropriate, retry the operation.

OCI-59523: Instance name '%0!s' is too long.

Cause: The specified instance name was more than 30 characters.

Action: Ensure that the INSTANCE_NAME parameter has a maximum length of 30 characters.

OCI-59600: file %0!s has too many mirror copies; %1!s needed, %2!s allowed

Cause: The specified file had too many mirror copies when the change was requested.

Action: To resolve the issue, try one of the following: - Retry the command by using a lower target number of copies. - If preparing a mirror split, reduce the file's current number of copies and retry the command, - If the sum of the file's current number of copies, plus the additional number of copies requested by the command does not exceed the number of mirror copies allowed, then wait for the BALANCE phase of the rebalance operation to complete. Finally, retry the command. Refer to the error message for the number of mirror copies allowed.

OCI-59601: A file group redundancy cannot be modified when it is associated with a volume.

Cause: An attempt was made to modify the redundancy of a file group that was associated with an Oracle Automatic Storage Management (Oracle ASM) volume. The Oracle ASM disk group compatible.advm attribute is lower than 18.0, and the file group contained at least one file.

Action: Update the Oracle ASM disk group compatible.advm attribute to a value equal or higher than 18.0 and then retry the operation.

OCI-59602: moving Oracle ASM internal files to a file group is not allowed

Cause: An attempt was made to issue an ALTER DISKGROUP MOVE FILE TO FILEGROUP statement on a metadata file used by Oracle Automatic Storage Management (Oracle ASM) to manage the disk group.

Action: Do not attempt to move Oracle ASM internal files to a file group because it is not allowed.

OCI-59603: This operation requires all disks in disk group *string* to be online.

Cause: An attempt was made to modify the redundancy of a file group when some disks were offline.

Action: Drop the offline disks and wait for the rebalance operations to complete, or online the offline disks and wait for the online operation to complete. Then retry the operation.

OCI-59604: offline disks encountered during rebalance of disk group '*string*'

Cause: Rebalance was run in the presence of offline disks.

Action: Bring the offline disks online.

OCI-59605: File '*string*' not available. File group '*string*' has too many disks offline.

Cause: A file identify operation failed because the file group specified was no longer available.

Action: Consult V\$ASM_DISK_STAT to find out which disks are offline, online or drop those which are offline, and then retry the command.

OCI-59606: Cannot change redundancy of individual file types in file groups associated with a volume.

Cause: Attempted to modify the redundancy of one or more file types in a file group associated with an Oracle Automatic Storage Management (Oracle ASM) volume.

Action: Change the redundancy of the entire file group and not just the redundancy of the individual file types.

OCI-59607: COMPATIBLE.CLIENT property requires FORCE option for modifications

Cause: An attempt was made to modify the COMPATIBLE.CLIENT property of a file group without the FORCE option.

Action: Be aware that the COMPATIBLE.CLIENT property cannot be downgraded under any circumstances. Caution should be exercised when manually modifying this property. If the change is still required, use the FORCE option to override this check and then retry the operation.

OCI-59608: FORCE option cannot be used for file group property 'string'

Cause: An attempt was made to use the FORCE option on a property that does not allow it.

Action: Remove the FORCE option and try again.

OCI-59609: cannot move a file that has prepared mirror copies

Cause: An attempt was made to move a file that has a prepared mirror copy.

Action: Create another database using the existing mirror copy or drop the existing mirror copy and wait for the rebalance operations to complete. Then, retry the operation.

OCI-59610: The database version %0!s is incompatible with file group %1!s'.

Cause: The COMPATIBLE parameter for the Oracle Database instance was lower than the value of the COMPATIBLE.CLIENT property for the file group.

Action: Update the COMPATIBLE parameter for the client instance to a version greater than or equal to the COMPATIBLE.CLIENT version.

OCI-59611: PARITY requires COMPATIBLE.RDBMS parameter of %0!s or higher for the ASM disk group

Cause: An attempt was made to create, open, or modify a file(group) using a redundancy setting of PARITY while the COMPATIBLE.RDBMS parameter of the ASM disk group was set to a version that did not support PARITY protection.

Action: Change the COMPATIBLE.RDBMS parameter to match the minimum required version that supports PARITY protection (if the database version is similar or higher), or specify a redundancy setting other than PARITY in the statement.

OCI-59612: file group %0!s' is not a template file group

Cause: The file group specified in the FROM TEMPLATE clause was not of TEMPLATE client type.

Action: Specify a TEMPLATE file group in the FROM TEMPLATE clause so that the newly created file group can inherit its properties from the TEMPLATE file group.

OCI-59613: file group requires rebalance completion

Cause: An attempt was made to modify the redundancy of a file group. ASM could not perform the operation because of the current state of the disk group.

Action: Allow the rebalance to run to completion. After the rebalance has completed, retry the operation.

OCI-59614: Oracle ASM file group of pluggable database %0!s' was not dropped.

Cause: Oracle Automatic Storage Management (Oracle ASM) did not drop the file group associated with a pluggable database that was dropped, either because an error was encountered or because the file group contained other files.

Action: Check the Oracle ASM alert log for any errors encountered while dropping the file group. Fix the underlying problem and drop the file group using the ALTER DISKGROUP DROP FILEGROUP command from the Oracle ASM instance. Alternatively, query V\$ASM_FILEGROUP_FILE to determine which files, if any, remain in the file group. Delete the files or move them to another file group using the ALTER DISKGROUP MOVE FILE command from the Oracle ASM instance.

OCI-59615: Oracle ADVM volume files of Oracle ASM file group '%0!s' cannot be deleted using the DROP FILEGROUP command with the CASCADE option

Cause: An attempt was made to drop cascade an Oracle Automatic Storage Management (Oracle ASM) file group that still contains files in it. File groups associated to a volume should not be cascade dropped.

Action: Drop the volume files by dropping the volume. If the files are not part of any volume and were moved into this file group, drop the files before dropping the file group.

OCI-59700: Failgroup *string* already belongs to site *string*

Cause: An attempt was made to add the specified failgroup to more than one site.

Action: Retry the operation providing the correct failgroup name and the site name while specifying the disk.

OCI-59701: Incorrect number of data sites *string* specified. Maximum allowed: *string*.

Cause: An attempt was made to create an extended redundancy disk group with an invalid number of sites.

Action: Retry the operation specifying valid number of sites in the disk group.

OCI-59702: Incorrect number of quorum sites *string* specified. Maximum allowed: *string*.

Cause: An attempt was made to create an extended redundancy disk group with an invalid number of sites.

Action: Retry the operation specifying valid number of sites in the disk group.

OCI-59703: Inconsistent site information in disk '*string*'

Cause: The site information stored in the disk header did not match disk group information.

Action: Drop the disk from the disk group or provide a site name that matches the site stored in the disk header.

OCI-59704: command requires at least *string* data sites and *string* quorum sites, discovered *string* data sites and *string* quorum sites

Cause: An insufficient number of sites were specified and discovered when creating an extended redundancy disk group.

Action: Check that the command specifies the required number of data sites and quorum sites, and that all of the specified disks are discovered by ASM. A query of the V\$ASM_DISK fixed view shows the disks discovered by ASM.

OCI-59705: Dropping a site is not allowed.

Cause: An attempt was made to drop a site.

Action: Set the disks of the given site offline with 'ALTER DISKGROUP *dg* OFFLINE DISK *disk*' command.

OCI-59706: The specified allocation unit size '*string*' is less than the minimum required for extended disk groups.

Cause: Extended disk groups required the allocation unit size to be at least 4M.

Action: Change the allocation unit size to at least 4M and retry.

OCI-59707: Site "*string*" does not exist in disk group "*string*".

Cause: The specified name did not match the site of any disks in the disk group. This usually indicates that the site name was specified incorrectly.

Action: Check the site name.

OCI-59708: Cluster site operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

OCI-59709: No site identified for the disk *string*

Cause: The disk did not belong to any site.

Action: Specify the site information in the SQL command. In the case of an ASM appliance, `cellcli` command can also be used to record the site information for the disk. For non-appliance, `asmcmd` can be used.

OCI-59710: site information mismatch between disk group *string* and disk *string*

Cause: The site information attribute of the specified disk did not match with the existing disks in the disk group.

Action: Ensure that new disks have the correct site information specified similar to existing disks. All disks in the disk group should have either no site information or the correct site information specified.

OCI-59711: The site identified by GUID '*string*' does not exist.

Cause: An attempt to retrieve a site failed because there wasn't a configured site using the indicated Globally Unique Identifier.

Action: Add the indicated site using the command '`crsctl add cluster site site -guid guid`'. Retry the original command. If retrying does not work, contact Oracle Support Services.

OCI-59712: The site identified by site name '*string*' does not exist.

Cause: An attempt to retrieve a site failed because there wasn't a configured site using the indicated site name.

Action: Add the indicated site using the command '`crsctl add cluster site site`'. Retry the original command. If retrying does not work, contact Oracle Support Services.

OCI-59713: The site name '*string*' does not exist in the disk group '*string*'.

Cause: An attempt was made to add a disk with a new site name to a disk group, which is not allowed.

Action: Change the site name to an existing one in the disk group and retry.

OCI-59714: invalid site name '*string*' specified.

Cause: An invalid site name was supplied.

Action: Specify a site name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

OCI-59715: missing site information in disk group '*string*'

Cause: The site information was not present in all the disks of the disk group.

Action: Specify sites for the disks using the 'asmcmd rename' command or using SQLPLUS and retry the operation.

OCI-59716: dropping all disks of the quorum site is not allowed

Cause: Dropping of the specified disks resulted in the loss of the quorum site. If only a subset of disks in the quorum site are specified, then check the state of other disks in the V\$ASM_DISK view.

Action: Modify the command to retain at least one disk in the quorum site and retry the operation.

OCI-59717: rebalance could not complete due to an unavailable site in disk group '*string*'

Cause: At least one of the sites had each disk in either dropping or forcing state.

Action: Undrop the dropping disks or add disks to the site.

OCI-59718: One or more disks are identified with a foreign site GUID '*string*'.

Cause: The indicated site GUID was not associated with any of the configured sites.

Action: Execute the command 'crsctl query cluster site -all' to list the existing sites. Associate the indicated site GUID with a site using 'crsctl modify cluster site *site* -addguid *guid*' and retry the operation.

OCI-59719: disk group '*string*' mounted but contains foreign site GUIDs

Cause: An attempt was made to mount a disk group with foreign site GUIDs.

Action: This is a warning. Examine the accompanying error messages for details.

OCI-59720: data sites in disk group *string* have a different number of fail groups.

Cause: An attempt was made to create a disk group with a different number of fail groups at each data site.

Action: Ensure that the data sites have an equal number of fail groups and try again.

OCI-59800: active use of disk '*string*' precludes its label clear

Cause: A LABEL CLEAR command specified a disk that was in use.

Action: Dismount the disk group that is using this disk and retry the LABEL CLEAR command. Query the V\$ASM_CLIENT fixed view in an Oracle Automatic Storage Management (Oracle ASM) instance or use ASMCMD LSOFF to list active clients. *Params: 1) disk_name: Path name of the disk specified for the label clear operation.

OCI-59801: Oracle ASMFD is not configured in the system.

Cause: An Oracle ASM Filter Driver (Oracle ASMFD) command was run without either an Oracle ASMFD library present or kernel driver loaded.

Action: Use the command ASMCMD AFD_STATE to find the status of Oracle ASMFD.

OCI-59850: all disks in disk group '*string*' need to be online

Cause: One or more disks in the disk group were offline.

Action: Online the disks that are offline.

OCI-60001 to OCI-65535

OCI-60001: adding (*string*) blocks to save undo segment in tablespace *string* with MAXSIZE (*string*)

Cause: Save undo for the offline tablespace at segment MAXSIZE.

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied.

OCI-60002: adding (*string*) blocks to temporary segment in tablespace *string* with MAXSIZE (*string*)

Cause: Extending a temporary segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60003: adding (*string*) blocks to table *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending a table partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60004: adding (*string*) blocks to table *string.string* with MAXSIZE (*string*)

Cause: Extending a table violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60005: adding (*string*) blocks to cluster *string.string* with MAXSIZE (*string*)

Cause: Extending a cluster violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60006: adding (*string*) blocks to index *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending an index partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60007: adding (*string*) blocks to index *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending an index subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60008: adding (*string*) blocks to index *string.string* with MAXSIZE (*string*)

Cause: Extending an index violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60009: adding (*string*) blocks to LOB segment *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60010: adding (*string*) blocks to LOB segment *string.string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60011: adding (*string*) blocks to lob segment *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60012: adding (*string*) blocks to table *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending a table subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60013: invalid MAXSIZE storage option value

Cause: Invalid value was specified for MAXSIZE storage clause.

Action: Correct the value and retry command.

OCI-60014: invalid MAXSIZE storage option value

Cause: Minimum of 1M should have been specified against the MAXSIZE storage clause.

Action: Correct the value and retry command.

OCI-60015: invalid RETENTION storage option value

Cause: Value of MIN retention should have been nonzero.

Action: Correct the value and retry command.

OCI-60016: The ALTER FREELIST/RETENTION operation is not supported on a SECUREFILE segment.

Cause: The ALTER FREELIST/RETENTION operation is not supported on a SECUREFILE segment.

Action: Check the LOB type and retry.

OCI-60018: adding *string* blocks to rollback segment *string* with MAXSIZE (*string*)

Cause: Extending a rollback segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

OCI-60019: Creating initial extent of size *string* in tablespace of extent size *string*

Cause: Creation of SECUREFILE segment failed due to small tablespace extent size.

Action: Create tablespace with larger extent size and reissue command.

OCI-60025: Event for temp segment cleanup used for temp lobs

Cause: Temp LOB segments used for temporary LOBs are deleted only on session exit which may lead to large amounts of memory being held across multiple sessions.

Action: Setting this event will cause temporary LOB segments to be freed when there are no active temporary LOBs in the session. Setting this event will have a significant performance impact as it can cause temporary lob segments to be allocated and deleted many times during a session rather than once per session. Use this event only when temporary LOB segment memory use is an issue.

OCI-60072: adding (*string*) blocks to heat map segment with MAXSIZE (*string*)

Cause: Extending the heat map segment violated the MAXSIZE limit.

Action: Increase the MAXSIZE limit.

OCI-60073: Heat map segment cannot be created

Cause: SYSAUX tablespace has uniform extent allocation and the extent size is not a multiple of megabyte.

Action: Re-create SYSAUX tablespace with autoallocate extent management policy or use the uniform extent size which is a multiple of megabyte.

OCI-60082: incorrect tablespace specified

Cause: Clear free space operation was used on the temporary, undo, or SYSTEM tablespace, which was not supported.

Action: Check the tablespace type and reissue the statement.

OCI-60084: inmemory_xmem_size specified is less than a minimum of (*string*) bytes

Cause: inmemory_xmem_size was less than the minimum expected by the system.

Action: Issue the command after changing the value for the inmemory_xmem_size parameter.

OCI-60085: invalid combination of parameters passed to the DBMS_SPACE_ADMIN function

Cause: Object ID could not be specified for undo or save undo segments.

Action: Issue the command after changing the value for the parameters.

OCI-60100: dropping temporary tablespace with tablespace ID number (*tsn*) *string* is blocked due to sort segments

Cause: The temporary tablespace had sort segments in use.

Action: Wait for sort segments to complete or terminate sort session and then retry dropping the temporary tablespace.

OCI-60209: invalid value *string* for parameter *string*; must be smaller than *string*%% of available SYSTEM temporary space

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

OCI-60210: specified data file or temporary file size exceeded the maximum allowed size

Cause: An attempt was made to resize the data file or temporary file with a value beyond the maximum allowed file size (MAXSIZE).

Action: Try with a value smaller than the maximum allowed file size (MAXSIZE).

OCI-60300: cannot use virtual column as ORDER BY or FILTER BY column of domain index

Cause: An attempt was made to create a composite domain index by specifying a virtual column as an ORDER BY or FILTER BY column.

Action: Remove the virtual column from the CREATE INDEX statement.

OCI-60301: cannot create sharded local domain index with indextype *string.string*

Cause: An attempt was made to create local domain indexes on sharded tables that were only allowed for a subset of native indextypes.

Action: Do not create a local domain index on sharded table with this indextype.

OCI-60302: Partition maintenance operation cannot affect more than *string* partitions in presence of local domain indexes.

Cause: An invalid number of partitions were specified for a partition maintenance operation. A partition maintenance operation can only affect a maximum number of partitions when there is a local domain index on the table: - One partition or subpartition for ADD PARTITION or ADD SUBPARTITION. - One partition or subpartition for DROP PARTITION or DROP SUBPARTITION. - One partition or subpartition for TRUNCATE PARTITION or TRUNCATE SUBPARTITION. - Two source partitions or subpartitions for MERGE PARTITION or MERGE SUBPARTITION. - Two target partitions or subpartitions for SPLIT PARTITION or SPLIT SUBPARTITION.

Action: Modify the partition maintenance operation to affect only the allowed number of partitions or subpartitions, and then retry the statement. *Params: 1) maximum_affected_partitions: The maximum number of affected partitions allowed for a partition maintenance operation on a table having a local domain index.

OCI-60303: unsupported partitioning scheme for local domain indexes

Cause: The creation of local domain index was not supported for the partitioning scheme of the base table. For referenced partitioned base tables, the parent table was using an unsupported partitioning scheme for local domain indexes.

Action: Perform one of the following to resolve the error: - Modify the partitioning scheme of the table to a supported partitioning scheme for local domain indexes. - Attempt to create a global non-partitioned domain index on this table. - Do not create a local domain index on this table.

OCI-60304: Cannot modify partitioning scheme of local domain index *string.string*.

Cause: An attempt was made to modify the partitioning scheme of a table with a local domain index to an unsupported configuration.

Action: Do not modify the partitioning scheme of the base table. *Params: 1) index_schema: The schema of the local domain index. 2) index_name: The name of the local domain index.

OCI-60305: cannot change partitioned table with local domain index *string.string* into non-partitioned table

Cause: An attempt was made to change a partitioned table with local domain indexes into a non-partitioned table.

Action: Do not change the partitioned table into a non-partitioned table or drop any domain indexes before attempting the operation.

OCI-60306: ARRAY DML type *string.string* of indextype must be a VARRAY

Cause: An attempt was made to use a type that was not a VARRAY in the ARRAY DML clause of the CREATE INDEXTYPE or ALTER INDEXTYPE statement.

Action: Specify a VARRAY type as the collection type in the ARRAY DML clause of the CREATE INDEXTYPE or ALTER INDEXTYPE statement. *Params: 1) type_schema: The schema of the type in the ARRAY DML clause. 2) type_name: The name of the type in the ARRAY DML clause.

OCI-60307: Could not validate return type of generic pipelined table function *string*.

Cause: The ANYTYPE description of the generic pipelined table function was not found, or it did not describe a collection type.

Action: Verify that the ODCITABLEDESCRIBE method of the generic pipelined table function is correct and describes a valid collection type. *Params: 1) function_name: The name of the pipelined table function.

OCI-60308: mismatched data type descriptor from opaque object instance

Cause: The data type descriptor returned by the ODCITableFetch interface inside an ANYDATA or ANYDATASET instance did not match the output data type described by the ODCITableDescribe interface.

Action: Verify the implementation of the ODCITableFetch and ODCITableDescribe interfaces and ensure the output data type is consistent during the describe phase and the fetch phase.

OCI-60309: cannot use a BOOLEAN type column as ORDER BY or FILTER BY column of domain index

Cause: An attempt was made to create a composite domain index with a FILTER BY or ORDER BY column of BOOLEAN data type.

Action: Remove the column from the CREATE INDEX statement.

OCI-60310: The collection image of type *string.string* is invalid.

Cause: An attempt was made to read a degenerate collection image or the collection image was not constructed correctly.

Action: Contact Oracle Support. *Params: 1) type_schema: The schema of the collection type. 2) type_name: The name of the collection type.

OCI-60311: The privilege that can be granted or revoked on operator type is EXECUTE

Cause: An attempt was made to grant or revoke an invalid privilege on operator. You can only grant or revoke the EXECUTE object privilege on operator.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE on operator.

OCI-60312: The privilege that can be granted or revoked on indextype is EXECUTE.

Cause: An attempt was made to grant or revoke an invalid privilege on indextype. You can only grant or revoke the EXECUTE object privilege on indextype.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE on indextype.

OCI-60400: Had error executing RMAN. Error code: *string*

Cause: Had error either when spawning a process to execute RMAN commands or getting RMAN process exit status.

Action: Check the error code and RDBMS logs.

OCI-60401: RMAN exited with status: *string*, more details are available in the RMAN output file: *string*

Cause: RMAN process exited with non-zero status.

Action: Check RMAN output log.

OCI-60402: Failed to read RMAN output from scheduler backup job. Log file: *string*

Cause: An error occurred when reading a RMAN output file.

Action: Check RDBMS logs.

OCI-60403: Internal error: database connection should be to the shard PDB when PDB name is not provided

Cause: An error occurred when updating a sharded database backup wallet.

Action: Check RDBMS logs.

OCI-60404: Internal error: database connection should be to the CDB when the shard PDB name is provided

Cause: An error occurred when updating a sharded database backup wallet.

Action: Check RDBMS logs.

OCI-60405: Internal error: Failed to update backup wallet

Cause: An error occurred when updating a sharded database backup wallet.

Action: Check RDBMS logs.

OCI-60406: HOST command is not supported when the RMAN command is submitted from GDSCTL command interface.

Cause: RMAN command HOST was submitted from GDSCTL.

Action: Remove the HOST command from the RMAN commands to submit.

OCI-60450: transaction ID specified is not quarantined

Cause: The transaction ID (*usnslotsqn*) specified in the command is not quarantined.

Action: Provide the correct transaction ID. Quarantined transaction details can be found in DBA_QUARANTINED_TRANSACTIONS. This DDL must be run from the container in which the quarantine is present.

OCI-60451: cannot execute the DML because it encountered a quarantined transaction (*string.string.string*) holding a row lock (TX) required by this statement

Cause: A quarantined transaction holding a conflicting transaction lock failed to recover.

Action: Resolve the transaction quarantine by following the recommended steps in the Oracle documentation and drop it using the DDL command ALTER DATABASE DROP TRANSACTION QUARANTINE.

OCI-60470: compatible must be set to 23.0.0.0.0 or higher in order to set max_columns=EXTENDED

Cause: Setting the parameter max_columns=EXTENDED required the compatible initialization parameter to be set to Oracle Database 23.0.0.0.0 compatibility or higher. The compatible initialization parameter is currently not set to release 23.0.0.0.0 or a later version.

Action: Set the compatible parameter in initialization parameter file to release 23.0.0.0.0 or later version.

OCI-60471: max_columns can not be set to STANDARD as there are one or more objects with more than 1000 columns

Cause: Setting the parameter max_columns to STANDARD is not possible because there are existing objects with more than 1000 columns.

Action: Remove all objects with more than 1000 columns prior to setting max_columns to STANDARD. To identify all objects with more than 1000 columns, issue the following query: select distinct owner, table_name from dba_tab_columns where column_id > 1000;

OCI-60480: undo segment file at PDB: string, TSN: string, DBA:0xstring cannot be read

Cause: An attempt to read a undo segment file failed because the file was dropped or it was never created.

Action: Create a valid undo segment file.

OCI-60490: Parameter string cannot be modified.

Cause: An attempt to update the parameter failed because it was allowed only in Oracle Autonomous Database on Shared Infrastructure(ADB-S).

Action: Refer Oracle Database documentation for the right parameter to use.

OCI-60491: Parameter string conflicts with string parameter.

Cause: An attempt to update the parameter failed because it conflicts with the other parameter.

Action: Refer Oracle Database documentation for valid value.

OCI-60500: invalid refresh SCN string specified

Cause: An attempt was made to refresh the pluggable database to a system change number (SCN) that was less than or equal to the last refresh SCN.

Action: Reissue the statement with a valid SCN number.

OCI-60501: insufficient disk space

Cause: There was insufficient disk space at the specified location.

Action: Free some disk space.

OCI-60502: string is the wrong type of pluggable database

Cause: A list of pluggable databases was given to a command but the named one is not of the same type as the earlier ones in the list. The different types are Data Guard pluggable databases and non Data Guard pluggable databases.

Action: Resubmit the command naming only pluggable databases that are of one type or the other.

OCI-60503: remote site *string* not found

Cause: An attempt was made to create a standby pluggable database before the remote site had been defined.

Action: Check the known remote databases and use Data Guard Broker to add any missing site.

OCI-60504: Missing credential for remote site *string*

Cause: The credential required to access the remote site could not be found.

Action: Use Data Guard Broker to confirm the validity of the remote site.

OCI-60505: unable to refresh the pluggable database

Cause: An attempt was made to refresh a pluggable database (PDB) using a catalog without specifying the source database link name.

Action: Retry the operation with the USING *dblink* clause.

OCI-60506: operation not allowed for standby pluggable database *string*

Cause: An attempt was made to perform an operation on a standby pluggable database (PDB) that was not appropriate for such a PDB.

Action: Perform the operation against a normal pluggable database or do not perform the operation at all.

OCI-60507: invalid refresh time *string* specified

Cause: An attempt was made to refresh the pluggable database to a time that was less than or equal to the last refresh time.

Action: Reissue the statement with a valid time.

OCI-60508: invalid refresh SCN *string* specified. Max possible refresh SCN *string*

Cause: An attempt was made to refresh the pluggable database to a system change number (SCN) that was greater than the source Container Database's (CDB) current SCN or the maximum SCN of the archive logs available in the refresh catalog or in the `remote_recovery_file_dest`

Action: Reissue the statement with a valid SCN number or refresh without the UNTIL SCN clause.

OCI-60509: invalid refresh time *string* specified. Max possible refresh time *string*

Cause: An attempt was made to refresh the pluggable database to a time that was greater than the source Container Database's (CDB) current time or the maximum time of the archive logs available in the refresh catalog or in the `remote_recovery_file_dest`

Action: Reissue the statement with a valid time or refresh without the UNTIL TIME clause.

OCI-60510: encountered an error during Replay Upgrade

Cause: An error was encountered during Replay Upgrade of a pluggable database (PDB).

Action: Open the PDB in upgrade mode and query the DBA_REPLAY_UPGRADE_ERRORS view to find the statement text and error explanation.

OCI-60511: missing or invalid application name

Cause: A valid application name was not present where required.

Action: Reissue the statement with a valid application name.

OCI-60512: invalid source for a standby pluggable database

Cause: An attempt was made to create a standby pluggable database from an inappropriate source pluggable database, such as an existing standby pluggable database.

Action: Retry the command using an appropriate pluggable database for the source pluggable database.

OCI-60513: cannot synchronize an application version or patch that is blocked

Cause: An attempt was made to synchronize an application version or patch that was blocked.

Action: Unblock the application version or patch. Query DBA_APP_VERSIONS or DBA_APP_PATCHES to find the version or patch that is blocked.

OCI-60514: implicit application common user cannot own common objects

Cause: An attempt was made to set the sharing status to metadata, data, or extended data on an object owned by an implicit user.

Action: Do not attempt to set the sharing status to metadata, data, or extended data on an object owned by an implicit user.

OCI-60515: standby pluggable database *string* requires more recovery

Cause: An attempt was made to open a standby pluggable database (PDB) before recovery had applied sufficient redo from the primary to make the PDB consistent.

Action: Open the primary pluggable database, ensure redo shipping is enabled to the standby, and start managed recovery for the standby PDB. Allow recovery to catch up. Then cancel it and attempt the open operation again.

OCI-60516: Pluggable database (PDB) *string* has a per PDB physical standby

Cause: An attempt was made to drop a pluggable database (PDB) that was protected by one or more per PDB physical standbys.

Action: If the operation is really required then either drop the per PDB physical standby databases first, or perform a role transition to switch the PDB into a per PDB physical standby and then drop it.

OCI-60517: Unimplemented operation for pluggable database *string*

Cause: An attempt was made to perform an operation on the pluggable database (PDB) that had not yet been implemented.

Action: If the operation is unplug for a PDB that has one or more per PDB physical standbys then drop the standby PDBs first and then try operation again.

OCI-60518: cannot enable supplemental logging on PDB without local undo enabled

Cause: Local undo mode was disabled.

Action: Enable local undo mode before enabling per pluggable database (PDB) supplemental logging.

OCI-60519: encountered an error during application sync

Cause: An error was encountered during application sync.

Action: Query the DBA_APP_ERRORS view to find the statement text and error explanation.

OCI-60520: unable to switchover when a TDE SEPS wallet is not configured

Cause: This operation could not be completed because Transparent Data Encryption (TDE) Secure External Password Store (SEPS) wallet was not configured.

Action: Configure the TDE SEPS wallet before attempting this operation again.

OCI-60521: operation not allowed due to lockdown

Cause: Lockdown is enforced to disallow the operation, as configured by the administrator.

Action: For cloud services please consult the list of allowed operations in the documentation. For non-cloud systems please consult with your database administrator.

OCI-60522: unable to create pluggable database using XML

Cause: An attempt was made to create a pluggable database using XML with a fuzzy data file.

Action: Create a refresh clone using XML.

OCI-60523: invalid pluggable database name specified for root clone

Cause: The pluggable database specified for USING ROOT CLONE was either nonexistent or not a root clone.

Action: Reissue the statement with a valid pluggable database name.

OCI-60524: too many database links in use

Cause: The pluggable database exceeded the maximum open links.

Action: Free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

OCI-60526: cannot switch to shared undo mode when perPDB supplemental logging is enabled

Cause: Supplemental logging is disabled at CDB\$ROOT container but enabled at pluggable databases (PDBs). Switching to shared undo mode would cause PDB-level supplemental logging to be lost.

Action: Enable supplemental logging at CDB\$ROOT or drop supplemental logging at all pluggable databases (PDBs).

OCI-60527: cannot externally modify partition containing dblink

Cause: An attempt was made to external modify a partition containing a dblink.

Action: External Modify is not allowed for a partition containing a dblink.

OCI-60528: operation not supported for a PET having all dblink partition

Cause: An attempt was made to perform an operation on a Partition External Table (PET) having all dblink partition.

Action: Do not perform the unsupported operation.

OCI-60529: more than one database link specified

Cause: Only one value of database link is allowed for database link location.

Action: Specify single database link.

OCI-60530: cannot exchange partition containing dblink

Cause: An attempt was made to exchange a partition containing a dblink

Action: Exchange is not allowed for a partition containing a dblink.

OCI-60531: operation not supported on a PDB that is not marked ACTIVE

Cause: An attempt was made to modify a property for a pluggable database (PDB) that is not ACTIVE.

Action: Verify the status of the PDB in DBA_PDBS and retry the operation after transitioning the PDB to ACTIVE.

OCI-60532: A static lockdown profile cannot be created from dynamic lockdown profile *string*.

Cause: An attempt to create a static lockdown profile from a dynamic lockdown profile was made.

Action: Create a dynamic profile from this profile or create a new profile.

OCI-60533: Common user or role names must consist of only ASCII characters.

Cause: An attempt is being made to create a common user or role with a name that is not valid for common users or roles. In addition to the usual rules for user and role names, common user and role names must consist of only ASCII characters.

Action: Specify a valid common user or role name consisting of only ASCII characters.

OCI-60534: Application common user or role name must not start with prefix *string*.

Cause: An attempt is being made to create an application common user or role with a prefix as specified in the COMMON_USER_PREFIX parameter set in CDB\$ROOT or with a prefix that is reserved for multitenant container database (CDB) common users ({{cC}}##).

Action: Specify a valid application common user or role name with a prefix as specified in the COMMON_USER_PREFIX parameter set in application root. If COMMON_USER_PREFIX is not set in application root, do not specify a prefix that matches with COMMON_USER_PREFIX parameter set in CDB\$ROOT or that matches with the prefix reserved for CDB common users ({{cC}}##). *Params: 1) common_user_prefix: The value of COMMON_USER_PREFIX parameter set in CDB\$ROOT or prefix reserved for CDB common users ({{cC}}##).

OCI-60535: invalid identifier

Cause: The identifier or column name entered was invalid.

Action: Ensure the following: - Enter a valid identifier or column name and verify that there are no typos in the identifier or column name. A valid identifier must begin with a letter, be less than or equal to 128 characters, and consist of only alphanumeric characters and the

special characters \$, _, and #. If it contains other characters, then it must be enclosed in double quotation marks. - It must not be a reserved word unless it is enclosed in double quotation marks. - If double quotation marks and mixed case were used for a column name when creating the table, then references to that column must use matching case and quotation marks.

OCI-60540: invalid program

Cause: An attempt was made to alter a lockdown profile without specifying a valid program name.

Action: Specify a valid program name while altering the lockdown profile.

OCI-60541: invalid subprogram: *string*

Cause: An attempt was made to alter a lockdown profile with an invalid subprogram name.

Action: Specify a valid subprogram name while altering the lockdown profile

OCI-60542: invalid schema: *string*

Cause: An attempt was made to alter a lockdown profile with an invalid schema name.

Action: Specify a valid schema name while altering the lockdown profile.

OCI-60543: invalid type: *number*

Cause: An attempt was made to alter a lockdown profile with an invalid type.

Action: Specify a valid type name (for example package, function or procedure) while altering the lockdown profile.

OCI-60544: invalid program: *string*

Cause: An attempt was made to alter a lockdown profile with an invalid program name which does not exist in schema.

Action: Specify a valid program name while altering the lockdown profile.

OCI-60545: execution of *string* disabled via lockdown profile

Cause: An attempt was made to execute/recreate program (for example package, function or procedure) which is part of lockdown profile applied on Pdb.

Action: Enable program by altering the lockdown profile then retry operation.

OCI-60546: program: *string* is not a oracle supplied CDB common object

Cause: An attempt was made to alter a lockdown profile with a container database (CDB) local object.

Action: Lockdown profile is only applicable with oracle supplied CDB common object. Specify a oracle supplied CDB common object

OCI-60547: PDB *string(string)* is not consistent; either flashback the CDB to any SCN or recover the CDB to at least SCN *string*.

Cause: The pluggable database (PDB) metadata in the control file is not consistent for open resetlogs.

Action: Either recover the container database (CDB) further until the control file is consistent or flashback the container database (CDB) to a past point-in-time. If

flashback is not enabled, you can also restore the control file from an older backup and repeat recovery.

OCI-60548: unable to set ROUTE_OUTBOUND_CONNECTIONS property

Cause: An attempt was made to set the ROUTE_OUTBOUND_CONNECTIONS property from within a pluggable database (PDB) that was not created as a private endpoint (PE) enabled database.

Action: If you are attempting to set the ROUTE_OUTBOUND_CONNECTIONS property, ensure that the PDB is private endpoint (PE) enabled and retry the operation.

OCI-60549: Cannot unplug pluggable database *string*

Cause: An attempt is being made to unplug a pluggable database (PDB) that was created as a snapshot clone.

Action: Materialize the snapshot PDB if it needs to be unplugged.

OCI-60600: maximum number of columns in a table or view is 1000

Cause: An attempt was made to create a table or view with more than 1000 columns, or to add more columns to a table or view which pushes it over the maximum allowable limit of 1000. Note that unused columns in the table are counted toward the 1000 column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are three options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit. 3) Increase compatibility to 23.1

OCI-60700: parameter '*string*' is not user modifiable

Cause: An attempt was made to set a parameter that should not be modified (via ALTER statement) or set (in parameter file) directly by the administrator. The parameter will be managed internally by Oracle.

Action: Do not attempt to set this parameter directly. If the parameter is set inside the text parameter file (PFILE), remove the entry. If the parameter was set inside the SPFILE, create a pfile, remove the parameter entry and recreate a new SPFILE using the edited pfile.

*Params: 1) parameter_name: The name of the parameter which cannot be set directly by the administrator.

OCI-61700: JSON Duality View collection "*string*" metadata component value must be "*string*"

Cause: Invalid JSON Duality View collection metadata component value was specified.

Action: Specify a valid JSON Duality View collection metadata component value.

OCI-61701: Metadata component "*string*" is not supported for a JSON Duality View collection

Cause: An unsupported metadata component was specified for a JSON Duality View collection.

Action: Ensure only supported metadata components are specified for a JSON Duality View collection.

OCI-61702: The column of the table or view underlying the collection cannot be renamed.

Cause: The table or view could not be altered. There could be uncommitted writes to the collection.

Action: Ensure that all writes to the collection are committed.

OCI-61703: invalid column name prefix

Cause: The specified column name prefix was invalid.

Action: Ensure that the column name prefix is specified correctly. It can not exceed 128 characters nor contain double quotation marks.

OCI-61704: TTL value in index specification must be greater than or equal to 0.

Cause: An invalid Time-To-Live (TTL) value was specified in the index specification.

Action: Specify an integer greater than 0 for the TTL value.

OCI-61705: Only TIMESTAMP data type is supported for TTL indexes.

Cause: The data type of the column was not supported by Time-To-Live (TTL) indexes.

Action: Choose a column of TIMESTAMP data type when creating TTL indexes.

OCI-61706: FOR UPDATE on JSON-Relational Duality View does not support *string* clause

Cause: A "select ... for update" query on a JSON-Relational Duality View contained unsupported clause for "for update".

Action: Only WAIT or NOWAIT clauses are supported on JSON-Relational Duality View. Remove the above clause and rerun the query.

OCI-61707: Cannot set *string* attribute on the document if *string* attribute is set.

Cause: An invalid combination of document attributes was specified.

Action: Specify a valid combination of document attributes. *Params: 1) attribute_1: The name of the document handle attribute being set. 2) attribute_2: The name of the document handle attribute already set.

OCI-61708: Object *string* cannot be described as a JSON schema.

Cause: An attempt was made to describe an unsupported object type as a JSON schema.

Action: Ensure that a valid type is described as a JSON schema. *Params: 1) object_name: The object name.

OCI-61709: Feature (*string*) cannot be described as a JSON schema.

Cause: An attempt was made to describe an unsupported feature as a JSON schema.

Action: Ensure that a valid type is described as a JSON schema. *Params: 1) feature_name: The feature name.

OCI-61710: Invalid JSON type column for clustered table: *string*.

Cause: Column type can not be used.

Action: Change column type.

OCI-61711: Predicates are not allowed in multivalue index (*string*) creation.

Cause: There was some predicate specified in multivalue index creation.

Action: Don't use predicates in multivalue index creation.

OCI-61712: Can't use json_table syntax to create non-MVI(MultiValue Index): *string*.

Cause: An attempted was made to create a non-MVI with json_table syntax.

Action: Don't use json_table syntax to create non-MVI.

OCI-61713: Table Value Constructor unsupported for JSON operator.

Cause: Table Value Constructor used with JSON operator.

Action: Don't use Table Value Constructor with JSON operator.

OCI-61714: Multivalue index is not allowed on an IOT table.

Cause: An attempt was made to create multivalue index on an IOT table.

Action: Do not create multivalue index on an IOT table.

OCI-61715: ETAG mismatch

Cause: The ETAG values provided to the ETAG_MATCHES function did not match.

Action: None

OCI-61716: EMBEDDED_OID key assignment method requires collection content column to be of type JSON. BLOB with OSON (only supported on Autonomous 19c) is also a valid content column type for EMBEDDED_OID.

Cause: EMBEDDED_OID key assignment method was specified with an incompatible content column type.

Action: Ensure that the content column type is JSON, or BLOB (but only on Autonomous 19c database).

OCI-61717: EMBEDDED_OID key assignment method with RAW key column type requires collection content column to be of type JSON.

Cause: EMBEDDED_OID key assignment method with RAW key column type was specified with an incompatible content column type.

Action: Ensure that the content column type is JSON when using EMBEDDED_OID key assignment method with RAW key column type.

OCI-61718: Error occurred in the execution of data guide procedure *string*.

Cause: An internal error occurs when executing a data guide procedure.

Action: This is an internal error. Contact Oracle Support. *Params: 1) procedure_name: The data guide procedure name.

OCI-61719: invalid input for JSON_SCALAR conversion as *string*

Cause: An attempt was made to cast an input value to produce a JSON scalar value of incompatible data type.

Action: Use an input value that is compatible with output JSON scalar type. *Params: 1) data_type: The output data type.

OCI-61720: invalid row path (*string*) specified in the JSON_TABLE function of a CREATE INDEX statement

Cause: Multivalue index is created on a view generated using the JSON_TABLE function and one of the following occurred: 1. An invalid row path is used in the JSON_TABLE function. 2. An invalid JSON_TABLE syntax is used.

Action: Do one of the following: 1. Specify a valid row path to the JSON_TABLE function. 2. Correct the invalid syntax in the JSON_TABLE function.

OCI-61721: index maintenance failed because JSON query raised error

Cause: A JSON query invoked by index maintenance raised an error. Possible causes were that the JSON path expression selected either no value, multiple values, or a value of the wrong data type.

Action: Ensure that the indexed value in the JSON data matches the data type expected by the JSON path expression in that index definition.

OCI-61722: output value too large (actual: *string*, maximum: *string*, path:'*string*')

Cause: The provided JavaScript Object Notation (JSON) operator is generating a result that exceeds the maximum length specified in the RETURNING clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB or BLOB in the RETURNING clause.

OCI-61723: Value selected by JSON path '*string*' exceeds maximum (*string*).

Cause: The JSON path expression selected a value that exceeded the maximum length specified in the RETURNING clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB or BLOB in the RETURNING clause.

OCI-61724: unable to convert value selected by JSON path '*string*'

Cause: An attempt failed to convert a value selected by a JSON path expression to a SQL scalar type value.

Action: Ensure that the selected value is convertible to the specified data type. Inspect the stacked error for more information.

OCI-61751: Path '*string*' refers to a non-scalar type.

Cause: The provided JSON path expression in the JSON_TABLE column pattern refers to a non-scalar type while the type of the JSON_TABLE column is scalar.

Action: Correct the JSON path expression in the JSON_TABLE column pattern.

OCI-61752: When "ttl" is specified, "fields" must only include a single "path".

Cause: "ttl" was specified, but "fields" included more than one "path".

Action: Ensure "fields" includes a single path.

OCI-61753: EMBEDDED_OID key assignment cannot be used with VARCHAR2 key column for collections with content column of type JSON.

Cause: Collection metadata specified EMBEDDED_OID key assignment with VARCHAR2 key column for a collection with content column of type JSON.

Action: For collections with content column of type JSON and EMBEDDED_OID key assignment, specify RAW as key column type. VARCHAR2 key column type is allowed for collections with content column of type BLOB storing OSON.

OCI-61754: Using JSON type collections on Oracle Database release 23c or later requires a SODA driver for Oracle Database release 23c or later.

Cause: A SODA driver for Oracle Database earlier than release 23c is being used to access a JSON type collection on Oracle Database release 23c or later.

Action: Use a SODA driver for Oracle Database release 23c or later to access JSON type collections on Oracle Database release 23c or later.

OCI-61755: unable to upgrade collection type to JSON since current type is not BLOB/OSON

Cause: An attempt failed to convert collection type to JSON because current type is BLOB/OSON.

Action: Ensure that the collection that is going to be updated is BLOB/OSON type.

OCI-61756: More than *string* paths are specified for JSON_TABLE.

Cause: The number of paths specified for JSON_TABLE exceeds the maximum number of paths permitted.

Action: Reduce the number of paths specified. *Params: 1) max_paths: The maximum number of paths permitted for JSON_TABLE.

OCI-61800: invalid boolean literal: *string*

Cause: The specified boolean literal was invalid.

Action: Specify a valid boolean literal.

OCI-61801: only boolean column or attribute can be used as a predicate

Cause: The specified column or attribute was not of boolean data type and could not be used as a predicate.

Action: Specify a valid boolean column or attribute as a predicate.

OCI-61803: argument of *string* must be a column or an expression of boolean data type

Cause: The specified argument of the IS [NOT] {TRUE|FALSE} clause was not a boolean column or a boolean expression.

Action: Specify a boolean column or a boolean expression as an argument.

OCI-61805: invalid boolean value: *string*

Cause: The specified boolean value was invalid.

Action: Specify a valid boolean value

OCI-61806: invalid boolean value.

Cause: The specified boolean value was invalid.

Action: Specify a valid boolean value

OCI-61850: Oracle version mismatch between primary database and True Cache.

Cause: Oracle primary database received an unsupported message format from True Cache, or vice versa.

Action: Please check and ensure the binary version matches between primary database and True Cache instances.

OCI-61851: True Cache instance does not allow *string* operation.

Cause: The specified operation was invalid on True Cache instance.

Action: Do not attempt the specified operation on True Cache instance.

OCI-61852: CREATE TRUE CACHE failed.

Cause: An error occurred during the creation of the True Cache

Action: See accompanying errors.

OCI-61853: Cannot start True Cache.

Cause: An error occurred during database open on True Cache

Action: See accompanying errors.

OCI-61854: Cannot start True Cache with non True Cache control file.

Cause: There was an error when the database or control file was created or you are using the wrong control file

Action: Check what error was signaled when the database was first created or when the control file was recreated. Take appropriate actions to recreate the True Cache.

OCI-61855: Invalid TRUE_CACHE_CONFIG attribute.

Cause: Invalid attributes were specified for the TRUE_CACHE_CONFIG parameter.

Action: Check the documentation regarding the correct specification of the TRUE_CACHE_CONFIG parameter.

OCI-61856: True Cache requires a valid parameter value for *string*.

Cause: True Cache requires a minimum set of parameters to be set or enabled.

Action: Set or update parameter in the initialization file. Note that empty values can disable the parameter or that blank values can be invalid.

OCI-61857: Communication with the primary failed.

Cause: True Cache processes lost connection with the primary.

Action: Check if the primary instance is still active.

OCI-61858: Unable to translate FAL_SERVER initialization parameter string.

Cause: Invalid connect string specified in FAL_SERVER.

Action: Check and correct the specification for FAL_SERVER parameter.

OCI-61859: There was an error when executing a remote procedure call (op: *string-string-string*) at primary server *string*.

Cause: The primary server got an error retrieving the data or metadata required by True Cache to boot.

Action: Verify that the primary server is on the same version as the True Cache and that it is configured as a multitenant database with ARCHIVELOG database parameter enabled. If that is all correctly configured, check the alert log file of the primary server for more descriptive messages.

OCI-61860: True Cache instance is being shutdown because it has been disconnected from the primary for too long.

Cause: The primary server has not responded in a long time.

Action: Check that the servers configured in the FAL_SERVER configuration parameter are up and the primary database is opened in read/write mode.

OCI-61861: Unable to receive redo since standby redo log is not available.

Cause: The remote file server (RFS) was unable to select a standby redo log file (SRL) to receive redo on a True Cache because SRLs were not available.

Action: See the alert log and trace file for more details. No action is necessary. This is an informational message provided to record the event for diagnostic purposes.

OCI-61862: *string* is not configured as a multitenant database

Cause: The system parameter ENABLE_PLUGGABLE_DATABASE was not enabled in either the primary or True Cache databases.

Action: Set the system parameter ENABLE_PLUGGABLE_DATABASE to TRUE and restart the database for which the change was made.

OCI-61863: True Cache could not be started because there was a configuration parameter mismatch with the primary. Restart the database.

Cause: There was a system parameter in the PRIMARY database that was incompatible with the same parameter in True Cache.

Action: The new parameter value has been automatically reconfigured on True Cache. Please restart True Cache instance. If the problem persists contact Oracle Support.

OCI-61864: True Cache failed to read metadata from the primary.

Cause: There was an error when trying to get the required data from the primary to open the True Cache database.

Action: See the alert log to find additional information.

OCI-61865: The TNS alias *string* could not be translated.

Cause: There was an error when converting the alias name provided into a valid connection string.

Action: Check that all aliases set in the FAL_SERVER system configuration parameter in the True Cache are valid alias names in the file tnsnames.ora.

OCI-61866: Some static parameters (*string*) differed from the value in the primary database. These parameters have been fixed and the database will be shut down.

Cause: Some static system parameters had a value that was inconsistent with the value at the primary database.

Action: Restart Oracle True Cache using the most recent version of the server parameters file (SPFILE) that has been internally modified so that these inconsistent parameters match.

OCI-61867: Oracle True Cache failed to restart. Shutting down.

Cause: Oracle True Cache had to be restarted because the primary database restarted and it received an unexpected error.

Action: Restart Oracle True Cache manually.

OCI-61868: True Cache entry corresponding to the hash ID *string* not found in a LOG_ARCHIVE_DEST_n parameter.

Cause: A True Cache server tried to read some data block from a primary database but the primary server was not able to find a connection string to connect back to the True Cache.

Action: Verify if the primary database has a LOG_ARCHIVE_DEST_n parameter defined for the True Cache server. If not, restart the True Cache server.

OCI-61869: Unable to connect to True Cache.

Cause: The primary server was unable to establish a connection with True Cache or the communication with True Cache failed.

Action: See the alert log to find additional information and restart True Cache server.

OCI-61870: True Cache requires ARCHIVELOG mode to be enabled at the primary database.

Cause: ARCHIVELOG mode was not enabled at the primary database or it did not have a valid destination for archive log files.

Action: Set a valid LOG_ARCHIVE_DEST_n initialization parameter and execute ALTER DATABASE ARCHIVELOG at the primary database.

OCI-61871: True Cache instance is being shut down.

Cause: A normal shutdown was issued on a True Cache instance. Since media recovery is always active on a True Cache instance, an implicit shutdown abort will be performed.

Action: No action needed.

OCI-61872: The *string* command in pluggable database *string* failed because some process is keeping a lock on it for too long. True cache will be restarted.

Cause: True Cache is trying to open, drop or rename a pluggable database but it is unable to get a lock in a reasonable time. This means that a previous redo marker to open, drop, close or rename the database did not finish in a reasonable time.

Action: Check alert log for additional information. The True Cache instance should be automatically restarted. If it failed, the instance will have to be manually restarted.

OCI-61873: True Cache could not be started because the system parameter '*string*' is different in the PRIMARY database. Remove the parameter from the True Cache initialization file.

Cause: There is a system parameter in the PRIMARY database that was incompatible with the same parameter in True Cache and this parameter cannot be different nor it can be internally changed.

Action: Delete the parameter from the True Cache initialization file (SPFILE) or set the same value it has in the PRIMARY database.

OCI-61874: cannot fetch data block from the primary database (file # *string*, block # *string*)

Cause: There is an error while fetching data blocks from the primary database.

Action: See accompanying errors.

OCI-61875: There was a failure adding the system parameter LOG_ARCHIVE_DEST_n at the primary database. True Cache database cannot be opened without it.

Cause: The request to create a LOG_ARCHIVE_DEST_n entry at the primary to set the True cache destination has failed. The reason can be that, either there are no free slots or there is a conflicting entry.

Action: Check the primary database alert log for a detailed description of the failure and solve the problem. Either make room deleting unused entries or remove conflicting ones. Restart True Cache after that.

OCI-61876: Failed to open True Cache because the primary database is configured for shared server.

Cause: True Cache is trying to boot using a primary database configured for shared server and this is not supported.

Action: Verify whether the connection string in listener.ora uses SERVER=SHARED or if sqlnet.ora contains USE_DEDICATED_SERVER=on. Set SERVER=DEDICATED in listener.ora connection string. You must disable the shared server configuration in the primary database to use True Cache.

OCI-61900: not enough space for first flashback database log file

Cause: An ALTER DATABASE FLASHBACK ON command failed because there was not enough space in the Flashback destination for the first flashback database log file.

Action: Make more space in the Flashback destination. For example, this can be done by increasing the value of DB_FLASHBACK_LOG_DEST_SIZE

OCI-62001: value for parameter cannot contain a comma

Cause: Parameter value contained a comma.

Action: Remove the comma from the parameter value.

OCI-62002: circular dependency error while evaluating expression *string* for parameter *string*

Cause: One or more of the parameters used in the expression value was dependent on the parameter being set.

Action: Identify the parameter dependency or provide an absolute value for the parameter.

OCI-62003: parameter set completed with errors in (*string*) pluggable database(s)

Cause: Parameter value was invalid or illegal for one or more pluggable databases.

Action: Check alert log for error(s).

OCI-62007: encountered a value of unsupported type or size for XML nodes at path *string*

Cause: An XML operator, such as UPDATEXML, expected the value operands to be of type VARCHAR2 or XMLTYPE. Supplemental logging or replication is not supported for XML operators with operands of unsupported types or sizes too large.

Action: Rewrite the UPDATE statement with the XMLQuery operator or set event 19027 at level 1 to dump the unexpected operands. *Params: 1) xpath: The XPath to the outstanding node.

OCI-62008: Cannot rewrite a newer version of XML redo diff (encountered: *string*, supported: *string*).

Cause: An unsupported version of XML redo diff was encountered.

Action: Upgrade to a newer version of the DB that supports the requested XML redo diff. *Params: 1) given: The given version of the XML redo diff. 2) expected: The expected version of the XML redo diff.

OCI-62009: cannot encode an invalid XML character 0xstring in a supplemental log

Cause: An attribute was being populated or updated with characters that were not valid for XML and, therefore, could not be logged.

Action: Store the desired value in a RAW or BLOB attribute. *Params: 1) hex_value: The hexadecimal value for the outstanding character.

OCI-62035: KEY VECTOR duplication failed

Cause: Parallel query failed to duplicate KEY VECTOR across Oracle RAC instances.

Action: Increase the size of the System Global Area (SGA) memory.

OCI-62036: out of memory for KEY VECTOR

Cause: A query undergoing vector transform ran out of memory in an unrecoverable way. This may indicate that poor statistics caused vector transform to be used for an unsuitable query.

Action: Gather statistics for the pertinent tables. If the problem persists, vector transform can be disabled using hint or parameter.

OCI-62037: KEY VECTOR with repeated values require join keys to match

Cause: A KEY VECTOR with repeated join key values required the JOIN KEYS of SYS_OP_KEY_VECTOR_PAYLOAD to match the JOIN KEYS of the related SYS_OP_KEY_VECTOR_USE.

Action: Ensure that either the join key values of SYS_OP_KEY_VECTOR_CREATE are unique or the JOIN KEYS of SYS_OP_KEY_VECTOR_PAYLOAD match the JOIN KEYS of SYS_OP_KEY_VECTOR_USE.

OCI-62038: missing GROUP BY clause in statement containing KEY VECTOR function

Cause: A statement containing a KEY VECTOR function did not have a GROUP BY clause.

Action: Add a GROUP BY clause to the statement containing the KEY VECTOR function, or remove the KEY VECTOR function from the statement.

OCI-62039: KEY VECTOR function not allowed in WHERE clause

Cause: The WHERE clause contained one of the following KEY VECTOR functions, which are not allowed in the WHERE clause: SYS_OP_KEY_VECTOR_CREATE, SYS_OP_KEY_VECTOR_USE, SYS_OP_KEY_VECTOR_SUCCEEDED, SYS_OP_KEY_VECTOR_PAYLOAD.

Action: Remove the KEY VECTOR function from the WHERE clause.

OCI-62040: KEY VECTOR ID string is used in more than one SYS_OP_KEY_VECTOR_CREATE

Cause: More than one SYS_OP_KEY_VECTOR_CREATE had the same ID.

Action: Ensure each SYS_OP_KEY_VECTOR_CREATE ID is unique in a query.

OCI-62041: SYS_OP_KEY_VECTOR_USE does not have a corresponding SYS_OP_KEY_VECTOR_CREATE

Cause: A SYS_OP_KEY_VECTOR_USE function did not have a corresponding SYS_OP_KEY_VECTOR_CREATE.

Action: Ensure for each SYS_OP_KEY_VECTOR_USE there is exactly one corresponding SYS_OP_KEY_VECTOR_CREATE.

OCI-62042: The load key defined in SYS_OP_KEY_VECTOR_CREATE is missing a corresponding SYS_OP_KEY_VECTOR_PAYLOAD function

Cause: A load key defined in a SYS_OP_KEY_VECTOR_CREATE function had no corresponding SYS_OP_KEY_VECTOR_PAYLOAD function.

Action: Ensure each load key has at least one corresponding SYS_OP_KEY_VECTOR_PAYLOAD function.

OCI-62043: The SYS_OP_KEY_VECTOR function is missing a corresponding SYS_OP_KEY_VECTOR_CREATE or SYS_OP_KEY_VECTOR_USE

Cause: A SYS_OP_KEY_VECTOR_PAYLOAD or SYS_OP_KEY_VECTOR_SUCCEEDED function had no corresponding SYS_OP_KEY_VECTOR_CREATE or SYS_OP_KEY_VECTOR_USE function.

Action: Ensure each SYS_OP_KEY_VECTOR_PAYLOAD and SYS_OP_KEY_VECTOR_SUCCEEDED has a corresponding SYS_OP_KEY_VECTOR_CREATE and SYS_OP_KEY_VECTOR_USE functions.

OCI-62044: The SYS_OP_KEY_VECTOR_PAYLOAD load key does not exist.

Cause: The load index specified in a SYS_OP_KEY_VECTOR_PAYLOAD function did not exist.

Action: Ensure the load key specified matches a load key defined in the corresponding SYS_OP_KEY_VECTOR_CREATE.

OCI-62045: KEY VECTOR could not be loaded from disk

Cause: The process ran out of memory (PGA) while loading a paged KEY VECTOR from disk.

Action: Increase the PGA_AGGREGATE_TARGET value.

OCI-62081: duplicate or conflicting VECTOR ENCODE or NO VECTOR ENCODE specifications

Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate specification.

OCI-62082: VECTOR ENCODE only valid for Oracle number column

Cause: VECTOR ENCODE was specified on a column that is not an Oracle number.

Action: Remove the VECTOR ENCODE clause.

OCI-62083: operation not allowed for system hidden virtual column

Cause: The system hidden virtual columns could not be dropped or modified directly.

Action: Avoid dropping or modifying system hidden virtual columns.

OCI-62085: invalid value while deserializing

Cause: The value being deserialized was invalid.

Action: Avoid deserializing such values.

OCI-62131: MEMOPTIMIZE FOR WRITE feature cannot be enabled on IOTs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on index-organized tables (IOT).

Action: None

OCI-62132: MEMOPTIMIZE FOR WRITE feature cannot be enabled on TEMPORARY TABLE.

Cause: An attempt was made to CREATE TEMPORARY TABLE with MEMOPTIMIZE FOR WRITE feature.

Action: None

OCI-62133: MEMOPTIMIZE FOR READ feature is not supported on ADG.

Cause: An attempt was made to populate data into hash index when in Active Data Guard mode.

Action: None

OCI-62134: MEMOPTIMIZE FOR READ feature cannot be used on table with ROW MOVEMENT enabled.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with row movement enabled.

Action: None

OCI-62135: Specified schema name is invalid.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with an invalid schema name.

Action: Use a valid schema name for the table.

OCI-62136: Specified table name is invalid.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with an invalid table name.

Action: Use a valid table name.

OCI-62137: Specified schema and table names are either non-existent or MEMOPTIMIZE FOR READ is not enabled on the table.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with invalid information. Either the specified schema and table names are non-existent or MEMOPTIMIZE FOR READ feature is not enabled on the table.

Action: Enable MEMOPTIMIZE FOR READ feature on the table and invoke the procedure with correct schema and table names.

OCI-62138: MEMOPTIMIZE memory area does not exist.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE package without creating the MEMOPTIMIZE memory area.

Action: Restart the instance with appropriate value for MEMOPTIMIZE memory area parameter.

OCI-62139: MEMOPTIMIZE_WRITE hint disallowed for this operation

Cause: MEMOPTIMIZE_WRITE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

OCI-62141: MEMOPTIMIZE FOR READ feature cannot be used with COMPRESS option

Cause: An attempt was made to use the COMPRESS option with MEMOPTIMIZE FOR READ feature.

Action: None

OCI-62142: MEMOPTIMIZE FOR READ feature requires NOT DEFERRABLE PRIMARY KEY constraint on the table

Cause: An attempt was made to use MEMOPTIMIZE FOR READ on a table that did not have the PRIMARY KEY constraint or the PRIMARY KEY constraint is DEFERRABLE.

Action: None

OCI-62143: MEMOPTIMIZE FOR WRITE feature not allowed on table with trigger.

Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with trigger.

Action: None

OCI-62144: MEMOPTIMIZE FOR WRITE feature not allowed on table with foreign key constraint.

Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with foreign key constraint.

Action: None

OCI-62145: MEMOPTIMIZE FOR WRITE feature not allowed on segment with deferred storage.

Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with deferred storage.

Action: None

OCI-62146: MEMOPTIMIZE FOR WRITE feature cannot be used with COMPRESS option.

Cause: An attempt was made to use the COMPRESS option with MEMOPTIMIZE FOR WRITE feature.

Action: None

OCI-62147: MEMOPTIMIZE FOR READ operations are not allowed at PARTITION or SUBPARTITION levels.

Cause: An attempt was made to use MEMOPTIMIZE FOR READ option on a PARTITION table or SUBPARTITION table level.

Action: None

OCI-62148: MEMOPTIMIZE FOR READ feature cannot be enabled on IOTs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on index-organized tables (IOT).

Action: None

OCI-62149: MEMOPTIMIZE FOR READ feature cannot be enabled on table with VIRTUAL COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with VIRTUAL COLUMNS.

Action: None

OCI-62150: MEMOPTIMIZE FOR READ feature cannot be enabled on table with INVISIBLE COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with INVISIBLE COLUMNS.

Action: None

OCI-62151: The MEMOPTIMIZE FOR READ feature cannot be enabled on a table with specified partitioning type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with an unsupported partitioning type.

Action: None

OCI-62152: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with LOBs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with LOB columns.

Action: None

OCI-62153: BLOCK SIZE is not equal to DB_BLOCK_SIZE setting.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure on a tablespace whose BLOCK SIZE was not equal to DB_BLOCK_SIZE.

Action: Use a default BLOCK SIZE.

OCI-62154: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with VIRTUAL COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with VIRTUAL COLUMNS.

Action: None

OCI-62155: MEMOPTIMIZE FOR READ feature cannot be enabled on table with LOBs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with LOB columns.

Action: None

OCI-62156: MEMOPTIMIZE FOR READ feature not allowed on segment with deferred storage

Cause: An attempt was made to set the MEMOPTIMIZE FOR READ attribute on a table with deferred storage.

Action: None

OCI-62157: MEMOPTIMIZE FOR READ clause needs to be specified only once.

Cause: An attempt was made to use MEMOPTIMIZE FOR READ clause more than once.

Action: None

OCI-62158: MEMOPTIMIZE FOR WRITE clause needs to be specified only once.

Cause: An attempt was made to use MEMOPTIMIZE FOR WRITE clause more than once.

Action: None

OCI-62159: MEMOPTIMIZE FOR READ cannot be enabled by CREATE PARTITIONED TABLE.

Cause: An attempt was made to CREATE PARTITIONED table with MEMOPTIMIZE FOR READ enabled.

Action: Use ALTER TABLE to enable MEMOPTIMIZE FOR READ for a partitioned table.

OCI-62160: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with INVISIBLE COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with INVISIBLE COLUMNS.

Action: None

OCI-62161: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with default valued COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with COLUMNS with default values.

Action: None

OCI-62162: MEMOPTIMIZE FOR WRITE operations are not allowed at PARTITION or SUBPARTITION levels.

Cause: An attempt was made to use MEMOPTIMIZE FOR WRITE option on a PARTITION table or SUBPARTITION table level.

Action: None

OCI-62164: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with ENCRYPTED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with ENCRYPTED COLUMNS.

Action: None

OCI-62165: MEMOPTIMIZE FOR WRITE cannot be enabled on table with specified partitioning type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with an unsupported partitioning type.

Action: None

OCI-62166: MEMOPTIMIZE FOR WRITE cannot be enabled by CREATE PARTITIONED TABLE.

Cause: An attempt was made to CREATE PARTITIONED table with MEMOPTIMIZE FOR WRITE enabled.

Action: Use ALTER TABLE to enable MEMOPTIMIZE FOR WRITE for a partitioned table.

OCI-62167: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with COLLATED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with COLLATED COLUMNS.

Action: None

OCI-62168: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with UNUSED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with UNUSED COLUMNS.

Action: None

OCI-62169: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with OID COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with OID COLUMNS.

Action: None

OCI-62170: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with unsupported COLUMN type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with unsupported COLUMN type.

Action: None

OCI-62171: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with XML COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with XML COLUMNS.

Action: None

OCI-62172: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table in encrypted tablespace.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table in encrypted tablespace.

Action: None

OCI-62173: MEMOPTIMIZE FOR WRITE feature cannot be enabled on materialized view log

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a materialized view log.

Action: None

OCI-62174: MEMOPTIMIZE FOR READ feature cannot be enabled on table with ENCRYPT COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with encrypted columns.

Action: None

OCI-62175: MEMOPTIMIZE FOR READ feature cannot be enabled on table with XML COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with XML COLUMNS.

Action: None

OCI-62176: MEMOPTIMIZE FOR READ feature cannot be enabled on table with UNUSED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with UNUSED COLUMNS.

Action: None

OCI-62177: MEMOPTIMIZE FOR READ feature cannot be enabled on table with unsupported COLUMN type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with unsupported COLUMN type.

Action: None

OCI-62178: MEMOPTIMIZE FOR READ feature cannot be enabled on table with COLLATED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with COLLATED COLUMNS.

Action: None

OCI-62179: MEMOPTIMIZE FOR READ feature cannot be enabled on TEMPORARY TABLE.

Cause: An attempt was made to CREATE TEMPORARY TABLE with MEMOPTIMIZE FOR READ feature.

Action: None

OCI-62180: MEMOPTIMIZE FOR WRITE unsupported DDL.

Cause: Unsupported DDL on MEMOPTIMIZE FOR WRITE table.

Action: None

OCI-62181: The MEMOPTIMIZE FOR READ feature is not supported on this table.

Cause: An attempt was made to enable the MEMOPTIMIZE FOR READ feature on an unsupported table.

Action: None

OCI-62182: external partitions not supported with MEMOPTIMIZE FOR WRITE

Cause: An attempt was made to use external partition with a MEMOPTIMIZE FOR WRITE table.

Action: None

OCI-62183: out of memory for MEMOPTIMIZE area

Cause: MEMOPTIMIZE memory area was full and did not have any free buffers.

Action: Restart the instance with an appropriate value for MEMOPTIMIZE memory area parameter.

OCI-62184: bitmap index not supported with MEMOPTIMIZE FOR WRITE

Cause: An attempt was made to use a bitmap index with a MEMOPTIMIZE FOR WRITE table.

Action: None

OCI-62185: Materialized view log cannot be created on a MEMOPTIMIZE FOR WRITE table.

Cause: An attempt was made to create a materialized view log on a MEMOPTIMIZE FOR WRITE table.

Action: None

OCI-62186: online index build or rebuild not supported with MEMOPTIMIZE FOR WRITE

Cause: An attempt was made to build an index online with a MEMOPTIMIZE FOR WRITE table.

Action: None

OCI-62187: timeout occurred while waiting for lock to flush object *string* data object *string*

Cause: While waiting to lock a memoptimize flush object, a timeout occurred .

Action: Retry the operation later.

OCI-62231: DESC is missing in ORDER BY clause within APPROX_RANK.

Cause: The DESC keyword was not specified in the ORDER BY clause within the APPROX_RANK function.

Action: Add the DESC keyword.

OCI-62232: invalid expression in ORDER BY clause within APPROX_RANK function

Cause: The expression in the ORDER BY clause within the APPROX_RANK function is invalid.

Action: Use the APPROX_COUNT or APPROX_SUM function in the ORDER BY clause.

OCI-62233: Multiple expressions are used in the ORDER BY clause within the APPROX_RANK function.

Cause: Multiple expressions are used in the ORDER BY clause within APPROX_RANK function.

Action: Use a single expression in the ORDER BY clause within the APPROX_RANK function.

OCI-62234: The APPROX_RANK functions used different PARTITION BY keys.

Cause: APPROX_RANK functions use different PARTITION BY keys.

Action: Use the same PARTITION BY keys across APPROX_RANK functions.

OCI-62235: PARTITION BY key in APPROX_RANK is not a subset of GROUP BY key.

Cause: The PARTITION BY key in the APPROX_RANK function was not a subset of the key in the GROUP BY clause.

Action: Use a subset of the key in the GROUP BY clause in the PARTITION BY key within the APPROX_RANK function.

OCI-62236: Missing GROUP BY clause when approximate top functions are used.

Cause: The GROUP BY clause was missing when the approximate top functions were used.

Action: Add the GROUP BY clause.

OCI-62237: Missing HAVING clause when approximate top functions are used.

Cause: The HAVING clause was missing when the approximate top functions were used.

Action: Add the HAVING clause.

OCI-62238: Mixed approximate top functions with window functions or non approximate top functions.

Cause: An attempt was made to use window functions or aggregates that were not approximate top functions along with approximate top functions.

Action: Remove the window functions or non approximate top functions.

OCI-62239: More than one expression appears in GROUP BY clause but not in PARTITION BY clause.

Cause: An attempt was made to involve more than one columns as the top N key.

Action: Remove the extra expression(s) from GROUP BY clause, or add extra expression(s) to PARTITION BY part in HAVING clause

OCI-62240: Missing one or more corresponding APPROX_RANK clause in HAVING list when approximate top functions are used.

Cause: One or more corresponding APPROX_RANK clauses were missing when approximate top functions were used.

Action: Add the APPROX_RANK clause in HAVING list for each approximate top N function that appears in SELECT or ORDER BY clause

OCI-62242: HAVING clause can only contain AND predicates when approximate top functions are used.

Cause: the HAVING clause contained predicates other than AND when approximate top functions were used.

Action: Only use the AND predicate with the HAVING clause.

OCI-62243: Each predicate in HAVING clause must be in the format of 'APPROX_RANK(PARTITION BY ... ORDER BY ... DESC) <(=) n' when approximate top functions are used.

Cause: Illegal predicates were used in the HAVING clause when approximate top functions were used.

Action: Correct the format to 'APPROX_RANK (PARTITION BY ? ORDER BY ? DESC) <(=) n'.

OCI-62244: GROUPING SETS, CUBE and ROLLUP cannot be applied to approximate functions.

Cause: An attempt was made to use GROUPING SETS, CUBE or ROLLUP over the approximate functions.

Action: Remove any GROUPING SETS, CUBE or ROLLUP when using approximate functions.

OCI-62245: A negative value has been passed to APPROX_SUM function.

Cause: An attempt was made to pass a negative value to the APPROX_SUM function.

Action: Only pass expressions that have a non-negative value to the APPROX_SUM function.

OCI-62246: The subqueries that contain approximate top functions must be unnested.

Cause: An attempt was made to execute subqueries that contain approximate top functions without unnesting.

Action: Remove the hint or the parameters that are preventing subquery unnesting.

OCI-62251: The Nest handle is invalid.

Cause: The Nest handle was not valid.

Action: None

OCI-62252: The Nest open failed.

Cause: The Nest open failed.

Action: None

OCI-62253: The Nest is already opened.

Cause: An attempt was made to open a Nest that was already opened.

Action: None

OCI-62254: The Nest lookup failed.

Cause: The Nest lookup for a given pluggable database (PDB) failed.

Action: None

OCI-62255: A Child Nest is present.

Cause: An attempt to delete a Nest that had a dependent child Nest failed.

Action: None

OCI-62256: failure to delete a Nest that is not created

Cause: An attempt to delete a Nest that was not created failed.

Action: None

OCI-62257: The Nest is already created.

Cause: An attempt was made to create a Nest that was already created.

Action: None

OCI-62258: The Nest creation failed.

Cause: The Nest creation failed with an operating system operation.

Action: None

OCI-62259: failure to open a Nest that was not created

Cause: An attempt to open the Nest before it was created failed.

Action: None

OCI-62260: The Nest open failed.

Cause: The Nest open failed with an operating system operation.

Action: None

OCI-62261: failure to update a Nest that is not opened

Cause: An attempt to update a Nest that was not opened failed.

Action: None

OCI-62262: The Nest update failed.

Cause: The Nest update failed with an operating system operation.

Action: None

OCI-62263: failure to close a Nest that is not opened

Cause: An attempt to close a Nest that was not open failed.

Action: None

OCI-62264: The Nest close failed.

Cause: The Nest close failed with an operating system operation.

Action: None

OCI-62265: The Nest delete failed.

Cause: The Nest delete failed with an operating system operation.

Action: None

OCI-62266: dedicated broker not enabled

Cause: Nest connections require an enabled dedicated broker. The dedicated broker was not enabled in the current instance.

Action: Enable the dedicated broker.

OCI-62267: invalid Nest parameter

Cause: An invalid value or length for the Nest parameter was specified.

Action: None

OCI-62268: The Nest creation failed due to reaching the maximum depth.

Cause: The child Nest could not be created due to reaching the maximum depth.

Action: None

OCI-62269: no PDB nest found for specified PDB

Cause: A pluggable database (PDB) nest was not found for the specified PDB.

Action: Check the connection broker and listener settings.

OCI-62270: connection outside PDB nest

Cause: The current pluggable database (PDB) connection was outside of the PDB nest.

Action: Check the connection broker and listener settings.

OCI-62271: connection outside CDB or PDB nests

Cause: The current connection was outside of the multitenant container database (CDB) or pluggable database (PDB) nests.

Action: Check the connection broker and listener settings.

OCI-62301: invalid statistic group handle

Cause: The statistic group handle was invalid.

Action: None

OCI-62302: invalid statistic group identifier

Cause: The statistic group identifier doesn't match the handle.

Action: None

OCI-62303: statistic group handle mismatch

Cause: Specified statistic group handle is wrong.

Action: None

OCI-62304: statistic group invalid *string*

Cause: An invalid parameter was passed to statistic group layer.

Action: None

OCI-62350: invalid extent ownership

Cause: The current process did not own the extent.

Action: None

OCI-62351: MEMORY_SIZE *string* is greater than MEMORY_MAX_SIZE *string*

Cause: The specified value of MEMORY_SIZE was greater than MEMORY_MAX_SIZE.

Action: Reduce the specified value to be less than MEMORY_MAX_SIZE

OCI-62352: cannot dynamically set MEMORY_SIZE if not set at startup

Cause: MEMORY_SIZE could not be set. Unified Memory can only be enabled during instance startup by setting MEMORY_SIZE to a non-zero value.

Action: Set MEMORY_SIZE at startup.

OCI-62353: cannot shrink MEMORY_SIZE

Cause: The new value of MEMORY_SIZE was less than its current value.

Action: Set a new value higher than the current value.

OCI-62354: cannot set MEMORY_SIZE to zero

Cause: The new value of MEMORY_SIZE could not be set to zero while the instance was running.

Action: Unified Memory can be disabled by setting the MEMORY_SIZE to zero in a parameter file.

OCI-62355: MEMORY_SIZE string is invalid due to insufficient large pages totaling string bytes

Cause: Not enough large pages were available for the new system global area (SGA) size.

Action: Increase the number of large pages or decrease MEMORY_SIZE.

OCI-62356: cannot set string parameter value since MEMORY_SIZE is set

Cause: MEMORY_SIZE when set to a non-zero value enabled Unified Memory and hence did not allow other memory parameters to be set individually at the multitenant container database (CDB) level.

Action: Unset or set MEMORY_SIZE to zero.

OCI-62400: invalid options were specified for FUZZY_MATCH operator

Cause: The options specified for FUZZY_MATCH() were invalid. For instance, RELATE_TO_SHORTER and UNSCALED options were mutually exclusive. EDIT_TOLERANCE option could only be applied to WHOLE_WORD_MATCH.

Action: Pass in valid options to FUZZY_MATCH.

OCI-62401: invalid numeric argument was specified for FUZZY_MATCH operator

Cause: The numeric argument passed into FUZZY_MATCH() was either not a constant or was outside the acceptable range. EDIT_TOLERANCE percentage should be between 0-99.

Action: Pass in a valid numeric argument to FUZZY_MATCH.

OCI-62402: invalid numeric argument is specified for PHONIC_ENCODE operator

Cause: The numeric argument passed into PHONIC_ENCODE() was either not a constant or was outside the acceptable range. Maximum output code length is 12.

Action: Pass in an acceptable numeric argument to PHONIC_ENCODE.

OCI-62403: string argument specified for FUZZY_MATCH operator was too long

Cause: The string argument passed into FUZZY_MATCH() was longer than 4000 bytes. Maximum input length is 4000 bytes.

Action: Pass in string arguments no longer than 4000 bytes to FUZZY_MATCH.

OCI-62404: options for FUZZY_MATCH were specified in the wrong order

Cause: EDIT_TOLERANCE option passed into FUZZY_MATCH() has to appear before options such as RELATE_TO_SHORTER and UNSCALED.

Action: Pass in EDIT_TOLERANCE option to FUZZY_MATCH before other options.

OCI-62430: DB upgrade terminating due to check "string" not having been addressed before upgrading

Cause: This check has not been addressed prior to upgrading. Hence, database upgrade cannot continue and needs to terminate.

Action: Read the comments above the failing check in the upgrade log for instructions on how to address this check. The comments start with the word "DOC". After fixing this check, retry the database upgrade.

OCI-62500: function is not allowed outside of MATCH_RECOGNIZE clause

Cause: The function was specified outside of the MATCH_RECOGNIZE clause. This function is only allowed in the MATCH_RECOGNIZE clause.

Action: Rewrite the SQL statement.

OCI-62501: invalid value specified for bounded quantifier in MATCH_RECOGNIZE clause

Cause: The specified lower bound or upper bound value was greater than UB4MAXVAL. The lower bound value must be non-negative. The upper bound value must be strictly positive. The upper bound value must be greater than or equal to the lower bound value.

Action: Choose an appropriate value and retry the operation.

OCI-62502: invalid variable name

Cause: The specified variable name was invalid. Variable names are not allowed to be "^", "\$", or "*".

Action: Choose an appropriate variable name and retry the operation.

OCI-62503: illegal variable definition

Cause: The specified variable definition was invalid. Variables defined in the DEFINE clause must be in the PATTERN clause. Variables defined in the SUBSET clause cannot be in the PATTERN clause. Variables cannot be defined twice either in the SUBSET clause or the DEFINE clause.

Action: Choose an appropriate variable and retry the operation.

OCI-62504: illegal variable reference

Cause: The referenced variable was invalid. Variables referenced in the SUBSET clause must be in the PATTERN clause. Variables referenced in the DEFINE clause, the MEASURES clause, and the AFTER MATCH SKIP TO must be in the PATTERN clause or defined in the SUBSET clause.

Action: Choose an appropriate variable and retry the operation.

OCI-62505: expression needs to be aliased

Cause: The expression was not aliased. MEASURES clause items have to be aliased.

Action: Choose an appropriate variable and retry the operation.

OCI-62506: illegal nesting of operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to nest aggregates/FIRST/LAST/PREV/NEXT. Aggregates/FIRST/LAST/PREV/NEXT cannot be nested. The only exception allowed is PREV/NEXT(FIRST/LAST()).

Action: Modify the query and retry the operation.

OCI-62507: illegal use of MATCH_NUMBER or CLASSIFIER in MATCH_RECOGNIZE clause

Cause: An attempt was made to use MATCH_NUMBER or CLASSIFIER in the MATCH_RECOGNIZE clause. CLASSIFIER and MATCH_NUMBER can only be used in the MEASURES clause. CLASSIFIER and MATCH_NUMBER cannot be used inside aggregates/FIRST/LAST/PREV/NEXT.

Action: Modify the query and retry the operation.

OCI-62508: illegal use of aggregates or navigation operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to define aggregates/FIRST/LAST/PREV/NEXT over multiple variables. Aggregates/FIRST/LAST/PREV/NEXT cannot be defined over multiple variables.

Action: Modify the query and retry the operation.

OCI-62509: illegal use of RUNNING or FINAL in MATCH_RECOGNIZE clause

Cause: An attempt was made to use RUNNING or FINAL in MATCH_RECOGNIZE. RUNNING or FINAL can only be used on aggregate/FIRST/LAST. FINAL aggregate/FIRST/LAST is not allowed in the DEFINE clause.

Action: Modify the query and retry the operation.

OCI-62510: Correlated subqueries are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlated subqueries in the MATCH_RECOGNIZE clause. Correlated subqueries are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

OCI-62511: Correlation variables are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlation variables in the MATCH_RECOGNIZE clause. Correlation variables are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

OCI-62512: This aggregate is not yet supported in MATCH_RECOGNIZE clause.

Cause: An unsupported aggregate was specified in the MATCH_RECOGNIZE clause. Only COUNT, SUM, AVG, MIN, and MAX are currently supported in the MATCH_RECOGNIZE clause. Distinct aggregates are currently not supported in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

OCI-62513: Quantified subpatterns that can have empty matches are not yet supported.

Cause: There were empty matches for the quantified subpattern in the PATTERN clause. Quantified subpatterns are currently required to match one or more rows.

Action: Modify the query and retry the operation.

OCI-62514: AFTER MATCH SKIP TO variable is not bounded in the match found.

Cause: AFTER MATCH SKIP TO variable was not bound in the match found due to pattern operators such as |, *, ?, and so on.

Action: Modify the query and retry the operation.

OCI-62515: Exclusion syntax cannot be used with WITH UNMATCHED ROWS.

Cause: An attempt was made to use exclusion syntax with WITH UNMATCHED ROWS. Exclusion syntax {- -} cannot be used with WITH UNMATCHED ROWS.

Action: Modify the query and retry the operation.

OCI-62516: The PARTITION BY, ORDER BY, or MEASURES clause is too large for MATCH_RECOGNIZE.

Cause: The number of items in PARTITION BY, ORDER BY, or MEASURES clause exceeded the maximum allowed. There cannot be more than UB2MAXVAL elements in PARTITION BY, ORDER BY, or MEASURES clause.

Action: Modify the query and retry the operation.

OCI-62517: Next match starts at the same point last match started.

Cause: AFTER MATCH SKIP TO option repositioned the next match at the start of the previous one resulting in an infinite loop.

Action: Modify the query and retry the operation.

OCI-62518: MATCH_RECOGNIZE pattern is too large.

Cause: MATCH_RECOGNIZE pattern was too large. More than UB2MAXVAL elements in alternation, concatenation, or permute, or more than UB4MAXVAL states in the state machine are currently not supported. Permute with more than 7 elements or bounded quantifier bound greater than 200 are also currently not supported.

Action: Modify the query and retry the operation.

OCI-62519: Subquery inside MATCH_RECOGNIZE cannot contain MATCH_RECOGNIZE.

Cause: An attempt was made to use a subquery containing a MATCH_RECOGNIZE clause inside a MATCH_RECOGNIZE clause. Subqueries containing MATCH_RECOGNIZE clauses are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

OCI-62520: illegal offset for MATCH_RECOGNIZE navigation operators

Cause: An attempt was made to use something other than a constant or a bind variable as the offset for MATCH_RECOGNIZE navigation operators FIRST, LAST, PREV, or NEXT. Offset for MATCH_RECOGNIZE navigation operators have to be constants or bind variables.

Action: Modify the query and retry the operation.

OCI-62521: MATCH_RECOGNIZE is not supported on lateral views.

Cause: An attempt was made to use MATCH_RECOGNIZE on a lateral view, which was not supported.

Action: Remove MATCH_RECOGNIZE from the query or do not use a lateral view.

OCI-62550: Invalid SQL ROW LIMITING expression was specified.

Cause: The SQL ROW LIMITING expression contained components other than literals, binds, correlation variables, or subqueries.

Action: Modify the SQL ROW LIMITING expression and retry the operation.

OCI-62555: Invalid use of PARTITION BY or ORDER BY clause.

Cause: Either the PARTITION BY or ORDER BY was specified on more than one argument of a POLYMORPHIC TABLE FUNCTION.

Action: Check the SQL statement and rewrite if necessary.

OCI-62556: Incorrect use of COLUMNS operator.

Cause: COLUMNS function was used outside a POLYMORPHIC TABLE FUNCTION.

Action: Check the SQL statement and rewrite if necessary.

OCI-62557: Invalid use of POLYMORPHIC TABLE FUNCTION.

Cause: POLYMORPHIC TABLE FUNCTION was specified inside RECURSIVE WITH clause.

Action: Check the SQL statement and rewrite if necessary.

OCI-62558: Unsupported data types (*string*) for polymorphic table function

Cause: Non-scalar data types were used in polymorphic table function. Only scalar data types are supported.

Action: Use only scalar data types in polymorphic table function.

OCI-62559: Data types mismatch (*string*<==>*string*) for polymorphic table function

Cause: Data types for the source and target did not match for polymorphic table function. In Get_Col and Put_Col APIs, both the type of the collection element and the type of the polymorphic table function column must match.

Action: Ensure the collection element type matches the column type of the polymorphic table function

OCI-62560: Duplicate column name (*string*)

Cause: The new column name already existed as a passthrough column in the polymorphic table function.

Action: Use a different column name that is unambiguous.

OCI-62561: Invalid column ID (*string*) in Get_Col or Put_Col

Cause: The column number specified in the Get_Col or Put_Col API for polymorphic table functions was incorrect.

Action: Use a column ID that is valid for this polymorphic table function.

OCI-62562: The API *string* can be called only during execution time of a polymorphic table function.

Cause: This API was called in a context other than the execution time context of a polymorphic table function. This API is not supported in this context.

Action: Use this call only during the execution context of a polymorphic table function.

OCI-62563: typecode not set for a new column in the polymorphic table function

Cause: The type of this new column was not set.

Action: Set the typecode and other needed metadata during the describe phase of the polymorphic table function.

OCI-62564: This new column name (*string*) already exists.

Cause: This new column name was already created during the describe phase and therefore it is a duplicate column name.

Action: Ensure that the new column names are unique for this polymorphic table function.

OCI-62565: The *string* method failed with error(s). *string*

Cause: This method of polymorphic table function had error(s) during SQL compilation.

Action: Look at the errors and resolve them.

OCI-62566: One of the new column names is a zero-length identifier.

Cause: A zero-length identifier was used as a new column name that was created during the describe phase.

Action: Specify valid identifiers for new column names.

OCI-62567: One of the new column names is too long.

Cause: An identifier with more than 128 bytes was used for one of the new column names that was created during the describe phase.

Action: Specify at most 128 bytes for new column names.

OCI-62568: invalid use of PARTITION BY or ORDER BY clause

Cause: Either the PARTITION BY or the ORDER BY clause was specified on an argument of a non-table semantic POLYMORPHIC TABLE FUNCTION.

Action: Remove the PARTITION BY or the ORDER BY clause.

OCI-62569: nested polymorphic table function is disallowed

Cause: A polymorphic table function was specified as an argument of a table function.

Action: Modify the query so that there is no nested polymorphic table function.

OCI-62570: new column name (*string*) is invalid

Cause: The new column name was invalid. It should be a valid Oracle identifier and should not be an Oracle reserved word.

Action: Use a different column name that is a valid Oracle identifier and that is not an Oracle reserved word.

OCI-62571: new column (*string*) has length (*string*) that is greater than the maximum allowed length (*string*)

Cause: The length specified for a new column for the polymorphic table function was greater than the maximum allowed length.

Action: Specify a new column length that is less than or equal to the maximum allowed length.

OCI-62572: object views are not supported with polymorphic table functions

Cause: An object view was being created with polymorphic table function in the select query.

Action: Do not use object views with polymorphic table function.

OCI-62573: new column (*string*) is not allowed with describe only polymorphic table function

Cause: The new column name was created in describe only polymorphic table function.

Action: Do not create a new column when no execution methods like OPEN, FETCH_ROWS or CLOSE are specified.

OCI-62574: row replication flag was not set

Cause: A row replication API was called, but the Describe method set ROW_REPLICATION to FALSE (default).

Action: Change the value of ROW_REPLICATION to TRUE in the Describe method.

OCI-62575: The parameter of type TABLE or COLUMN must not be NULL for a polymorphic table function.

Cause: An attempt was made to use NULL as argument for the parameter of type TABLE or COLUMN on a polymorphic table function.

Action: Use an argument different than NULL for the parameter of type TABLE or COLUMN.

OCI-62576: target size(*string*) is smaller than source size(*string*) for column(*string*) in *string*

Cause: When reading a column from database or writing a column to the database, destination buffer should not be smaller than the source.

Action: Change the size of destination buffer.

OCI-62577: character set IDs do no match *string*

Cause: When reading a column from the database or writing a column to the database, character set did not match.

Action: Ensure that the collection and table column character sets are identical.

OCI-62578: cursor expressions are not allowed with polymorphic table functions

Cause: A cursor expression was used as an argument to polymorphic table function.

Action: Instead of using the CURSOR expression, use the REF CURSOR bind parameter.

OCI-62579: The argument of type DBMS_TF.TABLE_T cannot be a TABLE.

Cause: A TABLE was used as argument for a formal of type DBMS_TF.TABLE_T.

Action: Do not use a table as argument for a formal of type DBMS_TF.TABLE_T.

OCI-62600: Invalid value is passed to a bitmap operator.

Cause: An attempt was made to pass an invalid value to a bitmap operator.

Action: Pass only expressions that have integer values to BITMAP_BUCKET_NUMBER and BITMAP_BIT_POSITION and provide only positive integer values for BITMAP_CONSTRUCT_AGG.

OCI-62601: invalid size value for BITMAP_BUCKET_NUMBER or BITMAP_BIT_POSITION operator

Cause: An attempt was made to pass an invalid size value for a BITMAP_BUCKET_NUMBER or BITMAP_BIT_POSITION operator.

Action: Pass only positive values that are less than 32 GB for the size argument of BITMAP_BUCKET_NUMBER and BITMAP_BIT_POSITION operators.

OCI-62602: The bitmap size exceeds maximum size of its SQL data type.

Cause: An attempt was made to construct a bitmap larger than its maximum SQL type size.

Action: Call BITMAP_CONSTRUCT_AGG with input BITMAP_BIT_POSITION and a smaller or the default bucket size argument.

OCI-62603: The input is not a valid bitmap produced by BITMAP COUNT DISTINCT operators.

Cause: An attempt was made to pass a bitmap that was not produced by one of the BITMAP COUNT DISTINCT operators.

Action: Pass only bitmaps constructed by using BITMAP_CONSTRUCT_AGG or BITMAP_OR_AGG to the BITMAP COUNT DISTINCT related operators.

OCI-62611: operation disallowed; cluster cannot be created in Oracle Autonomous Database Cloud

Cause: Cluster feature is not supported in Oracle Autonomous Database Cloud.

Action: Use heap-organized tables to store data in Oracle Autonomous Database Cloud.

OCI-62612: operation disallowed; column with ROWID type cannot be created in Oracle Autonomous Database Cloud

Cause: An attempt was made to create a table with ROWID column type. By default, Oracle Autonomous Database Cloud runs with ROW MOVEMENT enabled. Hence, ROWIDs stored in ROWID column may not be valid if rows are moved by automated maintenance operations, such as table shrink.

Action: Set ATP_ALLOW_ROWID_COLUMN_TYPE=TRUE and disable row movement of the tables that are referenced by the ROWID column.

OCI-62700: A DBMS_KAFKA application does not exist for cluster %0!s and application %1!s.

Cause: The procedure call was provided values for a nonexistent cluster and application pair.

Action: Pass in names for an existing cluster and application pair.

OCI-62701: DBMS_KAFKA cluster ID cannot be a NULL value.

Cause: A cluster ID was specified as NULL.

Action: This is an internal error; contact Oracle Support Services.

OCI-62702: DBMS_KAFKA generated cluster ID '%0!s' is greater than 40 characters.

Cause: The generated cluster ID was too long.

Action: This is an internal error; contact Oracle Support Services.

OCI-62703: DBMS_KAFKA cluster not found. Cluster ID is %0!s.

Cause: A DBMS_KAFKA cluster was not found with the specified cluster ID.

Action: This is an internal error; contact Oracle Support Services.

OCI-62704: An attempt to create a connection to Kafka cluster %0!s failed with status %1!s and secondary status %2!s.

Cause: An attempt to connect to a Kafka cluster failed.

Action: Check the availability of the Kafka cluster and the security credentials required for connecting.

OCI-62705: Property %0!s is not allowed because it would obscure a 'librdkafka' property with the same name.

Cause: An Oracle SQL Access to Kafka (OSAK) property was specified with a property name that was also used by 'librdkafka'.

Action: Rename or remove the OSAK property.

OCI-62706: Property %0!s cannot be NULL.

Cause: The property was specified without a value.

Action: Update the property and specify a value.

OCI-62707: OSAK Cluster configuration directory is not specified.

Cause: The cluster configuration directory was specified as NULL.

Action: Provide a cluster configuration directory name. The directory must be readable to an Oracle SQL Access to Kafka (OSAK) administrator.

OCI-62708: The OSAK properties file '%0!s' could not be read.

Cause: An Oracle SQL Access to Kafka (OSAK) 'osakafka.properties' file could not be read.

Action: Check that the OSAK properties file exists in the cluster configuration directory and is readable.

OCI-62709: OSAK SASL/SSL credential name is NULL.

Cause: An attempt to configure an Oracle SQL Access to Kafka (OSAK) cluster failed because the SASL/SSL credential name was NULL.

Action: The password for SASL/SSL must be stored as a database credential using the DBMS_CREDENTIAL.CREATE_CREDENTIAL() procedure. Supply the database credential name for the credential_name parameter in the DBMS_KAFKA_ADM.REGISTER_CLUSTER procedure call.

OCI-62710: The %0!s parameter is required.

Cause: The specified parameter was specified as NULL.

Action: Specify a valid value for the parameter.

OCI-62711: The %0!s value is NULL. The value must be an existing file name.

Cause: A value was specified as NULL instead of a file name.

Action: Specify an existing file name for the value.

OCI-62712: The directory path is not an absolute path for directory %0!s.

Cause: The directory path retrieved for the directory object was not specified as an absolute directory path.

Action: Update the directory object to contain an absolute directory path.

OCI-62713: The file specified by property %0!s is not accessible.

Cause: The file name provided for the property listed in the Oracle SQL Access to Kafka properties file was not accessible.

Action: Update the property in the properties file to refer to an existing file in the cluster configuration directory.

OCI-62714: error loading global temporary table %0!s from %1!s

Cause: Inserting data from the Oracle SQL Access to Kafka view into an associated global temporary table failed.

Action: This is an internal error; contact Oracle Support Services.

OCI-62715: unsupported call, call %0!s instead

Cause: An undocumented API was called instead of the documented API.

Action: Call the publicly documented API listed in the error message.

OCI-62716: Application %0!s already exists for cluster %1!s.

Cause: An attempt to create an application failed because an application of that name already exists.

Action: Provide a different name for the application or drop the existing application.

OCI-62717: The VIEW_COUNT parameter must be between 0 and the number of 'partitions' for the 'topic'. The supplied value is %0!s and the number of 'partitions' is %1!s.

Cause: View count was specified outside the valid range.

Action: Pass the view count parameter as a number between 0 and the number of 'partitions' for the Kafka 'topic'.

OCI-62718: VIEW_COUNT must be equal to or less than the SESSIONS_PER_USER quota. View count is %0!s and SESSIONS_PER_USER is %1!s.

Cause: The specified value for the VIEW_COUNT parameter was larger than the user's session limit.

Action: Specify a value for the VIEW_COUNT parameter equal to or lower than the user's session limit.

OCI-62719: The specified time zone [%0!s] is longer than 64 bytes.

Cause: The specified value was larger than 64 bytes".

Action: Specify a valid time zone.

OCI-62720: Invalid time zone [%0!s] is specified.

Cause: The specified value was not a valid time zone.

Action: Specify a valid time zone.

OCI-62721: The specified parallel hint [%0!s] exceeds the granule count {%1!s}.

Cause: The specified value was greater than the maximum possible parallelism, which is determined by the granule count.

Action: Specify a value less than or equal to the granule count. The granule count can be determined by calling the DBMS_KAFKA.GET_GRANULE_COUNT function.

OCI-62722: The parameter %0!s must be greater than or equal to 0. The specified value is [%1!s].

Cause: The specified value was less than 0.

Action: Specify a value greater than or equal to 0 for the parameter.

OCI-62723: The WATER_MARK parameter must be DBMS_KAFKA.WATER_MARK_HIGH {%0!s} or DBMS_KAFKA.WATER_MARK_LOW {%1!s}. The specified value is [%2!s].

Cause: The specified value was not in the valid list for water marks.

Action: Specify either DBMS_KAFKA.WATER_MARK_HIGH or DBMS_KAFKA.WATER_MARK_LOW.

OCI-62724: The calculated time stamp [%0!s = %1!sms] must be greater than or equal to the UNIX epoch.

Cause: The specified value was converted to a number of milliseconds that represents a time before the UNIX epoch. Kafka time stamps are restricted to time stamps since the UNIX epoch.

Action: Specify a time stamp that represents a time since the UNIX epoch.

OCI-62725: The end time stamp {%0!s} must be greater than start time stamp {%1!s}.

Cause: The end time stamp was equal to or less than the start time stamp.

Action: Adjust the time stamps so that the end time stamp is greater than the start time stamp.

OCI-62726: error preparing [%0!s] for seeking data using time stamps

Cause: Updating the metadata failed while processing the DBMS_KAFKA.SEEK_OFFSET_TS procedure.

Action: See the full stack trace for the cause of the failure.

OCI-62727: No offset data is recorded for view %0!s. A successful load involving the view is required.

Cause: The offset information was not recorded for the specified view name.

Action: Ensure that either a DBMS_KAFKA.LOAD_TEMP_TABLE or DBMS_KAFKA.EXECUTE_LOAD_APP completes successfully for the associated view.

OCI-62728: error while processing offset data for view [%0!s]

Cause: There was an unexpected problem processing the offset information associated with the specified view name.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

OCI-62729: The length of the %0!s parameter exceeds the allowed value {%1!s}.

Cause: The specified value for the argument exceeded the allowed length.

Action: Specify a value of the proper length.

OCI-62730: The DBMS_KAFKA cluster {%0!s} does not exist.

Cause: The specified cluster name was not a known Kafka cluster.

Action: Specify the name of an existing Kafka cluster.

OCI-62731: Required credential is not specified for a cluster associated with an Oracle Streaming Service 'stream'.

Cause: The specified credential name was NULL for a cluster whose provider is the Oracle Streaming Service (OSS).

Action: The password required for Oracle Streaming Service must be stored as a database credential using the SYS.DBMS_CREDENTIAL.CREATE_CREDENTIAL() procedure or an equivalent procedure. Specify the database credential name that was registered for the cluster associated with Oracle Streaming Service.

OCI-62732: The options specified contain duplicate keys.

Cause: The JavaScript Object Notation (JSON) document contained duplicate keys.

Action: Remove the duplicate keys from the JSON document and retry the procedure call.

OCI-62733: The specified options are not a properly formatted JSON document.

Cause: The JavaScript Object Notation (JSON) document contained errors and could not be converted to a JSON_OBJECT_T structure.

Action: Update the JSON document and retry the procedure call.

OCI-62734: Invalid option specified. Option {%0!s} is not supported. %1!s

Cause: The JavaScript Object Notation (JSON) document contained a key that was not one of the valid options. Invalid options generate / a suggested option in the error message.

Action: Check the suggested option specified in the error message or check the documentation for the procedure called and update the JSON document to contain only supported options.

OCI-62735: Option names are case sensitive. Name specified is {%0!s}; name expected is {%1!s}.

Cause: The JavaScript Object Notation (JSON) document contained a key that failed to match the option name due to case sensitivity.

Action: Update the JSON document to contain the option name using the proper case.

OCI-62736: The %0!s option must be one of {%1!s|%2!s}. The specified value is [%3!s].

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

OCI-62737: The DBMS_KAFKA cluster %0!s already exists.

Cause: Registering a Kafka cluster failed because a cluster of that name already exists.

Action: Specify a unique name for the new Kafka cluster.

OCI-62738: The DBMS_KAFKA cluster %0!s is still in use by some number {%1!s} of applications.

Cause: Deregistering a cluster failed because the cluster still had DBMS_KAFKA applications associated with it.

Action: The owners of the remaining applications must drop the applications before deregistration can be performed.

OCI-62739: The DBMS_KAFKA cluster %0!s is already disabled.

Cause: The DBMS_KAFKA cluster was already disabled or deregistered.

Action: None

OCI-62740: The DBMS_KAFKA cluster %0!s cannot be enabled.

Cause: The DBMS_KAFKA cluster was already enabled or deregistered.

Action: None. If the cluster is marked as deregistered, the cluster cannot be enabled.

OCI-62741: failed to add 'partitions' to DBMS_KAFKA application

Cause: There was a failure in the processing of the DBMS_KAFKA.ADD_PARTITIONS logic.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

OCI-62742: failed to ALTER TABLE %0!s while processing DBMS_KAFKA.ADD_PARTITIONS

Cause: There was a failure in the processing of the ALTER TABLE statement in the DBMS_KAFKA.ADD_PARTITIONS logic.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

OCI-62743: Application name for a DBMS_KAFKA application cannot be PARTITIONS.

Cause: The application name was specified as PARTITIONS. This name is reserved and cannot be used as an application name.

Action: Specify a name other than PARTITIONS for the application name.

OCI-62744: Application type for a DBMS_KAFKA application must be one of the following values [%0!s|%1!s|%2!s].

Cause: The specified application type was not a supported type.

Action: Specify an application type for the application from the list of acceptable types.

OCI-62745: application associated with the view name %0!s not found

Cause: The specified view name was not associated with a known DBMS_KAFKA application.

Action: This is an internal error; contact Oracle Support Services.

OCI-62746: The procedure only supports application types in this list: {%0!s}. Current application is of type %1!s.

Cause: The procedure called was not appropriate for the type of application associated with the specified view name.

Action: Call the appropriate procedure for the type of application.

OCI-62747: The BOOTSTRAP_SERVERS parameter is a comma-separated list of 'host:port' values. Value {%0!s} in {%1!s} needs to be a 'host:port' value.

Cause: The bootstrap server list contained a value that was not a 'host:port' pair.

Action: Update the bootstrap server list to contain a comma-separated list of 'host:port' pairs.

OCI-62748: The BOOTSTRAP_SERVERS parameter is a comma-separated list of 'host:port' values. The supplied value {%0!s} does not contain a 'host:port' pair.
Cause: The bootstrap server list did not contain a 'host:port' pair.

Action: Update the bootstrap server list to contain a 'host:port' pair or a comma-separated list of 'host:port' pairs.

OCI-62749: The {%0!s} parameter [%1!s] is not a known directory object.
Cause: The directory object did not exist.

Action: Either create the directory object with the name specified or specify the correct name of the directory object.

OCI-62750: The DBMS_KAFKA cluster {%0!s} is not enabled. Current state is {%1!s}.
Cause: The cluster was not in the enabled state. The procedure required an enabled cluster.

Action: Either enable the cluster or specify a different cluster for the DBMS_KAFKA application.

OCI-62751: The {%0!s} parameter {%1!s} is not a SQL name.
Cause: The credential name was not a valid SQL name.

Action: Specify a credential name that was created using the DBMS_CREDENTIAL.CREATE_CREDENTIAL() procedure or an equivalent procedure. The specified credential name may be schema qualified.

OCI-62752: The {%0!s} parameter {%1!s} does not exist.
Cause: The credential name was not an existing credential.

Action: Specify the correct name for the credential or create a credential with the specified name.

OCI-62753: The KAFKA_PROVIDER parameter {%0!s} must be one of the following {%1!s}|{%2!s}.
Cause: The specified KAFKA_PROVIDER was not one of the known providers.

Action: Specify one of the documented KAFKA_PROVIDER values.

OCI-62754: The 'format' {%0!s} requires a '%1!s' option to be defined.
Cause: The required option was missing for the format specified.

Action: Specify all required options for the 'format' option.

OCI-62755: The 'format' option is missing from the specified options.
Cause: The 'format' option was missing in the specified options. The 'format' option is required.

Action: Specify the 'format' option in the specified options.

OCI-62756: The '%0!s' option is currently an unsupported option.
Cause: An unsupported option was present in the specified options.

Action: Remove the unsupported option from the specified options.

OCI-62757: The '%0!s' option must be a single printable character. The specified value is [%1!s].

Cause: A single character option was specified with more than one character.

Action: Specify the option value as a single printable, Unicode or allowed escape character.

OCI-62758: The '%0!s' option cannot be a digit. The specified value is [%1!s].

Cause: A single character option was specified as a digit character, which is not allowed.

Action: Specify the option value as a single printable, Unicode or allowed escape character, that is not a digit.

OCI-62759: The '%0!s' option is not specified as an allowed escaped character {n|t|r|\}. The specified value is [%1!s].

Cause: An unsupported escape character was specified for an option requiring a single character.

Action: Specify an option value that is in the acceptable escape character list: {n|t|r|\}.

OCI-62760: The '%0!s' option is not allowed for the 'format' specified.

Cause: A known option was specified, but the option was not appropriate for the 'format' specified.

Action: Remove the option from the specified options.

OCI-62761: The %0!s option must be one of {%1!s|%2!s|%3!s|%4!s}. The specified value is [%5!s].

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

OCI-62762: The %0!s option must be between %1!s and %2!s. The specified value is [%3!s].

Cause: The specified value was not within the range of the valid values for the option.

Action: Specify a value within the valid range for the option.

OCI-62763: The %0!s option cannot be NULL.

Cause: A NULL value was specified that was not allowed for the option.

Action: Specify a value for the option.

OCI-62764: The %0!s option must be either the value UNLIMITED or a number equal to or greater than 0. The specified value is [%1!s].

Cause: The specified value was not UNLIMITED or a number greater than or equal to 0.

Action: Specify a valid value for the option.

OCI-62765: The %0!s option is not a valid date format. The specified value is [%1!s].

Cause: The specified value was not a valid date format.

Action: Specify a valid date format for the option.

OCI-62766: The %0!s option is not a valid time stamp format. The specified value is [%1!s].

Cause: The specified value was not a valid time stamp format.

Action: Specify a valid time stamp format for the option.

OCI-62767: The %0!s option must be one of {%1!s}%2!s}%3!s}%4!s}%5!s}. The specified value is [%6!s].

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

OCI-62768: The %0!s option is not an existing table name. The specified value is [%1!s].

Cause: The specified value was not the name of an existing table.

Action: Specify the name of an existing table.

OCI-62769: The %0!s option is not a valid JSON formatted Avro schema.

Cause: The specified value failed to be converted to a JSON_OBJECT_T data type.

Action: Specify a valid Avro schema in JavaScript Object Notation (JSON) format.

OCI-62770: The %0!s option lacks required validation logic.

Cause: The specified option was not allowed because it lacked validation support.

Action: Remove the option from the specified options. This is an internal error; contact Oracle Support Services.

OCI-62771: The %0!s parameter is restricted to the following characters {%1!s}. The specified value is [%2!s].

Cause: The specified value included a character that was not in the valid range.

Action: Specify an appropriate value for the parameter.

OCI-62772: The %0!s parameter must be a simple SQL name. The specified value is [%1!s].

Cause: The specified value could not be used in the name of a SQL object.

Action: Specify an appropriate value for the parameter.

OCI-62773: The %0!s parameter must be the name of an existing SQL object. The specified value is [%1!s].

Cause: The specified value was not the name of an existing SQL object.

Action: Specify an appropriate value for the parameter.

OCI-62774: The %0!s option must be one of the following {%1!s}%2!s}%3!s}. The specified value is [%4!s].

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

OCI-62775: The generated %0!s name [%1!s] is too long.

Cause: The object name generated was longer than the acceptable SQL object name length maximum.

Action: This is an internal error; contact Oracle Support Services.

OCI-62776: The %0!s name must be the name of an existing SQL object. The specified value is [%1!s].

Cause: The specified value was not the name of an existing SQL object.

Action: This is an internal error; contact Oracle Support Services.

OCI-62777: The type of object [%0!s] to rollback is not a supported type.

Cause: The specified type was not one of the expected types.

Action: This is an internal error; contact Oracle Support Services.

OCI-62778: The data type of the column [%0!s] for the reference table [%1!s] is currently not supported.

Cause: The data type of the column was not one of the supported data types.

Action: Specify a reference table comprising of column data types that are supported.

OCI-62779: An unexpected 'topic' format value [%0!s] is provided.

Cause: The format value for a 'topic' was an unrecognized value.

Action: This is an internal error; contact Oracle Support Services.

OCI-62780: The number of '%0!s' must be greater than 0. Retrieved value is %1!s.

Cause: The value stored in the database was invalid. This was because of data corruption or an attempt at SQL injection.

Action: This is an internal error; contact Oracle Support Services.

OCI-62781: The value of '%0!s' is invalid. Retrieved value is %1!s.

Cause: The value stored in the database was invalid. This was because of data corruption or an attempt at SQL injection.

Action: This is an internal error; contact Oracle Support Services.

OCI-62782: Error getting 'partition' count for 'topic' %0!s from the Kafka cluster. Check the status of the Kafka cluster: %1!s.

Cause: There was a failure to fetch the 'partition' count from the Kafka cluster. This could be caused by access errors to the Kafka cluster.

Action: Check that the Kafka cluster is running and reachable from the database host.

OCI-62783: Error getting 'partition' count for 'topic' %0!s from the Kafka cluster. Check that the topic exists in the Kafka cluster %1!s.

Cause: There was a failure to fetch the 'partition' count from the Kafka cluster. This occurred usually when the 'topic' specified did not exist. This could also be caused by access errors to the Kafka cluster.

Action: Check that the 'topic' exists on the Kafka cluster and that the Kafka cluster is running and reachable from the database host.

OCI-62784: An attempt to manually rollback a change to an external table [%0!s] failed.

Cause: Altering an external table to its original configuration during a rollback failed.

Action: This is an internal error; contact Oracle Support Services.

OCI-62785: An attempt to manually rollback an unknown type [%0!s] was made.

Cause: The type of object to rollback was not one of the known types.

Action: This is an internal error; contact Oracle Support Services.

OCI-62786: The specified object name [%0!s] could not be parsed into SQL object tokens.

Cause: The specified object name failed to be parsed into schema and object names.

Action: Specify a value that can be parsed as a SQL object name. The value can be a schema-qualified SQL object name.

OCI-62787: The specified object name [%0!s] parsed into more tokens than expected. Expected name is either an object name or a schema-qualified object name.

Cause: The specified object name parsed into more than just schema and object names.

Action: Specify a value that can be parsed as a SQL object name. The value can be a schema-qualified SQL object name.

OCI-62788: The directory [%0!s] either does not exist or does not have read/write privileges granted to the user.

Cause: Either the directory did not exist or did not have read or write privilege granted to the user.

Action: Specify a directory name that exists. Ensure that the current user has read or write privileges for this directory.

OCI-62789: The user cannot have EXECUTE access to the directory [%0!s].

Cause: EXECUTE access to the directory was granted to the user. This was not allowed.

Action: Either revoke the EXECUTE privilege for the user for this directory or provide a directory name that exists and for which the user has only read or write privileges.

OCI-62790: The OSAK view [%0!s] does not exist.

Cause: The specified view name was not a known Oracle SQL Access to Kafka (OSAK) view.

Action: Specify the name of an existing OSAK view.

OCI-62791: The OSAK temporary table [%0!s] does not exist.

Cause: The specified temporary table name was not a known Oracle SQL Access to Kafka (OSAK) temporary table.

Action: Specify the name of an existing OSAK temporary table.

OCI-62792: The Avro name is NULL.

Cause: The specified Avro name was NULL.

Action: Specify a value for the Avro name.

OCI-62793: The Avro name starts with an invalid character. The specified value is [%0!s].

Cause: The Avro name did not begin with an underscore or an alphabetic character.

Action: Specify a value for the Avro name with a valid starting character.

OCI-62794: The Avro name contains an invalid character. The specified value is [%0!s].

Cause: The Avro name contained a character that was not an underscore or an alphanumeric character.

Action: Specify a value for the Avro name with valid characters.

OCI-62795: The Avro type [%0!s] already exists and cannot be redefined.

Cause: The specified Avro type was already defined and could not be redefined.

Action: Specify a different name for the Avro type.

OCI-62796: The Avro %0!s %1!s is NULL.

Cause: The schema was not specified.

Action: This is an internal error; contact Oracle Support Services.

OCI-62797: The attribute [%0!s] is not present in schema [%1!s].

Cause: The specified attribute was not defined in the schema.

Action: Specify the attribute in the schema or use a valid attribute already defined in the schema.

OCI-62798: The attribute [%0!s] is not a string in the schema [%1!s].

Cause: The specified attribute was not defined as a string.

Action: Specify the attribute as a string.

OCI-62799: The attribute [%0!s] is not an integer in the schema [%1!s].

Cause: The specified attribute was not defined as an integer.

Action: Specify the attribute as an integer.

OCI-62800: The attribute 'aliases' is not an array in the schema [%0!s].

Cause: The specified attribute was not defined as an array.

Action: Specify the attribute as an array.

OCI-62801: The attribute array element 'aliases[%0!s]' is not a string in the schema [%1!s].

Cause: The specified attribute array element was not defined as a string.

Action: Specify the attribute array element as a string.

OCI-62802: Schema name [%0!s] cannot be a primitive name in the schema [%1!s].

Cause: The specified named schema was a primitive name. This was not an allowed value.

Action: Specify a different name for the schema name.

OCI-62803: A fixed type size must be between 0 and 2147483647 in the schema [%0!s].

Cause: The specified size was not within the range of acceptable values.

Action: Specify a size within the acceptable range.

OCI-62804: The 'symbols' attribute is missing for the enum in the schema [%0!s].

Cause: The required 'symbols' attribute was not provided for the enum.

Action: Specify the missing attribute for the enum.

OCI-62805: The 'symbols' attribute is not an array for the enum in the schema [%0!s].

Cause: The 'symbols' attribute was not an array.

Action: Specify an array for the 'symbols' attribute for the enum.

OCI-62806: The element [%0!s] in the enum 'symbols' attribute array is not a string in the schema [%1!s].

Cause: The 'symbols' attribute array contained a non string value.

Action: Specify an array of strings for the 'symbols' attribute for the enum.

OCI-62807: The element [%0!s] in the enum 'symbols' attribute array is a duplicate in the schema [%1!s].

Cause: The 'symbols' attribute array contained a duplicate string value.

Action: Specify an array of unique strings for the 'symbols' attribute for the enum.

OCI-62808: The default value [%0!s] is not in the array [%1!s] for the enum 'symbols' attribute in the schema [%2!s].

Cause: The 'symbols' attribute default value did not exist in the array.

Action: Specify an existing value from the array for the default value for the 'symbols' attribute. Alternatively, add the specified default value to the array.

OCI-62809: The type [%0!s] is not defined in the schema [%1!s].

Cause: The type did not exist in the schema.

Action: Specify the type in the schema.

OCI-62810: An illegal value for 'order' [%0!s] is specified for the field [%1!s].

Cause: The value for 'order' was not from the list of supported values.

Action: Specify a valid value for 'order' for the field.

OCI-62811: The record has an empty or missing 'fields' array [%0!s].

Cause: The 'fields' array was missing or empty in the record.

Action: Specify a valid 'fields' array for the record.

OCI-62812: The element [%0!s] in the 'fields' array for the record is not an object [%1!s].

Cause: An element in the 'fields' array was not an object.

Action: Specify only objects in the 'fields' array for the record.

OCI-62813: Union [%0!s] is not allowed to be nested within union [%1!s].

Cause: A union was nested within a union. This is not allowed.

Action: Remove the nested union from the union.

OCI-62814: A duplicate type [%0!s] is present within union [%1!s].

Cause: A duplicate type was specified within a union. This was not allowed.

Action: Remove the duplicate type from the union.

OCI-62815: The Avro schema is NULL.

Cause: The Avro schema was specified as NULL. This was not allowed.

Action: This is an internal error; contact Oracle Support Services.

OCI-62816: Undefined name [%0!s] in the current type map.

Cause: The specified name was not in the type map.

Action: Define the name before using it in the Avro schema.

OCI-62817: The 'items' attribute is not defined for the array [%0!s].

Cause: The array was defined without an 'items' attribute.

Action: Specify an 'items' attribute for the array.

OCI-62818: The 'values' attribute is not defined for the map [%0!s].

Cause: The map was defined without a 'values' attribute.

Action: Specify a 'values' attribute for the map.

OCI-62819: The type [%0!s] is not supported in the current type map.

Cause: The current map did not contain a valid type.

Action: Specify a different type or define the type before using it.

OCI-62820: Schema [%0!s] is not supported.

Cause: The schema contained an unrecognized element.

Action: See the Oracle documentation for the supported Avro schema elements.

OCI-62821: Schema type [%0!s] is not supported.

Cause: The schema contained an unsupported type.

Action: Remove the type from the schema.

OCI-62822: Avro schema is not a JSON object. Schema is [%0!s].

Cause: The Avro schema was not a JavaScript Object Notation (JSON) object.

Action: Specify an Avro schema as a JSON object.

OCI-62823: Avro schema is not a 'record' type. Schema is [%0!s].

Cause: The Avro schema was not a 'record' type.

Action: Specify an Avro schema that is a 'record' type.

OCI-62824: The maximum allowed number of 'fields' in an Avro record is %1!s. The number of 'fields' is %0!s.

Cause: The specified number of fields was more than the allowed limit.

Action: Specify an Avro schema that contains fewer 'fields'.

OCI-62825: The 'field' name [%0!s] exceeds the maximum column name length [%1!s] in the schema [%2!s].

Cause: The name of the field was more than the allowed number of characters for a column name.

Action: Specify a 'field' name that is shorter.

OCI-62826: The 'field' [%0!s] maps to the same column name as field [%1!s] in the schema [%2!s].

Cause: The 'field' name was a duplicate of another column name.

Action: Specify a different 'field' name that is unique.

OCI-62827: failed to ALTER TABLE %0!s while updating the access parameters.

Cause: There was a failure in the processing of the ALTER TABLE statement in the DBMS_KAFKA.SET_TRACING logic.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

OCI-62828: The target table contains one or more column names that do not exist in the provided OSAK view %0!s.

Cause: There were one or more columns names in the target table that did not match column names for the Oracle SQL Access to Kafka (OSAK) view.

Action: Provide a different name for the target table that contains only a subset of the OSAK view's column names or all of the columns of the view's column names.

OCI-62829: The 'size' attribute must be greater than 0 in the schema [%0!s].

Cause: The specified 'size' was not within the range of acceptable values.

Action: Specify a 'size' within the acceptable range.

OCI-62830: The 'precision' must be greater than 0 in the schema [%0!s].

Cause: The specified 'precision' was not within the range of acceptable values.

Action: Specify a 'precision' within the acceptable range.

OCI-62831: The 'precision' must be less than or equal to %0!s in the schema [%1!s].

Cause: The specified 'precision' was not within the range of acceptable values.

Action: Specify a 'precision' within the acceptable range.

OCI-62832: The 'scale' must be between 0 and %0!s in the schema [%1!s].

Cause: The specified 'scale' was not within the range of acceptable values.

Action: Specify a 'scale' within the acceptable range.

OCI-62833: An empty union definition [%0!s] is not allowed.

Cause: The union schema was empty.

Action: Define a union schema that is not empty.

OCI-62834: The record must define at least one supported field type.

Cause: The schema did not define any supported field types;

Action: See the Oracle documentation for the supported Avro schema elements.

OCI-62835: The application %0!s is still being used by %1!s and cannot be dropped. Stop all programs that are using this application and retry the drop procedure.

Cause: There were one or more programs still using the application with either an uncommitted DBMS_KAFKA.UPDATE_OFFSET call or a global temporary table with pending inserts.

Action: Commit or roll back the pending transactions. Alternatively, shut down the programs that are accessing the application.

OCI-62836: One or more properties required for Kerberos authentication are missing from the 'osakafka.properties' configuration file. The list of required properties are {'sas.l.kerberos.principal', 'sas.l.kerberos.config', 'sas.l.kerberos.ccname', 'sas.l.mechanism', 'sas.l.kerberos.service.name'}.

Cause: One or more required properties were missing from the 'osakafka.properties' file.

Action: Set 'sas.l.mechanism=GSSAPI' to indicate Kerberos authentication. Add all of the required properties to the 'osakafka.properties' file and retry the operation.

OCI-62837: The allowed number of columns in a reference table is between 1 and %1!s. The number of columns is %0!s.

Cause: The specified number of columns was not within the allowed limit. This number does not include the metadata columns KAFKA_OFFSET, KAFKA_PARTITION, and KAFKA_EPOCH_TIMESTAMP.

Action: Specify a reference table that contains fewer columns.

OCI-62838: The reference table %0!s contains one of the reserved OSAK columns {'KAFKA_PARTITION', 'KAFKA_OFFSET', 'KAFKA_EPOCH_TIMESTAMP'} that either vary in column position or data type.

Cause: There were one or more columns in the reference table that did not match data type or position for the Oracle SQL Access to Kafka (OSAK) reserved column names. The first three columns of all OSAK external tables are INTEGER columns named 'KAFKA_PARTITION', 'KAFKA_OFFSET', 'KAFKA_EPOCH_TIMESTAMP' in that order.

Action: Specify a different reference table that either does not contain OSAK reserved columns or contains all OSAK reserved columns with the correct data type and in the correct order.

OCI-62839: There is an unexpected failure for the Oracle SQL Access to Kafka trigger associated with a DROP USER statement for user %0!s while processing type %1!s.

Cause: An unexpected failure occurred while processing a DROP USER statement.

Action: This is an internal error; contact Oracle Support Services.

OCI-62840: The reference table %0!s contains at least one invisible or hidden column.

Cause: There were one or more columns in the reference table that are invisible or hidden and thus cannot be used as a reference table.

Action: Specify a different reference table that does not contain any invisible or hidden columns.

OCI-63000: operation disallowed: data file *string* is being moved

Cause: The specified data file was being moved.

Action: Wait for the move operation to complete and retry the command.

OCI-63001: file error during move operation

Cause: The move operation encountered an error for the moved data file. The error might be caused by file going offline or by an I/O error. See alert or trace files in all instances for further information.

Action: Retry the move command.

OCI-63002: a data file copy that is not current

Cause: An obsolete copy of a data file left from a data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Pass a valid file or perform a media recovery on the file.

OCI-63003: a half-done data file copy

Cause: A half-done copy of a data file created from a previous data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Check file headers and pass only valid files.

OCI-63004: Database names in file headers are inconsistent: *string* and *string*.

Cause: Differing database names were found in database file headers.

Action: Check that correct and valid data files are used.

OCI-63005: Header validation failed for *string* File ('*string*').

Cause: Oracle server failed to read or write to the specified file because the file has an SCN value which is too high for this release.

Action: Contact Oracle Support Services.

OCI-63006: only PDB files can be moved to or from the object store

Cause: Either the root CDB or the non-CDB file could not be moved to or from the object store.

Action: Check the source and destination of the move operation.

OCI-63007: only read-only files can be moved to or from the object store

Cause: The read/write file could not be moved to or from the object store.

Action: Check the source and destination of the move operation.

OCI-63008: cannot move file to or from the object store on ADG

Cause: The data file move operation to or from object store was not supported on Active Data Guard (ADG).

Action: Switch ADG to a primary database to perform this operation.

OCI-63009: cannot make object store files read/write

Cause: Tablespaces with object store files could not be read/write.

Action: Move the files out of object store to make the tablespace read/write.

OCI-63010: trace event for recovery data file pre-creation**OCI-63011: created file '*string*' is located in object store**

Cause: Files could not be created in the object store.

Action: Create the files outside of the object store and then move them to the object store.

OCI-63012: no DEFAULT_CREDENTIAL in PDB *string* available for data file move

Cause: When moving a data file to the object store, the DEFAULT_CREDENTIAL was not found.

Action: Set a valid DEFAULT_CREDENTIAL in the specified PDB that can authorize access to the object store URI specified for the data file move.

OCI-63013: no DEFAULT_CREDENTIAL in PDB *string* available for data file drop

Cause: When dropping a data file in the object store, the DEFAULT_CREDENTIAL was not found.

Action: Set a valid DEFAULT_CREDENTIAL in the specified PDB that can authorize access to the object store URI specified for the data file drop.

OCI-63014: cannot make object store data file read/write during recovery

Cause: Object store data files cannot be made read/write during recovery.

Action: Move the data file out of the object store to continue recovery.

OCI-63015: could not cache credential '*string*' for object store access : *string*

Cause: Object store data files require credentials to authorize access. An attempt to cache the credentials failed. Caching credentials is necessary for access in various circumstances.

Action: Review the associated error code for more information on other related errors which may have occurred. Check that the specified credential name is valid and is not disabled.

OCI-63016: could not read DEFAULT_CREDENTIAL in mounted or closed state

Cause: The DEFAULT_CREDENTIAL can only be accessed when the PDB is open in this instance. This instance is detected to be closed or mounted.

Action: Open the PDB on this instance to access the credential or issue the operation on another instance which has the PDB open.

OCI-63100: Primary key column cannot be redacted for JSON Duality View

Cause: Attempt was made to have a redacted column be a primary key column in a JSON Duality View.

Action: Do not redact the primary key column in a JSON Duality View.

OCI-63101: JSON Duality View Entity Tag (ETAG) column cannot be redacted

Cause: Attempt was made to have a redacted column be part of the ETAG in a JSON Duality View.

Action: Do not redact an ETAG column in a JSON Duality View.

OCI-63600: Failed to detach from a persistent memory region.

Cause: Attempt to detach a persistent memory region failed because one or more processes were still attached.

Action: Retry the operation.

OCI-63800: maximum number of elements(*string*) in a tuple exceeded for a TVC

Cause: An attempt to specify more than the allowed number of elements in a tuple of the table value constructor (TVC) is being made.

Action: Do not specify more than allowed number of elements in a tuple of a TVC.

OCI-63801: each tuple should have same number of elements in a Table Value Constructor

Cause: An attempt was made to specify different number of elements in a tuple of Table Value Constructor.

Action: Each tuple of a Table Value Constructor should have same number of elements.

OCI-63802: tuple in a Table Value Constructor cannot be empty

Cause: An attempt was made to specify a tuple of Table Value Constructor that had no elements.

Action: Each tuple of a Table Value Constructor should have at least one element.

OCI-63803: columns must be specified with *string*

Cause: Column names must be specified when Table Value Constructor is used in this context.

Action: When a Table Value Constructor is used in contexts like INSERT or WITH, column name must be specified.

OCI-63804: Number of Columns must be same as number of elements

Cause: Number of columns aliases is not same as number of elements of each tuple of Table Value Constructor.

Action: Specify the same number of columns in a Table Value Constructor as the number of elements in each tuple.

OCI-63805: Maximum number of tuples in Table Value Constructor exceeded

Cause: Number of tuples in the values clause of Table Value Constructor is more than the allowed limit.

Action: Specify less than the allowed number of tuples in the values clause of a Table Value Constructor.

OCI-63806: Duplicate name in column alias list for Table Value Constructor

Cause: Column aliases specified for Table Value Constructor had one or more names specified more than once.

Action: Specify a column alias only once in column alias list of a Table Value Constructor.

OCI-63807: Table value constructor is not supported in *string*.

Cause: The Table value constructor was not supported with this feature.

Action: Do not use the table value constructor with this feature.

OCI-63808: list of values in a table value constructor is not well formed

Cause: An attempt was made to specify a list of expressions in a Table Value Constructor that were not separated by a comma.

Action: Specify each expression in a list of values for Table Value Constructor such that it is followed by a "," or a ")".

OCI-63809: returning clause is not allowed with INSERT and Table Value Constructor

Cause: Returning clause was not allowed when inserting multiple rows by using Table Constructor in this release.

Action: Use Insert one row at a time to use returning clause.

OCI-63810: Sequence as default is not supported with INSERT using table value constructor

Cause: Table columns that have default values specified as sequences are not supported when they are referenced as keyword DEFAULT in an INSERT statement inserting multiple rows using table value constructor.

Action: Use explicit values of the default when specifying INSERT using table value constructor.

OCI-63811: INSERT on views with default columns is not supported using table value constructor

Cause: Table columns that have default values specified are not supported when INSERT is done on a view defined on that table using table value constructor.

Action: Use regular insert statement when inserting rows via views.

OCI-63812: INSERT on remote tables is not supported when using default values with table value constructor

Cause: Table value constructors can not be used to insert values on remote tables when using default expressions.

Action: Use regular insert statement when inserting in remote tables.

OCI-63813: Incorrect syntax in IN clause using table value constructor

Cause: Table value constructors in the IN clause should use comma separated values. For example: select employee_id, first_name, last_name from employees where employee_id in (values (100), (101), (102)); Should be specified as select employee_id, first_name, last_name from employees where employee_id in (values (100, 101, 102));

Action: For a single value IN LIST, use comma separated values without parenthesis.

OCI-63995: fractured block detected in control file: (block string, # blocks string)

Cause: A fractured block or checksum error was detected on reading the control file under no-enqueue control file transaction. The reason could be a stalled concurrent block update.

Action: Retry the operation later.

OCI-63996: A local temporary file remote call failed

Cause: An operating system error or network error occurred when making a remote call to another instance during a local temporary space DDL operation.

Action: Remedy the operating system or network errors mentioned in the error stack and then retry the operation.

OCI-63997: file size refresh failed

Cause: An operating system error or device error occurred when retrieving the file's size.

Action: Remedy the operating system or device errors mentioned in the error stack and then perform crash recovery.

OCI-63998: undo tablespace file suffered media failure

Cause: An undo tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

OCI-63999: data file suffered media failure

Cause: A data file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

OCI-64000: specified path already exists

Cause: The pathname of a new item specified in a DBFS API operation already exists.

Action: Specify a valid, new pathname for the operation.

OCI-64001: invalid parent directory in specified path

Cause: The pathname of an item specified in a DBFS API operation has one or more invalid parent components.

Action: Specify a valid pathname with valid parent components for the operation.

OCI-64002: specified path is invalid

Cause: The pathname of an item specified in a DBFS API operation is invalid.

Action: Specify a valid pathname for the operation.

OCI-64003: An unsupported operation was invoked.

Cause: The current Database File System (DBFS) API operation was unsupported by a provider.

Action: Use the provider feature set to invoke only supported operations.

OCI-64004: an invalid combination of arguments was specified

Cause: The current DBFS API operation specifies an invalid combination of arguments for the specified pathname(s) and operation.

Action: Specify a valid combination of pathname(s) and arguments.

OCI-64005: access control checks failed

Cause: The current DBFS API operation failed access control checks for the pathname(s) being accessed.

Action: Specify valid pathname(s) and principal for the operation, or take store-specific actions to enable access.

OCI-64006: lock conflict in current operation

Cause: A DBFS API locking operation could not be completed due to conflicts in the locking protocol.

Action: Follow the proper lock/unlock protocol according to the provider feature set.

OCI-64007: invalid store specified

Cause: The current operation specifies an invalid store name.

Action: Specify a valid store name for the operation.

OCI-64008: invalid mount-point specified

Cause: The current operation specifies an invalid mount-point.

Action: Specify a valid mount-point for the operation.

OCI-64009: invalid provider specified

Cause: The current operation refers to an invalid or incomplete or non-conformant store provider package.

Action: Specify a valid, complete, and conformant (per "dbms_dbfs_content_spi") store provider package.

OCI-64010: cannot modify store via read-only mount

Cause: The current operation attempts to modify a store via a read-only mount (or specifies a read-only store).

Action: Specify a valid modifiable store/mount for the operation.

OCI-64011: cross store operation

Cause: The current operation attempts to span 2 or more different stores and cannot be implemented entirely by the DBFS API.

Action: Split the operation, at the application-level, into multiple sub-operations to implement the same overall functionality.

OCI-64012: specified path is a directory

Cause: The current operation specifies a path that is a directory element, when a non-directory element is expected.

Action: Specify a path of the proper type for the operation.

OCI-64013: specified path is not a directory

Cause: The current operation specifies a path that is not a directory element, when a directory element is expected.

Action: Specify a path of the proper type for the operation.

OCI-64014: directory not empty

Cause: The current operation specifies a directory element that is not empty as required.

Action: Specify an empty directory element.

OCI-64015: cannot drop tablespace used by Database File System (DBFS)

Cause: An attempt was made to drop a tablespace containing DBFS metadata tables.

Action: Use `dbfs_drop_filesystem.sql` to drop the Database File System and try dropping the tablespace again.

OCI-64016: *string* is not a valid compression option. Use LOW, MEDIUM or HIGH

Cause: An invalid value was specified for compression option

Action: Specify any of 'LOW', 'MEDIUM' or 'HIGH' as the compression option.

OCI-64017: *string* is not a valid encryption option

Cause: An invalid value was specified for encryption option

Action: Specify any of '3DES168', 'AES128', 'AES192', 'AES256' as the encryption option

OCI-64101: Cannot alter both a structured and an unstructured component of an XMLIndex in the same ALTER INDEX statement.

Cause: An attempt was made to alter the unstructured component and structured component of an XMLIndex at the same time.

Action: Use separate ALTER INDEX statements to change an unstructured component and a structured component of an XMLIndex.

OCI-64102: Cannot create an XML Index with a structured component on a CLOB column within the object relational storage model.

Cause: An attempt was made to create an XML Index with a structured component on a CLOB column within the object relational storage model.

Action: Only an unstructured XML Index can be created on a CLOB column within the object relational storage model.

OCI-64103: Cannot create an XMLIndex on an object-relational XML type table or column.

Cause: An attempt was made to create an XMLIndex on an XML type table or column that uses the object-relational storage model.

Action: The object-relational storage model does not support an XMLIndex.

OCI-64104: Column name already used by internal column of the structured component of the XMLIndex.

Cause: An attempt was made to use a column name already in use by an internal column of the structured component of the XMLIndex.

Action: Chose another column name.

OCI-64105: Cannot create domain index on XMLIndex internal tables.

Cause: An attempt was made to create a domain index on an internal table of an XMLIndex.

Action: Create the domain index on the base table.

OCI-64106: incorrect use of comma(,) punctuation in COLUMN definitions

Cause: An attempt was made to define COLUMNS with incorrect use of comma punctuation.

Action: Properly separate COLUMN definitions with comma punctuation.

OCI-64108: Cannot truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to truncate a table that had an XMLIndex whose internal table was indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

OCI-64109: A problem was encountered while dropping the statistics of an XML index.

Cause: A problem was encountered while dropping the statistics of an XML index.

Action: This message is followed by a second message providing more details about the error. Check the second error message for more information.

OCI-64110: A problem occurred when gathering the statistics of an XML Index.

Cause: A problem occurred when gathering the statistics of an XML Index.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information.

OCI-64111: XMLIndex: problems encountered during EXPORT

Cause: See associated error message.

Action: Correct the error and retry command.

OCI-64112: XMLIndex: problems encountered during IMPORT

Cause: See associated error message.

Action: Correct the error and retry command.

OCI-64115: The table used to exchange partition from does not have XML Index.

Cause: The table used to exchange partition from did not have an XML Index.

Action: Ensure the table used to exchange partition from has an XML Index.

OCI-64116: incompatible XML index XPATH subsets found when exchanging partitions including XML indexes

Cause: The XML index from the table to be exchanged partition with had different XPATH subsets than the XML index from the table used to exchange partition from.

Action: Ensure the XML Indexes from both tables have the same XPATH subsets.

OCI-64117: XMLIndex Exchange Partition: incompatible modes for asynchronous DML

Cause: The XMLIndexes on the two tables had different deferred DML modes.

Action: Correct the error and retry the command.

OCI-64118: Incompatible XML index unstructured components were during the exchange of partitions including XML indexes.

Cause: One of the XML indexes from the tables participating in exchanging partition did not have unstructured component.

Action: Ensure the XML indexes from both tables have unstructured components.

OCI-64119: incompatible XML Index structured components found when exchanging partitions including XML Indexes

Cause: One of the XML Indexes from the tables participating in exchanging partition did not have a structured component.

Action: Ensure the XML Indexes from both tables have structured components.

OCI-64120: incompatible XML index structured components found when exchanging partitions including XML indexes

Cause: The XML index from the table exchanging partitions had a structured component different from that of the XML index from the table from which the exchange partition was used.

Action: Ensure that the XML indexes from both tables have the same structured components.

OCI-64121: XMLIndex DDL: failure of the internal "string"

Cause: See associated error message.

Action: Correct the error and retry command.

OCI-64123: A recursive DDL failed during the XMLIndex DDL processing.

Cause: A recursive DDL (Data Definition Language) command failed during an XMLIndex DDL processing.

Action: The error message is followed by a second message with details about the error. Check the second error message for more information and take the appropriate action.

OCI-64124: A problem occurred when setting an event for an XML Index.

Cause: A problem occurred when setting an event for an XML Index.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information related to this issue.

OCI-64125: A problem occurred when resetting an event of an XML index.

Cause: A problem occurred when you tried to reset an event of an XML index.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information.

OCI-64126: A problem occurred at the start of an XML index table function.

Cause: A problem occurred at the start of an XML index table function.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information.

OCI-64127: A problem occurred at the beginning of the XMLIndex Table function.

Cause: A problem occurred at the beginning of an XMLIndex table function. This message will be followed by a second message giving more details about the error.

Action: Check the second error message for more information and take the appropriate action.

OCI-64128: A problem occurred during the evaluation of an XML index table function.

Cause: A problem occurred when evaluating an XML Index Table function.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information. Contact Oracle Support Services if the error persists.

OCI-64129: A problem occurred at the end of an XML index table function.

Cause: A problem occurred at the end of an XML index table function.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information.

OCI-64130: XMLIndex: invalid namespace mapping "string"

Cause: Namespace mapping was invalid. The syntax is XMLNS="string".

Action: Check the namespace string, correct the error and retry command.

OCI-64131: A problem occurred when looking up the metadata of an XML index.

Cause: A problem occurred when looking up of the metadata of an XML index.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information.

OCI-64132: A problem occurred updating the metadata of the XML Index.

Cause: A problem occurred when updating the metadata of an XML Index.

Action: Check the secondary error message for more details.

OCI-64133: XMLIndex DML: failure of the internal "string"

Cause: See associated error message.

Action: Correct the error and retry command.

OCI-64134: XMLIndex DML: failure of the recursive "string"

Cause: See associated error message.

Action: Correct the error and retry command.

OCI-64135: A problem occurred while updating an XMLIndex.

Cause: A problem occurred while updating an XMLIndex.

Action: This message is followed by a second message giving more details about the error. Check the second error message for more information.

OCI-64136: A problem occurred when synchronizing an XML index.

Cause: A problem occurred when you tried to synchronize an XML index.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information.

OCI-64138: Cannot drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

OCI-64139: The type of the VIRTUAL column is not XMLTYPE.

Cause: An attempt was made to create an XML Index with a VIRTUAL column not of XMLTYPE.

Action: Specify the type of the VIRTUAL column to be XMLTYPE.

OCI-64140: missing chaining XMLTABLE for VIRTUAL column in the index

Cause: An attempt was made to create an XML index with VIRTUAL column but without required chaining XMLTABLE.

Action: Specify a chaining XMLTABLE after VIRTUAL column.

OCI-64141: Shared table can only have a single XMLType column.

Cause: Attempted to create a shared table with more than one XMLType column.

Action: Specify a shared table definition with only one XMLType column.

OCI-64142: Shared tables must have same semantics for truncation.

Cause: An attempt was made to create shared tables with inconsistent semantics for truncation. Either all shared tables must have or must not have the TRUNCATE keyword.

Action: Be consistent with the TRUNCATE keyword while defining shared tables.

OCI-64143: Can only share an existing XML Index table with an XMLTYPE column.

Cause: An attempt was made to share a table without an XMLTYPE column.

Action: Drop the group containing the XML Index table without an XMLTYPE column and re-create the group with new definition.

OCI-64144: Shared tables must have equivalent paths.

Cause: An attempt was made to share a table with different paths.

Action: Specify a correct shared table definition with appropriate paths.

OCI-64146: Nonblocking alter XMLIndex error

Cause: Internal error.

Action: None

OCI-64147: invalid use of NONBLOCKING COMPLETE or ABORT

Cause: An attempt was made to use NONBLOCKING COMPLETE or ABORT for an XML Index that is not being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: NONBLOCKING COMPLETE or ABORT is only allowed for XML Index that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

OCI-64148: Cannot complete nonblocking alter index operation.

Cause: NONBLOCKING COMPLETE is only allowed for XML Index that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN and there are no pending rows left.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work.

OCI-64149: invalid alter XML Index operation

Cause: An attempt was made to alter an XML Index that was already being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN, or alter an XML Index with rebuild option and NONBLOCKING operation.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work then run NONBLOCKING COMPLETE to finish existing NONBLOCKING operation, or run NONBLOCKING ABORT to cancel existing NONBLOCKING operation.

OCI-64151: invalid use of DBMS_XMLINDEX.PROCESS_PENDING

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that was not modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: DBMS_XMLINDEX.PROCESS_PENDING can only be called on an index that is modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

OCI-64152: There are no pending rows to process.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that does not have any pending rows to process.

Action: Execute NONBLOCKING COMPLETE operation to complete the nonblocking alter index.

OCI-64153: Cannot create XML Index for data stored in a CLOB column with object relational storage model.

Cause: An attempt was made to create an XML Index on a CLOB column stored with object relational storage model.

Action: Change the column storage to binary XML.

OCI-64154: XML Index cannot be created on an automatic list partitioned table.

Cause: An attempt was made to create an XML Index on a table that had an automatic list partition.

Action: Do not create an XML Index on an automatic list partitioned table.

OCI-64155: XML Index with unstructured component cannot be created on an interval partitioned table.

Cause: There was an attempt to create an XML Index with unstructured component on a table with interval partitioning.

Action: Create an XML Index with structured component on a table with interval partitioning.

OCI-64201: unregistered LOB value encountered

Cause: The LOB value associated with the input locator did not exist in client-side reference tables.

Action: This is an internal error. Contact Oracle Support Services.

OCI-64202: remote temporary or abstract LOB locator is encountered

Cause: Local database encountered a temporary or abstract LOB created on a remote database. Remote access to temporary or abstract LOB is not supported.

Action: Avoid remote queries that return a temporary or abstract LOB.

OCI-64203: Destination buffer is too small to hold CLOB data after character set conversion.

Cause: An attempt to convert CLOB data to CHAR failed because the large object (LOB) size was bigger than the buffer limit for CHAR types or the CHAR buffer was not big enough to hold all of the data after the character set conversion.

Action: Reduce the LOB size returned before performing the conversion. For example, use SUBSTR on CLOB or use DBMS_LOB.SUBSTR to convert from CLOB data to CHAR data.

OCI-64204: encountered partial multibyte character

Cause: The requested operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the input buffer ends with a complete multibyte character and retry the operation.

OCI-64205: Cannot use other triggering events along with LOGICAL LOB UPDATE event

Cause: An attempt was made to use other triggering events (such as INSERT, DELETE and UPDATE) with the LOGICAL LOB UPDATE event.

Action: Create multiple triggers instead of sharing a trigger for multiple events.

OCI-64206: Cannot create INSTEAD OF LOGICAL LOB UPDATE trigger

Cause: INSTEAD OF LOGICAL LOB UPDATE trigger was not allowed.

Action: None

OCI-64207: Invalid LOGICAL LOB UPDATE trigger definition

Cause: The LOGICAL LOB UPDATE trigger could not be created on a non-LOB column of a table. The column name has to be specified while creating the trigger. Only one column name can be specified while creating the trigger.

Action: Specify LOGICAL LOB UPDATE trigger with a valid definition.

OCI-64208: FOR EACH ROW clause is required for before or after LOGICAL LOB UPDATE triggers

Cause: An attempt was made to create a before or after LOGICAL LOB UPDATE trigger without a FOR EACH ROW clause.

Action: Specify a FOR EACH ROW clause for a before/after LOGICAL LOB UPDATE trigger.

OCI-64209: WHEN clause is not allowed for LOGICAL LOB UPDATE triggers

Cause: WHEN clause was specified for a LOGICAL LOB UPDATE trigger.

Action: Remove the WHEN clause when creating a LOGICAL LOB UPDATE trigger.

OCI-64210: Cannot reference a trigger of a different type

Cause: The LOGICAL LOB UPDATE trigger did not follow other LOGICAL LOB UPDATE triggers. Non-LOGICAL LOB UPDATE triggers cannot follow LOGICAL LOB UPDATE triggers.

Action: None

OCI-64211: cannot access other columns in a LOGICAL LOB UPDATE trigger body

Cause: An attempt was made to access an invalid column. A LOGICAL LOB UPDATE trigger can only access the ROWID column and the column for which it was specified. Access to other columns is not allowed.

Action: Remove references to other columns within a LOGICAL LOB UPDATE trigger body.

OCI-64212: cannot create a LOGICAL LOB UPDATE trigger on a view

Cause: A LOGICAL LOB UPDATE trigger could not be created on view.

Action: Do not include the LOGICAL LOB in the UPDATE trigger.

OCI-64213: Cannot create a compound LOGICAL LOB UPDATE trigger with statement level actions

Cause: A compound LOGICAL LOB UPDATE trigger could not contain statement level actions.

Action: Create the compound LOGICAL LOB UPDATE trigger without statement level actions.

OCI-64214: Cannot create a crossedition LOGICAL LOB UPDATE trigger

Cause: Crossedition LOGICAL LOB UPDATE triggers were not supported.

Action: None

OCI-64215: PL/SQL subprogram '*string*' for internal use only

Cause: An attempt was made to use a subprogram that is for internal Oracle development use only.

Action: Do not use this unsupported subprogram. Refer to Oracle documentation for available subprograms.

OCI-64219: invalid LOB locator encountered

Cause: The LOB locator sent from client to server was invalid.

Action: Pass a valid LOB locator that was either returned by the database or initialized as an empty locator.

OCI-64220: LOB signature is not supported for clients on Oracle Database Release 19c or earlier.

Cause: The buffer size allocated for the locator at the client side was not big enough to hold the locator with a signature. Large Object (LOB) signature is not supported for clients earlier than Oracle Database Release 19c.

Action: Upgrade the client version to Oracle Database Release 19c or later. For more information or other solutions, contact Oracle Support Services.

OCI-64221: cannot use BFILE locators selected from remote tables or shards

Cause: A remote BFILE column cannot be referenced.

Action: Remove references to BFILE in remote tables or shards.

OCI-64222: New segment name must differ from available segment names

Cause: Input segment name was already used by other objects within schema.

Action: Query `dba_lob`, `dba_lob_partitions` to check already used segment names.

OCI-64223: Invalid or missing segment name information.

Cause: Segment name information is missing or invalid format of alter table statment.

Action: Query `dba_lob`, `dba_lob_partitions` to get segment name. Provide old and newsegment name in alter table query.

OCI-64224: invalid value for `_LOB_session_parameters`

Cause: An invalid value was specified for the `_LOB_session_parameters`. The value expected for `_LOB_session_parameters` is a string that follows the format of a list of pairs key:value separated by (,). Supported keys: `PGA_SMART_LOBS_LIMIT`. For the key `PGA_SMART_LOBS_LIMIT` the expected values are: 0, 25, 50, 75 and 100. They represent the percentage allowed to store temporary LOBs in the PGA. If the usage in the PGA has overgone that percentage, the temporary LOBs are spilled to disk.

Action: Update the value for `_LOB_session_parameters` with the supported keys and values.

OCI-64225: Specified segment name does not exist or invalid.

Cause: Segment name information provided does not match any object.

Action: Query dba_lobs,dba_lob_partitions to get segment name. Provide old and new segment name in alter table query.

OCI-64300: Invalid compression level specified.

Cause: The archive compression level must be LOW or HIGH.

Action: Use a valid archive compression level and retry.

OCI-64307: Exadata Hybrid Columnar Compression is not supported for tablespaces on this storage type

Cause: An attempt was made to use Exadata Hybrid Columnar Compression on unsupported storage.

Action: Create this table in a tablespace residing on Oracle Exadata, Oracle's Sun ZFS or Pillar Axiom storage or use a different compression type.

OCI-64308: hybrid columnar compressed table cannot have column with LONG data type

Cause: One of the following was attempted: - Create a hybrid columnar compressed table with a LONG data type. - Alter an existing table with a LONG data type to be hybrid columnar compressed. - Add a LONG data type column to a hybrid columnar compressed table.

Action: LONG data types are not supported with hybrid columnar compressed tables. Create table without LONG column or change table to not be hybrid columnar compressed. If adding a column, do not use LONG data type. If modifying attributes of a column to change data type to LONG, the table cannot be hybrid columnar compressed.

OCI-64309: Hybrid Columnar Compression with row-level locking is not supported for tablespaces on this storage type.

Cause: An attempt was made to use Hybrid Columnar Compression with row-level locking on an unsupported storage type.

Action: Create this table in a tablespace residing on Oracle Exadata storage or use a different compression type.

OCI-64310: Could not get the compression analysis lock.

Cause: The operation could not obtain the compression analysis lock in a reasonable amount of time.

Action: Retry the operation.

OCI-64340: IM FastStart checkpoint failed.

Cause: In-Memory FastStart (IM FastStart) checkpointing could not complete within a reasonable amount of time in some Oracle RAC instances.

Action: Retry checkpointing after some time.

OCI-64341: IM FastStart Oracle RAC coordinator timeout.

Cause: In-Memory FastStart (IM FastStart) checkpointing could not complete as Oracle RAC coordinator timed out.

Action: Retry checkpointing after some time.

OCI-64350: only one INMEMORY clause may be specified

Cause: INMEMORY was specified more than once.

Action: Specify each desired INMEMORY clause option only once.

OCI-64356: The in-memory area is out of space.

Cause: The in-memory area did not have any free space.

Action: Add free space either by removing the in-memory attribute on tables, partitions or sub-partitions which do not require it, or by increasing the size of the in-memory area.

OCI-64357: In-Memory area is out of space for the current container.

Cause: There was no free space in the In-Memory area for the current container.

Action: Disable In-Memory from existing objects in the current container to make space or increase the maximum size limit by changing the INMEMORY_SIZE initialization parameter.

OCI-64364: In-memory column store on Oracle RAC is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store feature with Oracle RAC on an unsupported system.

Action: Disable Oracle RAC before attempting to use the in-memory column store in this environment or use an Oracle-engineered system.

OCI-64367: In-memory column store FastStart tablespace is offline.

Cause: The FastStart feature was enabled but its tablespace was offline.

Action: Disable FastStart or bring the FastStart tablespace online.

OCI-64368: In-memory FastStart is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store FastStart feature on an unsupported system.

Action: Use FastStart on an Oracle-engineered system.

OCI-64369: In-memory FastStart Oracle Call Interface (OCI) error string

Cause: An OCI error occurred when enabling or disabling FastStart.

Action: Manually correct the problem.

OCI-64370: INMEMORY clause with DISTRIBUTE BY PARTITION specified for a table that is not partitioned.

Cause: DISTRIBUTE BY PARTITION was specified for a table that is not partitioned.

Action: None

OCI-64371: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not composite.

Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not composite.

Action: None

OCI-64372: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not partitioned.

Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not partitioned.

Action: None

OCI-64373: The FastStart administrative operation ran into a timeout.

Cause: Multiple conflicting FastStart administrative operations are in progress.

Action: Retry the operation after the conflicting Faststart administrative operations are completed.

OCI-64374: This action cannot be performed when FastStart is not enabled.

Cause: An attempt was made to perform a FastStart-related action when FastStart was not enabled.

Action: Enable FastStart and retry.

OCI-64375: FastStart is already enabled.

Cause: Attempting to enable FastStart when it was already enabled.

Action: FastStart is already enabled, and thus, there is no need to enable it // again.

OCI-64376: FastStart is already enabled on this tablespace.

Cause: Either this tablespace was already assigned to FastStart or some FastStart internal objects already existed on this tablespace.

Action: Run DBMS_INMEMORY.DISABLE_FASTSTART, and then rerun DBMS_INMEMORY.ENABLE_FASTSTART.

OCI-64377: Action cannot be performed when the database is in read-only mode.

Cause: Attempted changes to FastStart objects on a read-only database.

Action: Mount the database in writable mode and retry.

OCI-64378: Action cannot be performed on the tablespace assigned to FastStart while FastStart is enabled.

Cause: Attempted to take the FastStart tablespace offline while the feature was enabled.

Action: Disable FastStart and retry.

OCI-64379: While the tablespace (*string*) is assigned to a FastStart area that is enabled, it cannot be dropped.

Cause: Attempted to drop the specified FastStart tablespace with the FastStart feature enabled.

Action: Disable the FastStart feature and retry.

OCI-64380: IM FastStart cannot be enabled or migrated to a non-automatic segment space management tablespace (*string*).

Cause: An attempt was made to enable or migrate In-Memory FastStart (IM FastStart) to a non-automatic segment space management tablespace.

Action: Enable or migrate IM FastStart to an automatic segment space management tablespace.

OCI-64381: Unable to acquire a lock on the tablespace for the given FastStart operation.

Cause: The given tablespace was locked by another operation while trying to run the FastStart operation.

Action: Retry the FastStart operation after the completion of the operation which had taken a lock on the tablespace.

OCI-64382: FastStart checkpoint has already started.

Cause: An attempt to initiate a checkpoint was made when one was already started.

Action: Wait for the previous checkpoint to finish.

OCI-64383: FastStart *string* was incomplete.

Cause: The previous FastStart administrative procedure was incomplete.

Action: Run the procedure again or disable the feature.

OCI-64384: Invalid FastStart catalog version (*string*) detected.

Cause: The version number of the FastStart catalog was invalid or too old.

Action: Rebuild the FastStart catalog.

OCI-64386: *string* not supported for proxy PDB

Cause: An attempt was made to use FastStart in the case of a proxy pluggable database (PDB).

Action: None

OCI-64387: *inmemory_size* cannot be modified

Cause: An attempt was made to modify *inmemory_size* parameter when database was not opened, was read-only, or was being migrated.

Action: Issue the command after opening the database in read/write mode.

OCI-64388: *inmemory_size* specified is less than a minimum of (*string*) bytes

Cause: *inmemory_size* was less than the minimum expected by the system.

Action: Issue the command after changing the value for the *inmemory_size* parameter.

OCI-64389: The tablespace *string* where FastStart is being migrated has insufficient space.

Cause: An attempt was made to migrate FastStart to a tablespace having insufficient space.

Action: Add space to the tablespace where FastStart is migrated to, and try again.

OCI-64390: FastStart not supported for *string*

Cause: An attempt was made to use FastStart along with the feature that is not supported.

Action: None

OCI-64393: In-Memory Expressions capture window is already OPEN

Cause: An attempt was made to open an In-Memory Expressions capture window with another capture window already in the OPEN state.

Action: Close the In-Memory Expressions capture window that is currently in the OPEN state.

OCI-64394: In-Memory Expressions capture window is not OPEN

Cause: An attempt was made to CLOSE an In-Memory Expressions capture window before opening it first.

Action: Open an In-Memory Expressions capture window before attempting a CLOSE operation.

OCI-64395: error encountered while changing the state of In-Memory Expressions capture window

Cause: An internal error was encountered in the In-Memory Expressions procedure.

Action: Contact Oracle Support Services.

OCI-64396: Resize of In-Memory Xmem area is not supported.

Cause: Resize of In-Memory Xmem area was not supported on non multitenant container database (CDB) and root pluggable database (PDB).

Action: None

OCI-64397: The new Xmem area size %0!s M is larger than configured Xmem area size %1!s M.

Cause: The specified In-Memory area size was larger than the configured In-Memory XMem area size.

Action: Check the new Xmem area size and reissue the command.

OCI-64398: invalid INMEMORY_SIZE value for cloud configuration, it must be zero

Cause: A nonzero value was specified for the INMEMORY_SIZE initialization parameter for a non-Oracle cloud.

Action: Remove the INMEMORY_SIZE initialization parameter or set the value to zero.

OCI-64399: In-Memory population or repopulation cannot be run for this segment.

Cause: Either the segment requested for In-Memory did not exist, or a population or repopulation task was already in progress for this segment, or this segment was not In-Memory enabled.

Action: Ensure that the segment exists, and it is In-Memory enabled, and no population or repopulation tasks are active for the segment.

OCI-64401: This manageability package is only supported on Oracle RDBMS versions 10.2, 11.1, and 11.2.

Cause: Package installation invoked on database version that was not 10.2, 11.1 or 11.2..

Action: Use Oracle databaseversion 10.2, 11.1, or 11.2.

OCI-64402: Invalid input. XMLSchema is null.

Cause: XMLSchema was not provided to the procedure or function call..

Action: Provide an XMLSchema.

OCI-64403: input cannot be NULL

Cause: An input parameter was NULL.

Action: Provide an input parameter that is not NULL.

OCI-64404: Input string exceeds the maximum size

Cause: An input string was provided whose length exceeded the maximum size allowed. This size is 30 bytes for clients prior to Oracle Database 12c Release 2 (12.2) and 128 bytes otherwise.

Action: Provide a shorter input string.

OCI-64405: No matching elements found. Zero annotations were applied.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

OCI-64406: No matching elements found. Zero annotations were removed.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

OCI-64407: Annotation maps to multiple elements.

Cause: The parameters provided to annotate the XMLSchema matched to multiple entities in the XMLSchema.

Action: .

OCI-64408: Name for collection table too long.

Cause: The name for the collection table exceeded 25 characters.

Action: Reduce the length of the name of the collection table.

OCI-64409: XPath could not be mapped to exactly one table.

Cause: XPath could not be mapped to existing table.

Action: Check input parameters.

OCI-64410: invalid XPath

Cause: The XPath string provided to the procedure was not valid.

Action: Check the XPath string.

OCI-64411: invalid collection table specified by the XPath string

Cause: An invalid collection table was specified by the XPath string.

Action: Check the XPath string.

OCI-64412: The procedure is called on an XMLType table in the BINARY storage model.

Cause: The procedure renameCollectionTable did not work on XMLType in the BINARY storage model.

Action: Out-of-line collection tables are only meant for the Object-Relational storage model, and do not apply to the BINARY storage model. There is no need to call the procedure on XMLType in the BINARY storage model.

OCI-64413: cannot disable constraints or indexes for a table or column not conforming to an accessible XML schema

Cause: The user attempted to disable constraints or indexes for an XMLType table or column which conform to no XML schema or a local one not accessible to the user.

Action: Ensure the XMLType table or column conforms to an accessible XML schema.

OCI-64414: Cannot enable constraints or indexes for a table/column not conforming to an accessible XML schema.

Cause: Attempted to enable constraints or indexes for an XMLType table/column which does not to an XML schema or conforms to a local schema not accessible to the user.

Action: Ensure the XMLType table/column conforms to an accessible XML schema.

OCI-64415: invalid namespace declaration

Cause: The namespace declaration was invalid.

Action: Correct the namespace declaration.

OCI-64416: Table does not exist.

Cause: The tab_name parameter provided the name of a table that did not exist.

Action: Correct the tab_name parameter.

OCI-64417: Column does not exist in table.

Cause: The col_name parameter provided the name of a column that did not exist in the given table.

Action: Correct the col_name parameter.

OCI-64418: column not of XMLType

Cause: The col_name parameter contained the name of a column that was not an XMLType column.

Action: Correct the col_name parameter.

OCI-64419: Name for collection table already exists.

Cause: The name for the collection table could not be used because it already existed.

Action: Use another name for the collection table.

OCI-64420: Table not of XMLType.

Cause: The table_name parameter provided the name of a table that was not an XMLType table.

Action: Correct the table_name parameter or provide the name of an XMLType column in the table.

OCI-64423: Deletion of global string is not permitted.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) declaration: The XML schema declaration, such as attribute and element.

OCI-64425: Addition of non-optional *string* to the complex type '*string*' is not permitted.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) declaration: The XML schema declaration, such as attributegroup. 2) type: The declared XML schema complex type.

OCI-64426: Deletion from an enumeration list is not permitted for simple type '*string*'.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) type: The name of the XSD simple type.

OCI-64427: Insertion at the end of an enumeration list is not permitted for simple type '*string*'.

Cause: An attempt was made to change an XML schema that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) type: The declared XSD simple type.

OCI-64428: Cannot evolve element or attribute '*string*' to '*string*' which is not a superset of '*string*'.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) name: The name of the declared element or attribute. 2) new_type: The target type for the evolving element or attribute. 3) old_type: The declared type of the evolving element or attribute.

OCI-64429: Cannot evolve element or attribute '*string*' from '*string*' to '*string*' in a non-binary XML schema.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) name: The name of the declared element or attribute. 2) old_type: The declared type of the evolving element or attribute. 3) new_type: The target type for the evolving element or attribute.

OCI-64431: Changing to mixed in complex type '*string*' is unsupported or not permitted.

Cause: An attempt to make XML schema changes was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to the DBMS_XMLSCHEMA.INPLACEEVOLVE procedure are permitted. *Params: 1) type: The XML schema complex type.

OCI-64432: Changing to mixed in local complex type is unsupported or not permitted.

Cause: An attempt to make XML schema changes was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to the DBMS_XMLSCHEMA.INPLACEEVOLVE procedure are permitted.

OCI-64433: Changing to mixed in complex type 'string' of non-binary XML schema is unsupported or not permitted.

Cause: An attempt to make XML schema changes was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to the DBMS_XMLSCHEMA.INPLACEEVOLVE procedure are permitted. *Params: 1) complex_type: The name of the XML schema complex type.

OCI-64434: Changing to mixed in local complex type of non-binary XML schema is unsupported or not permitted.

Cause: An attempt was made to make XML schema changes that were not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to the DBMS_XMLSCHEMA.INPLACEEVOLVE procedure are permitted.

OCI-64435: Cannot change element or attribute 'string' from 'string' to 'string'.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) name: The name of the element or attribute. 2) old_property: The old property for the element or attribute, such as old QName or "Optional" for an attribute. 3) new_property: The new property for the element or attribute, such as new QName or "Required" for an attribute.

OCI-64436: Cannot evolve element or attribute 'string' from a local type to global type 'string'.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) name: The name for the declared element or attribute. 2) global: The global type that the element or attribute is evolving into.

OCI-64437: Cannot evolve reference-based element or attribute 'string' into type 'string'.

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. *Params: 1) name: The name of the declared element or attribute. 2) type: The name of the declared XSD type.

OCI-64438: Change to complex type 'string' is unsupported or not permitted.

Cause: An attempt was made to make XML schema changes that were not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.INPLACEEVOLVE are permitted. *Params: 1) complex_type_name: The name of the XML schema complex type.

OCI-64439: Change to xsd:any property is unsupported or not permitted.

Cause: An attempt was made to make XMLSchema changes that were not permitted through in-place XMLSchema evolution.

Action: Ensure that the XMLSchema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted.

OCI-64440: cannot evolve element 'string' of complex type into a simple type 'string'

Cause: An attempt was made to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted. Refer to the Oracle Database documentation to find permitted operations. *Params: 1) element: The name of the declared element. 2) type: The name of the declared simple type.

OCI-64441: Cannot modify MAXOCCURS for element 'string' since the XMLSchema is not registered for binary XML.

Cause: An attempt was made to make XMLSchema changes that were not permitted through in-place XMLSchema evolution.

Action: Ensure that the XMLSchema changes specified in the XMLDiff argument to the DBMS_XMLSCHEMA.INPLACEEVOLVE procedure are permitted. *Params: 1) element_name: The XML element name.

OCI-64442: Deletion of elements, attributes, and so on is not supported since the XMLSchema is not registered for binary XML.

Cause: An attempt was made to make XMLSchema changes that were not permitted through in-place XMLSchema evolution.

Action: Ensure that the XMLSchema changes specified in the XMLDiff argument to the DBMS_XMLSCHEMA.INPLACEEVOLVE procedure are permitted.

OCI-64443: Change to string 'string' is unsupported or not permitted.

Cause: An attempt was made to make XMLSchema changes that were not permitted through in-place XMLSchema evolution.

Action: Ensure that the XMLSchema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.INPLACEEVOLVE are permitted. *Params: 1) declaration_type: The type of the XMLSchema declaration, such as group and element. 2) declaration_name: The name of the XMLSchema declaration.

OCI-64444: Change within restriction of complex type 'string' is unsupported or not permitted.

Cause: An attempt was made to make XMLSchema changes that were not permitted through in-place XMLSchema evolution.

Action: Ensure that the XMLSchema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.INPLACEEVOLVE are permitted. *Params: 1) complex_type: The XMLSchema complex type.

OCI-64445: In-place XML schema evolution operation is not permitted.

Cause: Attempted to make an XML schema change that was not permitted through in-place XML schema evolution.

Action: Use permitted XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve.

OCI-64451: failed to escape special character 0xstring

Cause: An attempt to escape special characters failed.

Action: Remove the special characters that cannot be escaped.

OCI-64452: Bind value was NULL.

Cause: An attempt was made to use a bind value that was NULL.

Action: Provide a bind value that is not NULL.

OCI-64464: XML event error

Cause: An XML event error occurred.

Action: Correct the error or contact Oracle Support Services.

OCI-64477: Multiple token tables are not supported.

Cause: An attempt was made to create a new token table. If encountered during an import, a critical patch was possibly missing on the export database.

Action: Use the default token table. If encountered during an import, apply the appropriate patch on the export database and try the export and import again.

OCI-64479: Element 'string' is missing type name annotation for type 'string'.

Cause: A common user tried to register an XMLSchema with missing type name annotations. All type names from the schema and its dependencies should be annotated.

Action: Ensure that the XMLSchema being registered and its dependencies have all the element type names annotated.

OCI-64480: Element 'string' is missing default table name annotation.

Cause: A common user tried to register an XMLSchema with missing default table name annotations. All table names from the XMLSchema and its dependencies should be annotated.

Action: Ensure that the XMLSchema being registered and its dependencies have all the default table names annotated.

OCI-64481: invalid tablespace name

Cause: The tablespace name did not have a closing double quotation mark.

Action: Ensure that the last character is also a double quotation mark.

OCI-64482: Moving XDB to *string* is not allowed.

Cause: An attempt was made to move XDB to a system tablespace.

Action: Ensure that the target tablespace is not a system tablespace.

OCI-64483: New tablespace *string* is smaller than the current tablespace *string*.

Cause: The new tablespace was smaller than the current tablespace.

Action: Ensure that the new tablespace is larger than the current tablespace.

OCI-64484: New tablespace *string* is not automatic segment space management.

Cause: The new tablespace was not automatic segment space management.

Action: Ensure that the new tablespace is automatic segment space management.

OCI-64485: Invalid resource handle or path name passed.

Cause: An invalid resource handle or path name was passed.

Action: Correct the resource handle or path name and retry.

OCI-64486: The internal table is empty.

Cause: The internal input table containing the schemas was empty.

Action: Insert schemas to be moved into the internal table and invoke procedure.

OCI-64487: XML schema *string* exists for user *string*

Cause: The XML schema existed for the user.

Action: Ensure that the XML schema is a new one.

OCI-64488: cannot migrate inherited type *string*

Cause: The inherited type could not be migrated.

Action: Ensure that it is not inherited by any other type.

OCI-64489: cannot migrate XML schema *string*

Cause: The XML schema could not be migrated.

Action: Ensure that the XML schema can be migrated.

OCI-64490: cannot migrate owner from *string* to *string* for XML schema *string*

Cause: The owner could not be migrated for the XML schema.

Action: Ensure that the XML schema can be migrated.

OCI-64491: cannot grant XML schemas to public

Cause: The XML schema could not be granted to public.

Action: Ensure that the XML schema can be granted to public.

OCI-64492: The level up the hierarchy must be greater than 0.

Cause: The level up the hierarchy was less than 1.

Action: Ensure that the level up the hierarchy is greater than 0.

OCI-64493: The resource type is unknown.

Cause: The resource type was not recognized.

Action: Ensure that the resource is valid.

OCI-64494: Substitution group is not supported when maintainDOM is not set.

Cause: Annotation attribute maintainDOM was not set to TRUE.

Action: Ensure that the maintainDOM attribute is set to TRUE.

OCI-64495: XQuery data model must be allowed.

Cause: XQuery data model was not allowed.

Action: Ensure that the XQuery data model is allowed.

OCI-64496: Position predicate on out-of-line table is not supported when maintainDOM is set to FALSE.

Cause: An attempt was made to use a position predicate on an out-of-line table when maintainDOM was set to FALSE.

Action: Ensure that maintainDOM is set to TRUE when using position predicate on an out-of-line table.

OCI-64497: File access not over XDB repository is not allowed on server side.

Cause: For security reasons, ftp and http access over XDB repository is not allowed on server side.

Action: Have file access over XDB repository only or do not specify file access.

OCI-64498: FTP and HTTP access over XDB repository is not allowed on server side

Cause: For security reasons, ftp and http access over XDB repository is not allowed on server side.

Action: Do not specify FTP or HTTP access over XDB repository.

OCI-64499: ORADB operations not allowed on client-side.

Cause: ORADB client access was a security issue.

Action: Do not specify ORADB operation on client-side.

OCI-64500: invalid PL/SQL XML parser handle

Cause: The PL/SQL XML parser handle was invalid.

Action: Ensure that the PL/SQL XML parser handle is valid.

OCI-64501: invalid PL/SQL XSL processor handle

Cause: The PL/SQL XSL processor handle was invalid.

Action: Ensure that the PL/SQL XSL processor handle is valid.

OCI-64502: invalid PL/SQL XSL stylesheet handle

Cause: The PL/SQL XSL stylesheet handle was invalid.

Action: Ensure that the PL/SQL XSL stylesheet handle is valid.

OCI-64503: invalid PL/SQL DOM handle

Cause: The PL/SQL DOM handle was invalid.

Action: Ensure that the PL/SQL DOM handle is valid.

OCI-64504: invalid PL/SQL DOM *string* handle

Cause: The named PL/SQL DOM handle was invalid.

Action: Ensure that the named PL/SQL DOM handle is valid.

OCI-64505: NULL or invalid *string* argument specified

Cause: The named argument was either invalid or was specified as a NULL.

Action: Specify a non-null, valid argument.

OCI-64506: procedure or function not supported

Cause: The PL/SQL procedure or function was not supported.

Action: Modify the code to avoid usage of the PL/SQL procedure or function.

OCI-64507: ACL path is not valid.

Cause: ACL path was not valid.

Action: Ensure the ACL path is valid.

OCI-64508: XSLT parameter is not valid.

Cause: XSLT parameter was not valid.

Action: Ensure the XSLT parameter is valid.

OCI-64509: Mismatch between complexType and SQLType "*string*".

Cause: The attributes referenced in schema definition differ from the attributes referenced by SQLType.

Action: Ensure that the SQLName annotation references all the existing attributes in SQLType.

OCI-64510: Attribute "*string*" from type "*string*" is not referenced in schema definition.

Cause: At least one attribute, from an existing type, was not referenced in the schema definition.

Action: Ensure that all attributes are referenced in the schema definition. *Params: 1) attr: The declared XML attribute. 2) type: The declared XSD type.

OCI-64511: Type "*string*" is not defined in schema namespace "*string*".

Cause: The specified type was not defined for the given schema component.

Action: Specify a valid type name. *Params: 1) type_name: The type name written in the query. 2) schema_name: The name of the defined schema.

OCI-64512: Storage type "*string*" in schema is not supported for the packed XML memory object.

Cause: The storage type was not supported for the packed XML memory object. The expected type is either RAW or VARCHAR2.

Action: None

OCI-64513: Invalid use of VIRTUAL COLUMNS clause of XMLType table.

Cause: There was an invalid use of VIRTUAL COLUMNS. The VIRTUAL COLUMNS clause is only valid when creating XMLType tables.

Action: Remove the VIRTUAL COLUMNS clause or change the table to be of XMLType. Refer to Oracle documentation for the syntax to define virtual columns on relational tables.

OCI-64514: registration of port failed

Cause: The registration of the port failed.

Action: Check for conflicts with other ports used on your system.

OCI-64600: duplicate or conflicting SCALE or EXTEND specifications

Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate or conflicting specification.

OCI-64601: duplicate RESTART specified

Cause: The specified RESTART was a duplicate.

Action: Remove the duplicate specification.

OCI-64602: CREATE SEQUENCE cannot have a RESTART clause

Cause: The RESTART clause was specified in the CREATE SEQUENCE statement.

Action: Remove the RESTART clause.

OCI-64603: NEXTVAL cannot be instantiated for *string*. Widen the sequence by *string* digits or alter sequence with SCALE EXTEND.

Cause: The NOEXTEND constraint was specified for the scalable sequence and the generated value was wider than the sequence maximum value.

Action: Widen the sequence maximum value or remove the NOEXTEND constraint.

OCI-64604: One or more Sharded Sequence objects exist that cannot be downgraded.

Cause: There were Sharded Sequence objects in the database that were created in a release later than the selected release for downgrade.

Action: Prior to downgrade, drop the Sharded Sequence objects that cannot be downgraded to the selected release.

OCI-64620: duplicate user tablespace specification

Cause: An attempt was made to create more than one user tablespace during database creation.

Action: Modify the command to contain only one user tablespace.

OCI-64621: SQL statement length (*string*) exceeds maximum allowed length (*string*)

Cause: An attempt was made to issue a SQL statement that exceeded the maximum allowed length of a statement.

Action: Modify the SQL statement or the views to which it refers to fit within the maximum length or split the SQL statement.

OCI-64625: bind variables not allowed in the string returned from SQL macro

Cause: The string returned from SQL macro contained bind variables.

Action: Modify the SQL macro definition, so that it does not return a string containing bind variables. Instead, use bind variables as parameters to SQL macro.

OCI-64626: invalid SQL text returned from SQL macro: *string*

Cause: The string returned from the SQL macro was invalid.

Action: Modify the SQL macro definition.

OCI-64627: cycle detected in SQL macro expansion

Cause: A SQL macro expansion had a reference to an earlier SQL macro.

Action: Modify the SQL macro definition.

OCI-64628: scalar SQL macro cannot appear in FROM clause of a SQL statement

Cause: The scalar SQL macro was called in the FROM clause of a SQL query.

Action: Use scalar SQL macro in places where scalar expressions can appear in a SQL statement.

OCI-64629: table SQL macro can only appear in FROM clause of a SQL statement

Cause: The table SQL macro was called from outside of a FROM clause of a SQL query.

Action: Use the table SQL macro only in the FROM clause of a SQL query.

OCI-64630: unsupported use of SQL macro: *string***OCI-64632: SQL macro is not supported with *string***

Cause: The SQL macro was not supported with this feature.

Action: Do not use SQL macro with this feature.

OCI-64633: SQL macro *string* cannot be used remotely.

Cause: A SQL macro was referenced remotely (for example, through a database link).

Action: Reference a SQL macro locally in the database in which it is defined. *Params: 1) macro_name: The name of the SQL macro.

OCI-64634: SQL macro length(*string*) was too big

Cause: SQL Macro created was too big for current memory configuration. Note: Length comprise of user returned string and internally generated SQL fragment.

Action: Create a SQL Macro that can fit in memory.

OCI-64650: database character set conversion finished with errors.

Cause: Conversion of blockchain tables failed while converting the database to Unicode.

Action: Address the blockchain table conversion errors, then execute the command again.

OCI-64651: database not ready for conversion to Unicode

Cause: The repository of Database Migration Assistant for Unicode (DMU) indicated that the database was not ready for conversion to Unicode. Or, the repository of DMU was not found in the database.

Action: Address all of the possible migration issues reported by DMU.

OCI-64652: operation not allowed while converting database character set

Cause: The requested operation was not allowed while converting the database character set.

Action: No action required.

OCI-64653: Only SYSDBA users can connect during database character set conversion.

Cause: A user without the SYSDBA administrative privilege tried to connect to the database during character set conversion. The database is available only to users with the SYSDBA administrative privilege during a conversion operation on the database character set.

Action: Connect to the database as SYSDBA.

OCI-64670: Failed to create persistent memory region backup file.

Cause: Attempt to create a persistent memory region backup file failed.

Action: Check the errors in the incident file that describe the operating system error which prevented the file creation. If possible, fix the problem. If this persists, contact Oracle Support.

OCI-64671: Failed to delete persistent memory region backup file.

Cause: The operating system call to delete a persistent memory region backup file failed.

Action: Check the secondary errors in the incident file that describe the operating system error which prevented the file deletion. Fix the problem. If it persists, contact Oracle Support.

OCI-64672: failure to attach to a persistent memory region

Cause: The operating system call to attach a persistent memory region to the backup file failed in an Oracle process.

Action: Check the incident file for the accompanying error messages on the operating system error that caused this failure and try to fix the problem. If you need assistance, contact Oracle Support.

OCI-64674: failure to allocate persistent memory region

Cause: System did not have %llu bytes of available persistent memory.

Action: Allocate the required amount of persistent memory on the system.

OCI-64675: failure to open a persistent memory region backup file

Cause: An attempt to open a persistent memory region backup file failed.

Action: Check the subsequent errors in the incident file that describe the operating system error which prevented the file from opening. If possible, fix the problem. Otherwise, contact Oracle Support.

OCI-64677: failure to query system state

Cause: An attempt to query the system state failed.

Action: Check the subsequent errors in the incident file that describe the operating system error that caused the failure to query system state. If possible, fix the problem. Otherwise, contact Oracle Support.

OCI-64678: enables XGA tracing

Cause: Tracing was enabled while doing an operation on XGA memory.

Action: Set this event only under the supervision of Oracle Support Services.

OCI-64679: failure to read from the persistent memory region backup file

Cause: An attempt to read from the persistent memory region backup file failed.

Action: Contact Oracle Support.

OCI-64680: failure to write to the persistent memory region backup file

Cause: An attempt to write to the persistent memory region backup file failed.

Action: Contact Oracle Support.

OCI-64681: persistent memory region header is corrupt

Cause: Attempt to attach a persistent memory region failed because the region's header was corrupt.

Action: Contact Oracle Support Services.

OCI-64682: Failed to identify the root object of the persistent memory region.

Cause: Attaching to a persistent memory region failed because the root object could not be identified.

Action: Contact Oracle Support Services.

OCI-64683: No persistent memory region descriptor slots were available.

Cause: Assigning a region descriptor to a persistent memory region failed.

Action: Contact Oracle Support Services.

OCI-64686: Detected a corruption in the persistent memory region.

Cause: Corruption detected in the persistent memory region.

Action: Contact Oracle Support Services.

OCI-64692: The database instance attempted to open too many files.

Cause: The operating system limit on the number of open files has been reached.

Action: Increase the operating system open file descriptors limit.

OCI-64693: invalid file system for persistent memory region backup file

Cause: An attempt to create or open a persistent memory region failed because an invalid file system was specified for the persistent memory region backup file.

Action: Specify a valid supported file system for the persistent memory region backup file according to Oracle Database documentation for your operating system.

OCI-64700: Recovery Appliance is shutting down

Cause: The Recovery Appliance was in the process of shutting down. This message is recorded in the incident log for the Recovery Appliance. When the shutdown completes, the incident is marked as FIXED.

Action: Wait for the Recovery Appliance to complete its shutdown.

OCI-64701: storage location *string* can no longer honor its reservations.

Cause: The specified storage location did not contain enough space to fulfill the reservations of all of the databases assigned to it. This error will be seen if a storage location lost part of its disk space and was in the process of being repaired.

Action: Either shrink the reservations for the databases contained within the storage location or add additional disk space to the storage location.

OCI-64702: error repairing container files for storage location *string*:\n*string*

Cause: An error was returned while trying to rebuild or repair the container files used to store data from protected databases.

Action: The subsequent error will identify the error that needs to be addressed before the Recovery Appliance can be repaired.

OCI-64703: resource error detected

Cause: A task needed to be interrupted because it detected a resource limitation such as insufficient temporary table space or a snapshot being too old. It will be retried once the contention for the resource decreases. The secondary messages will identify the resource that has been exhausted.

Action: If this error occurs rarely, no user action is required. If the condition becomes persistent, the Recovery Appliance administrator should increase the resource that is exhausted.

OCI-64705: no destination in "*string*" at column *string*

Cause: The storage destination contained a syntax error.

Action: Correct the syntax error and retry the operation.

OCI-64708: more than one polling_location in "*string*" at column *string*

Cause: More than one polling_location was specified. Only one polling_location is allowed.

Action: Specify only one polling destination directory and retry the operation.

OCI-64709: ASM polling_location is not supported in "*string*" at column *string*

Cause: The polling_location specified an ASM-based location. Only non-ASM-based polling_locations are supported.

Action: Specify one non-ASM polling destination and retry the operation.

OCI-64711: storage destination do not reference an ASM diskgroup

Cause: The storage destination referenced a non-ASM storage location. Only ASM-based storage destinations are allowed. The operation has been rolled back.

Action: Correct the syntax error and retry the operation.

OCI-64713: requested size *string* for *string* was too small; already using *string*

Cause: The size requested for the storage destination was smaller than its current size.

Action: Increase the requested size and retry the operation.

OCI-64714: requested size *string* for *string* was larger than total available space *string*

Cause: The size requested for the storage destination was larger than its current used space plus its current free space.

Action: Decrease the requested size and retry the operation.

OCI-64715: instance *string* is not available to Recovery Appliance

Cause: The Recovery Appliance could not utilize the specified instance due to its absence from Oracle RAC.

Action: Restart the specified instance or repair any connectivity issues with the specified instance.

OCI-64716: storage location *string* allocation size *string* does not equal diskgroup *string* allocation size *string*

Cause: The minimum allocation size of the specified storage location was not the same as the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or a different storage location and retry the operation.

OCI-64717: network chunk size *string* is not a multiple of diskgroup *string* allocation size *string*

Cause: The configured network chunk size was not a multiple of the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or reconfigure the network chunk size and retry the operation.

OCI-64718: diskgroup *string* allocation size *string* is not a power of two

Cause: The diskgroup allocation unit size was not a power of two.

Action: Specify a different diskgroup and retry the operation.

OCI-64719: diskgroup *string* allocation size *string* is less than two megabytes *string*

Cause: The diskgroup allocation unit size was less than two megabytes.

Action: Specify a different diskgroup and retry the operation.

OCI-64720: no containers were created for storage location *string*

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

OCI-64721: reserved space *string* is less than the minimum reservation *string*

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

OCI-64722: number of drives must be greater than zero

Cause: The specified number of tape drives was NULL or was less than or equal to zero.

Action: Specify a number of tape drives greater than 0 and retry the operation.

OCI-64723: number of drives reserved for restore operations must be greater than or equal to zero

Cause: The number of tape drives reserved for restore operations was NULL or was less than zero.

Action: Specify a number of tape drives reserved for restore operations greater than or equal to zero and retry the operation.

OCI-64724: number of restore drives *string* too large; must be less than *string*

Cause: The number of tape drives reserved for restore operations was at least as large as the total number of drives available. The number of tape drives reserved for restore operations must be at least one less than the total number of drives available.

Action: Specify a number of tape drives reserved for restore operations less than the total number of drives available and retry the operation.

OCI-64725: number of streams must be greater than zero

Cause: The number of streams was less than or equal to zero.

Action: Specify a number of streams greater than zero and retry the operation.

OCI-64726: number of streams *string* too large; must be no larger than *string*

Cause: The number of streams was larger than the total number of drives available. The number of streams must be no larger than the total number of drives available.

Action: Reduce the number of available streams and retry the operation.

OCI-64727: number of copies *string* not in the range 1 through 4

Cause: The number of copies was either NULL or not in the range 1 through 4 inclusive.

Action: Specify a number of copies in the range 1 through 4 and retry the operation.

OCI-64728: replication server name length *string* is too long

Cause: The replication server name was longer than 128 characters.

Action: Specify a replication server name shorter than 128 characters and retry the operation.

OCI-64729: replication server proxy port *string* must be greater than zero

Cause: The replication server proxy port number was less than or equal to zero.

Action: Specify a replication server proxy port number greater than zero and retry the operation.

OCI-64730: replication server proxy URL provided but proxy port is NULL

Cause: A replication server proxy URL was provided but a proxy port number was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

OCI-64731: replication server proxy port provided but proxy URL is NULL

Cause: A replication server proxy port number was provided but a proxy URL was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

OCI-64732: HTTP server not configured at replication host

Cause: The HTTP server at the replication host site has not been configured.

Action: Configure the HTTP server at the replication host site and retry the operation.

OCI-64733: unable to move individual backup piece with BP_KEY string; not a KEEP backup

Cause: An attempt was made to move an individual backup piece, but the backup set of which this backup piece was a member was not a KEEP backup.

Action: Specify a backup piece key that is a member of a KEEP backup set and retry the operation.

OCI-64735: unknown incarnation detected at Recovery Appliance, need catalog resync

Cause: A new archived log or backup set belonging to the new incarnation was received at Recovery Appliance.

Action: Using RMAN, connect to the Recovery Appliance as a recovery catalog, primary database as target database and perform the resynchronization operation using the RESYNC CATALOG RMAN command. If this error occurred at downstream of the Recovery Appliance (in a replicated Recovery Appliance setup), the reconcile operation fixes this error automatically when the same error is fixed at the upstream Recovery Appliance.

OCI-64736: Task ID string of type string has been interrupted string times.

Cause: The specified task was restarted an unexpected number of times. Tasks get interrupted when there is competition for resources. This is only a warning. It does not necessarily indicate a problem with the Recovery Appliance.

Action: If these problems persist for long periods, contact Oracle Support Services.

OCI-64737: unable to copy a full backup of database string to tape or replicated Recovery Appliance

Cause: While creating a full database backup to tape or to a replicated recovery appliance, level 0 backups of one or more data files were missing.

Action: Query the RA_SBT_TEMPLATE_MDF view to determine the data files for which backups are missing. If using the "incremental forever" backup strategy, perform a level-0 incremental backup for the given database and retry the operation.

OCI-64738: guaranteed copy suspended for database string

Cause: One of the following operations was performed resulting in the database using more than its allotted disk space: - UPDATE_DB lowering the DISK_SPACE_RESERVE value. - UPDATE_PROTECTION_POLICY setting the guaranteed_copy parameter to YES - DELETE_SBT_LIBRARY where backup data for the given database existed. New backup requests may be stalled until the system can recompute the safety of allowing additional backup data or backup data may be lost.

Action: This event can be avoided by ensuring backups are written to tape in a timely manner. Conversely, one should avoid the activities listed in the Cause statement when backups are not being written to tape in a timely manner.

OCI-64740: Redo and backups from database *string* have not been seen for more than UNPROTECTED_WINDOW period.

Cause: An UNPROTECTED_WINDOW parameter in a protection policy was specified and the Recovery Appliance could not receive sufficient online redo, archive log backups, or data file backups from the specified target database for at least that period.

Action: Ensure that backups are being performed in a timely manner and that, if set up, redo logs or backups are being sent to the Recovery Appliance.

OCI-64741: Scheduler *string* running task *string* of type *string* did not stop after *string* requests.

Cause: The specified Recovery Appliance scheduler process could not be stopped.

Action: If these problems persist for long periods, contact Oracle Support Services.

OCI-64742: database *string* is being deleted

Cause: The current command failed because the database was in the process of being deleted.

Action: No action is necessary.

OCI-64743: database *string* failed to purge all data files during a delete_db operation

Cause: Attempts to remove all data from the database failed.

Action: Retry the operation. If further attempts fail, then contact Oracle Support Services.

OCI-64744: Argument *string* is null, invalid, or out of range.

Cause: The argument was expecting a non-null, valid value but the argument value passed in was null, invalid, or out of range.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

OCI-64745: Name length is *string* characters; maximum length is *string* characters.

Cause: The length of the name exceeded the limit.

Action: Specify a shorter name and retry the operation.

OCI-64746: Name contains invalid characters.

Cause: The name incorrectly started with "_", "-", ":", "#", or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

OCI-64747: Name contains invalid character "*string*" at the position [*string*].

Cause: The name incorrectly started with "_", "-", ":", "#", or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

OCI-64748: trace file writing initiated using *string*

Cause: The configuration of the Recovery Appliance was modified to enable the production of trace files. Trace files have the capacity to exhaust disk space on the Recovery Appliance.

Action: Turn off the tracing when it is no longer required.

OCI-64750: Instance *string* is unable to access *string*.

Cause: The Recovery Appliance was unable to find a file that is required for its operation.

Action: Ensure that the file system of the specified file is available on the specified instance.

OCI-64751: replication setup error during *string*; replication server: *string* database: *string*

Cause: The Recovery Appliance was unable to complete the configuration and setup of replication for the database specified.

Action: Validate that the downstream replication server is properly configured and all network communication paths are valid.

OCI-64752: storage unavailable for new redo or backups for database *string*

Cause: There was a failure while backing up redo or copying backups from a polling location. This condition may be due to one of the following reasons: * An individual backup piece exceeded the database protection policy DISK_RESERVE_SPACE value. * Guaranteed_copy is enabled but not enough data has been spooled to tape. * Misconfiguration of the storage location size.

Action: Check for the value of DISK_RESERVED_SPACE and storage location uses.

OCI-64753: Incorrect object type specified; specified *string*, expected *string*

Cause: An incorrect object type was given to an API command.

Action: Use the object-specific API. For example, use 'resume_replication_server' instead of 'resume_sbt_library'.

OCI-64754: unable to perform operation with associated tape or replication objects

Cause: An attempt to execute 'update_db' or 'update_protection_policy' and change storage locations with a replication server or tape job associated with the protection policy failed.

Action: Create a temporary protection policy that has the same storage location as the current protection policy with the tape and replication attributes of the target protection policy, update to the temporary protection policy, and then finally update to the target protection policy.

OCI-64755: failed to delete database *string*; the Recovery Appliance is not running

Cause: An attempt was made to delete a database, but the Recovery Appliance has been deactivated by the administrator.

Action: Have the Recovery Appliance administrator execute DBMS_RA.STARTUP_RECOVERY_APPLIANCE and retry the delete_db() operation.

OCI-64757: unable to restore backup piece with BP_KEY *string*

Cause: An attempt was made to restore the specified backup piece which resulted in an error. An explanation of the error appears in the following messages.

Action: Verify the correctness of the backup piece. If it is corrupt, either delete it or replace it.

OCI-64758: unable to grow delta store metadata in tablespace *string*

Cause: Additional extents could not be allocated for the tables used to implement the delta store.

Action: Add additional storage to the indicated tablespace.

OCI-64759: Recovery Appliance is leaving restricted resources state

Cause: The Recovery Appliance ended its restrictions on task execution. The restricted resources state was entered when tasks could not run due to insufficient temporary table space or insufficient undo space. At that time, resource intensive tasks were put into RESOURCE_WAIT state.

Action: None. This is only an informational message entered in the alert log.

OCI-64760: Database *string* has had tasks in ordering wait state for over *string* days.

Cause: The specified database had an INDEX_BACKUP task that could not be run because the task did not tile against the delta store. An incremental backup piece could not tile into the delta store because the necessary control file information was missing or because the backup that it depended upon was not found in the delta store.

Action: Resolve the warnings for the database. A new full backup for the database should also clear this condition.

OCI-64761: disk group *string* is not usable by the Recovery Appliance

Cause: A disk group was supplied to either the create_storage_location or update_storage_location APIs that was not previously prepared by the installation software for the Recovery Appliance.

Action: Run the ra_update procedure to process the disk group and retry the API.

OCI-64762: Task *string* of type *string* has been running for *string*.

Cause: The specified task did not complete its execution after a reasonable period. This is only a warning message.

Action: If these errors persist, contact Oracle Support Services.

OCI-64763: Task *string* of type *string* was terminated after running for *string*.

Cause: The specified task did not complete and was presumed hung. Its process was stopped and restarted.

Action: If these errors persist, contact Oracle Support Services.

OCI-64766: backup deletion using RMAN prevented by protection policy

Cause: Recovery Manager was prevented from deleting a backup piece because the 'allow_backup_deletion' parameter of the applicable Recovery Appliance protection policy was 'NO'.

Action: Modify the 'allow_backup_deletion' parameter of the applicable protection policy to 'YES' to allow for deletion of backups.

OCI-64767: restore timed out

Cause: The Recovery Appliance terminated the restore operation due to unresponsiveness of the client database.

Action: Verify the network between the client database and the Recovery Appliance. Also verify the client database I/O performance. If the error persists, contact Oracle Support Services.

OCI-64768: KEEP file size *string* cannot exceed available DISK_RESERVED_SPACE *string*.

Cause: There was no more space for a KEEP backup piece. The total DISK_RESERVED_SPACE minus the space currently consumed by KEEP backups was less than the size of the current KEEP backup piece. The piece that caused the error was deleted.

Action: Use DBMS_RA.UPDATE_DB to increase the DISK_RESERVED_SPACE value of the database or move KEEP (archival) backups to other storage using the DBMS_RA.MOVE_BACKUP function.

OCI-64771: reconcile error during *string*; replication server: *string*; database: *string*

Cause: The specified database was unable to reconcile with the specified replication server. This is typically due to either a network communication failure, missing or incorrect credentials, incorrect wallet credentials, missing or incorrectly ordered add_db and grant_db_access calls.

Action: Check the incident log for active failures with a component type of REPLICATION_RECONCILE. Resolve the reconcile issues and resume_replication_server or wait until the next reconcile time period. After a successful reconcile all stalled replication tasks will continue and the incident is marked as FIXED.

OCI-64772: downstream replication server: *string* is not accessible

Cause: The specified downstream replication server was not running, was not accessible, had incorrect credentials for the replication user in the upstream wallet, or was in the process of starting up or shutting down.

Action: If the credentials are incorrect, correct the credentials. Otherwise, the incident is marked as FIXED once the downstream replication server comes back online or is accessible over the network.

OCI-64773: Note: *string* generated during execution of API command: *string*

Cause: The specified command was entered correctly but an unexpected event occurred during its processing.

Action: Check the message for further information.

OCI-64774: database *string* has replication tasks in reconcile wait state for over *string* days

Cause: The specified database had a BACKUP_SBT task that could not be run because the task was waiting for a successful reconcile.

Action: Check the incident log for active failures with a component type of REPLICATION_RECONCILE. Resolve the reconcile issues and execute a manual reconcile, execute a resume_replication_server, or wait until the next reconcile time period. After a successful reconcile, all stalled replication tasks continue and the incident is marked as FIXED.

OCI-64775: unable to execute required code on the downstream replication server for the specified database

Cause: The specified database could not execute the required code on the downstream replication server. This is typically due to a missing `add_db` or `grant_db_access` on the downstream or the commands were issued in the incorrect order.

Action: Ensure that you execute `add_db` followed by `grant_db_access` on the downstream replication server. Then reissue the command, execute a manual reconcile, execute a `resume_replication_server`, or wait until the next reconcile time period. After a successful reconcile, all stalled replication tasks continue and this error is cleared.

OCI-64776: message from downstream replication server during *string*: *string*

Cause: An unexpected event occurred at the downstream replication server.

Action: The message includes additional information for further examination on the downstream replication server.

OCI-64777: deletion of polled file failed

Cause: The Recovery Appliance could not delete the file that was backed up from the polling location.

Action: Check if the directory specified in the polling location grants the necessary permission to allow for deletion of files.

OCI-64778: privilege not granted to *string* for database: *string*

Cause: The privilege that was revoked was not granted to the user for this protected database, the revoke was not required.

Action: Do not issue the revoke for this privilege for the protected database, it is not granted to the user.

OCI-64779: The catalog is missing necessary control file information for database *string*.

Cause: A backup arrived before the Recovery Appliance could receive all the necessary control file information. `INDEX_BACKUP` tasks for these data files remain in `ORDERING_WAIT` state until the catalog receives all the information.

Action: Use the RMAN command `RESYNC CATALOG` to fix this issue. If the problem persists, contact Oracle Support Services.

OCI-64780: Section 1 of multi-section backup set *string* of data file *string* has not reached this Recovery Appliance.

Cause: Section 1 of the multi-section backup did not reach the Recovery Appliance. Without the section, `INDEX_BACKUP` tasks of other sections of the backup set remain in `ORDERING_WAIT` state.

Action: This could be temporary because sections of a multi-section backup do not reach the Recovery Appliance in order. If the problem persists, check the status of the incoming backup, as well as status of `INDEX_BACKUP` tasks for this database.

OCI-64781: Section *string* of the prior multi-section backup set *string* of data file *string* is missing.

Cause: A section of the previous multi-section backup prior to the current backup was missing. Without the section, INDEX_BACKUP tasks for processing the current backup set remain in ORDERING_WAIT state.

Action: An INCREMENTAL LEVEL 1 CUMULATIVE or INCREMENTAL LEVEL 0 backup of the data file should clear this condition.

OCI-64782: Missing backups between SCNs *string* and *string* for data file *string*.

Cause: There was a gap in backups provided to the Recovery Appliance. Without the backup, the current backup could not be processed, and the INDEX_BACKUP task remained in ORDERING_WAIT state.

Action: An INCREMENTAL LEVEL 1 CUMULATIVE or INCREMENTAL LEVEL 0 backup of the data file should clear this condition.

OCI-64783: The backup of data file *string* is tiling with a backup written to different media.

Cause: The backup on which the current backup piece depends was written to different media and no longer resides on this Recovery Appliance.

Action: The incremental forever mechanism of the Recovery Appliance does not support backups written to disk or other media. Provide an INCREMENTAL LEVEL 0 backup of the data file.

OCI-64784: Corruption found in backup *string* of data file *string* in Recovery Appliance. New backup cannot be processed.

Cause: A new backup could not be processed because the most recent backup piece of the data file residing in the Recovery Appliance was corrupt.

Action: An INCREMENTAL LEVEL 0 backup of the data file should clear this condition.

OCI-64785: Online redo shipping for DBID *string* cannot be performed because the Recovery Appliance is not available.

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because the Recovery Appliance was not running.

Action: Execute the startup API on the Recovery Appliance before sending archive logs to it.

OCI-64786: Online redo shipping for DBID *string* cannot be performed because the delta store is under repair.

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because the delta store was under repair.

Action: The archive logs are accepted once the repair completes. If the message persists, contact Oracle Support Services.

OCI-64787: Online redo shipping for DBID *string* cannot be performed because it is removed from the Recovery Appliance

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because the database was removed.

Action: Remove the Oracle Data Guard log destination corresponding to the Recovery Appliance from the indicated database.

OCI-64788: Online redo shipping for DBID *string* cannot be performed because its platform is unknown.

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because an initial backup from the database was not supplied. The initial backup provides the platform identification to the Recovery Appliance.

Action: An initial backup must be sent from the indicated database to the Recovery Appliance using the recovery manager (RMAN).

OCI-64789: Online redo shipping for DBID *string* cannot be performed because its storage location needs repair.

Cause: The database for the Recovery Appliance was opened by specifying `resetlogs`.

Action: Contact Oracle Support Services.

OCI-64790: Online redo shipping for DBID *string* cannot be performed because it is not known by the Recovery Appliance.

Cause: The database was not identified in the catalog of the Recovery Appliance.

Action: Execute the `ADD_DB` API for the specified database.

OCI-64792: incorrect `catalog_user_name` parameter specified in `create_replication_server`

Cause: An incorrect `catalog_user_name` parameter was specified in the `create_replication_server` or `update_replication_server` API.

Action: The `catalog_user_name` parameter must be the owner of the Recovery Appliance schema.

OCI-64793: unexpected scheduler exit

Cause: The task scheduler failed with an unexpected error code in the Recovery Appliance.

Action: Contact Oracle Support Services.

OCI-64794: unable to access the encryption HSM wallet or the encryption wallet is not open on the current instance

Cause: Encryption required a Hardware Security Module (HSM) wallet that was open across all instances.

Action: Ensure the following: - That there is a valid connection to the HSM keystore. - That the HSM credentials are correct. - That the wallet is open across all Oracle RAC instances in `GV$ENCRYPTION_WALLET`.

OCI-64795: unable to access or create the encryption key

Cause: Encryption could not create or obtain the required access to a valid backup encryption key during the copy to tape operation.

Action: This could be due to a network connection issue, missing or incorrect credentials, or a misconfigured key store. Inspect the `ERROR_TEXT` in the `RA_INCIDENT_LOG` for additional information.

OCI-64796: unable to create encrypted backup during copy to tape

Cause: During the copy to tape operation, backup encryption could not create or obtain the required access to a valid encryption key.

Action: Check the ERROR_TEXT in the RA_INCIDENT_LOG for additional information.

OCI-64797: waiting for recall of backup piece *string* from cloud storage

Cause: Restore was waiting for a recall of the backup piece from cloud storage.

Action: None. This is only an informational message. The incident status is changed to FIXED once the backup piece is recalled.

OCI-64798: encryption key does not exist in wallet of executing instance

Cause: The protected databases current encryption key did not exist in the wallet of the Oracle RAC instance or the instance that was executing the copy to tape operation.

Action: Rekey the current database and verify that the RA_DATABASE.ENCRYPTION_KEYID for the protected database exists across all instances in GV\$ENCRYPTION_KEYS.KEY_ID.

OCI-64799: System Backup to Tape (SBT) job template requires encryption for the specified library.

Cause: Encryption was not specified for a library that requires encryption.

Action: Use the DBMS_RA.UPDATE_SBT_JOB_TEMPLATE procedure and specify an encryption algorithm for all job templates associated with the specified library.

OCI-64800: unable to create encrypted backup for big endian platform

Cause: Copy to tape operation could not create encrypted backup for big endian platform.

Action: Contact Oracle Support Services.

OCI-64801: Altering RASYS password in SQL is not allowed.

Cause: RASYS Password modification attempted via SQL.

Action: Use racli alter rasys_user --password;

OCI-64803: failure to get ingest name for archivelog grouping

Cause: The Oracle backup process was unable to get the ingest name needed to connect to the Oracle restore process.

Action: Set the ingest name for the local node in the configuration variable.

OCI-64804: cannot reinsert deleted backup into delta store

Cause: The specified backup could not be reinserted into the delta store, because it either was previously deleted or contained a corresponding virtual backup in the same backup set that was removed from the catalog.

Action: Take a new backup of the data file.

OCI-64805: cannot reinsert virtual full backup into delta store

Cause: Virtual full backups or copies of virtual full backups could not be reinserted into the delta store because it could corrupt existing backups of the database.

Action: Use a virtual incremental backup of the data file.

OCI-64806: incorrect or all NULL input parameters specified for reset_error API

Cause: Some or all of the input parameters specified for reset_error API were incorrect or they were all NULL input parameters.

Action: Provide at least one valid input parameter.

OCI-64807: datafile encryption information for database *string* does not match

Cause: A datafile was encrypted or rekeyed on the protected database and now the encryption key for the current INCREMENTAL LEVEL 1 backup does not match the prior encryption key.

Action: An explicit INCREMENTAL LEVEL 0 backup is needed for the encrypted datafiles to maintain recoverability.

OCI-64808: Initialization parameter *string* has more than one SID value specified

Cause: There were multiple instance settings for one initialization parameter.

Action: Use "racli update parameter -type=db" to update the initialization parameter.

OCI-64809: Initialization parameter *string* does not match the recommended value

Cause: Initialization parameter did not match the recommended value.

Action: Use "racli update parameter -type=db" to update the initialization parameter.

OCI-64810: Initialization parameter *string* is not set with the proper value

Cause: Initialization parameter was not set with the proper value.

Action: Set the proper initialization parameter value.

OCI-64811: Initialization parameter *string* has a non-default value.

Cause: Initialization parameter had a non-default value.

Action: Use "racli update parameter -type=db -restart_db" to update the initialization parameter.

OCI-64812: -force option is required to ignore checking *string* initialization parameter

Cause: An attempt was made to ignore checking the initialization parameter value without specifying the -force option.

Action: Add the -force option when attempting to ignore checking the initialization parameter.

OCI-64813: Task *string* is being suspended.

Cause: A Recovery Appliance task failed 10 times and is now going into SUSPENDED state. A suspended task will be retried every few days until it successfully completes.

Action: Contact Oracle Support Services if the task remains in SUSPENDED state for more than two weeks.

OCI-64816: cannot create a replication server to an old version downstream Recovery Appliance

Cause: The downstream Recovery Appliance was an older version.

Action: Contact Oracle Support Services.

OCI-64817: error interacting with downstream Recovery Appliance during *string*; replication server: *string*; database: *string*

Cause: An error was encountered during communication or conversation with a downstream Recovery Appliance for the specified database with the specified replication server. This was typically due to a network communication failure, missing

or incorrect wallet credentials, or missing or incorrectly ordered ADD_DB and GRANT_DB_ACCESS calls. The error could also indicate an issue during the conversation with the remote Recovery Appliance.

Action: Check the incident log for active failures with a component type of REPLICATION_REMOTERA. Resolve the connection issues and execute the RESUME_REPLICATION_SERVER command or wait until the next reconcile time period. After a successful reconcile, all stalled replication tasks will continue and the incident is marked as FIXED.

OCI-64818: The polling feature is not supported for multiple tenants.

Cause: The polling feature did not work on multiple tenants.

Action: None

OCI-64819: Database *string (string)*, *string (string)* does not exist.

Cause: The database did not exist.

Action: Specify an existing database.

OCI-64820: DB_KEY *string* does not exist.

Cause: The database associated with the specified DB_KEY was not found in the Recovery Appliance.

Action: Specify an existing db_key.

OCI-64821: DF_KEY *string* does not exist.

Cause: The data file associated with the specified DF_KEY was not found in the Recovery Appliance.

Action: Specify an existing DF_KEY.

OCI-64822: Log file cannot be accepted from DBID *string* on Tkey *string*.

Cause: While performing redo shipping for the specified database, an error was detected that prevented the creation of the log file.

Action: Refer to the other errors in the error stack to determine the cause of the problem.

OCI-64823: unable to move individual backup piece with BP_KEY *string*; backup piece is not ready to move

Cause: An attempt was made to move an individual backup piece, but the move backup operation encountered the resource busy issue for this backup piece. The backup piece still needed to replicate.

Action: Retry the move command.

OCI-64830: Incremental backup for database *string* is not up-to-date.

Cause: This could be caused by an undersized appliance or it indicates that there was a problem with the backup for a particular database.

Action: Run a capacity planning report and review the sizing of the storage location as well as CPU, memory, and disk utilization of the components to see if the application is using more than 80% of the resources for an extended period of time. Also, check for other incidents that may help describe the problem. If the cause is still not clear, open a service request for Oracle Support Services.

OCI-64831: There are no outstanding backups to request for the specified group.

Cause: The backup request group was either empty or had requested all of the backups.

Action: No action is necessary. This is an informational message only.

OCI-64832: error interacting with remote Recovery Appliance: *string*; replication server: *string*; database: *string*

Cause: An error was encountered during communication or conversation with a remote Recovery Appliance for the specified database with the specified replication server. This is typically due to a network communication failure, missing or incorrect wallet credentials, or missing ADD_DB and GRANT_DB_ACCESS calls. The error could also indicate an issue during the conversation with the remote Recovery Appliance.

Action: Check the incident log for active failures with a component type of REMOTERA. Resolve the issue and rerun the command.

OCI-64901: INMEMORY_SIZE may not exceed 16 GB with Database In-Memory Base Level

Cause: INMEMORY_SIZE cannot be greater than 16 GB because the Database In-Memory Base Level was enabled.

Action: Set inmemory_size to less than 16 GB or disable Database In-Memory Base Level with INMEMORY_FORCE parameter.

OCI-64902: Database In-Memory Base Level can only be modified in the initialization parameter file

Cause: The Database In-Memory Base Level could not be enabled or disabled dynamically.

Action: Set INMEMORY_FORCE in the initialization parameter file.

OCI-64903: Database Cell Memory Level can only be modified in the initialization parameter file

Cause: The Database Cell Memory Level could not be enabled or disabled dynamically.

Action: Set INMEMORY_FORCE in the initialization parameter file.

OCI-64904: In-Memory not supported on HDFS tablespace

Cause: An attempt was made to enable In-Memory on a table or fragment with data in Hadoop Distributed File System (HDFS) tablespace.

Action: Ensure that In-Memory is not enabled on a table or fragment in HDFS tablespace.

OCI-64905: score operator not supported for INMEMORY TEXT

Cause: An attempt was made to use the score operator on an In-Memory Oracle Text query.

Action: Remove the score operator from the query.

OCI-64906: DBMS_INMEMORY_ADMIN package invalid option specification.

Cause: The value of one of the option parameters was incorrect.

Action: Fix the option value.

OCI-64907: DBMS_INMEMORY_ADMIN required parameter is NULL or missing.

Cause: Some of the procedures were called with missing or NULL parameters.

Action: Specify the missing parameter.

OCI-64908: The Database In-Memory size cannot be increased.

Cause: Oracle Database In-Memory (Database In-Memory) could not be enabled because an invalid value was specified for the initial Database In-Memory size.

Action: Specify a non-zero Database In-Memory size in the initialization `inmemory_size` parameter.

OCI-64909: The Database In-Memory size must be increased by a minimum of *string* MB.

Cause: Oracle Database In-Memory (Database In-Memory) size did not increase by the minimum required value.

Action: Specify a Database In-Memory size that increases by the minimum required value.

OCI-64910: A reduction in the Database In-Memory size cannot be completed.

Cause: The parameter was set to disable any reduction of the Oracle Database In-Memory size (Database In-Memory).

Action: Enable Database In-Memory shrink.

OCI-64911: The Database In-Memory size must be at least the initial value *string* MB.

Cause: The attempt to reduce the Oracle Database In-Memory (Database In-Memory) size was less than the initialized size.

Action: Specify the Database In-Memory size to at least the initialized value.

OCI-64912: The Database In-Memory size must be less than *string* MB.

Cause: The Oracle Database In-Memory (Database In-Memory) size was larger than 70% of the system global area (SGA) target.

Action: Specify a Database In-Memory size of no more than 70% of the total capacity, or increase the SGA target.

OCI-64913: The Database In-Memory size cannot be increased more than *string* MB for PDB ID *string*.

Cause: The Oracle Database In-Memory (Database In-Memory) size for the pluggable database (PDB) exceeded the total Database In-Memory size for the container.

Action: Specify a Database In-Memory size of no larger than the container Database In-Memory size.

OCI-64914: The Database In-Memory size cannot be increased more than *string* MB for PDB ID *string*.

Cause: The Oracle Database In-Memory (Database In-Memory) size of the pluggable database (PDB) exceeded the PDB system global area (SGA) target size.

Action: Specify a Database In-Memory size of no larger than the PDB SGA target, or increase the PDB SGA target size.

OCI-64915: A Database In-Memory resize is already in progress

Cause: Changing the Oracle Database In-Memory (Database In-Memory) size could not be performed until the current resize completed.

Action: Recheck the Database In-Memory size and retry if required.

OCI-64916: The Database In-Memory resize cannot be completed.

Cause: Changing the Oracle Database In-Memory (Database In-Memory) size could not be performed due to insufficient space for the resize.

Action: Recheck the Database In-Memory size and retry if required.

OCI-64917: The Database In-Memory size cannot currently be shrunk below value *string* MB.

Cause: The attempt to reduce the Oracle Database In-Memory size could not be completed because space to be freed was still in use.

Action: Set the Database In-Memory size to at least the specified value or try the shrink again later.

OCI-64918: The Database In-Memory resize operation is too large and the change in size must be less than *string* MB.

Cause: The attempt to reduce the Oracle Database In-Memory (Database In-Memory) size could not be performed because it was too large for a single request.

Action: Set the Database In-Memory size to the desired value in smaller increments given by the maximum of the specified value.

OCI-65000: missing or invalid pluggable database name

Cause: A valid pluggable database name was not present where required.

Action: Reissue the statement with a valid pluggable database name.

OCI-65001: missing or invalid administrative user name

Cause: A valid administrative user name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user name.

OCI-65002: missing or invalid administrative user password

Cause: A valid administrative user password was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user password.

OCI-65003: missing or invalid XML file name

Cause: A valid XML file name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid XML file name.

OCI-65004: missing or invalid database link name

Cause: A valid database link name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid database link name.

OCI-65005: missing or invalid file name pattern for file - *string*

Cause: Either source or replacement file name pattern was missing or invalid in a SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Correct the SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause and reissue the statement.

OCI-65006: missing or invalid ENABLE PLUGGABLE DATABASE clause

Cause: An ENABLE PLUGGABLE DATABASE clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

OCI-65007: duplicate ENABLE PLUGGABLE DATABASE clause

Cause: A duplicate ENABLE PLUGGABLE DATABASE clause was specified in a CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

OCI-65008: missing or invalid SEED clause

Cause: A SEED clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid SEED clause.

OCI-65009: cannot open pluggable database in read-write mode

Cause: The datafiles belonging to the pluggable database were read-only.

Action: Open the pluggable database in read-only mode.

OCI-65010: maximum number of pluggable databases created

Cause: The number of pluggable databases exceeded either the MAX_PDBS property value or the maximum supported number of pluggable databases.

Action: Drop the existing pluggable databases and retry the operation.

OCI-65011: Pluggable database *string* does not exist.

Cause: User attempted to specify a pluggable database that does not exist.

Action: Check DBA_PDBS to see if it exists.

OCI-65012: Pluggable database *string* already exists.

Cause: User attempted to create a pluggable database with a name that already exists.

Action: Check DBA_PDBS to see if the name exists.

OCI-65013: invalid CONTAINER clause

Cause: An invalid CONTAINER clause was used.

Action: Check the Oracle Documentation for the correct syntax for the CONTAINER clause of the statement and retry.

OCI-65014: invalid SHARING clause

Cause: An invalid SHARING clause was encountered.

Action: Reissue the DDL statement with a valid SHARING clause.

OCI-65015: missing or invalid container name

Cause: A valid container name was not present where required by the syntax of ALTER SESSION SET CONTAINER or ALTER USER ... SET|ADD|REMOVE CONTAINER_DATA statement.

Action: Reissue the statement with a valid container name.

OCI-65016: FILE_NAME_CONVERT must be specified

Cause: Data files, and possibly other files, needed to be copied as a part of creating a pluggable database. However, Oracle Managed Files (OMF) was not enabled, PDB_FILE_NAME_CONVERT was not defined, and there was a failure to specify the FILE_NAME_CONVERT clause.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause as a part of the statement.

OCI-65017: seed pluggable database may not be dropped or altered

Cause: User attempted to drop or alter the Seed pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

OCI-65018: FILE_NAME_CONVERT or NOCOPY must be specified

Cause: Oracle Managed Files (OMF) was not enabled and PDB_FILE_NAME_CONVERT was not defined. The FILE_NAME_CONVERT or the NOCOPY clause was not specified as a part of creating a pluggable database using data files.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause or NOCOPY as a part of the statement.

OCI-65019: pluggable database *string* already open

Cause: An attempt was made to open a pluggable database that was already opened.

Action: Check the OPEN_MODE column in V\$PDBS view.

OCI-65020: pluggable database *string* already closed

Cause: An attempt was made to close a pluggable database that was already closed.

Action: Check the OPEN_MODE column in V\$PDBS view.

OCI-65021: illegal use of SHARING clause

Cause: A SHARING clause was encountered in unexpected context.

Action: Do not use SHARING clause outside of Oracle-supplied scripts.

OCI-65022: CONTAINER clause already specified

Cause: A statement contained multiple CONTAINER clauses.

Action: Eliminate redundant CONTAINER clauses.

OCI-65023: active transaction exists in container *string*

Cause: A statement attempted to create a new transaction in the current container while there was an active transaction in another container.

Action: Switch to the container with the active transaction and commit, rollback or detach the active transaction before attempting to issue any statement that will attempt to create a new transaction in another container.

OCI-65024: Pluggable database *string* is not open.

Cause: An operation was attempted on a pluggable database that was not open.

Action: Open the pluggable database using appropriate open mode.

OCI-65025: Pluggable database *string* is not closed on all instances.

Cause: An operation was attempted on a pluggable database that was not closed on all Oracle RAC instances.

Action: Close the pluggable database on all instances and retry the operation.

OCI-65026: XML metadata file error : *string*

Cause: An error occurred while trying to parse or write to the XML metadata file.

Action: Check that the XML metadata file exists and is readable.

OCI-65027: XML metadata file error while getting node or value for (*string* - *string*)

Cause: An error occurred while trying to parse the XML metadata file.

Action: Check and correct the XML metadata file.

OCI-65028: Unable to open plugin data file at path *string*

Cause: Error occurred while trying to open the data file.

Action: Check that the data file exists at the path.

OCI-65029: a Local User may not grant or revoke a Common Privilege or Role

Cause: A Local User issued a GRANT or REVOKE statement specifying CONTAINER=ALL, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

OCI-65030: cannot grant a privilege commonly to a local user or role

Cause: A GRANT statement was issued specifying CONTAINER=ALL and naming a local user or role as a grantee, which is illegal.

Action: If trying to grant a privilege locally, remove CONTAINER=ALL from the GRANT statement. If trying to grant a privilege commonly, remove local users and roles from the list of grantees.

OCI-65031: cannot revoke a privilege commonly from a local user or role

Cause: A REVOKE statement was issued specifying CONTAINER=ALL and naming a local user or role as a revokee, which is illegal.

Action: If trying to revoke a privilege locally, remove CONTAINER=ALL from the REVOKE statement. If trying to revoke a privilege commonly, remove local users and roles from the list of revokees.

OCI-65032: A local role may only be granted or revoked within the current container.

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and listing a local role among the roles to be granted or revoked, which is illegal.

Action: If trying to grant or revoke a local role, remove CONTAINER=ALL from the REVOKE statement. If trying to grant or revoke roles commonly, remove local roles from the list of roles being granted or revoked.

OCI-65033: A common privilege cannot be granted or revoked on a local object.

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local object on which privileges are to be granted or revoked, which is not allowed.

Action: Remove CONTAINER=ALL from the statement.

OCI-65034: PDB describe output file not specified

Cause: User attempted to describe a pluggable database without specifying an output XML file location.

Action: Specify an output file location for describe

OCI-65035: unable to create pluggable database from *string*

Cause: An attempt was made to clone a pluggable database that did not have local undo enabled.

Action: Enable local undo for the PDB and and retry the operation.

OCI-65036: pluggable database *string* not open in required mode

Cause: Attempted to perform an operation on a pluggable database in incorrect open mode.

Action: Open the pluggable database in the mode required for this operation

OCI-65037: A privilege on a local user may not be granted or revoked commonly.

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local user on which privileges are to be granted or revoked, which is not allowed.

Action: Remove CONTAINER=ALL from the GRANT or REVOKE statement.

OCI-65039: container identifier column missing or is of unexpected type in a definition of a CONTAINER_DATA object

Cause: Table or view whose definition contained a CONTAINER_DATA clause lacked a column used to identify a container to which data belongs or the column was of unexpected type.

Action: Correct the statement and reenter.

OCI-65040: Operation is not allowed from within a pluggable database.

Cause: An operation was attempted that can only be performed in the root or application root container.

Action: Switch to the root or application root container to perform the operation.

OCI-65041: CONTAINER_DATA attribute for this user cannot be modified

Cause: An attempt was made to modify CONTAINER_DATA attribute for user SYS or SYSBACKUP which is disallowed.

Action: Do not attempt to modify CONTAINER_DATA attribute for users SYS or SYSBACKUP.

OCI-65042: name is already used by an existing container

Cause: The name was already used by another container.

Action: Specify a valid name.

OCI-65043: TABLESPACE keyword expected

Cause: TABLESPACE keyword was missing.

Action: Specify a TABLESPACE keyword.

OCI-65044: missing or invalid option following STORAGE keyword

Cause: An option other than MAXSIZE or MAX_SHARED_TEMP_SIZE was specified.

Action: Specify only legal options.

OCI-65045: pluggable database not in a restricted mode

Cause: An operation was attempted on a pluggable database that was not in restricted mode.

Action: Open the pluggable database in a restricted mode.

OCI-65046: operation not allowed from outside a pluggable database

Cause: An operation was attempted that can only be performed from within a pluggable database.

Action: Switch to a pluggable database to perform the operation.

OCI-65047: Object *string.string* is invalid or was compiled with errors in the root.

Cause: An attempt was made to issue a metadata link DDL for an object that that was invalid or compiled with errors in a CDB\$ROOT or an application root.

Action: Check the validity of the object in CDB\$ROOT or application root. *Params: 1) schema_name: The owning schema name of the invalid object 2) object_name: The invalid object name.

OCI-65048: error encountered when processing the current DDL statement in pluggable database *string*

Cause: An error was encountered when executing a statement in one of the pluggable databases.

Action: Examine the cause of failure in the pluggable database.

OCI-65049: Creation of local user or role is not allowed in this container.

Cause: An attempt was made to create a local user or role in CDB\$ROOT or an application root.

Action: If trying to create a common user or role, specify CONTAINER=ALL.

OCI-65050: Common DDLs only allowed in root.

Cause: An attempt was made to issue a common DDL in a pluggable database.

Action: Switch to CDB\$ROOT or application root and issue the common DDL.

OCI-65051: missing valid container identifier

Cause: A valid container identifier was not specified.

Action: Specify a valid container identifier.

OCI-65052: statement involves operations with different container scope

Cause: An attempt was made to combine one operation that applies to all containers with another that only applies to the local container into one statement.

Action: Execute the operations in separate statements.

OCI-65053: A global user cannot change the container in the session.

Cause: An attempt was made by a global user to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed for global users.

OCI-65054: Cannot open a pluggable database in the desired mode. PDB opening in *string*, CDB opened in *string*.

Cause: An attempt was made to open a pluggable database (PDB) in a mode incompatible with the multitenant container database (CDB) or, if the PDB belonged to an application container, in a mode incompatible with the application root.

Action: Open the CDB or the application root in a compatible mode first and retry the operation.

OCI-65056: CONTAINER_DATA attribute is not used in a pluggable database.

Cause: User connected to a pluggable database attempted to modify a CONTAINER_DATA attribute, which is illegal.

Action: A user connected to a pluggable database (PDB) may only see rows of CONTAINER_DATA objects on which the appropriate privilege has been granted and which pertain to that PDB or to the multitenant container database (CDB) as a whole. The ability to see this data is not controlled by the CONTAINER_DATA attribute, which is only used to control the ability to see rows pertaining to certain containers while connected to CDB\$ROOT or to an application root in a CDB.

OCI-65057: CONTAINER_DATA attribute must always include the current container

Cause: User issuing ALTER USER ... SET|REMOVE CONTAINER_DATA = ... statement attempted to exclude the current container from a CONTAINER_DATA attribute.

Action: Ensure that a CONTAINER_DATA attribute always includes the current container.

OCI-65058: object-specific CONTAINER_DATA attribute may only be specified for a CONTAINER_DATA object

Cause: Object referenced in an ALTER USER statement modifying an object-specific CONTAINER_DATA attribute is not a CONTAINER_DATA table or view.

Action: Ensure that an object referenced in the statement is a CONTAINER_DATA table or view.

OCI-65059: duplicate container name in CONTAINER_DATA clause

Cause: Duplicate references to a name of some container was encountered in a CONTAINER_DATA clause.

Action: Ensure that no container name appears more than once.

OCI-65060: CONTAINER_DATA attribute is not set

Cause: User attempted to add container(s) to an object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or remove containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

Action: Avoid adding containers to object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or removing containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

OCI-65061: some of specified containers do not belong to the CONTAINER_DATA attribute

Cause: User attempted to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

Action: Do not attempt to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

OCI-65062: CONTAINER_DATA attribute is set to ALL

Cause: User attempted to add or remove containers to or from a CONTAINER_DATA attribute whose current value is ALL, which is not supported.

Action: Do not attempt to add or remove containers to or from a CONTAINER_DATA attribute whose current value is ALL.

OCI-65063: CONTAINER_DATA clause has already been specified

Cause: The CONTAINER_DATA clause was specified twice.

Action: Specify only one CONTAINER_DATA clause.

OCI-65064: incorrect contents of XML metadata file

Cause: The contents of the XML metadata file were different from the actual file properties.

Action: Check and correct the XML metadata file.

OCI-65065: A local user or role can only be altered within the current container

Cause: The ALTER USER or ALTER ROLE statement was issued specifying CONTAINER=ALL and listing a local user or role among the users or roles to be altered, which is illegal.

Action: If trying to alter a local user or role, specify CONTAINER=CURRENT. If trying to alter common users or roles, remove local users or roles from the list of roles being altered.

OCI-65066: The specified changes must apply to all containers

Cause: An attempt was made to apply the specified changes to the current container.

Action: Specify CONTAINER=ALL.

OCI-65067: DEFAULT ROLE clause is referencing a local role with CONTAINER=ALL.

Cause: An attempt was made to reference a local role across all containers using the DEFAULT ROLE clause.

Action: Review the Oracle Database documentation for the ALTER USER statement. Also, review the CONTAINER clause to see the default settings in a pluggable database (PDB) and the multitenant container database (CDB) root. If you are trying to set a local role as the default role, then specify CONTAINER=CURRENT since a local role cannot be set as a default role in every container.

OCI-65068: cannot define a trigger that fires after a pluggable database is unplugged

Cause: An attempt was made to create a trigger that fires after a pluggable database has been unplugged. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after a pluggable database has been unplugged.

OCI-65070: AFTER CLONE trigger can only be created on a pluggable database

Cause: An attempt was made to create an AFTER CLONE trigger on a schema or a database. This type of trigger is not supported.

Action: Do not specify AFTER CLONE when creating a trigger on a schema or a database.

OCI-65071: BEFORE UNPLUG trigger can only be created on a pluggable database

Cause: An attempt was made to create a BEFORE UNPLUG trigger on a schema or a database. This type of triggers is not supported.

Action: Do not specify BEFORE UNPLUG when creating a trigger on a schema or a database.

OCI-65072: user must be connected to a pluggable database on which a trigger is being created

Cause: An attempt was made to create a database event trigger on a pluggable database while not connected to a pluggable database. This is not supported.

Action: Connect to the pluggable database on which a database event trigger needs to be created before attempting to create such a trigger.

OCI-65073: cannot define a trigger that fires before a pluggable database is cloned

Cause: An attempt was made to create a trigger that fires before a pluggable database has been cloned. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before a pluggable database has been cloned.

OCI-65074: editions not supported for common users

Cause: An attempt was made to support editions for common users.

Action: Do not attempt to enable editions for common users.

OCI-65075: cannot recover the pluggable database

Cause: The pluggable database has been dropped.

Action: None

OCI-65076: incompatible SYSTEM tablespace in database being plugged in

Cause: An attempt was made to plug in a database that had a SYSTEM tablespace whose relative file number was not one. The most common cause of this error is when the database has been created using Oracle Database release 7 or earlier and then upgraded using the migrate utility.

Action: Migrate the database to a pluggable database using the Oracle Data Pump utility.

OCI-65077: AFTER RELOCATE trigger can only be created on a pluggable database.

Cause: An attempt is begin made to create an AFTER RELOCATE trigger on a schema or a database. This type of trigger is not supported.

Action: Do not specify AFTER RELOCATE when creating a trigger on a schema or a database.

OCI-65080: cannot determine pluggable database name

Cause: An attempt was made to map the database ID to the pluggable database name.

Action: Contact Oracle Support Services.

OCI-65081: database or pluggable database is not open in read only mode

Cause: An operation was attempted on a database or pluggable database that is not open in read only mode

Action: Open the database or pluggable database in read only mode and then retry the operation.

OCI-65082: cannot add any more pluggable databases: limit of *string* exceeded

Cause: There was no more room in the control file for adding pluggable databases.

Action: Recreate the control file.

OCI-65083: pluggable database *string* shutdown in progress

Cause: The pluggable database is in the middle of shutdown abort

Action: Retry the operation later.

OCI-65084: object *string.string* does not exist in root

Cause: An attempt was made to create a common object that does not exist in root.

Action: Invoke the script using catcon.pl to create the object in all containers.

OCI-65085: cannot open pluggable database in read-only mode

Cause: The pluggable database has either been created and not opened or has not been opened in read/write mode after the undo mode has been changed for the multitenant container database (CDB).

Action: Open the pluggable database in the read/write or the restricted mode first.

OCI-65086: cannot open/close the pluggable database

Cause: The pluggable database has been unplugged.

Action: The pluggable database can only be dropped.

OCI-65087: Oracle-supplied operation not allowed from within a pluggable database

Cause: An operation in an Oracle-supplied script was attempted that can only be performed in the root container.

Action: Confirm that the operation is needed in the root container, and switch to the root container to perform the operation.

OCI-65088: database open should be retried

Cause: An inconsistency between the control file and the data dictionary was found and fixed during the database open. The database open needs to be executed again.

Action: Retry the database open.

OCI-65089: pluggable database is not clean

Cause: The pluggable database was not open anywhere but was not marked as clean yet.

Action: Wait until the cleanup is done and retry.

OCI-65090: operation only allowed in a container database

Cause: User attempted an operation that is only allowed in a CDB

Action: Connect to a CDB to perform this operation

OCI-65091: operation on *string* not allowed in a pluggable database

Cause: An undo tablespace or rollback segment operation was attempted that can only be performed in the root container.

Action: Switch to the root container to perform the undo tablespace or rollback segment operation.

OCI-65092: system privilege granted with a different scope to '*string*'

Cause: An attempt was made to revoke a system privilege that was granted with a different scope.

Action: Specify the correct value for the CONTAINER clause.

OCI-65093: multitenant container database not set up properly

Cause: An attempt was made to open a multitenant container database without the correct parameter set for a multitenant container database in the initialization parameter file.

Action: Set the 'enable_pluggable_database=true' parameter for the multitenant container database in the initialization parameter file and restart the database.

OCI-65094: invalid local user or role name

Cause: An attempt was made to create a local user or role with a name that was not valid for local users or roles. In addition to the usual rules for user and role names, local user and role names cannot start with C## or c##. When connected to a locked down Pluggable Database (PDB) with LOCAL_OBJECT_RESERVED_NAME feature

disabled, PDB local user or role can't have the same name as that of an Oracle reserved user or role name like MDSYS, WMSYS etc.

Action: Specify a valid local user or role name.

OCI-65095: invalid common object name

Cause: An attempt was made to create a common object with a name that was not valid for common objects. In addition to the usual rules for object names, common object names must consist only of ASCII characters.

Action: Specify a valid common object name.

OCI-65096: common user or role name must start with prefix *string*

Cause: An attempt is being made to create a common user or role without the correct prefix as specified in the COMMON_USER_PREFIX parameter.

Action: Specify a valid common user or role name with the correct prefix. *Params: 1) common_user_prefix: The value of the COMMON_USER_PREFIX parameter.

OCI-65097: DML into a data link table is outside an application action

Cause: DML into a data link table was attempted outside an application action.

Action: Begin the application action before the DML.

OCI-65098: DML into an extended data link table is outside an application action

Cause: DML into an extended data link table was attempted in an application root outside an application action.

Action: Begin the application action before the DML.

OCI-65099: operation cannot be performed when the CDB is not open

Cause: An operation was attempted inside a pluggable database that required the container database (CDB) to be open.

Action: Open the CDB and then rerun the operation.

OCI-65100: missing or invalid path prefix - *string*

Cause: The path prefix was missing or invalid. This can also happen if any of the following are true: - The directory path specified by PATH_PREFIX clause contains the string '..' or an invalid path separator like // or exceeds the maximum length supported on host operating system. - The target path already exists as a file in operating system. - The ROOT container (CDB\$ROOT, when connected to a pluggable database or application root, when connected to an application container) has a PATH_PREFIX set and either NONE or a directory location outside ROOT containers' PATH_PREFIX was specified.

Action: Correct the PATH_PREFIX clause and reissue the statement.

OCI-65101: container database set up incorrectly

Cause: An attempt was made to use a non container database control file to startup a container database (CDB).

Action: Create a new control file for the CDB.

OCI-65102: missing or invalid instance name

Cause: A valid instance name was not present where required by the syntax of a ALTER PLUGGABLE DATABASE statement.

Action: Reissue the statement with a valid instance name.

OCI-65103: UPGRADE cannot be specified for PDBs being open in READ ONLY mode

Cause: ALTER PLUGGABLE DATABASE ... OPEN UPGRADE was specified, but the root is open READ ONLY, so the specified PDBs will also be opened READ ONLY, and UPGRADE cannot be specified for PDBs being opened READ ONLY.

Action: Reissue the statement without specifying UPGRADE or reopen the root in READ WRITE mode and then reissue the statement.

OCI-65104: operation not allowed on an inactive pluggable database

Cause: The pluggable database status was INACTIVE. It was still being created or there was an error during the create operation.

Action: Wait until the status is changed to CREATED or, in case of errors, drop the pluggable database and re-create it.

OCI-65105: SYSTEM data file for pluggable database #string not found

Cause: Data files were not specified in a CREATE CONTROLFILE statement in the SYSTEM tablespace of a pluggable database.

Action: Locate the data files and resubmit the CREATE CONTROLFILE statement.

OCI-65106: Pluggable database #string (string) is in an invalid state.

Cause: Data files were not specified in a CREATE CONTROLFILE statement of a pluggable database.

Action: Drop the pluggable database or locate the data files and resubmit the CREATE CONTROLFILE statement.

OCI-65107: Error encountered when processing the current task on instance:string

Cause: An error was encountered when executing a pluggable database task on one of the Oracle RAC instances.

Action: Examine the cause of failure on the instance.

OCI-65108: invalid use of a cursor belonging to another container

Cause: An attempt was made to use a cursor that was parsed or executed in a different container.

Action: Check if there are any incorrect uses of the SET CONTAINER statement. Only open, parse, execute, fetch, and close a cursor in the same container.

OCI-65109: operation not allowed in CDB\$ROOT

Cause: An operation was attempted that is not supported in the Container Database root.

Action: Switch to a pluggable database to perform the operation.

OCI-65110: Invalid instance name specified

Cause: An attempt was made to use an invalid or inactive instance name in the INSTANCES clause.

Action: Specify a valid and active instance name.

OCI-65111: Cannot relocate to the same instance

Cause: An attempt was made to relocate a pluggable database to the current instance.

Action: Specify an instance which is different than the current instance.

OCI-65112: pluggable database *string* not closed on all instances of the standby database

Cause: Media recovery stopped because the pluggable database was either unplugged, dropped or renamed on the primary database.

Action: Close the pluggable database on all instances and restart the recovery.

OCI-65113: value of MAX_PDB_STORAGE property for the PDB is too low

Cause: The value of MAX_PDB_STORAGE specified in the ALTER or CREATE PLUGGABLE DATABASE statement is less than the current space usage of data files and temporary files of the container.

Action: Specify a higher value for MAX_PDB_STORAGE.

OCI-65114: space usage in container is too high

Cause: Space usage in the current container exceeded the value of MAX_PDB_STORAGE for the container.

Action: Specify a higher value for MAX_PDB_STORAGE using the ALTER PLUGGABLE DATABASE statement.

OCI-65115: CDB resource plan *string* has more than *string* PDB directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of directives.

Action: Remove the directives for pluggable databases (PDBs) that are not active on this database.

OCI-65116: incompatible database character set

Cause: The database character set of the container database was not a superset of the database character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having a compatible database character set.

OCI-65117: CONTAINER clause may only be specified when connected to a container database

Cause: The CONTAINER clause was specified when not connected to a container database (CDB).

Action: Reenter the statement without the CONTAINER clause.

OCI-65118: operation affecting a pluggable database cannot be performed from another pluggable database

Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

OCI-65119: incompatible national character set

Cause: The national character set of the container database was not the same as the national character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same national character set.

OCI-65120: illegal character set ID in XML metadata file

Cause: The XML metadata file for the pluggable database being plugged in contained a database or national character set ID that was not valid for the container database. This can happen if the XML file is manually modified, if it is corrupted on disk, or if the set of supported character sets differs between the container database and the source database of the pluggable database because a user-defined character set has not been installed in the Oracle Home directory of the container database.

Action: If you have manually modified the XML metadata file of the pluggable database, restore the original file or re-create the pluggable database from its source database. Manual modifications of the XML file are not supported. If the pluggable database uses a user-defined character set, make sure the character set is installed in the Oracle Home directory of the container database. Otherwise, contact Oracle Support Services.

OCI-65121: ALTER SESSION SET CONTAINER not allowed from this client

Cause: Clients earlier than Oracle Database 12c Release 1 do not support this feature.

Action: Upgrade the client to Oracle Database 12c Release 1 or later.

OCI-65122: Pluggable database GUID conflicts with the GUID of an existing container.

Cause: While creating a pluggable database, the GUID conflicted with the GUID of an existing container in the container database.

Action: Retry creating the pluggable database or consider using the AS CLONE clause for CREATE PLUGGABLE DATABASE if plugging in a copy of another pluggable database.

OCI-65123: cannot perform a SET CONTAINER operation in this context

Cause: An attempt was made to set the container inside a context where such an operation is prohibited.

Action: Do not set the container from inside a system trigger or a DML context.

OCI-65125: valid XML or PDB archive file name is required

Cause: An attempt was made to provide a file name that did not have an XML or a PDB extension.

Action: Specify a valid XML or PDB archive file.

OCI-65126: pluggable database *string* cannot be unplugged.

Cause: The pluggable database was not closed cleanly and there are active transactions that need to be recovered.

Action: Open the pluggable database in read/write mode before unplugging again so that transaction recovery can be performed.

OCI-65127: PDB recover output file not specified

Cause: An attempt was made to recover a pluggable database (PDB) without specifying an output XML file location.

Action: Specify an output file location for recovery.

OCI-65128: missing or nonexistent data file or directory name *string*

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by either not specifying a data file or directory location, or by specifying a nonexistent data file or directory location.

Action: Specify a valid data file or directory location and retry the operation.

OCI-65129: Pluggable database *string* cannot be relocated.

Cause: The pluggable database was already opened on all instances.

Action: Close the pluggable database without RELOCATE clause or close the pluggable database on another instance.

OCI-65130: cannot relocate more than one pluggable database.

Cause: An attempt was made to relocate more than one pluggable database.

Action: RELOCATE pluggable database one at a time.

OCI-65131: The feature *string* is not supported in a pluggable database.

Cause: An attempt was made to use a feature that is not supported in a pluggable database.

Action: Do not use this feature in a pluggable database.

OCI-65134: endian mismatch

Cause: The endian of the container database was not the same as the endian of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same endian.

OCI-65135: cannot perform ALTER SESSION SET CONTAINER operation in this context

Cause: An ALTER SESSION SET CONTAINER operation was attempted in a context where such an operation is prohibited.

Action: Do not perform the ALTER SESSION SET CONTAINER operation from a session that can be migrated or a session from an OCI connection pool.

OCI-65136: SPFILE name cannot be specified for a pluggable database

Cause: An attempt was made to specify an SPFILE name for a pluggable database.

Action: Remove the SPFILE name and retry the operation in the pluggable database.

OCI-65137: Pluggable database *string* is in the middle of Pluggable Database RESETLOGS operation.

Cause: The pluggable database is in the middle of a Pluggable Database (PDB) RESETLOGS operation.

Action: If possible, recover the Container Database further so that this Pluggable database is not in the middle of a PDB RESETLOGS operation. Another alternative is to perform PDB point-in-time recovery. A message is logged in the alert log indicating SCN and time until which the pluggable database can be point-in-time recovered.

OCI-65138: Data file *string* of pluggable database *string* with creation timestamp *string* does not belong to PDB incarnation *string*, or any of its ancestors.

Cause: Either the specified data file was restored from a backup that was taken during a period of time that was discarded by a RESETLOGS operation, or Oracle could not identify

which pluggable database incarnation the file belongs to. One would also encounter this error if a pluggable database (PDB) flashback or restore was performed to an orphan PDB incarnation followed by complete recovery of the PDB. The alert log contains more information.

Action: Restore a backup of this file that belonged to either the current or a prior incarnation of the pluggable database. If you are using RMAN to restore, RMAN will automatically select a correct backup. If you are using Flashback, then perform flashback to a point prior to the start of the orphan incarnation.

OCI-65139: Mismatch between XML metadata file and data file *string* for value of *string* (*string*)

Cause: Either the XML metadata file or the data file was corrupt.

Action: Verify that the XML metadata file and the data file are consistent as of the point when the unplug was done and retry the operation.

OCI-65140: invalid common profile name

Cause: An attempt was made to create a common profile with a name that is not valid for common profiles. Common profile names must consist only of ASCII characters, and must contain the prefix specified in `common_user_prefix` parameter.

Action: Specify a valid common profile name.

OCI-65141: invalid local profile name

Cause: An attempt was made to create a local profile with a name that is not valid for local profiles. Local profile names cannot start with `C##` or `c##`. When connected to a locked down Pluggable Database (PDB) with `LOCAL_OBJECT_RESERVED_NAME` feature disabled, PDB local profile can't have the same name as that of an Oracle reserved profile name like `ORA_STIG_PROFILE`, `ORA_CIS_PROFILE` etc.

Action: Specify a valid local profile name.

OCI-65142: A local profile can be altered only within the current container

Cause: An attempt was made to alter a local profile using an `ALTER PROFILE` statement with the `CONTAINER=ALL` clause.

Action: If attempting to alter a local profile, ensure that you are connected to the correct container and optionally specify `CONTAINER=CURRENT`.

OCI-65143: Creation of local profiles is not allowed in this container.

Cause: An attempt was made to create a local profile in `CDB$ROOT` or an application root. Except for `DEFAULT` and `ORA_STIG_PROFILE`, which are out-of-the-box Oracle supplied local profiles, no customer created local profiles are allowed in this container.

Action: If attempting to create a common profile, do not specify `CONTAINER=CURRENT`.

OCI-65144: ALTER SYSTEM DISABLE RESTRICTED SESSION is not permitted

Cause: An attempt was made to disable a restricted session while an unresolved error existed in `PDB_PLUG_IN_VIOLATIONS`.

Action: Resolve all of the errors before trying to disable a restricted session.

OCI-65145: FORCE open of multiple pluggable databases is not supported

Cause: An attempt was made to FORCE open multiple pluggable databases at the same time.

Action: Retry the FORCE open of one pluggable database at a time.

OCI-65146: account cannot be unlocked in a PDB while it is locked in the root

Cause: An attempt was made to unlock a common user account in a pluggable database (PDB) which was locked in the root of the container database.

Action: Ensure that a common user account is not locked in the root before attempting to unlock it in a PDB.

OCI-65147: DB_UNIQUE_NAME specified without SPFILE scope

Cause: An attempt was made to specify a DB_UNIQUE_NAME in an ALTER SYSTEM statement without SCOPE=SPFILE.

Action: Use DB_UNIQUE_NAME only with SCOPE=SPFILE.

OCI-65148: cannot FORCE open a pluggable database to or from upgrade mode

Cause: An attempt was made to FORCE open a pluggable database to or from upgrade mode.

Action: Close the pluggable database first and retry the operation.

OCI-65149: PDB name conflicts with existing service name in the CDB or the PDB

Cause: An attempt was made to create a pluggable database (PDB) whose name conflicts with the existing service name in the container database (CDB) or the PDB.

Action: Choose a different name for the PDB.

OCI-65150: unable to start the instance

Cause: An attempt was made to start an instance as a container or a non-container database when at least one of the other instances was started in a different mode.

Action: Start the instance in the same mode as all the other instances.

OCI-65151: invalid tablespace name specified

Cause: An attempt was made to use an invalid tablespace name or a mandatory tablespace name (SYSTEM or SYSAUX) in the USER_TABLESPACES clause when creating a pluggable database.

Action: Specify a valid tablespace name.

OCI-65152: cannot bring datafile online

Cause: An attempt was made to bring online one or more datafiles belonging to a pluggable database that is disabled for recovery.

Action: Issue the ALTER PLUGGABLE DATABASE ENABLE RECOVERY statement first and retry the operation.

OCI-65153: cannot bring tablespace online

Cause: An attempt was made to bring online a tablespace that was either missing in the plug XML file or excluded when the pluggable database was created.

Action: Drop and recreate the tablespace to bring it online.

OCI-65154: specified logging attribute for the pluggable database is same as the current attribute value

Cause: An attempt was made to change the default logging attribute to be the same as the current attribute value for the pluggable database.

Action: Change the logging attribute to a different value.

OCI-65155: missing or invalid source file directory *string*

Cause: Source file directory was missing or invalid.

Action: Correct the SOURCE_FILE_DIRECTORY clause and reissue the statement.

OCI-65156: pluggable database version *string* not allowed

Cause: An attempt was made to plug in a pluggable database with an incompatible version of the multitenant container database or the application root.

Action: Plug in a pluggable database with a compatible version of the multitenant container database or the application root.

OCI-65157: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY cannot be specified together

Cause: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY clauses were both specified.

Action: Use either the SOURCE_FILE_NAME_CONVERT or the SOURCE_FILE_DIRECTORY clause and reissue the statement.

OCI-65158: could not find a matching file for - *string*

Cause: A matching file was not found in the directory specified with the SOURCE_FILE_DIRECTORY clause.

Action: Correct the SOURCE_FILE_DIRECTORY clause or check that the file exists in the directory and reissue the statement.

OCI-65159: invalid service name specified

Cause: An attempt was made to use an invalid service name in the services clause.

Action: Specify a valid service name.

OCI-65160: invalid cleanup task ID

Cause: An attempt was made to pass an invalid cleanup task ID to the DBMS_PDB.CLEANUP_TASK function.

Action: Specify a valid cleanup task ID.

OCI-65162: The password of the common user has expired.

Cause: The password of the common user account has expired and must be changed. Connect to the CDB\$ROOT or Application Root of the multitenant container database to change the common user password.

Action: Change the password of the common user.

OCI-65164: PDB instance recovery cannot open a required archived redo log

Cause: The system could not access a required archived redo log file.

Action: Ensure that the offline log exists, the storage device is online, and the archived redo log file is in the correct location.

OCI-65165: missing or invalid path for file creation *string*

Cause: The path specified in CREATE_FILE_DEST clause was missing or invalid.

Action: Correct the CREATE_FILE_DEST clause and reissue the statement.

OCI-65166: cannot run noncdb_to_pdb.sql if PDB's version differs from CDB's

Cause: An attempt was made to run noncdb_to_pdb.sql when the version of the pluggable database (PDB) was different from the version of the multitenant container database (CDB).

Action: Upgrade the PDB before running noncdb_to_pdb.sql

OCI-65167: cannot run noncdb_to_pdb.sql if container database is in upgrade mode

Cause: An attempt was made to run noncdb_to_pdb.sql when the multitenant container database (CDB) was in upgrade mode.

Action: Open the CDB in non-upgrade mode.

OCI-65168: missing PFILE name

Cause: An operation involving PFILE was issued in a pluggable database without specifying the PFILE name

Action: Specify a valid PFILE name and retry the operation in the pluggable database.

OCI-65169: error encountered while attempting to copy file *string*

Cause: An error was encountered while attempting to copy the file while creating a pluggable database.

Action: Check additional error messages for the cause of the failure to copy the file, and resolve the issue accordingly.

OCI-65170: XML file *string* already exists

Cause: An attempt to create an XML file failed because a file with that name already exists.

Action: Use a different XML file name.

OCI-65171: invalid value for DB_BLOCK_CHECKING parameter

Cause: An attempt was made to specify a value of FALSE or OFF for the DB_BLOCK_CHECKING parameter in a pluggable database (PDB), when the value of DB_BLOCK_CHECKING parameter in the multitenant container database (CDB) is neither FALSE nor OFF. If the CDB has enabled the DB_BLOCK_CHECKING parameter, then the PDB cannot disable the DB_BLOCK_CHECKING parameter.

Action: Specify a value other than FALSE or OFF, such as LOW, MEDIUM, FULL or TRUE for the DB_BLOCK_CHECKING parameter in the PDB.

OCI-65172: cannot run noncdb_to_pdb.sql unless pluggable database is an unconverted non-container database

Cause: An attempt was made to run 'noncdb_to_pdb.sql' on a pluggable database (PDB) that was not an unconverted non-container database.

Action: 'noncdb_to_pdb.sql' is not necessary for this PDB.

OCI-65174: invalid or conflicting name in service *string* found in the pluggable database

Cause: The service name or network name in the specified service was invalid or conflicted with an existing service name or network name in the container database. If a

SERVICE_NAME_CONVERT clause was used then the conflict could have been because two services from the source PDB ended up with mutually conflicted names.

Action: Use an appropriate SERVICE_NAME_CONVERT clause to ensure uniqueness of service and network names within the PDB and with existing names for the entire container database. Then reissue the statement.

OCI-65175: cannot grant local SYSDBA administrative privilege in CDB root

Cause: An attempt was made to grant SYSDBA privilege locally in a multitenant container database (CDB) root or in an application root.

Action: Either grant the SYSDBA administrative privilege commonly or connect to the appropriate pluggable database (PDB) to grant the SYSDBA privilege locally.

OCI-65176: system tablespace block size (*string*) does not match configured block sizes

Cause: The block size of the system tablespace of the pluggable database to be plugged in did not match the block sizes configured in the container database.

Action: Configure the appropriate cache for the block size of the system tablespace using the DB_nK_CACHE_SIZE parameter (where *n* is 2, 4, 8, 16, or 32).

OCI-65177: cannot create non-local user, role or profile with the same name as local user, role or profile

Cause: An attempt was made to create a common user, role or profile with the same name as an existing local user, role or profile.

Action: Specify a different user, role or profile name.

OCI-65178: invalid logging mode specified for the pluggable database

Cause: An attempt was made to either enable a conflicting logging mode or to disable a logging mode when it was not enabled.

Action: Check the current logging modes in DBA_PDBS for the pluggable database and specify a valid mode.

OCI-65179: cannot keep datafiles for a pluggable database that is not unplugged

Cause: An attempt was made to drop a pluggable database without specifying the INCLUDING DATAFILES clause, and the pluggable database has not been unplugged.

Action: Unplug the pluggable database before dropping the pluggable database or use the INCLUDING DATAFILES clause in the DROP PLUGGABLE DATABASE statement.

OCI-65180: duplicate file name encountered - *string*

Cause: An attempt was made to issue a CREATE PLUGGABLE DATABASE statement with a duplicate source or target file name for the source file name mentioned in the message. This could be caused by incorrect SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Use an appropriate SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause to ensure that there are no duplicate source or target file names and then reissue the statement.

OCI-65181: invalid argument supplied to CONTAINERS function

Cause: An attempt was made to create a multitenant container database (CDB) view with an invalid table or view name.

Action: Specify a valid table or view name of the form *owner.<table_name | view_name>*.

OCI-65182: unable to modify the state of pluggable database *string*

Cause: An attempt was made to modify the state of a pluggable database which is currently in the middle of a state transition.

Action: Retry the operation later.

OCI-65183: FORCE open of a PDB on only a few instances where its open on is not allowed

Cause: An attempt was made to FORCE open a pluggable database on only a few Oracle RAC instances where it is currently open.

Action: Retry the FORCE open and include all Oracle instances where the PDB is open

OCI-65184: encountered data files belonging to different PDBs

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files belonging to different PDBs.

Action: Check the paths provided to DBMS_PDB.RECOVER() and retry the operation.

OCI-65185: could not find data file belonging to SYSTEM and SYSAUX tablespaces

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files where no data files belonging to SYSTEM and SYSAUX tablespace were found. SYSTEM and SYSAUX tablespaces are critical to recover a pluggable database (PDB).

Action: Check the paths specified for DBMS_PDB.RECOVER() and ensure that they at least contain data files belonging to SYSTEM and SYSAUX tablespaces.

OCI-65186: The user, role or profile *string* has sync errors.

Cause: There were pending SQL statements involving this user, role or profile which need to be resolved in order for the pluggable database (PDB) to be synced with ROOT.

Action: Resolve the pending SQL statement in the PDB and retry the operation.

OCI-65187: duplicate file found *string*

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files which are duplicate copies of the same file.

Action: Check the paths specified for DBMS_PDB.RECOVER() and ensure that they contain unique data files.

OCI-65188: cannot relocate a PDB opened with warnings

Cause: An attempt was made to relocate a pluggable database (PDB) which was opened with warnings or there were warnings encountered after relocating the PDB.

Action: Resolve the warnings in the PDB before attempting to relocate it or try relocating the PDB to a different multitenant container database (CDB).

OCI-65189: cannot clone a PDB from PDB\$SEED as the source PDB

Cause: An attempt was made to clone a pluggable database (PDB) from PDB\$SEED as the source PDB.

Action: Consider using the "create_pdb_from_seed" clause in CREATE PLUGGABLE DATABASE statement or clone the PDB from a different source PDB.

OCI-65190: operation allowed only from within an application root

Cause: An operation (such as creation of an application seed) that can only be performed in an application root was attempted by a user not connected to an application root.

Action: Connect to an application root container to perform the operation.

OCI-65191: operation allowed only from within a CDB root

Cause: An operation (such as creation of an application root) that can only be performed in a multitenant container database (CDB) root container was attempted by a user not connected to the CDB root.

Action: Connect to the CDB root container to perform the operation.

OCI-65192: database must be in UPGRADE mode for this operation

Cause: An attempt is made to issue ALTER DATABASE LOCAL UNDO [ON | OFF] when the database is not open in UPGRADE mode.

Action: Open the database in UPGRADE mode.

OCI-65194: Pluggable database *string* does not belong to the application container.

Cause: The user connected to an application root attempted to specify a pluggable database (PDB) that does not belong to the application container in a statement which can only affect PDBs belonging to the application container.

Action: Check DBA_PDBS to determine which PDBs belong to the application container.

OCI-65196: operation allowed only from within a View Pluggable Database

Cause: An operation (such as ALTER PLUGGABLE DATABASE VIEW LOCAL) that can only be performed in a View Pluggable Database was attempted by a user not connected to a View Pluggable Database.

Action: Connect to a View Pluggable Database to perform the operation.

OCI-65197: cannot clone from the PDB - file *string* has online backup set or is being moved

Cause: An attempt to clone from a pluggable database (PDB) which had one or more data files that are currently part of an online move or a hot backup operation.

Action: Retry the operation after the backup or move of the data files is complete.

OCI-65198: operation not allowed on a PDB when it is being cloned

Cause: An attempt was made to perform an operation which is not allowed when the pluggable database (PDB) is being cloned concurrently.

Action: Retry the operation after the clone from the pluggable database is complete.

OCI-65199: database busy. operation not allowed now

Cause: An attempt was made to perform an operation while a conflicting database wide operation or a read write pluggable database (PDB) clone is in progress.

Action: Retry the operation after the conflicting operation is complete.

OCI-65200: unable to create pluggable database with no data

Cause: An attempt was made to clone a pluggable database that contains some clustered tables or advanced queue tables.

Action: Retry the clone operation after dropping all clustered tables and advanced queue tables from the source pluggable database.

OCI-65201: DML on CONTAINERS() includes only the CON_ID column

Cause: A DML on CONTAINERS() included the CON_ID column but did not include a non-CON_ID column. A DML on CONTAINERS() including the CON_ID column can be performed only if a column other than the CON_ID column is also specified.

Action: Specify a non-CON_ID column in the DML statement together with the CON_ID column.

OCI-65202: DML on CONTAINERS() specifies an invalid CON_ID column value

Cause: A DML on CONTAINERS() specified an invalid value for the CON_ID column.

Action: If the current container is an application root, then specify the pluggable database (PDB) ID of the current container or the PDB ID of a member of the application container as the value of the CON_ID column. If the current container is CDB\$ROOT, then specify a valid container ID as the value of the CON_ID column.

OCI-65203: invalid pluggable database name pattern

Cause: An attempt was made to assign an invalid pluggable database pattern for this initialization parameter.

Action: Specify a valid pluggable database name pattern.

OCI-65204: STANDBYS clause is too long

Cause: The specified STANDBYS clause was too long in CREATE PLUGGABLE DATABASE statement.

Action: Use an appropriate length of STANDBYS clause and reissue the statement.

OCI-65205: missing or invalid lockdown profile name

Cause: A valid lockdown profile name was not present where required.

Action: Reissue the statement with a valid lockdown profile name.

OCI-65206: invalid value specified

Cause: An attempt was made to use an invalid value in the VALUE clause.

Action: Specify a valid value.

OCI-65207: invalid statement or feature or option or execution specified

Cause: An attempt was made to use an invalid statement or option or feature or execution in ENABLE or DISABLE clause.

Action: Specify a valid statement or option or feature or execution.

OCI-65208: Lockdown profile *string* does not exist.

Cause: An attempt was made to specify a lockdown profile that did not exist.

Action: Check DBA_LOCKDOWN_PROFILES to see if a lockdown profile exists.

OCI-65209: Lockdown profile *string* already exists.

Cause: An attempt was made to create a lockdown profile with a name that already existed.

Action: Check DBA_LOCKDOWN_PROFILES to see if the lockdown profile name exists.

OCI-65210: invalid value for PRIORITY

Cause: The specified value for PRIORITY was outside of the legal range: - The value must be between 1 and 4098. - If the current container is an application pluggable database (PDB), the value must be greater than that of its application root. - If the current container is an application root, the value must be smaller than that of its application PDBs.

Action: Choose an appropriate value for the option.

OCI-65211: PRIORITY may only be specified for user PDBs

Cause: An attempt was made to specify PRIORITY for CDB\$ROOT or PDB\$SEED, which is illegal.

Action: Avoid explicitly specifying CDB\$ROOT or PDB\$SEED when changing PRIORITY.

OCI-65212: operation not allowed from outside an application root

Cause: An operation was attempted that can only be performed in an application root.

Action: Switch to the application root container to perform the operation.

OCI-65213: existing application action in progress

Cause: An attempt was made to 'purge' or 'begin' an application action (install, uninstall, upgrade, or patch) while another action was already in progress.

Action: Attempt operation after the ongoing application action is complete.

OCI-65214: application action has not begun

Cause: An attempt was made to end an application action (install, uninstall, upgrade, or patch) without a prior 'begin' call.

Action: Begin the action first.

OCI-65215: starting version does not match current version

Cause: The starting version of the application upgrade did not match the current version of the application.

Action: Attempt operation with the correct starting version.

OCI-65216: invalid minimum version

Cause: The minimum version for the application patch did not exist.

Action: Retry the operation with the correct minimum version.

OCI-65217: application *string* does not exist

Cause: An action was attempted on an application that did not exist.

Action: Install the application.

OCI-65218: patch *string* for application *string* already installed

Cause: An attempt was made to start an application patch that was already installed.

Action: Attempt installation of a different application patch.

OCI-65219: patch *string* for application *string* is not in progress

Cause: An attempt was made to end an application patch that was not in progress.

Action: Begin the application patch.

OCI-65220: object *string.string* does not exist or is not of supported common type

Cause: An attempt was made to change the sharing status of an object that either did not exist, or was of a type that could not be made common.

Action: Attempt the operation on a different object.

OCI-65221: application *string* exists already

Cause: An action was attempted on an application that already exists.

Action: Use a different application name.

OCI-65222: *string* parameter is only supported in a CDB

Cause: An attempt was made to enable a parameter only supported in a multitenant container database (CDB), and the current database is not a CDB.

Action: Remove the parameter before starting the instance.

OCI-65223: tablespace *string* does not exist

Cause: The default tablespace specified in the CREATE PLUGGABLE DATABASE statement either did not exist in the source pluggable database (PDB) or is not included in the USER_TABLESPACES clause.

Action: Specify an existing tablespace to be set as the default.

OCI-65224: SQL statement not allowed according to lock down profile *string*

Cause: An attempt was made to execute a SQL statement, in a pluggable database (PDB), which was disabled according to the corresponding lock down profile.

Action: Enable the SQL statement in the lock down profile and then try to execute the statement.

OCI-65225: cannot run apex_to_common.sql or pdb_to_apppdb.sql on an unconverted non-multitenant container database

Cause: An attempt was made to run 'apex_to_common.sql' or 'pdb_to_apppdb.sql' on a pluggable database (PDB) that is an unconverted non-multitenant container database.

Action: Run 'noncdb_to_pdb.sql' in the PDB first.

OCI-65226: incompatible client version for the current database

Cause: An attempt was made to use an incompatible client version. Clients prior to Oracle Database 12c Release 2 (12.2) do not support long identifiers.

Action: Either upgrade the Oracle client to 12.2 (or higher) or do not use long identifiers in the database.

OCI-65227: unable to open pdb archive file *string*

Cause: An attempt was made to provide an invalid file name which could not be opened for generating the unplug archive.

Action: Check that the file name is valid and the file path is accessible.

OCI-65228: invalid host name specified

Cause: An attempt was made to use an invalid host name in the HOST clause.

Action: Specify a valid host name.

OCI-65229: invalid application version specified

Cause: An attempt was made to use an invalid application version.

Action: Specify a valid application version.

OCI-65230: internal database link cannot be altered or dropped

Cause: An attempt was made to directly alter or drop an internal database link. An internal database link can be altered or dropped only through an ALTER or DROP PLUGGABLE DATABASE statement.

Action: Specify the correct ALTER or DROP PLUGGABLE DATABASE statement.

OCI-65231: The referenced pluggable database does not exist or it is closed.

Cause: An attempt was made to create or access a proxy pluggable database that referenced a non-existent or closed pluggable database.

Action: Create or open the referenced pluggable database.

OCI-65232: unable to support PDB isolation mode in a non-PDB domain instance

Cause: An attempt to support pluggable database (PDB) isolation mode in a database without per-PDB recovery domains failed. PDB isolation mode is supported only on a per-PDB domain enabled instance.

Action: Enable the per-PDB recovery domains to use PDB isolation.

OCI-65233: unable to support PDB isolation mode in a global undo instance

Cause: An attempt to support pluggable database (PDB) isolation mode in a global undo enabled pluggable database failed. PDB isolation mode is supported only on a local undo enabled CDB instance.

Action: All PDBs should use local undo before starting in PDB isolation mode.

OCI-65234: DATA_LINK_DML should be supported only for data link tables.

Cause: An attempt was made to enable DATA_LINK_DML on a non-data link table.

Action: Avoid enabling DATA_LINK_DML on a non-data link table.

OCI-65235: cannot create common user, role or profile with the same name as existing common user, role or profile

Cause: An attempt was made to create a common user, role or profile with the same name as an existing common user, role or profile.

Action: Specify a different user, role or profile name.

OCI-65236: CON_ID column cannot be dropped or renamed

Cause: An attempt was made to drop or rename a CON_ID column of a CONTAINER_DATA table which is illegal.

Action: Avoid dropping or renaming CON_ID column of a CONTAINER_DATA table.

OCI-65237: CON_ID column must have a numeric data type

Cause: An attempt was made to change the data type of a CON_ID column of a CONTAINER_DATA table to a non-numeric data type, which is illegal.

Action: Avoid assigning a non-numeric data type to a CON_ID column of a CONTAINER_DATA table.

OCI-65238: operation cannot be performed when the application root is not open

Cause: An operation was attempted inside an application root that requires the application root to be open.

Action: Open the application root and then reissue the statement.

OCI-65239: missing or invalid service name

Cause: A valid service name was not present where required by the syntax of ALTER SESSION SET CONTAINER= SERVICE=.

Action: Reissue the statement with a valid service name.

OCI-65240: not connected to an application root

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB while connected to the root of a multitenant container database (CDB).

Action: Make sure that you are connected to an application root before attempting this operation.

OCI-65241: The VPD statement on an application root common object can only be executed during application maintenance.

Cause: An attempt was made to issue an Oracle Virtual Private Database (VPD) statement (creating or dropping a VPD policy) on a common object in the application root container database. This can only be done during the application maintenance mode in between the ALTER PLUGGABLE DATABASE APPLICATION BEGIN and ALTER PLUGGABLE DATABASE APPLICATION END statements followed by synchronizing the application pluggable databases to apply the changes.

Action: Ensure that the VPD statement is only run during the application maintenance mode when being applied to an application root common object.

OCI-65242: CONTAINER_DATA attribute disabled

Cause: An attempt was made to disable a CONTAINER_DATA attribute of a table for which it was not enabled.

Action: Make sure that the table whose CONTAINER_DATA attribute you are trying to disable has it enabled.

OCI-65243: CONTAINER_DATA attribute already enabled

Cause: An attempt was made to enable a CONTAINER_DATA attribute of a table for which it is already enabled.

Action: Make sure that the table whose CONTAINER_DATA attribute you are trying to enable does not already have it enabled.

OCI-65244: application action has begun

Cause: An attempt was made to execute an unsupported statement after an application action (install, uninstall, upgrade, or patch) was started.

Action: End the action first.

OCI-65245: application *string* has been uninstalled

Cause: An attempt was made to operate on an application after it was uninstalled.

Action: Use a different application name.

OCI-65246: invalid user name specified

Cause: An attempt was made to use an invalid user name in the USER clause.

Action: Specify a valid user name.

OCI-65247: tablespaces for subset clone or no data clone are not self-contained

Cause: One or more tablespaces listed in the USER_TABLESPACES clause or metadata tablespaces were not self-contained.

Action: Check the violating tablespaces and objects in the PDB_PLUG_IN_VIOLATIONS view to fix and reissue the statement.

OCI-65248: invalid clause

Cause: An attempt was made to alter a lockdown profile with an invalid clause.

Action: Specify a valid clause while altering the lockdown profile.

OCI-65249: invalid option

Cause: An attempt was made to alter a lockdown profile with an invalid option.

Action: Specify a valid option while altering the lockdown profile.

OCI-65250: invalid path specified for file *string*

Cause: An attempt was made to use a file name that does not start with the value specified by the CREATE_FILE_DEST clause in the CREATE PLUGGABLE DATABASE statement for the pluggable database.

Action: Specify a file name pattern so that the resulting file name begins with the value specified by the CREATE_FILE_DEST clause.

OCI-65251: ending version already exists

Cause: The ending version of the application upgrade matched a previous version of the application.

Action: Attempt operation with the correct ending version.

OCI-65252: cannot connect or ALTER SESSION SET CONTAINER to an application root clone

Cause: An attempt was made to connect or ALTER SESSION SET CONTAINER to an application root clone.

Action: Connect or ALTER SESSION SET CONTAINER to a different pluggable database.

OCI-65253: operation not allowed within a proxy pluggable database as SYSDBA or SYSOPER

Cause: An attempt was made to access a proxy pluggable database as SYSDBA or SYSOPER.

Action: Access a proxy pluggable database with any privilege other than SYSDBA or SYSOPER.

OCI-65254: invalid path specified for the directory

Cause: An absolute path was used in the CREATE DIRECTORY statement. Since the PDB has set the PATH_PREFIX property, only relative path is allowed for directories.

Action: Specify a relative path and reissue the statement.

OCI-65255: invalid tablespace number

Cause: An attempt was made to create a pluggable database where one or more tablespaces has an invalid tablespace number.

Action: Contact Oracle Support Services.

OCI-65256: maximum number of application root clones created for application container

Cause: An attempt was made to create an application root clone for an application container that has already reached the maximum permitted number of application root clones.

Action: Avoid creating too many application root clones.

OCI-65257: target is a non-CDB instance

Cause: An attempt was made to create a proxy pluggable database to a non-multitenant container database (non-CDB) instance.

Action: Create a proxy pluggable database to a pluggable database.

OCI-65258: referenced pluggable database is an application root clone

Cause: An attempt was made to create a proxy pluggable database that references an application root clone.

Action: Create a proxy pluggable database that references a different pluggable database.

OCI-65259: partial synchronization of application is disallowed

Cause: An attempt was made to synchronize an application that has not ended its install, patch, upgrade, or uninstall.

Action: End the application install, patch, upgrade, or uninstall.

OCI-65260: unable to create a refreshable clone

Cause: An attempt was made to either create a refreshable clone of a proxy pluggable database or to create a proxy pluggable database which is also enabled for refresh.

Action: Create a refresh clone of a regular pluggable database.

OCI-65261: pluggable database *string* not enabled for refresh

Cause: An attempt was made to refresh a pluggable database (PDB) which was either not created as a refreshable PDB or the final refresh was already complete.

Action: Attempt the operation only on a PDB that is enabled for refresh.

OCI-65262: Dismount operation is not allowed.

Cause: An attempt was made to dismount a pluggable database with parameter `enable_pdb_isolation` set to `FALSE`.

Action: None

OCI-65263: internal error

Cause: This is an internally stimulated error.

Action: Contact Oracle Support Services.

OCI-65264: Dismount operation is not allowed.

Cause: An attempt was made to dismount a pluggable database on a standby instance.

Action: None

OCI-65265: PDB cannot be dropped or unplugged.

Cause: An attempt was made to drop or unplug the root of an application container to which one or more application pluggable databases (PDBs) belong.

Action: Drop the application PDBs belonging to the application container before attempting to drop or unplug the application root.

OCI-65266: application root clone may not be dropped, unplugged or altered

Cause: An attempt was made to drop, unplug, or alter an application root clone pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

OCI-65267: Application PDB *string* is open in an incompatible mode.

Cause: An attempt was made to reopen an application root in a mode incompatible with that of an application PDB belonging to the same application container.

Action: Reopen the application PDB in a compatible mode and then retry the operation.

OCI-65268: PDB cannot be created

Cause: An attempt was made to either relocate a pluggable database (PDB) which was created as a refreshable PDB or to create a refreshable PDB from a PDB that was already created as refreshable PDB or was marked for relocation.

Action: None

OCI-65269: PDB cannot be refreshed

Cause: An attempt was made to refresh a pluggable database (PDB) with no refresh mode.

Action: Specify a manual or automatic refresh mode for the PDB.

OCI-65270: operation is not allowed in an application patch

Cause: An attempt was made to perform an operation that is not allowed in an application patch.

Action: Use application upgrade instead of application patch.

OCI-65271: internal application may not be altered

Cause: An attempt was made to alter an application that was created internally.

Action: Specify a non-internal application.

OCI-65272: operation not allowed from outside an application PDB

Cause: An operation was attempted that can only be performed in an application PDB.

Action: Switch to the application PDB to perform the operation.

OCI-65273: The specified changes must be restricted to the current container.

Cause: An attempt was made to apply the specified changes to all containers.

Action: Specify CONTAINER=CURRENT.

OCI-65274: operation not allowed from outside an application action

Cause: An operation was attempted that can only be performed in an application action (install, uninstall, upgrade, or patch).

Action: Begin an application action.

OCI-65275: invalid operation on a container database (CDB)

Cause: An operation was attempted that can only be performed from within a non-container database.

Action: Switch to a non-container database to perform the operation.

OCI-65276: rule already exists in the lockdown profile

Cause: An attempt was made to add a rule that already exists in the lockdown profile.

Action: Specify a rule that does not exist in the lockdown profile.

OCI-65277: Unable to support PDB isolation mode with MEMORY_TARGET or MEMORY_MAX_TARGET.

Cause: An attempt was made to support pluggable database (PDB) isolation mode with the MEMORY_TARGET or MEMORY_MAX_TARGET configuration parameters. PDB isolation mode is not supported with the MEMORY_TARGET or MEMORY_MAX_TARGET configuration parameters.

Action: Disable PDB isolation mode before starting the instance.

OCI-65278: The PDB SGA size is larger than or equal to the CDB SGA size.

Cause: An attempt was made to start a pluggable database (PDB) with a system global area (SGA) size larger than or equal to the multitenant container.

Action: Specify a PDB SGA size which is less than the CDB SGA size in the PDB SPFILE.

OCI-65279: The PDB SGA_MAX_SIZE is larger than or equal to the maximum CDB SGA size.

Cause: An attempt was made to start a pluggable database (PDB) with SGA_MAX_SIZE configuration parameter size larger than or equal to the multitenant container database (CDB).

Action: Specify a PDB SGA_MAX_SIZE configuration parameter which is less than the maximum CDB SGA size in the PDB SPFILE.

OCI-65280: The referenced pluggable database is a proxy pluggable database.

Cause: An attempt was made to create a proxy pluggable database that referenced a proxy pluggable database.

Action: Create a proxy pluggable database that references a different pluggable database.

OCI-65281: application *string* does not exist in application root

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that does not exist in the application root where the statement was issued.

Action: Install the application in the application root where the statement is issued.

OCI-65282: Aborting PDB *string*'s instance recovery due to the progress of its SHUTDOWN ABORT operation

Cause: The instance recovery could not proceed as the pluggable database (PDB) was in the middle of the SHUTDOWN ABORT operation.

Action: None

OCI-65283: pluggable database *string* does not belong to the current container database

Cause: An attempt was made to perform an operation on a pluggable database that did not belong to the current multitenant container database (CDB) in the CDB fleet.

Action: Connect to the container database where the pluggable database was created to perform the operation.

OCI-65284: Version *string* for application *string* does not exist in application root

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that has a higher version than the application root where the statement was issued.

Action: Upgrade the application in the application root where the statement is issued.

OCI-65285: Status mismatch for application *string*

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that has a mismatch status between application PDB and the application root where the statement was issued.

Action: Uninstall the application in the application root where the statement is issued.

OCI-65286: object *string.string* cannot be made an extended data link

Cause: An attempt was made to change the sharing status of an object to extended data link when the object was of a type for which extended data links are not supported.

Action: Ensure that the object whose sharing status is to be changed to extended data link is of appropriate type.

OCI-65287: cannot set a common application context using a local package

Cause: An attempt was made to set a common application context using a local package.

Action: Associate the common application context with a common package.

OCI-65288: PDB archive file *string* already exists.

Cause: An attempt to create a pluggable database (PDB) archive file failed because a file with that name already exists.

Action: Use a different PDB archive file name.

OCI-65289: Application root cannot be relocated to another container database.

Cause: An attempt was made to relocate the root of an application container.

Action: None

OCI-65290: Application may not be altered.

Cause: An attempt was made to alter an application when the application pluggable database was not open.

Action: Open the application pluggable database and retry.

OCI-65291: invalid container map object

Cause: An attempt was made to assign an invalid container map object to container_map property of the database.

Action: Create the container map object with partition names corresponding to the multitenant container database (CDB) ROOT or application container ROOT and their pluggable databases. And the partition key for the container map object must be single column.

OCI-65292: invalid common data map object

Cause: An attempt was made to assign an invalid common data map object to common_data_map property of the database.

Action: Create the common data map object with partition names corresponding to the pluggable database (PDB) or application PDB and its multitenant container database ROOT or application container ROOT, respectively.

OCI-65293: Implicit users cannot own common objects.

Cause: An attempt was made to create a common object to be owned by an implicit user.

Action: Create a local object.

OCI-65294: PDB's compatible parameter value (*string*) is higher than CDB's compatible parameter value (*string*).

Cause: An attempt was made to plug in or clone from a pluggable database with a higher compatible parameter value than the compatible parameter value of the multitenant container database (CDB).

Action: Create a pluggable database with the same or lower compatible parameter value of the multitenant container database.

OCI-65295: service name or module name mismatch

Cause: An attempt was made to end an application action using a service name or module name that does not match the service name or module name that was in use when the application action was started.

Action: Use the right service name or module name before ending the application action.

OCI-65296: unable to create pluggable database

Cause: An attempt was made to create a proxy pluggable database with relocate clause specified.

Action: Create a proxy pluggable database without the relocate clause.

OCI-65297: operation not allowed inside an application action

Cause: An operation was attempted that can only be performed outside an application action (install, uninstall, upgrade, or patch).

Action: Perform the operation outside an application action.

OCI-65298: cannot create an application PDB in an application root which is an unconverted non-CDB

Cause: An attempt was made to create an application pluggable database (PDB) in an application root which was created by plugging in a non-multitenant container database (non-CDB) without first running noncdb_to_pdb.sql script.

Action: Run the noncdb_to_pdb.sql script in the application root first.

OCI-65299: cannot grant a privilege to multiple users or roles or revoke a privilege from multiple users or roles

Cause: A GRANT or REVOKE statement was issued specifying more than one user or role in a pluggable database (PDB), which is not allowed.

Action: If trying to grant or revoke a privilege in a PDB, specify only one user or role at a time in the GRANT or REVOKE statement.

OCI-65300: PDB common_user_prefix conflicts with common_user_prefix in CDB.

Cause: An attempt was made to set the 'common_user_prefix' parameter in a pluggable database (PDB) that conflicts with the value of the same parameter in the multitenant container database (CDB.)

Action: Choose a different 'common_user_prefix' for PDB.

OCI-65301: cannot set a deprecated property when the new property value is set

Cause: An attempt was made to run an ALTER DATABASE PROPERTY SET command on an older property that was deleted after setting the new property value.

Action: Do not set the deprecated property if the new property is set.

OCI-65310: blocked by COMMON_SCHEMA_ACCESS lockdown

Cause: An attempt was made to run an AUTHID CURRENT_USER function or procedure, or to reference a BEQUEATH CURRENT_USER view, that is not safe under the COMMON_SCHEMA_ACCESS lockdown.

Action: Either do not call the function or procedure or reference the view, or adjust the definition of the function, procedure, or view to satisfy the requirements of COMMON_SCHEMA_ACCESS lockdown.

OCI-65311: cannot modify the common object of another application

Cause: An attempt was made to modify a common object that was created by another application.

Action: Modify the object using the same application as the one that created the object.

OCI-65312: Expired application common user password change failed.

Cause: The password of the application common user had expired and needed to be changed in order to successfully log in to application containers. But the application ROOT container's application status did not allow this operation to succeed either because: - An implicit application common user was attempting to change the password from within an explicit application action. - A non-implicit application common user was attempting to change the password from within an implicit application action. - A non-implicit application common user was attempting to change the password from within an explicit application action, but the application, which created the application common user, was being upgraded or uninstalled.

Action: Either begin an explicit application action for changing the password of a non-implicit application common user or try changing the implicit application common user's password inside an implicit application action, or wait for application upgrade or uninstall to be completed, and then try logging in or contacting the database administrator.

OCI-65313: cannot synchronize application in a proxy pluggable database without being in a SYSDBA session

Cause: An attempt was made to synchronize an application containing statements executed from a privileged session.

Action: Synchronize the application as SYSDBA.

OCI-65314: cannot use NOCOPY when plugging in a PDB using an archive file

Cause: An attempt was made to create a pluggable database (PDB) using an archive file using the NOCOPY clause.

Action: Specify COPY or MOVE and retry the plugin operation.

OCI-65315: invalid path specified for file - *string*

Cause: An attempt was made to use a file name that did not start with PATH_PREFIX for the pluggable database.

Action: Specify a file name that is under the PATH_PREFIX directory for the pluggable database.

OCI-65316: bad file name specified

Cause: An attempt was made to use an invalid file name as an argument.

Action: Specify a valid file name and retry the operation.

OCI-65317: cannot modify the user or role created by another application

Cause: An attempt was made to modify a user or a role that was created by another application. This can also happen when connected to an Application container and DBMS_PDB.SET_USER_EXPLICIT or DBMS_PDB.SET_ROLE_EXPLICIT procedure was invoked with the following type of users and roles: - Pluggable Database (PDB) Administrative user, that is, a user who has been granted PDB_DBA role inside the PDB. - The out-of-box Oracle supplied common users or roles. - Container Database (CDB) Common Users and roles, that is, users and roles created at CDB\$ROOT container.

Action: Modify the user or role using the same application as the one that created the user or role. Do not try invoking SET_USER_EXPLICIT or SET_ROLE_EXPLICIT procedures in DBMS_PDB package against CDB common users or roles and PDB Administrative users.

OCI-65318: query to cross-container fixed tables not allowed

Cause: An attempt was made to query the cross-container fixed tables.

Action: Avoid querying the cross-container fixed tables.

OCI-65319: DML on CONTAINERS() specified an unsupported CON_ID predicate

Cause: A DML on CONTAINERS() included the CON_ID predicate in an OR chain or in an in-list.

Action: Specify the CON_ID predicate within an AND chain and without an in-list.

OCI-65320: value of CON_ID is not known for DML on CONTAINERS()

Cause: A DML on CONTAINERS() included multiple CON_ID predicates, or the single CON_ID predicate specified a value that is not a constant or a bind.

Action: Specify a single CON_ID predicate as a constant or a bind.

OCI-65321: CON_ID column cannot be updated for CONTAINERS()

Cause: A DML on CONTAINERS() attempted to set a value for the CON_ID column.

Action: Do not set a value for the CON_ID column for CONTAINERS().

OCI-65322: invalid application patch specified

Cause: An attempt was made to use an invalid application patch.

Action: Specify a valid application patch.

OCI-65323: cannot create or set an object table or object view as a data link or extended data link

Cause: An attempt was made to create or set an object table or an object view as a data link or an extended data link.

Action: Create or set the object table or object view as a metadata link.

OCI-65324: An invalid value is specified in an ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

Cause: An invalid value is specified in an ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

Action: Specify a valid pluggable database (PDB) name or NONE in the ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

OCI-65325: DML on CONTAINERS() cannot be performed outside the CDB root or application root.

Cause: An attempt was made to perform DML on CONTAINERS() outside the multitenant container database (CDB) root or an application root.

Action: Perform DML on CONTAINERS() in the CDB root or in an application root.

OCI-65326: cannot query an object table or object view using CONTAINERS()

Cause: An attempt was made to query an object table or object view using CONTAINERS().

Action: Query the object table or object view without using CONTAINERS().

OCI-65327: cannot modify the sharing property of an object outside an application action

Cause: An attempt was made to modify the sharing property of an object outside an application action.

Action: Begin the application action.

OCI-65328: cannot end an application action in the current session

Cause: An attempt was made to end an application action in a manner that is inconsistent with the order in which sessions will be replayed during application SYNC.

Action: Start a new session to end the application action.

OCI-65329: cannot run pdb_to_appdb.sql unless pluggable database is an unconverted application pluggable database

Cause: An attempt was made to run 'pdb_to_appdb.sql' on a pluggable database (PDB) that was not an unconverted application PDB.

Action: 'pdb_to_appdb.sql' is not necessary for this PDB.

OCI-65330: cannot synchronize an application before pdb_to_appdb.sql is executed

Cause: An attempt was made to synchronize an application in an unconverted application PDB before running 'pdb_to_appdb.sql'.

Action: Run 'pdb_to_appdb.sql' in the unconverted application PDB.

OCI-65331: DDL on a data link table is outside an application action.

Cause: DDL on a data link table was attempted outside an application action.

Action: Begin the application action before the DDL.

OCI-65332: DDL on an extended data link table is outside an application action.

Cause: DDL on an extended data link table was attempted in an application root outside an application action.

Action: Begin the application action before the DDL.

OCI-65333: cannot purge an application that is installed on application PDB

Cause: An attempt was made to purge an application that was installed in one or more application pluggable databases (PDBs).

Action: Drop the installed application PDB before purging.

OCI-65334: invalid number of PDBs specified

Cause: An attempt was made to either set the MAX_PDBS database property to an invalid number or the number of current pluggable databases (PDBs) exceeds the number specified.

Action: Specify a valid value which is greater than the current number of existing PDBs.

OCI-65335: application action for application *string* has not started

Cause: An attempt was made to end an application action using an incorrect application name.

Action: Use the correct application name.

OCI-65336: incorrect application patch number specified

Cause: An attempt was made to end an application action using an incorrect application patch number.

Action: Use the correct application patch number.

OCI-65337: cannot modify the profile created by another application

Cause: An attempt was made to modify a profile that was created by another application. This can also happen when connected to an application container and the DBMS_PDB.SET_PROFILE_EXPLICIT procedure was invoked and the input profile type was one of the following: - The out-of-the-box Oracle supplied local profiles (DEFAULT, ORA_STIG_PROFILE and ORA_CIS_PROFILE). - Multitenant container database (CDB) common profiles created at CDB\$ROOT container. - Protected local profiles created by CDB common users inside the pluggable database (PDB).

Action: Modify the profile using the same application as the one that created the profile. Do not try invoking DBMS_PDB.SET_PROFILE_EXPLICIT procedure against Oracle supplied local profiles or CDB common profiles or protected local profiles.

OCI-65338: unable to create pluggable database

Cause: An attempt was made to relocate a pluggable database using a database link to the source pluggable database.

Action: Use a database link that points to the source multitenant container database root and retry the operation.

OCI-65339: unsupported operation on the source PDB

Cause: An unsupported operation was performed on the source pluggable database, which rendered the target PDB invalid.

Action: Re-create the target PDB.

OCI-65340: invalid application compatibility version

Cause: An attempt was made to set the compatibility version of an application to a version higher than that of one of the PDBs.

Action: Set a higher compatibility version.

OCI-65341: cannot open pluggable database in read/write mode

Cause: An attempt was made to open a refreshable pluggable database in read/write mode.

Action: Open the refreshable clone in read-only mode or modify the refresh mode to NONE and retry the operation.

OCI-65342: source pluggable database *string* has unrecovered transaction

Cause: The source pluggable database had an active transaction when it was closed.

Action: Open the pluggable database in read/write mode so that transaction recovery can be performed. End XA transaction.

OCI-65343: cannot unplug pluggable database *string*

Cause: An attempt was made to unplug a pluggable database that was previously unplugged.

Action: Drop the pluggable database to finish the unplug operation.

OCI-65344: cannot uninstall or purge an application that has objects, users, roles, and profiles

Cause: An attempt was made to uninstall or purge an application that had objects, users, roles, and profiles.

Action: Drop all objects, users, roles, and profiles that belong to the application.

OCI-65345: cannot refresh pluggable database, archive log not found for SCN string

Cause: The foreign archive log required for refreshing the pluggable database was not found.

Action: Re-create the refresh pluggable database and ensure that archive logging is enabled for the source multitenant container database (CDB).

OCI-65346: The PDB version is lower and components (*string*) are missing in CDB.

Cause: An attempt was made to plug in a pluggable database (PDB) that has a lower version and has more components than the multitenant container database (CDB) or the application root.

Action: Install the missing components in CDB or the application root before plugging in the PDB.

OCI-65347: cannot downgrade database that has proxy pluggable databases or application containers

Cause: There were proxy pluggable databases or application containers in the database.

Action: Prior to downgrade, drop the proxy pluggable databases and application containers.

OCI-65348: unable to create pluggable database

Cause: An attempt was made to relocate a pluggable database with availability max clause using a target pluggable database name which is different from source pluggable database name.

Action: Use source pluggable database name as the target pluggable database name.

OCI-65349: unable to create pluggable database

Cause: An attempt was made to relocate a pluggable database with availability max and service_name_convert clauses together.

Action: Do not use service_name_convert clause when relocating with the availability max clause.

OCI-65350: cannot run approot_to_pdb.sql

Cause: An attempt was made to run 'approot_to_pdb.sql' on a pluggable database (PDB) that was already converted to a regular PDB.

Action: 'approot_to_pdb.sql' is not necessary for this PDB.

OCI-65351: invalid partition (%0!s) access with partition map size %1!s

Cause: An attempt was made to access an invalid partition using the CONTAINERS() clause.

Action: Contact Oracle Support Services.

OCI-65352: Query across containers cannot have an ancillary operator.

Cause: An ancillary operator was used with a data link, extended data link, or CONTAINERS() clause.

Action: Remove the ancillary operator in the query.

OCI-65353: The *string* tablespace is missing from the XML metadata file.

Cause: An attempt was made to plug in a pluggable database (PDB) using an XML file that does not contain the SYSTEM, SYSAUX or undo tablespace specifications.

Action: Check and correct the XML metadata file. If the XML metadata file is missing undo tablespaces, you may need to regenerate the XML using a more recent patchset.

OCI-65355: cannot allocate PDB SGA memory

Cause: The multitenant container database (CDB) did not have sufficient system global area (SGA) memory available to open the pluggable database (PDB). *Result: Increase the CDB SGA size or dismount a PDB to free CDB SGA memory.

Action: n/a

OCI-65356: missing or invalid value for lead_cdb_uri

Cause: An attempt was made to specify an incorrect value for lead_cdb_uri. The lead_cdb_uri value can either specify the host name, port number and service name for the lead multitenant container database (CDB), or the value can specify a database link object name in the current CDB which connects to the lead CDB in the fleet.

Action: Specify a valid value for lead_cdb_uri.

OCI-65357: lead_cdb_uri and lead_cdb cannot be specified in the same CDB

Cause: An attempt was made to specify the lead_cdb_uri property in the multitenant container database (CDB) where the lead_cdb property is set to TRUE or vice versa.

Action: Specify lead_cdb or lead_cdb_uri property in the CDB.

OCI-65358: PDB *string* is not a template PDB

Cause: The PDB specified was not a template pluggable database (PDB) and thus pdb_template cannot be set to this PDB.

Action: Set pdb_template to a template PDB.

OCI-65359: unable to create pluggable database with no data

Cause: An attempt was made to clone a pluggable database that was opened in read/write mode.

Action: Retry the clone operation after the source pluggable database is in read-only mode.

OCI-65360: unable to switchover

Cause: An attempt was made to switchover a pluggable database (PDB) using a database link that pointed to the source pluggable database.

Action: Use a database link that points to the source multitenant container database root and retry the operation.

OCI-65361: pluggable database *string* is not a refresh copy

Cause: An attempt was made to switchover to a pluggable database (PDB) which was not marked as a refresh copy.

Action: Switchover operation is allowed only with a target refreshable clone PDB.

OCI-65362: pluggable database *string* is not a refresh copy of the source pluggable database

Cause: An attempt was made to switchover to a pluggable database (PDB) which was not marked as a refresh copy of the source pluggable database (PDB).

Action: Switchover operation is allowed only between a refreshable clone and its primary PDB.

OCI-65363: pluggable database *string* not enabled for snapshots

Cause: An attempt was made to snapshot a pluggable database (PDB) which was created with snapshots disabled.

Action: Retry the operation after changing the snapshot mode of the PDB.

OCI-65364: snapshot not found

Cause: An attempt was made to create a pluggable database (PDB) using a snapshot or to drop a snapshot that could not be found.

Action: Check DBA_PDB_SNAPSHOTS for all existing PDB snapshots and retry the operation.

OCI-65365: unable to create pluggable database

Cause: An attempt was made to create a pluggable database (PDB) using a snapshot when Oracle Managed Files (OMF) was not enabled or if the CREATE_FILE_DEST clause was not specified.

Action: Enable OMF or specify CREATE_FILE_DEST clause and retry creating the pluggable database.

OCI-65366: snapshot already exists

Cause: An attempt was made to create a snapshot of a pluggable database (PDB) using a name that already existed.

Action: Specify a different name and retry the operation.

OCI-65367: unable to switchover

Cause: An attempt was made to switch over a pluggable database (PDB) that was not a normal pluggable database that could be opened in read/write mode.

Action: Switchover operation is allowed only with a source PDB in NORMAL status.

OCI-65368: unable to open the pluggable database due to errors during recovery

Cause: Recovery was required prior to opening the pluggable database, but an error during recovery was determined to be fatal enough to end both the recovery and the open operation.

Action: More specific messages accompany this message. Refer to the accompanying messages for the appropriate action.

OCI-65369: The key column for the container map object has multiple values for each partition.

Cause: An attempt was made to generate logical partitioning key values using a container map object that had multiple values for each partition.

Action: Specify a container map object that has a single value for each partition and retry the operation.

OCI-65370: *string* initialization parameter cannot be specified in a lockdown profile

Cause: An attempt was made to specify an illegal initialization parameter in a lockdown profile.

Action: Do not specify this initialization parameter in a lockdown profile.

OCI-65371: *string* initialization parameter cannot be modified in a template pluggable database

Cause: An attempt was made to modify an illegal initialization parameter inside a template pluggable database (PDB).

Action: Do not modify this initialization parameter inside a template PDB.

OCI-65372: Initialization parameter %0!s cannot be modified when initialization parameter %1!s is already set.

Cause: An attempt was made to set the PDB_LOCKDOWN initialization parameter along with the PDB_TEMPLATE initialization parameter.

Action: Reset the PDB_LOCKDOWN initialization parameter before setting the PDB_TEMPLATE initialization parameter or RESET the PDB_TEMPLATE initialization parameter before setting the PDB_LOCKDOWN initialization parameter.

OCI-65373: operation not allowed in a template PDB

Cause: The specified operation was not allowed in a template pluggable database (PDB).

Action: Do not perform this operation in a template PDB.

OCI-65374: cannot set PDB_LOCKDOWN initialization parameter to an application lockdown profile

Cause: An attempt was made to set the PDB_LOCKDOWN initialization parameter to an application lockdown profile when the PDB_LOCKDOWN initialization parameter was already set to a container database (CDB) lockdown profile. This can also happen, if an attempt was made by an Application Common user to set the PDB_LOCKDOWN initialization parameter via ALTER SESSION DDL statement, when PDB_LOCKDOWN initialization parameter was already set in CDB\$ROOT container to a container database (CDB) lockdown profile.

Action: If PDB_LOCKDOWN initialization parameter is being set in an application pluggable database (PDB), contact the CDB administrator. If PDB_LOCKDOWN initialization parameter is being set in an application ROOT, set the PDB_LOCKDOWN initialization parameter in the required application PDBs. If PDB_LOCKDOWN initialization parameter is being set by an Application Common user via ALTER SESSION, retry the operation with ALTER SYSTEM or contact the CDB administrator.

OCI-65375: cannot set PDB_TEMPLATE initialization parameter to an application template *string*

Cause: An attempt was made to set the PDB_TEMPLATE initialization parameter to an application template when the PDB_TEMPLATE initialization parameter was already set to a multitenant container database (CDB) template.

Action: If the PDB_TEMPLATE initialization parameter is being set in an application pluggable database (PDB), contact the CDB administrator. If the PDB_TEMPLATE initialization parameter is being set in an application ROOT, set the PDB_TEMPLATE initialization parameter in the required application PDBs.

OCI-65376: unable to refresh the PDB

Cause: A conflicting operation was in progress in the source pluggable database (PDB) for the refresh clone.

Action: Retry the operation later.

OCI-65377: parameter cannot be modified

Cause: An attempt was made to modify an in-memory value for the SGA_TARGET parameter with pluggable database isolation mode enabled.

Action: Do not modify an in-memory value for the SGA_TARGET parameter in PDB isolation mode.

OCI-65378: illegal use of ALTER SYSTEM clause '*string*' in the template pluggable database(PDB)

Cause: An invalid clause was used in an ALTER SYSTEM operation.

Action: Choose a valid clause and retry the operation.

OCI-65379: application *string* is in transient state

Cause: An attempt was made to unplug an application pluggable database (PDB), which had unfinished application action.

Action: Fix the application state in the application pluggable database (PDB) before unplugging the database.

OCI-65380: unable to materialize

Cause: An attempt was made to materialize a pluggable database (PDB) that was not created as a snapshot copy.

Action: Retry the operation on a PDB created as a snapshot copy.

OCI-65381: unable to rename application root

Cause: An attempt was made to rename an application root that has one or more open application PDBs.

Action: Close all application PDBs and retry the operation.

OCI-65382: operation cannot be performed when subscribed template PDB is not open

Cause: The template pluggable database (PDB) to which the current PDB was subscribed was not open.

Action: Open the template PDB that the current PDB was subscribed to before opening the current PDB.

OCI-65383: unable to set MAX_PDB_SNAPSHOTS property to greater than string

Cause: An attempt was made to set the MAX_PDB_SNAPSHOTS property to a higher value than the allowed maximum.

Action: Retry the operation with a lower value.

OCI-65384: missing or invalid property

Cause: The issued operation had a missing property name or the property specified was invalid or not found in the database.

Action: Retry the operation with a valid property name.

OCI-65385: missing or invalid value for property

Cause: The issued operation had a missing property value or the property value specified was invalid.

Action: Retry the operation with a valid property value.

OCI-65386: unable to alter property

Cause: An attempt was made to specify a property that could not be altered using ALTER DATABASE PROPERTY or ALTER PLUGGABLE DATABASE PROPERTY statement.

Action: Retry the operation with a different property name.

OCI-65387: unable to create pluggable database with the specified USER_TABLESPACES clause

Cause: An attempt was made to create a pluggable database using an XML file that was generate with DBMS_PDB.RECOVER and all tablespaces were not included.

Action: Retry the operation with all tablespaces and regenerate the XML using unplug and then redo the subset clone.

OCI-65388: PARTITION_CONTAINED only supported in subset cloning

Cause: An attempt was made to use PARTITION_CONTAINED clause outside subset cloning.

Action: Either specify the USER_TABLESPACES clause or remove the PARTITION_CONTAINED clause.

OCI-65389: unable to clone pluggable database

Cause: An attempt was made to create a refreshable clone of a pluggable database (PDB) or relocate a PDB from a standby database.

Action: Retry the operation using a source PDB that is part of a primary database.

OCI-65390: unable to mark the application object as specific Link

Cause: An attempt was made to use SET_SHARING_NONE, SET_METADATA_LINKED, SET_DATA_LINKED, or SET_EXT_DATA_LINKED on an object of an incompatible sharing mode.

Action: Do not mark a metadata, data, or extended data-linked object with an incompatible sharing mode.

OCI-65391: violation of container map partitions

Cause: An attempt was made to insert or update a row in a container map enabled table that violated the partitions of the container map.

Action: Insert or update a row that does not violate the partitions of the container map.

OCI-65392: object column is accessed in a fleet proxy pluggable database

Cause: An attempt was made to access an object column in a fleet proxy Pluggable Database (PDB).

Action: Remove the object column from the query.

OCI-65393: Media recovery to SCN string must be performed in mount mode.

Cause: One or more pluggable databases could not be recovered by the RESETLOGS operation because the Oracle Active Data Guard standby database was still open.

Action: Close Oracle Active Data Guard standby database and restart media recovery.

OCI-65394: The LIBRARY object does not use a DIRECTORY object.

Cause: The LIBRARY objects did not use a DIRECTORY object for the pluggable database (PDB) with a defined PATH_PREFIX.

Action: Re-create the LIBRARY objects in the database to use a DIRECTORY object.

OCI-65395: constraint cannot be added

Cause: An attempt was made to add a referential integrity constraint from a table to a data-linked or an extended data-linked table.

Action: Add the referential integrity constraint in NOVALIDATE mode.

OCI-65396: A linked tablespace cannot be altered to READ WRITE status.

Cause: An attempt was made to alter a linked tablespace to READ WRITE status.

Action: None

OCI-65397: cannot open pluggable database in read/write mode

Cause: An attempt was made to open a pluggable database with files in object store in read/write mode.

Action: Open the pluggable database with files in object store in read-only mode and retry the operation.

OCI-65398: cannot change password during application upgrade or uninstall

Cause: An attempt was made to change password for an application common user while the application, which created the application common user, was being upgraded or uninstalled.

Action: Wait for application upgrade or uninstall to be completed before retrying the operation or contact the database administrator.

OCI-65399: cannot set object table, external table, hybrid partitioned table or object view with CONTAINER_DATA clause

Cause: An attempt was made to create or alter an object table, an external table, a hybrid partitioned table, or an object view with a CONTAINER_DATA clause.

Action: Do not use the CONTAINER_DATA clause when creating or altering an object table, external table, hybrid partitioned table, or an object view.

OCI-65400: Table does not have CLUSTERING clause associated with it

Cause: User attempts to modify clustering clause on a table that does not have one.

Action: Create CLUSTERING clause on the table first.

OCI-65402: invalid option on CLUSTERING clause

Cause: Invalid option on CLUSTERING clause. Only [YES | NO] ON LOAD or [YES | NO] ON DATA MOVEMENT are valid.

Action: Correct the option on the CLUSTERING clause.

OCI-65403: invalid usage of CLUSTERING clause

Cause: Invalid usage of CLUSTERING clause. The clause can be specified only for [CREATE | ALTER] [TABLE | SNAPSHOT | MATERIALIZED VIEW]

Action: Do not use the CLUSTERING clause in this statement.

OCI-65404: a table or materialized view can only have one CLUSTERING clause, remove the redundant clause(s)

Cause: The CLUSTERING clause was specified multiple times for the table or the materialized view yet a table or materialized view can only be clustered by a single order.

Action: Determine by which CLUSTERING clause you would like to cluster the table or the materialized view. Remove the other CLUSTERING clauses from the statement and re-execute the statement.

OCI-65405: CLUSTERING clause cannot be used with existing table options

Cause: The CLUSTERING clause conflicted with other clauses on the table. The CLUSTERING clause cannot be used with IOT, CLUSTERED, GLOBAL TEMPORARY TABLE, or the EXTERNAL TABLE clause.

Action: Correct the statement so the CLUSTERING clause does not conflict with other clauses.

OCI-65406: invalid option on CLUSTERING clause

Cause: The CLUSTERING clause was not followed by the BY [LINEAR | INTERLEAVED] ORDER option.

Action: Correct the option on the CLUSTERING clause.

OCI-65407: CLUSTERING clause already exists on the table

Cause: The ADD CLUSTERING clause was specified on a table with an existing CLUSTERING clause.

Action: If the table has a CLUSTERING clause, you can only change the ON LOAD or ON DATA MOVEMENT options. To change other options, you must first drop the clause.

OCI-65408: CLUSTERING clause has too many columns in the BY ORDER subclause

Cause: More than 10 columns were specified in the BY ORDER subclause. You can have at most 10 columns in the BY ORDER subclause.

Action: Lower the number of columns in the BY ORDER subclause to a value of 10 or less.

OCI-65409: CLUSTERING clause has too many INTERLEAVED columns or groups

Cause: More than 40 columns or more than 4 groups were specified in the BY INTERLEAVED ORDER subclause. You can have at most 40 columns and at most 4 groups in the INTERLEAVED ORDER subclause.

Action: Lower the number of columns to 40 or less, and lower the number of groups to 4 or less in the BY INTERLEAVED ORDER subclause.

OCI-65410: CLUSTERING clause can have only scalar columns

Cause: A non-scalar column was specified in the BY [LINEAR | INTERLEAVED] ORDER subclause. Also, virtual or hidden columns are not allowed.

Action: Specify only scalar columns in the BY [LINEAR | INTERLEAVED] ORDER subclause.

OCI-65411: CLUSTERING clause does not exist

Cause: An attempt was made to modify or drop a CLUSTERING clause in a table that had no CLUSTERING clause associated with it.

Action: Do not attempt to modify a nonexistent CLUSTERING clause.

OCI-65412: invalid option on ALTER TABLE .. CLUSTERING ..

Cause: You specified an invalid option on ALTER TABLE...CLUSTERING. For example, you specified DROP and ADD CLUSTERING in one statement.

Action: Correct the statement.

OCI-65413: cannot resolve referenced object in the CLUSTERING clause

Cause: An object was referenced in the CLUSTERING clause that could not be resolved to a base table reference.

Action: The CLUSTERING clause can refer to base tables only.

OCI-65414: column resolves to multiple tables in the CLUSTERING clause

Cause: A column resolved to multiple tables in the CLUSTERING clause.

Action: Correct the statement. The column should resolve to only one table. The table name should be qualified with its owner name.

OCI-65415: wrong join condition in the CLUSTERING clause

Cause: The CLUSTERING clause had an OR condition and the individual join condition on the base table columns was not an equijoin.

Action: Correct the statement. Ensure that join conditions are equijoins and there are no OR conditions, or no expressions in the join.

OCI-65416: multiple dimension tables in the CLUSTERING clause

Cause: Joins in the CLUSTERING clause referenced a dimension table more than once.

Action: Correct the statement. Remove one of the references.

OCI-65417: illegal dimension table in the CLUSTERING clause

Cause: The dimension table in the CLUSTERING clause was illegal. Dimension table cannot be GLOBAL TEMPORARY TABLE or EXTERNAL TABLE.

Action: Rewrite the statement so it does not use an illegal option on the dimension table.

OCI-65418: primary or unique key constraint missing in CLUSTERING join

Cause: The join between the fact and dimension tables in the CLUSTERING clause did not have a primary or unique key constraint on the dimension table join column(s).

Action: Add a primary or unique key constraint to the join column(s) on the dimension table.

OCI-65419: columns in a clustering group come from different tables

Cause: Columns in the clustering group did not come from the same table. For example: .. CLUSTERING BY ..(t1.c1, t2.c2), (t2.c1, t2.c2)). Clustering group (t1.c1, t2.c2) must contain references to only one table.

Action: Restructure the clustering group so it contains only references to a single table.

OCI-65420: columns in a join condition in the CLUSTERING clause are not compatible

Cause: The data type of columns in the join condition of CLUSTERING clause were not compatible. They must be of the same type.

Action: Select a compatible data type for the join conditions in the CLUSTERING clause.

OCI-65421: The CLUSTERING clause is defined on columns that are to be modified

Cause: An ALTER TABLE MODIFY COLUMN command was issued on a column on which a CLUSTERING clause exists.

Action: Drop the CLUSTERING clause before attempting to modify the column.

OCI-65422: The CLUSTERING clause already has a zonemap defined on it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITH MATERIALIZED ZONEMAP option but the table already had zonemap define on it.

Action: Drop the zonemap associated with the base table before attempting to add zonemap using the CLUSTERING clause.

OCI-65423: The CLUSTERING clause does not have a zonemap associated with it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITHOUT MATERIALIZED ZONEMAP option but the table did not have zonemap associated with the CLUSTERING clause.

Action: Do not use the ALTER TABLE MODIFY CLUSTERING WITHOUT ZONEMAP.

OCI-65424: CLUSTERING clause has too many joins

Cause: More than 4 joins were specified in the CLUSTERING clause. You can have at most 4 joins to the dimension tables.

Action: Reduce the number of joins to 4 or less.

OCI-65425: CLUSTERING clause not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define clustering on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage or remove the CLUSTERING clause.

OCI-65426: Non-scalar data type is used for a clustering column

Cause: Oracle cannot perform data clustering because an attempt was made to populate a clustering column with non-scalar data values, or a clustering column defaulted to non-scalar values was omitted.

Action: Use only scalar data type for the clustering columns, or disable data clustering with NO_CLUSTERING hint.

OCI-65427: A system-generated column or unused column is used in a join condition in the CLUSTERING clause.

Cause: An attempt was made to use a system-generated or unused column in a join condition in the CLUSTERING clause.

Action: Remove the system-generated or unused column in the join condition in the CLUSTERING clause.

OCI-65428: unable to create pluggable database with temporary tablespace files in object store

Cause: An attempt was made to create a pluggable database with temporary tablespace files in the object store.

Action: Create the pluggable database with local temporary tablespace files and retry the operation.

OCI-65429: PDB cannot be created

Cause: An attempt was made to clone a source pluggable database (PDB) stored in an object store using a database link.

Action: Specify the object store credential and retry the operation.

OCI-65430: Pluggable database *string* cannot be unplugged.

Cause: An attempt was made to unplug a pluggable database (PDB) stored in an object store using an invalid credential.

Action: Specify the same credential used for the PDB in object store and retry the operation.

OCI-65431: Pluggable database *string* cannot be unplugged.

Cause: An attempt was made to unplug a pluggable database (PDB) to object store without a credential.

Action: Specify the object store credential retry the operation.

OCI-65432: unable to read/write XML file in object store

Cause: An internal error occurred when reading or writing to XML file in object store.

Action: Contact Oracle Support Services.

OCI-65433: incomplete copy of source file - *string* (blocks *number* - *number*)

Cause: An attempt to copy a source file failed for the block ranges specified in the error message. The failure could be due to inability to access the source file.

Action: Verify the source file and retry the operation.

OCI-65434: unable to cancel relocate of pluggable database *string*

Cause: An attempt was made to cancel the relocate of a pluggable database that was not in relocate unplugged state.

Action: Ensure the pluggable database is in relocate unplugged state and retry the operation.

OCI-65435: unable to refresh pluggable database *string*

Cause: An attempt was made to refresh a pluggable database beyond the end of life span of the current source pdb.

Action: Transition the refreshable pluggable database to follow the new source pdb or change the refresh mode to none.

OCI-65436: unable to find new life span information for pluggable database *string*

Cause: An attempt was made to transition a pluggable database to follow a new lifespan that did not match the current state of the pluggable database's datafiles.

Action: Issue the transition after the new lifespan information is available in the pdb refresh catalog database.

OCI-65437: mismatch between new life span and data file *string* for value of SCN (*string*)

Cause: Either the data file or life span table was corrupt.

Action: Verify that the data file and `pdb_life_span_catalog$` are consistent as of the point when the new life span was registered and retry the operation.

OCI-65438: until SCN or until time clause not specified

Cause: An attempt was made to refresh the pluggable database without specifying a system change number (SCN) or a time to refresh.

Action: Reissue the statement with a valid until SCN number or time.

OCI-65439: general event for automatic clustering module

Cause: N/A

Action: This internal event is used to enable various switches associated with automatic clustering module.

OCI-65440: PDB creation clauses mismatch when resuming a PDB clone

Cause: An attempt was made to resume a PDB clone with mismatched clauses.

Action: Compare the creation statement with the initial statement. Ensure clauses such as the source PDB and the encryption algorithm remain the same.

OCI-65441: unable to create pluggable database from metadata clone *string*

Cause: An attempt was made to clone a pluggable database from a source pluggable database that was a metadata clone and never opened after creation.

Action: Open the source pluggable database in read/write mode and retry the operation.

OCI-65442: unable to create refreshable clone from source PDB *string*

Cause: An attempt is being made to clone a refreshable clone from a source pluggable database (PDB) that is never opened after creation.

Action: Open the source pluggable database in read/write mode and retry the operation.

OCI-65443: unable to rename refreshable clone data file to *string*

Cause: An attempt is being made to rename a refreshable clone data file with an invalid data file.

Action: Check the attributes of the target file to verify whether the attributes match with the attributes of the file being renamed.

OCI-65451: Advanced index compression is not supported for tablespaces on this storage type.

Cause: An attempt was made to use advanced index compression on an unsupported storage type.

Action: Drop and re-create the index with a compression option that is supported on the current storage type.

OCI-65452: could not clone read/write PDB to object store

Cause: An attempt was made to clone a pluggable database (PDB) that was open read/write to a location on the object store.

Action: Close and re-open the source PDB as read-only and retry the clone operation.

OCI-65455: family *string* is invalid

Cause: An invalid family was used to specify a parameter value.

Action: Use a valid family.

OCI-65456: family *string* is not valid in *string* instance

Cause: The specified family could not be used in the current instance type.

Action: Remove the family from the environment variable ORACLE_FAMILY.

OCI-65457: family *string* is not valid in *string* instance

Cause: The specified family could not be used in the current instance type.

Action: Use a family that is valid for this instance to set the initialization parameter.

OCI-65458: maximum length of parameter qualifier exceeded

Cause: Too many characters were specified in the parameter qualifier in the initialization parameter file.

Action: Change the parameter qualifier to a valid SID or family.

OCI-65459: family used with a specific system identifier (SID)

Cause: A SID was used with FAMILY.

Action: Use FAMILY without a SID.

OCI-65460: family *string* is invalid

Cause: An invalid family was specified for this instance in the environment variable ORACLE_FAMILY.

Action: Set the environment variable ORACLE_FAMILY to a valid family name.

*Params: 1) family_name: The user-supplied value.

OCI-65461: invalid parameter name specified with CONTAINER clause set to ALL

Cause: The CONTAINER clause was set to ALL in the ALTER SYSTEM SET statement for a non-PDB modifiable or non-inheritable PDB parameter.

Action: Retry the ALTER SYSTEM SET statement without the CONTAINER clause.

OCI-65462: error while updating a dependent parameter '*string*'

Cause: An internal error was encountered while trying to update dependent parameter value.

Action: Contact Oracle Support Services.

OCI-65466: Family '*string*' contains an illegal character or is too long.

Cause: The specified family contained an illegal character or the family specified was too long. This is not permitted in an SPFILE setting. Illegal characters include *,#'"=() and whitespace.

Action: Use a family that does not contain a special character or whitespace. Check your platform specific documentation for the maximum length of family. *Params: 1) family: user supplied value

OCI-65470: Lost write already in requested state.

Cause: Lost write was already in the requested state. If enable or disable lost write was specified, then lost write was already in the requested state.

Action: No action needed.

OCI-65471: LOST WRITE PROTECTION cannot be enabled on this type of tablespace.

Cause: LOST WRITE PROTECTION could not be enabled for lost write tablespaces or temporary tablespaces.

Action: Do not attempt to enable LOST WRITE PROTECTION for these types.

OCI-65472: invalid option for ALTER lost write TABLESPACE

Cause: An invalid option was specified while altering a LOST WRITE PROTECTION tablespace.

Action: Lost write tablespaces cannot be altered with clauses LOGGING, ENCRYPTION, REKEY, FLASHBACK, TEMPORARY, DEFAULT, or COMPRESS options.

OCI-65473: invalid option for FLASHBACK

Cause: An invalid option was specified while creating or altering a flashback tablespace.

Action: Lost write tablespaces cannot be used for flashback.

OCI-65474: Lost write tablespace does not exist or has insufficient space, or lost write protection is disabled.

Cause: Enabling lost write protection failed because: 1. The lost write tablespace did not exist. 2. The lost write table space had insufficient space. 3. Shadow lost write was not enabled for the database.

Action: Identify the cause and pick the corresponding action: 1. Create a lost write tablespace. 2. Add space to an existing lost write tablespace. 3. Turn on shadow lost write protection for the database.

OCI-65476: could not get data file space header

Cause: There was an internal error code.

Action: Make sure the data file is online and the database is open.

OCI-65477: lost write protection - invalid state transition

Cause: The object that was manipulated could not be set to the requested state.

Action: Ensure that the state transition is valid.

OCI-65478: shadow lost write protection - found lost write

Cause: A lost write was found in a data block protected by lost write.

Action: The data block can be recovered to fix lost write.

OCI-65479: operation affecting a pluggable database cannot be performed from another pluggable database [string]

Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

OCI-65480: invalid option for CREATE TABLESPACE

Cause: An invalid option was specified while creating LOST WRITE PROTECTION tablespace.

Action: LOST WRITE PROTECTION cannot be specified with the DEFAULT, EXTENT MANAGEMENT, SEGMENT SPACE MANAGEMENT, FORCE, MINIMUM EXTENT, LOGGING, ENCRYPTION, TEMPORARY, UNDO, or FLASHBACK options.

OCI-65481: LOST WRITE PROTECTION option already specified

Cause: In CREATE TABLESPACE, the LOST WRITE PROTECTION option was specified more than once.

Action: Remove all but one of the LOST WRITE PROTECTION specifications.

OCI-65482: invalid option for CREATE TABLESPACE

Cause: An invalid option was specified while creating a tablespace.

Action: Review the syntax and reissue the command.

OCI-65483: invalid option for creation of LOST WRITE PROTECTION tablespace

Cause: The BIGFILE keyword was not specified while creating a LOST WRITE PROTECTION tablespace.

Action: Specify the BIGFILE keyword while creating a LOST WRITE PROTECTION tablespace.

OCI-65484: cannot specify LOST WRITE PROTECTION tablespace as default tablespace

Cause: An attempt was made to assign a LOST WRITE PROTECTION tablespace to be a user's default tablespace.

Action: Assign a permanent tablespace to be the default tablespace.

OCI-65485: cannot create user objects in LOST WRITE PROTECTION tablespace

Cause: An attempt was made to create user objects in a LOST WRITE PROTECTION tablespace. Other system objects such as rollback segments are also illegal.

Action: Create the object in a permanent tablespace.

OCI-65486: cannot specify a LOST WRITE PROTECTION tablespace as default tablespace

Cause: An attempt was made to assign a LOST WRITE PROTECTION tablespace to be a default tablespace.

Action: Assign a permanent tablespace to be the database default tablespace.

OCI-65487: Lost write tablespaces must all have the same block size.

Cause: A different block size was specified when a SHADOW LOST WRITE tablespace was created.

Action: Retry creating the lost write tablespace using the same block size as the other lost write tablespaces. If re-creating the tablespace results in duplicate tablespace name error, then drop the tablespace using the SQL DROP TABLESPACE <tablespace_name> statement, and then retry creating the lost write tablespace.

OCI-65488: SHADOW LOST WRITE cannot be enabled on a standby database.

Cause: An attempt was made to enable SHADOW LOST WRITE on a standby database.

Action: SHADOW LOST WRITE can only be enabled on a primary database.

OCI-65489: Lost write tablespace cannot be enabled or created.

Cause: Attempted to enable lost write when the database was not open or an access error occurred when attempting to access the new_lost_write_shadows\$ dictionary table.

Action: Enable SHADOW LOST WRITE or create a shadow tablespace when the database is open.

OCI-65490: invalid parameters for LOST WRITE PROTECTION tablespace

Cause: Invalid parameters were specified for a LOST WRITE PROTECTION tablespace. Only BIGFILE TABLESPACE, SIZE and BLOCKSIZE for a LOST WRITE PROTECTION tablespace can be specified upon creation. ALTER cannot be used to make a LOST WRITE PROTECTION tablespace read-only.

Action: Create the tablespace using the CREATE BIGFILE TABLESPACE *tablespace name* ... DATAFILE '<data_file_name>' SIZE *size* BLOCKSIZE <block_size> LOST WRITE PROTECTION statement.

OCI-65491: A lost write bigfile tablespace must exist before attempting to enable lost write.

Cause: The required lost write tablespace did not exist.

Action: Create the tablespace using the CREATE BIGFILE TABLESPACE <tablespace_name> ... DATAFILE '<datafile_name>' SIZE *size* BLOCKSIZE *size* LOST WRITE PROTECTION statement.

OCI-65492: cannot get data file space header

Cause: An internal error occurred.

Action: Disable the lost write protection and then create the lost write tablespace again using the CREATE BIGFILE TABLESPACE <tablespace_name> DATAFILE '<datafile_name>' SIZE *size* BLOCKSIZE *size* LOST WRITE PROTECTION command. You may have to first drop the lost write tablespace on which this command failed.

OCI-65493: cannot shrink a lost write tablespace

Cause: An attempt was made to shrink a lost write tablespace.

Action: Lost write tablespaces cannot be shrunk. The drop can either drop all tracking data or move it to another lost write tablespace.

OCI-65494: LOST WRITE PROTECTION clause of CREATE/ALTER TABLESPACE could not access dictionary tables or encountered inconsistent dictionary tables.

Cause: There was an internal error in the lost write subsystem. The SYSAUX tablespace may be inaccessible or full.

Action: Check the SYSAUX tablespace first. If the SYSAUX tablespace has no problems, please contact Oracle Support.

OCI-65495: LOST WRITE PROTECTION could not create shadow tablespace.

Cause: There was an internal error in the lost write protection subsystem.

Action: Drop the lost write protection shadow tablespace just created using the SQL DROP TABLESPACE <tablespace_name> statement.

OCI-65496: Lost write tables are inconsistent. Delete may have occurred.

Cause: One of the lost write tracking tables was inconsistent. A parallel operation may have caused this problem.

Action: If lost write tracking is working properly, then this error can be ignored.

OCI-65498: SHADOW LOST WRITE tablespace could not be dropped.

Cause: An internal error occurred when updating shadow lost write meta data.

Action: Contact Oracle Support.

OCI-65499: incorrect SHADOW LOST WRITE operation on a read-only database

Cause: The attempted lost write operation is prohibited on a read-only database.

Action: Set the database to read/write mode before performing this command.

OCI-65500: could not modify DB_UNIQUE_NAME, resource exists

Cause: DB_UNIQUE_NAME could not be modified, because a database resource identified by DB_UNIQUE_NAME existed in the cluster. To modify DB_UNIQUE_NAME, any resource it identifies must first be removed.

Action: Remove the database resource identified by DB_UNIQUE_NAME before modifying DB_UNIQUE_NAME.

OCI-65501: locator from *string* container cannot be used in container *string* for this operation

Cause: In a pluggable database environment, an attempt was made to modify a LOB using a locator which belongs to a different container.

Action: Switch back to the original container.

OCI-65502: cannot access temporary LOB data

Cause: The database did not open.

Action: Open the database before accessing LOB data.

OCI-65503: cannot send or receive temporary LOB locators over a database link

Cause: An attempt was made to send or receive a temporary LOB locator over a database link.

Action: Do not send or receive a temporary LOB locator over a database link.

OCI-65504: cannot send or receive LOB locators from an index-organized table over a database link

Cause: An attempt was made to send or receive a temporary LOB locator from an index-organized table over a database link.

Action: Do not send or receive a LOB locator from an index-organized table over a database link.

OCI-65505: cannot pass a remote LOB locator as parameter to this operation

Cause: An attempt was made to pass a remote LOB locator as a parameter to a LOB operation which does not accept a remote LOB locator.

Action: Do not pass a remote LOB locator as a parameter to this operation.

OCI-65506: cannot pass LOB locators belonging to different databases

Cause: An attempt was made to pass Large Object (LOB) locators belonging to a different database as a parameter to a Large Object (LOB) operation.

Action: Ensure that all Large Object (LOB) locators that are parameters belong to the same database.

OCI-65507: cannot select a LOB locator across multiple database links

Cause: An attempt was made to select a Large Objects (LOB) locator from a remote database that was obtained by the remote from another remote database.

Action: Ensure that the locator that is selected from a remote database belongs to that remote database.

OCI-65508: cannot send or receive an invalid LOB locator over a database link

Cause: An attempt was made to send or receive an invalid LOB locator over a database link. Uninitialized locators, temporary locators, BFILE locators, QUASI locators, or older locators are considered invalid LOB locators for database link operations.

Action: Ensure that the locator that is sent to a remote database, or received from a remote database, is a valid locator.

OCI-65509: Cannot use remote LOBs in INSERT AS SELECT DMLs with INSTEAD OF triggers.

Cause: An attempt was made to perform an operation INSERT AS SELECT on a view with INSTEAD OF trigger on it and a remote LOB column in the select list.

Action: Do not use remote LOB locators in INSERT AS SELECT DMLs with INSTEAD OF triggers.

OCI-65510: Distributed LOB operations are not supported on pre-12.2 databases.

Cause: An attempt was made to send or receive a LOB locator over a database link to a pre-12.2 database.

Action: Ensure that the remote database for a distributed LOB operation is Oracle Database version 12.2 or higher.

OCI-65511: SQL statement executed on a remote database over a database link cannot access a LOB on the local database with parallel execution enabled on the remote side

Cause: This is likely the result of passing a local LOB locator as a bind value to a SQL statement that is executed on a remote database over a database link. For example, running the statement "INSERT INTO tabl1@@dblink VALUES (:1)" where the bind value is a local persistent LOB locator and parallel execution is enabled on the remote side.

Action: Disable parallel execution for the SQL statement on the remote database.

OCI-65512: cannot access temporary LOB from old incarnation of pluggable database string

Cause: When the pluggable database was closed, any temporary LOBs in it were freed. An attempt was made to access a freed LOB.

Action: Reinitialize the temporary LOB in the current incarnation of the pluggable database.

OCI-65513: value LOB operand mismatch for SQL operator

Cause: The LOB locator operands that were passed to the SQL operator did not have the value-based property set uniformly.

Action: All of the LOB locator operands for a SQL operator should either be value-based or reference-based. There cannot be a mix of value-based and reference-based operands.

OCI-65514: invalid ENABLE STORAGE IN ROW value

Cause: An invalid value was specified for ENABLE STORAGE IN ROW. The specified value for LOB ENABLE STORAGE IN ROW should be null, 4000 or 8000 for SECUREFILE LOBS in heap tables, and null in all other cases, for example: INDEX organized tables or JSON columns.

Action: Choose an appropriate integer value and retry the operation.

OCI-65515: LOB inline size is greater than tablespace block size

Cause: The inline size specified for the ENABLE STORAGE IN ROW clause of either the CREATE or ALTER TABLE was greater than the block size of the tablespace of the table.

Action: Ensure that the inline size is less than or equal to the block size of the tablespace associated with the table.

OCI-65516: incorrect usage of increased LOB inlining

Cause: An inline size greater than 4000 bytes in the LOB storage clause was specified for a case other than the top level LOB column. Increased LOB inlining is not supported in LOB usage cases like abstract data types (ADTs), nested tables and varrays.

Action: Ensure that the inline size greater than 4000 bytes is specified only for top level LOB columns.

OCI-65519: Expected LOB or JSON type got *string* during remote LOB operation

Cause: During a remote LOB operation, an incompatible data type was sent.

Action: Contact Oracle support.

OCI-65529: Index *string.string* creation failed. *string* not supported.

Cause: An attempt was made to create an index using an unsupported feature or option.

Action: Remove the unsupported feature or option.

OCI-65531: maximum level reached in index segment with object id *string*

Cause: The attempted operation resulted in the number of index levels exceeding the maximum allowed.

Action: Reduce the size of the relevant index, for example, by using compression or partitioning.

OCI-65532: cannot alter or drop automatically created indexes

Cause: An attempt was made to alter or drop an automatically created index.

Action: Do not perform the action on an automatically created index.

OCI-65533: index coalesce on object *string* could not complete

Cause: An alter index coalesce command could not fully complete. Further coalescing may still be possible.

Action: Retry the coalesce in a quieter period when there is less DML activity against the table indexed.

OCI-65534: *string* option for the *string 'string.string'* is not supported

Cause: An attempt was made to create or alter an index with an invalid compression option.

Action: Specify a valid compression option in the create or alter index statement.

OCI-65535: Oracle Database client does not support error number exceeding 65535.

Cause: Oracle Database clients earlier than Oracle Database release 12c version 12.1 do not support error codes larger than 65535.

Action: Upgrade Oracle Database client library to Oracle Database release 12c version 12.1 or later.

ODIG-00000 to ODIG-00013

ODIG-00000: No error.

Cause: Operation was successful.

Action: No action needed.

ODIG-00001: no value specified for option '*string*'

Cause: No value was specified for an option.

Action: Specify a value.

ODIG-00002: invalid argument: '*string*'

Cause: An invalid argument was specified.

Action: Specify a valid argument.

ODIG-00003: invalid option: '*string*'

Cause: An invalid option was specified.

Action: Specify a valid option.

ODIG-00004: invalid value specified for option '*string*': '*string*'

Cause: The value specified for an option was not the expected type.

Action: Specify a valid value.

ODIG-00005: Invalid query type: '*string*'. Supported types: *string*.

Cause: The type of query is invalid.

Action: Specify a valid query type.

ODIG-00007: thread spawn failed.

Cause: The spawn of a thread used for a query failed.

Action: This error should not be seen in ordinary use. Contact Oracle Customer Support if it appears.

ODIG-00008: invalid server address or name '*string*': *string*

Cause: The address or name specified for the DNS server was not valid.

Action: Specify a valid DNS name. See RFC 1034 for details.

ODIG-00009: No name specified.

Cause: A name was not specified to be queried for.

Action: Specify a name.

ODIG-00010: Internal error: *string*

Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ODIG-00011: Invalid value specified for option '*string*': *number*

Cause: The value specified for the option must be greater than zero.

Action: Specify a valid value.

ODIG-00012: failed to get the name of the GNS domain

Cause: An error occurred when trying to get the name of the Grid Naming Service (GNS) domain.

Action: Examine the accompanying error messages for further information about the error.

ODIG-00013: Options '*string*' and '*string*' are incompatible.

Cause: A query specified both the the DNSSEC option and the DNS query option, which is not allowed.

Action: Specify either the DNSSEC option or the DNS query option, but not both.

OKA-00116 to OKA-09550

OKA-00116: Internal error.

Cause: An Oracle internal error.

Action: Contact Oracle Support Services.

OKA-00618: OKA is not supported on this operating system: '*string*'

Cause: OKA device drivers have not been ported to this operating system.

Action: None

OKA-00619: The '*string*' machine architecture is not supported.

Cause: OKA device drivers have not yet been ported to this CPU type or operating system. This occurs when you try to load the drivers on an architecture or operating system type that OKA is not supported.

Action: Contact Oracle Support Services to determine if an updated driver is available for this operating system and architecture, or install OKA on a supported architecture and operating system.

OKA-00620: OKA is not supported on this operating system version: '*string*'

Cause: OKA device drivers have not been ported to this operating system version.

Action: None

OKA-00621: The user executing this command does not have permission to execute Perl in '*string*'.

Cause: Perl permissions are read/write/execute owner (0700). The user this command is executing as is not the owner of the perl binary.

Action: Enter the db home as an argument to -orahome. Ensure that the user executing the command has execute permission on the perl binary in that db home.

OKA-00623: Root access required

Cause: The user executing this command does not have sufficient privileges to run the command.

Action: Run this command as a user with administrative privileges.

OKA-00628: OKA installation cannot proceed:

Cause: Previous errors have caused the installation to reach a point where it cannot continue.

Action: Resolve the issues reporting in preceding messages, then restart the installation.

OKA-00629: Failed to unload OKA drivers. A system reboot is recommended.

Cause: An unexpected condition has been detected for which a system reboot is the best course of action.

Action: Reboot the system.

OKA-00630: Installation cannot proceed: Failed to unload OKA drivers.

Cause: The installation found that one or more applications is using the drivers.

Action: Terminate applications that may be using the drivers, and retry the installation.

OKA-00642: OKA not installed

Cause: No OKA drivers or commands have been found on the system.

Action: Install components using 'okaroot install *options*'.

OKA-00644: OKA drivers not correct for this operating system - cannot load.

Cause: The device drivers installed are not compatible with the operating system

Action: run "okaroot install *options*" to install the correct drivers.

OKA-00645: Not all OKA drivers have been loaded.

Cause: OKA device drivers have been started but not all of them are detected as running.

Action: Try 'okaload stop' followed by 'okaload start'. If that does not start all drivers, then contact Oracle Support Services.

OKA-00647: The OKA drivers are supported but have not been verified on this Operating System version.

Cause: The drivers have not been explicitly tested on this operating system version but are expected to work properly.

Action: This message is informational.

OKA-00650: Failed to load OKA drivers. A system reboot is recommended.

Cause: An unexpected condition has been detected for which a system reboot is the best course of action.

Action: Reboot the system.

OKA-00651: usage: *string* {installed | loaded | version | supported} [-s]

Cause: Syntax error or help [-h] option was passed.

Action: Use syntax as specified in the 'Usage' message.

OKA-00653: Failed to load OKA drivers.

Cause: An attempt to load OKA drivers failed.

Action: Reboot the system and run 'okaroot load'.

OKA-05062: cannot query CRS resource

Cause: The application failed to communicate with Oracle Clusterware.

Action: Verify that the Oracle Clusterware stack is running. Refer to the Clusterware alert log for error messages or problem indicators.

OKA-09109: *string* driver failed to load.

Cause: The driver failed to load.

Action: View the system specific operating system kernel log (for instance, /var/log/messages on Linux, Event Log on Windows). If the drivers have not previously been unloaded ('crsctl stop crs', 'okaload stop', 'okaroot uninstall'), it is not possible to

reload them. If a specific error has occurred, than clear the error condition and try again. If the operating system and/or architecture is not supported by the drivers, then contact Oracle Support Services for an updated driver package.

OKA-09118: Driver *string* in use - cannot unload.

Cause: This may be seen during 'crsctl stop crs', 'okaload stop', or 'okaroot uninstall'. It was found that one more applications is using the drivers.

Action: Terminate applications that may be using the driver and retry.

OKA-09119: Driver *string* failed to unload.

Cause: An unknown error has occurred when trying to unload the driver.

Action: Check system specific logs (/var/adm/messages on Linux, Event Log on Windows) and clear any error conditions that are preventing the unload.

OKA-09121: Failed to detect control device '*string*'.

Cause: OKA device drivers have been started but the devices that should have been created have not been.

Action: Try 'okaload stop' followed by 'okaload start' or restarting the crs stack - 'crsctl stop crs', 'crsctl start crs'. If the control devices still do not exist, contact Oracle Support Services.

OKA-09130: Root access required

Cause: The user executing this command does not have sufficient privileges to run the command.

Action: Run this command as a user with administrative privileges.

OKA-09135: *string* installation aborted.

Cause: Informational

Action: See preceding error message for more information.

OKA-09154: Loading '*string*' driver.

Cause: Informational.

Action: None

OKA-09155: Checking for existing '*string*' driver installation.

Cause: Informational.

Action: None

OKA-09156: Detecting control device '*string*'.

Cause: Informational.

Action: None

OKA-09158: Configuration file '*string*' in the /boot directory does not exist.

Cause: A populated /boot directory, which contains static files required to install kernel modules, was not detected on the system.

Action: After restoring the /boot directory and the kernel configuration files, re-run 'okaroot install'.

OKA-09160: Can not use the silent and verbose options at the same time.

Cause: The -s and -v options were used in the command. These options are mutually exclusive.

Action: Re-execute the command with one of the options or neither.

OKA-09164: okaroot enable: Enable OKA CRS resources.

Cause: Informational.

Action: None

OKA-09165: okasroot disable: Disable OKA CRS resources.

Cause: Informational.

Action: None

OKA-09167: OKA is not installed or loaded. Run 'okaroot install'.

Cause: An operation was requested that requires OKA to be running.

Action: Run 'okaroot install' and then run the requested operation.

OKA-09176: Entering '*string*'

Cause: Informational.

Action: None

OKA-09177: Return from '*string*'

Cause: Informational.

Action: None

OKA-09178: Return code = *string*

Cause: Informational.

Action: None

OKA-09179: Command executed: '*string*', output = '*string*'

Cause: Informational.

Action: None

OKA-09182: Variable '*string*' has value '*string*'

Cause: Informational.

Action: None

OKA-09184: *string* [-h] [-s | -v]

Cause: Either a syntax error or unknown option was specified, or the help (-h) option was specified.

Action: Use syntax as specified in the 'Usage' message.

OKA-09200: Supported

Cause: OKA device drivers have been ported to this operating system or CPU type.

Action: None - Informational.

OKA-09201: Not Supported

Cause: OKA device drivers have not yet been ported to this operating system or CPU type.

Action: None

OKA-09203: true

Cause: OKA device drivers were installed/loaded.

Action: None

OKA-09204: false

Cause: OKA device drivers were not installed/loaded.

Action: None

OKA-09212: Driver build version = *string* (*string*).

Cause: Informational.

Action: None

OKA-09215: System console log level set to: *string*.

Cause: System console log level has been set to specified value.

Action: None - Informational.

OKA-09216: System console log level set back to: *string*.

Cause: System console log level has been set back to a previous known value.

Action: None - Informational.

OKA-09217: Current system console log level is: *string*.

Cause: Informational.

Action: None

OKA-09218: Failed to set system console log level.

Cause: Failed to set system console log level to a known value.

Action: Contact system administrator.

OKA-09226: OKA drivers not correct for this operating system - cannot load.

Cause: The device drivers installed are not compatible with the currently running operating system.

Action: run "okaroot install *options*" to install the correct drivers.

OKA-09292: Warning: A newer version of OKA software is available in Oracle home *string*.

Cause: A version check prompted by user request or a maintenance operation determined that updated software is available in the indicated Oracle home.

Action: To ensure the benefits of the latest fixes and performance improvements, the available drivers should be installed at the next maintenance opportunity. Use the command 'rootcrs.pl -updatedriver' to update all drivers on the system.

OKA-09295: failed to open file *string*

Cause: A requested action failed to complete because the indicated file could not be opened.

Action: Verify the file exists and is accessible by the current user, examine previous error messages, address issues, and retry the command.

OKA-09296: New drivers have been detected for the kernel update, updating drivers from *string* to *string*.

Cause: The kernel was updated, triggering a driver update.

Action: None

OKA-09303: No installation files found for OS kernel version *string*.

Cause: If '-l' (distribution directory) was specified, the directory may not be valid.

Action: Choose a proper distribution location version.

OKA-09306: Failed to uninstall previous installation.

Cause: Failed to remove OKA commands and/or drivers.

Action: Commands and/or drivers are likely in use. Wait for operations to finish, unload the drivers, and retry the installation.

OKA-09319: Unknown operating system kernel version '*string*' detected.

Cause: This is an internal error.

Action: Contact Oracle Support Services.

OKA-09320: Missing file: '*string*'.

Cause: A required command or driver is not found on the installation media (pre install) or system (post install).

Action: If post install, try running okaroot again. Otherwise, contact Oracle Support Services.

OKA-09321: Creating udev for OKA.

Cause: Informational.

Action: None

OKA-09322: completed

Cause: Informational.

Action: None

OKA-09323: Creating module dependencies - this may take some time.

Cause: Informational.

Action: None

OKA-09324: Alternate drivers installed.

Cause: Informational.

Action: None

OKA-09327: Verifying OKA devices.

Cause: Informational.

Action: None

OKA-09343: Unable to retrieve operating system kernel version from module *string*.

Cause: Running modinfo against the OKA driver failed.

Action: None - the current operating system kernel version will be used instead.

OKA-09344: Missing directory: '*string*'.

Cause: A required directory was not found on the system.

Action: Contact Oracle Support Services.

OKA-09345: Unable to create directory: '*string*'.

Cause: Creation of a required directory failed.

Action: Contact Oracle Support Services.

OKA-09346: Unable to install file: '*string*'.

Cause: Copying to the given destination failed.

Action: Correct the error indicated by the accompanying messages and rerun 'okaroot install'.

OKA-09347: Unable to set permission bits (*string*) on: '*string*'.

Cause: Setting the given permission bits failed.

Action: Manually set the permissions to the required level and rerun 'okaroot install'.

OKA-09348: Unable to remove '*string*'.

Cause: A previously installed file could not be removed.

Action: Attempt to manually remove the file and rerun 'okaroot'.

OKA-09349: Unable to configure driver '*string*'.

Cause: A driver was installed but 'add_drv' failed to write a configuration file.

Action: Correct the error indicated by the accompanying messages and rerun 'okaroot install'.

OKA-09350: Failed to create a symbolic link from '*string*' to '*string*'.

Cause: Creating a symbolic link failed.

Action: Correct the error indicated by the accompanying messages and rerun 'okaroot'.

OKA-09351: Unable to remove default device table file entry for '*string*'.

Cause: An entry for the driver was found in /etc/devlink.tab but it was not possible to remove the entry.

Action: Manually remove the entry from /etc/devlink.tab and rerun 'okaroot uninstall'.

OKA-09352: Unable to write to file '*string*'.

Cause: A file required modifications but it was not possible to write to it.

Action: Ensure that the file ownership and permissions allow you to write to the file.

OKA-09365: The directory '*string*' is not being removed.

Cause: The directory was scheduled to be uninstalled, but it contained files that were not installed by okaroot.

Action: Manually remove the directory.

OKA-09381: Modification of OKA drivers resource failed.

Cause: An attempt to modify the OKA drivers resource resulted in an error.

Action: Contact Oracle Support Services.

OKA-09382: Modification of OKA drivers resource succeeded.

Cause: Informational.

Action: None

OKA-09384: Invalid operating system kernel variation '*string*'.

Cause: The command found an operating system kernel variation (e.g., "el5", etc) that it did not recognize as a valid OKA supported kernel.

Action: Boot a supported kernel.

OKA-09388: An absolute path name must be specified for the alternate location.

Cause: A relative path name to the distribution files was specified.

Action: Enter the absolute path name instead.

OKA-09389: ORACLE_HOME is not set to the location of the Grid Infrastructure home.

Cause: The ORACLE_HOME environment variable was not set correctly.

Action: Make sure that the ORACLE_HOME environment variable is set to the location of the Grid Infrastructure home and that it is properly exported.

OKA-09430: Oracle Kernel Accelerator driver is not supported on this OS configuration: '*string*'

Cause: Attempting to install or configure OKA driver failed because the driver has not been ported to this OS configuration.

Action: None

OKA-09510: Disabling OKA driver load due to lack of Spectre V2 retpoline mitigation support in driver (*string*).

Cause: The install failed because of kernel module incompatibility. The indicated kernel module is not compatible with the installed kernel.

Action: Ensure that the correct patches have been applied for Spectre V2 mitigation. Refer to MOS note (Doc ID 2034681.1), OKA Support On OS Platforms (Certification Matrix) for more details.

OKA-09511: Warning: installing drivers with Spectre V2 retpoline mitigation capability, however, the system kernel is not retpoline capable.

Cause: The install failed because of a kernel module incompatibility. The installed kernel does not include 'retpoline' support.

Action: Ensure that your system is running the latest kernel update from your OS vendor, including appropriate Spectre V2 mitigation with retpoline support. For more information, refer to your OS vendor's documentation for Spectre V2 mitigation.

OKA-09512: WARNING - Kernel does not have retpoline enabled.

Cause: OKA install aborted due to lack of Spectre V2 retpoline mitigation.

Action: Consult OS vendor documentation on Spectre V2 mitigation to ensure that retpoline capability was correctly enabled and installed. Ensure that all 3rd party modules are retpoline capable

OKA-09550: An error occurred while retrieving the kernel and command versions.

Cause: An attempt to retrieve the Oracle Kernel Accelerator driver version information failed.

Action: Check if the drivers are correctly installed.

OKSK-00000 to OKSK-00051

OKSK-00000: %2 %3

Action: None

OKSK-00005: Module failed to load and start with status %2. Build information: %3 %4 %5

Cause: Informational.

Action: None

OKSK-00006: Module unloaded.

Cause: Informational.

Action: None

OKSK-00007: Information has been saved in the file %2 . Include the contents of this file if reporting a problem to Oracle.

Cause: Informational.

Action: None

OKSK-00008: Cluster Membership Change starting - Incarnation %2.

Cause: Informational.

Action: None

OKSK-00009: Cluster Membership Change complete.

Cause: Informational.

Action: n/a

OKSK-00010: Persistent OKS log opened at %2.

Cause: Informational.

Action: None

OKSK-00011: Failed to allocate kernel memory for %2.

Cause: Unable to allocate memory for a required function.

Action: Contact Oracle Support Services.

OKSK-00012: Failed to open %2.

Cause: Unable to open a persistent OKS log file. Likely an invalid file path was specified or there was an internal error.

Action: Ensure that the file or directory exists else. If it does, contact Oracle Support Services.

OKSK-00013: Terminating Persistent OKS log.

Cause: Persistent OKS logging terminated due to the previous message.

Action: Informational.

OKSK-00014: Unable to generate an persistent OKS log file name.

Cause: Failed to generate an persistent OKS log file name.

Action: Internal error.

OKSK-00015: Persistent log thread creation failed.

Cause: Failed to create a kernel thread.

Action: Internal error.

OKSK-00016: Configuration error: buffer size %2 bytes is out of range.

Cause: The user selected an invalid buffer size.

Action: Select a different buffer size.

OKSK-00017: Configuration error: interval timer of %2 ms is out of range.

Cause: The user selected an invalid timer interval.

Action: Select a different timer value.

OKSK-00018: Configuration error: low water level of %2 bytes is out of range.

Cause: The user selected an invalid low water value.

Action: Select a different low water value.

OKSK-00019: Configuration error: high water level of %2 bytes is out of range.

Cause: The user selected an invalid high water value.

Action: Select a different high water value.

OKSK-00020: Configuration error: maximum number of log files (%2) is out of range.

Cause: The user selected an invalid maximum file number value.

Action: Select a different file number value.

OKSK-00021: Configuration error: The maximum file size of %2 bytes is out of range.

Cause: The user selected an invalid maximum log file size value.

Action: Select a different maximum log file size value.

OKSK-00022: File write error: File name '*string*'.

Cause: A write to the persistent OKS log file failed - possibly due to a full file system.

Otherwise, it is an internal error. The in-memory OKS log will contain details regarding the error.

Action: Free up file systems space and restart the OKS persistent log ('acfsutil plogconfig -d *dir*'). If freeing up file system space does not resolve the problem, contact Oracle Support Services.

OKSK-00023: Cluster membership node list:

Cause: Informational.

Action: None

OKSK-00024: Node %2 (Interconnect address: %3.%4.%5.%6) %7

Cause: Informational.

Action: None

OKSK-00025: Cluster membership node count: %2, Local Node Number: %3, Rebuild Manager: %4

Cause: Informational.

Action: None

OKSK-00026: Cluster membership rebuild manager failed to initialize.

Cause: Informational.

Action: Contact Oracle Support.

OKSK-00027: Oracle OKS kernel distributed lock manager hash size is %2

Cause: Informational.

Action: None

OKSK-00028: Oracle ACFS kernel memory log buffer address: %2, size: %3

Cause: Informational.

Action: None

OKSK-00029: Unable to extend the log buffer.

Cause: Informational.

Action: None

OKSK-00030: persistent OKS log buffer flush failure on OKS driver exit

Cause: The OKS driver failed to write the final log buffer to disk in a timely manner. The log file may be incomplete.

Action: None

OKSK-00031: Number of active kernel threads in Oracle ACFS drivers at driver unload time: %2 - reboot is recommended for driver cleanup

Cause: Kernel threads in Oracle ACFS drivers should have been terminated during driver unloading. However, some of those kernel threads were still active at the end of the unloading.

Action: Continued operation with the remaining active threads is possible. However, reboot is recommended to properly cleanup driver resources. For root cause analysis, a core dump should be generated.

OKSK-00032: Unable to allocate the log buffer.

Cause: Informational.

Action: None

OKSK-00033: WARNING. Possible hung thread tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7

Cause: A potential ACFS thread hang has been detected. This message is accompanied by message(s) OKSK-00034 which also provides details on this warning. This message may also be accompanied by other message(s) providing details on this warning.

Action: Contact Oracle Support Services.

OKSK-00035: %2

Cause: Follow up message to OKSUS-0033 and OKSUS-0034.

Action: See the preceding message Contact Oracle Support.

OKSK-00036: Warning: A possible ACFS thread hang has been detected:%2 pid:%3 tid:%4

Cause: A potential ACFS thread hang has been detected.

Action: See the OKS persistent log for more detailed information describing this potentially hung thread using the specified pid and tid numbers. Contact Oracle Support.

OKSK-00037: Module failed to load, mismatch between compiled thread size (%2) and kernel thread size (%3).

Cause: An attempt to load the OKS driver failed because the kernel thread size compiled into the driver was incompatible with the currently running kernel.

Action: Contact Oracle Support.

OKSK-00038: unable to open /proc/meminfo (error %2)

Cause: An attempt to load the OKS driver failed because an attempt to open the /proc/meminfo file to ascertain the current kernel stack size failed with the indicated error.

Action: Ensure that the file exists and is accessible, address the indicated error and retry. If the problem persists, contact Oracle Support Services.

OKSK-00039: WARNING. Possible lock contention. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7

Cause: A different thread was hung and blocked on a lock that this thread was holding. This message is accompanied by at least 3 more messages. OKSK-00033 and OKSK-00034 provide information about the related hung thread. OKSK-00040

provides more information about this thread. Additional OKSK-00039 and OKSK-00040 messages may identify other threads which held the same lock.

Action: Contact Oracle Support Services.

OKSK-00041: WARNING. Hung thread on node %2. thread:%3 tid:%4 pid:%5 lock_id1:%6 lock_id2:%7

Cause: A remote thread was hung on a DLM lock and was blocked on a lock that a local thread was holding. This message describes the remote thread and its DLM lock. This message is accompanied by at least 3 more messages. OKSK-00042 provides more information about the remote thread and its DLM lock instance. OKSK-00043 and OKSK-00044 provide information about local thread(s) that were holding the same DLM lock.

Action: Contact Oracle Support Services.

OKSK-00042: WARNING. Hung thread on node %2. thread:%3 tid:%4 record_type:%5 lock_mode:%6 state:%7

Cause: A remote thread was hung on a DLM lock and was blocked on this lock that a local thread was holding. This message is accompanied by message OKSK-00041 which provides more information about this remote thread and lock.

Action: Contact Oracle Support Services.

OKSK-00043: WARNING. Possible DLM lock contention. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7

Cause: This message provides information about local thread(s) that might have been blocking a remote DLM lock. This message is accompanied by at least 3 additional messages. OKSK-00044 provides additional information about the local DLM lock instance. OKSK-00041 and OKSK-00042 provide information about the remote node's hung thread and blocked DLM lock instance.

Action: Contact Oracle Support Services.

OKSK-00045: WARNING. syscall HM timeout. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7

Cause: A potential ACFS thread hang has been detected due to a user mode thread accessing USM kernel modules for too long via a single instance of a system call. This message is accompanied by message OKSK-00046 which also provides details on this warning. This message may also be accompanied by other message(s) providing details on this warning.

Action: Contact Oracle Support Services.

OKSK-00047: Additional build information: [devmsg: %2] [optimized: %3] [DNS: %4] [k_cflags: %5] [t_cflags: %6]

Cause: Informational.

Action: None

OKSK-00048: Tunable '%2' %3 (%4) changed to %5 (%6)

Cause: Informational.

Action: None

OKSK-00049: Failed to move Oracle driver binary logs

Cause: Error detected while attempting to move Oracle driver binary logs. The most likely cause is insufficient space at the target directory. If so, repeat the operation to another directory.

Action: For other errors, Contact Oracle Support Services.

OKSK-00050: Failed to initialize Oracle driver persistent log subsystem

Cause: Error detected while initializing or starting the OKS persistent log. The most likely cause is insufficient kernel memory.

Action: Contact Oracle Support Services.

OKSK-00051: Node %2 (HASH Interconnect address: %3.%4.%5.%6) %7

Cause: Informational.

Action: None

ORA-00000 to ORA-00879

ORA-00000: normal, successful completion

Cause: Normal exit.

Action: None

ORA-00001: unique constraint (*string.string*) violated on table *string.string* columns (*string*)

Cause: An UPDATE, INSERT or MERGE statement attempted to update or create a record that duplicated values limited by a unique constraint. A unique constraint can be implemented as an explicit unique constraint, a unique index, or a primary key. Consider the case where a table has a unique constraint on columns FIRSTNAME and LASTNAME. Because of this constraint, it is not possible to insert a row containing values of FIRSTNAME and LASTNAME that are identical to the values of these columns in an existing table row.

Action: Determine what type of unique constraint was violated (explicit unique constraint, unique index, or primary key), and which table columns are affected by this unique constraint. Then choose whether to change the constraint to allow duplicate values; modify the SQL statement to no longer create a duplicate value; or drop the constraint, unique index, or primary key. *Params: 1) constraint_schema: The schema name where the constraint resides. 2) constraint_name: The name of the constraint. 3) table_schema: The schema name for the table affected by this constraint. 4) table_name: The name of the table affected by this constraint. 5) column_names: The column names affected by this constraint.

ORA-00018: maximum number of sessions exceeded

Cause: All session state objects are in use.

Action: Increase the value of the SESSIONS initialization parameter.

ORA-00019: maximum number of session licenses exceeded

Cause: All licenses were in use.

Action: Increase the value of the LICENSE_MAX_SESSIONS initialization parameter.

ORA-00020: exceeded maximum number of processes (*string*) specified in initialization parameter

Cause: The limit specified by number of processes in initialization parameter is reached.

Action: Disconnect existing connections or increase the value of the PROCESSES initialization parameter and restart the instance.

ORA-00021: Cannot switch session because that session is being used by other users.

Cause: The session is currently used by other users.

Action: Do not attempt to switch to a session in use by other users.

ORA-00022: invalid session ID; access denied

Cause: Either the session specified does not exist or the caller does not have the privilege to access it.

Action: Specify a valid session ID that you have privilege to access, that is either you own it or you have the CHANGE_USER privilege.

ORA-00023: session references process private memory; cannot detach session

Cause: An attempt was made to detach the current session when it contains references to process private memory.

Action: A session may contain references to process memory (PGA) if it has an open network connection, a very large context area, or operating system privileges. To allow the detach, it may be necessary to close the session's database links and/or cursors. Detaching a session with operating system privileges is always disallowed.

ORA-00024: logins from more than one process not allowed in single-process mode

Cause: Trying to login more than once from different processes for ORACLE started in single-process mode.

Action: Logoff from the other process.

ORA-00025: SGA memory allocation request of *string* failed.

Cause: A process requested allocation of free memory from the System Global Area (SGA), which failed because there was not enough free memory available.

Action: Ensure that there is enough free System Global Area (SGA) memory available by, for example, changing relevant instance parameters and restart the instance. After that, retry the operation. If the problem persists, please contact Oracle Support Services.

ORA-00026: missing or invalid session ID

Cause: Missing or invalid session ID string for the current operation.

Action: Retry with a valid session ID.

ORA-00027: cannot kill current session

Cause: Attempted to use ALTER SYSTEM KILL SESSION to kill the current session.

Action: None

ORA-00028: session has been terminated

Cause: A privileged user has terminated your session and you are no longer logged on to the database.

Action: Log in again to continue working.

ORA-00029: session is not a user session

Cause: The session ID specified in the current operation was not a user session (for example, recursive, etc.).

Action: Retry with a user session ID.

ORA-00030: User session ID does not exist.

Cause: The user session ID no longer exists, probably because the session was logged out.

Action: Use a valid session ID.

ORA-00031: session marked for kill

Cause: The session specified in an ALTER SYSTEM KILL SESSION command cannot be killed immediately (because it is rolling back or blocked on a network operation), but it has been marked for kill. This means it will be killed as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the session to be killed, but further executions of the ALTER SYSTEM KILL SESSION command on this session may cause the session to be killed sooner.

ORA-00032: invalid session migration password

Cause: The session migration password specified in a session creation call was invalid or too long.

Action: Retry with a valid password using less than 30 characters.

ORA-00034: cannot *string* in current PL/SQL session

Cause: An attempt was made to issue a commit or rollback from a PL/SQL object (procedure, function, package) in a session that has this disabled (by 'alter session disable commit in procedure')

Action: Enable commits from PL/SQL in this session, or do not attempt to use commit or rollback in PL/SQL when they are disabled in the current session.

ORA-00035: LICENSE_MAX_USERS cannot be less than current number of users.

Cause: The LICENSE_MAX_USERS value is less than the current users.

Action: Check the license limit and drop extra users or license more users.

ORA-00036: maximum number of recursive SQL levels (*string*) exceeded

Cause: An attempt was made to go more than the specified number of recursive SQL levels.

Action: Remove the recursive SQL, possibly a recursive trigger.

ORA-00037: cannot switch to a session belonging to a different server group

Cause: An attempt was made to switch to a session in a different server group. This is not allowed.

Action: Make sure the server switches to a session that belongs to its server group.

ORA-00038: Cannot create session: server group belongs to another user

Cause: An attempt was made to create a non-migratable session in a server group that is owned by a different user.

Action: A server group is owned by the first user who logs into a server in the server group in non-migratable mode. All subsequent non-migratable mode logins must be made by the user who owns the server group. To have a different user login in non-migratable mode, the ownership of the server group will have to be changed. This can be done by logging off all current sessions and detaching from all existing servers in the server group and then having the new user login to become the new owner.

ORA-00039: error during periodic action

Cause: An unexpected error occurred while executing a periodically invoked action.

Action: Check the error stack for detailed error information.

ORA-00040: active time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00041: active time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00042: Unknown Service name *string*

Cause: An attempt was made to use an invalid application service.

Action: Use a valid service name from SERVICES\$ or add a new service using the DBMS_SERVICE package.

ORA-00043: remote operation failed

Cause: Execution of the inter-instance operation failed.

Action: Check the status of the target instance. The operation may have partially executed. Verify the result of the intended operation.

ORA-00044: timed_statistics parameter must be TRUE when statistics_level parameter is not BASIC

Cause: An attempt was made to set timed_statistics parameter to FALSE when statistics_level parameter was not BASIC. The timed_statistics parameter must be set to TRUE to collect meaningful statistics when statistics_level parameter is set to TYPICAL or ALL.

Action: Either set timed_statistics parameter to TRUE or set statistics_level parameter to BASIC.

ORA-00045: Your session has been terminated with no replay.

Cause: A privileged user terminated your session and you are no longer logged on to the database. Your session was not replayed by Application Continuity (AC) or Transparent Application Failover (TAF).

Action: Log in again and resubmit any data changes that are not committed.

ORA-00046: cannot modify sessions parameter

Cause: An attempt was made to alter the sessions parameter in the root container or non-consolidated database.

Action: The sessions parameter behaves like a static parameter in root containers and non-consolidated databases and hence cannot be altered. It can only be altered from a pluggable database.

ORA-00047: cannot set sessions parameter to this value

Cause: An attempt was made to alter the sessions parameter to a value greater than the root container's session value.

Action: The sessions parameter can only be set to a value less than or equal to the root container's session value.

ORA-00049: maximum number of DB_FILES exceeded for the PDB

Cause: The value of the DB_FILES initialization parameter was exceeded for the pluggable database (PDB).

Action: Increase the value of the DB_FILES parameter for the PDB and close and reopen the PDB.

ORA-00050: Operating system error occurred while obtaining an enqueue.

Cause: Operating system resources necessary to allow an Oracle enqueue were unavailable.

Action: Additional information can be found in the alert log and trace file generated for this issue. If the issue is because of lack of operating system user quota, then increase the quota on an operating system level and retry. If the issue persists, contact Oracle Support.

ORA-00051: timeout occurred while waiting for a resource

Cause: Usually due to a dead instance.

Action: Check for any dead, unrecovered instances and recover them.

ORA-00052: maximum number of enqueue resources (*string*) exceeded

Cause: Ran out of enqueue resources.

Action: Increase the value of the ENQUEUE_RESOURCES initialization parameter.

ORA-00053: maximum number of enqueues exceeded

Cause: Ran out of enqueue state objects.

Action: Increase the value of the ENQUEUEES initialization parameter.

ORA-00054: Failed to acquire a lock (Type: "*string*", Name: "*string*", Description: "*string*") because it is currently held by another session. The resource being locked can be identified by *string* ("*string*") and *string* ("*string*")

Cause: The current session is failing to acquire the specified lock on the specified resource because another session holds the lock.

Action: Retry the operation and see if the lock has been released in the meantime. If not, identify which session holds the lock and on which resource using the information provided in the error message text and terminate the transaction of the session before retrying the operation.

ORA-00055: maximum number of DML locks exceeded

Cause: Ran out of DML lock state objects.

Action: Increase the value of the DML_LOCKS initialization parameter and warm start.

ORA-00056: DDL lock on object '*string.string*' is already held in an incompatible mode

Cause: An attempt was made to acquire a Data Definition Language (DDL) lock that was already locked.

Action: This happens if you attempt to drop a table that has parse locks on it.

ORA-00057: maximum number of temporary table locks exceeded

Cause: The number of temporary tables equals or exceeds the number of temporary table locks. Temporary tables are often created by large sorts.

Action: Increase the value of the TEMPORARY_TABLE_LOCKS initialization parameter and warm start.

ORA-00058: DB_BLOCK_SIZE must be *string* to mount this database (not *string*)

Cause: DB_BLOCK_SIZE initialization parameter is wrong for the database being mounted. It does not match the value used to create the database.

Action: Fix the value of the DB_BLOCK_SIZE parameter or mount a database that matches the value.

ORA-00059: maximum number of DB_FILES exceeded

Cause: The value of the DB_FILES initialization parameter was exceeded.

Action: Increase the value of the DB_FILES parameter and warm start.

ORA-00060: deadlock detected while waiting for resource

Cause: Transactions deadlocked one another while waiting for resources.

Action: Look at the trace file to see the transactions and resources involved. Retry if necessary.

ORA-00061: another instance has a different DML_LOCKS setting

Cause: The shared instance being started is using DML locks, and the running instances are not, or vice-versa.

Action: Ensure that all instances' INIT.ORA files specify the DML_LOCKS parameter as 0 or all as non-zero.

ORA-00062: DML full-table lock cannot be acquired; DML_LOCKS is 0

Cause: The instance was started with DML_LOCKS = 0, and the statement being executed needs a full-table lock (S, X, or SSX).

Action: Restart the instance with DML_LOCKS not equal to zero, and reexecute the statement.

ORA-00063: maximum number of log files exceeded *string*

Cause: The number of log files specified exceeded the maximum number of log files supported in this release.

Action: Re-create the control file with the highest number of log files no greater than the maximum supported in this release.

ORA-00064: object is too large to allocate on this O/S (*string,string,string*)

Cause: An initialization parameter was set to a value that required allocating more contiguous space than can be allocated on this operating system.

Action: Reduce the value of the initialization parameter.

ORA-00065: initialization of FIXED_DATE failed

Cause: The FIXED_DATE string was not in date format yyyy-mm-dd:hh24:mi:ss.

Action: Make sure the initialization parameter is in the correct date format.

ORA-00066: SID '*string*' contains a character that is not allowed or is too long.

Cause: The specified system identifier (SID) contained a character that was not allowed or the SID specified was too long, which cannot occur in an SPFILE setting. Characters that are not allowed include , # " ' = () and whitespace.

Action: Use a SID that does not contain special characters or whitespaces. Check the platform-specific documentation for the maximum length allowed for the SID. *Params: 1) system_identifier: The user-supplied SID value.

ORA-00067: invalid value *string* for parameter *string*; must be at least *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00068: invalid value *string* for parameter *string*, must be between *string* and *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00069: cannot acquire lock -- table locks disabled for *string*

Cause: A command was issued that tried to lock the table indicated in the message. Examples of commands that can lock tables are: LOCK TABLE, ALTER TABLE ... ADD (...), and so on.

Action: Use the ALTER TABLE ... ENABLE TABLE LOCK command, and retry the command.

ORA-00070: The command *string* is invalid.

Cause: An invalid debugger command was specified.

Action: Type HELP to view the list of available commands, and use the correct command.

ORA-00071: Process number must be between 1 and *string*.

Cause: An invalid process number was specified.

Action: Specify a valid process number. Retry the command.

ORA-00072: process "*string*" is not active

Cause: An invalid process was specified.

Action: Specify a valid process and retry the command.

ORA-00073: command *string* takes between *string* and *string* argument(s)

Cause: An incorrect number of arguments was specified.

Action: Specify the correct number of arguments. Type HELP to see the list of commands and their syntax.

ORA-00074: No process specified for debugging.

Cause: No process was specified for debug.

Action: Specify a valid process and retry.

ORA-00075: process "*string*" not found in this instance

Cause: The specified process was not logged on to the current instance.

Action: Specify a valid process.

ORA-00076: dump *string* not found

Cause: An attempt was made to invoke a dump that does not exist.

Action: Type DUMPLIST to see the list of available dumps.

ORA-00077: dump *string* is not valid

Cause: An attempt was made to invoke an invalid dump.

Action: Try another dump.

ORA-00078: cannot dump variables by name

Cause: An attempt was made to dump a variable by name on a system that does not support this feature.

Action: Try the PEEK command.

ORA-00079: variable *string* not found

Cause: An attempt was made to dump a variable that does not exist.

Action: Use a valid variable name.

ORA-00080: invalid global area specified by level *string*

Cause: An attempt was made to dump an invalid global area.

Action: Use level 1 for the PGA, 2 for the SGA, and 3 for the UGA. Use <extra + level> to dump global area *level* as well as *extra* bytes for every pointer; *extra* must be a multiple of 4.

ORA-00081: address range [*string*, *string*] is not readable

Cause: An attempt was made to read/write an invalid memory address range.

Action: Try another address or length.

ORA-00082: memory size of *string* is not in valid set of [1], [2], [4]*stringstringstringstringstring*

Cause: An invalid length was specified for the POKE command.

Action: Use a valid length (either 1, 2, 4, or possibly 8).

ORA-00083: warning: possibly corrupt SGA mapped

Cause: Even though there may be SGA corruptions, the SGA was mapped.

Action: Use the DUMPSGA command to dump the SGA.

ORA-00084: global area must be PGA, SGA, or UGA

Cause: An attempt was made to dump an invalid global area.

Action: Specify either a Program Global Area (PGA), System Global Area (SGA), or User Global Area (UGA).

ORA-00085: current call does not exist

Cause: An invalid attempt was made to dump the current call heap.

Action: Wait until the process starts a call.

ORA-00086: user call does not exist

Cause: An invalid attempt was made to dump the user call heap.

Action: Wait until the process starts a call.

ORA-00087: command cannot be executed on remote instance

Cause: Cluster database command issued for non cluster database ORADEBUG command.

Action: Issue the command without the cluster database syntax.

ORA-00088: command cannot be executed by shared server

Cause: Debug command issued on shared server.

Action: Reissue the command using a dedicated server.

ORA-00089: invalid instance number in ORADEBUG command

Cause: An invalid instance number was specified in a cluster database ORADEBUG command.

Action: Reissue the command with valid instance numbers.

ORA-00090: failed to allocate memory for cluster database ORADEBUG command

Cause: Could not allocate memory needed to execute cluster database oradebug.

Action: Reissue the command on each instance with single-instance oradebug.

ORA-00091: LARGE_POOL_SIZE must be at least *string*

Cause: The value of LARGE_POOL_SIZE is below the minimum size.

Action: Increase the value of LARGE_POOL_SIZE past the minimum size.

ORA-00092: LARGE_POOL_SIZE must be greater than LARGE_POOL_MIN_ALLOC

Cause: The value of LARGE_POOL_SIZE is less than the value of LARGE_POOL_MIN_ALLOC.

Action: Increase the value of LARGE_POOL_SIZE past the value of LARGE_POOL_MIN_ALLOC.

ORA-00093: Parameter *string* outside valid range *string* to *string*.

Cause: The parameter value was not in a valid range.

Action: Modify the parameter value to be within the valid range.

ORA-00094: *string* requires an integer value

Cause: The parameter value is not an integer.

Action: Modify the parameter value to be an integer.

ORA-00096: invalid value *string* for parameter *string*, must be from among *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00097: use of Oracle SQL feature not in SQL92 *string* Level

Cause: Usage of Oracle's SQL extensions.

Action: Do not use the feature or use the ALTER SESSION SET FLAGGER command to set the appropriate level of SQL92 compliance.

ORA-00098: creating or mounting the database requires a parameter file

Cause: An attempt was made to create or mount the database when the instance was started without a parameter file.

Action: Restart the instance with a parameter file.

ORA-00099: warning: no parameter file specified for *string* instance

Cause: Even though no parameter file was specified, the instance was started with all default values.

Action: None

ORA-00100: no data found

Cause: An application made reference to unknown or inaccessible data.

Action: Handle this condition within the application or make appropriate modifications to the application code. Note that if the application uses Oracle SQL instead of ANSI SQL, ORA-01403 will be generated instead of ORA-00100.

ORA-00101: invalid specification for system parameter DISPATCHERS

Cause: The syntax for the DISPATCHERS parameter is incorrect.

Action: Refer to the manual for correct syntax.

ORA-00102: network protocol *string* cannot be used by dispatchers

Cause: The PROTOCOL type specified was not supported by dispatchers.

Action: Refer to the manual on network protocols supported by the dispatchers.

ORA-00103: invalid network protocol; reserved for use by dispatchers

Cause: The network specified in the SQL*Net connect string is reserved for use by the dispatchers.

Action: Specify other network protocols in the connection string.

ORA-00104: deadlock detected; all public servers blocked waiting for resources

Cause: All available public servers are servicing requests that require resources locked by a client which is unable to get a public server to release the resources.

Action: Increase the limit for the system parameter MAX_SHARED_SERVERS as the system will automatically start up new servers to break the deadlock until the number of servers reaches the value specified in MAX_SHARED_SERVERS.

ORA-00105: too many dispatcher configurations

Cause: Too many dispatcher configurations have been specified. No more can be added.

Action: Consolidate the dispatcher configurations if possible.

ORA-00106: cannot startup/shutdown database when connected to a dispatcher

Cause: An attempt was made to startup/shutdown database when connected to a shared server via a dispatcher.

Action: Re-connect as user INTERNAL without going through the dispatcher. For most cases, this can be done by connect to INTERNAL without specifying a network connect string.

ORA-00107: failed to connect to ORACLE listener process

Cause: Most likely due to the fact that ORACLE listener has not been started.

Action: Start ORACLE listener if it has not been started. Or else contact your ORACLE representative.

ORA-00108: failed to set up dispatcher to accept connection asynchronously

Cause: Most likely due to the fact that the network protocol used by the the dispatcher does not support asynchronous operations.

Action: Contact your ORACLE representative.

ORA-00109: invalid value for attribute *string*: *string*

Cause: The value specified for the attribute was incorrect.

Action: Refer to the manual for the proper values.

ORA-00110: invalid value *string* for attribute *string*, must be between *string* and *string*

Cause: The value specified for the attribute was incorrect.

Action: Specify a value within the range allowed.

ORA-00111: invalid attribute *string*

Cause: The specified attribute was not recognized.

Action: Refer to the manual for the proper keyword to use to specify a dispatcher attribute.

ORA-00112: value of *string* is null

Cause: The attribute was specified with no value.

Action: Specify a non-null value.

ORA-00113: protocol name *string* is too long

Cause: A protocol name specified in the DISPATCHERS system parameter is too long.

Action: Use a valid protocol name for the DISPATCHERS value.

ORA-00114: missing value for system parameter SERVICE_NAMES

Cause: No value was specified for the SERVICE_NAMES system parameter, nor for the DB_NAME parameter.

Action: Add an SERVICE_NAMES or DB_NAME definition to the INIT.ORA file. By default, SERVICE_NAMES is the value of DB_NAME unless SERVICE_NAMES is explicitly specified.

ORA-00115: Cannot connect to database. The selected process has reached its connection limit.

Cause: A connection request was refused because the chosen dispatcher or connection broker has reached its connection limit. The listener chooses which process based on the SERVER parameter in the CONNECT_DATA.

Action: Retry the connection call so the listener can forward it to a different dispatcher or connection broker.

ORA-00116: SERVICE_NAMES name is too long

Cause: A service name specified in the SERVICE_NAMES system parameter is too long.

Action: Use a shorter name in the SERVICE_NAMES value (<= 255 chars).

ORA-00117: PROTOCOL, ADDRESS or DESCRIPTION must be specified

Cause: PROTOCOL, ADDRESS or DESCRIPTION was not specified.

Action: Use one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00118: Only one of PROTOCOL, ADDRESS or DESCRIPTION may be specified

Cause: More than one of PROTOCOL, ADDRESS or DESCRIPTION was specified.

Action: Use only one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00119: invalid specification for system parameter *string*

Cause: The syntax for the specified parameter was incorrect.

Action: Refer to the Oracle Database documentation for the correct syntax.

ORA-00120: invalid 'shared_servers' value for the PDB

Cause: 'shared_servers' cannot be set to a non-zero value in a non-ROOT pluggable database (PDB).

Action: In a multitenant container database (CDB) setup, shared servers can be configured only in ROOT. A non-ROOT PDB can disable shared servers for the PDB by setting 'shared_servers' to 0. No other values are allowed. To reenable within the PDB, use 'alter system reset shared_servers'.

ORA-00122: cannot initialize network configuration

Cause: ORACLE could not initialize SQL*Net version 2.

Action: Check the error stack for detailed information.

ORA-00123: idle public server terminating

Cause: Too many idle servers were waiting on the common queue.

Action: This error is used internally, no action is required.

ORA-00127: dispatcher *string* does not exist

Cause: There is currently no dispatcher running with the specified name.

Action: Retry with a name of the form "D####" denoting an existing dispatcher process.

ORA-00128: this command requires a dispatcher name

Cause: Wrong syntax for ALTER SYSTEM SHUTDOWN

Action: Use correct syntax: ALTER SYSTEM SHUTDOWN [IMMEDIATE] 'dispatcher name'

ORA-00129: listener address validation failed '*string*'

Cause: An error was encountered while validating the listener address.

Action: Resolve error or contact your ORACLE representative.

ORA-00130: invalid listener address '*string*'

Cause: The listener address specification was not valid.

Action: Ensure that all the fields in the listener address such as protocol, port, host, key, and so on are correct. Refer to the Oracle Database parameter documentation. *Params: 1) listener_address: The address of the listener.

ORA-00131: network protocol does not support registration '*string*'

Cause: The specified protocol does not support async notification.

Action: Refer to the manual for information on supported network protocols.

ORA-00132: syntax error or unresolved network name '*string*'

Cause: Listener address has syntax error or cannot be resolved.

Action: If a network name is specified, check that it corresponds to an entry in TNSNAMES.ORA or other address repository as configured for your system. Make sure that the entry is syntactically correct.

ORA-00133: The value of *string* is too long.

Cause: The value specified for the attribute exceeded the maximum characters allowed.

Action: Use shorter names and keywords or remove unnecessary blank spaces.

ORA-00134: invalid DISPATCHERS specification #*string*

Cause: The syntax for the n-th DISPATCHERS specification was incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00135: missing attribute *string*

Cause: The indicated mandatory attribute was not specified.

Action: Specify a value for the attribute which cannot be null and retry the operation.

ORA-00136: invalid LISTENER_NETWORKS specification #*string*

Cause: The syntax for the nth LISTENER_NETWORKS specification was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00137: invalid LISTENER_NETWORKS specification for NAME '*string*'

Cause: The syntax for the LISTENER_NETWORKS specification with the specified NAME was invalid.

Action: Refer to Oracle Database documentation for the correct syntax for the LISTENER_NETWORKS initialization parameter. *Params: 1) network_name: The name of the network.

ORA-00138: all addresses specified for attribute *string* are invalid

Cause: All of the specified addresses or aliases for the attribute were invalid.

Action: Specify at least one valid address or alias.

ORA-00139: duplicate attribute *string*

Cause: The indicated attribute was specified more than once.

Action: Specify the attribute only once, and retry the operation.

ORA-00140: LISTENER_NETWORKS specification with NAME=*string* not allowed

Cause: An internal network name has been specified.

Action: Specify a different network name.

ORA-00141: Addresses or aliases specified for parameter *string* are invalid.

Cause: The specified addresses or aliases for the parameter were invalid.

Action: If an alias is specified, check that it corresponds to an entry in the tnsnames.ora file or in the naming method being used for resolution. Specify at least one valid address or alias and retry. *Params: 1) parameter_name: The name of the parameter that has an error.

ORA-00142: FORWARD_LISTENER and LOCAL_LISTENER are on the same network.

Cause: FORWARD_LISTENER was used with LOCAL_LISTENER for the same network.

Action: Do not use FORWARD_LISTENER with LOCAL_LISTENER in the same network.

ORA-00143: The registration of a remote port is not supported without the registration of a local port.

Cause: The remote HTTP/HTTPS port could not be registered without the local HTTP/HTTPS port.

Action: Register the local HTTP/HTTPS port first.

ORA-00144: LREG control event

ORA-00145: non-root container listener modification disallowed due to SERVICE_SCOPE configuration for LISTENER_NETWORKS

Cause: Modification of the listener parameter at the non-root container was disallowed because LISTENER_NETWORKS on the root container had SERVICE_SCOPE configured.

Action: Remove the SERVICE_SCOPE configuration in LISTENER_NETWORKS at the root container to use the per-container listener.

ORA-00146: invalid SERVICE_SCOPE value *string* for LISTENER_NETWORKS

Cause: An invalid value was specified for SERVICE_SCOPE.

Action: The SERVICE_SCOPE value can be set to CDB, PDB or ALL. The default value of SERVICE_SCOPE is ALL.

ORA-00147: connection refused; shared servers are disabled

Cause: A connection request was refused because the shared_servers parameter is set to 0.

Action: Set the shared_servers parameter to a non-zero value, or connect using a different SERVER parameter in the CONNECT_DATA.

ORA-00148: no dispatcher available to handle outbound connection

Cause: None of the dispatchers were able to accept a new connection.

Action: Dispatchers cannot accept new connections if they are at their connection limits or are in the process of starting up or shutting down. Start a new dispatcher, if needed.

ORA-00149: no compatible dispatcher found for the PROTOCOL

Cause: The protocol used in the dispatcher configuration did not support the one used in the connection.

Action: Start a new dispatcher with the protocol used in the connection, if needed.

ORA-00150: duplicate transaction ID

Cause: Attempted to start a new transaction with an ID already in use by an existing transaction.

Action: Check your application.

ORA-00151: invalid transaction ID

Cause: The specified transaction ID does not correspond to an existing valid transaction.

Action: Check your application.

ORA-00152: current session does not match requested session

Cause: The current session is not the same as the session that was passed into a `upixado()` call.

Action: Check your application.

ORA-00153: internal error in XA library

Cause: The XA library could not access thread-specific pointers.

Action: Contact customer support.

ORA-00154: protocol error in transaction monitor

Cause: The transaction monitor returned `TMJOIN` on an `AX_REG` call but the transaction was locally suspended.

Action: Contact the transaction monitor customer support.

ORA-00155: cannot perform work outside of global transaction

Cause: The application tried to perform some work on either an Oracle 7.3 server or an Oracle8 server with local transactions disabled while outside of a global transaction.

Action: Check if the application is connected to an Oracle 7.3 server. The Transaction monitor must not return a `NULL` `XID` on an `AX_REG` call when the resource manager is Oracle 7.3. If the application is connected to an Oracle8 server, either set `nolocal=f` in the `xa_open` string or start a global transaction prior to attempting the work.

ORA-00160: global transaction length *string* is illegal (maximum allowed *string*)

Cause: An external global transaction ID with a length either too large or 0 was passed in in a distributed transaction.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00161: transaction branch length *string* is illegal (maximum allowed *string*)

Cause: An external transaction branch ID with a length either too large or 0 was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00162: external dbid length *string* is greater than maximum (*string*)

Cause: An external database name with too large a length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00163: internal database name length *string* is greater than maximum (*string*)

Cause: An internal database name with a too large length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00164: distributed autonomous transaction disallowed within migratable distributed transaction

Cause: A request was made by the application to start a distributed autonomous transaction when the application was in a migratable distributed transaction.

Action: Roll back or commit the current distributed transaction first.

ORA-00165: migratable distributed autonomous transaction with remote operation is not allowed

Cause: A request was made by the application to start a migratable distributed autonomous transaction with remote operation.

Action: n/a

ORA-00166: remote/local nesting level is too deep

Cause: Too many remote table operations required a reverse trip back to the local site, for example to execute a local function on a remote table.

Action: Rearrange the query or co-locate the functions with the tables.

ORA-00200: control file could not be created

Cause: It was not possible to create the control file.

Action: Check that there is sufficient disk space and no conflicts in filenames and try to create the control file again.

ORA-00201: control file version *string* incompatible with ORACLE version *string*

Cause: The compatible parameter was set to a lower version than in the control file or the control file was created by incompatible software.

Action: Restart with a correct definition of the compatible parameter or restart with a compatible software release or use CREATE CONTROLFILE to create a new control file that is compatible with this release.

ORA-00202: control file: '*string*'

Cause: This message reports the name file involved in other messages.

Action: See associated error messages for a description of the problem.

ORA-00203: using the wrong control files

Cause: The mount ID in the control file is not the same as the mount ID in the control file used by the first instance to mount this database. The control files are for the same database but they are not the same files. Most likely one instance is using a backup control file.

Action: Check that the correct control files were specified.

ORA-00204: error in reading (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on reading the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00205: error in identifying control file, check alert log for more info

Cause: The system could not find a control file of the specified name and size.

Action: Check that ALL control files are online and that they are the same files that the system created at cold start time.

ORA-00206: error in writing (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on writing the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00207: control files are not for the same database

Cause: The database ID in the control file is not the same as the database ID in the control file used by the first instance to mount this database. Most likely one of the mounts used the wrong control file or there are two databases with the same name.

Action: Check that the control file is for the correct database and is not an old version.

ORA-00208: number of control file names exceeds limit of *string*

Cause: An attempt was made to use more control files than Oracle supports.

Action: Shut down Oracle. Reduce the number of control files specified in the CONTROL_FILES parameter in the initialization parameter file, and restart Oracle. Delete unused files.

ORA-00209: control file blocksize mismatch, check alert log for more info

Cause: The block size in the control file header does not match the size specified in the DB_BLOCK_SIZE parameter.

Action: Look at the alert log for more information.

ORA-00210: cannot open the specified control file

Cause: Cannot open the control file.

Action: Check to make sure the control file exists and is not locked by some other program.

ORA-00211: control file does not match previous control files

Cause: A control file was specified that belongs to another database.

Action: Find and install the correct control file.

ORA-00212: block size *string* below minimum required size of *string* bytes

Cause: The block size specified was too small. Space for the system overhead is required.

Action: Specify a larger block size and retry the operation.

ORA-00213: cannot reuse control file; old file size *string*, *string* required

Cause: To reuse a control file, it must be the same size as the one previously used.

Action: Either do not specify REUSE, or specify a matching combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses in the CREATE DATABASE or CREATE CONTROLFILE statement.

ORA-00214: control file '*string*' version *string* inconsistent with file '*string*' version *string*

Cause: An inconsistent set of control files, datafiles/logfiles, and redo files was used.

Action: Use a consistent set of control files, datafiles/logfiles, and redo log files. That is, all the files must be for the same database and from the same time period.

ORA-00215: must be at least one control file

Cause: No control file is specified or the control file specified does not exist.

Action: Specify at least one valid control file and retry the operation.

ORA-00216: control file could not be resized for migration from 8.0.2

Cause: The control file created by release 8.0.2 was missing some record types. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00217: control file could not be resized for new record types

Cause: The control file was missing some new record types supported by this release. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00218: block size *string* of control file '*string*' does not match DB_BLOCK_SIZE (*string*)

Cause: The block size as stored in the control file header is different from the value of the initialization parameter DB_BLOCK_SIZE. This might be due to an incorrect setting of DB_BLOCK_SIZE, or else might indicate that the control file has either been corrupted or belongs to a different database.

Action: Restore a good copy of the control file. If the control file is known to be clean set the DB_BLOCK_SIZE to match control file headers block size value.

ORA-00219: required control file size (*string* logical blocks) exceeds maximum allowable size (*string* logical blocks)

Cause: An invocation of CREATE DATABASE or CREATE CONTROLFILE was executed specifying a combination of parameters that would require the control file size in blocks to exceed the maximum allowable value.

Action: In the case of CREATE DATABASE or CREATE CONTROLFILE, use a different combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses.

ORA-00220: control file not mounted by first instance, check alert log for more info

Cause: The specified control file has a different mount ID than the other control files that are being mounted. This means that the first instance to mount the database did not use this control file.

Action: Find and install the correct control file.

ORA-00221: error on write to control file

Cause: An error occurred when writing to one or more of the control files.

Action: See accompanying messages.

ORA-00222: operation would reuse name of a currently mounted control file

Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of the specified currently mounted control file.

Action: Retry the operation with a different filename.

ORA-00223: convert file is invalid or incorrect version

Cause: An Oracle7 to Oracle8 convert file contains invalid data or was created with an different version of the migration utility. This error can also be caused by incorrect ORACLE_HOME environment variable when ALTER DATABASE CONVERT command is issued.

Action: Use a correct version of the convert file or regenerate it with the migration utility. Make sure that the migration utility is the same version as the Oracle8 RDBMS executable and that the ORACLE_HOME environment variable is properly set.

ORA-00224: control file resize attempted with illegal record type (*string*)

Cause: An attempt was made to expand or shrink the control file by calling cfileResizeSection using an invalid value for the RECORD_TYPE parameter.

Action: Use a value for the RECORD_TYPE parameter that specifies a valid record type other than type 0 (valid range is 1-16).

ORA-00225: expected size *string* of control file differs from actual size *string*

Cause: The expected size of the control file as stored in its header was different than the actual operating system file size. This usually indicates that the control file was corrupted.

Action: Restore a good copy of the control file.

ORA-00226: operation disallowed while alternate control file open

Cause: The attempted operation could not be executed at this time because this process had an alternate control file open for fixed table access.

Action: Retry the operation after calling cfileUseCurrent.

ORA-00227: corrupt block detected in control file: (block *string*, # blocks *string*)

Cause: A block header corruption or checksum error was detected on reading the control file.

Action: Use the CREATE CONTROLFILE or RECOVER DATABASE USING BACKUP CONTROLFILE command.

ORA-00228: length of alternate control file name exceeds maximum of *string*

Cause: The specified filename, which was supplied as a parameter to cfileSetSnapshotName or cfileUseCopy, exceeds the maximum filename length for this operating system.

Action: Retry the operation with a shorter filename.

ORA-00229: operation disallowed: already hold snapshot control file enqueue

Cause: The attempted operation cannot be executed at this time because this process currently holds the snapshot control file enqueue.

Action: Retry the operation after calling `cfileUseCurrent` to release the snapshot control file enqueue.

ORA-00230: operation disallowed: snapshot control file enqueue unavailable

Cause: The attempted operation cannot be executed at this time because another process currently holds the snapshot control file enqueue.

Action: Retry the operation after the concurrent operation that is holding the snapshot control file enqueue terminates.

ORA-00231: snapshot control file has not been named

Cause: During an invocation of `cfileMakeAndUseSnapshot` or `cfileUseSnapshot` it was detected that no filename for the snapshot control file had previously been specified.

Action: Specify a name for the snapshot control file by calling `cfileSetSnapshotName`.

ORA-00232: snapshot control file is nonexistent, corrupt, or unreadable

Cause: The snapshot control file was found to be nonexistent, corrupt, or unreadable during an invocation of `cfileUseSnapshot`.

Action: Call `cfileMakeAndUseSnapshot` again (or for the first time).

ORA-00233: copy control file is corrupt or unreadable

Cause: The specified copy control file was found to be corrupt or unreadable during an invocation of `cfileUseCopy`.

Action: Before retrying `cfileUseCopy`, use the `ALTER DATABASE BACKUP CONTROLFILE` command and specify the same filename that was specified for `cfileUseCopy`.

ORA-00234: error in identifying or opening snapshot or copy control file

Cause: A snapshot or copy control file of the specified name could not be found or opened during an invocation of `cfileUseSnapshot`, `cfileMakeAndUseSnapshot`, or `cfileUseCopy`.

Action: Re-create the snapshot or copy control file using `cfileMakeAndUseSnapshot` or `ALTER DATABASE BACKUP CONTROLFILE`, respectively.

ORA-00235: control file read without a lock inconsistent due to concurrent update

Cause: Concurrent update activity on a control file caused a process to read inconsistent information from the control file without a lock.

Action: Retry the operation.

ORA-00236: snapshot operation disallowed: mounted control file is a backup

Cause: Attempting to invoke `cfileSetSnapshotName`, `cfileMakeAndUseSnapshot`, or `cfileUseSnapshot` when the currently mounted control file is a backup control file.

Action: Mount a current control file and retry the operation.

ORA-00237: snapshot operation disallowed: control file newly created

Cause: An attempt to invoke cfileMakeAndUseSnapshot with a currently mounted control file that was newly created with CREATE CONTROLFILE was made.

Action: Mount a current control file and retry the operation.

ORA-00238: operation would reuse a filename that is part of the database

Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of a file that is currently part of the database.

Action: Retry the operation with a different filename.

ORA-00239: timeout waiting for control file enqueue: held by '*string*' for more than *string* seconds

Cause: The specified process waited the maximum allowed time for the control file enqueue.

Action: Restart the blocking instance indicated in the incident trace file or reboot the blocking node.

ORA-00240: control file enqueue held for more than *string* seconds

Cause: The current process did not release the control file enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-00241: operation disallowed: control file is not yet checked against data dictionary

Cause: Either the control file was recently created by using CREATE CONTROLFILE, an incomplete recovery was done, or some previous operations require the control file to be re-checked against the data dictionary.

Action: Shut down and restart the database or the pluggable database so that the check is performed, and then retry the operation.

ORA-00242: maximum allowed filename records used up in control file

Cause: Failed to create a new filename record entry in the control file because the maximum allowed filename records have been allocated and are in use.

Action: Free up controlfile filename section entries by dropping unwanted tablespaces/ datafiles/redfiles.

ORA-00243: failed to expand control file filename section by *string* records

Cause: Failed to expand control file filename section. See alert log for more details.

Action: Retry the operation after increasing disk space for controlfile expansion.

ORA-00244: concurrent control file backup operation in progress

Cause: Failed to create a control file backup because concurrent control file backup operation was in progress.

Action: Retry backup creation later.

ORA-00245: control file backup failed; in Oracle RAC, target might not be on shared storage

Cause: Failed to create a control file backup because some process signaled an error during backup creation. This is likely caused by the backup target (i.e., RMAN snapshot controlfile) being on a local file system so it could not be accessed by other instances. It can also be caused by other I/O errors to the backup target. Any process of any instance that starts a read/write control file transaction must have access to the backup control file during backup creation.

Action: Check whether RMAN snapshot controlfile is on shared storage. Also, check alert files of all instances for further information.

ORA-00246: control file backup failed; error accessing backup target

Cause: An attempt to create a control file backup failed because some process signaled an I/O error when accessing the backup target.

Action: Check alert and trace files for further information.

ORA-00250: archiver not started

Cause: An attempt was made to stop automatic archiving, but the archiver process was not running.

Action: No action required.

ORA-00251: LOG_ARCHIVE_DUPLEX_DEST cannot be the same destination as string *string*

Cause: The destination specified by the LOG_ARCHIVE_DUPLEX_DEST parameter is the same as the destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command.

Action: Specify a different destination for parameter LOG_ARCHIVE_DUPLEX_DEST, or specify a different destination with the ALTER SYSTEM command.

ORA-00252: log *string* of thread *string* is empty, cannot archive

Cause: A log must be used for redo generation before it can be archived. The specified redo log was not been used since it was introduced to the database. However it is possible that instance death during a log switch left the log empty.

Action: Empty logs do not need to be archived. Do not attempt to archive the redo log file.

ORA-00253: The character limit of *string* is exceeded by archive destination string *string*.

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command was too long.

Action: Modify the ALTER SYSTEM ARCHIVE LOG START TO command with a string shorter than the specified limit.

ORA-00254: error in archive control string '*string*'

Cause: The specified archive log location was invalid in the archive command or the LOG_ARCHIVE_DEST initialization parameter.

Action: Ensure that the used archive string refers to a valid online device.

ORA-00255: error archiving log *string* of thread *string*, sequence # *string*

Cause: An error occurred during archiving.

Action: Check the accompanying message stack for more detailed information. If the online log is corrupted, then the log can be cleared using the UNARCHIVED option. This will make any existing backups useless for recovery to any time after the log was created, but will allow the database to generate redo.

ORA-00256: cannot translate ALTER SYSTEM ARCHIVE LOG START TO destination *string string*

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command could not be translated.

Action: Check the message stack for more detailed information. Retry the ALTER SYSTEM command using a different destination.

ORA-00257: Archiver error. Connect AS SYSDBA only until resolved.

Cause: The archiver process received an error while trying to archive a redo log. If the problem is not resolved soon, the database will stop executing transactions. The most likely cause of this message is that the destination device is out of space to store the redo log file. Another possible cause is that a destination marked as MANDATORY has failed.

Action: Check the alert log and trace files for detailed error information.

ORA-00258: manual archiving in NOARCHIVELOG mode must identify log

Cause: The database is in NOARCHIVELOG mode and a command to manually archive a log did not specify the log explicitly by sequence number, group number or filename.

Action: Specify log by filename, by group number or by thread and sequence number.

ORA-00259: log *string* of open instance *string* (thread *string*) is the current log, cannot archive

Cause: An attempt was made to archive the current log of an open thread. This was not allowed because the redo log file might be in use for the generation of redo entries.

Action: Force a log switch in the instance where the thread is open. If no instances are open, then open the database so that instance recovery can recover the thread.

ORA-00260: cannot find online log sequence *string* for thread *string*

Cause: The log sequence number supplied to the archival command does not match any of the online logs for the thread. The log might have been reused for another sequence number, it might have been dropped, the sequence number might be greater than the current log sequence number, or the thread might not have any logs.

Action: Check the ARCHIVE statement, then specify a valid log sequence number. Specify a valid log sequence number.

ORA-00261: log *string* of thread *string* is being archived or modified

Cause: The log is either being archived by another process or an administrative command is modifying the log. Operations that modify the log include clearing, adding a member, dropping a member, renaming a member, and dropping the log.

Action: Wait for the current operation to complete and try again.

ORA-00262: current log *string* of closed thread *string* cannot switch log

Cause: The log cannot be cleared or manually archived because it is the current log of a closed thread. Also, it was not possible to switch logs because another log was current. All other logs for the thread must be either archived, or cleared, and cannot be reused.

Action: Either archive another log in the same thread first, or clear the log. For more information on why the switch cannot be completed, see attached errors.

ORA-00263: there are no logs that need archiving for thread *string*

Cause: An attempt was made to manually archive the unarchived logs in this thread but no logs needed archiving.

Action: No action required.

ORA-00264: no recovery required

Cause: An attempt was made to perform media recovery on files that do not // need any type of recovery.

Action: Do not attempt to perform media recovery on the selected files. Check to see that the filenames were entered properly. If not, retry the command with the proper filenames.

ORA-00265: cannot set ARCHIVELOG mode because instance recovery is required

Cause: The database either crashed or was shutdown with the ABORT option. Media recovery could not be enabled because the online logs may not be sufficient to recover the current data files.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-00266: name of archived log file needed

Cause: During media recovery, the name of an archived redo log file was requested, but no name was entered.

Action: Mount the correct redo log file and enter its name when it is requested.

ORA-00267: name of archived log file not needed

Cause: During media recovery, the name of an archived redo log file was entered, but no name was requested.

Action: Continue media recovery, but do not enter a new log name.

ORA-00268: specified log file does not exist '*string*'

Cause: The specified redo log file did not exist.

Action: Check the spelling and capitalization of the file name and retry the command.

ORA-00269: specified log file is part of thread *string* and not *string*

Cause: The given redo log file is not part of the given thread.

Action: Check that the thread of the redo log file matches the thread on the command line. If not, use a redo log file from the appropriate thread. Retry the command after correcting the error.

ORA-00270: error creating archive log *string*

Cause: An error was encountered while creating or opening the destination file for archiving.

Action: Check if the archive destination is valid and ensure that there is sufficient space on the destination device.

ORA-00271: there are no logs that need archiving

Cause: An attempt was made to archive the unarchived redo log files manually, but there are no files that need to be archived.

Action: No action required.

ORA-00272: error writing archive log *string*

Cause: An I/O error occurred while archiving a redo log file.

Action: Check whether the output device is still available and correct any device errors that may have occurred. Also, ensure that sufficient space for archiving is available on the output device.

ORA-00273: media recovery of direct load data that was not logged

Cause: A media recovery session encountered a table that was loaded by the direct loader without logging any redo information. Some or all of the blocks in this table are now marked as corrupt.

Action: The table must be dropped or truncated so that the corrupted blocks can be reused. If a more recent backup of the file is available, try to recover this file to eliminate this error.

ORA-00274: illegal recovery option *string*

Cause: An illegal option was specified for a recovery command.

Action: Correct the syntax and retry the command.

ORA-00275: media recovery has already been started

Cause: An attempt was made to start a second media recovery operation in the same session.

Action: Complete or cancel the first media recovery session or start another session to perform media recovery.

ORA-00276: CHANGE keyword specified but no change number given

Cause: The CHANGE keyword was specified on the command line, but no change number was given.

Action: Retry the command using a valid change number after the CHANGE keyword.

ORA-00277: illegal option to the UNTIL recovery flag *string*

Cause: Only CANCEL, CHANGE, CONSISTENT and TIME can be used with the UNTIL keyword.

Action: Correct the syntax.

ORA-00278: log file '*string*' no longer needed for this recovery

Cause: The specified archived redo log file was not needed for the current recovery.

Action: No action required. The archived redo log file can be removed from the current location to conserve disk space. However, the archived redo log file may be required for another recovery session in the future.

ORA-00279: change *string* generated at *string* needed for thread *string*

Cause: The requested log is required to proceed with recovery.

Action: Please supply the requested log with "ALTER DATABASE RECOVER LOGFILE <file_name>" or cancel recovery with "ALTER DATABASE RECOVER CANCEL".

ORA-00280: change *string* for thread *string* is in sequence #*string*

Cause: This message helps to locate the redo log file with the specified change number requested by other messages.

Action: Use the information provided in this message to specify the required archived redo log files for other errors.

ORA-00281: media recovery may not be performed using dispatcher

Cause: An attempt was made to use a dispatcher process for media recovery. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform media recovery.

ORA-00282: UPI *string* call not supported, use ALTER DATABASE RECOVER

Cause: The given UPI call is no longer supported.

Action: Use the ALTER DATABASE RECOVER command for all recovery actions.

ORA-00283: recovery session canceled due to errors

Cause: An error during recovery was determined to be fatal enough to end the current recovery session.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00284: recovery session still in progress

Cause: An error during recovery was determined to be minor enough to allow the current recovery session to continue.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00285: TIME not given as a string constant

Cause: TIME was not followed by a string constant for the time.

Action: Enter the time enclosed in single quotation marks.

ORA-00286: no members available, or no member contains valid data

Cause: None of the members of a redo log file group are available, or the available members do not contain complete data.

Action: If a member is temporarily offline, attempt to make it available. Make sure that the correct filenames are being used, especially if the redo log file is being accessed from a remote location.

ORA-00287: specified change number *string* not found in thread *string*

Cause: The given change number was not listed in any of the online redo logs for the given thread.

Action: Check the statement to ensure that a valid change number is given. You can try using the NEXT option if this error occurs during a request to archive logs. For other requests, retry the request.

ORA-00288: to continue recovery type ALTER DATABASE RECOVER CONTINUE

Cause: During media recovery, a new log is not required but the continuation command is necessary to do a checkpoint and report errors.

Action: Type ALTER DATABASE RECOVER CONTINUE and recovery will resume.

ORA-00289: suggestion : *string*

Cause: This message reports the next redo log filename that is needed, according to the initialization parameters LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT. This message assumes that LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT are the same now as when the required redo log file was archived.

Action: Consider using this filename for the next log needed for recovery.

ORA-00290: operating system archival error occurred. See error below

Cause: While attempting to archive to a redo log file, the server encountered an unexpected operating system error.

Action: Correct the operating system error given in the messages and retry the operation. See also your operating system-specific Oracle documentation.

ORA-00291: numeric value required for PARALLEL option

Cause: A recovery command was specified incorrectly. The PARALLEL option must be followed by a numeric argument that specifies the degree of parallelism.

Action: Re-enter the command with a numeric argument specifying the degree of parallelism desired.

ORA-00292: parallel recovery feature not installed

Cause: A parallel recovery was requested when the parallel recovery option is not installed.

Action: Delete the PARALLEL clause from the RECOVER command. Also, delete the RECOVERY_PARALLELISM parameter in the initialization file.

ORA-00293: control file out of sync with redo log

Cause: The redo log file and control file are out of sync because a non-current control file was specified when the instance was started.

Action: Retry the RECOVER command using the current control file, or retry the RECOVER command using the USING BACKUP CONTROLFILE clause.

ORA-00294: invalid archivelog format specifier '*string*'

Cause: An invalid format specifier was found in the LOG_ARCHIVE_FORMAT initialization parameter. The only characters permitted following the % symbol are %, a, A, d, D, r, R, s, S, t, and T.

Action: Correct the format specifier and re-start the instance.

ORA-00295: data or temporary file number *string* is invalid; must be between 1 and *string*

Cause: An invalid data or temporary file number was specified.

Action: Specify a valid data or temporary file number and retry the operation.

ORA-00296: maximum number of files (*string*) exceeded for RECOVER DATAFILE LIST

Cause: The RECOVER DATAFILE LIST command specified more datafiles than are allowed by the DB_FILES initialization parameter. This error occurs when doing recovery with Recovery Manager, and the instance has been started with a DB_FILES parameter specifying fewer datafiles than recovery manager needs to recover to satisfy the user's RECOVER command.

Action: Re-start the instance with a higher value for DB_FILES.

ORA-00297: must specify RECOVER DATAFILE LIST before RECOVER DATAFILE START

Cause: The RECOVER DATAFILE START command was issued, but no RECOVER DATAFILE LIST commands had been issued. This only happens when doing recovery with Recovery Manager, and is an internal error in Recovery Manager, because Recovery Manager should always issue RECOVER DATAFILE LIST before RECOVER DATAFILE START.

Action: Contact customer support

ORA-00298: Missing or invalid attribute value

Cause: A non-zero integer value is required when the following keyword attributes are specified: TIMEOUT, EXPIRE, DELAY, NEXT

Action: Correct the syntax and retry the command.

ORA-00299: must use file-level media recovery on data file *string*

Cause: The control file does not contain an entry for this file, so block media recovery cannot be done.

Action: Restore the data file and perform file-level media recovery.

ORA-00300: illegal redo log block size *string* specified - exceeds limit of *string*

Cause: The specified block size of the redo log is greater than the maximum block size for the operating system.

Action: Create the redo log on a device with a smaller block size

ORA-00301: error in adding log file '*string*' - file cannot be created

Cause: The creation of the redo log file failed

Action: Check: 1) there is enough storage space on the device 2) the name of the file is valid 3) the device is online 4) an IO error occurred Also, it is possible REUSE was specified on the command line and a file of the incorrect size exists. Either do not specify REUSE or use a file of the correct size.

ORA-00302: limit of *string* logs exceeded

Cause: The maximum number of redo log files has been exceeded.

Action: Use the CREATE CONTROLFILE command with a larger value for MAXLOGFILES if the compatibility is lower than 10.2.0. Otherwise, allocate more storage space for the control file.

ORA-00303: cannot process Parallel Redo

Cause: A redo log containing Parallel Redo has been detected. The current Oracle release cannot process this format of redo.

Action: Use a later release that supports Parallel Redo. to process this log.

ORA-00304: requested INSTANCE_NUMBER is busy

Cause: An instance tried to start by using a value of the initialization parameter INSTANCE_NUMBER that is already in use.

Action: Either a) specify another INSTANCE_NUMBER, b) shut down the running instance with this number c) wait for instance recovery to complete on the instance with this number.

ORA-00305: log *string* of thread *string* inconsistent; belongs to another database

Cause: The database ID in the redo log file does not match the database ID in the control file. This redo log file is not from the current database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00306: limit of *string* instances in this database

Cause: Starting this instance would exceed the maximum number of instances allowed for this database. This message occurs only with STARTUP shared and multiple instances.

Action: You cannot start more than the lower of a) port-specific limit as to the number of instances b) the number of instances specified at create-database time

ORA-00307: requested INSTANCE_NUMBER out of range, maximum is *string*

Cause: The initialization parameter INSTANCE_NUMBER specified a number that was out of range.

Action: Change INSTANCE_NUMBER to a valid range and restart the instance. The minimum value is one and the maximum value is the lower of the operating system-specific maximum or the MAXINSTANCES option specified in the CREATE DATABASE statement. See also your operating system-specific Oracle documentation.

ORA-00308: cannot open archived log '*string*'

Cause: The system cannot access a required archived redo log file.

Action: Check that the off line log exists, the storage device is online, and the archived file is in the correct location. Then attempt to continue recovery or restart the recovery session.

ORA-00309: log belongs to wrong database

Cause: The system cannot access the archived redo log because it belongs to another database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00310: archived log contains sequence *string*; sequence *string* required

Cause: The archived log was out of sequence, probably because it was corrupt or the wrong redo log file name was specified during recovery.

Action: Specify the correct redo log file; then retry the operation.

ORA-00311: cannot read header from archived log

Cause: An I/O error occurred when attempting to read the log file header from the specified archived redo log file.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00312: online log *string* thread *string*: '*string*'

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00313: open failed for members of log group *string* of thread *string*

Cause: The online log cannot be opened. May not be able to find file.

Action: See accompanying errors and make log available.

ORA-00314: log *string* of thread *string*, expected sequence# *string* doesn't match *string*

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00315: log *string* of thread *string*, wrong thread # *string* in header

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00316: log *string* of thread *string*, type *string* in header is not log file

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00317: file type *string* in header is not log file

Cause: This is not an archived log file.

Action: Find the correct file and try again.

ORA-00318: log *string* of thread *string*, expected file size *string* doesn't match *string*

Cause: On header read the file size indicated in the control file did not match the file size contained in the log file.

Action: Restore correct file or reset logs.

ORA-00319: log *string* of thread *string* has incorrect log reset status

Cause: Check of log file header at database open found that an online log has log reset data that is different from the control file. The log is probably an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00320: cannot read file header from log *string* of thread *string*

Cause: The file is not available.

Action: Restore the log file.

ORA-00321: log *string* of thread *string*, cannot update log file header

Cause: Cannot write to the log file.

Action: Restore the access to the file.

ORA-00322: log *string* of thread *string* is not current copy

Cause: Check of log file header at database open found that an online log appears to be an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00323: Current log of thread *string* not useable and all others need archiving

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs need to be archived before they can be used.

Action: Archive the logs for the thread then retry open.

ORA-00324: log file '*string*' translated name '*string*' too long, *string* characters exceeds *string* limit

Cause: the translated name for a log file is too long.

Action: Choose a untranslated name that yields a shorter translated name.

ORA-00325: archived log for thread *string*, wrong thread # *string* in header

Cause: The archived log is corrupted or for another thread. Can not use the log for applying redo.

Action: Find correct archived log.

ORA-00326: Log begins at change *string*. Earlier change *string* is needed.

Cause: The log supplied for recovery could not be used because it was generated after the log that was needed.

Action: Find the correct archived log. Use the earlier System Change Number (SCN) value from the message to look up the log in the V\$ARCHIVED_LOG dynamic view or other log repository.

ORA-00327: log *string* of thread *string*, physical size *string* less than needed *string*

Cause: A log file has shrunk in size. This is likely to have been caused by operator or operating system error.

Action: Restore the log file from backup. If backup is not available, drop this log and re-create. If the database was shut down cleanly, no further action should be required; otherwise incomplete recovery may be required.

ORA-00328: Archived log ends at change *string*. Later change *string* is needed.

Cause: The log supplied for recovery could not be used because it was generated before the log that was needed.

Action: Find the correct archived log. Use the later System Change Number (SCN) value from the message to look up the log in the V\$ARCHIVED_LOG dynamic view or other log repository.

ORA-00329: archived log begins at change *string*, need change *string*

Cause: The archived log is not the correct log. An earlier log is needed.

Action: Restore the correct log file.

ORA-00330: archived log ends at change *string*, need change *string*

Cause: The archived log is not the correct log. A later log is needed.

Action: Restore the correct log file.

ORA-00331: log version *string* incompatible with ORACLE version *string*

Cause: The log was written by incompatible version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00332: archived log is too small - may be incompletely archived

Cause: The log is smaller than the space allocated in it. May be the result of a shutdown abort while it was being written by the archiver.

Action: Get a complete version of this log and use it for recovery. There should either be an online version of it or a copy that was successfully archived.

ORA-00333: redo log read error block *string* count *string*

Cause: An IO error occurred while reading the log described in the accompanying error.

Action: Restore accessibility to file, or get another copy of the file.

ORA-00334: archived log: '*string*'

Cause: Reporting filename for details of another error

Action: See associated error messages

ORA-00335: online log *string*: No log with this number, log does not exist

Cause: Reporting filename for details of another error

Action: See associated error messages

ORA-00336: log file size *string* blocks is less than minimum *string* blocks

Cause: The log file size as specified in create database is too small.

Action: Increase the log file size.

ORA-00337: log file '*string*' does not exist and no size specified

Cause: An attempt to add a log found neither an existing file nor a size for creating the file.

Action: Specify a size for the log file.

ORA-00338: log *string* of thread *string* is more recent than control file

Cause: The control file change sequence number in the log file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-00339: archived log does not contain any redo

Cause: The archived log is not the correct log. It is a copy of a log file that has never been used for redo generation, or was an online log being prepared to be the current log.

Action: Restore the correct log file.

ORA-00340: IO error processing online log *string* of thread *string*

Cause: An IO error occurred on the named online log.

Action: Restore accessibility to file, or restore file from backup.

ORA-00341: log *string* of thread *string*, wrong log # *string* in header

Cause: The internal information in an online log file does not match the control file.

Action: Restore correct file or reset logs.

ORA-00342: archived log does not have expected resetlogs SCN *string*

Cause: Recovery was given a log that does not belong to current incarnation or one of the parent incarnation. There should be another log that contains the correct redo.

Action: Supply the correct log file.

ORA-00344: unable to re-create online log '*string*'

Cause: An I/O failure occurred when attempting to re-create an online as part of either ALTER DATABASE OPEN RESETLOGS or ALTER DATABASE CLEAR LOGFILE command.

Action: Correct the file/device as indicated by accompanying errors.

ORA-00345: redo log write error block *string* count *string*

Cause: An IO error has occurred while writing the log

Action: Correct the cause of the error, and then restart the system. If the log is lost, apply media/incomplete recovery.

ORA-00346: log member marked as STALE and closed

Cause: A log file member was no longer complete.

Action: Correct the underlying problem by referring to the other error messages found with this one.

ORA-00347: log *string* of thread *string*, expected block size *string* doesn't match *string*

Cause: On header read the blocksize indicated in the control file did not match the blocksize contained in the log file.

Action: Restore correct file or reset logs.

ORA-00348: single-process redo failure. Must abort instance

Cause: A failure occurred during a critical portion of the log code during single process operation. This error does not occur during normal multi-process operation.

Action: Shutdown abort and warmstart the database.

ORA-00349: failure obtaining block size for 'string'

Cause: The operating system was unable to determine the blocksize for the given filename.

Action: Consult the accompanying error message, and correct the device or specify another filename.

ORA-00350: log *string* of instance *string* (thread *string*) needs to be archived

Cause: The command cannot be done because the log has not been archived, and media recovery has been enabled.

Action: Archive the log or disable media recovery. If the command supports an UNARCHIVED option then it can be used. However this may result in making backups unuseable, and forcing the drop of some offline files.

ORA-00351: recover-to time invalid

Cause: The time specified in a recover-until statement must be after January 1st 1988.

Action: Specify a time after January 1st 1988.

ORA-00352: all logs for thread *string* need to be archived - cannot enable

Cause: Attempting to enable a thread with all logs needing to be archived, and media recovery has been enabled. There is no log that can be made the new current log for the thread.

Action: Archive a log for the thread or disable media recovery.

ORA-00353: log corruption near block *string* change *string* time *string*

Cause: Some type of redo log corruption has been discovered. This error describes the location of the corruption. Accompanying errors describe the type of corruption.

Action: Do recovery with a good version of the log or do incomplete recovery up to the indicated change or time.

ORA-00354: corrupt redo log block header

Cause: The block header on the redo block indicated by the accompanying error, is not reasonable.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database.

ORA-00355: change numbers out of order

Cause: A change number found in the redo log is lower than a previously encountered change number. The log is corrupted in some way. The corruption may be at the earlier change or at this one.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00356: inconsistent lengths in change description

Cause: A change record in the redo log contains lengths that do not add up to a consistent value. The log is corrupted in some way.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00357: too many members specified for log file, the maximum is *string*

Cause: An add logfile or add logfile member command would result in a log with too many members. The number of members is set when the database is created.

Action: Use fewer log file members.

ORA-00358: Too many file members specified, the maximum is *string*

Cause: A create or alter statement specified too many members in a parenthesised file list.

Action: Specify a number of file members that is within the port-defined limit.

ORA-00359: logfile group *string* does not exist

Cause: An add logfile member or drop logfile request specified a logfile group number that does not exist.

Action: Check the configuration of the log files and reissue the command.

ORA-00360: not a logfile member: *string*

Cause: A filename was given to drop logfile member that is not a part of the database, or which is a data file.

Action: Supply a valid logfile member name.

ORA-00361: cannot remove last log member *string* for group *string*

Cause: An attempt has been made to remove the last member of a log file group.

Action: If desired, delete the entire log, by using DROP LOGFILE.

ORA-00362: member is required to form a valid logfile in group *string*

Cause: A request to drop a logfile member was denied because it would remove data required to form a complete logfile.

Action: If desired, delete the entire log (after archiving if required), by using DROP LOGFILE;

ORA-00363: log is not the archived version

Cause: The log given to recovery is a backup of the online version from the time it was the current log. The archived version of the log would not be marked as end of thread. This error can also be caused by failing to list the current log of an enabled thread in a CREATE CONTROLFILE command.

Action: Find the archived version of the log and supply its name. If this is media recovery immediately following a CREATE CONTROLFILE, be sure the current log for this thread was included.

ORA-00364: cannot write header to new log member

Cause: An i/o error occurred when attempting to write the header to a log member that is being added to an existing group.

Action: See accompanying errors. Fix problem or use another file.

ORA-00365: the specified log is not the correct next log

Cause: The specified log failed to pass checks to ensure it corresponds to the log that was just applied. This is probably the result of using a log that was generated against a cold backup image of the database.

Action: Find the log that was generated by this copy of the database and give that filename to recovery.

ORA-00366: log *string* of thread *string*, checksum error in the file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find and install correct version of log or reset logs.

ORA-00367: checksum error in log file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find the correct file and try again.

ORA-00368: checksum error in redo log block

Cause: The redo block indicated by the accompanying error, is not valid. It has a checksum that does not match the block contents.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database. Restore correct file or reset logs.

ORA-00369: Current log of thread *string* not useable and other log being cleared

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs are being cleared or need to be archived before they can be used.

Action: If the ALTER DATABASE CLEAR LOGFILE command is still active then wait for it to complete. Otherwise reissue the CLEAR command. If there are other online logs for the thread, that are not being cleared, then archive the logs.

ORA-00370: potential deadlock during kcbchange operation

Cause: Error code used internally by software. Should never be reported

Action: Treat as internal error. See error 600.

ORA-00371: not enough shared pool memory, should be at least *string* bytes

Cause: The SHARED_POOL_SIZE initialization parameter was too small.

Action: Increase the parameter value.

ORA-00372: file *string* cannot be modified at this time

Cause: attempting to modify the contents of a file that cannot be modified. The file is most likely part of a read only tablespace but may be in the process of going offline, or the database may be in the process of closing.

Action: check the status of the file and its tablespace

ORA-00373: online log version *string* incompatible with ORACLE version *string*

Cause: The online log was written by incompatible version of Oracle. Can occur when the log file was created by either a new or older version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00374: parameter `db_block_size` = *string* invalid; must be power of 2 in the range [*string*..*string*]

Cause: invalid value for `db_block_size` parameter

Action: adjust parameter and restart

ORA-00376: file *string* cannot be read at this time

Cause: attempting to read from a file that is not readable. Most likely the file is offline.

Action: Check the state of the file. Bring it online

ORA-00377: Frequent backups of file *string* causing write operation to stall

Cause: Backups are occurring too frequently on this file. Each time a new backup is started for a file, any writes which have been previously issued (but not completed) have to be re-issued. If hot backups are started very, very frequently, it is possible that some writes will be re-issued repeatedly and never complete.

Action: Increase the interval between begin hot-backup commands for this file.

ORA-00378: buffer pools cannot be created as specified

Cause: Either the number of buffers or the number of lru latches is too small to satisfy the specified buffer pool configuration.

Action: Either increase the number of buffers and/or number of lru latches or configure smaller buffer pools.

ORA-00379: no free buffers available in buffer pool *string* for block size *string*K

Cause: All buffers in the specified buffer pool for the specified block size are in use and no free buffers are available.

Action: Increase the number of buffers in the specified pool for the specified block size

ORA-00380: cannot specify `db_stringk_cache_size` since *string*K is the standard block size

Cause: User specified the parameter `db_nk_cache_size` (where n is one of 2,4,8,16,32), while the standard block size for this database is equal to n Kbytes. This is illegal.

Action: Specify the standard block size cache using `db_cache_size` (DEFAULT pool) (and `db_recycle_cache_size`, `db_keep_cache_size` if additional buffer pools are required). Do NOT use the corresponding `db_nk_cache_size` parameter for the standard block size.

ORA-00381: cannot use both new and old parameters for buffer cache size specification

Cause: User specified one or more of { `db_cache_size` , `db_recycle_cache_size`, `db_keep_cache_size`, `db_nk_cache_size` (where n is one of 2,4,8,16,32), `db_cache_advice` } AND one or more of { `db_block_buffers`, `buffer_pool_keep` , `buffer_pool_recycle` }. This is illegal.

Action: Use EITHER the old (pre-Oracle_8.2) parameters OR the new ones. Don't specify both. If old size parameters are specified in the parameter file, you may want to replace them with new parameters since the new parameters can be modified dynamically and allow you to configure additional caches for additional block sizes. Cache advisory can only be enabled with the new cache parameters.

ORA-00382: *string* not a valid block size, valid range [*string*..*string*]

Cause: User specified a value for db_nk_cache_size where n is one of {2, 4, 8, 16, 32}, but nk is not a valid block size for this platform.

Action: Remove corresponding parameter from the "init.ora" file and restart the instance.

ORA-00383: DEFAULT cache for blocksize *string* cannot be reduced to zero

Cause: User attempted to reduce db_cache_size to zero, or attempted to reduce db_nK_cache_size to zero while there were still online tablespaces with blocksize nK. Note that since the SYSTEM tablespace cannot be taken offline, it is always illegal to set db_cache_size to zero.

Action: Offline any tablespaces with the corresponding blocksize and then perform the operation again.

ORA-00384: Insufficient memory to grow cache

Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

ORA-00388: dependent redo for buffers is lost

Cause: The instance contained buffers that had non-durable changes and depended on redo in another thread that was lost because of that thread crash. No data are lost because changes to such buffers cannot be committed while they are non-durable.

Action: Restart the instance.

ORA-00390: log *string* of thread *string* is being cleared, cannot become current log

Cause: An attempt to switch to a new online log for the redo thread failed because no reusable log could be found. This log is being cleared and will be useable when the clearing completes. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00391: All threads must switch to new log format at the same time

Cause: An attempt to switch the current log of a single thread is not allowed because the compatibility requirements force a new log format version number. When changing log formats, all threads must switch to the new format at the same time.

Action: Open the database to cause the coordinated log switch. If that is not possible then return to the same software version and compatibility setting last used to open the database.

ORA-00392: log *string* of thread *string* is being cleared, operation not allowed

Cause: An operation encountered this online log in the middle of being cleared. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00393: log *string* of thread *string* is needed for recovery of offline datafiles

Cause: Log cannot be cleared because the redo in it is needed to recover offline datafiles. It has not been archived so there is no other copy available. If the log is cleared the tablespaces containing the files will have to be dropped.

Action: Archive the log then repeat the clear command. If archiving is not possible, and dropping the tablespaces is acceptable, then add the clause UNRECOVERABLE DATAFILE at the end of the clear command.

ORA-00394: online log reused while attempting to archive it

Cause: It has been detected that an online log that was being archived was reused.

Action: No action is required because the log file cannot be archived since it has been overwritten.

ORA-00395: online logs for the clone database must be renamed

Cause: A clone database open forces logfile renaming to avoid overwriting the primary logfiles

Action: Rename the logfiles manually or using the log_file_name_convert initialization parameter

ORA-00396: error *string* required fallback to single-pass recovery

Cause: The indicated error caused two-pass instance or crash recovery to fail. Recovery was retried with an alternate (slower) method to avoid the error.

Action: Correct the cause of the indicated error (also recorded) so that future instance or crash recovery can succeed with the two-pass algorithm. This usually requires making more main memory available to the recovery process.

ORA-00397: instance recovery process terminated with error

Cause: The foreground process doing instance recovery died.

Action: Check the foreground trace file for the cause of recovery failure.

ORA-00398: abort thread recovery due to reconfiguration

Cause: Global enqueue service reconfiguration occurred during instance/crash recovery.

Action: This is used internally, no action is required.

ORA-00399: corrupt change description in redo log

Cause: A change vector in the redo log failed validation checks.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00400: invalid release value *string* for parameter *string*

Cause: The release level given for the specified init parameter is invalid.

Action: Correct the parameter value in the parameter file and retry.

ORA-00401: The value for parameter *string* is not supported in this release.

Cause: The value specified was not supported in this release.

Action: Enter an appropriate value for the parameter, or do not specify a value and use the default value.

ORA-00402: database changes by release *string* cannot be used by release *string*

Cause: Changes have been made to the database that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the init file.

ORA-00403: *string* (*string*) is not the same as other instances (*string*)

Cause: Another instance has set the compatible or compatible no recovery parameters differently than this instance.

Action: Change the parameters of the current instance to match other instances already running.

ORA-00404: Convert file not found: '*string*'

Cause: The file used for converting the database from V7 to V8 could not be found.

Action: Verify that the migration process has been started on this database and that the convert filename is accessible.

ORA-00405: compatibility type "*string*"

Cause: Reporting a type associated with another error.

Action: See accompanying error

ORA-00406: COMPATIBLE parameter needs to be *string* or greater

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00407: rolling upgrade from release *string.string* to *string.string* is not allowed

Cause: Another instance executing software at a different point release already has the database mounted.

Action: Shutdown all instances then startup with the new software.

ORA-00408: parameter *string* is set to TRUE

Cause: Reporting the parameter that resulted in the compatibility error.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00409: COMPATIBLE needs to be *string* or higher to use AUTO SEGMENT SPACE MANAGEMENT

Cause: This is due to migrating from an older release of Oracle with tablespaces created using AUTO SEGMENT SPACE MANAGEMENT. To open the database, the COMPATIBLE parameter needs to be set to the specified value.

Action: Shutdown and startup with the specified compatibility setting.

ORA-00421: failure in creating the required number of sessions for *string* processes

Cause: The required number of sessions for the PROCESSES parameter was greater than the maximum supported value.

Action: Decrease the required number of processes and start the instance.

ORA-00436: ORACLE is not licensed. Contact Oracle Corp. for assistance

Cause: The installed Oracle software was not licensed to run on this CPU. This occurred if the Oracle software was installed incorrectly.

Action: Check if the Oracle software is installed correctly. Then contact Oracle Support Services.

ORA-00437: ORACLE feature is not licensed. Contact Oracle Corp. for assistance

Cause: ORACLE feature is not licensed.

Action: Contact ORACLE for assistance.

ORA-00438: *string* Option not installed

Cause: The specified option is not installed.

Action: Purchase and install the option.

ORA-00439: feature not enabled: *string*

Cause: The specified feature was not enabled.

Action: Do not attempt to use this feature.

ORA-00441: Oracle Free Edition SID violation. Expected:*string* vs Actual:*string*

Cause: An attempt was made to start Oracle Database FREE Edition instance with ORACLE_SID other than 'free'.

Action: Oracle Database Free Edition must have ORACLE_SID set to 'free'.

ORA-00442: Oracle Database Free Edition (FREE) single instance violation error

Cause: An attempt was made to start more than one Oracle Database Free Edition (FREE) instance.

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) if you want to run more than one instance.

ORA-00443: background process "*string*" did not start

Cause: The specified process did not start.

Action: Ensure that the executable image is in the correct place with the correct protections, and that there is enough memory.

ORA-00444: background process "*string*" failed while starting

Cause: Usually due to a bad (or non-existent) background process image.

Action: Get a good background process image.

ORA-00445: background process "*string*" did not start after *string* seconds

Cause: The specified process did not start after the specified time.

Action: Ensure that the background did not die and leave a trace file.

ORA-00446: background process started when not expected

Cause: The background process specified started up AFTER the RDBMS was already running.

Action: If nobody at your site started the process, then this is an internal error.

ORA-00447: An irrecoverable error occurred in a background process.

Cause: One of the background processes stopped unexpectedly.

Action: Restart the instance to restart the background processes. If the issue persists, check the applicable log files for a cause. For assistance, contact Oracle Support Services.

ORA-00448: normal completion of background process

Cause: One of the background processes completed normally (i.e. exited). The background process thinks that somebody asked it to exit.

Action: Warm start the system.

ORA-00449: background process '*string*' unexpectedly terminated with error *string*

Cause: A foreground process needing service from a background process has discovered the process died.

Action: Consult the error code, and the trace file for the process.

ORA-00450: background process '*string*' did not start

Cause: The specified process did not start.

Action: Consult the error code, and the trace file for the process.

ORA-00451: foreground process died unexpectedly

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

ORA-00452: foreground process unexpectedly terminated with error *string*

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

ORA-00453: background process '*string*' is dead

Cause: The background process that was being messaged was dead or its incarnation was invalid.

Action: Restart the background process.

ORA-00454: The background process '*string*' is running

Cause: An attempt to spawn a background process that was already running failed.

Action: None

ORA-00455: timeout waiting for background process '*string*' cleanup

Cause: The state of the background process was not cleaned up.

Action: None

ORA-00457: process pool not found

Cause: The specified POOL_NAME was not valid.

Action: Specify a valid POOL_NAME and retry the operation.

ORA-00459: pre-spawned process pool not started

Cause: The pre-spawned process pool was created but not started.

Action: Start the pre-spawned process pool by using the DBMS_PROCESS.START_POOL procedure, and retry the operation.

ORA-00460: process pool invalid configuration value(s)

Cause: Invalid configuration values were specified for the process pool.

Action: Verify the configuration values.

ORA-00469: CKPT process terminated with error

Cause: The checkpoint process died

Action: Warm start instance

ORA-00470: LGWR process terminated with error

Cause: The log writer process died

Action: Warm start instance

ORA-00471: DBWR process terminated with error

Cause: The database writer process died

Action: Warm start instance

ORA-00472: PMON process terminated with error

Cause: The process cleanup process died

Action: Warm start instance

ORA-00473: redo transport process terminated with error

Cause: A redo transport process (ARC*, MRP0, NSS*, or TMON) died.

Action: ARC*, NSS*, and TMON processes will be automatically restarted. If the MRP0 process died, restart recovery.

ORA-00474: SMON process terminated with error

Cause: The system cleanup process died

Action: Warm start instance

ORA-00475: TRWR process terminated with error

Cause: The system tracing process died

Action: Warm start instance

ORA-00476: RECO process terminated with error

Cause: The distributed transaction (two-phase commit) recovery process died.

Action: Warm start instance

ORA-00477: SNP* process terminated with error

Cause: A materialized view refresh process died

Action: PMON will restart SNP process shortly. If SNP process does not get started, contact Oracle support.

ORA-00478: SMON process terminated due to error *string*

Cause: SMON was unable to service the requests due to error in cleanup of resources

Action: Warm start instance

ORA-00479: RVWR process terminated with error *string*

Cause: The RVWR process died

Action: Warm start instance

ORA-00480: LCK* process terminated with error

Cause: A system lock process died

Action: Warm start instance

ORA-00481: LMON process terminated with error

Cause: The global enqueue service monitor process died

Action: Warm start instance

ORA-00482: LMD* process terminated with error

Cause: A global enqueue service daemon process died

Action: Warm start instance

ORA-00483: During shutdown a process abnormally terminated

Cause: One of the background processes did not exit normally at or near the time of shutdown.

Action: Use shutdown abort.

ORA-00484: LMS* process terminated with error

Cause: A global cache service process died

Action: Warm start instance

ORA-00485: DIAG process terminated with error *string*

Cause: A global diagnostic process died

Action: Wait for process to restart

ORA-00486: Oracle ASM background process terminated with error

Cause: The Oracle Automatic Storage Management (ASM) background process in the database instance reported an error and stopped.

Action: Restart the Oracle database instance after ensuring that the Oracle ASM instance is running.

ORA-00487: CTWR process terminated with error

Cause: The change tracking process died

Action: Warm start instance.

ORA-00488: Rebalance coordinator process ended with an error.

Cause: The rebalance coordinator process ended with an error.

Action: Restart the instance. If the issue persists, contact Oracle Support Services.

ORA-00489: ARB* process terminated with error

Cause: An Oracle Automatic Storage Management (Oracle ASM) rebalance worker (ARB*) process terminated with an error.

Action: The Rebalance Worker process will automatically restart, no action is required. If the issue persists, please contact Oracle Support Services.

ORA-00490: Process Spawner (PSP) process exited with an error.

Cause: The process responsible for spawning processes in the Oracle instance failed and exited.

Action: The PSP process is required for normal database execution and should not be terminated by users. Check attention and alert log for more information on the cause of the failure. If the process exits due to internal error, contact Oracle Support.

ORA-00491: RMS0 process terminated with error

Cause: The RAC Management Process died

Action: n/a

ORA-00492: GTX* process terminated with error

Cause: A global transaction background process died.

Action: Warm start instance

ORA-00493: Oracle ASM disk group monitor (GMON) process terminated with an error.

Cause: The Oracle ASM disk group monitor (GMON) process terminated with an error.

Action: Restart the Oracle ASM instance. If the issue persists, please contact Oracle Support Services.

ORA-00494: enqueue *string* held for too long (more than *string* seconds) by 'inst *string*, osid *string*'

Cause: The specified process did not release the enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-00495: GEN0 process terminated with error

Cause: The generic background processing process died.

Action: Warm start the instance.

ORA-00496: LMHB process terminated with error

Cause: A heartbeat monitor process (LMHB) terminated.

Action: LMHB will automatically restart.

ORA-00497: XDMG process terminated with error

Cause: The Cell automation manager process terminated with error.

Action: PMON will restart XDMG process shortly. If XDMG process does not restart, contact Oracle Support Services.

ORA-00498: XDWK process terminated with error

Cause: The Cell automation worker actions process terminated with error.

Action: PMON will restart XDWK process shortly. If XDWK process does not restart, contact Oracle Support Services.

ORA-00499: XDMG repeatedly failed to initialize terminating the instance.

Cause: The Cell automation manager process repeatedly failed to initialize.

Action: Examine the alert log for the reason prior attempts to start XDMG failed. If it is due to user error or bad configuration, fix it and restart the instance. Otherwise, contact Oracle Support Services.

ORA-00500: Listener registration (LREG) process terminated with an error.

Cause: The listener registration (LREG) process terminated. No information could be exchanged anymore between the instance and the listener, and therefore the instance terminated.

Action: Restart the instance. If the problem persists, check the log files for any issues. If needed, please contact Oracle Support Services.

ORA-00501: cleanup main process (CLMN) terminated with error

Cause: The CLMN process terminated with an error."

Action: Restart the instance where the error occurred.

ORA-00502: process manager (PMAN) terminated with error

Cause: PMAN terminated with an error."

Action: Restart the instance where the error occurred.

ORA-00503: A cleanup process (CL) terminated with an error**

Cause: A cleanup process terminated with an error.

Action: Restart the instance where the error occurred.

ORA-00504: system monitor process (SMON) terminated with error

Cause: SMON terminated with an error.

Action: Restart the instance where the error occurred.

ORA-00505: GEN1 process terminated with error

Cause: The generic background processing process 1 died.

Action: Warm start the instance.

ORA-00506: GEN2 process terminated with error

Cause: The generic background processing process 2 terminated.

Action: Warm start the instance.

ORA-00507: The message bridge (BRDG) background process is terminated.

Cause: The message bridge background process was terminated.

Action: The process monitor (PMON) will restart the message bridge (BRDG) background process. No action needed.

ORA-00508: GENS process terminated with error

Cause: The generic short action background process terminated.

Action: Warm start the instance.

ORA-00509: VOSD process terminated with error

Cause: The Virtual Operating System Daemon background process terminated.

Action: Warm start the instance.

ORA-00511: Cluster flash cache background process terminated with error.

Cause: The cluster flash cache process terminated.

Action: Warm start the instance.

ORA-00512: Attempt to terminate an operating system process with multiple threads.

Cause: A termination request was attempted on an operating system process that had multiple threads. But the process was not marked as one that could be terminated as a group.

Action: Retry the operation. If the issue persists, contact Oracle Support Services.

ORA-00566: Cannot request processor group because Non Uniform Memory Architecture (NUMA) is not enabled.

Cause: A specific processor group was requested while the NUMA feature was disabled. Without enabling NUMA, no specific processor groups can be requested.

Action: Start the process without requesting a NUMA processor group, or enable database NUMA support.

ORA-00567: Process creation in the requested processor group *string* exceeds maximum limit *string*.

Cause: The process could not be started in the requested processor group.

Action: Start the process in another processor group, or consult your OS-specific manuals on how to change the maximum limit of the underlying feature (like Linux cgroups) that Oracle leverages for the processor group.

ORA-00568: Maximum number of interrupt handlers exceeded

Cause: User specified too many ^c handlers

Action: Remove some old handlers.

ORA-00569: Failed to acquire global enqueue.

Cause: A prior error occurred on one of the instances in the cluster. Typically errors are caused by shared pool resource contention.

Action: Check for and resolve prior errors on all instances in the cluster. If there is shared pool resource contention, increase the SHARED_POOL_SIZE, DML_LOCKS, PROCESSES, TRANSACTIONS, CLUSTER_DATABASE_INSTANCES and PARALLEL_MAX_SERVERS initialization parameters.

ORA-00574: osndnt: \$CANCEL failure (break)**ORA-00575: osndnt: \$QIO failure (send out-of-band break)****ORA-00576: in-band break protocol error****ORA-00577: out-of-band break protocol error****ORA-00578: reset protocol error****ORA-00579: osndnt: server received malformed connection request****ORA-00580: protocol versions do not match****ORA-00581: osndnt: cannot allocate context area****ORA-00582: osndnt: cannot deallocate context area****ORA-00583: osndnt: \$TRNLOG failure****ORA-00584: cannot close connection****ORA-00585: host name has incorrect form****ORA-00586: osndnt: LIB\$ASN_WTH_MBX failure****ORA-00587: invalid value specified for REDO_TRANSPORT_USER initialization parameter**

Cause: An invalid value was specified for the REDO_TRANSPORT_USER initialization parameter. The length of the user name exceeded the allowed maximum platform-specific length.

Action: Check the documentation and specify a new value for the REDO_TRANSPORT_USER initialization parameter.

ORA-00588: message from host was too short**ORA-00589: message from host had incorrect data length****ORA-00590: message from host had incorrect message type****ORA-00591: incorrect number of bytes written****ORA-00592: osndnt: \$QIO failure (mailbox queue)****ORA-00593: osndnt: \$DASSGN failure (network device)****ORA-00594: osndnt: \$DASSGN failure (mailbox)**

ORA-00595: osndnt: \$QIO failure (receive)

ORA-00596: osndnt: \$QIO failure (send)

ORA-00597: osndnt: \$QIO failure (mailbox requeue)

ORA-00598: osndnt: \$QIO failure (mailbox read)

ORA-00600: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string]

Cause: This is the generic internal error number for Oracle program exceptions. It indicates that a process has encountered a low-level, unexpected condition. The first argument is the internal message number. This argument and the database version number are critical in identifying the root cause and the potential impact to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00600 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

ORA-00601: cleanup lock conflict

Cause: The process monitor (PMON) database process ran into a lock conflict while trying to recover the processes.

Action: This is an internal issue. No action required.

ORA-00602: internal programming exception: [PC:string] [ADDR:string]

Cause: An address violation was encountered.

Action: Report the issue as a bug.

ORA-00603: ORACLE server session terminated by irrecoverable error

Cause: An Oracle server session was in an unrecoverable state.

Action: Log in to Oracle again so a new server session will be created automatically. Examine the session trace file for more information.

ORA-00604: Error occurred at recursive SQL level string. Check subsequent errors.

Cause: An error occurred while processing a recursive SQL statement as part of the current operation.

Action: Review the entire error stack to determine the root cause and take corrective actions, if possible; otherwise contact Oracle Support. *Params: 1) recursion_level: The level of the recursion.

ORA-00606: Internal error code

Cause: A call to deferred upi functions was made in non deferred mode

Action: Report as a bug.

ORA-00607: Internal error occurred while making a change to a data block

Cause: An internal error or memory exception occurred while Oracle was applying redo to a data block.

Action: call Oracle Support

ORA-00608: testing error [string] [string] [string] [string] [string]

Cause: Internal error reserved for testing.

Action: call Oracle Support

ORA-00609: An Oracle process was unable to attach to incoming connection.

Cause: An Oracle process could not respond to an incoming connection.

Action: Correct the condition described in the next error on the stack, otherwise contact Oracle Support Services.

ORA-00614: quarantine limit has been reached

Cause: A quarantine limit was reached and the instance or the pluggable database (PDB) was terminated.

Action: Restart the instance or the pluggable database. Review quarantine incidents that were created before the limit was reached.

ORA-00625: internal error code within PDB: (string)(string)(string)(string)(string)(string)(string)(string)(string)

Cause: This is a generic PDB-specific internal error number for Oracle program exceptions. It indicates that a process encountered an unexpected condition within the PDB that led to the closing of the PDB. The first argument in the message is the internal message. This argument and the database version number are critical in identifying the root cause and the potential impact. to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00625 error encountered. An Incident is created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should be gathered to determine the root cause: - changes that led to the error - events or unusual circumstances that led to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Consider the history of the errors that occurred before this internal error.

ORA-00700: soft internal error, arguments: [string], [string], [string], [string], [string], [string], [string], [string], [string]

Cause: Internal inconsistency that will not crash a process

Action: Report as a bug - the first argument is the internal error.

ORA-00701: object necessary for warmstarting database cannot be altered

Cause: Attempt to alter or drop a database object (table, cluster, or index) which are needed for warmstarting the database.

Action: None

ORA-00702: bootstrap verison '*string*' inconsistent with version '*string*'

Cause: The reading version of the bootstrap is incompatible with the current bootstrap version.

Action: Restore a version of the software that is compatible with this bootstrap version.

ORA-00703: maximum number of row cache instance locks exceeded

Cause: There are not enough row cache enqueues.

Action: Increase the row cache enqueue parameter and warm start the system.

ORA-00704: bootstrap process failure

Cause: Failure in processing bootstrap data - see accompanying error.

Action: Contact your customer support representative.

ORA-00705: inconsistent state during start up; shut down the instance, then restart it

Cause: A previous attempt to start an instance was terminated.

Action: Shut down the instance completely, then restart it.

ORA-00706: error changing format of file '*string*'

Cause: An attempt to change the block0 format of the specified file failed because the file is read-only or offline.

Action: Make the file read-write or bring the file online and set the BLKO_FMTCHG event.

ORA-00710: new tablespace name is the same as the old tablespace name

Cause: An attempt to rename a tablespace failed because the new name is the same as the old name.

Action: No action required.

ORA-00711: new tablespace name is invalid

Cause: An attempt to rename a tablespace failed because the new name is invalid.

Action: Choose a valid new name and retry the command.

ORA-00712: cannot rename system tablespace

Cause: An attempt to rename the system tablespace failed.

Action: No action required.

ORA-00720: ALTER DATABASE RESET COMPATIBILITY command has been de-supported

Cause: ALTER DATABASE RESET COMPATIBILITY command has been de-supported since Oracle 10i.

Action: No action required.

ORA-00721: changes by release *string* cannot be used by release *string*

Cause: An attempt to import a tablespace failed because the tablespace contains changes that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the initialization parameter file.

ORA-00722: Feature "*string*"

Cause: Reporting name of the feature for details of another error.

Action: See associated error message.

ORA-00723: Initialization parameter COMPATIBLE must be explicitly set

Cause: Oracle detected that the initialization parameter COMPATIBLE was not explicitly specified, and the compatibility of the database is lower than the default value of the COMPATIBLE parameter. In order to use the new compatible setting, the initialization parameter must be explicitly set by the user.

Action: Explicitly set the value of COMPATIBLE parameter either in PFILE or SPFILE, whichever is used.

ORA-00724: ALTER DATABASE CONVERT command has been de-supported

Cause: ALTER DATABASE CONVERT command has been de-supported since Oracle 10i.

Action: No action required.

ORA-00725: Desupported ALTER DATABASE SET STANDBY clause specified: *string*

Cause: A deprecated ALTER DATABASE SET STANDBY was specified.

Action: No action required.

ORA-00726: *string* subcommand not supported, use ALTER SYSTEM ARCHIVE LOG

Cause: The given User Program Interface (UPI) call is no longer supported.

Action: Use the ALTER SYSTEM ARCHIVE LOG statement for this archive log action.

ORA-00727: feature not supported on redo log in version *string*

Cause: This feature was not supported in this version of redo log.

Action: No action required.

ORA-00740: Data file size of *string* blocks exceeds maximum file size.

Cause: The specified data file size exceeded the maximum permissible size.

Action: Reduce the file size and retry the command. *Params: 1) size: Number of blocks in the data file

ORA-00741: logfile size of (*string*) blocks exceeds maximum logfile size

Cause: The user specified logfile size exceeded maximum logfile size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

ORA-00742: Log read detects lost write in thread *string* sequence *string* block *string*

Cause: Either a write issued by Oracle was lost by the underlying operating system or storage system or an Oracle internal error occurred.

Action: The trace file shows the lost write location. Dump the problematic log file to see whether it is a real lost write. Contact Oracle Support Services.

ORA-00750: database has been previously mounted and dismounted

Cause: The instance has already mounted and dismounted the database, which is only allowed once in its lifetime.

Action: Shut down the database.

ORA-00751: could not obtain resilvering status for file

Cause: An error occurred while obtaining the mirror resilvering status of a file.

Action: Refer to other error messages shown for additional details of the problem.

ORA-00752: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal database operation on the primary database.

Action: Shutdown the primary database and activate the physical standby database to failover. Call Oracle Support Services. See the Data Guard documentation for details. Unless directed by Oracle Support Services, do not attempt to bypass this error by copying blocks or data files from the primary database to the standby database because that would propagate the lost write from the primary to the standby database.

ORA-00753: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

ORA-00754: recovery detected a data block with invalid SCN

Cause: An error caused a data block mismatch with a log record.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

ORA-00756: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

ORA-00758: recovery detected a block with inconsistent flag values set

Cause: An internal error occurred.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

ORA-00759: session suspension timed out during switchover or failover

Cause: The standby database was going through a role transition and the new primary database was not reopened in the configured timeout duration after switchover.

Action: Open the new primary database and try to connect again.

ORA-00760: Nonexistent data file, "*string*" included in the current container.

Cause: Attempted to use ALTER DATABASE to modify lost write protection of a data file failed because the specified file is not known to the database's control file or the current container is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type. Check the DBA_DATA_FILES view for a list of possible files. *Params: 1) file: The name or number of a data file, specified by the user in the ALTER DATABASE command, that is having its lost write protection state changed.

ORA-00762: could not change lost write protection - out of memory

Cause: Memory allocation failed.

Action: Ensure that enough memory including stack memory is available

ORA-00763: could not add lost write tracking to data file

Cause: An error occurred while trying to add lost write tracking; could not lookup the target data file or there was insufficient space in the shadow tablespace.

Action: This may be an internal error if the target data file exists. Also, check to see if the shadow tablespaces have sufficient space.

ORA-00764: The current transaction started on standby database and attempted to make an update after role transition.

Cause: The session, which started a transaction on the standby database and stayed alive after a role transition, attempted to do an update.

Action: The client should catch the exception and retry the transaction.

ORA-00800: soft external error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: A system misconfiguration or setting resulted in a failure. This failure did not crash the instance, but it could result in unexpected behavior during query execution.

Action: Check the database trace files and correct the system configuration or the settings. If the issue persists, contact Oracle Support Services.

ORA-00816: Error message translation failed.

Cause: An incorrect internal condition prevented error message translation.

Action: Contact Oracle Support Services for further assistance.

ORA-00820: Specified value of sga_max_size is too small, needs to be at least *stringM*

Cause: The specified value of sga_max_size is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_max_size to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00821: Specified value of sga_target stringM is too small, needs to be at least stringM

Cause: The specified value of sga_target is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_target to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00822: MMAN process terminated with error

Cause: The Memory Management process died.

Action: Warm start instance

ORA-00823: Specified value of sga_target greater than sga_max_size

Cause: The specified value of sga_target is greater than sga_max_size.

Action: Increase sga_max_size to match up with sga_target or decrease sga_target to match up with sga_maxsize.

ORA-00824: cannot set SGA_TARGET or MEMORY_TARGET due to existing internal settings

Cause: Could not set SGA_TARGET or MEMORY_TARGET due to current parameter settings.

Action: Check the other error messages for additional information.

ORA-00825: cannot set DB_BLOCK_BUFFERS if SGA_TARGET or MEMORY_TARGET is set

Cause: SGA_TARGET or MEMORY_TARGET set with DB_BLOCK_BUFFERS set.

Action: Do not set SGA_TARGET, MEMORY_TARGET or use new cache parameters, and do not use DB_BLOCK_BUFFERS which is an old cache parameter.

ORA-00826: cannot set SGA_TARGET or MEMORY_TARGET for an ASM instance

Cause: SGA_TARGET or MEMORY_TARGET set for an ASM instance.

Action: Do not set SGA_TARGET or MEMORY_TARGET.

ORA-00827: could not shrink sga_target to specified value

Cause: Attempted to shrink the SGA to the specified value but did not succeed because the SGA components could not be shrunk as they were already at their minimum sizes.

Action: Do not set sga_target to a value below the current value without first shrinking the individual SGA components.

ORA-00828: specified value of shared_pool_reserved_size inconsistent with internal settings

Cause: Unable to set shared_pool_reserved_size to specified value if SGA_TARGET set, either because the specified value is too small, or because it is too large for the current internal size of shared pool. More details can be found in the alert log.

Action: If possible, do not set shared_pool_reserved_size without setting shared_pool_size if SGA_TARGET set. Examine the alert log for information about current internal size of shared pool, and valid range of values for shared_pool_reserved_size.

ORA-00830: cannot set statistics_level to BASIC with auto-tune SGA enabled

Cause: The user attempted to set statistics_level to BASIC with auto-tune SGA enabled which cannot be done because auto-tune SGA cannot work with statistics_level set to BASIC.

Action: Disable auto-tune SGA and try setting the statistics_level to BASIC again.

ORA-00832: no streams pool created and cannot automatically create one

Cause: A database feature which needs STREAMS SGA was being used, however, the streams_pool_size parameter was not defined and the value of db_cache_size was too small to permit an automatic transfer of SGA to the streams pool from the buffer cache.

Action: Please set the parameter streams_pool_size or set SGA_TARGET.

ORA-00837: Specified value of MEMORY_TARGET greater than MEMORY_MAX_TARGET

Cause: The specified value of MEMORY_TARGET was greater than MEMORY_MAX_TARGET.

Action: Set MEMORY_TARGET less than or equal to MEMORY_MAX_TARGET.

ORA-00838: Specified value of MEMORY_TARGET is too small, needs to be at least *stringM*

Cause: The specified value of MEMORY_TARGET was less than the sum of the specified values for SGA_TARGET and PGA_AGGREGATE_TARGET.

Action: Set MEMORY_TARGET to at least the recommended value.

ORA-00839: SGA_TARGET cannot be modified to the specified value

Cause: The specified value of SGA_TARGET was not compatible with current settings of PGA_AGGREGATE_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set SGA_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and PGA_AGGREGATE_TARGET. Also ensure that the current PGA memory used for non-auto workareas is low.

ORA-00840: PGA_AGGREGATE_TARGET cannot be modified to the specified value

Cause: The specified value of PGA_AGGREGATE_TARGET was not compatible with current settings of SGA_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set PGA_AGGREGATE_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and SGA_TARGET.

ORA-00841: MEMORY_TARGET not supported on this system

Cause: MEMORY_TARGET parameter was not supported on this system as shmfs was disabled.

Action: Refer to documentation for a list of supported systems.

ORA-00842: DB_BLOCK_BUFFERS cannot be set with SGA_TARGET or MEMORY_TARGET

Cause: DB_BLOCK_BUFFERS was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Remove the incompatible parameter setting.

ORA-00843: Parameter not taking MEMORY_MAX_TARGET into account

Cause: The parameter was larger than MEMORY_MAX_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_MAX_TARGET.

ORA-00844: Parameter not taking MEMORY_TARGET into account

Cause: The parameter was larger than MEMORY_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_TARGET.

ORA-00845: The Automatic Memory Management (AMM) feature encountered a problem allocating memory.

Cause: AMM is defined in the initialization file using the MEMORY_TARGET parameter. While trying to enable AMM, the database encountered an error. Either the operating system does not support AMM or it is not configured correctly.

Action: Refer to Oracle Database documentation to verify if the operating system supports AMM. If not, remove AMM related parameters from the initialization file. On Linux, check if /dev/shm is mounted and whether it can accommodate the memory requirements defined by MEMORY_TARGET. The database alert log contains additional information about the use of /dev/shm on the Linux platform as well as more actionable steps.

ORA-00846: could not shrink MEMORY_TARGET to specified value

Cause: Attempted to shrink MEMORY_TARGET to the specified value but did not succeed because the PGA and SGA components could not be shrunk.

Action: Do not set MEMORY_TARGET to a value below the current value without first shrinking the individual memory components.

ORA-00847: MEMORY_TARGET/MEMORY_MAX_TARGET and LOCK_SGA cannot be set together

Cause: MEMORY_TARGET/MEMORY_MAX_TARGET was set to a non-zero value and LOCK_SGA was also set

Action: Do not set MEMORY_TARGET or MEMORY_MAX_TARGET if LOCK_SGA is set to TRUE.

ORA-00848: STATISTICS_LEVEL cannot be set to BASIC with SGA_TARGET or MEMORY_TARGET

Cause: STATISTICS_LEVEL of BASIC was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Fix the incompatible parameter setting. Set STATISTICS_LEVEL to TYPICAL or ALL to use SGA_TARGET or MEMORY_TARGET.

ORA-00849: SGA_TARGET string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: SGA_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_TARGET to be less than MEMORY_MAX_TARGET.

ORA-00850: PGA_AGGREGATE_TARGET string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: PGA_AGGREGATE_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set PGA_AGGREGATE_TARGET to be less than MEMORY_MAX_TARGET.

ORA-00851: SGA_MAX_SIZE string cannot be set to more than MEMORY_TARGET string.

Cause: SGA_MAX_SIZE value was more than MEMORY_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_TARGET.

ORA-00852: Rolling migration monitor (RMON) process terminated.

Cause: The ASM rolling migration monitor process terminated.

Action: Warm start the instance.

ORA-00853: SGA_MAX_SIZE string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: SGA_MAX_SIZE value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_MAX_TARGET.

ORA-00854: Oracle ASM IO Server (IOS) instance fence monitor process (FENC) terminated.

Cause: The Oracle Automatic Storage Management (Oracle ASM) IO Server instance FENC process was terminated.

Action: Restart the instance to restart the FENC process. If the issue persists, check the logfiles for more information and contact Oracle Support Services.

ORA-00855: PGA_AGGREGATE_TARGET cannot be set because of insufficient physical memory.

Cause: PGA_AGGREGATE_TARGET value was too high for the current system global area (SGA) size and amount of physical memory available.

Action: Reduce the SGA size or increase the physical memory size.

ORA-00856: PGA_AGGREGATE_TARGET cannot be set higher 50 percent of PGA_AGGREGATE_LIMIT.

Cause: PGA_AGGREGATE_TARGET value was greater than 50 percent the current value of PGA_AGGREGATE_LIMIT.

Action: Increase PGA_AGGREGATE_LIMIT or use a lower PGA_AGGREGATE_TARGET.

ORA-00857: SGA_TARGET increase not a multiple of SGA file size in hugetlbfs (per-granule) setup

Cause: SGA_TARGET increase value was not a multiple of the file size used for creating SGA.

Action: Review alert log for more information and set the proper value for SGA_TARGET increase.

ORA-00858: Processes remain attached to system global area (SGA) after shutdown

Cause: One or more processes remain attached to SGA after shutdown.

Action: Review alert log for more information and take appropriate action.

ORA-00865: cannot perform the current operation on the same session

Cause: The current operation could not be performed on the same session.

Action: None

ORA-00866: invalid or non-existent SQL ID

Cause: The SQL ID specified was invalid or did not exist.

Action: Retry with a valid SQL ID.

ORA-00867: invalid instance ID

Cause: The instance ID specified was invalid.

Action: Retry with a valid instance ID.

ORA-00875: failed to *string* the dedicated connection broker

Cause: The dedicated connection broker could not be enabled or disabled.

Action: Check the process trace file for the reason for the failure. Contact Oracle Support Services for additional help.

ORA-00876: invalid CONNECTION_BROKERS specification #*string*

Cause: The syntax of the nth CONNECTION_BROKERS specification was invalid.

Action: See the additional errors that are reported. Refer to Oracle documentation for the correct syntax.

ORA-00877: TYPE=*string* appears in multiple CONNECTION_BROKERS specifications

Cause: Multiple CONNECTION_BROKER specifications contained the same TYPE.

Action: Specify only one specification for each TYPE.

ORA-00878: Cannot connect to database. The server type is not supported.

Cause: A connection request was refused because the chosen connection broker no longer supports the SERVER type specified in the CONNECT_DATA parameter of the connect string.

Action: Retry the connection call so the listener can forward it to a different connection broker.

ORA-00879: Cannot connect to database. The connection broker is exiting.

Cause: When a database instance uses connection brokers, the listener forwards each connection request to one of those brokers. The current connection attempt failed because the selected broker was exiting.

Action: Retry the connection call so the listener can forward it to a different connection broker.

ORA-00900 to ORA-01499

ORA-00900: invalid SQL statement

Cause: The statement was not recognized as a valid SQL statement. This error can occur if the Procedural Option was not installed and a SQL statement was issued that requires this option (for example, a CREATE PROCEDURE statement). You can determine if the Procedural Option was installed by starting SQL*Plus. If the PL/SQL banner was not displayed, then the option was not installed.

Action: Correct the syntax or install the Procedural Option.

ORA-00901: invalid CREATE command

Cause: The CREATE command was not followed by a valid CREATE option.

Action: Correct the syntax.

ORA-00902: invalid datatype

Cause: The datatype entered in the CREATE or ALTER TABLE statement is not valid.

Action: Correct the syntax.

ORA-00903: invalid table name

Cause: A table or cluster name was invalid or does not exist. This message was also issued if an invalid cluster name or no cluster name was specified in an ALTER CLUSTER or DROP CLUSTER statement.

Action: Check spelling. A valid table name or cluster name must begin with a letter and may contain only alphanumeric characters and the special characters \$, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

ORA-00904: *string*: invalid identifier

Cause: The identifier or column name entered was invalid.

Action: Ensure the following: - Enter a valid identifier or column name and verify that there are no typos in the identifier or column name. A valid identifier must begin with a letter, be less than or equal to 128 characters, and consist of only alphanumeric characters and the special characters \$, _, and #. If it contains other characters, then it must be enclosed in double quotation marks. - It must not be a reserved word unless it is enclosed in double quotation marks. - If double quotation marks and mixed case were used for a column name when creating the table, then references to that column must use matching case and quotation marks. *Params: 1) identifier: The identifier or column name that was invalid.

ORA-00905: missing keyword

Cause: A required keyword was missing.

Action: Add the required keyword to correct the syntax.

ORA-00906: missing left parenthesis

Cause: A required left parenthesis has been omitted. Certain commands, such as CREATE TABLE, CREATE CLUSTER, and INSERT, require a list of items enclosed in parentheses.

Parentheses also are required around subqueries in WHERE clauses and in UPDATE table SET column = (SELECT...) statements.

Action: Correct the syntax, inserting a left parenthesis where required, and retry the statement.

ORA-00907: missing right parenthesis

Cause: A left parenthesis was entered without a closing right parenthesis, or there was unrecognized information in the parentheses. All parentheses must be entered in pairs.

Action: Correct the syntax and retry the statement.

ORA-00908: Unexpected token *string* after IS or IS NOT, when expecting a predicate, like NULL or TRUE.

Cause: For the IS or IS NOT logical operator, the keywords NULL, TRUE, or FALSE were not found, nor were other predicates like JSON, NAN, or EMPTY. For example, the following statement generates this message: SELECT * FROM EMP WHERE DEPTNO IS NOT;

Action: Use a predicate after an IS or IS NOT logical operator.

ORA-00909: invalid number of arguments

Cause: A function was called with an incorrect number of arguments.

Action: Correct the syntax of the function call with the required number of arguments.

ORA-00910: specified length too long for its datatype

Cause: for datatypes CHAR and RAW, the length specified was > 2000; otherwise, the length specified was > 4000.

Action: use a shorter length or switch to a datatype permitting a longer length such as a VARCHAR2, LONG CHAR, or LONG RAW

ORA-00911: *string*: invalid character after *string*

Cause: An invalid character has been encountered in the SQL statement.

Action: Remove the invalid character. If it is part of an identifier, enclose the identifier in double quotation marks. *Params: 1) character_value: The invalid character causing the error. 2) token_value: The token after which the invalid character causing the error occurs.

ORA-00912: input parameter too long

Cause: one of your input strings was too long

Action: shorten the input parameter length

ORA-00913: too many values

Cause: The SQL statement requires two sets of values equal in number. This error occurs when the second set contains more items than the first set. For example, the subquery in a WHERE or HAVING clause may return too many columns, or a VALUES or SELECT clause may return more columns than are listed in the INSERT.

Action: Check the number of items in each set and change the SQL statement to make them equal.

ORA-00914: missing ADD keyword

Cause: The keyword ADD does not precede one of the following: - The keyword LOGFILE in an ALTER DATABASE statement - A column element or table constraint in an ALTER TABLE statement - The keyword DATAFILE in an ALTER TABLESPACE statement

Action: Specify the keyword ADD in the ALTER statement.

ORA-00915: network access of dictionary table not currently allowed

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00917: missing comma

Cause: A required comma has been omitted from a list of columns or values in an INSERT statement or a list of the form ((C,D),(E,F), ...).

Action: Correct the syntax.

ORA-00918: string: column ambiguously specified - appears in string and string

Cause: A column name used in a join was defined in more than one table and was referenced ambiguously. In a join, any column name that occurs in more than one of the tables must be prefixed by its table name or table alias when referenced.

Action: To avoid ambiguity, prefix references to column names that exist in multiple tables with either the table name or a table alias and a period. For example, if tables EMP and DEPT are being joined and both contain the column DEPTNO, then all references to DEPTNO should be prefixed with the table name, as in EMP.DEPTNO or DEPT.DEPTNO.
*Params: 1) column_name: The name of the column that is specified ambiguously. 2) table_name_1: The first table being joined that contains a reference to the ambiguously defined column name. 3) table_name_2: The second table being joined that contains a reference to the ambiguously defined column name.

ORA-00919: invalid function

Cause: An entry was formatted like a function call, but it was not recognizable as an Oracle function.

Action: Correct the syntax.

ORA-00920: invalid relational operator

Cause: A search condition was entered with an invalid or missing relational operator.

Action: Include a valid relational operator such as =, !=, ^=, >, <, >=, <=, ALL, ANY, [NOT] BETWEEN, EXISTS, [NOT] IN, IS [NOT] NULL, or [NOT] LIKE in the condition.

ORA-00921: unexpected end of SQL command

Cause: The SQL command was not complete. Part of a valid command was entered, but at least one major component was omitted.

Action: Correct the syntax.

ORA-00922: missing or invalid option

Cause: An invalid option was specified in defining a column or storage clause. The valid option in specifying a column was NOT NULL to specify that the column cannot contain any NULL values. Only constraints may follow the datatype. Specifying a maximum length on a DATE or LONG datatype also causes this error.

Action: Correct the syntax. Remove the erroneous option or length specification from the column or storage specification.

ORA-00923: FROM keyword not found where expected

Cause: In a SELECT or REVOKE statement, the keyword FROM was either missing, misplaced, or misspelled. The keyword FROM must follow the last selected item in a SELECT statement or the privileges in a REVOKE statement.

Action: Correct the syntax. Insert the keyword FROM where appropriate. The SELECT list itself also may be in error. If quotation marks were used in an alias, check that double quotation marks enclose the alias. Also, check to see if a reserved word was used as an alias.

ORA-00924: missing BY keyword

Cause: The keyword BY was omitted in a GROUP BY, ORDER BY, or CONNECT BY clause. In a GRANT statement, the keyword IDENTIFIED must also be followed by the keyword BY.

Action: Correct the syntax. Insert the keyword BY where required and then retry the statement.

ORA-00925: missing INTO keyword

Cause: An INSERT statement has been entered without the keyword INTO.

Action: Correct the syntax. Insert the keyword INTO where required and then retry the statement.

ORA-00926: missing VALUES keyword

Cause: An INSERT statement has been entered without the keyword VALUES or SELECT. Either a VALUES clause or a SELECT subquery must follow the INSERT INTO clause.

Action: Correct the syntax. Enter either a VALUES clause or a subquery after the INSERT INTO clause.

ORA-00927: missing equal sign

Cause: An equal sign has been omitted in one of the following places: - In the SET clause of an UPDATE statement - Following "!" in a search condition to signify not equal

Action: Correct the syntax. Insert the equal sign where required and retry the statement.

ORA-00928: SELECT keyword missing

Cause: A CREATE VIEW statement was missing a required SELECT clause.

Action: Include a SELECT clause in the CREATE VIEW statement and retry.

ORA-00929: missing period

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00930: missing asterisk

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00931: missing identifier

Cause: An identifier or column name was expected but none was provided.

Action: Enter a valid identifier or column name. A valid identifier must begin with a letter, be less than or equal to 128 characters, and consist of only alphanumeric characters and the special characters \$, _, and #. If it contains other characters, then it must be enclosed in double quotation marks. It must not be a reserved word, unless it is enclosed in double quotation marks.

ORA-00932: expression *string* is of data type *string*, which is incompatible with expected data type *string*

Cause: The input data type for this SQL operation was incompatible with the expected data type.

Action: Modify the expression to have a compatible data type for the SQL operation.

*Params: 1) failed_expression: The expression with the incompatible data type. 2)

expression_data_type: The data type of the column or expression. 3) expected_data_type:

The data type expected by the SQL operation.

ORA-00933: unexpected keyword at or near *string*

Cause: An unexpected keyword was encountered in the SQL statement at or near the position printed in the error message. One of the following occurred: 1. You had a typo in your SQL statement. 2. Unsupported syntax was encountered for a clause in the statement. 3. An unsupported clause was encountered in the statement. 4. A string was terminated prematurely leading to the rest of the string to be interpreted as keywords. For example, an apostrophe in the string may be causing it to end prematurely.

Action: Take the action that corresponds with the Cause: 1. Check that your SQL statement has no typos. 2. Check Oracle Database documentation to find the correct syntax for the clause and update the problematic clause appropriately. 3. Check Oracle Database documentation to find the correct syntax for the statement and remove the unsupported clause. 4. Enter two single quotes instead of one to represent an apostrophe within a string.

*Params: 1) keyword_value: Either the keyword causing the error or the keyword near the keyword causing the error. The keyword value may be truncated for readability if it is too long.

ORA-00934: group function is not allowed here

Cause: One of the group functions, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, was used in a WHERE or GROUP BY clause.

Action: Remove the group function from the WHERE or GROUP BY clause. The desired result may be achieved by including the function in a subquery or HAVING clause.

ORA-00935: group function is nested too deeply

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00936: missing expression

Cause: A required part of a clause or expression has been omitted. For example, a SELECT statement may have been entered without a list of columns or expressions or with an incomplete expression. This message was also issued in cases where a reserved word was misused, as in SELECT TABLE.

Action: Check the statement syntax and specify the missing component.

ORA-00937: not a single-group group function

Cause: A SELECT list cannot include both a group function, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, and an individual column expression, unless the individual column expression was included in a GROUP BY clause.

Action: Drop either the group function or the individual column expression from the SELECT list or add a GROUP BY clause that includes all individual column expressions listed.

ORA-00938: not enough arguments for function

Cause: The function was referenced with too few arguments.

Action: Check the function syntax and specify the required number of arguments.

ORA-00939: too many arguments for function

Cause: The function was referenced with too many arguments.

Action: Check the function syntax and specify only the required number of arguments.

ORA-00940: invalid ALTER command

Cause: An invalid ALTER option was specified.

Action: Modify the ALTER command to include a valid option and retry the operation.

ORA-00941: missing cluster name

Cause: The cluster name was either missing or invalid.

Action: Specify a valid cluster name. A valid cluster name must start with a letter, be less than or equal to 30 characters, and contain only alphanumeric characters or the special characters \$, _, and #. It may not be a reserved word. The name must be specified immediately following the keywords CREATE CLUSTER.

ORA-00942: table or viewstring does not exist

Cause: The specified table or view did not exist, or a synonym pointed to a table or view that did not exist. To find existing user tables and views, query the ALL_TABLES and ALL_VIEWS data dictionary views. Certain privileges may be required to access the table. If an application returned this message, then the table that the application tried to access did not exist in the database, or the application did not have access to it.

Action: Check each of the following: - The spelling of the table or view name is correct. - The referenced table or view name does exist. - The synonym points to an existing table or view. If the table or view does exist, ensure that the correct access privileges are granted to the database user requiring access to the table. Otherwise, create the table. Also, if you are attempting to access a table or view in another schema, make sure that the correct schema is referenced and that access to the object is granted. *Params: 1) object_name: The table or view name specified as SCHEMA.OBJECT_NAME, if one is provided. Otherwise, it is blank.

ORA-00943: cluster does not exist

Cause: The current user owns no cluster by the specified name.

Action: Specify a valid cluster name following the keyword CLUSTER, then retry the statement.

ORA-00944: insufficient number of clustered columns

Cause: An attempt was made to create a table with fewer cluster columns than were specified in the CREATE CLUSTER statement. The CLUSTER clause of a CREATE TABLE statement must specify all cluster columns that were defined when the cluster was created.

Action: Specify all cluster columns in the CREATE TABLE statement, then retry it.

ORA-00945: specified clustered column does not exist

Cause: A column specified in the cluster clause of a CREATE TABLE statement was not a column in this table.

Action: Re-execute the statement, using the names of columns defined for the table.

ORA-00946: missing TO keyword

Cause: A GRANT statement was specified without the keyword TO, or an invalid form of the GRANT command was entered.

Action: Check the syntax for the GRANT command, insert the keyword TO where required, and retry the statement.

ORA-00947: not enough values

Cause: This error occurs when a SQL statement requires two sets of values equal in number, but the second set contains fewer items than the first set. This can occur in a WHERE or HAVING clause in which a nested SELECT returns too few columns as in: WHERE (A,B) IN (SELECT C FROM ...) Another common cause of this error is an INSERT statement in which the VALUES or SELECT clause does not contain enough values needed for the INSERT, as in INSERT INTO EMP(EMPNO,ENAME) VALUES('JONES')

Action: Check the number of items in each set and change the SQL statement to make them equal.

ORA-00948: ALTER CLUSTER statement no longer supported

Cause: The ALTER CLUSTER statement has been withdrawn.

Action: To add data to a cluster from an existing table, use the following series of SQL statements: CREATE TABLE newtable SELECT * FROM oldtable CLUSTER clustername; DROP oldtable; RENAME TABLE newtable oldtable;

ORA-00949: illegal reference to remote database

Cause: This was an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00950: invalid DROP option

Cause: A DROP command was not followed by a valid DROP option, such as CLUSTER, DATABASE LINK, INDEX, ROLLBACK SEGMENT, SEQUENCE, SYNONYM, TABLE, TABLESPACE, or VIEW.

Action: Check the command syntax, specify a valid DROP option, then retry the statement.

ORA-00951: cluster not empty

Cause: A DROP CLUSTER statement specified a cluster that was not empty. A cluster may not be dropped if it contains any tables, unless the optional INCLUDING TABLES clause was specified. Tables may also be removed from a cluster by using the DROP TABLE command.

Action: Either specify the INCLUDING TABLES clause in the DROP CLUSTER statement or remove all tables from the cluster with the DROP TABLE command before issuing the DROP CLUSTER command.

ORA-00952: missing GROUP keyword

Cause: Groups were not implemented.

Action: No user action required.

ORA-00953: missing or invalid index name

Cause: An index name of the form [*identifier* .] *identifier* was expected but not present. If OIDINDEX clause, index name must be *identifier*.

Action: Enter an appropriate index name.

ORA-00954: missing IDENTIFIED keyword

Cause: A GRANT CONNECT statement was issued without the keyword IDENTIFIED.

Action: Check the syntax and insert the keyword IDENTIFIED after the last username. The format is GRANT CONNECT TO user-list IDENTIFIED BY password-list;

ORA-00955: name is already used by an existing object

Cause: An attempt was made to create a database object (such as a table, view, cluster, index, or synonym) that already existed. A user's database objects must have distinct names.

Action: Enter a unique name for the database object or modify or drop the existing object so it can be reused.

ORA-00956: missing or invalid auditing option

Cause: The AUDIT or NOAUDIT statement contained an invalid auditing option.

Action: Use a valid option.

ORA-00957: duplicate column name

Cause: A column name was specified twice in a CREATE or INSERT statement. Column names must be unique within a table, view, or cluster.

Action: In a CREATE statement, change one of the column names to a new, unique column name. In an INSERT statement, remove one of the duplicate names.

ORA-00958: missing CHECK keyword

Cause: The keyword CHECK should follow the keyword WITH in the WITH OPTION clause of the CREATE VIEW statement.

Action: Check the statement syntax and insert the keyword CHECK where required. Then retry the statement.

ORA-00959: tablespace '*string*' does not exist

Cause: A statement specified the name of a tablespace that did not exist.

Action: Enter the name of an existing tablespace. For a list of tablespace names, query the data dictionary.

ORA-00960: ambiguous column naming in select list

Cause: A column name in the order-by list matched more than one select list columns.

Action: Remove duplicate column naming in select list.

ORA-00961: bad datetime or interval value**ORA-00962: too many group-by or order-by expressions**

Cause: The group-by or order-by column list contain more than 1000 expressions.

Action: Use 1000 or less expressions in the group-by or order-by list.

ORA-00963: unsupported interval type

Cause: An unsupported interval type was encountered.

Action: Use a valid interval type.

ORA-00964: table name not in FROM list

Cause: The table name referred in the select list is not specified in the from list.

Action: Make sure the name is correctly specified and matches one of the names in the from list.

ORA-00965: column aliases not allowed for **

Cause: The statement is trying to alias the * expression in the select list which is not legal.

Action: Remove the alias.

ORA-00966: missing TABLE keyword

Cause: A LOCK statement was specified and the keyword TABLE was missing, misspelled, or misplaced. A LOCK statement must begin with LOCK TABLE tablename.

Action: Correct the syntax.

ORA-00967: missing WHERE keyword

Cause: The keyword WHERE in a SELECT statement was missing, misspelled, or misplaced.

Action: Correct the syntax.

ORA-00968: missing INDEX keyword

Cause: The keyword INDEX in a CREATE UNIQUE INDEX or VALIDATE INDEX statement was missing, misspelled, or misplaced.

Action: Correct the syntax.

ORA-00969: missing ON keyword

Cause: The keyword ON in a GRANT, REVOKE, or CREATE INDEX statement was missing, misspelled, or misplaced.

Action: Check syntax and spelling, and use the keyword ON where required.

ORA-00970: missing WITH keyword

Cause: The keyword START was specified without the keyword WITH. Both keywords were necessary if a START WITH clause is desired in a tree-structured query.

Action: Change the keyword START to the keywords START WITH. Then retry the statement.

ORA-00971: missing SET keyword

Cause: The keyword SET in an UPDATE statement is missing, misspelled, or misplaced.

Action: Check syntax and spelling, and use the keyword SET after the name of the table to be updated.

ORA-00972: The identifier *string...string...* exceeds the maximum length of *string* bytes.

Cause: Either an identifier with more than the maximum bytes was specified, or there was a misuse of single or double quotation characters. Note that some character sets may cause a character to require more than a single byte which can cause the limit of bytes to be exceeded while the number of characters remain within the limit.

Action: Specify no more than the maximum bytes for identifiers. Double check the syntax of your quotations. *Params: 1) first_10_chars: The leading 10 characters of the identifier that is too long. 2) expected_last_10_chars: The expected trailing 10 characters of the identifier which is the maximum length allowed. Cannot be longer than up to here. 3) maximum_bytes: The maximum length of bytes allowed.

ORA-00973: invalid row count estimate**ORA-00974: invalid PCTFREE value (percentage)**

Cause: The percentage of free space specified in a CREATE INDEX statement was not between 0 and 100. A PCTFREE value of 0 means the entire block was available. The value 100 was not useful because it means that no data may be inserted. The default was 10.

Action: Specify a PCTFREE value between 0 and 100. Then retry the statement.

ORA-00975: date + date not allowed

Cause: An attempt was made to add two date fields together. Dates may be added only to numeric fields, not to other dates.

Action: Use the Oracle function TO_NUMBER to convert one of the date fields to a numeric field before adding it to the other date field.

ORA-00976: Specified pseudocolumn or operator not allowed here.

Cause: LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE was specified at an illegal location.

Action: Remove LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE.

ORA-00978: nested group function without GROUP BY

Cause: A group function, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, was used within another group function, as in MAX(COUNT(*)), without a corresponding GROUP BY clause.

Action: Either add a GROUP BY clause or remove the extra level of nesting.

ORA-00979: *string*: must appear in the GROUP BY clause or be used in an aggregate function

Cause: The specified expression was not part of either the GROUP BY clause, an aggregate function, or a constant but appeared in a part of the query that is processed after the GROUP BY clause, such as the SELECT clause, the ORDER BY clause, or the HAVING clause.

Action: Add the expression to the GROUP BY clause or add an aggregate function to specify which value of the expression to use for each group. Ensure that any columns in the SELECT list that are not part of an aggregate function are present in the GROUP BY clause.
*Params: 1) expression: The expression that was missing from the GROUP BY clause.

ORA-00980: synonym translation is no longer valid

Cause: A synonym did not translate to a legal target object. This could happen for one of the following reasons: 1. The target schema does not exist. 2. The target object does not exist. 3. The synonym specifies an incorrect database link. 4. The synonym is not versioned but specifies a versioned target object.

Action: Change the synonym definition so that the synonym points at a legal target object.

ORA-00981: cannot mix table and system auditing options

Cause: Table and system-wide auditing options were specified in the same AUDIT or NOAUDIT statement.

Action: You must issue table and system options in separate statements.

ORA-00982: missing plus sign

Cause: A left parenthesis appeared in a join condition, but a plus sign (+) did not follow. A left parenthesis in a join condition usually signals an outer-join specification and so a plus sign was expected to follow. To specify an outer join on a column in a join operation, follow the column reference in the join condition with a plus sign (+) enclosed in parentheses.

Action: Correct the SQL syntax and retry the statement.

ORA-00983: AUDIT or NOAUDIT on SYS user actions is not allowed.

Cause: An attempt was made to AUDIT or NOAUDIT SYS user actions, which is not allowed for SYS users.

Action: Retry the statement with a user other than SYS.

ORA-00984: column not allowed here

Cause: A column name was used in an expression where it was not permitted, such as in the VALUES clause of an INSERT statement.

Action: Check the syntax of the statement and use column names only where appropriate.

ORA-00985: invalid program name

Cause: Probably a syntax error.

Action: Correct syntax.

ORA-00986: Missing or invalid join group names.

Cause: There was a syntax error while specifying the join group name.

Action: Correct the syntax and try again.

ORA-00987: missing or invalid username(s)

Cause: No username was specified or one of the specified usernames was invalid. Valid usernames must be specified to define a user. A username must begin with a letter, consist only of alphanumeric characters and the special characters \$, _, and #, and be less than or equal to 30 characters. If it contained other characters, it must be enclosed in double quotation marks. It may not be a reserved word.

Action: Specify a valid username, or list of usernames.

ORA-00988: missing or invalid passwords

Cause: The statement had an invalid or missing password for one or more users.

Action: Ensure that all users in the statement have a valid password that is not null. Do not enclose the password with single quotation marks. Use double quotation marks to enclose the password. Then retry the operation.

ORA-00989: too many passwords for usernames given

Cause: More passwords than usernames were specified in a GRANT statement. Only one password may be entered for each username listed in the GRANT statement.

Action: Enter an equal number of usernames and passwords.

ORA-00990: missing or invalid privilege

Cause: No privileges were specified in a GRANT privilege statement, or one of the specified privileges is invalid.

Action: Enter one or more valid privileges such as SELECT, INSERT, DELETE, UPDATE, ALTER, INDEX, REFERENCES, or ALL. More than one privilege may be granted by entering the privileges as a list separated by commas (,) or by specifying the keyword ALL to grant all privileges.

ORA-00991: only MAC privileges may be granted to procedures

Cause: Object privileges or non-MAC system privileges were granted to the procedure.

Action: Only grant MAC privileges using the PROCEDURE clause.

ORA-00992: invalid format for REVOKE command

Cause: An invalid form of the REVOKE command was entered. There are two forms of the REVOKE command. The first form was used to revoke a user's database access privileges. The second form was used to revoke a user's object privileges.

Action: Check the command syntax and retry the statement.

ORA-00993: missing GRANT keyword

Cause: The keyword WITH was specified at the end of a GRANT statement without the keyword GRANT. To grant privileges to a user and the permission to grant those privileges to another user, you must specify the keywords WITH GRANT OPTION at the end of the GRANT statement.

Action: Change the keyword WITH to the keywords WITH GRANT OPTION, then retry the statement.

ORA-00994: missing OPTION keyword

Cause: The keywords WITH GRANT were specified at the end of a GRANT statement without the keyword OPTION.

Action: Change the keywords WITH GRANT to the keywords WITH GRANT OPTION. Then retry the statement.

ORA-00995: missing or invalid synonym identifier

Cause: In a CREATE or DROP SYNONYM statement, the synonym name was either missing or invalid.

Action: Check syntax and spelling. A valid synonym name must be specified immediately following the keyword SYNONYM in both statements. Valid synonym names must begin with a letter, consist of alphanumeric characters and the special characters \$, _, and #, and be less than or equal to 30 characters. They may not be reserved words.

ORA-00996: the concatenate operator is ||, not |

Cause: A single bar (|) was interpreted as an attempt to specify concatenation, but the concatenation operator was a double bar (||).

Action: Enter a double bar (||) for concatenation or remove the single bar (|) if concatenation was not intended.

ORA-00997: illegal use of LONG datatype

Cause: A value of datatype LONG was used in a function or in a DISTINCT, WHERE, CONNECT BY, GROUP BY, or ORDER BY clause. A LONG value can only be used in a SELECT clause.

Action: Remove the LONG value from the function or clause.

ORA-00998: must name this expression with a column alias

Cause: An expression or function was used in a CREATE VIEW statement, but no corresponding column name was specified. When expressions or functions are used in a view, all column names for the view must be explicitly specified in the CREATE VIEW statement.

Action: Enter a column name for each column in the view in parentheses after the view name.

ORA-00999: invalid view name

Cause: In a CREATE VIEW statement, the view name was missing or invalid.

Action: Enter a valid view name following CREATE VIEW. Valid view names must begin with a letter, consist of only alphanumeric characters and the special characters \$, _, and #, be less than or equal to 30 characters, and may not be reserved words. If the view name contains other characters, it must be enclosed in double quotation marks.

ORA-01000: maximum open cursors for session exceeded *string*

Cause: An application is attempting to open too many cursors within the current session. This could be a result of the application not closing cursors properly or keeping cursors open for longer than needed. This could also be a result of the application genuinely requiring more cursors than currently permitted by the OPEN_CURSORS parameter value. This could also be caused by cursors not being closed properly.

Action: Check the application code to see if currently opened cursors can be closed before opening new ones. If the application does require more cursors to be simultaneously open within a session, then increase the value of the OPEN_CURSORS parameter. If a potential leaked SQL_ID is identified in the error text, then it needs to be reviewed by an application developer.

ORA-01001: cursor number is invalid or does not exist

Cause: Either a host language program call specified an invalid cursor number or the value of the MAXOPENCURSORS option in the precompiler command was too small.

Action: Check the erroneous call statement. Open a cursor when using the V8 Oracle Call Interface (OCI) API, or specify a valid Logon Data Area (LDA) when using the V7 OCI API. When using V8 OCI calls, make sure OCISmtPrepare2 (or OCISmtPrepare) and OCISmtExecute have been called. When using precompilers, all cursors must be opened using the OOPEN call before being referenced in any of the following calls: SQL, DESCRIBE, NAME, DEFINE, BIND, EXEC, FETCH, or CLOSE. If there is no problem with the cursor, it may be necessary to increase the MAXOPENCURSORS option value before precompiling.

ORA-01002: fetch out of sequence

Cause: A fetch was attempted from a cursor that is no longer valid. A PL/SQL cursor loop implicitly does fetches, and thus may also cause this error. Possible causes for this error include the following: 1) Fetching from a cursor after the last row has been retrieved and the ORA-1403 error returned. 2) If the cursor has been opened with the FOR UPDATE clause, fetching after a COMMIT has been issued will return the error. 3) Rebinding any placeholders in the SQL statement, then issuing a fetch before rerunning the statement. 4) The database server will close cursors at a request boundary when RESET_STATE is active. An attempt to use the cursor after the request has ended can raise this error.

Action: 1) Do not issue a fetch statement after the last row has been retrieved - there are no more rows to fetch. 2) Do not issue a COMMIT inside a fetch loop for a cursor that has been opened FOR UPDATE. 3) Rerun the statement after rebinding, then attempt to fetch again. 4) Close cursors at the end of a request. Do not fetch from cursors across requests without rerunning the statement.

ORA-01003: no statement parsed

Cause: A host language program call referenced a cursor with no associated parsed SQL statement. A SQL call (for example, OSQL3) must be used to pass a SQL statement to Oracle and to associate the statement with an open cursor. A cursor must already have an associated SQL statement if referenced in any of the following calls: DESCRIBE, NAME, DEFINE, BIND, EXECUTE, and FETCH.

Action: Do the SQL call, for example, OSQL, to pass the required SQL statement before referencing the cursor.

ORA-01004: invalid value for parameter '*string*': *string*

Cause: The value specified for the parameter is invalid due to the reason mentioned in the error message.

Action: Correct the value for the parameter and retry. Refer to the documentation of the parameter for accepted values.

ORA-01005: Login denied due to invalid password.

Cause: A null password was entered.

Action: Null password not allowed. Retry login with a valid password.

ORA-01006: Bind variable does not exist.

Cause: A program issued a call for a unbound variable.

Action: Modify the call to reference a bound variable, or add the bound variable to the SQL statement. Variables must be prefixed by either a colon (:) or ampersand (&) in the SQL statement to be referenced in a BIND call, OBIND, or OBINDN. Error might be caused by a mismatch between a precompiler program and the SQLLIB library.

ORA-01007: Reference to a variable not in SELECT clause.

Cause: A reference was made to a variable not listed in the SELECT clause of the statement.

Action: Modify the SELECT clause to include the reference, or remove the reference from the call.

ORA-01008: value for bind variable placeholder *string* was not provided

Cause: A SQL or PL/SQL statement containing a bind variable placeholder was executed without a value being provided for that placeholder.

Action: To resolve the issue, perform one of the following tasks: - When using named binding, specify a value for each bind variable placeholder. If a placeholder is repeated in the statement, then only one value with that name is needed. - When using positional binding, specify a value for each bind variable position, even if the bind variable placeholder name is repeated in the statement. - When using Native Dynamic SQL in PL/SQL, specify a value for each placeholder in the appropriate clause of the EXECUTE IMMEDIATE statement.

*Params: 1) variable_name: The name of the bind variable without a value or its position.

ORA-01009: missing mandatory parameter

Cause: A host language program call did not pass all required parameters.

Action: Check the syntax for the call and enter all required parameters.

ORA-01011: Cannot use v7 compatibility mode when talking to v6 server

Cause: An attempt was made to use Oracle7 compatibility mode when accessing Oracle version 6.

Action: Use v6 sql language type. You may need to use the 'SET COMPATIBILITY V6' command

ORA-01012: not logged on

Cause: A host language program issued an Oracle call other than OLON or OLOGON, without being logged on to the Oracle. This occurred when a user process attempted to access the database after the instance it was connected to terminated, forcing the process to disconnect.

Action: Log on to Oracle by calling OLON or OLOGON before issuing any Oracle calls. When the instance has restarted, retry the action.

ORA-01013: User requested cancel of current operation.

Cause: The user interrupted an Oracle operation by entering CTRL-C, Control-C, or another canceling operation.

Action: No action needed.

ORA-01014: ORACLE shutdown in progress

Cause: A user tried to log on to Oracle while an instance shutdown was in progress or a service required by an existing process was not available. Oracle logins were disabled and some other services were not available while Oracle was being shut down.

Action: Wait until Oracle is brought back up before attempting to log on. Ignore ORA-1014 errors reported by processes during an Oracle instance shutdown.

ORA-01015: logon called recursively

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-01016: This function can be called only after a fetch

Cause: Cursor in an invalid state.

Action: Make sure that the oci/upi function is called after fetch.

ORA-01017: invalid credential or not authorized; logon denied

Cause: An invalid credential was provided when accessing the Oracle Database or you were not authorized to access this database.

Action: Depending on your authentication method, ensure that the correct credential is provided when logging in to Oracle Database. Retry your credential after checking it. If your credential is correct, you may not be authorized to access the database. You will need to contact your database administrator or identity management administrator to confirm that you are authorized to access the database.

ORA-01018: column does not have a LONG datatype

Cause: An attempt was made to fetch data using the LONG fetch option, but the specified column was not LONG.

Action: Re-execute the fetch without the LONG fetch option or create the table with a LONG column.

ORA-01019: Memory allocation failed for an Oracle Database *string* process.

Cause: One of the following occurred: 1. The operating system did not have enough memory available for the process. 2. The Oracle server process exceeded the limit set by the PGA_AGGREGATE_TARGET parameter.

Action: Take the action that corresponds with the cause: If encountered on the server, try one or more of the following: - Reduce the number of open database connections, perhaps by using client-side connection pooling. Database Resident Connection Pooling (DRCP) may be useful in some scenarios. - Increase the database parameter PGA_AGGREGATE_LIMIT. - If PGA_AGGREGATE_LIMIT cannot be increased further, try to free up memory on the server; for example, by decreasing the database parameter SGA_TARGET. - Increase the system memory available for the database host. If encountered on the client, try to: - Free up memory. - Add memory to the system. *Params: 1) process_type: Either 'client' or 'server', indicating where the memory error occurred.

ORA-01020: context state error

Cause: There was an unexpected context state error.

Action: Retry the command or contact Oracle Support.

ORA-01021: invalid context size specified

Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-01022: database operation not supported in this configuration

Cause: The attempted database operation does not conform to the user programming interface (UPI) for the two communicating ORACLE servers.

Action: You may need to upgrade one or more of your ORACLE servers or re-link your user side application with new libraries. Report the problem to Worldwide Customer Support.

ORA-01023: Cursor context not found (Invalid cursor number)

Cause: The cursor number is not a valid open cursor.

Action: Make sure that the cursor is open.

ORA-01024: invalid datatype in OCI call

Cause: An OCI program call specified an invalid datatype. In OCI calls, Oracle datatypes were specified as numbers between 1 and 7.

Action: Check the datatype description and enter the correct number for the datatype.

ORA-01025: UPI parameter out of range

Cause: An integer parameter to a upi function is out of range.

Action: This usually indicates an error in a tool built on top of the oracle dbms. Report the error to your customer support representative.

ORA-01026: multiple buffers of size > 4000 in the bind list

Cause: More than one long buffer in the bind list.

Action: Change the buffer size to be less than 4000 for the bind variable bound to a normal column.

ORA-01027: bind variables not allowed for data definition operations

Cause: An attempt was made to use a bind variable in a SQL data definition operation.

Action: Such bind variables are not allowed.

ORA-01028: internal two task error

Cause: Received send long message but don't have the cursor context.

Action: Report as a bug.

ORA-01029: internal two task error

Cause: Received a request to send the long again when there is no long

Action: Report as a bug

ORA-01030: SELECT ... INTO variable does not exist

Cause: The SELECT... INTO specified in the bind call does not correspond to a variable in the SQL statement.

Action: If it is not possible to correct the statement, call customer support.

ORA-01031: insufficient privileges

Cause: A database operation was attempted without the required privilege(s).

Action: Ask your database administrator or security administrator to grant you the required privilege(s).

ORA-01032: no such userid

Cause: This is an internal error message related to Export/Import.

Action: Contact customer support.

ORA-01033: ORACLE initialization or shutdown in progress

Cause: An attempt was made to log on while Oracle is being started up or shutdown.

Action: Wait a few minutes. Then retry the operation.

ORA-01034: The Oracle instance is not available for use. Start the instance.

Cause: An attempt was made to connect to an Oracle database or ASM or ASMIOSEVER instance, but the instance was not available. The instance was either incorrectly specified or was shut down, failed to start, or was aborted.

Action: Verify that you are connecting to the correct Oracle instance and, if so, restart the instance.

ORA-01035: Login denied. Database is in RESTRICTED mode.

Cause: The database is running in RESTRICTED mode. Only users with the RESTRICTED SESSION system privilege are allowed to login.

Action: Obtain the RESTRICTED SESSION system privilege for the user and retry the operation, or request that the database be started without the RESTRICTED SESSION option.

ORA-01036: unrecognized bind variable *string* passed to the bind call

Cause: The bind variable that was passed to the bind call did not have a matching placeholder in the statement.

Action: Ensure that the variable being bound has a placeholder in the statement.

ORA-01037: maximum cursor memory exceeded

Cause: Attempting to process a complex sql statement which consumed all available memory of the cursor.

Action: Simplify the complex sql statement.

ORA-01038: cannot write database file version *string* with Oracle version *string*

Cause: The database file headers had an older format compared to the version of Oracle used to execute the command.

Action: Open the database to advance to the new file format and retry. If the operation is required before the database can be opened, then use the previous Oracle version to complete the operation. *Params: 1) database_file_version_number: The version in database file headers. 2) Oracle_version_number: The Oracle version in use.

ORA-01039: insufficient privileges on underlying objects of the view

Cause: Attempting to explain plan on other people's view without the necessary privileges on the underlying objects of the view.

Action: Get necessary privileges or do not perform the offending operation.

ORA-01040: invalid character in password; logon denied

Cause: There are multibyte characters in the password or some characters in the password are not in US7ASCII range.

Action: Resubmit password with valid characters.

ORA-01041: internal error. hostdef extension doesn't exist

Cause: Pointer to hstdef extension in hstdef is null.

Action: Report as a bug

ORA-01042: detaching a session with open cursors not allowed

Cause: An attempt was made to detach a session which had open cursors.

Action: Close all the cursors before detaching the session.

ORA-01043: user side memory corruption [string], [string], [string], [string]

Cause: The application code corrupted some of the user memory used by Oracle

Action: Make sure that the application code is not overwriting memory.

ORA-01044: size string of buffer bound to variable exceeds maximum string

Cause: An attempt was made to bind a buffer whose total size would exceed the maximum size allowed. Total array size for arrays is calculated as: (element_size)*(number of elements)

Action: Reduce buffer size.

ORA-01045: Login denied. User string does not have CREATE SESSION privilege.

Cause: A connect was attempted for a user who does not have the CREATE SESSION privilege.

Action: Grant the user CREATE SESSION privilege, or login with a user that has the CREATE SESSION privilege.

ORA-01046: cannot acquire space to extend context area

Cause: Oracle could not extend the current area any further because the operating system would not supply any more space. A system-specific message should appear following this message.

Action: Close some cursors and try again or check operating system quotas to use more virtual memory. See your operating system-specific Oracle documentation.

ORA-01047: The above error occurred in schema=string, package=string, procedure=string

Cause: This message was displayed after a previous message to provide more specific information.

Action: Informational message

ORA-01048: Couldn't find the specified procedure in the given context

Cause: The procedure user specified in deferred RPC doesn't exist.

Action: Check to make sure that the procedure exists and is visible to the replication process.

ORA-01049: Bind by name is not supported in streamed RPC

Cause: A newer version of server is talking with this version requesting an operation not supported in this version.

Action: You may need to upgrade one or more of your Oracle servers or relink your user application with new libraries.

ORA-01050: cannot acquire space to open context area

Cause: Oracle could not open a new context area because the operating system would not supply any more space. A system-specific message should appear following this message.

Action: Close some cursors and try again or check operating system quotas to use more virtual memory. See your operating system-specific Oracle documentation.

ORA-01051: deferred rpc buffer format invalid

Cause: The deferred rpc data in sys.def\$_call is corrupted.

Action: Contact your customer support representative.

ORA-01052: LOG_ARCHIVE_DUPLEX_DEST is not set.

Cause: A valid destination for parameter LOG_ARCHIVE_DUPLEX_DEST was not set when parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was set to two.

Action: Set a value for parameter LOG_ARCHIVE_DUPLEX_DEST, or set the LOG_ARCHIVE_MIN_SUCCEED_DEST to one.

ORA-01053: user storage address cannot be read

Cause: A bind variable or other user area could not be read by Oracle.

Action: Check that binds are done correctly on valid user buffers, then retry the operation.

ORA-01054: user storage address cannot be written

Cause: A define, FETCH... INTO or SELECT... INTO, variable or other user area could not be written to by Oracle.

Action: Check that INTO variables and indicators are correctly specified. Then retry the operation.

ORA-01055: Object datatypes not supported for bind or define in this mode

Cause: Bind or Define used for objects with an invalid mode

Action: Change the mode.

ORA-01057: invalid or ambiguous block.field reference in user exit

Cause: The reference to a block.field identifier in a user exit was incorrect or ambiguous, probably because it was misspelled or incomplete.

Action: Check syntax and identifier spelling. Then correct the reference.

ORA-01058: internal New Upi interface error

Cause: Attempt to delete nonexistent hstdef extension.

Action: Report as a bug.

ORA-01059: parse expected before a bind or execute

Cause: The client application attempted to bind a variable or execute a cursor opened in a PL/SQL block before the statement was parsed.

Action: Ensure the statement is parsed before a bind or execute.

ORA-01060: array binds or executes not allowed

Cause: The client application attempted to bind an array of cursors or attempted to repeatedly execute against a PL/SQL block with a bind variable of type cursor.

Action: Bind a single cursor or execute the PL/SQL block once.

ORA-01061: cannot start up a V8 server using a V7 client application

Cause: You are using an Oracle client application linked with version 7 (or lower) libraries and you attempted to start up a V8 (or higher) server.

Action: Use a client application linked with V8 (or higher) libraries.60

ORA-01062: unable to allocate memory for define buffer

Cause: Exceeded the maximum buffer size for current platform

Action: Use piecewise fetch with a smaller buffer size

ORA-01063: fetch row count exceeds MINSWORDMAXVAL

Cause: The total number of rows requested from the server exceeded the maximum specified in MINSWORDMAXVAL.

Action: Fix the number of rows to fetch or prefetch for the fetch interface call.

ORA-01064: invalid value 'string' for parameter INSTANCE_TYPE in Free version

Cause: A value other than RDBMS was specified for the INSTANCE_TYPE parameter in Oracle Database Free version (FREE).

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) to bring up any other instance type.

ORA-01065: A value was not provided for placeholder string.

Cause: The SQL statement contained a placeholder but a value was not provided for that placeholder. Placeholders are used in SQL statements so that data values do not need to be hardcoded.

Action: Use the OCISmtPlaceholderSubstitute() function to set a string value as a substitute for the placeholder when the statement is executed.

ORA-01066: Placeholder substitution failed.

Cause: Either OCISmtPlaceholderSubstitute() was called after OCISmtExecute(), or the statement was prepared without specifying the mode OCI_PREP2_OCI_PLACEHOLDER to OCISmtPrepare2().

Action: 1. Prepare the statement using OCISmtPrepare2() with mode OCI_PREP2_OCI_PLACEHOLDER before calling OCISmtPlaceholderSubstitute(). 2. Call OCISmtPlaceholderSubstitute() before calling OCISmtExecute().

ORA-01067: invalid placeholder name

Cause: Possible causes are: 1. A placeholder name passed to the function OCISmtPlaceholderSubstitute() was not used in the statement. 2. A NULL name or length zero was passed to the function OCISmtPlaceholderSubstitute().

Action: Check that placeholder names used in the function OCISmtPlaceholderSubstitute() match the names in the statement passed to the function OCISmtPrepare2().

ORA-01068: invalid substitute string for placeholder *string*

Cause: The substitute string for the specified placeholder was invalid or the mode specified for OCIStmtPlaceholderSubstitute was invalid.

Action: Check the Oracle documentation for the list of valid formats to use with OCIStmtPlaceholderSubstitute, and ensure the substitute string matches the format specified by the mode parameter.

ORA-01069: Attempt to use placeholders in a statement that doesn't support placeholders

Cause: Placeholders are not supported in SELECT, DML and PLSQL statements that already support binds.

Action: Use bind variables instead of placeholders in such statements.

ORA-01070: Using an old version of Oracle for the server

Cause: Using pre 7.0.10.1 version of oracle for server

Action: Upgrade server to post 7.0.10.1 version

ORA-01071: cannot perform operation without starting up ORACLE

Cause: An attempt was made to perform an operation before Oracle was started.

Action: Start Oracle. Then retry the operation.

ORA-01072: cannot stop ORACLE; ORACLE not running

Cause: An attempt was made to stop Oracle, but Oracle was not running.

Action: No action required.

ORA-01073: fatal connection error: unrecognized call type

Cause: An illegal internal operation was attempted.

Action: Contact your customer support representative.

ORA-01074: cannot shut down ORACLE; inside a login session - log off first

Cause: An attempt was made to shut down Oracle inside a logon session.

Action: Log off before shutting down Oracle.

ORA-01075: You are currently logged on.

Cause: Attempted to login while the session was already logged on.

Action: No action required.

ORA-01076: multiple logons per process not yet supported

Cause: Oracle did not support multiple logons per process.

Action: No action required.

ORA-01077: background process initialization failure

Cause: Failure during initialization of ORACLE background processes.

Action: Further diagnostic information should be in the error stack or in the trace file.

ORA-01078: failure in processing system parameters

Cause: Failure during processing of INIT.ORA parameters during system startup.

Action: Further diagnostic information should be in the error stack.

ORA-01079: ORACLE database was not properly created, operation aborted

Cause: There was an error when the database or control file was created.

Action: Check what error was signaled when the database was first created or when the control file was recreated. Take appropriate actions to recreate the database or a new control file.

ORA-01080: error in shutting down ORACLE

Cause: Failure during system shutdown.

Action: Further diagnostic information should be in the error stack.

ORA-01081: cannot start already-running ORACLE - shut it down first

Cause: An attempt was made to start Oracle while it was already running.

Action: Shut down Oracle first, if you want to restart it.

ORA-01082: 'row_locking = always' requires the transaction processing option

Cause: "row_locking = always" is specified in INIT.ORA file. This feature is not supported by ORACLE without the transaction processing option.

Action: Remove it from INIT.ORA file or set it to "default" or "intent".

ORA-01083: value of parameter "string" is inconsistent with that of other instances

Cause: The value of the given parameter is required to be the same for all instances in the cluster database configuration. ROW_LOCKING and SERIALIZABLE are 2 examples.

Action: Change the value of the parameter in INIT.ORA file to match that of other cluster database instances.

ORA-01084: invalid argument in OCI call

Cause: The failing Oracle Call Interface (OCI) call contained an argument with an invalid value.

Action: Use valid argument values. For more information, see the Oracle documentation for Oracle Call Interfaces and the appropriate programming language supplement.

ORA-01085: preceding errors in deferred rpc to "string.string.string"

Cause: Errors were encountered when the named procedure was executed as a deferred remoted procedure call.

Action: Correct the cause of the preceding errors.

ORA-01086: savepoint 'string' never established in this session or is invalid

Cause: An attempt was made to roll back to a savepoint that was never established in this session, or was invalid.

Action: Try rolling back to the savepoint from the session where it is established.

ORA-01087: cannot start up ORACLE - currently logged on

Cause: An attempt was made to start up Oracle by a user who was currently logged on.

Action: Logoff and then issue the STARTUP command.

ORA-01088: shutdown in progress - operation not permitted until restart

Cause: The SHUTDOWN command was used to shut down a running Oracle instance but the shutdown operation was not complete.

Action: Wait for the instance to be restarted or contact your database administrator.

ORA-01089: immediate shutdown or close in progress - no operations are permitted

Cause: The SHUTDOWN IMMEDIATE command was used to shut down a running Oracle instance, or CLOSE IMMEDIATE was used to shut down a pluggable database, so your operations have been terminated.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01090: shutdown in progress - connection is not permitted

Cause: The SHUTDOWN command was used to shut down a running ORACLE instance, so you cannot connect to ORACLE.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01091: failure during startup force

Cause: Unable to destroy the old SGA.

Action: Manually remove the old SGA and reissue the STARTUP command

ORA-01092: ORACLE instance terminated. Disconnection forced

Cause: The instance this process was connected to was terminated abnormally, probably via a shutdown abort. This process was forced to disconnect from the instance.

Action: Examine the alert log for more details. When the instance has been restarted, retry action.

ORA-01093: ALTER DATABASE CLOSE only permitted with no sessions connected

Cause: There is at least one more session other than the current one logged into the instance. ALTER DATABASE CLOSE is not permitted.

Action: Find the other sessions and log them out and resubmit the command

ORA-01094: ALTER DATABASE or ALTER PLUGGABLE DATABASE CLOSE in progress. Connections not permitted

Cause: An attempt was made to connect while the database was being closed with the ALTER DATABASE CLOSE statement.

Action: Attempt to connect again when the database is open. Contact the database administrator to find out when the database will be open.

ORA-01095: DML statement processed zero rows

Cause: During a call to OTEX, an update, delete, or insert statement being executed processed zero rows. The execution of statements by OTEX was halted at this point.

Action: Caller can either do a rollback or ignore the message and execute the rest of the cursors in the cursor array.

ORA-01096: program version (*string*) incompatible with instance (*string*)

Cause: A program was trying to connect to an instance using a different version of binary from which the database was started. This is not allowed.

Action: Either relink the program with the same version as the database or restart the database using the old version of binary. Check the environment to ensure the correct path and binary is used.

ORA-01097: cannot shutdown while in a transaction - commit or rollback first

Cause: An attempt was made to shut down the database while a transaction was in progress.

Action: Either commit or rollback the current transaction and then attempt to shut down the database.

ORA-01098: program Interface error during Long Insert

Cause: The application program interface could not insert or update a LONG column because of an internal error when a TTCGETV call fails. For example, a network read error or one of the parameters passed to the call is invalid.

Action: Retry the insert or update.

ORA-01099: cannot mount database in SHARED mode if started in single process mode

Cause: An attempt was made to mount a database in parallel mode with the initialization parameter SINGLE_PROCESS set to TRUE.

Action: Either mount the database in EXCLUSIVE mode or set the initialization parameter SINGLE_PROCESS to FALSE before starting the instance in parallel (shared) mode.

ORA-01100: database already mounted

Cause: A database is already mounted in this instance.

Action: No action is required.

ORA-01101: database being created currently mounted by some other instance

Cause: Some other instance has the database of same name currently mounted and you are trying to create it.

Action: Either change the database name or shutdown the other instance.

ORA-01102: cannot mount database in EXCLUSIVE mode

Cause: Some other instance has the database mounted exclusive or shared.

Action: Shutdown other instance or mount in a compatible mode.

ORA-01103: control file database name '*string*' does not match parameter file DB_NAME '*string*'

Cause: The database name in the control file did not match the database name specified by the DB_NAME parameter in the parameter file.

Action: If the intent is just to mount a control file so that it can be examined, then just change the value of DB_NAME in the parameter file to match the database name in the control file. If using an SPFILE, then use STARTUP NOMOUNT to allow access to the SPFILE, change the DB_NAME parameter, then use SHUTDOWN IMMEDIATE and STARTUP MOUNT. If the intent is to open a second database using the control file from the first database, then

instead consider using the RMAN DUPLICATE command. If there is no risk of the second database accessing the exact same data files as the first database, then either use the NID (New ID) utility to give the second database a new name and database ID, or change the DB_NAME in the parameter file. Otherwise, locate the correct control file to use for the database. *Params: 1) database_name: Name of the database in the control file. 2) db_name: Value of the DB_NAME parameter in the parameter file.

ORA-01104: number of control files (*string*) does not equal *string*

Cause: The number of control files used by this instance disagrees with the number of control files in an existing instance.

Action: Check to make sure that all control files are listed.

ORA-01105: mount is incompatible with mounts by other instances

Cause: An attempt to mount the database discovered that another instance mounted a database by the same name, but the mount is not compatible. Additional errors are reported explaining why.

Action: See accompanying errors.

ORA-01106: database must be closed before dismounting

Cause: An attempt was made to dismount a database before it was closed.

Action: Close the database, then retry the operation.

ORA-01107: database must be mounted for media recovery

Cause: An attempt to perform media recovery was made but the database is not mounted.

Action: Mount the database.

ORA-01108: file *string* is in backup or media recovery

Cause: Either media recovery is actively being applied to the file, or it is being backed up while the database is in NOARCHIVELOG mode. It cannot be used for normal database access or crash recovery.

Action: Complete or cancel the media recovery session or backup.

ORA-01109: database not open

Cause: A command was attempted that requires the database to be open.

Action: Open the database and try the command again

ORA-01110: data file *string*: '*string*'

Cause: Reporting file name for details of another error. The reported name can be of the old file if a data file move operation is in progress.

Action: See associated error message.

ORA-01111: name for data file *string* is unknown - rename to correct file

Cause: The data file was missing from a CREATE CONTROLFILE command or backup control file recovery was done with a control file that was saved before the file was created.

Action: Rename the MISSING file to the name of the real file.

ORA-01112: media recovery not started

Cause: An attempt to continue media recovery is being made but media recovery was not started.

Action: None

ORA-01113: file *string* needs media recovery

Cause: An attempt was made to online or open a database with a file that is in need of media recovery.

Action: First apply media recovery to the file.

ORA-01114: IO error writing block to file *string* (block # *string*)

Cause: The device on which the file resides is probably offline. If the file is a temporary file, then it is also possible that the device has run out of space. This could happen because disk space of temporary files is not necessarily allocated at file creation time.

Action: Restore access to the device or remove unnecessary files to free up space.

ORA-01115: IO error reading block from file *string* (block # *string*)

Cause: Device on which the file resides is probably offline

Action: Restore access to the device

ORA-01116: error in opening database file *string*

Cause: Usually the file is not accessible.

Action: Restore the database file.

ORA-01117: adding file '*string*' with illegal block size: *string*; max limit is *string*; min limit is *string*

Cause: An attempt was made to add a database file with a block size that was greater than the maximum block size allowed or less than the minimum block size allowed or an invalid value (that is, not power of 2) in the allowed range.

Action: Retry the DDL command with a valid block size.

ORA-01118: cannot add any more database files: limit of *string* exceeded

Cause: There is no more room in the control file for adding database files.

Action: Resize the control file or drop other tablespaces.

ORA-01119: error in creating database file '*string*'

Cause: Usually due to not having enough space on the device.

Action: Decrease the size of the requested file or allocate a file on another device with more available space. If a file size was not specified in the statement, then specify a file size smaller than the available space on the device.

ORA-01120: cannot remove online database file *string*

Cause: Attempting to drop a datafile when it is online

Action: Take file offline before dropping.

ORA-01121: cannot rename database file *string* - file is in use or recovery

Cause: Attempted to use ALTER DATABASE RENAME to rename a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions.

ORA-01122: database file *string* failed verification check

Cause: The information in this file is inconsistent with information from the control file. See accompanying message for reason.

Action: Make certain that the db files and control files are the correct files for this database.

ORA-01123: cannot start online backup; media recovery not enabled

Cause: An attempt to start backup of an online tablespace failed because media recovery was not enabled.

Action: Enable media recovery and retry this operation.

ORA-01124: cannot recover data file *string* - file is in use or recovery

Cause: An attempt to do media recovery found that the file was not available for recovery. Either it is online and the database is open in some instance, or another process is currently doing media recovery on the file.

Action: Do not do media recovery.

ORA-01125: Cannot disable media recovery. File *string* has online backup set.

Cause: An attempt to disable media recovery encountered an online backup in progress.

Action: End the offending backup and retry this command.

ORA-01126: database must be mounted in this instance and not open in any instance

Cause: An operation failed because the database was not mounted in exclusive mode.

Action: Shut down Oracle and mount the database in exclusive mode.

ORA-01127: database name '*string*' exceeds size limit of *string* characters

Cause: The specified database name was too long.

Action: Shorten the database name to eight characters or fewer, then retry the operation.

ORA-01128: cannot start online backup - file *string* is offline

Cause: An attempt to start an online backup found that one of the files is offline.

Action: Bring the offending files online and retry this command or do a cold backup.

ORA-01129: user's default or temporary tablespace does not exist

Cause: The user's default or temporary tablespace was dropped.

Action: Reassign the default or temporary tablespace.

ORA-01130: database file version *string* incompatible with ORACLE version *string*

Cause: The named datafile was created under an incompatible version of Oracle, or the file was invalid or non-existent.

Action: Shut down and restart the correct version of Oracle or check the references to the datafile and make sure it exists.

ORA-01131: DB_FILES system parameter value *string* exceeds limit of *string*

Cause: The specified value of the initialization parameter DB_FILES was too large.

Action: Reduce the value of the DB_FILES parameter and retry the operation.

ORA-01132: length of database file name '*string*' exceeds limit of *string* characters

Cause: The specified datafile name was too long.

Action: Shorten the file name and retry the operation.

ORA-01133: length of log file name '*string*' exceeds limit of *string* characters

Cause: The specified redo log file name was too long.

Action: Shorten the file name and retry the operation.

ORA-01134: database mounted exclusive by another instance

Cause: An attempt to access a database failed because it was mounted in exclusive mode by another instance.

Action: Either shut down the other instance or wait for the other instance to either close the database or mount it in parallel mode, before retrying the operation.

ORA-01135: file *string* accessed for DML/query is offline

Cause: Attempted to access a data file that was offline.

Action: Bring the data file back online

ORA-01136: specified size of file *string* (*string* blocks) is less than original size of *string* blocks

Cause: A file size was specified in the AS clause of ALTER DATABASE CREATE DATAFILE, and the size was smaller than the size needed

Action: Create the file with a larger size.

ORA-01137: data file *string* is still in the middle of going offline

Cause: It was not possible to get the lock for a file that is offline when attempting to bring it online. The most likely cause is that the lock is still held by the instance that took it offline.

Action: Wait a bit and try to online the file again.

ORA-01138: database must either be open in this instance or not at all

Cause: The requested operation can not be done when the database is mounted but not open in this instance, and another instance has the database open.

Action: Execute the operation in an open instance, open the database in this instance, or close the database in the other instances.

ORA-01139: RESETLOGS option only valid after an incomplete database recovery

Cause: The RESETLOGS option was given in ALTER DATABASE OPEN, but there has been no incomplete recovery session.

Action: Retry the ALTER DATABASE OPEN without specifying RESETLOGS

ORA-01140: cannot end online backup - all files are offline or readonly

Cause: All the files were found to be offline or readonly when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01141: error renaming data file *string* - new file '*string*' not found

Cause: An attempt to change a data file's name in the control file failed because no file was found with the new name.

Action: Make sure that the data file has been properly renamed by the operating system and retry.

ORA-01142: cannot end online backup - none of the files are in backup

Cause: None of the files were found to be in online backup when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01143: cannot disable media recovery - file *string* needs media recovery

Cause: An attempt to disable media recovery found a file that needs media recovery, thus media recovery cannot be disabled.

Action: Recover the offending file or drop the tablespace it belongs to and retry this command.

ORA-01144: File size (*string* blocks) exceeds maximum of *string* blocks

Cause: Specified file size is larger than maximum allowable size value.

Action: Specify a smaller size.

ORA-01145: offline immediate disallowed unless media recovery enabled

Cause: ALTER TABLESPACE ... OFFLINE IMMEDIATE or ALTER DATABASE DATAFILE ... OFFLINE is only allowed if database is in ARCHIVELOG mode.

Action: Take tablespace offline normally or shutdown abort. Reconsider your backup strategy. You could do this if you were archiving your logs.

ORA-01146: cannot start online backup - file *string* is already in backup

Cause: When starting an online backup it was noticed that an online backup was already started for one of the data files.

Action: End the first backup before beginning another.

ORA-01147: SYSTEM tablespace file *string* is offline

Cause: A file belonging to the SYSTEM tablespace has been marked offline by the DBA. The database cannot be started until all SYSTEM tablespace files are online and openable.

Action: Bring the file online.

ORA-01148: cannot refresh file size for datafile *string*

Cause: An operating system or device error occurred when retrieving the file's size. The device on which the file resides may have been offline.

Action: Restore access to the device.

ORA-01149: cannot shutdown - file *string* has online backup set

Cause: An attempt to shutdown normally found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

ORA-01150: cannot prevent writes - file *string* has online backup set

Cause: An attempt to make a tablespace read only or offline normal found that an online backup is still in progress. It will be necessary to write the file header to end the backup, but that would not be allowed if this command succeeded.

Action: End the backup of the offending tablespace and retry this command.

ORA-01151: use media recovery to recover block, restore backup if needed

Cause: Error 1172 occurred.

Action: This is additional information for error 1172.

ORA-01152: file *string* was not restored from a sufficiently old backup

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the database consistent. This file is still in the future of the last log applied. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the database is consistent or restore the database file from an older backup and repeat recovery.

ORA-01153: An incompatible media recovery is active.

Cause: There was an attempt to start an incompatible media recovery or open resetlogs during media recovery or RMAN backup. Media recovery sessions are incompatible if they attempt to recover the same data file. Incomplete media recovery or open resetlogs are incompatible with any media recovery. Backup or restore by RMAN is incompatible with open resetlogs.

Action: Complete or cancel the other media recovery session or RMAN backup.

ORA-01154: database busy. Open, close, mount, and dismount not allowed now

Cause: Some operation is in progress that expects the opened/mounted state of this instance to remain the same.

Action: Wait for the operation to complete then retry. If attempting to do a shutdown, SHUTDOWN ABORT will work. If this is a shutdown of a standby database that is operating in NO DATA LOSS mode, you must shutdown the primary database first.

ORA-01155: the database is being opened, closed, mounted or dismounted

Cause: The requested operation needs the instance to be in a particular state but the state is being changed.

Action: Wait for the open, close, mount, or dismount to complete then retry the operation. If necessary, a SHUTDOWN ABORT will always work.

ORA-01156: recovery or flashback in progress may need access to files

Cause: Either media recovery, instance recovery, or flashback was in progress. The recovery or flashback in progress may need the files to which this operation is being applied.

Action: Wait for recovery or flashback to complete.

ORA-01157: cannot identify/lock data file *string* - see DBWR trace file

Cause: The background process was either unable to find one of the data files or failed to lock it because the file was already in use. The database will prohibit access to this file but other files will be unaffected. However the first instance to open the database will need to access all online data files. Accompanying error from the operating system describes why the file could not be identified.

Action: Have operating system make file available to database. Then either open the database or do ALTER SYSTEM CHECK DATAFILES.

ORA-01158: database *string* already mounted

Cause: Another instance has a database by this name mounted.

Action: Find which instance is still running. Perhaps you have not lost the control files after all.

ORA-01159: file is not from same database as previous files - wrong database id

Cause: Not all of the files specified in CREATE CONTROLFILE are from the same database. The database ID of this file does not match that from the first file specified.

Action: Please double check the list of files provided to the CREATE

ORA-01160: file is not a *string*

Cause: The named file in the DATAFILE or LOGFILE section of the CREATE CONTROLFILE command does not appear to be as stated.

Action: Please double check the mentioned file.

ORA-01161: Database name *string* in the file header does not match *string* in the DATABASE clause.

Cause: The database name provided in the DATABASE clause did not match the database name found in the file header.

Action: Ensure consistency of database names. Use the SET DATABASE clause if you are renaming the database.

ORA-01162: block size *string* in file header does not match configured block sizes

Cause: CREATE CONTROLFILE discovered that the block size for this file is incompatible with any of the configured cache block sizes in the INIT.ORA file.

Action: Configure the appropriate cache for this block size using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

ORA-01163: SIZE clause indicates *string* (blocks), but should match header *string*

Cause: The size specified in bytes in the SIZE clause of the CREATE CONTROLFILE statement does not equate to the number of blocks recorded in the header.

Action: Specify the correct filename and size (in bytes).

ORA-01164: MAXLOGFILES may not exceed *string*

Cause: MAXLOGFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGFILES

ORA-01165: MAXDATAFILES may not exceed *string*

Cause: MAXDATAFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXDATAFILES

ORA-01166: file number *string* is larger than *string* (*string*)

Cause: File mentioned in CREATE CONTROLFILE has a file number which is larger than that specified for MAXDATAFILES or MAXLOGFILES.

Action: Increase the maximum specified on the command line.

ORA-01167: two files are the same file/group number or the same file

Cause: There is an overlap of file numbers in the files specified on the command line or the same file is specified twice. If they are not the exact same file then one is likely to be a backup of the other. If they are two members of the same log they must be specified together in a group file spec. This message will also appear if the same control file appears more than once in the control_files parameter in the init.ora file. If this happens, check for additional error messages.

Action: Confirm that the file mentioned is not a repeat of a file already mentioned in the command. If they are different files then omit the earlier backup. If they are members of the same log, insure they are in the same group file specification. If this message appears because of a duplicate control file, check the control_files parameter in the init.ora file and see if a file is specified more than once. If all files names appear to be unique, check to make sure that the actual control files themselves are unique. For example, in UNIX check for a symbolic or a hard link to another control file in the list.

ORA-01168: physical block size *string* does not match size *string* of other members

Cause: The file is located on a device with a different physical block size than the other members in the group

Action: Use a physical device with matching block size.

ORA-01169: DATAFILE number 1 not found. Must be present

Cause: Datafile number 1 was not specified in a CREATE CONTROLFILE command.

Action: Locate datafile number 1 and resubmit the CREATE CONTROLFILE command.

ORA-01170: file not found '*string*'

Cause: ALL datafiles and, if NORESETLOGS, ALL logfiles MUST be accessible by the process for CREATE CONTROLFILE.

Action: The file specified probably contains a typing error. Double check command and the existence of all files and then resubmit.

ORA-01171: datafile *string* going offline due to error advancing checkpoint

Cause: The checkpoint in the file header could not be advanced. See accompanying errors for the reason. The datafile will be taken offline the same as for a write error of a data block.

Action: See accompanying errors for details. Restore access to the file, do media recovery, and bring it back online.

ORA-01172: recovery of thread *string* stuck at block *string* of file *string*

Cause: Crash recovery or instance recovery could not apply a change to a block because it was not the next change. This can happen if the block was corrupted and then repaired during recovery.

Action: Do a RECOVER DATAFILE for the file containing the block. If this does not resolve the problem then restore the file from a backup and recover it.

ORA-01173: data dictionary indicates missing data file from a system tablespace

Cause: 1. Recover the database from a more recent control file. 2. Re-create the control file and check to ensure that all of the data files in the system tablespaces are included.

Action: Choose one of the following actions that corresponds with the

ORA-01174: DB_FILES is *string* but needs to be *string* to be compatible

Cause: The maximum number of database files supported by this instance is not the same as for the other instances. All instances must be able to open all the files any instance can open.

Action: Change the value of the DB_FILES parameter to be compatible

ORA-01175: data dictionary has more than the *string* files allowed by the instance

Cause: The data dictionary is found to have more files than that which can be supported by this instance.

Action: Shutdown the instance and restart with a larger number of db_files

ORA-01176: data dictionary has more than the *string* files allowed by the controlfile

Cause: After a CREATE CONTROLFILE, the data dictionary was found to have more data files than that supported by the control file.

Action: Re-create the control file with a larger MAXDATAFILES.

ORA-01177: data file does not match dictionary - probably old incarnation

Cause: When comparing the control file with the data dictionary after a CREATE CONTROLFILE or OPEN RESETLOGS, it was noted that this datafile was inconsistent with the dictionary. Most likely the file is a backup of a file that was dropped from the database, and the same file number was reused for a new file. It may also be that an incomplete recovery stopped at a time when this file number was used for another datafile.

Action: Do a CREATE CONTROLFILE with the correct file or none at all.

ORA-01178: file *string* created before last CREATE CONTROLFILE, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed at the last CREATE CONTROLFILE command. The information needed to recreate the file was lost with the control file that existed when the file was added to the database.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01179: file *string* does not exist

Cause: During datafile recovery, a file was listed which was not part for the database.

Action: Recheck the datafile name. Remember to use double quotes at the SQLDBA command line and remember that the file name is translated in the environment of the SQLDBA.

ORA-01180: can not create datafile 1

Cause: Attempting to create datafile 1 using ALTER DATABASE CREATE DATAFILE.

Action: Recover file from a backup or recreate database.

ORA-01181: file *string* created before last known RESETLOGS, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed before the last known RESETLOGS.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01182: cannot create database file *string* - file is in use or recovery

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions

ORA-01183: cannot mount database in SHARED mode

Cause: Some other instance has the database mounted exclusive.

Action: Shutdown other instance then mount shared.

ORA-01184: logfile group *string* already exists

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is already in use.

Action: Specify a different logfile number, or let the database choose an unused value.

ORA-01185: logfile group number *string* is invalid

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is too large.

Action: Specify a correct logfile number.

ORA-01186: file *string* failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. See the accompanying error messages for the reason the verification failed.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01187: cannot read from file *string* because it failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. Reads are not allowed until it is verified.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01188: The block size specified *string* does not match header block size *string*

Cause: The block size specified in the BLOCKSIZE clause of the CREATE CONTROLFILE statement does not equate to the block size recorded in the log file header.

Action: Specify the correct block size.

ORA-01189: file is from a different RESETLOGS than previous files

Cause: In a CREATE CONTROLFILE command either this file or all previous files were backups from before the last RESETLOGS. This may also occur if this is a file that is offline and has been offline since before the last RESETLOGS.

Action: If the file was taken offline normal before the last RESETLOGS, and is still offline, omit it from the CREATE CONTROLFILE command. Rename and online the file after the database is open. Otherwise find the version of the mentioned file consistent with the rest of the datafiles and resubmit the command.

ORA-01190: control file or data file *string* is from before the last RESETLOGS

Cause: Attempting to use a data file when the log reset information in the file does not match the control file. Either the data file or the control file is a backup that was made before the most recent ALTER DATABASE OPEN RESETLOGS.

Action: Restore file from a more recent backup.

ORA-01191: file *string* is already offline - cannot do a normal offline

Cause: When attempting to do a normal tablespace offline it was discovered that one of the files in the tablespace was already offline.

Action: Either bring the datafile online first, or use another tablespace offline option.

ORA-01192: must have at least one enabled thread

Cause: You must specify at least two logfiles from at least one thread at the create controlfile command line.

Action: Find the missing logfiles and resubmit the command with the newly found logfiles included in the command line.

ORA-01193: file *string* is not the same file seen at start of recovery

Cause: A different copy of the file was accessed the last time media recovery looked at the file header. A backup of the file was restored or the meaning of the file name changed during recovery.

Action: Ensure the correct file is available, then retry recovery.

ORA-01194: file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file was not closed cleanly when it was last opened by the database. It must be recovered to a time when it was not being updated. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the file is consistent or restore the file from an older backup and repeat recovery.

ORA-01195: online backup of file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file is an online backup which must be recovered to the time the backup ended.

Action: Either apply more logs until the file is consistent or restore the database files from an older backup and repeat recovery.

ORA-01196: file *string* is inconsistent due to a failed media recovery session

Cause: The file was being recovered but the recovery did not terminate normally. This left the file in an inconsistent state. No more recovery was successfully completed on this file.

Action: Either apply more logs until the file is consistent or restore the backup again and repeat recovery.

ORA-01197: thread *string* only contains one log

Cause: During CREATE CONTROLFILE all threads represented in the logs must be represented by at least two logs. A "last log" and a second log. The named thread does not contain two such logs.

Action: Either find more logs from the named thread. Or use the RESETLOGS option to CREATE CONTROLFILE.

ORA-01198: must specify size for log file if RESETLOGS

Cause: File sizes must be given for all logfiles if doing a CREATE CONTROLFILE with the RESETLOGS option.

Action: Resubmit the command with the appropriate logfile size.

ORA-01199: file *string* is not in online backup mode

Cause: Attempting to end an online backup for a file that is not in online backup.

Action: Do not enter command since it is not needed.

ORA-01200: actual file size of *string* is smaller than correct size of *string* blocks

Cause: The size of the file as returned by the operating system is smaller than the size of the file as indicated in the file header and the control file. Somehow the file has been truncated. Maybe it is the result of a half completed copy.

Action: Restore a good copy of the data file and do recovery as needed.

ORA-01201: file *string* header failed to write correctly

Cause: An I/O error was reported for the file header. The error was trapped and a second attempt will be made.

Action: The file probably will require recovery. Further error messages will indicate what is needed.

ORA-01202: wrong incarnation of this file - wrong creation time

Cause: The creation time in the file header is not the same as the creation time in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01203: wrong incarnation of this file - wrong creation SCN

Cause: The creation SCN in the file header is not the same as the creation SCN in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01204: file number is *string* rather than *string* - wrong file

Cause: The file number in the file header is not correct. This is probably a restored backup of the wrong file, but from the same database.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01205: not a data file - type number in header is *string*

Cause: The file type in the header is not correct for a data file. This is probably a log file or control file. If the type is not a small non-zero positive number then the header is corrupted.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01206: file is not part of this database - wrong database id

Cause: The database ID in the file header does not match the database id in the control file. The file may be from a different database, or it may not be a database file at all. If the database was rebuilt, this may be a file from before the rebuild. Note that if you see this error when the file is supposed to be plugged in from another database via the Transportable Tablespace feature, it means the database ID in the file header does not match the one expected.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01207: file is more recent than the control file

Cause: The control file change sequence number in the data file was greater than the number in the control file. This implies that the wrong control file was used for the file named in the accompanying error. Note: Repeatedly causing this error can make it stop happening without correcting the real problem, as every attempt to open the database will advance the control file change sequence number until it is large enough.

Action: If the control file has just been restored, then ensure the file named in the accompanying error is from a backup taken before the time of the control file backup. Otherwise, use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-01208: data file is an old version - not accessing current version

Cause: The checkpoint in the file header is less recent than in the control file. If opening a database that is already open by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01209: data file is from before the last RESETLOGS

Cause: The reset log data in the file header does not match the control file. If the database is closed or the file is offline, the backup is old because it was taken before the last ALTER DATABASE OPEN RESETLOGS command. If opening a database that is open already by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01210: data file header is media corrupt

Cause: The file header block is internally inconsistent. The beginning of the block has a header with a checksum and other data for insuring the consistency of the block. It is possible that the last disk write did not operate correctly. The most likely problem is that this is not a datafile for any database.

Action: Have operating system make correct file available to database. If the trace file dump indicates that only the checksum is wrong, restore from a backup and do media recovery.

ORA-01211: Oracle7 data file is not from migration to Oracle8

Cause: The file is not a copy of the file LAST used under Oracle7. This datafile is either a backup taken from before the migration, or the database was opened by Oracle7 after the migration utility was run. When converting a database from Oracle7 to Oracle8, the migration program MUST be the LAST utility to access the database under Oracle7. Only the datafiles that were current when the migration was done may be accessed by Oracle8.

Action: Have operating system make correct data file available to database, or repeat the Oracle7 to Oracle8 migration. Make sure that database is NOT opened after migration utility is run.

ORA-01212: MAXLOGMEMBERS may not exceed *string*

Cause: MAXLOGMEMBERS specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGMEMBERS

ORA-01213: MAXINSTANCES may not exceed *string*

Cause: MAXINSTANCES specified on the command line too large.

Action: Resubmit the command with a smaller MAXINSTANCES

ORA-01214: MAXLOGHISTORY may not exceed *string*

Cause: MAXLOGHISTORY specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGHISTORY

ORA-01215: enabled thread *string* is missing after CREATE CONTROLFILE

Cause: A CREATE CONTROLFILE statement was given which did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-01216: thread *string* is expected to be disabled after CREATE CONTROLFILE

Cause: A thread that was given during CREATE CONTROLFILE is enabled, but the datafiles indicate that it should be disabled. This is probably because the logs supplied to the CREATE CONTROLFILE are old (from before the disabling of the thread).

Action: This thread is not required to run the database. The CREATE CONTROLFILE statement can be reissued without the problem thread, and, if desired, the thread can be recreated after the database is open.

ORA-01217: logfile member belongs to a different logfile group

Cause: A member of a multiple-member logfile group specified in a CREATE CONTROLFILE is not part of the same group as previous members.

Action: Group together the correct members for the CREATE CONTROLFILE command.

ORA-01218: logfile member is not from the same point-in-time

Cause: A member of a multiple-member logfile group is from a different point in time. One of the members specified may be an older (backup) copy of the log.

Action: Find the correct version of the log, or leave it out of the CREATE CONTROLFILE command.

ORA-01219: Database or pluggable database not open. Queries allowed on fixed tables or views only.

Cause: A query was issued against an object not recognized as a fixed table or fixed view before the database or pluggable database was open.

Action: Rewrite the query to include only fixed objects, or open the database or pluggable database.

ORA-01220: temporary tablespace usage not allowed before database is open

Cause: A query issued against a fixed table or view required a temporary segment for sorting before the database was open. Only in-memory sorts are supported before the database is open.

Action: Rewrite the query to avoid a large sort, increase the values of the SORT_AREA_SIZE or SORT_AREA_RETAINED_SIZE initialization parameter to enable the sort to be done in-memory.

ORA-01221: data file *string* is not the same file to a background process

Cause: When the database writer opens the data file, it is accessing a different physical file than the foreground doing the recovery. The timestamp set in the file header by the foreground was not found by the background. It may be that the background process could not read the file at all.

Action: Look in the DBWR trace file for the error it received when attempting to read the file header. Reconfigure the operating system as needed to have the file name successfully access the same file when opened by a background process.

ORA-01222: MAXINSTANCES of *string* requires MAXLOGFILES be at least *string*, not *string*

Cause: Attempting to create a database or control file that does not have room for at least two logs per thread of redo. A thread of redo must have two online logs in order to be enabled. It does not make sense to allow more redo threads than can be supported by the logs.

Action: Either reduce the MAXINSTANCES argument or increase MAXLOGFILES.

ORA-01223: RESETLOGS must be specified to set a new database name

Cause: The SET database name option was specified to CREATE CONTROLFILE, but RESETLOGS was not specified. The database name can only be changed when opening the database with RESETLOGS.

Action: Either add the RESETLOGS option or drop the SET option to CREATE CONTROLFILE.

ORA-01224: group number in header *string* does not match GROUP *string*

Cause: Group number specified at CREATE CONTROLFILE does not match the group number stored in the header. Most likely the specification is wrong.

Action: Omit the GROUP option or give the correct one.

ORA-01225: thread number *string* is greater than MAXINSTANCES *string*

Cause: The log is for a thread greater than the MAXINSTANCES argument.

Action: Increase the value for MAXINSTANCES and resubmit the command.

ORA-01226: file header of log member is inconsistent with other members

Cause: The log file member in the accompanying error is for the same group as the previous members, but other fields in the header are different. Either a file header is corrupted, or some file is a member of a deleted log.

Action: Find the correct log member or omit this member from the command.

ORA-01227: log *string* is inconsistent with other logs

Cause: The log file in the accompanying error is inconsistent with the contents of other logs given in the CREATE CONTROLFILE command. Either a file header is corrupted, or some file is an old copy rather than the current version. The problem may not be with the log listed since all that can be detected is that there is an inconsistency. All log files listed in the command must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01228: SET DATABASE option required to install seed database

Cause: The SET DATABASE option was not included in the CREATE CONTROLFILE command when installing a seed database. The database does not have a database ID because it is intended to be installed at multiple sites, and each site needs to be a different database with its own database id. Both the SET DATABASE and RESETLOGS options must be specified to create the control file for this database.

Action: Resubmit command with the SET DATABASE and RESETLOGS options.

ORA-01229: data file *string* is inconsistent with logs

Cause: The data file in the accompanying error is inconsistent with the contents of the logs given in the CREATE CONTROLFILE command. The most likely cause is that one or more of the online logs was missing from the command. It is also possible that one or more of the logs is an old copy rather than the current version. All online log files must be listed in the command and must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01230: cannot make read only - file *string* is offline

Cause: An attempt to make a tablespace read only found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01231: cannot make read write - file *string* is offline

Cause: An attempt to make a tablespace read write found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01232: cannot start online backup - file *string* is being made read-only

Cause: An attempt to start an online backup found that one of the files is in transition to read-only mode.

Action: Wait for the transition to complete and then retry the command, if this is an ALTER DATABASE BEGIN BACKUP command, or take the backup without any begin or end commands, if this is an ALTER TABLESPACE BEGIN BACKUP command.

ORA-01233: file *string* is read only - cannot recover using backup control file

Cause: An attempt to do media recovery using a backup control file found that one of the files is marked read only. Read only files do not normally need to be recovered, but recovery with a backup control file must recover all online files.

Action: If the file really is read only, take it offline before the recovery, and bring the read only tablespace online after the database is open. If the file does need recovery use a control file from the time the file was read-write. If the correct control file is not available, use CREATE CONTROLFILE to make one.

ORA-01234: cannot end backup of file *string* - file is in use or recovery

Cause: Attempted to end an online backup of file when the file is busy. Some operation such as recovery or rename may be active, or there may still be some instance that has the database open with this file online.

Action: If there is an instance with the database open then the backup can be ended there by using the ALTER TABLESPACE command. Otherwise wait for the completion of the other operation.

ORA-01235: END BACKUP failed for *string* file(s) and succeeded for *string*

Cause: One or more of the files in an end backup command failed. Some other files given in the same command may have succeeded.

Action: See the accompanying error messages for the reason the backups could not be ended. Any files not listed in the error messages were successful.

ORA-01236: Error *string* occurred during initialization of file header access

Cause: The indicated error occurred while doing initialization processing of file headers.

Action: The error indicated should be corrected. An attempt is made to recover from this error by using a slower access algorithm.

ORA-01237: cannot extend datafile *string*

Cause: An operating system error occurred during the resize.

Action: Fix the cause of the operating system error and retry the command.

ORA-01238: cannot shrink datafile *string*

Cause: An operating system error occurred during the resize.

Action: The error is ignored, operation continues normally.

ORA-01239: database must be in ARCHIVELOG mode to use external cache

Cause: An online file uses an external cache, but the database is in NOARCHIVELOG mode. Since an external cache may require media recovery this can not be allowed.

Action: Change database to be in ARCHIVELOG mode or do not use an external cache.

ORA-01240: too many data files to add in one command

Cause: The command specifies adding more data files than can be done in one command. It is necessary to fit all the file names into one log entry, but that would make the entry too large.

Action: If this is a CREATE TABLESPACE command, create with fewer files then add the other files later. If this is an ADD DATAFILE command, break it up into multiple commands.

ORA-01241: an external cache has died

Cause: The external cache may have been restarted.

Action: Take the file mentioned in the error stack offline, perform media recovery, bring the file online, and retry the attempted operation. You may also restart all instances to make sure they access all data files through consistent external caches.

ORA-01242: data file suffered media failure: database in NOARCHIVELOG mode

Cause: The database is in NOARCHIVELOG mode and a database file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01243: system tablespace file suffered media failure

Cause: A system tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01244: unnamed datafile(s) added to control file by media recovery

Cause: Media recovery with a backup control file or a control file that was rebuilt, encountered the creation of a datafile that was not in the control file. An entry has been added to the control file for the new datafiles, but with the file name UNNAMEDnnnn, where nnnn is the file number. Attached errors describe the file names that were originally used to create the files.

Action: Rename the files to valid file names and resume recovery. If necessary the command ALTER DATABASE CREATE DATAFILE may be used to create a file suitable for recovery and do the rename. If the file is not going to be recovered then take it offline with the FOR DROP option.

ORA-01245: offline file *string* will be lost if RESETLOGS is done

Cause: Attempting to do an OPEN RESETLOGS with a file that will be lost because it is offline. The file was not taken offline with the FOR DROP option.

Action: Either bring the file online and recover it, or take it offline with the FOR DROP option.

ORA-01246: recovering files through TSPITR of tablespace *string*

Cause: The files named in the accompanying errors are backups that were made before a tablespace point in time recovery of this tablespace. They cannot be recovered to a time after the point in time recovery.

Action: Restore more recent backups and recover them.

ORA-01247: database recovery through TSPITR of tablespace *string*

Cause: Recovery of the whole database encountered redo indicating there was a point in time recovery of the tablespace. The new version of the files in the tablespace should be included in the recovery, but that was not done.

Action: If the tablespace should not be recovered, take its file offline for drop. If it should be recovered, then restore or rename as needed and restart the recovery.

ORA-01248: file *string* was created in the future of incomplete recovery

Cause: Attempting to do a RESETLOGS open with a file entry in the control file that was originally created after the UNTIL time of the incomplete recovery. Allowing such an entry may hide the version of the file that is needed at this time. The file number may be in use for a different file which would be lost if the RESETLOGS was allowed.

Action: If more recovery is desired then apply redo until the creation time of the file is reached. If the file is not wanted and the same file number is not in use at the stop time of the recovery, then the file can be taken offline with the FOR DROP option. Otherwise a different control file is needed to allow the RESETLOGS. Another backup can be restored and recovered, or a control file can be created via CREATE CONTROLFILE.

ORA-01249: archiving not allowed in a clone database

Cause: There was an attempt to archive an online redo log or enable archiving for a clone database. This was not allowed because the archive log destination of the clone could be the same as that of the primary database, resulting in the destruction of its archived logs.

Action: Do not attempt to archive from a clone. If archiving is needed, then convert the clone to a regular database. To do so, follow the documented steps based on how the clone database was created.

ORA-01250: Error *string* occurred during termination of file header access

Cause: The indicated error occurred while terminating the processing of file headers. The error was other than a write error.

Action: The indicated error should be corrected.

ORA-01251: Unknown File Header Version read for file number *string*

Cause: Read of the file header returned a record but its version cannot be identified. Either the header has been corrupted, or the file is not a valid database file.

Action: Have the operating system make the correct file available to the database, or recover the file.

ORA-01252: cannot prevent writes - file *string* in recovery manager backup

Cause: An attempt to make a tablespace read only or offline normal found that a recovery manager proxy backup is in progress. If the file is made offline or read-only, then the file header cannot be updated when the backup is complete.

Action: Wait for the Recovery Manager backup to complete and retry this command.

ORA-01253: cannot start online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete before starting another backup.

ORA-01254: cannot end online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete. Recovery Manager backup mode cannot be initiated or terminated manually.

ORA-01255: cannot shutdown - file *string* in recovery manager backup

Cause: An attempt to shutdown normally found that a Recovery Manager backup is still in progress.

Action: Wait for the Recovery Manager proxy backup to complete and retry this command.

ORA-01256: error in locking database file *string*

Cause: The file is in use by another database instance.

Action: Determine which database instance legitimately owns the file.

ORA-01257: cannot reuse database file *string*, unknown file size

Cause: The size of the raw partition cannot be determined

Action: Add the datafile/logfile by specifying the size parameter.

ORA-01258: unable to delete temporary file *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES or ALTER DATABASE TEMPFILE DROP INCLUDING DATAFILES operation was not able to delete a temporary file in the database.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01259: unable to delete datafile *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES operation was not able to delete a datafile in the tablespace.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01260: warning: END BACKUP succeeded but some files found not to be in backup mode

Cause: END BACKUP completed successfully for all files that were in online backup mode. However one or more modifiable files were found not to be in online backup mode. Backup of those files (if it was done) can be invalid and, if restored, can result in an inconsistent database.

Action: Check the alert log for a list of the files that were found not to be in backup mode. If there is a possibility that those files have been modified during online backup, then replace their backups with new ones.

ORA-01261: Parameter *string* destination string cannot be translated

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

ORA-01262: Stat failed on a file destination directory

Cause: Unable to get information about an Oracle managed files destination directory.

Action: Check the permissions on the directory or use a different directory name.

ORA-01263: Name given for file destination directory is invalid

Cause: The name given for an Oracle managed files destination does not correspond to a directory.

Action: Use a different name.

ORA-01264: Unable to create *string* file name

Cause: Unable to create an Oracle managed file name.

Action: Check previous error messages for the reason Oracle was unable to create the file name. Take corrective action, if possible, and retry the command.

ORA-01265: Unable to delete *string string*

Cause: An error prevented the file from being deleted.

Action: See the subsequent error messages that describe the operating system error that prevented the file from being deleted. If possible, fix the problem and manually delete the file.

ORA-01266: Unable to create unique file name

Cause: Unable to create a unique file name for an Oracle managed file. Oracle tried several names but each file name was already in use in the default destination directory for the file type.

Action: Retry the operation. If that fails, also, it may be necessary to change the default destination directory for the file type and then retry.

ORA-01267: Failure getting date/time

Cause: Could not get date/time when trying to create unique file name.

Action: Internal error - contact Oracle Customer Support.

ORA-01268: invalid TEMPFILE clause for alter of permanent TABLESPACE

Cause: A TEMPFILE clause was specified for an ALTER TABLESPACE for a permanent tablespace.

Action: Retry with a DATAFILE clause.

ORA-01269: Destination parameter string is too long

Cause: The value for DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter was too long.

Action: Replace the destination value for the specified parameter with a shorter character string.

ORA-01270: *string* operation is not allowed if STANDBY_PRESERVES_NAMES is true

Cause: An operation that renames or adds/drops a file was attempted at a standby database and STANDBY_PRESERVES_NAMES is true.

Action: Set STANDBY_PRESERVES_NAMES false if the operation must be performed.

ORA-01271: Unable to create new file name for file *string*

Cause: During standby database recovery an error occurred when trying to create a new file name for the indicated file.

Action: Use the ALTER DATABASE CREATE DATAFILE command with a new unique name and then resume the standby database recovery.

ORA-01272: REUSE only allowed when a file name is provided.

Cause: The REUSE parameter was specified in a command without a file name.

Action: Either supply a file name or remove the REUSE parameter.

ORA-01273: STANDBY_FILE_MANAGEMENT = AUTO needs COMPATIBLE = *string* or higher

Cause: Automated standby file management was disabled, so an added file

Action: Restart the instance with COMPATIBLE set to the correct release.

ORA-01274: cannot add data file that was originally created as '*string*'

Cause: The recovery failed to add the specified data file either because the recovery tried to create the specified data file but automated standby file management was disabled, or the recovery tried to look for the specified data file but the data file did not exist. In the former case, the recovery added a control file entry as 'UNNAMEDnnnnn'.

Action: Either use the ALTER DATABASE CREATE DATAFILE statement to create the file, or set STANDBY_FILE_MANAGEMENT to AUTO, or restore the data file to the location specified by the corresponding control file entry, and restart standby recovery.

ORA-01275: Operation *string* is not allowed if standby file management is automatic.

Cause: An operation that renames, adds, or drops a file was attempted at a standby database and STANDBY_FILE_MANAGEMENT was set to AUTO.

Action: Set STANDBY_FILE_MANAGEMENT to MANUAL if the operation must be performed.

ORA-01276: Cannot add file *string*. File has an Oracle Managed Files file name.

Cause: An attempt was made to add to the database a datafile, log file, control file, snapshot control file, backup control file, datafile copy, control file copy or backuppiece with an Oracle Managed Files file name.

Action: Retry the operation with a new file name.

ORA-01277: file '*string*' already exists

Cause: An ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename' command specified a file name which is already in use.

Action: Either specify a different file name, or add the REUSE parameter to the command to overwrite the existing file.

ORA-01278: error creating file '*string*'

Cause: An operating system error occurred while attempting to create a trace file specified in the command ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename'.

Action: Check the error stack for more detailed information.

ORA-01279: db_files too large

Cause: db_files has been set too high to be supported by the system.

Action: Decrease the number of db_files.

ORA-01280: irrecoverable LogMiner error

Cause: An internal error occurred inside LogMiner.

Action: Check the alert log and trace files for further information.

ORA-01281: invalid SCN range

Cause: The specified SCN range was invalid or the StartSCN was greater than the EndSCN.

Action: Specify a valid SCN range.

ORA-01282: invalid date range

Cause: The specified date range was invalid: - The startTime cannot be after the endTime. - Both startTime and endTime cannot be after the year 2110. - The startTime cannot be before the year 1988.

Action: Specify a valid date range.

ORA-01283: Options specified is invalid

Cause: The specified options parameter is invalid for the procedure.

Action: Specify valid Options parameter.

ORA-01284: file *string* cannot be opened

Cause: The file or directory may not exist or may be inaccessible. Pathname exceeds 256 characters.

Action: Ensure that the file and the directory exist and are accessible.

ORA-01285: error reading file *string*

Cause: The file or directory may not exist or is inaccessible.

Action: Specify valid file or directory. Make sure that file and directory are accessible.

ORA-01286: start interval required

Cause: Options were supplied which require a starting time or starting SCN

Action: Specify a starting interval (time or SCN).

ORA-01287: file *string* is from a different database incarnation

Cause: The logfile is produced by a different incarnation of the database.

Action: Add a logfile that is produced by the same incarnation.

ORA-01288: cannot apply this DDL to the Logminer Dictionary

Cause: A command that is not supported by Logminer was present in a logfile. Commands that change the character set of the database are not supported by Logminer. "ALTER DATABASE SET TIME_ZONE" is not supported by Logminer.

Action: Do not execute unsupported commands when using Streams, Logical Standby, or Logminer. Turn off DDL tracking in order for Logminer to skip unsupported commands.

ORA-01289: cannot add duplicate logfile *string*

Cause: The logfile specified has already been added to the list of logfiles.

Action: Specify a different logfile.

ORA-01290: cannot remove unlisted logfile *string*

Cause: The user attempted to remove a logfile that is not present in the list.

Action: Specify a valid logfile.

ORA-01291: missing log file *string*

Cause: Not all log files corresponding to the time or SCN range specified had been added to the LogMiner session.

Action: Check the system.logmnr_log\$ table for Logical Standby or Downstream Capture, or v\$logmnr_logs view for adhoc query to determine the missing SCN range, and add the relevant log files.

ORA-01292: LogMiner for upstream capture cannot find log file *string*

Cause: A log file needed by LogMiner could not be found in v\$archived_log.

Action: Check the alert log and trace files to identify the thread and SCN of the missing log. Restore the files if it was deleted or expired from v\$archived_log.

ORA-01293: mounted database required for specified LogMiner options

Cause: Options were specified which required the database to be mounted

Action: Specify different options or mount the database.

ORA-01294: error occurred while processing information in dictionary file *string*, possible corruption

Cause: The dictionary file is corrupt.

Action: Get a new dictionary file.

ORA-01295: DB_ID mismatch between dictionary *string* and logfiles

Cause: The dictionary file is produced by a database that is different from that produced the logfiles.

Action: Specify a compatible dictionary file.

ORA-01296: character set mismatch between dictionary *string* and logfiles

Cause: The character set of the database that produced the dictionary file is different from the character set of the database that produced the logfiles.

Action: Specify a dictionary file with the same character set.

ORA-01297: redo version mismatch between dictionary *string* and logfiles

Cause: The redo version of the database generating the dictionary is different from the one generating the logfiles.

Action: n/a

ORA-01298: conflicting dictionary option

Cause: More than one dictionary source was specified or DDL_DICT_TRACKING was specified with DICT_FROM_ONLINE_CATALOG.

Action: n/a

ORA-01299: dictionary *string* corresponds to a different database incarnation

Cause: The dictionary file was extracted from a different incarnation of the database.

Action: Specify a dictionary file extracted from the correct database incarnation.

ORA-01300: writable database required for specified LogMiner options

Cause: Options were specified which required the database to be writable.

Action: Specify different options or open the database for write access.

ORA-01301: error writing to file during flat file build

Cause: Error writing to file during flat file build

Action: n/a

ORA-01302: dictionary build options missing or incorrect

Cause: Missing dictionary build options or incorrectly specified options

Action: Specify either a build to redo log or to flat file. If build to flat file, specify filename and directory.

ORA-01303: subordinate process error: *string*. Check alert and trace logs

Cause: A process subordinate to this LogMiner process has exited with this error status.

Action: Search for this error in the alert log and trace files for additional information.

ORA-01304: Subordinate process error. Check alert and trace logs.

Cause: A process subordinate to this LogMiner process has exited with an error condition.

Action: Look in the alert log and trace files for additional information.

ORA-01305: incompatible database character set

Cause: The database character set of the mining database was not a superset of the source database character set.

Action: Perform the mining operation on a database having a compatible database character set.

ORA-01306: DBMS_LOGMNR.START_LOGMNR() must be invoked before selecting from V\$LOGMNR_CONTENTS

Cause: A SELECT statement was issued from V\$LOGMNR_CONTENTS without invoking the DBMS_LOGMNR.START_LOGMNR() procedure.

Action: Invoke the DBMS_LOGMNR.START_LOGMNR() procedure before issuing a SELECT statement from the V\$LOGMNR_CONTENTS view.

ORA-01307: no LogMiner session is currently active

Cause: A select was issued from v\$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure. Otherwise, dbms_logmnr.end_logmnr() was called without a prior call to dbms_logmnr.start_logmnr() or dbms_logmnr.add_logfile()

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v\$logmnr_contents view.

ORA-01308: dictionary directory is not set

Cause: The dictionary directory was not valid.

Action: Set the dictionary directory to an appropriate value.

ORA-01309: invalid session

Cause: The specified LogMiner session ID or session handle was invalid.

Action: Use a valid LogMiner session ID or session handle and try again.

ORA-01310: requested return type not supported by the lcr_mine function

Cause: The return type requested by the user is not supported by lcr_mine"

Action: Pick a return type supported by the lcr_mine function"

ORA-01311: Illegal invocation of the mine_value function

Cause: An attempt was made to use mine_value function on a column other than redo_value or undo_value columns of SYS.X\$LOGMNR_CONTENTS or SYS.V\$LOGMNR_CONTENTS fixed table/view.

Action: Rewrite the SQL statement with a legal invocation of mine_value

ORA-01312: Specified table/column does not exist

Cause: The table/column specified in the lcr_mine call does not exist at the the specified SCN. The table/column definition has to exist at the start SCN specified for lcr_mine to be able to identify the table/column correctly.

Action: Create a LogMiner session at a start SCN at which the table definition is available.

ORA-01314: Name of the column to be mined must be a string literal.

Cause: The fully qualified name of the column to be mined by the Oracle LogMiner functions must be a string literal.

Action: For example, if the column to be mined is a.b.c.d, enclose the column name in quotes, as in 'a.b.c.d', to create a fully qualified name.

ORA-01315: A log file has been added or removed during SELECT.

Cause: A redo log file has been added or removed while selecting from the v\$logmnr_logs fixed view.

Action: Retry the SELECT statement.

ORA-01316: Already attached to a Logminer session

Cause: A Logminer attach session was issued while already attached to a Logminer session.

Action: Detach from the current Logminer session and attach to the requested session.

ORA-01317: Command or procedure not attached to a LogMiner session.

Cause: A command or procedure was issued which requires an attached LogMiner session.

Action: Attach to a LogMiner session before issuing the command or procedure.

ORA-01318: incompatible national character set

Cause: The national character set of the mining database was not a superset of the source database national character set.

Action: Perform the mining operation on a database having a compatible national character set.

ORA-01319: Invalid Logminer session attribute

Cause: A session attribute was supplied which is invalid.

Action: Re-issue with valid session attribute.

ORA-01320: Invalid Logminer dictionary attribute

Cause: A Logminer dictionary attribute was supplied which is invalid.

Action: Re-issue with valid dictionary attribute.

ORA-01321: No Logminer Dictionary for requested start SCN

Cause: The requested session start SCN is less than the SCN of any available Logminer Dictionary build. It is not possible to unwind a Logminer Dictionary to the requested start SCN.

Action: Re-issue the start_logminer request with a start SCN for which a Logminer Dictionary is available.

ORA-01322: No such table

Cause: An non-existent table was supplied to Logminer include_src_tbl() or exclude_src_table().

Action: Re-issue with valid table name.

ORA-01324: cannot add file *string* due to DB_ID mismatch

Cause: The logfile is produced by a different database than other logfiles already added to the list.

Action: Specify a logfile produced by the same database.

ORA-01325: archive log mode must be enabled to build into the logstream

Cause: Database does not have archivelog mode enabled.

Action: Mount the database, then issue commands to enable archivelog mode. startup pfile=init.ora mount alter database archivelog alter database open

ORA-01326: compatability of 9.0 or greater required to build into the logstream

Cause: Compatibility mode set to some value less than 9.0

Action: Ensure that init.ora parameter establishing a compatability of 9.0 or greater is set. For example: compatible=9.0.0.0.0

ORA-01327: failed to exclusively lock system dictionary as required by build

Cause: Other users are performing DDL operations.

Action: n/a

ORA-01328: only one build operation may occur at one time

Cause: Another processes is simultaneously attempting to run build();

Action: Wait until the other processes completes.

ORA-01329: unable to truncate required build table

Cause: The table may be missing, or locked by another user.

Action: This error should not occur. If it does occur and there is reason to believe that required tables are missing, then as a last resort the package dbmslmd.sql may be reinstalled. Doing so will delete all existing Logminer Dictionary data.

ORA-01330: problem loading a required build table

ORA-01331: general error while running build**ORA-01332: internal Logminer Dictionary error**

Cause: Unexpected error condition

Action: Check trace and/or alert logs

ORA-01333: failed to establish Logminer Dictionary

Cause: No previously established Logminer Dictionary is available and a complete gather of a source system data dictionary was not found in the logstream. build() may not have been run to force the gathering of a source system data dictionary. Or add_log_file() may not have been called to add all log files which contain the complete gathered system data dictionary.

Action: If build() was not employed prior to this mining session the Logminer Ad Hoc user may elect to employ an alternate dictionary such as the current system catalog or a previously built flat file dictionary. Other Logminer clients must run build() prior to mining. If build() has been run, ensure that all logfiles which comprise the gathered system dictionary have been added. The following query, run on the system which build() was run, can be helpful in identifying the required files. select DICTIONARY_BEGIN, DICTIONARY_END, name from v\$archived_log; Minimally a set of files beginning with one which has DICTIONARY_BEGIN = 'YES' and all following log files through one marked DICTIONARY_END = 'YES' must be added.

ORA-01334: invalid or missing logminer dictionary processes context

Cause: Unexpected internal error condition

Action: n/a

ORA-01335: unimplemented feature

Cause: An attempt was made to use an unimplemented feature.

Action: Remove the attempted use of the unimplemented feature. Contact Oracle Support Services to raise a request to add this feature.

ORA-01336: specified dictionary file cannot be opened

Cause: The dictionary file or directory does not exist or is inaccessible.

Action: Make sure that the dictionary file and directory exist and are accessible.

ORA-01337: log file has a different compatibility version

Cause: The logfile has a different compatibility version than the rest of the logfile in the session"

Action: Make sure that the logfile has the same compatibility version as the rest of the logfiles in the session.

ORA-01338: Other process is attached to LogMiner session

Cause: Can not do this when other process is attached to LogMiner session.

Action: n/a

ORA-01339: LogMiner BUILD: Error copying system catalog metadata to LogMiner dictionary

Cause: Unexpected result while accessing system catalog metadata.

Action: Check the alert log.

ORA-01340: NLS error

Cause: Could not load NLS package.

Action: n/a

ORA-01341: Oracle LogMiner is out-of-memory.

Cause: The Oracle LogMiner session requires more system resources than are currently available.

Action: Allocate more system global area (SGA) for Oracle LogMiner.

ORA-01342: LogMiner can not resume session due to inability of staging checkpointed data

Cause: Logmnr can not resume session because there is not enough SGA memory available to read in checkpointed data. Logminer periodically checkpoints data to enable faster crash recovery.

Action: Specify a bigger max_sga for the given LogMiner session and try again.

ORA-01343: Oracle LogMiner encountered a corruption in the logstream.

Cause: The log file is missing a range of system change number (SCN) values.

Action: Verify the continuity of the SCN range represented by the log files added to Oracle LogMiner.

ORA-01344: LogMiner coordinator already attached

Cause: A coordinator process is already attached to the specified logminer context.

Action: Detach from the active coordinator session and retry the attach.

ORA-01345: Must be a LogMiner coordinator process

Cause: A LogMiner client attempted to perform a privileged operation.

Action: Issue the operation from the coordinator process.

ORA-01346: Oracle LogMiner processed redo beyond primary reset log SCN string

Cause: Oracle LogMiner detected a new branch with reset log SCN information prior to redo already mined.

Action: If running inside SQL Apply, retrieve standby reset SCN by executing DBMS_LOGSTDBY.MAP_PRIMARY_SCN (primary reset log SCN). And, execute FLASHBACK STANDBY DATABASE [<database_name>] TO BEFORE SCN *standby reset SCN*. Note: If the primary reset log SCN is 0, then intermediary log files are missing. Check the primary database for missing log files. In other scenarios, contact Oracle Support Services.

ORA-01347: Supplemental log data no longer found

Cause: The source database instance producing log files for this LogMiner session was altered to no longer log supplemental data.

Action: Destroy this Logminer session. Re-enable supplemental log data on the source system and create a new LogMiner session.

ORA-01349: LogMiner tracing event

ORA-01350: must specify a tablespace name

Cause: Invocation failed to specify a valid tablespace

Action: Reformat invocation of DBMS_LOGMNR_D.SET_TABLESPACE to include the name of a valid tablespace.

ORA-01351: tablespace given for Logminer dictionary does not exist

Cause: The tablespace name given as a parameter to DBMS_LOGMNR_D.SET_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. DBMS_LOGMNR_D.SET_TABLESPACE does not create a tablespace.

ORA-01352: tablespace given for Logminer spill does not exist

Cause: The tablespace name given as the parameter to DBMS_LOGMNR_D.SET_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. DBMS_LOGMNR_D.SET_TABLESPACE does not create a tablespace.

ORA-01353: existing Logminer session

Cause: An attempt was made to execute DBMS_LOGMNR_D.SET_TABLESPACE while a Logminer session(s) was active.

Action: First cause all Logminer sessions to be closed. A Logminer session can exist as a result of executing DBMS_LOGMNR.START_LOGMNR or as the result of using Oracle features such as Data Guard SQL Apply or Streams which use Logminer. Next, execute DBMS_LOGMNR_D.SET_TABLESPACE.

ORA-01354: Supplemental log data must be added to run this command.

Cause: Attempted to perform an operation that requires supplemental log data to run the command.

Action: Execute a command, like ALTER DATABASE ADD SUPPLEMENTAL LOG DATA, and then retry the failed command.

ORA-01355: LogMiner tablespace change is in progress.

Cause: The tables used by LogMiner were in the process of being moved to another tablespace.

Action: Wait until the move is complete and retry.

ORA-01357: LogMiner transaction queue is full

Cause: LogMiner ran out of space in the transaction queue.

Action: Increase the LogMiner transaction queue size and LogMiner system global area (SGA) parameters.

ORA-01358: LogMiner version is less than mined dictionary version

Cause: An attempt was made to mine a LogMiner dictionary from redo logs. The version of the Oracle database that created the logs was higher than the Oracle database version that attempted to mine the logs.

Action: Mine the logs using a newer version of the Oracle database having a version number that is equal to or greater than the dictionary version.

ORA-01360: invalid token *string*

ORA-01361: global name mismatch

Cause: The database global name where the log file was generated did not match the user-specified global name of the Streams Capture process.

Action: Start a new capture process and ensure that the user-specified global name matches that of the database that generated the log file.

ORA-01362: Specified SQL_REDO_UNDO parameter is invalid

Cause: The specified input value for the parameter was not a valid number.

Action: Specify a valid number and try again.

ORA-01363: Specified COLUMN_NAME parameter is NULL

Cause: NULL was specified for input value of parameter.

Action: Specify a non-NULL value and try again.

ORA-01364: waiting for branch at SCN *string*

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. LogMiner reader is now waiting for logs from the new branch.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files can be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

ORA-01365: waiting for new branch registration

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. The builder process is now waiting for logs from the new branch to be registered before continuing.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files may be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

ORA-01366: failed to find redo logs required for terminal apply

Cause: LogMiner failed to find all the expected log files required to complete the terminal apply, requested using the FINISH APPLY clause. During terminal apply, LogMiner does not wait for logs to be registered. It expects all logs between the starting point and the last log on any redo branch that it will or could mine through, to be present at the mining site.

Action: Examine system.logmnr_log\$ to see which logs are known to LogMiner. Then, locate or restore any missing logs and use the ALTER DATABASE REGISTER LOGICAL LOGFILE statement to register them. Alternatively, do not use the FINISH APPLY clause, but if activating a logical standby, only do this when you are sure that the missing log files can not be located and registered as this can lead to data loss.

ORA-01367: The redo log file *string* is invalid.

Cause: The specified redo log file had an invalid NEXT_CHANGE# column.

Action: Specify only completed or archived redo log names. *Params: 1) name: The redo log file name.

ORA-01368: Redo log file header mismatch for thread *string* sequence *string*.

Cause: Either the thread# or sequence# column specified in the Oracle LogMiner table did not match the thread# and sequence# in the log file header.

Action: Re-register the correct log file in the Oracle LogMiner table. *Params: 1) thread#: The thread number. 2) sequence#: The sequence number.

ORA-01369: persistent memory direct commit file not found for recovery

Cause: The persistent memory (PMEM) direct commit file required for recovery could not be found on an accessible PMEM grid disk or was found to be stale.

Action: Make the PMEM grid disk that contains the required file accessible.

ORA-01370: Specified restart SCN *string* is too old

Cause: specified restart scn is too old, logmnr could not find a proper checkpoint.

Action: Specify a bigger restart SCN to try again

ORA-01371: Complete LogMiner dictionary not found

Cause: One or more log files containing the LogMiner dictionary was not found.

Action: Add into LogMiner all log files containing the dictionary.

ORA-01372: Insufficient processes for specified LogMiner operation

Cause: The number of processes requested by the caller can not be allocated

Action: Increase number of parallel servers allocated to the instance

ORA-01373: insufficient memory for staging persistent LogMiner session

Cause: The maximum number of concurrent persistent LogMiner sessions allowed is limited by LOGMNR_MAX_PERSISTENT_SESSIONS parameter. Not enough memory has been set aside at instance startup to allocate the new LogMiner session.

Action: Increase LOGMNR_MAX_PERSISTENT_SESSIONS and restart instance.

ORA-01374: *_log_parallelism_max* greater than 1 not supported in this release

Cause: LogMiner does not mine redo records generated with *_log_parallelism_max* set to a value greater than 1.

Action: n/a

ORA-01375: Corrupt logfile *string* recovered

Cause: A corrupt logfile has been recovered by RFS

Action: None. Logical Standby should automatically restart. If logfile is still corrupt, may need to manually copy and reregister the logfile on the standby.

ORA-01377: Invalid log file block size

Cause: An invalid value was specified in the BLOCKSIZE clause.

Action: Use correct syntax.

ORA-01378: The logical block size (*string*) of file *string* is not compatible with the disk sector size (media sector size is *string* and host sector size is *string*)

Cause: One of the following occurred: (1) An attempt was made to create a file. (2) A file was moved to disks with different sector size.

Action: Create file or move file to the proper disk.

ORA-01379: LogMiner testing event

ORA-01380: Instance *string* (thread *string*) has less than two *string* block size log files

Cause: One of the following occurred: (1) An attempt was made to switch to specified block size logs for all threads. (2) An attempt was made to open a thread.

Action: Add log files to the thread that signals error, and try again.

ORA-01381: Dropping log *string* would leave less than two log files with block size *string* for instance *string* (thread *string*)

Cause: The database was migrated to use a specified log block size. Dropping all the logs specified would leave fewer than the required two log files with the specified block size per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

ORA-01382: Thread *string* failed to open log file *string*. The log file's block size (*string*) is larger than the disk sector size (*string*)

Cause: Log file was created on bigger sector disks, and moved to smaller sector disks.

Action: Move the log file back to bigger sector disks.

ORA-01383: Thread *string* failed to open *string* block size log file '*string*' on *string* sector native-mode disks

Cause: Log file was copied from smaller sector disks to larger sector native-mode disks.

Action: Move the log file back to smaller sector disks.

ORA-01384: Cannot add file *string* due to unsupported redo compatibility *string* which is earlier than *string*.

Cause: A log file with compatibility earlier than minimum redo compatibility supported by LogMiner was added.

Action: Specify a log file produced with a redo compatibility setting supported by LogMiner.

ORA-01397: file name too long to shrink without truncation

Cause: An attempt was made to automatically convert the control file created with maximum file name size value of 512 to 256. This could result in truncation of file names leading to loss of uniqueness among file names.

Action: Shorten the file names in the system where the control file was created to conform to the maximum file name length in the current system.

ORA-01400: cannot insert NULL into (string)

Cause: An attempt was made to insert NULL into previously listed objects.

Action: These objects cannot accept NULL values. Reservable columns cannot accept NULL values.

ORA-01401: inserted value too large for column

Cause: The value inserted was too large for the given column.

Action: Do not insert a value greater than what the column can hold.

ORA-01402: view WITH CHECK OPTION where-clause violation

Cause: An INSERT or UPDATE statement was attempted on a view created with the CHECK OPTION. This would have resulted in the creation of a row that would not satisfy the view's WHERE clause.

Action: Examine the view's WHERE clause in the dictionary table VIEWS. If the current view does not have the CHECK OPTION, then its FROM clause must reference a second view that is defined using the CHECK OPTION. The second view's WHERE clause must also be satisfied by any INSERT or UPDATE statements. To insert the row, it may be necessary to insert it directly into the underlying table, rather than through the view.

ORA-01403: no data found

Cause: No data was found from the objects.

Action: There was no data from the objects which may be due to end of fetch.

ORA-01404: ALTER COLUMN will make an index too large

Cause: Increasing the length of a column would cause the combined length of the columns specified in a previous CREATE INDEX statement to exceed the maximum index length (255). The total index length was computed as the sum of the width of all indexed columns plus the number of indexed columns. Date fields were calculated as a length of 7, character fields were calculated at their defined width, and numeric fields were length 22.

Action: The only way to alter the column is to drop the affected index. The index cannot be re-created if to do so would exceed the maximum index width.

ORA-01405: The fetched column returned a NULL value.

Cause: A query returned a row containing a NULL value for one of the selected columns, but the program variable associated with the column by the define call (the define variable) did not include an indicator variable. The define variable buffer in the program remained unchanged.

Action: To resolve the issue, perform any one of the following: - Associate an indicator variable with all define variables to record the presence of the NULL value. This technique permits your program to take a specific action if a NULL value is returned. - Use the NVL function to convert the retrieved NULL to another value, such as zero or blank. This is the simplest solution. - Revise the query to eliminate inclusion of columns that / might contain a NULL value.

ORA-01406: fetched column value was truncated

Cause: The fetched column values were truncated.

Action: Use the right data types to avoid truncation.

ORA-01407: cannot update (*string*) to NULL

Cause: An attempt was made to update a table column "USER"."TABLE"."COLUMN" with a NULL value. For example, if you enter: connect scott/tiger update table a (a1 number not null); insert into a values (null); Oracle returns: ORA-01407 cannot update ("SCOTT"."A"."A1") to NULL which means you cannot update the column "SCOTT"."A"."A1" to NULL.

Action: Retry the operation with a value other than NULL.

ORA-01408: such column list already indexed

Cause: A CREATE INDEX statement specified a column that was already indexed. A single column may be indexed only once. Additional indexes may be created on the column if it was used as a portion of a concatenated index, that was, if the index consists of multiple columns.

Action: Do not attempt to re-index the column, as it is unnecessary. To create a concatenated key, specify one or more additional columns in the CREATE INDEX statement.

ORA-01409: NOSORT option may not be used; rows are not in ascending order

Cause: Creation of index with NOSORT option when rows were not ascending. For non-unique indexes the rowid is considered part of the index key. Therefore, if you create an index nosort and two of the rows in the table have the same key and are stored in ascending order, but get split across two extents where the dba of the first block in the second extent is less than the dba of the last block in the first extent, then the create index nosort may fail.

Action: Create the index without the NOSORT option, or ensure table is stored in one extent.

ORA-01410: The ROWID is invalid.

Cause: Either the ROWID specified had an invalid format, or one or more of the components of the ROWID did not exist.

Action: The following corrective actions may be taken: 1. Refer to DBMS_ROWID package for creation of ROWID that uses the correct format. 2. Verify that the components of the ROWID exist.

ORA-01411: cannot store the length of column in the indicator

Cause: Tried to fetch a column of size more than 64K and couldn't store the length of the column in the given indicator of size 2 bytes.

Action: Use the new bind type with call backs to fetch the long column.

ORA-01412: zero length not allowed for this datatype

Cause: The length for type 97 is 0

Action: Specify the correct length.

ORA-01413: invalid value

Cause: The user buffer bound by the user as packed decimal number contained an invalid value.

Action: Use a valid value and retry.

ORA-01414: invalid array length when trying to bind array

Cause: An attempt was made to bind an array without either a current array length pointer or a zero maximum array length.

Action: Specify a valid length.

ORA-01415: Query contains too many distinct aggregate functions.

Cause: The query contains more than 255 distinct aggregate functions.

Action: Reduce the number of distinct aggregate functions.

ORA-01416: two tables cannot be outer-joined to each other

Cause: Two tables in a join operation specified an outer join with respect to each other. If an outer join was specified on one of the tables in a join condition, it may not be specified on the other table.

Action: Remove the outer join specification (+) from one of the tables, then retry the operation.

ORA-01417: a table may be outer joined to at most one other table

Cause: $a.b (+) = b.b$ and $a.c (+) = c.c$ is not allowed

Action: Check that this is really what you want, then join b and c first in a view.

ORA-01418: specified index does not exist

Cause: An ALTER INDEX, DROP INDEX, or VALIDATE INDEX statement specified the name of an index that did not exist. Only existing indexes can be altered, dropped, or validated. Existing indexes may be listed by querying the data dictionary.

Action: Specify the name of an existing index in the ALTER INDEX, DROP INDEX, or VALIDATE INDEX statement.

ORA-01419: datdts: illegal format code

Cause: An attempt was made to use an incorrect format.

Action: Inspect the format, correct it if necessary, then retry the operation.

ORA-01420: datstd: illegal format code

Cause: An attempt was made to use an invalid format.

Action: Inspect the format, correct it if necessary, then retry the operation.

ORA-01421: datrnd/datrn: illegal precision specifier

Cause: An attempt was made to use an invalid precision specifier.

Action: Inspect the precision specifier, correct it if necessary, then retry the operation.

ORA-01422: exact fetch returned more than the requested number of rows *string*

Cause: The cause is one of the following: 1. A SELECT statement was executed in the exact fetch mode and returned more rows than requested. 2. In PL/SQL, a SELECT INTO statement returned more than one row. 3. In PL/SQL, a DML RETURNING INTO statement returned more than one row.

Action: Choose the action corresponding to the cause as numbered: 1. Increase the number of rows requested to accommodate the number of rows returned; or omit the exact fetch mode on the fetch call. 2. In PL/SQL, use a FOR loop to process the rows. 3. In PL/SQL, use

BULK COLLECT to return values into a table. *Params: 1) requested_rows: The number of requested rows.

ORA-01423: error encountered while checking for extra rows in exact fetch

Cause: An error was encountered during the execution of an exact fetch. This message will be followed by more descriptive messages.

Action: See the following error and take appropriate action.

ORA-01424: missing or illegal character following the escape character

Cause: The character following the escape character in LIKE pattern is missing or not one of the escape character, '%', or '_'.

Action: Remove the escape character or specify the missing character.

ORA-01425: escape character must be character string of length 1

Cause: Given escape character for LIKE is not a character string of length 1.

Action: Change it to a character string of length 1.

ORA-01426: numeric overflow

Cause: Evaluation of an value expression causes an overflow/underflow.

Action: Reduce the operands.

ORA-01427: single-row subquery returns more than one row

Cause: The outer query must use one of the keywords ANY, ALL, IN, or NOT IN to specify values to compare because the subquery returned more than one row.

Action: Use ANY, ALL, IN, or NOT IN to specify which values to compare or reword the query so only one row is retrieved.

ORA-01428: Argument *string* is out of range.

Cause: An invalid value for a mathematical function argument was specified. For example: SELECT SQRT(-1) "Square Root" FROM DUAL.

Action: Check the Oracle documentation. Find the valid arguments, correct the request, and retry the operation.

ORA-01429: Index-Organized Table: no data segment to store overflow row-pieces

Cause: No overflow segment defined.

Action: Add overflow segment.

ORA-01430: column being added already exists in table

Cause: An ALTER TABLE ADD statement specified the name of a column that was already in the table. All column names must be unique within a table.

Action: Specify a unique name for the new column, then re-execute the statement.

ORA-01431: internal inconsistency in GRANT command

Cause: An internal error occurred while attempting to execute a GRANT statement.

Action: Contact Oracle Support Services.

ORA-01432: public synonym to be dropped does not exist

Cause: The synonym specified in DROP PUBLIC SYNONYM was not a valid public synonym. It may be a private synonym.

Action: Correct the synonym name or use DROP SYNONYM if the synonym is not public.

ORA-01433: synonym to be created is already defined

Cause: A CREATE SYNONYM statement specified a synonym name that was the same as an existing synonym, table, view, or cluster. Synonyms may not have the same name as any other synonym, table, view, or cluster available to the user creating the synonym.

Action: Specify a unique name for the synonym, then re-execute the statement.

ORA-01434: private synonym to be dropped does not exist

Cause: A DROP SYNONYM statement specified a synonym that did not exist. Existing synonym names may be listed by querying the data dictionary.

Action: Specify the name of an existing synonym in the DROP SYNONYM statement.

ORA-01435: user does not exist

Cause: This message is caused by any reference to a non-existent user. For example, it occurs if a SELECT, GRANT, or REVOKE statement specifies a username that did not exist. Only a GRANT CONNECT statement may specify a new username. All other GRANT and REVOKE statements must specify existing usernames. If specified in a SELECT statement, usernames must already exist.

Action: Specify only existing usernames in the SELECT, GRANT, or REVOKE statement or ask the database administrator to define the new username.

ORA-01436: CONNECT BY loop in user data

Cause: The condition specified in a CONNECT BY clause caused a loop in the query, where the next record to be selected was a descendent of itself. When this happens, there could be no end to the query.

Action: Check the CONNECT BY clause and remove the circular reference.

ORA-01437: cannot have join with CONNECT BY

Cause: A join operation was specified with a CONNECT BY clause. If a CONNECT BY clause was used in a SELECT statement for a tree-structured query, only one table may be referenced in the query.

Action: Remove either the CONNECT BY clause or the join operation from the SQL statement.

ORA-01438: value *string* greater than specified precision *string* for column *string*

Cause: When inserting or updating records, a numeric value was entered that exceeded the precision defined for the column. For example, for a column defined to be NUMBER(3,2), the precision or the maximum number of significant decimal digits is 3. The scale or the number of digits from the decimal point to the least significant digit is 2. In this case, a value of 123.89 will cause the error because the precision allows a maximum of 3 digits and 2 of them must be to the right of the decimal point. A value of 3.89 will not cause the error.

Action: Enter a value that complies with the precision defined for the numeric column. You can also use the MODIFY option with the ALTER TABLE command to redefine the precision.
*Params: 1) value: The numeric value being inserted or updated. 2) precision_scale: The specified precision and scale for the column into which the value is being inserted or

updated. 3) column: The name of the column that the value was being inserted into or updated.

ORA-01439: column to be modified must be empty to change datatype

Cause: An ALTER TABLE MODIFY statement attempted to change the datatype of a column containing data. A column whose datatype was to be altered must contain only NULL values.

Action: To alter the datatype, first set all values in the column to NULL.

ORA-01440: column to be modified must be empty to decrease precision or scale

Cause: An ALTER TABLE MODIFY statement attempted to decrease the scale or precision of a numeric column containing data. In order to decrease either of these values, the column must contain only NULL values. An attempt to increase the scale without also increasing the precision caused this message.

Action: Set all values in the column to NULL before decreasing the numeric precision or scale. If attempting to increase the scale, increase the precision in accordance with the scale or set all values in the column to NULL first.

ORA-01441: cannot decrease column length because some value is too big

Cause: An ALTER TABLE MODIFY statement attempted to decrease the size of a character field containing data. A column whose maximum size was decreased must contain only NULL values.

Action: Set all values in column to NULL before decreasing the maximum size.

ORA-01442: column to be modified to NOT NULL is already NOT NULL

Cause: An ALTER TABLE MODIFY statement attempted to change a column specification unnecessarily, from NOT NULL to NOT NULL.

Action: No action required.

ORA-01443: internal inconsistency; illegal datatype in resultant view column

Cause: An internal error occurred in referencing a view.

Action: Contact Oracle Support Services.

ORA-01444: internal inconsistency; internal datatype maps to invalid external type

Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

ORA-01445: cannot select ROWID from, or sample, a join view without a key-preserved table

Cause: A SELECT statement attempted to select ROWIDs from a view derived from a join operation. Because the rows selected in the view did not correspond to underlying physical records, no ROWIDs can be returned.

Action: Remove ROWID from the view selection clause, then re-execute the statement.

ORA-01446: cannot select ROWID from, or sample, a view with DISTINCT, GROUP BY, etc.

Cause: A SELECT statement attempted to select ROWIDs from a view containing columns derived from functions or expressions. Because the rows selected in the view did not correspond to underlying physical records, no ROWIDs can be returned.

Action: Remove ROWID from the view selection clause, then re-execute the statement.

ORA-01447: ALTER TABLE does not operate on clustered columns

Cause: An ALTER TABLE MODIFY statement specified a column used to cluster the table. Clustered columns may not be altered.

Action: To alter the column, first re-create the table in non-clustered form. The column's size can be increased at the same time.

ORA-01448: index must be dropped before changing to desired type

Cause: An ALTER TABLE MODIFY statement attempted to change an indexed character column to a LONG column. Columns with the datatype LONG may not be indexed, so the index must be dropped before the modification.

Action: Drop all indexes referencing the column before changing its datatype to LONG.

ORA-01449: Column contains NULL values. Cannot alter column to NOT NULL.

Cause: An ALTER TABLE MODIFY statement attempted to change the column definition to NOT NULL when NULL values were present in the column.

Action: Set all NULL values in the column to values other than NULL before attempting the ALTER TABLE MODIFY statement. You must not have NULL values in a column you want to modify to NOT NULL.

ORA-01450: maximum key length (string) exceeded

Cause: The combined length of all the columns specified in a CREATE INDEX statement exceeded the maximum index length. The maximum index length varies by operating system. The total index length was computed as the sum of the width of all indexed columns plus the number of indexed columns. Date fields have a length of 7, character fields have their defined length, and numeric fields have a length of 22. Numeric length = (precision/2) + 1. If negative, add +1.

Action: Select columns to be indexed so the total index length does not exceed the maximum index length for the operating system. See also your operating system-specific Oracle documentation.

ORA-01451: column to be modified to NULL cannot be modified to NULL

Cause: the column may already allow NULL values, the NOT NULL constraint is part of a primary key or check constraint.

Action: if a primary key or check constraint is enforcing the NOT NULL constraint, then drop that constraint.

ORA-01452: cannot CREATE UNIQUE INDEX; duplicate keys found

Cause: A CREATE UNIQUE INDEX statement specified one or more columns that currently contained duplicate values. All values in the indexed columns must be unique by row to create a UNIQUE INDEX.

Action: If the entries need not be unique, remove the keyword UNIQUE from the CREATE INDEX statement, then re-execute the statement. If the entries must be unique, as in a primary key, then remove duplicate values before creating the UNIQUE index.

ORA-01453: SET TRANSACTION must be first statement of transaction

Cause: self-evident

Action: commit (or rollback) transaction, and re-execute

ORA-01454: cannot convert column into numeric datatype

Cause: A non-numeric value could not be converted into a number value.

Action: Check the value to make sure it contains only numbers, a sign, a decimal point, and the character "E" or "e", then retry the operation.

ORA-01455: converting column overflows integer datatype

Cause: The converted form of the specified expression was too large for the specified datatype.

Action: Define a larger datatype or correct the data.

ORA-01456: may not perform insert, delete, update operation inside a READ ONLY transaction

Cause: A non-DDL insert, delete, update or select for update operation was attempted.

Action: commit (or rollback) transaction, and re-execute

ORA-01457: converting column overflows decimal datatype

Cause: The converted form of the specified expression was too large for the specified type. The problem also occurred in COBOL programs when using COMP-3 in the picture clause, which was acceptable to the Pro*COBOL Precompiler and to COBOL but results in this error.

Action: Define a larger datatype or correct the data.

ORA-01458: invalid length inside variable character string

Cause: An attempt was made to bind or define a variable character string with a buffer length less than the minimum requirement.

Action: Increase the buffer size or use a different type.

ORA-01459: invalid length for a variable length character string value in bind buffer

Cause: The buffer length was less than the minimum required or greater than its length at bind time.

Action: Ensure that the buffer is large enough to hold the string of the size specified.

ORA-01460: unimplemented or unreasonable conversion requested

Cause: The requested format conversion was not supported.

Action: Remove the requested conversion from the SQL statement. Check the syntax for the TO_CHAR, TO_DATE, and TO_NUMBER functions to see which conversions are supported.

ORA-01461: The value at bind position *string* exceeded the maximum VARCHAR2 length.

Cause: An attempt was made to use a bind value whose length exceeded the maximum VARCHAR2 length allowed for the database.

Action: - If the MAX_STRING_SIZE database parameter is set to STANDARD, consider changing it to EXTENDED. - If it is already set to EXTENDED, consider changing the data type of the column to CLOB. *Params: 1) variable_position: The position of the bind variable with the value that exceeds the maximum VARCHAR2 length.

ORA-01462: cannot insert string literals longer than 4000 characters

Cause: The longest literal supported by Oracle consisted of 4000 characters.

Action: Reduce the number of characters in the literal to 4000 characters or fewer or use the VARCHAR2 or LONG datatype to insert strings exceeding 4000 characters.

ORA-01463: cannot modify column datatype with current constraint(s)

Cause: An attempt was made to modify the datatype of column which has referential constraints; or has check constraints which only allows changing the datatype from CHAR to VARCHAR or vice versa.

Action: Remove the constraint(s) or do not perform the offending operation.

ORA-01464: circular grant (granting to grant ancestor) of table or view

Cause: The user in the TO clause of the GRANT statement had already been GRANTED privileges on this table.

Action: Do not GRANT privileges on a table to the user who originally GRANTED privileges on that table. The statement in error is probably unnecessary.

ORA-01465: invalid hex number

Cause: In an UPDATE statement following a SELECT FOR UPDATE, part of the ROWID contained invalid characters. ROWID must be expressed in the proper and expected format for ROWID and within quotes.

Action: Enter the ROWID just as it was returned in the SELECT FOR UPDATE.

ORA-01466: unable to read data - table definition has changed

Cause: Query parsed after tbl (or index) change, and executed w/old snapshot

Action: commit (or rollback) transaction, and re-execute

ORA-01467: sort key too long

Cause: A DISTINCT, GROUP BY, ORDER BY, or SET operation requires a sort key longer than that supported by Oracle. Either too many columns or too many group functions were specified in the SELECT statement.

Action: Reduce the number of columns or group functions involved in the operation.

ORA-01468: a predicate may reference only one outer-joined table

Cause: A predicate in the WHERE clause had two columns from different tables with "(+)".

Action: Change the WHERE clause so that each predicate has a maximum of one outer-join table.

ORA-01469: PRIOR can only be followed by a column name

Cause: Attempting to specify "PRIOR *something*" where *something* is not a column name.

Action: Only a column name can follow PRIOR. Replace with a column name.

ORA-01470: In-list iteration does not support mixed operators.

Cause: Constants of different types were specified in an in-list.

Action: Use constants of same type for in-lists.

ORA-01471: cannot create a synonym with same name as object

Cause: An attempt was made to create a private synonym with the same name as the object to which it refers. This error typically occurred when a user attempts to create a private synonym with the same name as one of their objects.

Action: Choose a different synonym name or create the synonym under a different username.

ORA-01472: cannot use CONNECT BY on view with DISTINCT, GROUP BY, etc.

Cause: CONNECT BY could not be used on a view where there was not a correspondence between output rows and rows of the underlying table.

Action: Remove the DISTINCT or GROUP BY from the view or move the CONNECT BY clause into the view.

ORA-01473: Subqueries cannot be specified in CONNECT BY clause.

Cause: An attempt was made to specify a subquery in a CONNECT BY clause.

Action: Remove the subquery or move it to the WHERE clause.

ORA-01474: cannot have START WITH or PRIOR without CONNECT BY

Cause: START WITH and PRIOR are meaningful only in connection with CONNECT BY.

Action: Check the syntax for the SQL statement and add a CONNECT BY clause, if necessary.

ORA-01475: must reparse cursor to change bind variable datatype

Cause: After executing a statement, an attempt was made to rebind a bind variable with a datatype different from that of the original bind.

Action: Re-parse the cursor before rebinding with a different datatype.

ORA-01476: divisor is equal to zero

Cause: An expression attempted to divide by zero.

Action: Correct the expression, then retry the operation.

ORA-01477: user data area descriptor is too large

Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

ORA-01478: array bind may not include any LONG columns

Cause: User is performing an array bind with a bind variable whose maximum size is greater than 2000 bytes.

Action: Such bind variables cannot participate in array binds. Use an ordinary bind operation instead.

ORA-01479: last character in the buffer is not Null

Cause: A bind variable of type 97 does not contain null at the last position

Action: Make the last character null

ORA-01480: trailing null character is missing from SQLT_STR type bind data

Cause: A bind variable of type SQLT_STR (null-terminated string) did not contain the terminating null character in its buffer.

Action: Add a null character at the end of the string.

ORA-01481: invalid number format model

Cause: The user is attempting to either convert a number to a string via TO_CHAR or a string to a number via TO_NUMBER and has supplied an invalid number format model parameter.

Action: Consult your manual.

ORA-01482: unsupported character set

Cause: The character set used to perform the operation, such as the CONVERT function, is not a supported character set.

Action: Use one of the supported character sets.

ORA-01483: invalid length for DATE or NUMBER bind variable

Cause: A bind variable of type DATE or NUMBER is too long.

Action: Consult your manual for the maximum allowable length.

ORA-01484: arrays can only be bound to PL/SQL statements

Cause: You tried to bind an array to a non-PL/SQL statement.

Action: Rewrite the offending code being careful to bind arrays only to PL/SQL statements.

ORA-01485: compile bind length different from execute bind length

Cause: You bound a buffer of type DTYVCS (VARCHAR with the two byte length in front) and at execute time the length in the first two bytes is more than the maximum buffer length (given in the bind call). The number of elements in the array and the current number of elements in the array cannot be more than the maximum size of the array.

Action: Ensure that the buffer size is sufficiently large to contain the array plus two bytes for the buffer length.

ORA-01486: size of array element is too large

Cause: You tried to bind a data value which was either too large for the datatype (for example, NUMBER) or was greater than 4000 bytes (for example, VARCHAR or LONG).

Action: Find a way to convert or truncate the data value so that its length is acceptable.

ORA-01487: packed decimal number too large for supplied buffer

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

ORA-01488: invalid nibble or byte in the input data

Cause: An impossible request for decimal to an Oracle number conversion was made.

Action: This conversion cannot be performed.

ORA-01489: result of string concatenation is too long

Cause: String concatenation result is more than the maximum size.

Action: Make sure that the result is less than the maximum size.

ORA-01490: invalid ANALYZE command

Cause: Incorrect syntax specified

Action: Retry the command

ORA-01491: CASCADE option not valid

Cause: The CASCADE option is only valid for tables or clusters.

Action: Do not specify CASCADE

ORA-01492: LIST option not valid

Cause: The LIST option is only valid for tables or clusters.

Action: Do not specify LIST

ORA-01493: invalid SAMPLE size specified

Cause: The specified SAMPLE size is out of range

Action: Specify a value within the proper range.

ORA-01494: invalid SIZE specified

Cause: The specified histogram SIZE value was out of range.

Action: Specify a value within the proper range.

ORA-01495: Chain row table not found.

Cause: The specified chain row table does not exist or the user does not have the proper privileges to access the table.

Action: Specify a chain row table that exists, the user has privileges to access, or both. Retry the statement.

ORA-01496: specified chain row table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-01497: illegal option for ANALYZE CLUSTER

Cause: The FOR COLUMNS *column-list* clause may not be used with ANALYZE CLUSTER.

Action: Retry with a legal syntax.

ORA-01498: block check failure - see trace file

Cause: An error occurred while checking a block with the ANALYZE command.

Action: Check the trace file for more descriptive messages about the problem. Correct these errors. The name of the trace file is operating system-specific, for example, ORAxxxx.TRC. It is found in the directory specified by the initialization parameter USER_DUMP_DEST. If USER_DUMP_DEST is not set, trace files are not created. It may be necessary to re-create the object. See also your operating system-specific Oracle documentation.

ORA-01499: table/index cross reference failure - see trace file

Cause: An error occurred when validating an index or a table using the ANALYZE command. One or more entries did not point to the appropriate cross-reference.

Action: Check the trace file for more descriptive messages about the problem. Correct these errors. The name of the trace file is operating system-specific, for example, ORAxxxx.TRC. It is found in the directory specified by the USER_DUMP_DEST initialization parameter. If USER_DUMP_DEST is not set, trace files are not created. It may be necessary to re-create the object. See also your operating system-specific Oracle documentation.

ORA-01500 to ORA-02098

ORA-01500: failure in getting date/time

Cause: During create database or alter tablespace, there was a failure in getting the date and time.

Action: Contact your customer support representative.

ORA-01501: CREATE DATABASE failed

Cause: An error occurred during create database

Action: See accompanying errors.

ORA-01502: index '*string.string*' or partition of such index is in unusable state

Cause: An attempt has been made to access an index or index partition that has been marked unusable by a direct load or by a DDL operation

Action: DROP the specified index, or REBUILD the specified index, or REBUILD the unusable index partition

ORA-01503: CREATE CONTROLFILE failed

Cause: An error occurred during CREATE CONTROLFILE

Action: See accompanying errors.

ORA-01504: database name '*string*' does not match initialization parameter DB_NAME '*string*'

Cause: The database name during create or mount did not match the name specified for the DB_NAME initialization parameter.

Action: Correct or omit one of the two names.

ORA-01505: error in adding log files

Cause: During create or alter database, error(s) occurred when adding new log files.

Action: Check error stack for detailed error information.

ORA-01506: missing or illegal database name

Cause: No db_name INIT.ORA parameter was specified.

Action: The database name must be given in the db_name INIT.ORA parameter.

ORA-01507: database not mounted

Cause: A command was attempted that requires the database to be mounted.

Action: If you are using the ALTER DATABASE statement via the SQLDBA startup command, specify the MOUNT option to startup; else if you are directly doing an ALTER DATABASE DISMOUNT, do nothing; else specify the MOUNT option to ALTER DATABASE. If you are doing a backup or copy, you must first mount the desired database. If you are doing a FLASHBACK DATABASE, you must first mount the desired database.

ORA-01508: cannot create database; error in file 'string' at line string

Cause: CREATE DATABASE was unable to process the specified file.

Action: Check the offending line in the specified file.

ORA-01509: specified name 'string' does not match actual 'string'

Cause: The database name specified in the ALTER DATABASE statement does not match the name of the database that is currently mounted.

Action: Correct the spelling of the database name or DISMOUNT the mounted database.

ORA-01510: error in deleting log files

Cause: During ALTER DATABASE, an error occurred while dropping log files.

Action: Check the error stack for detailed error information.

ORA-01511: error in renaming log/data files

Cause: An error occurred during the ALTER DATABASE RENAME FILE command.

Action: Check the error stack for detailed error information.

ORA-01512: error renaming log file string - new file string not found

Cause: An attempt to change a log file's name in the control file failed because no file was found with the new name.

Action: Make sure that the log file has been properly renamed by the operating system and retry.

ORA-01513: invalid current time returned by operating system

Cause: The operating system returned a time that was not between 1988 and 2121.

Action: Correct the time kept by the operating system.

ORA-01514: error in log specification: no such log

Cause: A log file name, or list of member names, did not correspond to an existing log.

Action: Specify an existing log file.

ORA-01515: error dropping log group string: no such log

Cause: ALTER DATABASE is attempting to drop a log file which is not known to the database control file.

Action: Specify the name of an existing log file.

ORA-01516: nonexistent log file, data file, or temporary file "string" in the current container

Cause: An attempt was made to use ALTER DATABASE to rename a log file, data file, or temporary file; or to change attributes of a data file or temporary file (for example, resize, autoextend, online or offline); or to re-create or move a data file. The attempt failed because the specified file is not known to the database's control file or the current container or is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type, as appropriate. Check the relevant V\$ table for a list of possible files.

ORA-01517: log member: 'string'

Cause: Used to print member names

Action: See top level error for information

ORA-01518: CREATE DATABASE must specify more than one log file

Cause: Only one log file was specified in the CREATE DATABASE statement.

Action: Specify at least two log files.

ORA-01519: error while processing file 'string' near line string

Cause: The CREATE DATABASE statement encountered a problem while processing the specified file. The specified file is invalid.

Action: Validate the file specified in the message and retry the CREATE DATABASE statement. If the problem persists, contact Oracle Support Services.

ORA-01520: number of data files to add (string) exceeds limit of string

Cause: CREATE TABLESPACE statement specifies more files than is permitted for this database.

Action: Use fewer files or re-create the database with a larger value of MAXDATAFILES.

ORA-01521: error in adding data files

Cause: During CREATE or ALTER TABLESPACE, an error was detected while adding data files.

Action: Check the error stack for detailed error information.

ORA-01522: file 'string' to be renamed does not exist

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the database control file.

Action: Specify the correct file name.

ORA-01523: cannot rename data file to 'string' - file already part of database

Cause: During ALTER DATABASE RENAME or ALTER TABLESPACE RENAME, the new name of a file is already present in the control file.

Action: Rename the file to a name not already being used as part of the database.

ORA-01524: cannot create data file as 'string' - file already part of database

Cause: During ALTER DATABASE CREATE DATAFILE, the new name of a file is already present in the control file.

Action: Create the file as a name not already being used as part of the database.

ORA-01525: error in renaming data files

Cause: An error occurred when renaming files as part of ALTER TABLESPACE.

Action: Check the error stack for detailed information. All files are renamed except for those mentioned in the error stack.

ORA-01526: error in opening file 'string'

Cause: CREATE DATABASE was not able to open the specified file.

Action: Make sure your CREATE DATABASE command only contains references to files and file locations for which the OS user and the Oracle Installer group (usually oinstall) has permissions for reading and writing.

ORA-01527: error while reading file

Cause: CREATE DATABASE was not able to read the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01528: EOF while processing SQL statement

Cause: CREATE DATABASE unexpectedly hit EOF while reading the specified file. The sql.bsq file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01529: error closing file '*string*'

Cause: CREATE DATABASE was not able to close the specified file.

Action: Retry the system installation procedure or contact Oracle Support Services.

ORA-01530: a database already mounted by the instance

Cause: During ALTER DATABASE MOUNT, an attempt is being made to mount a database on an instance in which a database is or has previously been mounted.

Action: If you wish to mount the database, shutdown the instance and then startup the instance and retry the operation.

ORA-01531: a database already open by the instance

Cause: During ALTER DATABASE, an attempt was made to open a database on an instance for which there is already an open database.

Action: If you wish to open a new database on the instance, first shutdown the instance and then startup the instance and retry the operation.

ORA-01532: cannot create database; instance being started elsewhere

Cause: During CREATE DATABASE, another user appears to be simultaneously altering the instance.

Action: Make sure no one else is simultaneously altering the instance. If no one is, contact your customer support representative; otherwise, retry the operation.

ORA-01533: cannot rename file '*string*'; file does not belong to tablespace

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the argument tablespace.

Action: Specify the correct file name or the correct tablespace name.

ORA-01534: rollback segment '*string*' doesn't exist

Cause: During the ALTER or DROP ROLLBACK SEGMENT DDLs, or when modifying the parameters: ROLLBACK_SEGMENTS, _OFFLINE_ROLLBACK_SEGMENTS, and _CORRUPTED_ROLLBACK_SEGMENTS, the specified rollback segment name is unknown.

Action: Use the correct rollback segment name.

ORA-01535: rollback segment '*string*' already exists or given name has prefix _SYSSMU

Cause: Specified rollback segment already exists or given name starts with _SYSSMU.

Action: Use a different name. Note that _SYSSMU is an illegal prefix to an RBU segment.

ORA-01536: space quota exceeded for tablespace '*string*'

Cause: The space quota for the segment owner in the tablespace has been exhausted and the operation attempted the creation of a new segment extent in the tablespace.

Action: Either drop unnecessary objects in the tablespace to reclaim space or have a privileged user increase the quota on this tablespace for the segment owner.

ORA-01537: cannot add file '*string*' - file already part of database

Cause: During CREATE or ALTER TABLESPACE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01538: failed to acquire any rollback segment

Cause: Failed to acquire any rollback segment during startup in shared mode

Action: Startup in exclusive mode to create one more public segment or specify available private segments in the INIT.ORA parameter rollback_segments_required, then startup in shared mode

ORA-01539: tablespace '*string*' is not online

Cause: Failed to either make a tablespace read-only or offline because it was not online. A tablespace must be online before it could become read-only or offline normal.

Action: Check the status of the tablespace. Use IMMEDIATE or TEMPORARY options to force all files offline. Bring the tablespace online before making it read-only.

ORA-01540: tablespace '*string*' is not offline

Cause: Failed to bring a tablespace online because it is not offline

Action: Check the status of the tablespace

ORA-01541: system tablespace cannot be brought offline; shut down if necessary

Cause: Tried to bring system tablespace offline

Action: Shutdown if necessary to do recovery

ORA-01542: tablespace '*string*' is offline, cannot allocate space in it

Cause: Tried to allocate space in an offline tablespace

Action: Bring the tablespace online or create the object in other tablespace

ORA-01543: tablespace '*string*' already exists

Cause: Tried to create a tablespace which already exists

Action: Use a different name for the new tablespace

ORA-01544: cannot drop system rollback segment

Cause: Tried to drop system rollback segment

Action: None

ORA-01545: rollback segment '*string*' specified not available

Cause: Either: 1) An attempt was made to bring a rollback segment online that is unavailable during startup; for example, the rollback segment is in an offline tablespace. 2) An attempt was made to bring a rollback segment online that is already online. This is because the rollback segment is specified twice in the ROLLBACK_SEGMENTS parameter in the initialization parameter file or the rollback segment is already online by another instance. 3) An attempt was made to drop a rollback segment that is currently online. 4) An attempt was made to alter a rollback segment that is currently online to use unlimited extents. 5) An attempt was made to online a rollback segment that is corrupted. This is because the rollback is specified in `_corrupted_rollback_segments` parameter in initialization parameter file.

Action: Either: 1) Make the rollback segment available; for example, bring an offline tablespace online. 2) Remove the name from the ROLLBACK_SEGMENTS parameter if the name is a duplicate or if another instance has already acquired the rollback segment. 3) Bring the rollback segment offline first. This may involve waiting for the active transactions to finish, or, if the rollback segment needs recovery, discover which errors are holding up the rolling back of the transactions and take appropriate actions. 4) Same as 3). 5) Remove the name from the `_corrupted_rollback_segments` parameter.

ORA-01546: tablespace contains active rollback segment '*string*'

Cause: Tried to make a tablespace that contains active rollback segment(s) offline or read-only

Action: Shutdown instances that use the active rollback segments in the tablespace and then make the tablespace offline or read-only

ORA-01547: warning: RECOVER succeeded but OPEN RESETLOGS would get error below

Cause: Media recovery with one of the incomplete recovery options ended without error. However, if the ALTER DATABASE OPEN RESETLOGS command were attempted now, it would fail with the specified error. The most likely cause of this error is forgetting to restore one or more datafiles from a sufficiently old backup before executing the incomplete recovery.

Action: Rerun the incomplete media recovery using different datafile backups, a different control file, or different stop criteria.

ORA-01548: active rollback segment '*string*' found, terminate dropping tablespace

Cause: Tried to drop a tablespace that contains active rollback segment(s)

Action: Shutdown instances that use the active rollback segments in the tablespace and then drop the tablespace

ORA-01549: tablespace not empty, use INCLUDING CONTENTS option

Cause: Tried to drop a non-empty tablespace

Action: To drop all the objects in the tablespace, use the INCLUDING CONTENTS option

ORA-01550: cannot drop system tablespace

Cause: Tried to drop system tablespace

Action: None

ORA-01551: extended rollback segment, pinned blocks released

Cause: Doing recursive extent of rollback segment, trapped internally by the system

Action: None

ORA-01552: cannot use system rollback segment for non-system tablespace '*string*'

Cause: Tried to use the system rollback segment for operations involving non-system tablespace. If this is a clone database then this will happen when attempting any data modification outside of the system tablespace. Only the system rollback segment can be online in a clone database.

Action: Create one or more private/public segment(s), shutdown and then startup again. May need to modify the INIT.ORA parameter `rollback_segments` to acquire private rollback segment. If this is a clone database being used for tablespace point in time recovery then this operation is not allowed. If the non-system tablespace has AUTO segment space management, then create an undo tablespace.

ORA-01553: MAXEXTENTS must be no smaller than the *string* extents currently allocated

Cause: The number of extents allocated is greater than the MAXEXTENTS specified.

Action: Specify a larger MAXEXTENTS value.

ORA-01554: transaction concurrency limit reached reason:*string* params:*string*, *string*

Cause: Too many concurrent transactions

Action: Shutdown the system, modify the INIT.ORA parameters `transactions`, `rollback_segments` or `rollback_segments_required`, then startup again.

ORA-01555: snapshot too old: rollback segment number *string* with name "*string*" too small

Cause: rollback records needed by a reader for consistent read are overwritten by other writers

Action: If in Automatic Undo Management mode, increase `undo_retention` setting. Otherwise, use larger rollback segments

ORA-01556: MINEXTENTS for rollback segment must be greater than 1

Cause: Specified MINEXTENTS of less than 2 for rollback segment

Action: Specify larger MINEXTENTS

ORA-01557: rollback segment extents must be at least *string* blocks

Cause: Specified extent of less than minimum size for rollback segment

Action: Specify larger extents

ORA-01558: out of transaction ID's in rollback segment *string*

Cause: All the available transaction id's have been used

Action: Shutdown the instance and restart using other rollback segment(s), then drop the rollback segment that has no more transaction id's.

ORA-01559: MAXEXTENTS for rollback segment must be greater than 1

Cause: Specified MAXEXTENTS of less than 2 for rollback segment

Action: Specify larger MAXEXTENTS

ORA-01560: LIKE pattern contains partial or illegal character

Cause: like pattern is not formed correctly

Action: make sure like pattern is specified correctly

ORA-01561: failed to remove all objects in the tablespace specified

Cause: Failed to remove all objects when dropping a tablespace

Action: Retry the drop tablespace until all objects are dropped

ORA-01562: failed to extend rollback segment number *string*

Cause: Failure occurred when trying to extend rollback segment

Action: This is normally followed by another error message that caused the failure. You may take the rollback segment offline to perform maintenance. Use the alter rollback segment offline command to take the rollback segment offline.

ORA-01563: rollback segment is PUBLIC, need to use the keyword PUBLIC

Cause: Did not use the keyword PUBLIC to identified public rollback segment

Action: Use the keyword PUBLIC when identifying public rollback segment

ORA-01564: rollback segment is not PUBLIC

Cause: The rollback segment segment identified is not public

Action: Do not use the keyword PUBLIC when identifying private rollback segment

ORA-01565: Error identifying file *string*.

Cause: An error occurred while trying to identify the specified file.

Action: Check that the specified file exists and is accessible.

ORA-01566: file specified more than once in ALTER DATABASE

Cause: The list of files supplied to the command contained at least one duplicate.

Action: Remove the duplicate file specification and retry.

ORA-01567: dropping log *string* would leave less than 2 log files for instance *string* (thread *string*)

Cause: Dropping all the logs specified would leave fewer than the required two log files per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

ORA-01568: cannot set space quota on PUBLIC

Cause: Trying to set space quota on a tablespace for PUBLIC.

Action: If trying to grant system-wide or tablespace-wide space privileges to all users, use GRANT RESOURCE [ON *tablespace*] TO PUBLIC.

ORA-01569: insufficient space in data file for database creation

Cause: The data file specified while creating the database was too small to hold the system dictionary tables.

Action: Re-create the database by specifying a larger data file, or add more data files.

ORA-01570: MINEXTENTS must be no larger than the *string* extents currently allocated

Cause: The number of extents allocated is smaller than the MINEXTENTS specified.

Action: Specify a smaller MINEXTENTS value.

ORA-01571: redo version *string* incompatible with ORACLE version *string*

Cause: This software version can not read the current redo logs, and either crash recovery is required or there are offline database files that need media recovery. If a file name is listed then it needs media recovery.

Action: Shutdown and startup using the compatible software. Do any required media recovery, and open the database. Shutdown and then startup using current software. If the file is going to be dropped then take it offline with the DROP option to skip this check.

ORA-01572: rollback segment '*string*' cannot be brought online, *string* extents exceeded

Cause: The number of extents in the rollback segment exceeds the hard limit. It cannot be brought online for writing.

Action: Drop and recreate the rollback segment.

ORA-01573: shutting down instance, no further change allowed

Cause: Some process tries to make changes while the db is being shutdown

Action: None

ORA-01574: maximum number of concurrent transactions exceeded

Cause: the limit on the number of concurrent transactions has been hit

Action: shutdown the system, increase the INIT.ORA parameter 'transactions' , and then restart the system.

ORA-01575: timeout waiting for space management resource

Cause: failed to acquire necessary resource to do space management.

Action: Retry the operation.

ORA-01576: The instance *string* is not enabled

Cause: The thread associated with instance is not enabled.

Action: Enable the thread associated with the instance using ALTER DATABASE ENABLE INSTANCE command.

ORA-01577: cannot add log file '*string*' - file already part of database

Cause: During CREATE or ALTER DATABASE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01578: ORACLE data block corrupted (file # *string*, block # *string*)

Cause: The data block indicated was corrupt. This was a physical corruption, also called a media corruption. The cause is unknown but is most likely external to the database. If ORA-26040 is also signaled, the corruption is due to NOLOGGING or UNRECOVERABLE operations.

Action: The general method to repair a media corrupt block is to restore a backup and recover the backup. For databases in ARCHIVELOG mode, use block media recovery or media recovery. In some situations, you can also drop the segment and re-create it. For example, you can drop an index and re-create the index.

ORA-01579: write error occurred during recovery

Cause: A write error occurred during recovery

Action: Consult trace files for the nature of the write error, and correct error.

ORA-01580: error creating control backup file *string*

Cause: An operating system error occurred while attempting to create a control file backup.

Action: Check the error stack for more detailed information

ORA-01581: attempt to use rollback segment (*string*) new extent (*string*) which is being allocated

Cause: Undo generated to extend a rollback segment run out of current undo block space and is attempting to write into the new extent which has not been completely allocated.

Action: The rollback segment extending will be rolled back by the system, no more extension will be possible until the next extent is freed up by rolling back or committing other transactions.

ORA-01582: unable to open control file for backup

Cause: An operating system error occurred while attempting to open a control file for backup.

Action: Check the error stack for more detailed information

ORA-01583: unable to get block size of control file to be backed up

Cause: An operating system error occurred while attempting to get the block size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01584: unable to get file size of control file to be backed up

Cause: An operating system error occurred while attempting to get the file size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01585: error identifying backup file *string*

Cause: An operating system error occurred when attempting to identify the file to be used for control file backup.

Action: Check the error stack for more detailed information

ORA-01586: database must be mounted EXCLUSIVE and not open for this operation

Cause: Attempting to DROP DATABASE when the database is not mounted EXCLUSIVE.

Action: Mount the database in EXCLUSIVE mode.

ORA-01587: error during control file backup file copy**ORA-01588: must use RESETLOGS option for database open**

Cause: An earlier attempt to open the database with the RESETLOGS option did not complete, or recovery was done with a control file backup, or a FLASHBACK DATABASE was done.

Action: Use the RESETLOGS option when opening the database.

ORA-01589: must use RESETLOGS or NORESETLOGS option for database open

Cause: Either incomplete or backup control file recovery has been performed. After these types of recovery you must specify either the RESETLOGS option or the NORESETLOGS option to open your database.

Action: Specify the appropriate option.

ORA-01590: number of segment free list (*string*) exceeds maximum of *string*

Cause: storage parameter FREELIST GROUPS is too large.

Action: Reduce storage parameters FREELIST GROUPS

ORA-01591: lock held by in-doubt distributed transaction *string*

Cause: Trying to access resource that is locked by a dead two-phase commit transaction that is in prepared state.

Action: DBA should query the pending_trans\$ and related tables, and attempt to repair network connection(s) to coordinator and commit point. If timely repair is not possible, DBA should contact DBA at commit point if known or end user for correct outcome, or use heuristic default if given to issue a heuristic commit or abort command to finalize the local portion of the distributed transaction.

ORA-01592: error converting Version 7 rollback segment (*string*) to Oracle 8 format

Cause: Look at the accompanying internal error; Version 7 database may not have shutdown cleanly.

Action: Investigate the internal error; may have to reload the Version 7 database (from backup) and shutdown the database cleanly.

ORA-01593: rollback segment optimal size (*string* blks) is smaller than the computed initial size (*string* blks)

Cause: Specified OPTIMAL size is smaller than the cumulative size of the initial extents during create rollback segment.

Action: Specify a larger OPTIMAL size.

ORA-01594: attempt to wrap into rollback segment (*string*) extent (*string*) which is being freed

Cause: Undo generated to free a rollback segment extent is attempting to write into the same extent due to small extents and/or too many extents to free

Action: The rollback segment shrinking will be rolled back by the system; increase the optimal size of the rollback segment.

ORA-01595: error freeing extent (*string*) of rollback segment (*string*)

Cause: Some error occurred while freeing inactive rollback segment extents.

Action: Investigate the accompanying error.

ORA-01596: cannot specify system in *string* parameter

Cause: The system rollback segment is specified in the INIT.ORA parameter referred to in the error message

Action: change the INIT.ORA parameter

ORA-01597: cannot alter system rollback segment online or offline

Cause: Tried to online or offline the system rollback segment

Action: None

ORA-01598: rollback segment '*string*' is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01599: failed to acquire rollback segment (*string*), cache space is full

Cause: the amount statically allocated is not enough based on max_rollback_segments parameter.

Action: For now take another rollback segment offline or increase the parameter max_rollback_segments

ORA-01600: at most one "*string*" in clause "*string*" of *string*

Cause: The INIT.ORA parameter was mis-specified.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01601: illegal bucket size in clause "*string*" of *string*

Cause: The bucket size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01602: The PDB *string* is in the wrong state for a role change to *string*.

Cause: A role change was requested for a pluggable database (PDB) that was either already in the requested state or, was not a member of a Data Guard configuration.

Action: Request the correct role change or add the PDB into a Data Guard configuration.

ORA-01603: illegal grouping size in clause "*string*" of *string*

Cause: The grouping size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01604: illegal number range in clause "*string*" of *string*

Cause: The number range was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01605: missing numbers in clause "*string*" of *string*

Cause: The numbers were missing for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01606: parameter not identical to that of another mounted instance

Cause: A parameter was different on two instances.

Action: Modify the initialization parameter and restart.

ORA-01607: cannot add logfile to the specified instance

Cause: The limit on the number of instances supported by the control file has been reached.

Action: Use an instance already known to the control file. Alternatively resize the thread, the checkpoint progress or both record sections of the control file.

ORA-01608: cannot bring rollback segment '*string*' online, its status is (*string*)

Cause: Could have been brought online before by DBA or left as a result of process crash.

Action: Check the status of rollback segment in `undo$` or `dba_rollback_segs`

ORA-01609: log *string* is the current log for thread *string* - cannot drop members

Cause: A member of the current log for a thread cannot be dropped.

Action: If the thread is opened, request a log switch by the instance that is using it. If it is not open, disable the thread, manually archive the log, or clear it.

ORA-01610: recovery using the BACKUP CONTROLFILE option must be done

Cause: Either an earlier database recovery session specified BACKUP CONTROLFILE, or the control file was recreated with the RESETLOGS option, or the control file being used is a backup control file. After that only BACKUP CONTROLFILE recovery is allowed and it must be followed by a log reset at the next database open.

Action: Perform recovery using the BACKUP CONTROLFILE option.

ORA-01611: thread number *string* is invalid - must be between 1 and *string*

Cause: A thread number in a command is greater than the number of threads supported by the control file.

Action: Use a thread number that is valid, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01612: instance *string* (thread *string*) is already enabled

Cause: An attempt was made to enable a thread that is already enabled.

Action: Either use this thread or enable another thread.

ORA-01613: instance *string* (thread *string*) only has *string* logs - at least 2 logs required to enable.

Cause: The thread cannot be enabled because it only has two online log files associated with it.

Action: Add logs to the thread or pick another thread to enable

ORA-01614: instance *string* (thread *string*) is busy - cannot enable

Cause: The mount enqueue for the thread could not be acquired when attempting to enable the thread. This probably means that another process has already started enabling this thread.

Action: Wait and try again, or find another thread to enable.

ORA-01615: instance *string* (thread *string*) is mounted - cannot disable

Cause: Some instance, possibly this one, has allocated the thread for its use. The thread can not be disabled while in use.

Action: Shut the instance down cleanly using the thread.

ORA-01616: instance *string* (thread *string*) is open - cannot disable

Cause: The thread is not closed. The last instance to use the thread died leaving the thread open. A thread cannot be disabled until it is closed. It is still required for crash or instance recovery.

Action: If the database is open, instance recovery should close the thread soon - wait a few minutes. Otherwise open the database - crash recovery will close the thread.

ORA-01617: cannot mount: *string* is not a valid thread number

Cause: The INIT.ORA parameter "thread" is not between 1 and the number of threads allowed by the control file.

Action: Shut down the instance, change the INIT.ORA parameter and startup, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01618: redo thread *string* is not enabled - cannot mount

Cause: The INIT.ORA parameter "thread" requests a thread that is not enabled. A thread must be enabled before it can be mounted.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread. If the database is open in another instance then the thread may be enabled.

ORA-01619: thread *string* is mounted by another instance

Cause: The INIT.ORA parameter "thread" requests a thread that has been mounted by another instance. Only one instance may use a thread.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread.

ORA-01620: no public threads are available for mounting

Cause: The INIT.ORA parameter "thread" is zero, its default value. There are no threads which have been publicly enabled, and not mounted.

Action: Shutdown the instance, change the INIT.ORA parameter to a thread which is privately enabled and not mounted. If the database is open in another instance, then a thread may be publicly enabled.

ORA-01621: cannot rename member of current log if database is open

Cause: This is a rename command for a member of the current log for an open thread. If the database is open anywhere, the log may be in use, so the rename cannot be done.

Action: Wait until the log is not current, or mount the database exclusively.

ORA-01622: thread number must be specified - default not specific

Cause: The thread was not specified when adding a log, and the currently mounted thread was chosen by default at mount time. Since the current thread was not specified explicitly the user cannot know which thread the log will be added to.

Action: Explicitly specify the thread number either in the INIT.ORA parameter "thread", or in the add command.

ORA-01623: log *string* is current log for instance *string* (thread *string*) - cannot drop

Cause: A thread's current log cannot be dropped even if the thread is closed. A disabled thread usually does not have a current log, but a half completed disable may need to be disabled again.

Action: If the database is not open then disable the thread. If the database is open and an instance has the thread open, then the instance can be requested to switch logs. If the database is closed the log can be archived or cleared to force a switch.

ORA-01624: log *string* needed for crash recovery of instance *string* (thread *string*)

Cause: A log cannot be dropped or cleared until the thread's checkpoint has advanced out of the log.

Action: If the database is not open, then open it. Crash recovery will advance the checkpoint. If the database is open force a global checkpoint. If the log is corrupted so that the database cannot be opened, it may be necessary to do incomplete recovery until cancel at this log.

ORA-01625: rollback segment '*string*' does not belong to this instance

Cause: Trying to shrink or take a rollback segment offline that does not belong to this instance.

Action: Take only those rollback segments offline that belong to the current instance. To take the rollback segment offline, connect to the instance containing it.

ORA-01626: rollback segment number '*string*' cannot handle more transactions

Cause: Too many transactions in this segment.

Action: Choose a different rollback segment, or reduce the number of concurrent transactions.

ORA-01627: rollback segment number '*string*' is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01628: max # extents (*string*) reached for rollback segment *string*

Cause: An attempt was made to extend a rollback segment that was already at the MAXEXTENTS value.

Action: If the value of the MAXEXTENTS storage parameter is less than the maximum allowed by the system, raise this value.

ORA-01629: max # extents (*string*) reached saving undo for tablespace *string*

Cause: Save undo for the offline tablespace at max extents

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied .

ORA-01630: max # extents (*string*) reached in temp segment in tablespace *string*

Cause: A temp segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01631: max # extents (*string*) reached in table *string.string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01632: max # extents (*string*) reached in index *string.string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01633: Real Application Clusters Option needed for this operation

Cause: System doesn't have Real Application Clusters configured

Action: Obtain Real Application Clusters option

ORA-01634: rollback segment number '*string*' is about to go offline

Cause: The rollback segment specified was marked to go offline by DBA.

Action: Bring the rollback segment online first.

ORA-01635: rollback segment #*string* specified not available

Cause: (same as 1545)

Action: (same as 1545)

ORA-01636: rollback segment '*string*' is already online

Cause: The instance is trying to online an already online RS

Action: Check that the values set in the initialization parameter file for parameters ROLLBACK_SEGMENTS, ROLLBACK_SEGMENT_INITIAL, and ROLLBACK_SEGMENT_COUNT are correctly set for the instance with the problem. Also check that the instance is using the correct initialization parameter file. Make sure you are not confused about the difference between private and public rollback segments. See the Oracle9i Database Administrator's Guide for more information about using rollback segments in parallel mode.

ORA-01637: rollback segment '*string*' is being used by another instance (#*string*)

Cause: The instance is trying to online a RS already in use by another instance

Action: Check that the values set in the initialization parameter file for parameters ROLLBACK_SEGMENTS, ROLLBACK_SEGMENT_INITIAL, and ROLLBACK_SEGMENT_COUNT are correctly set for the instance with the problem. Also check that the instance is using the correct initialization parameter file. Make sure you are not confused about the difference between private and public rollback segments. See the Oracle9i Database Administrator's Guide for more information about using rollback segments in parallel mode.

ORA-01638: parameter *string* does not allow ORACLE version *string* to mount cluster database

Cause: The recovery compatible parameter is set too low to allow this software version to mount in cluster database mode.

Action: Either use an earlier software release or advance the recovery_compatible parameter. If this happens when no recovery_compatible parameter has been specified then set it to the current software release.

ORA-01639: instance *string* has no thread assigned to it

Cause: There is no mapping from instance to thread for this instance in the control file.

Action: Make sure that this instance has a thread assigned to it by adding logfiles to this instance or by starting the instance with an existing thread which will automatically create a mapping.

ORA-01640: cannot make tablespace read-only with changes by in-doubt transactions

Cause: An attempt was made to alter a tablespace read-only while there were changes in the tablespace made by in-doubt distributed transactions. The in-doubt transactions must commit or rollback to ensure that there is no undo for a tablespace before it can be made read-only.

Action: Any in-doubt transactions that made changes to the tablespace must be resolved.

ORA-01641: tablespace '*string*' is not online - cannot add data file

Cause: Attempting to add a datafile to a tablespace that has been set to read-only or offline.

Action: Make the tablespace online and read write then add the datafile.

ORA-01642: begin backup not needed for read-only tablespace '*string*'

Cause: Attempting to begin or end a backup for a tablespace that has been set to read-only.

Action: Take the backup without any begin or end commands. The files are not being modified so the backup will be consistent.

ORA-01643: system tablespace can not be made read-only

Cause: Attempting to set the system tablespace to read-only. The system tablespace must remain read write for database operation.

Action: Leave system tablespace read write.

ORA-01644: tablespace '*string*' is already read-only

Cause: Attempting to make tablespace read-only that is already read-only.

Action: Leave tablespace read-only, or make read write then make read-only again.

ORA-01645: previous attempt to make read write is half complete

Cause: A failure while making the tablespace read write left it read only, but the checkpoint was advanced. The tablespace will not be useable after a resetlogs if its files are offline.

Action: Repeat the command to make the tablespace read write.

ORA-01646: tablespace '*string*' is not read-only - cannot make read write

Cause: Attempting to make a tablespace read write that is not read-only. It may be either online or offline.

Action: Leave tablespace read write.

ORA-01647: tablespace '*string*' is read-only, cannot allocate space in it

Cause: Tried to allocate space in a read-only tablespace

Action: Create the object in another tablespace

ORA-01648: Log *string* is the current log of disabled instance *string* (thread *string*).

Cause: An attempt to enable the thread failed and a log was left as the current log even though the thread is still disabled. Since a log switch cannot be done until the thread is enabled, the log cannot be cleared or archived.

Action: Complete the thread enable by issuing the enable command again.

ORA-01649: operation not allowed with backup control file

Cause: An attempt was made to run a command on a control file which was a restored backup control file. The command is not allowed on restored backup control files.

Action: Wait until the database is started, and retry the operation.

ORA-01650: unable to extend rollback segment *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a rollback segment in the tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01651: unable to extend save undo segment by *string* for tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for saving undo entries for the indicated offline tablespace.

Action: Check the storage parameters for the SYSTEM tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-01652: unable to grow *string* *string* in tablespace *string* by *stringstring* during operation with SQL ID : *string*, temp space used by session : *string* (MB)

Cause: In order to execute the operation, additional space is needed in the tablespace but the system is unable to increase the tablespace size. This can happen if the tablespace size is small. In a temporary tablespace, this can also happen because of concurrent use of the tablespace.

Action: If the failure is in a temporary tablespace, then retry the operation in case any concurrent operations have released space. For failure in permanent and temporary tablespaces, the size of the tablespace can be increased using one of the following methods: - Resize the tablespace using either the ALTER DATABASE RESIZE or ALTER TABLESPACE ADD statement. - Enable AUTOEXTEND for the tablespace. - If AUTOEXTEND is already enabled, then: * If MAXSIZE is set to UNLIMITED, increase the storage media where the tablespace is located. * Increase MAXSIZE. - If it is a BIGFILE tablespace, then use the ALTER TABLESPACE RESIZE statement to increase the tablespace size. *Params: 1) segment_type: The type of the segment that ran into failure. The type may be one of temporary, table, table partition, table subpartition, index, index partition, index subpartition, LOB, LOB partition, or LOB

subpartition. 2) object_name: The object name if the failure is in an object that is already created. 3) tablespace_name: The name of the tablespace that was supposed to be extended during the operation. 4) storage_allocated: The number of bytes in KB, MB, or GB in which the allocation was attempted. 5) storage_units: The unit of bytes in KB, MB, or GB in which space was allocated. 6) sql_id: SQL ID of the session for which error was received. 7) Temp Space Allocated: Temporary space currently used by the session.

ORA-01653: unable to increase tablespace *string* by *stringstring* during insert or update on table *string.string*

Cause: In order to execute the insert or update operation, additional space is needed in the tablespace. However, the system is unable to increase the tablespace.

Action: Depending on the tablespace attributes and storage strategy, take one of the following actions: - Resize the tablespace using either the ALTER DATABASE DATAFILE RESIZE or ALTER TABLESPACE ADD DATAFILE statement. - Enable AUTOEXTEND for the tablespace. - If AUTOEXTEND is already enabled: * And MAXSIZE is set to UNLIMITED, increase the storage media where the tablespace is located. * Increase MAXSIZE. - If it is a BIGFILE tablespace, use the ALTER TABLESPACE RESIZE statement to increase the tablespace. *Params: 1) tablespace_name: The name of the tablespace that is supposed to be extended during the operation. 2) storage_allocated: The number of bytes in KB, MB, or GB for the attempted allocation. 3) storage_units: The unit of bytes in KB, MB, or GB in which storage is allocated. 4) schema_name: The schema name of table. 5) table_name: The table name.

ORA-01654: unable to extend index *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for an index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01655: unable to extend cluster *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a cluster segment in tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01656: max # extents (*string*) reached in cluster *string.string*

Cause: A cluster tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01657: invalid SHRINK option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-01658: unable to create INITIAL extent for *string* by *string* blocks in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate INITIAL extent for segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with a smaller value for INITIAL

ORA-01659: unable to allocate MINEXTENTS beyond *string* in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate MINEXTENTS for the segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with smaller value for MINEXTENTS, NEXT or PCTINCREASE

ORA-01660: tablespace '*string*' is already permanent

Cause: Attempting to make tablespace permanent that is already permanent.

Action: Leave tablespace permanent.

ORA-01661: tablespace '*string*' is already temporary

Cause: Attempting to make tablespace temporary that is already temporary.

Action: Leave tablespace permanent.

ORA-01662: tablespace '*string*' is non-empty and cannot be made temporary

Cause: Tried to convert a non-empty tablespace to a temporary tablespace

Action: To drop all the objects in the tablespace.

ORA-01663: the contents of tablespace '*string*' is constantly changing

Cause: The contents of the tablespace is always changing between PERMANENT and TEMPORARY.

Action: To decide what the tablespace contents should be and stay with it.

ORA-01664: Transaction which has expanded the Sort Segment has aborted

Cause: Internal Error.

Action: Contact Oracle Support.

ORA-01665: control file is not a standby control file

Cause: An attempt was made to mount, recover, or activate either a standby multitenant container database (CDB) without a standby control file, or a pluggable database (PDB) that was not created as an Oracle Data Guard standby database.

Action: When the error is raised for an action against a CDB, create a standby control file before using the CDB as a standby database. When the error is raised for an action against a PDB, check and correct the PDB context so that it is only used against a PDB created as a standby database.

ORA-01666: control file is for a standby database

Cause: Attempting to mount, recover, or open a standby database without the appropriate command option to designate a standby database.

Action: Use the standby option or appropriate commands, or mount with the primary control file.

ORA-01667: cannot add any more tablespaces: limit of *string* exceeded

Cause: There is no more room in the control file for adding tablespaces.

Action: Resize the control file or drop other tablespaces.

ORA-01668: standby database requires DROP option for offline of data file

Cause: Attempting to take a datafile offline in a standby database without specifying the DROP option. Files that are offline in a standby database are not recovered, and are likely to be unusable if the standby is activated. Note that specifying DROP does not prevent bringing the file online later.

Action: Specify the DROP option or leave the file online.

ORA-01669: standby database control file not consistent

Cause: Attempting to activate a standby database with a control file that has not been recovered to the same point as the data files. Most likely the control file was just copied from the primary database and has not been used for recovery.

Action: Recover the standby database until all the files are consistent.

ORA-01670: new datafile *string* needed for standby database recovery

Cause: Standby database recovery noticed that a file was added to the primary database, but is not available on the standby.

Action: Either copy the file from the primary database or do an ALTER DATABASE CREATE DATAFILE command on the standby to create a file to recover.

ORA-01671: control file is a backup, cannot make a standby control file

Cause: The currently mounted control file is a backup control file, and attempting to create a control file for a standby database.

Action: Complete any needed recovery and open the database with the resetlogs option.

ORA-01672: control file may be missing files or have extra ones

Cause: Attempting to create a standby control file, but the control file was either recently created via CREATE CONTROLFILE or an incomplete recovery has been done. Thus the datafiles in the control file and the ones in the data dictionary may not match.

Action: Open the database, then retry the operation.

ORA-01673: data file *string* has not been identified

Cause: This data file was not in the control file after an incomplete recovery or CREATE CONTROLFILE. Since information from its header is needed for standby database recovery, we can not create a standby control file.

Action: Find the file and bring it online. If desired it may be taken offline again. If you intend to drop this file, then taking it offline with the DROP option will avoid this error.

ORA-01674: data file *string* is an old incarnation rather than current file

Cause: Recovery encountered redo that indicates this file was dropped from the database and another file was added using the same file number. This implies that a CREATE CONTROLFILE command was given the old file which was dropped rather than the latest file.

Action: Rebuild the control file using CREATE CONTROLFILE, and give the correct file.

ORA-01675: max_commit_propagation_delay inconsistent with other instances

Cause: The max_commit_propagation_delay INIT.ORA parameter is inconsistent with those in other instances.

Action: Make sure all instances have the same max_commit_propagation_delay.

ORA-01676: standby file name conversion of 'string' exceeds maximum length of string

Cause: When the given file name was converted to the name used for the standby database, the converted name was bigger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to convert to a valid file name.

ORA-01677: standby file name conversion parameters differ from other instance

Cause: The DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT initialization parameters were not the same as in other instances that already had the database mounted.

Action: Change initialization parameters DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to match other instances.

ORA-01678: parameter string must be pairs of pattern and replacement strings

Cause: The initialization parameter does not have even number of strings for its value. The odd numbered strings are patterns to be found in file names. The even numbered strings are used to replace the corresponding patterns when found in file names.

Action: Specify even number of strings for the parameter, or omit the parameter.

ORA-01679: database is being opened

Cause: An attempt was made to activate a standby database when the database was in the middle of being opened.

Action: Wait for database open to finish and retry the ACTIVATE command.

ORA-01680: unable to extend LOB segment by string in tablespace string

Cause: Failed to allocate an extent of the required number of blocks for a LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01681: max # extents (string) reached in LOB segment in tablespace string

Cause: A LOB segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01682: read-only DB cannot allocate temporary space in tablespace string

Cause: Temporary space (usually for sorting) could not be allocated in either main storage or a tempfile. An attempt was made to allocate the space from the tablespace named, but the database is opened read-only. The database open requires a sort work space.

Action: Either allow sufficient workspace in main storage (SORT_AREA_SIZE initialization parameter), or create a temporary tablespace before making the database read-only. Use ALTER TABLESPACE ADD TEMPFILE statement to add temporary files to the temporary tablespace.

ORA-01683: unable to extend index *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01684: max # extents (*string*) reached in table *string.string* partition *string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01685: max # extents (*string*) reached in index *string.string* partition *string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01686: max # files (*string*) reached for the tablespace *string*

Cause: The number of files for a given tablespace has reached its maximum value

Action: Resize existing files in the tablespace, or partition the objects among multiple tablespaces, or move some objects to a different tablespace.

ORA-01687: specified logging attribute for tablespace '*string*' is same as the existing

Cause: Attempting to change the tablespace default logging attribute (LOGGING or NOLOGGING) to be the same as the existing logging attribute

Action: Change the specified logging attribute

ORA-01688: unable to extend table *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01689: syntax error in clause "*string*" of *string*

Cause: There was a syntax in the INIT.ORA parameter.

Action: Fix the syntax error and restart the instance.

ORA-01690: sort area size too small

Cause: sort area size too small to fit two records in memory

Action: increase sort_area_size

ORA-01691: unable to extend lob segment *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01692: Unable to extend the LOB segment *string.string* partition *string* by *string* in tablespace *string*.

Cause: Failed to allocate an extent of the required number of blocks for the LOB segment in the specified tablespace.

Action: One of the following actions may resolve the problem: 1. Turn ON autoextension for the data files. 2. Increase MAXSIZE value for autoextensible files. 3. If the segment is in a SMALLFILE tablespace, add one or more data files.

ORA-01693: max # extents (*string*) reached in lob segment *string.string*

Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01694: maximum number of extents *string* reached in the LOB segment *string.string* partition *string*

Cause: Additional space could not be allocated because the LOB segment has reached the maximum number of extents allowed.

Action: Increase MAXEXTENTS for the LOB segment, or re-create the LOB segment with larger extents.

ORA-01695: error converting rollback segment *string* to version 8.0.2

Cause: Version 8.0.1 database may not have shutdown cleanly

Action: May have to reload the 8.0.1 database and shutdown cleanly

ORA-01696: control file is not a clone control file

Cause: Attempting to mount, a database as a clone when it is already mounted by another instance not as a clone or attempting to use a current control file for a clone.

Action: Mount without the clone option or use a backup control file and shutdown the other instances before mounting as a clone.

ORA-01697: control file is for a clone database

Cause: Attempting to mount a clone database without the appropriate command option to designate a clone database.

Action: Use the clone option or appropriate commands, or mount with the primary control file.

ORA-01698: a clone database may only have SYSTEM rollback segment online

Cause: Attempting to online a rollback segment in a clone database.

Action: Do not use this command.

ORA-01699: tablespace '*string*' is being imported for point in time recovery

Cause: Attempting to online a tablespace or begin another point in time import while a point in time import was already in progress.

Action: Wait until the import completes.

ORA-01700: duplicate username in list**ORA-01701: a cluster is not appropriate here**

ORA-01702: a view is not appropriate here

Cause: Among other possible causes, this message will be produced if an attempt was made to define an Editioning View over a view.

Action: An Editioning View may only be created over a base table.

ORA-01703: missing SYNONYM keyword**ORA-01704: string literal too long**

Cause: The string literal is longer than 4000 characters.

Action: Use a string literal of at most 4000 characters. Longer values may only be entered using bind variables.

ORA-01705: an outer join cannot be specified on a correlation column**ORA-01706: data value too large**

Cause: The data value exceeds the maximum allowed length (32K).

Action: Decrease the data value length.

ORA-01707: missing LIST keyword**ORA-01708: ACCESS or SESSION expected****ORA-01709: program does not exist****ORA-01710: missing OF keyword****ORA-01711: duplicate privilege listed****ORA-01712: you cannot grant a privilege which you do not have****ORA-01713: GRANT OPTION does not exist for that privilege****ORA-01714: error in execution of user function****ORA-01715: UNIQUE may not be used with a cluster index**

Cause: An attempt was made to create a cluster index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

ORA-01716: NOSORT may not be used with a cluster index

Cause: An attempt was made to create a cluster index using the NOSORT option.

Action: Remove NOSORT from the CREATE INDEX statement.

ORA-01717: seccta: invalid access mode token passed**ORA-01718: BY ACCESS | SESSION clause not allowed for NOAUDIT.**

Cause: An attempt was made to specify the BY ACCESS | SESSION clause in a NOAUDIT statement.

Action: Remove the BY ACCESS | SESSION clause from the NOAUDIT statement.

ORA-01719: outer join operator (+) not allowed in operand of OR or IN

Cause: An outer join appears in an or clause.

Action: If A and B are predicates, to get the effect of (A(+)) or B, try (select where (A(+)) and not B) union all (select where (B)).

ORA-01720: grant option does not exist for *string.string*

Cause: A grant was attempted on a view or a view was being replaced and the grant option was not present for an underlying object.

Action: Obtain the grant option on all underlying objects of the view, or revoke existing grants on the view.

ORA-01721: USERENV(COMMITSCN) was invoked more than once in a transaction.

Cause: The USERENV('COMMITSCN') function was used more than once in the transaction, which was not allowed.

Action: Rewrite the transaction to use USERENV('COMMITSCN') only once and resubmit.

ORA-01722: unable to convert string value containing *string* to a number: *string*

Cause: The attempted conversion of a character string for column or expression to a number failed because the character string is not a valid numeric literal. Only numeric fields or character fields containing numeric data can be used in arithmetic functions or expressions. Only numeric fields can be added to or subtracted from dates. If "UNISTR" appears in the error message, the value is not compatible with the national character set and cannot be represented directly.

Action: Use the LIKE expression to identify the problematic value. Ensure that it contains only digits, a sign, a decimal separator, and the character "E" or "e", and retry the operation. *Params: 1) invalid_char: Either this is the first invalid character of the character string that is being converted to a number or UNISTR (character string) if the character is not compatible with the database character set. 2) column_or_expression: The column or expression from where the invalid character comes. *Info: Details about the violating values are provided with the parameter ERROR_MESSAGE_DETAILS=ON. You can enable the parameter using the statement ALTER SESSION SET ERROR_MESSAGE_DETAILS = ON. The error message details are: ORA-01722: unable to convert string value containing invalid_char to a number: column_or_expression ORA-03302: (ORA-01722 details) invalid string value: string_value For example, the following query indicates the string that cannot be converted to a number: SQL> SELECT to_number(ename) FROM emp; SELECT to_number(ename) FROM emp * ERROR at line 1: ORA-01722: unable to convert string value containing 'S' to a number: ENAME ORA-03302: (ORA-01722 details) invalid string value: SMITH If the parameter ERROR_MESSAGE_DETAILS is set to OFF or DISALLOWED, the entire character string is not printed. However, you can check the problematic string using the LIKE expression. For example: SQL> SELECT ename FROM emp WHERE ename LIKE '%S%';

ORA-01723: zero-length columns are not allowed

Cause: Columns with zero length were not allowed.

Action: Correct the use of the column.

ORA-01724: floating point precision is out of range (1 to 126)

Cause: The specified number had an invalid range.

Action: Use a floating point precision that is in the correct precision.

ORA-01725: USERENV('COMMITSCN') is not allowed here.

Cause: The function USERENV('COMMITSCN') is only allowed as a top-level expression in the VALUES clause of an INSERT statement, and on the right-hand side of an assignment in an UPDATE statement.

Action: Correct the use of the function and retry.

ORA-01726: a table is not appropriate here

Cause: A table name was used in a statement in which tables were not permitted.

Action: Enter a valid table statement or use the current statement on the appropriate object.

ORA-01727: numeric precision specifier is out of range (1 to 38)

Cause: The precision specified for a number column in a CREATE or ALTER TABLE or CREATE CLUSTER statement must be a digit between 1 and 38. If no precision was specified, a default precision of 22 digits was used.

Action: Specify numeric precision between 1 and 38 and retry the statement.

ORA-01728: numeric scale specifier is out of range (-84 to 127)

Cause: The scale specified for a numeric field in a CREATE or ALTER TABLE or CREATE CLUSTER statement was not in the valid range. It should be between -84 and 127.

Action: Specify a numeric scale between -84 and 127. If a number is not specified, the default scale of the column is 0 decimal places.

ORA-01729: database link name expected

Cause: A database link name did not follow the at-sign (@) in a reference to a table in a remote database.

Action: Correct the reference and retry the operation. The correct syntax for denoting a table in a remote database follows: username.table_name@ database_name Spaces before and after the at-sign (@) are optional.

ORA-01730: invalid number of column names specified

Cause: The number of column names specified in a CREATE VIEW statement did not correspond to the number of columns listed in the SELECT clause. If column names were specified in a CREATE VIEW statement, exactly one name must be specified for each column or expression in the SELECT clause.

Action: Specify one view column name for each column in the SELECT clause.

ORA-01731: circular view definition encountered

Cause: Through a series of CREATE and DROP VIEW statements, a view was defined that referred to itself. For example, VIEW1 might include a column from VIEW2 that was defined as a column in VIEW1. View definitions may be seen by querying the data dictionary.

Action: Check the view definitions, remove any circular references, and retry the statements.

ORA-01732: data manipulation operation not legal on this view

Cause: An attempt was made to use an UPDATE, INSERT, or DELETE statement on a view that contains expressions or functions or was derived from more than one table. If a join operation was used to create the view or the view contains virtual columns derived from functions or expressions, then the view may only be queried.

Action: UPDATE, INSERT, or DELETE rows in the base tables instead and restrict the operations on the view to queries.

ORA-01733: virtual column not allowed here

Cause: An attempt was made to use an INSERT, UPDATE, or DELETE statement on an expression in a view.

Action: INSERT, UPDATE, or DELETE data in the base tables, instead of the view.

ORA-01734: illegal parameters - EXTENT MIN higher than EXTENT MAX

Cause: A wrong value is specified for the parameter.

Action: Correct the parameter and reissue the statement.

ORA-01735: invalid ALTER TABLE option

Cause: An invalid option was specified in an ALTER TABLE statement.

Action: Check the statement syntax, specify a valid option, and retry the statement.

ORA-01736: [NOT] SUCCESSFUL expected

Cause: An AUDIT or NOAUDIT statement contained WHENEVER followed by something other than SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the WHENEVER clause and retry the statement.

ORA-01737: valid modes: [ROW] SHARE, [[SHARE] ROW] EXCLUSIVE, SHARE UPDATE

Cause: The lock mode entered was not recognized.

Action: Valid lock modes are SHARE, ROW SHARE, EXCLUSIVE, ROW EXCLUSIVE, SHARE ROW EXCLUSIVE, and SHARE UPDATE.

ORA-01738: missing IN keyword

Cause: In a LOCK TABLE statement, the keyword IN was missing.

Action: Place the keyword IN and lock mode directly after the table name in the LOCK TABLE statement and retry the statement.

ORA-01739: missing MODE keyword

Cause: In a LOCK TABLE statement, the keyword MODE was missing. The keyword MODE must directly follow the specified lock mode.

Action: Check the statement syntax, insert the keyword MODE where required, and retry the statement.

ORA-01740: missing double quote in identifier

Cause: An initial double quote (") was found without a closing quote. If an identifier contains a blank or special characters other than \$, #, or _, it must be enclosed in double quotes.

Action: Add a closing double quote (") to the end of the identifier.

ORA-01741: illegal zero-length identifier

Cause: An attempt was made to use two double quotes ("") as an identifier. An identifier must be at least one character long.

Action: Insert at least one character between the double quotes in the identifier. If a blank identifier is required, specify a blank space between the double quotes (" ").

ORA-01742: comment not terminated properly

Cause: The indicated comment or hint begun with the `/*` token did not have the terminating `*/`.

Action: Properly terminate the comment or hint with a `*/`.

ORA-01743: only pure functions can be indexed

Cause: The indexed function uses `SYSDATE` or the user environment.

Action: PL/SQL functions must be pure (RNDS, RNPS, WNDS, WNPS). SQL expressions must not use `SYSDATE`, `USER`, `USERENV()`, or anything else dependent on the session state. NLS-dependent functions are OK.

ORA-01744: inappropriate INTO

Cause: The `INTO` clause may not be used in a subquery.

Action: Check the syntax, place the `INTO` clause in the top-level query, and retry the statement.

ORA-01745: invalid host/bind variable name

Cause: A colon in a bind variable or `INTO` specification was followed by an inappropriate name, perhaps a reserved word.

Action: Change the variable name and retry the operation.

ORA-01746: indicator variable not permitted here

Cause: An indicator variable was not permitted in this context.

Action: Remove the indicator variable and retry the operation.

ORA-01747: invalid column specification: *string*

Cause: A column name is specified improperly in the current SQL statement.

Action: Check the syntax of the statement, and ensure that: - Any column names that are reserved words are surrounded by double quotation characters. - All column names are specified correctly. - There are no dangling commas. Then retry the statement. *Params: 1) `column_name`: The column name that is specified improperly.

ORA-01748: only simple column names allowed here

Cause: This SQL statement did not allow a qualified column name, such as `username.table.column` or `table.column`.

Action: Remove the qualifications from the column and retry the operation.

ORA-01749: Cannot GRANT or REVOKE privileges to or from yourself.

Cause: Grantor was not allowed to grant or revoke an object or system privileges to self.

Action: `GRANT` or `REVOKE` should be executed by another user who has sufficient privilege to execute the command.

ORA-01750: UPDATE/REFERENCES may only be REVOKEd from the whole table, not by column

Cause: Although it was possible to GRANT update privileges on a column-by-column basis, it was only possible to REVOKE them for an entire table.

Action: Do not identify specific columns. To revoke update privileges for certain columns, use REVOKE for the entire table and GRANT the user privileges for specific columns.

ORA-01751: Invalid dump undo option

Cause: An invalid option is specified in the ALTER DUMP UNDO command.

Action: Correct and reissue the command.

ORA-01752: cannot delete from view without exactly one key-preserved table

Cause: The deleted table had - no key-preserved tables, - more than one key-preserved table, or - the key-preserved table was an unmerged view.

Action: Redefine the view or delete it from the underlying base tables.

ORA-01753: column definition incompatible with clustered column definition

Cause: An attempt was made to create a table in a cluster and one of the table's clustered columns is not compatible with the corresponding cluster key column.

Action: Make sure that all table columns specified in the CLUSTER clause of the CREATE TABLE statement are compatible with the corresponding columns of the cluster key, as documented. For example, the data type and the declared collation of a clustered table column must be the same as those of the corresponding cluster key column.

ORA-01754: a table may contain only one column of type LONG

Cause: An attempt was made to add a LONG column to a table which already had a LONG column. Note that even if the LONG column currently in the table has already been marked unused, another LONG column may not be added until the unused columns are dropped.

Action: Remove the LONG column currently in the table by using the ALTER TABLE command.

ORA-01755: Must specify an extent number or block number

Cause: Expecting an extent or block number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01756: quoted string not properly terminated

Cause: A quoted string must be terminated with a single quote mark (').

Action: Insert the closing quote and retry the statement.

ORA-01757: Must specify an object number

Cause: Expecting an object number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01758: table must be empty to add mandatory (NOT NULL) column

Cause: It was not possible to define a new column as NOT NULL if rows already existed in the table being modified.

Action: Retry the statement without the NOT NULL specification.

ORA-01759: user function is incorrectly defined

Cause: A user function was improperly defined.

Action: Contact Oracle Support Services.

ORA-01760: illegal argument for function

Cause: The argument or arguments specified for the function were not valid in this context.

Action: Check the definition of the function and correct the arguments.

ORA-01761: DML operation does not map to a unique table in the join

Cause: The primary table is the base table against which the update, insert or delete operation is finally being done. For delete either there is no primary table in the join query or there is more than one. For update or insert the columns specified map to more than one base table.

Action: Change the join specification.

ORA-01762: vopdrv: view query block not in FROM

Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

ORA-01763: update or delete involves outer joined table

Cause: For deletes, the table being deleted from is outer joined to some other table. For updates, either the table being updated is outer joined to some other table, or some table reachable from the primary table is being outer joined to a table not reachable from the primary table, or the underlying table being updated in a join view is referenced on the right side of an outer join or full outer join in the view.

Action: Change the join specification.

ORA-01764: new update value of join is not guaranteed to be unique

Cause: A row of a join query table is being updated using a row of a table that is not guaranteed to have exactly one value for the row being updated.

Action: Change the join specification.

ORA-01765: specifying owner's name of the table is not allowed

Cause: An attempt was made to rename the object with dotted object name.

Action: Do not specify username.tablename in query for table name.

ORA-01766: dictionary table not allowed in this context

Cause: The name of a data dictionary object was used outside the FROM clause of a SELECT statement. The only operation allowed on a data dictionary object was to SELECT from it.

Action: Restrict operations on data dictionary objects to queries.

ORA-01767: UPDATE ... SET expression must be a subquery

Cause: An attempt was made to use a single expression without a subquery to update a list of columns.

Action: Check the syntax for using subqueries to update data and add the necessary subquery.

ORA-01768: number string too long

Cause: A number entered exceeded the limit of 255 characters, including digits, sign, decimal point, and exponent.

Action: Shorten the number string, perhaps by expressing it in scientific notation, for example, 1.85E9 instead of 1,850,000,000.

ORA-01769: duplicate CLUSTER option specifications

Cause: During a CREATE of a clustered table, the user attempted to specify more than one CLUSTER option.

Action: Remove the extra CLUSTER option.

ORA-01770: CLUSTER option not allowed in CREATE CLUSTER command

Cause: An attempt was made to use the CLUSTER option within a CREATE CLUSTER statement.

Action: Remove the CLUSTER clause and try again.

ORA-01771: illegal option for a clustered table

Cause: During a CREATE or ALTER of a clustered table, the user attempted to enter one or more of the following options: INITRANS, MAXTRANS, PCTFREE, PCTUSED, STORAGE, TABLESPACE. These options may only be specified for the cluster itself.

Action: Remove the illegal option(s).

ORA-01772: Must specify a value for LEVEL

Cause: Expecting the value of LEVEL but something else was specified.

Action: Correct the error and reissue the command.

ORA-01773: may not specify column datatypes in this CREATE TABLE

Cause: Column data types or virtual columns were specified in a SELECT statement used to create and load a table directly.

Action: Remove the column data types and virtual columns. The data types of the SELECT list expressions are automatically used as the column data types.

ORA-01774: Dump undo option specified more than once

Cause: The same option for ALTER DUMP UNDO was specified twice.

Action: Remove the redundant options and reissue the command.

ORA-01775: synonym string resolves to itself due to circular translation

Cause: Translation of a synonym resolved to the same synonym. This is caused by a chain of object definitions including multiple private or public synonyms.

Action: Review the object definitions to determine which synonym resolves back to the original and change one or more of the definitions to break the cycle. *Params: 1) synonym_name: The synonym that is translating to itself.

ORA-01776: cannot modify more than one base table through a join view

Cause: Columns belonging to more than one underlying table were either inserted into or updated.

Action: Phrase the statement as two or more separate statements.

ORA-01777: WITH GRANT OPTION not allowed in this system

Cause: This version of Oracle did not support the WITH GRANT OPTION.

Action: Remove the WITH GRANT option.

ORA-01778: maximum subquery nesting level exceeded

Cause: An attempt was made to use more than 255 levels of nested subqueries.

Action: Merge some of the subqueries into their containing queries, until there are less than 255 levels of nesting.

ORA-01779: cannot modify a column which maps to a non key-preserved table

Cause: An attempt was made to insert or update columns of a join view which map to a non-key-preserved table.

Action: Modify the underlying base tables directly.

ORA-01780: string literal required

Cause: In a COMMENT statement, the Comment following the keyword IS must be a quoted string literal.

Action: Check that the Comment is a string literal.

ORA-01781: UNRECOVERABLE cannot be specified without AS SELECT

Cause: UNRECOVERABLE was specified in a CREATE TABLE statement without also specifying a populating subquery with an AS clause.

Action: Do not specify UNRECOVERABLE.

ORA-01782: UNRECOVERABLE cannot be specified for a cluster or clustered table

Cause: A CREATE CLUSTER, or clustered CREATE TABLE statement specified UNRECOVERABLE.

Action: Do not specify UNRECOVERABLE.

ORA-01783: only one RECOVERABLE or UNRECOVERABLE clause may be specified

Cause: RECOVERABLE was specified more than once, UNRECOVERABLE was specified more than once, or both RECOVERABLE and UNRECOVERABLE were specified in a CREATE TABLE or CREATE INDEX or ALTER INDEX REBUILD statement.

Action: Remove all but one of the RECOVERABLE or UNRECOVERABLE clauses and reissue the statement.

ORA-01784: RECOVERABLE cannot be specified with database media recovery disabled

Cause: A CREATE TABLE or CREATE INDEX statement specified RECOVERABLE when the database was running in NOARCHIVELOG mode. Since logs are not being archived, they will be overwritten and the object being created cannot be recovered from a backup taken before the object was created.

Action: Do not specify RECOVERABLE, or restart the database with media recovery enabled.

ORA-01785: ORDER BY item must be the number of a SELECT-list expression

Cause: Either an ORDER BY item for a set expression was not a column number, or the ORDER BY item was not the number of a SELECT list column.

Action: The ORDER BY item must be a number between 1 and the number of columns in the SELECT list. Check the column number and retry the statement.

ORA-01786: FOR UPDATE of this query expression is not allowed

Cause: An attempt was made to use a FOR UPDATE clause on the result of a set expression involving GROUP BY, DISTINCT, UNION, INTERSECT, or MINUS.

Action: Check the syntax, remove the FOR UPDATE clause, and retry the statement.

ORA-01787: only one clause allowed per query block

Cause: An attempt was made to use more than one WHERE, GROUP BY, CONNECT BY, or HAVING clause in the query.

Action: Combine the duplicate clauses into a single clause and retry the statement.

ORA-01788: CONNECT BY clause required in this query block

Cause: A START WITH clause was specified without a CONNECT BY clause.

Action: Check the syntax, specify a CONNECT BY clause, and retry the statement.

ORA-01789: query block has incorrect number of result columns

Cause: All of the queries participating in a set expression do not contain the same number of SELECT list columns.

Action: Check that all the queries in the set expression have the same number of SELECT list columns.

ORA-01790: expression must have same datatype as corresponding expression

Cause: A SELECT list item corresponds to a SELECT list item with a different datatype in another query of the same set expression.

Action: Check that all corresponding SELECT list items have the same datatypes. Use the TO_NUMBER, TO_CHAR, and TO_DATE functions to do explicit data conversions.

ORA-01791: not a SELECTed expression

Cause: There was an incorrect ORDER BY item. The query was a SELECT DISTINCT query with an ORDER BY clause. In this context, all ORDER BY items must be constants, SELECT list expressions, or expressions whose operands were constants or SELECT list expressions.

Action: Remove the inappropriate ORDER BY item from the SELECT list and retry the statement.

ORA-01792: maximum number of columns in a table or view is *string*

Cause: An attempt was made to create a table or view with too many columns, or to add more columns to a table or view which pushes it over the maximum allowable limit. Note that unused columns in the table are counted toward the total column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are two options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit.

ORA-01793: maximum number of index columns is 32

Cause: While creating an index, more than 32 columns were specified.

Action: Remove some columns from the index definition. If all the columns indexed are required, split them into two indexes.

ORA-01794: maximum number of cluster columns is 32

Cause: More than 32 columns were specified in the cluster key.

Action: Remove some of the columns from the cluster key definition. Consider concatenating multiple character strings into a single column.

ORA-01795: maximum number of expressions in a list is *string*

Cause: Number of expressions in the query exceeded the maximum limit. Note that unused column/expressions are also counted towards this limit.

Action: Reduce the number of expressions in the list and resubmit.

ORA-01796: this operator cannot be used with lists

Cause: A relational operator was not allowed in this context. When comparing lists, use only an operator that tests for equivalence, such as =, !=, or IN.

Action: Rephrase the query so that it only compares lists for equivalence. For example, the following clause is invalid: WHERE (A,B) > ((C,D), (E,F)) It may be necessary to compare individual columns separately. For example, to see if A and B are respectively greater than C and D, use WHERE A>B AND C>D instead of WHERE (A,B)>(C,D).

ORA-01797: this operator must be followed by ANY or ALL

Cause: The keyword ANY or ALL was missing.

Action: Check the statement syntax and add ANY or ALL where appropriate.

ORA-01798: missing EXCEPTION keyword

Cause: The EXCEPTION keyword was missing from the ENABLE clause.

Action: Correct the syntax.

ORA-01799: a column may not be outer-joined to a subquery

Cause: *expression(+)* *relop* (*subquery*) is not allowed.

Action: Either remove the (+) or make a view out of the subquery. In V6 and before, the (+) was just ignored in this case.

ORA-01800: a literal in the date format was too large to process

Cause: A literal specified in a date format was too large. If a literal was entered as a date, it must be less than 220 characters long.

Action: Use only literals less than 220 characters long in the date format.

ORA-01801: date format is too long for internal buffer

Cause: The date format string was too long to process. This occurred only if several long literals are specified as part of a date.

Action: Remove long literals from the date format string.

ORA-01802: Julian date is out of range

Cause: An invalid Julian date was entered. Valid Julian dates ran from 1 to 3,442,447.

Action: Enter a valid Julian date between 1 and 3,442,447.

ORA-01803: failed to get system date and time

Cause: An internal failure in the system clock occurred.

Action: Investigate the system clock and the process that requested the date or time. If necessary, contact Oracle Support.

ORA-01804: failure to initialize timezone information

Cause: The timezone information file was not properly read.

Action: Please contact Oracle Customer Support.

ORA-01805: possible error in date/time operation

Cause: The timezone files on client and server do not match. Operation can potentially result in incorrect results based on local timezone file.

Action: Please ensure client and server timezone versions are same.

ORA-01810: format code appears twice

Cause: A format code was listed twice in a date specification. Each format code may be specified only once in the function TO_DATE.

Action: Remove the duplicate format code from the date specification, then retry the operation.

ORA-01811: Julian date precludes use of day of year

Cause: Both a Julian date and a day of the year were specified in the TO_DATE function. If a Julian date is specified, the day of the year (DDD) may not be specified, as it is contained in the Julian date.

Action: Remove the day of the year or the Julian date from the specification, then retry the operation.

ORA-01812: year may only be specified once

Cause: More than one year format code was listed in a date specification. Only one of the following year format codes may be specified in a date: YYYY, YYY, YY, Y.

Action: Remove all but one year format from the date specification.

ORA-01813: hour may only be specified once

Cause: More than one hour format code was listed in a date specification. Only one of the following hour format codes may be specified in a date: HH, HH12, HH24.

Action: Remove all but one hour format from the date specification.

ORA-01814: AM/PM conflicts with use of A.M./P.M.

Cause: Both types of meridian indicators, AM and PM, were listed in a date specification. If one of the meridian indicator format masks, such as AM or A.M., is specified in the date, the other may not be specified.

Action: Use one meridian indicator format, with or without periods, consistently.

ORA-01815: BC/AD conflicts with use of B.C./A.D.

Cause: Both types of BC/AD indicators were listed in a date specification. If one of the BC/AD indicator format masks, such as BC or B.C., was specified in the date, the other may not be specified.

Action: Use one BC/AD indicator format, with or without periods, consistently.

ORA-01816: month may only be specified once

Cause: More than one month format code was listed in a date specification. Only one of the following month format codes may be specified in a date: MM, MON, MONTH.

Action: Remove all but one month format from the date specification.

ORA-01817: day of week may only be specified once

Cause: More than one day-of-the-week format code was listed in a date specification. Only one of the following day-of-the-week format codes may be specified in a date: D, DY, DAY.

Action: Remove all but one day-of-the-week format from the date specification.

ORA-01818: 'HH24' precludes use of meridian indicator

Cause: A date specification contained both a 24-hour time format code and a meridian indicator code. If hours are specified using the 24-hour time format (HH24), a meridian indicator, AM or PM, may not be specified.

Action: Remove the meridian indicator format code, AM/PM or A.M./P.M., or the 24-hour time format code, HH24, from the date specification.

ORA-01819: signed year precludes use of BC/AD

Cause: A date specification contained both a signed year and a B.C./A.D. indicator. If the year is specified with a sign, such as SYYYY, then B.C. or A.D. is implicit in the date and must not be entered.

Action: Remove the B.C./A.D. indicator from the date specification.

ORA-01820: format code cannot appear in date input format

Cause: A date specification contained an invalid format code. Only the following may be specified when entering a date: year, month, day, hours, minutes, seconds, Julian day, A.M./P.M. and B.C./A.D.

Action: Remove the invalid format code from the date specification.

ORA-01821: date format not recognized

Cause: A date specification contained an invalid format code.

Action: Check that only valid date format codes are specified.

ORA-01822: era format code is not valid with this calendar

Cause: An era format code, E or EE, was specified with a calendar which did not use era information.

Action: Retry the operation using a date format mask which does not contain era format codes.

ORA-01830: Date format picture ends before converting entire input string.

Cause: A valid date format picture included extra data. The first part of the format picture was converted into a valid date. The remaining data was not required.

Action: Check the specifications of the date format picture and retry.

ORA-01831: year conflicts with Julian date

Cause: The wrong year was specified with a Julian day. If a year was specified with a Julian date, it must be the year in which the Julian date occurred.

Action: Remove the year value from the date specification or enter the correct year for the Julian date.

ORA-01832: day of year conflicts with Julian date

Cause: A Julian date was specified with the day of the year but the day did not correspond to the Julian date. If the day of the year was specified with a Julian date, it must be the same day as the Julian date.

Action: Remove the day of the year value from the date specification or enter the correct day for the Julian date.

ORA-01833: month conflicts with Julian date

Cause: The wrong month was specified with a Julian date. If a month is specified with a Julian date, it must be the month in which the Julian date occurs.

Action: Remove the month value from the date specification or enter the correct month for the Julian date.

ORA-01834: day of month conflicts with Julian date

Cause: A Julian date was specified with the day of the month, but the month day did not correspond to the Julian date. If the day of the month was specified with a Julian date, it must be the same day of the month as the Julian date.

Action: Remove the day of the month value from the date specification or enter the correct day of the month for the Julian date.

ORA-01835: day of week conflicts with Julian date

Cause: A Julian date was specified with the day of the week, but the weekday did not correspond to the Julian date. If the day of the week was specified with a Julian date, it must be the same day of the week as the Julian date.

Action: Remove the day of the week value from the date specification or enter the correct day of the week for the Julian date.

ORA-01836: hour conflicts with seconds in day

Cause: The wrong hour was specified with seconds in the day. If an hour was specified with seconds past midnight (SSSSS), it must be the hour in which the seconds value fell.

Action: Remove the hour value from the date specification or specify the correct hour for the seconds past midnight.

ORA-01837: minutes of hour conflicts with seconds in day

Cause: A date specification contained both minutes of the hour and seconds in the day but the values did not correspond. If both minutes in the hour (MI) and seconds past midnight (SSSSS) are specified, the minutes value must be the minute in which the seconds value occurred.

Action: Remove the minutes value from the date specification or enter the correct minute value for the specified seconds value.

ORA-01838: seconds of minute conflicts with seconds in day

Cause: A date specification contained both seconds of the minute and seconds in the day but the values did not correspond. If both types of seconds are specified, the seconds of the minute value (SS) must be the second in which the seconds past midnight value (SSSSS) fell.

Action: Remove the seconds of the minute value from the date specification or enter a value that corresponds to the given seconds in the day.

ORA-01839: date not valid for month specified

Cause: The day of the month specified in the date was invalid for the given month. The day of the month (DD) must be between 1 and the number of days in the month.

Action: Enter a valid day of the month for the specified month.

ORA-01840: input value not long enough for date format

Cause: The data to be converted to date format was incomplete; the date format picture was longer than the input data.

Action: Either add more input or shorten the date picture format, then retry the operation.

ORA-01841: (full) year must be between -4713 and +9999, and not be 0

Cause: Illegal year entered

Action: Input year in the specified range

ORA-01842: quarter must be between 1 and 4

Cause: An invalid value was specified for the quarter of the year in a date. The quarter (Q) must be between 1 and 4.

Action: Enter a value for quarter between 1 and 4.

ORA-01843: An invalid month was specified.

Cause: You specified a date with an invalid month.

Action: Enter a valid month value using either the correctly spelled full month name or valid short month code.

ORA-01844: week of year must be between 1 and 52

Cause: An invalid value was specified for the week of the year in a date. Week of the year (WW) must be between 1 and 52.

Action: Enter a week of the year value between 1 and 52.

ORA-01845: week of month must be between 1 and 5

Cause: An invalid value was specified for the week of the month in a date. Week of the month (W) must be between 1 and 5.

Action: Enter a week of the month value between 1 and 5.

ORA-01846: not a valid day of the week

Cause: A date specified an invalid day of the week. Valid days are: - Monday-Sunday, for format code DAY - Mon-Sun, for format code DY - 1-7, for format code D

Action: Enter a valid day of the week value in the correct format.

ORA-01847: day of month must be between 1 and last day of month

Cause: The day of the month listed in a date was invalid for the specified month. The day of the month (DD) must be between 1 and the number of days in that month.

Action: Enter a valid day value for the specified month.

ORA-01848: day of year must be between 1 and 365 (366 for leap year)

Cause: An invalid day of the year was specified in a date. Day of the year (DDD) must be between 1 and 365 for a non-leap year or 1 and 366 for a leap year.

Action: Enter a day of the year value between 1 and 365 (or 366).

ORA-01849: hour must be between 1 and 12

Cause: An invalid hour was specified for a date using the 12-hour time format. If a 12-hour format code (HH or HH12) is used, the specified hour must be between 1 and 12.

Action: Enter an hour value between 1 and 12.

ORA-01850: hour must be between 0 and 23

Cause: An invalid hour was specified for a date using the 24-hour time format. If the 24-hour format code (HH24) was listed, the specified hour must be between 0 and 23.

Action: Enter an hour value between 0 and 23.

ORA-01851: minutes must be between 0 and 59

Cause: An invalid minute value was specified in a date. Minutes must be between 0 and 59.

Action: Enter a minute value between 0 and 59.

ORA-01852: seconds must be between 0 and 59

Cause: An invalid seconds value was specified in a date. Seconds must be between 0 and 59 if the seconds format code (SS) was used.

Action: Enter a seconds value between 0 and 59.

ORA-01853: seconds in day must be between 0 and 86399

Cause: An invalid value for seconds in the day was specified in a date. Seconds must be between 0 and 86399 if the seconds past midnight format code (SSSS) was used.

Action: Specify a seconds value between 0 and 86399.

ORA-01854: julian date must be between 1 and 5373484

Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

ORA-01855: AM/A.M. or PM/P.M. required

Cause: A date specification contained a meridian indicator format code but a valid meridian indicator was not specified. If a meridian indicator code, A.M., P.M., AM or PM, was included in a date format, the date must include a valid meridian indicator.

Action: Specify the meridian indicator in the correct format, A.M./AM or P.M./PM.

ORA-01856: BC/B.C. or AD/A.D. required

Cause: A date specification contained a BC/AD format code but a valid BC/AD indicator was not specified. If one of the BC/AD format codes, BC/AD or B.C./A.D., is specified in a date format, the date must include BC/B.C. or AD/A.D.

Action: Specify the BC/AD indicator in the date using the correct format.

ORA-01857: not a valid time zone

Cause: An incorrect time zone code was specified for the NEW_TIME function.

Action: Correct the invalid time zone code, then retry the operation.

ORA-01858: A non-numeric character was found instead of a numeric character.

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to ensure that the elements match the number and type. Retry the operation.

ORA-01859: a non-alphabetic character was found where an alphabetic was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

ORA-01860: week of year must be between 1 and 53

Cause: A week number outside the range 1 to 53 was specified.

Action: Use only a value within the valid range for the week number.

ORA-01861: literal does not match format string

Cause: A literal was specified that did not match the the format string, excluding leading spaces.

Action: Correct the format string to match the literal, or the literal to match the format string.

ORA-01862: the numeric value does not match the length of the format item

Cause: When the FX and FM format codes are specified for an input date, then the number of digits must be exactly the number specified by the format code. For example, 9 will not match the format specifier DD but 09 will.

Action: Correct the input date or turn off the FX or FM format specifier in the format string.

ORA-01863: the year is not supported for the current calendar

Cause: The year is not supported for the current calendar.

Action: Please check the documentation to find out what years are supported for the current calendar.

ORA-01864: the date is out of range for the current calendar

Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

ORA-01865: not a valid era

Cause: Era input does not match a known era.

Action: Provide a valid era on input.

ORA-01866: the datetime class is invalid

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01867: the interval is invalid

Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

ORA-01868: the leading precision of the interval is too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01869: reserved for future use

Cause: Not an error.

Action: No action required.

ORA-01870: the intervals or datetimes are not mutually comparable

Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

ORA-01871: the number of seconds must be less than 60

Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

ORA-01872: reserved for future use

Cause: Not an error.

Action: No action required.

ORA-01873: the leading precision of the interval is too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01874: time zone hour must be between -15 and 15

Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -15 and 15.

ORA-01875: time zone minute must be between -59 and 59

Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

ORA-01876: year must be at least -4713

Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

ORA-01877: string is too long for internal buffer

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01878: specified field not found in datetime or interval

Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

ORA-01879: the hh25 field must be between 0 and 24

Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

ORA-01880: the fractional seconds must be between 0 and 999999999

Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

ORA-01881: timezone region ID is invalid

Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

ORA-01882: time zone region not found

Cause: The specified time zone region name was not found.

Action: Contact Oracle Support Services.

ORA-01883: overlap was disabled during a region transition

Cause: The region was changing state and the overlap flag was disabled.

Action: Please contact Oracle Customer Support.

ORA-01884: divisor is equal to zero

Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

ORA-01885: public synonym collides with Oracle-supplied schema name

Cause: The public synonym was the same as the Oracle-supplied schema name.

Action: Use either a different synonym or a different schema name.

ORA-01886: use CREATE PUBLIC SYNONYM statement to create a public synonym

Cause: An attempt was made to create a public synonym by issuing a CREATE SYNONYM statement naming PUBLIC as the name of the schema to which the synonym belongs.

Action: Either specify a valid schema for the synonym or use a CREATE PUBLIC SYNONYM statement.

ORA-01887: use ALTER PUBLIC SYNONYM statement to alter a public synonym

Cause: An attempt was made to alter a public synonym by issuing an ALTER SYNONYM statement naming PUBLIC as the name of the schema to which the synonym belongs.

Action: Use an ALTER PUBLIC SYNONYM statement to alter a public synonym.

ORA-01888: use DROP PUBLIC SYNONYM statement to drop a public synonym

Cause: An attempt was made to drop a public synonym by issuing a DROP SYNONYM statement naming PUBLIC as the name of the schema to which the synonym belongs.

Action: Use a DROP PUBLIC SYNONYM statement to drop a public synonym.

ORA-01890: NLS error detected

Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Worldwide Support.

ORA-01891: Datetime or Interval internal error.

Cause: An internal error occurred.

Action: Contact Oracle Support.

ORA-01892: A non-numeric character was found instead of a numeric character.

Cause: The input data to be converted is incorrect. The input data did not contain a number where a number was required.

Action: Fix the input data to ensure that the elements match the number and type. Retry the operation.

ORA-01898: too many precision specifiers in date format model

Cause: While trying to truncate or round dates, too many format models (like 'YY' or 'MM') for ROUND or TRUNC were found in the call. Not all date format models can be combined in a call to TRUNC and ROUND.

Action: Check the documentation for which date format models can be combined in the call to ROUND and TRUNC. Correct the date format and retry the operation.

ORA-01899: bad precision specifier

Cause: An invalid precision code was specified in a date.

Action: Enter a valid precision code in the date format. Valid precision types are: century, year, month, day, Julian date, hours, minutes, and seconds.

ORA-01900: LOGFILE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01901: ROLLBACK keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01902: SEGMENT keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01903: EVENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01904: DATAFILE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01905: STORAGE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01906: BACKUP keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01907: TABLESPACE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01908: EXISTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01909: REUSE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01910: TABLES keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01911: CONTENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01912: ROW keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01913: EXCLUSIVE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01914: invalid auditing option for sequence numbers

Cause: AUDIT or NOAUDIT was specified as an auditing option that is not valid for sequence numbers.

Action: The following options are not allowed for sequence numbers and must be removed: COMMENT, DELETE, INDEX, INSERT, LOCK, RENAME, UPDATE, REFERENCES, EXECUTE.

ORA-01915: invalid auditing option for views

Cause: AUDIT or NOAUDIT was specified on views that had audit options that were not valid for views.

Action: The following options cannot be used for views and must be removed: ALTER, INDEX, REFERENCES, EXECUTE

ORA-01916: keyword ONLINE, OFFLINE, RESIZE, AUTOEXTEND, END, DROP, ENABLE, REMOVE, SUSPEND, ENCRYPT, or DECRYPT expected

Cause: An expected keyword was not used for the data file or the temporary file clause. Note the ENCRYPT and DECRYPT keywords are only applicable to the data file.

Action: Use the correct syntax.

ORA-01917: user or role '*string*' does not exist

Cause: A user or role by that name did not exist.

Action: Re-specify the name.

ORA-01918: user '*string*' does not exist

Cause: The specified user did not exist in the system.

Action: Verify the user name is correct by querying ALL_USERS view. *Params: 1)
Name: The name of the user.

ORA-01919: Role '*string*' does not exist.

Cause: A role with the specified name did not exist.

Action: Verify that the role name is correct and retry the operation. *Params: 1) role_name: The name of the role.

ORA-01920: user name '*string*' conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different user name.

ORA-01921: role name '*string*' conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different role name.

ORA-01922: CASCADE must be specified to drop '*string*'

Cause: Cascade is required to remove this user from the system. The user own's object which will need to be dropped.

Action: Specify cascade.

ORA-01923: CASCADE failed

Cause: An object owned by the user could not be dropped because it was locked in another session.

Action: Retry the operation or use the lock monitor to determine who has the objects locked.

ORA-01924: Role "*string*" not granted or does not exist.

Cause: Either the role was not granted to the user, or the role did not exist.

Action: Create the role or grant the role to the user and retry the operation. *Params: 1) role_name: The role name being granted.

ORA-01925: unused error**ORA-01926: A role cannot be granted a privilege with the WITH GRANT OPTION.**

Cause: An attempt was made to grant a privilege WITH GRANT OPTION to a role.

Action: Perform the grant without the WITH GRANT OPTION.

ORA-01927: A privilege cannot be revoked if you did not grant it.

Cause: An attempt was made to revoke an object privilege or a user privilege that you did not originally grant. You can only revoke privileges that you have granted. Alternatively, ensure that you have the GRANT ANY OBJECT PRIVILEGE system privilege to revoke object privileges or user privileges that have been granted to another user.

Action: Ensure that you are revoking the correct privilege from the correct user or role. - Review the granted privileges and grantor in the DBA_TAB_PRIVS view. - Check if the current session has GRANT ANY OBJECT PRIVILEGE by querying the SESSION_PRIVS view.

ORA-01928: GRANT option not granted for all privileges

Cause: In order to grant a privilege, you must first have the privilege with the grant option.

Action: Obtain the privilege with the grant option and try again.

ORA-01929: no privileges to GRANT

Cause: ALL was specified but the user did not have any privileges with the GRANT option.

Action: Do not grant privileges on that object.

ORA-01930: auditing the object is not supported

Cause: The AUDIT or NOAUDIT commands were specified for an object that could not be audited.

Action: Do not use the AUDIT command on the object.

ORA-01931: cannot grant "string" to a role

Cause: An attempt to grant privileges to a role failed. UNLIMITED TABLESPACE, REFERENCES, INDEX, or administrative privileges such as SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, and SYSRAC cannot be granted to a role.

Action: Grant the desired privilege directly to the user. For administrative privilege grants, some additional restrictions apply : * SYSBACKUP, SYSDG, or SYSKM administrative privileges can be granted only when the password file is in Oracle 12c or later format. * SYSASM administrative privilege can be granted only when connected to an Oracle Automatic Storage Management (Oracle ASM) instance. * SYSRAC administrative privilege cannot be granted to a user because only operating system authentication is supported for SYSRAC privilege.

ORA-01932: Role "string" has not been granted with WITH ADMIN OPTION

Cause: A role can be granted to another user or role only if the role has been granted WITH ADMIN OPTION.

Action: Grant the privilege or role to the user WITH ADMIN OPTION and retry the operation.

ORA-01933: cannot create a stored object using privileges from a role

Cause: An attempt was made to create a stored object using privileges from a role. Stored objects cannot use privileges from roles.

Action: Grant the privileges required to the user directly.

ORA-01934: circular role grant detected

Cause: A circular role grant was detected. A role cannot be granted to itself or in a grant chain where the role is eventually granted back to itself. This is a circular role grant.

Action: Review the role hierarchy to determine where this circular role grant occurred and modify your role hierarchy to prevent this.

ORA-01935: missing or invalid user name

Cause: No user name was specified, or the specified user name was invalid. A user name can contain no more than 128 characters and must begin with a letter, and may only consist of alphanumeric characters and the special characters \$, _, and #. If the user name contains other characters, it must be enclosed in double quotations marks. The user name may not be a reserved word. An existing user name must be specified when using the ALTER USER and DROP USER statements. Existing user names can be found by querying the DBA_USERS view.

Action: Specify a valid user name.

ORA-01936: cannot specify owner when creating or dropping a user or role

Cause: An owner has been specified for user or role. User and role objects do not have an owner.

Action: Do not specify an owner for the user or role.

ORA-01937: missing or invalid role name

Cause: A valid role name was expected.

Action: Specify a valid role name.

ORA-01938: IDENTIFIED BY must be specified for CREATE USER

Cause: Cannot create a user without specifying a password or "IDENTIFIED EXTERNALLY" for ASM instance.

Action: Specify one of the password clauses.

ORA-01939: invalid option specified for WITH clause in the GRANT statement

Cause: An invalid option was specified in the WITH clause. When granting SYSTEM privileges and ROLES, the WITH clause can only have either ADMIN OPTION or DELEGATE OPTION.

Action: If granting a system privilege, specify ADMIN OPTION in the WITH clause. If granting a role, specify either ADMIN OPTION or DELEGATE OPTION in the WITH clause.

ORA-01940: cannot drop a user who is currently connected

Cause: An attempt was made to drop a user who was logged in.

Action: Ensure the user is logged off and then repeat the command.

ORA-01941: SEQUENCE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01942: IDENTIFIED BY and EXTERNALLY cannot both be specified

Cause: A user cannot be specified to have and not have a password.

Action: Specify only one of the options.

ORA-01944: Only one IDENTIFIED clause or one NO AUTHENTICATION clause is allowed.

Cause: Either the IDENTIFIED clause was specified twice, or the NO AUTHENTICATION clause was specified twice, or both the IDENTIFIED clause and NO AUTHENTICATION clause were specified together.

Action: Specify only one IDENTIFIED clause or one NO AUTHENTICATION clause.

ORA-01945: DEFAULT ROLE clause is already specified.

Cause: The DEFAULT ROLE clause was specified more than once.

Action: Update the statement to include only one DEFAULT ROLE clause.

ORA-01946: DEFAULT TABLESPACE already specified

Cause: The default tablespace clause has been given twice.

Action: Use only one default tablespace clause.

ORA-01947: TEMPORARY TABLESPACE already specified

Cause: The temporary tablespace clause has been given twice.

Action: Use only one temporary tablespace clause.

ORA-01948: length of the identifier name (*string*) exceeds the maximum *string*

Cause: The specified identifier name was longer than the maximum allowed.

Action: Use an identifier that is no longer than the maximum size specified in the error message.

ORA-01949: ROLE keyword expected

Cause: The role keyword is required here.

Action: Specify the role keyword.

ORA-01950: The user *string* has insufficient quota on tablespace *string*.

Cause: The specified user does not have sufficient quota to allocate space in the specified tablespace.

Action: Use the ALTER USER QUOTA statement to allocate the necessary quota on the tablespace for the user and retry. *Params: 1) user_name: The user who owns the object which requires extension. 2) tablespace_name: The tablespace name on which the user has no quota.

ORA-01951: Role "*string*" not granted to "*string*".

Cause: An attempt was made to revoke a role that was not granted to the user.

Action: Query roles granted to the user by issuing the SELECT * FROM DBA_ROLE_PRIVS WHERE GRANTEE = 'USER'; statement. Do not try to revoke a role that is not granted to the user. *Params: 1) role_name: The role name being revoked. 2) user_name: The user name from whom the role is being revoked.

ORA-01952: system privileges not granted to '*string*'

Cause: A system privilege you tried to revoke was not granted to the user.

Action: Make sure the privileges you are trying to revoke are granted.

ORA-01953: command no longer valid, see ALTER USER

Cause: The syntax for assigning quotas on tablespaces has changed. The ALTER USER command is now used to perform the functionality

Action: Use the alter user command instead.

ORA-01954: DEFAULT ROLE clause cannot be specified in CREATE USER statement

Cause: The DEFAULT ROLE was specified in a CREATE USER statement.

Action: Do not specify the DEFAULT ROLE clause in CREATE USER statement. Instead, alter the user's default role after creating the user.

ORA-01955: Role "*string*" not granted to the user.

Cause: The user being altered did not have the specified role granted.

Action: Grant the role to the user and set it as a default role. *Params: 1) role_name: The role name being set as the default role.

ORA-01956: invalid command when parameter OS_ROLES is set

Cause: Granting a role to user or setting a default role of a user was not allowed when the parameter OS_ROLES was set to TRUE.

Action: Grant the role to the user in the operating system.

ORA-01957: Keyword MIN or MAX expected, not found

Cause: The keyword MIN or MAX was expected as an argument.

Action: Enter the keyword MIN or MAX and retry the operation.

ORA-01958: Must supply an integer for the LAYER option

Cause: An item other than an integer was entered for the LAYER option.

Action: Enter an integer for the LAYER option and retry the operation.

ORA-01959: Must supply an integer for the OPCODE option

Cause: An item other than an integer was entered for the OPCODE option. The value in ALTER SYSTEM DUMP ... OPCODE value must be an integer.

Action: Enter an integer for the OPCODE option and retry the operation. For more information on the OPCODE option, see the Oracle9i SQL Reference.

ORA-01960: Invalid dump logfile option

Cause: An invalid option was entered for the ALTER SYSTEM DUMP LOGFILE option command.

Action: For a list of valid options for DUMP LOGFILE, see the Oracle9i SQL Reference.

ORA-01961: Invalid dump option

Cause: An invalid option was entered for the ALTER SYSTEM DUMP statement.

Action: Enter a valid option for ALTER SYSTEM DUMP. Examples of valid options are LOGFILE and UNDO. For more information on the DUMP option, see the Oracle9i SQL Reference.

ORA-01962: Must specify a file number or log sequence number

Cause: An invalid file number or log sequence number was specified.

Action: Enter a valid file number or log sequence number and retry the operation. For more information on valid file and log sequence numbers, see the Oracle9i SQL Reference.

ORA-01963: Must specify a block number

Cause: An invalid block number was specified.

Action: Enter a valid block number and retry the operation. For more information on valid block numbers, see the Oracle9i SQL Reference.

ORA-01964: Must specify a time for the TIME option

Cause: A value was entered for the TIME option that could not be interpreted as a date.

Action: Enter a valid date. For more information on the TIME option, see the Oracle9i SQL Reference.

ORA-01965: Must specify a PERIOD

Cause: A period was missing between the file number and the block number.

Action: Enter a period between the file number and the block number, then retry the operation. For more information on file numbers and block numbers, see the Oracle9i SQL Reference.

ORA-01966: DEFAULT COLLATION already specified

Cause: The default collation clause was specified twice.

Action: Use only one default collation clause.

ORA-01967: invalid option for CREATE CONTROLFILE

Cause: An invalid CREATE CONTROLFILE option is present.

Action: Specify only valid CREATE CONTROLFILE options.

ORA-01968: Only specify RESETLOGS or NORESETLOGS once

Cause: The keyword RESETLOGS or NORESETLOGS has appeared more than once

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01969: You must specify RESETLOGS or NORESETLOGS

Cause: Missing a RESETLOGS or a NORESETLOGS

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01970: You must specify a database name for CREATE CONTROLFILE

Cause: Missing a database name

Action: Retype CREATE CONTROLFILE command with the DATABASE keyword.

ORA-01971: Illegal ALTER TRACING option

Cause: An invalid ALTER TRACING option was present.

Action: Specify only valid ALTER TRACING options. Examples of valid options are ENABLE and DISABLE. For more information, see the Oracle9i SQL Reference.

ORA-01972: Must specify a string for ALTER TRACING ENABLE or DISABLE

Cause: Something other than a valid identifier was specified for ALTER TRACING ENABLE or DISABLE.

Action: Specify a valid identifier for ALTER TRACING ENABLE or DISABLE and retry the operation. For more information on valid identifiers, see the Oracle9i SQL Reference.

ORA-01973: Missing change number

Cause: Keyword "CHANGE" found but change number not specified.

Action: Fix command line and resubmit

ORA-01974: Illegal archive option

Cause: Not a valid option to the "ALTER SYSTEM ARCHIVE" command

Action: Check the syntax of the command and retry it.

ORA-01975: Illegal character in change number *string*

Cause: An invalid change number was supplied.

Action: Resubmit the command with a valid change number.

ORA-01976: Missing change number

Cause: A change number was required, but not supplied.

Action: Check the syntax of the command, supply a change number where needed, then retry the command.

ORA-01977: Missing thread number

Cause: Keyword "THREAD" found but thread number not specified.

Action: Fix command line and resubmit

ORA-01978: Missing sequence number

Cause: Keyword "SEQUENCE" found but sequence number not specified.

Action: Fix command line and resubmit

ORA-01979: missing or invalid password for role "*string*"

Cause: An attempt was made to enable a role without specifying a valid password.

Action: Enable the role with a valid password. *Params: 1) role_name: The name of the role being enabled.

ORA-01980: error during operating system ROLE initialization

Cause: An operating system error occurred while loading operating system ROLES.

Action: Check the operating system error.

ORA-01981: CASCADE CONSTRAINTS must be specified to perform this REVOKE.

Cause: During this REVOKE, some foreign key constraints could not be removed. To perform this automatically, CASCADE CONSTRAINTS must be specified.

Action: Remove the constraints or specify CASCADE CONSTRAINTS.

ORA-01982: invalid audit option for table specified

Cause: An invalid AUDIT or NOAUDIT option, like REFERENCE or EXECUTE, was specified for a table.

Action: Validate the audit option for the table and retry the operation.

ORA-01983: invalid AUDIT or NOAUDIT operation while specifying ON DEFAULT

Cause: An invalid AUDIT or NOAUDIT operation was requested for the object (like REFERENCES) while specifying the ON DEFAULT clause.

Action: Correct the statement and retry the operation.

ORA-01984: invalid audit option specified for procedure, package, or function

Cause: An invalid AUDIT or NOAUDIT option was specified for the procedure, package, or function while using the DEFAULT clause.

Action: Only EXECUTE is allowed as valid audit option for procedures, packages, and functions.

ORA-01985: cannot create user as LICENSE_MAX_USERS parameter exceeded

Cause: Maximum users in the database license limit exceeded.

Action: Increase license limit.

ORA-01986: OPTIMIZER_GOAL is obsolete

Cause: An obsolete parameter, OPTIMIZER_GOAL, was referenced.

Action: Use the OPTIMIZER_MODE parameter.

ORA-01987: Operating system user name of the client is too long.

Cause: The operating system user name of the client was too long for the operating system logon method to succeed.

Action: Use a shorter operating system user name.

ORA-01989: role '*string*' not authorized by operating system

Cause: The operating system role did not exist, or had not been granted, or the correct password was not provided.

Action: Attempt the SET ROLE with a valid operating system role and password.
*Params: 1) role_name: The role name being enabled with SET ROLE command.

ORA-01990: Error opening password file '*string*'.

Cause: The password file did not exist or was inaccessible.

Action: Check that the file exists and is accessible, and then retry the operation.
*Params: 1) password_file_name: Name of the database password file.

ORA-01991: invalid password file '*string*'

Cause: The specified password file was invalid.

Action: Specify a valid password file name or re-create the password file. *Params: 1) password_filename: The name of the password file.

ORA-01992: There was an operating system error in closing the password file '*string*'.

Cause: The database password file could not be closed because of an underlying operating system error.

Action: Check for the underlying operating system error and retry the action. In most cases, retrying the operation will be sufficient. If the password file has become corrupt or deleted due to the operating system error, you need to recover the password file by re-creating it or retrieving it from backup. *Params: 1) password_file_name: The name of the password file.

ORA-01993: Error writing to password file *string*.

Cause: The password file could not be written to because of an operating system error or because an authentication action failed.

Action: Check for an authentication or operating system error with the password file, correct, and retry.

ORA-01994: Password file is missing or disabled.

Cause: The operation failed either because the initialization parameter file REMOTE_LOGIN_PASSWORDFILE was set to NONE or the password file was missing.

Action: Create the password file using the ORAPWD tool and set the initialization parameter file REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE.

ORA-01995: The database encountered an error in reading the password file 'string'.

Cause: An operating system error occurred when trying to read the password file. This may be due to the file permissions or that the file was moved or deleted.

Action: Ensure the password file permissions allow for the database to read and write the file and that the file exists in the correct location. You may also need to review your operating system logs for other possible errors that you might need to correct. *Params: 1) password_file_name: The name of the password file.

ORA-01996: GRANT failed: password file 'string' is full

Cause: The grant failed when a user could not be added to the password file, because all available slots in it were used already.

Action: Either create a larger password file or free up slots in the password file by revoking the SYSOPER and SYSDBA privileges from some of the remote users. You can determine which remote users are valid and their privileges by issuing the following query in SQL*DBA: SELECT * FROM V\$REMOTE_USERS;

ORA-01998: An administrative privilege cannot be revoked from the SYS user.

Cause: An attempt was made to revoke SYSOPER or SYSDBA administrative privileges from the SYS user which is not allowed.

Action: Review your requirements to determine a different approach.

ORA-01999: The database password file cannot be updated while the REMOTE_LOGIN_PASSWORDFILE parameter is in SHARED mode.

Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the initialization parameter REMOTE_LOGIN_PASSWORDFILE is set to SHARED and the password file is in read-only mode: - Attempting to change the password for an administrative privileged user either using ALTER USER DDL statement or SQL*Plus PASSWORD command, or OCIPasswordChange API. - Attempting to grant administrative privileges to a user. - Attempting to revoke administrative privileges from a user. - Attempting to drop an administrative privileged user. If the password file was created in 12.2 format, then the following additional operations are disallowed when the REMOTE_LOGIN_PASSWORDFILE parameter is set to SHARED: - An ALTER USER DDL statement making changes to an administrative privileged user's account status, password profile assignment, identification type, or password expiration timestamp. - An ALTER PROFILE or DROP PROFILE CASCADE DDL statement for a password profile, which is assigned to an administrative privileged user.

Action: Set the REMOTE_LOGIN_PASSWORDFILE parameter to EXCLUSIVE, ensure that the file is writable, and restart the database instance. Then retry the operation.

ORA-02000: missing string keyword

Cause: The statement entered requires the missing keyword.

Action: Use the specified keyword.

ORA-02001: user SYS is not permitted to create indexes with freelist groups

Cause: user tried to create an index while running with sys authorization.

Action: Indexes cannot be created with SYS authorization. Either do not create the index or switch to USER authorization.

ORA-02002: error while writing to audit trail

Cause: The auditing facility was unable to write to the audit trail. SQL statements that were being audited may also fail. This error occurred because of one of the following reasons: 1. Designated audit tablespace ran out of disk space. 2. Operating system mount point where the audit files were located did not have enough free space to generate new files. 3. Some other underlying error caused the audit write failure.

Action: Choose the action corresponding to the cause as numbered: 1. Add space to the designated audit tablespace. 2. Purge old audit records from the audit trail. 3. Check the following error to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Support Services.

ORA-02003: invalid USERENV attribute

Cause: An invalid attribute was specified for the USERENV namespace.

Action: Specify a valid attribute name.

ORA-02004: security violation

Cause: This error code was never returned to a user. It was used as a value for column, UNIFIED_AUDIT_TRAIL.RETURN_CODE, to signal that a security violation occurred.

Action: None

ORA-02005: implicit (-1) length not valid for this bind or define data type

Cause: A negative length for the define variable was passed to a define function.

Action: An explicit, non-negative, length parameter must be passed.

ORA-02006: invalid packed decimal format string

Cause: A packed decimal datatype was passed to a bind or define function, and the format string parameter was either not present or invalid.

Action: A valid format string parameter must be passed for a packed decimal variable. Check the programming manual for the definition of a packed decimal format string.

ORA-02007: can't use ALLOCATE or DEALLOCATE options with REBUILD

Cause: Allocate or deallocate storage and rebuild index are not compatible.

Action: Choose one or the other.

ORA-02008: non-zero scale specified for nonnumeric column

Cause: A scale factor was specified for a bind or define of a non-numeric variable.

Action: Set the scale factor to zero, then retry the operation.

ORA-02009: the size specified for a file must not be zero

Cause: A value of zero was specified in a SIZE or RESIZE clause of a file specification.

Action: Use correct syntax, or, if allowed, omit the SIZE or RESIZE clause.

ORA-02010: missing host connect string

Cause: A quoted character string did not follow the keyword USING in the USING clause of a CREATE DATABASE LINK statement.

Action: Specify the host connect string, then retry the operation.

ORA-02011: duplicate database link name

Cause: The database link name specified in a CREATE DATABASE LINK statement already existed.

Action: Either specify a new name or drop the existing link.

ORA-02012: missing USING keyword

Cause: The keyword USING did not follow the CONNECT TO clause in a CREATE DATABASE LINK statement.

Action: Specify the USING clause after the CONNECT TO clause.

ORA-02013: missing CONNECT keyword

Cause: The keyword CONNECT did not follow the database link name in a CREATE DATABASE LINK statement.

Action: Specify the CONNECT clause after the database link name.

ORA-02014: cannot select FOR UPDATE from view with DISTINCT, GROUP BY, etc.

Cause: An attempt was made to select FOR UPDATE from a view which had not been merged because the view used syntax (for example, DISTINCT or GROUP BY) preventing the merge, or because of initialization file parameter settings.

Action: Determine the reason the view will not merge and, if possible, make changes so that it can.

ORA-02015: cannot select FOR UPDATE from remote table

Cause: An attempt was made to select FOR UPDATE on a remote table (directly, or via a view) that had abstract data type columns, and the view or select list contained abstract data type columns or non-column items.

Action: To attempt a select FOR UPDATE, use a view or select list that consists only of base columns from the remote table, none of which may be abstract data type columns.

ORA-02016: cannot use a subquery in a START WITH on a remote database

Cause: An attempt was made to use a subquery in a START WITH clause. Such a subquery is not currently permitted if the table in the FROM clause of the tree query is in a remote database.

Action: It is necessary to connect directly to the remote database before using a subquery in the START WITH clause.

ORA-02017: integer value required

Cause: The specified value must be an integer.

Action: Specify an appropriate integer value, then retry the operation.

ORA-02018: database link of same name has an open connection

Cause: The user was currently connected to a PUBLIC database link with the same name as the database link name specified in a CREATE or DROP DATABASE LINK statement.

Action: Close the cursors that use the PUBLIC database link.

ORA-02019: connection description for remote database not found

Cause: The referenced database link did not exist.

Action: Create the database link before running the SQL statement.

ORA-02020: too many database links in use

Cause: The current session has exceeded the INIT.ORA open_links maximum.

Action: Increase the open_links limit, or free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

ORA-02021: DDL operations are not allowed on a remote database

Cause: An attempt was made to use a DDL operation on a remote database. For example, "CREATE TABLE tablename@remotedbname ...".

Action: To alter the remote database structure, you must connect to the remote database with the appropriate privileges.

ORA-02022: remote statement has unoptimized view with remote object

Cause: The local view is unoptimized and contains references to objects at the remote database and the statement must be executed at the remote database.

Action: Create a similar view on the remote database and modify the violating view in the SQL statement with the new view@remote.

ORA-02023: START WITH or CONNECT BY predicate cannot be evaluated by remote data base

Cause: The statement contained a tree query on a remote database, and the tree query's START WITH or CONNECT BY predicate contained a term that could not be evaluated at the remote database. Such terms included calls to user functions, calls to USERENV, and references to ROWID.

Action: Remove the disallowed term, directly connect, or log on to the remote database.

ORA-02024: database link not found

Cause: Database link to be dropped is not found in dictionary

Action: Correct the database link name

ORA-02025: all tables in the SQL statement must be at the remote database

Cause: The user's SQL statement references tables from multiple databases. The remote database is not Oracle V7 or above, and can perform updates only if it can reference all tables in the SQL statement.

Action: Remote updates can be performed only if all databases in the SQL statement are Oracle Servers. Update the earlier version databases in a separate statement.

ORA-02026: missing LINK keyword

Cause: keyword missing

Action: supply missing keyword

ORA-02027: multi-row UPDATE of LONG column is not supported

Cause: A bind variable with length greater than 4000 bytes is being used to update a column, and the update statement updates more than one row.

Action: You may only update a single row with such a bind variable.

ORA-02028: fetching an exact number of rows is not supported by the server

Cause: The server does not support UPIALL, so the fetch of an exact number of rows cannot be emulated on the user side.

Action: Connect to a valid server or do not use an exact fetch.

ORA-02029: missing FILE keyword

Cause: keyword missing

Action: supply missing keyword

ORA-02030: can only select from fixed tables/views

Cause: An attempt is being made to perform an operation other than a retrieval from a fixed table/view.

Action: You may only select rows from fixed tables/views.

ORA-02031: no ROWID for fixed tables or for external-organized tables

Cause: An attempt is being made to access rowid from a fixed table or from a external-organized table.

Action: Do not access ROWID from a fixed table or from a external-organized table.

ORA-02032: clustered tables cannot be used before the cluster index is built

Cause: User attempted to perform a DML statement on a clustered table for which no cluster index has yet been created.

Action: Create the cluster index.

ORA-02033: a cluster index for this cluster already exists

Cause: A cluster index already exists for the cluster.

Action: None

ORA-02034: speed bind not permitted

Cause: Speed bind not allowed with supplied bind variables. Trapped internally by the system.

Action: None

ORA-02035: illegal bundled operation combination

Cause: User requested that the UPI bundled execution call perform an an illegal combination of operations.

Action: See documentation for legal operation combinations.

ORA-02036: too many variables to describe with automatic cursor open

Cause: User requested that the UPI bundled execution call perform automatic cursor open and close on a describe operation. There were too many select-list items or bind variables to do this.

Action: open and close cursor explicitly

ORA-02037: uninitialized speed bind storage

Cause: User attempted a UPI bundled execution call containing a standalone execute operation without first performing a UPI bundled execution call containing a bind operation.

Action: perform a UPI bundled execution call with bind before performing a bundled execution call with execute

ORA-02038: define is not allowed for array type

Cause: User attempted to define a select list variable of type "array". Arrays may only serve as host bind variables.

Action: Correct the offending code.

ORA-02039: bind by value is not allowed for array type

Cause: User attempted to bind an array host variable by value. Arrays may only be bound by reference.

Action: Correct the offending code.

ORA-02040: remote database *string* does not support two-phase commit

Cause: the database was potentially updated but does not support prepare to commit (as determined by its logon transaction traits). The transaction was rolled back.

Action: Do not attempt to update the remote database unless it is the only database updated in one transaction.

ORA-02041: client database did not begin a transaction

Cause: internal error

Action: contact support

ORA-02042: too many distributed transactions

Cause: the distributed transaction table was full because too many distributed transactions were active.

Action: Run fewer transactions. If you are sure you don't have too many concurrent distributed transactions, this indicates an internal error and support should be notified. Instance shutdown/restart would be a work-around.

ORA-02043: must end current transaction before executing *string*

Cause: a transaction is in progress and one of the following commands is issued: COMMIT FORCE, ROLLBACK FORCE, or ALTER SYSTEM ENABLE DISTRIBUTED RECOVERY in single process mode.

Action: COMMIT or ROLLBACK the current transaction and resubmit command.

ORA-02044: transaction manager login denied: transaction in progress

Cause: a remote transaction manager tried to log in while a distributed transaction is in progress.

Action: end the current transaction (this is a protocol error from a remote transaction manager)

ORA-02045: too many local sessions participating in global transaction

Cause: too many sessions at this site for this transaction.

Action: use an existing link so another session need not be created.

ORA-02046: distributed transaction already begun

Cause: internal error or error in external transaction manager. A server session received a begin_tran RPC before finishing with a previous distributed tran.

Action: Contact Oracle Support Services.

ORA-02047: cannot join the distributed transaction in progress

Cause: Either a transaction is in progress against a remote database that does not fully support two phase commit, and an update is attempted on another database, or updates are pending and an attempt is made to update a different database that does not fully support two phase commit.

Action: complete the current transaction and then resubmit the update request.

ORA-02048: attempt to begin distributed transaction without logging on

Cause: client program must issue a distributed transaction login.

Action: contact support.

ORA-02049: timeout: distributed transaction waiting for lock

Cause: "The number of seconds specified in the distributed_lock_timeout initialization parameter were exceeded while waiting for a lock or for a begin transaction hash collision to end."

Action: Treat this timeout as a deadlock. Roll back the transaction and try again.

ORA-02050: transaction *string* rolled back, some remote DBs may be in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02051: another session or branch in same transaction failed or finalized

Cause: A session at the same site with the same global transaction ID failed. The failure could also be caused by an application error if an attempt was made to update the database while another tightly coupled transaction branch with the same global transaction ID was finalized or aborted.

Action: No action necessary as the transaction will be automatically recovered. In the case of an application error, make sure there are no more updates to the database once the transaction manager has started two-phase commit for tightly coupled distributed transaction.

ORA-02052: remote transaction failure at *string*

Cause: error in remote transaction at given DBLINK

Action: retry

ORA-02053: transaction *string* committed, some remote DBs may be in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02054: transaction *string* in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; DBs will automatically re-sync when the failure is repaired. Monitor pending_trans\$ for final outcome.

ORA-02055: distributed update operation failed; rollback required

Cause: a failure during distributed update operation may not have rolled back all effects of the operation. Since some sites may be inconsistent, the transaction must roll back to a savepoint or entirely

Action: rollback to a savepoint or rollback transaction and resubmit

ORA-02056: 2PC: *string*: bad two-phase command number *string* from *string*

Cause: two-phase commit protocol error.

Action: recovery of transaction attempted. Monitor pending_trans\$ table to ensure correct resolution. Contact support.

ORA-02057: 2PC: *string*: bad two-phase recovery state number *string* from *string*

Cause: internal error in two-phase recovery protocol

Action: contact support

ORA-02058: no prepared transaction found with ID *string*

Cause: no transaction with local_tran_id or global_tran_id found in the pending_trans\$ table in prepared state.

Action: check the pending_trans\$ table.

ORA-02059: ORA-2PC-CRASH-TEST-*string* in commit comment

Cause: This is a special comment used to test the two phase commit.

Action: Don't use this special comment (%s a number 1-10)

ORA-02060: select for update specified a join of distributed tables

Cause: tables in a join with the for update clause must reside at the same DB.

Action: Joined tables in a SELECT statement with the FOR UPDATE clause must reside at the same database. Simplify the SELECT... FOR UPDATE statement so that it joins only tables in the same database.

ORA-02061: lock table specified list of distributed tables

Cause: tables in a lock table statement must reside at the same DB.

Action: issue multiple lock table commands.

ORA-02062: distributed recovery received DBID *string*, expected *string*

Cause: a database link at a coordinator no longer points to the expected database. Link may have been redefined, or a different DB mounted.

Action: restore link definition or remote database.

ORA-02063: preceding *stringstring* from *stringstring*

Cause: an Oracle error was received from a remote database link.

Action: refer to the preceding error message(s)

ORA-02064: distributed operation not supported

Cause: One of the following unsupported operations was attempted: 1. array execute of a remote update with a subquery that references a dblink, or 2. an update of a long column with bind variable and an update of a second column with a subquery that both references a dblink and a bind variable, or 3. a commit is issued in a coordinated session from an RPC procedure call with OUT parameters or function call.

Action: simplify remote update statement

ORA-02065: illegal option for ALTER SYSTEM

Cause: The option specified for ALTER SYSTEM is not supported

Action: refer to the user manual for option supported

ORA-02066: missing or invalid DISPATCHERS text

Cause: A character string literal was expected, but not found, following ALTER SYSTEM SET DISPATCHERS

Action: place the string literal containing the dispatcher's specification after ALTER SYSTEM SET DISPATCHERS

ORA-02067: transaction or savepoint rollback required

Cause: A failure (typically a trigger or stored procedure with multiple remote updates) occurred such that the all-or-nothing execution of a previous Oracle call cannot be guaranteed.

Action: rollback to a previous savepoint or rollback the transaction and resubmit.

ORA-02068: following severe error from *stringstring*

Cause: A severe error (disconnect, fatal Oracle error) received from the indicated database link. See following error text.

Action: Contact the remote system administrator.

ORA-02069: global_names parameter must be set to TRUE for this operation

Cause: A remote mapping of the statement is required but cannot be achieved because global_names should be set to TRUE for it to be achieved

Action: Issue alter session set global_names = true if possible

ORA-02070: database *stringstring* does not support *string* in this context

Cause: The remote database does not support the named capability in the context in which it is used.

Action: Simplify the SQL statement.

ORA-02071: error initializing capabilities for remote database *string*

Cause: Could not load a remote-specified capability table.

Action: Contact support for the remote SQL*Connect product.

ORA-02072: distributed database network protocol mismatch

Cause: This should never happen between different PRODUCTION releases of ORACLE, but may happen between alpha and beta releases, for example.

Action: Upgrade the older release.

ORA-02073: sequence numbers not supported in remote updates

Cause: Sequence numbers may not be used in INSERTS, UPDATES, or DELETES on remote tables.

Action: Perform the operation without specifying a sequence number.

ORA-02074: cannot *string* in a distributed transaction

Cause: A commit or rollback was attempted from session other than the parent of a distributed transaction.

Action: Only commit or rollback from the parent session.

ORA-02075: another instance changed state of transaction *string*

Cause: A commit force or rollback force was issued from a session in another instance.

Action: Check if another Oracle instance is performing recovery of pending transactions. Query DBA_2PC_PENDING to determine the new state of the transaction.

ORA-02076: sequence not co-located with updated table or long column

Cause: all referenced sequences must be co-located with the table with the long column.

Action: Correct the problem and then reissue the statement.

ORA-02077: selects of long columns must be from co-located tables

Cause: if a select returns long columns from multiple tables, all the tables must be co-located

Action: Correct the problem, then reissue the statement.

ORA-02078: invalid setting for ALTER SYSTEM FIXED_DATE

Cause: An invalid value was used.

Action: n/a

ORA-02079: cannot join a committing or finalized distributed transaction

Cause: Once a transaction branch was prepared, no new transaction branch was allowed to start, nor was the prepared transaction branch allowed to be joined. Also, once a transaction was marked finalized, no new transaction branch was allowed to start, nor was the prepared transaction branch allowed to be joined. A transaction could have been marked finalized if one of the branches in the transaction was rolled back by PMON because it exceeded the transaction idle time limit.

Action: Check the application code to be sure it is not starting a new branch after doing a prepare (this is an XA protocol violation). If no prepare was done, check that the transaction idle time timeout (TransactionTimeout or SesTM) is large enough to avoid expiring before all work in the transaction is complete.

ORA-02080: database link is in use

Cause: a transaction is active or a cursor is open on the database link given in the alter session close database link *link* command.

Action: commit or rollback, and close all cursors

ORA-02081: database link is not open

Cause: dblink given is not currently open.

Action: Resolve network problems or contact the remote database administrator to determine if the remote database's problem has been fixed. Contact the local database administrator to determine if network problems have been resolved. Wait until the link is open and try the operation again.

ORA-02082: a loopback database link must have a connection qualifier

Cause: An attempt was made to create a database link with the same name as the current database.

Action: a loopback database link needs a trailing qualifier, for example MYDB.EXAMPLE.COM@INST1 - the '@INST1' is the qualifier

ORA-02083: database name has illegal character '*string*'

Cause: supplied database name can contain only A-Z, 0-9, '_', '#', '\$', '.' and '@' characters.

Action: Specify a valid database name.

ORA-02084: database name is missing a component

Cause: supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: Specify the full database name.

ORA-02085: database link *string* connects to *string*

Cause: a database link connected to a database with a different name. The connection is rejected.

Action: create a database link with the same name as the database it connects to, or set global_names=false.

ORA-02086: Database name or database link name is too long.

Cause: Database name or database link name limited to 128 characters.

Action: Specify a correct database name or database link name, or use a shorter database name or database link name.

ORA-02087: object locked by another process in same transaction

Cause: A database link is being used in the cluster database environment that loops back to the same instance. One session is trying to convert a lock that was obtained by the other session.

Action: Get the more restrictive lock first. For example, if session 1 gets a share lock and session 2 gets an exclusive lock on the same object, get the exclusive lock first. Or, simply use the same session to access the object.

ORA-02088: distributed database option not installed

Cause: Remote and distributed updates and transactions are a separately priced option in ORACLE V7.

Action: Contact Oracle Support Services about obtaining the distributed database option.

ORA-02089: COMMIT is not allowed in a subordinate session

Cause: COMMIT was issued in a session that is not the two-phase commit global coordinator.

Action: Issue commit at the global coordinator only.

ORA-02090: network error: attempted callback+passthru

Cause: internal error.

Action: Contact Oracle Support Services.

ORA-02091: transaction rolled back

Cause: Also see error 2092. If the transaction is aborted at a remote site then you will only see 2091; if aborted at host then you will see 2092 and 2091.

Action: Add rollback segment and retry the transaction.

ORA-02092: out of transaction table slots for distributed transaction

Cause: The transaction was assigned to the system rollback segment and was trying to get into the PREPARED state. However, Oracle requires a minimum number of transactions to not be in the PREPARED state in the system rollback segment. This transaction could not transition to the PREPARED state, it has been rolled back.

Action: Add a rollback segment and retry the transaction.

ORA-02093: TRANSACTIONS_PER_ROLLBACK_SEGMENT(*string*) more than maximum possible(*string*)

Cause: Value of parameter specified is greater than allowed on this port.

Action: Use default or reduce it to less than max.

ORA-02094: replication option not installed

Cause: The replication option was not installed at this site. Updatable materialized views, deferred RPCs, and other replication features were, therefore, unavailable.

Action: Install the replication option. The replication option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle Sales representative if the replication option needs to be purchased.

ORA-02095: specified initialization parameter cannot be modified

Cause: The specified initialization parameter is not modifiable

Action: Check the Oracle9i Database Administrator's Guide for information about under what scope the parameter may be modified. For more information about modifying an initialization parameter, see the Oracle9i Database Reference.

ORA-02096: specified initialization parameter is not modifiable with this option

Cause: Although the initialization parameter is modifiable, it could not be modified by using the specified options.

Action: Check Oracle documentation to identify the initialization parameter attributes that are modifiable.

ORA-02097: parameter cannot be modified because specified value is invalid

Cause: Though the initialization parameter is modifiable, the modified value is not acceptable to the parameter.

Action: Check the DBA guide for range of acceptable values for this parameter.

ORA-02098: error parsing index-table reference (:!)

Cause: An incorrect index-table (:!) syntax was encountered.

Action: This syntax is for oracle internal use only.

ORA-02100 to ORA-04100

ORA-02100: PCC: out of memory (i.e., could not allocate)

Cause: SQLLIB was unable to allocate enough memory to execute the program.

Action: Allocate more memory to the user session and then rerun the program. If the error persists, contact Oracle Support Services for assistance.

ORA-02101: PCC: inconsistent cursor cache (uce/cuc mismatch)

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02102: PCC: inconsistent cursor cache (no cuc entry for this uce)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02103: PCC: inconsistent cursor cache (out-of-range cuc ref)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02104: PCC: inconsistent host cache (no cuc available)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02105: PCC: inconsistent cursor cache (no cuc entry in cache)

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02106: PCC: inconsistent cursor cache (OraCursor nr is bad)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02107: PCC: this pgm too old for run-time library: please re-PCC it

Cause: The program was precompiled by an older version of the Oracle Precompilers, which was incompatible with this release of the Oracle runtime library (SQLLIB).

Action: Precompile the program with a newer version of the Oracle Precompilers.

ORA-02108: PCC: invalid descriptor passed to run-time library

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02109: PCC: inconsistent host cache (out-of-range sit ref)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02110: PCC: inconsistent host cache (invalid sqi type)

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02111: PCC: heap consistency error

Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02112: PCC: SELECT..INTO returns too many rows

Cause: A SELECT...INTO statement returned more rows than can be stored in the host variable provided.

Action: There are three possible solutions: - Use the precompiler option SELECT_ERROR=NO. - Declare a host variable with a larger array dimension. - Declare a cursor or cursor variable for the select statement.

ORA-02140: invalid tablespace name

Cause: An identifier does not follow ALTER TABLESPACE.

Action: Specify a tablespace name following ALTER TABLESPACE.

ORA-02141: invalid OFFLINE option

Cause: An option other than NORMAL or IMMEDIATE follows OFFLINE.

Action: The user must either specify no option following OFFLINE or one of the options NORMAL or IMMEDIATE.

ORA-02142: missing or invalid ALTER TABLESPACE option

Cause: A valid option was not present.

Action: Use one of the valid options: add, rename, default, online, offline, read only, read write, begin, end, no, force, retention guarantee and retention noguarantee.

ORA-02143: invalid STORAGE option

Cause: An option other than INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, or PCTINCREASE was specified in the STORAGE clause.

Action: Specify only valid options.

ORA-02144: no option specified for ALTER CLUSTER

Cause: No ALTER CLUSTER options are specified.

Action: Specify one or more of the following options: pctfree, pctused, size, storage.

ORA-02145: missing STORAGE option

Cause: No STORAGE options were specified following STORAGE (

Action: Specify one or more STORAGE option between the parentheses.

ORA-02146: SHARED specified multiple times

Cause: The SHARED option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the SHARED option once.

ORA-02147: conflicting SHARED/EXCLUSIVE options

Cause: Both the SHARED and EXCLUSIVE options were specified in a CREATE DATABASE statement.

Action: Specify SHARED or EXCLUSIVE, but not both.

ORA-02148: EXCLUSIVE specified multiple times

Cause: The EXCLUSIVE option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the EXCLUSIVE option once.

ORA-02149: Specified partition does not exist *string*

Cause: Partition not found for the object.

Action: Retry with correct partition name.

ORA-02150: invalid new tablespace name

Cause: The new tablespace name specified in ALTER TABLESPACE RENAME TO statement was invalid.

Action: Retry with a valid new tablespace name.

ORA-02151: invalid tablespace name: *string*

Cause: Oracle cannot create a tablespace whose name starts with '*_deleted\$*'.

Action: Try a different tablespace name.

ORA-02152: Invalid ALTER TABLESPACE ... RENAME option

Cause: An option other than DATAFILE or TO follows by ALTER TABLESPACE ... RENAME.

Action: The user must specify either DATAFILE or TO following ALTER TABLESPACE ... RENAME.

ORA-02153: invalid VALUES password string

Cause: The IDENTIFIED BY VALUES clause did not contain a valid encoded password string.

Action: Place a valid encoded password string after the IDENTIFIED BY VALUES clause and retry the operation.

ORA-02154: a tablespace with the name '*string*' is found

Cause: An attempt to rename a tablespace to a new name failed because the new name is already used by some other tablespace.

Action: Retry with a different new name.

ORA-02155: invalid DEFAULT tablespace identifier

Cause: An identifier does not follow DEFAULT TABLESPACE.

Action: Place a tablespace name after DEFAULT TABLESPACE.

ORA-02156: invalid TEMPORARY tablespace identifier

Cause: An identifier does not follow TEMPORARY TABLESPACE.

Action: Place a tablespace name after TEMPORARY TABLESPACE.

ORA-02157: no options specified for ALTER USER

Cause: No options were specified.

Action: Specify at least one ALTER USER option.

ORA-02158: invalid CREATE INDEX option

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified.

Action: Choose one of the valid CREATE INDEX options.

ORA-02159: installed DLM does not support releasable locking mode

Cause: The parameter file specified `gc_*` parameters that allow locks to be release by the LCK process when not in use. This mode requires additional support from the DLM that is not available.

Action: Specify configuration parameters that do not require the additional function.

ORA-02160: index-organized table can not contain columns of type LONG

Cause: A column of type LONG defined for index-organized table.

Action: Do not use columns of type LONG in index-organized tables.

ORA-02161: invalid value for MAXLOGFILES

Cause: A number does not follow MAXLOGFILES.

Action: Specify a number after MAXLOGFILES.

ORA-02162: invalid value for MAXDATAFILES

Cause: A number does not follow MAXDATAFILES.

Action: Specify a number after MAXDATAFILES.

ORA-02163: invalid value for FREELIST GROUPS

Cause: A number does not follow FREELIST GROUPS.

Action: Specify a number after FREELIST GROUPS.

ORA-02164: DATAFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one DATAFILE clause.

Action: Specify at most one DATAFILE clause.

ORA-02165: invalid option for CREATE DATABASE

Cause: An invalid CREATE DATABASE option is present.

Action: Specify only valid CREATE DATABASE options.

ORA-02166: ARCHIVELOG and NOARCHIVELOG specified

Cause: Both ARCHIVELOG and NOARCHIVELOG are specified in a CREATE DATABASE statement.

Action: Specify at most one of these two options.

ORA-02167: LOGFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one LOGFILE clause.

Action: Specify at most one LOGFILE clause.

ORA-02168: invalid value for FREELISTS

Cause: A number does not follow FREELISTS

Action: Specify a number after FREELISTS

ORA-02169: FREELISTS storage option not allowed

Cause: The user attempted to specify the FREELISTS storage option. This option may only be specified during create table or create index.

Action: Remove these options and retry the statement.

ORA-02170: FREELIST GROUPS storage option not allowed

Cause: The user attempted to specify the FREELIST GROUPS storage option. This option may only be specified during create table and when allow_freelist_groups INIT.ORA is specified.

Action: Remove this option and retry the statement or set the allow_freelist_groups INIT.ORA parameter.

ORA-02171: invalid value for MAXLOGHISTORY

Cause: A number does not follow MAXLOGHISTORY

Action: Specify a number after MAXLOGHISTORY

ORA-02172: The PUBLIC keyword is not appropriate for a disable thread

Cause: The PUBLIC keyword was specified for a disable.

Action: Remove the keyword and resubmit.

ORA-02173: invalid option for DROP TABLESPACE

Cause: Either a token other than INCLUDING was found following the tablespace name or some text was found following INCLUDING CONTENTS.

Action: Place nothing or only INCLUDING CONTENTS after the tablespace name.

ORA-02174: Missing required thread number

Cause: Must specify thread number after THREAD keyword

Action: Use correct syntax.

ORA-02175: invalid rollback segment name

Cause: In the CREATE or DROP ROLLBACK SEGMENT statements, an identifier was not found following ROLLBACK SEGMENT.

Action: Place the segment name following ROLLBACK SEGMENT.

ORA-02176: invalid option for CREATE ROLLBACK SEGMENT

Cause: An invalid option was specified in a CREATE ROLLBACK SEGMENT statement.

Action: Specify one of the valid options: TABLESPACE and STORAGE.

ORA-02177: Missing required group number

Cause: Must specify group number after GROUP keyword

Action: Check the syntax of the command, specify a group number after GROUP, and retry it.

ORA-02178: correct syntax is: SET TRANSACTION READ { ONLY | WRITE }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02179: valid options: ISOLATION LEVEL { SERIALIZABLE | READ COMMITTED }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02180: invalid option for CREATE TABLESPACE

Cause: An invalid option was specified for the CREATE TABLESPACE statement.

Action: Specify one of the valid options: DATAFILE, DEFAULT STORAGE, ONLINE, OFFLINE, FORCE, RETENTION, IN SHARD.

ORA-02181: invalid option to ROLLBACK WORK

Cause: A token other than TO follows ROLLBACK [WORK].

Action: Place nothing or TO SAVEPOINT *name* after ROLLBACK [WORK].

ORA-02182: savepoint name expected

Cause: An identifier does not follow ROLLBACK [WORK] TO [SAVEPOINT].

Action: Place a savepoint name following TO [SAVEPOINT].

ORA-02183: valid options: ISOLATION_LEVEL { SERIALIZABLE | READ COMMITTED }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02184: resource quotas are not allowed in REVOKE

Cause: In a revoke statement, a resource quota was specified.

Action: Specify resource privilege without the quota.

ORA-02185: a token other than WORK follows COMMIT

Cause: A token other than WORK follows COMMIT.

Action: Place either nothing or WORK after COMMIT.

ORA-02186: tablespace resource privilege may not appear with other privileges

Cause: An attempt was made to grant or revoke a resource quota in the same statement in which other privileges are granted or revoked.

Action: Use a separate grant or revoke statement for the resource quota privilege.

ORA-02187: invalid quota specification

Cause: The user attempted to grant a tablespace quota above the upper limit.

Action: Grant a smaller tablespace quota.

ORA-02188: Cannot enable instance publicly

Cause: An attempt was made to publicly enable a thread associated with an instance.

Action: Leave out the PUBLIC keyword.

ORA-02189: ON *tablespace* required

Cause: In a grant or revoke statement, the user specified a tablespace quota but did not follow it with the ON *tablespace* clause.

Action: Specify the tablespace on which the quota is to be applied with the ON *tablespace* clause.

ORA-02190: keyword TABLES expected

Cause: The keyword TABLES is expected following DROP CLUSTER *name* INCLUDING.

Action: Place TABLES after INCLUDING.

ORA-02191: correct syntax is: SET TRANSACTION USE ROLLBACK SEGMENT *rb*s

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02192: PCTINCREASE not allowed for rollback segment storage clauses

Cause: pctincrease was specified in a create or alter rollback segment

Action: reissue statement without the pctincrease clause

ORA-02194: event specification syntax error *string* (minor error *string*) near '*string*'

Cause: There is a syntax error in an event specification.

Action: Fix the error.

ORA-02195: Attempt to create *string* object in a *string* tablespace

Cause: The object type is inconsistent with a tablespace contents.

Action: Create an object in a different tablespace, or change the user defaults.

ORA-02196: PERMANENT/TEMPORARY option already specified

Cause: In CREATE TABLESPACE, the PERMANENT and/or TEMPORARY options were specified more than once.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE. For more information about the parameters of CREATE TABLESPACE, see the Oracle9i SQL Reference.

ORA-02197: file list already specified

Cause: In CREATE TABLESPACE, more than one DATAFILE/TEMPFILE clause was specified.

Action: Merge the DATAFILE/TEMPFILE clauses into a single clause.

ORA-02198: ONLINE/OFFLINE option already specified

Cause: In CREATE TABLESPACE, the ONLINE and/or OFFLINE options were specified more than once.

Action: Specify at most one of ONLINE or OFFLINE.

ORA-02199: missing DATAFILE/TEMPFILE clause

Cause: A CREATE TABLESPACE statement has no DATAFILE/TEMPFILE clause.

Action: Specify a DATAFILE/TEMPFILE clause.

ORA-02200: WITH GRANT OPTION not allowed for PUBLIC

Cause: An attempt was made to GRANT to PUBLIC WITH GRANT OPTION.

Action: Remove the WITH GRANT OPTION clause.

ORA-02201: sequence not allowed here

Cause: An attempt was made to reference a sequence in a from-list.

Action: A sequence can only be referenced in a select-list.

ORA-02202: No more tables are permitted in this cluster.

Cause: An attempt was made to create a table in a cluster that already contains the maximum number of 32 tables.

Action: Only up to 32 tables may be stored per cluster. You need to drop an existing table in the cluster or create a new cluster for this table.

ORA-02203: INITIAL storage options not allowed

Cause: The user attempted to alter the INITIAL storage option of a table, cluster, index, or rollback segment. These options may only be specified when the object is created.

Action: Remove these options and retry the statement.

ORA-02204: ALTER, INDEX and EXECUTE not allowed for views

Cause: An attempt was made to grant or revoke an invalid privilege on a view.

Action: Do not attempt to grant or revoke any of ALTER, INDEX, or EXECUTE privileges on views.

ORA-02205: Only SELECT and ALTER object privileges are valid for sequences.

Cause: An attempt was made to grant or revoke an invalid privilege on a sequence.

Action: Do not attempt to grant or revoke any object privilege other than SELECT or ALTER on sequences.

ORA-02206: duplicate INITRANS option specification

Cause: INITRANS is specified more than once.

Action: Specify INITRANS at most once.

ORA-02207: invalid INITRANS option value

Cause: The INITRANS value is not an integer between 1 and 255 and less than or equal to the MAXTRANS value.

Action: Choose a valid INITRANS value.

ORA-02208: duplicate MAXTRANS option specification

Cause: MAXTRANS is specified more than once.

Action: Specify MAXTRANS at most once.

ORA-02209: invalid MAXTRANS option value

Cause: The MAXTRANS value is not an integer between 1 and 255 and greater than or equal to the INITRANS value.

Action: Choose a valid MAXTRANS value.

ORA-02210: no options specified for ALTER TABLE

Cause: No ALTER TABLE option was specified.

Action: Specify at least one alter table option.

ORA-02211: invalid value for PCTFREE or PCTUSED

Cause: The specified value for PCTFREE or PCTUSED is not an integer between 0 and 100.

Action: Choose an appropriate value for the option.

ORA-02212: duplicate PCTFREE option specification

Cause: PCTFREE option specified more than once.

Action: Specify PCTFREE at most once.

ORA-02213: duplicate PCTUSED option specification

Cause: PCTUSED option specified more than once.

Action: Specify PCTUSED at most once.

ORA-02214: duplicate BACKUP option specification

Cause: The BACKUP option to ALTER TABLE is specified more than once.

Action: Specify the option at most once.

ORA-02215: duplicate tablespace name clause

Cause: There is more than one TABLESPACE clause in the CREATE TABLE, CREATE INDEX, or CREATE ROLLBACK SEGMENT statement.

Action: Specify at most one TABLESPACE clause.

ORA-02216: tablespace name expected

Cause: A tablespace name was not present where required by the syntax for the failing statement.

Action: Specify a tablespace name where required by the syntax.

ORA-02217: duplicate storage option specification

Cause: A storage option (INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, PCTINCREASE) is specified more than once.

Action: Specify all storage options at most once.

ORA-02218: invalid INITIAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02219: invalid NEXT storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02220: invalid MINEXTENTS storage option value

Cause: The specified value must be a positive integer less than or equal to MAXEXTENTS.

Action: Specify an appropriate value.

ORA-02221: invalid MAXEXTENTS storage option value

Cause: The specified value must be a positive integer greater than or equal to MINEXTENTS.

Action: Specify an appropriate value.

ORA-02222: invalid PCTINCREASE storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-02223: invalid OPTIMAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02224: invalid privilege on a table

Cause: An attempt was made to grant an invalid privilege on a table.

Action: Only ALTER, DELETE, INDEX, INSERT, REFERENCES, SELECT, UPDATE, UNDER, ON COMMIT REFRESH, QUERY REWRITE, DEBUG, FLASHBACK, READ, and SIGN object privileges can be granted on a table. Do not grant any other privilege on a table.

ORA-02225: You can only grant or revoke EXECUTE and DEBUG object privileges for this object.

Cause: An attempt was made to grant or revoke an invalid privilege on a procedure, function, package, library, assembly, java source, java class, java resource, java shared data, Multilingual Engine (MLE) language, or SQL DOMAIN. You can only grant or revoke the EXECUTE and DEBUG object privilege on these object types.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE or DEBUG on procedures, functions package, library, assembly, java source, java class, java resource, java shared data, MLE language or SQL DOMAIN.

ORA-02226: invalid MAXEXTENTS value (max allowed: *string*)

Cause: The MAXEXTENTS specified is too large for the database block size. This applies only to SYSTEM rollback segment.

Action: Specify a smaller value.

ORA-02227: invalid cluster name

Cause: A cluster name of the form [*identifier .*] *identifier* is expected but not present.

Action: Enter an appropriate cluster name.

ORA-02228: duplicate SIZE specification

Cause: The SIZE option is specified more than once.

Action: Specify the SIZE option at most once.

ORA-02229: invalid SIZE option value

Cause: The specified value must be an integer number of bytes.

Action: Specify an appropriate value.

ORA-02230: invalid ALTER CLUSTER option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or SIZE is specified in an ALTER CLUSTER statement.

Action: Specify only legal options.

ORA-02231: missing or invalid option to ALTER DATABASE

Cause: An option other than ADD, DROP, RENAME, ARCHIVELOG, NOARCHIVELOG, MOUNT, DISMOUNT, OPEN, or CLOSE is specified in the statement.

Action: Specify only legal options.

ORA-02232: invalid MOUNT mode

Cause: A mode other than SHARED or EXCLUSIVE follows the MOUNT keyword in an ALTER DATABASE statement.

Action: Specify either SHARED, EXCLUSIVE, or nothing following MOUNT.

ORA-02233: invalid CLOSE mode

Cause: A mode other than NORMAL or IMMEDIATE follows the CLOSE keyword in an ALTER DATABASE statement.

Action: Specify either NORMAL, IMMEDIATE, or nothing following CLOSE.

ORA-02234: changes to this table are already logged

Cause: the log table to be added is a duplicate of another

Action: Don't add this change log to the system; check that the replication product's system tables are consistent

ORA-02235: this table logs changes to another table already

Cause: the table to be altered is already a change log for another table

Action: Don't log changes to the specified base table to this table; check that the replication product's system tables are consistent

ORA-02236: invalid file name

Cause: A character string literal was not used in the file name list of a LOGFILE, DATAFILE, or RENAME clause.

Action: Use correct syntax.

ORA-02237: invalid file size

Cause: A non-integer value was specified in the SIZE or RESIZE clause.

Action: Use correct syntax.

ORA-02238: file name lists have different numbers of files

Cause: In a RENAME clause in ALTER DATABASE or TABLESPACE, the the number of existing file names does not equal the number of new file names.

Action: Make sure there is a new file name to correspond to each existing file name.

ORA-02239: there are objects which reference this sequence

Cause: the sequence to be dropped is still referenced

Action: Make sure the sequence name is correct, or drop the referencing constraint/object

ORA-02240: invalid value for OBJNO or TABNO

Cause: A number does not follow either OBJNO or TABNO.

Action: Specify a number after OBJNO or TABNO.

ORA-02241: must of form EXTENTS (FILE *n* BLOCK *n* SIZE *n*, ...)

Cause: bad extent storage clause

Action: respecify

ORA-02242: no options specified for ALTER INDEX

Cause: No options specified.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE.

ORA-02243: invalid ALTER INDEX or ALTER MATERIALIZED VIEW option

Cause: An option other than INITRANS, MAXTRANS, or STORAGE is specified in an ALTER INDEX statement or in the USING INDEX clause of an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

ORA-02244: invalid ALTER ROLLBACK SEGMENT option

Cause: The STORAGE option is expected but not found.

Action: Specify the STORAGE option.

ORA-02245: invalid ROLLBACK SEGMENT name

Cause: An identifier was expected, but not found, following ALTER [PUBLIC] ROLLBACK SEGMENT.

Action: Place a rollback segment name following SEGMENT.

ORA-02246: missing EVENTS text

Cause: A character string literal was expected, but not found, following ALTER SESSION SET EVENTS.

Action: Place the string literal containing the events text after EVENTS.

ORA-02247: no option specified for ALTER SESSION

Cause: The option SET EVENTS was expected, but not found, following ALTER SESSION.

Action: Place the SET EVENTS option after ALTER SESSION.

ORA-02248: invalid option for ALTER SESSION

Cause: Obvious.

Action: see SQL Language Manual for legal options.

ORA-02249: missing or invalid value for MAXLOGMEMBERS

Cause: A valid number does not follow MAXLOGMEMBERS. The value specified must be between 1 and the port-specific maximum number of log file members.

Action: Specify a valid number after MAXLOGMEMBERS.

ORA-02250: missing or invalid constraint name

Cause: The constraint name is missing or invalid.

Action: Specify a valid identifier name for the constraint name.

ORA-02251: subquery not allowed here

Cause: Subquery is not allowed here in the statement.

Action: Remove the subquery from the statement.

ORA-02252: check constraint condition not properly ended

Cause: The specified search condition for the check constraint is not properly ended.

Action: End the condition properly.

ORA-02253: constraint specification not allowed here

Cause: Constraint specification is not allowed here in the statement.

Action: Remove the constraint specification from the statement.

ORA-02254: DEFAULT expression not allowed here

Cause: Default value expression is not allowed for the column here in the statement.

Action: Remove the default value expression from the statement.

ORA-02255: obsolete 7.1.5

Cause: Was that defaults must not conflict with not null constraints

Action: n/a

ORA-02256: number of referencing columns must match referenced columns

Cause: The number of columns in the foreign-key referencing list is not equal to the number of columns in the referenced list.

Action: Make sure that the referencing columns match the referenced columns.

ORA-02257: maximum number of columns exceeded

Cause: The number of columns in the key list exceeds the maximum number.

Action: Reduce the number columns in the list.

ORA-02258: duplicate or conflicting NULL and/or NOT NULL specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02259: duplicate UNIQUE/PRIMARY KEY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02260: table can have only one primary key

Cause: Self-evident.

Action: Remove the extra primary key.

ORA-02261: The unique or primary key already exists in the table.

Cause: The unique or primary key value that was used already exists in the table.

Action: Remove the extra key or specify an unused value for the key.

ORA-02262: ORA-string occurs while type-checking column default value expression

Cause: New column data type causes type-checking error for existing column default value expression.

Action: Remove the default value expression or don't alter the column data type.

ORA-02263: need to specify the data type for this column

Cause: The required data type for the column is missing.

Action: Specify the required data type.

ORA-02264: name already used by an existing constraint

Cause: The specified constraint name has to be unique.

Action: Specify a unique constraint name for the constraint.

ORA-02265: cannot derive the data type of the referencing column

Cause: The data type of the referenced column is not defined as yet.

Action: Make sure that the data type of the referenced column is defined before referencing it.

ORA-02266: unique/primary keys in table referenced by enabled foreign keys

Cause: An attempt was made to truncate a table with unique or primary keys referenced by foreign keys enabled in another table. Other operations not allowed are dropping/truncating a partition of a partitioned table or an ALTER TABLE EXCHANGE PARTITION.

Action: Before performing the above operations the table, disable the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

ORA-02267: column type incompatible with referenced column type

Cause: The data type or collation of the referencing column was incompatible with the data type or collation of the referenced column.

Action: Select a compatible data type for the referencing column. Also, the collation of a character column in a foreign key must match the collation of the corresponding column in the primary key.

ORA-02268: referenced table does not have a primary key

Cause: The referenced table does not have a primary key.

Action: Specify explicitly the referenced table unique key.

ORA-02269: key column cannot be of LONG data type

Cause: Self-evident.

Action: Change the data type of the column, or remove the column from the key.

ORA-02270: no matching unique or primary key for this column-list

Cause: A REFERENCES clause in a CREATE/ALTER TABLE statement gives a column-list for which there is no matching unique or primary key constraint in the referenced table.

Action: Find the correct column names using the ALL_CONS_COLUMNS catalog view

ORA-02271: table does not have such constraint

Cause: Self-evident.

Action: Make sure the specified constraint name is correct.

ORA-02272: constrained column cannot be of LONG data type

Cause: Self-evident.

Action: Change the data type of the column, or remove the constraint on the column.

ORA-02273: this unique/primary key is referenced by some foreign keys

Cause: Self-evident.

Action: Remove all references to the key before the key is to be dropped.

ORA-02274: duplicate referential constraint specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02275: such a referential constraint already exists in the table

Cause: Self-evident.

Action: Remove the extra constraint.

ORA-02276: default value type incompatible with column type

Cause: The type of the evaluated default expression is incompatible with the data type of the column.

Action: Change the type of the column, or modify the default expression.

ORA-02277: invalid sequence name

Cause: The specified sequence name is not a valid identifier name.

Action: Specify a valid identifier name for the sequence name.

ORA-02278: duplicate or conflicting MAXVALUE/NOMAXVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02279: duplicate or conflicting MINVALUE/NOMINVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02280: duplicate or conflicting CYCLE/NOCYCLE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02281: duplicate or conflicting CACHE/NOCACHE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02282: duplicate or conflicting ORDER/NOORDER specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02283: cannot alter starting sequence number

Cause: Self-evident.

Action: Don't alter it.

ORA-02284: duplicate INCREMENT BY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02285: duplicate START WITH specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02286: no options specified for ALTER SEQUENCE

Cause: Self-evident.

Action: The statement is meaningless without any options.

ORA-02287: sequence number not allowed here

Cause: The specified sequence number (CURRVAL or NEXTVAL) is inappropriate here in the statement.

Action: Remove the sequence number.

ORA-02288: invalid OPEN mode

Cause: A token other than RESETLOGS appears following ALTER DATABASE *name* OPEN.

Action: Either nothing or RESETLOGS should be placed following OPEN.

ORA-02289: sequence does not exist

Cause: The specified sequence does not exist, or the user does not have the required privilege to perform this operation.

Action: Make sure the sequence name is correct, and that you have the right to perform the desired operation on this sequence.

ORA-02290: check constraint (*string.string*) violated

Cause: The values being inserted do not satisfy the named check constraint.

Action: do not insert values that violate the constraint.

ORA-02291: integrity constraint (*string.string*) violated - parent key not found

Cause: A foreign key value has no matching primary key value.

Action: Delete the foreign key or add a matching primary key.

ORA-02292: integrity constraint (*string.string*) violated - child record found

Cause: attempted to delete a parent key value that had a foreign key dependency.

Action: delete dependencies first then parent or disable constraint.

ORA-02293: cannot validate (*string.string*) - check constraint violated

Cause: an alter table operation tried to validate a check constraint to a populated table that had noncomplying values.

Action: Obvious

ORA-02294: cannot enable (*string.string*) - constraint changed during validation

Cause: While one DDL statement was attempting to enable this constraint, another DDL changed this same constraint.

Action: Try again, with only one DDL changing the constraint this time.

ORA-02295: found more than one enable/disable clause for constraint

Cause: a create or alter table specified more than one enable and/or disable clause for a given constraint.

Action: only one enable or disable may be specified for a given constraint.

ORA-02296: cannot enable (*string.string*) - null values found

Cause: an alter table enable constraint failed because the table contains values that do not satisfy the constraint.

Action: Obvious

ORA-02297: cannot disable constraint (*string.string*) - dependencies exist

Cause: an alter table disable constraint failed because the table has foreign keys that are dependent on this constraint.

Action: Either disable the foreign key constraints or use disable cascade

ORA-02298: cannot validate (*string.string*) - parent keys not found

Cause: an alter table validating constraint failed because the table has orphaned child records.

Action: Obvious

ORA-02299: cannot validate (*string.string*) - duplicate keys found

Cause: an alter table validating constraint failed because the table has duplicate key values.

Action: Obvious

ORA-02300: invalid value for OIDGENERATORS

Cause: A number was not specified for the value of OIDGENERATORS.

Action: Specify a number for OIDGENERATORS.

ORA-02301: maximum number of OIDGENERATORS is 255

Cause: A number greater than 255 was specified for the value of OIDGENERATORS.

Action: Make sure the number specified for OIDGENERATORS does not exceed 255.

ORA-02302: invalid or missing type name

Cause: An invalid or missing type name was entered in a statement.

Action: Enter a valid type name in the statement and retry the operation.

ORA-02303: Cannot DROP or REPLACE a type with type or table dependents.

Cause: An attempt was made to DROP or REPLACE a type that has type or table dependents.

Action: For DROP TYPE, drop all types and tables depending on the type and then retry the operation, or use the FORCE option. For CREATE TYPE, drop all types and tables depending on the type and then retry the operation, or drop all tables depending on the type and retry with the FORCE option. This query lists the dependent objects: SELECT owner, name, type FROM all_dependencies WHERE referenced_name = '<type_name>' AND referenced_owner = '<type_owner>';

ORA-02304: invalid object identifier literal

Cause: An attempt was made to enter an object identifier literal for CREATE TYPE that is either: - not a string of 32 hexadecimal characters - an object identifier that already identifies an existing object - an object identifier different from the original object identifier already assigned to the type

Action: Do not specify the object identifier clause or specify a 32 hexadecimal-character object identifier literal that is unique or identical to the originally assigned object identifier. Then retry the operation.

ORA-02305: only EXECUTE, DEBUG, and UNDER privileges are valid for types

Cause: An attempt was made to GRANT or REVOKE an invalid privilege (not EXECUTE, DEBUG, or UNDER) on a type.

Action: GRANT or REVOKE only the EXECUTE, DEBUG, or UNDER privilege on types.

ORA-02306: cannot create a type that already has valid dependent(s)

Cause: An attempt was made to create a type that already has some valid dependent(s) (these dependents depend on the fact that the type does not exist).

Action: Drop the dependents first before creating the type, or do not create the type.

ORA-02307: cannot alter with REPLACE option a type that is not valid

Cause: An attempt was made to ALTER with REPLACE option a type that is not valid.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

ORA-02308: invalid option *string* for object type column

Cause: An attempt was made to specify an invalid option, such as PACKED or UNPACKED, for the object type column.

Action: Remove the invalid option from column specification and retry the operation.

ORA-02309: atomic NULL violation

Cause: An attempt was made to access the attributes of a NULL object instance.

Action: Ensure that the object instance is non-NULL before accessing.

ORA-02310: exceeded maximum number of allowed columns in table

Cause: The creation of an object column internally creates a number of columns, including columns for any scalar attribute at any level. The total number of columns created exceeded the maximum column limit for the table.

Action: If this object column needs to be part of the table, drop some other columns so that the limit is not exceeded.

ORA-02311: cannot alter with COMPILE option a valid type with type or table dependents

Cause: An attempt was made to ALTER with COMPILE option a type that is valid and has type or table dependents.

Action: No need to perform this operation.

ORA-02313: Object type contains non-queryable type *string* attribute.

Cause: The specified object type contained a nested attribute whose type could not be queried.

Action: Use an object type with queryable attribute types. *Params: 1) type: The non-queryable type.

ORA-02314: illegal use of type constructor

Cause: The statement contains an illegal use of a type constructor.

Action: Refer to the SQL Reference manual for the correct statement syntax.

ORA-02315: incorrect number of arguments for default constructor

Cause: The number of arguments specified for the default constructor doesn't match the number of attributes of the object type.

Action: Specify the correct number of arguments for the default constructor and retry the operation.

ORA-02320: failure in creating storage table for nested table column *string*

Cause: An error occurred while creating the storage table for the specified nested table column.

Action: See the messages that follow for more details. If the situation described can be corrected, do so. Otherwise, contact Oracle Support. *Params: 1) column: The given nested table column name.

ORA-02322: failure in accessing storage table of the nested table column

Cause: An error occurred while performing DML on the storage table of the nested table column.

Action: If the situation described in the following messages can be corrected, do so; otherwise contact Oracle Support Services.

ORA-02324: more than one column in the SELECT list of THE subquery

Cause: More than one column was selected in the THE subquery.

Action: Specify only one column in the SELECT list of the THE subquery and retry the operation.

ORA-02327: cannot create index on expression with data type *string*

Cause: An attempt was made to create an index on an expression with an unsupported data type: VARRAY, nested table, ADT, LOB, or REF.

Action: Change the column data type or do not create the index on an expression whose data type is one of VARRAY, nested table, ADT, LOB, or REF. *Params: 1) data_type: The unsupported data type.

ORA-02329: Column of data type *string* cannot be unique or a primary key.

Cause: An attempt was made to place a UNIQUE or a PRIMARY KEY constraint on a column of data type VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column data type or remove the constraint. Then retry the operation. *Params: 1) data_type: The data type of the column.

ORA-02330: data type specification not allowed

Cause: An attempt was made to specify the data type in the column constraint specification of an object table.

Action: Remove data type specification and retry the operation.

ORA-02331: cannot create constraint on column of data type *string*

Cause: An attempt was made to create a constraint on a column of data type VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column data type, or remove the constraint. *Params: 1) type: The disallowed data type.

ORA-02332: cannot create index on attributes of this column

Cause: An attempt was made to create an index on an attributes of an object type column.

Action: Do not specify the index on the attribute.

ORA-02334: cannot infer type for column

Cause: A data type was not declared for this column (in the CREATE TABLE) and an attempt was made to create a constraint on an attribute of this column.

Action: Declare a data type for the column.

ORA-02335: invalid data type for cluster column *string*

Cause: An attempt was made to declare a CLUSTER column of data type object, REF, nested table, VARRAY, LOB, or FILE.

Action: Remove the CLUSTER column or change the data type of the column. *Params: 1) column: The column name.

ORA-02336: column attribute cannot be accessed

Cause: An attempt was made to extract an attribute from a packed object type column or a column that is not an Abstract Data Type (ADT).

Action: Correct the column name to use an unpacked ADT column.

ORA-02337: '*string*' is not an object type column.

Cause: An attempt was made to use dot notation on a non Abstract Data Type (ADT) column; that is, "a.b.c" where "a" is not an object type.

Action: Either change the column type to an object type or do not perform this operation. *Params: 1) column : The column name with dot notation.

ORA-02338: missing or invalid column constraint specification

Cause: A column constraint was not specified.

Action: Remove the column specification or specify a column constraint. Then retry the operation.

ORA-02342: replacement type has compilation errors

Cause: The use of the ALTER...REPLACE statement on a valid type caused a compilation error.

Action: Use the ALTER...REPLACE statement to replace the type with a valid type which does not cause compilation errors.

ORA-02344: Cannot revoke EXECUTE privilege on a type with table dependents.

Cause: An attempt was made to revoke EXECUTE privilege from a type that had table dependents.

Action: Drop all tables that depend on the type, then retry the operation, or use the FORCE option.

ORA-02345: cannot create a view with column based on CURSOR operator

Cause: A CURSOR operator was used as one of the SELECT elements in the subquery of a CREATE VIEW or CREATE TABLE ... AS SELECT statement.

Action: Remove the CURSOR operator and replace it with the CAST operator.

ORA-02347: Direct object privileges cannot be granted on object table columns.

Cause: An attempt was made to grant direct object privileges on the columns of an object table. Privileges cannot be granted to object table columns.

Action: A change to the design may be needed. An option may be to create a view on the object table and create privileges on the view columns.

ORA-02348: cannot create VARRAY column with embedded LOB

Cause: An attempt was made to create a column of VARRAY type which had an embedded large object (LOB) attribute. The LOB could be an attribute of a subtype of the declared type of the VARRAY element.

Action: Remove the offending attribute from the type. If it is a subtype attribute, then declare the VARRAY column as NOT SUBSTITUTABLE.

ORA-02349: invalid user-defined type - type is incomplete

Cause: An attempt was made to use an incomplete type definition as a column or table data type.

Action: Complete the type definition and retry the operation.

ORA-02351: internal error: *string*\n

Cause: An unexpected error condition was detected.

Action: Make a note of the error number and message and contact Oracle Support Services.

ORA-02352: error setting an OCI attribute: *string*\n

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02353: error fetching an OCI attribute: *string*\n

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02354: error in exporting/importing data\n*string*

Cause: An error has occurred in a stream export or import operation. This message will be followed by another message giving more details about this error.

Action: See export/import documentation for an explanation of the second error message.

ORA-02355: error opening file: *string*\n

Cause: An attempt to open the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02356: The database is out of space. The load cannot continue

Cause: The load was discontinued due to space exhaustion in the database.

Action: Add space for the specified table.

ORA-02357: header in file *string* may not contain correct information\n

Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

ORA-02358: error in exporting or importing data\n

Cause: An error has occurred in a stream export or import operation.

Action: Contact Oracle Support Services.

ORA-02359: database version in file *string* is not valid\n

Cause: The specified file could not be used for this load because its database version was not compatible with the database version in the other files in the DUMPFILE clause.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

ORA-02360: fatal error during data export/import initialization\n

Cause: An unexpected error occurred during initialization for data export/import.

Action: Contact Oracle Support Services.

ORA-02361: error while attempting to allocate *number* bytes of memory\n

Cause: An error occurred while trying to allocate memory. This is likely caused by insufficient memory.

Action: Reconnect to the instance and retry the operation.

ORA-02362: error closing file: *string*\n

Cause: An attempt to close the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02363: error reading from file: *string*\n

Cause: An attempt to read from the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02364: error writing to file: *string*\n

Cause: An attempt to write to the specified file for data export or import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02365: error seeking in file: *string*\n

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02366: The following index(es) on table *string* were processed:

Cause: The table had some indexes which were loaded if there were no errors.

Action: None

ORA-02367: read ended but had expected more data from file *string*\n

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully and that the files had not been accidentally truncated.

ORA-02368: the following file is not valid for this load operation\n

Cause: A file could not be used for this load. See the following message for more information.

Action: Verify all the files in the DUMPFILe clause are from the same unload operation and that the unload was successful.

ORA-02369: internal number in header in file *string* is not valid\n

Cause: The specified file could not be used for this load because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

ORA-02370: internal metadata in file *string* is not valid\n

Cause: The specified file could not be used for this load because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the DUMPFILe clause are from the same unload operation.

ORA-02371: Loader must be at least version *string.string.string.string.string* for direct path

Cause: The loader being used is incompatible with this version of the kernel.

Action: Upgrade your loader to at least the specified version or use the conventional path.

ORA-02372: data for row: *string* \n

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

ORA-02373: Error parsing insert statement for table *string*.

Cause: self-evident.

Action: Check the error given below this one.

ORA-02374: conversion error loading table *string.string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02375: conversion error loading table *string.string* partition *string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02376: invalid or redundant resource

Cause: a create, or alter profile command which names a resource not yet defined, or try to specify same resource twice.

Action: define resource first

ORA-02377: invalid profile limit *string*

Cause: A value of 0 or lower was specified for the limit.

Action: Specify a limit greater than 0. For password profile parameters, some additional restrictions apply: * The specified limit of the PASSWORD_ROLLOVER_TIME profile parameter cannot exceed either 60 days, or the current value of the PASSWORD_GRACE_TIME limit of the profile, or the current value of the PASSWORD_LIFE_TIME limit of the profile; whichever value is lowest. * When the PASSWORD_ROLLOVER_TIME profile parameter is non-zero (the password rollover feature is enabled), the specified limit cannot be less than 1 hour, to give the application time to switch over to the new password. * The PASSWORD_LIFE_TIME and PASSWORD_GRACE_TIME limits cannot be less than the PASSWORD_ROLLOVER_TIME limit. * For the INACTIVE_ACCOUNT_TIME profile parameter, the specified limit cannot be less than 15 days. * For the PASSWORD_GRACE_TIME profile parameter, 0 is allowed as a permissible value.

ORA-02378: duplicate resource name *string*

Cause: The same resource was specified twice in a CREATE or ALTER PROFILE statement.

Action: Issue the statement again, carefully checking that each resource is used only once.

ORA-02379: profile *string* already exists

Cause: Try to create a profile which already exist

Action: Create the profile with a name not already used by another profile.

ORA-02380: profile *string* does not exist

Cause: Try to assign a user to a nonexistent profile

Action: Assign the user to an existing profile.

ORA-02381: cannot drop *string* profile

Cause: An attempt was made to drop PUBLIC_DEFAULT or a mandatory profile, which is not allowed due to following restrictions: * PUBLIC_DEFAULT profile can be dropped only when the database is in migration mode. * A mandatory profile can be dropped only if it is not set as a mandatory profile in root container (CDB\$ROOT) of a multitenant container database (CDB) or in a Pluggable Database (PDB).

Action: If you are trying to drop the PUBLIC_DEFAULT profile, try dropping it during migration mode. If you are trying to drop a mandatory profile, check the MANDATORY_USER_PROFILE system parameter setting in the root container (CDB\$ROOT) or in a Pluggable Database (PDB) and retry the operation after resetting the MANDATORY_USER_PROFILE system parameter by executing ALTER SYSTEM RESET DDL statement.

ORA-02382: profile *string* has users assigned, cannot drop without CASCADE

Cause: An attempt was made to drop a profile that had users assigned to it without using the CASCADE option of the DROP PROFILE statement. A profile that had users assigned to it cannot be dropped, unless the CASCADE option was specified. CASCADE reassigns users to the PUBLIC_DEFAULT profile before dropping the profile.

Action: To reassign all users to the PUBLIC_DEFAULT profile, issue the DROP PROFILE statement with the CASCADE option.

ORA-02383: illegal cost factor

Cause: Negative or UNLIMITED cost for this resource

Action: Only positive integer values can be specified for resources in the ALTER RESOURCE COST statement. Issue the statement again, using a positive integer value for each resource specified.

ORA-02384: cannot drop an oracle maintained profile

Cause: An attempt was made to drop an oracle maintained profile. An oracle maintained profile can be dropped only by SYS during migration mode.

Action: Drop the oracle maintained profile during migration mode.

ORA-02385: cannot assign mandatory profile *string* to a user

Cause: An attempt was made to assign a mandatory profile to the user. A mandatory profile defined in the root container (CDB\$ROOT) of a multitenant container database (CDB) was meant only to enforce the minimum password complexity requirement inside the Pluggable Database (PDB), therefore it was not allowed to assign the profile to database or Real Application Security (RAS) users.

Action: Assign a profile other than mandatory profile.

ORA-02386: invalid value for MANDATORY_USER_PROFILE parameter

Cause: An attempt was made to specify a profile for the MANDATORY_USER_PROFILE parameter, which does not exist as a mandatory profile in the root container (CDB\$ROOT) of a multitenant container database (CDB).

Action: Check DBA_PROFILES to see if a profile exists as a mandatory profile and specify a valid value. Only CDB Common profiles created as mandatory profiles using the CREATE MANDATORY PROFILE DDL statement are allowed as valid values for the MANDATORY_USER_PROFILE parameter.

ORA-02387: invalid password parameter for mandatory profile string

Cause: Invalid resource name was specified for the mandatory profile.

Action: Assign a valid resource name to the mandatory profile. Only PASSWORD_VERIFY_FUNCTION and PASSWORD_GRACE_TIME password parameters can be specified for a mandatory profile. If the value is specified as DEFAULT or not specified at all, then instead of using the password parameters of the PUBLIC_DEFAULT profile, it is interpreted as NULL and 0 for PASSWORD_VERIFY_FUNCTION and PASSWORD_GRACE_TIME parameters, respectively, for mandatory profile enforcement purposes.

ORA-02390: exceeded COMPOSITE_LIMIT, you are being logged off

Cause: The COMPOSITE_LIMIT for the profile is exceeded. That is, the weighted sum of the connection time, logical reads per session, CPU usage per session, and private SGA space used during the session exceeded the limit set by the COMPOSITE_LIMIT clause set in the user profile.

Action: If this happens often, ask the database administrator to raise the COMPOSITE_LIMIT of the user profile, or determine which resource is used the most and raise the limit on that resource.

ORA-02391: exceeded simultaneous SESSIONS_PER_USER limit

Cause: An attempt was made to exceed the maximum number of concurrent sessions allowed by the SESSIONS_PER_USER clause of the user profile.

Action: End one or more concurrent sessions or ask the database administrator to increase the SESSIONS_PER_USER limit of the user profile.

ORA-02392: exceeded session limit on CPU usage, you are being logged off

Cause: An attempt was made to exceed the maximum CPU usage allowed by the CPU_PER_SESSION clause of the user profile.

Action: If this happens often, ask the database administrator to increase the CPU_PER_SESSION limit of the user profile.

ORA-02393: exceeded call limit on CPU usage

Cause: An attempt was made to exceed the maximum CPU time for a call, a parse, execute, or fetch, allowed by the CPU_PER_CALL clause of the user profile.

Action: If this happens often, ask the database administrator to increase the CPU_PER_CALL limit of the user profile.

ORA-02394: The current session exceeds IO usage limits; this session is being logged off.

Cause: An operation performed by the session exceeded the maximum I/O limit allowed by the LOGICAL_READS_PER_SESSION clause of the user profile.

Action: If this happens often, request the database administrator to increase the LOGICAL_READS_PER_SESSION limit of the user profile.

ORA-02395: exceeded call limit on IO usage

Cause: An attempt was made to exceed the maximum I/O for a call, a parse, execute, or fetch, allowed by the LOGICAL_READS_PER_CALL clause of the user profile.

Action: If this happens often, ask the database administrator to increase the LOGICAL_READS_PER_CALL limit of the user profile.

ORA-02396: exceeded maximum idle time, please connect again

Cause: as stated

Action: The user must reconnect to the database.

ORA-02397: exceeded PRIVATE_SGA limit, you are being logged off

Cause: Only when using TP monitor

Action: expand limit

ORA-02398: exceeded procedure space usage

Cause: Stored procedure used up too much space in SYSTEM Tablespace

Action: Use less stored procedure

ORA-02399: exceeded maximum connect time, you are being logged off

Cause: As stated

Action: The user must reconnect to the database.

ORA-02401: cannot EXPLAIN view owned by another user

Cause: The view specified in the SQL statement belongs to another user and cannot be explained.

Action: Create a view with the same definition that belongs to current user.

ORA-02402: PLAN_TABLE not found

Cause: The table used by EXPLAIN to store plan information does not exist in the current schema.

Action: Create a plan table in the current schema if absent, or use the INTO clause to store the output of EXPLAIN in an existing plan table.

ORA-02403: plan table does not have correct format

Cause: The explicit plan table does not have the appropriate field definitions.

Action: Redefine the plan table to have the appropriate field definitions.

ORA-02404: specified plan table not found

Cause: The specified plan table does not exist.

Action: Create the specified plan table or use an existing plan table.

ORA-02405: invalid SQL plan object provided

Cause: A NULL, empty, or malformed object of type SQL_PLAN_TABLE_TYPE was provided.

Action: Provide a new, properly formed object to the function.

ORA-02420: missing schema authorization clause

Cause: the AUTHORIZATION clause is missing from a create schema statement.

Action: Precede the schema authorization identifier with the AUTHORIZATION keyword.

ORA-02421: missing or invalid schema authorization identifier

Cause: the schema name is missing or is incorrect in an authorization clause of a create schema statement.

Action: If the name is present, it must be the same as the current schema.

ORA-02422: missing or invalid schema element

Cause: A statement other than a create table, create view, or grant privilege appears in a create schema statement.

Action: Self-evident.

ORA-02423: schema name does not match schema authorization identifier

Cause: a table definition with a schema name prepended to the table name does not match the schema name provided in the authorization clause of a create schema statement.

Action: make sure the schema names match.

ORA-02424: potential circular view references or unknown referenced tables

Cause: the create schema statement contains views that depend on other views in the containing create schema statement or they contain references to unknown tables.

Action: create the dependent views in a separate create schema statement and make sure all referenced tables are either defined in the create schema statement or exist outside the statement.

ORA-02425: create table failed

Cause: a create table statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02426: privilege grant failed

Cause: a grant privilege statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02427: create view failed

Cause: a create view statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02428: could not add foreign key reference

Cause: could not add a foreign key reference because of error in declaration. Either referenced table does not exist or table does not have a unique key.

Action: make sure referenced table exists and/or has unique key

ORA-02429: cannot drop index used for enforcement of unique/primary key

Cause: user attempted to drop an index that is being used as the enforcement mechanism for unique or primary key.

Action: drop the constraint instead of the index.

ORA-02430: cannot enable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02431: cannot disable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02432: cannot enable primary key - primary key not defined for table

Cause: Attempted to enable a primary key that is not defined for the table.

Action: Need to add a primary key definition for the table.

ORA-02433: cannot disable primary key - primary key not defined for table

Cause: Attempted to disable a primary key that is not defined for the table.

Action: None

ORA-02434: cannot enable unique(*string*) - unique key not defined for table

Cause: attempted to enable a unique key that is not defined for the table.

Action: None

ORA-02435: cannot disable unique(*string*) - unique key not defined for table

Cause: attempted to disable a unique key that is not defined for the table.

Action: None

ORA-02436: date or system variable wrongly specified in CHECK constraint

Cause: An attempt was made to use a date constant or system variable, such as USER, in a check constraint that was not completely specified in a CREATE TABLE or ALTER TABLE statement. For example, a date was specified without the century.

Action: Completely specify the date constant or system variable. Setting the event 10149 allows constraints like "a1 > '10-MAY-96'", which a bug permitted to be created before version 8.

ORA-02437: cannot validate (*string.string*) - primary key violated

Cause: attempted to validate a primary key with duplicate values or null values.

Action: remove the duplicates and null values before enabling a primary key.

ORA-02438: Column check constraint cannot reference other columns

Cause: attempted to define a column check constraint that references another column.

Action: define it as a table check constraint.

ORA-02439: Unique index on a deferrable constraint is not allowed

Cause: attempted to enable a deferrable primary key/unique constraint that has an existing unique index on the constraint columns.

Action: Drop the index on the constraint columns or make the constraint not deferrable.

ORA-02440: Create as select with referential constraints not allowed

Cause: create table foo (... ref. con. ...) as select ...;

Action: Create the table as select, then alter the table to add the constraints afterwards.

ORA-02441: Cannot drop nonexistent primary key

Cause: alter table drop primary key - primary key does not exist.

Action: None

ORA-02442: Cannot drop nonexistent unique key

Cause: alter table drop unique (*col list*) - unique specification does not exist.

Action: make sure column list for unique constraint is correct.

ORA-02443: Cannot drop constraint - nonexistent constraint

Cause: alter table drop constraint <constraint_name>

Action: make sure you supply correct constraint name.

ORA-02444: Cannot resolve referenced object in referential constraints

Cause: attempted to define foreign key referencing an object which cannot be resolved to a base table reference

Action: referential constraints can only be defined on objects which can be resolve to base table reference

ORA-02445: Exceptions table not found

Cause: the explicitly or implicitly declared exceptions table does not exist.

Action: Create the table then issue the enable command again.

ORA-02446: CREATE TABLE ... AS SELECT failed - check constraint violated

Cause: An attempt was made to use a CREATE TABLE ... AS SELECT statement when some rows violated one or more CHECK constraints.

Action: Do not select rows that violate constraints.

ORA-02447: cannot defer a constraint that is not deferrable

Cause: An attempt was made to defer a nondeferrable constraint

Action: Drop the constraint and create a new one that is deferrable

ORA-02448: constraint does not exist

Cause: The named constraint does not exist

Action: Stop trying to do something with a nonexistent constraint

ORA-02449: unique/primary keys in table referenced by foreign keys

Cause: An attempt was made to drop a table with unique or primary keys referenced by foreign keys in another table.

Action: Before performing the above operations the table, drop the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

ORA-02450: Invalid hash option - missing keyword IS

Cause: Missing IS keyword.

Action: Specify HASH IS option.

ORA-02451: duplicate HASHKEYS specification

Cause: The HASHKEYS option is specified more than once.

Action: Only specify the HASHKEYS option once.

ORA-02452: invalid HASHKEYS option value

Cause: The specified HASHKEYS option must be an integer value.

Action: Specify an appropriate value.

ORA-02453: duplicate HASH IS specification

Cause: The HASH IS option is specified more than once.

Action: only specify the HASH IS option once.

ORA-02454: Number of hash keys per block (*string*) exceeds maximum of *string*

Cause: The SIZE argument is too small.

Action: Increase the SIZE argument.

ORA-02455: The number of cluster key column must be 1

Cause: When specifying the HASH IS option, the number of key columns must be 1.

Action: Either do not specify the HASH IS option or reduce the number of key columns.

ORA-02456: The HASH IS column specification must be an Oracle Number.

Cause: The column specification must specify an Oracle Number.

Action: Specify the column definition as type NUMBER(precision, 0).

ORA-02457: The HASH IS option must specify a valid column.

Cause: The HASH IS column name is not specified in the cluster definition.

Action: Specify a valid column name in the cluster definition and retry.

ORA-02458: HASHKEYS must be specified for a HASH CLUSTER

Cause: The HASHKEYS option must be specified when creating a HASH CLUSTER.

Action: Specify the HASHKEYS option.

ORA-02459: Hashkey value must be a positive integer

Cause: The value of the hash key was not a positive number.

Action: Specify a positive integer.

ORA-02460: Inappropriate index operation on a hash cluster

Cause: An attempt to create a cluster index was issued on a hash cluster.

Action: Do not attempt to create such an index.

ORA-02461: Inappropriate use of the INDEX option

Cause: This option is only valid for non hash clusters.

Action: Do not specify this option.

ORA-02462: Duplicate INDEX option specified

Cause: The INDEX option is specified more than once.

Action: Only specify the INDEX option once.

ORA-02463: Duplicate HASH IS option specified

Cause: The HASH IS option is specified more than once.

Action: Only specify the HASH IS option once.

ORA-02464: Cluster definition can not be both HASH and INDEX

Cause: The cluster can either be a hash or indexed cluster - not both.

Action: Remove either the HASH IS or INDEX options.

ORA-02465: Inappropriate use of the HASH IS option

Cause: This option is only valid for clusters

Action: Do not specify this option

ORA-02466: The SIZE and INITRANS options cannot be altered for a hash cluster.

Cause: Attempted to change the SIZE or INITRANS options after the the hash cluster was created.

Action: Do not specify either of these options.

ORA-02467: Column referenced in HASH IN expression is not found in cluster definition.

Cause: A column in the HASH IS expression was not present in the cluster definition.

Action: Correct the cluster definition by either using column(s) that are present in the cluster key columns(s) or add the column you have chosen for the HASH IS clause as cluster key.

ORA-02468: Constant or system variable wrongly specified in expression

Cause: A constant or system variable was specified in the hash expression.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02469: Hash expression does not return an Oracle Number.

Cause: The chosen expression for the HASH IS clause does not return an Oracle Number.

Action: Choose an expression for the HASH IS clause that returns an Oracle number when creating your cluster.

ORA-02470: TO_DATE, USERENV, or SYSDATE incorrectly used in hash expression.

Cause: An attempt was made to specify SYSDATE, UID, USER, ROWNUM, or LEVEL in hash expression.

Action: Re-create the cluster and correct the error in hash expression.

ORA-02471: An unsupported function is used in the HASH IS expression.

Cause: An attempt was made to use an unsupported user-related function, an unsupported datetime function, or a pseudocolumn. Examples of unsupported constructs in the HASH IS expression are: LEVEL, ROWNUM, UID, USER, SYSDATE, SYSTIMESTAMP. For the full list, please consult Oracle documentation.

Action: Use the correct cluster definition and remove the unsupported functions.

ORA-02472: PL/SQL functions not allowed in hash expressions

Cause: A PL/SQL function was used in the hash expression.

Action: Recreate the cluster and remove the PL/SQL function.

ORA-02473: Error while evaluating the cluster's hash expression.

Cause: An error occurred while evaluating the clusters hash expression.

Action: Correct the query and retry.

ORA-02474: Fixed hash area extents used (*string*) exceeds maximum allowed (*string*)

Cause: The number of extents required for creating the fixed hash area exceeds the maximum number allowed.

Action: Reduce the number of extents required by increasing the extent allocation sizes within the STORAGE clause.

ORA-02475: maximum cluster chain block count of *string* has been exceeded

Cause: The number of blocks in a cluster chain exceeds the maximum number allowed.

Action: Increase SIZE parameter in CREATE CLUSTER statement or reconsider suitability of cluster key.

ORA-02476: can not create index due to parallel direct load on table

Cause: A parallel direct load is occurring to the specified table.

Action: Retry statement after load is complete.

ORA-02477: can not perform parallel direct load on object *string*

Cause: A parallel direct load is not possible because an index is being created on the table.

Action: Retry load after index creation is complete.

ORA-02478: merge into base segment overflowed MAXEXTENTS limit

Cause: Merging the temporary segment into the base segment failed because MAXEXTENTS was smaller than the total in the temporary and base segments.

Action: Increase the value for MAXEXTENTS on the base segment.

ORA-02479: error while translating file name *string* for parallel load

Cause: The specified file name in which to load data is invalid.

Action: Specify a valid database file.

ORA-02482: Syntax error in event specification (*string*)

Cause: Illegal event string

Action: Enter a legal event string

ORA-02483: Syntax error in process specification (*string*)

Cause: Illegal process string

Action: Enter a legal process string

ORA-02484: Invalid `_trace_buffers` parameter specification (*string*)

Cause: Bad process or size in `_trace_buffers` INIT.ORA parameter.

Action: n/a

ORA-02485: Invalid `_trace_options` parameter specification (*string*)

Cause: Bad syntax for `_trace_options` INIT.ORA parameter.

Action: n/a

ORA-02486: Error in writing trace file *string*

Cause: Error occurred in creating/writing the file.

Action: Check file name and make sure it is constructed properly. Also, check permissions for directories.

ORA-02487: Error in converting trace data

Cause: Incompatible binary trace data was specified.

Action: Check the format of the input data.

ORA-02488: Error encountered when accessing file [*string*] for trace conversion

Cause: An attempt was made to open or access the trace file during a trace conversion.

Action: Check the permissions for both input and output files. Also, check the file compatibility for the trace conversion.

ORA-02490: missing required file size in RESIZE clause

Cause: No value was specified for the RESIZE clause.

Action: Use correct syntax.

ORA-02491: missing required keyword ON or OFF in AUTOEXTEND clause

Cause: The keyword ON or OFF was not specified for the AUTOEXTEND clause.

Action: Use correct syntax.

ORA-02492: missing required file block increment size in NEXT clause

Cause: No value was specified for the NEXT clause.

Action: Use correct syntax.

ORA-02493: invalid file increment size in NEXT clause

Cause: A non-integer value was used for the NEXT clause of the DATAFILE list.

Action: Use correct syntax.

ORA-02494: invalid or missing maximum file size in MAXSIZE clause

Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the DATAFILE file list. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use correct syntax.

ORA-02495: cannot resize file *string*, tablespace *string* is read only

Cause: An attempt was made to resize a data file in a tablespace that is read only.

Action: Change the tablespace to read/write and retry the resize operation.

ORA-02496: cannot alter or drop an individual chunk tablespace

Cause: An attempt was made to alter or drop an individual chunk tablespace which is part of a tablespace set.

Action: Use alter or drop only on the tablespace set.

ORA-02500: IN SHARD option already specified

Cause: In the CREATE TABLESPACE, the IN SHARD option was specified more than once.

Action: Remove all but one of the IN SHARD options.

ORA-02501: invalid option for CREATE TABLESPACE SET

Cause: An invalid option IN SHARD was specified for the CREATE TABLESPACE SET statement.

Action: Remove the invalid option.

ORA-02502: USING TEMPLATE can only be used in CREATE TABLESPACE SET

Cause: An attempt to specify the TEMPLATE option without the CREATE TABLESPACE SET statement failed.

Action: Specify the USING TEMPLATE option in the CREATE TABLESPACE SET statement.

ORA-02503: USING TEMPLATE option already specified

Cause: In the CREATE TABLESPACE SET, the USING TEMPLATE option was specified more than once.

Action: Remove all but one of the USING TEMPLATE options.

ORA-02504: SHARDSPACE *string* does not exist

Cause: A nonexistent SHARDSPACE was specified in the CREATE TABLESPACE or CREATE TABLESPACE SET statement.

Action: Reissue the CREATE TABLESPACE or CREATE TABLESPACE SET statement with valid SHARDSPACE name.

ORA-02505: IN SHARDSPACE option already specified

Cause: In the CREATE TABLESPACE SET, the IN SHARDSPACE option was specified more than once.

Action: Remove all but one of the IN SHARDSPACE options.

ORA-02506: CREATE TABLESPACE SET statement requires the SHARDSPACE keyword

Cause: The SHARDSPACE option was not specified in the CREATE TABLESPACE SET statement.

Action: Correct the syntax. Insert the missing keyword where required and then retry the statement.

ORA-02507: missing SHARDSPACE keyword

Cause: The SHARDSPACE keyword was omitted in the IN SHARDSPACE option.

Action: Correct the syntax. Insert the keyword SHARDSPACE where required and then retry the statement.

ORA-02508: attempted to create a shard tablespace in a non-shard database

Cause: An attempt was made to create a shard tablespace in a non-shard database.

Action: Deploy the sharding environment before creating a shard tablespace.

ORA-02509: A SHARDSPACE cannot handle several PARTITIONSETS.

Cause: An attempt was made to define multiple PARTITIONSETS in the SHARDSPACE.

Action: Specify the different PARTITIONSETS in different SHARDSPACES.

ORA-02510: A tablespace set cannot be referenced at the table level.

Cause: An attempt was made to reference a tablespace set at the table level.

Action: Remove the reference to the tablespace set at the table level.

ORA-02511: SQL query not allowed; the shard DDL is disabled.

Cause: An attempt was made to run a shard DDL on a nondeployed shard or with the shard DDL option disabled.

Action: Deploy the shards or enable shard DDL before executing the DDL.

ORA-02512: only one PARTITIONSET option may be specified

Cause: The CREATE TABLE statement contained more than one PARTITIONSET option.

Action: Specify PARTITIONSET option at most once in the CREATE SHARDED TABLE statement.

ORA-02513: invalid sharded table PARTITIONSET method

Cause: An invalid PARTITIONSET method was specified in the CREATE TABLE statement. A table may be partitioned by RANGE or LIST.

Action: Modify PARTITIONSET method to RANGE or LIST in the CREATE SHARDED TABLE statement.

ORA-02514: list PARTITIONSET method expects a single partitioning column

Cause: The number of columns in a PARTITIONSET column list exceeded the legal limit of one for list partitioned tables.

Action: Modify PARTITIONSET column list so that it consists of at most one column.

ORA-02515: cannot interval partition set a sharded table

Cause: Interval PARTITIONSET was not supported for a sharded table.

Action: Use a LIST or RANGE PARTITIONSET instead.

ORA-02516: invalid SHARDED type specified

Cause: Only tables can have the SHARDED type.

Action: Remove the SHARDED option.

ORA-02517: PARTITIONSET and CLUSTER clauses are mutually exclusive

Cause: definition of a table with both PARTITIONSET and CLUSTER clauses which is illegal.

Action: Remove the PARTITIONSET or the CLUSTER clause.

ORA-02518: invalid PARTITIONSET clause specified in a non sharded table

Cause: definition of a non sharded table with PARTITIONSET clause is illegal.

Action: remove the PARTITIONSET clause.

ORA-02519: cannot perform cross-shard operation. Chunk "string" is unavailable

Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become available.

ORA-02520: Shard data object number exceeds UB4MAXVAL

Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become available.

ORA-02521: attempted to enable shard DDL in a non-shard database

Cause: An attempt was made to enable shard DDL in a non-shard database.

Action: Deploy the sharding environment before enabling shard DDL.

ORA-02522: cannot get a new data object number range from the Global Data Services (GDS) catalog

Cause: An attempt was made to get a new range of data object numbers which resulted in a failure.

Action: Check that the shard can connect to the catalog.

ORA-02523: The table being created is not SHARDED.

Cause: PARENT clause was specified on a non-sharded table.

Action: Create a SHARDED table or remove the PARENT clause.

ORA-02524: Invalid parent table specified.

Cause: The parent table specified was not a valid identifier.

Action: Check that the parent table specified is valid.

ORA-02525: child and parent table owner mismatch.

Cause: The child and parent tables did not have the same owner.

Action: Check the owner of the child table.

ORA-02526: child and parent table sharding method mismatch.

Cause: The child and parent tables did not have the same sharding method.

Action: Ensure the sharding method for the two tables is the same.

ORA-02527: child and parent table shard key columns mismatch.

Cause: The child and parent tables did not have the same shard key columns.

Action: Ensure the shard key for the two tables is the same.

ORA-02528: child and table partition set key columns mismatch.

Cause: The child and parent tables did not have the same partition set key columns.

Action: Ensure the partition set key for the two tables is the same.

ORA-02529: invalid parent table.

Cause: The table name specified was not the one of the root table.

Action: Check the root table name specified.

ORA-02530: parent table not specified

Cause: An attempt was made to create a child table without specifying the PARENT clause.

Action: Specify the PARENT clause in the CREATE SHARDED TABLE command.

ORA-02531: shard name not found

Cause: An attempt was made to create a sharded table on a non-sharded database.

Action: Ensure that the sharded database was deployed correctly.

ORA-02532: sharding columns must form a subset key of key columns of a UNIQUE index

Cause: An attempt was made to create a PRIMARY KEY or UNIQUE constraint in a table whose sharding columns do not form a subset of the key columns of the UNIQUE index.

Action: Include all sharding columns in the list of key columns of the UNIQUE index. This is required because UNIQUE constraint cannot be enforced across shards.

ORA-02533: missing PARTITION clause

Cause: The PARTITION clause was expected but was not supplied.

Action: Add a PARTITION clause to the CREATE SHARDED TABLE command.

ORA-02534: invalid PARTITION clause

Cause: The PARTITION clause was supplied with CONSISTENT HASH sharding.

Action: Remove the PARTITION specification.

ORA-02535: missing TABLESPACE SET clause

Cause: The TABLESPACE SET clause was expected but was not supplied.

Action: Add the TABLESPACE SET clause to the CREATE SHARDED TABLE command.

ORA-02536: invalid TABLESPACE SET name: *string*

Cause: The TABLESPACE SET supplied did not exist.

Action: Supply a valid TABLESPACE SET.

ORA-02537: Data file name specified but not supported by tablespace set template

Cause: Data file explicit name was specified as part of the tablespace set template. Only Oracle Managed Files are supported by a tablespace set.

Action: Remove the file name from the data file definition.

ORA-02538: invalid TABLESPACE SET clause

Cause: The TABLESPACE SET clause was not expected.

Action: Remove the keyword SET to specify just TABLESPACE.

ORA-02539: the operation is not supported across shards

Cause: An attempt was made to perform an operation with shard DDL enabled, which is not supported for propagation from catalog to shards.

Action: Disable the shard DDL to perform the operation on the catalog and go to each individual shard to perform the operation locally.

ORA-02540: global indexes are not supported for sharded tables

Cause: An attempt was made to create a global index on a sharded table, which is not supported.

Action: Create a local index instead.

ORA-02541: TABLESPACE SET is required

Cause: The TABLESPACE SET clause was not supplied when creating an index on a system-managed sharded table.

Action: Add the TABLESPACE SET clause to the CREATE INDEX command, or use the same tablespace set as the table by not specifying the TABLESPACE SET clause.

ORA-02542: invalid partitioning method specified with user-defined sharding

Cause: The partitioning method specified was not compatible with user-defined sharding.

Action: Choose a supported partitioning method.

ORA-02543: invalid partitioning method specified with system-managed or composite sharding

Cause: The partitioning method specified was not compatible with system-managed or composite sharding.

Action: Choose a supported partitioning method.

ORA-02544: sharding or partition set column data type is not supported

Cause: Supported data types were not used for the sharding or partition set columns.

Action: Use the supported data types for sharding or partition set columns.

ORA-02545: sharding or partition set column can not be a virtual column

Cause: Virtual column was used in the sharding or partition set key, which is not supported.

Action: Remove the virtual column from the sharding or partition set key.

ORA-02546: The LONG data type is not supported for duplicated tables.

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-02547: Option *string* is not supported for duplicated tables

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-02548: Option *string* is not supported for duplicated tables

Cause: An invalid option was specified while altering duplicated tables.

Action: Verify the specified option.

ORA-02549: cannot create a *string* table with *string*

Cause: Unsupported scenarios with sharding were attempted. Either an attempt was made to create an index-organized sharded table under system-managed sharding or composite sharding or an attempt was made to create a sharded table or a duplicated table with organization external.

Action: For index organization, either create a heap-organized table and the primary key or create the index-organized table with user-defined sharding. For organization external, do not use an external table in a sharding environment.

ORA-02550: Creating duplicated table not allowed when shard DDL is disabled

Cause: Duplicated tables were created when shard DDL was disabled.

Action: Enable shard DDL.

ORA-02551: Truncate table for duplicated tables is not supported

Cause: Invalid operation was specified on a duplicated table.

Action: Use "delete from *table*" instead.

ORA-02552: invalid shard name

Cause: The shard name specified was not valid.

Action: Choose a valid shard.

ORA-02553: TABLESPACE is required

Cause: The TABLESPACE clause was not supplied when specifying a partition of a user-defined sharded table.

Action: Add the TABLESPACE clause.

ORA-02554: invalid DROP TABLESPACE SET

Cause: The DROP TABLESPACE SET command was not compatible with user-defined sharding.

Action: Choose a supported sharding method.

ORA-02555: Online redefinition is not supported for sharded and duplicated tables.

Cause: An attempt was made to perform online redefinition on a sharded table or a duplicated table for sharding, which is not supported.

Action: Use the ALTER TABLE statement instead.

ORA-02556: Only sharded or duplicated tables are supported across shards.

Cause: An attempt was made to create a non-sharded, non-duplicated table across shards, which is not supported.

Action: Connect to each shard and create the table locally.

ORA-02557: cannot operate on sharded objects when shard DDL is disabled

Cause: An attempt was made to operate on a sharded or a duplicated object across shards when the shard DDL was not enabled.

Action: Enable shard DDL to perform the operation.

ORA-02558: cannot operate on non-sharded objects when shard DDL is enabled

Cause: An attempt was made to ALTER or DROP a non-sharded object when the shard DDL was enabled.

Action: Disable shard DDL to perform the operation.

ORA-02559: The TABLESPACE SET *string* does not belong to the shardspace of the table.

Cause: The TABLESPACE SET supplied existed in a different shardspace from the one to which the table belonged.

Action: Supply a valid TABLESPACE SET in the shardspace of the table.

ORA-02560: cannot modify partitions or subpartitions of *string* in system-managed or composite sharding.

Cause: An attempt was made to modify partitions or subpartitions of sharded tables or indexes in system-managed or composite sharding.

Action: Use the 'gdsctl split chunk' or 'move chunk' commands instead. For truncating partitions of sharded tables, marking local indexes unusable or rebuilding partitions of local indexes, perform the operation on the shard with shard operations enabled.

ORA-02561: maximum number of columns in a duplicated table *string* is *string*

Cause: An attempt was made to create a duplicated table with too many columns. Note that unused columns in the table are counted toward the maximum allowable column limit.

Action: Reduce the number of columns in the command and resubmit.

ORA-02562: cannot create a duplicated table in a non-shard schema

Cause: An attempt was made to create a duplicated table in a non-shard schema.

Action: Try creating the duplicated table in a sharded schema.

ORA-02563: XMLType column in a duplicated table cannot be used in non-automatic segment space management tablespace "*string*"

Cause: XMLType column in a duplicated table required an automatic segment space management tablespace.

Action: Specify an automatic segment space management tablespace for the XMLType column in a duplicated table.

ORA-02564: rebuild outline is not supported across shards.

Cause: An attempt was made to rebuild an outline with shard DDL enabled, which is not supported.

Action: Connect to each shard and rebuild the outline locally.

ORA-02565: cannot use individual chunk tablespace

Cause: An individual chunk tablespace which was part of a tablespace set was used.

Action: Use a normal tablespace.

ORA-02566: cannot create duplicated table - insufficient privileges

Cause: An attempt was made to create a duplicated table when the user did not have sufficient privileges.

Action: Ensure that the user has CREATE DATABASE LINK and CREATE MATERIALIZED VIEW privileges before creating a duplicated table.

ORA-02567: cannot create a sharded table with empty columns

Cause: An attempt was made to create a sharded table without any columns.

Action: Use valid columns to create a sharded table.

ORA-02568: cannot create an identity column in a sharded table

Cause: An attempt was made to create a sharded table with an identity column.

Action: Create a sharded table without an identity column.

ORA-02569: cannot drop a system tablespace *string* when sharding environment is deployed

Cause: An attempt was made to drop a system tablespace part of the sharding environment when the sharding environment was deployed.

Action: Do not drop a tablespace created by the system.

ORA-02570: cannot alter user password - insufficient privileges

Cause: An attempt was made to alter the password for a user who created duplicated tables but did not have the privilege to execute the ALTER DATABASE LINK statement.

Action: Ensure that the user, whose password has to be changed, has the ALTER DATABASE LINK privilege and try again.

ORA-02571: cannot modify refresh interval of a non-duplicated table

Cause: An attempt was made to modify the refresh interval of a non-duplicated table.

Action: Only issue the ALTER TABLE MODIFY REFRESH INTERVAL statement on duplicated tables.

ORA-02572: A non all-shard user cannot operate on schema objects that are sharded or duplicated on all shards.

Cause: An attempt was made to operate on a sharded or duplicated schema object by a non all-shard user.

Action: Operate on such objects as an all-shard user.

ORA-02573: cannot enable shard DDL when current_schema has been changed

Cause: Shard DDL is not supported after a session's current schema has been altered.

Action: Reconnect as the correct user to perform shard DDL operations.

ORA-02574: Sharded table cannot be a nested table.

Cause: An attempt was made to create a nested sharded table, which is not supported.

Action: Create a non-nested sharded table.

ORA-02575: Invalid sharding method for a deployed sharded database

Cause: An invalid sharding method was set for a sharded database.

Action: Check the database configuration and correct the settings.

ORA-02576: number of partition set specifications is not equal to the number of shardspaces

Cause: Fewer or more number of partition set specifications were specified than the number of shardspaces in the composite sharding environment.

Action: Specify one partition set specification for each shardspace in the composite sharding environment.

ORA-02577: cannot specify PARTITIONSET in a non-composite sharding environment

Cause: PARTITIONSETS were specified while creating a sharded table in non-composite sharding environment.

Action: Remove the PARTITION SET specifications in the create sharded table statement.

ORA-02578: missing PARTITIONSET specification

Cause: PARTITIONSET specifications were missing.

Action: Specify PARTITIONSETS for the sharded table.

ORA-02579: cannot create a tablespace set with SMALLFILE option

Cause: An attempt was made to create a tablespace set with the SMALLFILE option.

Action: Create a tablespace set with the default BIGFILE option.

ORA-02580: cannot add or drop data files from a tablespace set

Cause: An attempt was made to add or drop a data file from a tablespace set.

Action: Do not add or drop a data file from a tablespace set.

ORA-02581: cannot create foreign key constraints on columns referencing a duplicated table

Cause: An attempt was made to create a foreign key constraint in a sharded table on a column referencing a duplicated table.

Action: Remove the foreign key constraint referencing a column in the duplicated table.

ORA-02582: invalid tablespace set name specified for the partition set

Cause: The tablespace set name specified for the partition set was either invalid or belonged to a different shardspace.

Action: Specify a tablespace set name that belongs to the same shardspace.

ORA-02583: option PARALLEL not supported when creating duplicated table as select from another table

Cause: An attempt was made to create a duplicated table as select from another table in parallel mode.

Action: Create a duplicated table as select without the PARALLEL clause.

ORA-02584: INMEMORY options not supported for duplicated tables

Cause: An attempt was made to create or alter a duplicated table by enabling INMEMORY options.

Action: Verify the specified option.

ORA-02585: create tablespace set failure, one of its tablespaces not created

Cause: One of the tablespaces in the tablespace set was not created.

Action: Verify the creation of the tablespaces.

ORA-02586: cannot change duplicated table refresh rate in a non-catalog database

Cause: An attempt was made to change the dupl_table_refresh_rate in the non-catalog database.

Action: Connect to the catalog database to change the refresh rate of duplicated tables.

ORA-02587: create duplicated table of Object Type is not supported

Cause: An attempt was made to create a duplicated table of object type.

Action: Create a duplicated table without specifying the object type.

ORA-02588: minimum refresh rate for duplicated table is 1 second

Cause: An attempt was made to set the refresh rate for duplicated tables to less than 1 second.

Action: Set the refresh rate for duplicated tables to at least 1 second.

ORA-02589: invalid partition set name

Cause: An invalid partition set name was specified.

Action: Specify a valid partition set name.

ORA-02590: invalid sequence of partition sets

Cause: The sequence used to specify partition sets was invalid.

Action: Specify the partition sets in an increasing order.

ORA-02591: cannot specify a common tablespace set for indexes on a sharded table in composite sharding

Cause: An attempt was made to specify a common tablespace set for indexes on a sharded table in a composite sharding environment which is not supported.

Action: Create an index on sharded tables without the TABLESPACE SET clause or use the PARTITIONSET clause to specify tablespace sets for each partition set.

ORA-02592: cannot drop user until all shard databases are up and all gsm_requests are completed

Cause: An attempt was made to drop a user who owns a duplicated table when the shard database was down or the gsm_requests were pending execution.

Action: Ensure that all `gsm_requests` are completed and all shards are up before dropping a user with duplicated table.

ORA-02593: cannot drop *string* until all shard databases are up and all `gsm_requests` are completed

Cause: An attempt was made to drop a duplicated table or one of its columns when the shard database was down or the `gsm_requests` were pending execution.

Action: Ensure that all `gsm_requests` are completed and all shards are up before dropping a duplicated table or its column.

ORA-02594: cannot alter shard user password until all shard databases are up and all `gsm_requests` are completed

Cause: An attempt was made to alter shard user password when the shard database was down or the `gsm_requests` were pending execution.

Action: Ensure that all `gsm_requests` are completed and all shards are up before altering a shard user password.

ORA-02595: Non-final abstract data type is not supported for duplicated tables.

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-02596: cannot truncate duplicated table on a shard database

Cause: An attempt was made to truncate a duplicated table on a shard database.

Action: Connect to the catalog database to truncate the duplicated table.

ORA-02597: The read-only option is not supported for sharded tables.

Cause: An invalid option was specified while creating a sharded table.

Action: Verify the specified option.

ORA-02598: tablespace specified in the SQL command does not exist in the shard

Cause: A DROP or ALTER TABLESPACE operation was attempted on a shard where the tablespace does not exist.

Action: Create the tablespace in the shard first.

ORA-02599: cannot drop partitionset column

Cause: An attempt was made to drop a column used as the super-partitioning key for a sharded table.

Action: This action is not allowed.

ORA-02600: credential name is invalid: *string*

Cause: An invalid credential name was specified.

Action: Verify credential name and retry the operation.

ORA-02601: credential already exists: *string*

Cause: Credential name specified already used by an existing object.

Action: Verify credential name and retry the operation.

ORA-02602: credential does not exist: *string*

Cause: The specified credential does not exist.

Action: Verify credential name and retry the operation.

ORA-02603: file name is invalid: *string*

Cause: An invalid file name was specified.

Action: Verify credential name and retry operation.

ORA-02604: file already exists: *string*

Cause: File name specified already used by an existing object.

Action: Verify file name and retry the operation.

ORA-02605: file does not exist: *string*

Cause: The specified file does not exist.

Action: Verify file name and retry the operation.

ORA-02606: destination name is invalid: *string*

Cause: An invalid destination name was specified.

Action: Verify destination name and retry the operation.

ORA-02607: destination not specified

Cause: A destination must be specified in the command.

Action: Provide destination and retry the operation.

ORA-02608: destination does not exist: *string*

Cause: The specified destination does not exist.

Action: Verify destination and retry the operation.

ORA-02609: remote scheduler agent not running

Cause: The specified remote scheduler agent cannot be contacted.

Action: Confirm that the agent is running and retry the operation.

ORA-02610: Remote job failed with error: *string*

Cause: Unable to successfully run specified job.

Action: Check errors returned and retry the operation.

ORA-02611: shardgroup name is invalid: *string*

Cause: An invalid shardgroup name was specified.

Action: Verify the shardgroup name and retry the operation.

ORA-02612: shardgroup does not exist: *string*

Cause: The specified shardgroup did not exist.

Action: Verify the shardgroup name and retry the operation.

ORA-02613: shardspace name is invalid: *string*

Cause: An invalid shardspace name was specified.

Action: Verify the shardspace name and retry the operation.

ORA-02614: shardspace does not exist: *string*

Cause: The specified shardspace did not exist.

Action: Verify the shardspace name and retry the operation.

ORA-02615: Neither a shardgroup nor a shardspace name was specified.

Cause: A shardgroup or shardspace name was not specified.

Action: Update the parameters and retry the operation.

ORA-02616: Both a shardgroup and a shardspace name were specified.

Cause: A shardgroup and a shardspace name were both specified. For this command, either a shardgroup or shardspace name may be specified, but not both.

Action: Update the parameters and retry the operation.

ORA-02617: Neither a credential nor login information was specified

Cause: Either a credential or login information must be specified.

Action: Update the parameters and retry the operation.

ORA-02618: Both a credential and login information was specified

Cause: For this command, either a credential or login information may be specified, not both.

Action: Update the parameters and retry the operation.

ORA-02619: Both a file name and file contents were specified.

Cause: A file name and file contents were both specified.

Action: Update the parameters and retry the operation.

ORA-02620: db_domain value too long: *string*

Cause: The value specified for db_domain exceeded the 128 character limit.

Action: Modify the value specified for db_domain and retry the operation.

ORA-02621: file in use by shard '*string*'

Cause: The specified file was in use by an undeployed shard.

Action: Drop the undeployed shard and retry the operation.

ORA-02622: Shard is not open in write mode.

Cause: The shard was not opened in the correct mode.

Action: Open the shard in write mode and retry the operation.

ORA-02623: Failed to create broker configuration with error *string*.

Cause: A request to create the broker configuration failed.

Action: Check the broker logs for details.

ORA-02624: Failed to enable broker configuration with error *string*.

Cause: A request to enable the broker configuration failed.

Action: Check the broker logs for details.

ORA-02625: Failed to add standby shard *string* to the broker configuration with error *string*.

Cause: A request to add the shard to the broker configuration failed.

Action: Check the broker logs for details.

ORA-02626: Failed to enable standby shard *string* for the broker configuration with error *string*.

Cause: A request to enable the shard for the broker configuration failed.

Action: Check the broker logs for details.

ORA-02627: Shardspace '*string*' does not exist.

Cause: The requested shardspace did not exist.

Action: Check the name and try again.

ORA-02628: invalid shardgroup name '*string*'

Cause: The shardgroup name was invalid.

Action: Use a different name for the shardgroup.

ORA-02629: cannot modify deployed shardgroup *string*

Cause: The shardgroup was already deployed and could no longer be modified.

Action: Do not modify a deployed shardgroup. Delete it and add it again.

ORA-02630: cannot modify primary or standby status of shardgroup *string*

Cause: The shardgroup already contained a shard and could not be converted from a primary shard to a standby shard or from a standby shard to a primary shard.

Action: Do not modify the primary or standby status of this shardgroup.

ORA-02631: The shardspace name '*string*' is invalid.

Cause: An invalid shardspace name was provided.

Action: Check the name and try again.

ORA-02632: cannot modify deployed shardspace '*string*'

Cause: The shardspace was already deployed and could no longer be modified.

Action: Do not modify deployed shardspaces.

ORA-02633: The shardspace '*string*' is invalid.

Cause: An invalid shardspace name was provided.

Action: Check the name and try again.

ORA-02634: Oracle XML DB is not installed.

Cause: Oracle XML DB was required for remote scheduler agent configuration but was not installed.

Action: Install Oracle XML DB in the catalog database.

ORA-02635: The value of chunks must be greater than one.

Cause: An invalid value of chunks was passed.

Action: Set chunks to a value greater than one.

ORA-02636: Shard is already in shardspace *string*.

Cause: The shard was already in a shardspace.

Action: Remove the shard from the sharding schema before adding it to another shardspace.

ORA-02637: The source and target shards are in different shardgroups.

Cause: The source and target shards for a chunk move operation were in different shardgroups.

Action: Chunks cannot be moved across shardgroups. Specify a source and target shard that are in the same shardgroup.

ORA-02638: The shardgroup *string* is not deployed.

Cause: The containing shardgroup for the source and target shards was not yet deployed.

Action: Chunks cannot be moved until the shardgroup has been deployed. Deploy the shardgroup before moving chunks.

ORA-02639: Source and target shards are the same.

Cause: The source and target shards for a chunk move were the same.

Action: Chunks cannot be moved to the same shard. Specify a different source and target.

ORA-02640: Shardspace already has a primary shardgroup.

Cause: An attempt was made to add a primary shardgroup to a shardspace that already had a primary shardgroup. When Oracle Data Guard replication is used, only one primary shardgroup is allowed in each shardspace.

Action: Do not add another primary shardgroup to this shardspace.

ORA-02641: Shard *string* was not deployed because it does not contain a corresponding shard in all shardgroups.

Cause: The shard did not have a corresponding shard in all shardgroups in an Oracle Data Guard configuration, therefore it was not deployed.

Action: This is only a warning and the deployment will continue without this shard. In order to make use of this shard, either remove shardgroups, or add shards to other shardgroups so that there are the same number of shards in all shardgroups.

ORA-02642: There were no new shards to deploy.

Cause: The 'deploy' command was issued, but there were no new shards to deploy.

Action: This is only a warning. Deploy may continue to recover previous deployment attempts, if any exist, but no new shards will be deployed.

ORA-02643: failed to enable fast-start failover with error *string*

Cause: A request to enable fast-start failover failed.

Action: Check the broker logs for details.

ORA-02644: Shard '*string*' already exists in specified rack '*string*'.

Cause: The specified rack already contained another shard in the same Oracle Data Guard configuration.

Action: Specify a different value for the rack parameter.

ORA-02645: only one primary shard allowed per shardspace

Cause: The specified shardspace already contained a primary shard.

Action: Specify a different shardspace or create a standby shard instead.

ORA-02646: Standby shards not allowed in Oracle GoldenGate configurations.

Cause: The Oracle GoldenGate configurations contained standby shards.

Action: Create a primary shard instead of a standby shard.

ORA-02647: The rack name '*string*' is invalid.

Cause: An invalid rack name was provided.

Action: Check the name and try again.

ORA-02648: Password for SYS account was not specified.

Cause: A SYS password was not specified when creating a new shard using Oracle Database Configuration Assistant (DBCA).

Action: Retry the operation and specify a SYS password.

ORA-02649: cannot change region for a system-managed or composite shard

Cause: An attempt was made to change the region value for a system-managed or composite shard.

Action: Change the region value at the shardgroup level instead.

ORA-02650: remote scheduler agent error: *string*

Cause: An operation failed when performed using the remote scheduler agent.

Action: Correct the error specified in the remote scheduler agent output.

ORA-02651: The specified pool '*string*' is not sharded.

Cause: The specified pool was not sharded.

Action: Specify a sharded pool and retry the operation.

ORA-02652: The maximum number of sharded GDS pools has been reached.

Cause: The maximum number of Global Data Services (GDS) sharded pools had been reached.

Action: No more Global Data Services (GDS) sharded pools can be added without first removing a pool.

ORA-02653: shardgroup already exists: *string*

Cause: The specified shardgroup was already in existence.

Action: Verify the shardgroup name and retry the operation.

ORA-02654: Shards and shardgroups cannot exist in the same database pool.

Cause: The specified database pool already contained either a conflicting shard or shardgroup.

Action: Verify the database pool name and retry the operation.

ORA-02655: not a sharded catalog

Cause: The catalog was not enabled for sharding and a sharding command was executed.

Action: Re-create the catalog with 'create shardcatalog' or verify the command issued.

ORA-02656: shardspace already exists: *string*

Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

ORA-02657: too few chunks specified for shardspace

Cause: The number of chunks in the specified shardspace was less than twice the number of shards in one of its shardgroups.

Action: If the shardspace is not deployed, modify the shardspace to increase the number of chunks it contains.

ORA-02658: shardspace already exists: *string*

Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

ORA-02659: cannot remove a shard which contains chunks or replication units

Cause: An attempt was made to remove a shard which contained chunks or replication units.

Action: Move any chunks and replication units to another shard and then retry the operation.

ORA-02660: Shard '*string*' was also removed.

Cause: When a shard was removed, all other shards in the same Oracle Data Guard configuration were also removed.

Action: This is an informational message only.

ORA-02661: shardspace and shardgroup parameters are mutually exclusive

Cause: A command was issued that included both the shardspace and and shardgroup parameters.

Action: Remove one of the conflicting parameters from the command.

ORA-02662: Chunk number '*string*' does not exist on the source database.

Cause: An invalid chunk number or source database was provided.

Action: Check the number and try again.

ORA-02663: Remote scheduler agents may be listening on previously specified port.

Cause: The '-agent_port' parameter specified a new agent port value. The already registered scheduler agents must re-register with the catalog database to use this new value.

Action: This is only a warning. Re-register the existing scheduler agents as necessary.

ORA-02664: Specified port may be in use.

Cause: The '-agent_port' parameter specified a new agent port value. The port specified may already have been in use by another process in the system.

Action: This is only a warning. Confirm that there is no port conflict before continuing the operation.

ORA-02665: shardspace not specified

Cause: A command was issued that did not include shardspace".

Action: Specify shardspace.

ORA-02666: Tablespace set required to perform this operation was not found.

Cause: An attempt was made to perform a chunk management operation before creating a tablespace set.

Action: Create a tablespace set before issuing the command.

ORA-02667: Root table required to perform this operation was not found.

Cause: An attempt was made to perform a chunk management operation before creating a sharded table.

Action: Create a sharded table before issuing the command.

ORA-02668: Observer cannot be started for database "*string*"

Cause: One or more conditions required by Data Guard observer were not met.

Action: Confirm that Data Guard technology is used for replication, the database belongs to disaster recovery group with FSFO enabled, and there is an online primary database in that group.

ORA-02669: data type or length of a partitionset column in a sharded table cannot be changed

Cause: An attempt was made to issue an ALTER TABLE statement to modify the data type or length of a column used to super-partition the specified sharded table.

Action: Do not modify the data type or length of a sharded table super- partitioning column or columns.

ORA-02670: unsupported SQL construct: *string*

Cause: The query had a construct that was not supported for inter shard query.

Action: Rewrite the query to avoid using an unsupported construct. Consult Oracle documentation for details.

ORA-02671: DML are not allowed on more than one shard

Cause: The DML was applied to more than one shard.

Action: Rewrite the DML to limit operation to a single shard.

ORA-02672: cannot update sharding key

Cause: An attempt was made to update the sharding key value using the UPDATE command.

Action: Drop and re-create the sharding key.

ORA-02673: string maps to multiple shards

Cause: The aggregate, group by, semi-join, or anti-join subquery was mapped to multiple shards.

Action: Rewrite the query so that subqueries map to a single shard.

ORA-02674: illegal join predicate on sharding key

Cause: The query had illegal or no join predicate on the sharding key.

Action: Rewrite the query to include join on sharding columns.

ORA-02675: sharded table string outer joined with replicated table string

Cause: The query had a sharded table outer joined to the replicated table.

Action: Rewrite the query to remove the outer join.

ORA-02676: non-equality join on sharding key

Cause: The query had a non-equality join on the sharding key.

Action: Rewrite the query to remove the non-equality join.

ORA-02677: queries not supported on objects with user-specified sharding

Cause: The query had an object defined by user-specified sharding.

Action: None

ORA-02678: cross shard queries not supported on composite sharding

Cause: The query had an object defined under composite sharding.

Action: None

ORA-02679: queries involving private and sharded tables not supported

Cause: The query referenced a private and a sharded table.

Action: Rewrite the query to refer to either private tables or sharded tables, but not both.

ORA-02680: unsupported construct referred in the query

Cause: The query referenced unsupported constructs which could not be fetched from the shard.

Action: Rewrite the query to avoid using unsupported constructs.

ORA-02681: array DML not supported on a sharded table

Cause: The statement attempts an array DML operation on a sharded table.

Action: Rewrite the array DML statement as separate DML statements.

ORA-02682: shard key missing in INSERT statement

Cause: The INSERT statement was used to insert a row in the sharded table without inserting a value for the shard column.

Action: Insert a value for the shard key column.

ORA-02683: inconsistent shard schema

Cause: The schema definition on the shard and the coordinator did not match.

Action: Verify and fix the schema inconsistency between the shard and the coordinator.

ORA-02684: invalid partition for the chunk *string*

Cause: A valid partition was not found for the chunk number passed to the shard database.

Action: Check the chunks handled by the shard database.

ORA-02685: cannot rename a duplicated table on a shard database

Cause: An attempt was made to rename a duplicated table on a shard database.

Action: Rename the duplicated table in the shard catalog database, if required.

ORA-02686: query returned data from *string* percent of total chunks

Cause: Some of the chunks were not accessible in the system.

Action: Ensure that all shards are online and accessible from the query coordinator.

ORA-02687: target partition key does not map to any partition

Cause: An attempt was made to update or delete a record of a range or list-based sharded table with a partition key that did not belong to any of the partition.

Action: Use the correct partition key that belongs to a defined partition.

ORA-02688: sharded table *string* does not exist

Cause: An attempt was made to add a partition set to a sharded table that did not exist.

Action: Create the sharded table with the partition sets.

ORA-02689: cannot alter duplicated table until GSM_REQUEST to CREATE DUPLICATED TABLE are completed on all shards

Cause: An attempt was made to alter a duplicated table when the GSM_REQUEST to create duplicated table materialized view was pending execution.

Action: Ensure that GSM_REQUEST to create the duplicated table materialized view is completed on all shards before altering the duplicated table.

ORA-02690: cannot add existing value to partition sets

Cause: The value added to the list partition set already existed for the table.

Action: Add new value to the partition set.

ORA-02691: duplicate partition set name

Cause: The name of a partition set of a sharded table being created was not unique.

Action: Rename the partition set to ensure that their names are unique among partitions of the sharded table being created.

ORA-02692: cannot perform cross-shard operation. Some shards are unavailable.

Cause: One or more shards were unavailable during the cross-shard operation.

Action: Rerun the command when the shards become available.

ORA-02693: invalid shard ID

Cause: An invalid shard ID was specified in the query.

Action: Verify the shard ID and retry the operation.

ORA-02700: osnoraenv: error translating ORACLE_SID

Cause: Two-task driver could not find the value of ORACLE_SID in the environment.

Action: Make sure that the ORACLE_SID environment variable has been properly set and exported.

ORA-02701: osnoraenv: error translating oracle image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02702: osnoraenv: error translating orapop image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02703: osnpopipe: pipe creation failed

Cause: The pipe driver failed to create pipes for communications with the orapop process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02704: osndopop: fork failed

Cause: The two-task driver could not fork orapop.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02705: osnpol: polling of communication channel failed

Cause: The pipe driver failed while polling the communications channel.

Action: Contact your customer support representative.

ORA-02706: osnshs: host name too long

Cause: The length of your host-string specified by the TWO_TASK environment variable exceeds the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02707: osnacx: cannot allocate context area

Cause: The invoked Unix two-task driver could not allocate heap space for the context area.

Action: Contact your customer support representative.

ORA-02708: osnrntab: connect to host failed, unknown ORACLE_SID

Cause: The invoked Unix two-task driver failed to find an entry in oratab for the sid you supplied.

Action: First, check whether you have read access to oratab, and see if the desired sid is there. Add an entry to oratab for the desired sid, if necessary.

ORA-02709: osnpop: pipe creation failed

Cause: The pipe driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02710: osnpop: fork failed

Cause: The pipe driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02711: osnpvalid: write to validation channel failed

Cause: The pipe driver failed to write to the orapop process.

Action: Contact your customer support representative.

ORA-02712: osnpop: malloc failed

Cause: The pipe driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

ORA-02713: osnprd: message receive failure

Cause: The pipe driver failed to read a message from the communications channel.

Action: Contact your customer support representative.

ORA-02714: osnpwr: message send failure

Cause: The pipe driver failed to write a message to the communications channel.

Action: Contact your customer support representative.

ORA-02715: osnpgetbrkmsg: message from host had incorrect message type

Cause: The pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02716: osnpgetdatmsg: message from host had incorrect message type

Cause: The Pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02717: osnpfs: incorrect number of bytes written

Cause: The Pipe driver sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes furnished to the driver.

Action: Contact your customer support representative.

ORA-02718: osnprs: reset protocol error

Cause: The two-task driver could not reset the connection.

Action: Contact your customer support representative.

ORA-02719: osnfop: fork failed

Cause: The fast driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02720: osnfop: shmat failed

Cause: When the fast driver was invoked, processes failed to attach to the shared memory buffer. You probably supplied an illegal shared memory attach address, or the system ran out of data space to accommodate the buffer.

Action: Try invoking the Fast driver later, or use the default attach address.

ORA-02721: osnsemit: cannot create semaphore set

Cause: The Fast driver failed to get a semaphore set.

Action: The system-imposed limit on semaphores or semaphore identifiers may have been exceeded. Read the returned operating system error code and check with your system administrator.

ORA-02722: osnpui: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02723: osnpui: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Contact your customer support representative.

ORA-02724: osnpbr: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02725: osnpbr: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Kill system call failed. Check errno and contact customer support.

ORA-02726: osnpop: access error on oracle executable

Cause: The Pipe driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02727: osnpop: access error on orapop executable

Cause: The Pipe driver could not access the orapop executable.

Action: Check the permissions on the orapop executable and each component of the ORACLE_HOME/bin path.

ORA-02728: osnfop: access error on oracle executable

Cause: The Fast driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02729: osncon: driver not in osntab

Cause: The driver you have specified is not supported.

Action: Check with your database administrator which drivers are supported.

ORA-02730: osnrnf: cannot find user logon directory

Cause: The driver you have specified could not find your logon directory while searching for your local .sqlnet file.

Action: Set and export the HOME environment variable to identify your home directory. Check with your system administrator to make sure that your uid and home directory are correct in the /etc/passwd file.

ORA-02731: osnrnf: malloc of buffer failed

Cause: The specified driver could not find enough heap space to malloc a buffer.

Action: Contact your customer support representative.

ORA-02732: osnrnf: cannot find a matching database alias

Cause: Database alias specified was not identified in either \$HOME/.sqlnet or /etc/sqlnet.

Action: Create the alias in a file called .sqlnet in your home directory for personal use or ask your system administrator to create the alias in /etc/sqlnet for system-wide use.

ORA-02733: osnsnf: database string too long

Cause: While converting a database alias to a database ID, the resulting database ID string exceeded the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02734: osnftt: cannot reset shared memory permission

Cause: The Fast driver was unable to reset shared memory permissions.

Action: Contact your customer support representative.

ORA-02735: osnfpm: cannot create shared memory segment

Cause: The Fast driver failed to create a shared memory segment for two-task communication.

Action: Check whether the system-imposed limit on shared memory identifiers has already been reached for your system.

ORA-02736: osnfpm: illegal default shared memory address

Cause: The Fast driver failed to establish a default shared memory address.

Action: Contact your customer support representative.

ORA-02737: osnpcl: cannot tell orapop to exit

Cause: The Pipe driver failed to send orapop the command to exit.

Action: Contact your customer support representative.

ORA-02738: osnpwrbrkmsg: incorrect number of bytes written

Cause: The pipe driver apparently sent an incomplete break message.

Action: Contact your customer support representative.

ORA-02739: osncon: host alias is too long

Cause: The alias used for a sqlnet host is longer than 161 characters.

Action: Use a shorter alias.

ORA-02750: osnfsmmap: cannot open shared memory file ?/dbs/ftt_pid.dbf

Cause: The Fast driver failed to create a shared memory file for two-task communication.

Action: Check the permissions on the directory ?/dbs

ORA-02751: osnfsmmap: cannot map shared memory file

Cause: The Fast driver failed to map a shared memory file for two-task communication.

Action: Contact your customer support representative.

ORA-02752: osnfsmmap: illegal shared memory address

Cause: The Fast driver failed to attach shared memory at the expected location.

Action: Contact your customer support representative.

ORA-02753: osnfsmmap: cannot close shared memory file

Cause: The Fast driver cannot close the shared memory file.

Action: Contact your customer support representative.

ORA-02754: osnfsmmap: cannot change shared memory inheritance

Cause: The Fast driver could not alter the inheritance attributes of the shared memory.

Action: Contact your customer support representative.

ORA-02755: osnfsmcre: cannot create shared memory file ?/dbs/ftt_pid.dbf

Cause: The Fast driver failed to create a file for shared memory.

Action: Check the permissions on the directory ?/dbs

ORA-02756: osnfsmnam: name translation failure

Cause: The Fast driver encountered an error translating the shared memory file name ?/dbs/ftt_pid.dbf.

Action: Contact your customer support representative.

ORA-02757: osnfop: fork_and_bind failed

Cause: The Fast driver failed to fork a process onto the desired cluster and node number.

Action: Check the desired node number in sercose[0] and cluster ID in sercose[1]. If these seem valid, contact customer support.

ORA-02758: Allocation of internal array failed

Cause: The package was unable to allocate memory for an array because the system ran out of memory.

Action: Either reclaim memory by killing other processes or reboot the machine with more memory.

ORA-02759: Not enough request descriptors available

Cause: All of the package's request descriptors are in use performing other requests.

Action: Either wait until enough requests are done, or shut the package down and re-initialize it with more request descriptors.

ORA-02760: Client close of file failed.

Cause: The client was unable to close a file after forking the servers.

Action: This is a system problem - contact your System Administrator.

ORA-02761: File number to be canceled is negative.

Cause: The file number contained with the sfiov structure is less than zero.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02762: file number to be cancelled is greater than the maximum.

Cause: The file number contained with the sfiov structure is greater than the maximum.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02763: Unable to cancel at least one request

Cause: No requests were found that could be cancelled.

Action: This error can occur if all the requests dealing with that file number have already been filled.

ORA-02764: Invalid package mode

Cause: The mode of the package can only be parallel or duplex.

Action: See sfa.h for the correct values.

ORA-02765: Invalid maximum number of servers

Cause: The number of servers given was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02766: Invalid maximum of request descriptors

Cause: The number of request descriptors was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02767: Less than one request descriptor was allocated per server

Cause: The package requires that the number of request descriptors be greater than or equal to the number of servers used.

Action: Use a higher number

ORA-02768: Maximum number of files is invalid

Cause: The maximum number of files to be used by the package was less than or equal to zero.

Action: Use a positive number.

ORA-02769: Setting of handler for SIGTERM failed

Cause: The package was unable to set up handling by the server for the termination signal. This is an internal error.

Action: Contact ORACLE support.

ORA-02770: Total number of blocks is invalid

Cause: The total number of blocks to be allocated for use by the package was not greater than zero.

Action: Use a positive number.

ORA-02771: Illegal request time out value

Cause: The number was not a positive number.

Action: Use a positive number.

ORA-02772: Invalid maximum server idle time

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02773: Invalid maximum client wait time

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02774: Invalid request list latch time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02775: Invalid request done signal

Cause: The signal number was not a positive number.

Action: Use a positive number.

ORA-02776: Value for request done signal exceeds maximum

Cause: The value sent to the package for use as the "request done" signal exceeds the maximum allowed by the operating system.

Action: Contact your system administrator.

ORA-02777: Stat failed on log directory

Cause: The package was unable to get information about the directory in which the log files are to reside.

Action: Check the permissions on the directory or use a different directory name.

ORA-02778: Name given for the log directory is invalid

Cause: The name given for the directory in which the logs are to be kept does not correspond to a directory.

Action: Use a different name.

ORA-02779: Stat failed on core dump directory

Cause: The package was unable to get information about the directory into which the servers are to dump core in the event of an exception.

Action: Check the permissions on the directory or use a different directory name.

ORA-02780: Name given for the core dump directory is invalid

Cause: The name given for the directory in which the server processes are to dump core in the event of an exception does not correspond to a directory.

Action: Use a different name.

ORA-02781: Invalid value given for the timing wanted flag

Cause: The value given was not TRUE or FALSE.

Action: Specify TRUE or FALSE for the timing wanted flag.

ORA-02782: Both read and write functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the read and write functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02783: Both post and wait functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the posting and waiting functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02784: Invalid shared memory ID specified

Cause: The ID of the segment specified for use as the shared buffer region was invalid.

Action: Use a different ID, or let the package specify its own.

ORA-02785: Invalid shared memory buffer size

Cause: The size given for the shared memory segment to be used as the shared buffer region was less than or equal to zero.

Action: Use a positive number.

ORA-02786: Size needed for shared region is greater than segment size

Cause: The size of the shared segment that was specified for the shared buffer region is less than the number of bytes required. The first field of the "additional information" field is the size needed. The second is the size of the segment.

Action: Use a larger size segment or let the package allocate its own.

ORA-02787: Unable to allocate memory for segment list

Cause: The package cannot allocate memory for an internal segment list because the system has run out of memory. The "additional information" field is the amount of memory that the package attempted to allocate.

Action: Close some processes or contact your system administrator.

ORA-02788: Unable to find kernel process pointer in async process array

Cause: Internal error - Contact ORACLE support.

Action: Contact Oracle Support Services.

ORA-02789: Maximum number of files reached

Cause: The maximum number of files that can be used for asynchronous I/O has been reached.

Action: Shut down the servers and re-initialize the package with a higher number.

ORA-02790: File name is too long

Cause: The length of the name of a file that is being opened for asynchronous I/O is longer than the maximum. The "additional information" field is the maximum length.

Action: Use a shorter name.

ORA-02791: Unable to open file for use with asynchronous I/O

Cause: The package could not open file for some reason.

Action: Check the file name.

ORA-02792: Unable to fstat() a file being used for asynchronous I/O.

Cause: The fstat(2) call on a file being used for asynchronous I/O failed.

Action: Check the file name.

ORA-02793: Close of asynchronous I/O failed.

Cause: The client was unable to close a file being used for asynchronous I/O.

Action: Contact ORACLE support - this should not happen.

ORA-02794: Client unable to get key for shared memory

Cause: The client was unable to get a key so that it obtain shared memory for use with shared memory.

Action: Contact ORACLE support - this is an internal error.

ORA-02795: Request list is empty

Cause: The client was signalled by a server that it was done with a request but the "done" list was empty.

Action: Internal error - contact ORACLE support.

ORA-02796: Done request is not in correct state

Cause: A request is not in the right state.

Action: Internal error - contact ORACLE support.

ORA-02797: No requests available

Cause: No free request descriptors are available.

Action: Wait until some requests are filled and then retry the request, or shutdown the servers and initialize the package with a higher number of requests.

ORA-02798: Invalid number of requests

Cause: The number of operations sent to either sfard() or sfawrite() is less than zero.

Action: This is a user programming error.

ORA-02799: Unable to arm signal handler

Cause: The arming of a signal handler for the "done" signal failed.

Action: Internal error - contact ORACLE support.

ORA-02800: Requests timed out

Cause: Some of the requests for asynchronous input or output were not serviced in the required amount of time.

Action: If the load on the system is high, it is possible that the timeout limit is too low. Reset it with sfainit(). If the server processes are dying due to unexpected signals, this is an internal error, and ORACLE support should be contacted.

ORA-02801: Operations timed out

Cause: Some asynchronous operations timed out in kernel mode.

Action: Internal error - contact ORACLE support.

ORA-02802: No idle servers available in parallel mode

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02803: Retrieval of current time failed

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02804: Allocation of memory failed for log file name

Cause: The client was unable to allocated a buffer for the name of the log file.

Action: Contact your System Administrator.

ORA-02805: Unable to set handler for SIGTPA

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02806: Unable to set handler for SIGALRM

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02807: Allocation of memory for I/O vectors failed.

Cause: The client was unable to allocate memory for the array of I/O vectors that the servers are to use.

Action: Contact your System Administrator.

ORA-02808: Allocation of memory of open files array failed.

Cause: The client was unable to allocate memory for an array of flags that the servers are to use.

Action: Contact your System Administrator.

ORA-02809: Jump buffer not valid

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02810: Unable to make temporary file name for memory mapped file

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-02811: Unable to attach shared memory segment

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-02812: Bad attach address

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-02813: Unable to make temporary file name in order to get key

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02814: Unable to get shared memory

Cause: Shmget(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02815: Unable to attach shared memory

Cause: Shmat(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02816: Unable to kill a process

Cause: A server did not die after being sent a kill signal.

Action: The process may be a runaway - contact ORACLE customer support.

ORA-02817: Read failed

Cause: A server could not read a requested amount of data.

Action: Check the call to `sford()`. An incorrect file descriptor may have been sent to `sford()`. The number in the "additional information" field is the starting block number of the data segment being read in.

ORA-02818: Less than the number of blocks requested was read in

Cause: A server could not read in the request amount of data. The first number in the "additional information" field is the block number being read in. The second is the actual number of bytes that was read in.

Action: This is a programming error.

ORA-02819: Write failed

Cause: A server was unable to perform a write. The number in the "additional information" field is the starting block number of the data segment being written out. The first number in the "additional information" field is the block number being written out. The second is the actual number of bytes that was written out. The disk may have filled up.

Action: Check the UNIX error number.

ORA-02820: Unable to write the requested number of blocks

Cause: A server could not write the requested amount of data out to disk. The disk may have run out of space.

Action: Check the UNIX error number.

ORA-02821: could not allocate memory to receive message from LGWR

Cause: A redo transport SYNC process could not allocate memory to receive a message from the log writer process (LGWR).

Action: No action is required.

ORA-02822: Invalid block offset

Cause: A server was unable to seek to the designated block.

Action: Check the UNIX error number.

ORA-02824: Request free list is empty

Cause: The list from which the package allocates request descriptors is empty because all of the descriptors is in use.

Action: Wait until some become free, or initialize the package with a higher number of request descriptors.

ORA-02825: Request on free list was not free

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02826: Illegal block size

Cause: A negative number was given for the I/O block size to be used by the asynchronous I/O package.

Action: This is a programming error - use either a positive number or zero to get the default value.

ORA-02827: Invalid file number

Cause: The file number upon which an operation is to be done is either less than zero or greater than the maximum number of files that can be open.

Action: This is a programming error. Since the calling program should not touch this number, this is a programming error.

ORA-02828: Segment free list is empty

Cause: No segments are available to be allocated.

Action: Free some segments or shut down the package and re-initialize it with a higher number of segments.

ORA-02829: No segment of the proper size is available

Cause: No segment of the proper size is ready for use by the caller.

Action: Free some segments and try again.

ORA-02830: Segment could not be split - no free segments available

Cause: A segment that is larger than that desired could not be split because no free segment was available.

Action: Free some segments and try again.

ORA-02831: Segment deallocation failed - empty segment list

Cause: The caller attempted to deallocate a segment but the "in use" list was empty. This is a programming error.

Action: Check the calling program.

ORA-02832: Segment deallocation failed - segment not on list

Cause: The caller attempted to deallocate a segment that was not on the "in use" list. This is a programming error.

Action: Check the calling program.

ORA-02833: Server was unable to close file

Cause: A server was unable to close a file being used for asynchronous I/O.

Action: See the UNIX error number for more information.

ORA-02834: Server unable to open file

Cause: The server was unable to open a file for use with asynchronous I/O.

Action: Check the UNIX error number for more information.

ORA-02835: Server unable to send signal to client

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02836: Unable to create temporary key file

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02837: Unable to unlink temporary file

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02838: Unable to arm signal handler for the alarm signal

Cause: The arming of a signal handler for the alarm signal failed.

Action: Internal error - contact ORACLE support.

ORA-02839: Sync of blocks to disk failed.

Cause: The server was unable to flush its writes out to disk.

Action: Check the UNIX error number.

ORA-02840: Open of log file by client failed

Cause: The client process was unable to open its log file.

Action: Check the UNIX error number for more information.

ORA-02841: Server died on start up

Cause: A server exited during its initialization process.

Action: Check the servers' logs for more information.

ORA-02842: Client unable to fork a server

Cause: The client could not spawn a server. A possible reason is that the operating system has reached its limit on the number of processes that it can spawn.

Action: Either reduce the number of servers that are to be used, or reconfigure the operating system so that it can handle more processes.

ORA-02843: Invalid value for kernel flag

Cause: An illegal value was given for the kernel flag in the information structure. Only TRUE and FALSE are permitted.

Action: This is a programming error - check the calling routine.

ORA-02844: Invalid value for the leave open flag

Cause: A value was given for the flag that determines whether a file is to be left open after the client checks it to see if the servers can use it. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02845: Invalid value for the timing wanted flag

Cause: A value was given for the flag that indicates that operations are to be timed out. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02846: Unkillable server

Cause: A server would not respond to the termination signal. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: This is an operating system problem.

ORA-02847: Server did not terminate when posted

Cause: A server did not respond to a posted request to shutdown. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: Contact ORACLE support.

ORA-02848: Asynchronous I/O package is not running

Cause: An operation using the asynchronous I/O package was attempted without first initializing the package using sfainit().

Action: Call sfainit() before using the package.

ORA-02849: Read failed because of an error

Cause: A server could not read the requested amount of data from disk.

Action: Check the UNIX error number.

ORA-02850: File is closed

Cause: A file upon which an asynchronous I/O operation is to be performed has already been closed by the package.

Action: This is a programming error.

ORA-02851: Request list is empty when it should not be

Cause: This is an internal problem.

Action: Contact ORACLE support.

ORA-02852: Invalid critical-section time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02853: Invalid server list latch time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02854: Invalid number of request buffers

Cause: The value given for "db_slave_buffers" in your INIT.ORA file is less than 0.

Action: Use a number that is greater than or equal to 0.

ORA-02855: Number of requests is less than the number of slaves

Cause: The value given for 'db_slave_buffers' in the initialization parameter file was less than the number specified for the number of slaves, 'db_slaves.'

Action: Specify a number that is greater than that given for 'db_slaves.' Alternatively, specify 0. The kernel will supply the appropriate number.

ORA-02875: smpini: Unable to get shared memory for PGA

Cause: Stated in errno.

Action: Resolve the problem.

ORA-02876: smpini: Unable to attach to shared memory for PGA

Cause: Stated in errno.

Action: Resolve the problem.

ORA-02877: smpini: Unable to initialize memory protection

Cause: The adspcinit program has not been executed.

Action: Execute the adspcinit program as shown in your Installation and Users' Guide. If the problem persists, try rebooting your computer.

ORA-02878: sou2o: Variable smpdidini overwritten

Cause: The variable smpdidini was overwritten, probably by client code.

Action: Verify client code, e.g. Pro*C, for illegal memory access. If the problem occurs outside Single Task operation, contact your customer support representative.

ORA-02879: sou2o: Could not gain access to protected memory
